Have always thought difference between weekend- weekday made sense for most commuters.

Proposal to operate Metrorail service every 30 minutes

It wouldn't help during rush hour travel. My company will start requiring employees to report to the office buildings in March 2021. That trend will continue into 2022. Having fewer trains during rush hour will make it more difficult for employees to report to work on time.

Trains will be over capacity during rush hour. Could take an extra hour to 1.5 hours to commute each way if you can't get in your next train. I won't take Metro at all during the week for work if this is the service level

This will make my commute unworkable, and I'll get in a car instead, ending 30+ years of daily ridership during the week. I rode Metro every weekday from EFC to various stations in DC for work, and I expect to do so again as soon as my team returns to the office. I take the Orange/Silver lines from EFC to Foggy Bottom, and the trains were overcrowded already. Reducing service to every 15 minutes during rush hour will mean not getting on a train for an hour or more as they'll all be filled past capacity by the time they arrive. This entire proposal is insane, and I don't understand why you expect ridership to remain as low as it's been during the pandemic.

Some times your train operators arrive late or leave earlier than presented on electronic signs. Furthermore, the constant stopping trains for scheduled time adjustments would need to end for this to work.

The more you can run on the red line the better..10 mins is better than 15 and so on. Rush hour. Should be more frequent

I like that it keeps a lot of service while reducing the strain on the Metro system and staff.

Getting to work would take even longer during weekday rush hours and rush hour travel times are already too long. Driving would become more of an option which would crowd the roads further.

We need service on the Silver Line past WFC station. If I have to drive into work, my commute will be a nightmare. This is worse than Safe Track

Sounds like a good plan. Except you don't state what the current operating procedures are especially for rush hours. There are times during rush hour where the current capacity barely accommodates everyone. So decreasing that would be bad.

When Wilson HS & Deal MS reopen, I'm very concerned about even more overcrowding on the Red Line.

only concern is how crowded the trains will get. some trains at rush hour were already at full capacity, so the longer intervals would often mean waiting closer to an hour for a train

It makes me concerned that anyone changing stations would avoid using metro.

This is an awful idea. By January 2022, most people will be back in their offices and one train every 15-30 minutes is absolute insanity. Trains were already packed and by this time, more people will be riding the metro.

That will be not enough of trains. People will not be able to count on metro when they get back to work.

30 min between trains during rush hours seems too long.

30 minute wait times on weekdays after the pandemic will lead to overcrowded trains and long waits for commuters, likely further driving down ridership, which will return when the pandemic abates. Work from home will likely be more prevalent, however the majority of federal employees and Amazon Web Services support will be required to work in the office multiple times a week. Likely these riders would use metro if service was not so infrequent.

30 minutes between trains would make it MUCH less likely that I'd use Metrorail.

Metro is my main form of transportation, I've been late to work many times because of trains that were taking 6+ minutes during rush hour. The trains become so full that you can never get on as they arrive full at the stations. 12-15 minutes during rush hour would be absurd

I frequent a station with multiple trains (Blue and Yellow) so this is a workable plan for me. I would hope that the timing would be consistent, i.e. fewer delays with fewer trains in the system. In that case I could plan more easily for the large delay in train times.

Seems irresponsible to have no difference between rush hour and non rush hour traffic

Every 15 minutes means that there will be excessive crowding - and there may still be reasons for social distancing in early 2022.

Any transit system that has a frequency of service of 15 or 30 minutes apart fails to meet the travel needs of users. The system will bleed users at an alarming rate--and especially among those commuting to work.

If trains are scheduled only every 30 minutes that means they are going to be overcrowded and if you physically can't get onboard that means waiting another 30 minutes. That's extremely hard to predict and makes me more inclined to want to drive to work.

This is probably one of the most acceptable of a bad set of options. But if you're going to do this, you have to do better at making sure the trains are spaced apart on lines that multiple colors share. You also need to make sure you're not running anything but 8-car trains. This also implies, to me, that you won't charge rush hour fares, which is likely to eat into your revenue loss further, so is this really going to save that much?

This should be a last resort if no Federal support arrives and ridership stays low.

Proposal to operate Metrorail service every 30 minutes

It is very important that the Grosvenor station remain in regular operation. It is crucial to the continuity of the Federal government to ensure employees can get to DC on time during the week.

I expect that offices now closed will be open in January 2022 and that if Metro trains are reduced the train cars will be so packed that I will not be able to get on in Rosslyn. I think Metro needs to be more nimble. Cut stations by closing now. Then reopen them as the pandemic situation changes and more folks return to work. Metro could set some targets for the amount of ridership at each certain stations to trigger a change and divert resources accordingly. If this would be difficult with personnel, at least more cars could be added according to preset ridership numbers. In the meantime, maintenance work should be ramped up during the pandemic time so that when riders return with the opening of government and businesses, Metro won't stymie ridership with ongoing repairs that could be avoided with repairs made over the next 6 months.

As long as all metro stations remain open, this seems like a reasonable approach. I would take a look at modifying the times a bit for the weekend, either extending them out greater than 30 and 15 throughout the entire day or extending them during non-peak times on the weekends. priority for metro hours should be for M-F riders going to/from work

15 minute during rush hour?? Just shut it down at that point theres no use. Im going to need to get downtown and Im not tryna die squeezing into a metro car. DURING RUSH HOUR??

The trains are already packed at peak hours when they come every 5 minutes, this is completely untenable.

Frequent trains are necessary during rush hours in all directions.

I rely on the metro and Fairfax connector busses to get to work. After the pandemic, ridership will certainly return to normal levels and will require a level of service that can meet the high demand.

This doesn't work well for me because trains only coming every 30 minutes makes taking the metro even worse than it was before.

This change would happen when I expect to be going back to working in person and would make commuting via metro a nightmare. I would probably stop using the metro if this plan were to be enacted.

As someone who takes the Silver line from McLean to McPherson Square, I would need to alter my schedule so that I am at the station at least 45mins earlier than now in order to be at work on time by 9a. How is this fair to families with kids that attend school and need to follow the school schedule? With your proposal, we would always be late to work since we wouldn't be able to count on a train coming in a reasonable amount of time.

If ridership revives as the pandemic fades, trains during rush hour will need to arrive much more often than every 30 minutes. Such intervals would leave stations overly jammed with people waiting, and the trains would be overly jammed. And sooner or later the pandemic will fade, maybe by January 2022 or by mid-2022.

I believe if Metro has problems running trains, the current 12-15 minute train service would be much more effective. As an example I commute from Anacostia Metro Station, which is a single line (green) station. Having to wait 30 minutes for train arrivals would severely hurt my morning commute to work.

Under this plan, it could be extremely difficult to get on the train during rush hour

Once covid restrictions are over, trains will be crowded. I used to have to wait for a train or two to be able to fit on a train in the past- this would just make the problem worse. I don't want to spend my mornings or evenings in a metro station waiting for a train

It's ridiculous to run the same # of trains on weekends as weekdays and during rush hours vs. non-rush hours.

The train schedules are never dependable so limiting them to every 30 minutes would make commuting on time in the morning would be nearly impossible!

Keep the pre-pandemic schedule.

Severely restricted headways increases chances of crowded trains. Due to COVID, I am not sure I will be comfortable riding at all if trains are full.

I will be a student at UMD, making trips into DC regularly, but 30 minute time intervals will not cause a problem

Need service on orange line clarendon metro

This schedule at rush hour is a recipe for disaster.

Not having later weekend run times would continue to hurt the already devastated food and beverage industry.

Thanks If trains kept to schedule this may work for me, but if there is a problem (train out of service, single tracks etc) this greater delay would be problematic.

30 minutes is a long time between trains, what if the train is full because of crowding on Shady Grove station?

Trains at least every 20 minutes

You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!!

Where is all that money now, when times are slim?

Too limited between Grosvenor and Shady Grove for we without bus frequency improved.

Proposal to operate Metrorail service every 30 minutes

This would severely impact my commuting time. I would end up being too early or too late to work. Also, there would be massive congestion on the trains. How do you guarantee me a place on the train? If I don't make it, then I am guaranteed to be at least a half hour late.

My office is planning to reopen in fall 2021. This is too long of a wait on a workday and will result in overcrowding on trains and platforms. I'm fine waiting longer on weekends when I'm not in a rush but a lot of service industry staff that work on weekends rely on more frequent trains.

Fewer trains will mean fewer people will choose to ride the metro. Given that I have to transfer to most places I go, waiting 30 minutes will make my trips hell and I will choose other modes of transit. Wait times should be no more than 10 minutes during regular hours

30 minute gaps during weekday rush hour would lead to many overcrowded trains. Prefer less weekend service.

30 minutes is a long wait between trains. How about every 20 minutes?

Having trains arrive every 30 minutes, regardless of the exceptions, is unacceptable. My main form of travel would be greatly affected, resulting in up to 2+ hours of waiting time/travel time should I accidentally miss a train

It seems like a long spacing between trains but I think it would be fine.

Just going to lead to more reduced ridership. You might as well shut it down completely.

If the trains are scheduled to run every 12-15 minutes, then when there is a delay for any reason, of which there will be many, the time between trains will stretch to 20 minutes and I will often be late for work.

Having trains arrive every 30 mins would increase wait times and the possibility that so many people will be waiting for the train that people will be unsure they will make the next one due to crowding. This will only make for tension and aggravation.

While reducing weekend service and evening would be reasonable, it is unfathomable how metro could expect the system to be usable at all during rush hour. I cannot understand the logic of thinking that 15 minutes or less on weekends would still be needed but that it would be sufficient for rush hour, when typically even a slight delay in the lines at six minute headways causes the entire system to be unusable. Even with reduced future use following the pandemic that just means that there would be slightly more margin for error with normal headways. How would anyone who lives within the beltway be expected to ever even get a spot on a train to get to work? There would be hundreds of people waiting at every stop.

Shouldn't the trains run more often during rush hour?

I will plan my travel around the new schedule. I understand that metro cannot keep running trains when the demand is low.

It seems like trains would be more crowded because of the greater number of people on the platform waiting. 30 minutes is a long wait time. I would end up figuring out another mode of transportation

Rush hour would be a complete nightmare

financial considerations seem to be more important than the accessibility to Metro for working people!

As long as the first am train was no later than 5:30 am or earlier.

30 minutes interval is a very long waiting time. On the unexpected days where one may be delayed it would mean the difference between being 30min-1 hr late

this is crazy idea. we live in USA not in Third world country

All stations on Red Line are important so 15 minute intervals would be fine knowing that these stations will remain.

Every 30 min is the difference between having to plan the trip down to the min and arriving at the station and knowing a train will be coming soon. Those who can afford to do so will leave Metro.

Metro is important when I have to travel to downtown DC

I like that it is a 7-day a week schedule

But not desirable. platforms will be too crowded at commute and special event times. Causing more agitation anxiety and quality of life. More cars on road would be bad for environment.

How long does WMATA envision having to make these drastic changes? Presumably if ridership increases back to close to pre-pandemic levels, there would also be a return to pre-pandemic service.

Probably will need more trains at rush hour, depending on the pandemic

So we have to wait for 30 minutes if we miss the train? That's ridiculous! One of the main advantages of the metro is how fast one can get around and this option takes that away. That's going to increase commute time and increase the number of people in a train - which is not healthy given that we will be recovering from a pandemic

Proposal to operate Metrorail service every 30 minutes

I am extremely against closing the East Falls Church Station. It has a parking area that would be wasted as well. Plus, look at all the other closures in Arlington, it seems to be hit far harder than others. Additionally, I appose the Federal Triangle closure. It is a huge station for federal workers who make up a large share of your riders.

Why are you cutting service in 2022 when people will be going back to the office? You should cut service now instead and plan to increase service once offices open back up. I like increased service between grosvenor and silver spring but trains need to run more frequently than every 15 min.

Once things return to normal and ridership returns 12 min train separation would lead to trains that are so over crowded that riders would be waiting far longer to get aboard. Cars stuffed with that many people are unsafe and unhealthy

This would definitely not work for me. I commute everyday and cannot time my arrival to the stations precisely. Having to wait potentially 30 minutes for a train will severely impact my ability to commute via metro, and may force me to find an alternative mode of transportation

Rush or peak periods need more service than non-peak

As long as the Yellow line isnt curtailed, and thus the upper Green Line stations get a train every fifteen, this is doable if unpleasant. If, on the other hand, the train that takes me to work only arrives very half hour, that is miserable. I already bike to the station rather than taking the bus because the bus only leaves every hour.

More frequent trains during morning and evening rush hour.

You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

We need to be investing in public transport. I fully plan to take metro once things reopen, but the long waits will result in packed trains AND drive down ridership - this is not a sustainable plan!!

30 minutes is far too long a wait between trains. Already as is, some have nearly 15 minute waits. Missing a train shouldn't put those who use public transit at a disadvantage to those who use vehicles especially when fares are still the same and commute times are about as long if not longer already

This will be an absolute disaster when people are allowed to leave the houses again. Everyone is not going to work from home forever once we are no longer forced to, and this proposed schedule will make the return the daily work commute is a nightmare every single day. This will overwhelmingly hurt poor and working class people who have little alternatives for transportation

This schedule is fine during the weekend, but as I expect the pandemic to end soon, I want to be able to go to work during the rush hour without the 15 minute wait times.

Lowering the frequency of service would certainly be very inconvenient, but acceptable.

More trains more often encourages more people to turn to trains for transportation, thereby reducing traffic on our streets and helping DC meet its necessary carbon emissions reduction goals

Before COVID, trains were already packed at rush hour times, even when coming every 5/10 minutes. If trains are only coming every 30 minutes, it is unlikely that riders will even be able to fit on the trains. In the past when you werent able to squeeze onto a train it wasnt a huge deal because another one would come in less than 10 minutes usually. If they only come every 30 minutes, people will be aggressively trying to squeeze on in order to avoid waiting another 30 minutes for the next train. This is completely unworkable for most people operating on a schedule.

As a consultant, I do not know where my next client will be. However, if I were working downtown as I was before the pandemic, this would basically make Metro so crowded and infrequent that it would be useless. In my view, you might as well shut down metro if this is the plan, pave over the rails, and make it a bike path.

Consistent arrival times all day would make using Metrorail much easier.

30 minutes is too long between trains

A 30-minute wait for a train essentially cancels out the convenience of taking a train. In a major city, that wait time is totally unacceptable.

I take the train every day to/from work. Do you understand what it means to wait THIRTY MINUTES for a train to come in order for people to get to work on time? I understand people should plan accordingly to catch the train at the right time in order to get to work on time. However, life is not perfect. Things come up, people run late. Lets say someone has to be at work at 9am and needs to catch the 830am train to do so. If that person misses the train by one minute, you expect them to wait another THIRTY MINUTES for another train?! (Whereas normal schedule would afford the ability to catch the 837am train (which is what the wait should be) or the 842am train (btw, 12 minutes between trains is also ridiculous) and allow the person the ability to make it to work on time. Public transportation is for the public. Its for people to use to live their lives and get around town easily without using a car. WMATA is proposing a public transportation schedule that is not conducive to how the public needs to access it in order to live our lives. Public transportation is supposed to make our lives easier, not harder.

Additionally, do you understand that fewer trains means more people riding in the train cars and could potentially eliminate the possibility of social distancing. Eliminating the possibility of social distancing could/would result in an increase in COVID cases. I know thats not what the Mayor, nor anyone else in the DMV, wants to see in terms of metrics. I urge you not to make these proposed changes. You will be making our lives even harder (during an already difficult time (read: pandemic)).

Proposal to operate Metrorail service every 30 minutes

Foolish to make transit more inconvenient for the people you most need to ride it -- work-week commuters. This would ensure that revenues stay down indefinitely AND add lots of traffic/pollution.

By January 2022, ridership will likely be at a heavier level than now. I expect to be going to work with thousands of other Washingtonians. A train every 12-15 min would make it impossible to ride. People would be crammed --- and being that well still be protecting ourselves from COVID, packed trains will only hurt your ridership more.

During this time of extremely limited commuting, this seems entirely reasonable.

Long headways defeat the purpose of a subway system

The trains would be far too crowded, especially during rush hour. You may have to wait for multiple trains in order to board. And if one train is a minute early, you may have to wait 30 minutes for the next one.

This would be horrible for commuting. Trains would be overcrowded and I would not feel safe, especially given the probably need to social distance.

That will no coordinate well with Bus schedules and the unpredictability of street transit

This would technically work for me but the decreased train frequency is undesirable.

I plan to use the metro to get to work and the lower frequency during peak hours would be very detrimental

I would really expect rush hours to start picking up by then

The train can already get

I appreciate that this plan has been informed by low ridership in the midst of the pandemic, and there is a need to balance the budget. However, in thinking of past experiences riding the Metro, this sounds potentially disastrous, even if ridership remains a fraction of pre-COVID levels. Im concerned that commuters like myself who will need and want to ride the Metro again after getting vaccinated will be dissuaded by the long wait times and high likelihood of crowding. Ive ridden the Metro for many years, and am purposefully living close to a Metro station to ensure I can rely on public transit. Under this proposal, my commute (requiring a transfer from the Orange to the Red line) will be so long to the point of making Metro an option of last resort, rather than my go-to. Instead of incentivizing reliable riders who can help to re-invigorate Metros budget, Im afraid this will push those with options away from Metro, and put further pressure on the most economically marginalized.

This plan is unworkable at rush hour. Platforms would crowd to dangerous levels in the 12-15 minute gaps between trains at the busiest stations. It is unsafe and would cost the metro far more over time in lawsuits.

Once the pandemic is tamed, most of us who had commuted are likely to resume commuting--but less so if trains are less frequent at rush hour.

Need shorter waits between trains.

My total destination time by car is < 30minutes

Acceptable option -- we just need to plan. The real problem is that Metro is an antiquated concept.

So long as the schedule is very predictable and followed. And, so long as there is sufficient capacity on the train. I cant arrive at the station at 8:55 for a 9:00 train only to find it (a) already gone or (b) the station and train backed up with people.

Prefer to keep services running in more areas than cut whole neighborhoods.

This will severely negatively impact use of metro for work commutes.

It would work if the government continues to allow telework. Otherwise will not work as my commute would be too long and the trains would be crowded so I wouldn't feel comfortable taking metro.

30 minutes between trains is too long.

I am hopeful that a year from now people will be going into offices again, so Id like more rush hour trains so there will be fewer single occupancy car drivers.

For the working days it will affect our time and work and home life.

It's interferes with everyday commuters schedules and pre-existing daily routines.

This doesnt specify how many train cars will be attached to the trains that are arriving at longer intervals. Trains arriving at extended periods tend to accumulate a large amount of passengers that are usually not sufficient seating for all passengers (or enough room for passengers to stand and safely social distance). I believe that the proposed 30 minutes should be reduced to 20 minutes.

I am planning to travel from Ashburn to Clarendon and the change would significantly restrict when I travel to/from home.

Thats not frequent enough, if we miss train, we could potentially be waiting half an hour til the next train.

Proposal to operate Metrorail service every 30 minutes

Having to wait up to 30 minutes for the metro train will cause me to wake up for work up to 30 mins before I would normally and have me home 30 minutes later than normally. That is an additional hour of my day spent waiting for a train to arrive at the metro station. At peak hours during the weekday, it would be unacceptably busy and I would not choose to ride the metro at all, causing me to put more miles on my car and spend more on gas. Not to mention the cost of parking. This solution would cause even less ridership and would cause the metro system to be useless.

Rush hour needs more frequent trains.

30 minutes between most trains would be untenable, especially for those who need to make multiple transfers. Even 15 minutes is somewhat long given that most major metropolitan areas, especially outside the US, have trains that run every 5 minutes or less at peak hours.

This will increase my commute by over an hour and will increase my childcare costs tremendously. I cannot afford the additional costs. This is unacceptable

15 minutes is a very long time during rush hour - trains will be packed and may occasionally have too many passengers to enable others to board. Every 10 minutes would be better. 30 minutes is too long to wait at any time of the day - should be no more than 15 minutes, 20 minutes tops.

It would not. As a metro rider of over a decade, myself and everyone else who rides the red line knows during rush hour you need more trains. Having one every 12-15 minutes is a very good way to basically collapse the system. Knowing that trains are so far away and I would have to wait I would basically find another way to work.

Although transfers need to be timed and coordinated. Additionally, 15 is a bit arbitrary and times such as 10 minutes should be considered as well if trying to minimize trains

This depends so much on whether people have been vaccinated, the ventilation on Metro, etc. you could be setting yourself up for dangerously crowded conditions at rush hour.

Every thirty minutes is too big a gap for a workable and convenient metro system. Even with careful planning, trains will never be completely on time and will arrive late or early, and this will cause significant 30+ minute delays for commuters on a regular basis. You cant go without a car and plan to casually take the metro when it requires more than thirty minutes to plan your arrival.

To get to work, I have to transfer lines. Trains arriving every 15-30 minutes would double or triple my commute time, which is kind of ridiculous. Additionally, during rush hour times, trains may be incredibly full since they would only come every 30 minutes, meaning there may not be room for you to get on the train. Again, tripling commute time would not be good at all (I should note that post-COVID, I expect to be making my regular, daily commute into the office)

If ridership returns to somewhat normal, the trains during rush hour are so full, you cannot even get on the cars despite the frequency of service today. Having a less frequent service at rush hour will make it impossible to ride the train during rush hours.

I am expecting to need to use the Metro more frequently as the year goes on, and having no rush hour would add a burden to my (projected to be) daily commute. Also, once public transportation drops below a certain level of service, it is difficult to keep riders or get riders back. I am concerned this level of decrease makes the Metro too infrequent to be convenient, and will cause more riders to leave or fail to return.

When I need to change lines, as I often do, these wait times could significantly lengthen my trip in both directions. If my total trip time can reasonably be cleared to be over an hour, or I have difficulty consistently estimating my trip time, I will not take Metro rail.

Trains should be coming more often, especially during peak times

In normal times rush hour trains are PACKED at least on Red Line both am and pm. Fewer trains = more waiting to get on. I wish it didnt have to be this way - and even if on a Blue/Orange shared line there are more frequent trains - doesnt mean I can get from Capitol South to Ballston or Courthouse ... if a Blue Line is avail.

This seems like a good plan.

This is absurd. Trains are always at capacity during rush hour with trains every 5 minutes at Silver Spring. This would make Metro a daily hell.

Every 30 minutes was unacceptable before and is still unacceptable. It means crowded virus-filled cars, uncomfortable waits on platforms with insufficient lighting to read, not enough benches and people forced to the platform edge. If a train malfunctions we'll wait an hour in the hope we can cram on board.

Businesses and schools will be open and 30 minute waiting will make me late for work and trains extra crowded.

It would work for my weekend need but it would make me far less likely to use metro in the mornings to commute which I was planning to do when I return to working in office.

I take a bus to Pentagon Station and the time I arrive there varies. If mis-timed, I could end up waiting half an hour at the station, which is too long in the morning.

Reduced frequency will lead to further decline in ridership. If one scheduled metro is missed that would lead to an hour delay to work! Will have to add burden to existing personal budget as will have to buy personal car/vehicle to commute! Higher frequency is a must for effective use of public transportation.

There are a lot of commuters from Shady Grove to downtown, trains running only every 30 minutes between Grosvenor/Strathmore would be inconvenient for them. Additionally there is substantial new residential construction planned for Grosvenor/Strathmore and around White Flint Station.

I would end up paying for an UBER or driving when I need to go that far if this is how the train worked.

Proposal to operate Metrorail service every 30 minutes

If I understand correctly, if you miss a train that has just left the station, you have 30 minutes to wait for the next train? At that point I might as well walk home and drive. 30 minutes is too long a wait between trains. You don't have enough benches to sit. The stations are too dark to feel safe. By the time the trains arrive at Clarendon or Courthouse they will be packed and we won't get a space to stand on the cars.

There should be a difference between rush and non rush hours

This would not likely be appealing to people who plan to use metro to get to work.

No difference between peak and non-peak gives me pause depending upon ridership numbers.

Too few trains. Platforms and trains would be too crowded. Service far too slow for people to use.

If for some reason I miss my train, I have to wait 30 for the next one to get to work? That tardiness due to life just happening (traffic on the way to the metro, forgot a badge, etc.) will not be acceptable for most supervisors. Do every 10 minutes from extreme stations (Huntington, Franconia-Springfield, etc.) and then the 15 from stations serving more than one is fine.

If the trains aren't overcrowded, it would work. But due to need for physical distancing, I don't see how fewer trains would work. Fewer trains will mean more people waiting for next train, and therefore more crowded trains. One of the main reasons I purchased property at Grosvenor Strathmore station was due to the fact that every other train in the mornings was empty. Thus, the number of people waiting was fewer and you could get a seat or not be crowded for long ride into city.

Keep the frequency in arrival as it is in current rush hour

Quickly moving through a city is a key benefit of transit; at intervals like these other modalities become more efficient and we shouldn't be encouraging use of cars.

Increasing times between trains makes it less useful to take Metro. I used to take Metro to the Kennedy center but have stopped because it is so much faster to drive than use Metro after 9:30 PM.

My office in DC expects to be fully-operational by September 2021. As a daily commuter, trains every 30/15 minutes for a 20-minute ride is too long. And at such infrequent intervals, trains will be more crowded and will make me think twice about using Metro at all. More frequent trains will result in fewer passengers who can spread out. And would make me feel comfortable in using it.

30-minute headways is too infrequent, especially during peak hours. Also, travel times could really get dragged out on trips requiring a transfer between lines.

The arrival times during rush hour should be more frequent. At least every 6-8 minutes.

I think this disproportionately affects working class essential workers who rely on public transportation by making their daily travel disproportionately longer.

I understand pandemic-related travel issues. However, one reason people don't take Metro is because of the time you have to wait for your train.

If you need to do 15 minutes for every red line station from Grosvenor to Silver Spring, then it should be mandatory to give 8 car trains. Anything less than 8 cars would be a big problem.

Whether this would work or not is largely dependent on how common telework is in 2022.

Limits getting to and from work at Stadiums and Arena

I think the proposal is reasonable and adequate.

You should definitely provide more frequent trains during morning and end of workday hours

Trains running every 30 minutes would lead to such a high level of crowding that they would be essentially not useable. .

This is too long to wait for a daily commute

I would drive my car before having to risk waiting 30 minutes at each stop to catch the next available train.

This proposal would not be feasible unless all offices continue telework into 2022. While I imagine some businesses will remain telework, many businesses anticipate reopening before the new year. Employees such as myself who rely on Metro to travel to work will be forced to avoid Metro altogether if we cannot rely on the system to get to work on time.

It seems like a good plan, but it'd be better if it ran every 10 minutes.

This is contingent on reliability. In my experience, 30 minutes can mean 24, 30, 45, or even 0 minutes. The arrival board is not reliable, and often isn't even on or listing anything at all. But if it showed reliable and routine times, commuting could be planned around a 30min delay.

DO NOT TURN BACK AT SILVER SPRING.

This doesn't seem to take into account the trains that tend to be overflowing during rush hour. If I miss a train because it is simply too full, I could be late to work.

Not often enough from 9 a.m. to 5 p.m.

It will take a significantly longer time to commute to work in the even one misses a train. Also, trains will be really packed.

Proposal to operate Metrorail service every 30 minutes

The proposal would discourage riders and further exacerbate Metros funding shortfall.

Too little service to make a commute possible

Metro Service is very important for my family

It would be inconvenient but would not prevent me from commuting via Metro (once I stop working from home).

I travel around the area all day long in several routes. Train frequency is vital. It is also vital in providing space as we will be dealing with viruses and pandemics for years to come.

More frequent scheduling during rush hours would depend on the number of passengers who would be commuting post-COVID. This is an unknown, of course, but increased post-COVID ridership projections should be included in the overall planning for 2022.

At longest it's not every half hour . I'll run late to work then .

The proposal is ok as long as Metro does not close any subway stations on Orange and Silver lines.

That is ridiculous. By the fall 2021 I will be dependent on metro to commute to DC from Arlington more than ever.

Many offices plan to reopen later this year, so I and many riders will resume using metro to commute to and from work every morning and evening. There should be more trains at rush hour and fewer trains on off-peak times and weekends.

I feel like the train service and bus service should improve, and not go backwards. We need the late night weekend hours back as well .Thank youSean Harris

Frequency is crucial during rush hour times. I believe that once the federal government moves to bring workers back into the office, there will be a major surge in demand for the train and if the trains are 30 mins apart that would make it almost untenable for the working public. You could be creating a situation where people have a way higher likelihood of being late and creating distrust in the train system.

I strongly oppose cutting late night weekend service. It provides not only a safer way for people to get home from bars, it also provides a way for more customers to access said bars. It would be a horrible blow to clubs in DC after an already terrible year.

Perhaps you can schedule the weekday trains to arrive every 15 minutes from opening until 10pm and then each half an hour until closing. For the weekend, it can be every half hour. If the time between becomes too long, the belief in and credibility of the Metro system will decline even more, resulting in even less use and promote a financial and operational death spiral.

This is not practical for commuting to work once we can go back

I think there is room for reduced service on the weekends and any additional reserve should go the Mon - Fri schedule.

To make Metro use appealing and practical (so that its not only convenient but safe--not a crush of people on the platform trying to squeeze in), it needs to run frequently, especially during peak hours.

I use the red line frequently and mostly off peak, ie. during the day and on the weekends. A 15-minute delay between stations would pose a hardship and may result in my driving more.

in early 2022 my government agency will be moving from 1200 K St NW to 455 12 St SW. The proposed changes would significantly increase my commute time to the office and make me seriously consider driving to/from the office every day b/c it shorten my commute even though it would increase my out of pocket expense.

Por el horario de trabajo era más conveniente cuando la frecuencia de trenes era mayor durante horas pico

This plan means I would rarely use Metro and would be forced to seek other transport services. Frequency of service is one of the keys to rider use. Infrequency significantly deters ridership.

Please keep open the Grosvenor-Strathmore station for continued service on this schedule.

More likely to use other modes with limited headway's

It will work for me because I will be retired by then and have more flexibility and can plan better. If I were still working, it would be very challenging.

My employer plans to return to normal office procedures. Rush hour was always cramped and we would often have to wait for the next train because the one that came was too full. This plan would require me to arrive at the station excessively early. I would stop using Metro entirely under those circumstances.

Need to have more frequent trains to Grosvenor-Strathmore and the stations beyond.

Is more frequent arrivals and departures the real problem?

I think this would be very inconvenient.

Every 30 minutes is too inconvenient to commute.

I am a retired non-driver and moved near Metro (Grosvenor-Strathmore) for access to transportation! I usually travel mid-day, when the trains run about 12-15 minutes anyway.

Proposal to operate Metrorail service every 30 minutes

When I use Metro Rail I rely on Metros schedules to plan trips.

Rail rate has gotten so expensive. I pay extra money to save time. Waiting half hour for train is too long for extra fees

Waiting 30 minutes for a train is unacceptable and would make my commute much, much longer. I hope that Metro can get the funding that it needs.

Week-end travel to theater and sports events is essential and should be available. For access to much of the city culture Metro is the only option,

If I have to commute to work in the morning via metro, I would be worried that even if I got up earlier to ensure I had ample time to get on a train and get to work, I still might not be able to get on a train in time to get to work on time because so many passengers will be waiting for the trains that only come every 30 minutes. For people who rely on the metro, it makes the metro less reliable and I think it could actually hurt ridership as people seek other more frequent services, such as buses, rider share services, etc. I think you need to have increased services during rush hour to accommodate everyone who relies on the metro.

Crowding would be outrageous if trains are so far apart during regular workdays, and it would be awful to just barely miss a train and then have to wait HALF AN HOUR for the next one. Thats a huge difference if youre trying to get to work, or to meet someone at a set time, or if you value your time period.

If the trains were to arrive every 15 minutes, this may result in crowded platforms during rush hour, particularly on the Red Line, which has the most ridership.

I do not depend on Metrorail to get to work. I am commenting as an occasional rider.

15 minutes during rush hour is way too long resulting in packed trains during Covid-19

In this case, rush hour fares should be eliminated.

Cutting service this drastically is functionally eliminating the metro as a usable commuting solution. Total nightmare.

Way too infrequent. This totally gets rid of the meaning of Metro-level service which is a minimum of every 15 minutes, but ideally closer to every 6 minutes.

I believe that ridership post COVID will drop permanently by between 30 and 50 percent compared to prepandemic period. This reflects permanent shift towards online work and exodus from downtown DC by many businesses and households that no longer depend on being there. Arlington should plan for this new reality.

I am presuming the metro relies on commuters for the majority of its revenue in normal times. If that presumption is incorrect please disregard the rest. Increasing commuting time via metro at the same time that overall congestion is dropping due to increased teleworking, which will likely have lasting effect beyond the official reopening, will simply drive people with the means to afford it to commute via car. Overall revenues will not recover and those people without means will be disadvantaged through longer wait times.

Prior to the pandemic, service changes on the Red Line caused significant crowding on trains during rush hours. By all credible estimates, the pandemic will have subsided and Metro ridership should recover by January 2022. Further service cuts would only exacerbate pre-pandemic issues for commuters.

This proposal turns Metro into a commuter rail service, not an intercity mass transit system. It renders it largely unusable for people who depend on it for commuting, school, and other needs.

Every 30 minutes is not frequent enough. There will be 1,000s waiting on platforms during the morning and evening rush. This would be a complete failure if implemented.

Too long of a waiting period

Currently during my primary daily (M-F) usage, trains arrive approximately every 6-7 minutes. 30 minute intervals -- especially if Metro cannot provide regular predictability on arrival/departure time -- would potentially quadruple my commute time to and from work each day. This potential quadrupling of my commute via Metro would likely lead to my exploring alternative commuting options.

That is a horrible idea. During the weekday, there should be more train frequency (shorter wait times between trains) during rush hour, and that should apply to all stops (not just between Grosvenor and Silver Spring). Everyone will be back in the office by January 2022!

that is ridiculous considering the fact that I need to take metros more frequently. I do not live in the center of the city

During mostly full-time telework this would fit my needs. Once we are able to start going back in to the office regularly I expect wed need more frequency so would hope to go back to that.

I live next to a Red Line train and it is VITAL that the station remain open because that is the only way that I can get to work. I think that by making the train schedule longer (i.e., every 30 minutes) is a reasonable change. People are getting vaccines now and will have to resume their commutes to work on Metro.

It would work but it would be inconvenient. I think possibly waiting 30 minutes for a train during peak hours on a work day is a bit ridiculous. I at least think the frequency during weekday peak hours must be more common.

Seems like trains would be crowded during rush hour, but maybe people will be flexing their schedules more post-pandemic.

This proposal would add significant time and congestion to travel at peak rush hour times. If this plan were adopted, I would seek alternative travel arrangements.

I think trains should be more frequent during rush hour

Proposal to operate Metrorail service every 30 minutes

Do you think that Tokyo or London or Paris would chop so much service? World class cities dont behave this way.

This will likely not significantly impact me beyond a slight inconvenience.

The interval between trains is too long. This will make rush hours worse (we will return to normal rush hours). It will make it harder for me to get to my medical appointments on this section of the line

Rush hour downtown on the red line was already over-crowded pre-COVID. Post-COVID surely there should be some thought toward the suitability of cramming people in cheek to cheek in a metro car.

By Jan 2022, I assume many people will be back to work and there will be a crowd at rush hour.

If service becomes this infrequent, Metro will not get back the ridership it lost during the pandemic. Public transit becomes a viable alternative to cars when you do not have to plan to catch a specific train or bus but can leave your house when you want and know that there will be a service you can use. Honestly, in London tube trains arrive every two or three minutes. This country is so much richer than the UK. Why cant we have transit service that efficient?

There are events on the weekends that are not going on the weekdays. It makes it difficult for those of use who would like to go to events especially if they are later in the evening. Trains can get crowded at different times and it doesnt make since to have a similar schedule for weekdays and weekends.

This would not work with rush hour commuting. The trains would get too crowded and it would be difficult to plan on getting to work or other places on time.

With lack of fare box revenues and federal funding, no doubt service cuts will need to be made. If headways between trains are consistent and timely, riders can plan appropriately for 30 minute headways and alter their commuting times as needed to accommodate those changes. This plan would work for my personal commute.

I still use the metro for committing to work. I would strongly recommend trains run more frequently on week days during normal commuting hours.

It would be great if there was a train every 6 - 8 minutes. It is also unclear what the schedule will be if there are no differences between weekdays and weekend days.

This seems like a good way to make sure that no one rides the metro ever again. Increasing ridership will obviously hinge on increasing usability, this seems like it strongly decreases usability. Coming from West Falls Church I thought the trains should come MORE frequently because the wait time is long if you miss a train. This would make the wait time unbearable if you miss a train, from almost anywhere on the orange line to the west it would be quicker to bike into dc than take public transportation at that point.

Consider how changing trains could mean an otherwise 25 minute ride could potentially be 80 minutes or more!

I depended on these trains coming every five - ten minutes during rush hour to go to work and to get back from school, where I commuted from Medical Center on the Red line to Dupont Circle every day at 6 PM after sports practice during high school. Sometimes it was dark when I got there and there were very few people on the platform. As a 14-18 y/o girl, it made me feel really unsafe waiting alone and I also depended on timely service to get back home before night (it would often be around 7-7:30 when I got back - I took the D6 back to Foxhall) so I could do school work, eat dinner, and sleep. So many of my lower income classmates depended on prompt service on the red line - myself included. I have a single mom who had to travel frequently for business and we couldn't afford to have someone drive me home. This was absolutely necessary for me.

(Pre-pandemic) I took the metro regularly to McLean, which is only on the Silver Line. If trains arrived every 30 minutes, I would likely need to use a car (which I dont currently have), so I am not sure how I would get to work in a reliable manner.

The red line is heavily used and gets very crowded. After a train departs the platform is full of passengers waiting to board after 5 minutes. If trains arrived every 15 minutes the number of passengers waiting on the platform would build up. Imagine that the platform at every Metro stop is full of passengers waiting to board. By the time the train gets to Van Ness, Cleveland Park and Woodley Park, the trains are so full, no one will be able to board.

At this time it is expected that the region will return to more normal commuting patterns by January 2022. 30 minute headways will reduce ridership and induce more driving. The reduced ridership will drive more people away from riding metro ensuring its further failure in future years.

this plan will ONLY work if metro runs on a RELIABLE and PUBLISHED timetable with a memory pattern form for each route and station. Thirty minute headways are more like a commuter railroad than an urban metro but could work as a temporary solution to budget shortfall. People MUST know in advance when the trains on their route will depart.

My morning commute is from Arlington to Reston. With my local stop shut down for the year (Clarendon) and the silver line operating every 30 minutes, it no longer makes sense to take metrorail, and I will need to drive to work every day. Given the goal of WMATA is to get people out of cars and on to transit, this plan is counterproductive for mobility in the region and extremely inconvenient for a resident such as myself. If Congress' budgetary reconciliation measure passes in the coming weeks, which will close the financial gap for Metro, I sincerely hope this budgetary measure is scrapped entirely with levels of service increasing as the region gets back to work.

Commute time to/from work would be unacceptable.

Absolutely and totally unacceptable plan for people commuting to and from work. It's a shame this is even a proposal in the capitol city!

Proposal to operate Metrorail service every 30 minutes

It is inconceivable that trains only run every half hour in a major metropolitan area. Makes no sense and will increase crowding and probably deter a lot of people from taking Metro at all.

This plan makes it necessary to plan all travel/activities based on the trains frequencies; whereas before with more frequent arrivals of trains, one could guess at a narrow range of time communicating would take and usually not be waiting at a platform for 20-30 minutes (though even before the pandemic, that was possible...). The weekend schedule is extremely hard to utilize and I have no idea I would get to work or get back at reasonable times, and I feel like this change will force me to invest resources in uber or a care instead.

The reason I take the metro is the frequency of service and knowing I can get to my destination in a timely manner. These changes in frequency would make me consider alternative methods of travel

Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

We need more trains in rush hour

Im unsure of my Metro requirements for January 2022, but I suspect that it will look like my needing to commute to work 3-4 times/week. Pre-pandemic, waiting for one or two packed trains at Rosslyn or Court House to pass in the morning wasnt too bad, since the next train would come shortly thereafter. Waiting 12-15 minutes for the next train (or 24-30 minutes, if I had to let two trains pass) to arrive so I could get a spot inside may make taking metro unfeasible as a transportation option.

This change will make it even more challenging to commute to work when my office is back in person starting in the spring. With trains often running late and now coming even more infrequently, my long commute will be made that much longer due to accommodating the new train schedule, and I'll be more likely to be late to work frequently

as vaccination is completed I expect to go back to my office for at least 3 days per week with traveling by Metro as my preferred mode choice

I hope to buy a home in 2021 near a Metro line. Service every 15 minutes would be reasonable to help me get to work.

During weekday rush hours I get on the train at Farragut West. That platform isn't big enough to handle the amount of people who would have to wait 30 minutes for a train. There are other similar platforms that aren't big enough.

Ridership will return after the pandemic. Every 12-15 minutes will make the trains too full to get on.

Given the possibility we will be back to normal rush hour traffic, this will lead to even more overcrowded trains than we had pre-COVID. Especially if 6-car trains are going to be used instead of 8-car ones.

If Covid restrictions are lifted and rider ship goes back to a similar pattern, I don't think there would be enough trains to deal with the capacity of riders during rush hour or on weekends.

More frequency will be important during rush peak hours

I think metro is a crucial step towards the better environment and reducing the usage of cars which will lead to environmental protection. Also, metro delivers better options avoiding traffic and feeling more safe and comfort.

My daily commute requires a change in lines. Until I can work out the connection at Rosslyn, this proposal could greatly extend my commute to the point that it might not be workable. Weekend schedules (under the old system) were always a problem for my commute and it resulted in the decision not to commute on weekends (workable for me). Not commuting on weekdays is not really an option. The biggest sticking point is the elimination of rush-hour frequency.

This plan favors people who live along the Redline (mostly affluent, white people) over other areas of the city. Further 30 minutes between trains is too long. 15-18 minutes would be preferable

The trains need to arrive more frequently. If not then the trains will be overcrowded and people will be pushing and shoving them get on. Also the station platforms will be overcrowded which is dangerous.

SHOULD BE EVERY 15 weekdays, 30 tough but OK weekends. Info. boards outside every station, NEXT TRAIN TO *** AT __:__.

Concerned about briefing on platforms during rush hour. What would be fine to manage crushing, especially in stations with narrow platforms.

Not ideal, but I do understand budget constraints

This would absolutely not work. I'll be back in my office using metro to get to work; if this were implemented I would have to find another way to get to work. The weekend schedule is too unreliable for me to use as my primary mode of transportation at those times, and would be even worse with rush hour on a weekday.

Not preferable from current status, but workable.

As pandemic conditions improve and customers return to metro, this plan would result in overcrowded stations and unsafe conditions.

Proposal to operate Metrorail service every 30 minutes

There would likely be insufficient capacity and longer wait times if not staggered on common lines.

I can manage with this plan. I would have to time my arrival with the train. I only catch one train Green line so this would be manageable for me.

how would those who need quicker access to the services

It would work as long as the train times were available on an App so that we could plan to catch the train at a certain time

Rush Hour should remain the same for all lines.

Rush hour service should be more frequent.

Need more frequent from Wiehle-Reston

Too long to wait. Need to be in the stations for shorter period of time.

I need later times and more intervals, as the 15 mins can cause me a delay to work or other important events

When I would go to work during rush hour there might be a packed train when trains were coming every 6-8 minutes. I cant imagine what it will be like if trains came every 30 minutes. I would worry about being late to work every week day.

I'm not sure what my commute situation would look like in 2021/2022. But if we all end up going back in the office. 12-15 min frequency would NOT work. Is this plan temporary due to COVID?

I HAVE NO PROBLEM

Depends on ridership and COVID restrictions that are in place.

30 minute headways are unacceptable, even 15 minutes is pushing it. I would not ride a system where missing a train means waiting half an hour for the next one. In many cases, the headway would be almost as much as the ride time. Mass transit must be convenient to be useful. Telling folks they might spend an hour a day (assuming roundtrip) waiting on trains or having to making them schedule their life around the trains schedule is non workable. We need MORE FREQUENT trains, not less. Yes, this predominantly impacts the stations at the end of the lines which are single service but these are folks who are just going to switch to cars. A non-convenient service is one I would not use (which of course amplified by many others creates the death-spiral of further ridership/revenue loss)

Every 30 minutes between trains is too long. Every 15 minutes at all times would be better or 20 at most

The trains should run every 15 minutes at all stations. 30 minutes is not often enough for people who need to rely on Metrorail for their transportation needs.

As a rider of the blue line to and from Pentagon City to Rosslyn, my experience has been that there is a train that arrives every 8 minutes. Im a pretty patient person, but I do think that there should be a higher frequency of trains during rush hour in the mornings and afternoons instead of standardizing it across the board.

Infrequent service, but not much worse than at present.

Makes service outbound bound on both lines from Rosslyn greater than 30 minutes.

I appreciate the implied predictability of the frequency propose across days and times. This could increase commute times significantly, especially for riders who use Metrorail for part of their commute and metrobus for another - the times might not align too well

Having consistency of trains is extremely important for riders -- though understandably there is a case for more trains during rush hour. That said, the plan presented here would work for me.

Trains arriving every 12-15 minute during NON rush hours and weekends is fine. Trains can arrive every 30 minutes after 7:30 PM, when the ridership is low.

As you well know, the transit system is vital to the economy of the DMV. The DMV in many parts of the city operates with employees required 24 hours a day. i.e. Shipping, loading platforms, hospitality, healthcare, Housekeeping staff within healthcare such as hospitals. Most of these employees can not afford the daily costs of Uber/Lyft from the affordable housing areas into the city. We also need to be prepared for the return of ridership. The best way to cut costs without harming employment, especially to that of low income riders/workers is just to reduce the frequency of the trains. The transit system as a whole should remain a 7 day a week operating system.

30 minutes is entirely too long between trains. I am fine with not having a weekday/end difference. I leave from vienna and those trains are already crowded (pre COVID). When a train is missed and they do run every 30 minutes, there is often no room to sit and standing becomes too crowded by the 2 stop on the line. Most people are traveling to DC or further, so limiting the number of trains means more overcrowding. When I have had to wait 30 minutes before, I normally end up waiting another 12-15 for the next train because of the crowding. Running every 30 minutes also means I now have to leave an hour before I need to be somewhere in case I miss a train or one is running late. And then I am waiting on the other end as well if I would catch my train and be there early.

Proposal to operate Metrorail service every 30 minutes

While I certainly understand if cuts are required to balance the budget, the overall approach could cause a death spiral right when activities are projected to start to return to more normal in January 2022. Running trains every 30 minutes would discourage many prior riders from returning. Likewise, closing stations like Smithsonian which are key to enabling tourism or other industries to fully come back, seems extreme. Other cost cutting alternatives should be explored - like maybe having private companies bid to sponsor or adopt one or more station(s) in exchange for advertising in the station or displaying some of their items on display (similar to selling naming rights to stadiums). For instance, Greenbelt station sponsored by Ikea. Those companies perhaps could help pay for the operating costs of the station(s) that they sponsor. And of course, take a second look at labor, administrative, and other fixed costs wherever possible.

30-minute headway is ludicrous for a subway system. You will lose riders to cars.

30 minute headways are not appropriate for a capital area transit system. Even 12-15 is pushing it and should only be considered for very off peak hours.

With the reduced schedule of trains, it is essential that trains are on time.

Decreasing train frequency to every 30 minutes might work for some leisure trips, but would not work for commuting to work, especially if changing trains is required like it is for me..

Life will return to normal in 2022. Your plan will crest massive back up crowds on the platform with 30 minute waits. And as full trains arrive and all the passengers can't get in, it backs up more. We've seen this happen again and again at rush hour and 30 minute wait times will compound this. This is a horrible idea that doesn't take the rider experience or needs in mind.

NOTE: the same every day and no differences cannot also cite exceptions. You do know how language works---right?

I would rather have increased service during rush hour, even if it meant cutting back on weekend service.

Trains must run more than every 30 minutes!! No one will ride metro if it is not run on a frequent basis.

I like coming in DC during weekends using metro. I miss that.

15-30 mins wait between trains will not work for many commuters. Greater frequency (max 10 mins between trains) will be needed once people start getting to work again post-pandemic. Greater wait times will just lead to lower ridership, as commuters will choose to drive, take trains and bikes etc.

Metro as it is is not known for trains arriving on time - trains are routinely listed as arriving and then the scheduled time for a train arrival comes and BAM no train. This is bad enough when there is no rush hour but during rush hour this is untenable. At the same time, given the current decreased travel due to the pandemic, I understand why rush hours trains are not financially tenable right now. This proposal should be altered such that every 2 months the times are revisited with the understanding that rush hour trains will return once there is an X% increase in ridership so that Metro is able to respond faster to people returning to a more normal workflow and coming into the office as the pandemic is addressed

One train every 30 minutes could not possibly keep up with demand, particularly on week days. One train every 3 minutes during rush hour is barely enough to contain all riders any given day. This would also make the commutes of many who work far outside the city extremely precarious, relying on forcing their way onto the one train they need to get to work on time.

I like the idea of less difference between peak and off peak but would rather see more trains overall. Every 15 minutes at most

Rush hour service should not exceed 15 minutes per line.

Train arrival every 15 minutes at stations with multiple lines does not seem like enough.

It's called Rush Hour for a reason! Reducing rush hour service is nuts!

Having the trains and buses come every 30 mins is not efficient because of the long wait time and increasing chance of crowded trains and buses.

Most of Metro riders are day-commuters. We need Rush Hour service.

I think ridership will go back to pre-pandemic levels. If you handicap the system it will not come back because the service levels are not up to par with peoples needs.

If ridership returns to near pre/pandemic levels by January 2022, this plan does not seem to provide for enough trains during rush hours to avoid long waits and terrible overcrowding.

There is not enough frequency, especially if one needs to transfer to other metro lines or buses.

By January 2022, I will be able to go back to the office and, with so few trains during rush hour (7:30-9 am) the trains will be packed and unsafe with people being in such proximity.

Would double my commute

Because of the pandemic I am teleworking, and Im not sure when I will be expected to return to the office. But I assume that around January 2022 I will be transitioning back to work and will need the metro to run at its pre-pandemic rush hour times.

I take the green line, and would like more flexibility when it comes to me leaving work, and arriving at work.

Proposal to operate Metrorail service every 30 minutes

I would assume that addition trains either by length or frequency if ridership increased as COVID become less of a concern

30 minutes is too long to wait between trains. Would settle for 20 minutes during non rush hour.

After I have to return to work, waiting 30 minutes for a train is not acceptable. Has metro considered how crowded the trains will be during rush hour? With COVID 19 still in existence no one will wait to be like sardines on a train. Rush hour needs to remain.

If demand picks up, this would not work. Metro is always one door jam away from chaos.

This would work for me personally but only because I live within walking distance to my office and do not rely on metro for my commute.

If traffic patterns resume along the lines of pre-COVID, passengers during rush hour will have to wait for several trains to pass before they will be able to board. Even with trains running on a rush hour schedule previously, it has often been necessary to wait for a third train with enough room to board.

Thirty minutes between trains makes Metro virtually unusable for commuting to and from work due to overcrowding. DC residents, particularly those that live closer to the National Mall, would not be able to squeeze on overpacked trains.

This would not work if I'm back to working from the office at that point. However, it's difficult to predict if that will be the case.

Start the rush hour again, every train every 15 minutes, period.

This is much more preferable to any shutting down

Suggest that doors remain open longer than they usually do now so that people have more time to exit and enter the trains without having to rush.

not enough weekday trains; see no reason why weekend and weekday schedules must be the same

Crowding and wait times would be extreme if additional trains are not running during rush hour.

Train service needs to be more frequent than the proposed schedule otherwise rush hour becomes a torture. The proposed frequency is absurd. It would make more sense to close the entire system than to proceed with a plan that would not even guarantee space for boarding passengers, whose alternatives would then be to wait up to 30 minutes or find an alternate means of transport.

There are far less riders on weekends. Please don't reduce trains on weekdays.

Reduced frequency would be far preferable to any proposal that reduced active stations or lines. It would further allow a more gradual return to pre-pandemic service once revenue streams return, as train frequency can be slowly increased, as financially plausible.

I very seldom use Metrorail and cannot predict what my needs will be in 2022.

My employer has not given us clear plans for so far in the future. But if I do have to start commuting to work at that time, this plan would hinder my commuting options.

If operating a 30 minute headway operation, a specific published schedule for all stations (not just headway guidelines) will be needed to use the system. This will change the experience in using metro rail from a subway system, to a commuter rail system.

This sounds like way too infrequent service for the Red Line

I require your service on a weekday, rush hour schedule. Close metro on the weekends and keep it open during the week. Trains every 30 minutes isn't rush hour....nor is it even service.

Not sure how this is an acceptable form of public transportation from the capital of the US.

This would largely depend on if the federal government resumes pre-Covid workplace levels. If the government continues to use maximum telework, this would be fine and feasible. If most government workers returned back to the workplace, this would cause even more overcrowding and make it more difficult for those commuting using other connections such as MARC trains. 12-15 minutes can make or break a commuter trying to connect to a train or a commuter bus, this 15 minutes could make a commuter journey 30 minutes or longer depending on schedule times.

I know some work places will remain virtual, but I suspect that a good amount of the Federal workforce will be back in the office if not full-time then at least half-time. Given that the amount of Federal employees taking Metro is quite high, I think the proposed timings of trains won't work for the rush-hour time period. Trains will be crowded and those people waiting at either end of the downtown stops will not be able to get on a train (i.e. DuPont Circle heading towards Grosvenor and Union Station heading towards Silver Spring). You may need to do adapt the rush hour timings to accommodate.

By January 2022 I fully expect to be commuting again with everyone as before. This is when we will need full service operations again as it was in 2019. We can't have less trains and have it be incredibly packed- it was already too packed during rush hour commutes in 2019.

You should not have to wait 30 minutes for the next train to reach a station that takes 45 minutes to travel (example: Union Station to Wiehle-Reston East). This adds additional service disruptions and makes the service less appealing. Why not consider every 15-20 min. Consider turning Silver Line trains before Largo to add more service past McLean.

There's nothing more frustrating than waiting a long time for trains and buses. If this happened, I would probably abandon metro completely.

Proposal to operate Metrorail service every 30 minutes

Im not sure how they would be be fair to run the red line more frequently than the other rail lines. Do they pay increased fares for this? They should if you are going to cut the service for other lines, but keep they more or less the same in one swath. If that swath is busier than others, then they should pay extra.

This will cause much more crowded trains in a time when people will be trying to go back into offices (myself included) and I will feel unsafe.

We are lcoated near East Falls Church and use the Metro mostly to reach Rosslyn or points in DC, so service every 15 minutes would work well for us.

The effectiveness and efficiency to use metro will be greatly diminished. Use a vehicle will become the better permanent choice.

In theory this works, its not hard to remember to be at the station on the hour or half hour, but it is hard to know the impact of everyone returning to work and how impacted the trains would be as a result. If the change to service could be conditional, as in reviewed and reevaluated on a quarterly basis, that would be preferable.

This doesnt make sense during rush hour and will lead to overcrowding on trains. Ridership likely will go down due to extensive wait times.

I am an essential employee who is required to show up in person and cannot telework. This schedule would seriously impact my ability to get to work on time and lenghten an already long commute.

I expect to commute from Arlington into DC on weekdays and waiting 15 - 30 minutes would make it more difficult to arrive on time. I don't hate this, but it wouldn't be great or my first choice.

I think this would work if there was a very easy and accurate way to check when the next train is arriving to plan accordingly. For example an app that had up to date (delays, early arrivals, any changes to schedule) schedule of when the next trains (for up to an hour in advance) were arriving

Why would I wait 30 minutes for a train when I could drive from my house to downtown in 30 minutes. Under the pre-pandemic schedule, it took me 1 hour to get downtown. Thats bad enough. Why add another 15-20 minutes to that, each way?

Having trains come so infrequently during rush hour will make commuting almost impossible. When Metro trains were delayed during rush hour pre-pandemic, trains would be packed with people and it could take over an hour to make a 25 minute journey. This is not a sustainable way to improve ridership next year. Most people with any flexibility in their work will choose to take another form of transport or work from home instead.

This would be ok, but is obviously less than ideal. I would have to check schedules before going to the metro station.

by having train intervals increased - only will cause more people to be crowded on the platforms. trains will be packed. then people will need to wait for a long period of time especially since trains may be already packed by the time they arrive at the Pentagon or Pentagon City. during rush hour - trains should come as often as possible. the proposal works fine for non-rush hour -since people can plan ahead

It will work but I would prefer more frequent trains as before

This would not be workable if ridership returns to pre-pandemic levels--trains would be extremely overcrowded, resulting in passengers not being able to get on trains at some stations because they would be at capacity, and then individuals having to wait 30 minutes for another train to arrive, which could also be full. Also, for riders such as myself who live out in the suburbs who have an hour commute into DC, if we missed our train, wed have to wait 30 minutes for the next train, making us unacceptably late for work. This is an absolutely unacceptable proposal and is very poorly thought out.

This proposal would render Metro largely unusable for myself and likely most individuals who rely on it to get to work and school as well as for running errands.

It will be crowded and lengthen commute , but I'd be willing to make sacrifices to help metro survive

Pre-COVID, the trains ran every 5-10 minutes at Grosvenor during rush hour. I think the 30 minute delay would affect workers arriving at their destination on time and transferring at downtown stations.

If ridership suddenly increases because of mass vaccinations, this proposal would be a nightmare for riders hoping to catch the next train.

30 minute intervals would make planning my commute and being on time very difficult

My main concern would be, upon return to in-person work at my office downtown, commuting via metro would not be a viable option, even on the red line where trains would arrive every 15min. While I dont think we will return to 100% of the commuter population that existed pre-pandemic, I do recall trains sometimes becoming extremely packed when there was a delay as little as 6-7min between trains (rather than, say 3-4min). If trains only arrived every 15 min, I imagine most people would try to catch one or two specific trains during rush hour to make it to work on time. Otherwise, if they cant get on those, they have to plan to arrive to work much earlier than needed via an earlier train, or late.

We need to get one driver cars off the road. They waste precious fuel and increase pollution

Every half hour during rush hour is too far apart. People would be lingering longer in the stations waiting for trains and spreading germs. Also unless you run on a perfect time schedule, riders could be left waiting 30 minutes for a train, having missed one that left a minute early. Or miss a connecting train if their train is a few minutes late.

Every 20 minutes would be better.

Proposal to operate Metrorail service every 30 minutes

30 minutes is not frequent enough to reliably support train access for all riders, although I agree that there should be no difference between rush hour and non-rush hour services.

This is not adequate for getting the entire city to work and moving around the city.

As an avid public transport user I was disappointed in pre-pandemic times at the unreliability and infrequency of WMATAs service schedule- it is not reflective of being the capital city's transportation network. It trailed far behind New York, Berlin, London etc. To now consider even poorer reliability of service and frequency is incredibly disappointing and concerning.

The wait time should be shorter during the rush hour, at least by half.

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

No, this will not work for me as a young person who is very much planning on using the metro as my primary source of transportation in 2022 because I do not have a car, nor can I afford to buy one. At that point, I largely expect to feel safe enough to go about the city, which includes going to work, going to dinner, fueling the local economy, etc.

While this proposal may be considered equitable given riders access the vast majority of riders use the Metro during the weekdays for work. I work downtown and even with a plan/advanced schedule for getting an Orange or Blue train, the schedule would deter me from using the train or bus.

I largely use the orange and silver lines to go from East D.C. to West Arlington.

This would drive people with options away from Metro and into private automobiles.

So much time btwn trains is inconvenient.

Thinking back to before COVID, when everyone was commuting into the office, even trains that arrived every 3-5 minutes were overpacked and crowded. People frequently had to wait for another train. Delaying all trains with up to 15 minutes between them would only increase how packed the cars would get - and during a time when we are all now more cautious of not standing too close to others. Even once we are all vaccinated from COVID, we are now much more wary and concerned about the spread of viruses. The last thing we should do is force people to breathe on each other in a confined indoor space. More cars at a more frequent pace mean less people on the cars - which is better for everyone's health and safety. Please consider health and safety. Please consider that this will make people late for work. This could cost people their jobs when so many rely on public transportation. Now is not the time to cut this back.

Trains should run at least every 15 mins for stations with higher ridership. Schools are expected to open in some capacity starting next school year and teachers and students will need the train to get to and from school on time.

This sounds absolutely terrible making metro harder to operate and more inaccessible completely would ruin metro experience making it harder to go to work also if this would be implemented I would expect a decrease in fares to go hand in hand with decrease service

I believe this would be a misguided approach and make Metrorail almost completely unusable while still incurring operating costs because of the complete lack of convenience with regard to train availability.

This is not frequent enough to be reliably used and counted upon. This is more like a commuter rail service than a metro system.

If you expect the DMV economy to be up-and-running in January 2022, I don't understand how you expect people to commute while waiting 30 minutes for a train.

Off peak head ways of 15+ minutes on a rapid transit system are unacceptable.

Too much reduction. Other than late evenings service frequencies should not be any more than 15 minutes.

Concerned that trains would be too crowded while the pandemic is still an issue.

A train once per half-hour during Rush Hour is unacceptable for a public transit system ANYwhere, post-COVID or not.

If the times were consistent every half hour while inconvenient but could work if the times were well publicized.

I ride Metro from Shady Grove station to Farragut North station several times per month for doctors appointments. 30 minute intervals from Shady Grove would render Metro useless to me. At 30 minute intervals, I would definitely consider driving and paying high parking fees in downtown DC. Driving to downtown DC from my home is convoluted; therefore, I'd rather take Metro. I'm committed to public transit, but as mentioned above, I'd have to abandon Metro as being useless for my travels.

There should be a difference in arrival between rush hour and non rush hour periods to prevent overcrowding. 30 minutes is too long of a wait, 15-20 minutes sounds more reasonable and prevents overcrowding, and can prevent customer dissatisfaction.

By January 2022, hopefully we will be back to working in the office. Rush hour will be crowded and unsafe with this schedule.

Too much time to wait if you just miss a train. Furthermore, this will potentially make for very crowded trains. I believe some level of social distancing will need to remain, for quite some time.

Are you serious? This is going to make so many people late for work constantly. Each train will also be more crowded.

Proposal to operate Metrorail service every 30 minutes

30 minute headways do not provide a mass transit service. It is a commuter rail level of service, but with transit-sized vehicles. There would be no point in offering this service at all. I understand that there is uncertainty about demand looking forward, but by January 2022 commuting activity is likely to return to near-normal levels. WMATA should be basing 2022 projections based on 2019 data, not 2020 data. Using 2019 ridership levels, 30-minute headways would not provide sufficient rush hour capacity.

Weekend travel has been very unreliable. Train arrivals vary between a few minutes to more than 20 minutes. Having a consistent schedule will be great. I would prefer a more frequent schedule but I can live with 15 minutes.

Realistically, the trains are going to be overcrowded at rush hour, even if you run all 8 car trains. Moreover, i need to transfer from the red line to another line to get to Lenfant Plaza each day. This really burdens the transfers and will make me much less likely to use Metro.

During rush hour I can imagine station platforms becoming unbearably full. Its very difficult to guess what ridership will be like as the pandemic subsides.

In this scenario, I would continue riding metro as my primary means of transportation, but it would be frustrating, particularly given that I usually have to switch lines..

We already wait for long times when there are delays on metro lines

This would not be good for rush hour service.

My prediction is in January 2022 life will return to normal. Metro needs to be reliable.

This timetable would cause further crowding inside metro cars. I would consider a plan which included more trains during peak transit times with the 30 minute timetable during other times.

Every 7-9 minutes would be better for commuters

Too limiting and prolongs travel time; this will further decrease ridership!

I expect that the pandemic restrictions will have been lifted and morning and afternoon/evening rush hours need more frequent train service.

Thirty minute headways wont get anybody to work on time. Theyre not even appropriate for the weekend. Why take metro at all if it will take you an hour to get anywhere.

With train operating every 12-15 minutes many people will most likely become late for work. A lot of metro rider catch train and bus.

These wait times are very long. Considering that on weekends there are always issues and the wait times are even longer.

With this frequency of arrivals, trains will be more crowded and trips will take longer - especially if I have to transfer from one line to another.

Love the fact that we can hop on the silver line at East falls church to go to Tyson's corner and Reston

I am lucky enough not to need to travel at rush hour, but friends and neighbors do, and I would worry about overcrowding on platforms and trains. Apart from the health and safety implications, the more unpleasant the Metro experience is, the more likely people who can will find a different way to get where they're going.

The trains are not reliably on time enough to count on getting anywhere on time with 20 minute headway. Additionally, even if half of previous commuters work from home or find alternate transportation, trains will be twice as crowded as they were before the pandemic.

Does this include opening time being the same? Weekday or weekend? What would that time be?

So long as service is provided at every station along the Orange and Silver lines, this plan would be acceptable.

The morning rush hour dc inbound trains are already completely full when they arrive at Twinbrook (back in non-Covid times). So you are saying if a full train arrives, you need to wait another 30 mins for the next train, which will also most likely be full. No one in Rockville would ever get to work on time.

With well published time tables, i think this proposal is adequate to bridge the gap in allowing people to use metro while we wait for ridership to increase.

With the increased vaccination efforts by the government, I expect to be back in the office by 2022, and I similarly expect a high number of other companies/commuters will be back to commuting daily. Dropping the increased operation during rush hour will result in a lot of delay to those of us trying to commute on crowded trains and drive ridership down as people who would commute via metro are forced to find alternate means of transportation in order to ensure they can consistently arrive to work in a timely manner.

That is far too much wait time if you miss your train.

We are talking about the nations capital metro system and not a suburban train line.

My wife and I are not willing to wait up to 30 minutes for a train.

Trains arriving every 30 minutes will make travel more difficult to people who use it to go to work as they may use other types of transportation to get to the metro and they might find themselves waiting for as long as 30 min in a train station (something that will be not desirable at all during specific times of the year, like when its raining or snowing). Also, this new proposal means that trains will be more crowded and people would not feel comfortable taking the metro during COVID-19, thus considering other types of transportation which may lead to even less ridership for the metro.

If this materializes, you will need to ensure the live schedule is well distributed to Google Maps, and transit planning Apps.

Proposal to operate Metrorail service every 30 minutes

Horrible for commuters that need to get to work on time. We need more frequency of train service.

This would clearly be incredibly unworkable for anyone who needs to get to work at a certain time

In general, I would be far less likely to commute regularly using metro if headways were increased during rush hour. Schedule reliability would be of the utmost importance in my consideration, but even superior schedule reliability is less desirable than frequent trains.

This is a disastrous idea that will put commuters in horrible jeopardy. This is going to increase crowding within the stations, especially during rush hours. Nobody will respond well to this.

I bought this condo because I would have the Metro right at my door.

If there is any kind of regular return to the office, trains running every 15 minutes would be woefully over-crowded and insufficient.

Waiting on an open platform in all weather is onerous. Adding so much time to a trip makes it more enticing to drive to my destination, even though I prefer to support Metro and reduce vehicle miles. I have bad knees and find standing on a platform very painful. You should be shortening the wait times between trains, not lengthening them. How about more frequent trains that have fewer cars?

This would make it more difficult to get to work on time and would extend my workday (thus impacting my dependants care). It would also make it more difficult to take time from work to get to doctors appointments etc.

I cant imagine doing rush hour 2x/day with this schedule.

Im dependent on a single line (Silver), and trains running only every 30 minutes means very little forgiveness from a commute perspective.

Waiting 30 minutes for a train is absolutely unreasonable. I believe this will cause more people to stop using metro all together and opt to drive if permissible.

30 minutes would be too long for rush hour times of normal workday hours. However if trains are on time and the time interval is set for each station, then it is doable. However this is contingent on proper communication over when trains will arrive/depart at each station.

I take a bus from a park and ride lot to the Pentagon bus station, then transfer to Metro. With service cut, I would spend up to 30mins waiting for the metro if my bus is delayed and missing the connection. This could be as much as 60 additional just from the Metro each way, each day.

I think we do still need rush vs non-rush service. I am unsure how much an effect coronavirus and teleworking will have by 2022, but I know my workplace is eager to have people be physically in the office. Pre-pandemic, rush trains were often full at the schedule they were operating at before so I dont think this plan is sustainable. Off rush I think every 15-30 is fine.

Its not ideal, but this proposal is workable, and would still mean I could get to work and around the city.

There needs to be more frequent arrivals during rush hours of weekdays. The proposal is fine for weekends and holidays.

During winter months itll be cold to wait at the train station if the interval id 30 minutes

Every 15-20 would be preferable

It would take a lot more time to commute because I have to transfer onto the red line.

I'd prefer having more frequent trains. Running every 30 minutes could mean missing picking up my kids in time before daycare closes. I've always been grateful trains ran more frequently because if their schedule was a little off I knew I'd only have to wait a maximum of 10 minutes or so and another would arrive. Running every 30 minutes could also mean more crowded trains so if you wait 30 minutes for a train, can't board it because it's overcrowded, and then have to wait another 30 minutes that would definitely not work.

If you do this, you turn Metro into a commuter rail for anyone outside the city center. In that case, there needs to be a schedule thats followed ... people need to be able to say Im going to take the 7:30 train downtown, arrive at 7:25 and get right on the train. You need a timetable thats adhered to. Thats the only positive that could balance out the negative of cutting service back so much.

The schedule should be determined based on volume. Once more people start commuting again, the schedule should reflect load. If every train is full after the first few stops and there isn't another one coming people will have to find alternate transportation. This would doom the system and metro's closure would become a self-fulfilling prophecy.

This is ridiculous for those using metro to commute to work, especially with your awful track record of arriving on time.

Reduced times will result in crowding at stations

Will the trains adhere to a published schedule, and will the schedules be coordinated to allow convenient transfers between lines? If so, maybe this would be OK. But if not, this is unacceptable. Nobody wants to wonder whether theyll be standing around waiting for 29 minutes for the next train.

Delays on this schedule would make it impossible to get anywhere on time. Populations who have no options outside of public transportation to get to work and/or school will be severely affected.

Proposal to operate Metrorail service every 30 minutes

I primarily use the buses to get around the city.

Less convenient. More care would be needed to plan commute, but workable.

No, I expect to be using Metro much more in January 2022. I want to use Metro to cut down on my personal carbon footprint and to travel to work, restaurants and other landmarks.

I need metro and bus service. I ride the metro and bus to get to and from work. I cannot afford a vehicle. Full metro and bus service is crucial to me being able to provide for myself.

Cold waiting in the winter plus if I miss a train I would be late to work

30 minute intervals will lead to excessive crowding at peak times; full trains will mean a wait time of up to an hour, likely causing commuters to abandon metrorail as a transportation source and further driving down revenue

You have consider. Us. The seniors Disable. &. Low income people. that leave from the public transportation. To go to various needed places. Like. Going to Drs. , work. So before you make decisions off this nature you need to survey this people before you do this changes.

One train per 15 minutes does not seem feasible during commuting time once more people go back into the office, or during sporting events / special events

Nobody is riding right now because of the pandemic. Running 80% schedules right now is wasteful. To run 80% schedule now and then drop to 30 minute headways when people are returning to work from the pandemic is incredibly foolish and shortsighted. It will only ensure that people do not return to riding metro and serve to further destroy the network. To hit a balanced budget, cut service drastically now and then bring it back gradually when people are returning to work. Should have been done six months ago.

Seems reasonable, although the delta might get a bit long. Seems workable.

30 minutes is a long time to wait for the next train!

I believe it is unnecessary for trains to arrive every 15 minutes between Grosvenor-Strathmore and Silver Spring stations during NON-rush hour periods.

I would like to have a train running every 10 min on red line.

My commute requires two train changes: Orange to Blue and Blue to Yellow. The additional wait time between trains is added disincentive to Metro use.

It look like you plan on dismantling most rail and bus service. Do you know when you are shutting down the whole system to be replaced by self driving vehicles which will pick up each rider at their house and transport them to where they want to go.

Orange, yellow and blue lines end in different areas. Without guaranteed shorter intervals metro becomes a commuter train, ensuring loss of timing flexibility it provides. Convenience and reliability to get to work on time is lost.

15 minutes I think is a long waiting time.

Worried about Crowded stations during rush hour. What do you do when a train is at capacity? Can you limit the # of passengers waiting on platforms?

It would take me too long to get to work. I would need to purchase a car.

peak times important

Metro Rail is vitally important to me accessing all that DC has to offer and it allows me to keep my car out of the city.

I am ok with a longer wait time for train service if it means metro will save money and not close stations I need in order to commute.

If it's possible to maintain running every 10-20 minutes it would be better than 30.

Closing Arlington Cemetery is like closing the Smithsonian or National Airport stop. It should not be cut but have trains stop there maybe once an hour.

My work is beyond Grosvenor-Strathmore, and trains only every 30 minutes will make my commute much more difficult, and lead me to perhaps purchasing a car. This plan will also severely negatively impact the travel I do around the city with my toddler. The idea of waiting up to 30 minutes in a station with a toddler is entirely unappealing.

30 min apart would not work I'd miss my transfer to my Ride On bus

I would only accept this if Metro was able to guarantee, or at least within a reasonable limit, the 30 min arrival times. For instance, if I hustle to a Metro station to make a 8:30 am train, to only find out that its arriving early or 15 minutes late, this adds an unfair extra commute time.

I live on the green line and if I arrived just a couple minutes late to the station, having to wait 30 minutes for the next train would make me seriously late to work

This would have a huge impact on ability to get to doctors appointments and other important errands

This is completely inflexible. People will be late to work and lose their jobs. Underserved populations rely on public transit.

Most DMV residents will be vaccinated by June 2021. Workplaces will reopen and work commutes will resume. This plan will result in ultra-crowded trains during rush hour.

The proposal would substantially increase overall travel time, waiting time on platforms and crowding. On a trip that involves a transfer, it wouldnt be feasible to use Metro. Terrible idea.

Proposal to operate Metrorail service every 30 minutes

Having to wait 30 minutes between trains would be a severe inconvenience as I have multiple mobility issues that waiting that long of a period would cause additional physical problems

I used the Blue, Orange, and Silver lines extensively - when I was employed (Fed-downtown DC). I am now retired. Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

This would work much better with increased communication/availability of information on train arrival and departure times. For example, with times updated on apps easily accessible on phones or posted video boards outside stations.

Work for you is an odd way of phrasing it, but certainly lengthening the wait between trains would increase travel time and complicate logistics in switching from one line to the next. In terms of getting to appointments timely, much more lead time and margin for error would need to be added, so it seems like an extended commute would be the norm, rather than the exception, and would make using metro more time-consuming and complicated. This, in turn, might reduce ridership. If, for instance, I needed to get to an airport to catch a plane, something I have regularly used metro for in the past, I might very well choose to take an Uber or taxi, rather than risk being late because of the possibility of delays, missed connections, and an earlier start time.

I live in Virginia, I need buses to go to work. I take silver line unless if I am let from work

This makes metro comparable to the bus system.

Although we are currently under COVID restrictions and therefore offices, when NOT under COVID restrictions my husband and I both use metro daily, including on weekends.

That plan is not ideal but workable. What I don't understand is why the plan is to have these changes go into effect a year from now when business is going to pretty much go back to usual levels of travel before covid. This plan should go into effect right now and then add more service when the metro gets busier in 2022.

I would likely continue to use metro under these circumstances as long as the nexttrain information on the wmata website (and on a number of apps) was consistently accurate. If it became hard to predict when trains would actually arrive, I may have to consider alternative transportation.

This is a practical change, although once in the boundaries of The District it does seem a little sparse.

Too long of a wait time for commuting to work.

30 minute intervals is far too long. If you expect people to wait 30 mins for a train you are mistaken. They will leave and catch a uber or Lyft.

By January 2022, hopefully most offices will have reopened. Trains every 30 minutes will be impossible to get on because of overcrowding. Decisions for 2022 cannot be made based on ridership during the pandemic.

If you want ridership to rebound post-covid, then you cannot run trains so infrequently. They will be crowded and people will miss connections, lengthening the areas already long commutes.

I think during rush hour times we should get trains every 10 minutes

That is far too long to wait for a train in the morning. The cars would be overflowing to an absurd degree

It would be inconvenient and challenging but we would still take Metro. You would need to increase security in stations if people have to wait there longer-much more time for riders to be harassed or threatened while waiting.

Trains every 30 minutes is certainly not ideal

As trips become longer due to increased intervals, I may have to choose other options to arrive at my destination on time.

My evening commute involves a transfer from the Red Line to the Yellow Line. Under this proposal, if I just missed the Yellow train at Gallery Place, I could potentially wait up to 30 minutes for the next train. That would more than double the duration of my rail trip.

Weekday service is more important than weekend service for people getting to work.

Given the circumstances, it would make sense to run Metro more like a regional rail service than a subway service. In addition to 30 minute headways, Metro should publish a schedule and run the trains on time.

I am upset that the only 15 min headways are on the red line - a line that serves the wealthiest and the whitest in our area. I am fine with the same schedule every day. And while I understand the need to meet a budget .. but reducing service to 30 min headways means metro will not be a viable transit option for too many trips. You will not be serving our community with this cutback.

I would think it would be better to have more frequent and convenient service during rush hours even if it means less frequent service otherwise. Like, every 8-10 min during rush hours but every 45 at other times. I'd expect ridership to go back to somewhat normal (if not quite 100% the same) when things open up again and if you don't capture commuters, there's seriously no hope.

Proposal to operate Metrorail service every 30 minutes

It all depends on whether or not the trains are synced with transfer stations, i.e., going from Red to Silver/Blue/Yellow

By January 2022 travel should provide pickup close to previous levels.

No difference between rush and non-rush hour seems stupid. Doesn't increasing service during rush hour still make more sense as it allows for more passengers and thus more revenue to offset increased operating costs during that period? Decreasing flexibility in this regard does not seem like a smart way to get as close to producing at $MR=MC$ as possible, and thus doesn't make a whole lot of economic sense.

It would cause huge crowds on the trains during weekday rush hours - potentially endangering passengers. People would avoid it during rush hour because of this at a time when your ridership (and fares) would be higher.

Please ensure that Grosvenor-Stratmore station remains open. It is one of the critical stations not only for people who live there but for many who do park and ride!!!

Work schedules would be compromised with the weekday schedule that is proposed.

As businesses reopen fully this method will not work during rush hour.

It would be possible to make it work, but as I anticipate ridership increasing once a critical vaccination rate has been achieved (that's what I'm waiting for, for example), half hour waits would lead to Tokyo-style packing of trains. Would 15-20 minutes be financially possible. The difference could be huge. Also, if there's only one train every 30 minutes, and I'm entering a station and hear a train coming in, I'm naturally going to run like hell to catch it, risking injury to myself and anyone else who is in the way. At 15 minute intervals, such a rush to catch a train isn't as crucial.

If the schedule is well published and can be trusted, the frequency is not a problem, more like a commuter rail schedule than like a typical subway schedule where people don't think about schedules...they just show up. This would take an unusual commitment from the system!

More trains plz

I expect to be back at work by January 2022 and will drive if there is 30 minutes between trains. This is too long to wait if there is a service disruption or I just miss a train.

It's fine for me because I'm on Red line. But for goodness sakes, how are you going to get people to want to use public transportation if the metro only runs every 30 minutes?!

Overcrowding on trains during rush hour and after sporting events. People will get hurt.

A reduction in service frequency may result in crowding on platforms and on trains if commuting patterns return to normal faster than expected even with there still being some significant danger of contracting COVID-19. WMATA will need to communicate the levels of crowding in stations and on trains to let commuters know in advance whether to risk joining the crowd or choose an alternative mode of transportation that day.

30 minutes is a very long gap for metro service.

It's reasonable to start with this proposal and then adjust as needed once actual data is collected from ridership levels.

Then the pricing needs to be the same. No increase fare during rush hour and no more six car trains. Eight car trains to accommodate more people.

30 minutes is laughable. We need very frequent service at all times to make this system usable

By January 2022, most people should be back to in-person work. Every 30 minutes is too slow and too infrequent for commuters. In addition, there will be issues with overcrowding, which is awful itself, but especially when the trains have mechanical issues.

Please keep metro running and request help from the Federal Government as usual. Wishing metro always success

Depends on when people resume regular work. impacts a variety of people who use public transport for jobs and assumes people have alternative options eg cars

At least for the Red Line, where I live, that seems good. Might not be the best for the Yellow and Green lines, though. The Green would be important for a lot of lower income and college students.

This is absolutely egregious. The trains are already infrequent enough to seriously disrupt my day and add to my commute and because of these proposed changes it may now take an additional 45 minutes each way. That means 1.5 hours less per day that I get with my family, an additional 30 hours a month! It is criminal that we pay for this service and this sort of cutback is not acceptable.

When I need to start going back to the office, my concern would be a lengthy commute with these timelines.

During rush hour, I have significant worries about trains being too crowded to board (as I expect that metro usage will have recovered significantly if not fully by January 2022). And with trains running every 30 minutes, not being able to board a train would mean metro would no longer be a viable option for my commute.

I believe it is a reasonable proposal balancing the need to providing enough train service and reducing costs

Thirty minute headways would not be acceptable for my commute to and from the McLean station that is Silver Line only.

Proposal to operate Metrorail service every 30 minutes

This frequency of trains is not at all adequate if Metro is to remain a reliable way for people from around the DMV to get to and from work. One train every thirty minutes is not enough for people trying to get to their jobs and other time-sensitive commitments. This could drive people away from using Metro.

When this is considered in concert with the proposed station closures, I can only imagine the crowding on station platforms between trains. Why do this when commuters should finally be returning to work (circa 2022)?

To have trains arriving every 15 min during rush hour would likely be disastrous. If ridership increases back to levels similar to before the pandemic, depending on where you get on the train, trains will be completely full and individuals will never have room to get on because there will be significantly more people for too few trains.

30 minutes is not frequent enough. We need to create more incentives for ridership, and that starts with increasing service so people are less likely to take cars/cabs/ubers that increase street traffic, carbon emissions, and pedestrian injuries/deaths

This massively reduced service schedule will create unbelievable overcrowding during evening and morning rush hours. Assuming demand approaches pre-pandemic levels, passengers will not only have long waits between trains but those at stations close to the district may at those times will be deprived the opportunity to board as trains will already be totally full. How can you propose the same service schedule for Sunday afternoons as weekday rush hours? Absurd.

So not every 30 minutes on the weekends? Nothing like missing the transfer by 1 minute and have to wait 29 minutes. Or even 14 minutes. I wish your times on your site were accurate. Usually off by 2-3 minutes and then I'm 30 minutes late.

I live near a stop with multiple lines, but commute to work where there is a single line (Silver Line) potentially having to wait 30 minutes for a train during rush hour makes metro nearly unusable.

Intervals of 30 minutes between trains at rush hour would cause overcrowding and would be very inconvenient.

This will make it very hard for commuters and have folks deciding to drive downtown rather than wait. Not what we want!

Prefer more service, but this option is passable

Due to the long ride between my departure point (Grosvenor) and downtown DC, it is imperative that I have an option to be seated. I currently wait for another train if there are no seats available. If the number of trains are not increased during rush hour, it will be nearly impossible to ride and have a seat. If this is the case, I would probably opt to drive instead of using Metro.

seems like a lot of time in between trains during the work week.

I think these reductions in service time will increase crowding on the trains once ridership returns to normal / near normal.

I get on board in Clarendon...one of the last few stops before morning commuters start disembarking at Rosslyn and the DC stations. When trains are spaced 7 minutes or more apart, the passenger traffic builds to the point that there is no room in the cars for Clarendon (and Courthouse) passengers to board. But I've been teleworking due to COVID - perhaps that has changed.

30 min is too long between trains. It is difficult to get on a train during rush hour this would make for a very long commute

Waiting 30 minutes between trains is a really long time

Main concern with this proposal is overcrowded trains as more people return to work full time.

For years I have used wmata.com to plan travel around train times, Spacing the trains farther apart will work for me.

I would 100% completely STOP riding Metro if I had to wait 30 minutes for a train. During rush hour, the most I'll wait is 8 minutes. After rush hour, the most I'll wait is 10 minutes.

its unclear whether this applies to overlapping lines (e.g., orange, silver). I live at a station that services both Orange and Silver and if between those two, service was at least 15 minutes during rush hour, that would be OK.

The platforms would become so crowded that it would be dangerous, especially for older people and people with disabilities. Also, crowding would spread viruses, and not just COVID. Flu, Norovirus, etc.

I remember during rush hours trains every 2-3 mins werent enough. This proposal should consider rush hours and weekends not a single schedule all days.

While this plan would work for me personally (because I can bicycle to most my destinations if needed), the proposed reductions could result in dangerous platform crowding during rush hours. More people would be more likely to abandon Metro instead of using it, creating a downward spiral of revenue and ridership and driving up incentives for cars, creating all kinds of cascading problems for the city.

This is a rational plan going forward.

Its not a great plan. In most instances, the length of the wait would probably be longer than the trip itself. At that point, it doesnt make sense to take Metro. Id drive.

If this is an interim solution until we can move through the pandemic, maybe okay. If permanent it seems to mean we are eliminating Metro train transit in the DC area.

Proposal to operate Metrorail service every 30 minutes

If the trains run on a predictable schedule it will work. That is if they reliably reach a station on the hour and half hour so that I can time my arrival. However, if metro runs the way it usually does with a completely unpredictable schedule, it will not work and I fear having to wait a full hour before I can get on a train.

Yes. It would keep my station (Grosvenor-Strathmore) open & working. They want to redevelop Grosvenor and without a Metro here it would be devastating.

It will take time for passenger counts to return to pre-pandemic levels. Moderating service in some form to better match revenues with costs will be necessary, but should be undertaken with the ability to promptly increase service levels as passenger counts increase.

that doesnt make any sense

Hey, certainly better than nothing. Doesnt take service away from anyone on the outer edges of the WMATA map, which is important.

Less service and longer wait times doesnt make me want to take the train more often, which wont help solve your budget issue.

Delays in arrival times during the week would impact riders commutes negatively.

Less frequently than every 15 minutes would not be adequate.

This would cause trains to be even more crowded than before and make commuting awful. If there were any delays one could be over an hour late for work with these changes

This would be sorely inconvenient for work commuting purposes.

the plan would work only if trains arrived exactly as expected

You will have even more of a drop in ridership because there will be too many people commuting when covid restrictions lift and they won't all fit in the trains. I will not wait an hour to catch the next train. Commuter times must have more frequent trains. C

This would force me to have to drive to work. Waiting 30 min in between trains would mean I wouldnt make it home in time to pickup my kids from after-school care and make it on time to evening appointments, events, etc. I would also anticipated massive crowding on these trains - if you dont make it on to a crowded train you would then have to wait another 30 minutes! That renders metro completely unreliable.

Metro needs to get back to the old schedule ASAP since there will be vaccines for all by end of Summer

Orange line trains were already significantly overcrowded during morning rush pre-COVID. That ridership will return and crowded platforms and jammed trains are both dangerous and the cause of even more delays and maintenance issues.

This will just encourage more people with cars to drive. What is the point of a public transit system if it cannot deliver you to work without wasting your time. I wont want to hear the message, wait for the next train because this one is too crowded if trains will be as infrequent as described. Moreover, if you expect people to treat each other in a civilized manner on public transit, you cant create conditions that will cause people to behave otherwise.

If you think folks who have to get to work on time are going to be happy having to wait an extra 12-15-30 minutes for a train youre absolutely out of your mind! Most commuter/govt riders, especially those who live out west and are STILL WAITING for the Silver Line to open, already put up with construction delays, parking fares (dont even get me started on how MESSED UP the parking garages are to enter and exit during rush hour! Who ever designed Whiele should be fired immediately!!!) and other delays are NOT going to get up earlier to get a train or have to wait an extra 30 minutes for one during commuting times. You WILL HAVE fist fights on the platforms if trains are running scarcely and the train pulls up and there is no room during rush hours. THis is a BAD idea..... re-do your budget, make cuts where you can...Im sure the HEAD OF METRO could afford to take a pay cut!!

Acceptable as long as the ridership remains lower than normal so as to prevent platform congestion.

Need more frequent trains on weekdays for commuting to work

What about trains beyond Grosvenor?

I primarily use the silver and orange lines

This works for me because I am retired and dont use Metro to get to work. If I was still working, 30 minutes between trains would be a huge problem and I would probably drive to my former workplace instead of commuting by Metro as I did beginning the 80s.

I'm planning to commute using the green/yellow line transferring to the red line. I would have to see the changed schedule to see if it would impact what time I would have to leave. This proposal will likely add much more time to my commute and make it much more crowded.

longer trains/more cars to accommodate passengers as needed as pandemic eases

30 minutes between trains would result in fewer riders. Mass transit has to be more convenient

The timing is all right. I would have to plan ahead. I live in Cleveland Park and I am over 65. I ordinarily use the metro often. I live only 1.5 blocks from the Cleveland Park Station and I definitely need it to get around the city.

Metrorail should provide a schedule to minimize wait time and hourly parking costs

Proposal to operate Metrorail service every 30 minutes

The would make it very difficult to use metro to commute to work. The effect will be to increase traffic, and in turn pollution and parking issues - bad for everyone whether a commuter or not.

If were able to go back to work in person and the trains only ran every 15 mins or every 30 mins, that would lead to a lot of problems with commute times and too many people on the train. Pre-covid, our trains were packed to the brim and every 5-10 mins didnt help then. This is not ideal for the work commute at all.

Every 30 minutes is ridiculous. Rush hour is going to be absolutely insane. If I miss my train by 5 seconds Im automatically late to work and have to pay 5x my fare for an uber ride. How can we even all fit in a single train during rush hour if they come every 30 minutes?! No one will ride the metro if the frequency is changed and the streets will be jam packed with traffic. Please, please dont do this.

While this would be inconvenient and require more planning ahead, it would not be of significant inconvenience

Porque si pierdes el metro y tienes que ir a trabajar afectaria mucho y uno llegaria tarde. Tendria que pagar taxi o uber y eso afectaria mi presupuesto

Not sure how I feel about this for morning rush hour. Sounds like I would spend a lot of time waiting for the next train, especially when there are delays.

It would be ok to implement these changes now, given the pandemic, but it is hoped that we return to a more normal work week by January, so we should not plan to implement this schedule in January 2022. Rather, we should have a short-term solution through December 2021, and then implement a return to normal service beginning in January, unless we continue to see continued significant reductions in ridership consistent with the pandemic. We could phase in a return to normal service, depending on growing ridership.

Waiting 30 minutes for a train during weekday rush is ridiculous. That wait is too long and the train would most likely be overcrowded. If I cant get on that train, I would have to wait one hour for one train. Thats absolutely ridiculous.

I use the metro for my daily commute to and from work. Having trains arrive every 15mins at best, and potentially every 30mins, could add up to 30mins to my commute each way, but if you can commit to publishing accurate schedules for train arrival times, then I can time my travel to catch the trains accordingly.

I think it is a terrible decision. Transportation it is a need and a resource to get to employment., family and other activities. Having public transportation it is a way to provide equity to the citizens. Not everyone can afford buying a car. Some people may have a physical disability which impedes them from driving and the only way to move from one point to another is having available public transportation.. The county allocated a lot of money to the metro. It is another way to improve and safe the environment.

It sounds reasonable. Im not on the trains during rush hour but feel the same arrival times would be helpful.

I work in Navy Yard, a major employment and population center. 30-min service would make commuting inviable, considering a line change. If there is an opportunity to a shortened green line shuttle (Mt. Vernon to Anacostia, for instance) that would provide 15-min green line frequency in the core, that would be needed.

What is the point of having a metro line if the above proposal is implemented, you are turning the train stations into airports. The above gives zero value to riders (taxpayers) nor their time.

My schedule is more flexible than many, but I always loved that trains ran often and that I could get one soon if I missed the first.

service is to slow

Every 30 minutes is insane

30 minutes between trains on most lines is too long. Making red line more frequent is better, but why not the rest?

What would happen during weekday rush hours if, for example, a fully-loaded train needs to be removed from service due to a mechanical problem or other cause? With trains running in 15 minute intervals at those times, it may take a half hour or more for the off-loaded passengers to be absorbed by trains that follow.

This would double my personal commute, but also make life very difficult for my fellow commuters, especially for those of us without other means of transportation

Train service on Silver and Orange with 12-15 intervals is too infrequent for my needs. I travel to different locations on different days of the week.

I know the pandemic has been hard, but its an insult to have invested billions in creating this rapid transit system to then run trains every 30 minutes. I feel for Metro staff dealing with budget issues and a cash crunch, but the marginal savings of such service cuts are so small compared to the value of frequent service. One good thing about this proposal: having the same level of service throughout the day and on weekends. The thing is, that should be raising the bar of off-peak service, not lowering the bar for everything.

Metrorail is my primary source of transportation. while remote work is an option now, it wont be forever and because I have to transfer trains, thats potentially 30 minutes of waiting every day, each way, on my commute, before actual travel time. the longer the wait, the more people on the platform and the greater chance of passing communicable illnesses. I think at least half that time (7-8 minutes) would be a reasonable compromise

Do you want everyone to stop using metro completely? Because this is how you turn all of DC into drivers.

Im a little concerned that this would cause more crowding on the metro trains than is necessary (i.e. limited seating) particularly during rush hours, but perhaps this could be adjusted again if the number of riders increases once again after covid.

Proposal to operate Metrorail service every 30 minutes

I would prefer to have trains run more frequently to allow me to get home Quicker to pick up my kids from elementary school right as school ends.

Inconvenient but can plan and schedules around it

Like many people in DC, I am teleworking now, but I expect to begin commuting every day to my office sometime within the next year. Trains arriving only every 12-15 minutes will be wildly insufficient for the needs of DC metro riders, particularly during rush hours. Pre-pandemic, it could be difficult to find a train with enough space, on occasion. With this proposal, it would be impossible. It makes no sense to enact this plan and would only drive riders away from the metro to rely more on ride-sharing services.

Weekday rush hour train service needs to run more frequently otherwise train cars will not have enough space for all of the passengers and people will not be able to get to work on time.

I want to come on time because I go in the morning earlier

Do not cut service on the red line. It is already overcrowded. It would be good to reinstate trains that run Grosvenor to Silver Spring only. Only objection is to trains every 15 minutes.

Needs to be more frequent during rush hour. By January 2022, most people will be back to regular commutes.

With plans to move out to the Ballston/East Falls church area this would directly impact my ability to commute into work. I work in Tysons Corner. the Trains dont stay on the platform very long and if I were to be even slightly late to the platform I would have to wait 30 minutes for the next train. that is a ridiculous gap in time that make commuting very inconvenient. you would be doing a massive disservice to everyone who relies on the metro to commute for work.

If I go back to working in person in downtown Dc, this schedule is not reasonable. If most of the population is still working from home, I see no problem

Trains become too crowded, particularly as many industries go back to working in offices in 2022. Also, for special events downtown, sporting events, conferences, etc, regular trains are nearly impassible. Limiting rush hour hours when trains run more frequently may be a better alternative.

I am a resident without a car who relies on the Eisenhower Avenue station for work, etc. Rush hour periods should still be taken into consideration. If not, overcrowding and delays will ensue.

I live near Gallery Place and Metro Center and anticipate going to Braddock or King St. All of those have multiple lines so if each train for each line arrives every 12 - 15 minutes that is good. But, if just one train for one of the lines arrives in that interval that would not work since I have to take the yellow line and would not be able to wait 30 minutes.

The proposed wait times for Red Line trains are too long and would make it less desirable to use Metro, as it would add at about half an hour to your commute.

Thats an absurd amount of time to wait for public transportation in a major metropolitan area. Nobody could count on Metro to get to work.

Stop making all these changes and trains are still DIRTY and kids that should be in school still just Hanging Out in stations. Make the gate jumpers pay or arrest them.

Trains need to come every 15 minutes or so or it is too difficult to plan metro travel to arrive at city destinations from Falls Church.

If this were to happen, it would be especially important that trains arrive when expected.

Assuming we are going to be back in the office by January 2022 (which could be likely) the stations that are closed would present clogging issues at surrounding stations. Also, how are tourists supposed to get to Arlington Cemetery (assuming that they prefer not to take Uber or Lift)? Walk from Rosslyn? That isnt the safest or most straightforward option.

What happens to the service from Shady Grove to Glenmont if trains will be plying again from Strathmore to Silver Spring ? I am a user of Red line from Rockville station so this proposal doesnt work for me, at least at the peak service hours.

What is the rationale of having trains on the Red Line every 15 minutes for stops between Grosvenor & Silver Spring? Is these the most heavily trafficked stops? Are these the most vocal constituents? How does ridership compare to other stops on say the Green line? I understand the need to modify schedules, I would just be curious to better understand why the Red line is receiving an exception.

Depends on the change (if any) in telework frequency for companies and government agencies post-pandemic. If things are anything close to what they were pre-pandemic, the rush hour trains would be packed like sardines at all times, which would eventually cause people to avoid metro at all costs

At 15 minute intervals during rush hour the platform becomes too crammed and dangerous! The trains are packed to capacity during 8 minute intervals how much more so during tourist season. NOT a great idea.

Longer waiting times is acceptable. I hope/assume you can add more cars during busy times.

30min is too long to wait for a train at end stations. If the train becomes even slightly off schedule the ripple effect to people's schedules would make me reconsider metro as best option. Further, I am confused by the plan to have additional service starting/ending at Grosvenor-Strathmore when that station is set to close; what station do you really mean for extended service end point?

Proposal to operate Metrorail service every 30 minutes

I know Metro is basing their budget decisions and this survey on low ridership -- HOWEVER, once more people are vaccinated, the ridership will INCREASE. I am retired, and have MANY friends like myself who used Metro frequently to go to activities, programs, and exhibits in DC. We have not been on Metro since last March because we are at the highest risk for COVID -- but WE WILL RETURN, especially because we don't like to drive to and park in DC. There are hundreds (thousands?) of us here in Montgomery County who would be very unhappy if the Grosvenor-Strathmore Metro station closed.

None

every 15 minute trains is not reliable quick form of transit. Having trains run that infrequently would keep rider volume too low to be sustainable.

By 2022 we will be back to operating more at a normal level. So many of us rely on metro to get to work or around town. Every 30 mins could really make someone late for work or could cut down on people traveling to other parts of the city to bring business to restaurants, bars, shopping centers, etc. You can't based these decisions on ridership now because this is not going to be a permanent state and once we return to normal if you cut back so much on service people that would have used metro previously might be forced to find other modes of transportation, cutting down on your ridership even more.

30 minutes during rush will make Metro unusable. I would have switch to my car.

It wouldn't be helpful to have the same standard times in between trains regardless of weekends, weekdays or rush hour. At rush hour it has been beneficial to have more trains come frequently

This would be very inconvenient, and make riding the metro a chore, rather than an integrated part of my life.

Trains arriving every 15 minutes between Grosvenor-Strathmore and Silver Spring stations would be tolerable if necessary to keep the station open (which is crucial to my continued employment).

I have to transfer during rush hour to make it to work on time and 12-15 minutes would cause a huge delay. Also if I missed my train on the way to work there is no way I would be able to wait 30 minutes for the next, only to wait an additional 12-15 at my transfer station.

This isn't ideal, but it could work for commuting.

too long a wait during times. Trains should come more frequently during peak times

I work in DC. I have been working remotely for a year since the pandemic hit. My normal commute begins on the Red Line at Grosvenor station, switching at Metro Center to Blue/Orange or Silver Train to Federal Center SW station. If I am forced to go back to the office in January 2022 my commuting time could double. With the availability of more vaccines in the near future, I may be forced to commute to my office in DC.

Such a proposal would only work if metro publishes train arrival schedules for every station like the MARC train does. If ridership goes way up post pandemic, metro must be ready to increase train frequency or lengths.

30 minutes is too long between trains Trains would be jammed and possibly after waiting for 30 minutes you might not be able to get on.

I live in Silver Spring, and work in Chinatown, so this would work fine for me. I can manage my schedule as long as trains are running every 15 minutes.

The commute is from/to Vienna, so it's likely the outbound train coming from DC during evening rush will be over-crowded--how can Metro guarantee to get riders home timely?

It sounds fine to wait up to 30 minutes at first but I imagine it would get tiresome to wait up to another 30 minutes when switching lines.

Its inconvenient, though feasible. However, it will only work if the trains stick to an actual schedule. If you say every 30 minutes, it should be 30 minutes with few exceptions. People understand budgetary restraints, but reliability is important for planning. If the service isn't reliable and infrequent, it will be another reason for me to buy a car or take an Uber, versus now where I am mostly using metro.

Thirty minute service would be inadequate.

If just less teains will run, it will be fine. People can move earlier to arrive on time.

This plan would add significantly to my commuting time and make me much less likely to use metro.

On bad weather days whether its hot, cold, raining or snow, some of the stations dont have adequate shelter. Additionally, due to a medical condition, its difficult for me to stand in one place for a long period of time. Longer wait times means crowded trains, missed connections to buses.

Having trains run only every 30 minutes is not acceptable. It would make metro very inconvenient and not a feasible way of traveling.

Once more Covid vaccinations are distributed, I anticipate Metro will return to previous normal levels. Less hours during the week will have a negative effect on commuting to/from work.

With mMetro operating, a pharmacy near Eisenhower Ave. is nearest to me. Also nearest movie venue. Increased intervals between trains not good, Earlier closing time bad. I have no car and do not drive. My work commute depends on metro rail (Huntington to Foggy Bottom. Walking from Huntington to Eisenhower requires crossing beltway.

Proposal to operate Metrorail service every 30 minutes

As someone who works in McLean, having a train that arrives every 30 minutes would mean that I would just not use WMATA to get to work anymore and instead drive because I do not want to wait 30 minutes for a train.

This would make it very hard to rely again on Metro for transport around DC when we return to our Federal Gov offices.

I plan to commute daily M-F as soon as the pandemic permits; every 30 minutes on the weekends seems reasonable, but if things return to anything resembling normal by January, commuting during rush hour will be a nightmare of overcrowded trains/platforms.

I will be commuting to D.C. and attending various events 4 or 5 times a week. This change would particularly impact my return trips and would unfortunately tempt me to drive in to D.C. Generally, I prefer to use public transportation rather than my car, but I don't want to wait half an hour in a metro station.

Currently, this proposal would work. However, I anticipate being back at work by January 2022, and 30-minute intervals would lead to packed trains at a time when people would still be quite uneasy about being in crowds.

Support as long as platforms don't get dangerously crowded

Orange/Silver line is already congested during commuting hours. You should just run a lighter schedule during off-peak hours.

This proposal is certainly better than completely halting service on some lines. However, a train every 30 min is insufficient both in terms of flexibility (e.g., long wait times) and capacity (particularly during rush hour, it's hard to believe that the trains will not be jam packed)

Strict schedule and train every 15/30 mins is ok

If there is a long wait I would likely take an Uber or drive

This plan would need to consider flexibility for high-ridership events like protests and sports games, if those occur

Given that next year, most of us population will be vaccinated, traffic should resume as normal

If ridership were to return to anywhere near pre-pandemic levels, this would easily introduce the risk for severe crowding issues during peak travel times given issues that already existed with the prior service levels

this would only work if the train "held" at each stop for a while. Could you imagine getting to the station and running up the stairs only to reach the platform JUST as the train leaves, and then having to wait another 30 mins? This proposal would not only make most commuters have to adjust their schedules but it would make a LOT of people late for work and risk losing pay.

For me, traveling primarily by Metro (I do not own a vehicle) the 30m service times could be problematic. If the goal is to get ridership up, there should be consideration for the rush-hour periods and how much of rush hour contributes to revenue.

The metro is already packed during rush hour. These changes will make it even worse.

People will be returning to offices downtown and in the suburbs and will need Metro M-F to operate more frequently than on the weekends.

Rush hour and special event times (ie sports events) need more frequent trains

Going to work every day from Clarendon metro station to Medical Center metro station would take an enormous amount of time.

There will cause commutes to be longer, which will make me and others less likely to use Metro Rail. I may take the bus instead or just drive. It also makes me less likely to go to DC from Virginia on weekends.

30 minutes feels unreasonable for commuters, who may be returning en masse later in the year. So, I would want to know this will be revisited once offices reopen.

No requirement to have weekday and weekend schedules the same.

My family lives between Deanwood and Minnesota Avenue on the orange line, with no overlapping blue or silver line service. Especially for my husband, who commutes to Georgetown via Foggy Bottom, waiting 30 minutes for a train on the way to work is completely unacceptable. This plan also increases crowding on trains—highly counterproductive if we're still dealing with Covid variants and kids who take public transit to school are not yet vaccinated.

Lousy idea to make weekdays and weekends the same. Lousy idea to make service so slow. Operate more smaller, trains more frequently during weekdays.

Turning half of the trains around at Grosvenor (and I assume Silver Spring) is a horrible idea. There are large amounts of housing (and more being built) near all of the following stations (White Flint, Twin Brook, Rockville and Shady Grove). Additionally, many commuters drive to those stations to park and catch the train. This change has the impact of 30 minute waits at all those stations which will increase platform crowding. Finally, considering the Grosvenor station was closed for months during the pandemic (I assume due to lack of commuters), I don't understand the logic behind using it as a turnaround.

Trains every 30 min will make commuting difficult but still doable if silver line phase 2 opens. I am an essential employee having to take the silver line out. I have been waiting patiently for phase 2 to open but if it doesn't or innovation center station gets shut down then I'll be forced to give up on taking metro entirely.

Proposal to operate Metrorail service every 30 minutes

I continue to plan to commute in the morning with multiple transfers, and this would make travel very difficult.

I will not be able to work from home permanently. I will rely on a combo of Metro/bus to get to work - primarily blue/orange/silver line. There needs to be rush hour service. If there are only 4 trains per hour and 1 goes out of service, or there is some other issue, the morning commute will turn into a nightmare quickly.

30 minute wait time is a joke. I love public transit but it does generally take a bit longer for many trips than another option such as a ride share. While I would always choose public transit, having a 30 minute wait on top of a longer trip is really not an option. I think this is incredibly shortsighted since it would make Metro practically useless for anyone with anything time sensitive such as an appointment, a flight to catch, or importantly a job to get to. Metro cant afford to lose these customers and it would likely change their commute patterns into the future even after the current budget issues were resolved.

I expect my work will force me to return to the office in 2022. This would be impossible for commuting

It would be an inconvenience but I could live with it. Would the fuller schedule return when quarantine is lifted?

The important thing is that the Grosvenor-Strathmore station remain open with regular service.

We have been told we would be going back the office this summer. More regular trains would be much better.

Could make it work sometimes but wd be difficult and definitely create work time loss

For those of us who need to take both a bus and the metro to work the extended times between trains could double my commute time to/from work. Unless I could time it exactly right (which might not be possible) it would no longer be worth it to take public transportation to work.

WEek days on the red line needs to be more frequently than 15 minutes to handle rush hour demand; 15 minutes on weekends is ok

Service on the Red-line during peak hours should be AT least every 10 minutes, and 15 minutes on all other lines.

It seems all right with me, but then I am not affected by the above changes.

No mention is made of fares I'm senior and pay half fare all the time

Any timetable changes are acceptable as long as the Grosvenor-Strathmore station remains open.

Those headways are for commuter rail not Metro. Ridership will fall off completely. It is not how people will use Metro.

I am older and need the Metro to go to medical appointments along the red line and downtown. It becomes hard to plan and endure when I must wait for 30 minutes if I arrive as the doors are closing. If the connecting bus is late, I have to make plans to ride over an hour in advance. With the shorter times, I could plan more easily, become less tired, and use the Metro more often.

every 20 minutes would be a more tolerable interval

If we are being optimistic regarding the pandemic, things will start to normalize around this time. With people returning to workplaces, this schedule will be critical to getting commuters back to their place of business.

Rush hour was already intolerably crowded. Once the pandemic ends, this schedule would yield even worse situations.

I exclusively use the red line to commute.

This proposal seriously damages the ability to rely on Metrorail without a printed schedule. This degradation in service reduces Metrorail from a useful all-day transit service to a commuter rail system.

When ridership returns to pre-pandemic levels this would make rush hour service out of the city along the blue, orange and silver lines unmanageable. Station platforms would be packed for several hours during the evening rush. Every day would feel like a massive single tracking incident.

This issue today is about a loss of ridership and therefore lost revenue. The bigger issue is was the revenue from riders ever there for specific stations. After the stations were planned and built, local governments amended or did not change their land use plans. Instead they built single family homes around the subway station. There is not enough density and therefore riders to meet the revenue needed to support the station.

30min headways are unacceptably long. Any schedule issues on Metros part would cause major issues for commuters. Fewer people would choose Metro, and the system would spiral further into insolvency.

Trains were already crowded at rush hour and may days I had to wait at McPherson Square for the next train towards VA. If trains ran every 30 minutes I fear I would never get on a train or have to wait hours.

Its absolutely unacceptable to have trains running only every 30 min. The platforms at transfer stations arent even big enough to hold crowds for more than 15 minutes during rush hour and this was my experience before the pandemic. That would put the safety and health of our DC workforce in grave danger.

I mostly use Metro to go into DC for weekend activities. If I have to wait 30 min for a train, its much less likely that I will use it at all.

Proposal to operate Metrorail service every 30 minutes

Rush hour needs to be more frequent.

Given COVID, it doesn't seem that ridership for 2022 is going to be as low as during pandemic. It would make sense to do this for this year, but once things go back to normal, this would be an impossible schedule to rely on for work, appointments etc!

Might lead to over crowdedness

I do not own a car and medically can't drive. I need metro to commute to work and due to other medical issues cannot wait that long between trains; and fear I would miss trains, be late to work Andrea my job. I also depend on metro for errands, medical appointments, and everything else. Please raise fares if you have to along with more minor service cuts but do NOT institute draconian cuts to avoid any fare hikes. The fact is those of us dependent on public transit do not always have the ability to drive no matter what.

It doesn't make sense. The rush hour is when you need lots of trains. Other times, you don't

How are people supposed to plan? When you miss one train, you have to wait 30 more minutes?! I can also imagine that this will lead to very crowded platforms. Is this supposed to help to smooth out late trains? I am not in favor of the 30 minute intervals.

This infrequency in train service would make it impossible to depend on Metro to commute to work, which I expect to be doing in January 2022. I am disabled and cannot drive, and slashing service to this level would ruin my quality of life.

Uncertain if no differences between weekday and weekend schedules includes operating hours as well as frequency of service.

I take Orange Line to Dunn-Loring. This would only work if the train schedule was exact, and I could sync train with bus. But if train arrives randomly, it wont work.

When ridership increases the frequency should increase so cars aren't overfilled and have to wait 30 mins for next train which could also be full

My work hours require me to work various shifts. I can't spend half a day getting back and forth from work. WMATA is also wildly expensive, with spotty service - cut your workers' pay. Making \$90,000/year sitting in a half empty station is an embarrassment... I have to kill myself to survive. WMATA workers are way over paid and do little work. Sweet job is you know someone "inside" and your application can get walked three for you. If people only knew...

My commute like many other Capital One associates is from DC (McPherson) to McLean. During the week, this ride is already a bit crowded (usually no seats available which is fine) and if there were no longer any differences between rush hour and non-rush hour 1. That must be reflected in the fees, must be the same as non-rush hour periods for lower cost of operations 2. These rides will become extremely crowded getting out of the city 3. More people will simply drive to work if arrival times are in longer increments which will hurt the metros pockets. Obviously rider-ship is down right now, but by 2022, ridership will be back to normal and the schedule should be treated as such.

The volume of people going in to DC on the orange line (non-pandemic levels) is too high for this. The trains fill up in the outer stations and folks cant get on the train in VA Sq., Clarendon, and Courthouse.

I assume to be back in the office in January 2022. This proposal would be untenable for commuting to the office; I would likely be forced to continue in a work from home status.

We need the Grosvenor-Strathmore station remains open. I use the station a lot.

Need weekday rush hour service to be every 10 min. or less. 30 minute wait isnt acceptable and would make me unlikely to use Metro.

My job requires me to change work locations multiple times per day and 30 minutes gaps between trains at stations that only serve one line would disallow me from fulfilling my work obligations.

Just missing one train and having to wait 15 minutes the next train to arrive can be the difference between arriving at work on time or being late!

Trains will be over crowded during rush hour

This seems to be a good compromise solution between no changes and closing stations.

If this leads to packed trains during rush hour I hope metro would change this proposal

It depends on how the pandemic continues to affect commuting downtown, but if I have to travel from Brightwood to Metro Center every day on the proposed schedule, I would choose to drive instead of waiting for so long and being ultra crowded in trains.

We are near the EFC station, and during rush hour the platform is often quite full (with trains running more frequently). Wed be concerned about safety if there were more people. It seems sensible to run less frequent service during the weekend, when travelers schedules are generally more flexible and there are fewer travelers to begin with. Weekend trains that run even less frequent than 30 min. would be fine.

Sometimes the wait time is too late and can cause people to be late to work and other important things.

30 minutes is too long to wait for a train if you are also relying on MetroBus schedules to arrive at the Metro station for a commute.

especially wouldnt work during rush hours. If you barely miss a train, you have to wait a half hour and would be very late for work.

This change would negatively affect my travel to and from work.

Proposal to operate Metrorail service every 30 minutes

With such long waits, Im concerned about how crowded trains might be.

Making public transit less convenient is a bad idea. if youre waiting 15, 20 or 30! minutes for a train, that is too long. People will find another way.

Although this would probably meet my needs, this reduction in service should be avoided if at all possible. Metro is a critical component to equitable economic growth region wide and cuts in service would disproportionately affect low-income workers. Metro is a public good and should not be run like a business. Although I understand if no further subsidy comes from Congress cuts might be necessary, please keep fighting.

I think you have to run different hours during the rush period. The number of people wanting to ride the Metro is much greater then and they need to be accommodated, quickly.

I solely relay on Metro trains to and from work, and other daily required travel. The delay in frequency will cause unnecessary difficulties.

Trains every 30 minutes would add significant extra time to my commute and would make it harder for me to have time to have dinner/drinks before events and Caps games. Its not regular enough for a major urban network.

Please do NOT close Van Dorn metro station

This frequency is much lower than what it used to be. The risk is that passengers will have longer waiting time and crowded trains leading to further decline in ridership.

Fewer red line trains at rush hour means they are going to be even more crowded. What research have you done to figure out how many people will need to get back and forth each day?

Predictability is my largest concern, so having a schedule I can depend on is best. I also use a tracking app (i.e. DC Metro) so can plan accordingly.

Seems like really long headways, but understand re budget...

That is too long to wait for a train especially for those people who are trying to get to work or home

Primarily, I ride the orange/silver lines as do the majority of Metrorail participants. And while the Red Line is central to DC/MD ridership, the larger Northern Virginia (NOVA - where I reside) ridership will definitely still be more impacted by Red Line slow downs as so many of these NOVA riders have jobs in the Washington DC city limits (including myself). Dropping the train frequency will only serve to overpack trains, causing more people to rush the doors, damage the cars, and lead to offloading that will start that worsening spiral all over again.

My work is returning in person this month and is on the redline and we are not permitted to drive. Not having access to more regular transit means that fewer people will be able to take metro safely.

I prefer reduced service over closed stations. But trains must have sufficient space for all riders.

It would be a nightmare at rush hour - not enough trains to move everyone out of the city.

I live in Arlington and work in upper NW DC, very close to Maryland border. I already have to plan 1.5 hours each way and very carefully coordinate bus and train schedules to make it within 1.5 hours. Adding any more time to that would force me to use some other means of transportation.

This would seem to make taking METRO for work during the week, essentially impossible or at least highly impractical.

30 minutes is not frequent enough.

Rush hour times during the work week still needs more trains as commuters need to get to work or we are forced to choose other options. At other times it would work.

Having to wait 30 minutes for a train on the red line when one is going to an appointment is inconvenient. Either one will have to arrive far in advance of the arrival time or risk missing a train and then having to make alternative arrangements.

Proposal is confusing for stations with multiple lines. Does this mean that service would be staggered between lines - thus service on blue/orange and silver would be more than 15 minutes between trains for each line?

This makes sense. It provides reasonable service intervals, while it enables Metro to reduce operating costs.

Pre-pandemic, the 30 minute intervals on weekends discouraged me from taking Metro and led to me driving downtown frequently even though I live within walking distance of Metro. I generally dont need Metro on weekdays, but if the world returned to normal, 30 minute waits every day would definitely cause me to ride Metro less. However, this is better than closing stations!

The boarding process and station platforms will be a disaster during peak hours under this proposal, leading to slower overall travel speeds. Additionally, this frequency is not sufficient to provide stable transportation for hourly workers who do not have flexibility in arrival times to work.

For getting to and from my work at the beginning and end of the day it would work. During the day using the metro to get to various meeting around downtown DC seems problematic and unreliable if the trains don't run very often. The trip planner app is not always reliable, especially for buses. If the trip planner service worked better than it would be easier to plan when there is less service and still successfully use metro.

Proposal to operate Metrorail service every 30 minutes

I live in Clarendon and work in Crystal City. I exchange trains in Rosslyn and cannot wait 30 min for a blue line train.

The timing is too far apart for work commuting and/or culture/restaurant/friends commuting, making it far less likely that we will use this form of transportation. We'll just take car share. It will just take too long to use metro for our main transportation. This will defeat metros goals.

I understand the budget difficulties, but it is not acceptable to continue to charge higher rush hour prices if there is no rush hour service. If the service is the same throughout the day and on all days of the week, then the price needs to be, too. Go up, go down, but it defies logic to charge more during certain hours simply because you used to, when there is no difference in service. That makes no sense and is infuriating to your users.

This would not make sense during rush hour when people need to commute to work/home and are often transferring between trains. We need service at least every 8 minutes at stations with service from more than one line.

The platforms will be very crowded and not great for social distancing which is a concern.

Commute will take significantly longer since I take two metro lines to work.

This is absolutely unworkable. You cannot ask people to wait THIRTY MINUTES if they miss a train by ten seconds. And what if you had to make a connection, or accidentally went the wrong direction...a three-station trip could take two hours. And no difference in frequency during rush hour????? That is begging for dangerous overcrowding situations not to mention the inconvenience of having to build so much extra time into the commute. I would stop using metro rail almost completely; I have no car so this would effectively erase my quality of life in the DC area, with a ripple effect on other local businesses that I would not visit due to the inconvenience of local travel.

The 1/2 hour between trains would mean it would actually be quicker for me to drive into DC than to wait for the next train. It would not draw more ridership by reducing service and likely drive more demand for services such as Uber and Lyft.

This plan would work, but is not optimal.

Red line should be extended to include all stations, otherwise someone on the stations only being served every 30 minutes will be paying twice as much for service.

30 minute intervals is too long, trains will be overcrowded and getting to work will be more difficult. It should be 10 minute intervals during rush hour and 20 other weekdays. The long intervals will discourage me, and I will be more inclined to Uber.

I have concerns how this will impact rush hour commute when my agency goes back to the office, which definitely will be happening. If stations are closed and trains are not scheduled close together during rush hour it may take much longer to get into the office if you can't get on a packed train.

These changes would force me to get a car and I will no longer rely on the metro. If many other individuals have the same mentality, metro will eventually shut down, because even less people will be using the metro than now. There NEEDS to be funding to keep the metro of our nations capital running as normal.

From the student perspective, if I'm coming from East of the River and have to get to Eastern High School, if I miss the train, I miss the class.

If ridership remains low, then presumably trains will not get overcrowded with this schedule. If trains do get overcrowded, this would become untenable for everyone. There is a chicken and an egg problem here. Metro can't justify running nearly empty trains, but riders will not come back to Metro in the levels needed unless the trains start running near previous levels. I'm fearful that huge cuts to services will lead to a downward spiral in ridership, which will lead to more cuts, etc.

I use metro for my work. If metro comes only 12-15 minutes, my trip will be longer than current. It is very inconvenient. I believe by Jan 2022, most of people back to work/office in DC. So the demand during weekdays is much higher than weekends.

This would make me less likely to use Metro to go into DC from my home in Alexandria, to go to the airport (especially Dulles), or other non-commute trips.

I am retired so I use Metro infrequently. I like Metro and I want to see the system survive, so I think we need to see cutbacks in service.

30 minutes is too long. It's not a metro anymore. It's not even a suburban train! The frequency is higher for that!

If trains would - consistently - arrive every 30 minutes, that would not be great, but at least you could plan around that. Thanks for asking...

This proposal looks okay, but the authority has to ensure that the trains would arrive on time and people wouldn't have to wait endlessly

fewer trains is a reasonable way to deal with budget problems, particularly compared to laying off employees or closing stations. With fewer trains, I would be annoyed at waiting, but this would not be a dealbreaker. I would still take the metro. Trains could become more frequent as ridership increases. If they don't adjust with increased ridership, large crowds would form on platforms and I would feel uncomfortable taking the metro for public health reasons

It takes away Metro's advantage to quickly get across DC.

It depends on how full the trains are. It would be an issue if I got to the station in time to board one train but it was full and I had to wait another 30 minutes.

I'm expecting to be back on a pre-pandemic commuting schedule Jan. 2022. Expanding the wait times during the week to 30 minutes means the driving times would be shorter than taking metro, whereas right now they are fairly similar.

Proposal to operate Metrorail service every 30 minutes

Is there a way to meet in the middle, like 10min between trains (so 20min on single train lines)

I think this might work, depending on how many riders there are. I plan to be back at work on the Mall by next January and will take Metro to and from work. I live near Fort Totten station so I have a choice of three lines. But I may find that each train that arrives is too full to allow for boarding. This problem would continue all the way into town, most likely. I may end up waiting for an hour or more if the train arrives full of passengers.

If you have to wait 30 min for a train, it is worthless. Especially at night e.g. after attending an event at the Cap One Center that lets out at 10 p.m. Plus the trains will be JAMMED during busy times. How about 20 min. wait times all week. 15 min would be better

This is too much time between metro stops. This would mean standing out in the cold for 30 minutes if I just missed my train. It would also cause people to be late if they miss their train. I used to live in Woodbridge and take the VRE into work and stopped because they had crazy issues like this. If a metro train only comes every 30 minutes AND that train ends up being delayed, that means waiting for more than half an hour. Depending on an every 30 minute schedule just isnt right or convenient for people, especially if you have to make transfers. You could end up waiting 30 minutes for each transfer you have to make.

This generally is okay but I am concerned what this might mean for stations past Rosslyn. How often would these trains arrive?

Need increased rush hour service for my commute.

This would work, but the only way I see to ensure the population continuously chooses Metrorail is for consistent service that makes it more enticing than taking a car. The less frequently trains run, the more people will just drop metro entirely.

This would cause over crowding and possible bypassing of stations or offloading in 2022- recommend increase train frequency at peak, or express to major stations i.e. Vienna to Rosslyn

Commuting to work at a location serviced by a single train would become extremely varied and typically much longer. Today my commute time is around ~50 minutes with walking. Imagine if I miss a train by 1 minute, and the next is 29 minutes away.

This plan would add a significant amount of time to daily commutes if adding an additional 30 minutes both going to and returning from the office.

If waiting time is too long (15-30 min.), ridership may further reduce.

If the schedule came to this, my family would skip using metro altogether

15 and 30 minute headways are not sufficient to create a reliable public transit system. I cannot wait 30 minutes for a green line train to head into town and then wait another 15 minutes to transfer on Redline and head towards Bethesda. This could make a 1 hour current trip change to a 2 hour trip.

30 minute headways are unworkable for commuting. Once the pandemic is under control, commuters will want to return to Metro. But they will not do so unless absolutely necessary with 30 minute headways. This would be particularly burdensome on commuters transferring from bus to rail.

There needs to be a prioritization of more trains during rush hour, because the likely outcome if (Metrorail Proposal 1: Changes to Metrorail Service Frequencies) adopted would be in the long run a push for current riders to adopt new methods of transportation, i.e personal vehicles and thus further lowering ridership for Metro as a whole.

The Metro is my main method of getting to work, and if I miss one train, especially if its full, I will be way too late after half an hour. At that point, I would just take my bike. It also makes it so that I would never be able to transfer lines in a timely fashion. Again, if I have to be waiting 10 minutes on average at every transfer point, its not worth the cost for me.

At this point, Im working from home as my employer has shut down our DC office because of the COVID-19 pandemic). Once life gets back to normal (when the pandemic is over), whenever that is, employees in my office are likely to be expected to go into the office again, so while a schedule like this may work now (i.e., in 2021 while the pandemic is still going on), its not likely to work once the pandemic is over and other workers like me go back to working in the office.

Very inconvenient for commuting

Im retired and I live downtown and were in the middle of a pandemic. Its easy for me to say I dont really care. However, Metro is one of the reason I fell in love with DC when I moved here about 35 years ago

After the pandemic life will go back to normal, so we definitely need at least 12-15 minutes arrival time at Clarendon station.

There is no practical way this would work in a major metropolitan city with a metro dependent workforce.

This is far too much time between train arrivals.

Honestly, this is not how a major public transit system should work. Without having short headways between trains people will abandon the system for practical use. As Metrorail blurs the lines between urban subway and commuter rail, being impractical for commuters is not an option. 10 min/20 min instead of 15/30 is somewhat acceptable; 5 min/10 min is ideal. Please aim for the ideal unless WMATA enjoys bleeding ridership.

Proposal to operate Metrorail service every 30 minutes

If I had to choose this over my metro station being permanently closed, I would take this option since some service is better than none but having more service during rush hours is important. I'm not as concerned about metro frequency during off-rush hours.

So, commuting from Rockville to Farragut North, I could potentially have to wait half an hour for a train on any given day, depending on a hiccup in traffic or my childrens morning routine. Thats awful.

I require the Grosvenor station for my commute.

Rush hour requires more trains, not fewer trains. The interval should NOT be more than 5 minutes during rush hour.

The trains will be too crowded.

I do not mind waiting 15 minutes for my red line train. However, will I be able to get on to the train? Sometimes during rush hour (pre-pandemic) I could not even get on to a train, I had to wait for the next one. By the time a red line train gets to my station (even with 5 minutes in between) it is crowded

I expect the majority of us to be vaccinated by then and required to return to work, in person. This would make trains impossibly crowded and make it harder to make it to work on time.

I understand the needs for the changes, but expect that when society returns to normal and revenues should be also back to normal because of the volume especially during rush hours the system will experience. Having these delays will put tremendous burdens and time constraints on workers who need to get to the city in a timely manner. Further, if the trains are commensurately crowded, you might lose customers who are concerned to ride in such close quarters with others. I have not read your other proposals, but it seems more logical to reduce train availability between rush hours. And the system will also need to look at how it is servicing tourism, as people return to Washington in the summer time.

20 minute intervals; and 10 minute intervals at multiple lines is a bit more acceptable. And maybe keep the rush hour, but could be shorter, perhaps a two hour window. Thanks.

If trains were not on a set schedule, this would be a major inconvenience and cause constant delays in making it to appointments on time, getting to work, and would mean a lot of wasted time waiting in metro stations. Metro is my only affordable transportation option as I do not own a vehicle and cannot afford rideshares for every trip.

I would miss having rush hour service and I would have to plan more carefully to catch a train, but I could live with it. I expect to be commuting from Arlington into DC 5 days per week by January 2022.

We're not commuters, so it doesn't affect us, but won't this make commuting hours much more difficult and crowded?

I anticipate commuting daily in January 2022 and that is not enough service to meet the demands. Trains will be overflowing.

Arriving to work on time as someone who works at a hospital is crucial and I take the green line to columbia heights. Getting to work in a timely manner would be difficult if I miss a train and have to wait a full 30 minutes

Having robust service including more frequent trains is essential especially on weekdays

With this drop in service it would be better to shut the system down.

It's very hard to evaluate each proposal separately. For example, if my alternative to a 30 minute wait for a train is an additional 10-20 walk in the elements to the closest station because my go-to stations are shut down, then I, as a wheelchair user, will hands-down choose the longer wait time. It's burdensome, but I can work around it. I CANNOT work around long treks in the rain/snow/cold to reach a station.

Pre-covid, I commuted via Metro some days and bicycle on others. In this scenario I would probably rely more on biking if the Metro was annoyingly crowded or slow during rush hour. So, it would work for me but I would probably take Metro less.

During rush hour, it is hard to imagine that this will meet my needs to get to work on time and confidently have space to get onto the first train that arrives at my station.

I rely on the metro heavily and would like to see more regular rush hour service on the red line as well as other lines

Train arrival times are too slow,

When normal commuting resumes after COVID, a train every 30 minutes will not be sufficient during peak rush hour travel.

For us, it is easier to plan travel based on less frequent service as opposed to not service to various locations.

If extending frequencies would save money non-rush hour and weekends, I would be in favor of that.

This would increase my commute to work dramatically. The metro is a less appealing option if it doesnt offer timely service. I would probably stop using metro altogether.

Currently, Metrorail is the most convenient way to get around in the city. When Im in the city and see a Metro station, I can expect to get on a train in a matter of minutes and get to my destination efficiently. Having to wait up to 30 minutes for a train at stations with only one line will be a big hindrance.

My concern with this proposal is during morning and evening rush hour. With trains on the proposed schedule the trains will be crowded and not allow for social distancing.

Proposal to operate Metrorail service every 30 minutes

For those of us living further out on the Silver Line, this proposal makes Metro travel virtually useless. There are any number of factors - traffic, weather, long line at daycare - that can cause you to miss a train by a few minutes. Having to wait a half-hour to commute into work has a cascade effect that wrecks the rest of the days schedule. I would no longer bother using Metro if this were the rush hour interval. I'd rather brave traffic and toll roads, which is saying something.

Technically yes, it would work. As I'm sure others have commented, it would be much less convenient.

Once the federal government opens up again this will not allow for the influx of people coming back downtown.

My job is planning on making all employees come back fall 2021. Such a drastic change in train times will hinder myself personally and the workforce. I understand this change is being considered now because this is when budgets are due, but I think the world is going to look vastly different in January 22 (note: even if the pandemic doesn't look different at that time employers are planning on sending employees to work) and not having transit to support it will be devastating.

Given that rush-hour and non-rush hour are called this for specific reasons why would trains run the same at all times. Rush hour times are usually busier and people trying to get places faster. These delays won't be good.

If the trains were too full to get on during a rush hour because of the 15 minute lag, and I had to wait 30 minutes to get on a train then the plan would not work.

It will be harder for people to get to work downtown or stay out at bars and clubs, assuming people are doing that. It would mean longer commute times and people being late to work more often through no fault of their own. This change also would, regardless of the openness and any COVID restrictions, will disproportionately harm essential workers who rely on metro to get to and from work as well anyone who needs to undertake any essential tasks, like going to a doctor. Many people in the city don't have cars. For many, metro is one of the only affordable transportation options.

Reducing headways to 30 minutes between trains would render metro basically useless. It would be incredibly difficult to get anywhere on time, particularly if one had to change trains. That plan would reduce ridership even more.

We need more trains running, especially at those stations with multiple lines. Reducing it as proposed is almost a 50% reduction which would lead to unacceptable crowding and potential for overflow.

For those commuting to the pentagon or into the heart of DC where parking is not provided we rely on the metro rail!!! My husband starts a brand new job at the dept of energy and we plan to use the metro rail commuting subsidy as they won't pay for parking. You are making decisions just as we are turning a corner and getting vaccinated. The number one complaint I heard from my local friends is that the train is too expensive. If you just during normal times lower pricing and advertise that you would see an increase in ridership! You would quickly make up the difference in lower prices by increased ridership.

This seems like it would lead to additional crowding on the platforms which, even after we've gone back to normal is likely to be a problem.

There are a lot of people riding the metro at peak hours and it's hard enough to catch a train. Fewer trains would lengthen the commute and potentially take away the benefits of riding the metro.

Trains will be too crowded during rush hours.

I think the best compromise would be every 30min on all lines everyday during non-rush hour period and then 12-15min on all lines M-F during rush hour period.

Utilize Grosvenor Metro for work

More frequent service is preferred during rush hours, but this is a better alternative than closing stations.

The longer wait times will be a deterrent to even using the metro, which will make the deficit even worse. I commute from Virginia and transfer in DC to get to my office in Maryland. If there is this much time between trains, I fear that each train coming through will already be packed and will make my commuting via metro impossible.

What is not clear is whether there will be a rush hour. If there is not - then I think this will be hugely impactful in a negative way.

There are so many variables that could make this proposal work or not work. For example, if the vaccines are effective in both preventing initial infection and spreading disease, more people will likely be returning to in-person work and looking to ride the train. If this occurs, then not having a difference between rush hour and non-rush hour periods will create significant overcrowding conditions. However, if we are still dealing with surges in COVID infections and if the vaccines are not effective in preventing initial infection, more people will be staying home and/or avoid crowded situations for transportation. In terms of equity, some people will need to go into work regardless, and some thought should be put into how this will impact their lives. For example, someone who must commute a long distance on Metrorail for work, as well as drop off their child for daycare school, waiting an extra period of time during rush hour could greatly impact their travel time.

Would consistently make me late for work.

It lengthens the commute considerably depending on the timing of the trains and the wait at connecting train stations. It could further decrease ridership and bankrupt the system.

Proposal to operate Metrorail service every 30 minutes

That amount of time between trains is not acceptable. I would switch to driving if this becomes policy/operation. If Metro cannot provide better service, it will need to return the tax payer money it received from the COVID Relief bills and some from the dedicated jurisdictions.

Worry about overcrowding on trains

Weekday off-peak service throughout the day during weekdays and Sunday service all weekend would be an adequate alternative.

Thirty minutes is a long time to wait if you happen to miss a train. Riders might get frustrated and give up on Metro entirely (costing you even more revenue).

Increase trains during week days for working commuters

Trains arriving every 15 minutes on the Red Line sounds fair.

As COVID slows down, many customers will likely return to inperson work, and more normal schedules. My job does not allow for remote work. Waiting 30 minutes for a train at Vienna will make for a miserable commute. I would likely seek transfer to a different office, where I could drive and not rely on mass transit.

That is absolutely unacceptable. By Jan 22 metro should expect to see a return of regular commuters. As someone who uses the metro to get around regularly to not have faster trains during rush hour is a huge barrier to mobility. Also to not have weekends train service be longer doesn't make sense given that people will want to be more active after things resume in Jan 22

I think non-rush hours trains can run every 30 minutes

Could work, but its not the level of service typically expected from rail service in a major metro area

This is a hardship on working people

With expectations of vaccine rollout increasing as early as May, as well as a lack of direction from our employers about the permanence of telework, it is too early to know whether decreasing schedule options in January 2021 will work. If we are expected to be back in the office, I will need to commute via metro everyday like I used to, in which case, every 30 minutes will be a nightmare

I take the metrorail to my second job after my first job. I only have an hour to get to the second job and changing the timetable would make it much harder for me to get to work.

Yes as long as the Redline route from Metro Center to Glenmont is not affected, which from what I have read so far is the case.

If I have to wait 15 minutes and then ride the metro, it might just be faster and more reliable to walk.

before the pandemic, metro has never been reliable; decrease ridership has made no difference and metro service got even worse. management of the metro system is the worst in the world and is pathetic.

During rush hour times the wait time should be less. People need to get to work in timely manner and pandemic is slowing and ridership will be increasing.

will service originate at Grosvenor? If not the trains will be overcrowded. Also what are the hours of service?

I am not sure how long my trip from Forrest Glen to Virginia Square would take.

For me this would involve some planning in advance for what time to get to Metro to get where I'm going. I think this is feasible and can also see how this would provide a big cost savings to Metro.

USE SHRTER TRAINS ON EVERY TEN MINUTES SCHEDULE!

The interval time is perfect to go to meetings in DC.

I worry that less trains (especially during rush hour) would lead to increased crowding on the trains that are running.

The reason I purchased my home near Grosvenor Metro Stop is that it is convenient to get to work in DC, or to Museums and concerts during the weekend. Before the pandemic trains were overly packed during the rush hours. I would prefer the trains run every 30 min until traffics pick up. In other words, this proposed measure is reasonable as a temporary measure, but not in perpetuity. Once everyone is vaccinated we will need the service back. In major cities around the world metro still functions. The idea that metro stations be closed is such a populated area like North Bethesda and Rockville is not wise. I would use government assistance to make metro a safer.

There needs to be greater train frequency during rush hours to avoid intense overcrowding

This will lead to dangerous overcrowding in an environment where WMATA cannot guarantee full use of masks, and we are not in a place where we can be ensured that masks will not be necessary in 2022.

Unacceptable frequency; I have a bus to rail transfer at pentagon and a rail transfer at gallery place

On this schedule, the trains would run too infrequently for metro to be a viable source of transportation. Also, the proposal calls for closing the Grosvenor station. This would be terrible for me--Grosvenor is my stop, and the next closest station (White Flint) is 1.5 miles away. I have no car. This would mean that I would need to walk or take a bus to get to the metro, which would only be running every 30 minutes from White Flint. None of this would work for me. I would have to sell my house and move.

Proposal to operate Metrorail service every 30 minutes

BY JANUARY 2020 MORE PEOPLE WILL BE GOING BACK INTO THE OFFICES DURING REGULAR WORK HOURS...WE NEED TO HAVE THE 15 MINUTE SCHEDULE SO WE DONT HAVE TO LEAVE FOR WORK 30 MINUES EARLY

Your timeline is messed up. You should expect to see increased ridership after a bulk of people are vaccinated (which I would estimate to be June 2021). Cutting service at that point would simply drive people away from metro, at a time when they will desperately be wanting to get back onto metro. You will guarantee your own demise.

I have concerns about stations/trains overcrowding during rush hour. I think it also leaves the less affluent parts of the region even more isolated, since they are the areas most served by stations with service from only one line.

A 30-minute wait would be awful but if I were using Metrorail for pleasure--going to a museum, it would be OK. If I needed it to go to work, I'd call a taxi. Since I work free lance and would use the train more often for pleasure than work the 30 minute gap would be OK>

We need MORE Public Transportation, not less. Traffic in the DMV is ridiculous. We need to discourage individuals from driving more, not remove existing options.

Trains are needed more frequently during rush hour on Weekdays. I would think it would be better to make have slightly more service during rush hour and less service at other times. Trains were already VERY crowded during rush hour pre-pandemic.

At peak hours there is no way a train makes the transit between SS and Grosvenor in 15-minutes.

Maybe there should be a difference for rush hours. Having the metro run more often in rush hours and separate the non rush hours more

This works only if trains reliably stay on schedule, and as long as overcrowding is not a problem (that is, riders wait and then there is no room on the train when it comes).

This proposal pushes commuters using more distant Red Line stations to drive to stations with fewer parking options or to not use Metrorail at all. Due to Red Line and Yellow Line changes, it pushes me as a commuter back to driving every day, rather than using Metrorail and risking an extra 30-60 minutes on my commute. I transfer from Red to Yellow in the morning, and Yellow to Red in the evening. My commute would shift from 45-55 minutes each way to 60-90 minutes each way, and could be as long as 120 minutes if scheduling forces me to miss a transfer. As offices start to re-open and road traffic drives commuters back to public transportation, this is a problem waiting to happen.

The red line should go pass Grosvenor. There should not be a difference in fees for peak hours. Instead can a local tax be introduced in DC, northern VA area, and Maryland that will subsidize the metro? Paris metro system is subsidized and NYC subway fare is also less.

During rush hour you need to have faster trains to accommodate the number of people using the train.

every 30 minutes would make the train no longer viable for commuting. I chose to live near a metro station because metro has been more reliable and practical, I'd strongly prefer to see train service every 10 min everywhere in the downtown core.

By January 2022 I plan to be back to commuting. No rush hour service is a problem and these frequencies would turn a :40 minute commute to over an hour. I would rather, try to bike or drive.

I anticipate life being close to normal in 2022. Its hard to see trains this infrequent not resulting in crushing volume and some people being left behind. And unlike the old rush hour, people would be left waiting a whole 15 minutes? To the extent they haven't already, they'll be abandoning Metrorail for their cars (or work-from-home). If people are working from home anyway and ridership is not coming back, then at least this would maintain regular service. Its not as bad as closing stations. We'll have to see what life is like once vaccines are widely available and downtown offices are open again.

30 minutes between trains on weekdays is unacceptable. Crowding on trains will only become worse and the cost for being delayed a few minutes to your train becomes quite high in terms of how badly it affects your commute.

During rush hour will trains be lengthened to make up for the reduction in frequency of train arrivals? I am an infrequent train patron, so the 30min schedule is fine for me. I don't know if it would work if I traveled every day.

(1) What? You're proposing closing Strathmore station and concurrently running trains every 15 from Strathmore to Silver Spring??? (2) From my station (White Flint), I'll probably be driving rather than trying to work with an every 30 minute headway. Great way to reduce revenue further - cut back on convenience! Why not cease operating the trains at all. That would really save money!

This only works for me in part because I principally ride the red line and transfer to other lines at gallery place and metro center. This would not work for me in returning home from another line.

That is a terrible idea, given how crowded it gets during rush hour. That is way too much time in between trains.

The rush hour service should be every 15 minutes instead of every 30 minutes. Non rush hour and weekend service can be of 30 minutes interval.

Metro should not be scaling service down when post-pandemic ridership is likely to increase. Train schedules should be more dynamic to account for periods of higher volume like rush hour and large sporting venues.

Proposal to operate Metrorail service every 30 minutes

As more residents will return to work by January 2022 and rely on metro for commuting, I anticipate that trains would be overcrowded and may not run frequently enough to rely on as a primary form of transportation under this proposal.

If you miss a train when transferring from one line to another there would be an extra 15 minutes of commute time.

Frequency should be higher during rush hours. There will be huge crowds in the morning if trains arrive every 12-15 min. Given the pandemic, huge crowds need to be avoided at all costs.

Have to take 10B bus to Ballston. Arrival times may not coincide with train departures..

This sounds awful. Trains are already crowded when they arrive less than 30 minutes in between. I cant imagine what a 30 minute wait in-between would do to people getting to where they needed to go on time.

This will absolutely cause me to be late to work, Dr. appointments, and more. Metro does not run reliably on schedule already and longer periods in between trains with unpredictable arrival times will make metro difficult to use.

More frequent service needed during rush hour.

When everything goes back to normal, people go back to office jobs, students starts commuting to their schools, I can assure you that 30 minutes waiting time between trains will result in overcrowded stations, people rushing and pushing, holding doors, running and slipping-it will be a disaster.

This could work IF there are enough cars to carry all the passengers waiting at each stop. I can plan trips around a firm schedule.

No one is going to wait 30 minutes for a Metro train unless they are really desperate. The frequency should not be reduced and instead should be targeted around stations that still serve moderate numbers of passengers. This proposed plan also continues to focus on supporting passengers commuting downtown under the assumption that they will return to previous ridership levels, rather than increasing service in areas inhabited by essential workers.

The Red Line trains are packed during rush hour during non-covid times. How could the trains handle the riders every 15 minutes?

In this case, I would likely only take metrorail if there were not other options for me. Trains every 30 minutes is too infrequent for this to be a regular mode of transportation for me

To help the DMV economy, itd be better if metro were open later from Friday through at least Saturday night -- maybe Sunday. This doesnt seem the best way to cut costs.

Assuming I am able to return to DC and work in-person by then, 30 minutes is far, far too long a window to work during the work week. Trains would be far too crowded, and any delay could cost another half hour.

It is critical that we increase opportunities for public transportation rather than decrease.

Why not just shut the system down and focus on buses at this point? This is not how functional urban rail works.

The pandemic should be over by January 2022 and there will be normal levels of ridership on the trains. The trains will be very crowded if trains are only coming every 15 minutes during rush hour. Those with strollers and wheelchairs will be uncomfortable and unfairly burdened with the crowded trains. Crowding on platforms and escalators is also dangerous. My small children will have to squeeze in between other riders, which is also dangerous. When the train arrives only every 15 minutes, some more able-bodied people run like crazy down escalators and on platforms to get an arriving train, which is also dangerous.

For stations with multiple lines, staggering and spacing arrivals would reduce impacts from reductions in the number of trains in operation.

Trains running less will result in over crowding and eliminate social distancing

Im concerned that during rush hour this would over pack trains and cause further delays as more and more people would need to squeeze onto a single train. It would also be smart to ensure that the trains are 8 cars not 6 to allot for more people.

I don't commute at rush hour, but I know that even a 12 minute wait at those times will lead to overcrowding on platforms downtown.

Potentially waiting 15 minutes to take a train into DC and another 12 minutes to commute back home adds substantial time to an average commute, especially in extreme heat/cold. It would be quicker to drive in to DC

Better to adjust to needs as current practice

I use red line trains to get to work and back to work (8-9 am; 5-sh); and occasionally for leisure activities (after hours happy hour, access to downtown events in nights and weekends). this schedule would work for me

Trains would be impossibly crowded

When the pandemic is over and during rush hours, you will see over crowding - this will be a serious issue if there are regulations in place that will only allow x number of people in the metro station at a given time. I anticipate this will lead to frustrated individuals and an added risk to metro employees since fights could occur.

When there are separate trains to Grosvenor-Strathmore, they are half full, and the ones to Shady Grove are overcrowded.

Proposal to operate Metrorail service every 30 minutes

This seems an unclear way to state that all weekday service will be reduced to what is now the current weekend level of frequency. that may be tolerable but it is not clear how that will optimize ridership vs. revenue: Metro should take advantage of AI to better predict peak hours ridership, then increase fares at peak hours both to flatten demand and to increase overall revenues. Metro should adjust skeds in general to avoid running empty trains and buses on a regular basis.

I think not having more frequent trains during rush hour will cause more crowding on platforms and in train cars than we already have which can be dangerous and uncomfortable for passengers especially with longer commutes. I think it would be especially challenging for the elderly or those with disabilities who need accommodations. This is a recipe for disaster when people will be required to return to work. Also if there is no advantage ie. higher frequency of trains during rush hour, charging rush hour prices for those high travel time frames would be even more frustrating than it already is.

30 min is not frequent enough for those traveling from Shady Grove into downtown for morning commutes; it would lengthen commute time into downtown DC.

Reduced frequency of trains would significantly increase commuting times

Yes, it would work for me bu the trains would be quire crowded == and given the fact that COVID-19 will not have disappeared by then, potentially a health risk.

Waiting 30 mins for a train is way too long. If metro trains were always on time on schedule like the ones in Japan then this would not be an issue, but metro's past performance does not inspire confidence.

Every minute counts on my morning commute. Trains running less frequently would make me late to work a lot more often.

Service cuts are necessary and justified during the pandemic, however most people in the DC area will probably be going back to the office as regularly or almost as regularly as pre-pandemic times when the majority of the population is vaccinated by Fall 2021. Therefore, the plan should not be to cut service, but rather to restore it to pre-pandemic levels (especially during rush hour) in Fall 2021 and beyond.

If there is no difference between rush hour and non rush periods, what is the point? As it look that most people will be returning to work in 2022 there needs to be an incentive for people to get back riding the Metro as they did before.

I believe that this plan could work. It would work for my needs. I do wonder if the platforms could become quite crowded, and therefore a bit unmanageable, if not dangerous, during rush hours, if theres no increase of trains during those times.

I commute in the afternoons from Forest Glen to various locations and finish work between 9:30 and 10 pm, usually using the Crystal City, or Smithsonian stations to connect back to the Red lline for home. The reductions in service with a missed connection would significantly delay my return home.

Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely reamining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations.

The lack of ridership is understandable in these times, however, going from 15 min train arrival intervals to 30 min between trains at stations that aren't major hubs is a bit excessive. Having a 15-20 min interval is enough wait and possibly the most riders can allow for an effective commute to/from work without extending a commute beyond a reasonable amount of time.

January 2022 will be more open how can we possibly know need now

For routine schedules, I could make it work. For special needs, such as to a doctors appointment, I would feel the need for more service. Since its not routine, I wouldnt know the time I needed.

Rush hour service needs to be more frequent to avoid over crowding platforms and trains.

this works for me because I am retired and I can spend the extra time.

I am concerned that a single departure every 30 minutes from Shady Grove will lead to overcrowding while boarding during the morning commute. This was not an issue when I began commuting in 2018 (and eliminating the Grosvenor turn back reduced crossing even further) but the delayed at that time were every 16 minutes.

This would make commuting on Metro nearly impossible. Trains in downtown DC would be uncomfortably full, even with lower ridership due to the pandemic.

The whole point of mass transit is to move people quickly and make the service compete effectively with other options. If you slow every one down underground, guaranteeing an extra half hour or more in the system to get somewhere, you could further decrease ridership by making it less efficient and less competitive. If you are about moving people more slowly, you will only get the people that can afford to move slowly or prefer to move slowly. Metro needs to compete with high quality service. Ridership will recover after the pandemic.

Proposal to operate Metrorail service every 30 minutes

Once we are back to normal, which I fully expect well before January, service every 30 minutes is NOT satisfactory. At the very least, rush hour times should be 15 at most 20 for single lines.

I used Metro daily when I worked downtown but since Ive retired Im more likely to use evenings, weekends. Yes, evening trains at only 15 min intervals made me feel a bit uncomfortable (since I usually travel alone). Not during days. But I realize service must be recalibrated.

Assuming ridership returns to normal or similar pre-pandemic levels, this would cause increased crowding on the platforms and trains. In addition to the inconvenience (my pre-pandemic commute could increase from 45 minutes to over an hour), it would create unsafe conditions for riders.

I fear overcrowding during rush hours. Perhaps make rush hour shorter, e.u. 8-9:00am and 5-6:30 pm

This seems insane to me. The only way to have a good public transit system is if its attractive to people of means. If people of means are using public transit--everyone is, and you have the revenue/ridership that you need to sustain the system. But no one of means is going to ride metro if they have to wait 30 minutes for a train. Certainly no one wants to commute that way. Then the poorer folks who dont have other options are all going to be late to work since you might have to wait 28 minutes for a train to come, and then its full. What do you do if you have 2 or 3 jobs? Kids to pick up from school? Youd spend your whole life waiting for trains, and the service economy would collapse in DC since no one would be making it to their shifts on time. This seems like a proposal thats certain to make metro collapse entirely.

One size fits all is never user friendly. It is the choice of indifferent bureaucrats who are not interested in putting some thought into their decisions and are risk-averse. This is a terrible idea and would send a terrible message to riders. Be a leader and people will follow. This choice is the cowards way out of making any tough decisions.

More frequent runs on the yellow and green lines, especially between Columbia heights and reagan

I anticipate that by January 2022 most people will be back in the office more or less full time. This would make Metro extremely congested at rush hour, especially at busy stations like Ballston

I use the Metrorail red line train to go to downtown DC and to connect to airports and train stations. If its frequency is reduced, its utility to me will also diminish. I think the use of Metro will pick up in the summer and fall of 2021. Metro needs to hang tough to weather the pandemic, which will be over soon.

If trains are every 30 minutes you will need to stay on a precise schedule. Is Metro able to to that? This will also make trains extremely crowded during rush hour peak times. Will 7000 series trains be running on all lines so that more people will fit?

Waiting 30 minutes for a train during rush hour is not ideal

I not so worried about the time its the fact I dont want the Garrett Morgan station closed all together thats community means of transportation for people who dont one any.

While I would like to see greater frequency of service, this would not have severe impact. Personally, I would support even less frequent weekend service to allow better weekday service.

I dont plan to ride Metro for the foreseeable future. I used to ride primarily for leisure trips and now I dont take leisure trips because of the pandemic.

30 min intervals are way too long. Id be ok with 15 - 20 mins.

This is so infrequent that it would make using a car optimal under many circumstances.

only concern if Metro ridership increases will the trains have enough cars and do you have he flexobility to increase frequency of trains.

Rush hour more frequent timing is important to me to arrive at work in a timely manner.

My travel is always only between Grosvenor and Silver Spring and the fifteen minute schedule would be best for me as I walk to the Metro and standing for 30 minutes could be very cold. Also fifteen minutes is more suitable for those coming to the Music Center at Strathmore.

A wait any longer than 15 minutes would not be acceptable. We use the red line primarily, so I am selecting a tentative yes.

This is impractical for commuting to work downtown.

As long as there is a stop at Grosvenor we are fine

Fine (but not ideal) other times but this would not work for post-COVID rush hour

Fewer trains during rush hour makes no sense.

30 minutes is too long to wait to ensure an on-time arrival anywhere if a transfer is needed

How would this not lead to more crowded trains? People don't want to be jammed on top of each other following a pandemic.

If we'll be commuting back to work in DC by then, this schedule would be prohibitive in using metro. I can't have only one train every 30 minutes. If would likely be packed.

Yes this works. Considering the challenges, every 30 minutes makes sense and is fair; I would just be no room for mistakes (missing my intended train) on my end.

No extra thoughts

Proposal to operate Metrorail service every 30 minutes

Rush hour would be untenable.

The amount of bad publicity you would get from riders during rush hour alone is immeasurable. Also, the amount of time added onto daily commutes would be unacceptable unless fares were extremely cheap (like \$1).

Why not reducing number of cars and have trains running on a hour per hour basis?

It would work but I would prefer more frequent trains on busier days

The capital of the worlds most powerful country can provide service at intervals of greater than 15 mins. The tracks are the most expensive part of the system and you waste them by reducing frequency, which then perpetuates people's opinion that they can't rely on metro- which then reduces ridership further.

Trains every 30 minutes from multiple stations? No, that does not work.

If I have to transfer between lines missing the train would be a nightmare. Frequent service is why we use Metro.

I am a commuter, riding Metro rail & bus everyday. This change will impact my commuting. (longer waiting time)

For my specific needs traveling on the red line, this plan is manageable but not great or preferred by any means. Trains need to run more often at rush hour, and everyone needs to be able to access more regular transportation. Every 15 mins at a minimum on all lines at all time, with more frequency during rush hours.

This plan is acceptable for my expected travel needs.

With hopes that the pandemic will be better under control by January 2022 ridership will increase greatly. Many of us who have been teleworking since March 2020 will hopefully have received the vaccine and feel safe to return to public transportation. HOWEVER trains arriving every 30 minutes will only lead to extreme overcrowding which is what caused the decline in ridership during the pandemic. Forcing the same issue with the hope things are better regulated is not the answer. The frequency of trains aids in keeping passengers safety at the forefront.

This is a considerable reduction in service on Metrorail. Trains should arrive at least every 10 minutes. Every 30 minutes would promote crowding in stations, increase the opportunities for crime, perhaps increase the chances for outbreaks of disease, and certainly increase urban pollution levels as commuters seek alternatives to slow Metro service.

Trains every 30 minutes means that if I miss my train by even a few minutes, Ill almost certainly be late for wherever I was trying to go. This would force me to leave an hour early for appointments or work in order to avoid being late.

This is a fine idea during "off hours" and weekends but this would cause a LOT of problems during rush hour times

I travel to the office every day still, cutting metro service would put me far behind especially when I need to get to other parts of town for work quickly.

This would not be ideal and would make commuting more difficult, especially since I have to take one line into town and then transfer to another. I also dont know if this would be possible given the number of people who typically take Metro as commuting patterns return to normal following Covid-19.

Assuming I was back to full time commuting in Jan 2022, this would have a very negative impact on my commute to work if implemented. Trains were packed pre-pandemic with much more throughput in the system and if levels returned to anything close to that, this would be terrible.

The frequency should increase and trains should arrive within 10mins to each other

Not to have more trains at rush hour is foolish, incomprehensible and completely against your purpose as a public service..

This will work for me because I am retired and use Metro during the off hours. I am sure it is not ideal for working folks. The wait times are not ideal, but I will continue to become more dependent on Metro and I am willing to schedule my trips accordingly.

I need more frequent rides.

This seems reasonable, and an equitable way to alleviate the serious budgetary concerns without completely removing service for some people. We can all work together to adjust our schedules in accommodation.

Unless usage drops considerably, there is no need to reduce rush-hour service.

I work at downtown silver spring, it is critical for me to be able to ride metro from strathmore station to silver spring station

If metro were to make its service this irregular I would be forced to stop taking the metro altogether - its too infrequent to be practical.

As an Eight year denizen of the District, I, and many of my friends and associates, have relied on the WMATA system to get to and from work and the other responsibilities of our lives. I do not think that it is reasonable or equitable to the vast majority of those in the DMV to limit Metros services any further than they have already been limited.

With that few trains coming, how would I be sure to get a space on the train when commuting to and from work?

30 minute wait times during the week are excessive and will mean the trains are more crowded than usual. For Metrorail to be functional and to attract riders, it needs to be more reliable and more appealing. People will continue to be wary of public health concerns, and crowded trains will not help matters.

Proposal to operate Metrorail service every 30 minutes

It is not clear what the timing would be for stations beyond Grosvenor. Overcrowding on both trains and platforms on this side of the red line was a real problem pre-pandemic. It is also not clear what the length of trains would be. Having 8-car trains would help.

The rush-hour trains get very crowded with the current schedule. Reducing their frequency would exacerbate this problem. It would also make it impossible to maintain adequate social distance, a practice that we should aim to maintain going forward.

More frequent stops are ideal for people who use the metro for work commutes

It would severely cut into my transit times and make coordinating appointments and work nearly impossible.

Personally this would work; I do not use metro to travel to work. But prior to the Pandemic, I used it anytime I went into DC - to theater, to museums, to have dinner, etc. It is BY FAR the best way to travel into DC. I hate driving into town--parking is a pain and expensive. I loved being able to walk from my house to the metro.

Im retired so not needing the Metro for travel to the office. I travel mostly the Red line and mostly during off-peak hours.

Excellent idea versus eliminating stations

30 minute headways make the system unusable. It will create a self fulfilling prophecy for Metro in which ridership will never recover because commuters don't have 30 minutes to wait. I will drive to work if faced with 30 minute headways.

every 30 minutes is too infrequent. Consider what you charge us. Why did you spend so much money in platform improvement projects that did not improve anything and required costly and inconvenient shuttle bus services

As long as Grosvenor metro station is open, it works for me. I would rather wait a little longer than finding an alternate transportation to my work if Grosvenor will be closed.

It would work for me as I use Metro rarely and not for commuting, but this would be terrible for commuters.

It would mean having to adhere more strictly to timetables but the proposed frequency is doable. A big problem is crowding, less frequent trains would mean more people on each car and it would be harder to maintain physical distance.

Live in Fairfax County and work in DC pre-covid. Using metro bus and rail would be a major hardship starting January 2022 assuming back to physical work location post-covid.

I expect to be commuting back to work by January 2022, so the pre-COVID schedule would be ideal.

I work from home full-time now. If I didnt, I would consider driving instead to get to work since Im sure trains would still be late and I wouldnt want to be waiting 20-25 mins for a train if I just missed one. The trains never run on schedule.

I am concerned about the time lag between trains. 15 minutes is a very long time, plus this is only if there are no delays. I use Metro whenever I go downtown and this includes medical appointments, other events (except not during covid), etc. I also use several Metro lines to get to Dulles and National airports. If the schedule becomes less frequent, I will need to allow more time to reach any destination and/or connect with other public transport. It is too expensive to drive a car and park in downtown Washington or any of its close-in suburbs.

What would be the opening and closing times? They are not specified.

The DC metro should aim to provide faster levels of service. The outlined proposal would significantly impact the ability of folks to go to work, social events, etc. as it would severely reduce the speed at which trains arrive. Part of DCs appeal is how easily individuals can travel throughout the DMV in a timely manner. Starting the precedent of reducing service can lead to a slippery slope that eventually severe decreases in public transport options.

While mildly inconvenient, I can make this work with my personal work schedule.

This is way too infrequent and inconvenient, potentially leading to overcrowding or decreased public transits altogether and contributing to car traffic congestion / air pollution. As someone who does not have a car though, it would mostly affect my ability to get to school and other places in DC as I live in the greater DMV metropolitan. Please dont reduce frequency of service to these stations

If trains are really crowded and there is a need to social distance still, this likely wouldn't work. Also - if you miss a train or two because of crowding, this will significantly make it difficult to rely on public transportation.

Once life is back to normal and the pandemic is over, which should be by the end of 2021, let alone 2022, I will be commuting downtown again. Trains arriving every 15 minutes would be very disruptive and make my commute much more difficult.

This proposal doesnt seem to take into account the likelihood that more people will be commuting to work during rush hour in 2022.

These changes will significantly impact planning for travel to work once back in the office later this year, and add at least another 30-45 minutes to my total commute. And will also impact after work activities.

Morning rush hour times should have shorter arrival times / running more trains

Proposal to operate Metrorail service every 30 minutes

If trains are scheduled to arrive every 30 minutes there needs to be a published schedule (similar to buses or MARC) that allows riders to plan what time they need to be at the station. Trains should also ideally arrive at the same time every day to facilitate commuting. 30-minute headways require a LOT of pre-planning and make Metro a less viable option for commuters as a delay of 5 minutes can make you an hour late.

Crowd other stationsInconvenienceLarge group oom nearby apartment complex now walk tgo Grosvenor station. Change woould necessitate more vehicular traffic

this makes the commute too long. the arrivals of the trains at the stations would have to be available online so riders could synchronize their arrivals at the station to the arrival of their train.

This would make me much less likely to use metro at all. I mostly take short trips within DC. If I might be waiting 20-30 min for the next train, I might as well walk. Before Covid, I generally only used metro during rush hour service because i found it too infrequent at other times.

If travel volume returns to anything approaching pre-pandemic levels, this is way too infrequent. It would be impossible to board trains at OR/SV stations starting at EFC and continuing inbound. At that frequency during rush hour, you might as well have no service, since that frequency will result in most customers choosing other transport - often by necessity, not choice.

The ridership should be fairly back to normal given vaccine availability and station platforms would be dangerously overcrowded.

I'm able to walk to work, and while this wouldn't impact my *necessary* daily travel it would mostly work ok for going into the city center.

I rarely ride the red line, though the infrequent service would make me even less likely to use Metro when I did need to go to businesses near the red line

This would be grossly insufficient during the workweek/Rushhour. I would buy a car and drive to work rather that wait on the platform for half an hour. Not worth it.

Rush hour needs to have trains arriving more frequently. End of line stations need to have trains arriving more frequently, especially during rush hour.

This may not affect many people since the majority works from home right now

Trains are too far apart, especially during rush hour service and for downtown/transit stations. By 2022 I will be back in the office full time, commuting every day. People who need to change train lines during commute would need to wait up to 30 mins total each way. I would look for other ways to get to work.

Increasing average waiting time and congestion in your poorly ventilated stations would completing prevent me from using Metro. With the installation of UV-C lights and increased air exchange in your stations (no idea if this is even being considered), I then would have to double my estimates of travel time every time I need to use the system. 30 minutes is completely unacceptable and will lead to losing more customers.

This would be good on weekends but 12 minutes between trains on weekdays is far better. If Covid persists then 15 minutes between trains is sufficient

The current schedule is very convenient and I presume that it fits the schedules of a significant number of the riders. I understand that budgets are an issue however, how can we make the public more convenient and more desirable? Answer, adding flexibility.

Fewer trains during rush hour will lead to massive crowds of people waiting to board and not everyone will be able to board once the train arrives. This will create serious delays in our commutes. At crowded stations we already have to wait sometimes for the next train because the current train is too crowded. Fewer trains will be a disaster during rush hour.

My new work location (should on-site work resume) is outside of NoMa / Gallaudet University Metro and I do not desire to have an extended commute, which makes for an even longer workday.

Missing a train at the end of line, like Vienna on the Orange line or Shady Grove on the red line could really mess up a commuters day during the work week and probably push people to use less environmentally sound transportation such as ride-share apps ans their own vehicles.

As long as they don't close the Grosvenor/Stratmore station

This change would make metro more like an express bus. The effect on ridership would depend a lot on whether trains stick to a schedule reliably, so people know what time they have to be at the station to get the next train.

Change would add additional time to my commute; would need to leave early for work to arrive on scheduled time. With reduced train service, will fares be reduced?

terrible.more frequent service required for anytime anyone needs to use the Metro +if there is to be any hope of increasing ridership the service needs to be clean/quick/frequent/safe

As a commuter who currently uses the metro to travel to work in person, I am extremely reliant on a frequent metro schedule in order to commute to work in a reliable and effective manor. I am happy to pay for public transportation given the benefits to the community and the environment, but less frequent service lengthens commute time and makes the option of public transit a less desirable option, and I would consider discontinuing my public transportation commute if this change was implemented.

The less frequent trains on weekdays will make Metro a less attractive option for my work commute. Instead I would drive.

Proposal to operate Metrorail service every 30 minutes

I am a teacher who works in the middle of DC. I have very tight morning commuting time. Having to wait for half an hour for a train is a big waste of time, and if I miss one, I have to wait for another half an hour, which will make me late for work.

We all know that this is a disastrous proposal. This would cripple the DMV. People who rely on Metro will either have to extensively plan in advance, or will not take it. In fact, all this would do is actively discourage almost all of DC from taking the Metro. With Metro not an option, your budget will dwindle even more than it already has. Do NOT implement this option. Consider an increase from 12-minute headways to 15 minutes if the desire to cut costs continues to focus on Metro instead of on the capital plan; this is the maximum that people will tolerate. 30 minutes is a non-starter for all.

No, these times are too spaced out.

This disproportionately affects Black and Brown communities who disproportionately live off of Metro lines that are not the Red line and seems to favor the already economically advantaged.

It depends if ridership numbers rebound. Im on the orange/silver line and before the pandemic, trains were packed at rush hour. But during the pandemic, ridership is lower and I can always get on the arriving train. Perhaps services could be restored in line with (hopefully) rising ridership.

Will only work if the hours that metro is open for service are not significantly reduced. I have a long commute and need to coordinate with bus arrival/departure times.

15 minutes is a long time to wait, and 30 minutes is absurd. How would this work after an event like a Nationals game? I always thought of the trade off for higher fares during rush hour was frequent trains.

We need service every two to five minutes, otherwise, missing a train would me impossible to maintain a work schedule, and the next train will be packed.

As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

the long intervals between trains during rush hour will lead to severally overcrowded trains and drive customers away from Metro. To base 2022 service on 2020 ridership during the pandemic is absurd.

This would make me switch to driving.

I would like all of these proposals to be temporary. I am not sure how sustainable these are

Lack of increased capacity during rush hour is not a reliable way to get to work, which is why I use Metro.

I have relied on Metro to get around the metro area for many years. It has always provided efficient and easy use. One of the things I have values most is not having to wait long times for a train. My time and all riders time are valuable. In my experience, taking the train takes the same amount of time as driving. This time component makes it easy to choose metro. If I have to wait 15 or 30 minutes for a train, I will not likely stay a metro user. Our roads are government subsidized. -- why cant the government subsidize metro until ridership returns?

30 minutes is too long to wait for a train. I would prefer a slight fare increase instead. I have to get to work. Suppose i miss the train by 30 seconds...then I have to wait 30 minutes. Ill be late

This is shortsighted. The Red Line at rush hour is always packed and changing frequency to every 15 minutes will only exacerbate that. People will start using metro again.

Keep weekday schedule with more frequent trains

I generally use the green line, and red line is for leisure, so planning and a really good app will make it work (citimapper is good)

This is okay as long as it is temporary and train frequency is increased once ridership increases again. Also, ridership will probably increase by Jan 2022 because of the vaccine and declining numbers if COVID cases.

Its preferred to adjust the schedule to increase frequency during rush hour and have larger gaps during non-rush hours

This is unworkable. There has to be more trains during rush hour. The proposed cuts will further drive down ridership. This DC administration will be remembered for killing the Metro if this is allowed. Trains on all lines should run at a minimum every 10-15 minutes and more during rush hour.

How do trains coming from Shady Grove metro impact the load capacity at Grosvenor?

Pre pandemic, metro schedule was highly unreliable. To become a system that the public would use, extending the time between the trains is not the answer. Why can we learn from the Europeans. I never waited for a train more than 4 minutes. With such large waits here, metro will work itself out of the job. Why use metro when driving is more efficient

As long as there's a working schedule, this would work - but I'm retired, so there would be little inconvenience...

If there is no difference between rush hour and non-rush hour schedule, then there should be no difference in fares.

This schedule seems okay at this point but I am curious how often the schedule will be evaluated and changes made as needed?

This plan works for me and my family

Proposal to operate Metrorail service every 30 minutes

If DC has at least 50% of ridership back due to vaccines, people no longer working from home, etc this would be a disaster. People talk about moving to driving but this ignores massive segments of the population who cannot afford to all of a sudden drive to work (not to mention parking costs in DC) or who have never needed a car because of the availability of public transit. Either way it's a financial burden on the individual both in the potential time lost at work or the alleged necessity of a car.

increased wait time for my trains would make Metro less reliable for me - harder to get to appts on time.

30 minutes is entirely too long to have to wait between trains and would determine if folks arrive to work in a timely manner

This is a dramatic increase in wait time. I do like that stations with multiple lines are decreased from 30 to 15 minutes, but even that is still a big difference for those needing to transfer to get to work on time. Additionally, assuming most people are vaccinated and the area becomes safer to exist in public, the trains would be overcrowded. I loved using the metro pre-pandemic (one of the reasons I moved up here), but this proposal is making me not want to use it at all. If anything, this should take effect immediately since less people are using the metro. If you bring volume down to 30% now, then maybe once Jan 2022 comes we can bump it up to 80% (current volume). This makes the most logical sense given when people are more likely to use the metro.

30 minute trains on weekdays would be very impractical for commuters who cannot fit on trains even with the weekday frequency. It doesn't sound like it is feasible to transport all riders with the limited number of trains and decreased frequency

I am one of the lucky people that travels between the areas where it would only be every 15 minutes, but overall I think it would be a bad thing to go to this.

I travel on metro several times a month for meetings and appointments, and this schedule would almost certainly not allow me to get where I need to go in a reasonable amount of time. I would probably have to find another means of transportation.

While I do not know what my travel needs in January 2022 might be, I do know that having to wait 15 minutes between trains at any given time would greatly reduce my use of Metro, and I think other folks would say the same.

This will send people back to cars even more,

12-15 minutes can make a huge difference, and not in a good way. If a train is early, that can throw off somebody's entire schedule if they have to wait another 15 min for the next train!

Concern for every 15 mins - seems infrequent. Would there be a strict schedule to time it

This would work for me because I am retired and do not need to consider the impact of commuting delays.

This would work during the day but not during rush hour. Before covid the trains were packed by the time they arrived at Grosvenor-Strathmore.

For metro to be a serious commuting option, rush hour needs to have a priority extra level of service. There WILL be insane crowding which will make metro unusable. Metro is one of the best transit systems in the United States, and there needs to be faith ridership will return. Cutting service will have a major vicious cycle. Less service = worse service = lower ridership = more budget shortfalls. Please find the money!!!

I expect to be back to volunteering in person for Smithsonian museums in 2022, arriving and leaving at rush hour times, from White Flint on the red line, downtown. One train every half hour during rush hour times could be untenable, with more people returning to work.

This would lead to very crowded trains especially during rush hour and make everyone's commute longer. Many people take the train because it is quicker than driving. If you make the wait times longer, I think that you could discourage people from taking the train and as a result lose revenue.

I would be interested to see a proposed schedule of arrival times as well as the planned number of cars per train, post-COVID capacity estimates per car, and anticipated ridership on the Silver line before being able to assess whether this plan would meet my needs.

Commuters rely on regular scheduled public transportation. No rush hour service will have major impact to the commuters.

30 minutes is already a very significant gap for commuters who have to catch the next train for work. Rush hour should have more trains

During rush hour, the limited trains would most likely cause packed trains and I'd be concerned about overcrowding, people rushing for trains and injuring themselves or others, and damage to trains due to the need to catch them (there's already an issue with people forcing the doors open to slip in during rush hour) which could put the train out of commission and cause major delays.

Please keep Grosvenor station open as lots of people depend on this station. Also it has the closest parking lot on the red line which makes this station desirable for commute. I am fine with waiting longer for trains as long as they are coming.

Proposal to operate Metrorail service every 30 minutes

Pre-COVID, the silver line trains (and I'm sure all other lines) were packed during morning and evening rush hours, when they ran at or more often than every 12-15 min. Forcing them to run every 12-15 min at multi-line stations and every 30 min at single line stations would 1) create incredibly packed trains that would have to leave passengers behind, and 2) drive passengers back to their cars, because they would not be willing to wait 30 min for another packed train without guarantee there would be space for them. This proposal is untenable for work days. For weekends, it's fine. It would never make sense to have the same schedule 7 days per week unless it followed a rush-hour schedule all 7 days. You have to make it more palatable for commuters to use metro vs. use their cars. It's that simple. This proposal would do the opposite.

Why not have weekdays and rush hour timing that is quicker, and longer times on weekends, as it is now?

With vaccines being administered, ridership will increase and 12 - 15 minutes between trains will not be sufficient. Individuals' work times will not vary throughout the day, a rush hour will be needed.

This infrequency will barely make metro a subway station. The prices are already ridiculous for the service levels pre-covid. People would literally be late for work every day, unless they give themselves an extra 30 minutes to get to work. The cars already made riders feel like cattle. I understand there are revenue issues with lower ridership during the pandemic, but having low service once things are back to normal will truly make it into a cattle situation with even less frequency! I am appalled at this proposal.

I think you must keep regular train service at rush hour - as many, many people will commute again once the majority have had the covid vaccine. I do not think you need to run the trains as frequently on Sundays and Saturdays and I think it is fair that you have to wait longer for a train outside of rush hour. At the same time I don't think you should have to wait more than 20 mins on the weekends at high use stations - not just hubs. You have to plan for after covid - not base your plans on the past year because of small ridership because of covid. People will need to use metro again to get to and from work - and people will go out/go to the mall again more once a majority is vaccinated. If you need to save money - you could change for a short period - but I do not think you should make any major changes permanent.

Longer wait times are OK.

I can match my arrival at Metro Station to fit into the planned 15/min intervals and arrive at my destination at the desired time.

If we are still in social distancing measures this will lead to many people on the train. If we are back to work at pre-pandemic levels, the trains during rush hour will be way to full and people will start to explore other transportation options. Also this type of schedule is going to put unfair burden on low wage workers who have to commute by metro.

The thirty minute time gap between trains does not seem practical for morning commutes. Metro is the preferred mode of public transportation because of its speed and reliability. If the latter factor is taken away, then it will be very challenging for the workers and students who rely upon it.

Businesses in DC will undoubtedly be hard hit by this proposal. This proposal doesn't make clear what time trains will stop operating. I'm concerned about 2nd and 3rd shift workers.

If trains only run once every thirty minutes, that will make ridership decline even more sharply than now. It will also increase crowding and subsequently the covid risk on each individual train.

For red line - I would suggest 10 min interval during rush hour and 20 min interval during non-rush hour. For the weekend - 30 min interval.

I believe that having Metrorail helps keep traffic in the DMV under control and is good for the environment. I hope it can continue to operate as usual, while generating enough income to maintain it.

During rush hour times, when the metro fare is more expensive, the waiting time should be less than 15 minutes.

The train cars are not big enough to support that many people during rush hour. There will be severe overcrowding on the train cars...what about disabled, handicapped or elderly people? I can hardly see them able to ride the trains during rush hour! One train every 30 mins is not helpful at all...the normal train schedule before was barely working as is.

We need to have more frequent trains during rush hour. We're not going to be locked down forever (we better not be if we plan to have a future in DC).

This will not work because riders will miss their transfers which will cause late to work. The car will be packed and does not follow CDC guidelines 6 feet social distancing.

would not work if everyone could fit on the train when it came....an hour wait when you've timed yourself won't work, and I would have to forgo metro altogether. Also, this would mean shortening metro trip to avoid a transfer, to walk or other alternative.

It is understandable to reduce schedule operation based on low ridership. However, Metro acknowledges and identified stations that have higher rider participation and made it a point to keep those stations run frequently because of that, which is fair.

Since 2005, waits between trains have increased so much that Metro was barely functioning as a reliable subway system before the pandemic. With this move, Metro would be declaring that it no longer wants to try to be a transit system for a large city. 30 minutes between trains is what one would expect on a line connecting Winchester and Leesburg, not a subway in the middle of a city.

Proposal to operate Metrorail service every 30 minutes

The classic downward spiral . . . because of reduced ridership, service cuts and increased fares, which in turn result in further decline in ridership. The history is clear, from national rail passenger service to various local systems: Take this action and you'll make the problem even worse, because fewer and fewer people will rely on you as their go-to transit, especially in competition with Uber/Lyft. You have to get your riders back . . . and this surely will not do it.

Having some kind of rush hour with shortened wait times on weekday mornings and evenings is very helpful to commuters. Maybe shorten the length of the rush hours?

That doesn't work, the Pandemic is progressing with the vaccines and we need to get to work closer than 25 minutes.

Every 30 minutes would be terrible during rush hour, especially downtown. Also it can cause a lot of issues as a commuter to get to work on time.

This is utterly ridiculous given pre-covid ridership. If you miss a train you have to wait 30 minutes for the next?! This will push ridership lower as this is not a reliable system for people getting to work. People will switch to cars which goes against the push for public transportation and less cars on the street. How does this make any sense?

I will be moving to Alexandria (Van Dorn Metro) and will need to rely on metro to get to Fort Totten for work. These services cut could cause me to be extremely late to work should there be any sort of train malfunctions or delays of any kind. There is no direct bus service from Virginia to DC so it would only inconvenience me and many others.

While I am fortunate to live in an area with multiple lines, many are not as fortunate which can make timing very difficult. Many rely on specific metro times to allow them to get their kids where they need to go while also arriving at their employment in the same timely manner. Spacing out the metro times to a half hour makes things like this more difficult because if anyone is even 30 seconds late to the metro, now they are likely to be a half hour late to work. And that doesn't even include if there are delays which happen more often than not. It is marginalizing to whole populations.

Trains are packed even when they come back to back during rush hour (especially red line at Chinatown where I usually board).

I ride the Metro from Shady Grove so this would greatly limit the trains I am able to catch both to and from work.

This only works under the condition that I use the Transit app to time my departures. I anticipate one regular trip using the Yellow Line only. I can't anticipate other travel at this time, but transfers to other lines could produce excessive waits.

I think that trains should arrive more frequently. Every 30 mins is not often enough. Between 12 and 15 mins is more reasonable.

Before Metro jumps to conclusions, there should be some questions asked: is Metro possible sure that they will never go back to what it was before the Covid-19? If there is herd immunity will the ridership remaining at 90 percent? The proposal based everything remaining as is!

Seems like service times need to be frequent enough to keep current riders and encourage new riders -- so during rush hour and other high-traffic times it seems like wait times should never be more than 15 min

Aside from work, this would be doable for whenever I need to go into the city.

There should be rush hour schedules and there should be longer service on the weekend.

Waiting for 30 minutes for a train is unacceptable!

Yo creo que si pasan a cada 30 minutos estar a bien lo importante es de que haya servicio aunque eso implique para nosotros salir m as temprano de nuestras casas pero tambi n ser a bueno que trabajar n al menos hasta la 1am porque habemos muchos que trabajamos en restaurantes y hay veces salimos un poco tarde. Muchas gracias!!!

If even only half of former commuters return to work (as opposed to staying WFH) one red line train every 15 minutes is not going to cut for commuting hours. I used to live near Silver Spring Station and there were times when you could squeeze into a train (even though it's near the end of the line) and on the evening commute, from Gallery Place, I'd often work until 7:00 PM or later just because the trains heading home (Glenmont) were impossible to get on. This is a nightmare scenario, esp. as most of us will probably still be v. uncomfortable being in close proximity to others.

Since there is no Metro in my neighborhood, I rely on Metrobus to get to/from work. I only occasionally take Metrorail.

It will take longer to get to work.

Would make trains and stations too crowded not to mention additional time added to commute

At the end of a workday, people are ready to go home. Getting stopped in the hallway for a few minutes could mean the difference between catching a train in the next 10 minutes or so and waiting for half an hour.

Trains will be awfully congested if they are so far apart. Often at rush hour you can't even board the train because of overcrowding

I live near the Cleveland Park Metro station and previously commuted daily. Any time there was a service interruption, every train would be too full for me to board until the issue was resolved. If trains only came every 15 minutes, I would never be able to board. This would also add significant time for anyone needing to use more than 1 line.

Proposal to operate Metrorail service every 30 minutes

This assumes less people will be traveling during rush hours, for example. And with less frequent times, the metro cars will be filled with more people. Which is potentially dangerous if there is another surge of COVID. Similarly, less people would take the metro if there are less cars running, so that would sort of create less ridership in itself as opposed to more/ more fares.

30 minutes would be too long to wait in between trains for commute to and back from work. please keep at 15 minutes during rush hour.

In non-covid days, we need more metro trains available during rush hour. Trains would come every few minutes and they would be packed to the brim. I cannot fathom trains arriving every 30 min or every 12-15 min where trains overlap. The platforms would be teeming with people, shoving and pushing people out of the way just to get a train. This would be extremely unsafe. With an overflow of people on the platforms, pushing and shoving to catch a train, someone can easily be pushed onto the train tracks when it's a packed platform. No joke. I've already seen it happen prior to covid when trains would come every few minutes. I cannot imagine what the platform would look like if they were to come 15+ min apart.

No rush hour additional trains means more crowding and extend commuting times. This makes me less likely to take metro.

I would foresee the trains getting to work being too crowded, as commuters would end up using the trains at probably the same 3 or 4 half-hour times in the morning (& even in the evening). This seems like a bad idea with COVID-19, and with practicality in general. If the train is too crowded, then we have to wait 30 minutes for the next one, on work days -- it honestly sounds like a nightmare.

N/A - This plan works for me, personally.

Yes for running metro trains more time apart, since metro ridership declined over the Covid pandemic year

Even though this doesn't affect me, I think it is important to keep rush hour service in place to shorten commutes and keep social distancing in place.

I catch the train at East Falls Church, and I feel that with this option, at least the stations would remain open.

This is a complete abdication of what it means to be a transit provider in a major city. Go anywhere else in the world - trains every 30 minutes? That is bonkers. Especially during rush hour? Nobody would ever get to work.

This level of frequency is so low that I would likely switch to biking or walking for almost all trips.

Trains running every 12 -15 minutes should be during non-rush hour.

Seems reasonable particularly if work-at-home levels remain similar to current ones, which seems likely.

Despite the instructions to consider the options independently, which is not a realistic way to make a proper assessment given some of the drastic proposals, I would much rather wait long for a train at a nearby station, then need to be dropped off at a much further station for more frequent trains.

Would like to see more trains during rush hours

This is acceptable to me only because my station has two lines and would fall into the 12-15 minute interval

Passengers are most likely going back to work and daily commute by January 2022. This update will not satisfy passengers needs.

Without weekday rush hour scheduling, I have no idea how I'd get to work on time. I commute on the red line. Before COVID, train cars were often too packed for me to board WITH rush hour scheduling and new trains coming every few minutes. This is a recipe for severely overcrowded platforms and extreme difficulty for commuters trying to plan for an on-time arrival at work. We need to keep BOTH weekday schedules AND rush hour schedules.

Due to the pandemic I am unable to say whether this travel schedule would work for me into the future. I assume that metro rail could scale service back up as ridership increases.

What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

Metro is the lifeline for the poor and disadvantaged in our city. No cuts are acceptable, they are attacks on the most vulnerable, and are evil, plain and simple.

This proposed solution is completely unacceptable. While riders within the city core may find enough available trains, commuters and tourists moving towards destinations on the (remaining) stations on the far ends of the system would be forced into too few, overcrowded, and infrequent trains. This assessment is bad enough, before considering it ignores the possibility of COVID-19 variants moving from Pandemic to Endemic conditions.

It would work for this household because we are retired and can schedule around train arrival times. But that may not be the case for others who depend on metro to get to work and other issues. Must stress that the most important matter is that Strathmore station remains open. Post-covid, we are looking forward to once again using metro as our gateway to much of the rest of the region.

Proposal to operate Metrorail service every 30 minutes

I'm okay with weekday and weekend schedules being the same, but 30 minutes between trains is ridiculously long. The pandemic will end and when that happens we will need our public infrastructure to be as strong or stronger than it was before the pandemic.

This would be devastating to the region's already devastated entertainment industry.

Fewer trips means more crowded trains. Once the foot traffic picks back up over the next few months, there won't be any way to socially distance. I don't think the plan was thought out by people who are in the every day world.

This could affect the workers that our essential workers that work at grocery stores and other hourly based jobs. It could affect their capability to find child childcare and or school bus drop off etc. it may seem only a 15 minute for budget purposes but it could mean an 30 minute to an hour delay for others for their jobs.

January 2022 I expect to be using Metro to travel from the suburbs of VA or MD into downtown DC on a daily basis during rush hour. I would be very concerned about being able to get to work on time if there were such big gaps between trains, especially as ridership returns to normal.

My Metro station stop, Potomac Ave SE, was already plenty crowded on pre-pandemic mornings. To have to wait 12-15 mins will lead to tremendous overcrowding, esp. if there is a disruption on the line (sick passenger, disabled train, etc.).

The crowds would be unimaginable - they were pretty bad in 2019 what makes you think a simple model like that will work.. We are planning to go back to the office at Capital One in September everyone.

Metro trains should run more frequently than every 15 minutes so that commuters can have more options and more time to travel

By 2022, we would probably all be back to in person work with the normal ridership pre-covid or at least close. So reducing traffic then isn't ideal. Should reduce traffic now so that by 2022 can go back to normal.

I have to be at work at 6:30 am., so I am hoping that we will not see a 30 minute wait early in the morning.

Increased trains at rush hour and different weekend hours make a difference. I hope that Metro does not abandon this practice.

Assuming I return to having to work downtown again, 10 minutes during the critical 8am-8pm window is about my tolerance. But the general principal of the proposal is fine.

Assuming were back to work by then, this could be a nightmare for commuters. I guess not everyone will be back in the office. I could live with this, but I'd strongly prefer not to.

Sometimes trains are so full that, even if you're on time for the train, you can't get a spot.

This proposal means Metro will be running fewer trains. Fewer trains equates to fewer seats. Fewer seats means that the trains that are in operation will be more crowded. This means there will probably never be enough space on a train during rush hour for those of us who live closer to DC.

I commute using the silver line every day normally when not WFH (will no longer be WFH after Sept 2021) and the trains are already super packed and I have to stand most of the time.

Making the trains run only every 30 mins would make my commute an extreme hassle and would result in majorly overpacked trains.

Waiting 12-15 minutes for the Blue line in the morning commute would be inconvenient but doable. Waiting 20-45 minutes would not work for my morning and evening commute.

Seems sensible to me to have trains runs on days and time when demand is high. Anything to try to keep cars off the roads

This sounds bad, but potentially less bad than other possible alternatives. While this would be inconvenient, I'm open to considering this possibility.

This would have to be contingent on the expectation of longer-term low ridership after offices start opening up again.

It's unfortunate, but at least predictable and therefore acceptable

A key factor would be the period during which this reduced coverage would be provided. For me, it would need to be from 7 AM to 11 PM.

Red line and orange line should increase frequency because they service so many residential neighborhoods, compared to other lines, with commuters going into or out of the downtown area.

The long wait times mean you must rely on technology to schedule when to arrive at the station to avoid long wait times. It reduces Metrorail from a service always available to a scheduled service.

Unless trains grow by multiple car lengths to ensure enough space for rush hour traffic from here in Northern VA to inside DC

Some of my trips that I did back then had no need to go beyond Silver Spring or Grosvenor.

in 2022 I expect to be visiting the Washington, DC locations that have been closed for the pandemic. it doesn't make sense to close stops when everything will be opening up in 2022.

30 minutes between trains would be very difficult to time trains and get to work on time. Or I would end leaving earlier to catch the train and arrive at work plenty early not maximizing my time.

Proposal to operate Metrorail service every 30 minutes

I continue to commute from Clarendon (mostly) or Courthouse to Farragut West almost every workday (M-F). Every thirty minutes is simply too infrequent. I expect to continue this into 2022. It seems there will be more people working downtown if the pandemic eases through vaccines

Running two trains every hour during non-COVID rush hour is going to make downtown even further congested in the afternoons. Will bus schedules be increased to meet this capacity? Are we reliant on cabs and ride sharing to carry people home? Additionally, when the proposal says no difference between workday and weekday schedules, whose operating hours would become standard? Would we decrease weekend services? Right before more people are expecting to be vaccinated and be able to travel again? In the long run, this proposal would kill the metro on several fronts.

An up to 30 minute, with no set schedule, is too long a wait for a work commute. Taking bus and metro already makes for a long commute. Also, this will make each train more full. Not appealing or good for infection control. How well social distancing is being handled is important.

Commute would be twice as long

People will be vaccinated and back at work by January 2022. If metrorail only comes every 30 minutes, I wont commute by rail. It would be faster for me to drive or bike. I probably wouldnt take metro outside my commute either because i wouldnt want to get to a station and then have a 30 minute wait.

I think it makes sense to differentiate between rush hour and non rush hour and between week days and weekends

Rush hour trains would be unbearably crowded at 15-minute intervals, and missing a connection would make trips involving multiple lines even longer.

It would make my already long commute from Rockville to DC even longer. If I miss a train, I'd essentially be 15 minutes late to work. Also, the trains were already overcrowded at Rockville pre-pandemic, and I imagine this will just lead to more overcrowding when things go back to normal. I can't afford to drive...

15-20 minutes is too long to wait for metro rail the buses will not be synched so it would make you late for appointments or perhaps too early .

Need more frequent trains during peak hours

Doesnt account for rush hours. Which will gradually come back. What about events ? Nationals stadium and other such locations will be a total zoo at the platforms, as well as rush hours. Most would be acceptable if you adjust for rush hours and games.

This is not realistic during rush hour. Once people are traveling more, Metro should assess ridership and perhaps shorten rush hour or something of that nature, but trains coming so infrequently will result in crowded cars and frustrated riders - and after a pandemic, no one will want to be in a crowd.

Already experiencing uncomfortable levels of crowding on Blue/Yellow/Orange/Silver line during rush hour weekday travel. Reducing frequency further would only exacerbate this and may drive more people away.

During the week if you miss your train, if trains only arrive every 30 minutes, the yellow line train I need to travel to work; this time difference would be difficult to manage getting to work. Besides dealing with the overload of other trains; blue/orange/silver trains; and less yellow/green trains on the line - causing overcrowding of those. This would be made even worse during sport season; hockey and baseball fans on the yellow line always get short changed.

As long as you add more trains so we aren't going to be stuffed like sardines. Very 40 minutes seems steep why can't it be ever 20 minutes

It would be a nightmare during rush hour once the DMV is back to to its normal ridership. The outlook on COVID is optimistic for 2022

I dont see the value of trying to inch back to bottle necking at Grosvenor and Silver Spring. It didnt make sense when it was turnbacks. Slower rate of rail service would be counterproductive, if not self-defeating.

Trains should arrive every 5 minutes during rush hours.

I rely on the trains coming more timely so that my already hour long commute, one way, doesn't take that much longer

This plan would not work as I live on the Blue Line. This means that I would have to wait 30 minutes for a train, even in rush hour. Also, when that train arrives during morning or afternoon rush hour, there is a large possibility that I may not be able to board the train given the heavy volume. Therefore, I would need to wait another 30 minutes for the next train (an hour since I first got to the station) and hope I could get onto that train.

More frequent trains are better for the community. People are much more likely to take the train if they are not facing a wait. A wait of 15 minutes can make you late to work, to a doctors appointment, or to picking up a child at the end of school. Also, treating the blue, orange and silver line as interchangeable is not at all helpful for those whose stop is served by only one of the lines.

Would you consider every 20 min, + see if thats sustainable?

I work in DC so I rely on Metro every weekday. On the weekends I rely on Metro for social reasons. I save myself from many DUIs and DWIs because of Metro.

Knowing there would be consistent trains is good. Yes they would be longer wait times but you could plan around that.

Proposal to operate Metrorail service every 30 minutes

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies

This would make Metro very unusable and lead to even more ridership loss as we return back to normal pre-pandemic life.

Weekends could shift to trains running every 30 minutes. Try to keep the weekday wait between trains shorter.

Metro needs to be flexible. It may be acceptable/ necessary to limit routes/ arrival times during this period of diminished ridership. HOWEVER, in the near future - January 2022?? - Metro should meet increased demand/ need/ interest in ridership. Metro needs to support the the overall economy, so our businesses, restaurants, theaters, museums can be a vital aspect of the DC area. Without that, property values and taxes will drop, unemployment and bankruptcies will go up, businesses and cultural entities will be lost and we will become a second-class region.

There should be more frequent trains during the weekday mornings and evenings to account for people like myself that normally commute on the trains to and from work

Trains running every 30 minutes negatively impacts those who use Metro as a way to commute to their shift jobs.

Waiting 15 minutes for a Red Line train during rush hour would considerably affect my daily commute to work for the worse. Trains were overcrowded and delayed during rush hour in 2019 and early 2020 even with more frequent service. As people return to the office, a 15-minute wait time will make Metrorail an unreliable option for daily commute and, as a result, lead me to select alternative commuting options.

reducing service until the pandemic is over is a good idea, but closing stations is unwise.

Put signs outside to let the riders know when the train is coming.

This would severely limit my and many other riders ability to use Metro reliably and easily. 30 minute headways makes transferring between lines incredibly difficult, which is a crucial need for someone like me who lives near a station with only one line. This would make it harder to use Metro to get to and from destinations without a strict schedule, and disproportionately hurts lower income riders with hourly work schedules or less access to real time arrival information

I commute to my job during rush hour using Metro. The current schedule is very convenient and allows me to get to work on time and without hassle. This change would affect my commute

That plan makes no sense. Why would you not adjust so you put more trains in service during heavy commuting times and less trains during non-peak times? If you don't this will provide a rush hour crush and prevent more people from using Metro because they won't fit on the more limited trains that are running.

I take metro from Courthouse Station, which is usually a high-volume station. Before the pandemic, rush hour service was crowded, so with fewer trains, this would increase crowding. At some point, Ill be resuming my metro riding to/from work downtown, but if theres increased crowding on trains and platforms, its going to take me longer to travel to/from work. that, and increased crowding means potential higher transmission of highly contagious forms of COVID. Even though I plan to get vaccinated, this gives me pause. I might be inclined to ride less than I did before. And if others think the same, what have you gained?

Once we're commuting into work again, a train once every 12 or 30 minutes is far too slow, particularly since MÃ©tro's trains are rarely on time. We couldn't even successfully time our commutes to avoid significant waits between trains

Not acceptable for the green line east of L'enfant plaza.

These cuts could lead longer waits for every line and overcrowded trains.

30-min arrival will overload platforms and trains, especially during peak hours, increasing risk of delays and possible injuries.

Only 2 trains coming each hour? No. 30 minutes is a long time to wait for the next train if you just miss one. Most stations are not set up to accommodate large groups of people who are waiting. Think of the bottle necking that will occur when everyone is trying to get into a station for the same train. Could a compromise be every 20 minutes. and then 10 minutes for the multi line stations?

Rush hour service difference is necessary

This will not meet my expected needs (and service usage) for 2022.

Whatever is cost effective would be fine.

This would be acceptable provided that WMATA ensured info about train timing updates was widely and easily accessible to the public. Also - would be important that trains are held at transfer stations to ensure riders are not forced to wait 15 mins for their first train and then 15 mins for their transfer train. I expect you would see a decrease in ridership at that point bc of the convenience of other methods of travel.

Given the vaccination progress and expected trajectory of decreasing virus cases by the end of 2021, a high percentage of commuters will be depending upon metro to commute once again. Higher frequency at rush hour will be necessary in regaining ridership.

Proposal to operate Metrorail service every 30 minutes

First, this question is not written clearly. Making schedules "the same" does not communicate which schedule would change. I'm assuming you mean you would get rid of weekday and rush hour schedules so that trains would run on weekend schedules. This plan will not serve your ridership adequately and will particularly burden those needing to transfer train lines. This of course, effects people living further outside of the city core and more likely to be lower income, BIPOC.

some of the consequences of reducing frequency of trains is extended commute time and overcrowding of trains. Having appropriate and frequent public transport, especially in such a small city should be considered a key priority in terms of service for its residents.

Trains arriving at my station (Grosvenor) are already standing only during rush hour. How would I ever get onto a train, if it comes every 15 minutes? It could take 30+ minutes for me to see 2 trains arrive at my station. No one would be able to get to work on time with unpredictable train capacity and reduced frequency, this is unacceptable

The metro is right next to our complex where I live. If it is taken away, a lot of these benefits will be lost.

This is terrible for getting back to work! What happens when trains bunch and there are two within 15 mins and not another for 45? Or when there isn't room on a train? not everyone can be an hour late to work.

Waiting around for trains and buses is the single greatest reason why I prefer to drive. 30 minute intervals is absurd. People don't have that much time to waste getting to or coming from work or school. Most countries around the world already have better (and cheaper) public transportation options than DC Metro.

30 Minute intervals is too great, and while it may save money, will most likely cause, through unacceptable inconvenience, a decrease in ridership

This would cause inconvenience but could be OK as a temporary solution until more people need to ride the metro trains

30 minute headways are too long. 20 minute headways would be more reasonable.

My commute involves transfer to/from MARC at union station. If I narrowly miss my connection to the metro because of MARC delays or overcrowding, it will likely make me late for work. Additionally, 30 minute waits on metro platforms later at night can be dangerous for women/non-binary folks.

Every 30 minutes is crazy especially during weekdays. Many people will likely be needing to commute in 2022 as offices return back to normal. Crowded trains seem like a terrible idea from a health perspective. If anything, there should be more trains not less.

Thirty minute arrival/departure times are too infrequent to ensure timely arrival at work in the morning given life's constant variability. Also, it would make the evening commute more uncertain. The only way this could possibly work is if Metro could guarantee reliable departure times at each and every station which would almost assuredly require automatic train operation.

If ridership is low enough that you don't have to wait multiple trains, and trains ran on schedule, this would be ok. But if one train every 30min is in effect and ridership gets close to pre-CoViD levels, this would often mean waiting an hour or more to get on a train, and compared to that I'd rather drive.

Im not sure if that plan will work for me given the multiple connections I have to make to get anywhere.

The entire benefit of metro vs bus is that you are not waiting 30 minutes if you miss the last train. This would be a fatal step in the downward spiral of metro ridership. Increase the fares by 50 cents each way instead of this draconian change.

If there are budgetary constraints, it is better to have regular service in longer intervals than no service at all.

If trains arrive every 30 minutes I will definitely not use metro for commuting. It's too risky that I could miss the train and be late to work, whereas if I try the bus at least I have the option of finding alternative means and not being stuck on the platform after already paying for the trip.

No. Reducing service this far would create further crowding for people who have no other means of transportation and further disincentivize other riders from returning to the system. Less convenient or less frequent service would make your problems worse. Cut nonservice programs and consolidate your workforce.

If trains are arriving only every 30 minutes, I would be concerned about overcrowded platforms for many hours during the day. Also, if you miss or are unable to get on a train, waiting 30 minutes for the next one is not really an option

Our family, during normal times, relies on the Metro to get to work. We also have two kids. There are often unexpected issues that come up that would prevent us from getting to the station on the half hour to ensure that we make the train. Also, trains are notoriously unpredictable in their timing, so I have significant doubt that the timing of the times would be predictable themselves. Also, we take multiple train lines to get to work, etc. Therefore, we would have to wait for up to a half hour for various lines in order to do our daily commute. This is untenable and unrealistic.

The time to cut service to save money was last year! The pandemic will be receding by this summer and people will be looking to resume rail travel! You may as well shut down completely as only offer every 30 minute service!

Would rather have more frequent on weekdays. Could be less frequent on weekends.

Proposal to operate Metrorail service every 30 minutes

As long as Metro continues to disinfectant, trains on a scheduled frequency please maintain this schedule. Metro access is IMPORTANT, I live in city walk score to train & stores is 96%. Super convenient, cuts down on driving city.

This schedule would work for me regardless of my travel schedule; rush-hour (when I go back to the office in the future) or non-rush hour (typically after work when I'm coming home from the gym or other professional/social organization activities). This schedule for me on the Orange and Blue/Silver lines at time) is appears to be better than the current non-rush hour schedule.

By September 2021 I expect to be commuting regularly by Metro to the University of Maryland (once vaccinated, I will be working in person again in the fall). A 30-minute wait would make this commute extremely difficult for me. A 15-minute wait would be better than a 30-minute wait, but would increase my commute time by ~30%. I'm wondering if you could limit service now instead, and then bring it back as ridership begins to increase again in the summer and fall.

People take metro because it is more convenient and cost-effective than alternative options, and in many cases takes less time than driving oneself or using a rideshare service. We all have busy lives and tight schedules and most people cannot afford the luxury of waiting half an hour for their train to arrive (timing your trips will isn't a viable alternative as not everyone can just leave work whenever they would like to be able to catch the train they want, may have to see kids off to school, etc.). This change would make commuting incredibly difficult for individuals working multiple jobs, students who have to commute between campus and their jobs/internships, parents having to see their kids off from school or be present to pick them up/be home when they arrive home from school. Everyone in this city is already dissatisfied with metro services, and on days when the red line only runs every 15-20 minutes, most of us would rather walk across the city than wait for the train.

I depend on Metrorail for my commute into the office. Any cuts in service would not be good and would discourage me from using the system. DC needs a robust public transportation system.

Being retired, I mostly travel on off-peak times so this works for me.

Two trains an hour means I have to schedule every trip in advance, rather than just going to the station when I want to get somewhere.

If large numbers of people return to their work places after vaccination is almost complete the above schedule would not be adequate on the blue, orange, silver, green and yellow lines.

When taking breaks when I work I have a certain amount of time for my break waiting a half hour for the subway would shorten it

Increased service during rush hour times is critical, even if it means less trains during off hours.

These cuts will not work for people's travel needs which will be back to normal by January 2022. Reduced service like this will only drive down ridership.

This service would be inadequate for my main use of travel via metro, to attend sporting events in Washington DC, causing me to seek a less efficient, environmentally harmful alternative.

Wouldn't the trains be unbearably crowded during rush hour?

Given that the timeframe is 2022, I expect that ridership will be closer to pre-COVID. As such, it would not make sense to have a uniform service at all times. In addition, because of the need of reducing overcrowded trains to continue to keep the spread of the virus at bay, rush-hour service will be even more important than it was pre-COVID.

I do not use Metrorail, only Metrobuses

With fewer trains, crowding could be excessive. As a senior this concerns me, as I do not wish to have to stand. More trains are needed at rush hour.

Knowing the time table 7 days a week is very helpful.

For morning rush hour commuters, 12-15 minutes wait time could be practicable, but half an hour would not. As a regular commuter to DC, I would personally handle necessary service reductions and continue to take Metro, but I'm afraid others might desert Metro to rideshares or telework if they cannot count on train service under half an hour. A compromise might be to reduce rush hour time but at least provide reasonable train arrivals when most needed eg. 8:00-9:30am weekday mornings.

At all stations with service from more than one line, trains would arrive every 12-15 minutes (for example, Blue, Orange and Silver Line service at Rosslyn). Does this mean that a train from one of the lines would arrive every 12-15 minutes, or that a train from each line would arrive every 12-15 minutes?

I am an essential worker, I go to my job everyday. I don't know why it will affect us

THIS PLAN IS VERY IMPORTANT

Assuming covid is no longer a major problem, people will resume going to the office. Therefore weekday service at rush hour will be overly crowded. Unacceptable

I use the metro leisurely; however, I can't imagine this working for people who rely upon it for work.

Is that how it is now? Thought stops during rush hours were more frequent.

This would make getting to and from work extremely challenging and add to an already long commute time. If I miss the train, I would be very late to work.

Proposal to operate Metrorail service every 30 minutes

Trains would have to run on time for this to work for me. Constantly waiting 15 to 30 minutes for a train during rush hour would be the end of riding the metro for me.

This proposal is only acceptable if the service is smooth and clockwork like. Trains should be at stations every 30 mins to the minute. I shouldn't need an app or arrival time boards to see when the next train is arriving. There should be no schedule adjustments no train on the platform ahead or any of that garbage. Riders should have fairly predictable travel times. With this proposal I expect a higher level of on time performance.

I am in agreement to the changes.

By January 2022 more people will be using metro to commute to work. Most adults will be vaccinated and have returned to their normal work locations. One train every 30 minutes at rush hour will not meet the needs of commuters.

is the ridership the same during rush hour and off peak, weekends?

By January 2022, I would expect many more people will be riding the metro again due to high vaccination rates and more people returning to work. I can't imagine rush hour trains running every 30 min. How will everyone fit on the train if they are only 2 trains an hour??? Everyone will be jammed onto the trains.

That would not accommodate the numbers of passengers during rush hour.

Will probably start driving into town more again, and definitely won't try to leave Verizon Center, Nats Stadium, or other large events via Metrorail on 30 min schedule because the human packing would become dangerous

I could live with this but hope the trains start running early and run late

I work night shift (10PM-6AM) on Capitol Hill. I take Silver Spring to Union Station at 9PM and I take the 6AM train from Union Station back to Silver Spring. The trains arriving 15 minutes for the Red Line is very accommodating for my schedule.

One train every 12 minutes is a disgrace and you should be ashamed of yourselves.

Having trains arrive only every half hour on some lines will mean people will have to drive. If you miss a train, you'll be half an hour late. Trains need to arrive more quickly during rush hour. Even 15 minutes is too long, and is enough for me to consider another option if at all possible. (biking or walking)

I have been led to believe that the Grosvenor-Strathmore stop will be eliminated. I hope not. It is a way to get to American University, and, since I refrain from driving into DC proper, Metro is my means to the city.

Trains need to arrive more frequently, esp in rush hour.

I rely on Metro to commute from Twinbrook to Eisenhower Metro station. I would anticipate much greater crowding with that schedule, which means not always being able to get on a train. I would also anticipate longer commutes. My commute is already very long - about 80-90 minutes from door to door.

Will be very difficult to connect to a bus that is on a set schedule while commuting

Trains only every 30 minutes would make it faster for me to commute by car.

I rarely take metro and when I do I am generally able to plan the trip in advance. If however I took Metro as part of my daily commute, I would find this difficult to abide. I think more rush hour trains would be a must, even if at the expense of longer headways during the non rush.

Need more flexibility to arriving to work during rush hour times. Especially with new social norms or distancing. Recommend adding more transit times during rush hours.

I would not use Metrorail if I needed to transfer which would essentially limit my use to the Red Line. It is unlikely I would use the train at all as waiting almost 30 minutes if I barely miss a train or if the operations are off schedule is not appealing at all. The train system loses most of its value to me as the headways increase.

When it comes to every 12-15 minutes, does that mean an Orange Line train would come every 45 minutes for Rosslyn? I go out to Tysons regularly from Rosslyn, so I would not want to wait 45 minutes to make that happen. If the trains are going to be 30 minutes though, then they HAVE to be the full length ones, no shortened trains. Also, if we are still in COVID lockdown, every 30 minutes would make everyone have to be much closer together on the train which would not be good. Even if we aren't in lockdown, the platforms would be overrun. If we have to wait that long though for a train, I hope the peak fares will no longer apply because I would not want to pay extra to wait for 30 minutes on an overcrowded platform

15 minutes would be most acceptable if shelter from the wind was increased for the choker months.

Reducing train service is not acceptable. Does the Metro Board even ride the Metro? This proposal is not worth considering for the Nations Capital.

I won't wait longer for a train than the amount of time I would be spending on that train

Rush hour needs an increased amount of trains. This would cause back up especially with people being required to return to in person work within that time frame.

:It makes more sense to have increased metro service during peak hours and extend the morning peak to 1015 am.

The more consistent the schedule, the more dependable and convenient the service becomes.

Proposal to operate Metrorail service every 30 minutes

Every 15 minutes is doable, if not ideal. Every 30 minutes would definitely dissuade me from riding metro.

If you see an increase in the number of commuters at peak travel times (7-9am & 5-7pm) can you have a plan in place to increase the frequency of trains during those windows of time and adjust as needed to maintain distance guidelines if any are in place in 2022.

Service NEEDS to Continue for not only business/work purposes but also recreational. People make decisions on where to live and owning cars based on metro.

Trains running every 30 minutes is way to long to have to wait between trains. This will make the commutes extremely long and the trains overly crowded due to the reduction in the number of trains running during rush hour. If the time must be reduced, then the trains arriving every 10-15 minutes would be more convenient and support the normal commuter.

If we are back to work and social activities start again, how will metro adapt? My concern is it becomes permanent. I always take metro downtown. I am not happy that the red line will be affected. If the wait is too long, I would increase my uber transportation.

If I miss a train by 1 minute during the morning commute I have to wait 30 minutes for the next train - clearly not a way to be on time for work. So to be safe, I would have to plan to arrive 60 minutes ahead of time. Inconvenient intervals would be a major reason not to ride the train

As someone who uses the metro to commute from Washington D.C. to Arlington for work, this would significantly lengthen my commute. One of the reasons I choose to live in D.C. is the fact that there is reliable public transportation, without this, many individuals will be forced to change how/ where they live.

Anything to keep this station open

I use Metro for daily commute to and from work and rely on accelerated train schedule during rush hour. Waiting for Metro for 30 minutes does not work for me.

I have to travel from Tyson's to DC for work and this would extend my commute time.

This would serve to make Metro almost useless for most commuters and people will stop using it.

Super unfair for huntington, van dorn, and springfield stations. As well as other outlying stations on the lines.

Redline service should not be any less frequent than on other (single or multi-service) lines.

Every 30 minutes is too long between trains.

This would destroy the ability of people to move around the city. It was the Metro that made DC into the vibrant city it is today and it appears to be Metro that is intend on destroying that vibrancy.

This could be problematic during weekday rush. Before COVID the redline going in to the District was mostly full by the time it reaches Grosvenor during the rush. However, this could be workable if commuting population continues to be lower.

Right now it is not applicable to me. However, when my office opens up again, this schedule would work well for me.

It would be terrible for the metro to run every 15 or 30 minutes. Most people will be back to work and we need the metro badly to be at work on time.

This plan is not tenable for the many people who rely on public transportation to get to/from work.

As frustrating as it is to wait extended periods of time when traveling over the weekend (I think having to wait more than 15 minutes is problematic), on weekdays it would lead to overcrowding, in addition to frustration.

Inconsistencies in-service throughout the system might lead to inequities. Average wait times on all lines between all stations should be relatively similar.

Assuming ridership goes back to precovid levels, how will you deal with crowded platforms and trains?

There was already considerable overcrowding on trains on my commute (Orange/Silver line from Farragut West into Arlington) and that was with 3 different lines (Orange/Blue/Silver) bringing trains every few minutes during rush hour. While ridership is down during the pandemic, I fully expect to continue commuting by metro once I am vaccinated and my office reopens, and this plan would make that impossible not only by increasing wait time between trains (making it a less reliable way to get to work) but by ensuring each train is so crowded several trains may pass by before one has room for additional passengers.

With trains running every 6-8min they were already very crowded, changing the service to every 30 min would make it impossible to get on a train.

Would like to see rush hour times decreased, but not fully gone (perhaps only a 2 hour period 7-9am and 4:00-6:00). Also, more frequent trains during any super high ridership times like games as to not pack the stations and make it unsafe for any customers.

Having trains arrive at least every 10 minutes makes public transit significantly more useful and accessible.

The more you cut service, the more people will abandon your unreliable service. Fewer people means less revenue. You need to increase service so that more people can use a reliable transportation service rather than alternatives.

Proposal to operate Metrorail service every 30 minutes

From what I have observed over the years, there is a very big difference in utilization of metro services between weekdays and weekends as well as between non-rush and rush hours. It seems to me that a one size fits all solution as proposed is a missed opportunity for an in depth analysis of metro ridership and for the initiation of a flexible time-schedule based on current ridership data. With the available data acquisition and data analysis tools, I imagine it should be feasible to design a metro service that responds almost in real time (meaning, for example, with monthly adjustments) to the needs of ridership. Maybe other metro systems around the country or around the world have something similar already in place?

Increases in trains during rush hour are extremely important to reduce overcrowding. Especially for people who have to take other public transit (such as buses) or walk a significant distance, having trains only every 30 minutes could lead to very large wait times (both for metro and for connecting to other transit); especially if trains get off schedule for any reason.

I commute from Hill East to Farragut Square, primarily on the blue/orange/silver. While three lines would reduce some of the problems from some of these proposed changes, they would still significantly increase my commute and make it much harder to get to work on time. My office does not subsidize parking, which is \$20/day -- and in a city that needs fewer cars on the road and needs public transit, the overall proposed cuts to bus and rail service are disgraceful. It would also make it much harder for me to get around the city to do day-to-day activities overall -- likely leading to me relying more on uber/lyft or my own car, which would again only put more cars on the road.

If DC is serious about Vision Zero and reducing carbon emissions, Metrorail service needs to increase in frequency in order to move more people away from private vehicles. Metrorail has historically been a commuter service and 30 minute gaps would make relying on Metrorail rather precarious for commuters. If one train is missed, the commuter will be significantly late.

You are my link to work.

I live far out on the red line so this would impact my daily commute. It is already 55 minutes long! It would also prevent me from seeing my friends in virginia on weekends bc slow red line to slow orange/blue/silver sounds dreadful. I do not have a car. I am disabled. I used to take metro everywhere and I miss it. This is a terrible idea

Because many of the silver line (the line I use to travel) stations are above ground and open, missing a train in the winter would mean standing outside, in what could very easily be temps below freezing, for 30 minutes waiting for the next train.

My colleagues and others anticipate going back to the office incrementally starting in June. By the end of the year this schedule would be devastating for rush hour commuters. I believe the volume will be much higher than what wmata currently anticipates

Please do not make metro less frequent. This will lead to crowding and longer commute times.

I expect to begin commuting again in July 2021 and need more dependable transportation than trains every 15 minutes. If trains only run every 15 minutes, I will drive instead.

As long as there are no closures in stations-- every station must remain open

Rush hour every 30 min is danger because many people accumulate at station and in a train.

By January 2022 I expect to be commuting to an office again, taking the Green line to Branch Avenue station. If trains only run every half hour, there will be almost no capacity to absorb any shocks to the system. The tiny number of trains could quickly become full and have to bypass stations, leaving riders with choice but to wait half an hour for another, possibly full train. With so few trains in circulation, a single train breaking down could essentially suspend service on a line until another train could be fetched from the yard. In these circumstances, a dependable commute seems an impossibility. I would likely avoid using Metrorail altogether, either by getting permission to continue 100% telework or pursuing other transit options.

commuting to work from Virginia to DC will be difficult

Every 30 minutes seems really slow. And, if rush hour returns, there DO need to be more frequent trains during that time.

As a regular commuter from Grosvenor-Strathmore to Metro Center in pre-pandemic times, the cars would fill up from Grosvenor to Bethesda and every next station would require people to remain standing up. Every car was packed, which presents a huge concern in terms of public health. The trains in pre-pandemic times during rush hour would arrive every 5 minutes and would present the challenges described above. If trains arrive every 15 minutes there will be no way for people to get on once the train reaches Grosvenor. The Red Line would ultimately serve populations at the very ends of the line. This, in turn, will increase traffic on the roads leading to more accidents and overall negative influence on the environment. The proposed changes are simply not feasible.

Ideally, I would prefer more frequent trains during rush hour; however, if the choice is between reduced service and no service at certain stations, I would choose reduced train frequency

Proposal to operate Metrorail service every 30 minutes

Plan may work if there is a published schedule for trains and the operators stick to the schedule. Without a published schedule that is followed, the plan is worthless because taking Metro becomes a spin of the lottery wheel. You can win with a train arriving immediately or lose being stuck waiting a half hour for a train. Metro will become less dependable way of getting somewhere on time.

This would be a terrible change for the metro. It need to run more often than it already does not less!

I live in Hyattsville and commute to the Dupont circle area. If the yellow line continues to go all the way out to Greenbelt, that would work for me. However, if it does not, 30 minutes between trains would make commuting difficult. It would be like having a commuter train rather than a metro service. It would be doable, but it would probably result in my wanting to drive instead of take metro.

My commute is 1.5 hours in each direction under the old rush hour timing. This proposal would introduce significant variance, potentially adding 43 minutes (worst case based on timetables) each way. That would be painful. I would cease commuting altogether unless it cost me my job.

That would be fine for non-rush hour periods, but during rush hour, that would be untenable. I would consider driving instead of using the Metro.

These time frames are very limiting and dont take into account the different daily needs of customers. With such a long gap between pickups, the trains will be overly crowded which would delay any travel time. This also hinders the ability of visitors/tourists to navigate the city easily at various times of the day. Restrictions like this dont make the city commuter friendly or visitor friendly the way it has communicated in the past that it wants to be. This also doesnt reflect a responsiveness to the needs of the huge amount of people who will be moving here with the amount of development taking place.

If yellow line service is continued through to Greenbelt, this plan would work for me; but the waits would still be physically difficult for me in summer and winter. I would be willing to make the best adjustments that I could, however.

Only having trains at stations every 30 minutes is unacceptable. People would have to choose alternative modes of transportation if they could not get more frequent service. When most people stop teleworking and going back to their offices to work, Metro ridership will go back up, unless you insist on reducing the frequency of service, which would create a death spiral for Metro.

Trains would be too full if they ran every 30 mins, creating more exposure to covid. Don't do this.

This is a terrible idea that will lose tons of riders because they wont be able to fit on trains during peak hours.

That plan makes no sense, since you don't know the amount of people who will be returning back to work. If it's a lot, that's not going to be enough trains.

This will create a horrific passenger gridlock throughout all of the stations if everyone goes back to the same rat race routine that was in place before covid. Station platforms will be packed with impatient and angry passengers, as well as being packed with people pushing and shoving trying to get on and off of the trains. And if covid is deemed an endemic by that time, there goes an increase in covid numbers again for the DMV area.

Wait time to thirty minutes + closing out Clarendon, Virginia Square metro will exceedingly impact my travel plan to work/personal errands etc.

I live in Wheaton. There should be more trains running the entire length of each line. Please do not do this. We need to invest and encourage people to take the environmentally friendly transit option. WMATA is the only way we have to move large numbers of people in a green, equitable, and inclusive way. If it has better service more people will ride it. Thank you!

When I need to get to work & home from work my commute is wholly dependent on these limited train times. It may be easier to drive. My 8 mile commute could take over an hour if I miss a train by a couple minutes.

I would not take metro if this was the schedule

We need more trains during rush

This schedule is fine as long as most public and private offices are closed. However, when begin returning to work, Metro needs to be there for the region. Closing down or curtailing services just doesnt make sense.

creating established continual schedule for trains running may increase ridership but would likely cost more overall; metro needs to base decision on which sections which lines and which timeframes require more trains and frequency, after all were not all in the city; and it depends on what metros goals are

If the trains are very crowded with this reduced schedule that would not be good. Also, morning rush hour will need more service to get people around town to work on time.

This would work for me temporarily simply because I am not commuting to work due to the pandemic. Once we are called back to the office, waiting 30 minutes at a station would be problematic. It would result in me abandoning metro rail. I would imagine in January 2022, our offices will be open for employees.

Without more trains at rush hour, daytime workers are less likely to commute by rail, bringing ridership even lower. I know I'd personally avoid the metro if I miss a train and need to wait 30 min during the day.

Proposal to operate Metrorail service every 30 minutes

If my commute is longer using WMATA, why take metro at all?

Half hour trains are unacceptable for a public subway system in this country. Trains should be every 15 minutes at minimum or the downward spiral of low ridership will continue.

If the ridership is anywhere close to what it was pre-pandemic, the cars will be absolutely packed during the morning and evening rush hours.

Not frequent enough during rush hour.

people use the train to get to and from work. This will make people leave much earlier to be sure they arrive on time and cause people to have long waits at stations, especially if transfers are required. In addition, trains are often already crowded during rush hour times - this would mean some people would not be able to get on a train and wait 30 minutes for the next, being late for work. This will cause people to stop riding the metro if they have any other option, taking away much needed revenue. All of these changes always seem to be aimed and trying to reduce ridership which makes it seem that metros real intention is for metro to fail or be privatized. We are a major metropolitan city. We should be improving the service so people recognize there is no need to ever drive into the city and sit in traffic and have to park. And we should be trying to reduce car usage for the environment. This also affects those without the financial means to take Uber or own a car.

Prefer trains run more frequently during rush hour.

This depends on how much ridership increases when pandemic restrictions are lifted. If rush hour levels are at all like they were before the pandemic, trains will be horribly crowded with this kind of spacing during rush hour, which could be a health hazard if the COVID-19 is not fully under control when people start to return to work.

It's unclear how commuting will change when more people return to work, but eliminating increased frequency during rush hour could lead to overcrowding and wait times that end up lasting longer than 30 minutes. That's a serious increase of time that has the potential to greatly impact metro commuters.

I use Metro Daily, less frequency will make metro crowded and harder to get work on time

It would increase my commute to and from College Park significantly, take more time away from my family, and increase stress and fatigue. Alternatively I would have to get a second job to pay for a second car that would enable a shorter commute. Neither option gives me as much time with my family as I have now.

Excessive overcoming once economy stabilizes

As a Rail Supervisor I do the meet train at metro center and I observe about 6 people on the last orange line train to Vienna Fairfax. As a closing terminal Supervisor at Wiehle-Reston, our last train comes back with 0 passengers. I recommend to close at 10pm and our operators work 4 days a week with 10 hour days and no 7th day work. Saving money to the company and workers are available to work any unscheduled absences that occurs throughout the week.

I strongly prefer this to closing early. I remember the good ole days of 3am metro and its truly sad we cant do that

Additionally have one set fair price since there is no longer a "rush hour" period

After worst of covid, working people would not be served well by this schedule. For now, perhaps ok.

Making the train less convenient is likely to reduce ridership further. The lack of late night service is already an atrocious choice for a metro area. The assumption that you can cut costs to get out of this situation is obviously wrong. Instead, we need to increase ridership by making the train more convenient, reliable, and accessible. This will generate more fares, but - more importantly - will generate the political will necessary to get the localities to fund the system adequately.

This would complicate things for commuters who use a train and bus combination to get to and from work. I'm looking at a longer commute if I miss a yellow line train, and then have to wait extra time for a commuter bus at the Pentagon (for example). I would suggest increasing the number of trains during commute times.

it would be simply impossible for me to consistently rely on the metro with a 30 minute schedule

With such formation there has to be ZERO downtime, which means the trains have to run smoothly without any hiccups. Additionally, how is the maintenance window accounted for and when is it going to take place?

I can live with this plan, but spacing trains to this extent on weekdays is a terrible idea. This is the Nations Capital! When we have guests from abroad, they will think they are in some 2-bit city that cant meet the standards of comparable cities all over the world.

This would cause crowding and require setting aside more time to get to appointments. It would make using the system much less efficient for me to use regularly and I would have to resort to driving more instead of using metro.

Maintain M-F peak schedules for commuters, help keep cars out of the City. Curtail everything else, including reduced weekend schedules and hours.

Trying to schedule getting to the airport in time with train arrivals that far out would make me take Uber instead. Also, after a long day waiting another half hour for the train after work would not be fun

Knowing WMATA the slow down in service throughout the day would lead to a great hardship as you wouldnt remove the rush fares for commuters.

Proposal to operate Metrorail service every 30 minutes

Before January 2022, people will be vaccinated and not in lockdown. You're treating the future how you should have been running things currently and it will break the system. People will find other ways of traveling if you can't be reliable.

This is terribly inadequate, and would make Metrorail unusable as an option. By that time, the COVID situation should be largely resolved, and it will be important to have more service again.

I live in a high-rise bldg, and while I am retired many of my neighbors work and rely on Metro, others have nursing aides or other healthcare workers that rely on Metro.

I would rather have this option vs. stopping service at 9pm

The express trains are needed to help with over crowding

Not sure how often I'll go to work

This would not be useful to me because trains usually don't run on a predictable schedule and if you miss the train you have to wait 30 minutes and are then 30 minutes late to work.

I do not use Metro during rush hour so the longer period would not affect me.

Overall, the one change I would like to see with Metro's service is to have a better back-up plan when service goes down when there is an emergency. Things seem very frazzled when there is an emergency on major lines.

I'll have a transfer once I start going back to the office, potentially adding an extra 30 minutes to an already long commute on the way home. This would work if 30-minute trains had precise arrival times during rush hour, but I don't trust WMATA enough to make this happen.

This is a very bad option. 30 minutes between trains would discourage people from even considering Metro as an option, unless they are desperate. It is far too long to wait for a train, and people will drive instead. For those whom Metro is the only option, trains would be crowded and unpleasant.

I live at one end of the Green Line and work at the other end. Adding a 20-minute interval could add up to 40 minutes per day to what is already a very long transit commute. I have been a dedicated public transit user since I moved to the area, and this reduced level of service will make it difficult to continue using transit. I can not telecommute to do my job and must physically be in the office.

The wait time for trains to arrive every 30 minutes throughout the day, with the following exceptions listed is too long. Will trains be waiting at each station for 4-5 minutes and allowing passengers to board?

A train frequency of less than every 15 minutes makes the train essentially useless for trying to get anywhere within an acceptable amount of time. There should never, EVER be a wait of more than 10 minutes at any station (including terminals like Vienna or Huntington & including at 5AM, Noon, 7PM or 11PM).

I am currently working for a school in Washington, DC. I use metro rail from Clarendon to Brookland every weekday. I do not own a car. While our school is currently remote, I am expecting to be back on campus beginning August 2021. Reducing service beginning in January 2022 will result in my needing to find alternate transportation- likely a car. With DC's already difficult traffic patterns, I can't imagine pushing more ppl onto the roads will help solve any problems.

The possibility of having to wait up to 29 minutes for a train means I would never use metro

I pay more for rush hour so I can make it to work On Time. Having trains run every 6-8 minutes is ideal. If I miss one train, there is a short wait for the next. Having trains every 30 minutes is way too long to wait for the next train.

The general narratives that we hear these days are that a return to pre-pandemic levels of in-office work will be in full force by January 2022. While it is difficult to say if this will be true, it is not well advised to make cuts to public transit service at a time when ridership is very likely to be on the incline.

Need more frequent service at Rockville and Twinbrook

A 30-minute gap between trains would greatly increase the likelihood that I would be late for work. I have to catch a bus to get to the nearest Metro station and it often gets me there as a train is leaving, before I can get off the bus and get up to the platform to catch the train. Having another train come within 15 min. or less would keep me on track to make it work on time.

I take metro from White Flint early in the morning to work at the hospital. I cannot manage with 30 min interval. More people and businesses are around White Flint. There is no reason to stop at Grosvenor.

How can I be on time for medical appointments downtown if I don't know how long it will take me to get there?

Waiting 30 minutes for a train, especially during the work week would be unacceptable. I would have to stop taking metro if this occurs.

This would make it impossible for me to get to work and back using the metro. I will be working from the office daily in 2022. I would end up walking or taking the bus to work during bad weather.

Proposal to operate Metrorail service every 30 minutes

Assuming we are back to normal work schedules, this would be very inconvenient but could be managed. I would note that decreased train frequency is likely to lead to decreased ridership due to increased travel time, especially for those who change trains during their journey.

I am a red line passenger, living near Grosvenor-Strathmore. I depended on Metro to commute downtown but discontinued when the pandemic started and I was allowed to work from home. As a USG employee, the USG subsidy made this convenient and definitely more affordable than paying for parking. Assuming commuting returns to normal after the pandemic, rush hour trains are already standing room only. I would strongly recommend increasing rush hour service between Strathmore and Silver Spring.

At certain times, the half-hour wait would be manageable. However, at other times when travel time is, of necessity, tight, a half hour would be a GREAT inconvenience.

Not specific information for trips in this description

Should have 15 minute train service for all stations. Many people commute from outside of those lines and need constant service as well.

My work requires me to travel all across the city and I do not have a car or the ability to purchase one. Having to wait so long between trains is not feasible to keep up with a tight schedule. In my personal experience on Metro, when trains are scheduled like this (ie weekends) in the stations with more than one line, the trains come back to back to back and then there is a 15-20 minute wait, things are not spaced out at all.

Only in cases if I need to go to Germantown, Gaithersburg, etc.

Im chiefly a daytime user. But for fiscal purposes, I think rush hour should get the prominent share of service.

This plan *might* work for me. A lot depends on what happens with people returning to their workplaces. If a lot of people do go back to their workplaces and dont stagger commuting hours then the frequency will be too low to handle rush hours, especially if people remain hesitant to ride in crowded cars.

Weekdays we need to restore service frequency to normal pre Covid levels. During rush hours we need more frequent trains and more capacity. Metro is necessary for our employees to reach their work locations.

I totally rely on Mwtro service to get to work and go home from work. Most of the time I get home really late and having to wait for 30 minutes after a long day taking care of very sick patients is very frustrating.

This could maybe work outside of peak hours, but all day 30 minutes apart is unacceptable and would lead to a death spiral for metro.

I think if you get back more than 50% of people like me who have not been traveling on Metro due to COVID, there will be severe overcrowding with 30 or 12-15 min intervals.

It is too early to tell if offices are going to re-open. If they do, then more frequency during commuting times will be necessary. We are on the Red line, which was extremely crowded between Shady Grove and Grosvenor during rush hour, even with frequent trains. By reducing frequency well be cramped again, and that will perpetuate your problems - people wont ride because its inconvenient & risky.

30 minutes between trains is too long.

Although I would hate to see frequency of trains reduced, I think this is a far preferable solution to closing stations completely or eliminating bus routes. Making trains less frequent during peak ridership times is generally not good for riders, not only because it requires more planning and offers less flexibility, but also because the trains become too crowded. If COVID-19 is still suppressing ridership, decreasing frequency of trains seems like a reasonable thing to consider, assuming something MUST be cut.

Would each train be longer (more cars) than is the current average? If not, going from every 3-8 minutes to every 15 or 30 does not seem a reasonable ratio to deal with rush hour use. What about for special event (e.g. 4th of July, major sporting events) days? Would the same real-life adjustments be available as has been done in recent years?

It would require additional planning on my part, but I would still be able to get around. That said, it seems that more people are likely going to be using the metro as summer 2021 and then January 1, 2022 approach, assuming a smooth vaccine rollout. Metro should be securing funding to expand services if needed in the months ahead, not further reduce them. This proposed service plan seems too rigid and not flexible enough to deal with increases in ridership -- focused on reducing service and hours just as the need for public transportation begins to increase significantly.

If rush hour ever returns to anywhere near the pre-pandemic levels, there will not be enough room for commuters to access Metro with fewer trains running.

This would decimate the weekday commute -- almost doubling my trip from the DuPont metro station to metro center at peak hours.

This would not work at all. Every thirty minutes would lead to over-crowded trains.

It is really hard for people to answer this question when there is little certainty about future office routines and commuting.

There should be different plans for weekdays and weekends. During weekends trains should run less frequently. Same should apply to non rush hours during weekdays. Fifteen minutes flat between trains on the Red line is too long, specially on weekdays and during rush hours. It will create bigger crowds on the platforms and trains and ridership on Metro will become less attractive. The time space between trains should not exceed 10 minutes.

30 minutes between trains is way too long. 15 minutes between trains is way too long.

Proposal to operate Metrorail service every 30 minutes

Assuming post-COVID, rush hour platforms get very crowded, especially downtown. 12-15 interval between trains could be yet another disincentive to riding the metro.

My concern is large events (assuming they happen). As long as additional trains are added for large events at Capitol One Center (hockey, basketball, etc.) this would work fine.

Whereas workers can no generally flex hours, events end at specific times.

On rush hours need more trains arrivals

Trains arriving every 30 minutes is a ridiculous solution to the problem of decreased ridership. How am I supposed to rely on metro to get to work if it only arrives twice an hour? Most people would either have to arrive incredibly early or, in what I would assume would be most cases as metro delays are common as the sun rising and setting, extremely late. This could also lead to the trains becoming so crowded as to become unusable during rush hour. What was the point of all the Orange Crush changes if it leads to this?

Long waits between Red line trains would cause me to find other means of travel.

With the decreased train frequency missing the train once makes being late for work much more likely

I think it is a little too early to make this the set schedule for 2022 given that the vaccine is currently being distributed. Or allowing it to fluctuate to higher frequency as more people begin taking the metro again.

This would definitely make things more inconvenient, but not impossible if there was an adequate online tool for seeing the train schedules and planning metro trips.

A redline train every 15 minutes would lengthen my already long commute to the office, but I could live with it. I know Metro needs to make cuts somewhere!

Although this would work for me, I feel that this level of service during rush hour times will not be sufficient to meet demand after we/people begin to return to working in the office (as more people are vaccinated, etc.).

Many entertainment destinations require a change of trains. If trains run every 30 minutes, rider must allow at least an hour to reach (or return from) destination.

This would create an incredibly long wait for the train, making it very inconvenient to take the Metro. If I arrive at a station after a train has just left, then I could wait up to 30 minutes for another--this is simply too long of a wait for transportation. Currently, trains arrive around every 3 minutes at the Rosslyn station, making it my preferred method of transportation.

Rush hour should add more frequent trains for students who are commuting to school

This is the nations capital. Service every 30 minutes from the rail mass transit entity is completely unacceptable.

I worry about regular commuters with no other options AND that if you cut back service so much those who do have other options will be disinclined to use the service and you'll lose that revenue.

I would want more frequent service during weekly rush hour times.

I used to live on the Redline at Woodley and cant imagine having to wait 30min/hour for multiple full trains to go by before getting on one.

These wait times could mean such crowded trains that every ride would be an unacceptable "crush." Many more people would abandon METRO in favor of ride services and private cars. This increases pressure for more road area and parking, so overall transportation investments could increase and in ways that defeat efforts to mitigate plans to mitigate the impact and extent of climate change.

Every 10 minutes on the Redline would be more reliable for ensuring I arrived at appointments (particularly doctor appointments) on time.

It is very inconvenient for us. We travel everyday.

Thirty minutes between trains makes going anywhere via metrorail much longer -- possibly prohibitive, compared to car or taxi services.

It is difficult for me to assess my travel needs in 2022 as I am still working from home and don't have a specific day where I need to go back to the office. Although I am ok with this proposal, If everything returns back to normal I will imagine that rush hour will be unmanageable since I remember almost not being able to get out to the train in Farragut North due to the amount of people, which will be worst with less trains in service. But I understand that offices may chose to change to more work from home days, so it is difficult to predict right now. Overall, this proposal makes sense.

I would just need to allocate more time to my commute but it wouldnt adversely affect me too badly.

I believe that during rush hour, trains would get very, very crowded at the Grosvenor-Strathmore station.

I would suggest limiting the time on the red line to 30-minute increments unless there is evidence to show that 15-minute increment service is warranted during the week/weekday .

Please make sure the WMATA app is working so that customers can plan their trips/commutes to work effectively.

Frequency is less important than closed stations to the people who work in the city or rely in metrorail for work (especially those in front-line or service jobs helping others!)

I don't think people would be able to rely on the metro to get to work on time (myself included) if trains are 30 minutes apart.

Proposal to operate Metrorail service every 30 minutes

I am concerned about the frequency/availability of trains on the green and yellow lines being too long. Also, if society returns to pre-covid behavior, routines and events by early 2022 I think that people will be turned off mMetro and reluctant to start regularly using it if the trains are not frequent enough or crowded. I want Metro to thrive once we get back to normal, but I fear this will put people off of transit even more :(

It would make my commute so much longer

On the Red Line, trains need to arrive every 10 minutes between Grosvenor-Strathmore and Silver Spring stations. Longer waits will only further discourage riders from using Metro. Other lines might get by with every 15 minutes, but no more. Emulate the Parisian Metro -- they really know how to build a satisfied ridership!

Trains on the red line should arrive every 10 minutes. 15 minutes is too long On all stations with more than one line, trains should arrive every 10 minutes as well

30 minutes is a long wait at outer stations.

30min headways are unacceptable for basic commuter transit. this will leave many people stranded.

There should be consideration for increased service for large Convention Center, Sports, or other crowded activities. There has been previous severe overcrowding that has caused problems. Cleanliness has been a huge problem that took a pandemic to correct. Foot traffic patterns should drive flexibility to ramp up and down the seats available to move people.

Rush hour needs to be more than every 30 minutes. Airport needs to be more

One caveat: If I return to commuting into the District it would be a disaster.

Would work for me because I don't use it for work everyday. For everyday users could be problematic when the pandemic is over.

In general, I believe this is a reasonable proposal. My only concern is the rush hour time. Assuming that individuals begin to go back to in-person work, trains will be very crowded and I am not sure that they would be able to handle the capacity of riders. Will extra cars be added during rush hour?

Trains arriving every 30 minutes will make it almost useless to use Metro, especially for getting to work or other scheduled events. This would not improve ridership because this will not be a helpful system. It will take too long to catch a train for it to be worth it.

waiting 30 minutes for the next train would make me and my family LATE for work

I think 30 mins between each train is a VERY long gap. If this will be the case, there should be a grace period where the trains will not depart immediately. Instead schedules should coincide for this switching lines and all trains must wait for a minute or so before departing.

Why would Metro cut back on rush hour? Yes, we are in a pandemic right now, but why would you make a huge change such as this without knowing what commuting demands will be after work life gets back to some semblance of normal?

It is unclear to me from the wording of this proposal if rush hour commutes would be effected. You are going to get some horribly crowded trains and disgruntled passengers if they have to wait 30 minutes for a train when they try to get to work. I would seek another form of transportation because I cant wait 30 minutes for a train on top of my very long commute.

Im not someone who relies on the metro for commuting everyday even before the pandemic, but if it takes that long to wait for a train I cannot ever see using it again over ridesharing apps when I do need to get into the city, knowing that I have to add up to an entire half HOUR to any trip makes the metro completely useless to me.

This is better than closing stations

Although I understand the motivation behind this proposal, I am concerned that it could have unintended consequences, If Metro service becomes less convenient, this could potentially decrease the number of people who want to rely on Metro. Needless to say, a decrease in the number of riders would lead to decreased revenues.

Time changes are a much more reasonable and appropriate proposal than closing stations. People can adjust their schedules to the train schedule. If some peoples train stations close, they may not have a way to get to another station or it may add a significant cost burden to them. Many people choose where they live according to their train station, so I encourage you in the strongest manner to change train schedules and not close stations.

Yes, as long as this stays within budget and prevents closures.

Not ideal, but I am not using Metro to commute to a job.

If this were the case, I would not take metro unless I did not have to be there at a specific time. I would never take metro on weekdays, especially during rush hour. I imagine Id be waiting on an overcrowded platform only to have a full train arrive and nobody get off, leaving me to wait for the next one. This would be particularly true when I was travelling with luggage, on my way to union station, dca, or dulles. In before times metro was the most reliable way to get there, even if you had to squeeze your bag in but in this scenario I would brave traffic (and much higher prices) in a rideshare.

Proposal to operate Metrorail service every 30 minutes

I do not drive I am a senior and depend on metro and bud your plan eliminated buses to Sibley hospital and Georgetown hospitals which I need to get to. Your metro rail changes are terrible for senior citizens your closing times in humane. Tell the President your problem He is a senior citizen what if he or his wife had to live with these changes. How can you justify any of this. You should be ashamed of your inability to work something out. This is the Capital of the free world and it should have metro and bus 24/7. This is the United States not a third world country.

I think this would work for me and I would prefer it rather than an increase in fare charges.

This disproportionately affects low- and middle-income people who rely on METRO for all transportation needs. Also its already crowded and this proposal would make it ridiculously more crowded when we have learned so much about public health issues from the pandemic. Also, this is not environmentally good.

prefer to keep the frequency at 8 minutes on weekdays on the whole Red line. I commute from Grosvenor to Medical Center daily.

Of course it depends on to what extent ridership increases as we all get vaccinated and if teleworking will still be widespread. Trains every 30 minutes will be horrible if demand for rides bounces back significantly. imagine waiting an hour or two each way during morning and evening peak travel periods if trains are so packed at 30-minute intervals that you cant even board! Not to mention trying to sync up train schedules with whatever buses people are taking. I anticipate commuting by metrorail once or twice a week by Jan 2022 instead of 5 days per week

If the every 15 minute arrival on the Red Line is an increase in wait that is not acceptable.

If rider numbers return to normal by Jan 2022, then this would lead to massive overcrowding at many stations during weekday rush hours.

Keeping stations open is critical. Frequency is far less important. If stations are closed, then travelers must necessarily switch to cars or busses which may leave out many people and slow down overall travel times. The question here is also how permanent these changes are projected to be. People can adapt for short periods of time, but long-term has much bigger consequences.

Reducing frequency of trains rather than closing stations would be preferred.

For stations near the end of lines, trains arriving only every 30 mins will make metro trains far less reliable for daily commuting.

This is simply untenable for any rush hour riders. Trains are already extremely crowded in the mornings and reducing service will certainly not alleviate these challenges. Additionally, people may be hesitant to board a very full train as compared to pre-pandemic, which will further exacerbate challenges. With this solution, people will be unable to even board new trains, causing extreme backups within trains and stations. This is an unacceptable options for rush hour service.

does not accommodate weekend entertainment needs

This would impact travel time to and from work.

This would significantly increase passengers per car on trains. I anticipate this would be problematic as we would be in a stage of COVID recovery where we have more freedom of movement but still need to be concerned about basics like social distancing.

Trains that run every 30 minutes during rush hour would not be helpful and many riders would select another means of transportation.

When using the Grosvenor-Strathmore Metro train station for commuting to work five days a week, 15 minutes is too long to wait for the next train to arrive.

Red line is very busy. 15 minutes is a long time and would get overcrowded

Trains need to arrive more regularly during work day rush-hour, assuming in-office work will be resuming by 2022. All train arrivals - especially those 30 minutes apart - need to be posted online with RELIABLE ACCURACY so customers can ensure they catch the train and arent left waiting for 30 minutes on the platform.

I would be taking Metro at a station other than at the end of a line (for example, Shady Grove is the end of a line station). Under this proposed schedule, by the time a train got to my station on the middle of the line (Grosvenor, in the direction of Silver Spring) the train would be too crowded to readily accept additional passengers. And, what with the expected social distancing going forward, I would be very reluctant to take Metro. So once again, Metro would be shooting itself in the foot, as the saying goes.

As I used the Grosvenor/Strathmore Station since it began in 1976, it is very important for my ability to get into DC during the week and also critical on weekends. We bought our home in 1971, knowing that the Grosvenor Station was planned and due to open in 1976. Weve all used it often, including our adult children.

Rush hour commutes would be atrocious. Getting on a train would be practically impossible

I ride the green line train and I am confused. Would the trains only be running every 30 minutes? That could be problematic in the mornings during rush hour.

This infrequent service will further discourage riders from using metro. How is it that metro is still extending lines (e.g., to Dulles a/p) and at the same time, wants to close stations and provide infrequent service?

30 minute headways are more like MARC and VRE commuter rail service, not transit service. We need to preserve at least 15-20 minute headways on all metrorail lines.

Proposal to operate Metrorail service every 30 minutes

Assuming that most people who have been working from home during the pandemic will be commuting to work again in January 2022, waiting 12 to 30 minutes for a train during rush hour is neither convenient, nor does it seem like there would be enough space for passengers. I'd urge WMATA to wait until more people have been vaccinated, and more businesses have re-opened at pre-pandemic capacity in order to assess how many people are likely to take metro in 2022.

This is a disastrously bad idea. If a person misses a train by one minute they could end up losing their jobs because of a half hour tardiness. Flights would be missed. Events once those exist would be completely missed. Running on a 30 minute schedule defeats the entire point of having public transportation at all. It is supposed to be dependable and realistically useful for day-to-day tasks. The people who depend on Metro cannot afford alternative options, nor should we be pushing people to buy more cars and make the area more polluted and congest traffic even more. Of all the proposals you are making, all of which are bad, this is the absolute worst.

Every thirty minutes during the work day is not frequent enough.

I commute between Medical Center and White Flint on the Red Line, so having the demarkation between 15 and 30 minute train frequencies between them would be annoying. I would probably end up finding other methods to commute (eg biking, car, bus)

Please keep metro times more frequent. I know the pandemic has changed things, but here in a few months, things will be normal again. People need access to the metro more often, so they can move around DC whether for work or to go to local shops/restaurants and support businesses. People need frequency. Not everyone can afford to pay for a car and/or monthly parking

Cutting service will have adverse consequences not only to ridership but the entire regions economy and transportation infrastructure.

I would not want to have to wait 30 minutes if I missed the train. Also if it were running every 30 minutes I would want to have an exact schedule to know exactly when it was going to be there so that I could plan to not have a wait. But it really should run at least every 10 minutes so that if I miss one I can catch another one. If a person has to wait too long for the next train they will give up on public transportation and use a car if they have that option. And if they don't have that option The very long wait between trains is very inconvenient for them. We need to make it match as convenient as possible so people will choose to make it their primary choice for getting around

Way too long of a wait between trains. This is a major problem with the BART system in the San Francisco Bay Area. There, trains often arrive every 20 minutes, resulting in packed cars. Every 30 minutes is worse. What if the train is full? People aren't going to wait another 30 minutes to catch the next (also possibly full) train; a possibly 60-minute wait. It may even disincentivize people from taking Metro trains at that point; cars could be a faster commute with such wait times, and worth the extra stress as a result.

If I understand it right, this shift seems like a bad idea because if pre-Covid level rush hour becomes a thing again by 01/22, the platform crowds at Red Line-only stations between Dupont and NoMa would be even bigger? Like post-sport events level backup?

If most of the area goes back to work by Jan 2022 I will depend on the Metro go travel to work and in the morning it was very congested to travel from Grosvenor

The red line trains are already overcrowded during rush hour. More time between the trains would only make the situation worse.

Headways below 10 minutes decimates the trust in transit. If I have to plan on being in a station at exactly the right time for my trip to be taken in transit, it is just not a feasible option. No one will return to metro ever if you don't provide service.

People will be returning to their regular commutes by Jan 2022. Waiting 30 minutes between trains will mean dangerous platforms due to crowds and irritable individuals.

As long as not too crowded

Over crowding on metro during rush hour

This would work if trains arrive and depart on a designated schedule and are on time. This schedule does not meet riders living north of the Grosvenor metro station.

I could make this proposal work if I knew when the trains would arrive. My commuting pattern (EFT to and from Downtown daily) would remain unchanged. The trains would be even more congested, though, and they were already over-crowded at peak times pre-COVID.

I live close to metro stations so that I have safe, reliable, but most importantly, prompt access to transportation across the DMV. If trains are reduced to ever 15 or even 30 mins, that severely impacts my ability to get to my job on-time. Ontop of that, it will create more over crowded trains during rush hour and deny some of us access to needed seats on the train due to our conditions. Reducing frequency of trains will only drive away customers all together, not actual solve any problems at all

If Metro reduces or eliminates service at the Grosvenor Metro Station, I will no longer be able to walk to the Metro and will have to drive to my destination. I don't plan to drive to another station, park, and take the Metro anywhere. I stopped riding the Metro to my Doctors office every week during the pandemic because nobody was enforcing mask rules, making it dangerous. I drive there now.

Contrary to your assessment, the Grosvenor Metro stop is very busy during rush hour. Thousands take the Metro to and from work and several more townhouse communities are ready for occupancy - most have been purchased specifically for the access to the Grosvenor Metro. I feel it is important to supply more trains during rush hour.

As my wife and I are both federal government employees, we need red line service to be more frequent during morning and afternoon peak commuting times.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Not frequent enough on weekdays |
| While not ideal, longer waits would be preferable to discontinuing service. |
| When will Metro service start each day under this scheme? Currently weekday trains start running ~5-5:30am, and weekend trains start up ~7-7:30am. If, under the new schedule, those early weekday start times are eliminated, that could be a problem for me getting to DCA for morning flights. Other than that, I think I can adapt to the new service frequencies. |
| Given the covid 19 hardships, I think this is a fair solution and would not significantly impact any one area by cutting service to that area. Less riders would mean fewer trains aren't necessarily going to crowd a lot of people, either. |
| I would feel comfortable to have the proposal include language that makes considerations should ridership levels and rush hour travel increase to pre-Covid levels to go back to more frequent trains. |
| I feel during non-peak hours the trains should arrive every 45 minutes and the time should adjust as COVID-19 guidelines are lessened and normal travel resumes to pre-COVID travel |
| Activities involving large crowds that overfill trains could create a significant problem if an overfull train couldn't accommodate all riders and one had to wait another 30 minutes for a train. |
| I primarily use the metro on weekdays during rush hour to get to and from work in DC |
| Keeping the metro open with current hours is desirable, as many times when I need to go into DC it's because the driving traffic is terrible (morning rush hour) or because late at night no other transport into Maryland is available at this price point. |
| Metro is necessary for those without cars, so curtailing timing would be terrible for those that need metro. |
| 30 minute delays in train arrivals would likely keep us from riding to DC for an evening out. Adding a possible hour to the trip is just unacceptable. |
| The weekdays trains are going to be needed more frequently for work travel. |
| this would make getting to work on time next to impossible |
| No this is a dumb proposal. If you cut service with long waits people will be less likely to ride and making the problem worse. Keep service low for now during Covid but once it over return service back to normal. Ask congress for more funding. |
| We would probably drive rather than have 30 minute waits, especially considering we usually have to change line from orange to red, for instance. |
| Mostly I ride the Yellow line for work. Therefore as long as I am able to get into work from Huntington to DC on time it should not effect me so much. |
| Need to be able to go to Smithsonian and Arlington cemetery--you'd miss tourist dollars at Smithsonian and many veterans would not be able to visit their comrades in arms. I am 83 and depend on Metro for Medical care, shopping, and recreation. You are a service-- and by closing 22 stations you are depriving people of getting to their places of work. Government should up your support. |
| Weekend should have a reduced frequency if the budget is a concern |
| There should be more trains and more cars on trains during rush hour. Otherwise there will be such a crush of people boarding and likely many people left on the station platform. It won't be pretty. I assume rush hour fares will be higher still than non-rush hour fares. |
| The wait is substantial, and for anyone needing to transfer, the wait between trains really adds to the commute time |
| I can get where I am going by car in 30 minutes if I miss a train, so every 30 minutes really doesn't help. The train ride itself is about 15 minutes. |
| 30 minutes between trains means that if I just miss a train, I would arrive at work late, even though I took the very next train which would not be tolerated by my boss. |
| I believe rush hour time schedule is very important, it should be included in the new budget. |
| I agree with anything that will keep open the Grosvenor Metro Station. |
| As long as the changes are temporary. Hopefully by January ridership will be nearer to pre pandemic levels making the changes unnecessary. |
| Assuming covid continues to restrict in-person jobs, this plan is fine. Once most people are back to working in-person, I would like to see a return to increased service during rush hour. |
| This is fine for those of us not commuting now, but please don't make changes based on the Pandemic. Remember the old days when the platforms were crammed during rush hour. |
| If the Grosvenor-Strathmore station is closed, how can the trains run from there to Silver Spring????? |
| This would cause me and many others to have to change their morning and afternoon schedule to make the trains. Therefore having to wake up extra early. |
| It may cause crowded platforms at some areas |

Proposal to operate Metrorail service every 30 minutes

Once the pandemic has subsided and vaccinations have increased, people are going to have to start going back to the office, instead of working from home. Have you been on metro during a pre-pandemic rush hour? Metro is a mess during, and to assume a 30 minute wait is appropriate during rush hour makes no sense. There are some times you cant even get on the train as is. And to pack people in even tighter when a pandemic is still lurking is irresponsible. The point of public transportation is to make it a more appealing option to driving and clogging up the roads. This doesnt do that. You arent going to bring riders back. Realistically, how is this going to help? The people this is going to hurt are those without cars or somewhere to park when at work. Which means its doing to disproportionately affect low income and middle class citizens.

This would not be optimal, but would work. This would likely lead to overcrowding on trains as ridership approaches pre-2020 (aka pre-pandemic) levels again.

This proposal falsely assumes that the impact of the pandemic on ridership will be the same in Jan. 2022 as it is now. Ridership will increase substantially by that date is service recognizes rush hour demand versus off hour service.

It is very important to have these times because peoples work schedules may keep changing example flexible work schedules

Same rush / non-rush frequency makes no sense. Slow down non-rush and speed up rush.

Time is important. I do not want to miss a train and then have to wait 30 minutes for the next train. That would add to my commute.

Quite frankly if this is going to be the timetable I would request to either continue working from home or consider a separate ride-sharing option. I cannot believe how short-sighted metro is being! As someone who has used WMATA to commute DAILY for the past 25+ years I can testify to the fact that every 12-15 minutes (or good lord 30 minutes) will be quite unacceptable to many commuters who have not lost the memory of February 2020 when rush hour trains were packed as they have been for decades. Shame on you!

I would be able to plan accordingly.

As a daily metro commuter, I deeply appreciate metro's regular service. Because I can't work remotely and my work schedule often changes, I am dependent on metro to get to/from work on time. This would become more difficult with less consistent service. (Thank you, metro, for all you do!)

Have you seen rush hour on the red line? Reducing the number of trains to even every 15 minutes will result in much increased frustration and anger among riders, who are frequently trying to squish into standing room only trains. Waiting for the next train wouldnt help if the next train was 15 minutes away. Fifteen minutes is a long time in terms of arriving to work on time. If two trains are filled to capacity and you cannot get on, now youre 45 minutes behind schedule

This is the most ridiculous idea. One train every 30 minutes will make every train packed (once Covid is better) and then people will be forced to either push themselves into too full of a car or wait 30 minutes and hope the next train is better. Definitely not good idea.

Im retired and need not use the Metro at rush hour, so this would work for me. However, it seems to me this will lead to massive crowding at stations and on trains at rush hour, requiring Metro either to limit entry to the stations or to raise rush hour fares so much to control ridership. A secondary consideration is that it would be very important to make the schedule as regular and predictable as possible (as a bus schedule should be) -- the train arrives at this station every day at 8:41 am -- so riders can plan their schedules accordingly.

30 minute headways is a commuter rail, not a transit system. I would prefer 5-10 headways 7 days per week. we are trying to ENCOURAGW public transit, not give an excuse for more cars on the road

During rush hour, there are too many people trying to get on trains for this to work. If social distancing is still necessary, then there will not be enough space on each train and there will be too much time between trains. This will make riders late and less inclined to take Metro. If social distancing is no longer necessary, ridership will be high and there will be too many people trying to take trains. The red line needs trains to come every 5-7 minutes during rush hour to accomodate the amount of people who take the train.

If I am commuting on the Red Line I would expect that would not be frequent enough service to avoid crowding and delays.

I would prefer to return to the 8 minute wait time between trains. However, I understand the loss of revenue and therefore the impact on operations. As long as you maintain the 15 minute wait time at the Silver Spring Station on the Red Line I will accept the change.

Most of my time on metrorail is while traveling for work for WMATA, that is, my time waiting for a train will be on WMATAs time. So maybe Ill be doing 15 minutes less work for WMATA per day, on average.

This plan is wholly inflexible and doesn't take into account the reality of commuters. No difference between rush hour and other times? It makes zero sense.

This would be far too much time between trains and would result in overcrowded trains.

30 minutes is a long wait if youve just missed a train but this would be preferable to having stations closed

Reduced frequency would be a shame but an acceptable compromise given the budgetary issues and declining rider count. Planning rides through regular schedules and smartphone apps should be able to reduce issues for most regular users while maintaining stations that people have gotten very used to in their commute.

Proposal to operate Metrorail service every 30 minutes

This is ONE of the main reasons I moved to the local area to get to the Strathmore Metro. This ensures that my 5:30 am commute to Union Station is reliable. I am an essential employee all 52 weeks of the year. This would be devastating.

I am in school and working. My school and job is on the red line. Also most red line stations are outside. To wait 15 min enduring the weather elements could be very rough someday.

I expect to be in person full time, commuting in both directions via metro in Jan 2022.

This will make it arduous to take metro to work. With a varying shift start time, a 30 minute interval will mean that I may either show up way too early or way too late for the start of work.

I may get used to it, but it would be disappointing that trains are less frequent and it may cause me to use it less.

Having predictable arrival times would make it easier for me to plan my trips as a passenger and ensure that I am on time for work and appointments such as doctors visits. Such a fixed schedule would eliminate trying to remember multiple schedules that change throughout the day.

The red line needs many more trains at rush hour than the rest of the day. I work at DuPont Circle, and I take it to the bus at rush hour.

Makes Metro largely useless. Risk of being late or extremely early for everything. This would make it better to do shared rides for anything that has a start time, thus further reducing Metro usage.

I understand Metros need to belt tighten, if no other sources of funding are available. Even though I don't like the 30 minute/15 minute proposal (and I fear Metro would lose a lot of ridership as a result), I could deal with it. What would be truly detrimental-- both to my own commute and to the system as a whole-- is if there were NO adjustments for rush hour. I know it will take a while to get back to early 2020 ridership numbers, but NOT running additional trains at rush hour could be a fatal blow to the system. Not only will it lead to insane crowds on the platforms (and in the trains), but it could easily drive many riders away from Metro permanently. Since rush hour is (I am assuming) at the heart of fare collection, think about this one, please!

These wait times are exceedingly long for those who rely on Metro to commute to work. Even without these service cuts, I have experienced more than 30 minute wait times on the Blue Line before, and I had to take an Uber to work instead, costing me more money than I make in two hours of work. Working people cannot afford to miss work and they cannot afford to take private transportation. Wait times like these would further depress our economy.

I would prefer greater frequency during rush times

Since the Yellow Line isn't really the Yellow Line anymore (many trains don't service north of the Convention Center), this means there will be 30 minute headways at my (nominally) Yellow/Green Line station during rush hour. I normally commute daily on Metro, but I will not ride Metro to work with 30-minute rush-hour headways.

Trains every 15-30 minutes will result in crowding especially during a rush hour. People in DC stops will not be able to get on as it will be full of riders who get on in MD and VA going to work. We will have to keep social distancing still in 2022. Winter also a flu season and crowding in trains/stations during flu and how long covid vaccine will work will be a health disaster! Please keep the trains running every 2-3 minutes as they were pre-pandemic unless you want to be responsible for another pandemic or deaths!

This plan is detrimental to Metrorail service and human health. With this plan more riders would have to overcrowd trains which will have very little social distancing. Under this plan all yellow line trains should run to Fort Totten to reduce crowding railcars along with all red line trains running to Silver Spring.

I have a tight schedule with school drop off and morning commute to the office, so having to potentially wait 30 minutes or more for a train (if one train is slightly early and the next one is late) would mean I would give up on Metro and just drive. Adding that much time to my commute is not just an inconvenience, it's a physical impossibility. I can barely fit my commute and office hours into the maximum child care hours as it is. Extended Day does not care why you are 15 minutes late; after a certain number of late trains, you lose your spot. No childcare, no ability to work. So under this proposal, anyone with a young child is going to wind up having to drive in order to have more control over timing.

From my experience it is better to have more trains during the week than the weekend. The platforms will get overcrowded if there is a 30 minute wait at each of the stations. I have experienced overcrowding with less frequency of trains stopping.

Trains already arrive infrequently on the weekends, and it is a huge inconvenience. Those living beyond Grovesnor and Silver Spring would be at an even greater transit disadvantage than they already are.

This plan would work for me, but it would cause problems for a lot of my coworkers who commute from green-line-only stations.

Rush hour schedule should continue. Commuters need this. I need this. My community needs this. Congress appropriated 1.9 trillion. Only 9% is going to covid. Get Congress to give more money

Proposal to operate Metrorail service every 30 minutes

I typically take the M4 or D6 to my federal government job downtown. however both are proposed to be eliminated leaving me with no other option but driving. I will have no viable way to reach the metro to take it into the city as the proposed N6 route would only run every 35min and if the metro only runs every 30min (assuming I take the bus to Dupont Circle and metro from there) I wont be able to rely on it to get to work. Id need to use rideshare as an option as public transportation. I realize there need to be some cuts but these changes dont seem to be optimized for how people used to take public transportation. A computer forecasting model should be used to track how many people rely on both bus/metro, when and the impact of changing service.

People are trying to get to work on time. So trains coming more often during rush would better. Of course if you want me to rank this issue compared to others; it would be on the lower end of the spectrum.

That frequency is ridiculously slow. I would have to build in a lot of extra time to get anywhere. If you are trying to regain ridership, making rail travel so inconvenient is not the way. I am among the previous riders who has not been using mass transit because of the pandemic. But now I am vaccinated and expect (and hope) to be able to return to my previous usage. I do not have a car and am very dependent on public transportation. This would drive me to use taxis and ride-shares more often.

Need more frequent trains. Ridership will come back if Metro rail campaign to keep trains in good condition, no breakdowns and no delays.

I live near the SW Waterfront metro station, I dont have a car, and I am a strong supporter of public transit. However, if trains only came every 30 minutes, this would render Metro basically useless to me and many of my neighbors. I personally would purchase a car (its a step Im already considering because of the deterioration of Metro service in recent years), but unfortunately, I know that many of my low-income neighbors dont have this option. This would not be fair to the low-income people of color who disproportionately rely on Metro to get to and from work and school.

Trains would run only every 30 minutes from/to the Twinbrook, Rockville and Gaithersburg stations on the Red Line. Remembering the large numbers of people using the Metro, especially at the latter two, I dont see how Metro trains could accommodate all the riders once things return to a more normal time.

Trains need to come more frequently. People will be going back to work, to school and to doctors appointment.

I think it could make rush hours very crowded, and large events too crowded, assuming stores, museums, businesses, and events have resumed in-person hours.

This should be fine.

The frequency is too low and it would make outing with metrorail unacceptably inconvenient. Please keep the current frequency.

As long as that service is reliable, that would work. Do have a question about hours of operation. Needs to be able to service early and late sufficiently for going to work and going out at night

This proposal is the "throwaway" course of action, correct? This is not suitable, acceptable, or feasible to riders.

You dont say anything about the fares. Currently we pay a premium for rush hour, and I thought that was because trains came more frequently. If there is no difference through the day, will all the fares be the same? If not, how would you justify any fare differences?

Im at the end of the Blue line. This would increase my wait exponentially.

My concern is this would add another half hour to my commute due to arriving by bus. this may discline me and others from using Metro.

already my 4 mile commute, to/from DC each day can take an hour under the current conditions; with this new schedule it would take 90 minutes or more each way each day. every day I get numerous emails from WMATA with problems on the blue and yellow line that slow down trains or put them out of service and if you add those issues to longer wait times for trains....well its not worth it. I live close and it takes too long to get to DC, what the heck are those further out going to do?

I would like to use metro to get to work in Herndon when the silver line is extended. Train frequency during peak periods is needed to address the inevitable influx of passengers during these times, ESPECIALLY with COVID protocols and some social distancing in place.

The rich red line does not have delayed service but the other lines serving poorer areas do.. The rich folks on the red line can drive. Focus should be based on customer need not Metro revenues. You are supposed to serve the public not line your pockets!

It will really depend on how crowded trains are by that point. It will be a nightmare if trains are anything close to pre-pandemic levels. But if ridership is still pretty sparse, sure, that will probably work.

Trains would be extremely crowded during weekday rush hours and on weekends - It is quite possible that I would not even be able to board an Orange Line or a Silver Line train during those times. Before the pandemic, I used Metro for all my travel; if these changes are adopted, I will not be using Metro for any weekend travel.

Not acceptable. Ridership will go down even more since well have to use other options

Proposal to operate Metrorail service every 30 minutes

During the week, given usual demand for Metrorail service for working people (not during a pandemic but during what we usually call normal times), frequency on all lines at all stations MUST be much more frequent than every 30 minutes throughout the day! This proposal is unrealistic and potentially dangerous (i.e. overflowing stations during peak travel times and certainly potential damaging effects on the environment as well).

A 15-minute wait is not practical for the public transport system in the U.S. capital. Too many of us rely on Metro for transportation to work and school. There is no point to a subway system with wait times that don't actually serve the public's needs.

If you miss a train, 30 minutes is a long time to wait, especially if you are a parent who needs to take a child/pick up a child at daycare, etc.

This would be too long between trains to and from the Rockville station.

If longer wait times mean we can keep some lines open, ok. But 15 minutes is a looooong time to wait, especially during rush hour. People wont all fit on the train when it comes. Some people may end up waiting 30 minutes.

Assuming that things are back to levels even approaching normal in 2022, the proposed infrequency of of trains would cause intolerable overcrowding and waits on the platform for, literally, hours until one could squeeze into a train. That, of course, would reduce vastly ridership. Before COVID, the rush hour frequency at Union Station was already inadequate.

The timing between trains is too infrequent. Especially for rush hour. The rush hour times need to be 3-5min apart tops.

Travel demands will return to pre-CoVid levels by this projected date. Service should return to the same level to support the demand. Reducing trains will cause rippling effects through the entire commuter system into DC. Reduction in trains will cause heavy congestion on the roadways which will lead to traffic accidents and other stresses caused by difficult commutes.

During rush hour train service must be more frequent. By next January metro should at minimum be ready to at least resume normal rush hour times and train frequencies. The budget should be allocated in a manner to ensure that is possible.

If trains are going to be spaced out every 30 min, youre going to need to publish an actual schedule for when the trains will be departing. As a commuter, arriving at the station only to find out that you have to wait 20 or 30 minutes for the next train is going to be a problem. If people know exactly when the trains are leaving, they can plan on which trains they need to catch in order to get to their destination on time (like Amtrack or the airlines). When Metro trains ran every 5-7 min during rush hour this wasnt a big deal. But every 30 min is a big deal.

I imagine this could be fine for January of 2022, but ridership will most likely increase as 2022 goes on.

The red line is among the most important metro lines. Its the main artery for folks coming to work downtown, which is expected and desirable to entice next year after the vaccine rollout. My main metro stations are both in the red line, which, pre-pandemic, were always in need of more frequent trains, not the opposite. If you want a DC downtown reactivation, we need a solid, reliable and frequent red line.

Green and yellow lines, if Im not mistaken, are lined that gets busy at certain times of the day. I do not agree that a 30 min wait is going to be convenient friendly for riders. If its going to be a change in wait for those lines, it should be no more than 20-25 mins.

A 30-min wait for people depending on the Metro to go to work (a) would create overcrowding and the possibility of having to wait another 30 min for the next train, thus both an unsafe and untenable situation; (b) would most likely increase road traffic; goes against the purposes for which the Metro was created in the first place.

Thirty minutes between trains is way too long. That span would cause many folks to miss work if they just missed a train or if they were uncomfortable with crowding onto a packed train. Every other major city with a metrorail system has trains running way more frequently than 12-15 minutes or 30 minutes.

I believe it is important to have trains arrive/leave Grosvenor Station during rush hours at a more frequent interval than every 15 minutes.

The time period is acceptable provided train is not too crowded.

This would depend on the number of people who returned to work. If numbers are similar to pre-pandemic, the schedule may not have enough trains to handle demand. If I could get on the train when it arrived, the train arrivals were on a regular schedule, and there are minimal delays, this schedule could work as I would time my arrival to the station to correspond with shortly before the train I needed I arrived. Or, plan on reading material to fill the waiting time. If the trains were full and I had to wait an additional 30 mins, this would not work as I would be late to work or other events/errands.

As long as the time table is posted and I'm aware of when the train will arrive, I have no issue with this plan. It could work

Proposal to operate Metrorail service every 30 minutes

There are many issues with this proposal. First, it presents challenges in commuting to work. Given the current vaccine rollout schedule, I anticipate returning to in-person work in 2022 and using metro for my commute. I suspect this is the case for many others in the DMV. Trains arriving every 30 minutes will create serious overcrowding and make it very difficult to guarantee you will get on the train at your desired time. If I wasn't able to get on my desired train, I would be forced to use another transportation method to get to work because waiting 30 minutes for the next train would make me late. Even at stations where trains will arrive every 12 minutes, this would likely cause overcrowding and present significant problems for traveling to and from work in a timely manner. Second, one of the things that makes DC a wonderful place to live is how Metro makes it easy to get around the city. 30 minute wait times between trains would cause a serious change in how I think about getting around the city. Prior to COVID-19, Metro was my preferred option for traveling around the city, and I would like for it to remain that way once it's safe to regularly use public transit again.

This would create a huge mess at rush hour. If the trains are full or people are a little late, then they have to wait 30 minutes and possibly miss connections, making them late to work. Trains would be full by the time they arrived at stations with multiple lines. The inconvenience of this suggestion would further decrease ridership and encourage commuters to avoid metro.

My main concern would be crowding on trains during peak rider times. I imagine usage levels will remain lower until vaccination levels have reached critical mass and new case numbers are near zero, but during previous experiences with single tracking and the like that result in less frequent arrivals train cars can fill quickly on popular routes.

This seems like a reasonable proposal only IF the pandemic continues. These cuts to be addressed 10 months from now could cause irreparable harm to the reputation and credibility of the Metro system.

I board at Union Station to travel to work. It's already packed there (in normal times) on the platform. With people waiting 30 minutes between trains, it would be a disaster. Trains would be so packed by the time they got to Union Station, I would risk not being able to board and having to wait 30 minutes for the next train, which by now would make me late to work.

If this is done, Metro should make schedules available for each line. Also, station dwell time should increase if service is reduced to 2 trains per hour per direction. Basically, if only two trains per hour will be provided, passengers need to know when those trains are coming and the trains should wait in the stations longer.

On those routes with a high number of travelers (normally, not with COVID), are you proposing to increase the number of cars? What about service to events that hold large numbers of people reliant on metro? A reduction in frequency near the stadiums would be disastrous. Consider that there is inadequate public parking nearby.

I would not mind much waiting in the evening for 30 min between trains but rush hour in the mornings allows me to get to work on time. So it is helpful that there are more trains during rush hour.

If offices reopen, most likely this will lead to crowded trains. Prices for non-rush hour service should be reduced.

This would be disastrous during rush hour trips. Trains were full before, when they ran every 3-5 minutes. We'd never get to work this way.

Red line gets extremely crowded during rush hour. Every 15 minutes would mean very crowded stations and trains.

If I have to schedule my metro trips and get penalized by a 30 minute wait if I miss one - I probably won't use it.

Is this schedule corresponding to metro bus schedule? Once we miss the train, then miss the bus???

It is rare that I would be at a station with only one line, and in general 12-15 min will be sufficient. I will add that it could lead me to use ride share more if I'm pressed for time and at the long end of the timeslot.

It is so inconvenient (and annoying) to have to wait longer for trains on the weekend that I often give up and drive, not an environmentally sound option.

Not frequently enough, given bus cuts, to get me to work in a reasonable period of time. My pre-covid commute was 20 minutes. I am now looking at upwards of an hour.

I travel 6 times a week on red line at Grosvenor station.

I understand needing to space out the time between trains, given the low ridership and budget constraints. However, even making the gap 10 minutes, as opposed to 15 minutes (on the Red Line) during the day would help those of us who have and still will depend on Metro for most of our local travel. And perhaps 20 minutes between trains, as opposed to 30 minutes on the other lines and weekends.

I would really prefer more frequent trains, especially when transfers are involved, but it's better to have infrequent trains than no trains (system and/or stations closed).

Assuming we are all back in the office in Jan 2022, this would severely overcrowd trains (meaning we would have to wait for multiple trains before finding a spot) and I would end up finding another way to get to work.

This places a lot of pressure on ensuring you do not miss a train to / from work. If you do, you would potentially be late by at least one hour to your place of employment. This relies on bus service being on time too.

I like how no matter what time you're taking metro the time for arrival is the same and you don't have to wait too long for the train. But it's not fair for people who live or need to commute beyond Silver Spring and Grosvenor which is many people due to the high cost of living in DC.

Proposal to operate Metrorail service every 30 minutes

Once the pandemic subsides and we rely on Metro service to commute to our offices; (i.e., ridership goes back up) the 30-minute increments would result in trains being too crowded. That means that if I've already stood on the platform for 28 minutes and the train is too crowded for me to board, I'll have to wait another 30 minutes - 58 minutes total - which would not be feasible. With the inconvenience of 30-minute increments during rush hour, people will be even less likely to ride Metro; i.e., ridership will decline further.

I recommend that rush hour goes from 7 through 9 am in and 4 through 6 pm

The wait time is so long that it makes the metro useless if you miss it, especially for commuters. This makes the problem worse- fewer riders will use metro.

This plan will likely add at least an hour to my total commute time each day. More importantly, I work at a school and this plan would negatively affect the lives of our young students by adding significant travel time to their commutes and stress on their caregivers.

My biggest worry would be long wait times between trains but seems more ideal than severely restricting services to many stations

This would work to have all trains available

I believe that trains and platforms would be over capacity as early as the summer and fall of 2021 once vaccines are fully distributed and people, including, myself return to their pre-pandemic routines, which includes relying on the metro for transit to and from work on the red line.

This is an excellent solution

I would be concerned about overcrowding if there are not more trains during the peak hours.

Prior to the pandemic, Metrorail trains were already too infrequent and overcrowded. This plan would make the reliability and overcrowding even worse. Metrorails plan should be to make Metrorail trains more frequent, not less, especially on the Red line.

Travel time for trips from my home to my doctor would be significantly longer

Lack of increased service frequency during rush hours would be time consuming for commutes and 30 minute frequency at any time during business hours would hamper access

would prefer more frequent service on weekdays and during rush hours;

Not ideal. Would definitely need to budget extra time to commute to the office as fewer cars would come on the red line as compared to normal rush frequency. But I could begrudgingly make it work.

Trains every 30 minutes is simply ridiculous for a functioning metro in a big city. You can forget about ridership altogether with such schedule.

Not everyone has access to vehicles and totally depend on WMATA. The times are ridiculous!!!

It would be inconvenient, but as long as the apps and station boards were correctly tracking the trains in real time, I could make this work. It would be crowded, and people would probably stop using the metro as much- I probably would too- potentially making metro problems worse in the long run. I'm not thrilled about it, but I could make it work if I had to.

DMV officials cant in one breath say they want to reduce traffic congestion, lower pollution, and advance other environmental initiatives and then in the next breath say that public transit is going to be cut significantly. I get that the money has to come from somewhere, but cutting public transit is NOT the way to do it.

Many more people rely on Metrorail on weekdays to commute to/from work during rush hours.

Weekday rush hour service needs to be more frequent than weekend service for passenger convenience and distancing. Lengthy or uncomfortable commutes will drive riders with the most resources away from Metro. Raise rail prices for rush hour service if needed to have frequent weekday rush hour service.

While the following concern doesn't really affect me, this plan leaves an incredibly high temporal cost for missing a train anywhere outside of the city center (and a few places within the city too) which is not going to bode well for retaining or growing ridership. Every 15min at the better stations isn't awful, but it's not great either.

If the arrivals during rush hour are not more frequent, the trains would potentially be very crowded, so that would scare people away from riding. It's self defeating. If you want to regain ridership, deciding to offer worse service is not the way to go.

Airport travelers depend on the frequency of train arrival and departure to ensure timely arrival and or departure to meet flight schedule. Increasing the wait time of train schedule of arrival and departure will create overcrowding, and delays in travel.

Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

This would work for me only if timetables are published showing exactly what time the train is coming.

I am not going to take Metro if trains don't show up with any sort of frequency. Every 15-30 minutes would be a shame and would make Metro less reliable for people. If you want ridership to increase, you have to make it convenient for people. I really want to take Metro, but if I don't know how long it's going to take me, I will likely choose other options.

You have not provided hours of service for this scenario; we currently use metro sporadically but given the hope that Covid-19 will not have the same impact in the future, this schedule could work for me and others in our community .

Proposal to operate Metrorail service every 30 minutes

work is a judgement call. It would extend my commute between 24 minutes and 48 minutes per day.

Trains every 30 minutes during rush hour is not feasible. Much higher frequency during rush hour is a must.

Need Service at Wiehle-Reston to continue as currently schedule.

In the plan, Grosvenor-Stratmore is shown as a closed station. How will this turnback work? I have concerns about Eisenhower station(Yellow). I go to the movies there and its a pretty convenient stop. Having the stop open on weekends would be nice or during certain hours of the day would be nice.

This works for me.

I will be traveling during rush hour times (eg. 7am - 9am and 4pm - 6pm) and would like more frequent trains to avoid crowding and get home faster.

Rush hours should be considered since there are so many people using the metro at those times

I live at Rockville Town Center which is adjacent to the Rockville Metro Station and commute via the Metro everyday to Metro Center. Reducing service to 30-minute intervals would add a significant duration to my total travel time.

why is Prince Georges county always on the negative end of your policies. I notice that the trains that would run less than 30 minutes apart are all in Montgomery county or in Virginia. We always get the short end of the stick.

I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else.

This level of cuts would decimate the economy of the DMV. It will add more cars to the roads. It will deprive people without cars the ability to get around. It is not in keeping with the allocation of tax dollars to keep the transit agency operating. It will be implemented at a time when most Americans will have been vaccinated and ready to return to our pre-pandemic lives.

I am government worker who takes the metrorail and the VRE in combination to get to my duty station. This may cause some conflict with coordinating my commute.

People needing to commute to work/ from work or to an airport will need certainty in train arrival times to ensure on time arrival. I voted no because a person who just misses a train is likely to arrive late to work, the airport, or to pick up kids. Lower frequency service could potentially work if metro could maintain a set train schedule. This would reduce the uncertainty associated with lower frequency to allow people to manage their schedules.

Cutting frequency to this degree is a virtually guaranteed way to send the system into a downward spiral and further failure. This is the capital of the United States and were well into the 21st century. Having such poor rapid transit service would be both an incredible embarrassment and a recipe for further disaster

I use Takoma red line to commute to Gallery Place and pre-COVID had come to rely on frequent AM train service. If we are asked to return to the office full-time--something my employer has not yet decided--these cuts would impact my morning and evening commutes.

I can schedule my time...this works

Orange line trains should come every 15 minutes during rush hours on the weekdays as well

This plan would be so inconvenient to riders! Each trains stop at stations for less than a minute and if I miss one train by a few seconds, I dont want to have to wait half an hour before I can get onto another train. Also, Coronavirus is not going away completely by Jan 2022 and with less trains means more people packed into one train. How am I supposed to social distant on a full train?

Trains every 30 or 15 minutes is too long of a wait between trains. It would result in me opting not to take the metro as often as I do now because I would take another mode to avoid the wait. Also, it would make the likelihood that I would be dangerously late for work much higher. This could be risky for lower-income residents who rely on the Metro and are also more likely to have a job that would fire them for being 15-30 minutes late. I can imagine many others forgoing the Metro as well, further reducing the Metros revenue. Decreasing service will be a downward spiral of not making enough money to cover costs. To get more fare money public transit needs to be RELIABLE, not intermittent. You could imagine that DCs more well-heeled residents would opt for private car or Uber, further increasing the traffic on the road.

I could see this working IF you guys got really consistent timing because half an hour is a long time to wait if you get there just after the last train leaves. But if the train just kinda shows up when it shows up like it does now, then this change would be pretty bad.

This is a ludicrous proposal. I do not own a vehicle and need to work in person downtown. Even during the pandemic, I have been a regular weekday rider. The idea of decreasing service to this extreme is frightening to consider. The idea of rush hour having the same level of service as a Saturday afternoon makes absolutely no sense. I still hope this is nothing more than a scare tactic for additional funding, but if it comes to pass, I certainly will no longer be able to be a regular rider due to this lack of reliability. I understand the need to decrease service due to ridership, but this is about the most ill conceived plan I have ever heard of.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| 15-30 minutes is too long to wait between train arrivals |
| This would not work during regular business hours and would significantly affect morning and evening commutes. |
| I like the simplification of the schedule but worry about the impact it would have on commuters. Am curious about the effect this would have on fares - would you no longer charge peak rates or raise costs across the board? |
| Perhaps, all the non-Red Lines could have 20-minute service, have shorter trains and actually have more motormen. Do you save that much money by having nearly no motormen at all? |
| With all the delays that Metro has a lot of times the wait could be longer than 30 minutes, so with that in mind all trains should run between 12-15 minutes |
| The regular frequency of service to stations with only one line is important. If there is a chance that I would have to wait 30 minutes, I would be less likely to ride Metro regularly and possibly drive/rideshare to my office around McPherson Square. Overcrowding concerns may be mitigated by a guarantee of 8-car trains being used for all of the 30-minute intervals. |
| this makes more sense explaining it this way, however, I currently I reside at a place with two trains but if this is long term and I move to a place with only one train this wouldnt work |
| This looks ok |
| Public transit doesnt provide much value if there is (up to) a half hour wait for every train and transfer |
| 30 minutes in between trains is a long time and difficult to time. |
| Why not have rush hour and non-rush hour periods continue to be distinguished? And half hour arrival times between trains is too long all day on weekdays. |
| Im still teleworking now due to Covid but my employer plans to bring us back to the office in DC in June or July. I have disabilities and need a seat on the metro or else I cant ride it safely. (I have a heart condition and back injury that make standing on a moving train dangerous, putting me at risk of falling or fainting.) Before Covid I had a hard enough time finding a seat because there isnt enough disabled seating. People without disabilities would sit in those seats (people like to sit in one and put their bag or backpack in the other and refuse to move, or teenagers like to sprawl on both seats with their feet up on one - when I ask politely for the seat, they ignore me, and given the assaults that have commonly occurred on metro in the past, Im not going to push it). Reducing service would make metro trains essentially inaccessible to people with disabilities like me. The trains will be so crowded that I wont be able to get on easily (when I try, other riders rush ahead of me and sometimes kick my cane out from under me in the process), and even if I can get on, there wont be seats, so I wont be able to ride. And dont tell me to ride Metro Access. My friends who have disabilities have all told me it is a terrible service and completely unreliable. |
| The idea of just missing a train - and having to wait 30 minutes for the next one - would make travel by metro extremely difficult and would likely cause unacceptable delays to peoples schedules. In addition, the amount of people who arrive to board the next train train within the 30 minutes of waiting would be an issue for COVID social distancing. |
| There should be more trains during rush hour. Also, I think 15 minutes is too long. Trains coming every 5-10 minutes during rush hour is acceptable. |
| This would work best if there was a definite time schedule so riders could plan appropriately. |
| It seems to make no sense not to take advantage of WMATA's data on usage times. |
| This will expectedly make life more difficult, as it could add up to an hour each day to the commute time to and from work. It will require careful planning to avoid long wait times in the tunnels. |
| For those that rely on bus to metro transfers the 15-30 minute intervals between trains would negatively impact the commute. Commute times would be lengthened for people who travel to DC for work. Additionally, more frequent metro prevents overcrowding and all the issues that come along with overcrowding. People would be LESS likely to take metro if this proposal is implemented. Lastly, making a train that leaves every 30 minutes would require riders to leave their homes much earlier. This can mean traveling very early in the morning before the sun has come up which can be dangerous for women commuters particularly. |
| The weekday traffic congestion on I-66 is to unpredictable for me to depend on a metro schedule of every 30 mins for my workday commute. I would either drive or take the bus. |
| By January 2022, I expect to be back in the office (as will many people) BUT I imagine that wearing masks and social distancing will also be still in effect. Having METRO run every 15-30 minutes based on line, etc. would mean incredibly packed and therefore unsafe trains, especially during rush hours. |
| While this plan would work for me personally, I typically only travel on Metro on weekends, when there is already a 30 min wait. However, I have traveled Metro during rush hours on a regular, commuting basis in the past, and I dont believe this plan would work well. I can see decreasing train frequencies during rush hours, but not all the way to 30 min increments! I think 10-15 min increments would be much more realistic. |
| I could manage with this proposal. Just DONT CLOSE GROSVENOR OR WHITE FLINT!!! |
| No, I'd like more frequent service especially if the quarantine ends. How is the city to open up if our metro system is not fully functioning? This proposed schedule is too limited. |

Proposal to operate Metrorail service every 30 minutes

If trains only run every 30 minutes on the Red Line, they will be extremely crowded, even if some arrive between Grosvenor-Strathmore and Silver Spring every 15 minutes. This will especially be true during weekday rush hours (many federal employees from Maryland commute beyond those stations) and if all trains aren't eight cars. If trains are more crowded, ridership will surely continue to decrease, which will only compound Metro's budget problems.

Keeping the service hours before the pandemic will be good.

Traffic on the Red Line between White Flint and Shady Grove tends to be higher when college classes are in session, and trains every 30 minutes might not be enough.

I live near Grosvenor-Strathmore and will be commuting every day again by January 2022. 15-minute intervals are not acceptable for my commute, especially coming on the heels of a large federal stimulus. This proposal would force me to consider commuting by MARC or car instead and, more globally, it would permanently reduce Metro ridership across the board.

I don't have a problem with this proposal because the service won't be eliminated only the waiting time is a little longer.

Every 30 minutes makes Metro inconvenient. I will use my car.

My commute includes bus service; the train schedule could impact which bus I would need to take in order to minimize my wait time at the station.

1) I would hope that there would be a posted schedule about train departures/arrivals. Also posting the time of the next available train would be helpful too - just like it is now. 2) Would the fare be the same throughout the day, since the trains would run the same schedule all day? That would be my suggestion.

Seems like you could reduce service somewhat, but not as much, and still save money. Why not run trains every 15 minutes at all stations on weekdays and every 30 minutes on weekends? Also, if there is crowding on trains, as there will be with so few trains running, that just makes COVID worse...which just makes people want to ride Metro less. If you keep the schedule to every six minutes during rush hour, you will have far more riders. If you don't have a lot of riders, then consider schedule change.

Every 30 minutes isn't a functional subway system. Even every 15 minutes is subpar. I moved where I did so I could rely on a (often barely functional) mass transit system. Now you're reneging and blaming the pandemic.

Limiting the times for the Metro would cause more congestion and cause for concern due to COVID.

I take the Metro from work to the VRE train for commute. Metro cars only arriving every 30 minutes means if I miss the one I expected to take then I would also miss my train home.

I hope it did not take long to come up with this plan because it is, for lack of a better word, foolish. The present difference between Weekend and Weekday hours is understandable. The majority (I think) of weekend riders are tourists and they do not mind waiting. You have always given preferential treatment to the weekday riders. Why not continue it? There is nothing more frustrating than getting off a Metro and transfer to another but then have to wait because one has just missed a Metro. I even ride the Metro on the weekends and I understand why I may have to wait longer. I realize you have lost ridership but this is not the way to regain it.

Proposal increases time necessary for trips and leads to reduced use of public transportation. This will put more vehicles on the street when we are trying to reduce the number of vehicles.

You understand the concept that making service shittier will only keep riders away and you'll never get the fares you need, right? Just creating a death spiral you cannot recover from. 30 minutes during rush hours is completely untenable and the people responsible for letting an idea this stupid get so far should be sacked.

Thirty minutes is a long time to wait if you just miss a train. 20-25 would be more appealing, so long as trains were super reliable so riders could plan to arrive at stations close to a train arrival. Also assume this would mean rates would be the same rush and non-rush, since the trains would not be rushing themselves anymore.

Depending on when we're returning to the office, etc., ability to know when the trains are supposed to arrive, whether rush hour or non-rush, would be paramount in planning my trips to various appointments, work, meetings, etc.

If federal agencies return to mostly working from the office this will result in severe overcrowding on all trains. I would be disinclined to returning to riding Metro if this proposal is put into effect.

I could live with this if Red Line trains went all the way to Shady Grove every 15 minutes. One train every 30 minutes is just not acceptable for people trying to get to work.

If I take the Metro rail to work it is from the Franconia Springfield station. Cars fill up quickly - pre-COVID - and seating becomes scarce. 30 minutes between departure for rush hour could be a negative.

Because our company deals with many government projects, travel to DC area would be affected. Closing the Clarendon station is not preferred and would definitely increase our travel time into DC areas. The increase in time between trains is ok, but closing the Clarendon station and the increase in time would make it more difficult to get into the DC area to meet with clients.

This won't work for commuting on the Red Line from Takoma to Union Station/Capitol South. If we're back up and running in the office, as I expect we will be, the train will be too full to get a seat. I don't want to have to retire or start driving to work due to Metro service cuts.

Proposal to operate Metrorail service every 30 minutes

Red Line service should ideally run every 10-12 minutes from Glenmont to Shady Grove; the train is particularly crowded during rush hour and warrants the demand. Running trains every 15-30 minutes will increase crowding and will force riders to make time-based transfers to ensure they are not waiting 15-30 minutes for a train depending on the destination.

This would effect me greatly as I do not own a car, nor plan to buy one, and the metro is a very reliable source to move about the city (to see friends, to go to dinner, to go to my employment) and making the gap larger between trains would make it less reliable.

I live in northern Virginia and commute to work on the orange / silver line daily -- while my office is currently closed due to the pandemic, when it opens I will resume traveling downtown daily Monday - Friday. Even with trains coming every 12-15 minutes on the orange / silver lines, it would significantly increase my commute time. Further, at pre-pandemic travel levels, even with trains coming every 3-4 minutes, trains were so crowded I would often have to let two or three pass before I was able to board. If trains were only coming every 12-15 minutes, people who live closer to the city would likely have a hard time using the trains at all because they would be so crowded with commuters from more distant stops. Further, in the past platforms have gotten dangerously crowded when trains were delayed or needed to be offloaded -- train platforms may get dangerously crowded during the week if trains are only coming every 12-15 minutes.

30 minutes between trains is likely to discourage ridership. Smoothing out the differences between rush hour schedules and the rest of the schedule is likewise problematic.

Simply too infrequent, especially during rush hour. Service on ANY line at ANY time should never be trains more than 15 minutes apart ... 20 at most!

Rush hour would be totally overcrowdedâ€”platforms & trains. After rush hour evening waits in some stations would feel unsafe.

This plan wouldnt work for me I would prefer that every lines run every 12-15 mins like it doing now. This would really push riders away for that year. I understand the reason why these service cuts are consider but I really dont support this.

I generally use the Red Line mostly. 15 minutes can be a long wait, but doable.

This takes planning to have less frequent arrival times but it can be worked around. Workload at my job can change a lot and determines when I can get to a Metrorail station. This change may put me in a situation to use other transportation like Uber, Lyft, taxi, car sharing service or carpooling depending on the day/week.

Assuming that ridership increases back to anywhere near pre- covid levels, I can't imagine that a train every 30 mins will cut it. Trains at all hours will be crowded, and the chance that you have to wait up to 30 mins (or 60, if the first train that arrives is too full) is absolutely ridiculous.

How many times have we done this? If you cut service you cut ridership.

Assuming people go back to work again and take Metro, it is hugely crowded during rush hours and not very busy at all during the weekend. I think this would be not serve the community well at all.

The short time between trains has always been the perk of the Metro. If waiting for 10-15 minutes for a train becomes the norm, I would chose another mode of transportation, and only use Metro sparingly.

30 minutes between trains is a long time, but better than stations being closed altogether. The long wait time would cause me to look at other modes of transportation (slugging, VRE, bus).

If people are going back to the office in full force after COVID, this will absolutely not work. Trains are already packed with five-minute headways on weekdays at rush hour, 15-30 minute headways would only result in people leaving Metro and never coming back.

For the moment, I am not using metro. Once I start having to go back into the office, I use the green line from the Georgia Ave/Petworth station and then transfer to the red line at Chinatown. If the trains only run every 15 or 30 minutes, my 45-50 minute commute would likely be about an hour and a half, which would be impossible to do since I will also have to pick up my daughter from prek.

Intervals of 12-15 minutes during rush hour are way too long. This is why the trains are always packed. Packed trains arent safe, sanitary, and allow for harassment. Rush hour periods should have more trains.

I think not having trains run later on Friday and Saturday nights puts communities at risk. The trains keep folks off the roads that dont need to be driving.

Thats fine

By January 2022 I would expect much higher ridership and use than currently - I dont think trains running every 15 min on the red line will be sufficient, or 30 min on the other lines. And we certainly need a rush hour schedule thats more frequent. I take the train every day right now during rush times and its hard to socially distance from others. I cant imagine what it would be like if the train were to increase in ridership a lot and decrease running times by more than half. It would probably be total chaos. I plan to take the train daily for the foreseeable future (years) during rush hour, and have a stroller with me, so I need the space and the trains to run regularly (a screaming baby on the platform is not a good scene).

My daily commute is already over two hours round trip and involves transferring between yellow and red lines during rush hour. This reduction in frequency would add 30-60 minutes a day to my commute, depending on schedule alignment

Proposal to operate Metrorail service every 30 minutes

Not ideal -- it might work, it might be painful.

This totally ignores those who take the yellow and green and the difficulty connecting to other lines when the times are disparate

A delay of 15-30 minutes to wait for any train would cause a commute time to be intolerably long . It would be very difficult to anticipate a destination arrival time, especially if a transfer is involved. This horrible wait time would make the system almost unusable. By the time any train arrived at a platform, the crowd could make it impossible for all riders to use that train, and if some had to wait another 30 minutes, how t=could they justify the waste of time? It would be a sad day if this became the norm, and I cannot believe that riders would use the service. How could anyone plan if they had an appointment to meet, a meeting to attend, a work schedule that demanded an individual not be late?

Comparing 30 minutes to 60 plus minutes when catching bus in NE to Nursing Home it is NOT bad. But, if while waiting 30 minutes for train, people start pouring into the subway, then it would NOT be good. Would hope that less people would still be riding the subway.

30 minutes is way too long for anybody to be waiting for a train. Especially if they have to transfer. This would greatly delay travel times and make me less likely to take metro.

This proposal would be much better than closing Metro stations. I live in the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro Station.

I would prefer to keep the same way it was during rush hours

The trains need to be scheduled so transfer connections are not missed

I live near a station that has multiple lines so my wait would not be too long. Otherwise, a 30 minute wait would be a deterrent to my using Metro.

This could work only until we reach the point where we are able to return to regular work - hopefully summer 2021. It would be good to calculate the change between a current commute from/to various points in the system in order to show people how their personal situation might be affected. If the wait/journey is too long then people will obviously further abandon metro.

Crowded trains would make this difficult to travel

20 minutes between trains, max.

This seems like a pretty good compromise, as long as the trains generally arrive as scheduled. For those who will commute to work, this seems feasible as long as they know when to arrive at the station to catch a certain train.

I use Metro Rail primarily to get to Greenbelt and Forest Glen Station for doctor appointments and occassionally Morgan Blvd Metro Station to volunteer and meet my mom at her work. I understand that things would have to be reduced, but I am not sure how likely this change would increase the time frame of me getting to my doctor appointments since I take the W14 to Southern Avenue and then from there use Metro Rail. Without changes it takes me normally 3 hours to get to doctors in Greenbelt (W14 to Southern Avenue to Greenbelt to G14), and 2.5 hours to get my doctor in Silver Spring (W14 to Forest Glen Station to walking to Holy Cross Physician Building). I would be hesitant to use MetroRail if this would significantly increase my time to get to doctor appointments because of the fact that to get to my doctors without changes I am leaving at 5:30am and I have to get up 2-2.5 hours earlier.

I believe this schedule can accommodate the majority of riders. Especially if it is the same for weekdays and weekends.

During pre pandemic rush hour, trains would be overcrowded, often leaving at least as many passengers on the platform as they picked up. Spacing trains at longer intervals would not provide good customer service, and more altercations could occur, or dissatisfied riders would find another provider (e.g. Uber, Lyft)

This is laughably insufficient train service for a such a densely populated metropolitan area. Considering how crowded trains are during rush hour--to the point that people have to wait for multiple trains until there is enough space to ride--I can only imagine what trains every 15 minutes would be like during those times. Furthermore, as the District continues to push for more reopening, more people will soon rely on public transportation again.

As ridership picks up again with reopening, Metro will have additional revenue. If this is a temporary measure it might be appropriate, but having to wait 15-30 minutes between trains indefinitely will make it a significantly less attractive transportation option for both regular and periodic riders.

During peak times, the stations with 30 minute wait times have 15 minute wait times during peak hours.

I work from about 8AM to 9PM on a regular basis, with about a 45 minute commute. 30 minute waits would add a significant burden to travel times. Also, ridership is slowly increasing, so with significant cuts to trains, social distancing would be impossible and this would exacerbate the pandemic, especially to WMATAs fee paying riders.

It would require me to change my travel time also would affect my transfer connection time

This would be a disaster during rush hour.

With more of the population getting vaccinated and some employers already expecting workers back in the office, this is not frequent enough during rush hour.

All trains at all stations should have 15 minute intervals.

Proposal to operate Metrorail service every 30 minutes

The red line has no connections to other lines until farraguth north. Bus service to downtown dc is not optimal from shady grove to metro center. The population de density between shady grove and medical center has gown exponentially the last few years, with lots of communities being built near metro. Trains from Grosvenor need to be at least every five minutes during peak hours. Otherwise trains will not be able to accommodate the number of people and the platforms will be overcrowded and unsafe

If we are physically back at work in January 2022 then every 30 minutes would be a long time between trains and could cause overcrowding on trains as people would not want to wait 30 minutes for the next train to work.

I would suggest still offering differences between weekday and weekend schedules - more frequency during weekdays

Im 80 and retired (and mostly use MetroAccess) so longer waits for me are not a problem.

You will be taking away jobs and what is left of Covid will spread more with people piling up on the platforms.

I use metro to commute from Falls Church city to Washington DC every work day. Increasing intervals between trains will double my commute time which is already an hour.

-

I would be using a bus connection, making scheduling an issue. Busses typically run late or are unreliable. This could add an extra hour per day for a commuter.

Maybe this would be acceptable for leisure travel where running late somewhere isnt the end of the world, but a schedule like this can MAJORLY screw hourly workers if they just miss the train departure. Obviously managers dont like employees who run consistently late, forcing them to turn to more expensive options, which can be unfeasable for lower income people dependent on metro services. As someone dependent on the metro for work, even just missing a departure with a 7 minute wait has made me late. Bad luck with a 15 minute wait could hurt a lot of people.

this much time between trains could be disastrous during busy commuting periods- causing crowded platforms and jam packed trains the end up bypassing stations the closer into the city they go. Pre-covid there were times were stations were bypassed due to overcrowded conditions, especially when mechanical issues, medical emergencies etc. occurred and this caused a great deal of frustration for commuters. If you want to attract ridership back to metro it cannot take people 2-3 times longer to commute to their work than driving or alternate modes of transportation which if someone just misses a train and it only comes every 30 minutes would be the case

The main issue with this proposal would be rush-hour needs not being met in either a best-case (trains run as scheduled) or worst-case scenarios (delays and interruptions). As someone who regularly used the metro for work before the pandemic, it seems there could be crowding issues with fewer trains, not to mention potential conflict with riders feeling they need to push their way to the door when trains come in.

I have to return office on july 2020. I don't have car and the only transport is the grosvenor station

I am a government worker and have been commuting for 10 years. Any changes to my current commute would be detrimental to my continued use of metro. Parking at my government site is limited and my drive would be a a three hour round-trip. Currently my commute costs are covered by my agency. Parking is not covered but I walk to the metro Strathmore- Grosvenor if this is closed I would have to drive to White Flint, park and go past(!) my apartment! This would be costly and detrimental, increase traffic on 355 and increase pollution... this is a BAD MOVE ON METROS PART!

At least, people can plan ahead and take the slower service into account when going out & coming home.

First, you have no mention of the Green line which I take every day during the week. But like I said before no mention of the Green line.

While I'd prefer to avoid eliminating rush hour service frequency, I would strongly prefer moving to a standard service frequency if that would prevent station closures.

I go north on the redline at ~7 AM and south at 5 PM. So, this should be ok since the train is not crowded (Woodley Park to White Flint). For people going south from Woodley Park, its too much time between trains. At rush hour, both the trains and platform would be extremely overcrowded. There would be fights to board. Its already sometimes too crowded on an arriving train that no one on the platform can board. This proposal would make that a standard occurrence.

Trains every 20 min would be acceptable for this proposal to work. Or, provide fans and heaters for outdoor stations if trains had to run every 30 min. Thirty minutes can be a very long time to wait in extreme hot and cold temperatures.

The metro during 8:00am-9:00am is full of commuters, and often on the red line when trains you cannot get on as the train is full when they are running every 3-5 minutes. If trains are running every 15 minutes, I envision lots od commuters having trouble getting to work on time. This would lead to people not being able to rely on wmata.

Less frequent trains while keeping stations open makes sense.

I wouldnt be willing to wait that long for a train and would be less inclined to use Metro services

As a retiree who normally uses off-peak service I have the flexibility to adjust to less frequent service.

my bus arrives at the Metro station at 4:40. would I have to wait 20 min for a train?

Proposal to operate Metrorail service every 30 minutes

At the moment, I work from home and my travel needs are limited. Though it would make it difficult for me to get to my job in person using WMATA, it would not be impossible. I would hope that when more people are working in their offices again and using Metro Rail after January 2022, more frequent rail service would resume.

I like that there would be weekend service on this plan. I'd be worried about train overcrowding and long wait times during rush hour because the frequency of trains would not increase during this time.

Morning rush hour should at least be treated differently with quicker service

As long as all stations are available

This could work but the trains would need to be on a set timetable for departures from each station and potentially staying at each station longer. Not knowing when trains are leaving and potentially having to wait 30 minutes for a train would mean metro is no longer a feasible commute option. I don't understand the second part of this proposal for stations serviced by multiple lines, are you proposing staggered arrivals from each line? It would be helpful for this to be clarified before this proposal goes any further.

Waiting thirty minutes between trains will further decrease ridership unless you are served by a station with multiple lines. In addition, trains will be more crowded. At stations served by multiple lines, does that mean every line will run at least every 12-15 minutes? More frequency is needed at rush hours than non-peak time.

Trains need to run the same intervals at all stations. It is too confusing to have train arrivals not uniform.

Can rail service be reduced now to shift funds to bus service in the future when more people will be riding?

A half hour between trains seems a long time but since I live near Grosvenor and seldom go anywhere but downtown, this would be fine for me..

Plan appears insufficient to handle passenger load and inconvenient for timing during rush hour

This change would make taking Metro much more perilous. The consequence of having to wait 30 minutes if I missed a train would make it much, much more difficult.

If rush hour trains don't run as often, they will be very crowded and unhealthy to ride.

It works OK for me since I only use stations with more than one line. 30 minutes between trains at rush hour would be pretty rough.

This does not account for overcrowding on all trains during the busy hours of going to- and from- work.

I commute from Grosvenor to NoMa (and back for work). Missing a train and waiting 15 minutes would increase my already long commute time, although it's certainly better than having to wait 30, which would potentially make the commute prohibitive.

I am retired and can rely on adjusting my schedule. Many work in my area and the time changes will require major adjustments to schedules, especially for those taking care of children and elders. People within DC, especially in my area have consciously chosen not to have a car or have given them up. Please take that into account.

I'm concerned about the limited frequency during rush hour, but in the worst case, would be ok with a maximum of 15 minutes on the most frequented segment of the red line.

I currently am able to get to my work on foot, but am not sure I will be living in the same location in 2022. Moreover, if I ever need to get across town or to go to Virginia, this would NOT work for me.

If I'm understanding this correctly, you're saying during non-peak hours the green line would run every 30 minutes, and every other color line would run every 12-15 minutes? If so, that hardly seems fair to green line riders. I think every 15 minutes during non-peak hours should be universal for every line. No more than 20 minutes and even that can be excessive unless you create a schedule so people are aware of what train they need to catch (outside of using trip planner).

I can adjust my schedule as long as Metro trains depart and arrive according to schedule. Otherwise, waiting longer at the platforms and sitting in trains due to delays are a waste of time.

By January 2022 enough people should be vaccinated that people are returning to work, and there would be sufficient numbers that 15 minute intervals would cause too much crowding. It would be too infrequent to be convenient/useful for people trying to get to work, and would discourage ridership for rush hour. It also makes no sense if you charged the same for rush hour but provided the same level of service.

For optimal flow of service, rush hour requires more frequent arrivals and departures at most every metro station. Additionally, the Red Line, at all stations requires more frequent service than 30 minute arrivals, if heavier use of metro throughout all areas transpires within this and the next year, and most likely heavier use of metro will be a likely development as COVID vaccines are more widely distributed and more people resume working at offices rather than from their homes.

Trains should be running more frequently in the morning and in the late afternoon early evening when people get off work

Certain lines and sections are being prioritized for more frequent service. It looks like predominantly white neighborhoods serving downtown workers are being prioritized, when residents of those areas probably have greater resources to take other forms of transportation. Please service areas for which public transportation is a necessity.

15/30 minute intervals are way too long. It would defeat the purpose of using the Metro (speed and convenience). This would discourage people from using it.

How many cars per train?

Proposal to operate Metrorail service every 30 minutes

Seems like a reasonable way to spread the pain of cost cuts.

First of all, I expect ridership to increase once coronavirus vaccinations increase and more people return to work and use also use Metro for shopping and other personal uses. Also, I don't drive and I moved across the street to the Grosvenor Metro station for transportation convenience. I would be forced to rely on cabs, which are unreliable and expensive.

During non-pandemic times, morning and afternoon rush hour trains were very crowded, standing room only. Only having trains every 30 minutes would make it almost impossible to get on trains, with very large volumes of people trying to get on at one time. And if you weren't able to get on, you would need to wait 30 minutes before another train, which in the winter, on an open platform will be very difficult to do.

I will need the trains to run more often during the morning rush hour, at least every 10 or 15 minutes.

Previously, the red line from Fort Totten to Gallery Place is jammed pack. Increased weekend access would encourage tourism, DMV folk to pursue nightlife, entertainment, restaurants and sporting events.

The time between trains (15 minutes) is too long, particularly for rush hour.

This would cause massive delays, overcrowding (which was a problem before the pandemic) and extremely poor service overall.

As long as this plan does not require closing the Van Dorn Station, this plan can work for me, my family, and co-workers.

Missing a train and having to wait 30 min for the next is too long. I (and presumably others) will end up late for work, appointments, etc. The economic impact of such a move will be enormous--all the lost productivity. It's the equivalent of introducing rush-hour traffic and having everybody sit uselessly in traffic for an hour on what should be a 10 minute commute. You would be costing the economy billions to save millions.

I like the consistency of knowing that at a set interval period, the train will be arriving (eg, every 30 minutes). This would help me plan when I should head to the metro station to catch the next train.

This would work only if ridership does not rebound much at all in 2022.. If ridership rebounds even partially, there is no way that a train every 30 minutes would work at rush hour. They would be entirely too crowded to get on. Also, if trains only run every 30 minutes they need to be on a set schedule under which riders would know that the trains arrive at their stations at, for example, 10 minutes and 40 minutes after the hour, so riders can properly time their arrival at stations and not be forced to waste up to 60 minutes a day (30 minutes in the morning and 30 minutes in the evening) on their daily commutes.

I get off work in the evening which would impact my ability to take the orange line from Clarendon to Vienna metro. If it takes too long to get home I would be better off driving. As long as this happens before 8 pm.

Accurate schedules and real time arrivals will be very helpful for planning purposes and to avoid waiting 30+ minutes for a train.

The train should arrive every 10 minutes during rush hour (6AM to 10 AM and 4PM to 8 PM every week day).

During rush hours the trains should arrive every 10-15 min, otherwise the train will become overcrowded and it will not be possible to keep a social distance between passengers. . Also, the 30 min waiting the next train is too long during the rush hours.

I personally travel into DC occasionally, but my wife is expected to resume her daily commute from the silver line (Wiehle) to Smithsonian in the late spring/early summer. She currently travels around 12-20 minutes to the station, and depending on parking, will arrive somewhat inconsistently. The change to trains every 30 minutes means that she would, on average, have to leave earlier in the morning and arrive back at the station later. This could be as much as 58 minutes of variance each day. That would be extremely hard to deal with day in and day out. Coupled with the fact that she currently gets off at Smithsonian (we'll talk later about the proposed station cuts), this could add an additional 10 minutes to her commute each way if she needed to get off at Federal Triangle or L'Enfant. That's now a range of at least 20 minutes more, up to nearly 1 hour 20 minutes. And that's per day. The service cuts could cost my wife at minimum 1 hour 40 minutes to 6 hours 20 minutes per week. She's not alone in this.

This plan works for me, however it seems like having a set time across weekends, weekdays, and potentially higher traffic times (ie rush hour) doesn't make a lot of sense. Not opposed to what is proposed but it might be useful to understand how this decision was made.

This plan would mire DC in horrific congestion. It would do serious damage to the Districts economic development, and would reduce housing values near metro lines, with implications for the Districts tax base.

Many grad students rely on the metro to get to campus. I think changes to each of these lines would affect both graduate workers and people who work on campus at DC universities. Less frequent trains would also mean more crowded trains, which especially immunocompromised people like myself may not be comfortable with.

These wait times are ridiculous. It's already bad enough on the weekends. We need more funding! I heard the DC government has a surplus in the budget this year, as does Virginia. Where's that money going? This is essential public infrastructure and I am so tired of hearing about proposed service cuts because this region refuses to properly fund public transportation.

Proposal to operate Metrorail service every 30 minutes

By January 2022 one would hope that most people will be vaccinated and that a good proportion of them would want/need to commute via MetroRail again. I think you might end up with heavily overcrowded trains on a 30 minute schedule, especially during traditionally busy hours.

While workable, this leaves long wait periods for Silver/Orange line stations in VA to/from west of Ballston. Those areas are likely to see more ridership after businesses return. WMATA should be willing to increase service quickly if ridership increases.

Having service every 30 minutes every day of the week and is not workable. There will be over crowding on platforms and I will likely be late for work, appointments, etc. Please reconsider other options.

I do not use the Metro to commute to work, but many of my colleagues do and this would be an issue for them getting to our office in Reston.

I commute to work on the green line. When trains are delayed during the day, especially during rush hour, it becomes very difficult to get a spot on a train. I would not be able to effectively commute with Metrorail.

People are more willing to travel when trains are more frequent with shorter wait times.

12-30 minute intervals is too big when you are traveling from a bus that has less reliable timing due to traffic and the number of riders picked up/dropped off along the route. Missing the train means waiting a half hour which is an unacceptable level of tardiness when you use metro to get to work, meetings, and appointments. You would lose even more ridership as a result from those who could afford other modes of transport. And you could cause others to lose their jobs.

This would not work for my daily commute, which depends on a short (<8 min) wait.

Rush hour train frequency was already insufficient before the pandemic. Reducing it further would result in more crowded trains. Having said that, this is probably the easiest way to adjust service to demand and could be scaled up easier if ridership increases, relative to station closures.

It works for me, but seems silly. Weekday service should always be more frequent than weekend.

Stations/trains will likely get really crowded during rush hour once the pandemic work-from-home ends.

I assume that this frequency is sufficient to handle the number of riders that will be using the metro. If not, a packed train will result in a person potentially waiting up to an hour. If ridership increases and thus revenue, then maybe additional trains may be considered. Having an app or method of accurately determining the status of the trains may also help lessen the inconvenience of a sparse schedule

In pre-pandemic times, during rush hour, these trains, especially red line, were so crowded I'd need to have trains pass to get some space to squeeze in. Presumably there would be some- but maybe lower - amounts of travel list pandemic, but not 4/5 less during rush hour. Also anyone transferring now has a much much longer commute to the point where it's not even worth taking the metro at all. Most of the time, the weekend frequency is so low that I choose to use other options - even walk if the weather is nice- to avoid weekend metro waits....and having that always be the case would make it harder to choose metro.

While these changes would reduce the number of trains, based on the reduced ridership, these changes seem reasonable.

Except at rush hours i think every 40 minute full save some money.

There should be more trains inrush hour and more and later trains on weekends

Train arrival should be every 15mins

If Im back in the office most of the week, then I will be moving to extended telework so I dont have to ride metro more than once per week. One train every 15 minutes during rush hour is going to be horrible. My office hasnt decided when well be back in.

McLean is the station I use to commute to DC. If it's absolutely necessary to reduce service, I could live with this proposal.

This plan is appealing to use on the weekends, but I think it would be very bad for commuters during rush hour, including myself. The only way this would work if the trains do not fill up and skip stops because they are at capacity.

With people going back to work I think this would be disastrous to the overall system. I could see implementing this with current ridership levels, but when people start commuting again it will be absolutely terrible. Also, having longer weekend hours was a huge benefit pre-covid that is fine now, but would be extremely disappointing when there are activities happening again.

I hope to begin taking metro again when we return to work, and this proposal would mean that if I missed my exact train, then I would end up being 30 minutes last for work. The only other option this gives is to wait in the station for long periods of time.

There should be more frequent trains at least during rush hour otherwise the waiting areas get really crowded really quickly, and overcrowding of trains. These combined would decrease overall ridership when things pick back up, waiting an hour for a train to get to home or work due overcrowding will cause to look for alternative modes on transportation.

Proposal to operate Metrorail service every 30 minutes

This is an unacceptable decline in frequency. The point of metro is that it is a show-up-and-go service. Trains should be coming at least every 10 minutes all day long and on the weekends.

Muy tardado el servicio.

Because I live between the Shady Grove and Rockville stops, I rely heavily on these for transportation. Switching these stops to having a train every 30 minutes would be incredibly inconvenient for me.

Not sure what the teleworking situation will be but I expect it to go back to pre pandemic commuting by summer of 2021.

If we get back to pre-pandemic ridership levels, I think not all passengers on the platforms will be able to get into a car when the rush hour trains arrive. Before covid the cars were a crush of people 5 PM - 6 PM, so even adding cars might not solve the problem. Personally, I am willing to wait 30 minutes for my 20 minute ride, but not 60 minutes. There would be other issues as well: are the platforms big enough to hold two or three trains worth of people at a time? Will the prospect of not being able to get a place on the next train (or two trains) lead to even more pushing on the platforms? Im small - I dont want to be the one who is pushed onto the tracks.

What is rush hour going to look like at East Falls Church? We're accustomed to trains every 4 minutes or so. Even at that rate, not everyone can get onto a train. Waiting 15 minutes would be terrible over crowding on the platform.

The pre pandemic rush service is incredibly useful and helpful in commuting to work. Cutting service in 2022 will lead to further reduced ridership.

In hopes the city will be returning to normal as close as possible with more stores and restaurants re-opening/ opening, I think maintaining the regular weekday and weekend schedules is the sensible thing to do, as the Red Line services much of the subway traffic to and from the District.

Too much time in between trains. Red line would be completely packed during rush hour.

Do Not Close Stations

The long wait times at the station would highly discourage my use of the train. I would be worried about train crowding and lack of seat capacity, and likely opt to not take the train (when I would have previously). Im worried how the longer wait times would affect minimum wage workers who use the service. If anything, rush service, but during all metro opening hours would encourage my use.

The long wait for trains will discourage us from taking metro. More convenient to use Uber. Shorter wait times make metro a better option.

That works. My bigger concern is during the weekend, on weekends I plan my travel with extra time for the bigger time gaps

I agree. These schedules would make it easy to go to and from destinations.

I ride from McPherson to McLean on weekdays and a 30 minute gap between trains is not workable. There is also no way everyone that is resuming commuting would fit on trains running that infrequently.

Trains should not be limited during rush hours

30 minutes between trains is too long, no one wants to have to wait 30 minutes if you get to the station and you just miss the train.

I work in early childhood at Adas Israel Congregation next to Cleveland Park metro. I would need a reliable form of travel to get to work.

This type of schedule would make it nearly impossible for me to take metro to work. Prior to the pandemic I took the bus to the redline and the redline to the silver line every day. 15 minutes or more between trains would lengthen my commute to significantly making it impossible to use metro.

The pandemic would end sooner than January 1, 2020 to sell, if that happens they will have to increase your ridership as soon as the pandemic is over increase the metro rail service so just to let you know the pandemic will definitely be gone by January 1, 2022 but it could be sooner than that people are starting to get vaccinated now then more people will probably be vaccinated by about July August and September so when the pandemic is over metro rail will increased completely and run more frequently

Service that infrequent would be a deterrent from riding Metrorail at all.

For work purposes, having the option of a train every 30 minutes is not often enough. The current schedule works and I recommend maintaining that schedule - assuming that COVID restrictions are lifted.

My main use of the metro is to get to my office Monday through Friday - I board at the end of the silver line (Wiehle-Reston Station) in VA so wait times would be 30 minutes between trains when starting my commute in the morning. If I missed a train for any reason (train leaving early/late or otherwise not at scheduled time, traffic delaying me driving to station on time, etc.) I would certainly be late to the office. Unless WMATA could guarantee trains run on time and leave only at their published scheduled times (not early) I would likely find this situation too difficult to deal with and take other methods to get to work or work from home. If I did decide to take the train - I had previously purchased a monthly rail pass every month - due to the uncertainty under this plan I would no longer do that since there would likely be significantly more days that I could not count on Metro to get me to work on time. I think I would be likely to seriously consider using metro less or not at all for my commute under this plan.

Proposal to operate Metrorail service every 30 minutes

I won't ride Metro because I don't want to get stabbed. How many stabbings have there been just in the past year? And I heard about that one on a shuttle bus. Are you waiting for a self-defense shooting like on the New York City subway in 1984 before you get some more security and clean it up?

Typically rush hour times are when more passengers are commuting to work and non-rush hour times are when fewer passengers are traveling by metro. Having no variability in service between rush hour and non-rush hour will only exacerbate passenger dissatisfaction with metro and result in fewer people turning to it for transportation once large numbers of people begin to return to work in person.

The wait times are too long especially since most of us who are dependent on public transportation have already returned to work and need to make several transfers from metro rail to metro bus and vice versa on a daily basis including weekends. This makes no sense. The system needs to be more efficient and dependable to improve ridership.

I, my kids and spouse included my neighbors depend on Metro for all activities in and around town including commute to DC from East Falls Church and local destinations and activities around town.

The issue isn't the frequency, but the capacity. If the trains are full and you can't get on, we need either more frequent or longer trains.

Yes, this would work well. While companies and organizations are expected to be back in office by January 2022, the impact of COVID on public services cannot be denied. People will have to work around the metro schedule. By January 2022, there will certainly be some hybrid/return to office schedule. It is vital to keep metro service available, rather than closing it down. Grosvenor Park is a heavily commuted station when used for weekday commutes because metro is the most efficient method (truly the only way) that office workers living can travel to DC in only 30 min!

Arrival times should be more frequent for rush hours.

I am retired and do not use Metrorail to go to work. When I do use it I very seldom use a station that will be cur back to 30 minutes. I can understand how others would be negatively affected.

During the weekday this would be difficult for students who have to make connections to get to school on time.

Trains running only 30 minutes is a sure inconvenience for my schedule

Though this proposal would create inconvenience for me, I could live with it. This proposal remains silent on higher fares and increased fees for parking. Perhaps, your survey highlights these two variables later.

This would effectively convert metro into commuter rail; as that is primarily what I use it for it would be a change I could adopt to. However I'd be concerned about the longer intervals between trains leading to even more crowding than there usually is - spending an hour on a standing-room-only train, especially in the summer, would not be a commute I'd want to take. It would likely mean metro was no longer an option for non-commute travel (concerts, sports, etc.) for me. If this were adopted I would spend LESS per year on metro.

I am concerned about the bus/train connections and having to wait for an extended amount of time required to commute due to the need to transfer. I'm also concerned about the crowding on the train. As a senior citizen I need to sit on public transportation and with fewer trains running the trains will be overcrowded. Overcrowding is a concern due to COVID too. I don't think the pandemic will be controlled by January 2022.

The decrease in frequency in trains will increase my commute time, which ultimately decreases my time with my family.

This would be a DISASTER! Rush hour is already insanely crowded as it is. Many people do not have alternative ways to get to and from work (ie cannot afford a car), and even if they could drive, traffic in DC is already horrible. DC should be INCREASING the frequency of trains, not decreasing. PLEASE PLEASE DO NOT DO THIS.

I'll be back in the office full time by then, and with the elimination of the 7y, have no other means of getting from Alexandria to Foggy Bottom other than the blue line. 12 to 15 minutes is too long to wait on a train when you have both a bus and a train in your commute, if we could get it to below 10 minutes that would be far better.

That seems like a way to make cars really crowded in 2022 during rush hour.

There would be no space for people to fit on trains that are arriving that infrequently.

The description says there won't be a Rush Hour, but saying that doesn't make it true. There will still be times during the day with increased need for transportation. Having fewer trains available during higher levels of need will cause delays and over-crowded trains. Currently we are seeing Metro usage down by 90% but that is because of COVID. When more professionals are able to go into work, we will need the full service of the Metro again.

We're likely to see people back at the offices and more willing to use public transport once the pandemic weans out. With this frequency and 80% of the usual ridership, packed trains are going to be the norm in rush hour. This will discourage people from taking public transportation in the future.

As someone with a disability I rely on using the metro in my daily life. If metro reduces rides it would greatly impact my daily commute.

Weekday rush hour trains are necessary for frontline workers to arrive on time to their shifts. If nothing else there should be a shorter interval between trains during rush hours on weekdays.

Proposal to operate Metrorail service every 30 minutes

First of all I/we commend the leadership of metro for removing shorter trains between Silver Spring to Grosvenor-Strathmore. Terminating Redline trains at Shady Grove makes it really convenient to connect to buses beyond Shady Grove to our homes. We ask leadership to maintain this schedule, and Dont bring back Silver Spring -Grosvenor-Strathmore routes. Thank you.

It would require that I plan carefully, not just go to the station and take the next train.

It's difficult to arrange the hours of operation of the train as well as the bus services. For an example often times the buses for run on a consistent schedule, early departure, late arrival, no show, no arrival at all, waiting for the next bus, if it would arrive on time. I'm a resident of Maryland and disable, it's a challenge as it's self. Several factors change help to improve riders from the station managers, to the bus operators and for the riders services. The WMATA App isn't accurate at all. It's hard to reach some one to ask a question about the bus services in your neighborhood, but customer services do not open until 8 am... (inclement weather) often buses may "show" and when riders call customer services they don't have as much information for the riders as well... since technology is such a fast way of providing services for the community perhaps that would be a #1 priority.

Metrorail service should be compatible with the demand for service.

Trains need to be more frequent

This timing inefficient for my commute

If I miss a train that only arrives every thirty minutes, I now have to wait up to thirty minutes for the next one. And what if my trip involves two trains? I could be an hour late. I already pad my arrival at stations to try to be early--when I think of all the time Ive already spent waiting--and the thought of waiting even more--its pretty maddening

My job said that we will be returning to work full time in July 2021 so this schedule will not work for my commute.

I think it's better to operate every 12 to 15 minutes per line than every 30 minutes per line. Because we might be back to normal life by that time. Plus I think u should cut back on your employees salary.

In general this is a good plan (much better than closing some stations!). My concern is rush hour, when everyone will be coming back from downtown. In normal times, you have to let 2-3 trains pass before you can get on. With trains every 30 min, this means a potential wait of 1-1.5 hours. I assume youd revisit the plan based on ridership at that time, so overall this is an acceptable plan. Also Id have all 8-car trains.

My employer will resume regular office hours September, 2021. My daily commute on the Metro is from Grosvenor/Strathmore - Union Station and return, and do not want to wait 30 minutes in between trains. I also take the #6 bus to the Metro Station each day, and do not want to have to wait 30 minutes between trains, which would be very inconvenient.

Time is money. Even pre-pandemic I had to carefully time trains and monitor delays. Less frequent train service will just make it more necessary for me to continue remote work or switch to driving.

I take the red line to work downtown and every 15 minutes is not frequent enough during rush hour. Its too long of a wait to get to work on time, and it would cause even more crowding.

I rely on a shuttle to get from my town to the station and this could cause me to be late to work depending on the arrival of the shuttle.

These wait times would deter me from choosing to use Metro for my transportation needs.

It isn't clear for Orange and Silver line stations like Ballston or East Falls Church would have service every 12-15 minutes. Going from every 12-15 minutes to every 30 means up to 30 minutes more a day could be taken from one's day waiting longer for a train. And clearly going to Dulles by rail could result in up to a 15 minute extra wait per ride.

There should be distinct rush-hour service since so many riders are using the transportation for a variety of reasons throughout the day, i.e. early morning hours to late-night hours.

We are retired so ;out time limits are flexible. I am not sure, given the normal, i.e. pre pandemic ridership from the Grosvenor/Strathmore station that would work well. The starting of trains from Grosvenor every 15 minutes might solve that problem.

I live in one of the Grosvenor perk buildings and mÃ©tÃ©o is my only mode of transport to work, groceries, medical appointments, weekend bits unthinkable to wait 30 mn d'or a train to get anywhere

With ridership and revenue down sharply, cuts have to be made, especially given Metros very high labor costs. The conclusion might be different if ridership was expected to bounce back to its pre-pandemic level once most of us have been vaccinated, but with more employers and workers familiar with telecommuting, ridership will always be sharply below what it was before 2020.

This would provide reliable service that would enable riders to depend on Metro to commute and get to other scheduled appointments.

waiting on any current station and major station during rush hour even for 5 more minutes, would make it very difficult to get a ride, and if you can it will be more than overcapacity each and everytime. If there is going to be a reduced rides I propose express lines to be introduced. For example: regular stops from shady grove until grosvenor strathmore, but from grosvenor strathmore - to - farragut north nonstop ride. Then stop again on every stop until union station, then skip stops again until silver spring.

Proposal to operate Metrorail service every 30 minutes

With proposing this, whats the point of even having a mass transit option? With proposing this, we dont even know what the Mayor will/will not allow due to COVID next month, let alone next year, so how does this make any sense? Why does it seem to difficult for a public organization to manage and figure out solutions that work? A private company would be finding ways that dont cripple their business nor cripple the city. I have never owned a car in the 40 years of my life. If this proposal happens, I will need to get a vehicle because (1) if I miss a train, Im SOL; (2) I need to transfer stations and if it doesnt coincide properly I will need to stand around another station for that transfer; (3) it will take 3 or 4 times as long to commute to work via Metro than it would by car, even with heavy traffic. Go back to the drawing board and start thinking outside the box. Dont allow the union to essentially manage our transit system.

I would prefer trains to run a little more frequently, but this plan will work.

15 minute intervals between trains at rush hour would cause excessive crowding, increase automobile traffic in the city causing gridlock and exacerbating air pollution, and damage the local economy by making Washington a less attractive place for employers.

Standardizing times across the entire week at least gives riders a chance to plan commutes.

As an Assistant Property Manager for a 505 unit high rise community adjacent to Eisenhower Metro Station, our concern is keeping Eisenhower Metro Station (Yellow Line) open. This concern has been voiced by many of our residents who are under the impression our management company can influence WMATA in doing so.

No comment on frequency

Missing a train by just a second and then having to wait 8-12 minutes for the next one during rush hour is bad enough but having to wait 30 minutes for the next train should not be an option

Waiting up to 30 minutes for a train would mean I would likely find an alternative to metro

But it will be more of a challenge to get to and from Nationals games. I go to about 12 per year.

I ride on the yellow line and dont have a problem with the opening and closing times but 30 minutes between each train is an issue. Sometimes I have appointments in Wash DC and I usually change to the blue line at King Street. If for reason the train out of Huntington is late (i.e. problems with signals, delays further down the line) I might miss the connection to the blue line. Im a senior citizen and the thought of having to wait another 30 minutes for a train would be a problem. Public transportation is my only way to get around.

Trains should run at least every 15 minutes no matter how many lines are on that station. Otherwise the bus becomes the most efficient way to travel.

While this works for me because I would be using the Grosvenor-Strathmore Metro station (if it is still open) to commute to DC (to Metro Station, Gallery Place, Federal Center SW, etc.), it will create a significant hardship for many people who would have extended wait times to travel to and from their places of work served by WMATA Metro - it is largely non-productive dead time.

I am a Red Line user and am fearful that trains would be too crowded to get onto during rush hour with 15 minute intervals between trains.

I see this as dangerous when it comes to rush hour crowds. This is because it increases the risk for people falling off platforms and onto the tracks.

Tough to say, in some cases like my normal commute to work, it would be fine. But Id be nervous for something like the end of Nats games where everyone is trying to get on the green line at the same time

That seems very inferque

My most efficient commute requires 2 transfers, so the potential of waiting up to 30 minutes adds a lot of time and uncertainty to that trip. Other trips would be impacted in the same way. I dont go to the office more than a few times a month now, but that is subject to change soon. I dont have a car by choice because transit is and should be the most convenient way to get around in any place like DC. These changes would drastically undermine that state of affairs.

Frequency of trains is less important to me than hours of service, as is I cannot get to work on weekends by metro in my commute to airport since service does not begin until 7/8 AM Sat/Sun respectively...

This would literally make my commute impossible. Pre-COVID, trains running through downtown every few minutes were still so crowded that I would often have to wait for multiple trains to pass before being able to board. If they ran every 30 minutes, I could be waiting 1.5 hours for an open train.

If teleworking federal workers have to return to their offices additional trains would be needed from 7am to 8:30am (at Grosvenor) or longer trains would be needed.

None at this time.

Without the Grosvenor stop riders would have to go to either White Flint or NIH. Neither offers adequate parking for additional riders. If Metro wants to encourage ridership why make it difficult for patrons. Hopefully, riders will return when businesses reopen and government employees go back to work. Surely this will happen before January 2022.

Proposal to operate Metrorail service every 30 minutes

During COVID-19 people were told to stay home, so ridership decreased. By January 2022 people will need to commute to work once again. With many people taking advantage of low mortgage rates and moving out to the suburbs during COVID, the demand at stations beyond Grosvenor and Silver Spring will be even higher than pre-pandemic. If you limit service you are not going to resolve your budget issue. Instead, people will find alternatives to the metro and you are going to decrease your long term revenue.

I feel like 30 minute waiting period for trains is a long time

Assuming ridership returns to pre-pandemic levels, this would result in long wait/commute times, especially during rush hours. Even 8 car trains were uncomfortably crowded prior to the pandemic, and often individuals would have to wait for the next train. This solution would remove the waiting for the next train option for many commuters based on solely on timing, resulting in more crowded trains. I would also assume that people will be less comfortable packing into trains post-pandemic as well.

The trains at rush hour might be too crowded (8 am and 8:30 am, for example).

Having one train every 30 minutes would make the platforms and trains much more crowded in the mornings and afternoons. If I cant get on the train because the platform is so crowded, or because the train is already full, I would now need to wait an additional 30 minutes for the next train? Thats just not acceptable. I typically commute on the Red line (from Rockville to Gallery Place), and this type of schedule would routinely make me late for work. I grew up in NYC, so Im a big fan of public transportation and use it all the time. But a train every 30 minutes? That would force me to stop taking Metro to/from work.

It would be horrifically crowded during rush hour (and pre and post rush hour); and perhaps not really safe since COVID variations may well still be a danger. Or, the huge crowds may discourage people from using Metro.

In order to get to work on time, I need additional trains to help me make transfers between Orange and Yellow trains.

This would cause even more crowded waits and trains during rush hour times. It would also mean a higher chance of being late as you have to wait longer if trains are off schedule or you are not able to get on a train as it is full

depending how busy rush hour will be in 2022 30 minutes may be enough to back things up (at least in the past).

I think it is important to keep the increased rate of trains at Strathmore - I think this drives ridership from the Rockville Potomac areas

It would not impact me. However, this suggests that the ends of lines where commutes drive in from further out and park, would be incredibly packed if train only coming every 30 min.

too infrequent

I travel in between VA, MD and DC when I am able to work. When you have to arrive at a set time at the job, late metro buses or trains will delay work arrival.

I would adjust my leave time to ensure my connections get me to work and events in a timely manner.

30 min between trains would work during the day, but not during a rush hour period.

I really dont want WMATA to have to cut Metro service on any of the lines. It will continue a downward spiral of people not using the system, which feeds the underfunding, which results in further cuts in service, which causes even more people to stop riding, and so on. The local jurisdictions need to step up to give Metro the funding it needs. Public transportation benefits everyone, including drivers, by taking cars off the road.

The trains will be too full for every 12, 15 or 30 minutes. The amount of people that would end up on teh platform waiting will lead to people pushing to get on the train and there wont be space. So now people arent waiting 12, 15 or 30 minutes for a train, theyre waiting 24, 30 or 60

I think this is a great option. I dont drive and need the metro to get around. Keeping everything the same for all lines is the best decision.

I am concerned about the metrorail running only every 30 minutes because I do not catch the red line everyday to go to work also, closing at 9:00 p.m. instead of 11:00 p.m. since this is my only mode of transportation.

Keep the service on all red line stations, but trains should run more frequently during rush hours.

15 minutes is a long time to wait for a train if you miss one.

I would not be happy about a 12-15 minute timespan between each train, however, I would be willing to live with it IF funding doesnt arrive.

I am retired, so the timing between trains would not affect me unduly (although it would definitely be inconvenient); if I were still working, I would be quite unhappy about this.

this will only work if the trains arrive and leave each station at the exact time they are scheduled. This way I can plan which train to take that will allow me to arrive to work on time. If the times cannot be strictly adhered to, then you will be making me 30 minutes late to work for no fault of mine, but yours

This would make already long trips on the metro even longer. What should be a quick ride can easily be extended to 45 minutes or an hour when you have to wait 15 minutes for the train upon arriving at the station, and another 15 minutes if you need to transfer.

Need more frequent during workweek should we be back to increased in-office work.

Proposal to operate Metrorail service every 30 minutes

By Jan 2022, I expect in office work to be fully open and therefore more trains would be necessary to support the ridership.

After Covid, many companies are insisting on going back to 3 days a week IN OFFICE. I would want Rush hour increased to every 15 min

None

i give it a thumbs up.if that be the case

I anticipate the federal government will be reopened and such a large gap between trains will mean I miss it only being prompt to work but also back home for dinner and bedtime with my children. Please do not make such drastic changes to weekday ridership.

When you have to wait more than 10 minutes for train to arrive it starts to become more convenient to just use a lyft/uber cars to get around, Im worried this would push more people away from using metro and further harm the services bottom line.

This proposal - while sound during time periods (e.g., CY 21) in which most individuals telework or possess the option of doing so - will become increasingly impractical as a phased physical return-to-work schedule is implemented by multiple agencies and organizations. Such a proposal also appears in direct opposition to metros stated aim of improving customer service, enhancing responsiveness, and strengthening reliability. A more logical approach would be to examine ridership data over time and subsequently phase and/or scale an increase in train schedule and frequency commensurate with growth therein (e.g., start with some semblance of this proposal but collect data on ridership and scale or upgrade services as needed; this could entail upsizing or downsizing schedules within a single day based on data).

I would not commute on metro with 15 minute rush hour headways, and I would almost never use it for other purposes.

I live pretty far from the city so only one line that comes into my area is silver, and only a couple stations later does orange come in. If headways are 30 minutes then it would seriously affect how I have to plan my trips. How are single-line stations expected to be at all convenient with just two trains in an hour?

I enjoy having shorter headways (as Im sure everyone does) and its very noticeable on the weekends when the headways are something closer to 20+ minutes at some stations. If I knew the timing to expect, with proper updates to Google Maps and similar services, however, I could plan accordingly.

Once COVID has been maintained and I return to work, I would need to find different way to get to work. I plan on using the Clarendon Metro- this cannot be closed.

Trains are already not very reliable with their arrival times, and this is going to lead to a lot of people missing trains by just a minute or two and being forced to wait unreasonably long times, which will make them late to work or school, which is a huge problem especially for workers whose employment might be threatened by recurring lateness. Saying just leave a few minutes earlier isnt a solution, either, a hundred small things can go wrong along the way and cause a responsible person to get to the station just a moment too late, especially for people with children. Additionally, pre-Covid rush hour trains were already often packed full to bursting, and theyll probably be back to that capacity by January 2022, which means that people are going to get stuck waiting between 12 and 30 minutes for a train thats too full to take any additional passengers (after theyve already paid fare, and in many cases after the grace period has expired). So basically, this plan is going to waste peoples time and money and interfere with their ability to get to work and school (jeopardizing employment in some cases), and create a rail system thats really only useful for tourists who have all the time in the world to get where theyre going in non-rush hour periodsâ€”totally failing the people who actually live in the DC metro area.

Reducing frequency to this level would be a disaster. Metro would cease to function as a proper commuter line, and the platforms would likely be over-crowded and dangerous during peak commuting hours when trains are expected. Trains would be unlikely to accommodate everyone on the platform, which would lead to frustration. Commuters would revert to their cars thus contributing to gridlock, pollution, and parking issues. You cant evaluate future commuting needs based on pandemic data. In our family, in normal times, the metro is used regularly by two family members: one adult who commutes daily on the orange line from Clarendon or VA Square to Farrugut West, and one teen who commutes to a high school on Capitol Hill (orange line to Red line). These changes would render the metro unviable for the teenager and potentially unviable for the adult. it would also lead to the further demise of Metro by creating conditions that are so unfavorable that ridership will drop permanently. The entire family uses the metro to commute to sporting events, etc.. Please dont do this.

By only coming every half hour, the convenience of metro is gone. Not worth it for working folks.

Services should stay the stay regardless of ridership. It seems that changes are being recommended based on low ridership due to COVID 19. This pandemic will NOT last forever, how about considering reducing some of the corporate positions and take that salary reduction to repair and keep services running.

I am a big supporter of public transit and have a very negative view of this proposed change. I take multiple metrorail lines to get to various appointments, and with the proposed 30-minute interval between trains on much of my route, it would inevitably happen that missing a train (or more than one) by a small amount of time would require a long wait for the next train and make me late (VERY late) for some appointments. Missing timed appointments (doctors visits, etc.) is a serious matter and goes well beyond personal inconvenience.

This would be a good idea, provided that the last train arrival remains the same.

Proposal to operate Metrorail service every 30 minutes

what is the impact on traffic flow

Those are terrible headways. Especially when the train that arrives is full -- waiting an hour because the last train was a problem is unworkable.

This is a reasonable change given lack of funding.

This might work well unless there was congestion, meaning enough people would be using the metro to cause congestion due to waiting for arrival of a car. In that case, since the ridership warranted it, I would assume that you would provide more service, without complaint, as the ridership revenues should support additional expenditures on your part.

It will depend on whether I'm working in the office, how crowded the trains are and what will happen for special events, assuming they're happening (sporting events, concerts, etc.)

Disaster!

Though this still works, it will prolong travel time.

Since my office is not convenient to a metro station, I do not take metro for work, except for an occasional meeting downtown, or if my car is being fixed, and whenever possible for outings downtown, especially on weekends or in the evening. I use Grosvenor so this is not a big deal for me.

If I am back to work in Jan 2022 and trains come only every 30 minutes? There would be two trains per hour at my station, Braddock Road? NO. THIS WOULD NOT WORK. First - the blue line during rush hour is much more crowded than any Metro person seems to believe. we would be packed in like sardines if there were only two trains per hour (this is post-pandemic of course). Second - most of us have busy lives and we are rushing home - kids, sports, exercise, dog, etc. If we missed a train and had to wait 30 more minutes - our after-work schedule would be blown.

Add more trash cans so that debris will not accumulate on seats as people wait longer for trains to service their stations. Also, require a quicker response for cleanup of water seepage on platforms.

During any level of demand times service from Ballston only every 30 minutes is not acceptable. As the station is serviced by the Orange and Silver lines the timetable would at least have to be set up to guarantee service every 15 minutes. However, during peak demand times trains would be overcrowded even with 15 minutes intervals.

Decreased frequency in arrivals means more people waiting on platforms for longer periods of time and more people on trains at once. If we are still needing to socially distance, which seems likely, this will limit the ability to do so. Also, in January and beyond we will likely start to see some return to normalcy (i.e., many returning to work in-person and resuming commuting). If there are no differences in arrival times with rush hour trains, again this will increase number of people simply waiting around, which seems like it would discourage use of Metro overall. Finally, many people's commute time on Metro may be less than 30 minutes in total. Missing a train and having to wait 30 minutes for another seems excessive, when simply walking the distance between stops would likely get people to their destination more quickly.

Anything under 15 minutes all day, and really 10 minutes all day, is unacceptable. In particular, 30 minute frequencies between Alexandria and L'Enfant provides commuter-rail level service. WMATA needs to consider short turning branches from their end to join points. For example, Yellow trains can be run from Huntington to Mount Vernon, planning to arrive two minutes before northbound Green trains, and then leaving Mount Vernon southbound two minutes after southbound Green trains. This would give seamless connections for Yellow riders into points north on Green while reducing service hours on Yellow, and providing more core capacity north to the red line. (If this could be also lined up to provide a cross platform wrong-way transfer between Yellow and Green, facilitating trips between Alexandria, etc. and SW DC, that would be even better.) With such low frequencies to Huntington and Franconia-Springfield, you should consider running all trains from both points as Yellow trains to Mount Vernon, and then turn the Blue line into a shuttle between Rosslyn and either Pentagon or National Airport. With trains at Rosslyn coming only every 10 minutes in each direction, there would be enough time to pull in northbound on the eastbound platform and have the driver walk to the rear of the train and then run it back towards National on that same NB/EB track without an out-of-revenue move, and then do the crossover at Arlington Cemetery. (Conversely, one could come reversed in on the westbound platform, and then go straight out.) At the other end this could either be done at Pentagon, or the pocket track at National could be used, allowing a cross-platform timed transfer to Yellow there. This would then allow both Franconia-Springfield and Huntington branch passengers to get service to both Rosslyn and L'Enfant without a transfer penalty, and with other connections could allow good access to Farragut and the CBD. These kinds of transfers can also happen at East Falls Church, and possibly Armory, depending on how simple the crossovers are.

It would be important to have a schedule to arrange plans.

I think that we will be in a slightly better place in regards to the pandemic. I think that 10-12 minutes may be possible.

Knowing trains run much less frequently I would be less inclined to choose Metrorail to get to and around DC. I would assume the reduced frequency in trains during peak hours would be accompanied by a reduction in peak fares.

Trains would be absolutely packed -- to the point that people would have to wait for the next train, IF THEY CAN FIT ON THAT ONE -- during rush hours. Additionally, I take the MARC to the Metro as it is, and have a Metro transfer to a different line. So, I'd have three transit lines with relatively long wait times in between instances, and that would likely mean I'd opt to drive.

Proposal to operate Metrorail service every 30 minutes

Eliminate overtime and reduce wages.

This would increase my commute time an average of 15-20 minutes each way, and I would much rather pay a higher fare for rush hour service. If this would disproportionately affect lower income riders, consider a voluntary program where participants pay some portion of another riders rush hour increase; e.g. normal rush hour increase is 15 cents, then participants might pay 20 cents more. I would participate.

I am part of the green line and I use the meter and bus every day. For work, for my kids charter schools, also my husband goes downtown every morning. When there is a event on the weekend we take metro and bus to make to our fun destination.

While this may temporarily make sense with ridership down, once the District returns to some sort of normalcy, ridership will greatly increase. With trains every 30 (or 15) minutes, riders will be crammed onto platforms. With this proposal, you are telling your riders that if a train comes by and is fully, they in theory would have to wait another 30 or 15 minutes. This in turn makes metrorail an inviable mode of transit. This proposal in my opinion is worse than the permanent closure of stations (which will also cause more crammed conditions, since stations will be consolidated)

We are retired, so rush hour is not too important to us

Trains need to more frequent (every 5 minutes) during rush hour. Trains were too packed, less frequent trains will lead to more crowded trains.

I imagine that Ill have to return to the office by then and waiting for 12 to 15 minutes for a train in the morning or afternoon will make the trains even more packed and extend my commute

We are elderly and use the East Falls Church metro to go to our doctors in Washington, DC.

very 30 min doesnt work at all - at that point I dont need the metro - I would just use uber service. every 15 min should be the most in-between train times

As long as Metro provides a clear, timed schedule of when trains would be scheduled to leave from end stations in order for riders to time arriving in the station so they can catch the next train (understanding that if there are interruptions in the schedule, that could throw things off.

I do leave on the red line path and rely on the service heavily. Proposed changes to the services and limiting the schedule means, commuting to work with constraints and adding more burden to common man

Im fine with the lesser frequency of trains, but I would like a development of an app or tool that gives real-time updates of when the trains are coming to each station so that we can plan for getting on each train to get us to where we need to go.

I would be able to arrange my schedule to fit this one, provided there are enough cars available to carry the number of passengers resulting from fewer trains running.

This would result in pushing the younger riders who can't afford housing â€œclose-in' to drive to the city adding pollution and even more traffic gridlock. This is exactly the opposite of what our regional transport policy should be doing.

Right now the trains dont come frequent enough. I miss the connection to the bus many times,and since the buses dont frequent enough, Im stuck waiting a while for a bus

At every 15 minutes, I would consider alternative modes of transportation.

This would significantly increase my work commute since I need to transfer to a shuttle at the end of the line

This action would essentially turn Metro into a commuter bus line--a strategy that has seen a decline in bus usage proportional to the length of wait time between buses. For those who need to transfer from one line to another, the overall travel time on Metro would lengthen considerably. Metro serves NOT just commuters but also retirees and tourists who would like to travel around the DMV area easily and quickly all during the day, not just during rush hour.

30 minutes is too long time to wait for a subway ride...and a long time to wait for a bus too!

I plan my trip to work with MetroRail or MetroBus. I have a specific time I need to be at work downtown (7:30 am, M-F). A 30 minute frequency will not get me there on time, and there is no mention here of timing of buses with trains considered, or not. And will there still be a rush hour and non-rush hour fare? That seems unfair even now with the 8-20 minute headways - the current nor this proposed frequency gives rush hour service for a rush hour fare.

I utilized METRO in Spring/Summer 2020 when train service was every 30 min. and it was HELL. The train service does not coincide with the bus schedules, so I waited 30 min. for a train and ANOTHER 30 min. for a bus. I noticed that with Metrorail Proposal 1, there is no difference in arrival times between rush hour and non-rush hour, however will riders still be charged rush hour fees?

having the same schedule everyday would help in consistency and remembering the schedule / planning for trips. But every 30min is a long time to wait if youre using this for work and just miss the train. Having to wait a full 30min would not be feasible for most people. Waiting 20min would be a lot better.

Every 30 minutes would be difficult to manage during rush hour, if a train is full and you cannot physically fit on to it you would be required to wait at least 30 minutes until the next train which could cause significant personal delays. I do like the same hours all week, if the trains arrive every 20 minutes or less.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| First of all, youre giving the game away by saying youll increase rail service from Jul-Dec 2021. If drastic service cuts are truly necessary to balance the budget, why not start in 2021? This is obviously an unserious proposal designed to scare people into demanding more Federal funding. These service cuts would only accelerate the death spiral of declining ridership. If people cant rely on metrorail to get somewhere in a timely manner, they will turn to other modes of transportation, as has been documented time and again. |
| I don't think it make sense to make decisions about 2022 based on ridership in 2020. I used to take metro to and from work every day. Now I'm working from home, but I intend to go back to the office sometime this year. If this is how often metro comes, it would significantly extend my commute because I connect from Metrobus. I would be forced to drive to work or face a more than one hour commute on public transit, with all the frustrations of significant delays. If you implement this, I probably won't ride metro anymore. |
| A half-hour is a long time to wait, especially given that Metro riders are often using several lines or buses in connection, and a few minutes' slide would add a half hour on to a one-way ride. If you want to drive ridership into the ground and close the system, that's your ticket. To make it be useful to just about anyone, the entire system would have to be as on-time as a Swiss watch. No, just No. |
| No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab. |
| This depends on how and when the pandemic is resolved and normal pre-2020 daily activities resume, but it doesn't seem this option would be feasible for rush hour. On the orange/silver lines, cars are often packed even with the increased service. If the ridership returns to around pre-2020 levels, it's difficult to see how this wouldn't result in extremely long wait times and extreme frustration of riders. |
| By January 2022, it is likely that workers will have returned to offices and 15-30 minute headways will result in very crowded trains and stations. |
| Inconvenient but possibly tolerable. |
| Does the 15 minute scheduling apply to stations such as Courthouse, where both the Orange and Silver lines are serviced? |
| Waiting 30 minutes is too much and considering that the scheduling for the metro is not that reliable for one to plan to get to the station close to the time for the train to arrive and spend the least amount of time around other people, or in very bad weather given that the station is outside |
| After the pandemic is over, we will all be back to normal commuter riding. Trains will be excessively crowded at rush hour with this proposed plan. |
| Due to vaccine availability, I was planning to return to the office and thus resume my commute at the beginning of 2022. With this new timetable, I dont know that I will a) be able to reliably get a spot on the train due to infrequency and overcrowding (assuming many others will also be returning to work) and b) get to work on time. |
| It is unacceptable for the green line to arrive the less than 12-15 minutes apart because of the need to transfer from bush to rail and vice versa especially in wards 7&8 |
| In addition to proposal 1. The Elimination of all Federal subsidies for commuter outside the District of Columbia, and fare differential within the District itself ; lower the base for Metro / rail |
| Totally apart from pandemic related issues, Metro has not been providing rail service that could be relied upon to get to users to work or other other essential functions at my station over the past several years, due to repeated and extended closures (SafeTrack, reconstruction of the platform and track, I66 work, etc.) Reduced hours when actually open only made using Metro less attractive, as it became useful ONLY for work, closing toe arly and running to rarely to make using it for pleasure possible or enjoyable. Now Metro is proposing to make limited service permanent - or at least for several years. Its hard to understand how this will regain the ridership lost to the many failures to date. In addition, even when trains do run, they often do not run on time or consistently, so a schedule that begins with an assumption of 30 minute gaps between trains is likely to translate to something far worse. As someone who has been commuting by Metro since the 1980s, recent years have been a great disappointment. However, I had hoped that post-Covid, we would be seeing improvement. This proposal suggests otherwise. |
| I am able to go online to determine the next train near my house, so the frequency would only occassionally matter (e.g., when I had a connection to catch). However, I fear the trains would be overcrowded |
| This is unacceptable for those of us who rely on metro for doctors appts., having to go downtown to office, shows, plays, business, or restaurants. Do you want to kill downtown commerce? This is a bus schedule and that is just crazy for a train system. And to charge us the same price or more for this longer wait--as well have to err on going early or else will arrive late. I stayed in DC BECAUSE of metro access. i cant drive. You are penalizing those of us in most need of train service. DC will be a laughing stock as it is a major city and tourist and vacation destination but it will be downgraded due to lack of a proper and modern mass transportation train system. You will be competing against UBER and lose. This is just a white flag going up and you are dooming the system by such a proposal. |
| It depends on what you mean by trains. Do you mean, for example, at Federal Triangle, a green train would come, then 12-15 minutes later a yellow train would come? Or do you mean that a green train would come every 12-15 minutes? |

Proposal to operate Metrorail service every 30 minutes

| |
|---|
| While I am closer to the city center, this plan sounds like it will be very rough for the people who live or work outside the beltway. If Blue, Orange, or Silver line service are every 12 minutes but you can only take the orange to get to your destination, would that passenger be expected to wait over 30 minutes if they barely missed their train? Supplemental trains that travel from the end of the line to the first transfer point may help to alleviate this issue for those riders. |
| This would be a nightmare - I use metro to get to work, to get to doctors appointments, to visit friends and family. I need frequent service so I can connect between trains and arrive to my destinations. Metro needs to compete with other modes of transportation in order to reduce traffic and increase pedestrian safety. |
| I like that frequency stays the same at all times, but I would like it better if trains were more frequent. |
| Shorter wait times are crucial during rush hours periods. Even with pandemic precautions it is likely that a higher number of riders will be present during rush hour and it would be beneficial to have shorter wait times to reduce crowding. |
| If demand for commuting goes back to pre-pandemic levels, this proposal does not work for me. I will likely drive to work if headways are this long. |
| This makes transfers exceedingly unreliable. Additionally, commuter congestion will increase. While this wont be as extreme as trying to catch a train to a Nats game, this is an extreme adjustment. To be reliable, trains should run at least every 10 minutes during rush hour.Outside of rush hour, if this adjustment is made, I will take uber in situations where a transfer may be required.This prospal is disrespectful to the metro-area tax payers who have invested over \$6BILLION in metro-area improvements over the last several years. |
| If offices are fully reopened by January 2022, that would not work well for my commuter needs on weekdays. |
| 30 minute wait for a train to commute to work is unreasonable |
| I moved to DC to rely on public transportation. This shift does not create reliable transportation for me. Less trains=Packed trains |
| Service needs to be more frequent, especially during rush hour. Instead of a 30 minute wait at most stations, the wait time should be reduced to at least 15 minutes at most stations with a 10 minute wait at hub stations. |
| As commute frequencies return to normal levels, this plan would lead to significantly overcrowded trains and slow commute times. |
| 30 minutes is too long of a wait between busses, especially when my arrival is dependent on traffic and metro bus. |
| I like the service before the pandemic so if this is the same keep it |
| The proposal likely will result in overcrowding and then eventually finding alternative modes of transportation. If trains dont run exactly on time, it would greatly extend time required on trips. |
| This would represent a significant delay in my commute time -- as I make multiple transfers. If each had, on average, double the delay, this proposal would result in my commute time increasing from 75 minutes to likely 90 minutes on average. |
| This would add significant time to work commutes; if you just miss a train, this is makes an already long commute 30 minutes longer (and makes catching bus connections incredibly difficult). This proposal would only put more people in cars. |
| Many people commute from Clarendon, and travelers can barely get on trains that run every 5-8 minutes during rush hour. Having rush hour trains run every 15-20 minutes means nobody would practically be able to actually get on the train |
| It takes me approximately 90 minutes one-way using Metrobus and Metrorail to arrive at my place of work. Due to the frequency of unexpected delays within the rail system on any given day, waiting 30 minutes for the next train to arrive would be detrimental to my arrival at my workplace in a timely manner. |
| This would work for me in the mornings, but not coming home after work. This is because the metro station I use near my home has more than 1 line. |
| My office is currently closed, but my employer is looking to resume in-office work this summer. I know many other employers with the same plan. This proposed plan does not account for increased volumes on work days that are likely to accrue before January. |
| Commuting and only having a train every 30 minutes would be incredibly difficult |
| A thirty minute wait for the next train to arrive at a commuter stop like Rockville, Vienna, and Huntington would wreak havoc on the daily commute of hundreds of thousands of passengers that rely on Metrorail to get to work everyday. This proposal would further decrease ridership on Metrorail and cause significant difficulties for the low-income individuals, essential workers, and folks with disabilities who rely on Metrorail to get them around the DC metro area. |
| This would only work if trains and buses stay on schedule, including with broken buses, trains, and switched, sick passengers, road construction, and traffic. |
| This station is instrumental in supporting the businesses in the area. |
| Vitally important as a senior citizen living at Grosvenor park to have metro service |

Proposal to operate Metrorail service every 30 minutes

In 2022, I plan to commute by redline between Takoma Park and my office in DC. Even with the redline running every 15 minutes, this schedule would present a challenge during morning and evening rush hours. I would expect trains to be more full of passengers if they are running with reduced frequency--and the ability to just take the next train would be severely limited. Missing the train could also substantially impact arrival times at the office and at home. I am also very concerned about the impact of 30-minute wait times for all other lines. As a former user of the Green/Yellow lines to commute in DC, trains running every 30 minutes would force me to find alternative commuting solutions. It simply would not be worth the wait. I would be concerned that this proposal would have very negative consequences on overall metro ridership in 2022.

This would result in too few trains and lead to issues of overcrowding. It also would most negatively impact the most underserved areas of the region (SE DC and NE PG Country). With no rush hour would that mean no surcharge? Hopefully, Metrorail would no increase the cost of a trip due to the loss of the rush hour surcharge.

I suggest a published schedule similar to a bus schedule?

On weekdays, I use the Green Line exclusively to get to work in College Park. I have no other mode of transportation, only Metrorail and Metrobus. Trains running every 1/2 hour would make it difficult to get to work on time and to coordinate transfers between Metrorail and Metrobus. Inevitably, transfers would result in longer wait times of up to an hour if the transfer is missed.

Two factors arise immediately: when the downtown offices re-open, and whether (as many in the neighborhood suspect,) access to the Medical Center station is curtailed. A return to normal commuter volumes - or a situation where even the present traffic is forced to shift to another RrdLine station - could result in bottlenecks at that 15 minute interval. Further, I wonder if cutting off the late and early runs would imperil the jobs of many shift workers, and those who do not, (economically) have the option to resort to POV alternatives.

I would need more information about the stations with service from more than one line.

It's hard to know if things will be back to normal by January 2022. But if they are and this part of the plan moves forward, it'll be really inconvenient! I probably wouldn't take the train if I need to get somewhere on time. Would probably still take it to head back home after work or any appointments/engagements, or during weekend outings.

On the Red Line, oppose trains arrive every 15 minutes between Grosvenor-Strathmore and Silver Spring stations.

A half an hour is way too long to wait at certain stations and even 12-15 minutes is too long for stations like Grosvenor-Strathmore that are outside, especially in the freezing winter and scorching summer, but of which are risky to one's health and wellbeing.

With reduced time between trains I fear this would make rush hour impossible to get on a train, from overloaded trains, worse door issues, and thus further propagating issues of additional delays or disabled cars which long term would reduce ridership and continue worse metro budget and service problems.

This will not only make trains crowded to an unsafe degree, but it will make it almost impossible to get to work on time. We've all had the experience of missing our train by a few seconds--having to wait 12 to 30 minutes for the next one can make people late to work, school, and appointments.

I rely on the red line for my child's school, my work, help my mother in her daily needs. To wait for 30 minutes would not be suitable and it would delay my whole schedule alongside my child and elderly mother.

There should be a middle ground - say 20 minutes, instead of jumping from 15mins to 30mins. The 30 minute time would have a significant detrimental affect on ridership - people would instead decide to drive in fear that they would miss 1 out of the 2 trains that come each hour (many people can arrive at their destination within 30mins by car).

Waiting 30 mins for metro is unacceptable. I will not take the metro if the plan is executed.

There is no justification for turning back at Silver Spring and Grosvenor. I ride to Glenmont, and I see as much use at that station as some of the inner stations. We have too little knowledge about whether people will be going back to work, whether there will be a Covid resurgence next winter, to risk cutting service and packing trains indiscriminately. If usage does not normalize, cuts may be justified, but you need information about patterns of use. You do not know how much telework will continue, or if partial telework will continue and follow a pattern. That information will not be available before January 2022.

This will be a challenge for those who rely on extended night time hours on weekends for work or entertainment in the DMV region.

I take two metro lines to get to work. It would need to move more quickly.

Well, I prefer not to wait for longer periods of time but if I have to; I'd adjust my schedule accordingly.

Metro bus H8 and the Metro rail are my only ways for transportation and cutting the H8 bus will make traveling to work very difficult for me to get to work on time. I catch the H8 bus to Georgia Ave - Petworth metro station and I take green/yellow train to L'Enfant Plaza and transfer to Orange line train to Minnesota Ave. On weekend I catch the H8 bus to run errands.

Proposal to operate Metrorail service every 30 minutes

This is absolutely crazy. The overcrowding on Orange/Silver during rush hour (my typical travel route) would be unbearable. We should be increasing service on OR/SV line relative to 2019 levels. While current ridership levels are awful, many riders of these lines (including me) do not have alternatives to commute into the city once the pandemic is over and we return to our white collar jobs.

Rush hour trains headed downtown (to get to work) are likely to be very crowded by the time they reach Dupont Circle. Based on past experience, it could well be the case that not all passengers will be able to board the train, meaning that actual wait times could be significantly longer. There have been instances in the past (pre-COVID) where 2+ trains would pass without being able to board due to crowding. However, this approach should be okay for people going outbound (e.g., my son headed to school if he opts for the train instead of the 96 bus).

Awful idea! 30 minute headways would effectively convert Metrorail from an urban transit system to a light rail system. Ridership would drop precipitously if riders had to anticipate at least a 45 minute trip to basically anywhere, when driving would be quicker. The metro systems Ive used in cities around the world that work have significantly shorter headways. Those with long headways like this proposal have noticeably low usage. Moreover, long headways do not reduce station staffing and maintenance, and they likely wouldnt reduce track maintenance much.

Provided there is a schedule which we know in advance and can organize around the timing might be workable. I am concerned about crowding however.

I am retired, so I can time my use of the Metro-rail to fit a schedule that runs more frequently during rush hours and at larger intervals the rest of the time. I would support such a program if it helps with Metros finances and keeps all the different stations open.

I live where I live (across the street from Virginia Square metro) so I can get to my job easily in the morning and come home at night without at wait. All the businesses and schools and churches around here are geared towards this population -- Rosslyn to Ballston on the Orange line. Theres an implied social contract here. Weve paid more for our condos and higher taxes for it. Weve had enough stress with COVID. Essentially forcing people to drive to work in DC is bad for the environment, bad for DC residents, and bad for the health of the metro area. For Northern Virginia/Arlington transportation to be curtailed during high commuting times when we are back at work is devastating to Northern Virginias and the citys health and wealth.

Metro would not be a feasible way for me to get to work. I have to change stations and cannot be delayed by 30+ minutes because the timing does not match. The benefit of Metro is that is can be faster than driving. This change would completely eliminate that benefit.

This would back up commuters and cause extensive issues for roads and mass transit

It is important to keep the trains running on all lines with no station closures. Why the decision of every 30 minutes and not 20 minutes? Metro can start off running the trains every 30 minutes, but then adjust accordingly. Again, regardless what ends up becoming the time intervals of trains, it is important to have trains running with no station closures.

I am expecting that metro riders will return to use Metro once vaccines are received and employers begin asking their staff to return to work. i think that by Jan 2022, we will be back to normal, and the delayed schedule will increase overcrowding on metro. I would not continue to ride metro if overcrowding occurred.

My daily commute is by Metrobus; Metrorail is used on the weekends

With social distancing needed for a while. We should actually have the reverse (more frequent train) to avoid large crowd

If metro changed its schedule to every 15/30 minutes during rush hour, I would stop using metro entirely and switch to driving.

This kind of scheduling makes Metro a deterrent for riders. This will cause overcrowding, train break downs, and even longer delays. People who need to use the Metro to get to work will not be able to get there on time and could risk losing their jobs as a result. This is a terrible way to serve people reliant on public transportation.

Proposal to operate Metrorail service every 30 minutes

I live within walking distance of the Grosvenor-Strathmore station. I do not own a car and need the metro to get to work starting in June when our offices open again. My husband and I recently bought the townhome where we live just recently precisely because it is within walking distance of a metro because I need to travel by metro for work, doctors appointments, shopping, and to visit friends in DC and the fact that I do not want to have to buy a car due to my commitment and desire to travel in an environmentally sustainable manner. Closing the station would not only have a huge negative impact on me and be a detriment to my mobility needs, it would also likely force me and many others in my neighborhood to purchase cars adding to green house gas emissions, pollution, and traffic. This would also likely lead to a downward spiral for WMATA ridership as lower frequencies would certainly push others to move to private vehicle ownership permanently. While I understand the budget crisis, cutting lines, stations, and frequencies would only exasperate not solve the financial crisis brought on by pandemic-related ridership loss by leading to further and permanent loss in ridership. In addition, countless numbers of low income individuals who can not afford to buy a car would be put at further disadvantage by reducing their mobility options and access to jobs, food, health care, and social opportunities. In short, I believe that the plan is short sighted, particularly given that people are getting vaccinated and will soon likely return to WMATA and public transit generally. In the long run, if these cuts are made, it will only put further strain on our road systems and make the DC metro area less livable. I implore the board to consider other more sustainable long-run alternatives such as seeking ways to build confidence in transit users that it is safe to use public transit again as we all get vaccinated. -for example, through use of high filtration systems on-board vehicles and better enforcement of mask requirements or revenue from parking fees in congested downtown areas, and gas/congestion fees that would be earmarked for transit.

There is a large federal building at the twinbrook station with limited parking and lots of metro riders. May need more frequent trains at rush hour.

I ride the metro bus every day and ride the metro train about 5 times a month

This proposal will work fine if the Federal government (my employer) will allow me to telework 2-3 days a week. I will just need to time my arrival to the station to minimize train wait time on days when I commute.

While the reduced frequencies would probably work, packed trains during rush hour would be a deterrent for me.

With November 3, 2020 General Elections and President Joe Biden and Vice President Kamala Harris, there is a new federal direction and charge to lead the United States, through and out of the COVID-19 Coronavirus Global Pandemic, Safety and Health, and Economic downturns and threats. On Friday, 2021 February 19, both my mother and father recieved thier second Phizer Vaccinations. As more and more Americans are allowed access to and receives their vaccinations, the safety and health opportunities improve our chances for life and the business and economic impacts and have greater opportunities to emprove. Obviously, this will not happen overnight, and will take some time through 2021.

A 30 min wait on trains is too long during rush hours

Not frequent enough, even for red line which is the busiest line. If it's only running every 15 mins the chances of the cars getting too full will mean lots of people won't be able to get on and then have to keep waiting. Lots of people need green and yellow and silver lines too.

More frequent trains is desirable

Too infrequent for the load of Metro commuters. Supply will not meet demand

This seems reasonable unless there is a surge in ridership - return to pre-pandemic ridership.

Currently that would be fine, but would disrupt things if I'm back in the office June 2021 as my company proposes to be

Assuming most people return to office commutes by this time, I think trains would be packed during rush hour. I've been on many trains that are overcrowded, which often leads to offloading, and I think that would happen frequently with this schedule.

Trains should be scheduled more frequently than 30 mins. With significant gaps in trains, potential riders are forced to turn to alternative options, thereby decreasing ridership. Additionally, with less frequent trains, there is less flexibility for commuters. If one is to miss a train, waiting an extra 30 minutes for the next is often not feasible (think of hourly workers who utilize public transportation and cannot afford to be late to their jobs). The train frequency is more burdensome than anything.

The trains during rush hour are crowded already, pre-COVID, add in the build up from fewer trains and youd make many stations unusable due to overcrowding and long waits.

Lots of commuters on the silver line and orange line. This would hamper daytime work commutes a LOT.

That would make a daily commute on metro much less attractive and would clog up traffic once we are able to use public transport again

If the pandemic continues to impact the workplace then I would expect this to be a suitable schedule for my purposes, however if the region begins to reenter the office setting, this would be grossly under service.

The above appears to require more planning and time for those of us who are retired or otherwise not working or traveling during rush hour.

These plans would increase the length of my trip from 1:15 to at least 1:45 - an addition of 30 minutes taking into account one transfer.

Wont be able to get on a train during rush hour

Proposal to operate Metrorail service every 30 minutes

The company I work for plans to bring all of its employees back to working in the office towards the end of 2021. I do not own a vehicle and rely on the metro to travel to work. If the metro stops near my home and office were to shut down, it would impact my situation significantly. Not to mention the incredibly negative financial impact it would have on the value of my home and all other property owners and business owners near those metro stops.

I live near the Twinbrook metro station in Rockville, MD, and this proposal of trains arriving every 30 min. at stations north of Grosvenor would make trains too crowded. Even with the previous pre-pandemic schedule, many south-bound trains arriving in Twinbrook for the morning rush were full. I have waited for up to 3 trains at Twinbrook during the morning rush in order to find space to board safely. Post-pandemic, no one is going to be thrilled about being in such close quarters with so many others riders. People will start to drive to work instead of cramming into metro trains like sardines. Loss of the riders north of Grosvenor station post-pandemic will compound Metro's budget issues. It's not clear why metro hasn't reduced service now, when there are fewer riders, to save money now instead. I see trains at Twinbrook much more frequently than I would expect during the pandemic. It doesn't make sense.

30 minute arrivals is not a reliable form of transportation to get to work. Missing a train could make someone late enough to lose their job or have substantial enough impact that I wouldn't rely on it.

My intellectually disabled daughter travels on the Red Line to and from work. Her shift ends at 8 pm. While I think the commute to work will be manageable, I'm worried about how late she will be getting home. She travels between Shady Grove and Medical Center.

By January 2022 the pandemic will be mostly under control and we will all be heading back to our offices more normally. Trains every 30 minutes during weekday morning and evening rush hour would not meet the needs of all the riders.

Service every 30 minutes virtually negates the usefulness of the metrorail system. I live near White Flint, and these changes would render the Metro as too difficult to use.

No change in the arrive time for the above trains.

I still come to work for United States Government (Army Hospital Logistic)

I think adjusting the amount of time between trains and/or the number of trains running at a given time in relation to capacity needs is a reasonable solution to reduce operating costs. This change makes the most sense to me.

30 minutes is a long time to wait if train service is not exact and the schedule fluctuates.

Prefer more frequent weekday service vs. weekend service. (Weekday trains every 20 min. weekend trains every 30 min.)

I deeply appreciate having more trains currently, but if there need to be drastic cuts, this is workable with planning.

If Metro can GAURANTEE the times that trains would arrive and depart this would help me decide.

If there is no difference between rush hour and non-rush times it would not make Metrorail a viable option for commuting for work. The 30 minute interval times between trains would also not make Metrorail an attractive option for getting around the region for day-to-day activities or for leisure.

I am willing to wait 8 min max at the station for the train.

Provided there is a train every 15 minutes and trains remain on schedule that should be fine. The issue is when you plan on a set arrival time and a train is either early (so you miss it) or so late that you are late for work/an appointment.

I would still take metro sometimes, like when I wasn't in a hurry and didn't need to transfer, but otherwise it would add too much time to travel. Reminds me of how much I avoided metro on the weekends before the pandemic because of the long arrival times - devastating for transfers.

I expect to return to commuting to work by Jan 2022. So trains every 10-15 minutes would be the max that I would want to wait without making other arrangements.

This proposal is better than any proposal that closes stations.

Need an accelerated schedule for rush hour.

I assume we'll be back to work by January 2022 and that doesn't sound like nearly enough capacity for rush hour. I ride both the red and orange/silver/blue lines and feel like that would inevitably lead to overcrowded trains.

Metro provides an excellent service to all communities within the Great Washington Area. Therefore, I think that the service should continue with some minor adjustments only. The economy and Metro activities will be in full swing towards recovery by January 2022. Thank you Metro!!!

It seems stupid and irresponsible to propose to close 22 stations and delay service during rush hour, particularly downtown exactly when Federal and state workforces will begin to return to the office post-pandemic.

As long as Metro provides accurate times on the app, one can easily plan to cut down on waiting.

As long as trains keep to posted schedules. No one wants to wait half an hour for a train.

Proposal to operate Metrorail service every 30 minutes

Metro has had service issues well before COVID-19! From train derailments/malfunctions to weekend shutdowns to SafeTrack to the Capital/Platform Improvement Project, Metro train service has been seriously reduced or shut down altogether....in addition to fare hikes! This proposal would make travel MORE difficult, especially for people who can only use Metro to get to certain areas. Having trains run every 30 minutes at all times is an AWFUL proposal which will force people to either wait longer or find alternate transportation besides Metro altogether!

Waiting for 30 minutes at an one line station should be embarrassing for WMATA and the involved cities. As a rider, it is disappointing to leave work, play, events and have to wait that long, not even mention dangerous. During the work peak hours, this will also result in more crowded platforms, then obviously the trains will be overcrowded.

This would work for me because it is consistent and I live at Grosvenor.

I would think rush hour trains would need to be more often.

This plan give me peace of mind, knowing that I can take the Metro to go to work like before, not have to worry about driving to work, or moving closer to work.

We rely on the Metro to go downtown and come home. Rush hour should have more frequent trains.

Every 30 minutes is simply not enough to support peak traffic hours. These timings could maybe work the rest of the day if there was increased service during rush hours.

No, I am not happy that the Employees is going to be lay off that work and have many years with metro if they do not get the funding that they need . If lay-off so many people is going to be upset and They will be Angry and will be without a Job and take care of their familys

frequency much higher than 30 minutes during rush hour would be needed

I rely heavily on the Cleveland park and Woodley park stations to get to work downtown. Trains arriving only every 30 minutes would make the morning commute impossible given that trains would be absolutely packed. Normally when this happens I'm able to catch one of the trains a few minutes later when there's more space. There's no way I could rely on metro to get to work by 8am if trains came only every 30 minutes.

While it may not be as convenient, as long as the times are genuinely the same so that I can plan around them, I would be ok with this. I cannot emphasize enough that the times must be the same -- consistent and on time -- so that people can effectively plan around it. If I miss a train because it came through earlier than scheduled and then have to wait 30 minutes for the next, I would be very upset and I can only imagine the complaints that would come in.

Once Federal employees go back to their offices waiting 30 minutes for a train would be crazy. The trains are already packed at rush hour, especially at the end of the day. I believe you would lose more riders.

Is this a joke? Unless DC and the feds are paying literally everyone to stay home, how are you proposing people get to work?

It will literally be dangerous to be on the red line platform at Gallery Place during rush hour if trains are only arriving every 15 minutes. The platforms are too narrow for the number of people who will be crammed onto them waiting for what will surely be overloaded trains.

Trains should arrive every 15-18 minutes instead of 30 minutes. On the Red Line, trains should arrive every 6-8 minutes. I travel by Metrorail everyday to work on the Red Line, and I have seen several passengers inside the train as well as those waiting on the platform without wearing a mask. This happens on a daily basis. Some even took off their mask (or pulled it down) once they got on the train. This will become a safety issue if we cant have social distancing because of overcrowded trains due to long waiting periods between trains.

We will need more trains at rush hour once commuters return to their workplaces. This is way too long a time between trains both at rush hour and for any transportation purposes. The proposed times between trains will be both inconvenient and too crowded.

I believe the reduction of rush hour service would lead to much more crowded trains and greater difficulty in getting on a train. Prior to the Covid shutdown, I would be lucky to be able to get on the first train that came through the station, given the amount of people on board, less frequent trains would lead to a much greater problem.

30 minutes too long

This may present a problem for those connecting to VRE or other modes of travel.

Do not close/shut down any metro station even if there is low ridership-- to compinsate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals.

This will increase my travel time significantly since I travel from MD to VA daily for work daily.

Each line should run at least every 20 minutes between 6am and 8pm with overlapping lines every 10 minutes. .

If ridership returns to pre-COVID levels, no.

This would hurt low-income riders who use metro to commute increasing their commute time

Proposal to operate Metrorail service every 30 minutes

Not ideal, but workable for the short term if commuter numbers remain relatively low

This works for me. I live close to EFC -- for non-rush hour, every 30 min for orange and silver is okay.

honestly dont understand the proposal. trains would only be every 12-15 minutes in downtown? that kinda bites.

I rely on metro rail service including routes with multiple lines. Increasing time between service would make my commute to Virginia and around Washington harder, and would likely push me to rely on car transportation instead.

Increased wait times adversely impacts parents of children in daycare. If a rider were to miss a train and have to wait 30 minutes for the next train, especially during the evening commute this would mean they would be late picking their child up from aftercare facilities, which incurs an addition cost (most \$1/min). Frequent Metro trains are essential for most passengers.

The current service plan works quite well. I am in Cleveland Park, and the reason I take Metro is because I can rely on the service--a train shows up in 3-5 minutes. From home to office is about 40 minutes on Metro (versus 15 minutes to drive to Courthouse). I take Metro because it is better environmentally.

Too long intervals in between trains and long wait times that would cause essential workers to be late for work.

Even just 15 minutes is a long time to wait for a train. It would also cause rush hour trains to be very crowded once most people have returned to the office.

This plan will lead to overcrowding and make transit impossible to use, especially for disabled people who require extra space to navigate onto trains.

15/30 minute wait is too big a gap - i need to use the metro to commute to work, from Grosvenor to White Flint, and sometimes even from Naylor Road to White Flint! If I cant use the metro, I may lose my job.

I have to get to work on time!

It would take me hours to commute from Shady Grove to Rockville and this would make it impossible to commute to DC

I don't agree with metro rail opening later on weekdays to match the weekend schedule. 20 minutes is the max time someone should have to wait for a train since many people catch multiple trains and buses to get home or to their destination.

Those proposed times feels like its happening now.

The statement that trains would arrive every 12-15 minutes at stations with service from more than one line is misleading, because it encompasses all lines at those stations. Just because I can get a Blue or Yellow line train at Pentagon doesnt mean the Blue line train that I need to get me to Van Dorn St is going to arrive any sooner than the 30-minute wait specified in the opening paragraph of this page.

Would certainly like to know the times that trains would arrive/leave a station, such as always at 1:10, 1:40, 2:10, 2:40, etc., on a regular schedule so you can plan.

Not ideal but better than closing stations.

I use a combination of Metrorail (both Blue and Silver lines), Metrobus, and a private shuttle to commute to work. This schedule would significantly increase the time of my commute, especially if a train or bus is delayed and I miss a connection. I would have no choice but to seek out alternate (more expensive!) transport methods (Rideshare, buy a car, move closer to work) and stop using Metro.

I am currently working from home but expect to be back in the office before or by January 2022. I solely rely on the metro service for transportation because I don't own a car.

On the red line, every 15 minutes is not great at any time of day, and especially not great during rush hour when conditions are back to normal (post pandemic).

During rush hours, trains arriving every 12-15 minutes will be crowded and there would be no alternative to wait for the next train to alleviate the traffic

15 minutes during rush hour is an unacceptable delay

Arrival times at multiple-line stations are acceptable. Closing many ,22, metrorail stations in between is going to be very inconvenient for metro riders!

train service in the morning is needed every 15 minutes for commuters to get to work along the redline, between shady grove and SS. 30 minutes in evening is OK.

If trains only run everything 30 minutes, it would significantly impact my ability to utilize the metro for my commute, particularly in instances of unexpected delays or incidents that impact train capacity. I would be forced to drive instead, and would likely end up not using the metro except in special circumstances if I no longer buy a commuters pass. This would be a significant impediment to my expected travel needs

Less frequent train arrivals make metro use a less convenient method of transport. Not to mention the frequent delays that are already experienced on a frequent basis (pre-COVID). This could potentially mean that people would be stuck 30-40+ minutes on a train platform.. waiting for a train... which would eventually be crowded (less frequent trains means more people on each train...

Proposal to operate Metrorail service every 30 minutes

I am very concerned, as many of others that ride the P18 bus on a daily basis to commute to Fort Washington. Are aware that this is the only bus that run into Fort Washington? We need a bus that run to that area of PG County. When the P18 doesn't run because of snow or ice, it can cost me \$60 per day or even more just to get to Fort Washington from Southern Avenue or from the National Harbor.. Is the PG Government taken action to provide a bus service to replace the P18 if this bus is eliminated. I ask on behalf of all those that ride this bus to reconsider this route before any action is taken. I am planning to contact PG County Officials to get their input about this urgent and important matter to those that use this route. I travel every day except weekends (since the P18 doesn't run on weekends), from Bethesda (5101 River Road (about a mile NW from Friendship Heights Metro Station) via 2 buses and two train lines to get to Fort Washington Road and Beech Street, Fort Washington, MD to care for my granddaughter while her parents work. I don't have a car, so I need the P18 bus route to take me there. When this bus was suspended from March of the end of August of 2020, it cost me thousands of dollars to travel there. When the bus route was restored, it was the best news I received since the pandemic restrictions started. I am grateful for this route and ask you to please keep it running. If you have to increase the amount charge for each trip to keep this bus, please do. I am 74 years old and live on a medium fixed retired income, but I am happy to pay for whatever is necessary to maintain this route. There many other people using this route to get to work along the route of this bus. Some of them go to the end of the line. there is no other way to get to this area from anywhere within the Washington, DC area, Maryland or Virginia. The P18 is the only bus available. It is a service that the residents of this area need to get to work and home. Thank you! Rosa Elena Bland 5101 River Road, Apt. 716 Bethesda, MD 20816 roselena.bland@gmail.com 301 641 1769 (for text messages only)

Keep higher frequency at rush hour

Future plans should operate as if things will go back to normal, and emphasize and encourage more use of public transit. Before the pandemic, WMATA was already going the wrong direction in terms of service compared to other major city's train systems such as New York City and Chicago (short hours of service on weekends, frequent station closings).

every 30 minutes seems like a long time. Like, if I arrive at a metro and see my train is 22 mins away, I'm likely to leave the station (within 15 mins which would get my money back) and take a rideshare instead.

Every 30 minutes is not a useful service, I would choose Uber rather than wait that long each time.

would appreciate more frequent red line service during prime commuting hours (7-8:30 am and 5-6:30pm) - running trains every 15 minutes will lead to significantly increased commute times and way overcrowded trains (they were already crowded)

Trains running every half hour basically means I will not be taking the train. DC metro has always been a reliable way to avoid traffic and reduce my carbon footprint. If I'm going to a meeting near Farragut North Metro and I am near Dupont Circle my 20 minute commute now becomes 45 or 50 minutes. I'll have to take an Uber.

With up to a 30 minute wait, a trip with a transfer could be extended 45-50 minutes. This is not acceptable for someone who uses public transportation exclusively.

I would need a car. If I miss one train I wouldn't be able to wait 30 min for the next one. I would be late to work

Wait times are too long, and switching trains will make commute even longer.

During the week there would be longer wait times to get to work in the morning. Less trains also means more congestion.

I think that trains should be more frequent during rush hour (as has been the practice). Especially during times when health is of great concern and anticipation that mask-wearing may continue for perhaps another year or two, people will want to be able to socially distance from others on the trains. Having been on crowded trains during rush hour, I think it would be ill advised to reduce the frequency during those time periods

Rush hour commute would be impacted because schools and daycares would not open earlier to accommodate the additional commute time required by riders.

Too many trains will have too many cars packed with too many people. Not a working solution.

Could work assuming capacity is sufficient to cover peak times

This is absolutely unviable for me as a commuter. Even assuming some drop in ridership due to more flexible WFH arrangements post-pandemic, I commute by one of THE MOST CROWDED LINES pre-pandemic. I would have to allow at LEAST a two-hour period for what normally takes half an hour IF Metro doesn't randomly break down, suspend service, or take trains out of service during rush hour. That is ridiculous. It is NOT a subway system serving the commuters who pay for increasingly substandard conditions. The day my office shut down, a man was stabbed IN RUSH HOUR on the Pentagon platform, showing how unsafe the system is.

I think this would work fine for most of the day, but increased frequency during main commute hours.

This wouldn't account for rush hour which will be coming back.

I only use metrorail on offpeak times occasionally. With longer times between trains I would use my car more often as there would be less use cases where waiting for a train would make since.

Proposal to operate Metrorail service every 30 minutes

If you must close stations it would make more sense to do that now when people are not vaccinated. We will need full metro service again when a majority of people are vaccinated and many of us will have to return to the office. Removing stations will hamper anyone who lives near that station and does not have a vehicle. The metro needs to prove that its reliable and removing stations will not attract riders. Its also difficult to operate on 15+ minutes without a timed schedule (which most metro/subways have - ex. Vienna leaves at 8:00am and then 8:15am etc.). The metro will never recover if its seen as inefficient after the pandemic (which was the case previously).

If the every 15 minute service on the red line was extended to Wheaton, that would work.

I use the Metro daily at all hours and need it running frequently not just during rush hour for work, Hockey Games, Baseball games, anytime I want to go to DC and not worry about parking or getting home safely after a night out. I use it all the time for visitors from out of town to go to museums and monuments. I also use it to go to Tyson's, Reston, DCA.

I have to take a Metroway bus to my train and it is possible that delays on the bus could cause me to miss a train. That would mean that Metroway busses should be more frequent or should pick up passengers within 1.5 miles of the train station approximately 15 minutes before trains depart.

I would expect ridership to be at higher levels again by Jan 22. If they are not that would be fine, but I see the trains getting over packed.

This is not nearly often enough. If I have to wait 30 minutes for a train, I will start using a different mode of transport. Especially if I also have to change.

This proposal would add considerable time to trips to visit friends in DC (I live in Alexandria) as I would not be able to rely on transfers at stations like Lenfant plaza. Since I do not own a car, it would make it difficult to use Metro to maintain these relationships.

I would strongly prefer slower service as opposed to reduced hours or closed stations. I can plan around trains coming a little less frequently but cannot plan around my station closing or the metro closing hours before it used to. As ridership increases and revenue increases, increasing frequency will also be a lot easier than reopening closed stations etc.

Pre-COVID, there were plenty of mornings when I had to wait out several trains before there was room to board. If we return to an in-office scenario and the frequency of trains doesn't increase during rush hour, trains are going to be so packed no one will use them.

I would prefer to have even less frequent trains during non-rush hour periods and more frequent during rush hour. Even just 35 minutes for non-rush and 25 for rush would make a big difference as a commuter

Every 30 minutes is not often enough for rush hour commuting.

It would be nice to reduce from 30 minutes to 15 minutes so we do not have to wait a bit longer.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around—especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinate, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around.

First, a general pint. You should have listed the current times, schedule etc. give the Corona virus situation, I dont remember the current status due to stopping travel due to the virus.The thought of a longer wait into the evening for trains is bothersome. The Parking lot is valuable when we go Downton with family members. Ive driven a family member to the Grosvenor-Strathmore to park her car and take the Metro to work in DC. The NLM Metro station has no real parking, its very busy and crowded which will get worst if there are less trains. I know I will avoid overpacked trains in the future.Bottom Line let Grosvenor take some of the pressure off by loading and unloading riders instead of adding even kore riders at the NLM Metro status.

I generally use the Red Line in the area where the trains would arrive every 12-15 minutes. I dont often ride on weekends, but when I do, the importance and urgency of my trips is about the same as it would be on weekdays, so I dont object personally to trains at the same intervals. However, I think it would be a true hardship to my friends and colleagues who live near Rockville/Gaithersburg, Huntington, Reston, or other areas that would only have trains running very 30 minutes. When I was in Vienna, Austria, 1.5 years ago, it was a common perception that a) public transit is an essential public right and 2) that the only way to provide adequate service to residents is to operate transit (buses and trains) all day long every day of the week, more frequently than once every 15 minutes. Operating every 30 minutes or even less frequently means that people cannot get to a transit line and expect a train or bus to come along within reasonable time to get them to work or wherever they want to go reliably, without undue wait (for example, 15 to 20 minutes or more waiting outdoors in all weather).

30 minute wait between trains, during rush hour, is too long.

Keep RUSH HOUR Schedule the same from 5am-9am, then switch.I have to be at work at 7am. In order to get work, I need to be in Old Town Alexandria no later than 645am. The 28A bus wont get me there in time unless you start 28A bus at 4:30 am to King Street Metro. So I now have to walk to East Falls Church Metro at 4:30 am in order to take the first train in order to make the transfer at LEnfant Plaza.

Proposal to operate Metrorail service every 30 minutes

Thats a long time to wait especially at the open platform in wintertime. .

There is a benefit to having added trains during rush hour.

I assume that by January 2022 most people will be back in the office so trains every 30 minutes will not come anywhere close to being able to handle that many commuters. Also, with reduced service to this degree people will stop taking metro because it cant get you anywhere and then you will never make money

I am retired and not frequently traveling into the District. However, how will ridership be rebuilt after the pandemic, if the communitys rush hour needs are ignored?

Need more options during work hours rather than on weekends or nights

Assuming rush hour service would return when ridership again reaches normal levels, I think this would be a great solution.

I live close to Fort Totten. The neighborhood has new residential construction projects in progress. Housing units marketed as "Metro accessible" have already been sold. This will bring a lot of new metro riders to the area and we can't afford less service. Rush hour ridership (pre pandemic and presumably post pandemic) is often standing room only. Motor vehicle traffic is very heavy during rush hours and many residents, like myself, want to avoid that.

It would depend on accurate prediction of when trains will arrive so that I can time my commute, and trains that would have space on them for me to get on.

Rush hour service needs to be faster to get into work on time.

Would work well for weekends but would be a poor decision for weekday commuters-- trains will most likely be packed.

Every thirty minutes PLUS waiting for a bus makes mass transit unworkable.

I think when things get back to more normal, I dont think every 15 mins will work, especially during rush hour.

I rely on metro for morning and afternoon commute to work everyday. These adjusted times not considering rush hour would drastically hurt my commute time. If you make the trains run less frequently I guarantee that will reduce ridership even more, especially for daily commuters. Please note that during the pandemic I am not riding metro but once the pandemic is over I plan on using metro again. Need to think about long-term ridership.

30 minute frequency is absolutely absurd. The purpose of a metrorail service is the frequency and flexibility it provides to its riders. This would not work. I would drive and use rideshare instead of using Metro if the frequency was this poor.

Need McLean

This is too long in between trains.

This is not a viable option. With 30 minutes between trains the stations will either be absolutely packed with people, creating a dangerous, litigation-inviting rush to get on when a train arrives to avoid waiting a half hour, or people will avoid the metro altogether and the budget problems will only continue to escalate.

If service were cut this much, this would change the math on how long it takes to drive from Reston to Ballston such that Id likely end up driving more often. To offset the cost of tolls if the drive became too long trying to avoid them, Id just arrange a work from home schedule to offset the cost of tolls and the inconvenience of dealing with curtailed metro service. If I just missed a train and ended up having to wait 30 minutes for the next one, Id likely just go back home or opt to drive to the office and insist on my parking fee being returned.

Its ridiculous. How can a modern city operate effectively and efficient if trains are moving at a snails place. Metro needs to do everything in their power to lobby congress for additional funds and find other way to save money to maintain service at pre-covid levels.

This would make commuting nearly impossible. It would be much for difficult to time my commute and the trains would likely be too packed to even be able to get onto a train. If theyre only coming every 30 minutes, that means having to wait a full 30 minutes for the next one and likely being late.

I would like to have other trains operate every 15 min not just certain trains. My main source of transportation is Metro and I do NOT like to wait for half an hour NOR do I like to be LATE.

I will be commuting to work as I did before the pandemic and will need reliable train service more frequently during the week. If the trains run every 30 minutes I will not use the trains and will find different way to get to work.

Concern about the timing being too long.

Im scared to even think about how long it would take me to get to work under this scenario.

Assuming I am back at work in Tenleytown in Jan. 2022, having to schedule trips downtown for business meetings around a 30-minute schedule would be very inconvenient.

Every 30 mins is too infrequent

I retired from Government Service in 2015. Pre3viously I commuted from Arlington VA to College Park, MD and this change would have certainly made my daily commute longer.

Thirty minutes seems like a long time to have to wait if you miss your intended train.

Trains coming every 30 minutes at anytime of the day can result in a passengr being late for work, events, and appointments, ecs. That time needs to be shorten.

Proposal to operate Metrorail service every 30 minutes

Given my mom traditional 9 to 5 work day, this plan would essentially strand an essential employee at the station

While I dont expect to need to ride Metro, I would hope that the frequency of trains would be adjusted with increased use. Waiting 15 minutes for a full train would not be acceptable.

I dont use those lines

If you consider 10 minutes instead. There are still essential workers who depends on these lines to get work. We are working throughout this pandemic also.

I realize its hard to predict what the new normal will be. However, not having increased frequency of trains during rush hours could lead to long waits for commuters and possibly finding other modes of transport.

My station is Shady Grove, waiting 30 minutes for every train will not work for me.

The rush hour trains would need to arrive much more frequently, especially in the mornings.

I have not used Metro in past year due to COVID concerns and working remotely, however, I expect this to change in mid to late 2021. I hope to once again rely on Metro for transportation to and from work and miscellaneous doctor and other appointments. I moved to this location in order to take advantage of Metro and I hope its up and running in 2022. Also, theres a huge population in the local vicinity that counts on Metro. Prior to COVID I rode Metro almost daily and during the week, it was packed with people and there was standing room only. I expect that to return and so many people love the Grovesnor station (although parking is a bit tight some days).

This would work OK now with ridership low because of Covid. If rush hour returns, i dont know how crowded it would get.

Interval between trains is long.

The only place the Blue Line goes to that other lines dont go to is Arlington National Cemetery, Van Dorn Street, and Franconia-Springfield. There should not be more Blue Line trains on the track than Yellow Line trains.

More trains during rush hour make a big difference. If we have longer spaced trains things will back up and platforms will become too crowded. This would result in fewer people using the metro.

This frequency would meet my expected travel needs because I live and mostly expect to travel in January 2022 in a corridor with service from more than one line.

Would depend upon travel volume. If trains are packed and space unavailable, this would not work for me.

I anticipate being back in the office regularly in 2022. This would work for March through June of 2021, but not starting in 2022.

Consistent frequency throughout the week is very important; as a frequent tourist but not resident, I cannot comment specifically on the 30-minute suggestionâ€”for me in N.J. it would be better than I have, and when I visit I can certainly plan around that, but residents who generally have more frequent service than that may find a 30-minute wait when a train is missed to be too much.

frequency of every 30 mins would be tough to manage

People will be late for work. There would be more people on the platforms as they wait for their train to arrive. Metrorail cars will be more crowded due to the increased wait time in between Metro trains.

I think having the trains run 30 minutes apart is not a good idea, especially at the outside stations in the winter. your plan to implement this right as the colder weather is beginning to take hold is short sighted. This long time between trains would be best suited for spring, summer, or fall.

This would force a large amount of people onto fewer trains once offices open back up as it was before the pandemic. Waiting times if someone misses a train would make a huge difference in people getting to work on time, especially if the station is very busy and someone cant get onto a train and is forced to wait for the next one. Additionally this restricts workers schedules much more than they were by having very regimented train times, in the past there was freedom to get any of the next several trains without stress of missing one

My commute is roughly 75-90 minutes door-to-door, one-way, including walking time, a bus, and a rail transfer. The proposed changes potentially adds 30 minutes to that time and an hour to my total daily commute. As a single-car family, this proposal would push me to commute less, if my work allows. Subsequently, I would pass less to Metro and RideOn for service, worsening their problem.

I would worry about even more crowding during rush hour, both on platforms as well as in the cars. It is pretty dangerous already.

I am assuming that the pandemic will ease in 2022 and life will return to normal or at least start to. Pre-pandemic I rode the orange line. If a train didnt come every 5 - 6 minutes during rush hour the trains would become so packed that people couldnt get on with out cramming in - something that obviously people are not going to be willing to do while we are coming out of a pandemic. If Metro doesnt provide more trains during rush hour then rush hour commuting will be a nightmare and people will move away from public transportation altogether.

This is. Relatively sane.

Proposal to operate Metrorail service every 30 minutes

I take the Metro to/from work, so not having rush-hour service would be very undesirable for me. It would lengthen my commute in terms of time and each train would be even more crowded than it normally is. As it is, I feel like a sardine when I'm on the train, and can almost never get a seat. Adding even more people to each train would really make it unbearable.

30 minutes is way too long between trains. This would harm commuters immeasurably.

As someone who takes the Metro to work every day and has to change lines sometimes late at night, trains that are 12-15 minutes apart significantly increase the commute.

I think an interval that big would be awful.

Rush hour yields higher demand and when trains are full, this could effectively double transit times. When trains fail or non-scheduled maintenance would increase issues and transit times.

Every 30 minutes on weekends might be OK, but I'd prefer more frequent service on weekdays, especially during rush hour. My closest station has 2 lines, so I could probably make do with outbound service every 15 minutes, but if other stations are only served every 30 minutes, the return journey may take much longer than anticipated. The trains would probably get very crowded during peak travel times on weekdays.

If I miss the train, I'll probably be late for work

I have not been commuting for the past year but expect to resume commuting as soon as Sept 2021

This plan would work for me, as I am not commuting every day, but I imagine this would pose problems of overcrowding during rush hour and extended commutes for people who commute regularly.

January 2022 demand post-pandemic at East Falls Church Metro Station will be greater than pre-pandemic January 2020, based on growth in activity and conversations were having within our community during the pandemic.

Missing one train because of traffic, parking, slow elevators at Forest Glen, would mean a thirty minute delay at the station. That would effectively double the length of my commute (Forest Glen to Gallery Place).

Trains will be overcrowded and limited seating

It's OK for me, it works

Don't stop the A6

This would be a nightmare.

If it was a schedule we could depend on to plan it.

Every 30 min is not acceptable

Would result in packed trains, especially during rush hour.

If my bus would run, I would not have to try to take a one-per-30-minutes rush hour commuting train. But if my commuter bus (7Y) were cancelled, this would be a problem. There's no way commuters could squeeze themselves into trains at the Pentagon to get downtown.

Rush hour trains need to operate more closely together in order for folks to get to work on time. Especially with ridership bound to increase after pandemic

The infrequency will affect my commute.

No?!?! I work in an industry that is on hiatus right now, but I expect to be commuting during standard weekday rush times beginning in fall 2021. This would seriously hamper my ability to get to/from my office, as I have a 2-seat ride from Petworth to Eastern Market. - even with 2 colors of trains running on each service, that's a potential of up to 30 minutes of wait time, which would substantially change my commuting habits. IIRC, train frequencies were 6-8 minutes at rush on the green line and faster on the O/B/S, which is frequent enough that even if I completely missed my train and had to wait a full cycle of headway, I wouldn't be more than 10 minutes late. There's a big difference between 10 minutes late and 30, from an ability to get to work reliably perspective. And this idea is terrible.

I NEED METRO TO GET FROM A TO B PLEASE DON'T CLOSE THE STATIONS

Please don't close the Cheverly stop! That's how we are able to commute to work.

I currently live on the redline at Twinbrook so I would have a 30 min wait for a crowded train. Trains would be very crowded as well and is that wise considering COVID?

While I wouldn't be happy about it - it's nice to be able to just leave and walk to the Metro and know that within 5 minutes a train I need will come - I guess I would just need to plan more. It would be helpful to have a solid schedule of times. For example, would trains arrive on the 00 and 30 of every hour? That's the deal for my work commute. For weekend travel, this would be more inconvenient and frustrating since I have family and friends who live out in Rockville and on the silver and orange lines where getting out and back would be a major challenge. I also coach in VA and MD sometimes, so having quicker access to meet my players for games is important.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Provided service returns as ridership improves. |
| 30 min gap would only work if the schedule is reliable |
| Assuming that people go back to work sometime even in 2021, this frequency of trains is going to cause huge bottlenecks. |
| Depends on vaccination roll-out and pandemic |
| Most people would be back in the office by Jan 2022 and that was the case it would take too long to get to work and make commuting very difficult |
| This would make life hectic, crowded on the trains, and challenging for meeting my work commitments. |
| During weekdays the trains will be packed beyond capacity as more normal travel patterns return. |
| 30 minute wait times at Cheverly would not be conducive to my schedule and having to also bring my toddler on the train every day. I cant imagine having to wait on the platform in the cold with her for 20-30 minutes if we miss a train. I would move. The awful metro schedule would diminish my home value, and I would move. |
| I expect to be back to my regular MD to DC commute in 2022 and waiting 30 minutes for a train on an already 50 minute trip is not acceptable |
| I expect the trains to run as they normally would, including a rush hour schedule. |
| This would only work if the apps that predict arrival times for trains are accurate. I would be limited to a line that will have trains arriving at the station every 30 minutes and would need to plan accordingly. |
| Once I return to working in the office, 30 minutes between trains will not be a workable service and I would not be relying on Metro. |
| 30 minutes is way too much time in between trains. This schedule would make me choose not to take Metro. |
| In 2022, more people will be returning to work and trains will be full. |
| My metrorail usage depends on the client contract that I work on. Sometimes my needs change dependent upon who Im working for. I cant predict my needs for January 2022 But if the Cheverly station is closed down then I would not have any options. |
| While it isnt ideal, Id prefer to see fewer trains, timing spread apart, than closures to vital stations. |
| 30 mins is too much gap. Unless the schedule is very much exact, so people can plan their schedule. Like the VRE train schedule, very much on time, so people can plan for it. |
| Cheverly is only served by the Orange line. If the Silver Line were to alternate between the Blue and Orange line stations on the eastern leg the issue might be mitigated. |
| How would you expect to fit non-pandemic size crowds on the trains during rush hour? I can't see a universe in which that would make sense. Have you ever ridden on the orange line at 8:15am? They are absolutely jammed with riders (during normal times, with trains 5 mins apart). Aside from that, the trains would have to arrive exactly on time at the same time daily in order for this to work. Missing a train would cause so much disruption in a persons day. This whole concept of one train arriving every 30 minutes during commuter hours gives me a panic attack just thinking about the crowds. |
| The rush hour matters. It means more people will be in one same place to wait for the next metro to arrive. Less people waiting, better itd be. |
| This would make commuting to work very difficult. |
| My concern is the Cheverly Metro. Here are some bullet points:1. Cheverly is located right next to the where Rt 50 & BW Parkway intersect. One of the highest volume road usage in the area.2. Cheverly is the 1st station in Maryland just pass the DC line.3. Development is increasing dramatically in this area. The 26 acre Prince Georges County Hospital Hill development will be done including demolishing the hospital. |
| This would drastically extend commute times, especially for those who only live on one metro line (which tend to have higher minority and lower income individuals). |
| I think this will definitely help people who work full time shift work. It is not right if I work at night or on the weekends, I am often stuck walking or paying a higher price for cabs because I dont have a car that my job wont reimburse me for parking anyway. |
| How would we know, before getting to the station, when the next train is scheduled? |
| The 30 minute schedule would make the trains overcrowded and hinder my ability to get to work on time |
| insufficient frequency |
| Shorter headways encourage use and enable mobility for everyone. Run more trains. |
| This severely limits ability to use the metro for parents who must time use with bother work and daycare/school pick up times. Waiting 30 minutes for a train does not provided sufficient flexibility. It also means trains will be packed so parents trying to travel with children is strollers will be unable to board. |
| Not enough trains for commuters |
| Thats just not often enough. If Im running five minutes late one day, Ill be half an hour late to work? |
| This works for me as a commuter. My day would just have to be more structured. I like that no stations are being closed. Access is so important!! |

Proposal to operate Metrorail service every 30 minutes

This would work for me ONLY because I am retired and can plan my Metro travel to fit reduced service. I think commuters would find it very difficult to cope with the loss of extra rush hour service.

Given frequent service disruptions to begin with, trains that only run every 30m would likely lead to problems getting to work on time, which may lead to employer retaliation

I understand the rationale, but this will be extremely challenging for outlying stations on all lines other than red

That reduction in service would be the start of a death spiral of service. Anything over 15 minutes between cars during rush is a killer.

As long as there are no station closures

Make sure that youre not charging more for rush hour if the service level is the same during non-rush.

I commute between Greenbelt and Crystal City- the proposed change would add 15 minutes to my commute if I have to change from the green to the yellow line. I am OK with that.

I can plan for these longer intervals

Making no distinction between weekend and week day service doesnt seem to make sense to me. If the goal is to reduce traffic congestion and assist people getting to work, maintaining higher level service during work days makes far more sense to me.

It makes sense to me to have more trains running during rush hour. Other times would be every 30 min

Keep all stations open

Once the pandemic is over, more service will be needed. This will most likely occur in 2022.

For someone who takes a bus and a metro plus a shuttle to get to work this will make my already 50 min commute even longer.

Well - what is it now? How would this be different than current arrivals?

I use the metro to commute from Shaw-Howard University station to College Park-University of Maryland station. I would still need rush hour service once in-person activities resume at the University of Maryland, which will hopefully be in Fall 2021.

As an outside station, a 30 minute wait is not acceptable. I have two household members who have some disabilities and the delayed or terminated service would prevent them from getting to their employment.

Luxurious

In my opinion, frequent trains at rush hour were needed to accommodate the number of passengers as much as an issue of scheduling. IF the trains run on schedule, one can adapt to less frequent scheduling.

So much depends on whether Businesses and Colleges open up to in person classes/work.

Rush hour more trains are needed due to capacity.

Why not every 10 min on weekdays and 20 min on weekends? I may be commuting to work again starting in January.

Green line travel needed much more frequently

30 minutes is a long time to wait.

When using the system downtown, 30 minutes is too long to wait

Depends only whether I have to return to the office by then.

I board at the end of the Green line (Branch Avenue). Potentially waiting half an hour to enter the system at the beginning of the trip would add a lot of time to a commute that already takes me more than an hour under normal circumstances.

There will be no appeal to take public transportation.

I am legally blind and use Metro as main source of transportation. 30 minutes between trains would delay me getting to and from work.

As people return to work, it seems incredulous that this would even be considered an option. Even trains every 15 mins during rush hour would not be able to accommodate the necessary space for riders? Why couldnt WMATA scale its level of service to meet ridership demand, and prepare to ramp up/scale-up quickly rather than pre-determining a very limited schedule?

Proposal to operate Metrorail service every 30 minutes

Having trains every 30 minutes is not the best, but it could work if customers have paper or electronic schedules. This way, a customer would not have to worry about standing for long periods of time, on the platform. This would be crucial to customer ridership because there is limited seating and limited space on the platform to wait for the train. People who routinely catch the Metrobus can only do so, once they know when an expected bus will come. Because the Metrorail is usually scheduled to come frequently, there was not need to have a schedule, simply show up and a train would arrive within 12 -15 minutes. This will require some retraining of old habits that were developed over the last 20 years. Plus, they really need to get pricing in line. Sometimes Metrorail discourages riding by charging \$5.00 or more each way, plus \$5.00 for parking. Charging \$15.00 per day is way too expensive. Why not charge a flat rate similar to NYC?

This would work for me ONLY if the trains ran on time. If trains RELIABLY arrive every 30 minutes, I can plan my commute around that.

Wont work for a lot of people, but we are retired

Every 15 mins would be best. Every 20 is okay. Every 30 is too sparse.

At that interval during rush hour every train would be completely full.

Every 20 minutes would be better. 30 is pretty sparse, especially if theyre late.

More frequent trains would better meet my travel needs.

It's counterintuitive to have the same weekend and weekday schedules when there will certainly be more commuter ridership once most of the region has been vaccinated, which is expected in fall of 2020. Also, significantly intermittent train service would make riders LESS likely, not more likely, to resume taking metro.

I would much rather have trains run less frequently than close stations.

Going back into the office via Metro would be very difficult and take a lot longer with this plan / headways.

Can reduce service during non-rush hours and weekends

Im really concerned about crowding. Were just seeing the light at the end of the tunnel with the pandemic, and if people see that trains are crowded it could lead to a vicious circle of falling ridership.

I commute from College Park to Farragut North and there are many times that I have had to wait for a train on my return trip because the trains were full. If there were a limited number of trains I might not make it home.

This is workable for me.

That sounds like a good idea

That is not frequent enough to rely on.

Are you nuts?

You will never have a twenty four hours city if your your mass transit stop at nixie pm

30 min frequency would likely preclude commuter ridership on yellow and green lines...why are the red lines only being given the ability to have more frequent stops? Seems to be a racial-social injustice issue to confine updated service to the wealthiest sector of the system...

Trains that arrive every 30 minutes (or 12-15 minutes at stations with multiple lines) are next to useless for commuters, travelers, or anyone. You might as well get rid of Metro.

This would take additional planning to make sure I would arrive at a station on time to get to work, though it would be manageable on the B-O-S stations. My larger concern is how crowded the trains will be if the frequency is cut in half as proposed. Missing a train due to crowding will have more significant consequences than it does now as the wait for the next train will be longer, and even in a post-COVID world, dense crowds should be avoided as we have seen how easily illness can spread.

Yes, if thats the best option the budget would support.

15 mins es mucho tiempo

Don't eliminate 89M because I visit Maryland in Laurel and the 62 takes me home because I am disabled and it is convenient for my disability.

My son needs to get to DC for school every day at a specific time and he couldnt wait 30 minutes for a train. This would cause him to need to be driven instead.

The red line is very busy and people will return to their offices by then

What times would train service stop and start? Not clear.

Education would be needed for whether this were to be a permanent fix or a temporary one. I could navigate a different rush hour for a year. But if it led to unpleasant congestion and it was not clear how long it would last, I might actually look for alternatives that worked in the longer run, e.g. a second family car. I want Metro to stay afloat, but the frequent rush hour trains have always been a major convenience, so if this were a permanent change it would change how I feel about my daily commute.

This could work if the times for the trains are set. If I know that at 8am there will be a train then I can plan for that. I MUCH prefer reduced service to closed stations.

Proposal to operate Metrorail service every 30 minutes

30 minute intervals are too long. Waiting at a station, especially at night, can be a major safety issue. Also, 30 minutes in inclement weather would not be feasible for the young and elderly.

Weekend service during the week would mean long waits and very packed trains, and would probably cause me to just drive every day, especially as I have to switch lines to get to my office downtown.

There needs to be a link to the sports schedules permitting persons at the games easily to make the last train AFTER the game is finished.

Working in a hospital and using the metro with patients this is not enough frequency

I prefer to use the Metro (green line) to get to the red line to go to Union Station during rush hour as otherwise it can double the time.

Every 12-15 minutes during rush hour at stations with more than one line is not frequent enough. Riders have experience with this when there have been metro delays and trains get backed up with people packed into platforms trying to squeeze into trains.

My concerns is that with reduced intervals, trains will be more crowded, making people feel less safe, and then even more ridership will be lost.

too infrequent service during the weekdays - need rush hour increases to safely accommodate all travelers (social distantly)

Preference to have variance (increase) during morning and evening rush hours (eg 7:30-9:30am and 4:30-7:30pm)

Its too much of a time gap for metro to remain a feasible reliable option. Like this, yes, you cut costs, but you also undermine commuters reliance in your services. People will abandon your services altogether.

This would work, if College Park (where yellow and green run together) also counted as a multi-line station.

This is a racially-biased change in service. The primarily white, affluent Montgomery County line would retain higher levels of service than the less affluent more racially diverse green and yellow lines. Even prior to Covid the Metro was biased towards the red line. Being primarily a green-line user I was always struck by the better quality and cleaner trains on the red line when I had occasion to ride on that line.

Rush hour trains have historically been very full and it would be difficult to effectively commute.

Too much time between trains. It could make my commute really long.

Does this proposal involve a reduction of the bus schedule as well? If so, will the buses departing from respective stations be synchronised with the trains?

This would work for me because I use the metro irregularly, but it would cause LOTS of congestion during busy travel times so would likely cause a problem for other travelers.

Since I commute on the Red Line and expect to be back in the office later this year, this would be okay for me - however, if I lived on any of the other lines, trains only coming every 30 minutes during rush hour would not be feasible at all.

Generally more frequent service would be preferred.

Absolutely infeasible. Not near enough service. 12-15 minutes in the middle of the city is not tolerable.

A max wait of 30 mins would make me move to another neighborhood closer to work or to buy a car

Would more sheter and seating be provided, given the longer wait times. If so, this could work for my schedule.

Trains arrival every 30 minutes during weekdays doesnt make sense to me. They should arrive more frequently during the am and pm rush hours.

If Covid is no longer a substantial factor, people will start taking the Metro into their workplaces again, so rush hour trains would be too crowded. Also, the bus connections would have to be adjusted and the buses might be too crowded, also.

For every route, a peak hour schedule for at least 2 hours in the morning and 2 hours in the evening should be available with trains arriving every 15 minutes during weekdays.

When I am called back into my office in DC for work, I will again rely on the rush hour schedules for the Silver line from Greensboro Station to Union Station in DC. Reducing the frequency of train service during the rush hour period would increase my daily commute time and will encourage me to commute by car. This seems to run contrary to the pre-pandemic push to increase the use of mass public transportation in the DC metro area and the development of transportation oriented development in places like Tysons where I live.

the most important thing is a schedule - more trains better, of course, but as long as I know I can count on when a train will arrive - all good.

This would be difficult with having to get kids ready and dropped off and then back to metro to get to work on time.

In 2022 I'm not sure what my travel needs will be.

Trains only arriving every 30 minutes would make it difficult to connect with Metro buses or schedule appointments.

Having trains every 30 min only makes travel very unattractive. A delay of a bus could delay the planned travel by 30 min or more, this is not acceptable.

Proposal to operate Metrorail service every 30 minutes

Waiting 30 minutes for a metro train is unacceptable. You should anticipate the increased needs of a major metropolitan area and develop a plan that encourages MORE ridership rather than less.

If the purpose of mass transit is to decrease traffic congestion and focus on transit-oriented development, these proposals are absolutely counter to all the research and trends in urban planning, transportation planning, economic development, etc.

trains were already crowded. 15 minutes means theyll be crushed full.

This is the closest to normal scheduling and keeps all open

15 minutes is too long to wait and too infrequent. It would stretch my commute out to where it would be more efficient to use a car.

trains too infrequent

I use the Green line and cannot wait a half-hour if I miss a train. That would be disruptive to my work schedule.

every 30 minutes is too long of a wait time; think it should be 15 across the board.

That is far too infrequent and would seriously detract from the flexibility of using public transport that is supposed to be one of the services greatest benefits.

not convenient, but workable

the main priority should be to keep the hours of operation and days of service unchanged

Would this plan also include decreased bus service? If yes, that would increase its difficulty for me. Would the higher rush hour fares still apply even if there were not a greater number of trains at rush hour? If yes, there will be great rider dissatisfaction when rush hour trains are packed and riders end up paying a premium to wait (and significantly longer than previously) for the next train.

way too infrequent

Trains should arrive at much shorter interval during rush hour

This takes too much time for me to get work. Need to drive instead.

This is extremely inconvenient! We moved out of the city specifically relying on the metro, and we highly rely on the frequency of its service, especially during rush-hours. P.S. It's against every rationale to NOT to distinguish between rush and non-rush hours!! It will without doubt result in extremely crowded rush hour trains, and empty non-rush hour trains. This is not fair for most of the working class, who needs to arrive at the workplace on time. I hope you can please reconsider.

I think during rush hour it would be better to have the trains run every 15 minutes, say between 7:30 and 10 AM and 4 and 7 PM.

I'm not quite convinced that having fewer trains during rush hour is a wise idea. It would really depend on whether government agencies and businesses continued expanded telework, so as to lessen the rush hour congestion. I do prefer this option over closing metro stations altogether (though you said we should consider the proposals separately... not every option is truly as independent as it seems...)

That will lead to more crowding and less people taking the train.

I would need red line trains to come more often

Trains running every 30 minutes on weekdays would create difficulties with commuting in case of a missed train.

30 min is too long to wait

Thirty minutes is too long to wait for the green line

I think this needs to be a pending option but not Plan A, given the vaccination rates

la frecuencia de lunes a viernes deber a ser menor a 15 minutos, la gente trabaja y necesita usarlo de manera regular en las horas pico

is this a joke?

If ridership increase, the number of riders will quickly over fill train cars and make it unreliable for anyone needing to get on mid-line.

Ensure that the new train times are easily accessible so that riders can plan in advance, e.g. within an application

Citizens of Cheverly Ward 4 which is adjacent to the Metro stop still work and use the Metro as their main source of transportation in to town. Having a need to travel downtown at specified times after handling domestic chores (kids to school and or other activities that require hands on), the availability of frequent trains is a necessity.

The wait time are too long. Assuming people go back to work, trains will be WAY too crowded at peak times

I only use Metro outside of work hours and within the city, so this would make it super inconvenient

This is an absolutely terrible idea

Proposal to operate Metrorail service every 30 minutes

Rush hour service is concerning, because the trains are typically packed at that time. I do not think that the same frequency is appropriate for the weekend and rush hour on a work day.

I do not live in the DMV, so I cannot comment knowledgeably on details. When I do visit the area, I park at one of Metro's Park & Ride lots, and I use MetroRail (and my feet) to get where I need to go.

Thats why customers not paying cause everything always out of order

Trains coming so infrequently on weekdays mean more people will be late to work.

I dont ride the train much so it wouldnt alter my travel very much. But for those traveling by train for work this may become an issue and you may lose more ridership.

What happens if ridership increases? There could be serious crowding and potential altercations. If a person arrives at the station having just missed the last train, and then the next train is full, they will have to wait a full hour for a train. That wont work for anyone.

This would make metro an infeasible option for me to get to work. I take the metro now, but that would likely push me to purchase a car.

I think it would take a little advanced planning on the part of riders because were so accustomed to walking into a station and more than likely a train is only a few minutes away if not already pulling up. But the time difference wont be that bad once people get used to having to leave out a little earlier to make up for the time gap between trains.

It would work if trains operate on schedule

My issue is w/ service end times. As an essential worker who works the second shift, I would like to see Metrorail service extended to at least 1:30a. This would provide service for those who work not only the second shift but the overnight shift, as well.

30 minutes between trains seems excessive. Suggest a maximum waiting time of 20 minutes.

Crowd management during rush hour.Lines or ques

I think also try to squeeze in time frame for weekends. For an example. my Son and others work a mid shift 3p-11:30p. We live in Maryland But Work In Virginia. Thats A struggle. We make it work. He and others Uber home.

If the arrival times are to be the same than there needs to be a gade fare and no peak versus non-peak fare.

The traons world be so crowded and dangerous because of COVID-19

This would be my preference should I feel safer to take the metro, depends on the situation with covid

30 minute headways are unacceptable.

This plan would require that all bus routes and their arrival and departure times were in line with the train departures and arrivals. As it is some times Im waiting 30-50 minutes for a bus if I miss it due to the train. So timing becomes more precise to ensure that those of us who are reliant on public transport can get to our destinations.

It's understandable why you would look at it like this. However 30 minutes is a major inconvenience. Anything passed 15 minutes is a inconvenience.

Rush hour should have a shorter arrival time like say train arriving every 6mins

That seems extremely long between trains during the week as normalcy should return by then.

I am an essential healthcare worker that relies on the metro to get to and from the hospital and this would significantly affect me

No porque el intervalo de horario es muy extendido

This seems like a way to overcrowd the trains and would take significantly more transit time to ensure I got to my location on time. I prefer trains every 5-7 minutes.

I rely on the train's constant arrivals in order to make it to work on time!

Trains should arrive at least every 15 mins on all lines

It is not optimal but does allow for planning.

Once ever 30 minutes!!!!!! Are you crazy? During rush hour, and the trains will be packed to the gills.

Incredibly inconvenient for traveling, especially when coordinating with others or other modes of transportation (metro to airport, metro to Union Station Amtrak, etc)

The infrequent timing of trains (30 min, 15 min) would reduce ridership even further. I cannot see how this plan is sustainable. The need to rein in costs to offset decreased revenue is understandable, but not by enacting such a drastic measure.

Red Line cuts would make it harder for me to get to work.

None

This would prevent getting to work

I will rely on the metro to get to work, and limited schedules will impact my ability to get to work on time and get to classes after work.

Proposal to operate Metrorail service every 30 minutes

I think it's a great proposal! The DMV is always on the go and having this transit operating at that capacity helps tremendously

This would mean 30 minute wait for any trip with a transfer

Assuming continued risk of COVID in the community, this would increase risk by increased time spent in proximity in stations and higher density on trains. This seems like a bad idea.

You might consider keeping schedule for connecting lines on bus routes, and getting more courteous drivers, they seem to think it's funny to take off on someone who's running to catch it

I use the metro to get to work and would really like the current work week schedule - trains coming every few minutes

I feel Metrorail should stick with non-rush hour schedules to maintain budget until more funding comes in to maintain other services.

Due to the pandemic I have stopped using metro train/bus. I'm speaking for the people in my family that NEED Metro to get to work.

30 minutes between trains is ridiculous

None

It seems like a very long time to wait, however considering the circumstances it sounds reasonable. As long as NO train takes an hour to come. For example: late night 8pm or so

30 minutes is too long. Please consider 20

That's extremely limiting to folks out in Springfield

Length of trains would have to be increased. No 4 or 6 car trains. Is there any way to safely run 10-car trains?

Hospitality industry personnel work 24hrs are lowest paid and most likely to need reliable public transportation

I have retired and I rarely ride the subway. I ride the trains to doctors appointments, I will adjust my schedule and leave home earlier so I can make my appointments on time.

Some lines like the green and the yellow may need more arrival times when more people start going back to work. 15-20 mins would be better than 30 mins

People work late on the weekends and need to get on the metro

Every 30 minutes would not work. I take the bus and train daily and even on rush hour time frame it takes me over an hour each day to get to and from work.

Mucho tiempo

Lots of people take bus and train. If the trains keep their schedule, busses should too. Oftentimes, we are running to make a tight connection.

I really need the green line and orange line to operate on a peak sched with frequent service times just as they do now. I'm a frontline healthcare worker and I rely on metro to get back and forth to work during peak times

How will weather delays affect this plan? 30 minutes is, for me, the most time there could be between train arrivals and it still work. What about staff call outs? Will those affect train arrival times?

As long as the timings on the train match with the busses I catch, or that I can time it with my scheduled time I leave for work, then it's fine.

30 minutes is a huge wait! Especially if it doesn't go the full length of the line. Or your connection is delayed and you miss the other line and have to wait 30 minutes! Not reasonable.

I take silver line when I am late from work

Me parace bien la propuesta

It needs to be more frequent regardless of line or day of the week. Waiting thirty minutes or possibly more if there's delays no matter what day of the week is absurd

Esta bien porque uno necesita llegar temprano a los trabajos todos los días

While I understand the impact the pandemic has had on our economy and metro ridership, 30 minutes is too broad a timeframe between trains. 15-20 minutes is a better idea, if such a change is absolutely necessary. Also, a train schedule should be developed so that people who rely on metro as their sole source of transportation would be able to plan their travel. Remember, you have people that would use metro rail to get to the airports, and timeliness is critical.

Deben transitar menos los sábados y domingos ya que esos días no hay muchos pasajeros. De lunes a viernes es necesario que circulen más en las horas pico.

Metro is essential to our country's recovery from Covid

Having the rail run differently would put a strain on the buses. More people would be trying to be at a certain location at certain times to overcrowd the bus.

My only way to travel in VA, DC, and MD is by metrorail and buses; it is very difficult and often unsafe to wait for printed times as a handicapped elderly person.

I work later at night and I need more frequent service

Proposal to operate Metrorail service every 30 minutes

Metro is my main transportation. I already spend time waiting on metro everyday and catch Uber on Sunday mornings because metro opens at 8:00 AM. I understand budget, but please, let metro rail and buses run regular.

I understand that these have been rough times but, some people (me included) depend on the metro to get us places for work, school, ie. You could say that we should plan to arrive around the time of the train but, that's not as realistic as you may think. I strongly believe you should reconsider the times.

It should be the same times throughout the whole entire metro stations.

I depend on the bus and the train and only traveling to the Longworth Bldg..all those sts are already cut off..my transportation budget has gone from 20\$ a wk to roughly 50-60\$ Im already disturbed..

Will take too long to commute

It will make me late for work.

keep rush service

OK for weekend, not OK for weekday rush. Opening and closing hours are important, but not described in the proposal.

Too long to wait. Should be 8-12 minutes

I need the morning rush in order to give me flexibility if I miss a train.

Every 20mins and 10mins for metro stations with more than 2 train line.

I live near a station only served by the Green Line and don't own a car. As someone who will likely be working from an office at that time, this would greatly affect my commute.

I live in Rockville, so this does not directly impact me, but sounds similar to previously done Metrorail things

This is unusable for transportation

I don't own a car so metro is my primary means of transportation. Waiting 30 minutes for a train would make metro near unusable

I don't have to use those routes as I live close to my place of work. It may pose problems for people who have to travel long distances for work.

This will make for very crowded trains particularly on the green and yellow lines where persons live outside of the downtown area in DC. Please consider trains every twenty (20) minutes to ease the crowding and reduce travel time for passengers that live outside of the downtown area.

Reluctantly, yes since I currently appreciate the frequent trains which allows me not to worry about timing my trip. If this reduction in service occurs it would be vital for trains to be on time.

A standard schedule is a plus but since I transfer from the Red line to the Yellow line it seems I could be waiting a while depending on how they sync up.

This would be too infrequent to be useful to riders, especially essential workers who are more likely to live near stations only served by 1 line

People will be back to work then and the morning commutes will be fucking hellish if trains are only coming between 12-30 mins depending on the station.

Too long between trains

Too far apart

None because I don't take subway to work

shorter headways can drive greater ridership because of passenger psychology. consider shortening headways from 30 to 24 minutes.

This is so infrequent, when people start back at work this is going to make metro unusable.

The times are way too far apart that negate the purpose of mass transit.

Based on the travel situation during Covid in 2020 this doesn't work at all since the Travel times of Metros and bus are not coordinated enough. A usual 20 minute commute would turn into a 40-50 minute commute for me

Once back in office, I will need to rely on the Orange/Silver lines to get me to Rosslyn in order to transfer to the Blue Line to my office in Alexandria. This option would make commuting to my office next to impossible. I might have no choice at that point but to drive

I understand people don't want to pay the fare yet, if you raise the pricing up more, you will see a huge decline coming in 2022. It is a fact that Uber and Lyft do cost in order to go directly to where they need to go, yet to skim service all because of budget will be detrimental to service for all riders. Even for the ones who need to go to work and depend on Metros service.

It stinks to miss the train and have to wait 30 minutes

Because I have to travel to do essential shopping as well as other essential errands so it's important to keep this line open

Do this, and I'll buy a car. You'd be murdering the planet with a policy like this. Trains every 12-30 minutes is absurd. I'd never be on time to work again.

Proposal to operate Metrorail service every 30 minutes

Could make it work, but it'd be a challenge.

30 minutes is a little long but 25 minutes would be great. Many of us work from 11-7am and midnight to 8am and need to make sure we can get to work to pay the fares on buses and trains.

The buses that being cut are majority of the bus need to get to important location like job, grocery store, doctor appointments, hospital and family homes. A6, P6, X2, U5, V2, & V4 play an important in our community . Please consider these bus to stay running.

It is feasible because a rider could plan their trip.

I think there should be more arrival times during rush hour than non-rush hour.

This would be good because it gives you time to be early what I mean by that if I know they run like that and I gotta be to work a current time it allows me to improve time management

It going to be so many people at one time.

Unfortunately I don't use Metro since I am retiree.

I would prefer more frequent silver line service but this is workable.

I just have to plain accordingly

seems fair and workable

Vienna/Dunn Loring Orange Lines are already packed at 8 min. 30 min would be impossible to get any additional passengers on after Vienna

We use Metro for pleasure rather than business, so longer wait times would not be a problem.

If I were to rely solely on metro for my commuting needs, this proposal would not be the most convenient but I would be able to make this work for me.

This schedule is doable with proper planning

N/A

This new proposal conflict with my work schedule, trains running every 39 mins is outrageous!

I wont rely on metro rail service if trains aren't coming frequently enough during workdays.

How will this affect volumes in the train?

Trains should run every 5 minutes

15 minutes seems a long wait with crowded cards during peak hours - I believe we will have peak hours once again.

more trains during rush hour and extend rush hour timing. I expect to be in the office as will others. trains are crowded enough. there are always mechanical issues causing delays

Horribly inconvenient, but I can make it work.

I still use trains at peak hours to commute. Please keep higher frequencies during peak times.

As long as the Blue line arrived no longer than 15 minutes apart

I would assume next year school will be open and most will return to work. This would mean over crowding for both.

I'm not to sure that cutting out rush hours is a smart thing because it's well needed and it allows customers who missed one to still be able to make the next.

I still dont know for sure if Ill be going back to the office one day a week or more often than that. Assuming its only one day a week, it should be fine. If its more often, then I would have more difficulty catching a train.

Inefficient. Trains crowded at some times and empty at other times.

Please do not decrease ride frequency. Increase prices and invest in electric and self driving train to cut labor costs

This would be terrible. Would change my schedule of getting to work. Would increase possibly of being late. This change would discourage me in planning to stay in this city for longer. If the public transit isn't easily accessible that makes every aspect of life harder. Even very basic things like running errands for groceries.

This would very probably reduce ridership even further especially for commuters who ride internal to the system and not to or from a terminus. There is a diminishing point of returns as time between trains extends beyond 10-15 minutes and even more so for those with changes between lines. If service is not frequent enough or reliable, people will go elsewhere. For instance, the circulator is faster and cheaper for me but it is almost always unreliable so I opt for metro. A 30 minute wait between trains multiplied by two with a line change will drive me to other options.

Any lines at metro center or Lafont Plaza should run 6 to 10 mins most busy lines to use

Proposal to operate Metrorail service every 30 minutes

A fixed schedule may make some trains full, but having a fixed time would make it easy to schedule around. I hate that there are such different schedules between peak and off peak hours. I never quite know when the switch happens.

Inconvenient times and missing one train would push my eta back too far.

These changes would require daily rides to manage their time.

Hours would have to run late enough

Would be an inconvenience to riders throughout the entire DMV area.

Weekdays you need more frequent service to get to work.

I dont ride the train

Since I would only be riding Metro for non-commuting, it would be fine, especially if WMATA listed the arrival times somewhere (preferably online and/or outside the station--why go into a station when the trains not due for another 30 minutes?--might as well keep doing what I was doing).

If I have to be back in the office (post COVID), every 12 mins may not cut it. Right now, this schedule would be fine.

30 minute-interval seems to be too long for many passengers, as they still need the public transportation for work and lives. I think 20 minutes would be appropriate during non-rush hours.

The infrequency of the trains makes sense during the pandemic.

I don't take red line often

Need to be more frequent than every 30 minutes

If I am waiting for 12-15 minutes and the arriving train is not working, that means I have to wait another 15+minutes for the next train. This will not work considering I am dependent on the metro system to run efficiently.

I think this proposal would work best for those people who work at restaurants and bars late at night.

As long as times are posted and trains are on time the time between trains doesn't matter as much.

In 2022, I fully expect most of the country to be vaccinated and to be busier than ever. As a result, more trains running during rush hour will prevent overcrowding and still provide some type of safety protocols. Metro needs to stop focusing on the bottom line in dollars and focus more on customer safety.

El tiempo de espera es importante para mi. Yo llegar a tiempo a mi destino

Because I normally use Metro for work travel, I want to be sure that rush hour service is not affected. That said, I often work late nights and find that off-rush hour times tend to make a commute home much longer, even if at 30 minutes at a max between trains. If it could be made system wide that 12-15 minutes between trains was the norm, that would cut down on times waiting in stations, potentially around other people and increasing risks of transmitting COVID.

As people come back to work in offices, those trains are going to be full and the stations will be dangerously overcrowded. Remember when people couldnt get off escalators after a train had to unload?

I do not believe this plan would work given the infrequency of trains; however, I currently do not rely on metro rail.

As long as nothing changes during rush hours, I think people will be fine with this.

While it is hard to tell, but I cannot think that this would be reliable for me to get to and from work and catching buses. 30 minutes isnt frequent enough. This doesnt seem like enough trains to hold all commuters. Trains every 30 minutes will make more people non each train creating more health and safety issues. Trains need to run more than every 30 mins

Every 10-15 minutes for the red line. I have to work and this is not conducive to my getting to work on-time.

Is possible you can still keep trains still running every 8-10 mins please and thank you.

Sometimes I might be in a rush to get to my destination as soon as possible.

given the current circumstances with Covid 19 it is a reasonable proposal to me.

Im currently working and I have to be able to connect from the bus to the train. At this time the trains arent running every 6 mins during the peak rush hour times

I work very early mornings and Metro already BARELY gets me to work on time. Reducing the number of trains would likely mean I have to get up earlier and get home later, totally to over 30 minutes EVERY DAY.

I believe this would work for me although it would be much less convenient

Every 30 minutes might be too far apart.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Reduced ability to get to where I work. |
| During work days the trains need to run at least every 15 min during peak commute hours. |
| Though ridership is down in 2020 and 2021, it may return to near-pre-pandemic levels by 2022. If so, this plan would result in packed trains, which would still be a risk to public health. |
| Please consider additional trains during rush hour. Otherwise this is not a viable commuting option for many. |
| This plan would result in me never taking the metro again. There is no way I am going to plan my day around catching a specific metro at a specific time, only to miss it by a minute and then have to wait half an hour. Forget it. You would generate zero dollars in revenue from me. |
| As long as rush hour arrival remains the same |
| Each day I ride the train there is ALWAYS some sort of issue the one thing you can count on is METRO having issues daily!!!whether its track related ,personnel related, anything there is ALWAYS SOMETHING.As a native Washingtonian who has seen METRO from the beginning stages to now I can honestly say The Glory Days of Metro ARE GONE!!!! |
| It seems to be a significant change for 2022 to go from what was 8 minutes between trains to 12 minutes in 2021 and then 30 minutes in 2022. Is it possible to spread the pain out over the remainder of 2021 and 2022 meaning 15-20 minutes between trains starting now and through 2022? A half hour between trains puts increased pressure on people's professional and personal schedules and planning. |
| Metro is all or nothing for me. If service is degraded, I cannot rely on it for my daily commute. |
| I currently commute on metrorail daily and this would greatly impact my commute as well as possibly further decrease riders. |
| That is not frequent enough to meet my needs. |
| There are people who cant afford cars or parking in the district and their is limited parking. To help alleviate car traffic, Metro should run ore frequently during rush hour-max every 6 min during stations with more than one line |
| Its difficult to make an estimate for 2022 when there are still a lot of unknowns with the coronavirus. My primary need for metro is when Im commuting from Dunn Loring to Farragut West during the weekday for work. But, this seems like the best option for the circumstance |
| I use the train to commute to work, and 30 minutes between trains, even during "rush hour," would complicate travel to/from work. |
| It won't hurt people to plan ahead a little to time buses and trains right. I do it even now with buses and trains going at their current rate. |
| Do not charge rush hour fares if there are no additional trains |
| I totally understand the changes and would definitely agree to it. In order to prevent layoff. |
| Once I am back in the office, I rely on the metro to get to and from work. I intentionally live near a station with two lines so that I never have to wait that long for a train. Waiting 15 minutes for a train during rush hour would not be feasible for me to take the train anymore. |
| Trains need to arrive every 10 minutes or faster. |
| Would work on weekends but unlikely during the week |
| This plan would limit my after-hours travel into and out of D.C. from my home. |
| Metro service should stay the same |
| Train timeing is to long |
| This plan seems like it would be a nightmare at rush hour. |
| A rush hour really needs more frequent trains from the outer stations into D.C. 30 minutes is too infrequent and will give crowded trains. The weekend schedule does not matter to me. |
| Too long of a wait at the stations I use, especially in the morning. My commute is supposed to be 25 minutes by train, but is usually closer to 30-40. This could add even more time with waits and crowded trains. |
| I ride the bus primarily |
| Riders would need to plan effectively and possibly change work hours |
| The workability of this proposal would depend on the precise schedule -- in particular, how early the trains started running in the morning. |
| I take the bus |
| 15 minutes between trains would make my commute impossible. I would need to consider an alternative form of transportation to and from work and social activities. |
| Sounds like a recipe for disaster. The trains would be extremely crowded. |

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| It would make the working class late for work |
| This sounds great. Everyday, seven days per week, I could expect to get a train every 15-30 minutes. Clear and concise. This would very easily be communicated to our national and global visitors (who have enough other things to be confused about). |
| Every 30 minutes is too long of a wait for riders who depend on the metro to commute to and from work. If anything the plan to cut trains and close stations would further deter riders from seeing the metro as a convenient and efficient means if transportation into D.C. If you need to recoup operating costs lower the salaries of CEOs and Board members. |
| I only use the silver spring line to head home when my shift is over. It also depends how late Im getting off for me to determine how it will affect mw |
| Missing one train would triple my commute time or make me late for wor |
| I take one line from home to work every day. If the time between trains increased by 30 mins my commute would suffer. If a train is delayed or taken out of schedule suddenly I could be 30 minutes late to work. |
| The current pandemic may be declared as over and this an influx of people would be returning to the office. I proposed that during rush hours trains should every eight to ten minutes and during non peak hours trains can run every 15-30 |
| This looks like laziness by Metro. |
| Im retired and feel for people who work; this may not work. |
| This is a terrible idea and we be a good reason for me not to take the metro anymore. |
| Sounds reasonable |
| This schedule should work and relieve crowds due to its routine nature |
| More trains during rush, fewer on off peak... |
| Obviously, 30 minute wait times is way too long. |
| Changing to every 30 minutes to stations that arent Red Line is absurd. Are there plenty of individuals who ride Red? Sure. But I cant just alternate between the different lines Yellow / Blue which are the only transfer stations. The lines go to entirely different places, they are not alternatives so having them alternate every 12-15 mins means nothing to me. |
| This is far too infrequent considering trains on weekdays presently arrive every 7 min or so |
| Metro is the only way for me to get to work . I work in dc and live in Virginia . I moved just to be close to Greensboro station in buy every month metro pass |
| It primarily depends how soon people get vaccinated and business/offices open in the DMV. For no its a yes |
| Continue shorter durations between trainsDuring rush hour. |
| I disagree with this proposed service reduction in the strongest possible terms. If you want ridership to decrease and lose even more money, this is a great way to do it because a train that only runs every 30 minutes is useless to the people who rely on Metro to commute to work, medical appointments, and other essential reasons. |
| I am not currently using the metro to commute but if I were 30 minutes would be a big gap if transferring |
| It would work but would present a significant hardship. |
| This would be a hardship |
| Waiting up to a half hour for my commute would be very detrimental to my job performance. I would end up waiting longer than I would spend on the train. |
| I am not working |
| As long as I get to my destination on time |
| I use metro doe work and will be late each day with this change. |
| Not frequent enough |
| there should be some rush hours in which the frequency would be shorter than 30 min |
| That's a fair compromise. However, I do prefer the old rush hour schedule |
| 12-15 minutes are too slow |
| This alone would push me to consider parking in DC and abandon metro. |
| 15 minutes between trains appear to be reasonable during rush and non-rush hours. |
| Once everything is back in person, this is not nearly enough service for everyone that will need to get to work. People will not be able to get to work on time, trains will be massively overcrowded, and road traffic will become much more congested as people seek alternatives. |

Proposal to operate Metrorail service every 30 minutes

Once everyone gets back to work the trains will become more crowded then before. If the trains break down this would cause the platform to become over crowded then before. Metro is supposed to be convenience to the public, but you are finding mores ways to inconvenience the working people.

Not ideal but seems like a workable solution.

I take the orange and red line to work. And bus to

I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus

No reductions should be done in service, WMATA needs to make cuts in administration and non service related areas.

Every 20 minutes is already a stretch.. Going to every 30 minutes would mean leaving home an hour early just to make it to the pentagon on time. Aren't you supposed to be encouraging public transportation? This would make sure your ridership goes to zero.

Every 30 minutes seems a bit long, especially during work hours. 30 minutes will cause unnecessary crowdedness

12-15 would be a big adjustment when trying to get to work

Every 30 minutes is far too long for a city full of commuters. Those trains would be absolutely packed each ride.

As long as all stations are open to a certain degree every day, I'll be relieved!

I rely on Metro for commuting. Having 30 minute intervals is too far apart

Having service every 30 minutes would make it harder for me to get to work on time. Waiting an extra 15 minutes for the next train means I could be late for the start of my shift.

As of now this plan will work only because I'm working from home but if I had to go back into the office M-F and had to depend on Metro this would be terrible as it will be no rush hour trains and the timeframe would cause me to be too late for work or too early.

I depend on the metro silver line to get to and from work on weekdays. I would have to greatly alter my daily plan, making it very difficult to get to work on time. And if I accidentally miss a train, I am then left to wait 30 minutes for another train on a windy, sometimes freezing outdoor platform.

This plan would increase the length of my commute by as much as 30 min each way. As a customer that both lives and works in Northern Virginia and attends grad school at night in Washington DC and relies heavily on DC Metro to get to all locations, this would create a major conflict with my ability to get to class, work and personal events on time. I have also tried to be environmentally conscious and avoid using a personal vehicle or ride-share/taxi - this would likely force me to use metro less and automobile alternatives more.

not often enough. might as well take a lyft

Most of us depends on being on time for whichever we need to get to or if we use your metro train services we need to be on time

Why does it stop at Grosvenor-Strathmore? There are more stations past that.

Although, Im weary of the rush hour time slot. I dont want to many people piled on the platform during that time. It would cause too much confusion and problems if people are not properly spaced out.

Waiting 12-15 minutes for a train, especially if you have to switch trains and risk waiting that long for both, could be extremely time consuming, inefficient, and unreliable for customers.

Trains need to run more often than that, particularly during rush hours.

Higher frequency during weekdays would be important after the pandemic.

During rush hour trains coming only every 30 minutes would be insane! In normal times the trains are crowded as they are, with 6 minutes between trains. If you miss your train, or the train is so full you cant get on,, the next one being 30 minutes away just doesnt work for a morning commute. If your goal is to shut down, this will do it. There is no way to rely on metro for a commute if you are automatically 30 minutes late for work because you had a late bus or too many traffic lights

After the pandemic (if ever), there may be a surge in ridership so an adjustment would need to be made rapidly otherwise the trains may become overcrowded which is dangerous both physically and biologically; could surge viral spread of endemic and emerging pathogens as observed with 2020-present with COVID.

I use the green line to commute to work and trains arriving every 30 minutes would be unsustainable.

There is too much time between trains

This would make commuting very difficult - Metro becomes more of a commuter rail with a fixed schedule than a frequently-running and reliable mode of public transit.

Service should be every 10 minutes during morning and evening work rush hours.

Very promising plan.

Metro rails are not reliable enough on a daily basis to be able to plan to catch the exact same train everyday to make my commute. I would not ride metro with this plan.

Proposal to operate Metrorail service every 30 minutes

I take the M6. You plan on cutting a bus line that's the only way people in my neighborhood can get down Pennsylvania Ave. This is the only bus that brings me home. You CANNOT CUT THIS LINE!!!!!!

It may work for me however I dont usually ride the Red Line.

Better than nothing but sounds like the beginning of the end.

Agree with more frequent service on Red Line, compared to elsewhere

Would it be possible for the redline train to run every 15 minutes for all of the red line stations?

I think services should be increased during rush hour & reduced at times with less demand.

I am a fare paying customer. This proposal will greatly affect my means of getting to work, shopping, and going to medical appointments. However I do understand the budget constraints that Metro is undergoing.

I frequently commute from home to work on the Orange line everyday except on the weekend if Smithsonian is set to reopen beforehand.

This proposal works for me because I live on the red line and dont need to transfer to get to work. I dont think it will work for commuters who need to use other lines. 30 minutes is a long time between trains.

Working peoples special needs during rush hours should be respected. Most important for personal as well as business needs that rush hour traffic have more frequent arrivals.

While every 15 minutes for the rush hour red line is less than ideal, I could make my own adjustments to make it work.

My shift at work might changed which would make this difficult for me to decide right now if that above plan would fit my needs.

If trains dont arrive more frequently during rush hour, then its possible that the trains will be too packed to board, which will cause people to miss appointments. This may cause a further decline in ridership.

Should operate more frequently during rush hours.

I take both a silver/orange line train and a red line train to work every day. While it will make my commute longer, I can adjust to longer waits at each station.

No comment

Unacceptably long wait times between trains.

Businesses would have to adjust their expectations for workers arrivals.

A 15-minute wait is tolerable but not 30 minutes.

Trains will be incredible crowded, and unusable to use as quick transport around the metro DC area

Main transportation to and from home and work

I mostly depend on REX

This is a knee jerk reaction to the pandemic. Newer stations that just opened should be closed. Stations with low ridership that are close to heavy traffic centers could have times altered or could be closed. Especially if there are multiple stations in close proximity to one another. Primacy goes to rush hour traffic and well established end point stations.

30 min is way too far apart and with the expectation of increased riders in 2022, trains will be overcrowded with the next train coming in a half hour

As someone who uses two lines to commute, this would significantly extend my weekday commute

Me parece muy bien el plan, aunque recomiendo que en horas no pico podria el intervalo de minutos podria aumentar a 30 minutos para ahorrar recursos.

This plan doesn't work for me because 30 minutes is too long to wait.

Depending on the line and how far Covid reform has gotten it could get awfully crowded.

Every 15-20 minutes would be ideal... Making every effort to coordinate schedules between transferring trains(ie., from red to green, at ft. Totten).

Rush hours time between 8min and 13min is good

If back to work in person in office this would NOT work for me. Would need more frequent arrivals.

Trains will be much too crowded during rush hour.

As a retired person, I can avoid the impossible crush of people during rush hours that this schedule would cause.

It would work for me because I'll probably only use Metro for fun weekend activities, not for a daily work commute.

Would be doable at every 10 mins

Every 12-15 minutes is way too long to wait for a metro.

It would take more planning but it would be workable (not ideal but workable) and it would be helpful if buses (all regional busses) adjusted accordingly so that there would not be huge waits between drop offs and arrivals from busses that go to metro stations.

Proposal to operate Metrorail service every 30 minutes

This isn't a terrible plan, but 30 minutes is quite a long time for folks on the outer fringes. Maybe a compromise, something like 25 min on weekdays?

The consistency of the plan is appealing. Would the trains be longer at all times.

The stations will be too crowded and it will be a nightmare. It will make less people take the Metro which won't help WMATA's money issues.

I believe the worst of the pandemic will be over and ridership will improve.

This plan is not workable unless the train schedules are specifically designed to enable efficient transfers.

It wouldn't be great but I could get by with trains coming every 15 minutes.

I need to be at work in person.

Having to wait even 12 min for a train to work in the morning would make my commute too volatile to be viable. Also, trains were oppressively crowded during rush hour before! This would make things truly miserable, and might drive me off Metrorail entirely.

I would love this.

None.

Does the red line have the highest passenger volume? If not, why do the red line trains arrive in 15 minute intervals while the other trains arrive in 30 minute intervals?

Why not have the Green Line trains arrive every 12-15 minutes as well?

How crowded would the trains be? Would only 30 min trains be able to accommodate riders appropriately during rush hour? Especially with the most likely timeline of things "returning to normal" in spring 2022? Please study the numbers for this.

Making service less convenient will only deter riders from selecting metro for their travel needs.

This would increase my travel time and the trains would be too crowded. Driving to work would decrease time and crowded trains.

There should be increased service during commuting hours on weekdays.

No one in our household uses Metrorail. It is a great system. But it is not conducive to how we work and live.

The hours of operation are more important than the interval except at peak hours as necessary to accommodate traffic.

30 minute headway during rush hour/on weekdays is unacceptable. Especially if the rush hour fare premium is not terminated as well.

There should be more service on weekdays.

The difference between weekday & weekend use is dramatic.

One of the reasons that I would take Metro for business is the limited wait times. Making me wait longer is an inconvenience.

15 minutes isn't a long time to wait.

To have to wait 30 minutes for a train from Reston if I just missed a departing train would not be worth it. At that point I would rather take a bus. And frankly, even the possibility of having to wait 30 minutes for a train would deter me from taking the metro even if I believed I could catch the train I wanted. I understand you are in a tough position, but you are likely to lose a lot of riders from the geographic periphery of your service area if you implement this change which would also contribute to budget deficits.

I expect to be commuting to work regularly (I already am now) and would need increased access to the metro trains.

I am a Security Officer licensed in DC, MD, & Va. When I work a shift ending at 11pm, of course the subway is no use to me. If I'm working in Bethesda, I can get to Anacostia on the bus, however, I have to walk the rest of the way home from MLK & Morris rd.

I would prefer trains would more often than 12 -15 minutes, probably during rush hour they should arrive every 5 - 10 minutes cause the platforms can get crowded.

People will need to start going back into the office by mid/late 2021 and will need reliable train schedules to handle the flow of rush hour. In addition having people crammed into one train that runs every 30 minutes could cause people to not fit on the train and would have to wait an additional 30 mins for the next one.

Hopefully this proposal also reflects the metro buses as well. Would these changes require more employees and an increase in metro fare?

It could work but not preferred. If the train schedules and next train arriving are accurate planning around this change would be possible.

30 minutes is a long time to wait as I travel on the green line.

The services from stations with one line, like the orange, many lower income riders depend on them as their main and only mode of transportation to and from work. Reducing the frequency/reliability of trains will put an extra burden.

I think trains should come every 15 minutes that would be much better and keep down a lot of people waiting on the Platform for trains.

I hope federal aid comes through but when I return to work after being vaccinated, as it is I have an hour and a half commute involving auto plus two Metro lines (Orange and Red) If trains ran less frequently, my commute could easily reach the 2-hour mark! Please no!

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| rush hour would be impacted by this leaving the station crowded |
| People may need to resume to work in their offices. It is imperative that during rush hour that trains come with more frequency. |
| Half hour departures during rush hour is too long to wait and, in my opinion, would further decrease ridership |
| No change |
| 30 minutes is too long in between |
| H. En he e tabacNot frequently enough to plan for one missed train and making it to work on time in the morning. |
| Longer wait times for trains means that I potentially miss connections with buses and my commute time doubles. |
| The economy needs to reopen yet your proposal is to reduce the capacity of transportation. This will ensure overcrowded trains at the very moment we need more trains not less. |
| Would there be a difference in cost during peak hours? What time would rail end and start each day? |
| 30 mins is too far apart |
| I have to be by work at 8:15 and the current service hasn't let me down yet. I like how it is for the red and green lines. |
| The red line frequency of every 30 minutes at Shady Grove would make my commute near impossible and potentially cause loss of employment for me. No parking is available at my place of employment and I am not able to telework. The metro is the only way for me to get to my work and successfully maintain my current position. Please extend the every 15 minutes frequency out to Shady Grove. |
| I travel from Glenmont East falls ch daily with need connect 3A bus to work which runs only one hour or 1a which runs eve 30 minutes and woukk look d provide little Lea way in train has delays and may make a long commute 1 hr 30 min approx even longerI may very well choose to start driving daily.... |
| Doesn't effect me as I am on the red line |
| Definitely it will affect my commute on the Red Line |
| This would not meet the demands of my commute and I would be forced to find another way to get to work |
| I would prefer this option over closing stations such as Cleveland Park. I am concerned that this will not be enough trains on the red line when the government starts working in person again. I would choose biking over metro if I regularly can't get on a train due to it being full. |
| The big problem is there is zero effort to ensure riders pay for fares. Every time I get on metro I observe countless people push past turnstiles because no one even says anything to them EVER. |
| Ill need to keep reading for the Green and Yellow proposals. |
| I commute daily between Shady Grove and Farragut North. I pay premium to travel during rush hour and 30 min wait time is completely unacceptable. Weekday schedules need to be way more robust than every 30 min. |
| if the schedules are clear and posted so we know when the expect a train, then this would be ok. Of course more trains is better but if that means increasing pricing, then this would work |
| There is a lot of people need Glenmond station. To serve it every 30 minutes is a big mistake |
| Every 30 minutes on weekdays is too infrequent. If I miss one train then Im immediately going to be at least 30 minutes late. There is no margin for error. |
| My commute would be much longer with trains every 15 minutes. |
| It would take more planning on the customer which may result in people taking more Ubers and Lyft. |
| My trip starts at Strathmore. |
| Red line 15 minutes from Shady Grove to Other end completely |
| Current schedule is better |
| Too sparse on the blue line, unless the timetables are so predictable and accurate that I can time it perfectly at the station, it's not workable. |
| If you decrease the train times, people will not use the metro and you will lose more money. The way to increase ridership is to increase train arrivals. If you decrease to 30 minutes, this is the death of the metro. |
| Would every train by an 8-car? I dont see how this could work (30 minutes between trains) unless the trains are bigger. Youd have to be 100% 8-car. |
| Not frequently enough |
| I need frequent service on weekends |
| Timing does not allow for reliable transit to work. would need to rely on other forms of transportation like ride share to get to work. |

Proposal to operate Metrorail service every 30 minutes

| |
|---|
| I leave my home at 7:15 to get to work for 8:30. I am already leaving earlier than usual, and if the bus is delay then I miss my train resulting in my late arrival to work. Waiting for 15 minutes between trains in rush hour is a bit too much and it does cause me a lot of stress and anxiety. |
| This is too infrequent for the red line. This is already an overcrowded line. If covid is not under control by 2022, I will not feel safe riding a more crowded train. |
| Every half hour is unacceptably slow. |
| 12-15 is too long of a gap., especially during rush hour. 8-12 minutes would be preferred. |
| This would be incredibly disruptive to my daily commute to work. As an essential worker, I have had to get to work daily and have already had to deal with multiple service disruptions that has caused added stress to an already incredibly stressful situation. According to this plan, my station would again be closed resulting in a 1.5 mile walk to the next nearest station. |
| Reducing service from 11 to 9 would make it difficult to get home from work. |
| If trains are too infrequent, then I cant justify not driving. |
| This is too long of a time gap for my commute. |
| 30 minutes is far too long. 15 minutes max. |
| 30 Mins is a bit too long, shorter times would be better. |
| I can live with this plan even though Id prefer trains running more frequently. Since I am now retired I dont need to rush to the office. |
| Is this an increase or decrease in frequency? Please outline the current situation for accurate responses. |
| Just have all trains run every 30 minutes - no turning back between silver spring and grovsner |
| I commute to work in DC M-F this could make me late for my daily job if I miss a train. Also on the return trip. |
| my son rides the red line to school, this may affect his commute to Ft Totten station. |
| 30 minutes seems like a long time to wait, but I suspect that would force more planning on the riders part. |
| I live close to McLean station and rely on it to commute to DC where I work |
| Metro is a valuable service regardless of other riding options. Adjusting arrival times based on ridership is wise, especially for those stations sharing lines where a train is still showing up every 5 min regardless of line color (like Foggy Bottom). |
| That's stupid. The two track style was stupid, what you should do is add 4 track trains and separate the blue line so you can serve the georgetown area. |
| I primarily commute during rush hour on the Red Line, so this would completely change my perspective on the metro. I would reconsider driving instead, which would be upsetting in many ways. |
| The only reason why i opposed this is because the buses don't line up with the train schedule as is. Cutting train service down to every 30 minutes would make people have to wait longer for train after getting off busses. |
| This will delay workers who physically have to come to work. The will make Metro commuters late and connecting lines from services like Marc even later. This proposal will also go against clean air for reduce CO 2, commuters will have to consider driving their own vehicle, taking Uber or Lyft. |
| I use Grovesnor station |
| I live and work within Silver Spring-Grosvernor on the Red Line, so it might be an inconvenience at most for me personally - though I imagine I might feel differently if I lived in the affected areas |
| I use the Forest Glen metro - during normal work days the train already gets packed with people and only being available every 30 min would make that even worse. With potentially needed more space for travelers for COVID safety (assuming we're not 100%) that would make me very uncomfortable. |
| This would greatly affect my work commute. It would add up to 15 min if I missed a train on the way to work. Red line trains should stay the same |
| It would definitely put a burden on planning the time to leave house and office. I need to transfer from the green to the red line. I would end up considering to use the car more often if metro becomes this slow |
| The decreased frequency on the red line during work hours could make me significantly more late. I'd advise having trains remain at an every 6 minute interval for peak commuting hours (7AM-10AM & 4PM-7PM) |
| This creates a disadvantage to those commuting to/from work. It will create overcrowding. |
| It may mean fewer trains running; however, it is predictable and constant and makes for easy planning by the ridership. |
| Im an on call employee, this definitely wouldnt work for me. |

Proposal to operate Metrorail service every 30 minutes

Every 30 minutes isn't acceptable. My work schedule flexes, and this infrequent service would likely force me to drive.

I would just adjust when I get to the station. As long as I know in advance what the timing is, this is not a problem.

I ride the red line every day to and from Silver Spring to downtown DC. This would severely impact me !!!

30 minutes is too far apart during rush hour. If this is adopted, I will be forced to commute via other means.

Long wait times at stations near the end of lines (particularly ones outdoors) will create a hardship for people in the winter months. Also, any delay in service will be compounded.

This would probably cause me to rethink whether I can commute from my current location once Covid is over.

Timing is inconvenient for those with varying start times in DC

I would be more likely to commute to D.C. by car than take Metro -- if this eventuality happens.

I work in old town and live in Loudoun station

With COVID it's not really smart to have trains running every 15 minutes. I ride the red line and it gets really crowded if the wait time is too long.

Since the red line is so busy it would not make sense to have fewer trains servicing these stations.

This plan can work during non-rush hours but definitely not during rush-hour. You cannot have a train every 30 during rush hours. This will end up in having super crowded trains and I hope the pandemic will be resolved by that time. I would suggest to have more trains during rush hour and less during the non-rush hours and during Saturday's and Sundays

More trains should come during the rush period

I would be unable to arrive on time for my shift at the hospital with the decreased frequency of trains

If this is the case, there needs to be a reliable tracking system so we know when each train will be at the station, so we can avoid waiting at the station for 15/30 minutes.

While I wouldn't mind the wait too much, this will result in more crowded platforms and cars.

The trains were already too full and too sparse before the pandemic - I'm not sure every 30 minutes or every 15 minutes is workable - especially when you have platforms like Crystal City or Rosslyn that are too small to support the surrounding growth in high density housing. I suggest you (who are making these decisions) ride the rails DURING A RUSH such as a game or other event from one of these tiny platform locations.

I am always early to everything however it's made more difficult especially when switching trains to get places

This proposal is a joke. Maybe people could plan effectively if Metro stuck to time tables but trains do not since Metro can't manage their trains at all. I will never use Metro if headway's are 30 minutes.

This is consistent. I value consistency. I work weekends. Knowing the time is the same every day simplifies my routine. This eliminates having to remember special days and times, and makes my travel experience easier. Especially when I use the same route on week days and weekends.

It would make traveling to and from work more complicated. A lot more waiting times

12 to 15 minutes is a lot of time to wait when you miss a train and that you have to be at work at a certain time.

This is a horrible idea and I may have to leave the city without proper transportation provision on the Metro

There should be more frequent trains on the red line.

I just think it's too infrequent schedule

Me parece bien y además reducir el tráfico automotriz.

Tons of commuters come from the ends of the red line to work in the District or in VA, MD. Reducing the frequency of trains would drastically impact my commute to work in DC because I am beyond Grosvenor-Strathmore as many people are. This would essentially cut off many workers from using Metrorail in the future.

The proposed wait time between trains is too long

Rush hour fees should be deleted since service is the same all day.

Possibility of waiting 30 min for a train is too hard to negotiate within a commute or for other obligations.

This is way too large of a gap between trains

Train cars during rush hour were already packed pre-pandemic when they came every few minutes. If they came less frequently, we wouldn't all fit on the trains, and I'd have to drive to work instead.

I think that if certain Metro stations are allowed to have quicker trains, then priority should be given to areas with low-income communities. These areas typically consist of low wage workers who don't have much flexibility on their travel options.

Changing the train time will have most people delayed for work.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Frequency is not ideal |
| The extended wait times will probably further decrease ridership given that commuting time on the metro will double in some cases. |
| That is a horrible idea. The trains would be very crowded and people would have less flexibility with working schedules. |
| With trains arriving so spaced out, there won't be space for everyone on the train when it does arrive. The reality is I will likely have to wait for more than one train to be able to even board. |
| With trains arriving every 30 minutes, it would be much more important for them to be on schedule for trip planning purposes. |
| People pay to live in DC to have accessible transit. Once people are vaccinated, we will use metro more regularly and will need more trains and more space on the trains to use metro safely |
| On the weekends, I tend to stay out later in the night and would like to have the option to use the train past 11pm. I like having the train come by as much as it does during the weekday, but I enjoy that it's open late on the weekends. |
| Would make commute to and from work longer. |
| They have to turn more often than that |
| The red line goes to Shady Grove so what does this plan mean for all stations beyond Grosvenor-Strathmore? The same applies to newer stations beyond Silver Spring. So I don't know what you do except things like raise fares to the point people cannot afford the system, keep petitioning policy makers and law makers, cut services (which this implies and isn't acceptable that newer stations get reduced service), and talk to Congress and the White House and the state legislatures about the possibility of ever reducing reliance on work from home once COVID vaccines, etc. work to the satisfaction of public health officials. |
| This plan is based on current ridership levels during the COVID-19 outbreak, but as the vaccinations become more available and more passengers have it, ridership will increase. Having delayed opportunities to travel (30 minutes between trains) will be a disincentive to taking Metro. |
| So long as the trains arrive and depart on-time and don't depart early this could work. |
| I'm not sure if it would be a negative effect because I'd just plan and schedule better |
| As long as bus schedules are coordinated with metro train arrivals during rush hour. There's no point on arriving to a metro station on a bus and waiting a half hour. It was tough going home at night waiting for a train or bus. I live 12 miles from DC and it took an hour and a half. I can't imagine that would be the new normal. I can drive and be there in thirty minutes. To me a three to four hour commute total per day more than that would be questionable. |
| I need the M6 because this bus takes me I can get the train or buses. |
| People depend on Metro especially during rush hour times. Since hopefully the pandemic will be at a close or at least nearing one, more people will be returning to work and schools. It would be a travesty reducing times |
| As I travel to and from Glenmont (to Foggy Bottom), the 30min will add to my already long commute. |
| This is a suitable approach if ridership is not near pre-pandemic levels. Having access to public transportation is a necessity because not everyone can afford a car. Some places of businesses, places of work are usually accessible by public transit |
| This would greatly increase my morning and evening commute times |
| I mostly take the bus, but this feels like it would be really hard for people if/when we get back to full capacity. I remember taking the red line at rush hour and each train 2 min apart was completely full! |
| I can't wait 30 minutes for a train. I will find a job in another state that doesn't rely on WMATA. I can't afford a parking garage in D.C. This is making me look for another job in another city right now. |
| Buena propuesta |
| I think that it would work during non-rush hours. Rush hours would be difficult |
| By January 2022 I expect to be back to work in the office. Therefore, more trains will be needed in order to ensure enough room for passengers commuting. Also, people are going to prefer having room on the metro. If we go back to riding metro and it's super crowded and service is slow you're definitely not gonna be increasing ridership. That will continue to impact revenue |
| It really depends on how dependable J2 bus service to medical center is |
| That level of service is far too low. To keep people safe and for metro to be a timely, reliable mode of transportation the number of trains/level of service needs to be maintained at current levels. |

Proposal to operate Metrorail service every 30 minutes

Trains would be crowded

Later stop time on Fri and Sat night Later start time on Sat and Sun morning

Since the red line is used more, it would be better for me to have it every 10 minutes instead of 15.

I ride metro to an essential healthcare job during weekday rush hour. Fewer train times lead to more crowds, unsafe environment, and unnecessary inconvenience.

I am working in medical center at the NIH and leaves in Dupont circle. I am working on a flexible schedule so I cannot afford to wait 30min for the metro to go to work or go back home

It would be better if they could arrive every 10 min during rush hour

I need to travel from Shaw to king street on the yellow line. Trains every 30 minutes would be awful :(

In addition I hope the 12-15 minutes would also apply to stops in which there low income workers use, I'm thinking of Columbia Heights and Howard Shaw on the green and yellow line.

I do not favor a 30 minute gap. Cutting back to 20 if needed is more helpful for passengers after life gets more normal.

It seems shortsighted to cut commuting service, at least permanently. By Jan. 2022, the majority of commuters will be vaccinated and well have a far better scientific understanding of the spread. I look forward to going back into the office on my old schedule (3 days in, 2 days work from home).

There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy

Thoughts: Having same Weekdays schedule on the Weekend is Positive change. Will the same rule applies for Buses especially P18, going to Fort Washington. Other Questions: Are we going to continue respecting the Social Distancing? Will Metro Executives continue to provide Disinfecting services to the Trains? That will be great

| Proposal to operate Metrorail service every 30 minutes (Spanish) | Translation |
|---|---|
| 30 minutos es inaceptable | 30 minutes is unacceptable |
| Quince minutos es mucho tiempo. Cada cinco minutos maximo seria mejor. | Fifteen minutes is a lot of time. Every five minutes maximum would be better. |
| Por el horario de trabajo era más conveniente cuando la frecuencia de trenes era mayor durante horas pico | Due to my work schedule it was better when the train frequency was greater during peak hours |
| Porque si pierdes el metro y tienes que ir a trabajar afectaria mucho y uno llegaria tarde. Tendria que pagar taxi o uber y eso afectaria mi presupuesto | Because if you miss the metro and have to get to work, it would have a big impact and you would arrive late. You would have to pay for a taxi or Uber and that would affect my budget |
| Yo creo que si pasan a cada 30 minutos estarÃ-a bien lo importante es de que haya servicio aunque eso implique para nosotros salir más temprano de nuestras casas pero también serÃ-a bueno que trabajarÃ-n al menos hasta la 1am porque tenemos muchos que trabajamos en restaurantes y hay veces salimos un poco tarde. Muchas gracias!!! | I think if they come every 30 minutes it would be good. The important thing is that there is service, even if this means we have to leave our houses earlier, but it would also be good for them to run until at least 1am because there are a lot of us who work in restaurants and sometimes we leave a little late. Thank you very much!!! |
| Muy tardado el servicio. | The service is very late. |
| 15 mins es mucho tiempo | 15 mins is a long time |
| la frecuencia de lunes a viernes deberÃ-a ser menor a 15 minutos, la gente trabaja y necesita usarlo de manera regular en las horas pico | The frequency from Monday to Friday should be less than 15 minutes, people work and need to use it regularly during peak hours |
| No porque el intervalo de horario es muy extendido | No because the scheduled interval is very long |
| Mucho tiempo | Long time |
| Me parece bien la propuesta | The proposal seems good to me |
| Esta bien porque uno necesita llegar temprano a los trabajos todos los días | It's good because people need to get to work early every day |
| Deben transitar menos los sábados y domingos ya que esos días no hay muchos pasajeros. De lunes a viernes es necesario que circulen más en las horas pico. | They should have fewer runs on Saturdays and Sundays because on those days there aren't many passengers. From Monday to Friday they need to run more during peak hours. |
| El tiempo de espera es importante para mí. Yo llegar a tiempo a mi destino | The wait time is important to me. For arriving at my destination on time. |
| Me parece muy bien el plan, aunque recomiendo que en horas no pico podría el intervalo de minutos podría aumentar a 30 minutos para ahorrar recursos. | The plan seems very good to me, although I recommend that during non-peak hours the interval of minutes could be increased to 30 minutes to save resources. |
| Me parece bien y además reducirÃ- el tráfico automotriz. | It seems good to me and plus it reduces automobile traffic. |
| Buena propuesta | Good proposal |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Then, I wouldn't be able to commute from DC around 10 pm |
| thats insane how will late shift workers get home |
| We need the metro at these later hours. |
| Opening the Silver line as soon as possible is key to the regions economic recovery. |
| I sometimes work after 9 pm |
| I never take metro after 9pm. |
| This would be so terrible for anyone working in the arts or attending the arts. Many concerts, performances, and crucial cultural events are not over until 10 or 10:30. Please reconsider this. It is a huge part of our economy and many workers would be stranded. |
| Annoying, but I suppose I can find night life out by me and no longer go downtown DC for that. |
| Public transit should be open as late as possible to avoid having to rely on car travel. |
| Please don't do this |
| This is extremely irresponsible - closing stations early is unacceptable |
| I am a healthcare worker so need more trains later for later night shifts |
| This is the dumbest idea of all |
| I want |
| 11 pm isnt even sufficient. This is a major city. I should have the option to take the Metro home after a late night out, period. |
| we need it open longer |
| I work in the theatre in DC. Shows typically end at 10pm. This would prevent me from working in the District and would prevent audiences from coming (and spending money at nearby restaurants beforehand or after). |
| Makes using metro to go downtown to dinner or theater nearly impossible. |
| need to get around after 9pm |
| 10PM |
| It would be impossible to metro back from sporting events. |
| Having the option for later travel is essential on some days, even if the train were to run every 60 mins instead of every 30 starting at 8, as long as it remained open til 11 |
| If this is applicable on the weekends it would impact games, concerts, access to Washington DC |
| How about meeting in the middle and closing at 10pm? |
| Need late evening options for employees |
| This impacts being able to go out for a drink after work. |
| if concerts or sporting events are back this would not be good |
| I frequently use Metro for Nats and GU basketball night games. |
| What??? |
| Employees need to get home around 1030pm |
| The metro should stay open later in a post-COVID world to allow for travel in the evenings. 9 is way too early and would require an uptick in ride sharing services or other means of transport |
| stupid hurts people working late |
| You will impact dining and entertaining venues |
| what about coming home late from events in DC???? |
| How do you expect people to go to events? The system is already too 9-5 commuter centric as it is |
| I bring school groups to the district and this would greatly hamper evening tours. This literally effects hundreds of students. |
| It would make it impossible to use Metro for sporting events |
| should be open 24 hours a day |
| can make up late night with Uber if needed |
| This would drastically impact my commute and I would not be able to use metro if this happened. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| 9 PM is so early! Forget sporting events or long happy hours. This would be a huge bummer. |
| Late night commutes |
| This is my familys preferred option! |
| What about people who work at night |
| I am a healthcare worker and need the service as late as 11pm if not later. |
| While this specific change would not affect me, it would affect so many essential workers who have to work past 9 p.m. each night. |
| Closing at 9 makes going downtown for a game, dinner, or a show twice as expensive and hard to manage. |
| Everyone should be fully vaccinated by 2022. Closing the metro that early does not make sense when bars will reopen. |
| We have employees that sometimes work late and this would severely impact their ability to safely commute home. |
| Youve become so shitty and infrequent at night to begin with that I dont rely on you then anyways. But what a blow to our most vulnerable workers. |
| Would kill nightlife again, such as itd be |
| A bad idea that will kill people taking Metro to Nats games and other downtown events. |
| Again, in regular work environment 9 pm is too early. |
| 9pm is far too early and disproportionately affects people in the service/retail industry who work late shifts. |
| Metro already closes to early. By 2022, full late service will be needed again. |
| Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members. |
| I live in College Park and use the Metrorail to visit D.C. Sometimes, I would like to stay out past 9. This would now be a problem. |
| Absolutely not |
| What a joke |
| This would dramatically impact my ability to go downtown after hours. |
| I do not finish work until 9 PM |
| 10 is decent. |
| I am a student who lives in Arlington but attends a Masters program in D.C. I have class every night until 9:30. This would be disastrous for me and all of my classmates, who would then have to Uber home every night? D.C. has a substantial night program from Masters, law, and LLM students - this would affect SO many people in a disastrous way. |
| Would like to keep service open longer if possible. |
| 9pm is ridiculously early and not functional for a major city. |
| GET REAL. |
| way too early if going into dc |
| There is no way this is workable. |
| This kills any desire to go out after work in the city, see shows, go to restaurants, go to hockey games, attend events. I would rather stay home than pay thirty dollars in surge pricing for a rideshare because it's 9:30 and the nation's capital can't get me home. |
| I like the concept of being able to use the metro after hours to get home |
| This would preventing working later. |
| This eliminates safe public transit for my family when we go to DC |
| I would hope that by Jan 22 that sporting events, theatres, would open again and I am a subscriber to many theaters in DC and go to games at Capital One Arena, but I am car-free and live in Arlington (Ballston) so rely on Metro to run later than 9pm! |
| It should be open until at least midnight or later. This isn't fair for service industry workers who have late shifts. |
| Youre kidding right? 11 pm is already too early to close. |
| I dont like this because some people work late. |
| 9PM is too early! |
| While it would work for me personally, I am not in favor of this plan due to the difficulties it could pose to workers who rely on it for later work shifts. |
| Our family relies on the metro at all hours. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| way too early |
| This would make me feel much less safe |
| This would work on weekdays but wouldn't work for weekends |
| This would not work for concerts and sporting events. |
| For me at least this is preferable to having less trains during rush hour |
| This would make outings nearly impossible. I count on metro for transportation, and this would dramatically reduce my options. |
| Too early |
| I am concerned that this will not work for service industry workers but Im also not sure whether those jobs will be around at that time. |
| I need metro to stay open late like in 2019 as I take metro following hockey games and concerts |
| Weekends should be open later. I don't use metro when I work after 10 but I know people do |
| Low income workers |
| Get the nationals, wizards, and capitals on board to subsidize later closing hours. |
| 11pm is already too early -- so many cities can effectively run 24h subway service, why cant we? |
| I heavily rely on this service. Please do not cut it |
| Please do not close Grosvenor-Strathmore Station! |
| Best for folks that rely on metro for work (regular workday) only |
| Not ideal, but workable. |
| Consider 10pm closing. What about special events concerts caps nats wizard games |
| I need to use metro after 9 frequently. |
| I consistently use the metro past 9 pm and consider it vital since parking in DC is not readily available. |
| Never rode late anyway. |
| Closing at 9 pm is utterly absurd. Everyone would be able to get somewhere earlier in the day and then be unable to get home. |
| Would hurt low income workers in entertainment, retail and hospitality who rely on Metro. |
| This would be awful for anyone working in the service industry |
| This is a great option if pandemic conditions dont change. If were no longer in a pandemic, Id expect service times to return to pre-pandemic times. |
| This change would greatly restrict travel options. |
| The few times I ride the metro, I need it to be run later than 9pm |
| It depends on what 2022 looks like, if pandemic somehow is still going on and nightlife is closed then it might be okay as long as there is an expansion of late night bus service for essential workers. |
| This will make it impossible for me to get home from grad school classes. |
| This is irresponsible and will cause more car accidents etc |
| This would not allow you to go see any evening games (football, basketball, soccer, hockey, etc which is the total reason I use metro. |
| Too early |
| 10 pm would be better |
| Don't ride Yellow Line so no problem. |
| Too many concerts and the like end later than 9pm. |
| This would make travel extremely difficult when working late nights |
| Late-night service is very important to me |
| This is far too early of a closing time. |
| This is a disgrace - it was already bad when hours were reduced to midnight and now 11pm. I would never even consider riding metro if this happened. Can't imagine the nightmare after leaving Nats Stadium and Cap One Arena after a sporting event. |
| Too early for any evening in the city |
| Are you trying to cripple public transit? Some people work past 9 pm. 11 pm is already too early quite frankly. This is embarrassing. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This will encourage drunk drivers and unsafe behaviors. |
| provided that commerce returns after pandemic, closing the trains at 9 means they have ZERO viability for a city. The trans are for the benefit of ALL, not just the ones working during daylight hours |
| Would depend on what other actions have been taken in terms of places being open. Nine PM seems too early. |
| Negatively impacts evening workers and night shift, |
| I work unpredictable hours so the earlier closing time would affect me sometimes |
| Stations would close way too early |
| Closing at 9pm would not allow attending programs in the District that would end at 10pm. |
| Safe evening travel is needed. It is ridiculous to think people would be ok with 9pm closure. From the suburbs it is vital to being able to go out and dine/entertain safely. |
| This will lead to more drunk driving as a reliable alternative is eliminated |
| Harms nightlife |
| Some of us dont work traditional hours. Its already incredibly disappointing that in a city like DC it closes at 11. |
| 9pm is a very early closing time, especially for the weekends. It would be nice for metro to stay open later on weekends at least. |
| bars and restaurants will be open in January 2022, this will just lead to a surge in rideshare and POVs and make Metro yet again worthless. Your ridership would plummet as bars will be more active than offices. |
| I use the metro after 11pm. |
| I think this works perfectly fine on weekdays, I'm unlikely to be out later anyways. On weekends, perhaps not, but 11pm probably wouldn't be much better anyways, so I guess it doesn't make much of a difference. |
| I use metro for work commute only. Would take an Uber if out late at night. |
| Are you kidding? |
| This is way too early, many people including myself work late and rely on the Metro after 9pm |
| I don't take metro at night. |
| Ridiculous -- restaurants, performing venues would suffer. |
| This makes the metro inaccessible to night workers as well as to students. |
| This is one of the most absurd ideas I've ever had. No world class city has a metro rail system that closes at 9 PM you might as well just put a knife in the economy of DC. |
| 10 maybe, but not 9 |
| Please keep home - part of the best elements of the metro is flexible hours |
| 10pm |
| I think with rideshare now available less people would take the metro. |
| Keep open to 11PM please; many workers come home late. |
| 9 pm is way too early especially for restaurant and hospitality workers. I would rather less stops but ones that actually stay open. 9pm is ridiculously early and will impact people with lower incomes and is a safety hazard. |
| I feel like it would be preferable to stay open until 11. Many people work until 9, so they would be stuck without Metro train service if it closed as early as 9 pm. |
| Hockey games get out later than 9:00 pm |
| This is a terrible idea. |
| Thats the worst idea |
| These hours are way too short |
| As someone without a car in the DC area, having the maximum amount of hours available for travel is critical. |
| People rely on night time metro service to get to and from work, as well as social events, which helps prevent drinking and driving |
| I work for the Wizards and on game nights I don't get out till 9 and I have no car. This would be a huge inconvenience |
| The metro already closed too early. 9 PM would be a disaster for restaurants and nightlife |
| Too early for evening shift workers! |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This would ruin my life, I'm a student who commutes to night classes. |
| I often use Metrorail to go into DC for pm work events and driving is not an option |
| Very rarely do I commute home after 9 pm |
| 9pm is too early to allow proper time for all riders to get home safely from work |
| I use metro for personal travel on weekends and often after 9 pm. |
| Too early for sporting events and concerts |
| The metro needs to be useful for all patrons including those at work later hours. |
| Please run at minimum low-frequency evening trains, even every 30 minutes would mean a lot. Metrorail functions like long-distance commuter rail common of other cities like Philadelphia or NJ, and they commonly have late night trains even up until 11pm or later. If we can maintain scheduled late evening Metrorail runs, it would greatly help late shift workers get back home safely. |
| Early closures punish essential workers and others who need to travel at night. |
| There is no way to go out to dinner in DC and get on the train home in time. |
| Devastating to my household. Why even have a rail system? |
| That is too early if you are trying to return home after an evening out, and would prompt me to take another mode of transportation |
| Metro is one of the main ways people get around, with particular emphasis on the bar scene in this area. I think you will see a spike in driving under the influence if you do this. |
| What about Nats games? |
| Late night service is important to me |
| Very inconvenient for sporting/entertainment events in the city |
| I'm a medical student and often have to go to and from the hospital at late hours by metro. The DC metro already closes extremely early relative to most cities in the United States, please don't make it worse |
| Absolutely not. I am a college student and primarily use the metro to get home from social functions on weekends. This would be 100% contrary to half of my metro usage. |
| I have classes that I use the metro for that go until 10. I would not be able to get home if the system closed early. |
| Too early. Usually get out of work by 10:30pm at the earliest. |
| Does the city forget how many of its citizens work in the food and retail industry within the city? This would be a ridiculous cut to make and severely hinder the aforementioned group, along with college, graduate, and doctoral students within the city's universities. |
| People work late |
| This would not affect me, but would significantly affect individuals in the service industry and create a burden on them to afford transportation. |
| I am a graduate student who gets out of class as late as 11pm and need to take the red line home. |
| 11PM is already too early! |
| 9 pm is too early for a public transportation system to close |
| Its too early. Especially if going to an even like a baseball game or a play. |
| Classes at the Mason Arlington campus do not end until 10PM on weeknights. Metro is a vital means of transportation for students, staff, and faculty. We need access to metro until 10:30 PM. |
| This is INSANE. Youre basically making it for commuting to and from work only. |
| I would see 10pm. But not 9pm. If you go out for an evening (dinner, etc) youd probably start to read home at 9pm. |
| This could cause more dangerous scenarios for single travelers. For those in the food and service industry, they may have no other option to go home or might have to work late. |
| People who may need metro most - service workers, cleaning staff, etc - will be most disadvantaged by this |
| bring back late hours |
| Closing the metro earlier on weekends eliminates an affordable means of transportation for people under the influence. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Working later than 9pm with no metro would be not okay |
| Not open long enough for a metro area transit. |
| Leaves no good public transport option for evenings |
| Too early |
| This is completely untenable for anyone attending a sporting event or concert in DC. Even having dinner out would mean rushing to catch the last train. Totally insane. |
| Depends on COVID and whether restaurants are open again... |
| Sounds like a game day nightmare near the parks |
| ABSOLUTELY NOT: HOW WILL WE GET HOME FROM SPORTS EVENTS IN DC. |
| Fine for commuting useless if you want to go out for a night on the town or a sporting event |
| Too early |
| 9 p.m. is way too early for commuters to finish work or get dinner before heading home. |
| Depends on Covid-19 |
| you really do not care for the community the metro serve |
| I would adjust and not take metro at night I suppose |
| if baseball comes back to DC, we would not be able to take Metro to the game |
| will kill off a lot of nightlife chances of coming back post-COVID. This is a very bad idea. |
| This would prevent use of Metrorail for evening activities |
| Metro should stay open all night like in NYC |
| You need to keep metro open to transport people home from events downtown |
| Why is it that after all the money that has been appropriated and spent to maintain Metro, you are resorting to shutting down most of its services? This is utter incompetence on the part of your leadership. |
| i have school that extends past 9 pm and would have no way to get home |
| This is affect businesses that are open late as well as workers who work evening hours. |
| I wont be able to get home when I attend evening events. |
| Too early |
| Makes it impossible to attend evening events in DC " I live in Virginia, and like to use Metro for evening events. |
| People need extended access not less access to the trains |
| This is too early and doesn't allow people to use the metro for sporting and other events downtown. |
| Maybe later on weekends. |
| It's not ideal |
| The metro gives people safe and reliable transportation after dinners and events to reduce the number of drunk drivers. |
| I use Metro to go to Crystal City and the Kennedy Center for theater performances. 9 PM shutdown is far too early. 11PM is barely acceptable |
| Games, ridership to downtown after nationals etc |
| It needs to be open later for people going out to restaurants etc. Also for workers. |
| Having metro open till 11 is crucial in combating dui especially after sporting events |
| This would prevent metro use for events, such as games at Capital One or Nats Park |
| Dude, shit will open back up. It needs to be Fri-Sun - 24 hour service. |
| 9pm is way to early to close. Restaurant workers should be able to take public transportation home after they close. |
| Seriously? No! |
| I would be fine with this but I know it would be very bad for workers with shift hours who rely on metro. This would be bad for racial equity in the region |
| Limits safe public transportation options for those who use the metro to get out in the evenings |
| I will be a part time student, I'm addition to working full time, and classes do not get out until 10. Parking in the city is too expensive so metro is highly preferred. |
| this is not acceptable for workers and is highly biased against those working in the service industry. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This will severely affect my ability to go to events in DC which is the opposite of what we want after the pandemic. |
| again cutting off lifeblood of people working in hospitality |
| People need to be able to have reliable late night service too. Not everyone works a 9-5. And on weekends, people need a reliable way to get home and not drink and drive. |
| Close at 11 pm |
| How will you handle various sporting or other activities given that metro is the major way folks travel to and from these activities. |
| Hopefully this would be temporary |
| I would be unable to get home from work, please dont do this! |
| As long as you offer an alternative |
| Would basically mean WMATA would be commuter service only, and unreliable for evenings, sporting events, concerts, etc. |
| The trains should run 24 hours a day. |
| Keep it open later |
| This is the capital of the United States of America. Shame on you for shutting a train down at 9 PM. How are restaurant workers supposed to get home?mm |
| It would work for my work commute, but not for doing anything in the evening... anywhere in DC or Arlington/Alexandria |
| This would impact afternoon shift workers who get off work between 8:30 and 10:30. I strongly oppose this change. |
| As someone who lives in Arlington and likes to attend functions downtown on the weekends, this greatly limits my ability to safely use public transportation. Ubering is not affordable. |
| People will be out at night again at bars and this could cause more people to drink and drive. |
| For a major metropolitan city closing at 9 pm is absolutely ludicrous. I even find an 11 closure to early. |
| My work ends after 9 pm, so I would be unable to use Metro to commute for work. |
| We have chosen our housing based on accessibility to Metrorail and prefer to use this rather than taxis, Lyft, buses, etc. |
| Closing down service that early is absurd. What about people who work nights? You couldn't even have dinner after work and get home by metro. |
| That doesnt work for anyone who works late hours |
| While this would work for me personally, I know this would severely effect night life and people who work in the evenings. |
| This is a giant impediment to those of us who live on metro lines and would like to return home on the train after an event. |
| For the short term. For the long term its not a good idea |
| Id rather the metro re-focus on the prime time (commuting), rebuild the brand and service quality to slowly expand back to full hours (as budget & ridership rises) |
| Make temporary changes because of COVID is understandable, but long term decisions without knowing what will happen when everyone goes to back to the office is complicated. |
| Would need to drive to, for example, go to a baseball game. Wouldnt work. |
| Metro provides a safe and affordable alternative to driving under the influence on weekends. I do not support this time change for weekends. |
| 11pm isn't even that late to start with :(|
| So basically you want to force people who want to go in and out of DC for drinks or social events to drive? Or if you are planning on staying in the city late after work you need to drive, adding to traffic. 11 pm is already shamefully early for the public transport system in the nations capitol city. NO! |
| Are these changes permanent? |
| This change would be the least disruptive to my commute. |
| I work as an airport bartender and finish work at 10pm. I do not have a car. This proposal would effectively strip me of non-bus transportation to work, forcing me to choose between quitting my job and spending 4+ hours on transit each day. This is a horrific proposal and I oppose it as strongly as I am able. |
| I really hope this change isnt permanent. This wont work for me long term |
| Severely restricts movement home on work nights |
| Problematic for anyone who has to do business/pleasure in the city after 9! |
| In such an intense culture as DC, I often find myself working past 9. In happier times, I might go to dinner after work. Closing at 9 is extremely early for a city and removes metro as a reliable transport method. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Most venues and such are open late |
| I work in the heart of D.C and often get off work very late, uber prices are to high to be sustainable. |
| Closing at 9 would make even something like dinner in the city completely impossible. |
| How would Metro serve those attending sports events in Washington, such as Nationals, Wizards and Capitals games? |
| I think a lot of people are still out past 9 PM since bars close at 10 PM. I think it would affect those that are going out and, when the bar would close, be screwed for a way to get back home. |
| Classes at Mason end at 10pm, I need this to get home. |
| This would make attending Nats games impossible. |
| Does not give me a viable way home after work. Needs to stay open until 11 pm |
| Staff have trouble making the 11pm trains, extend to 11:30 |
| Going to be a lot more DUIs with this--the metro needs to be open longer, not less time. |
| I will plan on eating out in dc once I am vaccinated. This will hurt restaurants |
| This would hurt people who work in the service industry or work late often |
| This would kill the ability to go anywhere in DC in the evening |
| This would be really hard to patronize establishments in DC when they reopen! |
| This time change discriminates against those in service jobs who don't work traditional hours. |
| I often need a train after 10pm on weekends or after Nats and Caps games |
| Late metro arrivals are vital to shopping and dining out |
| This unfairly penalizes service and healthcare workers, who work off-peak hours but are essential to keeping our society functioning during the pandemic. |
| go downtown for events in evenings. this closing is too early |
| Sometimes I ride the train later than 9 pm |
| This severely limits those who have to work later in the evening or commute into the city for night work. This would also be an issue for those attending events as the city prepares to open up with limited capacity (caps nats etc) |
| We go to cultural and sports events in DC and rely on metro to get home after 9pm |
| Too Early. Would hurt workers and businesses |
| I can only imagine this would lead to more unsafe roads - more drivers, fewer people able to get home safely. |
| PLEASE DO THIS ONE. I never need to take the train after 9pm, this would allow for everyone who needs the metro during rush hour to be able to take it!! |
| If things are back to normal it may strand people in the city |
| Closing at 9pm would no longer make Metro a good option for traveling into/out of DC for dining, night life, etc. |
| How would people get home from any event in the city?? I go to a lot of baseball games and it's already tough for those to end by 11. If the closing time changes to 9pm, I'd literally never take metro. |
| need exceptions for events like Washington Nationals games and Capitol One Arena events |
| Terrible idea if things become more normal. |
| This is HORRIBLE for those in the service industry!! Puts poorer people at a disadvantage. |
| This would not have a major impact on me personally, but I think its a terrible idea for the City and system as a whole. We have this great system, so to reduce its hours to save some operating expenses seems incredibly short-sighted. |
| 9PM? Yall insane? |
| Makes using metro for theatre / music events impossible. |
| How about a compromise with closing at 10pm? |
| This would not work. |
| 9pm is really early for anyone using Metro for any after-work uses. |
| This will kill the city. What about sporting events. DONT DO IT! This is the path to irrelevance. |
| I use metro the most for nightlife!! If it closes that early people will have to Uber or walk, and that is either expensive or NOT SAFE! |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Its D.C.! You would essentially be telling anyone who decided to go to dinner after 7pm that they should Uber or drive. Raise the rates during certain hours, perhaps, but dont do this. |
| Getting dinner out in DC is no longer an option with such restrictive cut-offs. This will have big effects on restaurants that are already hurting from the pandemic. |
| No, most people under the age of 40, which if you look at statistics are many of the people who actually use the metro service and dont have cars, are out past 9pm on Thursday-Saturday nights, and sometimes more |
| This hurts late shift workers, this cutoff is too early |
| There are many people who don't fall into the usually 9-5 work schedule and those front line workers would be affected greatly by not having access to get home safely if they work late hours such as food service workers, custodians, delivery drivers, etc |
| But not when things start opening back up and events happen |
| Keep it open late |
| I would not be able to work late or I would need to pay for a taxi home. And this would definitely not work for people who work late shifts. |
| I would be willing to make this sacrifice to preserve other essential Metro service, e.g. keeping the EFC station open |
| This wouldn't work for Nats, Caps, and Wiz game nights. |
| A 9:00p.m. closing time is way too early. |
| This sucks for lower wage workers and for the DC economy. |
| depends on what life is like in January 2022; if this is the option vs closing stations that I use would prefer this but would be harder for attending events, going to restaurants, etc. and would require a lot more Ubers/Lyfts |
| What about sporting events and concerts? |
| People who work in dc need to be able to get home. |
| How about 10 pm? |
| If I stayed in DC for dinner would Uber home. |
| 11pm is already too early to close. |
| Horrible, horrible idea. |
| Wouldnt affect commuting but completely eliminates usefulness for going on/going into DC |
| Not good for community |
| Leads to more drunk driving, having to rely on Uber or rideshares. 9 is far too early, not to mention people who work later |
| will work for us |
| Appreciate later closure if out late, or attending event at Strathmore or downtown |
| This would destroy downtown restaurants and entertainment businesses. |
| Extending train service to 11 p.m. or even later on Friday and Saturday nights could help cut down on drunk driving |
| This would effectively kill off any dc nightlife |
| This would not work, if we go to get dinner in DC we would not be back home by 9. |
| If I get back on a late flight to Reagan, I'd like to have the train available! |
| 10 pm would be better |
| Not sure, when you say 9 PM closing, does that mean weekends too? Or just weekdays? |
| 10 would be a compromise |
| absolutely not! i rely on metro to get home at night - buses make me carsick |
| 9pm is so early for metro riders |
| This does not affect me |
| This would work for me personally but there are significant equity issues with this proposal and also potential safety concerns (increase in drunk driving?) |
| I am frequently at work past 9:00 p.m. |
| This is just stupid |
| It would restrict time in the city with the ability to return to the outskirts of the system. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| What happens with sporting events or concerts like Capitol One Arena or other venues? |
| I only ride rush hour |
| Metrorail needs to stay open until midnight. Cutting hours dramatically limits accessibility and for the rate Metrorail is charging for tickets, they need to be providing a significantly better service. |
| This is crazy - a big part of the reasons why I take Metro is to attend events downtown and they would all result in me needing to use the train after 9PM |
| 9 pm is too early for me to rely on Metro. I would find alternate means of transportation. |
| Would prohibit night visits to DC from VA |
| I often have to work past 9:00 p.m. |
| So there's a caps game or Nats game how would you get folks out of the city if you close at 9pm |
| Make a rule that Metro stops 45 minutes after large DC events so people can get home |
| I often work late hours and need the ability to get home via metro, after 9pm |
| I often use the orange or silver line later |
| Cuts in frequency and early station closure metro will lose even more ridership |
| Workers throughout the region need the system to be open all night. People need to get home after 9p |
| If attending dinner or a sporting event in DC, this would not work |
| This is a terrible idea! Metro is a great option for transportation after drinking. Please dont give people an excuse to drink and drive. |
| Need Metro to get home after sporting events |
| 10 PM would be better |
| precludes attending events in DC using Metro requiring us to drive and find very expensive parking. Would probably reduce number of times we go into DC |
| People need the service until 11pm because they might work until 10/11 o'clock at night. |
| Closing way too early. Many jobs require late hours. |
| Ridiculous for getting to/from restaurants and ballpark and any other social activities. |
| People work late!! |
| Nightlife and nighttime workers will suffer |
| Late service is important for those travelling to work or home from evenings out |
| Many of us are often at work well past 9pm |
| Need metro open as late as possible |
| Thats really early |
| Closing metro stations early strands lower income individuals who can't get home from work, and promotes drunk driving. |
| This means I would not take metro on nights I have to work late. Would switch more to driving. |
| should be open later Fri and Sat |
| 9 PM is so early and would leave so many people stranded, especially those who work later. |
| I use the train for sporting events, concerts, night time out.....closing at nine makes it impossible. |
| Makes it very burdensome to get home from a late shift at work |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| If Caps and Nats games are back on, itd be a huge inconvenience |
| I do not generally take metro after the evening rush hour so this service change does not impact me |
| 9pm?!?! |
| This would be a terrible idea. Folks in Maryland and Virginia would be unable to travel to DC at night and would be a big hit to the city's economy. |
| This would not be acceptable due to commuting needs. |
| This is TERRIBLE, I need to get home from night school |
| This makes metro useless for an evening option for going out/ avoiding drinking and driving, or even going to performances in and around DC |
| Needed: night trains |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Consider later hours for the weekend. |
| this will not work for tens of thousands of workers and students who need to travel past 9pm, plus it will have a detrimental effect on businesses such as bars and restaurants where people go after work |
| This is too early for a mass transit system in a major city to close. |
| I rely on Metro to return home from Nationals games 20-30 times a year. |
| 9 is awfully early, but would only affect me on weekends. Maybe could have extended hours on weekends? |
| Terrible for going out in dc or to events |
| keep open late |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| As long as the metro would be open for sports events if there is in person attendance. |
| This removes the ability to use Metro for travel to a show, ballgame, etc. |
| I will be using the metro service more frequently in 2022 because more people will have the covid vaccine. I would use it after 9pm. |
| I do not use metro rail that late. |
| I do not want change |
| This again would not be ideal but I would be able to do my work commute on Metro and could rely on ridesharing services for the times I was out in the evenings. |
| We need transportation options after events |
| Late evening Metro service is essential for our community and economy. |
| If you want to help support the local economy and get people back into bars and restaurants, this will not work. |
| Way too early to close as I often attend Capitol Hill Events which will hopefully resume this Fall. |
| Total nonstarter. 11pm is already too early, especially on weekends. May as well shut it down entirely. |
| This could cause increase in DUI numbers. |
| It depends again on whether COVID is over. |
| No, no, no absolutely not! |
| Depending on the shift at work I get out late some days. |
| But this would really hurt workers who need it past 9. |
| Should work fine! |
| It disincentivizes people even more to take transit to nighttime entertainment or after drinking. It could honestly make the roads less safe. |
| Yes, thats fine. Obviously if everything opens back up again after the pandemic, you can extend Metros hours again. |
| This would have a disastrous impact on my life |
| If pro sports returns, this is inadequate |
| If I want to visit a friend or go to listen to music, Ill be forced to pay for ride share home. |
| Just totally screw anyone who works at night? Who is coming up with this garbage? Where is the "reduce bloated wages" option? |
| If you want people to completely abandon using the system, by all means go for this option. |
| I am not a daily metro rider but when I do use it, it's almost exclusively in the evening. 9:00 is too early. |
| Cripples downtown recovery for thester/dining/late workers... |
| Work later than that |
| If we go into DC, for an evening event that would force us to come home before we are ready. |
| Would work except for sporting events and special occasions |
| Makes metro not an option for people who worker later at night or want to attend events in the city. |
| I don't normally ride metro that late, but this doesn't seem very smart to me |
| Many people still need transportation after 9pm |
| Even though it works for me it would be awful for service workers. These folks already have a hard life. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This will disproportionately impact working people |
| Later trains are needed |
| I often stay late at work and this change would make it impossible to get home some nights via metro |
| The ability to take a late night metro is vital to me once COVID is over |
| While I understand funding is playing a large factor in this, closing the metro early would hinder folks getting home from work/outings that do not have other means of transportation. Uber/Lyft is more costly than taking the metro. |
| If there is no public transit for sporting events and concerts I won't attend the sporting events or concerts resulting in lost revenue for metro and entertainment venues |
| This disproportionately impacts 2nd and 3rd shift workers. as well as people who wish to go out at night (Nationals and Caps games in particular). |
| This closing time is much too early. |
| For the metro to remain a useful form of transportation, it needs to be open for many hours a day |
| I need the late night service. |
| This would shut down night life in DC. It would promote drunk driving. It would cause needless deaths. |
| I am often required to work late, therefore, the metro being open late is incredibly helpful to me. |
| While it would personally work for me, it would take away the option for many people who do work late or who are going out or into the city at night. |
| This is awful and will leave many people who rely on the metro with no transportation |
| Absolutely not. This would require alternative ways of getting back home if I was to work late or have plans after work. |
| I sometimes work late in the city or have a dinner. With no way to get home I would start driving to DC. |
| Yeah nope. I am a homebody but love concerts and movies and don't want to have to rely on rideshare or bus |
| Need to have ability to get around later at night. |
| If there are no trains for post dinner rides home, people will go for the alternatives. |
| I rarely ride metro in the evening but 9 pm seems too early for residents using metro for theater, sporting events, etc. |
| This is awful for those who work late hours and for those who would like to contribute to the local economy |
| Metro definitely needs to stay open for folks who work later than 9 (restaurants, etc.) It would make night traffic worse, I think. |
| This is absolutely too early and would not allow for a safe commute for me/others! |
| This is absurdly stupid. |
| This works for me, but this may negatively impact wage workers and students |
| This cannot be a serious suggestion. Really?? |
| I can commute with this schedule, but I wont ever be going out to dinner or concerts downtown again if I cant take Metro home. |
| Shut it all down. Rip up the tracks - sell for scrap. Sell off everything else. You will save a lot of money. |
| Way too early for the metro to close. |
| 9pm is early! People get off work later than that often and nerf a safe way to get home! |
| For those that use metro and work late 9:00pm may not work. I believe a compromise would be 10pm, but for someone that is working and going to school at night that would be the earliest. |
| ONCE THEATRES OPEN AGAIN, TRAVEL WILL BE NECESSARY AFTER 9 PM |
| You'd be putting a lot of families who depend on rail service to get to and from work in jeopardy. |
| Not preferred, but could make it work |
| I travel on metro during work hours only |
| It would make planning an evening out more complicated and expensive. |
| Except on weekends Friday and Saturday night should be later |
| inequitable for working poor with shift work |
| Often on weekends it was difficult to go to outdoor dining by Metrorail during the 9pm closure. |
| This would mean that I will be more likely to drive than take Metrorail. |
| Reduce the trains in the late evening but don't eliminate trains after 9 PM. People are still coming from work or meetings. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This limits access to evening activities in the city, such as the restaurant and sports industries |
| Needs to stay open later on weekends |
| This would significantly impede using Metro to go into DC and back to the suburbs for sporting events, cultural events, dining, and other evening activities. |
| let me pay more taxes to prevent this |
| My commute home is normally before 9pm and I can adjust to Uber on the occasional night where I need to work later. |
| What about people who have jobs past 9 pm? |
| I often need Metrorail service after 9pm |
| I feel like this will largely affect poor and disenfranchised populations and make commuting even more of a burden. |
| This would mean that you could not take metro after any evening event in. This is not helpful. |
| Not optimal but better than other proposals |
| 9pm sounds very early! How about making trains less frequent after 9pm? |
| Sometimes I get off work after 9pm |
| this would lead to severe inequities for those workers who do shift work, especially those who do lower wage work |
| 9 is too early for getting home from a ballgame, dinner, etc. |
| Reduced hours also reduces the relevance of Metro trains. |
| This plan disproportionately affects essential workers and shift workers while prioritizing business workers. This is ultimately not only a tone deaf plan for the current moment, but will further weaken and hurt minority communities who rely more strongly on the metro system. |
| People work in the hospitals that rely on riding the train and do not get off until after 11pm this would not work for them. |
| Will kill the economy. |
| Means those attending events downtown or at other Metro-related locations would have to drive or take taxi/uber and be exposed more to street crime. |
| Essential workers will have no means to get home. |
| Absolutely not. This means I would not use metro for traveling into or out of the city if I was going to be out late. |
| What about at the end of sporting events? Caps, Nats, etc. |
| There are times where events end at 9:00. 10:00 might be a better compromise. |
| Would limit how effective the system could be for most activities. |
| We will eventually go back to our offices stop this madness |
| That doesn't make a lot of sense to me. If working late there might not be a train in time. It also seems a lot less safe given that many people rely on the subway when going out and drinking. |
| This will be a huge problem for people working second shift, who are likely among the least able to afford to switch to driving. |
| I work at Walter Reed and MUST use the metro to get home after work as we are not allowed to drive and park on the Walter Reed campus (local government limits amount of spaces for workers in the hospital, even military like me). How can you take away my only way to get to work and then tell me that you are taking away my public transit as well? How do I get to work now? |
| The plan works for weekdays but not weekends. |
| Closing by 9pm is fine. |
| Again. People work past 9 pm |
| 9 PM????? Are you trying to fuck over poor people |
| You cant shut down a major metropolitan regions rail transit system at 9PM. This is not acceptable. |
| generally yes, but not for travel to events and sports. |
| This would be less than ideal on weekdays, and very problematic on Friday and Saturday nights. |
| Late night workers will need to rely on Metro to get home |
| I use the metro to travel at night to my dance studio and class ends after 9PM. I need to be able to get home. |
| Many people rely on metro outside of those 9-5 people, stop with the time cuts and focus on cutting the bloat from the budget. |
| Depends on what happens with covid and society between now and January 2022 |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I work until 10 and use the metro to get home |
| This would really hurt sporting events and concerts. |
| Please do not do this! I cannot afford evening travel outside of the metro offerings. |
| Sometimes I have to work later than that. |
| I often work late and once returning to post-pandemic life would need Metro later than 9pm. |
| Way too early. |
| I think the metrorail system should be open until 11pm on weekend nights. |
| this doesnt take into account all of the people coming back from Nats games etc. You will end up with a lot more people on the road and more accidents. YOu could close the suburban stations going INTO the city at 9pm, but coming home form the city should be open until 11 |
| Metro is a reliable and safe way to get home in the evenings. Needs to stay open longer!!! |
| I use Metro for sporting and arts events in DC, so a 9 pm close would cause me to drive. |
| This will make the restaurants in dc downtown suffer... |
| This would impact many workers who have essential jobs. This is a horrible idea. Also, will force people who stay downtown for dinners and outings to rely on cars. very bad idea |
| Way too early to close for anyone who works late or is using metro sensibly rather than driving after drinking |
| Would not work for me if these are permanent changes. |
| I dont work in a restaurant |
| This is fine during COVID but should remain 11pm post COVID. |
| limits ability to go out at night |
| This is going to cause problems. Area sports? Friday and Saturday night competition for rides. This is the worst idea of the set so far. |
| Not ideal, but not life-ending |
| I rely on the Metro rail to commute and my work doesn't even close until 10PM. |
| We want to be able to get to the city for evening events via Metro |
| Terrible some people work way past 9pm how will they get home?? No one will use the metro and cars in dc will increase with this terrible plan |
| I live in Arlington and work in dc as a dod contractor. I have to work 130pm-930pm shift to mitigate covid risk. if they closed at 9 id have a terribly expensive time getting home daily. |
| Sporting events and dinner would no longer be an option in the city for those living in the metro area. |
| This would all but prevent people from engaging in social activities after work and still being able to return home safely |
| If social like resumes this would be bad to do. |
| You have people who get off work at night and don't have enough money for Uber and Lyft. They need to metro to be able to go home. |
| People go out after 9 |
| This is too early |
| Would decrease economy for nightclubs |
| This would severely impact ridership for sporting events, concerts, or general nightlife. |
| 9pm is extremely early. This will encourage way more drunk driving. |
| This would work for me, but it is not good for the tons of working class people who use the metro outside of regular working hours. Further, it is bad for businesses who need clients to get to and from them. |
| Just not practical. We need to get cars off the road!! |
| I frequently use the metro later at night. 9pm would be inconvenient and force me to use Uber much more... |
| Many people work past 9 pm - this would be severely limiting metro riders. |
| Dependent on the pandemic situation in 2022. |
| I am usually home before 9 pm so this would work for my schedule |
| Metro needs to be open and available in order to increase ridership. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Weekend hours should go until at least 11pm to accommodate special even events. |
| I rarely travel on Metro after 9 pm, but this seems awfully early to close, especially for service industry workers. |
| 11:00 PM |
| Closing earlier makes it really inconvenient for people that rely on metro transportation for work and/or recreational outings. |
| I work past 9pm often and would be unable to return home from work. Additionally, this would drastically impact my choices for dining out and frequenting business across the metro area. |
| I have to work until 9 pm on weekdays sometimes. |
| Come on now, are you just messing with us? |
| I wish the metro was open even later than 11pm. I want a safe way to get home at night. |
| Many essential workers need Metro open later, not closing earlier. In addition, people who go out and use Metro to get around after hours will not be able to with this plan. |
| Cut staff not service. Focus on the incompetentâ€”a majority of the staff |
| I could accommodate the earlier closing time. |
| Alot of sporting events and concerts run past 9pm. This would possibly impact thousands of people once fans are allowed back. |
| This sucks for all people who work restaurant/retail who dont have vehicles. |
| This would make commuting extremely difficult, especially for people working in restaurants and other businesses with later hours. |
| This idea is less bad than others, but still not desirable. |
| Would provide significantly less flexibility in travel options |
| This is OK for a few days a week, but I think that Thus, Fri, Sat should be to 11pm. |
| While this works for me, this is still an embarrassment compared to metro systems in other big cities and other parts of the world. |
| Workers need the Metro to get home from work. |
| That's way too early |
| I depend on the metro to commute to/from work with hours regularly past 9pm. I would have no way to get home if this occurs. |
| As it is, before COVID I couldnt rely on metro to get me home if my events went past 11 pm....if youre going to close at 9 then theres no way I would risk using metro for evening activities. |
| This is a terrible option for anyone who works in restaurants who often rely on late night trains. |
| That doesnt allow for people to travel to sports or arts events downtown and back. Huge mistake to take away this option for travel. |
| Terrible for all of us who work hours that aren't 9-5. |
| People who work late or have late classes like graduate students (my classes went from 830pm - 1045pm) rely on late services. |
| We use metro in evenings. Need it open later. 9:00 is insufficient. |
| As the city reopens not being able to take metro will push people to Uber/Lyft or to drive irresponsible |
| This would be challenging for students taking night courses and folks that work second shift - 10 pm would be much better. |
| That cuts it a bit tight, but wouldnt impact things too much. Not as deleterious a cut as core hour cuts. |
| this would really limit accessibility across the city for post work social gatherings, which hopefully will return in 2022 |
| Many of my staff members at the hospital use the Metrorail to get to their shifts that start at 11 PM. |
| This would negatively impact workers. |
| Shutting down earlier when more people are going to be able to start riding the train is a terrible idea. As people get vaccinated, more and more people like myself will be returning to using the metro. These plans are very shortsighted. |
| Enjoy visiting sites in the evening around the DMV. |
| This is far too early for many of us |
| This is absurd. What about those of us who work late shifts? |
| Once Capitals games resume, 9pm closure would be too early for return trips |
| Would prefer at least 10 PM |
| Wouldn't this negatively affect lower income people who depend on the metro for travel? |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Metro should not cut hours - if anything, hours should be extended until at least 2am every evening. |
| This would negatively impact nightlife in the DMV in addition to harming low income residents. |
| If this were regular service hours but metro ran later for sporting events, for example. |
| closing at 9 is ridiculous! there are plenty of people in DC working late night hours that depend on the Metro. |
| This would alienate many many workers that work past 9pm. Regularly I must work at 10pm. That would make parking even worse if we all had to drive in |
| I dont like it, but it wouldnt affect me too much. Except for flying in and getting home late from the airport (usually DCA but Ill also uber from BWI to Greenbelt and ride from there). |
| A 9 pm closure would be crippling to the ability of late-night service workers to get home, and would make metro much less useful for the population at large. |
| Ridiculous. |
| An overall horrible idea. The system needs more not fewer opening hours. |
| Makes Metrorail unusable for downtown travel, like hockey games or late dinners. Would push me to drive instead |
| That is too early for service industry and for being out to even get dinner. |
| I already thought 11pm was too early to close when I go out to the city and rely on Metro to get back home - I think 9pm is definitely too early. |
| But I think this would be very tough on working class people who use the Metro to commute and have jobs that require working late |
| There are times when service is needed after 9pm. There are also plenty of people who use the service after 9 for commuting to/from work. |
| I rely on public transit entirely for my commute and all other people who commute outside the normal rush hours |
| I often take the Metro to the theater in DC from VA, and this would not allow me to get home after the show ends. |
| Absolutely not. This plan would be devastating for my travel needs, to get home after work. Not everyone works 9-5 jobs. |
| Using the metro to get to/from the airport is a great and affordable option, and it would be difficult to get to/from the airport for nighttime flights if the metro closes at 9. |
| If this is to provide additional time for maintenance and repairs, YES! |
| 10PM is the earliest reasonable |
| My family and I plan to ride the metro at all hours and past 9pm. |
| This would be preferred to the 30 minute between car option |
| No, this is way too early. Some of us work until 8 pm and to grab dinner with a coworker or meet a friend would mean we have to use Uber or taxi, costing consumers significantly more \$\$. |
| I like to drink at happy hour |
| It would work for me for work-related travel, but I would not be able to take metro if I wished to stay in the city for dinner or theater performance. In those events, I would take a rideshare, which I can afford, but would be expensive for many other riders. |
| People need to get home from late night jobs. |
| Would seriously interfere with work schedules |
| Ridiculous. You should serve the working class. |
| I would be extremely less likely to ride the metro with these limited hours |
| If sports have resumes this could be an issue. 10 pm seems better. |
| Could strongly impact lower income workers. Opposed |
| My work day often goes late into the evening, metro rail service is the only way I can get home late at night |
| many of these changes are only going to hurt the working class.... especially this. |
| By then, a lot of restaurants and bars may be able to open, and Metrorail helps people get to them. This could hurt their reopenings as COVID-19 wanes, at a time when they need more people to come into the city. |
| Concerts last past 9 pm |
| Simply, why? Metro is an accessible, affordable way to get to and from places at night - much safer than walking and cheaper than rideshare programs like Uber. |
| Many people, myself included, work past 9pm |
| Businesses close after 9pm. |
| This would make attending events (theater, concerts, meetings) in the evening untenable. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Make exceptions for Nats games, other DC sporting events |
| I use the train to go in and out of the city for entertainment, bars, and events. This would eliminate my major need for the train. Please keep it open as late as possible! |
| I use Metro only and often work past 9 |
| This proposal will make it harder for employees to get home and rely on public transport, and also damages the ability to travel into and around DC for evening entertainment/tourism. |
| Too early |
| Not ideal but could work |
| If this plan is to extend beyond covid shutdowns and restrictions, then you would be cutting off service too early in the evening for us suburbanites to enjoy cultural and dining activities in the District. |
| You have plenty of people working downtown late into the evening. |
| This really seems to squeeze the people who have to take Metro rather than the ones who choose to |
| The metro already closes so early |
| No, metro is already barely useful at night. This would destroy it. |
| Please consider extending times on Fridays. |
| Late night trains are essential to getting home safe! |
| I work in live theatre and I'm never out of work by 9pm; shows run later than that. Our patrons need to be able to get home as well. |
| Prefer at least until 10 pm |
| This is ridiculous and I would just take uber. Stop mismanaging funds. |
| 11pm accommodates more work schedules. Especially a 2pm- 10pm as an example. |
| We use the train to go to the hockey games. |
| A 9 pm closure renders metro service unusable! |
| If this is required to keep all stations open, then yes. But, it's certainly not ideal. |
| Compromise -- 10:00 pm |
| Unacceptable for late night workers, needs to be a 24/7/365 operation. |
| This would defeat the purpose of public transit. Metro should stay open until at least midnight if possible. |
| Are you suggesting closing all metro by 9pm? No this would not work for me. |
| This plan doesn't take into consideration people who have to work late or have events at night after work. Concerts and plays at Kennedy Center or Cap One Arena don't let out before 10 pm many times. |
| I frequently work late and catch Metro at 9 PM. This option is not workable for me. |
| I use metro to go out socially and rely on metro for my sober ride home |
| Fine except when events at Nationals Park or Verizon Center. |
| This would be inconvenient on weekends but would not impact my work commute |
| Would significantly cut back on metro ridership under this proposal |
| I never rode the metro after 9 PM pre pandemic as it wasn't safe. They need to do a better job with safety before all of this. |
| 10pm preferred |
| We are hoping to enjoy more in the area, including sports events which tend to run past 9 pm. |
| When I go out and work late this won't work |
| We never ride Metro after 9pm, so this is not a problem. |
| keep the 11 pm closure times |
| I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I don't care if they have to raise my taxes for it. |
| I can understand why, for safety and lower traffic reasons, the metro might close earlier. I would say that 9 PM is too early, but 10 PM would be reasonable. |
| Closing at 10pm would be better than 9pm. 9pm is early especially if we expect in 2022 more events to occur, which often end around or after 9 |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| A functional system needs to stay open late. |
| Would work on weekends but not on weekdays when people like me work late |
| I primarily take the metro when going out for drinks or concerts in DC. Closing at 9 would make this impossible |
| Having the metro rail service until 11pm, at least on the Redline, is vital for me. I would be required to drive into work at least 10 days/quarter, due to this change. |
| This wouldnt be great for the late night workers/night life, but think this would be a fine cut off. |
| Workers often need later into the evening. |
| This would limit me to ride sharing or walking home from my second job |
| I need to get home from work after 9pm |
| Disproportionately affects those who work late, who are also most likely to not have other transportation options. You would also lose all of your evening sports fans. |
| 9pm closing works for me...but not for the people who rely on metro for transportation to jobs which will hopefully have returned by 2022. |
| People work late at restaurants etc that don't close until late leaving people Stranded. Or spending more money on Uber and Lyft |
| only if theres no sporting events |
| Depending when things get better, 9pm would still be considered premature. |
| That is too early of a closure time during the week for people who use metro as their form of transportation. |
| This will impact me as well as those who work past 9 pm and rely on metro to safely commute to and from work. |
| Most frequent use of METRO is to evening events. |
| People work late. |
| I do not have a car and rely on metro service. This is essentially a 9pm curfew which is not feasible |
| This would be inconvenient for weekends and later events on weekdays. Considering COVID-19 restrictions will not be in place in 2022 my after work travel would be greatly restricted |
| This seems too early for metro to close to accommodate riders outside of rush hour. |
| 9pm is not late enough |
| Id be fine but poor people would be hurt |
| Metro should be focused on proving commuting services to work or school. 9 pm closure will cover most people commuting for work. |
| This is very early and would hurt business to late night businesses |
| This seems way worse than the previous options |
| Too early for service workers |
| So much for DCs nightlife to come back! This is a joke for a major city!! |
| I would stop going into DC restaurants for dinner. |
| Fine, close earlier - but maybe work something out with sports teams? |
| For those who work for me, closing at 9 will make their getting home much more difficult. |
| Wouldn't work for those working night shift. |
| Its too soon to tell, not knowing if there is a variant virus |
| I need the metro to get me home after going out with friends. |
| This is a vital service that people use. Lower income families will be severely affected by this. |
| The train cutting service at 11 already makes it impossible to use the metro for evening plans in the city. if it were 11 I would never count on metro for anything outside of work |
| I often go into the city for dinners and having a closing time of 9pm would restrict and reduce the amount of times I come into the city |
| Terrible for public transportation options. At least have later on Friday and Saturday going out nights. |
| Higher fares, less service. You suck metro.... |
| Id like the option to be able to visit DC from the Bethesda area after work. A 9 pm closure would not permit that. |
| Would be disastrous for anyone whose jobs require working past 9pm. |
| Would not be able to attend any sporting events, at night, in particular, Washington Nationals games. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This is nuts. Metro rail provides an important method of transportation for people going out to drink on the weekends. Removing it is a mistake. |
| Would there be any exceptions for sporting events or other special activities? |
| Close at 10:00 pm |
| With exceptions for special events he'd in the district. |
| 9 pm is too early for going out for dinner. This will lead to an increase in drunk driving. |
| This is annoying but more manageable. |
| Most people use it to commute they can take Uber late at night |
| Too early, people work odd hours |
| If we all get vaccinated and back to life as normal, I couldnt go into DC for anything and still get home to my suburb at night! |
| Washington DC is a major global city and people have to work/commute early in the morning and late at night to accommodate international customer needs. |
| This would hinder my ability to get home from work, along with most of my coworkers. |
| That would make it impossible to take Metro into the city for sporting events, shows, and even working late. Reconsider this, especially on weekends. |
| This would work for my work schedule but I know many others who rely on metro likely work later (I am thinking of those in service positions). |
| This would be a horrible blow to the already struggling hospitality industry! Both employees and customers rely on late metro service. And more people may engage in driving while mildly intoxicated to get in and out of the city |
| I often work late and have to take the metro home. Without the metro I am stranded. |
| There are days that I have activities in DC past 9pm. |
| Many people work at night and sporting events are also at night or late evening. What about essential workers transportation? |
| Except for sports events |
| Metro needs to stay open past 9pm |
| A lot of my use of the Metro involves going downtown for concerts, dining, or other events. These events stretch beyond 9pm. |
| I expect to be at work much later in 2022 & in person. I will need access to metro after 9pm otherwise my safety could be in jeopardy |
| This will have a devastating impact on nightlife -- especially sporting events which are already difficult to navigate with full service. Theres insufficient parking, ubers, lyfts, and taxis to handle the need. Further, the danger of impaired driving (drinking/drugs) is too high a risk for this change. |
| Most retail and restaurant locations are closing at 9pm or later leaving customers to find another avenue to get home. |
| While inconvenient, I understand the necessity for some cuts such as this one. |
| Often times late at night the Metro is the safest and quickest method. Drinking etc. |
| This is too early and would make it hard to use the metro for social events, concerts, sports events, etc. |
| Would be difficult to get home without access to metro after 9 |
| one of my primary uses of metro rail is at night, including after sports events, and this would make me need another mode of transportation. |
| Should be later at least on wknds. DUIs are prevented by metro. |
| Metro should operate 24/7 even if its trains run mostly empty. It is a public service. It should not be administered as a business but as a service.Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors |
| Please remove peak hours fares if there are not additional trains during peak hours. |
| 9 pm closing is inequitable and puts people in danger. People take the metro to avoid driving after drinking and those who work late (largely less wealthy poc) take the metro home. This is an awful solution and if anything hours should be expanded |
| Way too early for attending plays in the city |
| Would prevent me from being able to work late & enjoy cultural activities in the city. |
| Yes, I will long be home by then. My latest train will be 7. |
| Sometimes I have to stay late for work. This would mean Id have to pay for an Uber home (\$30) instead of taking the metro. |
| This diminishes the use of the rail system for catching flights or coming home from flights which is a big point of transit! |
| That is ok, Im usually traveling in metro by 7 or 8 pm. |
| One of my main uses for the metro is access to restaurants and events in DC. This proposal would remove most of ,y use cases for the Metro |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| You're just asking for a more car-centric city which is bad for the environment and bad for DC |
| Is this permanent? If permanent it does not work once remote work ends for most. |
| I sometimes go to the theater, etc. nonstarter. |
| this is a terrible idea. we should be moving toward more metro hours, not less. by 2022 metro use will be up again. |
| The later closure works well especially for weekends |
| How will metro-dependent restaurant workers get home at the end of their evening shifts? |
| Way too early to close. |
| Many service industry workers need to take metro home and they work past 9pm |
| On days with special events (Nats games, Caps games, etc) it would be a hardship |
| Doesn't work if going to dinner, movie or sports event |
| This will be a devastating decision. As the area is opening up we plan to have restaurants stay open later and staff that is employed is coming from Metro-accessible locations. This would cause a huge problem if we closed Metro earlier. |
| It might mean rushing home sometimes, but there's probably lower ridership at that time so, with the known expectation, I could adjust my expectations and schedule. |
| Seriously?! How do you expect people to get home from the multitude of events downtown?! NOTHING IS OVER AT 9! Shameful |
| This is when Metro is needed! |
| Again this would be horrible for essential workers that rely on metro to get to and from work |
| if anything metro should be open later not close earlier to allow people to get home quickly and safely after concerts, sporting events, shows etc. |
| Metro has already drastically reduced its nighttime hours. I can't imagine them closing at 9pm. |
| I work at a hospital and work all shifts - I need as much metro coverage as possible |
| What about late night workers? |
| I think that it's a very poor idea to close the Metrorail system even earlier than it already is in light of the fact that many events in the city, such as baseball games at Nationals Park, are notorious for people leaving early so that they can catch a train. This proposal would only exacerbate that problem and quite probably would create new ones. |
| Strathmore stop needs to stay open later for concerts and students! |
| I frequently rely on the metro to get home in evenings after going out in DC. I don't like driving in DC, particularly at night, and I rely on the metro for safe travel |
| I have usually relied on the last metro around 11pm multiple times. To move to 9pm would push more ridesharing which someone times I do not feel share with that late at night |
| 9 pm is too early |
| Hate to see it but I don't use Metro late myself |
| This is good for security purposes as well |
| HOW WILL PEOPLE GET HOME FROM WORK, NOT EVERYONE WORKS 9A-5P HELLO?!! |
| I work in BA and live in MD and get out of work at 10PM |
| Many workers rely on metro to get to and from work. Those who work in healthcare, retail, and other essential workers often finish work after 9 and will have no option but to take expensive taxis or Ride service apps. Last trains should be no earlier than 11 pm. |
| Too early to be practicable |
| I work until 10. I would not be able to get home if metro closed at 9 |
| if it must be reduced ten pm is preferred |
| This would be difficult for people working in the service industry and reliant on taking the train home late at night |
| Lots of nights I work late and wouldn't be able to catch the metro home anymore. I take the metro every week day and would use my car if I can only take the metro one way. |
| Would not work for leisure travel on weekends. |
| Close later |
| Given that many of us are expecting to be back at a normal work schedule by next January, this proposal falls well short of what I would need/expect. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| again an inconvenience, but if you have to do it to stay afloat, it is ok with me |
| If there are no events and restaurants are takeout primarily, this seems reasonable. |
| As long as WMATA's bus service remains reliable this should be workable |
| You wonder why ridership has been dipping for years? Because the metro schedule all but tells people "drive or Uber on a Friday or Saturday night" |
| Metro should offer later hours Friday-sunday |
| What about sporting events or other public events that regularly take place in dc. Not even close to enough coverage for events that simultaneously release thousands of people. |
| A reminder that DC will never be New York |
| Late night travel after games is essential |
| This won't work for evening workers or people enjoying the city at night. |
| Use train for theatre at night |
| Generally yes, but there are times that I catch a train shortly after 9pm. 10pm would be a better solution. |
| Would not be able to use metro for sporting events |
| Anything earlier than 11pm would severely impact the service industry. Riding multiple buses would put an unfair burden on those individuals. |
| Many work events end after 9 pm |
| Too early |
| I really worry about peoples ability to get home safely and affordably without a late-night metro. |
| seems too early if people are working and need to return home. |
| I think on the weekends it should go longer for people to travel out to restaurants and bars. |
| No, the trains should AT THE VERY LEAST be running until 2 AM, no earlier. 9 PM is outrageous. How are people supposed to get home? |
| This would likely work for us, as we do not typically use Metro after 9pm, even pre-pandemic |
| Not good for tourists or people who work late! |
| From time to time, I do require a metro ride after 9pm. |
| I use the Metro to commute during regular business hours, so this would not affect me. |
| wow thats early - and not cool to the restaurant/service industry |
| I use the metro to safely get home if I have been drinking |
| I think this is not a good idea, but it would probably not affect me personally. My family members rarely take the metro after 9pm. However, I am retired; when I was working, this would have been disastrous for me. |
| Closing too early |
| This is much to early to allow for dinners out, sporting events, etc. |
| This would impact my ability to go downtown for nightlife. |
| This plan leaves Nationals fans without hope for night games. |
| This would severely impact the restaurants and bars in DC that are already greatly hurting due to covid. The 2 hour time jump is far too significant |
| I already think its ridiculous that the train system in a major city closes at 11:00. |
| Will not be able to take trains after dinner or work. People will buy cars. Horrible idea |
| I do not get off of work until later in the evening and this would be hard for people with similar work schedules |
| After COVID-19 declines, I anticipate using the Metro again after occasional long nights at work, Nats baseball games, Verizon center concerts that end later than 9 pm. |
| People with service jobs need metro to be open later. |
| This early closure would not allow time to attend functions in the city - i.e. sports games, when they resume |
| This is painful, but reducing the systems service hours is acceptable if it means running more trains and lower headways during the hours that the system is open. |
| Late work, late classes, movies, theatre, and music all end after 9pm. I wouldnt want to drive all the time for these, especially considering how hard DC parking can be. |
| I dont have input in a work commuter from 7-6 |
| Caps games go past 9 pm |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| maybe for nights when major league sports are playing they can extend the hours? |
| could live with it if necessary, but not good for flight arrivals, Nats games, meeting friends, etc. 9 is pretty early to shut down |
| I only ride the trains at night after a sporting event or concert. |
| This wouldnt be great, but would be doable. I worry about employees who work later shifts, though -- how would they get home? |
| People have to work and this would affect businesses for evening outings. People traveling and using it to go to Reagan National and Dulles need the later times. |
| CAPS games and evening concerts and events end later than that. |
| This would shutter the city. Let alone there are hundreds if not thousands of people that relay on metro to get to and from work after 9pm |
| This cut hurts the most people. It hurts people working later hours, kills nightlife ridership and in turn, nightlife in general. I attend a number of events at capital one arena in normal times, the large majority of which end after 9PM. I don't want to leave events early to get the last train home and driving into the city is expensive and burdensome. I'll just stay in Virginia if this happens and that helps no one. |
| This is a bizarre suggestion. Workers in restaurants and cleaning crews need a way to get home. |
| You all should be embarrassed for even proposing this. |
| Metro has always been a safe, affordable and environmentally sustainable option for residents who cant or choose not to drive. this would severely affect our quality of life and increase cost of transportation |
| Travel to sporting and entertainment events would be impossible via metro |
| In general this plan discriminates against people whose jobs require them to work later in the evening. Personally, it would eliminate my use of Metro for evening entertainment (restaurants, theatre, etc.). |
| Ridership will increase when the vaccine is rolled out more effectively. |
| I need the longer hours and VERY MUCH NEED Grosvenor-Strathmore to stay open and frequently serviced |
| As an older retired person, I rarely use metro at late hours. I am sure this would inconvenience younger person. There may be rare occasions if theater performances are late that I would need to find an alternate form of transportation. |
| would prefer 10pm |
| 11 pm is already very early for a transit system. |
| A lot of people work nontraditional hours. |
| This would limit my flexibility should I stay downtown after work. |
| 9:00 pm is too early, defeats the entire purpose of using public transportation in a city |
| Many UMD classes go until 9 pm, including mine, which would leave me stranded on campus and/or facing a much longer travel time home if I miss the last train. |
| Rush hour service on red line is my priority. |
| For people who work late or would like to socialize after 9pm this makes that impossible. |
| This would be bad. It would eliminate the ability to use the Metro for any thing after work (regular business hours) |
| Every day of the week or just on weekdays? 9 pm on weekends is not useful. |
| People need options after shift work. |
| Husband works late and needs it to get home safely. |
| It's fine for me, but think about all the essential workers that need metro to get home. This is a terrible idea! |
| Doesnt allow for return trips after theatre and other evening events. |
| There are ride share options (Uber, Lyft) for later travel. |
| This would make it difficult if not impossible to fulfill obligations I have in the evenings. It would also severely impair some industries such as restaurants and entertainment. |
| This doesnt work for anyone in hospitality or works a nontraditional schedule. |
| I need metro service in the evening hours. Even 11pm is inconvenient |

Proposal to close Metrorail at 9 p.m.

It is already bad enough that our metrorail system is not 24 hours. This is a major metro area, let alone the Capital of this Country and yet our trains close. Any earlier would be a travesty. It would actually likely cause some people to move to an entire different area where public transportation is much more acceptable (NYC, for example).

I wouldn't be able to get home when I worked late.

Again, not ideal but doable for a temporary period

How are essential workers and attendees at sporting events supposed to travel?

This is a terrible idea, please do not do this

It would mean I would spend less time on Metro for social reasons assuming I am vaccinated.

That is too early

More people would drive if this were the case, leading to less ridership which in turn leads again to even less funding to the Metro. Too many people will leave the Metro system if they cant get home after 9:00.

does not allow people to get home if they want to go out/run errands after work

9pm is too early. 10pm would be ok

I think 11 pm is already too early, and that 9 pm would be way too early. However, I understand that ridership decreases in evenings.

10 pm would be better

The early close of the metro is one of the biggest challenges to using the metro. Even closing at 11 means that for many evening activities one is required to take a taxi or drive instead of using the metro

People don't don't what their 2022 travel needs are. Additionally, this would hinder the evening dinner crowd to choose Uber and other ride share platforms over Metro

Traveling into DC from Maryland after work and returning home would not be possible under this plan. I cannot afford a car and therefore solely rely on the metro for transportation

What that means is that we couldnt use the Metro to go out on a weeknight or weekend night. When things start to open up, I suspect this will be an issue. Especially for those who work non-standard hours.

Metrorail needs to extend its hours for riders to get to and from work.

If I go to the theater in DC from the suburbs--or even just out to dinner, I would have no way to get home.

I use metro to avoid drinking and driving and bar trivia ends at 10

Kennedy Center?? theaters??? downtown restaurants/bars? the gig workers from those places many of whom cant afford cars?

To the extent you want to keep people who have been drinking off the roads, this seems like a poor choice.

People need a safe and reliable way to get home at night.

Classes at GMUs Arlington campus end at 10pm. The university plans to vastly expand its Arlington presence. This would be disaster for Arlington expansion plans.

I sometimes work later hours and need the metro after 8 or 9pm.

This is ridiculous! You ask folk to not drink and drive then shut down the travel options? NO METROPOLITAN CITY HAS A TRSIN THAT SHUTS DOWN BEFORE MOVIE THEATERS

metro should stay open later to handle sports events

Basically eliminates an economical way to get to or from to DC.

Attending Nationals games and other evening activities would severely affect my ridership

Sporting events

It's critical to have late night service!

Not ideal, but wouldnt impact my commute.

Using the metro is great for attending events in the city. If the metro closes at 9, I would be unable to use it at all.

Impacts to work ability.

That discriminates against people who may have to work in the late evening and need metro get home.

I would Uber after metro closes

This would be a terrible inconvenience on days Id have to work late.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Seems to disproportionately impact low wage, service workers at the expense of professionals. |
| The metro already closes earlier than other metro rail systems (i.e. NYC) and would be a massive inconvenience to anyone needing to use the metro for week-day after work functions or recreational activities that end after 9pm. |
| I frequently travel for work after 9 |
| I sometimes need to take Metro later at night after concerts, ball games, etc. |
| To be safe in the city at night, the metro stations provide lighting and safety. If you close at 9, what will happen to the people that need to get home before that time? |
| We use metro to go to Caps games. If trains stop at 9pm, we would not be able to get home, so we probably wouldnt go to games. |
| Hurts people who have to work late |
| I use the trains late in the evening and this would adversely impact me and many others. |
| How late would it stay open on friday, saturday, and sunday evenings? |
| I often get off work after 10 PM. |
| It eliminates using the metro to attend theaters, concerts and other late night venue sites |
| It would be my preference that the metro continue closing at 11 pm, particularly on weekends. But overall I would be able to use it after my work shift ends at 7 pm which is most important to me. |
| Close at 9 pm Sun - Thur and close at 11 pm Fri/Sat. |
| Times should be extended to midnight. |
| Metro is my main mode of transportation and I feel safe using it at night. Cutting service hours will drastically limit my ability to travel throughout the city |
| You cant have a vibrant city if youre going to shut it down at 9. |
| We need to induce demand by making train routes more frequent and reliable! I wont spend as much with the metro if theres no train for me to take |
| I occasionally rely on Metro service past 9pm for social and work-related events. |
| This will only make life more difficult for service workers, who are among the poorest and cant afford a rideshare. |
| I oftentimes have to use the metro after 9 pm. |
| assuming the covid thing is over by then, 9 pm is too early. Youd have to finish work or dinner by 8 to make it home. and I have young adult children Id rather see on metro than driving in town. |
| Would there be closing adjustments for special events? |
| Ending service of the metro line will kill many business all around the dmv area. Bars and restaurants will suffer immensely. Also how will workers at these locations make it home? |
| Again, this proposal seems designed to destroy public transit, not to preserve it. The downsides of this proposal are so obvious as to merit further comment. |
| I'd be less likely to stay after work for social activities /contribute to dc's economy |
| Ive used the Metrorail after 9pm and always been appreciative, but they were not too common of occurrences. |
| if working downtown, I often worked past 9pm |
| Would prefer open until 11pm. |
| As we return to normal and need to support local restaurants as much as possible, an early close of the metro would dampen enthusiasm for eating out. |
| You cant even go to a 7 p.m. movie and make it out to a Metro station by 9 p.m. Dinner dates last well past 9 p.m. Waaaay too early to close. |
| Seriously? Closing at 9pm? This is not realistic for anyone who uses metro to go into DC for evenin activities. |
| What are food service workers supposed to do?! Walk home?! |
| Metro is a lifeline to prevent drunk driving. If we cut the hours to 9 pm especially on friday/Saturday we are asking people to drive under the influence of alcohol and put others in danger |
| I am hoping to be doing things in the evening next year, so I would not like to see the system close early. |
| Need to get home from class at 10:30 pm |
| 9 pm has an adverse economical impact that needs to be explored. How many people are out for late dinner or drinks at that time? That would put stress on other transportation systems and could lead to some bad decision making. Also, many sporting events are going on well past 9pm. |
| Keep the hours where they are |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| That is bad--often work past 9pm |
| This would work fine for weeknights, but not Friday or Saturday nights |
| This interferes with all evening activities, such as sporting events and theater. |
| Although this works for me personally, I suspect many lower income travelers would be disproportionately impacted by this change. |
| Cutting union wages and or employee hours and corporate salaries would not affect your customers |
| This is crazy. Lots of people are out and need transportation after 9 pm. |
| This would be a huge inconvenience for weekend events, and create intense congestion at the venues. |
| I have to work I get off at 10pm |
| Too early to close! |
| That defeats the purpose of public transportation. |
| Evening service is important to me. |
| Way too early. Leading to more drunk driving. |
| What about sporting events? And late night travel? Airport? Not great. |
| I would not use metro in the evening because there would be no guarantee I could get home. |
| nothing good happens after 9 p.m. |
| 11 pm is already far too early for this city. |
| Far too early to close if one wants to do anything at night. |
| I regularly rely on the train after 9pm |
| This is a fair compromise since its outside of rush hour. |
| Im worried about the impacts on supporting workers and industries throughout the region. |
| This would be detrimental to people who work past 9, who attend evening events in DC, etc. Many people would be stranded, and it would affect business in DC since people in the suburbs would stop going to evening events. |
| I anticipate life to be mostly "back to normal" by January 2022. Therefore, 9 pm is too early to end services. |
| I do take metro to DC sporting events which do end past 9pm. Would like to be able to take Metro to these events. |
| I often take trains after 9 PM for work. |
| Earlier closures Mon-Thurs would be fine, but Fridays and weekends should be later. |
| This is problematic with my work schedule and associated transportation needs |
| Problem for when events come back - e.g. Nationals games, concerts, theater. |
| I often leave work late and this will not allow me to get home. |
| Evening events usually run until 9. This would force me to use other transportation options |
| You would be hurting the minorities who work service level jobs, creating more travel issues for them. |
| Shutting down early is inconvenient, if I work after this time I would be stuck and have to spend more out of pocket. |
| You will hurt area businesses who host after-work patrons and limit ability to depart city for area communities. |
| This would likely decrease ridership even more. If I cant get home using Metro, I wont ride there on it. Baseball is coming back this season and I wont be able to go to games if Metro closes at 9 p.m. |
| I rely on the metro to commute to and from work. Closing at 9:00 pm would force me to purchase a car and stop using metro. This is untenable. |
| Works for me but not for many essential workers who clean our office buildings at night! |
| How will people who work late shifts be able to get home on the metro? |
| I teach at George Mason until 10:00 pm some nights. I need to be able to take a train that would depart at 10:00. |
| My teenaged son would not be able to use metro to get home from socializing with his friends in South Arlington under this plan |
| This is racist and classist, the people who depend most on transit would be left out. |
| Assuming the entertainment economy returns in 2022, this would be a problem for people utilizing transit for things like theater, baseball games, hockey games, etc. |
| 10PM would be better |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This is absolutely not workable. There would be zero chance anyone would use metro because it closes at 9pm. |
| doesn't give me enough time to return home after a night class |
| I only travel during normal business hours so this would be fine for me. |
| so that means everyone who goes out at night will either be driving (after drinking) or taking ubers/cabs? That doesn't seem to make sense. Also, how does this work for essential workers? what public transportation options will they be left with? |
| it would completely eliminate any intown entertainment or concerts when they finally reopen. |
| This plan would mean never being able to get home from the theater or ball game via Metro. |
| This would damage my route any night where I was asked to work overtime |
| I'm rarely on metro after hours - sounds fine! |
| I don't ride the metro that late. |
| I usually take metro in the evening to get into DC, and this would mean I couldn't take metro at all. |
| Ok with this on weekdays more than weekends |
| 9pm is really early and given that most places in the city are currently open till 10pm. The metro opened till 11pm gives users to ride it home. |
| By next January, I think many of us hope there will be more nightlife, so 9PM on weekends is pretty early. It might be better to go later on Fri/Sat and possibly even run shorter Sunday hours. |
| This does not allow for transport home from dining/entertainment and also the people staffing those would certainly not have a way home. |
| This will reduce ridership and lower income from fares. It doesn't make sense. It leads to spiraling losses. |
| There are individuals who rely on Metro to travel from working later in the evening. 11:00 is a reasonable time to stay open. |
| What if I want to eat dinner and have drinks downtown DC on the weekends, that would not work for me at all |
| There is no good reason for this, we should be expanding access to public transport, not reducing it |
| 9 PM is not late enough for participants who need to ride the train to and from their job at later times of the night. |
| Im usually home by 9pm however seems very early to close the metro, especially on weekends |
| The pandemic has changed ridership at an unprecedented rate. It's not fair to close items just people return back to work. |
| How would I get home from the airport after a conference and after a late flight? Taking several bus lines is quite complicated late at night. |
| Nonetheless, if we want to get more people out of cars for social reasons - like drunk driving - then increasing rather than decreasing hours should be the plan. |
| Not ideal, but would only impact my experience a few nights a month (vice options that impact a daily commute) |
| Should be find |
| too many people that support what I do work later hours and have no other alternative to get to their work. |
| I need metro to commute every day to and from my home and office. I would much prefer more frequent workday service (i.e. trains more often) and okay if that means metro closes at 9 PM. |
| The government has shift work and the majority of government workers use metro |
| People have plenty to do in the evening and many workers have night shifts. Metrorail should run 24 hours. |
| I would like to be able to use metro after a night out. |
| Sometimes I work until 9pm and need to get home. It would make me not take metro. |
| Needs to be open until 11 PM on all days |
| Given that restaurants, event venues, sports arenas will all likely resume operations before then, this would kill a struggling nightlife/hospitality/entertainment industry |
| Obviously not, I'd like to go to baseball games and other events. |
| 9 PM is ridiculously early we don't live in Salt Lake City |
| sometimes i work later than 9 |
| If this approach results in the closure of stations in Clarendon and Virginia Square, I am not supportive. These are high density areas that need to be appropriately services |
| 9 pm is still early in the evening |

Proposal to close Metrorail at 9 p.m.

The availability of the metro during later times during the week and on the weekends especially allows DC residents the flexibility of not having to pay for ubers or taxis to get around. This late service is also vital to those essential workers that get off after 9pm and need to find a way home.

Already many people who rely on public transportation struggle with the 11 PM closing. This is my least favorite option.

This would be bad for people who have to work late shifts

The metro needs to stay open later. 11pm is already too early.

On days involving DC area professional sports games, Metro should accommodate/ lengthen hours if needed.

So much of the city has to work past 9pm and relies on public transit, myself included

This is again short sighted. Staying open and being available is what makes metro a valuable means of transportation within the DC area. Riders will return, but changing the schedule will likely be permanent with no intent to reverse course.

Metro is needed after 9 for events & such.

Way too early.

Many office and hospitality workers in DC regularly work well past 9pm. This would leave them stranded without a quick and affordable way to get home.

timing would be early if seeing a show downtown and they dont begin until 7:30 or 8pm, travel options would be limited

By January 2022, people will be back to attending events (sports, concerts theater, etc.) in person. Its frankly an embarrassment to think the metro system in the nations capital would close at 9pm.

This is a joke right? This is a path to a death spiral which may already be too late. No one going to a sporting event can take the train? Even 11 is nuts.

The ONLY time I need the service is ending after 9pm, and there are essential workers on the trains at this time. It would cause significant inconvenience to me...but worse to those who need that service to sustain their livelihood. Metro needs to stop pushing late night riders under the bus while never even considering whether early morning service is needed.

Not ideal but for getting to and from work it would work. It would also mean not being able to do anything social after work.

This is extremely inconvenient for anyone using the system for leisure/night life

This is a terrible idea.

What about airport & Union Station? Sporting events in DC...seems unfair to those that work late

Even closing at 11pm is too early

I work late

While I only infrequently ride in the evening, 9 PM seems to early to shut down Metro - wouldnt accommodate those who go out in the evenings, or who work later hours.

Would prefer 10:00pm closure

Im rarely out that late, but would presumably have to ensure as much in this scenario.

It should stay open until 12

Hours need to stay the same

I use the Orange Line (Clarendon and Virginia Square) daily to commute to work. Such cuts in train service would severely impair my ability to get to my destinations at Foggy Bottom and Federal Triangle.

I am seldom on the metro after 9pm, but it offers an affordable ride home for people who want to drink after work.

I work late sometimes

Early closure on evenings of sporting events would lead to gridlock and overload on taxis.

Cutting back service is unproductive, even idiotic. Please table these foolish proposals.

Capitals hockey games dont end until 9:45

Having metro to go into the city for evening events is very important for keeping cars off the street at that time. It also makes going in to the city much more affordable than paying for parking.

This punishes people who depend on public transportation

This causes a lot of issues for anyone who works evening shifts or over night shifts. Often times corporate jobs even have team members leaving as late as 9pm.

Unless you could flex for events (baseball games, concerts @ Verizon Center, etc), 9 PM seems too early.

Proposal to close Metrorail at 9 p.m.

This would not affect me, personally. But it would negatively impact all people working nontraditional hours, as well as those coming back from sporting events or bars (which could also increase people's incentive to decide to drive while impaired)

I often work or am in DC past 9 and need to get home. I would suggest 10pm

This is terrible for essential workers!!! The very people who have been keeping us all afloat for the past year are going to get screwed!!! Not to mention, this is terrible for the service industry in DC- we need later service so people can enjoy a night out, spend money at our restaurants and entertainment venues without drinking and driving.

The metro already shuts too early as it is, any reduction in its operating hours at night would kill off the vibrancy of the city already suffering from bar and restaurant closures.

This will mean no ability to go out on weekends and support local economy.

my son who is a paraplegic and in a wheelchair uses metro after 9 PM to attend events downtown DC such as a Capitals game and would be unable to return home to Clarendon after the game / event if this were to happen. This would seriously limit his ability to enjoy life and events in DC.

As a student at GW, my classes would release at 9 PM. Closing Metro at 9 PM would leave me unable to commute back home to Arlington and be a major issue for me and for GW as a whole.

I often use metrorail to return home from evening evnts. 9pm is much too early to close. Even 11 pm is too early!

Holy word. What are you even thinking?

I use the metro to get home after weekly game nights with friends that dont end until about 8pm. My home is about an hour and a half metro ride from my friends place, I would not be able to guarantee getting home via the metro.

This will make more people drive, leading to more crashes, more drink driving, and harder commutes for shift workers.

The earlier closing time already negatively affects businesses, changing the time even further would hurt these businesses even more. It would make it difficult for people to get to work and would make it harder for the economy to recover post pandemic.

During weeknights, this seems more feasible. On the weekends, however, this would greatly limit my travel. Furthermore, these cuts would most likely hurt those who most need the transport.

I am home by 9 and dont go anywhere that late.

This would make travelling much more difficult.

Possibly. Not really a night owl

No other major city in the world closes its subways that early, we can't be a world class city if we close the subway at 9

Many workers who rely on Metro are not off of work by 9pm

Cant go out at night

Often times I have to work late and it would be terrible if there is no service after 9 pm. I already think 11 pm is too early to close. It used to be 1 am or even 3 am on weekends. That was so much better.

Great way to make commuting home from a late shift, easing traffic congestion in Nats park after a game, and getting home from dinner/bars even worse!

How are people supposed to get home in the evening, from say, a baseball game or movie or even drinks out with friends? This is a terrible idea.

Outside of a pandemic operating environment, closing at 9pm on Friday/Saturday would have a bad impact on riders' abilities to go out and visit restaurants/bars without paying steep fees for taxis/Uber's/etc. This would likely have a bad impact on the restaurant and bar industry, an industry that has already suffered severely due to the pandemic.

Metro is a crucial part of DC nightlife, this would encourage drunk driving.

too many essential workers need later train service.

The later times are necessary on the weekends, but it would work for the weekdays. I do not work in an industry that works past 5pm so my opinion is not based on those needs

This is again an insane proposal. If I had to pick this or the lengthening of time increasing, it would be this, but this would massively decrease the amount of times Im going into DC to spend money in the district at restaurants and stores etc.

Impossible to go out to dinner or drinks after work and rely on Metro with this schedule. We will be forced to use ride-share services costing much more.

This would present challenges with getting back home, especially over the weekend.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| We try to use Metro when we go downtown. Closing @ 11 is already not very night out friendly. This would keep us from using Metro in the evenings. |
| Late night trains are important to keep DC safe! |
| 9 pm is too early, especially on the weekends when people are going out. For example, I cant imagine getting out of a game at Capital One arena and not being able to get on a metro. The Uber situation would be out of control! |
| 9 pm is too early, esp on Friday and Saturday |
| only time I would ride Metro late in pm would be Nationals Night Game |
| This would disproportionately impact poorer communities who rely on metro to get home from work. Especially nightlife workers. |
| Employees work until 1030pm and they would not be able to get home from work. |
| This would make it much harder to travel around the DMV past 9pm and would force me to drive or rely on ride sharing services more |
| The bulk of commuters will have finished their commutes by 9pm. |
| Some do work late and have to ride back home |
| We are a world class city, our trains should run well into the night. 9 pm is a childs bedtime |
| What about people who log long hours at work and cannot afford drivers???? |
| For work it would be fine, but for sporting events and other things it's not frequent enough. |
| this seems unfair to retail and restaurant workers who get off late and most depend on metro, while favoring white-collar professionals. |
| I dont often use metro at night but please assess ridership needs at night, especially for lower income riders who may not have alternative options - Im assuming bus service would remain available instead |
| Metro is an excellent alternative to driving home from events downtown like theater, restaurants, and bars. |
| Yet another way to discourage ridership. |
| I would take Lyft/Uber if needed |
| This is a terrible proposal that would hinder businesses running late into the afternoon. |
| My expected travel needs include using public rail transit in the evenings, especially on Fridays and Saturdays |
| I will likely be commuting back home from school at late hours and need the metro as late as possible |
| later on the weekends would be better. |
| That is way too early. |
| Later hours for those who need it |
| I work late in the city and commute to VA. My shifts end often after 9 pm. I do not have a car. I need to be able to access metro. |
| Really? Close at 9pm? What is this, Florida? |
| This is the worst possible proposal and it would kill night life and the theater industry in DC. |
| Keep it open later for people working late |
| Working at the hospital can give you unexpected hours, more than once in the past couple of weeks I have unexpectedly had to stay at work late and needed to metro home later than 9pm. |
| works and events keep going later than 9pm. |
| My (non pandemic) life really relies on metros running until at least 10:30pm. Im not sure what I would do if it was only available until 9pm. |
| 11 is already too early for a metropolitan city, not an option. |
| Closing at 9pm is ridiculous. I dont expect 24/7 service like NYC, but many people who work afternoon/evening shifts will be affected by closing Metro at 9pm. This is a terrible idea that puts a huge burden on those who ride during off-hours. |
| Would not work when we get back to attending Smithsonian Associate events in DC and Music Hall at Strathmore events, where we park in the Metro parking garage at Grosvenor-Strathmore. |
| Sometimes I commute home from work after 9 pm, this would not be convenient |
| I have evening meetings on Capitol Hill. This proposal completely defeats the purpose of using WMATA. |
| I plan to return to me evening hobbies once COVID makes that possible. I plan to be out later than 9 pm. |
| Places people workâ€”like retail shopsâ€”close at 9 pm or 9:30. Couldn't take Metro home. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| What about socializing outside of our neighborhoods, sports, concerts? |
| Closes too early |
| After 9pm, the majority of riders are taking Uber or buses when they are outside of city limits. |
| I would have to find a different way home from work |
| while I typically do not need late night metro rail service, I do need it occasionally on weeknights and definitely on weekends |
| I rarely ride Metro after 9pm |
| Would there be alternative public transit options available for folks working later shifts? |
| This will be terrible for businesses and for those of us without automobiles. |
| This is the nations capital. Closing the metro so early is a joke on numerous fronts. |
| That's too early for many work schedules or other events in DC such as sporting events. Even dinner after work will not be possible |
| This isnt late enough to get me home from evening activities, like going to the theatre. Id have to drive or use a ride hailing service. |
| Monday - Thursday, ok, but not during the weekend |
| This is absurd and hugely favors economically advantaged folks with 9-5 jobs. As it is, its hit or miss as to whether Ill make the last train when I work the night shift when its at 11PM, and then Im left with no choice but to take a \$40+ rideshare ride home, which negates the extra money that I make from working the night shift. Whenever pandemic restrictions are lifted, it will also mean that people will not be able to use the metro to access nightlife. |
| Upon a return to "normalcy" I would like to see weekend evening hours extended. |
| If I Metro to a show or game in DC, how do I get home? |
| no, that wont work for late events like ballgames or going out at night. It will lead to more DUIs. |
| Wow. Well so much for working late |
| I prefer public transportation for evening events like concerts, shows, etc. Having service routinely end at 9 pm would exclude a lot of options. |
| I think this is reasonable. |
| In the abstract this probably works, but it sort of defeats the purpose of relying on Metro if it is closed so early. |
| This prevents people getting home from work |
| During the week it may work, but could it be 10 instead? |
| This would significantly reduce our ability to use metro for all non-commuting travel, which is a significant portion of our regular use. |
| Unless theres extended service for sporting events with limited parking options or other events downtown (concerts, etc.) Additionally, later metro trains from train stations & airports need to be allowed. |
| This risks people driving into the city and drinking and driving home instead of being responsible and taking metro because it removes any cheap option to get home |
| 9 pm is far too early and would mean that I would rarely use metro outside of commuting time |
| 9pm is so early, especially those who rely on metro service for late working hours. |
| That is too early |
| This would mean that even a 7 p.m. movie playing downtown wouldnt get out early enough for people to be able to take the Metro back home. |
| This would work for me but I think it would likely result in more drunk driving as people try to drive themselves home from the bar. |
| This is much too early of a time. In 2022, many people will be dining out more frequently and those with later reservations would have a main source of transportation removed. Same goes for events such as night baseball games. |
| This will hurt the businesses who depend on Metro like bars, restaurants, venues. You would be unable to take the Metro for leisure activities, it would only be for commuting purposes. |
| 10 seems more reasonable |
| 9pm is incredibly early. At times I have to stay out late for work dinners and events. I rely on metro to get me home on those nights. I would be forced to take car service, which isn't as affordable. |
| Only if support to late night venues, such as games, concerts can be handled once those are open again. |
| 9 pm is way too early. The city is getting to be a later city, and please dont make decisions based on the entirely anomalous pandemic year. This is the worst time to try to gauge what behavior will be like in 2022. |

Proposal to close Metrorail at 9 p.m.

Sorry, but I'm active in civic affairs, and our meetings run past 9 p.m. It would be a nightmare to depend on the kindness of others in both directions with each and every meeting. And forget about going to Nationals games!

Closing at 9pm would remove the option to use Metro to attend Kennedy Center and other cultural events in DC

10:00 PM may be an alternative to people that work in food/beverage, nurses, late night jobs.

I think this would start pushing more people off of the system. Putting more cars on the road as people drive or use ride share.

I would not be able to go to concerts or many restaurants.

All entities with any informed understanding of the virus anticipate a gradual return to normalcy to begin well before January 2022. This proposal works for now but would be disastrous to late night economy once things begin to reopen

My job as an attorney requires many late hours and the 9 pm time would be untenable

Would there be exceptions for large events like Caps and Nats games?

Night availability is important

9pm is too early. I occasionally work later than 9pm; while my employer would pay for a taxi to my car, Metro is faster.

You need to keep the metro open later. This is going to mess up the commute of essential workers who rely on metro to take them home after a late shift.

I only use public transportation, and 11 PM is already relatively early for me on weekends. 9 PM would drastically interfere with my ability to go downtown and to visit friends.

I mainly use the metro to go out in the evenings after work, particularly when grabbing a drink to avoid the need to drive. Cutting off service at 9 would be incredibly difficult to accommodate and would likely lead to me taking (and paying for) the metro significantly less.

I have soccer games that start later than that. Terrible 11pm cut off time already jeopardizes essential workers in service industry.

Because I ride the metro for work/during rush hour, this is not applicable to me, but TERRIBLE for residents of the city and any one wanting to go to a special event.

A transit system that closes at 9pm is not acceptable for a city of DC's caliber. this would hurt our entertainment venues, restaurants and bars.

I use the Metrorail system to commute to/from College Park and DCA, and often need to take late night flights. Closing the trains at 9 instead of 11 would make travel home significantly harder.

My hours vary with work and I may still need later service hours.

This would hamper our service workers and other who work late hours

This would make it impossible to use Metro for social purposes after work.

Would end any possibility of evening events in the city.

Same answer as before, by January 2022 things will be back to normal and so Metro should return to normal service at all stations.

unfairly penalizes restaurant workers and the like who will have to rely on uber instead of metro to get to distant situations

Need later metro hours

I use Metro to get to and from events (Nats games, weekend nights out) that end after 9 PM. I work past 9 PM on occasion too.

No

Are you serious? I will stop riding Metro.

Staying open until 11PM allows me to use Metro instead of UBER, or my own vehicle, after I have been out for dinner.

This is fine for 9-5 workers, but for those lower-income folks who depend on public transit to get to jobs that may be in different shifts will be GREATLY affected by this.

Evening service is essential (movie theatres, concerts, ...) - that's the reason why you use Metro in the first place. If you don't get home after evening events it doesn't really help.

This would work for me, but I imagine it would make it very difficult for late shift workers to use metro.

Way too early to close

I think that would really limit how much I'd use the Metro.

That's useless!

would have to drive into DC for anything at night

I often ride around the city on metro to get to/from bars and restaurants, venues, etc. I would prefer the later hours of 11 PM to get to/from where I need to be

Proposal to close Metrorail at 9 p.m.

NO! This would further cripple our already weakened nightlife industry. Before, I could reasonably expect to have a chance to catch the metro after a gig ended (I am a full time musician who primarily played U St. and downtown). This would mean that I would have to take ubers, a huge cost.

Weekends should stay open later than 9pm

While this would not impact me, it would cause difficulties for many workers who cannot afford to travel by car, Uber, or cab. This is another cut that would most impact poorer travelers.

This is hard for workers with late shifts (such as in the hospitality industry)

I would prefer to have the trains run until 11 but Im not sure if my work schedule will be that late as of yet

metro is my main transportation while consuming alcohol. this would encourage people to drive intoxicated

The early closure would prevent me from considering to use metro if I planned to attend any events in the city in the evening, and I would most likely take other modes of transportation completely.

I rely on the Metro to come home late from work, or from visiting friends across town--those options would all be cut if Metrorail ended service at 9 p.m.

That would restrict me going to events in DC. I would like to support business, restaurants, etc.

Not enough time. 9pm is too early

Late night workers, getting back from sporting events, concerts, visiting friends, need trains after 9pm

9pm closure is absurd.

I often work past 9 pm and rely on metro to get to and from my office

I envision being able to get back to real life in January 2022 and it will be very sad to have to pay more to commute after 9pm because the metro would be closed.

yes, but doesnt seem fair to service workers and others who may need metro most

The entire 3p-11p nursing shift depends on this train to get to and from work.

Use of metro later in the evening is important -- 9 is too early to close.

This would not work on days where I'm working late.

That's completely unreasonable and would lead to more people drunk driving. A lot of people also rely on the metro operating late in the evening to get home from work. I've had multiple occasions where I had to work late and barely caught the last metro as it is.

Metro already closes too early as it is. I think this would be detrimental to people traveling to DC on the weekends/evenings.

I hope to be leaving my house in the evening next year.

This would eliminate possible Metro service for me--no ride home from DC to Arlington

This is unsafe for many people who need transit. Uber is too expensive and this would set up many to be sexually assaulted without the safety of public service.

are we a city or the town from footloose

Id like to be able to use the metro past 9 p.m.

Metro should be open 24/7. You hurt poor service folks by closing earlier.

no ability to return late

Many people need to use Metro after 9 to go home from work. Not a good idea.

This would effectively render metro obsolete -- forcing commuters and those who rely on metro to get to work and move about the DMV to purchase a personal automobile.

That's so early that it would make me not want to use metro area all - I would rather go somewhere in my neighborhood rather than venture out.

This would severely limit chances to attend sporting events, not to mention the impact on workers who work late

I work until after 9pm routinely in DC and would be unable to get back home easily after my gigs. Additionally there are over 5,000 residents in the building on the east side of the station and about twice as many across the street who will be vaccinated and returning to regular work commutes by 2022.

Metrorail should close no earlier than 11pm on weekend and holiday nights.

Metro should have late night hours to encourage ridership. Decreasing hours will lead to fewer people seeing it as a useful option for moving about the DC area. Employees with late night hours will no longer be able to use the service. This will lead to more cars on the streets.

I run a business that depends on Metro traffic; this would doom my business. Absolutely doom my business. We need later hours, not earlier closures.

This would severely hurt businesses and restaurants, as well as worsen DCs emissions by driving up the need for more cars on the road.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Depends on COVID; would be inconvenient but I worry more about people who need the metro later for commuting. |
| Better than closing stations entirely. |
| Way to early for restaurant workers. |
| This would eliminate the use of metro for evening events. |
| I often use the trains later than 9 o'clock to get from DC to Virginia. This would force me to rely on other methods of transportation rather than metro. |
| This will impact tourism and people from outside of DC being able to stay at events and patronize local businesses. Similarly to residents of DC. What about shift workers? |
| A lot of people work later, especially restaurant and service workers who clean up after others leave. |
| System would be useless for anyone who works odd hours or wants to spend an evening out. Will result in more rideshare and personal vehicles. |
| This would have serious impact on the nightlife vendors |
| Would not be able to use metro for sporting events and concerts |
| Closing early isn't supportive of our family. We depend on metro and one member doesn't depart work until after 10pm. |
| Absolutely not - it is already hard enough having it close at 11pm. |
| No. Im not the kind person who ends my day and goes to bed shortly after 9PM like a toddler. |
| People who work into the evenings need to have access to public transportation and closing at before 11 p.m. is just too early. |
| I believe it's important to have safe and reliable transportation options for those who work off peak hours. I rely on public transportation as a safe and affordable way to get home. |
| Any evening events, such as concerts or sporting events, would require a trip home past 9 pm. As we anticipate things opening up in 2022, a 9 pm close would not work for us. |
| Part of the benefit and perk of public transit in the city is the availability to use public transit regardless of your activities or destination(s). For working professionals and those that work late hours in this city (especially retail and food service workers) who rely on the metro to travel across state lines to come work and support our city, cutting hours to the same close time as many retailers and restaurants or even before their hours close will be detrimental to the workforce. |
| I sometimes have to work past 9pm |
| This is laughable-- 11pm is bad enough. This makes it so that you cant go out for dinner after work and make it home. |
| What if your at an event at The Capital One arena or baseball stadium. Theres not enough Lyft or Taxis to get people out of the District. Stupid just like your fare prices. |
| 9 is extremely early for a metropolitan area |
| Cant use to go out |
| 9 pm is prohibitively early |
| Definitely not!! Due to classes, I sometimes just barely make it to the last train. 9 pm would be too early for the train to close, seeing how the metro is one of our main mode of transportation. |
| This will only lead to people stranded in DC, forcing them to drive or use ride share, leader to more congestion, costs, pollution, and drunk driving at night |
| For people without cars, the metro is the only way to get between DC and the near suburbs. Cutting hours would make it difficult for workers who do not work between 9-5, and would hurt restaurant and entertainment venues as people would not be able to spend their money there as they would not be able to get home afterwards. |
| If you make all these limitations you're not going to have a business, bro |
| This would largely affect service employees and low income workers. Cleaners, maintenance... |
| Many people who rely on Metro and/or buses to get to/from work dont work regular 9-5 schedules. Many people work late-night shifts (at restaurants, hospitals, etc.), and have to be able to get home afterward. This would probably make some people have to quit their jobs. |
| I work till 10 or 11 pm most nights. |
| this would eliminate Metro as an option for attending Nationals, Capitals, and Wizards games. |
| This will obviously disproportionately impact service workers or those that do not work a classic 9-5. Additionally, it removes a reliable and relatively safe mode of transportation home for single women late at night. |
| This is the best solution of the available options. Thank you. |

Proposal to close Metrorail at 9 p.m.

The 11 pm metro closure is ALREADY inconvenient. When I have to stay after work this is not going to work for me.

Closing at 11 provides adequate time for those who work late, attending late night sporting events, and theatrical performances. Closing at 9:00 pm would definitely make things more complicated when trying to do what was stated above.

Run late trains Friday and Saturday nights

This makes public transportation unusable for anyone outside of working hours. For events, people generally do start heading home by 11, but certainly not before 9.

The metro is an important way to go down the DC for dinner, bars, etc. If this proposal was implemented my ridership and the time I spend in DC would decrease

While it would work, it seems like Friday and Saturday nights should be later.

This might be the worst proposal yet. 9 p.m. service would cut it off from many of mine and the regions needs - coming back home after a show/dinner/bar, commuting home after a long day at work, etc. 11 p.m. should be the absolute minimum the system is open until.

Work shift ends at 9, I would miss my train home.

I would suggest looking deeper at which lines are busier later. Don't think closing all trains at 9pm would be successful but closing some or most may be more useful.

I rely on Metro for late evening returns from dining or theater and a 9 pm closure would be significantly problematic at least on Friday and Saturday nights.

Users who visit DC Chevy Chase and DC for dining and entertainment would be harmed as would the businesses they patronize.

I am frequently not out of work at 9pm. How am I supposed to get home without the evening transport?

It would be worthless for any evening events

For late night employees this will be dangerous and does not account for the fact that in 2022 more people will be working later than now due to lockdowns. Would drive people to cars and is antithetical to the environmental and cheap/easy-to-use agenda the WMATA prides itself on.

Closing at 9 pm might work for most weekdays and Sunday evenings, but many people rely on metro to get home from social events later in the evenings on Friday and Saturday nights. Suggest keeping services available until 11:00 or at least 10:00 pm on those evenings if ridership data usage supports it.

Again this works for me. However I have the luxury of being able to afford rideshare home at the end of a late work night.

not very considerate of people who rely on metro and work outside normal business hours

This proposal would end nightlife in DC

Later metro access makes for safer travel options

I take the metro after 9pm very frequentlyâ€”particularly to and from sporting events

A majority of my non-work related metrorail trips occur after 9pm. While I would likely continue to use the train for commuting purposes, I would largely cease my usage for personal purposes.

Are you trying to destroy whatever businesses remain or will be started post pandemic?

Trains running until 11 is important for second shift workers

I would rather trains arrive less frequently and the metro close earlier than stations close permanently.

This seems to really disadvantage people who work at night, like restaurant/service industry employees.

Primarily use metro after 9pm

I frequently take the train home from work, and I work long after 9:00 on many occasions.

I am an infectious disease researcher at GWU. Sometimes, I need to work late in the labs and this requires me to take the metro home later in the evening. The extra hours in the evening are very helpful to have in case of an emergency at work.

early closure time for events like basketball, baseball games, shows, etc. should consider later times for the weekend

With the potential of activities to resume as normal, ridership at night would increase and would need the metro to get around

9 pm is too early.

Most service workers get off shift earliest at 9:00 pm. This plan would leave all of our essential workers stranded without public transportation. This update will have detrimental effects on our economy.

Federal employees should be back to work by then. Only impacts recreational things in DC. Not a huge problem.

This is only equitable if MetroBus access can pick up the slack. Not everyone can afford Uber or driving.

Proposal to close Metrorail at 9 p.m.

For those of us that work late hours in the device industry this would be extremely detrimental to our livelihoods. Additionally, this that are trying to better themselves through night classes would also be unfairly hurt. 10 pm would be better, if there needs to be a change.

This would mean I would not be able to get home after attending a program or dinner after work.

Remove the useless station managers. Use the money to keep up service.

If the Metro closes at 9 pm on Friday/Saturday, I would pick another means of getting in and out of DC.

Not late enough for evening needs

would prefer later service but could live with it

9pm seems early since sporting events routinely go to 9:30 or 10

9 pm is too early. How will service industry people get home?

Metro systems are open until 2am in most other large cities. You should be running it later than 11pm and changing it to 9pm makes it UNUSABLE!

This would work for me personally, but I do not support it because many people rely on Metrorail to get home from work at late hours, and cutting service so early would be difficult for them. These people are likely the least able to absorb service cuts.

This makes the commute between work and home inaccessible.

This creates an extra financial and safety burden on people working late shifts.

I sometimes ride the metro after 9:00 p.m., but my regular schedule brings me home before then. However, I am concerned that this will encourage drunk driving.

This would work for my personal needs but I think a 9PM closing would be a challenge for many Metro riders

We are a major metropolitan area - we need transit to at 11 pm during the week.

This would reduce my evening travel and ability to patronize local businesses outside of my immediate neighborhood.

I can see the appeal of this, but worry about late night events in DC, such as concerts or sporting events.

In the summer, 9 pm may be too early

This wouldn't affect me but it punishes workers who rely on Metro.

This would be devastating for the hospitality industry workers. Especially restaurants where workers struggle to even leave the restaurant by 10:30pm. Covid-19 has already taken this industry to the ground and this would be such a blow.

This would generally work for me because I use the train to commute to work and I usually do not work past 9. Occasionally it would be possible.

This would severely hurt anyone who works evening or night jobs that relies on public traffic. It would also severely cut tourist traffic into the city for things like games, restaurants, etc. Many people rely on the metro for reliable service and this would be devastating.

I could see 10 pm being more reasonable, however maybe for friday nights an extension beyond normal hours would be nice.

I often take the metro around 10pm and would not have alternative transportation without the metro late at night. I would not like to feel rushed to get to the station.

We would never be able to travel to the district for weekend events

If I'm taking the metro to avoid drinking and driving, I need the metro to be operating after I've been drinking.

A public transit system with a 9pm closure is not a serious system.

This would be especially difficult on weekends or when there are special events/activities in DC.

This means no downtown theater, movies, or any evening events. A disaster for me personally and for the arts scene of DC

Closing the metro that early significantly decreases its utility and could also have a horrible impact on people who get off work later than 9 pm, thus making the metro inaccessible to people who may need it the most. Keeping the metro open later is critical.

I know people who take Metro to concerts at Strathmore. This would not allow them to do that.

It seems too early considering that in a year we would potentially have evening work and recreational events we would attend in DC.

Would option would enable me to use Metro rail to get to work. But would eliminate almost all evening activities (i.e. theater, sports, dining out).

Im a boring overweight dad who takes the Metro at 6:00 am and then again at 4 pm. When I do go out back 9 pm, which is almost never, I drive.

This does not allow me or others to depend on Metro for any evening plans

Planning this for January 2022 is ridiculous-- by that point, the virus will be under control and people will be back at the offices, dining out, and going to entertainment and sporting venues. Closing at 9 is way too early and very shortsighted.

would hurt dc nightlife which i like to enjoy

Proposal to close Metrorail at 9 p.m.

What doesn't make sense to me is you would be cutting back services right as things will be going back to normal. By January many will be vaccinated and commuting to the office again. To cut back services right as ridership would be increasing seems counterproductive.

This would depend on weekend as well. I would like to see it open later on the weekend days. This would also heavily impact night shift workers who typically heavily rely on affordable transportation like METRO

Couldn't get home from any entertainment, so there would be no reason to use public transportation into DC. Restaurant workers couldn't get home after work.

This would be preferable to service cuts to rush hour.

This is completely unacceptable for a city the size of DC. A huge percentage of the population is dependent on public transportation both for work and entertainment.

Metro closing that early will stop me from metro-ing in the evening because of the fear of not being able to catch the last metro

Metro needs to be open later, not close earlier.

Closing at 11 already too early! Many folks working in the DMV, including myself, have work responsibilities that often extend beyond 9 pm.

As I wrote, I'd rather you increase the pricing than decrease availability of trains.

More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable.

I don't love it...but for work commuting, this option makes sense.

The only times it wouldn't be for sporting events... IF they are safe to attend by then.

I could make this work if the stations are open.

Personally, I rarely use the metro after 9pm, but I believe keeping the metro open later serves a vital public service.

Extended availability is important to support workers with alternative work schedules

Take into consideration those who work evenings

I do theatre how do I get home?

Me yes, but not for my son. I'm in bed early! But I think this would be very bad for many young people.

Later closing time will better serve residents who need to work late and rely on metro transit to get home safely

I frequently use the service to get back after 9! The trains should at least run until 10 or 10:30

It would seriously curtail our use of Metro for evening use of restaurants, bars, theatre, etc.

Restaurants and other businesses that operate at night depend on people being able to get around using metro. Many DC residents do not have cars and this would just dissuade people from going out and helping out these businesses.

Unfortunate, but acceptable.

Nothing ends at 9 pm.

I have to work after 9 p.m. extremely frequently and this would completely disrupt my commute. I would prefer that stations stay open later over almost any other change.

Further cutting service will drive riders toward alternatives like rideshare, and force WMATA to serve as a commuter rail rather than a dynamic public transportation system.

Cutting service to an 11pm closure was already a mistake. Please don't cut it further.

The metro trail needs to stay open 24 hours. Its ridiculous that its not

Trains should be in service until AT LEAST 11pm, if not later.

I get off work at 10:00pm i have no way to get home 11:00pm is better for people who work at late 10:00pm

I used to go to sporting games in DC and would take the metro. I am guessing that would mean that I wouldn't either bother with going or would drive in rather than leave early or miss the last train and be stranded.

9pm closing would preclude someones using metrorail to attend cultural events in DC, a very important use of metro

This would have a significant impact considering we rely on the system to return home in the evenings

often use metro for evening events and work meetings.

It would not effect me as my job is 9am-5pm.

A lot of people miss their bus and need to call a Uber because they sometimes do extra hours so to be sure they train and buses should extend hours

It works for "work" where I earn money, but not for leisure when I spend money to stimulate the economy.

If this is implemented, I would hope it could be temporary until ridership is up to the necessary level to support longer open hours.

Ridiculous

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Washington is a work-late city. This is an absurd proposal (also, what happened to midnight?). |
| This would decrease the likelihood of me going out at night to the city and to use public transportation. |
| I work in an emergency management, during an active disaster I work 12 hour days, if the metro shut down at 9 I would have no way to get home. |
| This would make it difficult to stay at work late. It would be helpful if it was later at least for weekdays. |
| This would drastically affect me when needing to work late, and would also affect my ability to participate in nightlife, entertainment, and visiting friends out of my neighborhood. |
| Though this does not affect me personally, I think there are people who work a late shift who rely on metro at that hour. Alternatives would be very expensive. |
| This will be horrible for people going out into DC and using the metro to go back home. If this will happen, there is no reason for the metros use. |
| 9 pm is too early to use the Metro to get hoe after going out to dinner |
| Not good for weekends when people go out and will push more people toward UBER |
| I would not be able to use the metro rail if that were the case. |
| This would not allow for me to attend concerts, events, have a late dinner or sports events like baseball games. |
| For late work nights, this would not allow a public transportation method for getting home. |
| No late night service will crush social life. |
| Wow, no Caps, no Wizards, no Nats and no weekend pubs. |
| Offentimes dinner meetings go later than 9 pm, 10 or 11 pm would be better |
| Limiting evening hours to 9pm will further limit usability of transit as an option, further reducing ridership. |
| Tath would kill all Redskin, Nat CAPs, and cultural events that dont end by the. I think that would detract a lot from DC and affect tourism. |
| i get off work by 4 every day so that would work. |
| This is wrong. This service is necessary for late workers, commuters, and entertainment purposes. Especially Thursday-Saturday night. |
| Night time trains are essential for many workers as well as for night life. |
| It would make it much less likely that I would go from my home in Maryland to Washington DC. I think this would greatly affect businesses in DC - especially restaurants/music venues/etc. I think this is a terrible idea. |
| This would discourage me from having dinner in DC on some evenings or going to DC on the weekends. |
| One of the core benefits of the Metro is being able to go into and out of the city at night. Closing at 9 pretty much eliminates that option. |
| You are essentially telling people to uber home. Can't go in for dinner I'm the city or go to a sporting event and expect to take metro home. That's a game changer. |
| possibly this can work on most days. |
| It would be hard to return from dinner in DC |
| TEMPORARILY --- until normal ridership resumes |
| This would disproportionately impact those that work outside the "usual" 9-5 (usually those earning minimum wage and do not have access to other means of transport) |
| I sometimes ride home on the Metrorail system after 9pm |
| minor inconvenience for visiting DC in evenings (restaurant use, concerts, stage productions) |
| So long as it stayed open until the later time during large events like nats or caps game this seems fair. |
| The early closing time of Metro stations/lines is one of the problems with the system already |
| I think this would be reasonable for weeknights, but not for weekends. |
| I live in an area close to bars and restaurants. Closing metro this early will lead to more drivers vs metroers, a very unsafe situation. |
| Hockey and Baseball games |
| This seems like the least desirable option - preferable to have less-frequent trains than to cut hour of operation. |
| see previous comments |
| If I take Metro to attend an evening concert I would not be able to get home. |
| The janitorial staff that work at my building rely on the Metro for transportation home at night |
| This is too early to make metro a viable option |

Proposal to close Metrorail at 9 p.m.

The appeal of the train is that runs till 11. If anything the hours should be later to encourage bar goers to use it.

9 is way to early - people work, and eat and drink far later

This would have some impact on me, but I could make it work. I might drive on days when I need to stay late at work.

Going out to restaurants or for other reasons it would be harder to get home.

11pm is laughably early. 9pm is intolerable. I would not be able to travel from MD to DC for any evening event. As it is, the 11pm closing time severely limits that.

Special events are often not over by 9pm, so Metro would not be available

I regularly work past 9pm and this would be very burdensome

Wouldnt be able to use Metro to get home from post work events

Too early for metro to close

many social outings end after 9pm and this would be a much more expensive way to travel if i had to rely solely on uber and other methods of transportation.

A 10pm solution may be more feasible.

It would mean we would drive more to events in DC. Like sporting events, shows, or concerts. Not the purpose of mass transit, but if it happened, we could deal with it.

If have to work late/attend events and or meetings and want to not drink and drive - not safe.

If an individual is working beyond 9:00 p.m., that person would have no way home, other than an expensive taxi ride.

Doesnt affect me personally but will affect those who depend on metro for transportation from work late shift

This is absurd as people in the service industry work outside of these hours. What are they supposed to do?

I have a young adult in my family and she relies on the metro to get home after 9 PM. I think 11 PM is even too early

Lousy

That's extremely early, people will have no way to get home.

10pm would be better

Not ideal but workable.

Why do you hate your riders? Why do you want the nations capitals public transit system to close at 9pm? You are a monumental disgrace.

Reducing hours is not acceptable

I work double shifts sot I use metro after 9 pm

I depend on Metrorail to go into DC in teh evenings for recreation, dining, shopping, visits. Metrorail closing at 9pm would cause me to spend significantly less money and time supporting DC businesses.

One of the values of Metrorail is the service after 9. It means dinner out, theater or other entertainment, even late meetings without needing to drive into DC

People need the trains open longer if they have evening activities, such as dinner or entertainment after work.

Generally, this would work for me. It would suck however, and Id spend less time (and \$) in the district after work.

Metro is already essentially useless in the evenings, and this would make it moreso.

Absolutely not, the metro already has far reduced hours from when I first arrived in DC in 2012. With these hours, the metro would essentially become useless and a non-competitor to ride-sharing services like Uber or Lyft especially on the weekends.

Doesnt effect commuters

I have no car in DC and buses do not cover all routes so limiting options is not feasible

Theatres, bars, restaurants, sports venues, and event spaces ALL close later than 9 PM â€” this proposal would result in lost revenue in the medium-term.

nope.

I think we are all hopeful that evening activities - sports games, concerts, plays - would again happen. This plan would eliminate Metro as a form of transportation home from these events. Metro is not just for commuting to work; Metro plays a vital role in allowing people to move about the DMV for leisure activities as well.

Many activities I participate in extend beyond 9 p.m. and limiting the hours would be highly inconvenient

Many folks like myself use the metro later in the evening and closing at 9 PM would significantly hinder that.

DC is the capital of the richest country on earth, how are we not going to have night service???

It wouldnt hinder my ability to commute to work but might be disruptive to things like going into the city socially (meals, events).

Can't go to baseball games or any night activities in dc even with the 11pm closing

Proposal to close Metrorail at 9 p.m.

Hopefully this change would last only as long as the pandemic lockdown. Otherwise, it will drive traffic away from metro to Lyft, Uber, taxi, or personal cars when night life in DC resumes, such as to the theaters.

10 pm would be better

Closing at 9pm is much too early.

Again, this only encourages more cars

We need to keep everything as is.....

Assuming COVID-19 vaccines are effective in reducing transmissibility, I would use the Metro to access DC restaurants and events which certainly would have me returning home after 9 pm.

Some need metro for work in evening

I expect to be fully retired by 2022, but I would still want to use Metro to attend sporting events and other evening events in DC, so 9 p.m. is too early.

This would work for me as I use metro to get to work during the day.

I depend on metro rail service for my job. I often work late and even 11pm is not late enough for me. I could lose my job if this proposal goes through.

If this is implemented, you might as well shut it down right after evening commute.

Why didn't you invoke some sort of emergency clause in your contracts with union employees, where you could suspend their employment (while they get unemployment benefits) or pay a reduced salary due to the lack of funding and get all maintenance out of the way while ridership was vastly depleted due to COVID-19? Why can't Metro be managed better? Why are we faced with such dramatic actions which will only serve to guarantee reduced ridership because so many people already have reliability concerns with Metro? WMATA is the laughingstock of all public transit systems. It's embarrassing. You should be embarrassed.

I do not feel comfortable at metro stations in the city at night, so when I need it at night I use Uber or Lyft.

I sometimes use after 9. What about 10

This would curtail all evening activities (dinner, shows, sporting events) -- which would also hurt the economy.

Should be open until midnight and 2 am on Friday and Saturday. This is not acceptable!!

I mostly use the metro for commuting and do not often have to use it after 9pm anyway. I would be able to use alternate travel methods after that time if needed

Would miss classes in DC e.g. revenue shortfall for Smithsonian.

We would prefer to use Metro for sporting and other events in the evening

No!

No way I can use metro for any sports and concert outings. Or even social outing at restaurants.

Would make night outings on weekends harder to do. Force to pay for expensive ubers home

Riders need later operating hours as many work late and metro is their only means of transportation home.

This makes it very hard to use Metro for a night out

So lets increase the number of drinks driving. What a load of shit

If there are sporting events, concerts, etc how do we get back to the suburbs? Uber is a nightmare if there is no train service

That would make getting home quite challenging

This would strand my partner after work with no affordable way home.

This does not accommodate most evening activities in the District, such as sporting events. This means I must rely on other, more expensive paid transport to get to these events

No way

9 pm is very early to end service.

there are many low income workers who rely on metro and work late hours. 11 is already too early.

DC sporting events would be impossible to attend

Bad idea, metro should be closing even later, not earlier.

Yes for weekdays no fr weekends. 10pm would be better in general for any day of the week

9PM isnt even late enough for many people to have dinner downtown.

This would negatively affect retail workers who close between 9-10 pm.

Proposal to close Metrorail at 9 p.m.

A lot of people work later hours and rely on the Metro to get home. Closing at 9 cuts off a safe, reliable mode of transportation for those people.

9 pm is so early! Even 11 is too early!

This would make it impossible to use Metro to attend downtown sporting events (Caps, Wizards, night Nats). Terrible idea.

There are so many events and reasons to stay open until 11.

This will impact the working poor, but not me.

I dont ride that late.

My evening doesn't always end before 9pm

I ride often later at night, this would be a very bad change for me

Save money by stopping all current and former WAMATA employees from riding for free or with a discount. USPS does not give discounts to employees on stamps ...

Sometimes I work late and I get out around 10pm. This does not work well with me and other workers in a similar boat.

Reducing transit frequency (and reliability) reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself.

Plan would be disastrous for DC cultural organizations.

It doesnt help to improve transportation to neighborhood for evenings out around town. Think of things like sporting events, concerts, or other art events. Most of those dont get out until at least 10pm. Keep the 11pm shut down. Keep it for the weekend, if need be. But closing early would be a huge mistake, not to mention seriously hamper all the folks that work later shifts at jobs and often rely upon public transportation as well.

Closing early will unduly affect transit culture, specifically the ability to participate in evening events. This would be a big setback for transit in our region.

I would prefer later. This proposal eliminates taking metro to sporting events and concerts.

I often work late and catch the last train. This will require a lot of planning and less hours at work. So less pay.

I do not use Metro this late typically

Way too early.

This would not work given that traffic is heavy in the dc area and it would be difficult to get home on time and get an Uber or taxi which is expensive

Keep it to 11pm most nights; 12am for Fridays and Saturdays

This would be extremely restrictive as I live outside of the city but am attending graduate school at GW. There would be many instances of needing to be on campus after 9 pm and then needing to commute home. Ubers are expensive and the public transport would be the best option for me.

This would increase drunk driving in DC, putting pedestrians and drivers at risk. This directly contradicts the goals of Vision Zero.

This plan is preferred over closing any stations, but this will disrupt the ability of many people to use the system to commute in the evening.

No, of course this doesnt work for anyone who doesnt work the standard 9-5pm. This would also impact night life such as concerts in and around DC, sports events, and other social and work events that go later than 9 pm. This is an unacceptable change to the hours and should not be implemented. This would cause huge amounts of traffic as people would be forced to drive when they cannot take the metro. Terrible idea.

We use Metro for dining in downtown DC and for Kennedy Center Shows

Late night riders rely upon transit more than most and have fewer safe alternatives.

This would be difficult on weekends, following sporting events and for anyone making travel arrangements.

As seniors we depend on Metro for evening events in DC

I often work late and rely on Metro being open to get me home.

i often take the Metro after 9PM

This would work except for sporting events and concerts.

I need safe and quick transportation at night

I would not be able to go to the gym

That is way too early. I am often still at work at 9.

That would severely limit the usability of metro for evening activities

I work seasonally from April through October; usual work hours can span from noon to 11 p.m. A 9 p.m. closure would give me no means of getting home.

Same as the first answer. This makes the metro unusable for many people and in the evenings, further driving down revenue.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Sometimes Im not ready to go home until after 9 pm . Could hinder weekday and weekend travel for work and extra |
| At least provide a last train to come back home at 11:30. |
| What about people who take the Metro for sporting events? Evening games end after 9pm. |
| Any business closing at 10pm would leave several customers without public transportation home. |
| This proposal would eliminate my use of the metrorail after work and on the weekends |
| Besides commuting, my main use is for social events, which often end later in the evening. |
| My graduate school classes end at 9pm in DuPont and I will need to take the metro to get home from them. |
| We work at Walter Reed with no parking privileges and rely on the metro. Sometimes emergencies keep us at work late |
| Sports games need metro access. Youre literally killing the economy with these proposed changes. Hire smarter people and figure it out without doing this. |
| This is a very bad option, but better than cutting service during peak times. |
| It might have difficulty for people commuting from late shifts or universities |
| I would not need full service after 9, but at least one train to serve as the "last train home" around 11pm is definitely necessary in my opinion |
| One of the benefits of living in DC is having a subway system. Cutting these services back is making DC a less attractive destination. |
| This is going to keep anyone other than commuters from riding metro on weekdays. |
| That would not work. Most folks stay out later than 9 pm. |
| Metro closes too early already. A 9pm closing makes Metro virtually unusable for anything outside of normal commuting times. |
| It is too early |
| Need later metro for late nights at work and weekends |
| Most events that I would attend end around 9:00 or 10:00 especially on Weekends. Having Metro run through 11 is convenient. Otherwise I suppose I would Metro to the event and Uber back. |
| THIS WOULD BE A DISASTER, ESPECIALLY FOR PEOPLE WHO WORK LATE. |
| When the curfew is eventually lifted in DC, it is incredibly expensive to uber home every time you go out versus using the metro at night with friends. I realize this may not be super important to someone like me who is going to social gatherings, but to the hospitality and restaurant business, I feel like this makes it hard for those people to find transportation at a decent cost. |
| No impact to me, personally. |
| sporting events will require later rides |
| This does not allow time to use the trains for evening events like theatre, concert, dinner or visiting friends. |
| 10 PM would be better. |
| 10pm. |
| Closing too early. Some of us work late and need Metro service later in the evening |
| Military and government people have demanding hours. Leaving them with a 9pm closure and slowing down the trains will cause many people to be left without transportation home. |
| STOP CLOSING EARLY. You already made major changes to the closing that is still annoying |
| Might be okay if bus is still an option |
| It would work for me personally, but Im concerned for those, for instance in the service industry who rely on public transport and are required to be at work later. |
| People will be going out at night in droves after a years of isolation. Late night service MUST continue! |
| While it would not affect my work-related travel, it would affect my non-work travel in the District, including use of Metro to attend sporting events, concerts and other performances, and other events and social functions. |
| Give plenty of notice. Sports arenas will be sorely impacted, which is a source of revenue for DC govt. |
| Do not cut level of service. This cut disproportionately affects people who work hourly non-9-5 office jobs. It hurts people who need public transportation the most. |
| The metro should be open until 30 minutes after bars close to discourage drunk driving.. |
| as cultural and sporting event open up we will not be able to use metro |
| I sometimes work in the evening and need later service. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I often have late meetings or events and come home after 9pm |
| I often use the metro late at night. |
| 9 pm is too early to stop train service. On days when I finish working at 9, there would be no way for me to get home. |
| People use the metro at night, especially to go out to restaurants and bars (and back) safely. 9 pm is way too early. 11 pm is honestly still too early. Bring back 2 am on weekends. |
| Definitely NOT! Metrorail should be open until midnight on weekdays, and 2 a.m. on weekends |
| we use Metro as primary means of transportation for dining out and such |
| I specifically need the metro in the late evening. This would be terrible. |
| While most days I commute within hours that accommodate the 9pm closing time proposed, it would hamper my transit options for days when I have events to attend in DC and would be staying later. With a 9pm closing, then I would be forced to drive into DC more often than metro. |
| That would render metro effectively useless. |
| Wizards and capitals and nationals games! |
| That would impact to many individuals that were either working late or had other engagement. I would like to see 11pm to continue week day and 10 pm closing on weekends |
| It is good to have transport options available after 9pm for people to use who dont have cars or who are not able to deal with expensive parking in the city. |
| No- many of your metro-riders work in the DC restaurant industry. 9pm is too early to end metro service. |
| Closing at 9 p.m. is too early for people who work and for late flights arriving at DCA airport. |
| But it wouldn't work at all when Nats Park opens to fans in April |
| I don't use metro at night |
| Many people do not get off of work in time to take the train home before 9 pm. |
| This would reduce my usage of the metro from 2-4 times a week to 0-1 time a week. 11 pm closure (vs previous times) will already reduce my trips |
| Reduce service frequency at later hours if those savings are needed but still keep it running. |
| Many work events and events in general end after 9pm, drinking and driving will also increase |
| Its useless for the airport if you close at 9 pm. We had to use an Uber last time we traveled. 9 pm its a joke. 11 pm its too early, but 9 pm is ridiculous. |
| In addition to working part-time in DC, I frequently attend events. A 9 PM closure would mean that Metro is not an alternative for this, or for work on days I am attending something after work. |
| This plan only supports people who use the system for work--and even then only workers with regular 9-5 employment. It doesnt allow people to use the system for sports and entertainment, and it totally ignores workers who dont work early shifts. |
| This is going to have a bad impact on people who work night shifts or even people that use metro for social occasions - leading to either more drunk driving or rising costs for Uber and lyft which a lot of people have a tough time affording. |
| I have been more concerned with safety on the metro lines and no longer feel as safe riding late nights |
| This is not acceptable. Many of us work late shifts and need the Metro to be open until 11:00 pm. |
| My family is likely to use Metro in later hours of the evening due to work schedule. I also think this would be hardest on those who are most dependent on Metro to get to/from work that occurs outside of usual business hours, and they tend to be the most economically vulnerable -- with least access to transportation alternatives such as cars & ride-sharing. |
| Please do not cut hourd further for late night service as existing cuts are already draconian enough for younger people and lower income people. I want to Metro back from NSO concerts, sports events, and theater. People with less money or no cars need evening Metro service to be part of DC area cultural activities. |
| 9pm week days, Mon-thr & sunday and fri - Sat 11pm |
| I frequently need to use metrorail after this time |
| Is this every night or just week nights? |
| Anything less than full operations is unacceptable. |
| This seems very early, especially for essential workers who might rely on the later hours. I would especially like if they were later on the weekends. |

Proposal to close Metrorail at 9 p.m.

This should absolutely not happen! 11pm is already nearly too early. If I use the system and go out to dinner or drinks I often won't head home until after 9, it should be open until 11 or later. This also would severely impact service workers working late shifts

This would also make Metro effectively useless to me.

Could be ok Mon-Thursday, but def not on weekends.

This would hurt dinners and events

Seems early? Maybe do 930 or 10 to start and you could reduce hours further

I work at night and rely on Metro to get me home between 10 and 11 pm. I will have to quit without late nite service.

I would hope Metro would consider extended hours for special events that end after 9 pm.

More than likely i would be using its services past 9:00 p.m. in the evenings.

thats too early. some work late; restaurants open later

No, I get off work at 10 pm and sometimes go in at 10 pm how would I get to work and home?

Too early closure

I think this is the best option. Because the other cuts are too drastic during rush hour, whereas the after 9pm ridership is not very high and usually can take a bus instead.

Many people, who work non-traditional hours, use the metro and this would limit their ability to safely and cost effectively travel to and from work.

Too early

Event service is a large part of metro and keeping the city safe. Not having services for sporting and other events will lead to more traffic congestion and pollution

can we extend the hours on the weekends? Otherwise Metro is inadvertently adding to DUI potential.

Late trains are necessary for those who work late hours.

This works for me, but will not work for many who rely on transit to get home after work. This is not the level of service a world capital should have.

An alternative should be given in case people stay later at work like a bit longer wait time only for those hours.

If restaurants and bars are open past 9, the metro should be as well. This would have a large negative impact on DCs economy as a whole as people would not be able to stay at restaurants or stores as late as they can now.

My jobs lets me off at 11pm so most days i am rushing to the metro.

this would mean taking expensive Uber rides. I cannot afford that

Other arrangements for transportation could be made, but it would cause earlier surge pricing for ride share services that would likely last longer.

Metro is a great use and safe option to get in and out of the city and after events when things go back to normal.

People go into the city for evening events. This is stupid.

I frequently fine out or go to sports events. This doesnt work.

Crazy early if you are attending an event in the city. Toddler bedtime.

This would work for me but it would be an absolute disaster for service industry workers. Totally unfair proposal - punishes the people least able to make other plans.

Theater not out by then.

I use metro frequently to make day-long trips. Closing earlier would make said trips impossible and a haste to coordinate.

Thats quite frankly unacceptable. It would make metro entirely unavailable to those traveling downtown on weekends to restaurants, Nats games, Caps games, all of the businesses and activities we hope will return in 2022.

I have no activities that would require me to be out past 9pm, although it could be an inconvenience.

Late work hours and social events (post-COVID) are common among myself and everyone else I know...closing the metro that early could be dangerous for me and other women traveling late at night.

Please keep it open until at least 10

9pm are you serious, do u guys care about people who work late evenings....

It will make my life much more difficult

One key use is to attend Nats and Caps games. Closing at 9 pm would mean I could no longer use Metro for these events.

9 pm? Businesses downtown would suffer a major hit.

I rely solely on metro for transportation. This would seriously prevent me from working/living.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Not a good change for healthcare workers who rely on public transportation and leave their workplace late at night |
| I teach until 10 pm one night a week and I would not be able to get home on metro. |
| While this would work for me, it would be detrimental for TONS of workers at places like restaurants, etc. |
| If its late I can take a taxi - but I dont think it works for late-night shift workers who should be able to depend on public transportation to get to their workplaces. |
| 11pm is even too early, trains should close after bars to limit drunk driving and provide service staff a reliable and safe way to return from work |
| this is a major metropolitan city having its rail system close at 9pm is ridiculous |
| This would severely limit options for anyone who works late. |
| See response to question 2 |
| You still shouldnt do it. The people who use it at that time rely on that service. |
| Too early |
| I almost never was on the Metro past 9pm anyway pre-pandemic. Generally, if I was out that late, I took an Uber home anyway. |
| Under normal circumstances it would be ok. If I wanted to stay downtown for entertainment, it would be inconvenient. |
| Assuming we are able to get back to arena events, closing at 9 would cause severe issues for Capitals games. |
| I often am involved with work related or other activities after 9. So then this would require other transportation options. |
| Can't get home from ballgames or any downtown evening events |
| This might be fine for now while we're still in a pandemic, but once we get back to a more normal place, we need Metro to run later. |
| Although it'd work for me, other (like retail workers) could be affected |
| How would we get home from sporting events, etc. with such an early close time? |
| I use Metro to go to cultural events which end later. |
| Metrorail already doesnt run late enough to accommodate late-night workers. I would ride Metrorail on weekends to get to events in DC that end after midnight, but that is not possible so I have to drive and search for parking. |
| I sometimes need to access metro after 9 Pm due to work constraints. |
| If anything, I need it open later; not closing early! |
| This would be fine for me because I dont go out these days :) but for younger people this may lead to more drunken driving which isnt good for anyone. Many people who normally take the metro home from bars or restaurants arent going to want to pay for a taxi. |
| Some people need access to metro later in the night. Some people have work late at night. This will also hurt nighttime life and restaurant/bar businesses, which operate after 9pm. |
| Definitely not. People will be vaccinated at this time and will need access once again to metro. Stopping service at 9pm is way too early. |
| This would make it very difficult to go into DC for socializing or concerts or other late evening events |
| We often travel back to Eisenhower Station after 9 pm. But wed definitely be open to the trains being 1 per hour at that time. E.g. 1 at 9pm, 1 at 10pm and a final train at 11pm. |
| Such an early closing time will require more riders to drive downtown in the event that they might have to work late or might want to go out after work. |
| Many people use the metro to go to/from work, downtown, and need metro to return home. Many (such as myself) work past 9 PM. So no, this time change does not work. |
| Really not ideal but could make it work |
| A Metro system that closes at 9:00 pm is useless for a major city like Washington. |
| You cant have first world public transportation when you propose third world hours. |
| Cutting metro hours so much will make people rely on rideshare services and their own cars. This will lead to more emissions and potentially more drunk driving. |
| This makes it virtually impossible to use Metro for sporting events, concerts, etc. I would assume this would result in even more revenue loss. Also, it heightens the chance of drunk drivers if they dont have Metro. |
| Do you want to promote drunk driving or strand restaurant employees without a reliable and safe way to travel home? Terrible idea |
| Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office. |
| I commute between 9 am - 7 pm so this is fine with me |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This is the worst proposal. I have courses that go until 10 pm during weekdays, I must get from Clarendon to Metro Center without a car. There are things to do not effect me personally but overall, this is the worst decision. |
| Occasionally take metro past 9 pm |
| Although my late night travel needs are infrequent, they do occur and are unpredictable. Closing earlier makes use of the metro less certain, and makes it ore likely that I will need to drive in to work. |
| This is way too early whenever Id want to be in DC for a later event. Because the the District and Arlington have moved against drivers and more towards other forms of transportation, it would be tough to drive in in these situations and this makes it tougher to commute in and out or a lot more expensive which is inequitable. |
| I live above the VA Square metro and often use it to go into/out of DC, as well as out to work in Tysons.I often end up riding the metro after 9pm. There have been many times when I wished the metro was usable even later than 11pm, as well. This would be incredibly frustrating and disappointing. |
| I often work late as do many of the most vulnerable workers in the DC area. This is not a viable proposal at all and will disproportionately impact those most at risk. |
| We often use the Red Line to go downtown DC from Grosvenor in the evening |
| Going into DC for shows or dining would not be able to happen |
| I dont ride metro after 9PM, but my goodness this will force more people into cars! |
| Why not have 1 train at 11 pm?? |
| Need to stay open for dc events |
| This would prevent use of Metro for all evening activities |
| This is a terrible idea that would cause widespread harm. The proposal implies that the primary function of the metro is to bring suburban visitors to the city center. It would cease to function for city residents who travel beyond normal business hours. Please do not adopt this proposal. |
| I prefer to use the metro to get home since I live in close proximity to a metro station. |
| I get off of work at 8pm. If the train closes at 9 and I need to get to Virginia I will be stranded, along with majority of my employees |
| That's way too early. What about people who work late? Or go out? |
| eliminates Metro as an alternative to go out for events, shows, etc. No! |
| In â€œnormal Timesâ€\We take metro home from baseball games, nights out in DC,etc. |
| Yes. This will affect the fewest people. |
| This is terrible for all people who work later in the evening. |
| Absolutely ridiculous for a major metropolitan city. |
| 9am is too early to close - will limit people using the metro to go to dinner and businesses in dc, which will hurt the city |
| This would make having dinner in downtown DC be a drive-only event. |
| While I didn't usually ride the metro at night 9pm seems early and limiting for those who need it for work |
| Perhaps stay open to 11pm on Fri and Sat nights. |
| This would affect my travel from DC to Virginia on some nights. |
| Weekend and late night commutes under this would now have to be owned by uber/lyft services which are much much more expensive than riding the metro.So this would reduce a lot of the ability to go anywhere at night or else take a big budget hit. |
| Some sports and arts activities dont end by 11 |
| Ill have to uber back from social gatherings frequently, which is too expensive for me to do consistently. I moved out here because of the transportation. I rely on it for my quality of life here. |
| We need a ride home! This is public transportation! |
| Why not 10pm? |
| This would almost entirely eliminate the utility of Metrorail as a service to travel to events in DC, from sports to theater to concerts. |
| Absolutely no. Highly reliant on metro to travel back home at 9pm would be too early |
| I often have plans after work that go past 9pm. Getting home would then be challenging and expensive |

Proposal to close Metrorail at 9 p.m.

Metro is more than a work commuting option for many. For those that do work, many of us well into the evening hours, not having Metro run past 9PM places us in positions to be stranded or have to get alternate means to travel out of D.C. Additionally, for those who may want to do something outside of work after hours, that will limit/restrict social event opportunities due to limited Metro service in/around D.C.

This will severely limit after work and night time plans during the week and on weekends.

This is really bad for service workers who rely on public transport for their jobs, many of which dont end by 9 PM. We are a world-class city...we should at least have subway working until 11 PM.

Closing the metro before 11pm limits access to service and retail jobs.

Many retail shops and restaurants are open well past 9pm. Closing at 9pm would make it nearly impossible for restaurant staff to use metro to get home.

Do not fuck over people who work late. 9pm is not late enough.

It means that I can't go out in the evening to DC

Inconvenient for later night meetings and would force me to drive more. Consider needs of late shift workers. If this goes into effect, then consider 10pm

But it would. It work for workers who depend on metro to get home from late night jobs

I assume we will be back to pre COVID socializing by January of 2022. In such a case, you could not even go out for a later dinner and rely on train service home. All of these proposals will work together to reduce overall ridership because it just won't be convenient to take the Metro.

This doesnt work for us - we use the metro to access DC in the evenings.

Closes too early

Closing at 9 pm would make Metrorail useless as a means of an extremely important means of transportation that would impact workers, restaurants, concert/theatre venues, ball parks, etc. If Metro is not going to be a viable source of reliable transportation then why have Metro at all?

No! Returning from a movie, a concert, shopping-- and no metro home? Terrible!

This would keep me from being able to work late without incurring massive uber charges.

This does not work for me. I often take the metro home past 9 pm, and for the many people who need to get home from work safely and affordably, being open until 11 is crucial.

Because of the service workers who depend on Metro

Would work on weekdays, not weekends.

Close at 8pm.

it would make sense to reduce the size of trains but not to eliminate the later hours. But Im not sure if you can save \$\$ by smaller trains instead of eliminating trains.

This is an utterly terrible idea. A lot of people rely on the metro to commute well past 9 PM, ending transportation at 9 would have a major effect on DC nightlife and DCs economy. While many people are currently not going out much at night, once the pandemic is over this business will return and there will be a great demand for Metros to continue operating after 9 PM. If anything you should consider operating till 1 AM.

This proposal directly impacts employees who work second shift jobs. This proposal is extremely out of touch and geared only to those who are working traditional work hours.

I understand budgets. This is just sad. If we consider metro only for workers and commuters- not those trying to spend on hospitality and the service industry (OR THE WORKERS IN THAT INDUSTRY) then this sort of works. I'd end up driving if metro closing at 9 meant I could use it one way but would have to pay a taxi to get me home after 9 pm.

11PM is better than 9PM - as many restaurant workers/users work late night.

I mainly use Metrorail for trips during the day so a decrease in late night service would not impact me.

This will adversely harm the workers in the DMV that do not work 9-5.

Some people get off at 7 or 8 this would be a inconvenience

This will have a significant impact on restaurant and hospitality workers who rely on Metro to commute to work. What do those people do for transportation home considering restaurants are open much later than the close time.

10 pm would be a more reasonable compromise to allow people to use metro to go to restaurants, events in the city, etc.

Proposal to close Metrorail at 9 p.m.

This is limiting to people who work later or people who are socializing in the evening. You're going to force the hand of a lot of people who need this service at night. Also people use the metro for concerts and sporting events. They won't be able to use it to go back to their homes. This is going to affect businesses in DC

I could not go to my local bars if that happens.

Later hours are needed for people to get to and from work.

Weekends should include later service

The Metro is a prime mode of transportation during sporting events which never end before 9 PM. As well as concerts and other activities where driving downtown is an issue.

Workers in arts, entertainment, restaurant, and hospitality (music, sports, events, hotels, bars) NEED late night trains for after gigs and shifts. Gigs and performances will likely be back and workers need transportation

9am is way too early. This would affect people who work late, frequent restaurant/bars, and other activities.

The metro is the safest and most affordable way to get around DC at night. Buses are more varied in time, and having to wait for them on a dark road alone is less safe than in a well lit metro station where at least one person is working. Also, streets around bar districts are already overcrowded with Uber/lyft cars- taking the metro away will make that worse. Finally, if people cannot ride the metro and will not pay for a ride share it is more likely that they will drive to their destination and then drive home drunk, putting us all at risk.

Metro is important at night

High impact on second shift and service workers.

I would need trains to run until at least 10pm, in order to enjoy downtown evening events.

I work late

Live in MD and don't use rail in evening except for possible special events

How are people going to get home from Nats games and concerts?? The city can't expect to have big events and close at 900.

I think you need to look at the demographics of who is using the trains now between 9 and 11. Maybe be ready to make some adjustments based on this info.

It might be inconvenient for anyone who eats dinner after 6pm, and might hurt businesses with late night clientele, but it's fine for me since I only commute for work.

Honestly the metro would be more beneficial if it ran later after night. Possibly trains every 30 minutes after 11

This is one of the worst possible ideas. I cannot believe it is even being considered.

Much too early for, especially, elderly people going downtown for plays, concerts, etc.

How about 10 pm instead?

9pm is definitely too early for even weekdays. think late dinners, concerts, sports. you are thinking now during covid - not when we will be open fully. short sighted

This is entirely too early to close as many people do not get off work until 9-10pm who use the metro as cheaper modes of transportation in the low income community.

If you want to lose customers, this is a great idea.

The late hours are extremely nice to have if I'm traveling around DC for dinner or anything else.

This would be inconvenient for me as I work late at night and the metro is my only way of transportation

Metro needs to stay open later to insure the vibrancy of the city. It needs to be more than a commuter train.

It would mean I could not stay downtown after work.

Clearly I rely on transportation after 9:00 PM.

This works for me as person with a job during the day, but I am saying no because it does not work for people with jobs that run later, like much of the hospitality industry

this is flat out ridiculous. i have no further comments. figure this out.

I sometimes work late, and when I don't, I often go out. Closing the system at 9 would force me to rely on expensive cabs or ride-shares for about a third of my Metro use.

This would harm a lot of people including service workers and increase dependence on rideshares which would ultimately suck customers away from Metro even during hours it was open; if anything Metro should be open more, not less

Severely restricts use of the system

I rely on metro to see friends and get around after business hours

No nights out or late dinners in the city. Unreliable and stressful

Music concerts and other venues, as well as workers, need metro to be available later than 9 pm

Proposal to close Metrorail at 9 p.m.

Elite metro rails around the world operate smoother, more frequently, and 24 hrs. We are the capital of the US, we can do better. I get that it is a funding issue mainly caused by the federal government but this isn't the answer. Micro mobility and having supreme public transportation must be the future rather than personal cars, we need to act as such.

This would make the metro unusable for anyone entering the city for concerts or any other late night events. It would be an undue burden on anyone who works late night or overnight shifts.

I am a healthcare worker and have to work irregular hours. I rely on the metro to get to and from work and there is no easy bus replacement for me. Closing earlier is unsafe and inconvenient for me when I'm working and discourages me from going out on my days off.

I would not be able to get back home some nights.

So you want to contribute to Ubers stock price?

I use the metro to commute to events in DC. Once things get back to normal, I would no longer have the option to metro home if an event ends at 10pm.

Absolutely not! People, especially lower income, work after 9!

Okay with me but not good for the larger number of metro users attending sports events, etc., ending later.

I leave work at 10, and I know many other people that do as well. Anyone that works second shift the metro would be useless for

Staying open late reduces drunk driving and is helpful for student studying late and workers who get off late.

People use this to get home in the evenings. This would increase traffic and congestion of automobiles in downtown. Not helpful.

This will be very inconvenient given my late work hours

Living at the end of the Silver Line, this would limit my family's ability to travel in DC for dinner or entertainment.

In non-pandemic times, I generally stay out later, but would likely depend on Lyft or Uber after 9pm anyway

I travel in the District. Sometimes events end at 9 or 9:30 pm.

I work late so not having access to metro after 9 doesn't work for me

This would inconvenience anyone have any late-night activities, be it work or dinner plans. I do not find this acceptable as a metropolitan city and capital.

Two visually impaired sons need access to reliable and timely transportation through metro.

I frequently attend events in DC that end later than 9 p.m. This change would require me to drive to them.

It is essential that service until at least 11 p.m. continue, especially for essential workers.

I serve on the board of a local theatre; attendees will not be able to take metro

Many people working late shifts need to get home

I often work past 9:00 pm and use the metro to get home so this would not be good.

this change would make it almost impossible to travel from DC to east falls church after any recreational activities in DC. Shows and sports events end later than 9:00

I get off work at 10pm and use metrorail

Late night is essential to DC commerce and economic activity

Metro hours need to be extended, not shortened

I use Metro to go downtown for sporting events and dining out. All of these necessitate trips home after 9 PM.

The metro provides a safe ride home at the end of the night and this would encourage me to drive or be forced to Uber

It works for us because we can afford to use Uber and usually do if we are coming home after 10. However, we feel that many workers would need later service due to schedules. Maybe, significantly reduce the number of trains as it gets later.

Wouldnt work for weekends!

Sometimes go to programs in DC (from Bethesda, MD) and 9pm would be too early for some of them.

Makes metrorail even less reliable and usable than it already is. People will want to be going out at night past 9pm in the future. This is short sighted.

Don't usually use Metro at night, but would go to a play or concert.

No people work late at times

This makes it really difficult to use the metro to commute home from work

I would no longer attend events in DC due to the stop of metro service at 2100.

Often I am out working late and a 9pm closure would make me have to rely on Uber/Lyft for my transportation needs which is considerably higher in cost

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| General concerns about how this would impact workers who work late and rely on metro to get home at later hours. Ride share isn't as feasible or affordable. |
| Several classes and jobs will have meeting going until 8:30/9pm so those travelers will not be able to use the metro anymore |
| This is a terrible idea considering the Metrorail is an integral part of people's commutes and cutting evening service eliminates the opportunity for DCers to enjoy evening life and still commute home |
| This would prevent people from using Metro to go to events (sports, concerts, etc) |
| Many individuals work later than 9PM and will need rides . . . |
| We use metrorail to attend evening events downtown -- this would cripple restaurant and entertainment businesses and sports if patrons cannot get home after an evening out. |
| Most people are out and about past 9. Sometimes work runs late and coming back to my apartment off the silver line has me coming home around 1030. |
| This change virtually eliminates the ability to use Metrorail to go out at night to dinners/events. |
| Washington's restaurants and nightlife took a massive hit last year. As vaccines are distributed these industries and their employees will look to rebuild. They can't do that very effectively if Metro closes at 9pm. Nor could I go to a baseball game, etc. |
| Once people are vaccinated with the covid-19 vaccine, ridership is going to increase again... why isn't this assumed? |
| This change would negatively impact DC businesses that are open later, such as theatres, bars, and restaurants. |
| This would, in effect, cripple the restaurant and bars in our city. It would also encourage unsafe driving and lead to more public risk. This is an embarrassment that a major metropolitan public transit would even consider this proposal. |
| Dont usually ride after 8 pm but that could change. |
| It seems early during weekends. |
| This would be horrible for evening activities in DC, once the pandemic is under control and a large % of the population are vaccinated |
| Closing stations would be unacceptable |
| This time change affects many workers who do not subscribe to typical 9-5 office hours. Plus, many offices will move to flexible hours to stagger people in the office. Do not close Metro early. |
| Although not ideal if this meant no change in arrival times of trains I would be okay with this proposal |
| Work |
| Young people rely on metro to get home safely, and 11pm is reasonable. |
| Ill be working in the Washington, DC office five days a week. Metro would be the best alternative for the commute. Sometimes I need to work later than 9:00 p.m. |
| I come late in the night sometime |
| I attend orchestra rehearsals in Bethesda, MD that end at 10:00 PM. It is crucial for me that Metro service continues until at least 11:00 PM. |
| Metro is critical to supporting dcs nightlife and sporting events, and helps reduce traffic and drunk driving. |
| Weekends should be later close 11 or 12 |
| May not affect me but may affect adversely essential workers and others who do not have alternate modes of transportation. |
| Hoping the pandemic does end, if the metro rail closes earlier, traffic in and out of the city on game days/holiday weekends would become outrageous and dangerous |
| This would still help minimize traffic while providing speedy service however there should be expanded service during special events like sports etc. |
| I completely disagree with this. DC is trying and doing a great job trying to become a green city - this would stall those efforts to decrease public transport options. once restaurants and bars open up fully at end 2021 or early 2022 it would be important to make it EASIER to get to visit those business not harder. |
| Even 11 is too early |
| This will hurt the system and people who work late. Bad idea. Maybe reduce service after 9... In reality metro should be open later than 11PM. |
| The rail system should be a 24 hour service. |
| Wouldn't be an issue for me personally, but I'm thinking of people like healthcare, food service workers who work later |
| Would seem to lose lots of after hours business. |
| This is ridiculous proposal. It makes people want to ride metro less, not more because it becomes an unreliable mode of transportation |
| For commuting purposes this is fine but I would stop using Metro for all evening travel to/from the city |
| this would be disastrous for tour guides who often work until 11 PM |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Once herd immunity is reached, I would ask that this be reevaluated. |
| My wk hours are flexible I can get off as late as 10pm |
| I plan to be going out to friends' houses and restaurants more after the pandemic in 2022. |
| Doesn't work if you are going to a concert or a NATS game... |
| Depends what you mean by "system" If the trains stop at 9:00 that is too early. If it means there would be no one in the booth to help that would be too bad. |
| Late service on a few nights a week is preferred |
| It would make me have to leave my jobs with DC United and the Washington Nationals. Goodbye paychecks. Hello unemployment. |
| 11pm is already a restrictive time to close. What about people who work past 9pm and depend on your service to get home? What a terrible proposal. I hope this doesn't pass or you will see thousands of people who use metro to commute take their money elsewhere. |
| Again, it would be inconvenient having to make sure I got to the metro by the last train but would work for my commuting schedule. I value consistent trains during work hours (necessary) more than extended hours in the evening/night. |
| This will hurt restaurants in DC |
| We live in a major US city - 9pm is way too early! |
| Drunk driving will increase and that will be blood on your hands. |
| If I had to pick one change, this would be it. As most usage of metro happens during office hours. But still 9 PM is a bit early. There are lots of times I have stayed back at work till late. Especially for women, I feel more comfortable riding a metro in a public setting than catching a late night Uber, for example. |
| Wow...that's so early! I don't have a car and rely on Metro for all my transportation. If the trains shut down that early I will need to eliminate a number of activities. |
| I and many others don't leave work until after 8 or attend activities after work. I would need to find alternative transit home. This would also make it impractical for food service and retail workers to rely on metro. |
| 11 PM is early enough. There are people who work late at night who could ill afford to use alternatives to metro. |
| The Metro is a safe alternative for those who do not want to drink and drive. |
| 10 pm would be better with longer weekend hours |
| I would much prefer an earlier end to daily service than to have train arrivals be so spread out. |
| Trains could run less frequently during the late hours but the schedule should not be shortened. |
| Cutting 3 hours of travel time will increase DUIs, and hinder all evening and night workers in the community! Use the money more efficiently and make VA and MD pay more for their share of the train |
| While this would not impact my use of Metro, I do fear its impact on service industry workers. |
| 9pm is too early to close. It would make it impossible to work late. It would also damage the hospitality industry who will be still trying to recover from Covid-19. |
| I don't love this idea, but it's better than closing my College Park Station. |
| Would prefer later options for special events like baseball or hockey games |
| Service should stop at 11pm |
| You might as well close down the entire metro with these plans because it will make it impossible to use the Metro to get to work for just about everybody. Other stations nearby? You consider a walk a mile for someone physically unable to make the trip nearby? |
| How would one get home after a dinner or event (baseball hockey soccer stadium etc)? 9 pm is too early. |
| 9pm is TOO EARLY! |
| Don't normally ride Metro that late. |
| This would be a huge detriment to night life, businesses, and workers in non-office jobs. I frequently find myself missing the later closing time so making it earlier would be terrible. I also am part of a running club who meets at 7 pm in various parts of the city. Without the metro running past 9, we would be severely limited in where we could meet. |
| If I went to an event whether at the Kennedy center or a sporting event, I would have to wait for an uber and spend a lot to go home at night. |
| I don't usually take metro in the evenings, after rush hour |
| You need a way home from dinner and other nightly gatherings |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Hopefully we will be able to enjoy dinner in the city again, so on Friday or Saturday, staying open until 11 would be preferable. |
| I prefer this option over closing stations altogether. |
| As someone who works in the late evenings, and earlier closing time would make commuting by metro nearly impossible |
| This is bad. |
| This basically means there is no affordable way home for people who work late or are out patronizing restaurants and bars in the city. My work regularly requires me to work until 10:00pm which means I would have to use car share to get home which is prohibitively expensive |
| 9pm is too early to close, especially for those who work a later shift. |
| Yes, but I would not visit DC on the weekend and would likely end up buying a car, reducing my need further for Metro. |
| Closing the metro this early would make attending sporting events or concerts impossible in DC. There is insufficient parking as-is for these events, and ride-sharing is always a disaster when these events end. |
| Would completely destroy nightlife options in DC or for night classes, 11 is already too early |
| Often come home from work after 9 |
| Keep public transit open! |
| I don't use it at night, only to get to work in DC. Uber will be more than happy to take my money if I decide to go into the city. |
| What is the point of having a train in the city as we project to reopen from COVID shutdowns, but mass transportation is not prepared to support surge use. |
| If entertainment options aren't back by then, this works for most people, but I'm concerned about essential workers who don't work a typical 9-5 and rely on taking public transportation |
| If there is an event downtown, the system should be able to flex its schedule to accommodate riders. |
| Pre-Covid restrictions, I traveled to DC from Arlington one or two evenings a week to dine out with friends or attend concerts. If Metrorail service ended at 9 p.m., I would drive, increasing road congestion. |
| will definitely curtail travel from late night activity; may encourage impaired driving! this does not effect me -- but just thought I'd point it out |
| This has multiple issues: It harms businesses that depend on late night riders. This is problematic for those who work owl shifts and have no other means of travel. |
| Public transit should be available during late nights |
| Many events do not end before 9 pm and would drive ridership down further |
| Hopefully by January people will want to go out at night |
| It would mean adjustments, but nothing major. |
| OMG! 9PM? This is legit insane. I can't believe you would close so early and strand people. |
| This would kill nightly entertainment. Keep trains the same. |
| This would make it difficult to use the metro for evening plans |
| Too early closure |
| Once things go back to normal and we are able to safely go out and about- having the metro shut down at 9pm would make it an unreliable form of transportation. Part of having a public transportation system like the metro is being able to rely on it in the evenings as well. I utilize the metro when going out and possibly drinking to stay safe and not put myself in the position of driving- closing early would nullify that. |
| This would NOT work. Train service should continue later than 9:00PM. This would not make it feasible if I wanted to eat out or attend happy hour after work. |
| 9 PM is too early for many, especially during the weekend |
| 11pm is too early. |
| Sport events need full metro support |
| I don't use metro in the evenings, however this may affect younger people who go out after work or things like Caps games, Nats games, concerts. |
| I sometimes work after nine and travel between the hours of 9-12 and this would be a huge problem for me and my family |
| DC is a global city. 9PM closing is unreasonable |
| Should stay open until midnight. Service workers depend on this |
| Ending service at 9 PM significantly reduces the likelihood that I can participate in evening activities downtown. |
| People work different hours and rely on metro staying open until 11pm. |

Proposal to close Metrorail at 9 p.m.

Once the pandemic ends, this would strand people many places. Additionally, this would remove a safe and easy way for people to get home if intoxicated, likely resulting in an uptick in dangerous and fatal situations.

This would make travel back from sporting or concert events at DC venues impossible unless spectators left those events early.

Keep Metro open till 11 pm.

I, like many others, work late. I would no longer be able to use Metro to go to and from work.

Nope, go later, not earlier, or you'll lose even more revenue to rideshare programs.

This is very dangerous for service workers who normally work until after 9pm and rely on Metro for safe affordable transit.

Open later the better for my work in case I work overtime.

It should go back to late night service once things are back to normal.

This will have a negative impact on businesses dependent on evening travel, such as restaurants and theaters, just as they emerging from the pandemic.

what about late sports events and concerts?

A public transit system needs to meet the work and recreational needs of the public. This plan will drive more riders away.

While my current Metro usage is down dramatically due to COVID, in a post-COVID environment such a closure time would effectively eliminate any potential usage of Metro for traveling to downtown DC for evening events (culture, sports, etc.). Proximity to a Metro station was a major factor in our choice of residence permitting ease of access to the city without having to drive.

This will restrict our ability to find employees & patrons for restaurants and bars that are operating past 11:00pm.

People need to be able to get around after 9, you know that the reason ridership is down is because of the pandemic, right? Are you trying to lose customers forever?

I would likely attend less sports/events

Just no chance of metro being used for anything but commuting.

Yes during the week, but not on weekends. Whats the point of having a transit system that doesnt help with respect to social activities in the region?

This is going to have a big impact on dining out in DC or going to any sports or arts events.

That seems very early

This is an absolutely terrible idea; it would make it impossible for people to go into DC for anything later than 9pm, and given the number of people who rely on the metro to get to concerts, bars, etc. this would have a huge effect on those industries in DC.

The entire purpose of night service is to have a safe way home after events and concerts where parking is expensive and/or limited.

Can't attend sporting events or theater by metro. Bad for economy

This is crazy. Metro travel is an integral part of the community and commute for this area. Closing it even earlier is ABSOLUTELY RIDICULOUS. I cant believe this is even I survey I have to complete. Take money from other places for god sake.

Could we make this 10pm? Sometimes after work meetings happen and 10 is early for that.

This doesnt work well for many reasons. Attending concerts, plays, sporting events, etc. It is vital to have metro for these events and many others.

Would prefer later closing on Friday and Saturday

Just awful. People would have to rely on cars 100% for all nightlife, which would hurt businesses (parking is already impossible) and probably increase drunk driving incidents.

Not to mention the impact this would have on service industry workers.

You should consider having later hours on Friday and Saturday evenings for people who want to stay out later, go to shows, etc. once it is safer to do so.

Much too early for attending concerts at the Kennedy Center or doing anything in Washington.

This harms local businesses and we use Metro for social occasion and downtown dining

Would cause difficulties for when I am required to work late into the evenings

It would make it difficult to spend time in DC after work hours, but I could live with it.

For me personally yes. I rarely ride the metro that late and when I do, volume seems very light. Alternative would be to run trains with fewer cars (3 cars) every 30 minutes.

9:00 is too early if you are seeing a show or concert downtown, especially if you have come in from a station towards the end of the silver or red lines

This change would put my life at risk

Maybe 10 pm

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I regularly require metro to get home after 9pm. |
| If metro has to prioritize, given its purpose and reliance on public funding metro should focus on serving commuters. Reduced hours will also produce less wear and tear on trains and tracks. |
| I would not be able to use Metro to attend theater events if it closed at 9:00 PM |
| Awful. Terrible. Worst idea yet (and theyre all bad). |
| Thats too early |
| It would work for me personally, because I can afford to take Uber or Lyft after Metro closes. Im afraid those wouldnt be options for many other riders. |
| Good for weekdays, but would keep metrorail open late on weekends (even if not to pre-covid hours, still until at least 10:30) |
| The primary benefit of Metrorail--outside of commuting--is the ability to attend events without worrying about parking or driving while intoxicated. Metrorail should be open later, not closed earlier. This would also harm those who work non-traditional or service schedules. This is truly an awful proposal and would further erode Metro ridership. |
| We have employees that take the metro as their main transportation and we don't close at 9. This will affect the service industry and any industry that is open past 9. |
| Once things are normal I will use metro to commute daily to work and to DC from Grosvner metro so keeping it till 11 will be useful |
| I think there should be exceptions for holidays and events - - -HOWEVER, metro should be compensated in full by either event planners, the sport organization or the county. |
| This will harm the hospitality industry which is already slammed by Covid. This is a very bad idea. |
| That will badly hurt people who rely on public transportation to get to their jobs. And when the pandemic ends, who the hell is going to go to a night Nats game with Metro closing at 9? Terrible idea. |
| This would MASSIVELY impact accidents and drunk driving. It would also impact sales and revenue at restaurants and bars. Overall this feels like the WORST option of those listed here. |
| I generally don't use the train past 9pm so that would be ok. The obvious issue is for Nats games. |
| Basically means no dining out, sports events, entertainment for me in the District unless Im willing to drive in or ride share. Which I wouldnt be, because Id be commuting via rail. |
| Often travel after 9 pm. Also, car service and other alternatives are less available after 9pm, especially weeknights. |
| Doesn't work for theater or dining out or games at arenas and Nats. |
| If we are able to attend sporting events and concerts in 2022, this would prevent metro being an option for travel and would only further your monetary issues. |
| Probably maybe 10 pm but 9 could work |
| I will use the Silver line to get into work from Herndon to McLean and often worm past 9:00. |
| I dont have a car. How would I get back from downtown after drinks in the evening? |
| Ridiculous! |
| Works for me because I commute for regular business hours. This definitely would not work for a lot of others. |
| By January of 2022 I will be going out to bars again. Even 11 was a little early and soon we will mostly be vaccinated. |
| Again, I would prefer metro be closed in 2021 for the majority of the day (perhaps entirely) and reopen in 2022; with the 2022 hours ending at 1am. 9pm is far too early, especially for weekend service (which should really be until 4am). |
| This would make it difficult to attend evening events in Washington and also make it difficult to work late. |
| 9pm weekly closure is fine, but extended weekend hours would be helpful. |
| horrible |
| This would make it difficult to get home after team events at work. |
| 9pm is a joke. What kind of works class city closes public transportation at 9pm? |
| Metro should be expanding rather than reducing hours. That is has no budget is a political problem. It will not be solved by wasting all the capital costs that went in to creating the system. These hours will mean that metro is usable only for community, not for evening travel. For example, I could not take it to see a play in Washington, DC on this schedule. And, importantly, it will cease to be a way to get potentially drunk drivers off the streets. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| If traveling after 9pm, I can drive. |
| I am not terribly keen on this idea for how this would affect others (such as people in the service industry). But personally, this would have little impact to me. |
| As a woman, I do not use public transportation alone that late at night. |
| Again your plans seem to be set in killing the dc economy. |
| The metro is way more inexpensive than a lyft or Uber. This would eliminate an affordable safe option for people to get home safely instead of driving under the influence |
| This is terrible! The metro already closes too early! 9 PM is absolutely ridiculous, and would destroy both businesses and the nightlife of DC. |
| Once the pandemic is under control, I look forward to resuming nights out in the city. Metro is my preferred mode of transportation, but. 9 pm curfew would end that. |
| Too early. I'm often not out of work or du. We by that time |
| Not ideal, but would not be a large impact to me personally |
| 11pm is already too early to close. 9om is ridiculous. |
| It would work during the week, but I left no longer go into D.C. on weekends. |
| Why would you even consider that an option. There use to be a time when the metro ran until 1am. If anything, we need more times not less |
| Assuming professional sports venues will be back in 2022, it will be a shame not to have the Metro as an option for Caps/Redskins/Wizards etc games in the city. |
| 9pm is still early. |
| Would have to utilize Uber or Lyft to get home from work which is costly. I depend on metro late at night |
| It would be better to have trains till 10pm on weekdays and midnight on weekends. People need to be able to get home safely. By January 2022, I expect that bars, clubs, and concert venues will be open again. People need transportation to stay safe. |
| Discriminatory against people who work late shifts -- who tend to have less budget for travel and very few other affordable options. Think of the most vulnerable users. |
| I never use Metro at night but many people do! |
| Occasionally ride the train later in the evening |
| Not fair to essential workers with later hours |
| God, no. I'd never take Metro were that true. The biggest reason I rarely take it is it shuts down too EARLY. Many night classes end at 9. Businesses close at 9. This is CRAZY. |
| Would prefer 9p close on weekdays and 11p close on weekends. |
| This would |
| Closing at 9pm would seriously harm the businesses that thrive off of nightlife in the DC Metro region. With the pandemic slowly ending, people will be less restricted in gathering. Small businesses are already struggling. Removing the one safe method of going home for both patrons and workers would be detrimental. |
| How will people who work late get home? How would anyone go out for dinner/drinks if they cant get home after? |
| 2 hour earlier close directly impacts my ability to use metro for work. I'd highly consider driving instead. |
| Most days this would be fine but suggest later on friday and saturday to accommodate thosng home from events like concerts or sports. |
| There will be an increase in drunk driving if people don't have access to the metro during the night |
| 9:00 is too early. Even 10:00 would be better than 9 00; it leaves time to be sure people can get home after dinner, an evening event, etc. |
| No late night theater, no evening sports, limited entry to downtown |
| The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming. |
| Why would this be implemented in January 2022? By then I think well be back to almost normal, this would be useless.Plus, I already wish it was open later so it would be useful for people coming back late from events. |
| This wouldnt affect most commuters with traditional 9-5(ish) jobs. |
| Im concerned this would disproportionately negatively affect low-income riders. |
| This is just awful! How in the world can persons who work later shifts and have few options other than metro get to and from their places of employment? |
| I think 10pm would be a better compromise |
| Again, after over a year of quarantine, we will all want to enjoy going out again! I expect to be out in DC late and 11PM closing time would be very helpful. |

Proposal to close Metrorail at 9 p.m.

Laughable in a post covid world. In a vibrant economy when people go out again it will be necessary to extend hours to accommodate sporting events and all manner of evening entertainment options.

This does not allow any evening social activities; it is disastrous for people with later working hours

It would suffice for professional needs, but would limit my social visits outside of my neighborhood (no evening baseball, soccer, or other entertainment trips)

9 pm is extremely too early.

Really for me the answer is yes... But I dont want a system that screws over people who work a non 9-5 job. They are important and deserve adequate transportation options too.

This would make using metro in the evenings for any entertainment (theater, movies, etc) impossible. As a DC resident, I prefer not to add to the traffic and use metro exclusively within the city. This would seriously curtail my ability to attend these functions.

How would this support DC venues like the Kennedy Center, National Theater, etc. A lot of people take Metrorail to those venues.

If I were eating or visiting downtown I would not be able to use metro...assuming we are able to dine or visit at that time.

There would be some days that I would be stranded in DC and unable to get home to Virginia under this revised schedule.

Are there exceptions for sporting events and concerts?

This would limit the usefulness of Metro, but Id still ride it during the day.

This is too early for restaurants and any nightlife. Recommend 10 pm closing if cuts must be made.

The metro is necessary for safe, reliable, and affordable travel in the late evenings, especially for students and young adults.

This would be a hassle since I occasionally take the train after 9pm, but its a minor hassle.

Increase in drunk driving. How are restaurant workers supposed to get home?

As a tour director this will influence my business. Most of my tours end at 9pm. If my students are using the metro to get back to their hotels in the outskirts of DC, this creates a huge burden. I also believe that most of the traffic in DC in the high season uses the metro after 9pm.

Any chance to stay open until 11 on the weekends?

There are still jobs operating at 10pm on weekdays. This forces people to possibly have a harder time to get home.

When I use Metro, I need it for service later than 9pm

I work strange hours especially on weekends less hours of service would cut down on my being able to work

theaters - i.e. the Kennedy Center - close later than 9 pm. to keep the economy going, please consider keeping public transportation available until 11 pm.

I would hope metro bus would still operate late for those who would need it for work and for whom ride-sharing services would be too expensive

By January 2022 music venues and other entertainment venues should be open. The earlier closing would SEVERLEY affect me.

This is too early to close given events that go on in DC much later

It's not acceptable for people who work nights and need to get home after work.

Yes, if im going to be out late where I dont have my car, Id take an UBer or Lyft.

Need to get places after 9:00.

With expectations of life becoming more normal, taking Metro would be impossible for any evening activities.

This is a terrible idea that adversely impacts local economy, businesses will suffer because of the short sighted approach

Such early closing would not work particularly on weekends.

Cmon... this is a major US city. That's embarrassing

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

I use Metro after concerts

Likely works for me Sun-Thurs but prefer later hours Fri-Sat

thinking of all essential workers who will need to get home after their shift and will not have access to the metro anymore - not acceptable for someone already risking their health to continue providing for their family

For weekdays only this works. Not weekends

Depended on late service for many years.

It would eliminate the ability to use Metro for restaurants, sports events, plays, and concerts.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| What are service industry employees supposed to do? Unacceptable. |
| Its terrible |
| This would strand congressional staff, restaurant staff, and other retail providers from having an affordable ride home |
| It is a terrible idea. 11:00pm is already way too early. |
| Sometimes I need to take the metro home from work later than 9pm |
| We need more trains. Many neighbors work a late shift and need to get home safely. |
| this seems ridiculous to me. there are very often times where having the metro open later is very beneficial. if you decide to close it at 9 I feel like I will be using the metro less and less |
| I regularly metro home after 9pm and many people depend on the system to return from work after that hour. |
| For the purposes of work, there are often times where the metro must be taken after 9 pm. |
| I think this is a dangerous option for people working late, people without other transportation options or people under the influence. I would want to see trains running to 11 pm on weekdays and 1 am on friday and saturday nights. |
| Will definitely take trips into DC and make them incredibly shorter during the weekend. Would also affect ability to get home convenient way after sporting events at nationals Stadium or Audi Park |
| This would NOT work. Many evening work or school-related activities dont wrap up by 9pm, and people would be stuck! This would have an incredibly detrimental impact to safety, productivity, economy, wellness, etc. |
| Cutting down hours is unhelpful to individuals who do not work on a regular work schedule (i.e. 9-5). Getting out at work later and having to run errands can push you to missing the last train and not having a means to get home. Also, this will push people to utilize public transportation less and can cause more drinking and driving incidences. |
| As a researcher, the length of my work day varies depending on what the experiment is for that particular day. If trains are operating ever 15-30 minutes, and the metro closes at 9pm, that would severely impact my work. |
| Sometimes, my work requires me to work til.9. Also, that would harm any bar/entertainment venues in DC. Nine is too early! |
| I work in events which often wrap up after 9PM. This would force me to take a car, tripling my cost for transportation. |
| Essential workers get off after 9pm. |
| Sometimes use the metro for activities such as Kenny center at night |
| This is not acceptable. Metro is a public transporting system in a major US city. Individuals should be able to rely on service later than 9 pm. |
| With normal activity beginning in the summer of 2021, closing Metro at 9:00 will directly affect evening and nighttime events in DC i.e. concerts, sporting events, etc. |
| Closing at 9:00 is fine as long as all of the stations remain open |
| Leaves little option for people working nights or getting off late |
| No way to get home from late work nights, and evening social events (professional sporting events, trivia nights, etc.) |
| I don't often take metro after 9 pm but that seems VERY early to end service. |
| Use redline to go downtown army night |
| I routinely go home after 9 pm. |
| This would make it difficult for me to travel home from work and appointments some nights. |
| I use Metro for daytime commuting |
| In general, we dont use late-night Metro service, but I think we would miss it if it wasnt available every once in a while! |
| See previous answer. Also, bars and other night spots will be opening up again. Many in the area do not drive or park at a station and metro in. Doing this will actually continue to decrease rather than increase revenue. |
| it will not work if I am working late |
| This would work for me personally, as Im privileged enough to be able to Uber/Lyft home if I need to be in the city after 9 pm. However, I am deeply concerned about the inequity in access this proposal would create. |
| Commute to and from work. When pandemic is over resume your service to normal pre pandemic levels |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| It thrn becomes a daytime commuter train and not something that fits peoples needs in many other situations. This is not how a world class urban system can operate. |
| People do work after 9pm. What is the end goal for this |
| This might work. It would make it very challenging for me to make plans in other parts of the city because I dont know how I would get home if I stayed out past 9 pm. I would probably just bike instead of taking Metrorail. |
| I rarely ride the metro after 9pm as I use metro primarily for business hour commuting. However, I think that this plan would be detrimental to the many low income workers who rely on metro for their commutes home from service jobs later in the evening/night. |
| As a senior, I do not ride Metro late at night |
| This is the best solution. For those of us who need to take the metro to work, none of the other solutions are feasible. I cant even imagine the amount of crowding that would result - I think it would deter anyone from resuming use of metro at all. |
| Metrorail will continue to lose customers if trains are not available into the night. |
| No. No no no no. |
| We have season tickets to the Kennedy Center and many times we take the Metro to and from the event. The opera does not end at 9pm and therefore we would be out transportation. This is a bad idea to close the Metrorail at 9pm |
| There are days where I work late and post covid will have evening events. This would push me to use Uber or Lyft more in the evenings |
| This is wayyyy too early. Metro should be open until 2am |
| Limit options for returning late from work or visits. |
| This would force me to take Uber to get home. |
| I think 10 pm would be better for people to adjust their schedule |
| This is the worst idea Ive ever heard. I work past 9 pm and would have no choice but to take an expensive rideshare home. This is against the working class! |
| Except Fridays and Saturdays, let trains run til 1am |
| This makes it impossible to use the subway system if going to the theater, ballgames or restaurants, for example. |
| Many people - including essential workers have to work past 9 pm. This will cause many issues. |
| That is way too early to close metro if restaurants and all entertainment open again. I would take closing earlier off the table. |
| 11pm isnt even that late. This means I couldnt go out and do things with friends ever and still take Metro home. |
| Until more bars and restaurants are open it works for me but I'm not sure about some of the low income workers who have shift work. This might make it very difficult for them |
| You might as well just close everything permanently and go straight to hell. |
| People need a safe way to get home from bars and restaurants |
| The limited metro hours already make it difficult to use for evening transportation. Closing it earlier just makes it more difficult for people to navigate the city. Earlier closing hours will make people use other forms of transportation altogether OR leave earlier which hurts businesses in the district. |
| Right now we are under closings due to the governor By 2022 we should be back up and running, meaning people will be out and wanting to use the metro. If you close it early then you definitely will not make more money... |
| Not ideal but closing early Sunday to Thursday might be Ok. It would mean driving if I want to stay downtown after work. Best to have longer hours on Fri/Sat to minimize drunk driving. |
| If the trains stop running at 9pm, people who take Metro to evening events would have no way to get home. |
| This reduces the ability for so many people to get affordable transportation outside of 9-5 business hours. The people who need affordable transportation arent the ones who work 9-5 and removing an option to get them home quickly and efficiently is awful |
| I rely on the metro to commute between work and home and may need to come home after 9pm on some days. |
| It would work during the weekdays but I'd propose extending the hours on weekends to prevent drunk driving. |
| ABSOLUTELY NOT!!! If Metro closes at 9pm we probably wont bother to take it earlier in the evening to performances or sports events since there will be no way to get home other than driving or UBER. It will mean fewer riders overall since many people will just give up on Metro rail all together. |

Proposal to close Metrorail at 9 p.m.

This would harm businesses that are open late as well as people trying to attend sporting events. This would also hurt members of the working class that work those venues

This is not mass transit. People having dinner at 7pm in the city will not be able to get home. This is not a viable option for a city. It might be a commuter rail, but its not functioning mass transit. This doesnt help the metro area function

Omg no.... what... do you know how many people will be suffering

Needs to stay open for sporting events. Baseball.

This makes Metrorail unavailable for many service workers who rely on public transportation.

This doesnt provide ridership for events.

A possible compromise would be to close early on weekdays and stay open later on Fridays and Saturdays.

Seriously, this helps no one. No evening entertainment in the city. Given the long hours many in DC work, you wouldnt even be able to go out for a nice dinner after work.

I use the metro past 9pm to get places. I cannot afford to take an uber everywhere.

This is ridiculous. We live in one of the busiest, most cosmopolitan cities in the country. Having a functioning metro system requires evening rides. People do not get off work in DC until late at night, and if the city wants to foster any kind of downtown nightlife/restaurant/bar scene for local businesses, metro is required beyond dinnertime.

For those of us without cars, 9:00 is too early.

No I work until 9 often or later and this would hurt the safety of the city as there would no longer be reliable transportation at this hour!

I almost never ride the Metro at this late hour. The exception would be major sports events, especially Nats night games.

Agree if WMATA is going to use tbe extra time to make repairs and upgrades. Not agree if just to close for closing sake

9 am is ridiculously early! Some people still need to travel and get around town in the evening and don't have access to a vehicle

I would not take Metro for evening events

For weekdays 9pm makes sense, but for weekends that time seems too early

This is completely unacceptable.

This seems unsafe as taking the metro is a far more cost effective way of traveling late at night. Additionally, having public transportation available cuts down on drunk driving.

This would cut transportation needs for all restaurants and other businesses that will be operating based on increased use once vaccinated folks start going out more

Weekdays possibly but not during weekends or events downtown like concerts, sports games, ect.

If we have to make hard choices, this is much more palatable than having service only every 30 min.

With the availability of Uber and Lyft this would be ok

Needs to be later on weekends

11pm is already a decrease from the 2-3am service we used to enjoy on Metro.

you must encourage people to ride metro in the evenings

This would generally be fine as well. It would be nice to have them operate (perhaps sparingly?) on weekend nights, but otherwise wouldnt be a huge deal.

Would no longer be able to use Metro for social activities in the evening like going out to dinner, going to Kennedy Center etc.

Considering the amount of people that are expected to return to Metro rail once COVID becomes less of a risk as the vaccines become more prevalent, these suggested changes would leave riders stranded and train cars would not be large enough to accommodate the amount of riders that will be trying to get on the last trains. DC businesses will also suffer if metro hours are limited to these proposed times and, as metro is one of the safer options for public transportation in the district, cutting its later evening hours is problematic and dangerous.

Work at night

Very stupid proposal, geared to the arrogant affluent.

While this proposal wouldnt impact my personal needs, I think it would adversely impact people who work evening shifts and depend on Metrorail for transportation. Thinking of people cleaning office buildings, etc.

Proposal to close Metrorail at 9 p.m.

While this schedule would work for me, I believe there are many others that need late night service. This part is tough. If there truly are very limited riders after 9PM then this proposal makes sense until ridership increases.

This change makes sense.

I am a news worker in media in DC. I have to leave the office later than 9 most days of the week, as do many other workers who perform necessary tasks in government. This would not only impact my commute it would make relying on public transportation for my commute needs completely impossible.

I believe metro should stay open later. As the city begins to open back up, people will need a safe mode of transportation that is open later in the evening. 9pm is too early and also doesn't support those who work later than 9pm and still rely on the metro.

Metro can no longer be used for evening activities which is a great loss

If events are held with audience attendance, I think Metro should offer service until the event is over and riders can make it home. Uber/Lyft prices have skyrocketed and there are not enough options.

Work hours often extend past 9pm and would mean lack of access to commutes after work.

Ridiculous for a major city to close its metro that early, especially on a weekend.

Be an urban rail system, not a commuter rail system.

I would not be able to use Metro beyond a work commute.

If things are normal again, this would make it hard to go out to DC on weekdays. Especially to sporting events.

11PM service seems to be a baseline level of service for a transportation system in the Nations capital.

Late-night use is one of the main reasons I use metro.

This change would leave me stranded without transportation home several times each week based on a relatively small delay getting out of work. What an absolute nightmare this would be.

Too early to close. You're turning the system into something for 9 to 5 white collar commuters who may just work from home anyway.

I think this is the best option.

No...bad idea. There are sporting events, concerts and more that do not end at 9pm

For those who work late, this time of closure would not be helpful. It will only cause more customers to not use metro

I know this will not work for anyone simply stated because most things close after 9 p.m.

i dont get off of work until 9:30pm

This would make it very difficult to use metro reliably after work, gym etc.

Occasionally, it would be a hardship.

There are days I dont leave the office until 8pm that is cutting it so close for so many people myself included

This would eliminate my ability to rely on Metro for going to performances.

People use metro to get to and from jobs as well as to go to restaurants/theaters etc. Closing this early will impact local businesses

Due to budgetary constraints I understand this proposal. You would get all the normal commuting traffic but you would be unable to support events in DC. Assuming sporting, theater and other events start-up again would Metro consider running longer for those events? (Caps games, Nats games, concerts)?

9PM is unacceptable early and fairly often I have to work until that time, so I wouldn't be able to commute home.

When I attend Nats or Capitols games they are not done by 9pm. Parking is expensive at those venues and after having a few beers at the game it is a safety issue. Similar situation with cultural events and theatre.

This plan would work for me, however, individuals in the service industry and other frontline workers who rely on Metro would be negatively impacted compared to office commuters.

This would force many people (myself included) to use taxis/rideshare at relatively early hours in the evening

Metro already closes too early, 9 pm would be ridiculous.

Stay open until at 10pm

As the areas economy recovers post-pandemic, closing Metrorail at 9 PM will make it difficult for people to access entertainment and other evening activity centers, as well as the staff that work at those locations.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This plan would increase the number of people drinking and driving, hence increase traffic accidents. |
| People actually live in DC and use metro, not just commuters. As a resident, this is severely limiting and also, as previously stated, racist. And what about people with service jobs that can't get home by 9? |
| I take metro downtown to go to events in DC like plays, concerts and restaurants. |
| Primary use of metro is evenings so this would impact me once in person dining restrictions are removed. |
| I often return from meetings pas 9 pm. |
| I would use Uber if not trains were available. |
| Work sometimes demands that I stay beyond 9:00 without warning, and federal government will not pay for ride home. |
| Illuminated night time tours of the monuments and memorials are very popular. As a tour guide, these mostly end at 10pm and then I have to get home. Closing at 9pm would be a hardship and I would lose work. |
| Would rule out attending any evening events in DC that go past 9 pm. I dont do that often, but Metro is by far the easiest way to go. |
| That is ridiculously early and would hurt business establishments and encourage more driving. |
| I often get into DC via Amtrak from New York around 10pm pre-COVID â€” this will make Metro downright useless for me |
| Part of the advantage of the Metrorail system is providing car free transport to people enjoying a night out or working late. Particularly for those out having drinks, being able to take the metro home prevents drunk driving. By January 2022 COVID ridership decreases should be increased so it makes no sense to start limiting operating hours then. They should be limited now, not in a year. |
| Ubers and taxis are already expensive. This would take away an affordable transportation option. |
| I could make this work, but it would be inconvenient. 9pm is extremely early, especially on weekends. |
| Go all in and close immediately after rush hour, say 7pm? Service workers can pound sand I guess. |
| Leaving stations open until 10 on the weekends seems more reasonable given the hope of having events coming back to the district in 2022 |
| Raise late night fees if you must. Dont eliminate the option for safe, low-cost, long-distance travel. |
| Closure of stations at 11 pm might work. |
| The Metrorails are an essential lifeline of travel for those who work on a Midshift/Nightshift and those with constant overtime. Shutting down system at 9PM would cause more disruption in their abilities to get home and raise possible financial problems in having to rely of private companies to get home like Uber, Taxis, etc. |
| No, I depend on metrorail service to get home after work. |
| Travelling home by public transport after a sports game or attending the theater would be impossible. |
| 11pm was early for closing. Closing at 9pm would encourage me to drive in more than use Metro. |
| This would be awful for people in the service industry that take metro. Anyone who worked long hours or at a restaurant would be stuck. |
| Would allow me to commute normally but not use metro for evening events like Nationals games |
| 10pm would be better |
| Doesn't impact me but I can see it impacting others. |
| I often take Metro from Reagan National Airport to my residence (Grosvenor Strathmore). Many flights arrive at Reagan National after 9:00 PM. |
| This makes travel difficult in the evenings especially in to or from the district. If vaccines become widely available and the economy is to start again, this would be detrimental to the ability of many to go to businesses |
| I say yes because that would work 95% of the time. |
| Much later closing hours are necessary, both for work and for pleasure. |
| Work 2nd shift to the city |
| This would make metro rail a poor choice for DCA and Sports |
| Metro Is mostly needed during rush hours. |
| This eliminates the ability to use metro for events Gallery Place/Chinatown and Navy Yard-Ballpark (hockey, baseball, concerts, etc, as all end well after 9pm). Taking the train to the event and alternative transport home does not work with large groups and children who require car seats. |
| need trains to run at least till 10pm |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This is ridiculous. Service hours have already been cut in recent years and cuts like this do real damage to those who work night shifts and depend on public transportation. |
| This is a terrible, terrible move, and I sincerely hope you all reconsider. |
| It would impact my likelihood of choosing Metro on certain days when I will be working late. |
| 9 PM is too early! What about second shift employees who depend on public transit. This is also highly inconvenient for District nightlife. |
| Converting the service to daytime hours only cuts the value of having public transportation. |
| I use the metro as a safe way to get home after a night out with friends. I often take the metro after 9PM. This would remove the most cost-effective responsible way for people to get home after they have been drinking. |
| Many events require later service! |
| Absolutely not. How about run later? This is ridiculous, and would be a massive hit to restaurants and businesses opening after Covid. Hell no!!! |
| This would negatively impact bars and restaurants and everyone would have to Uber home |
| i leave my job very late sometimes |
| this means having to drive, taxi, or uber/lyft for all evening activities in the city |
| This will require me to drive more, incur expenses for parking, and result in worse air quality. It will also make it much more difficult for people who work on the weekend. |
| I consistently use the metro to travel throughout the city after 9pm |
| Not everyone works a 9-5 job and ride sharing is expensive. |
| Again, much of the value of the metro does come from the ability and flexibility to stay and work later hours in/near DC. Changing the timings from 11 to 9 PM will significantly increase that struggle. |
| I say yes assuming this means weeks days. Metro should stay open late on weekends. |
| It works for privileged white collar commuters but not those who have to work the late shift. I guess you dont care about them. |
| This will be extremely detrimental to many income earners such as restaurant staff who rely on public transportation and are already facing huge economic impacts from COVID 19. |
| Its rare Im out that late anymore, but this definitely would have made Metro almost pointless to me in my earlier year commutes |
| How will this benefit people whose classes or work end after that time? Target prominent DMV businessmen such as Daniel Snyder and David Rubinstein who came make up for a lack of funding from the government. |
| This would certainly make any late evening plans very difficult if riding Metro; any after hours social plans would need to be by car. |
| The metro rail is an excellent option for getting home when intoxicated. Reducing the hours so that it closes early would put a lot of people at risk of driving under the influence. |
| That's terrible. Workers could not get home; others could not get home from restaurants and theatre putting many thousands of cars (including Uber's) on the road. |
| it is too early. I need to work until late in the evening and need access to the metro. |
| This is the one that is most angering. Any concert, movie, or later dinner and I cant use the train. What about late nights at work or service members? They cant use the train if they dont get off in time. Do NOT do this. |
| The 11pm time works better when I have to work late. It also prevents drunk driving because people can ride home later. |
| The majority of my Metro rides involve attending classes, theater, and social events downtown. Almost all of those events last later than 9 pm. Therefore, my use of Metro would likely cease. |
| Closing that early means I would never use Metro to go into DC for an evening event. |
| Severe lack of consideration for hospitality industry workers who rely on Metro. Restaurant workers on dinner shifts will not be able to rely on Metro |
| This plan would have a very serious impact on safe travel for individuals attending evening events or traveling home late from work. I would anticipate that this could impact the tourism, sports, and entertainment industries very significantly. |
| Not enough time to attend evening events and patron local games. Also metro is often an emergency backup for late night transportation. This would eliminate this option of metro closed at 9 |
| need to make an effort to stay open later. Most subway systemes (NYC) stay open after 11PM |
| This is ridiculous. You would increase the risk of drunk driving by removing late-night service. And same for concerts/sporting events/etc. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would definitely limit my ridership of Metrorail. |
| Would not work for being able to use Metrorail to go to restaurants downtown. |
| It is imperative that the metro stays open late to accommodate essential workers and reduce late night accidents driven by tired/drunken drivers |
| Many of us work or recreate into the evening hours. This would strand us and be a form of lockdown. |
| If things begin to return to normal and if sports return, this closing time would be too early and make the difference between me riding metro or not. |
| Would be hard for evening workers who do not have a car or other means of transportation |
| This doesn't help people who rely on metro for later shift work |
| POOR PEOPLE HAVE JOBS |
| It would work for me personally, but it wouldn't work for those who work outside traditional business hours. |
| As a young person, having the metro open later is a safe option for transportation home after a night out. |
| I work a job that has flexible hours. There have been many times I've gotten out almost at closing. A 9 pm shutdown means last trains ranging from 8:30 to 8:45 depending on your station. How does this work for supposed public transportation?! |
| If nightlife opens back up following the pandemic, I think this could be problematic for people. |
| I see the trains used late at night by workers. What are they supposed to do? And is DC just supposed to become another boring city that closes down at 9pm? Even cities like Phoenix with its massive sprawl have service until 11pm. Dont do this. |
| It would impact any time I had to work late, just as it did when I had to take VRE when you shut down the entire Yellow Line during the summer for renovations. |
| Obviously, I could not take Metrorail in the evening. A 9pm closing time is laughably inadequate for any city with a train system. Just will lead to a lot of drunk driving deaths. |
| I think 10pm might be more fair as a closing time. |
| I don't get off work til 10 at night, I live out Maryland with metro closing at 10 I can get home, changing the time to 9 is not good |
| Somewhere in the middle around 10pm would maybe be ok. But 9pm means that it's not possible for people to have dinner in the city and then still catch the metro home. |
| Think it would also have a detrimental affect on DC businesses as commuters wouldn't stay for happy hour/dinner if the metro closed that early |
| At times I have to work late and I would have to take an Uber home and it's about \$40 -\$50 one way |
| It would be hard for people who work late. I wouldn't go out to bars and restaurants in DC at night anymore. |
| This would prevent me from taking metro to downtown theaters and concerts. I do not drive into DC if I can avoid it and especially not at night. |
| I mean, yeah it would probably work for me personally, a privileged white person with a white collar job, the early closing being only a minor inconvenience for me who can just call an Uber or Lyft instead. But I am one of the few who actively tries to take public transportation even when it's not the most convenient option, and there are a ton of people who rely on metro for reasons that I don't. |
| As bars begin to reopen, people will miss the later night service. This could result in more cars on the road, possibly drunk driving, or fewer people going out, because they know they won't have a safe way home. |
| So what you are saying is that you don't care about the restaurant workers, bartenders, working class staff, and people that rely most heavily on public transportation to do their jobs? |
| Many people use the metro when coming to and from sporting events in dc. Not many sporting events close before 9, especially during the week. |
| I don't use the metro that late anyway because I'm nervous about my safety |
| This will cut service for a huge number of people who work hours outside of 9-5. |
| 9 too early |
| It would not directly affect me since I can afford to taxi home from late nights in the city but I imagine it would have a big impact on some workers |
| Are you kidding me? It's already horrific they no longer offer late night service. Bring back 2 AM closures on Friday/saturday |
| Later closures Thursday-Saturday would be nice, but it's otherwise okay. |
| It'd be great to extend hours into the evenings, not cut them. Ridership will return once folks are vaccinated. |
| I will make due with the short time. |
| When we can go back to Nationals Park, I would like to see trains to get me home. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would make everyone want to use cars, ubers, taxis because metro not open late enough to enjoy pre pandemic nightlife activities. |
| These changes impact evening work. |
| I wont be able to get home when I work late. I cant afford to ride-share or take taxis that frequently. |
| Evening work and tourism in DC is a major economic activity benefiting thousands. Closing at 9 means making life very difficult for those who suffered the most during this pandemic: the tourism industry! |
| I am generally an infrequent late-night metro user. I do take metro to and from Capitals games and other events in DC. I think that Metro will see ridership increase once the vaccination numbers increase--by fall 2021. |
| That is too early. it would discourage people from using metro to get late night drinks for example - further hurting businesses that will need to recover |
| This will affect performances at Strathmore and at the Kennedy center which normally ends at 10:00 pm. |
| I need the metro to get home & I don't finish work until after 9pm. |
| Given the ubiquity of Uber and other methods of public transportation then this would be the most tolerable of the options. |
| Reduce times to increase profitability |
| I rely on the trains to get me home safely after bars close. The rail system should be open until 3am. |
| With a late classes and work hours, the transit I normally rely on would not be available |
| Who would want to take metro to go out on the town or for sightseeing and have to rush to get on the metro by 9pm? Defeats the purpose of metro. |
| This will further exacerbate the dangers of traveling at night, increase risks of inebriated driving/biking/scootering, and see a continued loss of ridership in favor of ride shares. |
| Not good for service workers, as well as will encourage drunk driving. In January 2022 nightlife should be open |
| Would not be able to use Metro to go to DC events anymore. Ive used Metro to go to Nats games, concerts, and Caps games. I work late occasionally but could likely use other means to get home. |
| This would preclude using Metro for any night time activities, especially dinner and shows at Arena Stage and the Kennedy Center. |
| Shows no consideration for people who work in jobs that require them to stay late |
| Ending at 9:00 is too early to meet the needs of anyone not taking the Metro for an office job. We frequently use Metro at night for Baseball games, dinner, etc. |
| No absolutely not! People are going to drive home drunk. Also think of sports and entertainment events. Also what about workers who work in restaurants who need to get home? |
| You will destroy the hospitality industry especially restaurants if people cant go out to a leisurely dinner without worrying that the Metro closes at 9. At the very least, you should keep it open Thursday thru Sunday til 11 |
| Two words: Nats games. Get serious. |
| This will create issues on the nights of Nationals/Caps/Wizards games |
| Many of us work later than 9pm and rely on the metro to get home |
| This leaves service workers with no means of getting home |
| This is unacceptably early closure. How are we supposed to get home from baseball games? Think about all the drunk drivers coming home from bars! |
| This wont work for anyone eating out. Restaurants are typically open until 11pm. |
| 9:00 is too early for those of us who work late. DMV is a large metro area and we can't have a metro system that shuts down at 9:00. |
| A 10pm closure would work instead of a 9pm closure. |
| 9pm weeknights would be fine but it would need to run later on Fri-Sat. |
| This makes metro much less accessible for using to go to shows and other places later into the evening. |
| Would limit the usage of metro for entertainment usage and impair mobility for traveling and commuting for work. |
| Terrible idea for the huge sports crowds back by then. |
| I take evening classes at GW and live on Capitol Hill so this would not work for me and would make me feel unsafe. |
| Its fair to do this for most riders. Auto traffic in the evening is lighter. |
| Can't go out on the town with this schedule |
| Would prefer to have it open to the same hours as now. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Thats worse than in the 90s! |
| 11 PM is already too early to close. Metro should operate past midnight on all days of the week. A 9 PM close would decimate sectors of workers that aren't corporate office goers. DC has a huge population of people that are more than just consultants and hill staffers. We make this city run. |
| If live entertainment returns in 2022 as it probably will this would make taking the Metro home from any concert, play, or other show impossible. It was hard enough when it was 11pm. |
| Based on pre-pandemic this would make it difficult to take metro to and from dinner or a Caps game. At least for the ride home. |
| If late night activities roll out, 9pm would be too restrictive. |
| WMATA should not reduce any service. |
| I work several nights a week until 9pm. I am an employee of the DC Government |
| One of the benefits of having urban arenas and stadiums is the ability to utilize public transportation. This would eliminate any reasonable possibility of using metro for attending events at these venues. |
| Taking the metro home on weekends is my preferred mode of travel. |
| It would be a hardship to get a train home if I traveled to DCA and the flight arrived from 8:30 pm on |
| NO My job ends at 9:30pm. I would have no way to get home. |
| I often take trains at times after 9 p.m. |
| I most often use metro in the evenings and depend on trains running as late as possible |
| I live in Arlington and would like to avoid needing to ride share any time I'm in DC after 9 pm |
| Because some people get off work at 9:30 how are they going to get home |
| Seems very early, especially on weekends if people are relying on it to get home safely. |
| No! It should be extended until 2 am every day |
| This does not work for those who depend on metro to return from work in the businesses in operation. Mostly service workers who are less likely to be paid enough to use other (individual transit) options |
| How on earth will people go out in the evening or work late if you do this??? |
| I only use the metro for commuting now, however, with hockey games and other sporting events starting, this would not be realistic to attend those events. |
| The metro should reconsider this based on sporting events. It seems like those nights the metro is used a lot more than a night without it. |
| Again, this would hurt those with low income the most. This would also hurt tourism for the many events that end after 9pm. |
| How would the economy resume and late shift workers ever get home? I would think the disparate impact analysis would show an unfavorable result to EJ and Title VI communities with such a change. It's one thing for me as a choice rider, it's an entirely different matter for individuals who do not have a choice in their mobility! |
| I get out of after work activities at 9:30 and usually metro home, at least 3-4 times per week. |
| Unacceptable. How would I get home in the evenings? How would someone get home who works an evening shift? |
| Perhaps this could work on weekdays. Not good for businesses (apart from Uber, etc.) on weekends. |
| Many essential workers need metrorail past 9pm to get home. This will be disastrous for the community! |
| Proposal ignores the needs of those that work nights and that may rely more heavily on metro |
| I will probably never go out to eat or to a bar in DC after 9pm again under this proposal |
| While overall this doesnt work for a lot of people, would any exceptions be made for games at local arenas/stadiums? |
| I work rotating shifts, and the third shift goes past 9PM. This would put working people at a big disadvantage! |
| Completely unacceptable, youre setting off a death spiral for the system |
| This would have a major adverse affect on non-commuting travel. |
| Ridiculous! No one is ready to go home at 9pm. No time for dining or shopping |
| Sounds reasonable for the majority of people, with the hope that hours would be increased back to the later time at a future date. |
| This makes it very hard for anyone who works in the service industry to get home from work. |
| But I'm older. I'm sure it would be a negative impact for younger people and the businesses that serve them. |
| I go to a lot of Baseball Games at Nats Park. This would be horrible for our fans as they would have to leave around the fourth inning of any night game to get home. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Shorter hours of operation means I may not be able to commute home if I participate in an activity after work |
| That would kill my dining out and after work activities. |
| I used to work night shift along with enough others to not want to see the hours shortened to 9pm. Also, if I rode the train for entertainment venues, this would stop service too early. |
| I often have to work past 9. |
| Metro should be open until at least midnight every day |
| Maybe extend time every 20 -25 minutes until 11:00 pm. |
| Those agencies to include FEMA during Hurricane season (1 June to 30 November) work around the clock to support response to disasters. Other agencies include DoD, DOT, Corp or Engineers, etc. |
| Most evening activities end around 10:00 pm |
| If I am staying out late, I am probably staying out later than 11 PM, so I would have to take an Uber to get home anyway late at night. |
| Too early. |
| That would make having dinner anywhere very difficult. |
| Way too early |
| This makes it impossible to use Metro for evening activities such as theatre or any evening programming. It cuts out transportation for restaurant workers, for example. You might as well but everyone in the DMV an extra car or two. |
| I may be taking late classes and would need Metro to get home |
| i use metro for work, rush hour travel only |
| 9 PM closing doesnt work even for commuters, let along recreation, tourists, night shift, etc |
| No, I often stay in the office late and would be unable to get home if you close at 9pm |
| Other than for baseball games..... |
| Im a late night person. Consider keeping later service on Fridays and Saturdays |
| WMATA should strongly reconsider lost revenue from sporting events, concerts, tourists, etc. I would not like to see the metro system close at 9pm. Especially on the weekend. |
| I frequently use the train past 9pm. Also, please consider events at Verizon center and other events around DC. |
| I sometimes need to ride Metro after 9 pm. |
| It seems irresponsible to take away the safest, most economical option for people who may be intoxicated to get home. |
| This would reduce metrorail as a service only for commuters. Unacceptable. |
| I travel very little at night. |
| 9 p.m. seems really early.... |
| Can always take a cab if Im ever staying that late. |
| Need it for work |
| Biggest problem would be with sporting events as people who would metro would drive to Capital One Center and Nats Park |
| Seems reasonable, given that there will be fewer passengers at later times. |
| People who dont work 9-5 jobs need the option of getting home. By Jan 2022 I assume many more folks will be working in person, especially those who work shift jobs. |
| Absolutely not. Drunk people need to use the train to get to bars. I don't want a fleet of drunk drivers on the roads. |
| Metro rail is a needed transportation for late shift workers, and public events: sports, concerts etc. |
| I teach a class at GWU that ends at 9pm and then I take metro home. Closing Metrorail at 9pm would be very problematic. |
| NO"DO NOT REDUCE SERVICE. ARE YOU KIDDING ME. THIS IS THE WORST IDEA. |
| In order to make metro relevant for my needs, 9:00 p.m. is too early of a closing time. |
| How could one go to any evening events downtown? |
| A 9 pm closing would certainly mean no late night activities in DC - no plays, no concerts, no sporting events. Of course, I do not engage in those opportunities frequently, maybe once a month, so to forgo them completely would not be too difficult. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| close at 10pm |
| Many rely on the metro system not only for commuting to work, but also as a main form of transportation throughout nova. Closing two hours early creates a barrier between those who rely on public transit and their ability to do so, as well as is a step backwards in increasing public transit and moving away from individual vehicles, which is a necessary portion to control climate change. I personally use the metro after 9pm, and know of many others who do as well. |
| I often work past 9 on the weekends and would need to either Uber every night (which I can't afford) or walk through unsafe areas |
| I live in Silver Spring and like to use the Metro to go Out to Dinner in DC. Closing at 9pm would reduce our ability to do that. 11pm closing time at least on Friday and Saturday nights should stay. |
| This will pose significant issues with late-night work commuting. Post-covid, it also may make me less likely to go out and do things that might end past 9 because Id have to Uber home (sporting events, concerts, evening dinners, etc) |
| Evening performances at theaters and kennedy center. Wouldn't be able to get home |
| I use the metro so I don't have to drink and drive and because it's cheaper than Uber. It should stay open to keep people from driving while intoxicated. Students also take it after a late night of studying. |
| Will push drunk drivers onto the road. Terrible idea for safety. |
| As restaurants reopen this proposal would kill their recovery |
| Closing increasingly early is going to make the Metro inaccessible for service workers and those who have to work overtime. |
| Metro needs to be available to those who work late or who have social lives |
| 9pm is very early and would have severe effects on the local economy. |
| It is really important to stay open late, even if trains are less frequent! If you dont have trains, please have bus service. There are a lot of people who dont have cars. |
| I often need to use the metro for my main travel when going in and out of DC in the evening because uber is too expensive. |
| The only issue with this would be if someone had to work late or had a shift that caused them to work past 9pm. Again, at that point, they would be driving and it would push ridership down more. |
| 9pm is too early to close given hours for concerts and other venues |
| I rarely use the metro late at night |
| prevents most evening events in DC |
| Horrible, not necessarily for me, but for the people I rely on to work in all the service jobs that make city life vibrant and bearable. |
| I would prefer more consistent service on a reduced schedule, so I would prioritize this plan. I imagine ridership decreases at night anyway, so the impact on overall ridership would be less. Id prefer people to say that metro works well for them and they wished there were extended hours than saying it doesnt work well because the wait times are so long. |
| ridiculous trying to save money closing stations instead of firing people that dont do anything. |
| Could not spend the evenings at DC venues |
| I use metro during working hours; 9 pm close would not affect me. |
| Many captive users need the service later at night. As a discretionary user, I often like to take a train home after dinner. |
| As it is I struggle with working and making it to the metro in time before it closes. The metro closing at 9pm means I could no longer work my afternoon job. I wouldnt have transportation home. |
| This could cripple the entertainment business and make night work impossible for many people. |
| 11 pm is already too early. You want to be a world city? This isn't the way to do it. |
| This isnt ideal, but it would work for me. It would cripple DC nightlife and increase drunk-driving incidents sharply, however. |
| I count on Metro to get home from Union Station late at night, also to get to and from downtown DC for socializing. |
| Metrorail should operate 24/7 |
| This is a terrible idea. It would significantly reduce attendance at DC restaurants, theaters, athletic events and cause significant traffic and parking problems in downtown DC |

Proposal to close Metrorail at 9 p.m.

An early closure makes it hard to get home when you work late. Also it makes it hard to get home after flying in later to National Airport or on a later arriving train at Union Station.

9pm is too early, especially for essential workers who may work in restaurant/bar industry.

This would significantly impact those who work late shifts in their ability to get home safely and quickly

This would be a hardship for my working hours.

11 is bad enough; terrible if Metro shut down at 9.I thought that Metro recently got a big infusion of money that mooted the need for these kinds of economy measures.

My train from Baltimore arrives back to Union Station after 10.

Not wild about the idea, but better this than closing orange line stations out eliminating rush hour.

No good for attending functions at Kennedy Center

Useless. Close at 9? Close the whole system and be done with it. DC should refuse to contribute a dime to WMATA if this is enacted

9pm is too early for evening activities

We use metro to go to evening concerts in DC. 9pm is too early to close.

And what if my work ends around 9? how do I get home?

I sometimes work late. I anticipate being back in the office by 2022 and this plan would strand me in DC if I worked late.

Ridiculous time - and unsafe. Many events dont end until 10 pm. Even 11 sounds early.

This would have major negative impacts on much of what makes me enjoy living in the region most: going to sporting events, concerts, etc., but it would not impact my commute which is most important.

I need to be able to get home from work

This gets in the way of business and of people who have to commute late at night.

I live on the Orange/Silver line and would like to be able to use Metro to go to dinner in DC and elsewhere. Closing lines at 9 PM is too early.

9pm is too early as we return to normal and will only make traffic worse.

This would be detrimental to my work schedule and would cripple many businesses

This is ridiculously early to close. If you close at 9pm I can no longer take the metro when Im going out to dinner - I will have to switch to uber which is lower my ridership even more. If you cut times too much there is no point of even having a metro service.

I am concerned for people who must work late. Perhaps a train every hour between 9 and 11 pm so those who are working evening hours have options to get home. Otherwise street traffic will increase.

This would make it nearly impossible to use Metro on the weekend to get home.

I understand you need to cut costs but I wouldnt use the metro for any evening meetings or social events if it closes at 9 p.m.

Usually ride in daytime hours but it's useful to have it for evening events

This would be dreadful for businesses in DC, Rosslyn, Alexandria which depend on late night service. You will put more folks in cars, late at night, after going out. Another death spiral proposal.

It would work for me, but not for many others who dont have other options.

This will not work well for tourists, residents of the area, or anyone else who want to go into DC from VA for dinner, events, etc....I would drive instead of taking the metro trains.

9 pm is way too early as a large number of people who work in late shifts use it for commute. Additionally, many people use it to go for outings as well and 9 pm is too early. If it closes early, it could mean more people drive to go out resulting in a significant increase in traffic and further relying on other modes of transportation thus making them get used to other modes more.

Essential workers have shifts that end at 9 pm. I am one and I rely on the metro to go home safely at night so I would prefer the closing time to not be at 9 pm. Even into 2022, these shifts will not change and people will still rely on the metro.

Stop reducing the late night hours - this puts a tremendous strain on people who work past 9pm as well as anyone with plans to be out in the evening and that choose not to drive. Not everyone wants to rely on taxis or Uber, Lyft, etc.

I frequently use it to go out to dinner. This would not work

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| There is no night life, so close earlier and save money. |
| This is way too early & cuts off access between the city & suburbs |
| 9 pm is too early given any circumstance. Many people live near by the metropolitan area and it's metro rail because of its accessibility. This would put a GREAT hindrance on that |
| I use Metro to commute to and from work and I do not work later than 6:30 pm. I do not see myself needing to take Metro after 9 pm. |
| Does not impact me. |
| Sometimes I have to travel late nights. |
| This would make it very hard to attend evening events (ex. - concerts, hockey games, baseball games). |
| Metrorail should be open until at least 11pm |
| People with jobs who need transport outside of normal working hours must be able to rely on public transportation. Slower trains is OK; no trains when they are needed is not OK. |
| I work long hours in a hospital and often times get out later than scheduled |
| Best solution out of all those proposed |
| Many essential workers work late nights. You are doing a disservice to them if you pass this cut. |
| That is WAY too early and absolutely ridiculous |
| I would have to Uber home and this would be expensive! |
| A lot of us finish work extremely late or go out with friends after work. 9 PM is way too early to close. |
| Metro is one of the most reliable and safe options I use to return home at night from social gatherings, dinners, special events and sporting events, etc., so I'm normal times, this would be a very disappointing proposal, but if those events are still not happening by January 2022, this proposal will not be as painful. |
| Many service people have jobs that end on or around 9pm. This would leave them with few or more dangerous travel options. |
| Unlike station closures, this is a measure that is easy to reverse as ridership recovers after the pandemic. It would be fine for my personal needs. |
| Again, ridiculous. |
| People would be stranded if they went to nighttime events in DC |
| Most of the time, yes. It would not work for any sporting events or nights or with friends. If I have to drive I'd rather stay local and not spend money in DC or using metro to go places. |
| No impact to me - I would take Uber home if out beyond 9pm because in most cases its faster to return home than taking metro when outside of rush hour... |
| Metro closing at 11pm has often been a saving grace of when I'm out and don't expect to be out long and end up doing so. 11pm is the perfect time to close and 9pm would put significant damper on Friday and weekend travelers |
| 9pm is unacceptable . the system must be available for people who work other than 9-5 jobs and for others it must be available to use for non-work , non-commuting trips. Social life, shopping, etc are important too |
| This city relies on workers 24/7 and also on revenue from evening activities such as sports, entertainment, dining etc, which all go past 9:00 PM. The metro should run 24/7 or close to it. |
| But this seems extremely unfair to service workers and others who need to work into the evenings. |
| I think the weekend hours should run later though. Maybe 11PM or midnight for Fri-Sat... |
| We rely on Metro for transportation to sporting & cultural events in the city. This would increase traffic & pollution & congestion. This is a terrible idea |
| This is insane -- many people, myself included, work later than 9pm. This will be the death of local business. |
| Close at 11 pm on weekends, close at 9:30 on weekdays |
| Would discourage people from dining in the District. |
| If we go to concerts or dinner down town this is too early |
| Since I don't have a car, I depend on Metro, and when I have evening meetings/rehearsals, they're unlikely always to get out in time for me to be on the trains before 9 p.m. |
| This would turn the metro trains into a commuter-only service and leave behind anyone who is reliant solely on public transit. |
| This is a recipe for DUIs to increase. Did you know young people live in DC who like to go out when a pandemic isn't raging? |

Proposal to close Metrorail at 9 p.m.

Assuming post pandemic, in addition to work travel during the day my wife and I would expect to use metro approximately monthly for entertainment (dining, drinks, theater, movies etc)

As a woman, this is the safest way for me to travel and it would mean having only more expensive less safe options for getting home at night.

What about the weekends? If this is the same for weekends, then it doesn't work for me.

I use metro for essential business travel to my healthcare employer as a key essential employee and hours of operation change would much outweigh the drastic decrease in service at Forest Glen station

People need to get home from work and social events after 9 pm. You are inviting more cars on the roads. Ugh. Leave DC -- a new motto for a lot of us.

Very often I work until 10 PM.

Too early for folks going in and out of DC for post work events and food. With more people vaccinated and indoor restrictions easing this year, this measure would hurt DC businesses that have DMV residents catering DC businesses more.

People use the metro as a way to get home safely. I think ending it earlier could lead to more people driving drunk. Further, we should be trying to increase ridership and that won't happen if service times are cut. All it does is add money to rideshares.

I work until late

This is an offense to all people who work in the metro area and need to be at work after 9pm. This will also prevent people from using metro trains to go out for dining and entertainment and will be financially disastrous for businesses, not to mention a major problem for individuals and families going to events in the city.

While this wouldn't significantly impact me, it may impact people who work night shifts or later hours

It will make it nearly impossible for me to return home in the evening.

This is a city. 11 p.m. is bad enough (midnight on weekdays, later on weekends would be ideal). 9 p.m. is unacceptable.

By January 2022, I would expect that I would be returning to music and drama performances at the Kennedy Center, the National Theater, Shakespeare Theatre, etc. I have always traveled from my home in DC via Metro so that I wouldn't have to deal with driving through rush hour traffic and parking. If the system closes at 9:00 p.m., I would not be able to attend such performances because my advancing age means I prefer not to drive in the evening.

For environmental reasons and to reduce traffic congestions, WMATA should make Metro train riding more user-friendly. The best way to do this is to run trains more frequently, and to run the trains for longer hours during the day. The frequency of train arrivals should thus be *increased*, not decreased. Similarly, the hours of operation should be increased, not decreased. European cities encourage their residents to use their mass transit by running more trains. Trains in London, Paris, Berlin, Munich, Rome, Brussels, and Madrid arrive every few minutes and run for very long hours, many operating 24 hours a day. WMATA should do the same for residents of the Washington DC area.

11 PM is necessary for my work

This is awful. I frequently have to work late and this would mean I would have to take a cab or rideshare home as I do not have a car. that is too expensive.

That's too early...we work late here in the nation's capitol. We get overworked and need to travel home afterwards.

This creates major equity issues and would also be a problem for people who need transportation from the airport.

I worry about this plan for younger individuals who might rely on the metro to get home between 9pm and 11pm, at least Thursday through Saturday.

Can't have a functioning city with a social life when trains close at 9pm. That's ridiculous.

9 pm is a pathetically early time to close. People wouldn't even be able to take the metro home from a dinner out! The metro should operate until 11 on weeknights.

I work a part-time job in the evening and need to use metro to get home.

Metro needs to go back to supporting nightlife.

9 p.m. is too early.

Needs to be open late if back to in person work.

Once again if there is still a pandemic maybe, if we are out of a pandemic it would be inadequate. Longer service hours to 11pm should increase ridership beyond costs. Essentially it would drive positive ridership

For many DMV-area residents, one of the great things about living here is being able to stay in the city after work for dinner and/or a cultural performance before metroing home. Closing metro at 9 instead of 11 will essentially close that option to residents, as most evening performances don't end until 9 or later.

I think 10pm would be ideal

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This wouldn't work for anyone who wants to go out on a Saturday evening and can't afford to Uber home, or people who work the evening shift |
| Stay open later on weekends |
| This is a ridiculous proposal. People who work third deserve to get home cheaply too. |
| Would prefer that stations stay open longer |
| This would KILL attending after work sporting events or patronizing local restaurants. |
| This is a better alternative to closing stations. |
| Downtown events run later and decreased hours prevents attendance. |
| DC has a vibrant restaurant and bar culture. If you close the metro at 9 pm, there is a high likelihood that drunk driving will increase. |
| I am a work commuter so this would not affect me. Glven Uber/Lyft rates, use of their services would certainly make up for lack of Metro service at that time. |
| Will be returning to normal social life / night life by then. Terrible for venues that work in those hours, they already hurt so much. |
| I would never be able to use metro to return from a dinner or party. I rely on late services on metro |
| this is fine. |
| I go out in DC and will get drunk and take the metro home; it is affordable and accessible, and safe. Closing at 9pm would make this impossible. It's also difficult for people who work late and take the metro home; it should close at 2am every day |
| People go out and can take the metro on the way back home |
| You can't take metro rail fro evening events |
| This would effectively end (or drastically curtail) my ability to attend cultural events in DC, visit and dine with friends and family. |
| I use Metro for most of my travelâ€”my day does not end at 9pm. |
| This would be very difficult for workers, travelers, and anyone who wants to be downtown for any reason at night |
| I use the Metro for responsible night-life travel, so I would have normally answered noBut that aint happening for a while, so maybe? |
| This seems short-sided. As the world begins to open back up, I would expect higher rates of travel, even at the late hours, because of a restoration of events and entertainment. One of the best parts about the Metro is the fact that you can use it to get to work, as well as events/entertainment, etc. Losing this would be a tough pill to swallow. |
| Would not be able to do nighttime activities in DC |
| This proposal will hurt people who work at businesses that close late. |
| Should have a couple trains, say one per hour, after 9:00? Or one train after 9:00 |
| Sports games are some of the best times to use metro. |
| If I were to go out for drinks or dinner with friends after work I might not catch the last metro back to Falls Church. 9pm is very early. |
| Should be open later on weekends |
| for the love of God no please dont do this. It was a battle just to keep metro open until 11. Metro provides a more affordable way home for so many people in the city as compared to Ubers/Lyfts/taxis, etc and by shutting down at 9 youre effectively eliminating transportation for so very many people. |
| Problem for evening events. |
| When there are large DC events - Folk Life Festival, sports events, plays - I strongly suggest Friday and Saturday nights should stay open till 11 PM. You need to understand that teenagers and younger people rely on the serviceand they become your adult customers of the future as well. |
| Many need Metro available after 9; sometimes even after 11, e.g. Nationals games |
| If the clubs and bars are open, closing the metro so early would be horrible. The early closing before 2am really hurts people who travel into the city to go to the bars and clubs |
| Reducing hours like this really makes this more of a commuter-rail system that favors the 9-5 worker. It doesnt allow for service-industry, medical and other shift workers who benefit from Metros longer hours. |
| the Metro has to stay open until the bars close to keep drunk drivers off the road |
| No. Do you want people drunk driving? Why even have a metro system at this point? Do you hate service industry workers? |

Proposal to close Metrorail at 9 p.m.

I primarily use metro to come home at night, and often that is after 9pm. People primarily drink in the evenings, and metro is a very good, safe way to get home. Taking that option away makes streets more unsafe. It also makes metro harder for me to use during the period i use it most.

Many people work late and this would really inequitably harm the schedules of essential workers and those who work in fields associated with longer working hours such as restaurant workers, retail workers, nurses, etc.

This is MASSIVELY disrespectful to the working class who do not work office hours - what about all the restaurant workers, cleaning crews, etc. who would suddenly need to have access to cars, parking, etc. This would contribute to the burden on individuals by the new costs, and on the environment in heightened pollution. Find another way.

It would severely negatively affect how I use the metro to enjoy DC and the surrounding area. I very often use the metro late at night after events and choir rehearsal.

This would be a disappointment but less disruptive for me than daytime service cuts. 10 PM would be much better than 9 PM

I rely on Metro late at night to get around. This is insane. I dont own a car.

This would not work for me or my family. Nor would it work for many businesses in downtown DC on which the economy of the DMV area depends.

This doesnt give residents of MD and VA any reason to stay in DC for special events. Theres really no public transportation flexibility.

If there is a metro deficit, why was Silver line built. Nobody rides this line. It is a waste of money.

On some weekdays and especially weekends I depend on the metro to help me safely travel and worry about late night ubers or people feeling more pressure to drive as a result.

This plan would affect staying in town and riding metro home after a play/ dinner

This would lead to increased reliance on the gif economy and increase the city's carbon footprint.

I work in columbia heights and live by clarendon and get out of work at 9, so essentially I would not be able to take the metro at all because i would not be able to get home. Some nights its even later

Many people who work retail are at their jobs until at least 9, and would hit middle-lower class citizens the most, who rely on the metro. Also, it will hurt businesses, as less people will venture to the city for dinning and events if there is no transportation available to return.

As long as there is bus service for shift workers.

This would not impact me. It may impact others.

This doesnt help anyone that has a job that gets out late. I dont believe this change will help the community. Everyone deserves a chance to be able to get home safely without having to resort to taxi or Uber

This would absolutely not work. I often take the Metro between 9-11. The price difference between taking the Metro and having to call an Uber at that time of night is astronomical, and I believe many people would not be able to afford the alternative of Uber.

I cant imagine getting out of a crowded event downtown (sporting event, concert, etc.) and not being able to get on the metro. I think that this would be a catastrophic mistake.

Any sporting event in the district ends after 9 p.m. This would also cripple weekday concerts and nightlife.

Makes it impossible for Nats games and a bunch of other events that help the economy.

This would be a real problem for those going/out of the city for late night activities eg concerts, fireworks, attending events, meeting friends, and especially enjoying resturants

This is fine, but late hours on friday/saturday would still be nice

Thats way too early for metro to close. People work late and they would be stranded. That also means people wouldnt be able to take metro after dinner or sporting events.

This would be very bad for local businesses.

Need time for dinner & entertainment in DC!!!

I sometimes need to work late

This will lead to more drunk drivers with no public transportation options

Anyone who works later than 9pm would be negatively impacted by this. Siting my earlier argument, those who rely on public transportation would then need a bus route or another form of transportation to get back from work later in the evening.

Greatly impacts my ability to get home from work.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I frequently need to work late hours so I would need the metro to get home. |
| Not late enough for my social and sports events. |
| This is fine for commuting but it means that riding for evening events is limited. However, I would plan ahead. |
| I can't believe you would float this question again. Early closing puts workers at restaurants and other late night venues at a harsh disadvantage. This simply doesn't make sense. |
| This is the only proposal so far that has been viable. On the weekends I think it's silly, but I could certainly live with it |
| 9pm is far too early to stop services, taking into consideration after-work events |
| I work till 10-11pm that would make work impossible |
| Using metro for events would not work if it closes at 9 pm |
| I rarely commute past 9pm |
| Closure is too early to be useful especially for some workers |
| Sometimes timing at work means staying late and I have no other transportation options. Trains until 11pm would be ideal |
| If you go to dinner at 7:30 or 8, theres a good chance you wont be out by 9. Many people already believe that an 11pm close is too early. What about folks who work in food service or provide essential work at grocery stores? A good portion work until 9. |
| 11pm is better than 9pm. |
| And how do you propose that people get home from social gatherings, jobs and Nationals, Capitals or Wizards games? Or concerts, plays or 4th of July events? |
| Many work shifts end after 9pm. |
| I do occasionally like to go out to dinner or a movie after work. how will I get home? |
| Sometimes work requires late nights that last until at least 10pm |
| People with jobs at restaurants, bars, grocery stores, hospitals need adequate transportation for the duration of the day. A lot of workers get off late or until their businesses close which is normally at night. |
| Would not affect me, but sure seems like it would screw lots of bar/restaurant/service workers, just as their jobs are starting to return... |
| How would this affect service to Nationals Stadium? Metro access to and from the stadium is very important. |
| Most performances go way beyond 9PM. |
| However, I would suggest that certain lines remain open later on nights when there are Washington Nationals baseball games. I know that those night trains are profitable for WMATA. |
| 2100 is a little early. closing 2200 might be a good compromise. |
| I don't ever take the metro after work hoursp |
| Can't ever plan to go out without a car unless you will shell out for an Uber back |
| 9pm is too early in terms of returning from dinner, evening performances. Movies and other events. 9pm is is when many events finish. Which wouldn't allow for transportation time. |
| What sort of city has a metro that closes at 9 pm? |
| Low-wage workers and people without cars need safe nighttime transportation, please dont cut nighttime hours |
| Its not ideal, but could work. |
| Still a bad idea, but it's more important to keep metro useful for commuters. |
| This cut would drastically reduce my use of Metro as well as my tendency to patronize businesses in the evenings. While this would generally only impact my social plans, I also recognize that such a cut would be extremely detrimental to many workers who use Metro to commute at later hours. |
| Need late service for people who dont work 9-5 |
| How will people get home from evening activities downtown? I would not be able to go to a downtown restaurant or to the theater. |
| I would not be able to get home from work |
| This change would encourage congestion and drunk driving |
| 10 PM would be better - gives people time to get back safely from seeing friends after work |
| It would be difficult to be able to use Metrorail for things such as Nationals baseball games if it closed so early. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Couldnt use metro forgames, theater, diing i the district. Wi kill businesses |
| This would work for me personally but not for the many people who work odd hours who rely on the metro for inexpensive travel (many of whom do not have access to a car). |
| That is way to early. My boyfriend uses metro to come over after 9. |
| Not if I want to attend a sporting event in DC. Again, this proposal ensures that folks stay in their cars. Cut your union staff jregardless of whether the union likes it or not. Every other business has had to make staffing sacrifices during COVID why doesnt METRO? |
| 9pm is too early, please do not close so early |
| It would be very inconvenient to use metro to access restaurants and bars in Arlington if metro closes at 9 pm. |
| Will drastically reduce the ability to use metro for nightlife activities |
| This will hurt those who need metro for evening hours work |
| 11pm must be retained. 9pm closure wouldnt even allow for a dinner out in the city without driving. I would also suggest expanding for event specific times...ie concerts, NATS games etc. |
| Although I could still travel to and from work with those hours, I would no longer take part in any evening events in the city. |
| This makes it difficult to travel to the city during the week. Limits commerce. And hurts folks who need metro the most who work late at night. |
| I often work late and use rely on the Metro to take me home. |
| Dinner and theater and events go later than 9pm. This would greatly damage these business, after a year of pandemic closures. Please keep the metro open until at least 11pm!!! |
| Many low-income residents of the District rely on public transit to get home from their jobs outside of 9-5 hours. Cutting service early means that those people have to find other ways of getting home. I think this is also a missed opportunity as restaurants and nightlife begin to recover from COVID- keeping the metro open late means that more riders can use it. |
| This is madness! |
| This schedule is inappropriate for a city. Too early to eat out at restaurants and other nightlife! |
| Impossible to use metro for nights out in DC |
| It would be fine for me as a person with a 9-5 professional position, but I worry about hourly workers and their needs to get to/from work. |
| Every day? That would make dining out and going to concerts and shows hard |
| Perhaps keeping metro open later on weekends still would be better |
| This makes me so sad for people that rely on the metro to work non-traditional office jobs. this would completely disservice restaurant/bar workers, office cleaners, everyone in our society that needs reliable public transportation. |
| Keep Clarendon, Virginia Square, and 38B line open and have ways for people to get to Bethesda MD from Washington DC. |
| That will kill ALL traffic, from the Redline to downtown. Washington DC businesses are in enough trouble now,DO NOT add to the problem!!! This is the first one I felt strongly about. When I worked downtown, I frequentlyworked LATER than this would allow. BAD BAD idea. Only good if you want to lessen ridership. |
| If we want to attend evening events in DC we would not be able to rely on metro. |
| Other than commuting, I use Metrorail so I dont have to drink and drive. If Metro ends at 9pm, it significantly reduces the events for which I could use Metro - shows, concerts, sporting events |
| It would make me think twice about using Uber but I could make it work most of the time. |
| This would make late night baseball games and other evening activities impossible. It is also terrible for people who work at night closing restaurants, cleaning buildings, etc. |
| I often work late or stay in DC late, and Im sure many others do the same, not to mention individuals who dont work standard 9-5 office jobs and dont have access to a car and rely solely on public transit. |
| This is extremely early. If I go out to dinner at a normal time, say 7 or 7:30, Metro is going to be closed by the time I am done. That means taxi or ride hailing services to get home, rather than Metro, which is normally a quick, affordable, and safe option especially for folks who are (drinking) downtown. I have even taken Metro home when working this late. Would much rather see Metro open until 11 pm. Barf to 9 pm |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I attend Nationals games. 9 PM shutdown is way too early. |
| There are times where Im out at dinner or drinks with friends somewhat late into the evening but dont mind waiting for a train to get back home because of the cheap rate |
| I plan to use Metrorail for evening events and activities in January 2022. |
| For most of my needs this would be ok, but for any evening activities outside of work closing at 9pm would mean driving or taking UBER instead. Arriving back in town at Union Station is often after 9pm as well. If metrorail is to exist just as a commuting option, this would be ok. But that seems fairly limited. |
| You might as well shut down the system if you cannot use metro to go out to dinner after work. |
| It works for me but forces me to uber at times |
| Often times I am off work after 9 PM and still rely on metro to get home |
| This means that I couldnt go out to restaurants or theater or do any of the things Im looking forward to doing once Im vaccinated and COVID is no longer an issue. |
| This is ridiculous. Need to extend hours not cut. Working people need Metro to 1 AM |
| Consider later trains on nights w professional sports games |
| 9:00 is too early for theater, cultural and sporting events. |
| Need to keep it open as DC lifts their cov8dnrestrictions for events, restaurants, and nifgtlife |
| This would impact my ability to travel on the metro (yellow line to and from DC on Fridays and Saturdays). |
| Late night service is important for younger people who rely on public transport |
| DC and much of Arlington, Alexandria, Silver Spring, and Bethesda businesses thrive on a robust evening scene. Closure at 9 PM - particularly in the summer months when its barely dark out risks the ability of businesses and citizens to be mobile across neighborhoods and enjoying the businesses therein. |
| i work a 9-5 job. I commute using metro. I have a life, so i have stuff to do after work. 9pm is pretty early to close the stations - even schools host events after 9pm. |
| This really impacts not only those workers that have non-9-5 work schedules, but limits the usefulness of the system in the evening when revenue can be generated. |
| While I have needed the train on weeknights after 9 pm, improvements in telework would make a departure from work in time to catch a 9 pm train manageable. |
| This is not what a "world-class system" does. Metro is not just about commuting. It's about providing lifeblood to the region. Expand hours. |
| This would negatively impact those who work later hours and will eliminate the ability to use the service for extracurricular activities. This city is full of young professionals who rely on this service for all of their professional and social lives. Once again, ending service at 9pm would force more cars on the road, increase drunk and impaired driving, and shut down a once vibrant city. |
| Why the hell would you do that? So we can all drunk drive home? |
| Ball games and other evening events are better with public transit. |
| Except for the occasional instances when Im attending the theater or a sports event. This would mean I would be driving to those events - something public policy should not encourage. |
| While not applicable, I am sure this presents a problem for working families especially hourly workers |
| 11pm is already too early. Bring back late night service |
| I think it reduces affordable options, I do not often need to travel that late but I think when I do it reduces the options |
| This would limit my ability to stay out late in DC and participate in various events if I cant use Metrorail past 9 p.m. |
| too early to close for night not able to go downtown and arrive back at such an early time |
| While I occasionally use Metro after 9pm, that is rare, and I would MUCH rather have this option than Option 1 (trains every 30 minutes all day). |
| That would allow me to use metro to events downtown, and then I would just Lyft/Uber home at a later hour. I would be ok with this. |
| That would foreclose use of Metro for any evening performances at JFK or other theaters. |
| I am concerned that this would put those working retail and food service jobs at a disadvantage, prioritizing those with 9-to-5 desk jobs. |
| This is ridiculous. Metro should be available until late at night. Business and restaurants will suffer without Metro after 9. |
| Metro use for a nice dinner and an event in the city wouldnt be as possible with earlier closure |
| there are occasional times when I would be coming home later than 9 PM from mid-week events. |
| This would mean no ability to go to ball games or any of the sporting events in the area. Also, it would mean no more flexibility to go out for the evening to any place that is not within walking distance. There would be severe economic impact on businesses throughout the region. |

Proposal to close Metrorail at 9 p.m.

This would eliminate metro as an option for any night time event in DC. The 11pm close time already significantly reduces its usefulness. A 9pm close time would make it useless.

I like to take the Metro to go out at night as well. I already found the closing time too early for my needs, and this would prevent me from using Metro as my means of transportation for my social outings.

Prefer to have these available at least during weekends

No issues with closing early as long as trains are operational and coming often enough during peak hours.

On most days, this would not affect my travel plans. However, its uncertain the days I will be working late, and it will eliminate any opportunity to take public transportation from work in downtown DC back home in Arlington VA.

Night shift???

I rely on Metrorail for service after 9pm on weekends and also during late commutes. The changes would also devastate low income service workers who rely most heavily on nighttime Metrorail service.

Many weekdays, I work at my office downtown after 9pm and need the Red Line to get back home to Bethesda. On weekends, I sometimes take the Metro downtown to entertainment, and would need it after 9pm.

I expect to travel to DC using the Orange line during evenings and late nights due to work and recreation.

It would likely work for me personally but I know many workers it wouldn't work for

Closing early negates the benefit of using metro for sporting events and evening activities

This would prove to be an economic burden on so many people that rely on public transportation to get places in that 9-11pm timeframe. You are making it harder for people to use public transportation at all which will only drive ridership down even more.

This will make it very tough for people in service industries or retail to use Metrorail for their transportation to and from work.

Having the Metro operational into the evening reduces incidences of drunk driving in the city -- when taking the train home after a dinner out with wine or cocktails is possible. Closing the Metro early will shift many people dining out to driving to and from their destination (to ensure they dont accidentally miss the train) and will increase incidences of drunk driving throughout the city.

Will not be able to take metro home from working late, concerts, sporting events, etc.

People work late, restaurant workers would be screwed

When restaurants were open i would often take metro for the night out. This is too early. People driving in the evening will mean more DUI

Closing at 9PM is far too early. Is this a joke?

Having metro available later at night for returning. From the city is important to me.

This punishes the lower income service workers, who disproportionately work later hours than white-collar professionals. This is the exact opposite of what you should be considering. If you have to shut down metro, do it in the middle of the day for 1-2 hours, not at the end of the day!

while this would work for me it would hamper travel for many people. The hours should be at least 11 on weekdays and midnight on weekends if not later.

This wouldn't interfere with my work commute but it would prevent me from using metro to return home after going out in the evenings.

Fridays and Saturdays should probably be 11 pm

what about sports events and cultural activities that finish after 9 pm. Later closing at 11 pm is desirable.

Sometimes work gets out late.

I already think 11pm is too early for close. 9pm is a joke.

By 2020 more entertainment venues would be open to require later service for those coming from MD & VA into DC.

This seems incredibly early compared to most metro stations in major US cities.

There are times I have to work late at the office. On those days I would then have to take a taxi home or drive into work which is very expensive.

Friday and Saturday nights must remain open late.

On weekends and holidays (days with increased traffic) the metro should keep the 11 pm closing time. Otherwise this solution is not terrible.

I work part time during the weekend at a local black owned restaurant which doesnt close until 11pm. That would leave me and my coworkers stranded or the need to use an Uber or Lyft.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This would be inconvenient during baseball season when games end at 11 pm or later for the Nats. |
| I plan on enjoying the city I live in and want to spend money to support local businesses. I rely on metro for safe transport around the city and 9am is far too early. |
| Although I would normally not ride after 9:00 pm, this would discourage me from riding during any evening hours given the concern of delays and missing the last train. |
| This would work for me, but there might be equity issues with lower income workers not being able to catch the metro back after a shift. |
| I typically don't utilize Metro in the evenings except on rare occasions when I might be going to the theatre or hockey/sporting event downtown. BUT, if trains close before the show or games ended, I would not be able to utilize Metro and would commute via car. |
| Why would you turn DC into. Ghost town? This is way too early |
| This proposal will both harm nightlife in the area when businesses reopen, and it harms people of color who have service jobs instead of 9-5 or teleworking jobs |
| Should have one late night train for night life areas |
| Metrorail should close later instead of earlier! |
| I believe this may work for the weekdays, but definitely not the weekends |
| Re-submitting because survey quit and not sure answers were recorded... This proposal does not accommodate needs for evening job teaching college class. Concerned about students being able to get to and from the class as well as own transportation needs as the teacher to get home from the class. It also prohibits using public transit going into DC from Arlington for entertainment (theater, late dinner dates, etc) on weekends. |
| Won't work for tourists or baseball games, so that's a problem. |
| Some people don't get off work til 9pm so this isn't fair at all everybody doesn't drive |
| This is a terrible idea and completely undermines the metrorail system, especially for workers who routinely work late into the evening. |
| I often have to return home after 9pm. Cutting late night service would be greatly detrimental. |
| I often ride the train after 9 pm. |
| May use later in evening. |
| I typically use Metro during the evening/night hours and weekends only, often to go to a restaurant. Closing at 9 pm would most likely mean I would drive in to the city instead. |
| Metro was a great alternative to going out for an evening and leaving the car at home, looks like it won't be any more. |
| Works for me - but for those who need cost effective transportation no!! |
| Work past 9p often |
| people work later evening shifts and need to have reliable public transportation to accommodate their schedules |
| This would be problematic for many who have evening work. |
| Unless restaurants and events end/close that early, I don't see that being practical. It would be dooming recovery of the local economy before we even start. |
| The greatest part of the Metroid that it offers a safe way to return home if you've been out drinking or participated in an evening activity. This would severely limit myself and anyone else in the district that does not have a car and cannot do anything beyond 9pm |
| It would be nice on weekends if the trains could run until midnight at least. |
| Before the pandemic, I consistently used the Metro for trips taking place later than 9pm, especially on the weekends. It would be a great disservice to close the Metro as early as 9pm. In fact, Metro must consider having later hours on the weekends. |
| This means I have to drive with drunks who have to drive. |
| Not ideal, but better than a plan that cuts trains during the day. Maybe keep it open later on the weekends? |
| I miss the midnight train, closing earlier would make me use the system less |
| It could impact my staff's ability to attend after-work-hours events, and require the company to potentially provide alternate means of travel. Ultimately, this impacts our team's manship and cash out of pocket. |
| I have enough money to always take a cab if I run into trouble. I think this will harm the least fortunate among us. |
| This removes Metro as an option for any travel downtown for evening activities. I currently exclusively rely on Metro for this (or I did before COVID). |
| I think it is crucial for people working and safety that the metro rail operate to at least 11pm and that there appears to be zero thought given to the fact that more businesses will be opening and will be open later and this could hurt them or just hurt the metro. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Maybe if bars stay closed forever. |
| This would dramatically affect those going to events in DC -- sporting events, concerts, etc. In 2022 there will be in person events again. Metro is being shortsighted. Because of the pandemic, ridership is significantly down. However, once the pandemic has ended, ridership will increase. |
| This would make it impossible for Los wage workers to get to and from their jobs. You'd be hitting the most vulnerable. It would also prevent trains from taking spectators home from Capital One Arena and Nationals Park after games. How are all of them going to get home? |
| This would make it impossible to use Metrorail for evening events - in my case, orchestral rehearsals, concerts, theater, etc. |
| Weekdays yes I can make do but later access Thur-Sat would be needed |
| Needs to run later in case working late |
| This would kinda suck for evenings out, but I guess I could make it work. |
| This would be detrimental to riders with later work hours, and would disproportionately affect hourly workers and people who live in the outer metro area (especially low income and BIPOC commuters) |
| Although technically this plan would work for me, I am not happy with this plan because it would not work well for a lot of riders who work in the hospitality industry and need service later at night. This is not an acceptable proposal, and it should not be implemented. |
| Baseball game nights - you should stay open longer... Also for those who work in DC - theyll need to get home... many rely only on METRO |
| It wouldnt affect my commute, but it would affect how I get around in the evenings, so more of a QOL issue. |
| Special events in DC, such as concerts, etc., require later metro service. This would cause me, and others, to not be able to attend those events, which could impact the economy. |
| Im totally against this. Eleven is too early as it is. Its ridiculous. |
| When I use Metro, I am usually seeing an evening performing arts event in the city. 9 pm is far too early to use Metro for such an outing. :(|
| There are evenings when individuals have to work at the office late, if the metro isnt running past 9:00 p.m., there would be no way to get home for some folks. Or they would have to spend an exorbitant amount of money on alternate modes of transportation. If there is a person parked at a metro garage in Virginia or Maryland, and they cant get to their vehicle because metro is closed, how do you expect that person to get home? |
| You need later service than 11 pm to provide equitable service, particularly those who are essential workers who have late night shifts. |
| Closing at 9p is very early and would increase traffic on roads (particularly from areas like DC and Arlington), and in particular from drunk individuals. You're taking away a safe and cost efficient alternative for people get home. |
| Although it would not affect my commute there are many people in the DC metro area that get off work late into the evening and this early closure could GREATLY affect them! |
| Prefer 11pm, but 9pm would be ok. |
| I use the metro later than 9PM less than 1 time a month. Typically more prior to COVID. It would depend on how under control COVID is at the time |
| We attend sporting events, plays and dinner in Dc. Closing at 9:00 would not allow us to use Metro. |
| There's no reason Metro needs to be open until 11pm daily. Consideration should be given to staying open late for special events such as sporting events, subsidized in part by the sports teams |
| We have about 50 + Employees that rely on Metro, Uber, & lift all the time. They would be screwed to the point of quitting their jobs |
| I live in a one car household that relies on Metro to go to restaurants, sports games and other events, as well as for work that often goes later than 9pm. 11pm was already too soon! |
| I often work until 10/11. The 11 is already a stretch for me- 9 would make it so that I'd need to cab home from work everyday. |
| 9pm is too early to close the metro. It would impact ability to do things downtown after work. |
| Ok most weekdays. Would prefer later hours Thursday-Sunday. |
| Yes, that is fine for me most of the time unless I am in late for a sports game " then I rely on the trains running until 11 pm. This also negatively affects so many groups who rely on this from first responders to people not well enough to own a car and rely on their jobs just to eat each day |
| I infrequently use metro at night |

Proposal to close Metrorail at 9 p.m.

The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station!

I often use the metro to attending sporting/social events that end after 9pm. I fear this would increase the likelihood of DUI related deaths in our area.

I typically never take the metro that late, unless Im at a sports game.

With two children, we are rarely out past 9pm!

This is far too early! I couldn't get anywhere I needed to go and I'd be stranded!

I do worry that this would disproportionately impact ppl in service industry

9:00 pm closing time limits access to educational and cultural events, and restricts travel for those who work later shifts.

I usually use Metro during the day, so its ok for me. But I can see how this would be a major inconvenience for people going out in town. I suggest closing at 11 on Friday, Saturday and Sunday nights.

This plan will disproportionately impact low wage workers who are reliant on metro to commute.

Closing at 11 pm. is a problem. I have been stuck at the Citi Open at Rock Creek Park with no way to get home via metro because of these early closures. no other major city in the world closes their metro before midnight and most run through the night. This plan will give service employees like waiters, waitresses as well as people performing in theater etc. no way to get home but to drive. Terrible idea. All these ideas will kill metro.

This means we could not use metrorail for evening theaters downtown.

Unacceptable. Half metro salaries and enforce turnstile skipping instead.

Need later hours for sporting and other special events. Also, closing early would deter evening outings via mass transit.

i oleave work around 10 pm and rely on the metro for transpotation between medical center and grosvenor

this would be devastating to restaurant and medical workers - they would have to be on the platform by 8:45 or run the risk of missing the last train home

The majority of my metro rides take place in the evening, if the system closes at 9 it will become unusable.

11:00 am is not even late enough - certainly in the weekends when nightlife is expected to return

will not work if theaters and entertainment venues open up

This is much more bearable then closing the EFC metro!

Cannot get home from class and cultural events.

Need later hours to get home from DC events

I would like to see Metrorail stay open later on the weekends to reduce the need to reliance on commercial and retail transportation.

Makes it difficult to go out in the evening

This would eliminate metro as a safe and reliable transit option for late night outings, including live events and activities that involve alcohol consumption.

This will work on weekdays but weekends and holidays when people are using metro so they don't drink and drive it should be later

That would effectively keep people from being able to use Metro for performances, evening ball games, etc.

This is ridiculous. Again you will lose riders

As a worker in the bar and restaurant industry, this would make it impossible for me to commute home without using a ride share service.

However, this may not be a good idea for VA and DC nightlife. This means more people using cars and potentially driving drunk. However, it could be a good idea to decrease the frequency after says 8pm.

Extend hours on weekends to 11 pm

Only if actually done independently. You cant say trains are only running every 30 minutes AND roll back hours.

Sometimes I work until 10 pm. If the metro closes at 9 pm, how am I going to get back home? I do not own a car and I depend on the metro for transport. It would not be sustainable for me to take a taxi every time I leave work late. I really need this service.

I work 9-5 so no impact

We use metro at night after performances and other evening events to return to Virginia from DC.

Anyone leaving a restaurant or a Kennedy Center or other show would have to cab home--or drive in the first place. And people who have jobs that go to 11 or later would be really out of luck.

Yes, I mainly use metro for work between the hours of 7am and 7pm.

Proposal to close Metrorail at 9 p.m.

Thats way to early. This may be my least favorite idea so far.

Prevents going to Kennedy Center concerts and other evening cultural events in DC as could NOT get home afterwards if Metro closes at 9:00pm

This would not allow the use of metro for going out to dinner, going to theater, or other evening activities. This would decrease the ability to utilize services and businesses in the DC metro area.

Do you think about people who work later??

If I work late, this would make it hard to make it home safely.

This is fine for me however, for those relying on the metro to get home after work (late hours), there would be an increase demand in bus services.

At least once a week I work to 9pm. So no way to easily get home.

I think 9:00pm during the week is fine but weekends should be 11:00pm

This would severely hinder night life for patrons and employees.

Why not give Uber & Lyft the business? If I need to work late or stay for events I'll need to take an Uber.

There may be times for work purposes I would have to take Yellow line out of DC after 9pm

This would significantly hurt a lot of business with restaurants and bars that close later

Extended hours are important to me

When are you going to recognize that people have to work nights and those are often lower paid wages and rely on metro. Metro needs to resume service to midnight and 2am on weekends

This would make it impossible for me to rely on Metrorail to spend evenings in Washington D.C. and come back to Greenbelt where I live.

This is a terrible idea. It makes the Metro unusable for much of the time.

9pm is too early to close the metro. For me it would work the majority of the time, but i know there are a number of people who rely on the metro to stay open late because they work jobs where the shifts end past 9pm. Additionally on the weekends typically we will take the metro into DC and would be unable to do so. Personally I think 11pm is already too early and it should stay open until 1am.

This seems more workable to me but still not ideal.

This will also affect folks being able to go into DC for the night, for eating and entertainment, but also for conferences and meetings

Probably ok - we generally just use metro for commuting now since weekend service is slow.

Most service workers such as the food industry do not even get off until 9:00 or later

9pm is ridiculous. 11pm is already bad enough. Again, this is not a public transit service then. You will put yourselves into a situation where people cannot depend on the service and will just make other arrangements. Don't get on the slippery slope.

This would make it impossible to travel from N. Virginia downtown for cultural events in the evening.

I work in healthcare and I get off at 11pm. How would this work for me? Why does it seem like metro just want to cut all opportunities for low income people to use your services.

This is the minimum work hour that can be acceptable to us.

I think that this proposal will end up killing Metrorail. In the summer, it isnt even dark outside. Families who want to spend the day at the Washington Mall will likely get stranded.

This is terrible. Once we start going back to work, you strand so many people -- especially those who make the least amount of money. The service industry is already hurting and you are devastating them. And it would deter me from using Metro.

We need to support later hours, not early nighttime closures.

The whole draw to the metro being open is that if you stay late at work, have a work dinner, or happy hour you can still safely get home- and not have to get an Uber

Perhaps for one year, as we get closer normal life, would expect the time to increase back to 11

I rarely use Metrorail after 9pm so it would not inconvenience me to close at 9pm.

When the pandemic ends and people can go out at night again, closing the metro rail system at 9 pm would be detrimental to restaurants and bars as they would continue to lose significant money if there is no public transportation available at night.

Commuter transit is the most important role Metro serves.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| After work activities usually end after 8 pm. |
| I am currently on required shift work / evening shift for my government job with my shift ending at 9pm or 10pm daily. This early closure would be a severe hardship on my commute and would force me to find other modes of transportation. |
| 9pm is too early! |
| If things get back to normal then this would not work for me |
| Not ideal, but I could possibly make it work. |
| These late operating hours actually made this region special |
| 11pm is already too early for me, 9pm would effectively remove metro as a method to return home in the evening. Less frequent trains over a longer time period would honestly be preferable. |
| Even closing at 10pm would be better. Closing at 9pm on the weekends would not bode well for weekend activities throughout the District. |
| It would work unless I go downtown for some sports or entertainment event. It would really make it nearly impossible for me to do that |
| When I am going to dinner with friends in Clarendon I would rather ride metro than drive. 9 is early to close if I am going out to eat at 8. |
| Metro should maintain late closing on Friday and Saturdays to attract more evening customers who go out. |
| Ubers and Lyfts are already expensive and those companies will drive up prices knowing that there isn't another option. This will severely impact low-income workers who often work late night shifts and need a way to get home after 9:00PM. |
| 9PM is unacceptably early for 2nd shift workers or anyone wanting to use public transportations for evening events. |
| This change would greatly impact our ability to attend events such as concerts, theater performances, and sports. It would also limit our access to restaurants in DC since we are coming from Northern VA and rely on Metro to return home. |
| Not good idea people works late at night people don't get off work until 9pm. This no good at all |
| Would like to to run until 11pm on Friday through Sunday nights. |
| This will disproportionately hurt hourly workers who cannot afford to live in the parts of the system that are easily accessed. Metro is a more cost efficient way to travel than uber or car ownership for many people. This may also see an uptick in drunk driving because people will need to get home somehow and if metro isn't an option, they will choose to drive instead rather than paying for uber. |
| Im concerned this would increase the likelihood people would drink and drive |
| By January 2022 we will be going out more regularly, how will we get home safely after a night out? |
| While this would work for me, personally, it would negatively impact a significant portion of the DC population. |
| Taking the metro into DC for events such as concerts at the Kennedy Center requires being able to have a return ride after 9 pm. I am a senior citizen who does not drive at night. |
| n/a |
| ABSOLUTELY FUCK THIS, WHAT ABOUT SHIFT WORKERS? |
| I use the metro to travel late from work and would not be able to get home if it closed early |
| But that will certainly affect night life in town |
| I would look at 8pm closing. Every day. |
| You already broke your promises of returning to 1am closing times and now you want to close stations even earlier? How will anyone go to events in the area? This nonsense is how you lose customers forever, and that seems to be your desire. |
| This would seem to eliminate trains operating after baseball games or other sporting events or cultural activities that end after 9. It would make these events less accessible |
| This is too early to finish service. |
| Stay open late only for special events/sports/etc. |
| I would prefer to have longer hours - if I go to a happy hour I prefer to take the metro, but couldn't if it shuts down at 9 pm |
| This is early for people who work shift jobs |
| Many jobs end later than 9pm. And we should be incentivizing everyone to travel via wmata including those returning from dinner, tourists, etc |

Proposal to close Metrorail at 9 p.m.

Many people in the service industries rely on metro and cutting at 9pm in 2021 is not responsible or environmentally correct. Also potentially leads to drinking and driving doesn't support transportation from Nationals park

I work long hours in DC. This would be a disaster.

Prior to pandemic shut down I frequently took the train after 9pm.

At night puts lower socioeconomic people, particularly women and those that belong to the LGBTQ population at risk, as the metro is the only affordable way to return home for many people.

What about people who go into the city (DC or downtown Arlington) for events and most of the times the events end late in the evening. How are people supposed to get home?

I frequently use metro as a late night transportation option. Especially on weekends, eliminating service after 9 pm would make transportation much more difficult at night.

This would cause me to rely on Uber rather than metro for evening travels

This proposal closes the system to shift workers who depend on metro as their primary means of transit and may not be able to afford rideshare alternatives to get home. When baseball season in the ballpark returns, this would mean attendees would have to leave the game early because they depend on metro to get them home - many go out to the MD and VA suburbs.

This would make doing any evening activities in DC impossible

I work late and I also like to dine and drink after work in D.C., closing at 9 pm is not helpful and very inconvenient.

No. 9pm is too early to close. It should be open till at least 10pm or even 11pm.

Students and culture. So many students who live/work/go to school in DC require use of the metro past 9pm. When I was a student, I frequently had classes that went until 9pm. If the metro closed then, I would've had to walk 1 hour+ at night or paid for a car each time, which would have gotten very expensive (especially for a student). Or if a student needs to go to the library on campus, but then safely get home, 9pm is an incredibly difficult deadline to maintain. Beyond just students, DMV has many workers that staff restaurants, bars, stores, live entertainment, etc. which very frequently work beyond 9pm. There are also classes and events (philanthropic, dinner, fundraisers, workout classes, bookclubs, hobby clubs, music) which VERY frequently go past 9 pm. This excludes people from participating in DC's vibrant cultural scene (and harms DC as a city) if they cannot work or afford an Uber home. Also, while not always safe, the Metro is often a safer option than walking at night, when one risks theft, kidnapping, sexual assault, or other crimes that could have been avoided by taking a Metro home. Closure of the metro at 9pm puts students, food/entertainment workers, and others looking to enjoy what DC has to offer at unnecessary risk.

It will be the end of theater, restaurants and other entertainment in the D MV

If I need to be in town after work, I generally drive and find a parking garage because I already can't count on Metro to provide decent service after the evening rush hour.

taking Metro into the city for evening activities would not work if the stations close at 9, would have to use taxi services instead

This makes a lot of sense. Ridership probably tapers way off between 9 and 11pm

With the exception of evening when the Nationals or other sports teams play. Yes. Those evenings, cars should run an hour after the game ends.

Metro rail is a safe way to get home instead of driving

People going out during the evening and people who work evening shifts for work would find their commutes more difficult if this happened. Low-income workers would find their ability to work certain hours harder. Also in the more trendy areas of Washington, Maryland and Virginia this would only encourage more ride-share and cab traffic on nights after 9, which residents would not appreciate.

Frequently used metro after 9PM when commuting into DC and on weekends. Again, this will just push me to alternative transportation - driving/Uber/cabs.

Would hurt workers and stop me from going downtown via metro in evenings

9pm close time seems reasonable

Because we can't think of Metro service independently of road traffic, it makes sense to try to keep stations open at night so people working in DC but living outside of DC can socialize in DC a little longer.

Negative impact on citizens who by necessity work late hours. These are people who need public transportation.

Would decrease property values since many people who live in our building depend on metro evening service.

I only take metro at night occasionally, but I do rely on metro to get to sporting events- Capitals and Nationals games

Yes let's get people to work but not home from work that's a really good plan

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Weekends should be later. |
| It basically removes all options for using the metro for evening events. Basic cultural or sporting events will need to start at like 4 or 5pm instead of 7pm unless they want everyone to drive. This isnt just affecting people who work late -- which it certainly will -- or people who go to bars until 2am. |
| If this means catching a train in DC at 9:00, it works. If it means at 9:00 Id be stuck half-way home, then no. Because there are times with your delays that I cant be sure of getting on a train before 8:00 p.m. |
| At this time, Ill say yes as I do not expect to work later than 6 p.m. |
| This metro system is lauded as a world class train system. Words dont match the service. |
| This would negate Metro as a transit option for sporting events, theater, dining out, etc. Not acceptable. |
| I, like many other employees in the region, get off work after 9 p.m. This would force me to take the bus home and spend less time with my family. |
| I would not need to take the metro after 9 PM on weeknights. |
| I believe this would be be more or less OK during the work week (M-Friday), but do believe that not having the metro open until at least midnight on the weekends, if the hope is to help the DC restaurant/nightlife economy return to what it was prior to COVID, would severely cripple that industry and potentially lead to more drunk driving for those folks coming into the city from outside of DC to enjoy the city at night. |
| This proposed schedule would affect shift workers. |
| Who are the people using the Metrorail system between 9pm and 11pm? Are people using it to get to and from work or run essential errands? Do they outweigh the people that are using it for non-essential needs? |
| This is a terrible idea, it would kill nightlife and harm people who are reliant on metro for getting to/from their jobs that are outside the normal 9 to 5. I imagine that this plan would have hugely disproportionate racial impacts as well. |
| Once people are vaccinated I would expect people will want to go out for dinner and/or drinks in the evening. If the system shut down at 9pm on weekdays only, that would be somewhat more acceptable, but shutting down at 9PM on Fridays and Saturdays seems like an unacceptable level of service and would also negatively impact anyone relying on metro who works weekend evening service jobs in the city. |
| working people need the metro access to keep your city clean |
| This would severely limit my use of Metro. When there isnt a pandemic, I frequently use Metro to get back home after 9pm. This just wouldnt work for me. |
| This encourages drunk driving by folks going to bars and restaurants during the evening in the city. Public transportation really should operate until 11pm at a minimum. |
| I regularly have business that concludes in the evening and wouldnt allow me to change lines and get home before 9pm |
| Many people in the health and hospitality industries get off after 9 and before 11. This would leave many people without transportation home. |
| That works for me since I get off work at 5 pm daily. |
| Trains should operate until 2am weekdays. Closing at 11pm is too early; 9 PM is ridiculous. |
| I only use metro for commuting, 8:30 am - 7pm. |
| That's an early time for such a large metropolitan area. |
| so now you are talking about a system that would result in more driving after going out to dinner and drinking etc. THATS INSANE. If we want to have theater, dining, clubbing, etc we need later trains. How is the hospitality industry supposed to recover post-pandemic if you make it more difficult for folks to actually get to restaurants, theaters etc? You dont have to be young or wild to want to be out past 9 p.m. |
| Often, especially summer, I use the rail after events that would not be over in time |
| This proposal goes in the wrong direction. People need to be encouraged to use Metro. This would be discouraging with respect to ridership. |
| If we want people to be able to use the metro instead of other forms of transport, seems to me that it needs to be open. |
| Would use other transportation for night events. Would be an inconvenience, especially for sporting, dining, and other events downtown. |
| I often work variable hours as a laboratory scientist at the National Institutes of Health. My work schedule is often unpredictable, and I do not want to feel rushed to finish an experiment because I would be unable to make it home by the last train at 9PM. This proposal would significantly impair my ability to complete my work investigating diseases like Alzheimer disease and Parkinson disease. |
| I work longer hours during busy season and this would make it difficult for me to get home after long days. |

Proposal to close Metrorail at 9 p.m.

I do enjoy using the metro to go to bars/restaurants in the evening, but I would prioritize using it for increased trains during rush hour and seek other transportation options in the evening.

I work overnight

Using metro to downtown D.C. 9 would not be late enough

I think this would put a strain on a lot of people who work swing shifts that end late in the evening.

Makes it useless for anything but commuting.

Assuming things are open again by then, this will limit ridership into the city on weekends

I sometimes go to synagogue and have dinner afterwards that extends past 9

This may work for weekdays, but I think having a late closing time on weekends is a necessity

How about 10:00 pm as an alternative?

I need access until at least 11 pm for the system to meet my needs.

would make use of metro for leisure unworkable

Need to keep operation till 11 pm.

This would be really devastating for people who work in the service industry and may not have access to other transportation.

I primarily use metro for ballgames, concerts, and other evening events. I am not a late-night person, but this is absolutely unacceptable. Almost no reason to have a metro anymore if you do this.

How would all riders working in restaurants, bars, entertainment sites, hotels, etc. get home if the metro closed at 9pm? This is a major oversight.

This will negatively impact citizens as we return to normal after the pandemic.

This is not a good idea as it would make the least safe time to be on the roads even less safe.

This proposal would essentially eliminate any use of Metro for citizens who are enjoying entertainment/culture/dining options in DC or wherever Metro services. If you cant take Metro home after an evening dinner, then you wont take it in the morning to work. I strongly, strongly oppose this proposal, which would reduce Metro to purely a commuter service.

This area does not close its sidewalks at 9 pm you are risking peoples lives-- if they try to walk home or catch a cab late at night. Some of them cannot afford to catch a cab!!!

What part of Public Transportation do you not Understand?

This would effectively eliminate using Metro for travel to evening events including concerts, theater, sporting events and meetings

I am a night student and my classes end at 9:20. I would have to uber home every night, which would be very expensive

People dont just work 9 - 5 jobs. I already think the closing time is too early, as I come from a city with 24 hour service, and much less expensive.

That is ridiculous. For anyone who works a late shift or sees a concert or goes to a ball game or out to dinner or really any normal human city thing, this would be crippling. If DC wants to be a thriving city [without even worse congestion/parking issues] such a dramatic cutback shouldn't be on the table.

I'm expecting life will be (relatively) back to normal by January 2022, so this would seriously affect my ability to make any plans that involve staying out past 8:30pm (which would mean most plans).

I rarely take the Metro after 9pm so it wouldnt impact me directly. But I can imagine it would be bad for anyone with later shift jobs - including restaurant, grocery, and maintenance workers.

Late evening events and functions will resume so we need trains after 9pm

Im anticipating night time work and will need to save on gas.

Need metro rail services past 9pm

Many people rely on late night trains. 11pm is already too early.

This would encourage people to drive drunk when they might otherwise use the metro.

What?? Why? We need expanded hours not less. Raise taxes!

I uses metro rail when i am out for the evening. Im more likely to consume alcohol and drive if i dont have this option

We take metro into DC on evenings and weekends. This early closure would prevent us from using metro as metro would close before we would need to return home.

This proposal would be better than taking stations out.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I use the metro to come back from events and work well after 9pm. 11pm was already too early some times. |
| You have people who gets off later than 9:00pm |
| If there were plans to go out after work, this would limit options of getting back home safely and at an affordable cost |
| Need trains to operate after 9:00 pm |
| I like to go to The Kennedy Center, National Theater and other venues in DC. I purposefully moved to a home near the Grosvenor Metro so that I could take public transportation into DC. |
| This would affect leaving games or having nights in the city! |
| Yes, but I hope this would be temporary. In the fall when my evening classes resume, this might prevent me from being able to take metro home after class |
| Fuck me for working late or having dates. I guess the only jobs metro is creating is for uber drivers |
| The trains are packed at 11PM and even at 1AM on the weekends. Why give up that money? |
| This doesnt apply to me, but it would be a concern for theatre-goers and restaurant patrons, or evening workers, wanting/needing to metro in and out of DC. I am particularly concerned about women walking on their own at night if the metro station they usually use is not available to them. |
| My traveling is complete prior to new time |
| Should be 24/7 |
| I would like to be able to go out to dinner, see a show or sports game and then be able to go home on the Metro |
| There is too much need to travel after 9pm, whether it be work or otherwise. |
| Maybe just on weekdays but not weekends. What about workers who rely on mass transportation that work the night shift? |
| I use the metro for night shows. This would prevent this use of the Metro. |
| This is a horrible idea. My work doesnt end until 10 or 10:30 in the evenings. Sometimes later. As it is I rush to get the last trains. We live in a major city, one that is trying to move to more sustainable transit. How can this cut even be contemplated? |
| Metro closing at 9pm doesnt support local nightlife and enjoying the city and other areas metro services at night. |
| The only time I need late night service is when I have flights that come in late - there would need to be an alternative, especially with construction at DCA currently |
| This would not be ideal for me, but I could manage - however, many other commuters and people in the DMV would find this prohibitive in terms of their ability to move around the metro area due to costs. While I can afford an Uber or Lyft for the occasional night out, many people cannot - limiting access to work sites or even just social interactions unfairly. |
| Would limit concert/sport travel into the city on metro. Limit metro for nightlife activity that hopefully can return |
| This is more appealing to me than losing so many trains during the day. It seems like it would really disrupt people who dont work 9-5 jobs though and rely on it for transportation home from an evening shift. It also seems that the DC economy has been so fractured by the pandemic, having restaurants and bars and sporting events going again will be necessary, but if Metro isnt running to make it easier and more affordable for people to move around the city this seems concerning. |
| This one sounds nuts. Uber-backed! |
| I expect to need to travel after 9PM quite frequently |
| My work schedule ends at 10pm. I would have no transportation home. |
| During the week? Or weekends too? Just how provincial do you think D.C. is, that we want to end socializing while out at 8pm in order to get home and into bed by 9pm? |
| This will cripple the recovery of dining/entertainment including sporting events after the pandemic is under control, nevermind those who work retail or non-standard hours |
| 9 pm is way too early for an effective rail service. Being in the hospitality sector, 11pm change implemented was already drastic compared to the midnight closing time before |
| This will make it impossible for me to go to concerts at Kennedy Center in the evening. |
| Weekdays this is very understandable, weekends this should be made later!! Close 11pm or after |
| It would alter a lot of my social travel and would increase drunk driving. |

Proposal to close Metrorail at 9 p.m.

I've always found low traffic after 9pm on Metro. Most commuters want to get home to see their kids. When I come back late, I often just Uber, when rates are lower because there is less traffic.

I personally would be taking train by .7 pm but what about those who need evening transport. That's absurd for an international city to have limited transport. Could you provide busses instead after 9pm? What about attending big events - concerts, baseball. This proposal is short sighted.

Some (many) people actually work until 9pm; that is why the DC/MD/VA area is economically successful. Now you want to force those people onto cars.

I have a job with evening hours that usually dont end until after 9 pm.

I work in retail and have no car. Closing early would leave me without an affordable way to get home from work

This is the worst. Killing nightlife and hobbling service workers

When there are big events in the city, like hockey/baseball games or concerts, the metro should stay open longer.

I take the metro to work and occasionally work late. Having said that, this is the least problematic of the proposals so far, sinvce it would only prevent me fro taking metro every so often as opposed to every day.

I already responded that having trains close at 9 pm on weekdays would probably be okay, but NOT on weekends; that is essential for me and many others in the suburbs who want and need to go downtown without a car and the hassles of parking. Having trains stop early on Friday and Saturday will devastate the DC economy.

Many people still use the trains after 9 pm.

This seems dangerous and encouraging of drunk drivers

frequently use metro for evening events in DC

For those who live outside of DC (MD or VA) it would cost an obscene amount of financial stress and safety concerns for an Uber if they were to be in the city past 9 pm

It would mean no use of Metro for leisure activities. You might consider closing at 9 only Sunday-Thursday.

We are senior citizens who like to frequent performances in downtown Washington. Driving late at night is not ideal for us.

9PM is WAY to early. If I go to dinner, I cant metro back anymore...

Again people that work nights and weekend would be negatively impacted by the reduction in service

Closing the metro at 9 p.m. would render metro completely useless to me. I have an unpredictable work schedule and often work past 9 p.m. There are rarely days where I know going in that I will be done before 9, which would mean I would have to stop using metro for commuting entirely and seek other modes of transportation.

This creates an unsafe situation where people are driving when they shouldn't be and is difficult for people working later hours.

Again. Using a current pandemic to justify cutting future necessary public amenities is unacceptable. Do you want businesses so suffer even more when we finally have people vaccinated?? How on earth are you using data from a catastrophic ongoing event to justify cutting services??

A majority of the time it would work. However, there are occasions when I am out later than 9:00 ie. Nats games

If we get past the pandemic, it would be nice to get back to things like going out at night - it would be hard to do if metro service stops at 9.

Cutting to earlier closing is a terrible idea. Im fine with late night decreased frequency, but dont close

This is absolutely the worst decision. People would literally lose their jobs due to not being able to find a way home. Again, those with power and more flexible jobs are the only ones who would benefit.

CONCERTS AND SPORTING EVENTS THAT I ATTEND WOULD BE HALTED, GREAT LOSS TO ME AND TO THE BUSINESSES AFFECTED.

This is fine. I only use Metro for commuting to work during normal daytime business hours.

I like the option of taking transit home from a friends or baseball game after 9

I frequently use the train between the hours of 8-11pm. Whether it be for work or for leisure. This would make things very difficult if service were to be reduced.

WANT METRORAIL TO CLOSE AT 11PM

Closing that early everyday would make take advantage of DC restaurants, bars, retail, and nightlife almost impossible.

I rarely take metro after 9 pm and would take Uber instead.

It would render use of Metrorail pointless for drinks or dinners after work as well as for evening baseball and hockey games.

It wouldn't be ideal, but I think most people have given up on Metro's reliability at night anyway.

This completely disrupts nightlife in DC, a big industry. Theaters, restaurants, and bars are vital, and need this equitable transportation for their patrons and employees.

Proposal to close Metrorail at 9 p.m.

Frequently for work related events and also personal things i rely on the metro to be able to get home from DC. The whole point of living near the Grosvenor Metro is metro accessibility.

Not enough time to enjoy the city when traveling in from the suburbs

Does not impact me, but many service workers need Metro service late at night. That needs to be taken into consideration. What about special events?

When sporting events resume service to National Park and downtown arena need to cover before and after games travel

In general yes, because I commute into the city for a 9 to 5ish job, but it would have a much more significant impact on those that cannot afford alternative transportation, but have jobs that end after the last train leaves.

That will, of course, eliminate use of metro for any entertainment purposes. People with after work dinner plans will need to drive instead of take metro. People leaving night time Wizards, Capitals, and Nationals games will need to drive. All of those things will reduce Metros revenue and increase traffic. It will also cause public safety problems because people drinking at those events will then be driving.

I often need metro after 9 pm

I am concerned for those workers who start or end work between 9 pm and 12 am.

This would absolutely not work. Late nights are common in the DC area for a variety of reasons. Staying long at work or having a night out. Closing at 9 pm would be very bad

This would work for my daily commute to and from my office but I would obviously be forced to take other travel methods around the city after 9pm in my free time.

11 pm is preferable

Close metro instead. I do not want to pay for a system that is this woefully inadequate.

A better proposal would be to Close at 9pm everyday of the week except Friday and Saturday night when close time stays at 11pm

The metro system is an important means of safe evening travel for many people, myself included.

If I used the metro after 9, it would not be for work-related reasons.

Not compatible with attending evening events in the city. Need transportation until 11 pm.

When I use the metro, it is often past 9pm

This is perfect for us commuters with kids. Probably not for young people who have lives after dark - but they always have uber.

I occasionally go to events downtown that always end after 9 pm.

As social activities begin, I would be less likely to attend dinner and evening functions in the city if I could not metro home

My commute sometimes is at 10 pm

But I think this is a bad idea. You should strive to keep the system open as many hours as possible.

Metro should absolutely not close earlier. It would make the service less appealing, and have a disproportionate impact on shift workers who use it to get to and from work at off-peak hours.

I often work past 9pm

People working night shifts will be forced to take ride share which is more expensive

Some days would be stuck miles from home and would require more out of pocket expenses

Metro should be open at least till 10pm

9p is awfully early. I cannot imagine ever going into DC or to a National game on a weeknight given that schedule. Not a fan unless it is the only way to keep trains running.

This would reduce riders transportation home from nighttime activities in DC (concerts, sporting events, work events, etc.). Not to mention hurt riders who work in the evenings and depend on the metro as transportation

This plan would hurt restaurants, bars, and entertainment businesses whose patrons rely on Metro to get them home safely in the evening. Plus it would hurt the employees of those businesses.

You'd really be a commuter rail system then. Don't think this will solve your fare problem...

This would discourage people coming into the city and supporting hospitality. The most popular reservation period is 730-9pm for restaurants. It would have a detrimental impact to hospitality if individuals had to use car services and no doubt cause a higher level of drink driving.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Baseball games? Theater? 9 Pm is way too early. |
| Its better to close early than cut service during the day/ rush hours |
| The people who need metro the most work not daytime 9-5 jobs. |
| It would certainly limit where I feel like I could travel in the DC metro area and I think this would cause an undue burden on various business such as restaurants, bars, sports venues, etc. |
| I dont have a car, the metro is my only way of commute, and as soon as Ill be vaccinated against covid, I intend to use the metro again. |
| Simply no. The option hurts nightlife and those who work late. |
| Often use metro late in the evening on Fri.-Sun. |
| Would still want to run late on weekends once restrictions are lifted |
| I frequently use metro later in the evening |
| This plan would work for my commuting needs, but would be deeply disruptive to the usefulness of metro for anyone but 9-5 office workers commuting. |
| I use metro for work and don't use it later than 8:00 pm. |
| This would severely limit my ability to work a second job, which is needed to support my family. |
| Prefer longer hours on weekends |
| After the pandemic, people are going to be going out and staying out late. Closing at 9pm would completely shut off access for people who do so, leading to an increase in traffic, pollution, and potential drunk-driving. Additionally, stopping at 9pm would make life more difficult for people working non-traditional shifts, many of whom live outside the center of the city. |
| This proposal is very damaging to businesses |
| I often used to attend evening events in DC and would take metro home to Falls Church. I suppose on those occasions I could use a cab or ride sharing, but I think 9 p.m. is too early to close. |
| Good excuse to get home early... |
| i sleep at that time. |
| Not convenient for eating out at restaurants especially on the weekend. Would impact retail workers. |
| This is stupid. Just puts more money in corporations like uber and Lyft. Why can't this city provide affordable public transportation until 11pm? Ridiculous idea. |
| I think keeping metro open later than 9 pm is very important for night life in the area. Closing at 9 pm will cause some people to forgo plans in the city/metro areas while causing some others to drive in increasing the risk of drunk driving. Rather than closing early, metro could space out the frequency of trains more significantly at the later hour so the option of getting home remains. Similarly, metro could consider closing at 9 pm on the days of the week less likely to have a lot of night life, like Sunday-Wednesday. |
| Would this be temporary? |
| We would rather have fewer trains versus shutting metro down completely as metro is the best option for these hours. Please consider. |
| Shift workers will have no transport. Especially for those in hospitals. Often take metro into DC for pleasure as well. So this would def reduce my usage of the metro all together. |
| What is the point of public transportation if it close at 9pm? There are people who work til midnight and depend on metro. |
| Many workers require the later closing time. |
| 9pm is ridiculously early. At least have the last trains at 10pm. |
| Yes--if I stay out past 9 PM Id be able to get a rideshare and so this wouldnt cause me any difficulties. I was going to suggest exceptions be made for major events (like sports games), but I think those are cancelled now? |
| I think a middle-ground should be struck and it should close at 10pm. Plenty of workplaces are open until 8 or 9pm, and those people need a way home. Id also hope there were schedule adjustments at certain stations for baseball games, concerts, etc. |
| Many activities in the city that will be starting again such as sports, music, dining need later service than 9 pm. |
| You have workers in dc that depend on late hours service |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I think closing at 9pm would greatly cause suffering to folk who are hardest hit by the economic impacts of the covid pandemic. First responders and essential workers including grocery store workers and others. They heavily rely on metro and this would be unfair for them |
| I dont need metro open until 11 but 9 is too early, 10 pm would be fine |
| That is terrible. We always use metro to go to the theaters and theater ends after 9:00 so youre forcing us to drive, use gas and pay for parking instead of environmentally friendly and less expensive metro. That plan will kill restaurants and bars as well. Another absurd plan and dangerous to the economy of the region! What are you thinking????? |
| Will there be buses available at 9pm with similar routes? |
| would prefer extended weekend hours |
| This would greatly impact retail and low income workers where most retailers close at 9:00 PM. |
| Evening use - as at ballpark- would not be available and that's a big issue |
| I sometimes have to work after 9 and I dont know how I would get home.... unless the bus schedule/ routes were extended |
| This would make late nights at the office or work events that go late quite difficult to manage, especially events that might include alcohol and would prevent people from driving |
| 9pm closure means last train at 8:30 or even earlier. that is not feasible for anyone working outside of the traditional 9-5. my hours often stretch to 8pm and i'm not in hospitality or service industry. |
| Returning home after an evening would become difficult |
| it would be ridiculous to have our public transportation close at 9pm |
| could not go out to a game in town or to a play, so not workable |
| I believe this will drastically impact those who need access to transit at night especially essential workers who may need access to metro before 11pm. Please do not close the metro at 9pm. |
| How would this work during sporting events? How would Washington have a restaurant industry? |
| Great way to screw essential workers |
| when we use metro we need it until at least 10p to get home from city events |
| Special event rail service - to Washington Nats games or in July 4, for example - would be needed on an exception basis. |
| Many people use the metro to get to Strathmore for concerts and other evening events. These events typically do not end until after 10 pm. |
| 1) I frequently work late. 2) It is crazy to have a metro system in a major metropolitan area close that early. |
| Thats incredibly presumptuous that peoples work schedules end before 9pm |
| If working late, 9 PM closure would not work for me. |
| Why not do this NOW assuming ridership picks up eventually. How does a influential city close down so drastically and expect to stay influential? |
| 9pm is far too early to be closing metro stations. For regular metro users like myself, the metro is one of the easiest and cheapest ways to get home at night (especially on weekends). |
| Because there are people that get off work at 9pm. Also some businesses close at 9pm, would not allow people enough time on their home commute. |
| Once events reopen, this would be an inconvenience to many who regularly use metro to get into DC. |
| I rely on the metro for my essential needs and the decrease in operating hours would mean that I would not be able to go to my job; many Washingtonians do not have the option to change their work schedule based on the metro decreasing their operating hours. |
| for me its ok but for younger people Metro should run later |
| It would depend on business operating hours. It would make using metro to commute to late shift jobs or picking up late food, etc, impossible. |
| Many people use the Metro to get home after dinner or any other activity in the city, and more often than not it is far later than 9 PM. You would be reducing economic activity in the city if people decided to not partake because there is no feasible option home |
| I rarely ride metrorail late, so this change would work well for me. |
| As my mom says, nothing good happens after 10pm. |
| U get off at ten oclock from wor |

Proposal to close Metrorail at 9 p.m.

Usually if I take Metro its to attend events in the city that end after 9 pm, so I would be stranded.

Again, what is the point of having a metro if I ts gonna close at 9PM?!Ostensibly, by January 2022, we will be back to a normalish life. This plan hurts the industries that have been hurt by the pandemic, hurts the workers most affected by cutbacks, and doesn't encourage people to go out and spend their money!

This is too early to close.

My first priority in my Metro use is daily commuting on the Orange/Silver Lines and this proposal would not affect that. It would mean that I do not use Metro when going out (especially to downtown DC) in the evening.

While this plain would not effect me much, I think the early closing would really put other people in a huge bind if staying after work for sporting events or evening plans.

Keeping the metro open late is critical for hospitality workers, shift workers and people going to games, arts events, etc.

Events downtown (sports, concerts, etc.) get out later than 9pm and therefore public transportation would not be an option for those events. This would create a traffic problem both getting into and out of any event in the city.

This will need to be until at least 12pm

10pm might be workable

Please see my previous comments.

Metrorail should never close no earlier than 11pm.

I work evening shifts and cant get home if wmata closes at 9p. THat means that last trains will be around 8p. Wmata has already destroyed the nightlife in wdc by closing so early

My work finishes long after 9 pm, this is not at all workable.

unfair to workers; also I couldnt get home from the Kennedy Center or Arena Stage after an evening performance. Major inconvenience.

Doesn't allow time for evening shift work travel

My teenager relies on metro to attend theater class and sports events. They often end after 9 pm, leaving her with no way home.

Students at the George Mason University Arlington campus take class until 10:00 pm. Closing at 9:00 pm would prevent any Metro-dependent student from leaving campus.

After the pandemic, we hope to return to plays and events in the evening in DC

I can understand it on weekdays, but seems pretty early for weekends

While this plan would work for me, I have concerns about the impact it may have on transit dependent workers who work odd hours, late shifts etc

Don't punish people (typically those with lower incomes) for having to work late

Why bother opening? What do you do for Caps or Nats games

Between office events and community organization meetings, I am often out past 9 and cannot afford to take an Uber home every night.

It is already hard enough to make 11pm deadline to not get stranded downtown. With 9pm closing, I would not have a way home.

This is very unhelpful to those who go out

Most days OK. However, this does not work when attending an event or a restaurant (assuming post-COVID)

I think there should be different hours for weekends - extended for weekends. I think fewer trains is fine but still have something - one late train - so people can plan around the time table vs eliminating hours.

Many residents of DC get off work later than 9pm and need ways to get home safely. Closing the metro at 9pm would endanger their lives, and thus endanger so many in the city..

9pm is too early. We'd have to drive downtown, to Nats games, etc.

I utilize the trains to commute on the weekends as well. I would have no way of getting home if the trains stopped at 9pm. I think this is a major issue that needs revisited.

Sometimes we don't get off work until after 9

I usually dont take the metro after 9pm, but it could happen and I would not like to have to take a taxi/uber just because I am out a little later than 9pm. It seems very early to close service.

I work as a tour guide. Evening tours, which are very popular with out-of-town high school and middle school groups, run until 10pm.

Proposal to close Metrorail at 9 p.m.

This is catastrophic for people who will go out drinking and need to get home after. 9pm is WAY too early for that. Some will drunk drive and the rest will rely on ubers, which also treat their drivers horribly. 9pm is a nonstarter.

Why does the metro system continue to get worse? Again, those of us with non-traditional work hours, with possibly lower income levels will be more disenfranchised and forced to rely on private transportation, such as uber/lyft. This will cause a premium on transport costs and lessen people's ability to work etc. None of the ideas proposed by metro seem to take into account socioeconomic differences of the DMV and the high need for a quality public transportation system.

This would negatively impact DC workers who work outside of a 9-5 especially our essential workers like restaurant and hospital staff who may end their shifts past 9 pm.

We come home from DC after 9.

Most Friday I work until 10 p.m.

Friday, Saturday should be until 11pm or midnight

This is ok during the week but not for Friday / Saturday. People wont be able to support restaurants etc that can now open late again

Many urban Metros stay open all night! This is essential for working people as well as for social (theater, movie, restaurant, friends) reasons

How are people, especially young women like me, supposed to get home safely from a night out then? Walk across a city late at night? This will definitely get people hurt. I would be scared to do anything at night for fear of not knowing how to get home. If you're thinking "oh but Uber" remember that being a woman alone with a stranger at night is so so so dangerous so get your head out of your asses and think about the fact that you're making people who are already vulnerable even more so. Disgusting.

On weekends, it would be nice to have extended service later into the evening. During the week, a 9 pm close would be doable.

Bad idea. People would start driving to DC from suburbs to go out. This would increase the amount of possibly impaired drivers.

This would impact workers significantly, especially those working in the service industry. I would not support this change,

Me and countless 1000s have activities and work after 9pm. This is absurd for anyone who works in food service let one just basic mobility. By doing this, you will have more people drunk driving, people will use Uber more.

Two words, shift work!

I use metro for evening events in DC --would defeat the aim of keeping cars off the roads and would certainly hurt businesses in the city

I don't usually take Metro at night anymore and rely on ride sharing services instead.

Having extended service makes the metro more useful. By January 2022 more people will likely be doing activities (going out to bars, concerts, restaurants) and the metro has remained a safe and reliable way to get home.

I'd be stranded as I work at Union Station and I work late some nights.

This would prevent me and other essential workers from using metro regularly.

On regular basis my work finishes at 10pm so the fact that I could no longer rely on metro service would present a significant hardship.

For me, yes, but it means that Metro is not an option for folks wanting to go to restaurants or entertainment in DC/

I think there are many workers that need the train to run to 11pm and as social events return 11pm would be better. Especially if the Dulles train stop opens, the later the better.

Many of the employees (especially food and beverage employees) work past 9PM and commute long distances. This would significantly impact our low income essential employees. This is one of my major issues with WMATA - everything is focused on M-F 9-5 employees, and ignores our most vulnerable citizens.

I attend many things downtown after work (pre-Covid) such as hockey games, art classes, etc. In order for this to continue, trains closing at 9 p.m. will not work. If this is what occurs I will be forced to drive instead of using metro for all my activities.

When going out to restaurants or bars in the evenings I would not be able to take metro home.

For now this would work, however as bars, theaters, and restaurants resume operations, it would be much better to have the trains running later on the weekends.

Many riders work will 9 or 10pm, we would need it to get home. if not, Ill purchase a commuter car.

Shutting down at 9 pm would leave many people attending concerts, plays, sporting events, etc. stranded. Closing at 10 pm would be better.

Last work nights, going out to dinner across town, all of these things would be eliminated by this rule. It is inadvertently applying a curfew to the people that rely on public transportation for transportation. It is not equitable and allows freedom of movement to the upper classes with their cars/ability to afford ride shares.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Assuming DC comes alive again, this would further crush nightlife and restaurants in the area, not to mention tour guiding which normally ends at 10 pm during the good times. |
| I use metro to visit the city in the evening so that I can eat and drink without the need to drive. This change would prevent me from using metro to, for instance, attend a play. |
| That hour is way too early to close. |
| Proposal isnt clear if this is weekdays only or eveyday |
| I need later weeknight service for work. |
| Is this every day or sun-Thursday? If it is fri-sat what about Nats game day's? |
| A lot of businesses in my neighborhood would suffer if Metrorail closed at 9pm. Also, people working graveyard shifts, who are often lower income to begin with, would suffer if they couldnt take Metrorail to work. |
| I use the Metro to access concerts, shows and restaurants in DC. I do not own a car. |
| Events I attend often run from 8-10PM |
| Needs to run later |
| depending if public functions are still cancelled in the city. we use public transportation extensively, to go the movies, to go the theater, concerts, restaurants, etc. so a 9:00pm cutout is a bit too early to plan to go out for these things. |
| way too early to close. |
| That is very inconvenient as I use the metro regularly at late hours. |
| My main concern is weekday rush hour service. |
| I would have to rely on Uber/Lyft to get home from work |
| Many times for work I ride the Metro well past 9pm. |
| This is absolutely absurd. Why extend the metro lines and promote its use as carbon footprint conscious only to deny access to a vital service of a major city? Promote ridership as the pandemic comes to an end. |
| Cutting hours is not a solution to make Metro an essential part of low-carbon mode of transport in this century. |
| Work late. Would miss train. |
| This is especially difficult for people residing further from the city (in my case, Loudoun County). The geographic concentration of metro customers, and their available alternatives, are important factors in this case. |
| This would be AWFUL. Restaurants (especially their workers) would suffer, drunk driving rates can be expected to go up, any sort of nightlife (theater, music, art) would be harder and cost prohibitive to some. This is a truly terrible idea. Please don't. |
| Could impact late evenings especially during work week but would definitely impact weekend travel. |
| This strands late night workers and ruins evening economy in the city. Late nights at bars, theatre, and dining would suffer if people can't rely on transport home |
| 9pm is too early for final trains. This greatly increases chances of getting stranded and would negatively impact businesses. |
| This is a bad idea, as it would likely increase the numbers of drunk drivers who would otherwise have the Metro as an option. Additionally, it would mean that anyone going oyt for an evening would have to wrap up early and would affect business. |
| 9 pm seems way too early, it would interfere with after office plans. |
| This is the easiest one for me to manage. I use metro to commute during the day and would prefer shorter hours with more frequency. |
| the system should be open longer hours, not shorter hours |
| As long as it goes back eventually when revenue begins to come back in |
| Occasionally take trains past 9PM |
| Although this does not apply to me, I believe this would affect a number of people in the restaurant industry who work late nights but do not live in Washington DC. I would consider extending it to 10 PM on the weekdays to assist with this issue. |
| Would likely be a hardship on hourly workers. |

Proposal to close Metrorail at 9 p.m.

This would be extremely inconvenient as this would disrupt any evening events. Given that parking around downtown is especially inconvenient, people rely heavily on metros. 2022 would also be a time more social gathering would take place, and not having metros to travel back on wouldnt work.

This essentially eliminates nightlife, going to thestet or sports event by public transit. Everyone would have to drive to Nats Park for evening games, for example. Ready for the traffic nightmare?

We would never use metro if hours are reduced.

For the few late nights Id have in the urban core, I can find other means of transportation. Thats my privilege, however. Id hope there would be alternatives for others (e.g., continued bus service for night-shift workers).

What about people that work late they would not be able to get home safely

With this option, I would take the metro to my destination and return via Uber

As much as I would say I want to stay out late, my 9-5 job would be covered by the 9pm closing.

I live outside of the primary Metro area, so I wouldnt miss the later service regularly, but I would have to start planning my evenings with friends much more carefully.

Shift workers would be unduly penalized. No one could take the train for a night out. Again youre forcing more people to give up on public transportation and use their cars and pushing customers away is not a way to make money.

It is already hard to get back from the city at night, closing at 9 pm would mean i spent less time in DC

I volunteer after work and would have to stop if you closed metro early. And my second job is after work until about 10. I wouldn't be able to afford transportation

This is not late enough to cover events that are going to start picking up as more people get vaccinated.

No, this absolutely would not work for me. I frequently have work events that go late in the evening. This is a terrible plan and so inconvenient to metro users.

There are plenty of occassions like a theater performance or even a movie downtown that would end after 9. This would pose a problem and deter me from making those plans in the future.

Depends on whether the theatres downtown and Kennedy Center open. I use Metro/buses to attend evening events.

If you do this,Uber will replace metro once we can travel again

This would have a strongly negative impact on night shift workers

This would probably work unless theaters start opening again and later times would be needed.

Absolutely not. Many work WAY past 9pm for work. And with going out, the metro is a safe outlet to reduce unsafe driving. Again I don't see this working after mid 2022, especially the summer when drinking and going out will increase. With I'm sure restrictions of pandemic will slowly begin to be lifted.

I regularly use the trains after 9PM and would prefer closing later than 11PM on weekends.

How will people get home that are totally dependent on the Metro after 11:00 pm when they get off work?

I often work until 9 or 9:30 pm. I get on the train in Virginia or at Metro Center to ride to Grosvenor.

TERRIBLE idea for anyone using Metro to attend theater, sporting events, dine out, etc.

I tend to use Metro primarily for commuting, so it would not affect me, but could be catastrophic for those who work evening hours.

I

This would most impact those who can least afford it, and the system should not be considered merely for weekday commuters.

I use metro rail to travel to DC in the evenings for appointments, meetings, and social events. Limiting hours would be challenging and expensive (would need to rely on private ride sharing more)

People work late. Go to restaurants, bars, etc. 9p is silly for the capital of the free world. Run fewer trains with longer waits after 9p, but dont close at that ridiculous hour.

While (in normal times, pre-Covid) I don't often use the metro after 9pm, I occasionally do, perhaps staying in the city for dinner. This would totally eliminate this option. I think restaurants, etc. would suffer.

with the vaccine already in roll out, the pandemic is starting to subside. with this, means more activity. more people will be leaving their houses ...especially on weekends. 9pm is far too early to close the metro.

I would sometimes be in DC later than 9 pm, so how would i get home to Clarendon? (pay more for unsafe Uber or Lyft?) I have a metro card account I use to travel.

No way!! Definitely need later!

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| At some points, the metro needs to be open past 9PM especially on game days. |
| Reduces travel options and has a significant impact on businesses along the Metrorail lines - especially dining and entertainment establishments. |
| I often am working after hours and leave office around 9pm, so do many people I know. This would mean that all of us won't have a chance to get home on metro |
| THIS IS A TERRIBLE IDEA. Implementing this plan would remove taking Metro to any sporting events or concerts as an option. |
| I need Red line service after 9pm to Grosvenor |
| In terms of commuting for work that would not impact me, but it would limit any potential evening plans and force me to look for alternatives. |
| This is your best proposal. It allows you to focus on your core commuters. |
| Need later service for attending chorus rehearsals and theater productions. |
| I usually use metro for dc evening events and would be less likely to attend if i need to drive or catch a cab. |
| Im a student at George Mason Universitys Arlington Campus near Virginia Square Metro. Our classes end at 10:00pm, and I rely on the metro to get me home. Many other students also rely on the metro Monday-Thursday evenings. |
| Do not like the closing time but I can make it work |
| Fri and Sat should be later or Metro would be useless for weekend entertainment. |
| I live near Grosvenor station. This change would mean that I would not be able to attend Nationals night games or go to most cultural events in downtown DC. In other words, this would be a disaster for me as I do not drive and cannot afford taxis. |
| I rely on Metro to go to concerts, etc and once Covid is over, people need Metro to stay open to get safely home from downtown DC. |
| 9pm is too early for almost every time I have needed to stay in the city later than my normal commute. I would never be able to take Metro from a ballgame nor for a night out on the weekend. |
| Would that be every day including weekends |
| Maybe, between closing stations and closing early I'd rather closing early |
| Basically the people who are food preparer will have to used their minimum wage jobs for Uber. Metro has turned the region into unenjoyable place to commute. |
| Bars, restaurants, and other businesses are open past 9 pm. Events occur past 9 pm, like movies, plays, baseball games, etc. |
| Any socialising (i.e. restaurants; concerts; occasions with alcoholic beverages) would now require other transportation. Problematic for those who rely on Metro/with Metro card as would increase financial burden. |
| would be close on a couple of evenings and if so, would push use of a vehicle instead |
| This would make it difficult to rely on metro on nights when I work late or go out to eat with friends. |
| Even staying open until 9:30 or 10pm would be much better than 9pm |
| Would be inconvenient and unfortunate |
| Maybe for weeknights only this would be ok |
| My hours will similar to normal business hours; this operational schedule would not effect my commute. |
| now and then i need that train at night- and id be stuck if it were after 9pm |
| Eliminates Metro option for theater, concert and sporting events |
| This is reasonable, although Id consider extended hours for major sporting events ending after 9. |
| Really like Metro as a late option to get home. |
| Closing at 9 would mean not being able to go downtown for evening programs. |
| This would leave many working-class people stranded at their jobs, with no way to get home except the unreliable bus network. If anything, Metrorail should create a 24-hour service, instead of cutting it off at 11. |
| Too early |
| I rarely ride the train after 9:00pm |
| How can passengers go to events in the evening if train service ends at 9! |
| why not 10pm during the week and midnight on weekends. |
| Lots of people depend on rail to get home from work or late meetings so reducing it would increase the already expensive travel costs in DC |
| My shift starts 7:00am any I go from VA to MD |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| close at 10pm instead of 11pm to allow people to go out after work & still be able to get metro home. |
| I use metro to commute back and forth to work. At night I am fine and can accommodate if there is a need to reduce cost |
| I think it'd depend on the day of the week. I'd have no problem with 9pm closings on weeknights. |
| Would negatively impact after hours social events |
| Less late night traffic since there are less places to go out to |
| It would be an unacceptably big burden on restaurant workers and other late-night workers. |
| I know way too many service workers who would be negatively impacted by this early closing time everyday. They would have to book expensive taxis or just be outright stranded! |
| 9pm is ridiculously early |
| People have changes in schedules, so we need longer hours |
| One of the biggest reasons I do not take metro more often (when it's not a pandemic) is because of how early service closes already. I want to be able to get on a train any hour of the day. Even trains every half hour after 1am or something would be better than nothing. No late night or 24 hour service is why metro is dying. You can't use it when you want to, so you get an alternative (uber/lyft or just buying a car) and then to make that worth it, you stop taking metro. You're in a death spiral because of cut service. I cannot overstate how much late night or 24 hour service would improve the chances of me using metro regularly. |
| I don't have a call so sometimes find myself needing metro after 9 |
| Painful as this is for entertainment industries in Washington, COVID will very likely not be done with by next winter, so metro should focus on getting the most essential workers during the day to work as opposed to providing services that may not be necessary. |
| No!!! |
| It's not ideal but this is the least bad option |
| If attendance at Nationals games resumes in 2022, would there be a later option to ride on game nights? |
| Metro is crucial as a later-night transit option, especially during the winter |
| I don't plan to use Metro after 9:00 pm. |
| This means when sports event begin to allow fans then Metro would not be an option. |
| When we go back to work probably by May; this will be a problem. |
| Late night work is common in the District and the late night culture would suffer |
| I often use the Red Line to go out downtown on weekend evenings. Closing at 9:00 means I'd have to drive or take a cab/Uber. |
| Not ideal, but if these were pandemic hours that would be ok. |
| Might occasionally negatively affect my week night plans. |
| This would make it impossible to get home from late shifts. |
| In addition to requiring public transportation at night from restaurants/bars, most retail places close after 9 pm; therefore, those workers would be stranded and would need to rely on other transportation services. |
| It is too early. If closed at 9 I cannot use metro to return from my office |
| Will have to scramble for taxis during an after work event, or drive. Not a good idea after happy hour. |
| Metrorail is the only way I feel safe traveling home during the evenings after I have had alcohol. I do not trust ride shares and this would essentially make my curfew 9pm. |
| PLEASE DO NOT DO THIS! Metro is the only way I can get around the city and cutting service back by 2 hours would make it extremely difficult and much more costly to go about my daily life. I am a student so often have to use Metrorail at a late hour. |
| Not good for going to evening events in town. |
| I did used to take it after 9 pm before the pandemic, but not that often. |
| I could make this work -- I worry about all of the essential workers who need transportation after 9 PM, increased cars on the road after 9 PM, and the potential for increased drunk driving. |
| This would work for me, but I can imagine it would create problems for many others. I have the privilege of a car if needed. |
| Certainly wouldn't be riding that late at night |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| That would harm restaurants and absolutely kill performance venues. |
| Need to remain open for Nats games. |
| After the pandemic, I would like to go out at night. This will thwart that ambition. |
| Means I could no longer take metro home from work |
| You can have ou close early certain times of year. |
| I do not get off work until 6:00pm M-F and when there are company mandated events or overtime is required I would leave around 9-10 and not have a way home |
| As soon as young people are vaccinated aged, they are going to want to party. At night. And take metro. So if you're going to do this,MCP it now, while young people are still unvaccinated and scared to take metro or to socialize. Then you can revert back to regular schedules in Jan 2022, once young people are vaccinated. |
| Cutting evening hours is probably the least worst solution to the funding crisis. |
| Nighttime social life will no longer have Metro as an option. |
| 11 p.m. is already too early. 9 p.m. is absurd. I want to go out at night and get home safely and affordably. This is a completely backwards, counter-productive, irresponsible proposal. |
| That means that you also are affecting people that work at night. Unacceptable. |
| No, concerts and sporting events and bars will (maybe) be open and they dont close at 9, ending service at 9 makes no sense. Even 11 is too early I feel...what happened to 1am? |
| Less likely to use Metro for after work activities after work due to the early closings. |
| 9pm is way too early. In 2022, Im assuming more restaurants and bars will be open since the vaccine will have been out for a year at that point. People need to be able to get home safely and cannot always afford ubers. Businesses will suffer if the metro closes too early. I definitely have made 9pm grocery or Target runs and took the Metro. There are a lot of situations where being on the train at 8:50 or 9:20 is necessary. |
| DC needs to be seen as a city that supports social activities as well as being a business center. This would negatively impact businesses and inconvenience residents. |
| As long as I dont get stuck at work late or need to be in DC for something past 9pm. Then Id be screwed and pay a huge Uber fee. |
| This change would negatively affect lower-income folks who work restaurant jobs and other shift work. Equity issues will increase. |
| I often need to return home or go somewhere between 9 and 11pm. 9pm is extremely early for metrorail to close. |
| Need late night iption |
| Too early. Shops close at 9pm. Workers will not be able to return home. |
| I have to go into the office on shift work for my federal government job so am getting on the metro to head home between 10 pm and 11 pm most weekdays. I already cannot be on our morning shift because the metro doesnt open early enough. I would have to pay \$25 for Ubers home every day if the Metro closes early. There is no indication when our shift work will end. |
| I take the metro too and from sporting events, concerts and similar events. 9 pm sure sounds early for many such events. |
| I work in Vienna until 930pm on weekdays and live in DC. There is no direct bus route. This would make it near impossible to get home from work. You would also be cutting off service for most of the poorest and in need passengers. Those in the service industry and shift workers. |
| This would leave evening workers without a reliable and affordable transit option. |
| I like the option of being able to ride metro home after dinner out, or a baseball game, etc. So 9PM would eliminate that option, really. Thats unfortunate. |
| This may affect those who work late, or work a night shift -- or want to go out and have fun at a bar, movie, etc. Maybe make it...10:00 p.m. and split the difference? |
| This will hurt workers commuting, and force bar and restaurant patrons to Uber and other car apps that are competing with transit already. |
| If youre going to cut hours so drastically, why bother having a metro system at all? |
| If low-wage workers use Metro at these times I am opposed (but I think low-wage workers use the bus more then metro). For my own Metro use this is fine. |
| I would not use Metro to go to restaurants, concerts, games. I would be forced to drive. |
| If shows and sporting events open, then getting home from them would be more challenging if the metro always closes early. |
| I dont really take metro that late anyway because train times even prior to the pandemic were too spaced out. If I had to be out this late I was more likely to take an Uber/Lyft. So this change would not apply to me. |

Proposal to close Metrorail at 9 p.m.

| |
|---|
| This will prohibit people from outside of the city from enjoying the city's restaurants, bars, theater, and events as they will have to factor a \$50+ uber home from every event. It will have negative impacts on the local economy. Perhaps this could work if the city prioritizes increasing public parking. |
| I do not have a car, this limits how late I can stay out for work. |
| This may unfairly impact communities of color |
| This change would substantially impact my ability to socialize in Washington DC. Furthermore, this change would significantly impact patronage at restaurants and bars. Finally, this change could result in an increase in impaired driving. |
| This will probably have a huge effect on tourism and weekend life. If Metro closed earlier during the week and later during the weekend that MIGHT work, but still would trap those who have to work late on a daily basis or have atypical schedules. |
| Would it stay open late for events like Nationals games? If not, it would impact my attendance and would push more people to use cars. |
| I use metro to go to evening and night time events in D. C. |
| people who really need the service work later than 9 pm |
| 9pm is too early, keep it at 11pm. People drink at night and need to rely on the metro. Otherwise there will be a lot of drunk drivers. |
| From an equity perspective, I think WMATA needs to consider who will still be taking metro in 2022, and particularly for commuting to work, is a 9pm end time realistic for retail, restaurant etc. workers |
| There are a lot of low wage essential workers who depend on metro late night and early morning |
| I cannot fully support local business if you close Metro at 9! |
| 10 p.m. might be OK, but 9 p.m. is just too early. |
| If restaurants are open this would be terrible. But who knows. |
| I look forward to returning to theater, movies, entertainment, and dining out by that time. This would reduce or eliminate that possibility. |
| Not applicable to me, but this seems very problematic for any service workers, like grocery store workers and restaurant workers. |
| Talk about discouraging ridership, this would cripple ridership & get you in a car in a hurry for evenings. |
| This is a horrible idea for those working in the service industry |
| Sometimes I work late, and then I would not be able to make it home on the metro. Again, better than nothing, but it would have an impact. |
| Too early a closing given evening meetings. |
| We would probably reduce our visits to DC for entertainment, rather face the hassles of driving and parking in DC. We would not, for example, be able to attend any Nats night games. |
| 9pm does not work. Honestly, metro should be running more frequently and open until 2am. |
| What about the workers you get off at 9 pm, that would cause an issue. |
| We need metro to run until at least 1am everyday but at least Friday and Saturday nights |
| 11:00 pm should remain the closure time. |
| Is not worth it bc some many people who work overnight need to take the trains to go back home or going to work |
| Why even run the Metro? What's the point? Shut the system down if you're going to reduce service to 58% of the day. Let D.C. residents find a better alternative than the embarrassing plan you've proposed. |
| I use the train primarily for non-work travel- particularly going into DC for dinner. 9pm is too early. restaurants and nightlife would suffer. |
| Even going for dinner in DC, 9 pm is waaaay too early. |
| Very bad for service workers who work in the evenings and for their employers. Thus bad for the DC business community and citizens in general as well as workers. |
| That's too early. |
| I think this would work in terms of many weekday commutes but would result in increased car traffic due to a lack of reliable public transportation after 9pm. |
| I work in retail and this would not help me when I get off work. I don't have a car and rely on metro. Closing at 9pm would cause me not to be able to get to or from work. |
| The train needs to stay open later as ridership will be up when things open. |
| If going out, will not be able to take metro at night |
| 9 PM makes Metro unusable for evening use. |
| It should be open later than 11! |

Proposal to close Metrorail at 9 p.m.

| |
|---|
| This will surely crunch restaurants, movie theaters, live theatre, bars, sporting events, etc. that rely on evening traffic. It would surely curtail many evening activities getting in and out of the district. In addition to hurting already struggling businesses. |
| Metro is the only way I will get to and from the office in 2022. Late work events and regular visits to friends in the DC area would become impossible if the trains were to stop running at 9pm. This is the worst proposal out of all of the possible proposals so far. |
| I depend upon late night service into the city for night time outings. The system should be open until 12 am on weeknights and 2 am on weekends. |
| I need transport sometimes at night too |
| Weekends should be later and consider service industry workers. |
| How would people get home safely? This would devastate restaurant workers for example. Metrorail should be extending later into the night, not making hours shorter. The lowest paid workers will be impacted the most and they will be forced into evil ride sharing services like Uber or increasingly scarce bus service. Why is metrorail trying to drive customers to Uber? |
| While we dont always use metro that late, that means every time we would go downtown to restaurants, to Nats games, we would have to drive. That increases congestion and pollution. We take the metro late 1-2x month. While that does not seem like a lot, we are just one family. Multiply that by thousands on any given night. |
| If there are large events in DC such as a Caps game (sports) or July 4th etc, maybe you should run the last trains based on the event that is happening in DC? |
| I work late or sometimes have dinner in DC and I would have to rush dinner to be able to get on a train. I also travel and closing early would only force me to take taxis because of this earlier closing time. I would think you would want people to start riding again, not push them to find alternatives. This is NOT helpful at all. Why is Metro so much more expensive and limited runs here than in other major cities? |
| This would absolutely destroy the budget of retail workers who work late hours and or restaurant workers who work late hours. Did you guys even consider the fact that some people work a late shift and possibly get off at 10 PM? |
| I use metro at night in order to safely travel (as opposed to walking). As a woman often walking alone, I would not feel safe with earlier closures. |
| What an awful thing to do to service workers or anyone else who is out late and needs a safe way to get home. This will be a huge burden on small business restaurants and bars in the future. Shame on you for suggesting it. |
| This would severely restrict and limit my commute home both on weekdays and on frequent trips to the airport (DCA) for frequent, monthly work travel. |
| Would this option be re-evaluated if the pandemic affect lessened? |
| This plan would work for my commuting pattern, which is my chief concern. |
| The inability to comfortably stay late at work or comfortably grab dinner with friends would be an issue that might cause me to ride Metro less overall, but this could be managed. |
| Yet again, this would force me to buy a car, cutting my metro use. I enjoy nightlife, and this would kneecap that |
| Given flexible work hours, people may need service after 9pm. And on weekends, there are many people who stay out later. |
| this doesnt work for anyone how has to work late, DC isnt a small town, we dont roll the sidewalks up by 8. |
| You need late night metro services to/from DC to VA and MD, for those who use it for work and night life/social activities that would not be able to drive or not want to drive. |
| 9pm appears too early for folks and young people without cars, who work late |
| Metro should be open late |
| There will be a serious problem for Capitals/Wizards and Nationals/DC United Fans. On game nights, trains should operate until 11 pm. |
| I use Grosvenor-Strathmore so as long as that stop is preserved, this works for me. |
| I believe that we will be moving into far more nightlife and dining by this time. |
| This would not work you were coming from a Nats game |
| A compromise of 10pm would be better |
| Bad for workers, bad for sporting event traffic, massive increase in intoxicated driving. Would mark us as not a real city. |
| This is not 50 years ago. People routinely work extended hours. This would affect essential workers the most, the workers we have all been thanking for during the pandemic for being there for us. |

Proposal to close Metrorail at 9 p.m.

People around the DMV work in thousands of different types of jobs, and many rely on Metro to get to and from work. Restricting hours to such a ridiculous extent removes this transportation option for tens of thousands of working people.

Stupid, stupid, stupid. Life and work, especially in media centric Washington, does not shut down at 9 pm. These types of asinine ideas come from people who obviously dont put in a good long days work. Maybe thats what Metro is in trouble, youve got too many clock watchers who leave at exactly 9 pm instead of doing the work they get paid for. Some of us put in long hours and do good work. Try it sometime.

This unfairly discriminates against people that work nontraditional hours, like myself. The later the service, the better.

Completely fine by me. Ride sharing is a thing that exists.

Would limit businesses bottom line

We use metro for sporting events

If I need to work past 9pm in DC as often happens I would be stuck without a means home.

10pm closing would be better

Most days, yes this works. But if there are sporting events, weekends, concerts, etc. that puts a HUGE damper on the availability of nightlife in DC. Surely 30 min trains or even a reservation type system or survey might work?

This is the craziest proposal yet. The impact on traffic, drunk driving, local businesses etc is unacceptable.

This would be fine for most days, but would rule out any late night shows/concerts. And they will need the business in 2022!

As long as the trains run often (every 2-3 min) during mornings and days (till 8-9 pm) people that commute to work by metro will be fine...

Coming in on Amtrak many of their arrivals in DC are after 9pm

People do have to work late and can't afford to take a taxi or Uber home.

Keep the metro open later. Closing it earlier increases traffic on the beltway, increases the chance of drivers going home from the bars drunk and killing someone. DC is a major urban metro center and the metro is one of the most important transportation assets. If you're concerned about crime, increase police presence on all rail lines

Once sporting/entertainment/social/networking events open back up to the public with fans/attendance, ridership will increase and the demand for metro will be back to normal levels again, especially during peak hours. Many events do not end until 9pm or later, so this would not work.

This would make it impossible for me to take Metro to theater, concerts, any other downtown activities in the evening. And what a horror show for people who work in the evening (wait staff, actors, musicians, etc)

10pm would be more manageable.

How will service workers get home? We work late!

Perhaps closing at 10pm would be an acceptable compromise.

Bring back extended weekend hours so I don't have to uber home from the city!!!!

Despite the cost, the purpose of a mass transportation system is to serve the region for which it was designed. Limiting service to 9pm will necessitate less (if any) use of metro - just as will the station limitations.

How would this work with events, such as Capitals hockey games or Nationals baseball games?

This means that going to any theater or music or artistic event or social gathering will require a car, with defeats one purpose of Metro - to take cars off the road and reduce pollution. Even if we were to use a car service, it doesnt reduce the air pollution

Most days this would work. Should I get stuck at work late, there needs to be commuter options. This will also hurt local economy, particularly on weekends. I would use metro to go out to eat or entertainment on a weekend. Without a metro ride home, I would be much less likely to go into the city. A temporary .5% tax for bars and restaurants and entertainment events for transportation would not impact business much but could help pay for later closings on weekends.

I often work late and rely on the metro. Plus this is only going to increase drinking and driving. Another policy that only hurts the residents of the DMV.

This is a preposterous consideration for a major citys transportation system

this is extremely early to close Metro. It already closes really early, which increases the use of vehicles (personal or ridesharing) .

This would be OK for me, but I think exceptions should be made for when there are large events such as a baseball game where metro would service thousands of customers; it seems that would benefit the riders and metro system.

Proposal to close Metrorail at 9 p.m.

Metro should serve all of the city. Work doesn't end before 9pm for too much of the city. It is bad enough that Metro doesn't serve the city 24 hours a day like in other major cities.

Can there be a compromise with closing at 10 PM

For folks that work west coast shifts or hang back late at work this would cut off a pathway to being able to get home entirely. This would also mean the metro could not be used for any late night travel plans on Friday/Saturday

We need the trains to operate later in the day - there are a lot of folks who get off work past 9pm who wouldnt be able to get home, in this situation.

If that includes weekends, that won't work. Think of all the drunk drivers you're enabling by not providing a safe way home.

9 pm is incredibly early for say going out to dinner or going to a movie.

Theater tickets, bar and restaurant presence, sporting events, and private visits in the evening would all be made impossible.

This will have an impact on peoples ability to go into DC from all over the Metro area to watch games, attend cultural events, and go out to dinner. People often host professional dinners in the District while hosting a conference in VA or MD. Closing at 9pm vice 11pm limits the ability to move attendees from these dinners beyond 9pm - which is early.

Many shift workers work later than 9 pm. Also people who like to go to restaurants/clubs/theaters etc would be inconvenienced and forced to drive

9 PM is way too early for a world-class city to be rolling up the sidewalks. This would be potentially dissuade visitors to DC and potentially place a hardship on those that rely on the convenience and pricing of this mode of transport.

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

The only time I have taken late trains is when attending Nationals games. Frequency is too low to pay for extra service. And 11pm was too early to stay for the whole game anyway.

I ride Metro most often when I want to get downtown in DC. Such an early closing would not allow me to use Metro for downtown dining or theater in the evening.

You will certainly lose my business because I often leave restaurants after 9pm.

Any evening event in DC (I live in Arlington) would require driving and parking. Gets expensive and inconvenient.

I do not use the metro after 9 p.m.

Metro was a reliable means of transport to be home fast when working late. You will be removing this option.

This is absurd. I have worked jobs where I my shift ended after 9 pm. So many people in DC work jobs where their shifts end after 11 pm, let alone 9 pm. Why would metro decide to only service people with 9-5 jobs instead of other workers who keep this city going? This is a really terrible proposal, and possibly the worst one. Truly embarrassing.

This is just not doable. There are WAY too many folks who work in food service, front-line retail, and on shifts (like hospitals) that would really get shafted by this change.

What the fuck! I am sorry but 11pm is already too early. I am currently unemployed but hoping to waitress again. My restaurant is open until midnight or 1am. Closing the metro at 9pm means I cannot get home from work! I cannot afford to take a taxi nor should I have to! I should be able to use public transit to get home from my service indutry job. this is a racist and classist change that hurts the DC economy by limiting when people can go out and spend money in restaurants and when staff can get home. Im furious.

This would prevent people who use metro to go out for dinner and evening entertainment for safely riding home by putting more drivers on the road. It is a terrible idea.

Not applicable to me. But definitely applicable to everybody that relies on the metro to get to and from night-shift work, especially those who do not have vehicles or money to pay for a ride-share car (which is more expensive than the metro).

I cant imagine its a good idea! Especially for late night essential workers and tourism.

Assuming that theaters will reopen by 2022, how would I get home after a show that doesnt end until 10:45?

Closing the Metrorail this early, combined with only running trains every half hour, will destroy the ability of the community to rely on public transportation in the evening. It will destroy the esteem and reliability of the DC metro area.

Staying open late is a safe and cheap option for late transportation

More trains are necessary. If I attend a soccer game, I couldn't use Metro.

How about closing at 9pm on M, T, W, Th and Sunday, but open until 11pm or midnight on Friday and Sat.?

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I occasionally took Amtrak from Union Station to Chicago or NYC. |
| No one can rely on a metro that closes at 9. |
| The service was cut to 11pm and this affected a lot of workers with late night shifts. To cut to 9 on would be even worse. Please please reconsider |
| When working evening and night shift, during sports and holiday season it would be inconvenient. |
| Metro is a valuable transportation option when going out for the evening. As a Caps season ticket holder I would not be able to use Metro to return from the game. Bad idea |
| Way too early. |
| How am I supposed to get home from restaurants, bars or other special events that occur in the evening? Will have to pay a great deal more for Uber or a taxi to get home with the early metro closure. |
| What about nightlife?! This would take potential income away from WMATA and give it to rideshare companies. If anything, you should increase hours on weekends to promote more support of DC-based date nights and nights out. Also, working late means not being able to always get out by 9. I cant afford a car or daily ubers/lyfts, so how would I get home at night? |
| I use the Metrorail Station at Virginia Square regularly to attend and return from social gathering with friends and to attend events on Capitol Hill and at the Smithsonian which are not over in time to reach home by 9 PM |
| Consider longer times weekends at least. This would mean Uber rides for sure. |
| What about games and concerts? This is not sufficient. Do you want to encourage drunk driving for those attending bars and restaurants? There is insufficient parking as well in many areas. |
| Really bad for late night essential workers and will decimate regaining economic ground |
| Need to know how these hours effect events at Nationals Stadium and Capital One Arena. Extended hours for these events as parking is limited for these sporting/entertainment venues? |
| It would severely curtail any social activities outside my state but I am okay with that. I would worry about the impact on people who work at night |
| Sometimes work can lead to long periods of time and closing at 9 is too early. |
| We use metro extensively to come into DC for sports events that end after 9pm. |
| Thats ridicullous. I use the Metro to attend the theatre, go to restaurants, and visit friends. Its of no use to me if you shut down at 9 pm. 11 is too early as it is. Where else in the world does a mass transit system have such absurd hours? |
| This would be awful for when I have to work later. Its not uncommon for me to be working later than 9pm. If anything, there should be 24-hour service, not shorter hours. |
| I mostly use Metrorail for commuting during peak/rush hours, but do utilize service later in the evening. |
| Even as an office worker, sometimes I want to stay downtown for events that start after work and end after 9. Not being able to commute home by metro would be very frustrating. But even more importantly, for people who work later shifts, its important to keep metro open as many hours as possible. |
| This will certainly increase traffic as those of us who travel to the city for concerts, games, etc. will need to utilize our vehicles instead of mass transit. Seriously----how about helping the economy!?!? |
| This plan could impact our ability to enjoy DCs entertainment and restaurant venues. We would not be able to get home. |
| I think metro should add hours for events like baseball games, Fourth of July and weekends. |
| There are many workers that have jobs past 9pm. Does METRO really want to do more damage to the economy? |
| This time is too early to support dining out and socializing which the city needs to get for income and to get back to normal. |
| There are people who have to close at bars and restaurants late. It would also have bad effects on night time businesses |
| This plan works as long as East Falls Church station remains open for service. |
| I do not frequently use the Metro after 9pm, even in the pre-pandemic times, so this would not significantly affect my travel plans/needs. |
| Ten oclock would be more doable. |
| I only use Metro late at night if Im going to an event, (sporting..) or to meet friends for social activities. Would service end at 9pm on Friday and Saturday nights?!? This seems very early and wouldnt provide the service I would need. |
| Cutting service in any way inhibits its value and quality. |

Proposal to close Metrorail at 9 p.m.

Many restaurant industry workers who rely on the metro don't get off of work until very late and if the metro closes at 9 then they would be without a reliable and affordable transportation choice

Once the pandemic is over, it would be nice to still have the Metro available until 11pm. But if any change had to be made, I'd prefer this over lessening route availability/frequency.

Many use metro to avoid driving and go out socially. It would dramatically impact business

I think 10pm would be more reasonable.

I don't travel Metro those hours, and while I can appreciate people wanting the 11:00, this seems reasonable since there are likely to be fewer people anyway.

These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options.

I rarely use Metrorail in the evening.

9 p.m. is just plain too early to close. It needs to go at least until 11:00 p.m.

11pm is already too early to close. 9:00 pm would be ridiculously early.

Metro is essential for leaving large sporting events and concerts, which often end after 9pm.

This would increase my reliance on driving and taxi/rideshare services.

I will hopefully be back in the office by January 2022 and may need the extra time aka 11 pm

The later hours are very important, especially on weekends, to provide more affordable options other than car rentals.

This is the dumbest idea I've ever heard. Customers have happy hour and dinner plans and want to be able to take metro home from those plans. You are putting more money in the hands of Uber instead of helping dc residents

The metro already closes too early. This should be extending not getting earlier. What about essential workers, students, employees who need to get to and from work?

Definitely not...One of the beauty of living in the area has been accessibility to metro

The greatest impact would be from the money metro could make after sporting events that end after 9pm. Would make it almost impossible for folks to get home after those games.

NEED LAST WESTBOUND TRAIN OR LAST EASTBOUND TRAIN HAS DEPARTED SIGNS AT THE KIOSK OR ESCALLATOR AND ELEVATOR AT THE APPROPRIATE TIME, BEFORE SOMEONE CAN ENTER THE SYSTEM. KIOSK AGENT CAN ASSIST WITH STATION CLEANING, NOT JUST SITTING IN A KIOSK.

When events and travel normalizes, 9pm is much too early for late work events and cultural events in the city. This would cause undue financial burdens and harm the live events and concerts industry further as riders could not easily return home after events.

This means that all sporting events and all public events are no longer accessible by metro, not to mention even just going out to dinner with a friend - metro would no longer be an option.

Essential government operation needs sometimes require staying downtown past 9pm, occasionally at short-notice.

Lots of people are now working different shifts and the metro is needed at least until 11 but 12 would be ideal for people that get off work at 11.

Our business includes shift work and employees rely on later metro rides

It's too early for people who work late and go out for a late dinner or entertainment downtown.

Many essential workers need service past 9pm. I sometimes need it for my work as well.

This will negatively affect working class people who rely on public transportation to get to and from their jobs and don't have other options.

I'm a 8-5 commuter. I sometimes ride in the evening, but this would be preferable to other options.

So if I work past 9:00, how would I get home

I expect COVID restrictions will not extend beyond Jan 2022, and that museums, restaurants, sporting events, and other venues will be open beyond 11 pm.

This plan will just help the car service programs. Metro will get people to their destination and they will just use a car service to return home. It seems metro may lose out on that revenue. Also, when sporting events or concerts are going on in dc, those people will be stranded and will have to utilize other means of transportation to get home. That experience may cause people not to use metro the next time, so metro will start losing future revenues.

With such limited hours metro will alienate significant ridership.

Need to keep the system open late at night, ideally round the clock

Proposal to close Metrorail at 9 p.m.

We need to have the metro available later into the evening as there are people who need to commute home and to work past 9pm. In other cities the metro is open 24 hours a day. We should be talking about expanding service not shortening the hours.

This change eliminates the metro as a plan for travel into the city for dinner. 90% of my transportation takes place on the metro, including trips into the city for dinner and to visit friends(during non-Covid times). By shifting the hours, that means that I cannot rely on the metro for consistency.

Even 11pm is awfully early for a metro system in a major city.

This makes it prohibitively expensive to go out using only taxis or Uber in order to avoid drinking and driving.

This greatly limits the functioning of the city at night. All great cities having late night rail systems that help boost the cities economy and culture. Closing early would be detrimental to city nightlife and the economic effects would ripple through the entire DC economy.

For weekdays, keep the trains running to 11 on Fridays and Saturdays.

Yes for during the week, no for the weekend.

I dont generally use metro that late and if this would allow WMATA to cut back on spending, I am all for this change. Happy to take uber if I am out that late.

Work late night and depend on train

Curtailling hours means fewer passengers and then it's a downward spiral. Hours should expand not contract to attract more customers.

This would work for me as I dont use Metro this late, I would typically take a car service, but what about service workers who work into the evening hours and then need to get home?

This would not work if you are using metro to attend theater events in DC.

Perhaps leave them open later (11pm) on weekends

Forces people to spend too much on other transportation that current DC infrastructure can't handle with limited car accidents

I would not be able to use the train for anything other than going to work. I rely on the metro for transportation. If I traveled from Maryland to DC for a concert or event in the evening, I would have to Uber back if this proposal went into effect. Why don't you want my money for that trip???

But I'm old and go to bed early.

Hoping theatres will reopen by then so early closure would be before shows are finished.

Living in Arlington, with potential use of Metrorail in the evening hours, it is unreasonable to close system service at 9 p.m., when many riders depend on MetroRail to return home in the evenings. The earlier closing hours of the MetroRail system will mean continuing to lose MetroRail customers, most permanently.

Except when sporting events in the dc area are at home. Hockey. Basketball. Baseball

Would work if weekends (Friday/Saturday) the trains ran later

Once things have opened up, we will need to be able to get home from events or restaurants. This would force everyone to get an uber, taxis, or drive intoxicated

This is not ideal, but I could make it work.

Not good for people going to afterwork events like CAPS and Nationals games.

I work past 9 pm. This would entirely upend my schedule.

Personally it would work for me because I never take the trains that late. But what about concerts in DC, or sports games, or other events...are all those people who depend on the Metro now to get home supposed to find a cab? or walk?

While this proposal would work for me, it would seem to greatly restrict many individuals who may frequent restaurants, bars and clubs at later hours than 9 pm. Closing Metrorail at 9 pm could easily have a negative impact on restaurants, bars and clubs.

I usually do not use the metro between 9-11pm.

Any trips to theatre/concerts or even dinner at a restaurant in downtown DC would be impossible with driving.

This is insane. This is a major way people get home later in the evening, especially for people who don't work â€œtraditionalâ€ 9-5 hours.

We have an important, weekly group meeting at NIH. A 9 pm system closure would prohibit many members from attending.

Assuming professional sporting events return, 9pm is entirely too early to accommodate.

Proposal to close Metrorail at 9 p.m.

I dont really go out late, and although I sometimes work late, I would be able to schedule around being home by 9 pm most times. However, this seems like it would be the hardest system for essential employees who may work night shifts, which I imagine would end up having very significant secondary impacts on me in the form of stores or other businesses being closed, cleaning and janitorial services not being done as often, and less staffing at places like hospitals if people cannot commute as easily. I think this is therefore likely to be tremendously difficult for everyone.

Again if I work later at work or travel for shopping this is a huge disruption. Why even bother having train service. Also this is bad as i also use the trains from air travels. This is embarrassing for being the Nations Capital!

Hopefully, theaters and restaurants will be opened again by then. We need those later hours.

The only time I use it is at night because parking downtown is tough for going out for dinner

I would love that in the future, the Metrorail could operate beyond 11pm. during the summer.

This plan would make it very difficult to attend events at the Kennedy Center and other venues, unless I drive. Since I am 73 years old, that would be a major problem.

Many people actually work late into the night if not in an office then meeting people for discussion elsewhere. Also if people are going out at night, do you want them drinking then driving home?? Saving one life is worth the cost of keep the place open till 11:00.

I already dont use the metro a lot at night because the wait times are so long. Why wait 20 minutes for a train to even start your commute when you could be home in 15 minutes on an uber? Id like to use the metro more at night to save money, but there would need to be funding for a lot more frequent trains for this to be viable.

People work different types of jobs with different hours and rely on Metro.

10:00 may work for me, but 9:00 is really. I also suspect this will harm the restaurant industry.

Please consider closing at 10 pm instead of 11 pm.

We take the metro to evening activities in DC - it would no longer be a good option for that if it closes at 9. Also, what about people who have jobs where they work late - such as in food service, hotels, event venues, medical care???

Having metro operating late supports dangers related to alcohol consumption, or people with low income that end working late.

I would have to drive more often if I couldnt take Metro home following after work functions.

Are you trying to kill ridership into and out of the city for entertainment and tourism?

Metro services need to have e tended hours for those working or running errands. More people will probably use the metro in 2022 as well.

Assuming a return to normal in 2022, Metro needs to accommodate passengers going to concerts and sporting events at Capital One arena and Nats Park. Those events typically do not end until 10 PM.

I think 10 would be more reasonable.

Eliminates the convenience of taking Metro to DC to see shows at several of the major theatrical venues & concert halls. Why bother with Metro if you have to leave the show right after it starts? Its a ridiculous idea

Makes use of metro for evening dinner or entertainment impossible

I use metro to travel into DC in the evening to avoid having to try and find parking. I would just stop going into DC in the evening under this scenario.

Terrible idea for Metro and the regional economy. This is another death-spiral initiator. Maintain full, reliable service and riders will return in droves.

During the week, this would not be a problem, but it would be a major inconvenience for Friday, Saturday, and Sunday nights.

A lot of people rely on metro to get home from work and 9pm closure is too early.

Evening activities in DC (concerts, sports games) end after 9 pm

When I have to work late I wouldnt have an affordable way to get home. I feel like this would also screw over anyone who has work shifts in the evening/night.

You will destroy local businesses, especially restaurants, cafes and bars. This will debilitate service workers and those with disabilities that prevent them from driving.

Reducing service in any way will hurt ALL riders and end up hurting you! Who is giving you this terrible advice??

Changes in traffic patterns post commuting hours will make metro usage more attractive provided that service is available/accessible.

This would cause me to have to take an Uber home if I work late.

It should be open later than 11pm

A lot of people are working overtime or studying late hours and they need the metro to commute.

I often use the Metro to go to the Shakespeare and Studio theaters as well as to meet friends for dinner. That wouldnt be possible with a 9 pm close.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| How are frontline workers, including healthcare workers, expected to travel in the area without metro? |
| A lot of people have to work late hours, shops and restaurants close at 10 p.m. so to get home it should operate at least to 10.30 pm! |
| I often choose to ride Metro on weekends to meet up with friends. 9 pm is too early and will push individuals towards unsustainable car services that do not pay a fair wage. |
| 9 pm is very early to close if going to dinner or a show. 11 pm is reasonable, but not 9 pm |
| I attend sports and theatre events that end later than 9pm. 11pm closing is needed. |
| I may need to work night shifts as we return to a normal schedule. I wouldnt be able to commute from my current job to home if metrorail closed that early. |
| I rarely ride Metrorail that late in the evening, but closing at 9 p.m. would make it less convenient to ride Metro to evening events in D.C. |
| Its possible this could work, but it will harm restaurants as people wont be able to go out for dinner and use the metro. This means people just wont take the metro for dinner; theyll use Uber instead. |
| Usually off metro before that time |
| I often work late and/or meet friends for dinner after work. If this proposal is adopted, I likely would take another mode of transportation into work so that I could continue to have the flexibility to work late and/or meet friends for dinner. |
| Metro is how many people get to and from events in the city. Closing the stops early would keep people from accessing what NOVA and DC have to offer it's community, increase drivers/traffic, and most likely result in more drunk driving |
| I can find other travel options for the late evenings. |
| I would worry about how this could impact tourism and also safety within DC at night. Plenty of people rely on the metro to get home after drinking and I would be concerned they would switch to driving while under the influence instead |
| inconvenient but would work |
| Too early, assuming people are working in offices, 10pm would be a more acceptable time |
| Needs to remain open later on Friday and Saturday nights. |
| Earlier closing makes the Metro system less reliable for those whose work-related travel times require the later closing. |
| This inhibits the ability to access events and entertainment between jurisdictions. It will hurt many businesses that depend on activity after the normal workday ends. |
| That is too early to get home from work |
| Even though this proposal would work for me personally, many people, especially in service jobs or who are otherwise lower income, rely on later train hours. |
| This would be a huge challenge for people who attend professional development and networking events after work. |
| Cutting off service would be a hardship for people who rely on it to get to/from jobs that end late at night (eg restaurants, government shift-workers). |
| this is unacceptable. Commuters highly rely on Metro between 9-11 for work and social purposes. This will hurt the region and just give more power to the ride sharing companies |
| I usually use metro when I go to dine out in DC or for other evening activities such as meetings, classes (I live near the Grovesnor station). Stopping the metro at 9 would force me to have to drive into the district. Now that I have family there this would be an inconvenience |
| While not ideal, closing earlier would be least harmful to me personally. However, this will make metro infeasible for many night and weekend events. |
| While this proposal would not impact my commute, the commutes of many evening shift workers will be adversely impacted, making it difficult for workers to get home safely after hours. This also acts as an informal curfew on DCs women, as walking or bus transit in the evenings is not as safe as Metro, particularly for single women traveling alone. If Metro is committed to equity (on gender and class lines) this policy is not acceptable. |
| This doesnt affect me except that there would be more people driving while intoxicated- after being out at night. It will affect restaurant workers too. |
| People working late shifts should still have access to public transportation. |
| I would like to see extended hours on a Friday and Saturday night |
| This would be a huge detriment to workers who have late shifts and also a huge blow to nightlife around the District. |
| My job involves conferences and networking events. 10 pm closure might work on weekdays but 9 pm is too early. A 9 pm closure means I would not be able to use metro on Saturday nights for social gatherings. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This will incentivize me to not take the metro at all because I often work late, even though I now take the metro to go to/from work. I will drive (and revenue will father further as others make that choice as well), but not everyone can afford a car or parking in the district. This would disproportionately impact those who need the metro the most. I would be happy to pay higher taxes to fund the metro. |
| Earlier closing times will just further enhance a downward service spiral. People will stop taking Metro for leisure purposes or going out to dinner. |
| As the city gets back to normal, people will be in need of the metrorail service on Fridays/Saturdays to get home safely from a night out. This service cut would increase reckless behavior (e.g. people choosing to drive rather than take public transportation). This would work for me if the metrorail had extended hours on Friday and Saturday. |
| Any night I'd have to stay late at work, this could be a problem. I don't want to get stranded. |
| Many people rely on metro for transport to and from downtown Washington, especially for sports events and to enjoy DC nightlife. Additionally, people who rely most on metro for transport, specifically those who work in the service industry, will be negatively impacted by this change. |
| I would have to take Uber/taxi from the airport, dinners or cultural events in downtown. |
| This change effectively blocks people from attending events downtown that end after 9 pm. It would have a negative effect on the cultural life of the city--sports, theater, restaurants, bars. 9 pm is simply TOO EARLY. |
| If I were to attend an event-it would limit those activities drastically. |
| Would it be possible for the earlier closures to be Sunday - Wednesday, and then later trains on the weekend beginning Thursday? Conference travel means that people would not be able to attend evening events if they had to take the Metro. |
| I frequently rely on metro to travel home from downtown after an evening out; early closing would discourage me from using metrorail and would prevent workers with later commutes from using Metrorail. |
| Seldom use Metro after 9, so not sure of effect. |
| Please do not limit the night time metro access. |
| My husband works 2nd and 3rd shifts and these hours will force him to use other more expensive options to get to and from work and home. |
| That will kill dining out, theater, and probably most evening activities. |
| How does this work for going by to the theater or the ball game or an event on the mall or going by to a movie or on a date? Also what about workers who work at night? In dining or retail? |
| If we ever return to normal (after the pandemic), this would make it impossible to frequent restaurants, theater, ball games, etc in the evening. |
| What about sporting and other late events |
| If Metrorail would close at 9 pm I would no longer be able to go into DC for fun events in the evenings. |
| fuck you cheap rat bastards |
| These ideas make Washington DC region a laughingstock in terms of 21st century transportation and will add to road congestion. |
| Once fan attendance is allowed, I would take Metro to Nats, Caps and Wiz games |
| Could the hours be extended on weekends? Think about the people who drink and take the metro for safety. Or ride to events, like ballgames. |
| 9pm is far too early for this mode of travel to shut down. |
| Cutting hours means cutting volume to any potential events in the evening. I would expect concerts and sports attendance to start ticking up this summer. |
| I depend on metro to get me home safely. I've been in a couple of ubers with unsafe drivers to get home. Please don't compromise my safety this way. 11pm was already not great. I miss when metro was open until 3am on weekends |
| I was considering moving to Maryland next year and commuting to work; this is not ideal and would not be helpful to me or my family! |
| I work in hospitality which means I work non traditional hours, so I would no longer be able to ride metro if this changes. This would also prevent many people from using it to go to dinner, a game, a show, etc. Who closes at 9?? Might as well close at 7 after the evening rush. |
| This eliminates Metro from evening activities. Bad idea! |
| I rarely am out that late. |
| Once downtown events resume (e.g. sporting events, concerts) you basically are telling anyone that attends a weekday event that they will not have public transit as an option to return home. Furthermore, any travelers flying into DCA would not have the option of public transportation for any sort of night time flight. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Ride shares be available for late night workers |
| I think late night service (not that 11pm is that late to begin with) is an important part of making Metro work for the residents of DC, not just office workers commuting. It helps people who work late and helps folks who live here run errands and live social lives. |
| I find the 11pm closing time ridiculous and not at all responsive to folks who need mass transit or would like to use mass transit. It should be operational 24hours per day. |
| Not good if attending events in DC- ball games, concerts, etc. |
| This will work for my needs now, but I do remember when I was in grad school a few years ago and the metro staying open to 11 was critical for all of the students in my school taking night classes. This plan could be detrimental to students across the city. |
| I guess if you are trying to destroy the evening economy....9 pm isnt late enough to take metro home after dinner or a movie or a show at a local theater or a sporting event. |
| Eliminates any opportunities to use Metro for nighttime events - dinners, concerts, sports events |
| 9:00 is too early. Consider hospitality industry shift workers who often don't have cars. There is a need for public transportation for those whose shift ends after 9:00. Please consider the impact on the businesses as well as the workers. |
| There are and will continue to be plenty of times when I need a reliable public transportation option to get home after 9 PM, especially on the weekends. I believe closing service for the Metro at 10 PM at the earliest would be more reasonable. Realistically, it should end at 11 PM. |
| I think this is a smart idea. The only thing I would make exceptions for would be weekends if there is a sporting event. Many people take the metro after a capitals or wizards game. Getting rid of this could impact game attendance. |
| Everyone works late. Sometimes people go to a restaurant after work. This would kill the downtown businesses |
| Night shift workers??? |
| I often leave work later than 9 pm and I wouldn't have another way to get home in a safe and timely manner |
| This is stupid. Things should be getting back to normal by then. If our people don't have enough money to run a proper metro system in the capital of the free world then we are in an incredibly sad state of affairs. I'm tired of the nonsense. Congress or whoever needs to provide proper funding instead of wasting it on stupid stuff like their limousines, security details, border walls, free lunches and all the other stupid crap Republicans wasted money on in the past 20 years. There is no vision in the past 30 years about transportation in Washington DC AREA. An influx of people without much thinking when that dumbass G. Bush started his stupid wars and brought in all these over paid military, contractors, over blotting the intel community. |
| Assuming that restaurants and bars are beginning to reopen fully in January 2022, I think the early closure would significantly impact my ability to visit and support these venues as a patron. |
| Absolutely not. Even the 11pm closing is too early about 50% of the time for my job. A 9pm closing would render Metro completely useless. |
| I rely on public transport to see friends and to do my work. This will force me to take expensive taxis, adding even more cars onto our roads. This will increase the risk of accidents, and it will increase pollution, which means you are increasing the risk to public health with this decision. You are also making the climate crisis even worse. I thought we were meant to be building back better or was that just a nice phrase that had a catchy ring to it? |
| Even 11pm is too early for Metro to close which is one reason people don't use it as much. If you change it to 9pm your ridership will drastically decrease. Those who work in retail or the restaurant industry won't be able to use it to get home from work and those using it to go into DC or the suburbs to grab dinner, go shopping, or go to an event at a museum, the Kennedy Center, or DAR are also unable to use it to get home. |
| Doesn't allow for dinner, shows, sports etc |
| Closing the system at 9 vs. 11 pm would not allow ridership following almost all evening events. |
| Absolutely no. I couldn't get home from evening concerts at Strathmore. |
| I take night classes that end at 10pm and will not be able to go back home to Anacostia. |
| working class people obviously don't need to use public transport, and nope, neither do essential workers. you are... serious about this, really? |
| Earlier closure on weekdays is ok but it needs to be open until midnight on weekends so people can go to bars and restaurants, entertainment venues, and not drive. |
| The timing of this plan would undercut any reopening of late night activities. |

Proposal to close Metrorail at 9 p.m.

This suggestion is ridiculous. Reduce the service and you will reduce the passengers, because if they cannot count on the system to run when they need it, they will not even use it at times they could because they have switched to other modes instead. 11pm is already too early for closing service of the day, moving it to 9 would make transit an infeasible option for any evening activity.

Okay for me, but not for restaurants, bars, concerts, games.

That would not work because there are countless people who are still essential employees in the DMV area that work all different hours and heavily rely on the Metrorail. I currently work on evening shift at my job and still occasionally take the Metrorail, but my shift doesn't end until 10:30 PM Monday-Friday, so if the system closes at 9 p.m. how am I supposed to get home from work? And, I'm not just thinking of me, I'm thinking of the other people who work where I work on evening and midnight shifts who rely on Metrorail. So, how are those people supposed to get home from work on evening shift, and also the employees who work midnight shift how are they supposed to get to work if the system closes at 9? These are things I think need seriously considered and I'm strongly opposed to this proposal.

11pm is already an early closing time in my opinion

Not sure if this would prevent me from attending an evening event.

I'd be concerned on the impact of people attending evening events: concerts, Nats games, Wizards games, and Caps games.

I am a tour guide in the area and frequently have student groups at the memorials until 9:30 or so. I then rely on the metro to get back home and would be unable to do so if it closed at 9, so I would have to drive instead of using the system.

This would severely limit any evening activity in DC. Have you discussed this with businesses in DC?

Some nights are late in the office, past 9. I would also be bringing in much less weekend revenue (restaurants, bars, etc--if open and I'm vaccinated) to DC because nights out would be gone since constrained by metro schedule; I would not pay the uber surge pricing to go out anyway.

That is way too early- even 11pm was too early. It forced people to leave the downtown area before they even have a chance to have dinner and drinks. This proposal will absolutely kill the city and make people living in the suburbs miserable

There are so many downtown spots/venues that we frequent in the evenings and we would be stranded downtown should METRO close at 9 p.m. rather than later.

If the Kennedy Center and other entertainment venues are back in service in 2022 as I hope, I will need to be able to come home later than 9pm after attending a performance at one of them.

People take public transportation so they don't drink and drive. Closing later would make that harder. Additionally, many jobs don't let out until 10pm and people will need public transportation to get home after work.

Need Metro opened until 11 pm to accommodate evening sports and concert events, etc.

With options like uber and lyft, I feel safer taking private transport after 9 pm.

I often use the Metro to come home after evening events. this change would require me to drive into the district from Maryland

What are workers who work past 9 supposed to do? What about people who go out to bars and restaurants and need a safe way to get home without drinking and driving? The metrorail should absolutely be available past 9, it supports thriving nightlife in DC, the safety of our communities, and people working later hours.

This would greatly diminish my ability to take the metro home. Additionally I would probably stop taking the metro in because I would need to worry about how I'm getting back so I'll probably just drive. This is too early for so many places/jobs. Please do not reduce the hours of the metro.

needs to close at 11pm

It would work for me but what about others that use the Metro at night for work.

The 9pm cut off is too early for any major metro area, and it would prompt many to have to find alternative means of travel, though many would not be able to afford to do so regularly.

I would accept this

I do not feel safe riding the Metro at night and would usually take a taxi/Uber at night.

absolutely an impractical and exclusive time, leaving out workers in DC and detrimental to businesses trying to regain momentum after pandemic and reopening

Works for me but so many who can least afford it would be impacted

It would be rare for me to use Metrorail at that time unless there was a special event.

The metro should run until 11pm at a minimum on Fridays and Saturday nights. I often go into downtown DC mid-week (pre-pandemic) and instead I would be forced to drive (or not bother to go into DC) if metro only stayed open until 9pm on weekdays or god forbid 7 days a week.

Proposal to close Metrorail at 9 p.m.

You all need to have a plan for major sports events including playoffs and finals. Nothing was more infuriating than how the Nationals play offs were handled.

I often work overtime or stay in town to go to dinner or socialize. This would force me to drive or seek other options.

There are many activities after 9 pm that I would access using metro including plays, sporting events, and dining.

OK on weekdays, not on weekends

I dont own a car, so metro is the only way I can get groceries, visit restaurants and venues, see friends and family. Such a proposal would force me to use other transit besides the metro, especially at such an early hour. I frequently use metro after 9 PM to return home.

It would be impossible for me or others who work in DC or attend a performance in DC.

Absolutely terrible idea. DC is not a second-class city. We need more, not less, Metro service. Longer hours, cover all baseball games to close, late night shopping, eating and more.

This would dramatically reduce the utility of the system as last trains at many stations would be far earlier than the 9pm closing. Staying open till 11pm is critical for many essential workers at restaurants and office buildings.

After work I frequently visit business along the metro not in my neighborhood, this change would force me to take more expensive modes of transportation cutting into the money I spend at local business.

At least 10pm

For people going to entertainment areas in the city, 9:00 would be rather early to stop transportation.

One of my main uses of Metro has been to attend Kennedy Center concerts. This would make that use impossible.

Travel from restaurants or airport difficult if close at 9 pm

If we go out to a game or just dinner after work we will use past 9. I think 10pm is a better time frame with staying longer on game night

What about the late night workers?

From time to time, I use Metrorail after 9:00. It would be very inconvenient if the system closed at 9:00.

It means to go downtown for dinner or theater in the evening, I would need to drive my car instead of rely on metro. Probably means I would go less often.

Evening workers NEED reliable transportation. We need late night access to metro.

Not ideal, but workable.

I do not have a car and frequently use the system after 9pm.

My primary use of Metro is evenings and weekends - this would severely curtail my use of Metro. If I would need to use a taxi or Uber to get home, I would probably not use Metro at all, and just use my car instead, thus contributing to more traffic congestion.

This is essentially a death sentence for the entertainment industry and everyone who works in restaurants.

What about folks that work late, ride the train for an hour? By the time they got home the metro would be closed. Plus this decreases metro use for sports and leisure

People who work late need to be able to get home.

It needs to be open until 2 am when businesses close

It would mean I ride trains way less often.

I take the train daily, starting at 655 am to go to work and leave from federal triangle between 440 and 5 pm.

People who work in retail would be severely impacted by this considering most stores dont close until 9:30 pm. Relying on Uber would become expensive

This presumes current Covid conditions. This would not be acceptable if ridership returned to pre-3/20 levels.

If, as currently projected by the US gov and CDC, some semblance of normal life is achieved by end of 2021, and many people are vaccinated (I plan to be!), and transmission is slowed, i and I feel many others will want to participate in activities later in the day (like going to restaurants, or cultural activities), so having extended operating hours of metro would be beneficial to the local economy.

If I decide to take the train on the weekends, there will be no late service to travel.

I dont like it. But yes, I could make that work. I dont go into town for anything very often at night - especially these days.

Even the 11 pm closing is a hardship for many workers. Many service workers work well past 9 pm and cannot afford to use alternative transportation like Uber.

Frankly 11pm is way too early to close.

Terrible idea and bad for restaurant business which is already devastated

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would mean that people could not take metro to DC for dinner or a show or a movie or other activities. People working in Dc could not stay in DC for a show or movie or other activities. They would have no way to get home. |
| It means I would never use metro to go out at night, but rather Uber or similar, but I could still use it to commute to work. |
| I often work later than 9 pm on weekdays and I ride Metro from Grosvenor to Gallery Place/Chinatown. |
| This plan works for me, though 9PM seems extremely early on the weekends. It seems like perhaps starting service later on the weekends, as opposed to terminating it earlier, should be considered. I suppose ridership numbers should dictate, though. |
| Precludes evening attendance at plays, concerts. sports in DC. |
| This would eliminate our ability to patronize local restaurants and theaters. Often Metrorail is more reliable than rideshare and is always more economical. |
| The weekends should have extended hours. |
| This would make any late night activities in downtown DC harder |
| Closing at 9 will prevent people from using Metro for evening events such as the Kennedy Center, National Theater, Wolf Trap, etc. putting more cars on the road and removing the ability for some people to participate in these events due to lack of transportation. |
| Later times are very helpful for late nights out |
| I use Metro in the evenings as an alternative to private options such as Ubers and Lyfts, which are much more expensive, less sustainable, and ultimately exacerbate the problem of public transit use. This change would be a huge detriment to getting around the city for visiting local businesses, bars, restaurants etc. |
| This means anyone working late or intending to eat out or go to the theatre would absolutely need to drive. This is a very bad idea with all sorts of unintended economic consequences. |
| It would prevent going out to downtown businesses, nightlife, and late night workers. |
| I feel like maybe 10 pm would be a better time. I feel like by Jan 2022, rider capacity will start going up and nightlife will get back to the rhythm of things. However, when there are sporting events, 11 pm would be good as well as for Friday-Saturday. I can see 9pm closing during Sunday-Thursday if there are no huge sporting events or whatnot |
| Any event that occurs on a weekday after work could cut this very fine. Owning a car could become a requirement. As long as its still possible to travel by bus, though, I would consider it acceptable if necessary. |
| Shift changes happen at 11pm. This is just putting money in the pockets of rideshare services when people go out for happy hours. |
| except during sports games. |
| It would destroy night life for people who dont want to drive town down or who do not have a car. |
| This would decrease ridership even for commuters, who dont know how late they stay or want to have dinner or a drink after work |
| 9 PM is far too early! As someone who will frequently have to work evening shifts, as I know many others in DC have to as well, closing the metro so early will make it impossible for me to get home in a safe and affordable way. This is NOT a change that I think the metro should be willing to make, especially when metro services in other major cities already operate much later hours that DC does. This is a move in the absolute wrong direction. |
| This change would be detrimental to people who work in the evening and rely on public transportation. |
| This again would prevent me from taking the metro when I could I would be more inclined to a 10 pm stop time for days when I need to work late |
| That would mean not being able to take the metro home after a dinner out - that means more expense for me, and greater carbon emissions for the world! |
| This would be a negative effect for evening/night industries relying on customers. |
| I work late and require metro service after 9pm. |
| Closing far too early. People would need to board at 8 pm to be sure the trains were still going to run to destination. |
| While I dont use metro for late night, I could see this being an issue for people in the city that utilize metro for their transportation in the evenings. |
| This would be fine for my commute, but it would mean I no longer use metro to come home from evenings in the city. |
| Weekends to stay open until 11pm |
| should have later times Fri/Sat nights!! dont want drinking adults to drive |
| How are people suppose to get home if they get off of work after nine? |
| It would be difficult on some days (when staying for after work events) but generally would accommodate commuter requirements. |

Proposal to close Metrorail at 9 p.m.

The metro is important for late-night commuting as well as social activities. Closing it early might lead to an increase in drunk driving in the city, as well as traffic and air pollution.

For low income families who may be working night shifts at fast food retail or any other employers this may cause problems since metro bus and Metrorail are the cheapest ways of getting around town in a timely matter.

After sporting events/concerts/etc. many people take the metro home and would probably be forced to leave early or use alternative modes of transportation

If it closes before the theaters do, what use is it?

cutting service will hurt lower income people and workers who depend on an affordable means of transportation

We use Metro to go to ball games, hockey, and concerts downtown, 9 pm close would prevent this.

I believe that is reasonable given the circumstances

While inconvenient, this would be workable with other ride share services. However, some extended service to Reagan National airport might be worth considering to continue moving travelers beyond 9 pm.

This would be very challenging for students and shift workers who may be leaving class/work just as stations are closing, and have long commutes to suburban locations that would be much more inconvenient to make by bus.

No have to clock out early to make it home or last train

I mainly use the Metro for special events in DC which would usually end after 9pm. Would want Metro to stay open until 11pm.

Not everyone works 9 - 5. Essential workers and those who make lower incomes (janitors, cooks) depend on Metro and work later in to the night.

I think this is acceptable. Most business work is wrapped up by then and younger customers that enjoy later city nightlife usually uber or lyft.

This would be an extreme limitation on my ability to travel in DC . I often take the metro downtown and ride it home after 9 pm on weekends, sometimes as late at 11 pm. This early closing would make it almost impossible for me to go downtown on weekends for entertainment (theater and dinner).

I would have to curtail any after-work dining or entertainment (shows/events) in the city given this option.

It would be helpful if the weekends had extended hours so people could commute to shows, theatres, restaurants downtown.

Need metro to operate at a later time. 9PM is too early.

I sometimes depend on the system to get home later in the evening.

I use metro primarily for commuting. I do not often use if after 9 PM.

Not good at all. Prevents nightlife from occurring and also makes it impossible for workers to get home at the end of later shifts

Even a dinner after work runs later than 9pm.

This will mean that I can no longer attend evening events in DC. The city will be overwhelmed with automobile traffic, parking needs, and most notably vastly increased air pollution.

I believe drinking and driving will increase in that case

It would not affect me personally but how will people who work in retail or restaurants get home after closing time?

Service hours are curtailed enough an to limit options.

If anything, 11pm is also too early. Night shift workers, restaurant or hospital workers, and others with off-hours schedules should all be served by the Metro. To reduce to 9pm presents further barriers to Metro being an important part of the city's economic development and social development. Metro can help reduce people drinking and driving, but closing by 9pm severely limits that ability. DC will instead be overrun by private rideshare companies and individual drivers. This is not the future of metropolitan life.

It would hinder taking advantage of theater/music/dinners out (assuming any of it opens). Therefore would continue to hurt the economy.

This would be minimally acceptable to me. It would be a boon to taxis and ride-sharing services, especially on weekends, adding to congestion on downtown streets.

We need to 2am weekend times back. At the very least Midnight. 11pm is too early and 9pm is even earlier

Service during this time is especially critical to keep impaired drivers off the road

That will hurt, not help, the entertainment sector to get people out to their venues. Many will just not go.

Assuming most things are back to normal by then, I love to attend concerts, lectures and dinners which will be over past 9pm. My home station is Vienna, so I'm already getting the last trains by the skin of my teeth

Proposal to close Metrorail at 9 p.m.

A lot of people use the Metro to either get to an overnight job or to get home safely after a night out. The service should be there to be used when needed, not needed when used.

This would prevent me from doing things in DC. Too early closing time to attend baseball games or hockey. Or to go to restaurants.

This would make it impossible to use metrorail to go out to dinner, bars, or sporting events

This would work for me personally but would be devastating for service workers. Will Metro make it up with more buses? This seems unworkable.

This targets low-wage workers, as well as workers that have later shifts, which disproportionately affects communities of color and other minority communities

This would force me to use ride share, and at that point, why do I even need metro?

we could make this work if we had to. Would impact going to DC for evening activities

Sometimes if I work super late I take Metro home from Courthouse to Virginia Square, but if that wasnt an option, I would walk or call an Uber.

Occasional sporting (and other) events would be effected, which would be a bummer. Maybe several lines could stay open on nights, with limited trains from venues only.

Audiences and workers need transportation when performing arts venues re-open.

closure at 9 pm really forces anyone visiting downtown later in evening to drive or take cab/uber. This is NOT SUSTAINABLE for neither the environment or the economy of downtown DC. Service should continue until 11pm.

Being a shift worker, the time change would definitely have an impact. I also see this as being an impact for events in the future too.

One of the benefits of metro is to go downtown to evening events and not have to drive/park or worry about driving/parking.

If you want people to use metro to go to restaurants, theaters, or any of the other places that DC has to offer, this lack of service will decimate them.

I use metro extensively "even more than for work" to go to events (sports and entertainment) venues. If I can't do that I will probably forget metro exists.

I use the metro infrequently after 9am, even in pre-pandemic times. This proposal would have very little direct effect on me.

metro is useful to go out after work to ball games and other events, have drinks without the hassle of driving. a short sighted proposal

Use to go to sporting events and would creat issues for younger people

10 pm is manageable. 9 is jst too early

I like to,take:metro to,the theater but I could t if there were. No service after 9 pm

The metro isnt safe after 9pm anyway

This seriously would impact those most in need of Metro, where Metro is not a benefit but a necessity to get to and from work or school. This proposed change severely impacts the purpose of Metro - PUBLIC transit system.

This schedule change would affect late evening travelers and reduce the commercial appeal of Clarendon and other parts of the RB corridor - putting pressure on business and sales taxes .

I dont get out of classes until 9

Need at least 10 pm

I generally take a car service (taxi, uber, etc.) after 9pm.

Post-pandemic, Metro should be a reliable, safe travel option for people working late, attending sports events or otherwise being entertained in downtown DC. This proposal would shift transportation options to ride share and personal vehicles, increasing traffic, increasing fossil fuel usage and potentially increasing dangerous driving (particularly DUI) occurrences.

By then theatres would be open and I would not be able to use metro for going into the city for theatre visits

I understand why, that would put a damper on people who work past 9pm.

Important to have some a bit later into the evening so Metro can be used for late-ending theater, sporting event, dinner times, etc in D.C. Probably need to at least 10 PM

If pandemic ends and things open up, then night time service becomes more important

The metro is how I get home when I work late in the city,. This is the only affordable way for many employees to get home!

This plan seems very reasonable.

I rarely ride metro after 9pm. Although, it does limit options for sporting events when those return, like they are expected by 2022.

Does not allow for those working in the city to have late hours and still have transportation

Consider later Thursday through Saturday

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Im fine with the 9pm closure during the week, M-TH, Sun, but I think I should be 11pm on F and Sat. |
| A large portion of the metro area works later than 9 p.m., and it is unreasonable to cease public transit at that point in the evening. 11 p.m. is already early when compared to other major metro areas' train systems, and moving it earlier will place a burden on the people who need an affordable mode of transportation the most. Perhaps limiting train times/frequencies even further could help reduce costs without completely abandoning this community. |
| Commute is generally complete by 9pm. |
| A 9 pm close would be an awful decision. People need to get home safely after plans, and closing at 9:00 is way too early. |
| My work often keeps me downtown past 9pm. |
| Early closures would not help individuals who work night shifts or night classes. It would make more sense and be more helpful if train arrival times were extended near metro closing time. |
| unless there are exceptions for hockey games and events, this will make it even harder to manage transit/travel for these events. |
| If I can't rely on metro to get me gone after work I'll have to stop using it. It seems likely we'll be back at work by 2022 bc of the vaccines and I really need metro if that's the case. |
| Evening and Night shift workers wouldnt be able to get to work or home. |
| I use metro to commute home from the city for social and work events in the evenings. I cant afford to do so by taxi/uber. this would be a hardship. |
| Over the weekend closing later will encourage people to use instead of driving to DC for parties,, games, events, etc. 2AM would be more reasonable |
| If life ever returns to normal, a 9 PM cut off time on the weekends would be very bad for business and customers. |
| Are we really not have a night-life in Jan/2022? Sad ...:(|
| Im not sure, as if I need to go back into the office during this time of year we will be working late hours. This could lead to potential issues, along with the fact there are no buses that will have routes to VA during this time it may be difficult for myself to go home. |
| for those involved in the tourism industry this would be TOTALLY UNACCEPTABLE AND a disincentive for ANYONE, tourist or tourism worker. Many tours of DC take place up through 10 and 11 pm. Closing metro at 9 pm would leave both tourists and guides and workers without a viable transportation option. |
| This survey seems intended to justify fare increases saying that patrons do not want cuts in service when the proposed cuts are clearly not viable for folks who may actually work or want to go out to dinner or a movie after work, at a minimum |
| If cuts have to be made, cuts outside of rush hour/after in the day makes the most sense. While people understandably want to be able to go out and eat, socialize, drink, etc., and use the Metro to get home safely, prioritizing rush hours - i.e. when more people are using the system, and workers, has to be the main concern. Further, people who want to go out to eat, drink, and socialize in the evenings have options not available 20 years ago, such as Uber and Lyft, that they can use to get home that would not be feasible for commuters and during rush hour. |
| This would be one of the worst ideas so far and would unfairly impact many lower income workers that work evenings. |
| That isn't even late enough for people to have a late dinner out. The city will be restarting commerce and we need transportation. |
| This will strand riders who depend on metro for later commutes and make it impossible to utilize for any sort of entertainment purpose. |
| Works for me most days, but night public meetings often go well past 9 pm. So this would impact democracy and service workers and the economy of DC in particular. |
| I am concerned that the early shut-down will adversely affect the restaurant and bar industry, which has already been hard hit, as well as service workers who rely on the Metro. |
| People spend money at night and drink alcohol. I personally cant afford to take ubers and taxis all the time. The bus is not always reliable. Im guessing this too would have a bad impact on the economy and ultimately metro. If people could explain how these cutbacks will ultimately set us up for success and improved services in the future, I might be more supportive, but of course, I cant support cutting back hours on a service I relied on pre-covid and hope to utilize again someday. |
| I depend on the metro to be available at night, especially on the weekends. |
| Ive often needed to use metro after 9pm to get home from non-work activities. Closure at 9pm means I could only ever use metro for commuting to and from home, and even then only on days when Im 100% certain that I wont be doing anything else or going anywhere after work. This isnt an appropriate option for whats supposed to be a major urban transportation mode. |
| I seldom use Metrorail at night, but I can see this would impose a hardship on many others. |
| It works for me but incredibly unfair to other workers who have late shifts or other transport needs. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Terrible idea. Get home from work. If things open up by then, need to get home from activities |
| Maybe an exception for special events downtown, at venues such as the Verizon Center, 4th of July, etc. |
| Or 10pm |
| Hours do not align with late shifts |
| This would leave residents from out of state stranded in DC during events (even minor ones) and would reduce tourism traffic, etc |
| Works often extends past 9pm. If the metro isn't available to get home from work, I would consider investing in a car. |
| 9 p.m. closing means that I cannot consider using Metro for any events in the District of Columbia, including trips to Nationals Park and Capital One Arena, as well as other events like meetups. |
| This will lead to an uptick in drunk driving. |
| This would be devastating and financially debilitating to me and so many others. Many businesses and jobs end after 11pm. |
| I work in tourism and rely on Metro. To have the Metro close at 9:00pm would be ruinous for all of us who rely on it at night. |
| Absolutely not, so how do I get to dc on the weekends? |
| 9pm is not late enough to make Metro a reliable choice for post-pandemic life-- going to dinner, downtown theater or sports events, etc. This would cause me to drive rather than rely on Metro, as I normally would. |
| Unfair to those who rely on public transportation and work evening and early am hours |
| On a semi-monthly basis, I have been attending parties in DC. I already have to leave the party early to ensure that I can get home before the Metro closes at 11. Considering the fact that I dont arrive at the party until between 7 and 7:30, I would barely be able to spend any time at the party and therefore have no point in going if Metrorail closes at 9. |
| Night shift workers will be considerably disadvantaged. Inequitable idea here. |
| Id prefer later hours on weekend (Friday and Saturday) evenings. 9pm on weeknights is fine. |
| 11:00pm is already inconvenient. 9:00 would be horrendous. Would lead to a huge uptick in drunk driving and would make DC a way less accessible and more expensive city |
| Without weekend service hours extending past 9 pm, this would hurt travel to the District as sporting events and other cultural events that end after 9 pm would make attendees more likely to drive themselves rather than ride metrorail...which would impact traffic patterns and likely lead to more accidents/incidents as an unintended consequence. |
| I know ridership wasn't big after 9 when I used it during the pandemic, this does make sense so long as buses or other modes of transportation are hopefully available for consumers. |
| Living in herndon, this would not work for me to be able to have dinner in Arlington or the district. This would prevent me from being able to use metro to go home eventhough I will be living next to the herndon metro stop. Bad bad move |
| Would probably be OK on weekdays, but would like to have late night service on Fridays. |
| I very frequently take metro after 9 pm, but i could take an uber instead. But when i take it late, it is nearly empty, so these seem like good hours to reduce service if reduction is required. |
| The region needs a fully functioning METRO to bring back the economy! We need METRO to access downtown cultural activities and restaurants. How would workers at all of these places get home? |
| This would not work for me as I do not use metro for a 9-5 commute but rather to get around the city at all hours of all days to work, see friends, shop, and access leisure. Additionally, this would negatively impact some of the communities which most need transit (low-income workers) who work late night or overnight shifts in maintenance and hospitality. Metro should not just be for the 9-5 suburban commuters. |
| 9pm is definitely not an acceptable closing time for the primary transit system in a major city so this is a definite no. |
| it would be best if this is only piloted for 6 months as the year moves into spring/summer in 2022 and concerns and activities become more available, it would be best to be open until 11 pm. |
| Given the re-opening of businesses, Id like to see extended hours of operation instead of decreasing them. |
| We take metro not to encounter traffic problems in DC and 9:00 pm closure is extremely early. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would penalize hospital and health care workers, all who work night shifts -- restaurant workers, etc. It would also adversely affect the quality of life of single people of all ages, as well as other adults of all ages. |
| It would be bad, but workable. |
| But later closing on Fri, Sat and perhaps Sun and holidays would be beneficial. |
| This does not allow for transit home after majority of DC sports games |
| It would work with my work schedule. But I would miss the convenience of being out socially and being able to take the metro home. |
| Many people work several jobs back to back and require public transportation to get there. Limiting the hours of operations will have a disparate impact on those people. It would require use of other, more expensive modes of transportation. |
| When issues arise, my team is required to work off hours. This change may prevent someone from having transportation to get home. |
| One major benefit of the metro is the ability to use it to go to events in dc, events that end later than 9pm. |
| This is way too early if you want to use Metro after work. Also all those that work at night would have troubles too. |
| 9:00p.m. is too early for people who work late. Will bus service be sufficient? No. Close at 11pm, not 9pm although 11pm is too early also. Shame on you Metro. Too many people rely on Metro. |
| How would this support DC's nightlife? |
| Part of the reason the metro needs to stay open is to help those who been out to restaurants and bar to have a safe way of getting home without driving under the influence. Public transit needs to be an affordable option so drunk driving is deterred |
| Essential workers need longer not shorter hours. All of these proposals have serious and negative equity impacts. |
| Will there be exceptions on days when there are large festivities in DC to run extended hours? |
| I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport. On the one occasion Ive used metro for this purpose since moving to the area in March 2019, my flight arrived just before 11 and I anticipate that this is likely to recur. Therefore, Id much prefer longer hours with expense cuts realized in other ways. |
| With the exception of game days at Nationals Park. I hope you can coordinate with major sports venues and events to keep metro open when there is a scheduled event. |
| Sports events, concerts, theater, etc. are big economic drivers for Virginia and DC. This would be a deadly blow. Dont do it! |
| Again, this serves to drive people from the system to either Uber/Lyft, their own private vehicles, or other transportation options. If the system isnt usable, people will not come back. |
| I use metro to attend concerts in DC at Gallery Place, to meet friends for dinner in the city, to attend work-related events in DC that sometimes end later than 9 pm. Also, while this doesn't apply to me since I live at this stop, Strathmore Music Center is at Grosvenor-Strathmore station and it would surely impact business for them. |
| This is inconvenient for those going between city and suburbs for social engagements and arts events--and opens the way to more drivers who may have drunk alcohol at dinner, or are sleepy, and who are rushing to make Metro before it closes. |
| Late night operations are so important for a city. Taxis/Uber are extremely expensive and inaccessible to many and the metro provides safe travel home. |
| We often take the metro for sporting events on the other side of the city. Those events end after 9 pm. |
| ABSOLUTELY NOT!!!! This would make it impossible to use Metro to get home from any evening event, like classes I take, meetings I attend, sporting events I go to, or, for that matter, deciding to go out for dinner after work. |
| Work is sometimes late into the evening. Also once downtown I like to take advantage of restaurants, plays and musical events. Not having metro would deter enjoying evening events. |
| Often finish work way pass 9pm! We need the metro operate till 11pm |
| I am an evening and weekend Metro user. If Metro closes at 9 PM, I would be less likely to chose to commute by Metro for any evening event. |
| Would work for me but not for many others |
| While I don't rely on metro, if I were to take metro home from work it would be at 11pm |
| Assuming programs, events, sports kick back in, within the next year, it would cut ridership even more if people couldn't rely on metro going in and out of the District. |
| Dining and shows end after nine. |
| People regularly need to to work until 10 pm and this makes metro an impossibility |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This is ridiculous. Once we go back to normal and theatres, bars, concert halls open up - a 9:00 closing time will be so unacceptable. |
| I go to restaurants, bars and sporting events in D.C. and closing the system down a 9 is too early for people who want to enjoy available nightlife as well as the workers for these establishments. |
| For the elderly, as we are, we often take Metro at night for evening activities. It is safer than driving and too-frequent use of taxis and driving services can be expensive, |
| This is again disappointing and honestly increases the incidence of drunk driving in the district and in the surrounding states, most likely |
| Cheaper than lyft/uber/taxi |
| Metro is a vital tool for employees in the service industry. Most service jobs that are good paying require work past 9pm especially in areas of high restaurant volume. Arlington Restaurants employ people from all over the region but making those employees have to leave work to catch a train at 9pm or sooner would mean restaurants would not be able to stay open later to serve guests which would lead to closures and loss of jobs for A LOT of people. Metro should look at how many riders they lost when they cut from midnight to 11pm closures. Many employees who used to take metro both ways to and from work had to cut back to only one way on Metro (lost revenue to Metro) and started taking rideshares or bought a vehicle. Cutting hours further will result in more people cutting Metro altogether at hours between 5-7p who were at least using it to get to their evening jobs. People who work night shifts are restaurants use the system between 430-6p to get to work but would need it open from 1030p-midnight to use it going home. This is a very poor proposal and shows very little understanding of how metro SHOULD be a two way option. |
| I utilize metro services until about 10 pm |
| Popular entertainment doesn't end before 9:00. Example- Kennedy Center events. |
| Assuming vaccinations have essentially ended the pandemic closures by 2022, I am a season ticket holder for the Caps and Nats and need public transit to run later. If this plan goes into effect, I would either get rid of my season tickets or need to buy a car. If I make the investment in a car, I will stop taking public transit altogether. |
| Among other things, how would I get home from baseball games and other events or even just a simple dinner out? Horrible idea (worst so far in this survey). |
| An 11 PM closing would be better when I want to attend evening events at the Kennedy Center and Arena Stage. |
| Not ideal but it would not impact my travels often so I think it would be ok |
| Couldnt get home from most movies. Not acceptable. |
| We travel to the Mystics game using metro. The games are played at the Entertainment and Sports Center in Congress Heights. We use the orange line to metro center to green line to get to and from the games. The games usually end around 9:15 PM. If the games go into OT, we barely make it to the Congress Heights Metro stop before the last train leaves for Metro Center. Closing Metro at 9pm would prevent us from attending games. |
| Many of us (myself included) work jobs that often require late nights. This would make late evening commuting impossible . It would also significantly hurt entertainment and nightlife (sports, arts, bars, venues) that are already struggling to recover. There would be a decimation of the event and arts industries in our city. It would also decimate restaurants too. This would in turn cost people jobs and in turn further hurt metros ridership and financial woes. Weekends especially, metro must stay open til at least midnight . Perhaps close slightly earlier on weekdays (10 or 10:30pm)? |
| As long as it is reassessed once COVID transmission is under control |
| Given that things should return to normal by January 2022, this change would mean that individuals going to evening events in DC or elsewhere would be left stranded. Washington is the nations capital and one of the leading cities in the world--it needs to have a mass transportation system in keeping with that. |
| This would make it untenable to use public transit to get home if I make any stops while leaving work/use transit to return from post-work social events. How are essential workers like night shift security personnel supposed to commute? This will, again, essentially require that anyone with non-standard mobility buy a car. This will further drop Wmata ridership and lead to further reductions in service until the service is unusable. |
| Vary closing hours. Weekends later than week days. Perhaps 9:00 on weekdays only. |
| You can't go to any plays or concerts nor baseball/ hockey games by Metro if you close at 9:00 pm. This makes people learn to not use Metro trains at all. |
| This is a very bad idea. This completely excludes people taking metro after late night dinners. Metro is also a safe option for those consuming alcohol, and this time frame will cause people to walk/drive/uber which are less safe options. This is unacceptable. |
| Would be a total disaster for sports venues, restaurants, and theaters, movies etc. |
| The early closure would definitely put a damper on going into DC for evening activities (dinner, show, sporting events etc) |
| Unless METRO can change the MLB, NHL, and NBA schedules and ensure that the games will end before 9:00 p.m., this is a terrible idea. Dont do it! |

Proposal to close Metrorail at 9 p.m.

| |
|---|
| Absolutely not. How do I get home from work? I work much later than 9pm. This punishes those who work in the arts, food service, retail, and more: the backbone of the city! |
| This would absolutely destroy nightlife and thus this city. Drunk driving will increase, service workers will have to drive more, or uber which is more expensive and more traffic and car travel will increase, as well as GHG emissions. |
| Assuming that car ride services such as Uber and Lyft are available where I would need them in the evening, and that in Jan of 2022 I will feel comfortable using the services again w/ COVID, this option would be ok with me. |
| This proposal is likely to further disadvantage lower-income local workers without personal transportation options, leading to more inequity in the region and likely reduced ridership/fare collection. |
| Metro already closes earlier than MYCs subway and Bostons T. |
| I only use metro to commute |
| This would not work for anyone who has a service industry job - bars, restaurants, etc. They need to get home after closing and if all of them had to start driving to work and paying to park when they are only making minimum wage they would never be able to afford the cost of parking alone. This would cause increased traffic in the region. No one would ever be able to attend a baseball game or theater performance. This increased use cars would destroy the environment at an even faster rate. |
| I am concerned this would increase drunk driving and make the city less safe for everyone. I dont want to be worried about some drunk driver hitting me while Im on the sidewalk. This also would disproportionately hurt low-income workers with irregular schedules. |
| Use the metro to get back from events sometimes that go past 9 |
| Not sure what life will be like in 2022 but for now it would be ok |
| This is highly dependent on whether people return to their offices and activities after work. If not, then I don't think this would be very consequential. |
| Except for special events like going to sporting events such as baseball games |
| Metro would cease to be a viable alternative for evening travel for restaurants, theater, etc. |
| One of the most important times for metrorail use is the after-dinner hours, because it protects against drunk driving. DC residents cannot get to a from work if the metro closes at 9. Furthermore, DC residents cant support the bars, restaurants, and nightlife spots without reliable metrorail service until at least midnight. Every other capital city on Earth has late night subway service. How is it possible that DC doesnt? Its an embarrassment and absolute joke. |
| There is little traffic after 9 and the cost / benefit ratio gets really skewed. The affected business is the party business, and that is not core. |
| NOawful idea |
| THIS is crazy! Retail workers and late night workers will not have options for transportation. Many workers work later than 9pm, we need to provide options for transportation. |
| This seems really short sighted as I can take yellow line to airport ... but only if its open DCA has terrible traffic and reopening in 2022 will compound that. Need to keep lines open late also for people working. |
| I occasionally use Metrorail after 9pm |
| this would mean that the last train would be at 9pm or earlier? I can stay at work until 8pm sometimes, I dont think this is reasonable. |
| Doesnt affect me, but this would affect workers in DC I imagine |
| I assume restaurants, theaters, concerts, etc. will resume in 2022, so they often go past 9. |
| There are times when I must work late and I can't anticipate if that would be until 9pm or later. |
| This would be devastating for restaurants and residents ability to enjoy the city. Just no to this idea. |
| I frequently need late-night service from public transportation, and often, late night shuttle services are wholly insufficient. As such, the lack of post-11pm train service is already a major problem for my travel needs. Changing this to 9pm would make use of public transportation impossible in many cases, and would drastically increase my use of non-public options. |
| Evening activities and many workplaces dont end that early, and people really need metro to go meet up with friends, often involving drinking (not drunk, just not driving) |
| Its likely that I would need to use metro through the 11 pm closing. |
| Given the expectation of modified work from once tings get back to normal, individuals may work longer hours in the office on the days they are in the office. In the past I have worked close to 9pm and would like the option of having the train available past 9pm. |

Proposal to close Metrorail at 9 p.m.

| |
|---|
| Non-working Northern Virginians use Metro to go to the Kennedy Center, downtown restaurants and entertainment venues; this saves driving and is environmentally better. Evening events are not finished by 9pm. For those working in Washington or Maryland, such as hotel and restaurant workers, etc., they would have no economical way to get home! It would be better to run less frequent service than to eliminate night service altogether. |
| Disaster on so many levels. Our family uses the redline to travel to ball games, concerts, and evenings in the city. This would limit our access to DC or probably cut us off entirely. Mass transit forcing people to drive? Totally counter intuitive. |
| My husband and I take Metro to Caps and Nationals games, and stopping trains at 9:00 would not work for transit after the games. |
| This is something not fair for people that work at different schedules, like restaurants for example. |
| Maybe slightly later on weekends? |
| Later closing times on weekend evenings would help greatly, with earlier closings on other evenings. |
| This means that you could not reliably use Metro to attend any activity in the evening in DC. |
| Absolutely unfair. Would decimate the city's nightlife right when it's becoming safe to socialize again. Horrendous for the economy and for me personally. |
| So, if one wants to take Metro to a movie or out to dinner you have to make it a very early night!?!?! Again, I think this will just make folks choose to drive. |
| I require the ability to ride the metro home after attending late events. It should probably even run later than 11. |
| This would prevent me from returning from a downtown DC evening event which would force me to pay for taxi both ways because I would not park at Grosvenor and use red line to go into DC. |
| Return from DC events would be problematic. |
| I routinely use Metro to go to Capitals hockey games and Nationals baseball games and they never end before 9 pm. |
| Due to late night meetings and time of arrival for flight from DCA, this would be very unhelpful. In addition, starting next fall, I have grad school classes that go until 10:00PM and would not be able to get home. |
| On weekends as well? |
| 9 pm closure is too early |
| It would not impact work but could impact my decision to go in to DC for any evening activities |
| It would generally work for me as a commuter, but my weekend ridership as a tourist would plummet. |
| This would affect ability to use public transportation for attending concerts, baseball, other late ending events from DC to home (Arlington, EFC) |
| Sometimes I need to work late - yes, too late to catch a last train if the systems closing at 9. And I guess this means forget about using Metro to return home if I'm going out downtown in the evening - never mind at Strathmore! |
| This plan would be fine. The rare occasions I am in the District past 9pm, I usually have a car ... or can hire one. |
| This is unacceptable. The metro should be 24 hours if it is meant to be a viable alternative to car ownership |
| For most government affairs industry events, gatherings with friends, and sporting or theater events, this would force me to drive instead of taking metro. That means much less revenue for you and more cars in the road (pre-pandemic, I rode metro about 15-20 times per week in a light week). |
| A 9 PM closing time is too early. It would affect many workers, as well as people who go to concerts, plays, and sporting events. |
| What about night workers. |
| What if one goes out for dinner or to a bar after work? I say 10pm would be the earliest I would suggest closing |
| I work until 11 pm. I need a way to get home. During covid, I've been walking. It is 6 miles & takes me almost 2 hours. I get home at 1 am. It is too dangerous for a woman to do this. I can't afford a taxi or uber. |
| I use metro for evening events in DC so this would mean I would have to find other transportation home. |
| I believe 10 pm would be a more reasonable time to close but it still really harms people's ability to frequent businesses like restaurants later at night which further harms the DC economy |
| Need service after 9:00 pm |
| The District & its businesses do not close at 9 pm. That would be a disaster. |
| This proposal would severely disadvantage working class residents who work in food service, bars, etc, which would mean that businesses would have to close earlier OR employees would need to find alternative transportation, which may not be available to them. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Many mid day (or swing) shifts for federal workers end at 9pm leaving many without this commuting option which is already limited for workers with nonstandard hours. These workers will likely have to resort to driving to work. |
| I take Metro to downtown on weekend nights, to the Kennedy center for concerts, for example. 9pm would be much too early and make it impossible to use Metro. |
| This plan discriminates against essential workers who have late hours and not other transportation options. Additionally, it will reduce ridership for events due to early hours. |
| Way too early for people working later shifts. |
| You would literally just be making the city unlivable for people who are young. There would be no metro for sporting events and concerts. Pretty much anything you did for fun would make metro a useless service |
| If places are still locked down, then yes this works for commuting to office work. However if other businesses open up, this would be a challenge for many people. This could also hinder frontline employees and restaurant/shift employees. |
| 11pm is needed for service workers and others. Please consider weekend extension to 11pm, this will help prevent drunk driving and will give everyone more cost effective options compared to taxi or Uber after 9pm |
| I often go out in the evenings in DC on weekends and closing the metrorail at 11pm instead of past midnight already affects my plans since many events and hangouts with friends end near midnight. Closing at 9pm would mean I may not even be able to eat dinner because many places open late and have a wait, potentially starting dinner at 8-9pm |
| The proposed closing time will be detrimental to night shift employees. 11pm is a standard shift change time. Cutting service will impact those clocking out and those clocking in. |
| I use Metro to attend evening events in the District. But I do so relatively infrequently, so this proposal might be manageable though not preferable. |
| Would there be weekend hours or added bus hours? really hurting the community by not offering transit during those hours. |
| This eliminates Metro from serving workers leaving work late as well as people going out to recreation or restaurants |
| Way too early!!!! What about Nationals baseball night games; how do you would try get home?? What about later events at the Mall or Museums:- how do you get home. 9:00 pm is way too early. |
| It should close much later - 1am like in most big cities for example |
| Sporting & Theater events would be destroyed! |
| As a Tour guide, I often work past 9pm and rely on metro to return home |
| 9 pm is too early. I frequently need access to trains up until midnight. The early closing would remove the Metrorail system from my travel options and create a financial hardship for me. |
| People rely on late transportation to get home from work. Also, when events open back up, its the easiest way to get around the city, allows people an option NOT to drink and drive, and increases traffic to retail, entertainment, and nightlife...something well definitely need to restore the economy |
| Closing at 9pm turns Metrorail into a suburban commuter rail rather than a mass transit system and will disproportionately impact low income riders with late commutes. |
| Metro needs to continue to operate later for those who work late, attend sporting events or concerts, or use metro for after-hours recreation. |
| Its important to have a safe & reliable method of travel in the evenings. Uber is too expensive |
| I need to travel from work after 10 pm on some days. |
| If someone goes into or works late in DC they should be able to metro home or metro anywhere before 11pm |
| would that include Fridays and Saturdays? |
| Many essential workers need to take public transportation after 9pm and this would disproportionately impact them. |
| Too early |
| This means only people who can afford taxi/Uber/Lyft can stay in the city for evening events. |
| When restaurants and stores open up, how will staff get home? |
| this would be bad for my travel because i get off of work late so i hope you could consider extending the metrorail hours |
| Metrorail provides a valuable service, and we should try to encourage that service to operate for as long as possible each day instead of curtailing it even further. |
| Thanks. |

Proposal to close Metrorail at 9 p.m.

Theres too big a chance of being caught without transportation after being out in the evening.

The point of metro in the evenings is to prevent drunk driving, you would inherently hurt the arts at The Kennedy Center and Strathmore, The Anthem and 9:30 Club, any sporting event, and restaurants and bars that stay open and have their peak business in the late evening. When Metro changed the hours initially from 2am on weekends, it made it more expensive and more difficult to attend the arts, concerts, sporting games, etc. It meant that friends who only took the metro before now turned to Uber and Lift because they were more frequent and more reliable, but it is difficult for those who want to appreciate and experience the culture and happenings in the city who live just outside the city, but commute into the city everyday for work and want to stay late to grab a bite to eat or attend a show or sporting event

Especially on Fri-Sun metro should operate beyond 9pm.

it would be inconvenient on rare occasions, but I dont much rely on late evening service.

Closing at 9 even in weekdays is too early for my commuting.

Early closure of the metro rail would severely deprive individuals of an ability to engage in nightly activities and DC throughout the MD/DC/VA area.

I use metro to travel into and out of the city for baseball games. This would cause me to stop going entirely

I use metro for commuting, never after 9pm.

I most often use the metro at night.

Close it early Sun-Thurs nights and keep it open late Fri-Sat.

My friends and I often go to evening events in DC and use the Metro. We usually travel from East Falls Church to Foggy Bottom. Very convenient and safe.

This is too early to be useful to many metro users.

This hurts businesses and those who work late hours as they would be left with no service to get around in many areas.

If I need to work late, I would have no way to get home

I often have gone into, home from, and around DC After 9 pm.

A community based transportation service need to align with the needs of the customers - this is absolutely the opposite

A system that closes at 9 pm is very problematic. Folks who work late or want to go to a play or movie will be out of luck.

People wont even be able to go attend happy hours or other night-social events in DC. 9 pm is very early even 10 pm would be more understandable.

When I go out, this is for fun and relaxation. I don't want to have to time my leaving to a train schedule or risk waiting 30 minutes for a train, especially i have a connection.

That is why I don't use MÃ©tÃ©o to go out.

We use the Metro a ton for going to sporting events, dinner, etc. This is not workable!!!

It would eliminate using public transportation of theatre, concerts sporting events etc in Bethesda, DC and N VA which is one of the important aspects of any public transportations system. This would have economic impacts all over the DC metropolitan area.

If metro shut down at 9pm during the week it might be manageable unless there was a ball game or other event downtown that require mass transit to limit traffic. On Friday and Saturday nights metro should stay open until 11pm. The provides safer transportation options for people who frequent entertainment venues.

This could make it more difficult for passengers that are traveling back after evening meals or drinks which could send more passengers back onto the roads when they are not in a position to drive. The metro is one of the few affordable options for a large population in the region as ride-sharing services can get very expensive.

It will make me impossible to get home after the theater show.

This is a regressive policy on those with the fewest options. Are you trying to lose customers?

I oppose making life much harder for late-night workers, many of whom are disproportionately low-income and BIPOC, and harming the bottom lines of our restaurant, nightlife and entertainment industries which have suffered more than any other industries during this pandemic. Hope yall get sued for violating disparate impact clauses if you move forward with this.

Depends on whether late night activities are open then.

That is too early, 10:00 p.m. closure would be OK.

I use the metro frequently after 9 pm and rely on this as a safe and reliable form of transportation

It needs to add more services because people are going to events and transportation at night for activities for Washington metropolitan area after midnight or late night service and boost more bus hours after late night along with Metrorail hours.

Absolutely not. That would mean that if Im at the end of a line heading in the last train would leave at like 8:20

Proposal to close Metrorail at 9 p.m.

Once people have COVID vaccinations more people will be going out and I need to have the metro working until 11 pm it is my only mode of transportation to and from work

This is much too early to close a transit system for a vibrant and functioning city. I consistently traveled past the hours of 9 p.m. in the pre-COVID period and expect to do so again once we can resume normal life. This move would also negatively impact service workers and other essential members of the community served by Metro.

This would be extremely inconvenient for anyone who cannot access a car, particularly essential workers, and would probably do quite a bit of damage to the restaurant industry as it seeks to recover from the pandemic

During pandemic time closing at 6 Pm with 45 min or 60 min makes more sense

I would need to be sure that I would get home from work before the Metro system closes. It is rare that I stay that late, but when I do, it is for an important reason.

If Capital One Arena returns more to pre-Covid with events like Capitals' games then it would be difficult for service to end before games end. Especially as alternative means of transport if drinks were shared at the games.

I use the metro largely for daytime commuting only.

Expecting my schedule will go back to normal in January 2022, I often have professional development meetings after work and on those days, I am commuting after 9pm. I think 10pm would be a good compromise.

It's not ideal as many people rely on the metro after 9:00pm but if there must be a reduction in service, this seems manageable, short term.

Metro cannot afford to provide after hours service to a constrained ridership and higher incidence of criminal activities

Once the pandemic crisis eases and I use the Metro more I will greatly limited if it closes so early. That would mean driving, and potentially not going out due to the limitations. Plus, nearly every baseball and hockey game (when fans are allowed back) would be affected. Nearly everyone would have to find alternate transportation.

This would adversely impact businesses in the area that typically have later operating hours such as restaurants. This would significantly impact workers who work 3rd shift or night shift hours.

You must be kidding! The Metrorail is the lifeline for DC. How will theaters, clubs and other night-time institutions survive if the Metro closes at 9 pm?

Does not work for the citizens of DC. Games, dinner out etc. 9 is way too early.

If I'm taking Metro at night, I'm doing so to go downtown and take advantage of the nightlife. If it cuts off at 9, I won't be able to use it for this at all.

Absolutely not! What happened to 1am closing times? Going to 11pm was fine but going to 9pm would be awful.

No. As mentioned the train is a lifeline. The only reason I am able to live in this great neighborhood is bc of the train access and frequency of trains. The DMV area is my home, and being able to rely on public access to all major areas (including DC proper) is essential

It really limits the value of the service as it renders it useless for nightlife or evening activities, as well as leaves people who work nights and evenings in the lurch without a reliable and affordable way to get to and from work.

I think restaurant workers will have a real problem getting home. Even restaurant customers unless they eat fairly early

Not giving people the chance to ride will only decrease your revenue. January 2022 is far away, you can't make that kind of decision so long in advance. It could work, but it could be a disaster too. And if people are dissatisfied with the service, chances are that they will end up finding alternative ways to move around and will stop riding the metro altogether.

We go out to dinner and often rely on the metro to take us home

This would negatively impact workers who have later shift jobs. That is not equitable.

This makes taking the metro to go out to a nice dinner or evening event impossible

Again, more people need to ride, not fewer. You already close too early. You should be a 24 hour a day service. Rather than always crying about lack of funding, you should be figuring out how to fund a system that serves its purpose, but you really never have, and it has hurt you. Now, covid is a problem, but is it a permanent problem? We don't know, but you're again seeming to be making permanent decisions that will just make it even harder for businesses and workers to ever get back to normal.

My hours are longer and we have visitors and business people who need it. Also many service workers are having trouble now.

I just won't go to any night activities in the District.

This might occasionally inconvenience me when I am returning from Union Station or National Airport after travel, but I could make do.

Proposal to close Metrorail at 9 p.m.

While this should be effective during the work week, 11 p.m. during the weekends is difficult to tell, especially if I would like to attend sporting events, music events, or other events in the city during the weekend.

If I use Metro to attend evening performances of anything a 9pm close would be too early to get home. 11pm might work. Please consider those who have jobs and need/prefer mass transit to driving a car.

As much as I like the flexibility of the metro being open later I understand the financial aspect and I would rather have the orange line metro stations all stay open with an earlier closing time then closing the stations.

This would prevent people from going downtown for the evening and impair attendance at the Strathmore, which presumably will reopen sometime soon. It cannot sustain a drop in revenue from lost ticket sales nor can organizations like the National Philharmonic, which frequently perform there.

Forget thinking about using the rail system after choosing to see a film at 7PM or attend a Wizards/Mystics/DC United/Nationals Game. HOW DO YOU EXPECT ANYONE TO GET HOME???? 9PM is not even bedtime for some children.

Absolutely unacceptable. To consider only 1 area, what about Nats Park, Arena Stage, Shakespeare Theatre, etc.?

The 9 pm closure would mean that taking Metro to the Kennedy Center or similar venues would not be viable. This undermines the value of public transit.

I rarely take metro late at night

Would stink for using metro for evening events, but better than 1 train every 15 or 30 min at rush hour.

People who go to DC to attend concerts, go to dinner, and participate in other evening and night time events would have to find alternate means of transportation which would mean more cars on the road and more potential for drunk and unsafe driving. The Metrorail needs to extend opening hours (or stay open 24/7) rather than cut hours.

What happens when there is any sort of evening event Downtown? We need to be assuming that there is a "return to normal" after vaccination. This is so shortsighted

I use the metro for my work commute, so morning and late afternoon. However, this will be tough for anyone who is in food service and commutes in/out of the city.

How can someone do an evening event, such as a dinner, concert, or theater, and have service end at 9 pm? And what about those who work to support activities in the evenings?

This would impact metro riders with later night shifts at grocery stores among other jobs that have later night shifts

This works for me, but it might be better to close at 10 during the week. 9pm is too early for weekend and 11pm would be better.

Retail workers who leave the pentagon city mall at 9-11 PM often use the metro to get home safely. Especially if you're a female this area is already dangerous at night the alternative is going to be standing on a dark street with high theft alone from 9-11 PM waiting for an Uber that Costs 10 times as much as metro fare.

For those who rely on the later closing time to get home from late shifts at work, this would make getting home difficult.

9 is too early for some workers.

Im never out that late, but I would think this could cause a lot of problems for events scheduled at night and the people who have to work at those events.

Won't work for service industry or sporting venues

Things will be greatly changed towards the end of the year. I will be commuting to work and will require metro rail service after 9PM, especially on the weekends. Especially if the pandemic dissipates and vaccine compliance is high, there will be a high demand for metro use next year.

NO this would encourage more people to drink and drive, and it would be devastating for bars and restaurants.

When there are events in DC or other places, and 4th of July 9pm wouldn't work. My daughter rides home at 10pm most weekends.

I use metro at 11pm and even would use it later if possible. 9pm is not helpful especially for weekends!

That is absolutely too early

Not at all. I have late nights at the office several times a week, where I leave work at 10pm.

too much to do in the evenings

With the complete absence of WMATA police officers on the train and prevalence of non-paying transients filling the metro now, no one that I know is willing to ride the train at night anyway.

If things are somewhat normal in 2022, that's much too early. Seems early morning would be less important than late night.

If things open as when pre-pandemic, weekends need extended time (later operations Friday and Saturday nights especially)

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Closing at 9pm vs 11pm would affect dining and entertainment venues and would reduce ridership after evening rush hour. |
| Normally not out late, but this would make me drive rather than taking Metro if I needed or wanted to stay in the city after work. |
| It should kept at 11 i get off work at 9:35pm |
| I rarely travel by metro after 9pm because I am already home with my child. But in the past, I have used it to get home from sports games and concerts where crowding makes taxis and ubers difficult. Obviously it's then often after 9pm. |
| I dont own a car and rely on metro for transport around DC. Going out in the evenings to attend events (i.e. dinners, sports events, theater...) would become more difficult if metro shuts down at 9pm. |
| Given that I mostly take metro for recreational purposes, not being able to take it home after dinner downtown would mean that Id pretty much never be able to use it during the week. |
| This change would not affect my commute. |
| This depends on whether or not I am able to return to my usual routines of evening entertainment outside of the area where I live. |
| Metro will never recover and have the riders it needs if it is this limited. |
| It would kill so many downtown businesses, the ones that are left and have fought so hard to remain in the face of the last year and the pandemic.. |
| How would we come back from theater and dining out? We have become dedicated public transportation users, and cutting off service at 9 PM will prohibit going into DC for entertainment, as we would have to take a cab home (not a huge fan of car services like Uber). |
| If i went out to dinner with a late reservation, a 9 pm closing would not work. If I went to a Nationals evening game , at 9 pm closing would not work |
| An earlier closing time would impact the amount of activity people do in the city when the pandemic is over. |
| Lots of peolpe still work until 10pm or so. Thats why if you plan time to reduce the closing this would really hit hard on people like me who is managing our transportation expenses. |
| This would affect restaurants and other downtown businesses if customers had no way to return home at night. Saving money for the metro in this way would have a negative ripple effect on the economy as we try to reopen. |
| I rely on riding the metro sometimes past 9 p.m. because of my work schedule. |
| Due to safety concerns, as a single woman, I do not generally take the metro after dark except on rare occasions. |
| I'm not planning on being in before 9 once bars are open again |
| 9pm every day? What about weekends? Should consider staying open later on weekends. 9pm is also a very early closing time for during the week. |
| I don't tend to ride after 9, but this would impact a lot of people. |
| I strongly believe Metro should stay open later to serve people with irregular hours. I often work late, and I imagine lots of people have weirder hours during the pandemic if they work in person. |
| Special Events in DC, such as Nationals game should have a metro option |
| ABSOLUTELY PREPOSTEROUS!!!!!! This would make DC the laughingstock of cities. Many people work until 8pm. People have lives outside of work. |
| The service on Metro is so poor that the closing time makes no difference. |
| A 9:00 closing is too early for those who work a late shift, or just work late. |
| How is anyone supposed to get home if they work late. This would directly effect anyone in the service or restaurant industry. It would likely increase competition from Uber or other such ride sharing companies. |
| Would not cover trips home after an evening in DC |
| I used to work until 10 pm and commute via metro from Metro Center to Shady Grove. I wouldn't have been able to afford an Uber ride home every night and would take the metro. A lot of late night workers in the government , hockey game fans and others would take the metro late at night. Servicing these customers would definitely hurt your budget more. Also, think about how this will deter the safety of the community. Intoxicated individuals may feel enabled, desperate or have no choice but to think that they need to get behind the wheel to go home. |
| Again, better option than no metro service at all. |
| Would eliminate my METRO use for trips into DC where we go at least 50 times a year and spend thousands of dollars supporting the city's economy. |
| Hopefully by then people will be attending in person arts and sports programs (sports events, theater, etc). You're leaving these people stranded. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would continue to kill the restaurant industry. There would be NO recovery and no incentive for people coming into the city to stay in the city after business hours. |
| I rarely use the Metro that late in the day and with Lyft/Uber, I have alternatives. |
| This is the biggest problem I have. Many of us dont get off work until 8 or 9 meaning we couldnt take the metro home. Since Im a young woman without a car not only would this add an extra hour and a half to my commute, but I wouldnt feel safe waiting at the bus stop at night. So waiting a little longer between rides etc is a small price to pay to still have use of the metro when we need it most. |
| This would make it impossible to rely on Metro to get to Caps, Wizards, or Nats games. It would also mean I could not take Metro on days I had social plans after work. |
| When working late this would be problematic, pre pandemic I often took a train home at 9 or 10 PM about once every two months. That said this can be worked around. |
| This is a sophisticated, urban region. Work, dining, and amusements will increase with vaccine and herd immunity. This concept fails on its face. |
| Do you want to support the area economy at all??? |
| Would this also be on the weekend? If so, it will have an effect night life/cultural events (theater, concerts, restaurants, bars, etc) |
| Many people rely on metro for activities outside of work hours. Restaurants, bars, sporting events, concerts, and Theaters would be adversely impacted by these reduced hours. More people would abandon metro and drive. |
| no 11pm is early enough too many people depend on it, people will be back in the metro soon! |
| I expect my main use for the metro in 2022 will be commuting during normal 9-5ish work hours. This works with me. |
| I work in a Federal Emergency Operation Center I will need to get to work on time 24/7 |
| Not sure what demographic would be unaffected unless you're only thinking of people who work 9-5 jobs (disregarding shift workers and others with late working hours) or eat dinner really early. |
| This would turn downtown into a ghost town in the evenings. People rely on metro to get them home safely. |
| 9 PM is insanity. MANY people throughout the DMV work past 9pm/require Metro service to get home. |
| People in service jobs would be dramatically and unfairly impacted by this. |
| My hours of work do not fall in this time frame, I typically work on the weekends and evenings, I will need a train that goes until 1am, 24 hours would be better. Let's also think of the entertainment industry and service industry, not all of DC works 9-5, or socializes in that time frame |
| Metro has been a semi-reliable way to go to downtown DC for events without having to pay exorbitant ride-sharing fees. Especially with 30 minutes between trains, this means I would have to leave whatever event Im attending by probably 8 p.m to ensure I could catch at the the next to the last train. This is a terrible idea. Also, there are a lot of workers downtown who count on Metro to get them home - again, this is not a good idea. |
| This is terrible for those who work late hours and have no other means of transportation. |
| I consistently rely on metro to get me home after 9 pm, usually closer to 11pm. This later night service quite literally saves lives, as one can take the metro instead of attempting to drive home from a bar. Additionally, it is safer to take the train late at night than call an Uber. The citys night life relies on these later trains, and to go without them would greatly hurt the city. |
| I often take the metro in the evening for a variety of events during the week and occasionally on weekends. If the metro closes at 9pm I would have to drive in from the suburbs |
| How will people get to and from sporting events and other activities downtown that run past 9PM? |
| Are you kidding me?? Some days we get out of work during evening hours as it is, but how would this serve DC events and nightlife? No metro station in the world would consider this. Shameful. |
| i think the biggest losers in this scenarios would be local businesses like clubs and restaurants in the city. i think the average working commuter would be able to deal with this change. |
| 11 is already early. Maybe reduce frequency after 9? |
| I think this will cause problems with nightlife - I think it should at least be open later on weekends. |
| Impossible to use metro for any sporting event |
| What's even the point of having a train system if you make the hours this inconvenient. This change only helps WMATA make a lil more money while turning it's back on it's very mission: to provide cheap, efficient, equitable travel. |
| This would cut off transportation for many events and reasons to go into the city. |

Proposal to close Metrorail at 9 p.m.

No cuento con vehiculo y el metro es el unico medio para movilizarme en el DMV, al cerrar el servicio a las 9pm limitaria mi forma de movilizarme, me afectaria mucho.

This would prevent me and most people I know from participating in evening events in the city. This proposal would have a negative impact not only on ridership, but on local economy and accessibility. 11PM was already too early -- we should be building toward 24-hour service, not cutting back.

We need to have stations open, especially after events and weekends, for people returning home safely. This will double to not only provide economic benefit to our communities (increase property values as fewer people will need cars) and increase safety.

In 2022, I expect to regularly use the Metrorail system to return from the airport and events after 9 p.m. This would mean I would take my commuting dollars elsewhere.

Taking the metro home from events in dc is very important!

If we want our economy back up and running, we need a system that works for people who work evening shifts.

Especially weekend evenings, this would cut off entertainment enterprises of all kinds and discourage metro use

I often work as late as 9ish, and still need to get home at that point. I realize that its not rush hour any more at that point, and I may have to wait for a train, but I still need trains running.

Again, you must consider ridership volumes and make decisions to accommodate and attract riders, not alienate and reduce ridership. This may mean keeping open later on Friday and Saturday nights for example. Hopefully most will be vaccinated and ready to ride again, well before January. You must be poised to maximize ridership quickly

does not work for us attending Kennedy Center events or dining out in the city

Works for me because I rarely use the metro after 7 pm.

11pm needed for service workers

I would assume the cost-benefit of staying open later for few customers is not worth it

This is just stupid.

If this were to go into effect, this would have a negative effect on night workers. If the pandemic is over by 2022, more people would likely be going into or staying in DC later at night. This is a loss of revenue and could lead people to stop using metro altogether by either driving into the city or by finding another travel method that will also get them home after 9pm.

Suggest a 10 pm stopping time.

We just need Easy Falls Church to stay open during normal commuting hours.

Consider offering hourly service while waiting in stations for the final hours. Or if actually closing early use the time for much needed maintenance.

I get off late most times and 9pm would be too early to stop trains

Had the question been asked, given the expected rollout of the vaccine wouldn't ridership be increasing around this timeframe with pent up consumption taking the rein?

Support DC restaurant and entertainment industry!!

The most important thing is protecting peoples ability to get to work, and for most people this would do that, myself included. I would however have to seriously change my lifestyle outside of work as compared to life pre-pandemic. I worry this would impact lower earning people who work nontraditional hours and have a negative impact on bars, restaurants and other nightlife establishments that will already have been devastated by the pandemic.

This seems difficult for many workers who rely on Metrorail. It would certainly be problematic for going to sporting events and other evening activities and, potentially travel to and from the airport.

This is awful! The metro is a safe, efficient, and reliable mode of transport for everyone in the dmV. Some people work late hours. Some people work different than a 9-5. If you handicap the entire city by shutting down the metro at 9, you're doing everyone a massive disservice and it's completely ruining the growth and expansion of the city. It's a tourist city, entertainment city, and a working city. Leaving the public without options to commute/travel within the beltway is immoral.

Only feasible if you consider Metro as a service for getting to and from work. If Metro is a larger part of metro DC transportation, then this option doesn't work. How do you get home from say, The Kennedy Center after an evening performance??

Assuming events start up again a 9 pm closure does not work for attending concerts or sporting events. Closing at 9 pm is also too early to accommodate late business meetings. When there isn't a pandemic Washington DC is a big, vibrant city with a lot of night-time activities and it's imperative that the city has public transportation that allows its residents to get around past 9 pm.

Many people work late. You cannot shut down at 9pm.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Before Covid I often took metro to sporting events and even concerts. How would I get home? |
| Im currently working until 9:30 PM. This change would make it impossible for me to get home from work. |
| Seems the savings would need to be significant to justify. |
| I work at night. This would provide a real hardship for me. |
| When cities are struggling to get people to return (live-play-work), post-covid, this would massively harm those plans. Why go support restaurants, shops, and sports venues in the evening, if it is going to be difficult to return home? Makes no sense to close the metro early. This will hurt all the businesses that need evening commuters. In turn, less people will ride on Metro - causing metro to hurt itself. |
| This makes working late or doing anything after hours more difficult and expensive given the need to instead rely on rideshare services. It seems likely that this would lead to an increase in the incidence of driving under the influence. |
| I often use metro for rides after 9pm. |
| I like to use the Metro when traveling from MD to DC for theater. The final curtain at most theaters in DC (Kennedy Center, Shakespeare Theater, Arena Stage, Fords Theater, etc) is after 9:00 p.m. That means I would have to drive to theater performances. Finding parking is either impossible or expensive. Plus, I am a Senior Citizen and prefer not to drive at night when I can avoid it. Also, I frequently see Caps or Nats fans on the Metro. They, too, would have to drive for night games because they generally are not done until after 9:00 p.m. |
| Would say stay open till 10 - week days. |
| If workable with budgets, a 10pm close would be better than 9pm, though the earlier closure is workable |
| Certainly an issue if attending a Washington National game. |
| This would be awful and really limit mobility for evening activities. |
| I fear WMATA aid not prepared for ridership growth as vaccination rates rise and the economy opens. |
| People rely on metro to get home from late nights at work or from concerts, sporting events, parties, etc. This would add a lot of drunk drivers to our roads. |
| Life does not shut down at 9 pm. Many work past then. More cars on the road as a result. |
| 9pm is very early, considering most restaurants and businesses would close at the exact time the metro would stop running. Even 10pm would be an improvement, but keeping the metro open until 11pm on weekends would also be very helpful. |
| Train service should operate til 12am. 9pm is way too way to not have train services. |
| If the city opens up more, and there are options to stay out later- like live music and sports games, then this plan would not longer work as metro has always been my preferred option for going into town for these events. |
| closing at 9 would kill downtown dc after working hours, esp on fridays and weekends! Considering the time were in 9 is probably the least hurtful for Mon-Thur, but please keep extended hours at least Friday and Saturday! |
| I typically use metro mostly early morning and could work around the earlier closing. |
| This plan would absolutely not work for me. I regularly take the metro in the evening, and if the metro stopped running at night, it would cause a huge financial burden for me to have to pay for Ubers and Lyfts. To get from my house in College Park to Dupont for example, it would cost upwards of \$40-50 one way, especially when it is snowing and less cars are available. |
| Metro is an essential transportation service. Its hours now are limited compared to other Metropolitan areas like NYC that has 24 hr daily service. My family go to events in evenings and use metro too return home, often after 9 pm |
| Although I do not require Metro transportation at that time, I am sure there are other who may need to do so. |
| Too early to close. Terrible for restaurant and entertainment. |
| Need way to get home if work late or have dinner out |
| I rely on the metro to commute to and from work and would not want to take an alternative method home. Especially if i am attending a sporting event downtown. |
| If I go to dinner or attend a concert downtown, I would want to come home after 9 pm. |
| This severely curtails involvement in any evening activity (community organizations, arts and entertainment, attendance at sporting events). This is a crazy plan. A world-class city like DC should NOT operate on such meager public transportation offerings! |
| I can live with this. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I'm a frequent theater goer. Shows end around 10:30pm |
| This would be catastrophic to the economy in D.C. what the hell ? It would completely nuke after work socializing or restauranting, shopping, and would SEVERELY impact retail and customer service workers with 9 or 10pm store closing times. That is RIDICULOUS |
| When we are able to go to the theatre and restaurants again, a 9pm close would be a problem. The theatre doesnt let out that early. |
| This is too early to close and does not meet transit needs. |
| I would suggest a 10 pm closing time as many businesses close after 9 pm and if I was eating out at a restaurant or attending any public event, 10 pm would be more reasonable. Also, if possible, consider keeping the metro open for longer on Fridays and Saturdays when people are more likely to be out of their homes late. |
| I guess I wouldnt be able to go out at night. I mean, buses, sure, but we got rid of our car this year and plan to rely on public transit, once things are back to normal. Nine feels SO early. How would people even get home from jobs at shops? It seems too early. |
| This is very anti-blue collar, anti-front line health worker, and anti the needs of our community. |
| Evening travel to and from DC on Red Line necessary to enjoy being in city environment. Without Metro service would not travel to DC for restaurants, etc. |
| This would prevent my engagement in many downtown activities (e.g., going to restaurants, theatres, etc.)--this would be a significant loss to me personally and prevent some of my funds going to downtown venues. |
| would leave many segments of our workforce with no safe affordable transportation |
| My daily commute to work is very much dependent on the metro at Grosvenor and there are days when I get back from work at 9 pm or later so if that means that I miss the last train or so then I am not sure what's the point. |
| This proposal would make Metro pretty much useless in the evening hours and seriously inconvenience travelers, residents, tourists and just about everybody. Very bad idea! |
| Thats far too early for those who work nights and depend on metro for transport |
| Yes if Metro would stay open later for certain special events when needed. |
| This proposal would cause issues for some workers who work until 9 pm. |
| Performances at the Music Center at Strathmore routinely end between 10 and 11:00 pm. To main current ridership and accommodate anticipated increases, trains would have to run until 11pm. |
| Sporting events and evenings out people use metro so they don't have to drive ... 9pm is too early |
| This proposal makes it harder for hourly wage earners to get to work. They generally have different hours and need metro to be available. These cuts are a real problem in terms of equity impact. It's going to affect the people who are in no position to afford alternative means of transportation. |
| As work and socializing picks back up. 9pm is gonna frustrate everyone. |
| If it stayed open longer on Friday and Saturday that would be okay |
| With metro as the main source of transportation for many DC residents (including myself), this would severely impact evening travel needs. |
| Would mean I couldnt stay in two after work for dinner or a play; couldnt work late as needed. But only an occasional problem. |
| This would change how I travel into DC for sporting events and for weekend dinners |
| Definitely would not work, I need late hours!!!! |
| WORKING, APPOINTMENTS AND SHOPPING WOULD BE ALMOST IMPOSSIBLE. |
| This makes it impossible to use metro for evening events like plays, concerts, baseball games, basketball games, football games, etc. I know that things have been closed due to covid...but life will return to normal and metro needs to be there to fulfill the needs! DC traffic will be awful again soon. We need late night Metro - not to mention workers at service industries and hospitals also need late night transportation. |
| My main use of metro is commuting so this likely works for me, but it means I would never use the system for pleasure, to get to evening events or go to dinner. |
| Metrorail is needed later in the night due to sports and other activities in the DC area, closing at 9pm will require most people to have to use other transportation back home. Once activities are opening more and more, Metro use will be needed. |
| Please make it as 11 pm |
| It is definitely better to have the metro run til 11pm. For example, sporting events on the metro often run 7pm-10pm, as well as often providing safe drunk-driving alternative to many DMV constituents. |

Proposal to close Metrorail at 9 p.m.

Have you given a thought to what it does to the essential workers that rely on public transport? Not really, as life doesn't stop for a lot of people at 9pm! Some travel far to get to their jobs, are you pushing them to consider alternative private means like Uber and make those monopolies richer when the minimum hourly wage is so ridiculous?

Many times I do not get out of work until after 9. This would cause increase cost to my commute and cause me to find alternatives to Metro, to include no longer using the service. Under this proposal, I would have to find a cab to take me to my destination, Huntington station (Approx. \$25) and since I did not ride Metro into the parking area pay the full price (\$8.95) instead of the discounted price (\$4.95) when you use Metro. Since I would have to do this 2-3 times a week it would be better for me to find a different commute than Metro.

Yes, closing at 9pm makes sense for most of the area population. There are some people though that work past 9pm and rely on Metro to get home from work. It would be good for these people to have an option, while still reducing the costs for MWATA. Also, special events that end after 9pm should still be considered to have trains available.

At that point there is no point in taking the train. I might as well left or uber. I have to work late at times and depend on the train to get home. If they close this early theres no point

This works except for possible events in DC

This would not work for those of us who rely on the Metrorail system to get into DC and have to work later shifts. It would also negatively impact those of us who need to dine and/or entertain in DC past 9 p.m. and would need to find other means of transportation and parking is not readily available.

Sometimes I have to take the metro home late so this would not be helpful in doing so.

My answer of yes is based on the assumption that SOME cut is needed. 9pm would effectively make travel for post evening engagements (dinners, events, etc.) impractical by public transit. However, if given a choice between this and cuts that would impact work commuting needs, this would be far preferable.

Very bad for sporting events and access to entertainment venues. Terrible for workers who have no options.

9 p.m. is too early for a large metropolitan rail service to close. 11 p.m. should be the earliest.

Too often rely on metro past 9pm due to work

Generally on the weekdays I am home by 9:00pm. We use the metro late when we go to baseball and hockey games so on those days we are more likely to need a later train.

Weekends and game nights should be later.

This would mean I could not use Metro to get home after theatre or concert or visiting friends along the metrorail.

It would interfere with Washington, DC night tours

Thats way too early

Can this be 10 pm?

To become a reliable transportation option, metrorail should run until 12 am M-F and until 2 am Sat

I regularly took Metro after 9 pm before the pandemic and expect to do so again.

11 pm is already a far earlier closure than most other world-class public transit systems. 9 pm is not acceptable, and would strand many of the non-professional workers for whom Metrorail, with its long suburban station distances, comparatively low frequencies, and high fares, is not serving well. This should be avoided at all costs.

I rarely ride Metro after 9 PM.

This is an inconvenience to those riders who do the right thing.

Is that applicable on weekends as well? People depend on the metro to get home after socializing in the city. Maybe an increase in fare from 9-11 pm? What about all the games and concerts that are held in DC, people will be unable to use public transport once the activity finishes.

I am not usually out at night late enough to worry about when metro closes, but I would be hesitant to close it at 9 pm for workers, especially in the food and beverage and service industries who would be more likely to be riding metro in the evening hours closer to 11 pm than I would be. That could be very detrimental to their work and livelihood.

I live along the Clarendon/Ballston corridor, and I feel that business touting night life would suffer from early closures. I would also feel I'd use Metro a lot less often (once I feel safe to do so in post-Covid times) for going into DC and Tysons Corner for evenings out.

Are you joking?

Proposal to close Metrorail at 9 p.m.

Would recommend weekend staying open longer, otherwise might see an increase in drunk drivers or very expensive Uber rides. Also, would request extended or more frequent bud routes to offset.

I work late and frequently need to take trains after 10pm. If Metro changes their hours I will not be able to use public transportation to get to work and from work.

My work often requires public transportation beyond 9pm; not to mention any recreational activity like theatre or movies. This would render DC inaccessible to those who do not live directly in the city outside of standard work hours and I imagine would significantly hurt recreation-based businesses

The current system is inadequate, so further reductions in timing and service will only further erode the quality of the system.

If changes have to be made, I can live with this. As I can take an Uber or a Lyft home if I stay in the city late. This is preferable to changes made during the much busier rush hour times.

This would basically prevent me from doing anything downtown after work.

Initially, I was hesitant but considering Metro has never been packed after 9pm (usually just the drunk), I don't have an issue with this. While inconvenient, I completely understand why and think it changes the mindset of users from train to the club, car home to instead car to the club, car home. For me, this works.

Metrorail should run to at least 11pm to accommodate those with later work schedules.

I depend on the Metro for evening activities and would really like service until midnight.

This would be more preferable than shutting down the EFC metro..

9 p.m. is way too early for a system in an area like ours to close.

This would hurt Downtown Dc/ games and cause more people to have to drive

Some days I'm at work later than 9pm

This plan does not support sporting events, concerts, and other activities in the District that usually last longer than 9pm.

This would likely put undue burden on workers who work past 9 PM.

People really need this service!!!

This would not work on the weekends for people relying on the metro or working late hours. I am okay with 9pm weekday closure but not weekends! Save the weekends

Besides from work, it would be impossible for me to take it, for going out, traveling, etc.

Would hope that eventually the full service would be restored. We have often used metro to go into the city for performances, and a 9 PM return time would not work. I can understand doing it for a short time, to get the Metro budget back on track.

It will adversely affect the events and businesses I frequent that require me to take the metro to their venues, restaurants, or businesses to return home in the late evening. Maybe if it closes at 9pm during the week but 11pm on the Fridays and Saturdays would help.

Please reconsider. 9pm would normally be end of dinner time (if dining outside), how will riders get home if metro shuts at 9pm?

Works for me because I am white collar. Would not work for most retail and restaurant workers.

I've taken Metro home after socializing after work for 30+ years. This will make me much more likely to drive on those days, meaning more lost revenue for Metro.

the worst idea, would be forced to walk in the dark

Would limit certain weekend and holiday plans when things eventually settle down and customers are able to gather at late events (i.e. - concerts, sporting events, homecomings, etc.)

Try 10..many colleges have classes that end at 9.

It's very early for the metro to close. Often my husband has work events in the city that go past 9, meaning he would be stuck downtown with no way home if the metro closed. I also think about show venues and restaurants/bars, if these can reopen in any capacity the early closing of Metro would hobble the businesses again.

People who work night shifts downtown and attending functions downtown would be severely affected.

This would eliminate using Metro for transportation for any evening activities.

There are many service people who work until 10 pm that would no longer be able to have transportation to work.

It would seem like the people most affected would be service workers who work non-traditional hours--would seem to shift the burden to those who may be least able to afford it.

This would work if it would be a way to avoid closing stations. It is certainly not ideal and imposes hardships on my travel plan, but it's better than losing a station altogether.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| even 9:30 or 10 would be a lot better |
| If I work later or see friends Metro accessibility is incredibly important |
| I run a store in Tysons. My employees metro. The mall closes at 9 and we often dont leave until 10 or 11 pm on weekends. |
| This would not work for me. When running late at work if the metro closes by 9, I wont have a way to get home. Additionally, this will economically impact the city if people have to be where theyre going to be for the night before 9 pm hits because otherwise, theyll have to pay for a costly uber. |
| I am a DC tour guide for student groups. Tours often end after 9:00. With closure of the Metro by 9:00, I would be unable to get home following the tours. |
| Living in the suburbs but looking forward to again patronizing dining and entertainment in DC, I think a 9pmClosing might have a negative impact on certain businesses. |
| 9pm seems very early, even for commuters working 10-12 hour days. |
| I work at night and I have to be at work by 11:30pm. I would have to get to work before 9pm. We have some workers who are cleaners and medical workers who depend on metro. I don't have an Uber or Lyft account. There are not many cabs running in the District since the pandemic began. |
| No, you are now forcing people in the service industry and those who work later/night shifts to find other forms of transportation that are more expensive. Especially when you travel to outside of the city. This would be incredibly harmful. Most industry jobs don't stop until 11pm, if not later. I have continuously relied on the last train of the night. |
| This should not impact my daily commute. While it is not ideal for late nights in the city (assuming COVID restrictions are gone) it at least allows for travel at the start of the evening. There are enough taxis/ride sharing services to make up for the trip home, though that is not ideal (higher cost than a similar metro trip). |
| This plan affects the vibrancy of DC night life, negatively affects the service industry, and makes it more difficult/expensive for people to visit friends in different parts of DC. In 2022 DC will be reopening, people will want to move around the city. I expect whatever money Metrorail saves with this plan will be lost in other parts of the DC economy. |
| Speaking as someone who sometimes has to work second shift and depends on the metro for transport, closing metro at 9 pm now strands individuals from those shifts and they will have to pay more money to try and get home via Uber, taxi, or extend their transport time by taking a vast number of buses when one metro car would have done the job in half the time. |
| Super bad plan. Putting many people in dangerous situation and stranding many of your most vulnerable passengers in the city. What do we need to do to o get Congress to cate about this issue |
| This means that when theaters open and other events that it will be impossible to use the Metro. Not everyone can afford taxis and Ubers. This is particularly bad for people working later shift jobs and is extremely inequitable in that regard when so many of those jobs are lower wage and cannot afford other transportation. |
| This is absolutely ridiculous! We use Metro to get to the theaters--Shakespeare, Kennedy Center, Arena Stage and others. Closing at 9 p.m. is a terrible idea. |
| Many people work later than 9pm plus restaurants are typically open until at least 10/11pm. |
| NO! This is unacceptable! A lot of my travel is to evening events and its very difficult to get home from DC (to Silver Spring) after 10pm lately. You cannot keep cutting late night hours unless youre going to provide some kind of late night bus service that would run the same route as the core Metro system does. You are pushing late night and weekend event goers to pay costly Uber prices just to get home! |
| This should never happen even if no Federal support arrives and ridership stays low. |
| People in many work roles rely on Metrorail to get to and from work. Closing at 9 p.m. would be a great disservice. |
| This would be a problem with attending Caps games that end after 9 pm. I dont go to Wizards games, but folks attending those will also be upset. |
| I depend on metro to see my friends and meet them during the weekend and some weekdays (more during the summer). Public transport shouldnt just be for work- people like myself without cars have no other way to affordably get around. Honestly when I hear this I start to feel like the city Ive grown up in is a bit of a fake city- no trains at night for events everyone driving places whats the point of living in a city. If Im going to just drive everywhere might as well go somewhere cheaper so I can afford a car and gas. |
| This would negatively impact DC bars and restaurants and would make participation in city nightlife much more difficult for anyone who can't regularly afford to drop \$20-30 on rideshares every time they go out. |
| That is much too early to close Metro and would be an inconvenience. |
| This will have a negative and potentially dangerous effect if people stay late and drink and don't have a safe and affordable way to return home. |
| This doesnt work for me, assuming that DC reopens by 2022 and there are evening events in DC. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| 9PM is very early. Even 10PM might be acceptable but 9 could even cut into post dinner travel |
| By having the system shut down at 9p, you would dissuade people from attending concerts, sports events, special events throughout the city (cherry blossoms). This would have a negative affect on bars and restaurants who have already endured great hardship the past year. |
| It might be OK for me, but it would be terrible for people who work later hours. |
| I have relatives who do not get off work until 9pm as well as relatives who work overnight. Such a proposal would hamper their ability to arrive home or make it into work safely. |
| This would impact people attending events in DC and workers who use the train to travel home |
| Public transport accessibility to those who work in industries that do not offer 9am-5pm work hours is essential in the city. By decreasing the hours metro is removing access to affordable public transit for those who need it most |
| Service should go at least an hour after last call for liquor sales. This would allow people in the service industry to commute home via metro. Just because the asshole writing these proposals works a 9-5 cushy office job, doesn't mean everyone in the city has the same schedule. The world does not revolve around the privileged schedule of WMATA executive employees |
| 9 is too early. Can't take train home from DC after a show or event. |
| It would make affordable travel completely impossible for anyone in any service industry. It would strip travel possibilities from people who are the most relied upon. ANY essential worker would be completely screwed over. |
| 9pm is too early! Keep it open until at least 11pm. |
| I am not a late night rider but fear the equity impact of curtailing hours when service workers badly need transit. |
| 9:00 PM is too early. |
| I think that I will probably need it later. |
| 11 is already way too early. 9 is completely ridiculous. There are hundreds of people who work late, many of them low-wage workers in the service industry. This would be a terrible situation for them. |
| This would absolutely devastate the food and beverage industry. Talk about kicking someone while they are down. This would make it incredibly more difficult for myself and all of my fellow hospitality workers to make it home after our evening shifts. |
| My family lives in a walking distance to the Grosvenor station. My children, who are of high school/college age rely on the Metrorail system exclusively for their transportation needs. My mother-in-law, an active senior citizen, does not own a car and relies on Metrorail exclusively for her commute. |
| How are people to travel if Metro closes at 9pm instead of 11pm? This impacts people who work as well as businesses who depend on people who cannot get to their destination if there is no transportation. This should Never be considered. |
| I value using the metro to get to the Kennedy Center for the free concerts....when we are able to attend those concerts as in the past |
| You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!! Where is all that money now, when times are slim? |
| Longer waits preferable to closure, especially for farther from city center. |
| This not only impacts those who wish to dine or go out to eat by having to buy an uber ride or find another non-public means of transportation home. This negatively impacts students, restaurant and nightlife patrons, those in the service industry, etc. |
| Cannot be used for social events and visits if closed at 9 |
| This plan would work for me in terms of commuting but if restaurants or entertainment venues like nats stadium reopen to the public its going to majorly inhibit the economy within the district and the people who work in the service industry who have already been hard hit by the pandemic. |
| Please keep it open until 1/2am on Friday and Saturday nights. 11pm other nights is preferable |
| I think this is completely inequitable for people reliance on public transit working downtown. Even 11 is too early and 9 would mean a lot of drunk drivers. |
| I have no need to be out at night; I am 65+. |
| Think about events, like theater, ball games, concerts..... traffic will be very stressful. |
| I, like many people who rely on Metro, sometimes work late or attend events that run past 9pm. By closing at 9pm Metro would be forcing me to take a car which is unacceptable/too expensive. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I think earlier closing is not smart. It forces people to use their cars late at night especially if they wanted to go out and have a few drinks. Its safer to offer public transportation than to deal with drunk driving accidents. |
| By reducing evening hours you are increasing the choke hold already being put on the hospitality/nightlife industry in the city. Might as well shut down bars, restaurants and clubs as well. |
| I often have to work past 9pm. On those days, I would have to drive to work and would then buy a parking pass and abandon Metro altogether. |
| People do use the metro for more than work. People use it for dates, shows, etc. 9pm is too early. |
| This is a reasonable change to save money compared to screwing up rush hour usability |
| I don't use the train at night very often but when I do go downtown, I'd come back after 9PM |
| I am able to plan around this change in schedule. |
| If the goal is to decrease car traffic in the region and avoid the continuing expansion of highway lanes, Metro should stay open past 9pm. We selected to live close to DC and near a metro to take advantage of public transportation. |
| I use this system as my transportation for work & appointments. |
| The sun is barely down at 9pm in summer. |
| Again...SAFETY. Neeeing to work later, going into town to eat or visit friends and then not being able to come back unless you can afford to pay a private car service. Not good. Nurses and healthcare professionals count on those hours as well. |
| obviously working public will suffer. |
| Would it run later if there is an event |
| I often have to work hours past 9pm, this proposal is inconsiderate of us individuals who work later shift. |
| Close Metro system at all |
| Eliminating the option to use the Metrorail system during later hours could potentially increase the prevalence of drunk driving, particularly on weekends. |
| This discourages use of metro for social functions (that should resume post-pandemic) or events at down town arenas. It also disproportionately hurts employees of bars, restaurants, arenas, etc. who rely on metro to commute to work. This creates discrimination against blue color and service industry workers. |
| Maybe you are aware that workers need to use Metro to get home after their shifts. 9 PM is much too earlier to support our service workers. |
| If things are open again i.e. Wizards games and restaurants, this would be inconvenient |
| Could not get home from events, most of which end after 9 pm |
| Dc area economy depends on bars restaurants theatre events etc. Closing at 9 will hurt economy and quality of life and reason people move to or stay in area. 11pm last train was already problematic. Other Major cities have later train systems. It's just getting dark at 9pm in summer. We need trains that get us home safely after working late or night out. More drunk drivers on road? More uber traffic causing surging prices and traffic? No thanks. |
| Understandable in short term, hope this would be reversed as evening entertainment venues open up. |
| 9pm is too early. The metro offers a safe and easy way for commuting especially in areas like DMV where the palpatation is very young |
| People need this to commute to and from work. People just do not work from 9 to 5. You need to stay open longer. |
| This hurts a lot of lower income and service workers who rely on Metro. |
| This may work but what about Friday and Saturday, or for special events? Nats games or concerts. This essentially turns metro into a commuter service and not transport for all |
| I often use the metro after 9 PM, coming back from restaurants or bars. This would be awful and would force me to use ride shares |
| Even when working normal business hours, there is frequent needs for service past 9pm |
| Closing at 11 has already made it impossible to use the train for anything like concerts or after-work board games. And 9 is late enough to account for happy hour or whatever. |
| Closing at 10pm would be better |
| You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it. |
| When all is said and done and things go back to normal, how will people including I get to and from the city for late shifts? I'd have to take an Uber or taxi which would cost me my hard earned money when I could be using the Metro. |

Proposal to close Metrorail at 9 p.m.

Trains should run later!! We are living through a once a century natural disaster. These decisions will harm people in the short term and further disincentivize using the system in the long term

A less accessible public transit system is one that will see less ridership year after year.

I live in SE DC and work late and I cant get home from work if the metro closes at 9pm

Honestly, what is the point of even having the metro at all if it's going to be made so inconvenient that it's impossible to use with any reliability. What a joke

Aside from individuals who have to work late, once events resume in the city then people will have a harder time getting home

I sometimes have to work late. It would be terrible to be stranded in DC without metro service late at night.

This seems like a really bad idea! It would strand people who want to go to restaurants or shows. Could have a negative impact on economic recovery.

This would increase both crime and traffic, as well as ceding more power over our streets to unregulated corporations like Uber and Lyft, due to people being forced to walk, drive/park, and/or take rideshares.

The metro provides a safe and affordable option for people to get in, out, and around DC for work and social engagements. Closing operations at 9 PM would disproportionately affect hourly workers that arent working a strict 9-5 job and increase the use of ride share services like Uber and Lyft, which arent affordable options for most people who do not have cars of their own to drive.

Generally, this works. There should be some consideration of extending when large events are held downtown.

When using the Red Line for social outings 10:00 or 11:00 would make more sense.

I attend events in DC that let out around 10 or 10:30 pm

On weekends, it makes sense to run later, at least urban core and close-in suburbs. Facilitate people getting to nightlife and reduce drunken driving.

This includes the weekends too? Just when the city might be coming back, I look forward to being able to take the metro after a night out.

I think this. will result in a higher number of drunk drivers, accidents and fatalities due to nighttime and drunken driving - all from persons going home from restaurants and drinking establishments. Further - this severely impacts restaurant servers and bartenders who will be finishing their dinnertime shifts at 9PM.

It is a source of ongoing frustration that attendance at a sporting event or concert means I cannot depend on Metro service to get me home afterward. Therefore, I am forced into my car. This is a sad, sad situation in a metropolitan area like this. Now the hours would be even more constrained. It would seem WMATA could follow game and concert schedules and, at a minimum, customize service for such events. This lack of imagination is the most frustrating thing for me about Metro service.

George Mason University (among others) has a very high commuter population that takes classes in the evening. When these classes return to on-campus instruction (Fall 2021) they end at 10pm. Therefore WMATA would also lose revenue from students going to campus as they wouldnt have a way to get back after class is over.

This would mostly be fine on work nights but on weekends, it would mean I would have to find another form of transportation to get home. It is very rare that I would be ready to go home at 11pm on the weekend.

People who work late hours have to be able to get home somehow 11Pm is bad enough

Metro should be open later at least on weekends. Also, if metro closes this early, it forces locals arriving late at DCA airport to have to catch a taxi or Uber and removes metro as an affordable commuting option back into DC

how will people get home from work?

Thus would probably cover most of my needs but would not meet my evening needs.

This would really make it difficult to use the metro to go into town to enjoy the cultural and leisure activities of DC. We will be succumbing to the car sharing services

Trabajo hasta tarde necesito poder asegurar a mi empleador puedo quedarme las horas que me necesita

This would prohibit my going to the theatre via METRO in the evening (about 30x per year)

Other essential workers might need longer hours

I would worry that this could increase instances of inebriated driving, and feel it would be extremely burdensome for many front-line workers that have non-typical work hours (such as medical and restaurant staff).

That would eliminate going to dinner, movies, theater and other activities involving later returns.

A big benefit of using the metro is being able to return home from DC at an affordable price on a predictable schedule. It would greatly impede my ability to use the metro and would probably adversely affect that amount I do use the metro. If others are like me, this will inevitably lowering the Metros operating income and begin the Metros death spiral.

Proposal to close Metrorail at 9 p.m.

I regularly go downtown for performing arts events, taking the metro to the Kennedy Center. A 9 pm closing is much too early.

While I dont anticipate riding the Metro often after 9pm, this would be inconvenient. But more importantly, its an equity issue: this change penalizes those who have no other options but to ride the Metro, often to jobs with hours that differ from typical commuter 9-5 schedules.

This would further weaken the metro in an already weak regard. Fast, reliable evening public transit is needed for an economically robust nightlife in the area.

Need later service for evening activities

If I need transportation late at night, I take uber

Nightlife is simply not as important of operations during the work day.

Having the metro open in the evenings is part of the reason it is such a valued service. Anticipating restaurants/bars/venues opening in the near future, late night is a time where the metro would be utilized most. Cutting late night would cause you to lose customers to ridesharing apps.

Late night workers need a ride. What if service slowed down to 45 min headways until midnight?

Many theaters, music venues and restaurants are open much later. Attendees and workers need transportation!

Many times in need to work late and commute by public transportation. Buses stop much earlier this train is my only and safe option

I work late nights, and depend on the metro train heavily.

I often use the metro in the evenings, and 11 pm is already sometimes too early for my needs. 9 pm would make it difficult to use the metro at all outside of working hours, and force me to rely on expensive ride share apps for long trips.

I dont routinely work or recreate after 9pm in the city, although I am a user of the Kennedy Center and would like the flexibility of using the metro between Ashburn and Foggy Bottom

Would not work coming home from baseball games in the summer.

If this was the only change, then this would be acceptable. I have only ridden the metro that late only a handful of times.

This is a ridiculous idea. Who will use metro to go out to dinner or a movie with this closing time?

If they must be shortened how about 10pm instead of 9pm

Would extended service be offered for special events such as night games at Nationals Stadium or Capital One center?

I am an essential worker that has odd hours. I often have to put in late nights to make up for my rent. I cant afford to Uber or Lyft home. I need the money for rent.

This is bad news for our economy - people unable to get to work or home from work, fewer customers for restaurants, theaters, and other entertainment options. Also bad for the environment and traffic - this will force people into their cars, making for more traffic and more air pollution. DC is the Nations capital - come on! This is just a terrible idea.

I mean in the nicest way come on! You want to be a public transportation system in a major city, the nations capital nonetheless, and close at 9? 11 is already too early. Go back to having at least minimal late night service like you used to. DC and the metro area have a lot to offer but if people cant use Metro to enjoy it then what is Metro even doing?! 9 pm would not allow anyone to use Metro to attend sports events, most concerts, normal things like dinner or exploring the city.

I rely on metro rail for MLB and NHL games which end after 9PM.

DC is a city full of young professionals. We ride the metro and miss pre-pandemic happy hours desperately. Closing the metro at 9pm instead of 11pm wont change anybodys habits of being out late, it will just result in a) clogging up the road with ubers at night and b) people moving out of DC since one of the primary reasons to stay despite high prices is convenient transportation that means you dont need to own a car here.

Greatly harm any after hour activities such as performances at the Kennedy Center, Nationals games, and events at the Verizon Center.

I attend night-school at GW university, and (during non-COVID times) would travel to and from class via metro. Some of my classes are from 7-9 pm during the week, and if metro wasnt available, I would have to pay for parking each week (about \$10-\$20) to attend classes. I think a closing at 10 pm would be more reasonable.

9 pm closure will make metro unusable for any downtown activity. Not only it will be inconvenient for the riders, but businesses downtown or on the metro lines will suffer.

I am expecting that by January 2022 I will be working until 9:15 or 9:30pm, so 9pm closure would be a huge burden.

These hours make it far less likely that riders will use Metrorail on evenings and weekends when dining out, attending sports matches, visiting socially, etc. the resulting vehicle traffic in dining and entertainment districts would be unacceptable. As well, these limited hours cut second and third shift workers off with fewer non-car commuting options.

There are plenty of people including family members who work past 11pm and depend on metro

Proposal to close Metrorail at 9 p.m.

| |
|--|
| A lot of people depend on metro staying open late, including workers who may not have easy access to other transportation. Ive taken the train many, many times after 9pm |
| I think this is a terrible idea from the standpoint of public safety. I myself rarely ride after 9 pm but I think it should remain possible. |
| Wow. I know fewer trains at later hours but Ive been surprised to see how crowded trains are even late at night on weeknights at least in central downtown. Add game days or nights at Verizon Center or Nats Park and its jammed ... that means a lot more cars on the street. When part of the joy of living in DC was great public transportation. |
| Is this a joke? This is insane. What will downtown DC look like after baseball games and capitals games? A mess. Uber and Lyft will boom, but carbon emissions of DC will skyrocket. |
| We used to stay downtown for dinner and live events. A taxi home would be \$60. When theaters and entertainment reopen this will kill them and downtown again. |
| Work. After school activities. Meetings. People will be stranded. |
| This would interfere severely with many of our dining and entertainment activities, especially on the weekend. Metro risks losing more riders and lower revenue. |
| Sporting events are most of my nighttime use of metro and unless you are convincing teams to start at 5, shuttering at 9 is insane. |
| Closing at 9pm would lot allow enough time for people to go out to dinner in DC or attend a concert at Strathmore, etc. |
| I generally use metrorail to commute to work between 6:30 am to 8:30 pm. |
| It would require driving to downtown concerts, entertainment, and restaurants, its just too early. |
| I would way rather this and keep the trains moving throughout the rest of the day.I do feel like this will really hurt the restaurant industry and especially their employees that rely on the train. STOP HURTING low-income people. |
| Except occasional game nights |
| We are generally off of the trains by 7:30pm, unless we are at a baseball game. Would you extend the train hours for baseball games? |
| Terrible idea |
| This may cause more people to drink and drive because metro will not be open after social gatherings |
| Not appropriate for residents and travelers arriving at DCA and IAD airports in the evening. At least keep airport metro lines functioning. |
| I dont normally travel after 9:00 pm but this will change my pattern after attending events in DC. such as ball games, fireworks, etc. |
| I often work late. Rhis would have a devsstating impact on the DC area economy. DC would no longer be a world class city. |
| Workers on late shifts need to get home somehow, and many cant afford cars, parking or Ubers every work day, to and from. |
| Night time service is critically important! |
| You are chasing riders away from Metro for 2023 and beyond. Once I quit Metro, I am not coming back. |
| You will kill the theater, sports and restaurant patrons with this schedule. |
| Many businesses close at or after 9 p.m. and an earlier closure of 9 p.m. could leave people stranded. The frequency/availability of buses along the metro station routes would need to be increased at night to keep commuters safe, if the stations are closed earlier. |
| This will put dozens if not hundreds of people who will be travelling home from bars and concerts in the future at risk of predatory behavior as has been seen in Boston. |
| There are a variety of cultural and sporting events that would not have ended in time to avail of Metro with that schedule. |
| 11pm needs to remain the time. |
| Stadium and Arena event workers will NOT be able to work if the 9pm closing is put into operation. |
| Suggest closing at 9PM on weekdays and later, say 1AM on weekends and holidays. |
| Earlier service limits ability to travel around the city with limited availability for car ride options such as Uber, Lyft, etc. in the later afternoon. Impacts would be significant for individuals working later in the evening, connectivity to the airports and overall will increase traffic at night after larger events such as supporting events, holiday fireworks, etc. |
| Many sporting and cultural events in DC area go past 9 pm. I would drive instead of use metro if it closed at nine as the cost for parking would be less than other means to return if out past the last 9 pm train |
| An earlier closing time would be ok for me considering the budget shortfall, but if restaurants/bars continue closing at 10 pm on weekends, service would be needed to allow employees to travel home. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I work late and dont have a car. Getting an Uber/Lyft to work is not guaranteed and expensive |
| I routinely work after 9pm on weekdays. On weekends a 9pm closure means I could not eat out with friends or go for drinks. I do not trust Uber/Lyft, and of course would never drive inebriated. |
| No. This discriminates against residents not working 9-5 jobs and crystalizes the Metrorail system as a space for 9-5 white collar workers. |
| This would decrease going out in the city for dinner, theater, etc as there would not be public transport home. How would people who work in the evenings get home from work?? |
| It will work for me, but may not be good for people working late shift. A reduced frequency after 9pm that meets the need of people working late may be a better option. |
| This proposal would prevent Metro from being used by those who go out in the evening so would have a detrimental effect on restaurants, bars and theaters. |
| If you work late and your only means of getting home is by the train what do you do? You are already taking the train because you don't have alternative transportation, this would be a serious burden on the already underserved communities who can't afford Uber, Lyft etc. This is a hardship |
| I sometimes commute home after 9:00. Not sure if I could adjust my schedule to make this work. |
| Work events in the evenings. |
| I frequently travel by Amtrak and arrive at Union Station after 9pm when returning home. This is in addition of using the Metro if I am about on evening activities. |
| Yes, this plan would work; I would just have to take an occasional Uber or Taxi. I am sure restaurants and places of entertainment would not be in favor of this proposal, as there will certainly be an increased ridership post--COVID. |
| No! Because sometimes I get out of work at 9 . I have no car . |
| This would increase drinking and driving after sports and other events. |
| We need our late night hours back for work reasons |
| Would buses run after 9 p.m.? |
| You create a dangerous situation where people no longer have an option to take a train home at these times. You would force people to walk streets alone, drive where there is no parking, and possibly drive while inebriated. Also, this would really leave service industry people high and dry at a time when they are suffering the most. |
| People need to be able to get home from late shifts and other evening activities. Cutting the hours so drastically may cause people to need to cut their evenings short (depending on their locations) so DC restaurants and theaters may end up seeing lower attendance after a year+ of already lowered attendance. Id also be concerned about people without car access having to cut their hours or if they can get cars an increase in traffic in the metro area. |
| I assume WMATA came up with this time by reviewing the data on how many riders the system gets and where the sharpest drop off is. I think 10pm would be better because of late workers and people rushing to get home but splitting the difference may provide the most benefit for both Metro and the customers. |
| This would make it impractical for commuting to DC |
| What was thinking behind 9 pm as opposed to 10 pm, for instance? Couldnt there also be more limited service after 9 rather than elimination of service? |
| This means that folks who want to go out or who work into the evening would have to use other transportation--that doesnt make any sense. This would also increase the number of people who go out, drink alcohol, and then drive home because there is no Metro after 9. Crazy! The Metro needs to stay open even later on weekends. |
| I think it depends on the line and stations. For DC and more urban parts of VA and MD the closing time should be later. It also depends on the season. It might be too early to close at 9 in summer. |
| 9 pm is too early to close for those going out for dinners in restaurants or visits with friends. 10 pm would be better |
| Im a DC United STM. Matches typically end after 9pm. This change would mean I wouldnt be able to get home by metro and would have to either drive to the game or take a cab or ride share home which is significantly more than metro. This change would also impact fans attending baseball, hockey, and basketball games. |
| Porque los horarios de trabajo a veces hacen que uno se quede hasta mÃ¡s tarde |
| Requesting metro hours to remain open until 11pm. |
| This plan means I would rarely use Metro at night and would be forced to seek other transport services. Frequency of service is one of the keys to rider use. Infrequency significantly deters ridership. Why are you stranding people at sports and dinner events? |
| System needs to stay open until 11 PM for workers to finish late shifts and get home as well as for visitors from VA & MD enjoying sporting & entertainment events or shopping or enjoying museums in DC who need to return home same night. |
| Very early closure for a large city transit system |

Proposal to close Metrorail at 9 p.m.

Assuming that performing arts venues would be functioning again by that time, such early closing hours would be a big problem for me.

Trains need to stay open until 11 to keep people safe. If you cut off service at 9pm, people will be stuck with no affordable options to get home.

I tend to work late, and will use the metro to go to my girlfriends place after, but wont stay the night, so I typically catch one of the last trains. There are still plenty of people on the train past 9PM, and I think this will hurt peoples commutes. This is very inconvenient.

Metro would become essentially irrelevant for anything other than work commuting in this case for many folks

For those of us who work evening shifts, metro is a critical way to get home. Especially given the lack of saftey in biking at night, metro is a safe and important option!

9pm closing means that any evening activity on our part would necessitate another form of transportation beginning well before 9pm. Metro would lose out on our ridership earlier in the day, plus there would have to be more use of our car -- traffic, parking...

Unacceptable proposal for ridership equity considering many workers end shifts at all hours of the night especially our frontline workers who will still be essential even in January. Also as a former student, many evening classes end around this time and metro transit is essential.

I am not a bar-goer, but when night life resumes, this would be very devastating to the businesses, as people would not be as free to stay downtown DC, Bethesda, etc.

Perhaps there is a way to stagger the closing times? So, maybe it would close earlier on certain days (determined by ridership) and then stay opened until 11pm on others.

Work

I rarely go out past 9 p.m. anymore and I try not to take Metro at night.

Early closure would virtually eliminate much of my familys activities.

Because of COVID-19, shifts hours at my government workplace are 4am-12pm or 2pm-10pm. If you stop service by 9pm, you will lose all the riders who take the metro from work to their homes. Also once businesses start opening up more as more individuals get vaccinated and we start building herd immunity, people will start going out a lot more and will need a reliable service to get home, which has always been the metro. I would continue your hours until 11pm to accommodate this crowd.

Without the option of Metrorail, more people will make the poor choice to drive after drinking. Alternative transportation can also be cost prohibitive for people trying to get home from work, or from recreation. And if people use taxis or shared rides instead of rail, it will increase traffic noise and risk of crashes at night.

This would leave a lot of passengers deserted, especially those who have to work late.

9pm seems very early. Im sure there are riders who depend on Metrorail for their evening jobs who are not commenting. I personally find myself out later than 9pm and although I am able to catch an Uber, etc, I would rather be environmental and ride mass transit. Note: I do not depend on Metrorail to get to work. I am commenting as an occasional rider.

This is too early of a closing time.

Lots of things happen after 9pm. Lots of people work past 9pm.

Too early to close. This would make it very difficult to maintain my current schedule.

Most late night concerts conclude after 9PM

This plan would force me to find alternate means of travel after events when they allow sports and arenas to reopen. Unfortunately I think this will lead to increases in Drunk and Influenced Driving as there will be one less safe option for transit at a time of day when many people are leaving events, bars, etc.

When I was regularly commuting to my office I was often riding Metro home after 9 PM. The same is true for weekend trips for recreational or other personal reasons. Closing the system at 9 PM would render it unreliable and essentially useless for those reasons.

10 pm would work better for me.

11pm is too early. Therefore, 9pm is obviously too early.

Personally typically do not use Metro that late in evenings (though its always been nice to have available on those occasions I am working or out late).

Horrible for people that have late working hours and use the Metro for late night recreational travel.

Completely detached from reality. Need a public transportation after 9pm.

The ability to travel home after 9pm via Metro is valuable both personally (expense, safer alternative I can rely on, etc.) and because without it less people would be likely to support dining/bar/entertainment venues further from their homes (when its low-risk to do so). Also it would make it less safe to be out later further from home.

It will make weekend nights a bit tricky for people. Perhaps it could stay open a little longer on Friday and Saturday nights.

Proposal to close Metrorail at 9 p.m.

I think that will impact a large crowd in a negative manner. For example, what about people who go to Nationals games? They rely on the metro to get home after a game. If you eliminate the ability to ride a metro that late, there will be a surge in other prices that will be challenging for the average person to afford. Additionally, many bars/other businesses rely on nightlife to sustain their business and ending the train at 9:00pm rather than 11:00pm would negatively impact the number of customers/foot traffic. Impacts small local businesses the most.

This would be bad for people in the city who use it as a tool of mobility. By limiting opening to 9, only commuters would have full accessibility. People wishing to use the metro for regular purposes, or those who work late, would see the metro just as a means for people on outlying areas to commute in and out of the city. The metro must be a means of moving around the city without a car, otherwise people will use cars and cause worse traffic.

This would work with my schedule on an every day basis, however there are occasions in which I work late or have a function after work which might find me needing to travel home after 9pm

We use Metro in the evening when we go to Washington, DC for dinner, sports events or concerts. I would not like Metro to close at 9pm.

Think of the late shift workers.

Makes it impossible to get home from work

11pm already seemed too early of a closing time. 9pm would rule out metro as an option for commuting for recreational or post-work activities.

This eliminates the possibility of enjoying any of the anticipated night events, such as sports events, concerts, plays, dinners, etc. Unless times of events in DC are adjusted to accommodate transportation, this seems completely unreasonable, and eliminates the benefit of why more non-commuting riders would use public transportation. This also indirectly encourages driving under the influence, by eliminating opportunities for affordable transport.

People rely on metro when going out and seeing friends, work, or going out to eat. This would limit the time spent with others

You need to stay open past 9 pm!

Suggest 10 pm (compromise) as 9 pm is too soon to close (if after work meetings, dinners, etc.).

We used Metro to travel into the city on evenings and weekends, often returning well after 9pm. To revive the local economy, service should return to running until 1am so that it can be used by people coming into the city for entertainment and recreation not just by commuters. I would gladly pay higher taxes if I knew this would be the result.

This disproportionately affects the service industry

For some people, the only way to go to work is public transportation or it is difficult to drive because of parking or hours long traffic. Not to mention, not everyone has a 9-5pm job. Some people have to long longer hours and rely on public transportation to get them home safely. Trains should be operating even later especially on the weekend given events in the city. Not everyone can afford or trust companies like uber or lyft to get them home everyday especially if the commute is long.

if/when I am in this situation, taxis are available. Not possible for everyone. Just dont work late hours.

Would be better if it could be open till 11 on weekends

This doesnt allow for people who are going out for dinner or who work in restaurants to commute during the evening.

Pre-pandemic, I would regularly work late in my DC office 3 to 4 nights per week and rely on Metro to return to Virginia. If the Metro closes at 9:00 p.m. I would then need to rely on Uber or Lyft, or begin driving to and from work to guarantee a safe and reliable return trip home. I would then reconsider my use of Metro at all if driving and ride-sharing became my more frequent method of commuting -- which defeats the purpose of Metro trying to increase ridership.

Likely to cause occasional problems with commute home

Evening hours of operation help keep riders safe who need to be out later into the evening. Strongly recommend keeping hours till 11pm.

The change seems to both hurt commuters AND people who live in the city. Proposed closures of stations and decreased trains hurts those in the suburbs and this proposal some how at the same time makes this a service designed only for commuting. It seems as if the goal here is to decrease ridership, make it less safe for people to get around at night, and to increase the wealth divide by forcing individuals to use taxis and Ubers to get around at night.

sporting events are a problemmetro in and Uber back home can be expensive

My self employment, in the tourism sector, requires that I work evenings- and definitely past 9pm. I would be (hopefully) only coming back to work after 2 years of pandemic unemployment, and would face this?????? It would be a crisis- another crisis!!!!

How about essential workers who have to commute from downtown to exurbs - stores close around 8 or 9. This would mean they would have to drive - lots of stores and worksites don't provide free parking and parking is so expensive downtown. This is absolutely unconscionable and would be awful for essential workers

Proposal to close Metrorail at 9 p.m.

Absolutely NOT. We do not need a city that is only accessible to those with cars. We can be responsible and put money into public transit, rather than redoubling efforts to keep DC and the metro area chained to the oil and gas industry and the environmental damage that it has unleashed.

I work late till 9pm

I worry about people who don't like to travel at night. Will they have to walk home if they don't have the money to Uber?

Closing at 9 would disadvantage shift workers who work late until the night. It would also be a public safety hazard because it would cause tired or inebriated drivers to be on the road rather than take the safer metro route home.

At least half of the trips I take require service well into the eve. You would LOSE ME as a Metro customer if the service shut down at 9 PM!

I use the Metro to meet with friends in and around DC to enjoy the nightlife. I would much rather have the flexibility to be able to take the train home in the evening than have to spend 10x the money on a rideshare service.

I take Metrorail to concerts and shows that run later than 9:00.

So people can forget about using Metro for entertainment purposes? Shameful!

Evening activities will be curtailed with this proposal. Many people cannot afford to take ride share transportation instead of Metro.

I have had many occasions where I have been out late and relying on the metro to get me back home because I trust it and its safety. Without late metro hours, I would have to rely on friends, ubers, or limit my late night activities, all of which have negative consequences.

Mostly yes, but I rely on metro (as many others do) for getting home after sporting games so would be good to see some exceptions

Washington is a world capital. It is ludicrous for us not to have world-class service. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

We frequently dine in town and go to shows and games so need the metro open later

Many of the properties (apartments, condos, houses) near the metro here are rented out to University students or other young adults, who take the Metro to evening classes, and/or enjoy taking Metro to socialize. There is also nightlife (restaurants and bars) near the Metro stations that others travel to. This may have an impact on where those individuals will choose to live or which nightlife establishments they choose to visit. This could have a negative impact on these communities.

This will make it more difficult to keep DC and the suburbs connected after the pandemic and will make it impossible for folks living right outside of DC to attend many cultural events and social gatherings, if the price of ride sharing home at night is prohibitive

this would impact negatively low income workers that work in late shifts

It wouldn't be a problem for my work commute, but it would definitely be a problem for entertainment and seeing friends in the evening.

9 is too early to metro home from a cultural event or dinner. This will drive more people to drive and you will lose further ridership and divert more traffic to the roads.

With the exceptions of weekends. Trains should run longer on Fridays/Saturdays

I use the Metro for work, but I also use it for going out to eat and drink. This would limit how I can do that and would require more usage of car/taxi services.

People take metro, especially on wed and weekend evenings when going out and not wanting to drive - early closures would impact sporting events, concerts, plus many more activities

I do take metro later times, also it is very convenient to travel to the DCA airport in you have later flight or arriving late.

2nd and 3rd shift choices would be greatly effected by this. People who rely on this transit to and from work would be adversely effected.

Absolutely not! This plan does not accommodate service workers who rely on the metro for safe, affordable (for DC) transportation and would compromise students who also travel to school the metro. This would force more cars on the road and have a detrimental environmental impact.

People work late and need to get home. There are events around town that do not end till late and how is everyone suppose to get home: capitol center, Warner, 9:30, Wolf Trap, Kennedy Center to name a few. Restaurants, movies

Kills attending events in DC.

Assuming we are relatively back to normal this would curtail my evening dining and entertainment

Not ideal, but I understand budget constraints

I'm often out after 9pm, and with metro as my primary mode of transport, this wouldn't work for me

Proposal to close Metrorail at 9 p.m.

| |
|---|
| This is entirely unfair and unworkable for people who rely on Metro who work at restaurants, bars and other late-night venues. Would also eliminate use of Metro for attendees of events at Nats Park and Capital One Arena. Extremely poor idea. |
| This option eliminates metro for evening travel, would adversely impact shift workers, would increase costs of attending any evening event, and increase traffic. |
| It would cut out access to evening activities |
| I could see this working during the week, but on weekends or nights of sporting events (should we get back to some sort of normality) than later hours would be nice. |
| I do use the train for outings so this does not work for me. |
| Would want the weekends to be longer hours |
| This would be impossible for anyone working a restaurant job or other late night employer. It is already difficult enough to have service stopping at 11pm. |
| It would work for me; however, many people work evenings and weekends and this may have an impact. |
| 9pm is too early for anyone returning from ball games, concerts, etc. |
| Would be a problem if we chose to go out to eat in a restaurant downtown or went to an event in the evening. |
| It would work the majority of the time but not always. |
| Doesnt meet needs for restaurant dining, theater. 9pm is much too early. Will also have adverse effects on businesses. |
| I sometimes come to town on the Amtrak. If the train is late to Union Station, then this could impact me. |
| Activity should be very close to back to normal. Which means extended hours at the office. Closing at 9pm is a bit early. |
| Would have difficulty coming from DC to Maryland on weekends |
| NO this would heavily impact my job and day to day activities. I am not able to afford transportation other than metro |
| I love having the metro available to take home after dinner or happy hour on weeknights and on the weekends. Without metro running late, I would need to use Uber/Lyft/taxi to get home which would cost significantly more than metro. |
| It would be inconvenient, because I would have to finish my errands prior to 9 PM |
| This would effect when I attend after work activities or presentations where I rely on Metro for transportation. |
| Given that 9:00pm is based on center-city stations, that means last trains from suburbs are well before that. We need night service when folks are out of work with shopping/entertainment/etc. not just rush hour/tourist service. |
| I prefer to have the flexibility of Metro open until 11:00 but not essential. Not on weekends. Makes for easier restaurant commutes after dinners |
| Metrorail service should not be limited to normal work hours. Metrorail is relied upon by many for late and off-peak trips. |
| While I am not usually out late in the evenings, I thinkâ€given that I am not comfortable getting into an Uber or Lyft drivers car during and post-pandemicâ€I would rather ride the metro home if I do happen to be out late. Maybe instead there could just be less frequent trains between 9â€11pm? |
| We were hoping to use the Metro to be able to attend the opera and concerts at the Kennedy Center and this would make that impossible. Other than that, I doubt that it would affect us much. |
| This would not affect me directly but it does concern me given the need for transport past 9pm for workers in the service and other similar industries |
| This gives no access to a majority of restaurant and other late night service workers. |
| Hell no |
| Attending downtown events and activities, even a dinner out, would leave me stranded... unless I shell out money for a ride share. |
| How about 10 PM? |
| 9 is too early for most sporting events and activities in the district. |
| Closing at 9 would be one of the least worst ways to balance the budget, I would agree. Obviously 10pm would be better. Has any thought been given to closing selected stations on weekends only to help save costs? If many (most?) of the stations were closed on weekends - assuming that the whole system wasnt entirely closed on weekends |
| I have to imagine it would save a lot of weekend operating costs. |
| No urban transit system anywhere, let alone one in the capital of the United States, should shut down that early. This would ill-serve area residents and tourists alike, and turn us into a laughing stock. |
| servers, bartenders, retail workers, custodial workers, entertainment workers are how our economy goes, you have to let them get home. 9pm is absurdly early |

Proposal to close Metrorail at 9 p.m.

Closing at 9 PM would work for the majority of my metro trips, except for special events like Nats game for example when I would suggest the metro remain open until after the event.

Life will be back to normal in 2022. Restaurants, theaters, sporting and social events will be back and it will be unacceptable and of no use to close at 9:00. Not to mention that the workers at these venues likely cannot afford daily Lyft or Uber rides home.

I am never on metro that late.

The nations capital cant keep a rail system operating every day until 11 PM. It should be operating 24 hours a day.

DC is a major world city. The city does not close at 9pm. This is a disservice to service workers in particular and unacceptable.

I enjoy nightlife in DC. I miss the old days where metro close at 2am, not before midnight. So 9pm is worse than 11pm.

9 pm post-pandemic will drive ridership away from Metro. 10:30 would make more sense.

I work at a job in DC where quite often I have to work late. This schedule will interfere with my ability to do my job. Further, this proposal will hurt the DC economy and by extension metros budget. People who want to spend time - and money - in DC eating out and drinking and other types of recreation will be affected by this, since so often its easy to go to places in DC using metro. Dont forget that revenues from commercial businesses also flows into metros budget, and restricting peoples ability to access those businesses hurts DC and metro financially. Also, this proposal once again creates a vicious cycle where people stop using metro because its inconvenient, thus leading to decreased ridership and revenues for metro.

Not only would this be inconvenient - I work long hours and rely on Metro to get home at night - but it would have profound impacts on the citys nightlife. Downtown DC relies on folks staying around after work, and this will be hindered by the Metro closing earlier. Additionally, weekend nightlife, and sports game travel will be severely impacted - including endangering people due to increased driving, potentially drunk driving.

Completely neuters the usefulness of the system. If I want to go into the city I cant get back out without Uber or car ride. Would increase individual costs. Hard no to this.

I am fine with a weeknight closure at approximately 10 p.m. This would allow individuals taking night classes at local colleges and universities to use Metrorail to get home.

Friday/Saturday service should remain at 11 p.m. or later.

This would negatively impact DC area night life and especially hit service workers hard. You should be discussing staying open later! This would put more cars on the road late at night and lead to more drinking and driving. Also, ever seen a Nats night game end before 9:00?

People work late hours and having to cut short would force people to get taxi/rideshare services.

Forcing carless DMV residents to pay surged fares on rideshare apps instead of being able to ride the rail home after dark is an unbelievably inappropriate option.

This is very bad.

Missing the last train is always a difficult situation to navigate, and you cant account for some things that may delay your ability to get to the metro in time for the last train, especially if the time is changed. Commuters have planned their time around the current schedule, and it could lead to difficult situations if changed.

I think service should go into the evening for people to use after dinner

This is ridiculous and will affect anyone working in any industry that closes past 8:30 pm. Please reconsider your planning.

9pm is too early to close on weekends. Could you please stay open until 11pm on weekends?

This would result in me going downtown less because I wouldnt be able to get home from late night activities, but it wouldnt affect my daily commute so it would be an acceptable change if required for the short term.

I am perfectly fine with stations closing early on weekdays. However, I would like to see stations open later on Friday and Saturday night.

I would hope runs would be added as necessary to handle events such as a CAPS or Wizards game begin to allow large live audiences

Inconvenient for attending work events, sports events, birthdays and other celebrations. 10 oclock would be more realistic.

what about when there are sporting and entertainment events at MCI and other major venues? DC does not have adequate, reasonably priced parking.

I would hope to be able to take the metro home from evening performances at the Kennedy Center or other venues. Bad idea.

This would probably work for me

Would prefer consideration of events such as sporting events, concerts from arenas and stadiums and staying open an hour after the event ends.

Later night hours are essential

Anyone working in or visiting a restaurant would never be able to take a train home. Possibly even anyone working late.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| 11 PM is already too early a shut-down, particularly on weekends. This will make traffic even more unmanageable than before when there are largely-attended events at sports stadiums/arenas/conference halls/concert halls. |
| I fear this would increase likelihood for drunk driving, especially on weekend nights. If a change had to be made here, I'd recommend 10pm instead of 9. 9 is very early. |
| WHAT? I GO HOME AT 10 AND ENDING AT 9 IS BAD AND NOT GOOD! THIS BUDGET IS VERY BAD AND SHOULD BE REPEALED! |
| I'm more likely to need the metro later, when more bus lines have closed, and fewer people are able to provide transport to me |
| Trains must run at least until 11:30 p.m. to accommodate riders who work night shifts, who attend sports events that run late, or whose work requires overtime. |
| I use the metro coming back from the city in the evening. |
| Washington, DC is a world-class city or it isn't. If it is, then Metro service is needed - at the VERY minimum - until 11pm to service evening/night workers and a vibrant nightlife, both of which have significant economic implications. |
| This would hinder my options to travel around the metro area in the evenings. |
| How about Fridays and Saturdays. Wouldn't this impact access to sporting events and other nightlife events downtown. |
| This would unevenly effect those who do not use the system for traditional 9-5 jobs (ex. students, those without other travel options). |
| This is way too early a closure, and could cause an increase in drunk driving, especially between DC and nearby suburbs. In post-COVID times, commuters will likely resume going for happy hour or dinner after work before taking Metro home. Also shift workers need to be able to get home from their jobs safely- restaurant and bar workers typically have no ability to park at work and must rely on Metro. Please keep Metro open and available for safe transport in the evenings! |
| Given the entertainment and arts in the DC area, this would seem to deter taking public transit to attend entertainment and arts events, which largely operate after 9PM. At least expand the hours on the weekend. Seems very odd for the major city to close public transit at 9. Also consider the tourist and convention visitors. |
| However, there are people who rely on nighttime commuting due to the nature of their jobs (those cleaning office buildings, restaurant and retail). Consider 9:30 or 10pm since many of the service industries close at 9pm. |
| 10 pm would be a better compromise. |
| Essential Service should continue until 11am considering buses and trains from Union Station operate past 9am. The last commuter train is at 10:30pm. The last departing Amtrak is 10:00pm. Trains arrive past 10pm as well. |
| I expect this would put more drunk drivers on the streets and hurt businesses that function in the evening. Is there enough parking for all the extra cars that would be needed? |
| My tenants rely on the metro for safe evening travel and if the metro is close my rental property near metro will be very devalued and I will lose money that my family relies on! |
| This makes difficult to see a show and make it back on metro. |
| This is absolutely ridiculous! 9pm is very early and if someone lives in the suburbs and requires the metro, a closing of this early of time would make it impossible to meet someone out after work or to go to dinner. |
| Sometimes my travel home is between 10 pm and 11 pm. The change will require rejecting metro permanently in favor of a personal vehicle. |
| It's a convenience that the trains and buses run to 11, as it provides another option for entertainment and dining purposes under non-pandemic conditions, but it is not a necessity. This would not affect my work schedule. |
| Before dropping back to 9 pm, perhaps 10 pm might make sense initially? What about downtown or Monday night sporting events? Will exceptions be made to support fans? |
| This is very inflexible and unrealistic. People work late and will need a way to get home. |
| On weekdays I wouldn't mind that as I'm rarely out past 9pm and needing to return home on Metro. On the weekends or once sporting events return, I would be stranded far from home without Metro service past 9pm. |
| I rely on Metro to travel to & from Nationals games. Would work for me if accommodations made for later sporting events |
| Evening service is very important!! |
| 9pm on weekdays and 11pm on weekends would be more feasible |
| This would put an end to going to any evening public events downtown. That might be fine during the pandemic, but afterwards, it is not. Plus, there are lots of service-industry workers who rely on Metro to get to and from work, this proposed schedule change would make it very hard for them to get home at night. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Shows and events end after 9p making it difficult to use metro for shows & events. |
| Except for Concerts or ball games |
| I think this would work for a year while things are getting back to normal, but once I am able to see more people and go out to socialize, the 9pm cutoff would be hard. |
| Having limited access to public transportation at night will make activities downtown less accessible. I will think twice before staying downtown at a restaurant, the movies, a sports game, etc. |
| It is fine. I am an early bird. |
| This would seriously impact necessary workers who may not have access to a car. |
| 10 pm would be better. 9 pm is too early for many events in DC |
| I don't use metro in the evening. Only to commute during the day. |
| For a major metropolitan area like DC, such an early closing time does not seem reasonable, particularly if it applies on the weekends as well. |
| While I could adjust my work and errand schedule to conform with this, I fear how this will negatively impact those who rely on the service whose schedules necessitate commuting later in the evenings. With often 30 minutes between trains, this puts even more stress on people who have to travel in the late evening. Miss one train after 8pm, and there is little room for error. |
| But it would make attending night events e. g. Concerts at Verizon center almost impossible. I would not trust to find parking. Switching to Uber would be the only alternative |
| If the DC area experiences increased tourism and nightlife because of vaccinations and loosening of restrictions, then 9 p.m. wouldn't help the local economy recover. In addition, allowing for special event service hours (late sporting events, concerts, etc. if allowed) was not mentioned in this proposal. That said, if we are at current ridership levels and COVID-19 restrictions remain, then 9 p.m. seems reasonable. |
| As a non-car rider, I have relied on the 11 pm closures a lot in the past |
| Yes, but it would be inconvenient as traveling after 9pm would involve a much more costly Uber, or navigating by bus, but that is also limited. |
| need to balance serving the public vs being fiscally responsible |
| 99% of my metro rides are commuting to/from work. |
| As long as sporting games had extended service nights, this would be acceptable. Otherwise no. |
| People with late night long-distance travel plans need access to Metrorail stations beyond 9pm. |
| This makes it impossible for anyone in the restaurant industry, entertainment industry, or any other late-night industry to get in and out of the city. This puts a burden especially on those not wealthy enough to own cars, who would be the most likely to work in jobs that require late-night commuting. The burden is disproportionately on the lower income population. |
| As an avid public transport user I was disappointed in pre-pandemic times at the unreliability and infrequency of WMATA's service schedule- it is not reflective of being the capital city's transportation network. It trailed far behind New York, Berlin, London etc. To now consider even poorer reliability of service and frequency is incredibly disappointing and concerning. |
| This does not allow for public transportation to workers and also individuals going to events and restaurants. It may affect the revenue of places of business. |
| Not ideal, but I can deal with it. It will hurt restaurants and bar late hour business though. |
| Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station. |
| Minimal impact to me rarely use metro after 9PM but might impact some sports attendance. |
| A 2 hour reduction would not impact my expected travel needs and use of Metrorail on the weekdays or weekends. |
| Closing at 9 pm would encourage drunk driving and make it difficult for service workers to get home at the end of their work shifts. |
| Stranding riders who went to dinner or events would really discourage ridership. Metro in and Uber back? Perhaps, but I'd probably just use a car app for both trips. |
| Many, many people frequently work past 9 p.m. or are traveling to see friends, attend concerts or go to restaurants. It would strand many people with no way to get home if metro closed at 9 p.m. My partner works until 10 p.m. at his job and needs metro to be open until 11 to get home. |
| No this undoubtedly has to be THE WORST of all the ideas available might as well never ride metro if it closes at 9pm a lot of people aren't even off work at 9pm what the heck kinda garbage idea |
| I think this is a practical and reasonable approach. |

Proposal to close Metrorail at 9 p.m.

I am frequently out past 9 and this is very limiting. This is not reflective of the major city that DC is.

It wouldnt necessarily affect my commute, but it would affect the vibrancy of the DMV region and increase traffic.

You have to consider special events that happen at the different sporting and concert arenas in the area and need to stay open longer.

I frequently travel past 9. It is unacceptable for a major city to end its mass transit rail service at 11, let alone 9.

Would reduce mobility particularly for those working later and those wanting to attend evening events or return from out of town travel.

11pm is already too early to close a major city metro system. This would further crowd streets with Ubers, taxis, etc., increase the risk for drunk/distracted driving incidents, and would make transportation to major sporting and entertainment events increasingly cost prohibitive

In a major metropolitan city, even 11pm isnt late enough. At 9pm when (post COVID vaccine) everyone is in town - how do we get home?

I would be okay with this if there was another alternative transit option kept at that hour.. preferably bus.

I think shutting down metro at 9pm will hurt the ability of the area to recover from the Pandemic and will adversely impact entertainment, tourism and business.

I have friends in DC, e.g., Cleveland Park. It would make it difficult to visit my friends for dinner and conversation. Parking in Cleveland Park is non-existent. I wouldnt want to curtail my social life just because Metro closes at 9 pm. Also, closure at 9 pm would effectively render Metro useless to any number of people, e.g., late afternoon/late evening shift for employees. A 9 pm closure would effectively make Metro irrelevant. With 9 pm as a closure and 30-minutes, you might as well simply shut down the entire system indefinitely. Any of these proposals would be a shocking waste of billions of dollars of public investment

This plan could work if other alternate buses, shuttles or services are provided after 9 for customers who need it.

This might work, except when the Nats are playing. Also, parking restrictions should be relaxed in the evening if metro stops running at 9pm. Otherwise, it will not be possible to visit theaters and restaurants downtown.

Again, this will cause you to lose ridership. If you need revenue, you need people to feel like metro is a viable solution to driving.

This is so thoughtless for all non 9-5 workers. Not only that but by 2022 more people will want to go out and spend time away from home, this plan would hurt multiple businesses in DC that have already struggled through a pandemic.

Recovery of night life in DC depends on Metro running as late as possible. Proposal 4 is a terrible plan!

I often travel after 9 pm, in fact almost every day. If you close down service at 9 pm you might as well cancel all service for me. I dont have any other mode of transportation to and from Grosvenor to Regan Airport and Crystal City.

I rarely take the train that late, but when I do its essential

Its a horrible idea. The system should operate until later than 11pm. Youre forcing people either to drive or into Ubers, etc., when they might be out eating, taking in shows, etc., after 9pm. Why?

I rarely leave work or events early enough to take that ride, so I could basically never ride metro as I wouldnt have a way to get home. I would have to buy a car. This also seems more unfair to people who have to work late (which is not me, I just choose to) than some of the proposals with limited trains.

no, what about weekends? rider cannot spend more time in the DC area recreation events (i.e. restaurants, museums, bars, etc.) if service is cut off early. This might also affect business in the area

This is unrealistic and detrimental to riders who rely on safe transit at night versus walking. If anything, metro should be open later.

This proposal is best. The rest would severely effect riders and may cause us to turn away from metro all together.

This limits people ability to move around the city- forcing people to use less climate friendly modes of transportation such as ubers or driving themselves.

This would further erode service and discourage use, making Metro lose more revenue. This change would make using Metro useless for many tourists, showgoers, late workers.

NO! This will kill the recovery efforts of evening businesses and venues (restaurants, performing arts, other events). If not every day, have late service on weekends and two to three weekdays. (Quiet Mondays and Wednesdays?)

A lot of people depend on metro to get them home from work.

This is outrageous. During the pandemic people that HAVE to go to work and didnt have the privileges of working from home were losing their scarce jobs left and right. With this proposal to limit service hours (Which are already short comparing to other metro rail systems), what is the point of having the metro at all?

I am often out later in the evenings. If the Metrorail system closes at 9pm, I will have no way of getting home after 9.

Closing at 9pm is too early. We use metro orange line to access restaurants from East falls church and 9pm closure would force many to drive to that congested area.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I use the metro for evening commitments and 9 is too early to shut down. |
| This would work for me personally because I almost never take Metro at night, but I fear for the people who work late shifts at restaurants or hospitals or wherever. How would they get home? |
| Seems ridiculous for a major metropolitan transit system, but would not impact my riding habits |
| I have several jobs trying to stay afloat through this foolishness and they all start and/or end at different times. Many times after 9pm |
| So long as service is provided at every station along the Orange and Silver lines, this plan would be acceptable. |
| These changes to the Metrorail Service hours would prohibit me from going to sporting events. |
| Would lead to increased driving under the influence. |
| This will make travelling in and out of the business core difficult. |
| Horrible. What a detriment to DC events: sports, theatre, concerts. |
| Among all proposals, this one does not make any sense. How would that contribute to the city? How would close at 9 pm would give back to taxpayers? The city needs the metro! |
| not able to take Metro home from the Kennedy Center and other events downtown. |
| 9pm is a little early. Some people, including myself, who work long hours and rely on the metro to get to work and back home late at night (10pm for example) will have to consider other transportation means for this, which means less people will be using the metro |
| This does not serve people who work late or people who want to avoid DUIs. |
| This would make it extremely difficult to use metro to go almost anywhere in the evening, not to mention impossible for those who work nights to use it |
| More time for arriving home |
| Metro should not just be for commuting. It is an important means of access for social amenities in the city too. |
| In what world does this work? There is so much vibrant night life in DC and this will put everyone out in a huge way. |
| This would make. Metro an unlikely option for any evening activities |
| Once post-pandemic activities resume, it would impact evening plans. I feel safe at night waiting in metro stations and traveling on the metro. I do not feel as safe waiting for buses at night. |
| Personally, I could work around this, but I acknowledge it would probably be a hardship for others using Metro to get to/from work at night. |
| This works for my own regular work hour job, however I imagine many essential retail workers whose stores close at 9pm would be unable to leave early to catch the last train. 10pm may be a better time is a reduction is looked for. |
| Sometimes I work late, others go out with colleagues for dinner, if the service times are cut, I would have to rely on other modes of transport, taxis, ride share or most likely stop frequenting establishments in DC or NOVA and just go home instead. I have lived in other countries and service stops Midnight or up to 2am in most locations and run all night weekends. |
| If I am able to return to my pre-pandemic travel arrangements, I would like to go to events that last longer than 9pm. This is the one proposal I find totally unacceptable. |
| Sometimes I would have to stay late at work past 9pm. |
| 11pm already sucks, and no one should be going out partying during the pandemic. If you want people to be able to go enjoy DC nightlife when its safe, you need to have metro open late enough for revelers and workers who depend on metro to get home. |
| This basically gives up on the idea of Metro as anything other than a commuting mechanism. This increases traffic in all the going-out areas -- people will have to drive if they cant take the train -- and youll probably end up with more people driving drunk. Very bad idea. |
| This is disproportionately punitive on low income people. |
| Due to the odd hours that many are working to feed their families, closing 2 hours early would be detrimental to their livelihoods. |
| I often rely on Metrorail to take me home after evening events. This would not work for me. |
| It is not ideal since a dinner night out might run late. |
| I rarely travel that late, so it would work for me, personally. |
| Absolutely not. Metro as it is does not run service at needed hours. I work construction and when you have to get to the job site early in the morning, metro is not available. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| If that means not closing any stations, particular Grosvenor, then that is acceptable. |
| I work at George Mason University and classes dont end til 10pm plus major events at our arena and concert halls end after 9pm, meaning no one could use Metro to travel to campus. |
| No please make it open later to allow those who work in restaurants a safe and affordable way home. |
| Weekends should go longer |
| 9 seems early, 9:30 or 9:45 would be more reasonable. |
| It's unsafe for people to not have late night transit options |
| I think 9pm is way too early to close, especially on weekends and for people who work outside of typical 9am-5pm hours and rely on metro for transportation. I think a 9pm closure would negatively impact establishments such as bars and restaurants as well. I use metro after 9pm often on weekends. |
| If the train closes at 9pm, there should be buses running those routes after 9pm to 11pm. |
| I sometimes use Metro to travel to evening events in downtown DC. Assuming in-person events resume by January 2022, this plan sounds like a disaster for those attending events and downtown restaurants. |
| I would not be able to go into DC for theatre,concerts and other entertainment. |
| This plan would help in stopping residents from going to Washington and would help reduce your revenue. |
| Does not provide convenient way to get home after going out to dinner, event, etc. becomes commuter train for professional workers, hurting low-income/those with jobs in service industry, health care, etc that rely on metro as only form of transportation. Further constraints on already struggling businesses. |
| What if there is an event such as game night, how are we supposed to get home? |
| Would not be able to use metro for weekend entertainment travel, eating out, meeting friends. |
| Unless restaurants and all public venues close at 8:30, this doesnt work. Employees of these places need to be able to get home. |
| Being able to attend concerts and plays by using Metro rail is wonderful. Having it close earlier would have a negative impact on the hospitality and theater industry. |
| I work long hours and having the train available until 11 allows me to travel home safely and not have to relay on taxis or other rideshare platforms. |
| DC is not just a city of 9-5 workers. Closing at 9 p.m. makes it significantly harder for anyone working odd hours to get to and from jobs. Closing at 9 p.m. will have significant impacts on the robust arts scene—plays, concerts, etc. end after 9 p.m. How are they getting home if they took metro to the venue? Same goes for sporting events, and its even riskier there—how many people drink during a game and rely on metro to get home safely? I could go on. |
| How about closing at 9 pm on weekdays and 11 pm on weekends? |
| Weekends require later closing. Otherwise, we cant consider going to many restaurants on the weekend. |
| If the metro closes at 9 pm, then using the metro for any evening activity is impossible - and that is my main use of the metro. |
| If the Metro closes at 9, then I might as well call Uber. |
| As someone without a car, I rely on metro services to get home from work, and this would mean I could never stay late, despite needing to on occasion. |
| It all depends on how the rest of the businesses would be functioning by Jan 2022. I only take Metro to get to work and before COVID - I would regularly be required to stay past 9pm due to my organizations special events. I would take Metro home after those events. Having the station close by 9pm would pose a lot of additional ride-share cost on me, but only if my organization has resumed its after-hours events by Jan 2022. |
| Having Metrorail close at 11 is difficult enough as it is, and 9 p.m. would make it almost completely useless. Why cant we have it close in the early morning like other major cities? |
| I enjoy taking Metro to DC for theater and Kennedy Center, and it would be impossible to stay for the entire performance with the metro closing at 9:00PM. We need it to stay open until at least 11:00PM. |
| Metrorail is my safest, most affordable form of transit. Pre-pandemic, the 11 PM time caused me difficulties. Cutting services earlier would make it worse. |
| How could anyone expect to know their expected use in January 2022. You're going to hurt the DC economy by capping public transit at 9 pm, bars and dining will rebound and open again and people won't be able to use public transit later at night. Why make this choice now???? |
| Once you make it necessary to take my car or Uber home, its less likely that I would use Metro. |
| There are times when travelling by train is necessary past 9pm and utilizing cabs is not an option. |

Proposal to close Metrorail at 9 p.m.

Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

11pm is already too earlyâ€”my job requires me to be able to travel home after 11pm.

9:00 p.m. is not late enough to allow for dinner plans and meetings. For those who use the metro to commute to evening shifts, this would leave them stranded and with only more expensive ways to get home.

This would be more dangerous and inconvenient for me, making it harder and more expensive to get home safely after dark, with the only other options being on foot or via ridesharing services.

I come late from work something and not fair if the metro close early

Metro rail is the choice of transportation when my husband and I go into DC on weekends. These trips are usually to shop and have dinner so a closing time on Metro of 9pm would mean cutting evenings in town short. We moved to this neighborhood specifically for the Metro access at Grosvenor-Strathmore and the convenience of accessing DC without driving.

it would work, just not as well. But honestly a lot of people go into dc for dinner so the 9 pm is a bad time to stop. 10pm is way more doable for people that want to go into dc for dinner. Ideally on the weekends the metro would run until 2am though

I would likely continue to use metro under these circumstances, but I would have to find alternative arrangements during the evening pretty frequently.

This would support systematic racism noting number of low income workers in service industries that need metro after later night jobs.

This is a METROPOLITAN transit. Hopefully, by 2022 life will be more normal and adults will need safe transport after evenings out and after work at restaurants and bars.

This change is completely impractical. Even if you only consider Nats Park and Capital One Area. Ridiculous.

If its this over closing station outright, do this. But again you will effect low wage workers coming home from work more than anyone else. You may also drive up drunk driving numbers with this strategy if people dont rideshare long distances.

Hopeful that things will improve as more folks get vaccinated.

Terrible idea! How are people expected to go out to bars and restaurants and take the metro back home.

While it would work for general work commutes, by 2022, I think we can expect restaurants and special event venues to be getting back to normal, and not having Metrorail access in the later evening hours would make for traffic and parking congestion downtown.

No way, not for employment purposes or social! An earlier closure would mean COUNTLESS workers without a reliable way to get home. Unacceptable.

This would be damaging to not only Metro ridership numbers but to DCs entertainment industry - sports, theaters, movies, concert venues, restaurants, etc. People will literally stop taking Metro and you will permanently lose people to ride shares.

Many elderly peoplelike myself depend upon the metro fot attending events in DC. These events go beyond 9 pm. Would prefer the metro be open till 11 pm.

I use the metro at night. It is far preferable to using rideshare

For people working or trying to have dinner, 9pm is too early.

I am a current health sciences student that relies on the metro for morning, daytime and evening hours to get to and from school and various clinical rotation sites in the DC metro area. Having the metro close at 9 pm instead of 11 impedes my ability to access essential medical educational activities, as many of my rotations will end between 9 pm and 10 pm during the week.

Could it be 10p? This move will crush DMV businesses even more.

As a single person without a car living in the District, this schedule would greatly reduce my social life.

I seldom use Metro at night.

If Metro did this, I would certainly never do anything in the city after work ever again.

9pm is early, but making it early is a reasonable response to the current climate

With the reduced service and 30 minute headways, an 11:00 PM closing should be achievable

Nope. I assume I will be back in the office in 2022. Too often I need to work past 9pm in a 9-6 office job. The same as many professionals. Lets add people who work outside the 9-6 work schedule. You re proposing abandoning service for people who need it. It seems you are trying to keep your job while not serving your mission.

Proposal to close Metrorail at 9 p.m.

If I begin taking metro into the District again, and start perhaps actually going out to restaurants and events again, 9 pm would not work. It would mean either I choose not to take metro on days I have things planned or choosing not to stay in the District and spend money at retailers/restaurants/venues. There were times 11 was cutting it close so 9 would be nearly impossible.

Do not make me uber to a Caps game.

It is too early to close at 9:00 PM. If you go to a restaurant , a concert, or arrive at an airport later in the evening, 9:00 PM is not convenient to stop the Metro.

11:00pm is already too early to close. What about the folks who work in retail? How do they get home?

This is outrageous. No city in the world closes metro this early.

Would prevent attendance at Kennedy Center events, etc.

Often have to work late. Also, impossible to use metro for events or dining in DC.

This may work initially but as businesses open up and open later this will not work for many essential workers.

I tend to work beyond 9pm when theaters, or theater schools, are in operation. 11pm would be possible. 9 pm... well, Im either in the middle of a show, or in the middle of teaching a class, and the only thing after that would be a ride-sharing app. At that point, you might well lose me both ways.

Decreased (but well scheduled) frequency, but keep a late night train to keep the city nightlife available

Keeping metro open later keeps intoxicated would-be drivers out of cars as well as provides necessary transport for service industry workers.

It would be a hassle as I would need to drive to any evening events and would probably limit my going into the District in the evening.

this would limit trips to dc for restaurants, movies etc.

But I dont work at night. How do you expect people who rely on public transportation and who finish work after 9 pm to get home?

We like to Metro home after dinner out and sporting events.

Service already ends too early. This would essentially guarantee having to take an Uber to and from when metro would be preferable. Will just increase traffic congestion.

There are major equity concerns with this proposal that do not affect me but will affect disenfranchised communities in our region who may be more likely to work jobs whose hours do not conform to the traditional 9 AM - 5 PM weekday office schedule. This proposal will also hinder the economic recovery of our regions bars and restaurants as we emerge from the pandemic, with patrons and employees being unable to use Metro during late night hours.

Would have to drive or take taxi for any evening event downtown

I don't get off work till between 10:00 and 11:00 and I can't always afford to take a Uber/Lyft/taxi.

I believe this would be a bad decision, many people who travel to DC and live here rely on the metro to travel at night

One of the major benefits of metro is that it runs later in the evening for late nights at work or while out at restaurants/bars. Stopping service at 9 pm would reduce much needed patronage at restaurants and bars.

Seriously, is this a city or rural West Virginia? What about shift workers, college students, tourists, and others who rely on evening train service. Closing at 11 is already early.

WHAT.

Its not ideal, but if I prefer closing earlier over slower train arrivals.

when the colleges and universities reopen - students in Montgomery college, American, George Washington and other institutions may find it difficult to take night classes. For women in particular the lack of public transportation at night is a huge risk for them to seek other means home. Unverisities are big employers in city and this would not be helpful for those doing night shift in hospitals, students and those wanting to go out in DMV area.

A lot of the stuff I use the metro for is late night stuff. I dont use it for commuting. But I take it all the time.

People who might have to work non-standard hours could suffer, especially if they have been out of work for a while and lost their vehicles.

If i am in the office late and need to make a stop at the store before heading home, this would be an inconvenience

Need an evening/night option available for work

I am an essential worker who provides a service that people need 24 hours a day. After everything you have done to make life worse for people like me through a public health emergency this would be a major blow to my life! I can barely afford child care as it is, and with this proposal I will have to take vehicles that cost way more than the metro in order to get to and from work. I am in tears over what these cuts mean for my family!

Getting home from the Kennedy Center after a Friday nights performance would be a problem.

Proposal to close Metrorail at 9 p.m.

Would make it very difficult to get home from late flights and to get to an from entertainment in the city. Would make it exceedingly difficult to go to concerts, especially in places like the wharf that are not as well linked by frequent bus networks.

People use metro as safe ways to get around at night, especially if its not safe for them to drive. Cutting service after 9 would leave lots of people without a reliable method of transportation to get home safely. Not to mention cutting of thousands of food and other service industry workers out of a way to get to and from their shifts.

This is the most reasonable of the proposals, in my opinion. That said, I am in a position that I dont have to commute between these hours. For those that do, consider the locations of centers of commerce/traffic and alternative means to meet the needs of these riders.

Don't do thisâ€”this would hurt businesses, workers, and patrons of late-night businesses. It also increases risk of injury for people who might be intoxicated who try to walk home over a further distance

I am normally asleep early, but wow. 9? Maybe try 10.

This would limit me to using the metro only for work commuting given that I work a 9-5 and would potentially limit me from staying for after hours events at the office or attending events around the city.

Coming back home would be impossible after eating dinner or a attending a ball game.

This proposal would appear to limit the ability to enjoy nightlife options within the city and surrounding areas. Since I would expect by January 2022 most of the city would operate at pre-pandemic levels this proposal seems counter to getting the city back to normal operations and would impact the availability and enjoyability of the city and surrounding areas.

Longer/later hours, not shorter hours are best.

This proposal is very bad.

Absolutely not. Contrary to what the talking heads behind Metro apparently believe, people do exist in the area beyond us 9-to-5 workers. Do you have any concept of how insanely expensive it is to use any other transportation service but Metro? Please dont do this. It would also cut down on opportunities to do things at night, which are already few and far between because of the pandemic. Talk about hurting the local economy, not to mention the mental well-being of so many working adults. Just raise prices on fare to avoid these budget cuts-- people wont like it, but maybe itll help cut down on those individuals who dont wear masks on the Metro and/ or harass riders.

It would be okay if extended service is provided for sports events at Nats Park, etc.

Later is better for those working late, or out drinking when they shouldnt be driving

I work in hospitality, as do thousands of other people in the DC metro area. You are effectively excluding those riders from service by closing at 9 PM. Even an 11 PM closing time is ridiculous, but 9PM? Youve got to be kidding with a proposal like that.

9pm is much too early for some workers and for those out socially to, say, the theater. Even 10pm is cutting it close. 11pm would allow both those out to the theater and many hourly workers in the restaurant and maintenance business to hop the last train.

Largely I take trains into the city to meet with friends go to restaurants and this prevents drinking and driving!

Seems like this would really hurt the people who really need to ride metro.

Disappointing. This is the nations capital, not just some town somewhere. Besides, I loved those cute ads when the hours were extended: Operating Until Whatever time it was - with everybody in green scrubs. But really, do we want the world to know that Washington DC closes up at 9 pm????

I would want the stations in DC and Arlington to stay open until 11pm on weekdays and weekends. Stations further out could close at 9pm.

Often work past 9:00 and rely on public transportation.

This may work for weekdays, but weekends would need system to run until 10pm

While this would work for me, a 9-5 worker, I worry about others who have â€œnon traditionalâ€ hours.

There are events, games, etc during Friday - Saturday. You should have the data on usage. Some people rely on this late service.

This plan hurts working class poor people, students and others needing affordable evening and night transportation. Ubur and Lift are not affordable to these populations. Furthermore. it will discourage people from taking advantage of DC entertainment.

This makes it very hard for young people to get around once we open back up. It would increase the cost of living for young people and encourage drunk driving

Id prefer the close time to be 10 pm, but if service cuts need to be done, Id prefer it to be here. I still need to get to and from work.

Again, if temporary it is possibly okay. If permanent, just close Metro train service entirely. Hopefully the plan is in place to re-evaluate all of these considerations 6 months from now, when hopefully we are returning to some sort of normality.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Would this not adversely effect commercial businesses such as restaurants and theaters and in turn reduce income for Metrorail? |
| I think feasibly it would be fine, but what about Nationals games, Caps games, concerts, going out? |
| Not ideal, of course, but daytime service would have to rank as having a higher priority. Again, I would expect passenger counts to get back to pre-pandemic levels as we get into 2022, so service levels should not be permanently decreased. |
| Much of my pre-pandemic use of the Metro was nighttime travel in/out of the city. This would probably cut my Metro use in half. |
| A metro system that closes at 9pm is effectively a commuter rail. Whats the point of having the metro if its just going to be a commuter rail? No one needs that, especially right now. |
| This would have a horrendous impact on the livelihoods of people who work late/night shifts and are dependent on the Metrorail system to get to/from work. Would also negatively impact restaurants/theatres and other places of business if riders cant use Metrorail system to get home past 9:00 p.m. That is simply way too early to close the system! |
| It would mean having to take a taxi home from DC to Maryland after almost all evening events. |
| This change would affect lower income workers who rely on public transportation, and make it difficult to bring business to DC |
| This would be occasionally inconvenient but preferable to the first option. |
| I expect to be in class in Brookland until 930pm and live at Grosvenor, so this will kill me |
| I know that ridership is not on the pre COVID level, but for metro to be closed at 9 pm is so early even for COVID lock down. |
| Our metrorail system needs to be expanding hours not limiting them. I would like to be able to use an environmentally and fiscally sound option when navigating the city I live in. 9pm does not even allow for traveling home after a dinner out, let alone going to a concert, attending a baseball game, going to a bar, etc. This is an unacceptable time to have the metrorail close. |
| This wouldn't allow commuting after a ballgame or a show and would affect the economy even more as I would not meet friends out for dinner for fear of missing the last train at 9. |
| We want the full old schedule! |
| This would be a shameful lack of service for a major metropolitan area, at the very least Thursday to Saturday should maintain late night service. |
| DC already rolls up the sidewalks after normal work hours. I will certainly not be patronizing downtown businesses if I have to risk not having a ride home via Metro. Also, I would never attend a sporting event/concert in the District if I cant get to and from DC via Metro. |
| It would limit my ability to travel between the District and Falls Church for events at night. This would force me to use a personal automobile. |
| Early closing would hurt dining and theater use |
| Way too early for riders who use Metro to go to evening events in DC |
| Closing the metro at 9 would mean that anyone planning to go into the district for dinner or entertainment would have to drive, which would likely result in even higher parking costs and more traffic. |
| I don't often take the metro after 9pm anyways but many of my friends do. I'm able to afford another means of transportation, but I think this would negatively impact others. |
| at this moment in time your proposal works, but as things open up downtown wed want to use metro to get back from plays, dining out, etc. |
| We use Metro socially 9 is way too early. We would have to rely on Uber etc (Uber drivers are, frankly, the worst drivers on the road). A good Metro is one of the reasons why we moved to the area |
| I often need a train later than 9pm |
| I often am out after 9:00 pm. This is unrealistic. |
| Maybe Metrorail should just close all together and tell people to walk along the tracks. But still keep the third rail on to remind commuters that Metro is committed to not giving a damn about their safety. |
| We use metro for sporting events and concerts not sure this would work to get back home. |
| It should end at 11PM. If people dont have access to affordable travel after school or work, that would create a lot of problems. Plus, this could increase the risk of drinking and driving if people arent willing to pay for taxi/Uber/Lyft. |
| I actually wish the metro ran 24 hours, but would accept closing at 9pm if its the only way to save it. |

Proposal to close Metrorail at 9 p.m.

This would be a significant inconvenience. I work until 10:30pm in the District. With COVID alternative methods of transportation such as a ride share have sky rocketed in costs, more than doubling in cost compared to pre pandemic, which is 10x the costs the cost of metro fare. I would hate for metro to not be an option at the end of my work day for getting home.

On occasion I am in the City (DC) after 9pm and need transportation back to the suburbs. 9pm is very early, especially on a Friday, Sat., or Sunday. This action needs to be re-considered.

no estoy de acuerdo porque muchos trabajos y negocios cierran a las 10. La economia se alteraria mucho y tambien los presupuestos familiares

So many late night workers depend on the metro line, especially restaurant workers on the weekend. 9 pm is too early to close

What about baseball games? What if trains are running late, will you just cancel final trains sometimes?

This is a poor option as we need to assume a return to some normalcy by January. Again, I would implement this change now and phase in a return to 11 pm based on return of ridership.

I usually do not travel on Metrorail after 7pm, so this is fine.

This heavily curtails evening activities. If Metro could stay open later on Fridays - Sundays, and just close at 9pm Mon-Thurs, that would be acceptable

we need a world class train sysyem. Events downtown occur at night--NBA, shows, theatre, also Nationals baseball, and more- and I could not use subway if trains stopped at 9. PLus workers needs transportation-hospital employees and thos ein hospitality industry.

Once it is possible to enjoy evening activities again, such as The Kennedy Center, we would want to use the Metrorail after 9 PM.

Way too early. 10pm might be tolerable

There are a lot of service personnel such as hotel and security staff that rely on trains staying open late in order to get home safely if train only end at 9: pm some these individuals would loose either jobs

We use trains to go into DC and environs for evening entertainment!!!

close to soon

This has impact on those who work and depend only on public transportation. This will impact ALL businesses that stay open until late in the evening.

ABSOLUTELY NOT. This will kill nightlife in DC, and will be ruinous for many essential workers who work night shifts.

11pm is too early as it is! World class cities have world class transit. Climate change necessitates expansion of transit, not pushing people into more vehicles!

If things return to normal 9:00 is very early to close public transportation. If someone goes to a show or concert we wouldnt be able to get back home again after. This would effect many venues such as restaurants, theaters, music halls, etc.

This would significantly change my personal evening plans, but would also make it difficult for people who work 2nd or 3rd shift to commute

I travel into and out of DC frequently for evening events (performing arts, sporting events, dining, other entertainment). The duration of these events typically run well beyond 9PM and even 11PM. I would have no workable alternative options if Metro closed at 9PM.

Cant get home from restaurants/bars/theater

If the pandemic has taught us anything, its that transit agencies need to think broader about the population they serve, not just 9-5 commuters. Fewer service hours is not moving in the right direction.

I often have public meetings at night which run past 9pm. I depend on metro to get home from work as I live in a one car household and have to take public transportation to and from work

As someone who prefers to take the metro into DC than drive, this would limit my ability to use the metro for night events. I would have to rush from dinners or events and it would cause me to be less likely to use the metro given the likelihood of that I wouldnt be able to use commute back the same way.

I work in the restaurant industry and use the Metro as my primary form of transportation and getting out early enough to catch the 11pm train is hard enough. Servers and bartenders can not get out of work before 9pm, this change would make and every restaurant employee unable to use the metro to get to work.

While this would work overall, I would hate to miss going to concerts, and sports games or dining in DC if they extend beyond 8:00 pm. I'm unlikely to park in DC nor take taxis/ride-sharing apps for these late night functions.

Huge impacts for those working evenings, as well as retail businesses and restaurants. Most retail closes at 9 or 10 PM. Those workers will need transportation to get home.

This is completely unacceptable. It penalizes many people who do not own a car, or wish to travel safely and in an environmentally-friendly manner.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I mainly use metro to go from Virginia to downtown for evening events so this removes a lot of my use case. |
| Dont limit metro hours just as bars and restaurants will be expected to open up again! |
| People working in DCs service industry would not be able to safely get home from work if metro service is cut by two hours every night. |
| I prefer to be closed at 11pm |
| I'm concerned about shorter metro hours, but this is a better alternative than cutting rush hour service. |
| 9 p.m. is far too early too close. With Metro being a main access to the city it would greatly limit peoples ability to go into the city and leave at a flexible time, enjoying much of the cities night life, beautiful nighttime views and late dining. DCs tourism would tank as a result hurting much of the retail and service industry jobs within the city itself. |
| That would strand many workers, tourists, and attendees of special events in DC which will adversely impact the economy and increase reliance on rideshare options which further takes money from Metro. |
| I like most of DC and northern Virginia residents rely on public transit for my sole means of transportation. Could you at least make it to 10 p.m.? |
| If youre going to a sporting event you will have no way of getting home unless you use Lyft or Uber. The same thing applies if you are working late, going to the theatre or movie. This makes absolutely no sense and this cut will definitely hurt the economy. |
| This closing time would work better on week days than week ends. |
| I think considering some businesses close at 9, it would be better to have the metro open to at least 10pm so workers who take the metro can still get home. |
| Every single service industry employee in the city works past 9pm. This has to be a joke. |
| Too much happens in the system CLOSE at 9PM |
| If I take a night class Id have no affordable way of getting home |
| One of our main uses for Metrorail was to attend theatre and concert performances at Kennedy center etc. They are extend beyond 9 pm. |
| In order to support restaurants and the arts I would like to see later hours at least on weekends. Individuals working in these areas have been very adversely affected by job losses. |
| Is this a 100% closure at 9pm on weekends? That will affect entertainment businesses. Mon-Friday, maybe? But what about folks whose shifts end at 11pm? |
| It's already bad enough that it closes at midnight. If it continues to close earlier than it will actually cost Metro more and more customers will be forced to use ride share options. |
| Many feds work later than 9pm without the assurance that one can catch a train more people will abandon METRO all together. You will not achieve the goal of greater ridership |
| Especially not on weekends |
| I work some nights until 10 pm. This would not work for me. |
| I dont use Metro late at night, so it wont impact me, but I think it will be detrimental to many people. |
| A lot of workers in the district depend on the metro to get home at night |
| Most weekdays this would be fine, but it would limit work related and social evening functions. It would probably create over-capacity situations at 9pm given how early that is. |
| I and MANY people I know use Metro to go from North Bethesda to DC for evening performances. This obviously hasn't happened since last March, but when performances start again, we'll want to use Metro again. Closing at 9 pm would mean that we'd be stranded in DC! |
| Some people get off of work at 10pm |
| If you want night life to return to the city many people during normal life are still out at work, at work dinners, happy hours, seeing friends, I have a Wed night jazz session I love. I'm always there until at least 10:30. If you cut the service to end at 9. It doesn't even start until 8. I probably wouldn't even go, as well as other people. Now that business is losing out on my business a couple times a month, plus other people that will be in the same situation. That's just one example. If you want the economy to return to the city you can't cut the public transit for people to get there. People can't afford to uber everywhere they go. So they just won't go and the city's economy as it's trying to revitalize and return never will because people can't get around. |
| If the trains ended service at 9pm it would limit options I have to get home safely from work, outings etc |
| 11 pm is very bad - 9pm would be catastrophic. The metro is my only means of transport, aside from walking. I imagine it would be very bad for local businesses as well. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I have to be in my job in DC between 6am and 6pm, so the Metrorail system closing at 9pm would not affect my work-related travel needs. |
| Having trains running during the day is more important than at late night. |
| This would be a pain for sporting events and concerts downtown. Even dinners or drinks out would be impossible without taking a taxi home. This would seriously impact downtown businesses |
| Certainly on weekends need it to operate later. |
| ends too early 11pm is a bit early as well. In NYC trains do not stop they run 24 hrs a day |
| I occasionally work late so I would have to find other options to get home. What about workers in restaurants and non office jobs? |
| I dont need to be out late in the city. If I need something urgently, I can usually find it at a store/destination in the Silver Spring area where I live, vs. having to find it in another neighborhood. |
| I and many others that line in Nova work late, this would force us to drive and metro will miss that money. |
| Businesses in the District would sure lise a lot of suburban customers and vice versa. |
| If I got on the metro before 9 would I still be able to switch lines to get all the way home? Also I worry for the people who work at restaurants and take public transportation. Wouldnt they need 24 hour access? Maybe their employers could provide Ubers. |
| DC is a city, we need service in later hours. This will be critical for bars and restaurants as we exit the pandemic. In addition, this change will disproportionately effect late night workers, many of whom have no other option but to use Metrorail. |
| Nine oclock is way too early;even midnight is inadequate. |
| Is two hours with trains running every 30 minutes a big issue?!! |
| While this is workable on a normal work day, it is not ideal as it would preclude using metrorail for evening events. |
| This doesnt affect me however it does affect those who work odd hours causing them to spend more money for alternate transportation. |
| An early closure would mean that metro would not be a viable option for me. I often travel in the evenings into dc for cultural and other events that go past 9:00. Metro should stay open until at least 11pm |
| Metro already shuts down too early. Why push the closing time even earlier? 9pm is too early for people who have dinners/entertainment plans in the District who want to use Metro to get home in the evenings. |
| The commute would be longer if coming from the red line |
| IF you go to plays or other evening events, this would not provide a way home. |
| I couldnt get back from shows and games downtown. Which means i would have to drive a car and park, and not use Metro going downtown earlier. |
| It's a better compromise than shutting down stations. |
| I think this is okay for Sunday through Thursday, but would make Friday and Saturday difficult to attend weekend events in the city. Also, consideration should be given for special events (such as accommodating increased nighttime ridership for Wizards/Capitals and Nationals). |
| Id have to drive my car more. |
| There are many times when I am in DC after 9pm and need to take the metro back home and can't afford a taxi or ride share to get home. The old closing time of of 3am was perfect, then when it turned to 12 am that was pushing it and the 11 pm close was ridiculous. This has really stopped me from participating in any nightlife in DC because I'm unable to get home most nights. |
| It would make many things more difficult. For one, I would take the metro home from the airport. A 9 p.m. closing would make that harder. And doing anything in D.C. would have a countdown clock attached to it. An 11 p.m. closing was hard enough. |
| Ok on a temporary basis until the financial crisis is overall |
| This is way to early to close. |
| need to get home |
| Ruins ability to use metro for evening events in DC. |
| This would really limit evening flexibility. In Jan 2022, I anticipate being out past 9 pretty regularly |
| Perfect. No late noise. No drunk people. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| While I live near a metro station and my preference is to take the Metrorail, I often take a taxi service late night due to the delayed trains. I check an app to see when the next train is coming and if it is not close take a taxi service. |
| If you don't have a car and are out at night, closing the metro rail at 9pm would make it difficult to get home. |
| I work long shift and am still working past 9pm at least twice a week |
| This is much too early and would discourage use of public transit for entertainment purposes, likely causing an increase in the likelihood of driving under the influence. Also unfair to those who work in the evenings. |
| This would curtail use for evening events such as theater attendance - it would certainly require plans to take a taxi or ride share after the event. |
| This would negatively impact many people who work for hourly wages in the evenings. They need to commute and can't afford to park cars in town. |
| What about coming back home from dinner or from the airport ? |
| This works for me because I work a typical 9-6 job. But this may not work for workers in other blue-collar or restaurant jobs, where Metro is the most cost-effective and convenient method of transportation. |
| This will adversely affect employees who work irregular hours and rely on safe and affordable modes of transportation to get home |
| The region needs a fully functioning METRO to bring back the economy!Â We need METRO to access downtown cultural activities and restaurants.Â How would workers at all of these places get home? How would concerts at Grosvenor-Strathmore be served?Â |
| At least Thursday Friday and Saturday nights should stay running to at least 11 |
| This will make me less likely to use Metro, especially on the weekends. |
| This plan would cripple any hopes for economic recovery for the restaurant, entertainment, sports, and tourism industries in DC as we emerge from the pandemic. Keep late night service! |
| Terrible idea to cut nighttime service hours. How do you think 20-somethings and other folks attend concerts, eat out, and enjoy alcoholic beverages and return home safely? Evening service (until midnight) is essential for both safe traffic and evening entertainment. |
| Cutting metro hours makes more feasible since then shutting down stations |
| This would not work for me on weekends. |
| Closing at 9pm would force me either onto a bus (if available) or onto car sharing service to get home when I participate in any social activity after 7 pm. If that is the case, I would rather drive my car out of the city and participate in my social activity there and drive myself home. I do not want to be dependent on getting the bus home after 9 pm or paying exorbitant parking prices in DC. |
| I need later running metros to get home after work. I work past 9pm on a daily basis |
| This would be a completely unacceptable time for Metrorail to close. The only thing that has stopped by 9pm is the evening commute. By closing at 9pm, metro would lose out on every customer going somewhere in the system for the evening (ie. into DC for dinner, visiting friends, etc). This would also be harmful to low wage workers since many restaurants have not closed yet at this time. |
| I remember when service was after midnight. This was so helpful for me as a young professional who wanted to engage in nightlife/sporting events etc. Those industries are also hurting because of the pandemic. If the DC region wants customers to return to those activities, there absolutely need to be trains after 9 pm. Otherwise I wouldn't even consider going out to dinner after the pandemic is over if I don't have a reliable way home |
| This would not work after the quarantine is lifted and evening activities resume. |
| 9:00 PM is too early to close. Closing early this kills a lot of nightlife, and I cant imagine that its good for the local economy. |
| As a graduate student taking classes at night, this would not work for me. |
| Much preferred over longer waits during the day |
| It would work for me because my job is 9-5, but it does not work for those who work in numerous industries that dont close before 9pm such as hospital workers, restaurant workers, etc. |
| Metro needs to stop being so racist. People of color need to be able to get to and from their jobs which for those in the hospitality business need to have training AFTER 11 PM to get home after their long work day |
| Train stations should close later on weekends. |
| The closing of Metro by 9pm instead of 11pm means people will have less time to stay in the city and work OT. Maybe that is a good thing. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| It's not safe to go out alone at night there's curfew |
| Nine is way too early to close the system. |
| Public life should return in 2022 - nightlife too. Need metro to be available. Also, it is an equity issue for folks working late hours, especially in the service industry. |
| This would prevent late shifts, late visits at hospitals, and stop participation at arts and entertainment venues. Metro is much more convenient than parking; but this plan would eliminate my (and friends and family) from traveling Metro at all for evening travel.DONT DO IT! |
| 10pm closure would allow more people to use the METRORAIL. 9pm closure would force me into a car and I cant see well at night |
| Any later commuters coming from DC into the suburbs would be put in a lurch without public transportation availability to get home. I used to regularly see the trains with numerous riders at 9pm. Even an hour later (10pm) could help with this commuter option. |
| This would irredeemably harm low-income workers and other riders. It will also have wide ranging effects that will negatively affect the economy as many folks will opt to not go out in the evenings. |
| This proposal would hurt a lot of the travel that I do on metro rails, especially for nationals games (that will hopefully open back up). I have already been upset at the effect the change from after mid-night hours to 11pm has caused. I think this is especially important for preventing drunk driving. If the metro is unavailable after 9pm, the community members who are out drinking will have limited options for getting home which will result in more drunk driving. |
| Both me and my husband have used the metro post 9pm on multiple occasions. We do not own a car and so we are highly dependent on the metro for our transportation. |
| Again, this is a service degradation that reduces the utility of Metrorail. |
| This would make taking metro after an evening out impossible. Revenue from hockey games, baseball games, soccer games, concerts would be lost. |
| There are many service workers who need the subway to commute. This change would restrict this use. |
| 11pm is already too early. |
| I expect by January 2022 I would be in the city later for dinners and events, including Nationals games and theater. |
| The entertainment and restaurant industry have a long way to recovery once we can attend live events again. If DC closed the metro this early, people wouldnt go out therefore wouldnt pump money back into this suffering industry. |
| No, it will not. My activities in DC end well after 9 PM> |
| It should operate later on weekends. And for sporting events. |
| This does not work at ALL for those of us who depend on metro entirely for transport. I cannot drive due to medical issues and disabilities and rely on metro for all transportation not just during rush hour. This would make it impossible for me to have much of a life, work late, etc. |
| How does closing at 9pm serve the needs of the people who rely on it for work and for getting around the city? This seems very anti-customer. Metro is a safe and affordable way to get places. This time will make ridership tank bc it doesnt make sense why a train service in the Nations capital closes at the same time as Macys. With all respect, is the point of Metro for transportation or is it a jobs program? Weve seen some very positive changes in Metro over the most recent years; lets keep up the momentum! |
| This is a ridiculous proposal that would decimate the restaurant industry. But for me personally, a disabled person who cannot drive and needs to rely on Metro to get to my 9-5 job, this would be preferable to 30 minute headways during rush hour. |
| Could be worked around, but with impact to my travel. |
| more people would have to rely on taxis and uber, or would decide to use their vehicle even after a visit to bars or pubs with obvious bad consequences for traffic accidents |
| This is based on trends due to the pandemic. Long term plans should not change because of it esp for public transportation. This would affect a lot people who work late or night shifts. |
| No. I need to work different shifts. Stop balancing your checkbook on my back!!! Cut WMATA worker pay like we've all suffered... |
| Not good for sports events |
| 9 isn't even late |
| This is very bad for service workers who rely on metro. |

Proposal to close Metrorail at 9 p.m.

If this were to occur, I would likely not attend any event in DC that were to go past 9pm--sports event, concert, theatre, etc. Events, especially those at the Capital One Center, would be a nightmare to leave. I also probably wouldnt go out to dinner, knowing Id have to add in a 20-30\$ uber ride. Id pay slightly more for metro instead

Would make it impossible for me to attend pro sports games: Nats, Wizards, Caps, DC United, and live music performances.

My job often requires me to work past 9pm. This happens a few times per week and would disallow me from using the metro to return home on those nights.

This could impact the number of people able to attend sporting events, concerts, etc. Without Metro, the transportation options are certainly decreased.

Eliminates options after concerts and sporting events

This would likely be mostly fine for me, but I imagine its not at all fine for the many people who work shifts that need travel between 9 and 11 pm. The answer to ridership issues isnt to further restrict schedules.

Absolutely not!! For most young adult we use this form of transportation and at night it creates more safety to know you won't get stranded somewhere late at night.

This is a reasonable proposal, but it is important to keep in mind that not everyone has a 9-5 schedule and may work late while still relying on Metro services.

Night workers and people who want to enjoy DC at night would be too limited in their modes of transportation.

this is outside of my regular work commute

This would effectively close the downtown for after hours entertaining leaving taxis and Uber-like services the only transportation choice for those without a car. These choices are more expensive and would be seen as exclusionary. People with plans after hours would choose to drive in to the city - more traffic, more delays and a less pedestrian friendly city. What self-respecting world class city closes the main mode of transportation at 9PM! Also, what about shift workers who are not on a typical 9-5 schedule? VERY BAD IDEA. 11PM is already too early.

This proposed change would negatively affect my travel to and from work.

Such an early closing hour would almost ensure that people would NOT use Metro for night-life activities.

Then you cant use metro if you want to stay out past 9. Ridiculous. Who is coming up with these ideas? Major city with metro closing at 9 pm. what a joke.11 pm is too early.

people work late shifts and depend on the metro this isnt fair to the mass of people who need to get around who dont have transportation .

I dont usually use the metro rail after 5pm.

Although this would probably meet my needs, this reduction in service should be avoided if at all possible. Metro is a critical component to equitable economic growth region wide and cuts in service would disproportionately affect low-income workers. Especially those that work late hours! Metro is a public good and should not be run like a business. Although I understand if no further subsidy comes from Congress cuts might be necessary, please keep fighting.

This will make working late and social late impossible.

Much of my non-commute use of Metrorail is to visit friends, go out, and attend sporting events in the District. If Metro closes early then I will have to drive in so I can get home after, and will likely not go to the District as often.

Would not allow me to use metro to get back from plays, etc. or have friends use trains from Strathmore after concerts. I really dont like this idea

I'm concerned about the ability of folks in hospitality in particular to get home. 9pm is early.

It probably would work for me, as I live city-center, but this just seems ridiculous for the capital of the US. It will kill the restaurant business throughout the region. This is a really bad option.

That could lead to an increase in drunk driving. Also, 9 would barely be late enough. What about 10pm?

I normally take the metro during the day

Much of my communitys businesses rely on people arriving after business hours to patronize our local and small businesses to buy dining, entertainment, exercise, and other activities, services, and products. For many of these transactions, later transportation is necessary to get to and from those places, especially given the year round sporting events and other activities where metro is encouraged to avoid vehicular traffic challenges.

This works for me, but from an equity perspective, many of the employees who work at my institution at night (most of whom are Spanish speaking) might not be able to get to and from work. This puts a burden on those who already have the least access to transit.

While it would work for my travel needs, this will make it difficult for workers in restaurants, retail, etc. to travel home after their shifts - disproportionately affecting low income DMV residents

9 is too early if attending any evening program. Even 10 is better

Proposal to close Metrorail at 9 p.m.

I just spent four years in Chicago, where the public transit runs 24/7. I've seen what a difference that makes in the life of a city. Seems to me it would benefit us to try to move that direction rather than away. Ridership will pick up - this is not the year to use for comparison.

This would eliminate any possibility of attending any evening events in DC. In pre-Covid days, that was a frequent part of my activities.

May not affect me much but closing the entire system at 9pm indefinitely will probably hasten METRO's decline and ultimate dissolution.

As it is, 11pm is a hardship for people with late night jobs, or dinner after the theater, but 11pm is better than 9pm. Public transportation is essential for some people, optional for others.

9 pm is very early - 10 is more reasonable

All these options only increase cars on the roads, what about the environment? The private costs of buying new cars? Pollution? Traffic?

Many of us use metro to attend events at the Kennedy Center, etc., go to and from restaurants at dinnertime or go out for a drink after dinner. Closing at 9 pm will effectively make evening use all but impossible. Without metro, people will have to take Uber or Lyft which can be expensive or drive which will increase traffic and add cost because of steep parking fees. Metro is so much easier, cheaper and more environmentally sound.

Assuming that theatres reopen by January 2022, this would be an inconvenience for me as it would mean that there would be no public transportation to get home from such events - or for that matter sometimes from restaurants. It would be a true hardship for those involved in service industries.

For people who go to the theater or other venues in DC, closure at 9 PM would require everyone to ride on alternative transportation. Perhaps trains at 30-minute intervals between 9 PM and 11 PM might be a reasonable solution.

I primarily ride Metro for social events downtown. The 11 PM close was already too early sometimes, so 9 PM definitely doesn't work.

I work in the service industry, and before the pandemic, my managers already strategized who to send home in time to catch the last train before 11pm. Closing the system at 9pm would decimate job access particularly for low-wage hourly workers and also do severe damage to DC's nightlife and cultural scene, which are part of what makes this city a great place to live. It would also severely impact local businesses and DC tax revenues.

I would prefer to have the metro trains running at the current schedule during work hours.

Ridiculous. Unusable. Metro knows better than this.

This eliminates our vital entertainment/service sector and all the essential workers who staff it. I'm a regular (or was) theater goer; this absolutely does not work.

This disproportionately impacts essential workers who don't work traditional hours and who rely on the affordability of using the metro. This is not an equitable solution.

This would further tank restaurants, theaters, ballpark, etc not to mention further limit the travel options of many workers who work later hours. So many of us in the DC area have no transportation alternatives and I would probably have to move to a different state completely were metro not a viable option.

Cutting back hours the first time was inconvenient and closing even earlier makes it harder to have reliable quick transportation.

Use of Metro primarily for commuting.

That means you need to be in the system no later than 8:30 pm, which is too early.

I work late, as do many others. In my opinion, 11pm is too early to close. 1am is better

Night school in DC for full-time workers would not align with this plan. Most part-time night school programs end at 11 PM or later.

Working until closing would leave employees stranded if they used the metro. Most stores and restaurants don't close until later.

MAJORLY INCONVENIENT.

This would work but make it much less likely that I went into Washington D.C. during the evening hours.

Some school events end after 9pm. Students would be stranded.

To be perfectly honest, this DOES work for me, but so does shutting down the Metro system entirely, because I am a (relatively) rich person who can pretty much telework as much as I want, ride a bike or hire an Uber as needed. So, limiting my riding till 9 pm would be fine, if I didn't care about anyone else in the world. But there are thousands -- maybe hundreds of thousands -- of riders in the WMATA-served area who depend on Metro for riding late at night. And I'm willing to bet good money that they aren't the ones taking this survey.

It is ok to close at 9 pm as long as East Falls Church station is open and the demand during morning/afternoon rush hours are considered.

When I use Metro, it is often in the evening. I expect service like this would lead to increased drunk driving, which worries me.

I would like it to run later, but I don't have to have it. I think there are restaurant workers and fans going to sporting events, theater who will suffer. I can afford it, but not everyone can. I worry about them

Proposal to close Metrorail at 9 p.m.

There is a lot of life after 9pm. And most ppl working these jobs have only metro to rely upon. It's a regressive idea. Giving. More service to the most affluent white collar crowd and less to the service jobs. Absolutely no

Thats too early for people who would be going to entertainment and sporting events in the city. Not everyone can afford the cost of parking, taxi or ride-shares.

This would greatly impact people who leave work at night (e.g. restaurant staff, retail sales) and tourists.

Knowing that the metro was closing early would affect my decision to take the metro at all that day on any day when I could possibly stay later, since taking a taxi home would be very expensive and I dont take ubers at night

There will definitely be days that this will add substantial cost and burden to the commute and social travel.

Most of my commuting occurs during the normal work hours but for those times my commute would fall outside of those hours, the earlier closing scheduled would be problematic.

When the city returns to a more vibrant place in the near future, I hope to be attending theater, film and musical events. These will presumably end well after 9PM. Closing down Metro at 9PM will not allow these vital businesses to remain viable.

I have Wizards season tickets. If this goes into effect, no more games for me. It will also destroy business downtown (Cap one Center, Penn Quarter) and a lot of people will lose jobs.. Ditto for events at Monumental Sports Arena in Ward 8. If you do this, you will feel the wrath of Ted Leonsis. THIS PROPOSAL IS A TOTAL LOSER

What about people who have to work late? Or people who depend on the metro for entertainment purposes (concerts, etc.)?

I am concerned this plan disproportionately impacts lower income communities and communities of color.

Need more--not less--Metrorail service in evening hours.

This would eliminate my ability to see shows, sporting events, or enjoy most restaurants in the city.

I think you could have a night train service or express bus-last calls to the burbs on Thursday and Friday nights -one train every 30 or 60 min and still operate more frequently for DC. /Inside the beltway to facilitate night life. Last trains should coincide with shift work-hospital staff etc should be able to take the train home

11pm doesnt mean 11pm at all stations - I have previously been a position trying to leave Mclean after a late night at work and the last train comes at ~9. That would be a huge impact to many commuters from far into Virginia and Maryland.

Under this plan, neither I nor others, would be able to stay downtown for dinner, shopping , sporting or other events after work.

THis will kill the restaurant and entertainment industries in DC. I take buses and metro to Nats Park, as do thousands of others. Night games hardly ever end before 11. You have a world championship team. Let thousands of fans safely travel back and forth to enjoy their team once the pandemic is under control!

Trains running to my area every 30 minutes combined with an early closing time means I cant rely on metro.

So those working later hours would just have to suck it. What kind of world capital has their metro system close so early? Not even NYC does this and they were hit far worse with the coronavirus.

My metro travel is almost exclusively for entertainment, with an occasional medical appointment. Dinners, concerts, lectures, plays, the tourist attractions,etc. I will change plans to accomodate any new schedule.

Metro is my favorite way to get to and from a night out; it is much cheaper than an Uber or taxi and still allows me to socialize with my friends; closing Metro at 9 would force me to take an Uber or a taxi. But this is a minor issue compared to the thousands of late-shift workers that rely on Metro transit to get to and from work safely. This would be catastrophic for them.

Disappointed

I am a musician and would not be able to use metro to travel to/from gigs. would not even be able to take metro to a Nats game!

when I do ride the metro at night, I have enough trouble with missing the train at the last stops

Forget about going to any cultural or sporting event. I guess we're all supposed to be tucked up in our beds by 9.

By 2020 life will go back to normal after the pandemic. So as a commuter between Virginia and DC I need late night trains until 11 p.m.DCs late night entertainment business and restaurants coming back to high level, so we need late night rail service.

ABSOLUTELY NOT. It is embarrassing enough the train closes as early as it does. Closing at 9pm will continue To disenfranchise people who depend on metro service and do not have access to personal vehicles or money for ride shares.

Does this mean permanently for the entire year? What about night baseball and soccer games in DC?

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| This encourages impaired driving - full stop. The affordability of Metrorail - and the convenience of having it run later into the evening - makes attending events, dining, shopping, and visiting friends across town and downtown realistic *without* resorting to pricey taxis and rideshare - or personal cars, which should be greatly reduced in utility and necessity in a dense urban space. 9 p.m. closure is basically telling all of downtown DCs businesses sorry, you lose as this will take away their ability to stay open later and appeal to the sensibilities of people who dont adhere to farm hours. |
| This is a compromise I am okay with if it allows for better serve during commuting hours. I often metro when it's later at night. |
| In non-COVID times, I use Metro at least once a week after 10pm. |
| It would certainly be better than closing rail service to Grosvenor however it would negatively impact DC businesses and venues. |
| Metro should be working to extend service, not reduce service. If anything, metro needs to consider closing at 12am, instead of 9pm. |
| Will no longer be able to use Metro to get to Nationals Park or the Kennedy Center. |
| I am generally fine with this. However, I have two issues with an early closing: baseball games and air travel. Both may involve travelling beyond 9PM. Air travel can involve an Uber but baseball games can be crazy trying to get a ride in that size crowd. |
| This would eliminate any ability to go a ballgame, concert, etc. in the evenings, without incurring the expense of an uber. |
| This would effectively kill all nightlife in DC and kill the economic viability of the entire city. |
| We couldn't use metro rail for traveling to and from Nats games. |
| Going into DC for evening activities would be difficult and would result in more people driving under the influence. |
| I do not ride the metro after 9 pm. But this would be problematic for sports attendees. |
| 10PM is more reasonable. |
| I work late night part time jobs and would need to sacrifice them as I depended on Metro to get home after a shift. I do not own a car and a ride share cost would cut into my wages significantly. |
| While 9 seems reasonable for most days, this would certainly impact weekend travel and special events. |
| I dont often take the train after 9pm. But I am hopeful that we will be able to go to sports games and concerts again by January 2022. I want to be able to take the train home after a hockey game or concert, for example. I wont be able to do that if Metro closes at 9pm. I dont like this option. |
| It would work for me now since there are no events but you are really screwing over a lot of people closing so early that rely on metro to get to work. |
| Assuming that theaters and the Kennedy Center (as well as the Cap Center) are open in the evening, NOTHING ends that early so attendees (including me) would have to drive rather than taking the metro. Since I no longer work downtown, evening sport/cultural events are my principal attractions to go downtown and use the metro. Dont stop so early. |
| Be at work |
| How will anyone get home from work? Or restaurants or bars? That will absolutely not work! |
| If I have to work in the evening it would be impossible for me to get home or I would have to take an expensive uber. |
| People who work later hours must be able to rely on Metro |
| kiss any evening events goodbye. this would cripple any sort of entertainment businesses |
| If I ever socialize again in public, I would like to rely on Metro as a safe way to get home in the evening. A 9pm closing time seems really early, even on weeknights. |
| We use Metro to go to Sports games such as Caps and Hats games which end later than 9:00PM. Also, on weekends the Metro can be used by people who are out at bars and restaurants instead of driving. |
| When I work late, I would not have a way to get home on metro. This would significantly impact my ability to use metro as my primary form of commuting to and from work. |
| Please keep till at least 10pm |
| We need public transportation hours as long as can to help people get to and from work |
| We could likely work around this plan. When using metro in the evenings, we tend to use Metro going and then use a shared car service to get home for convenience. |
| Its unfortunate to have a metro system in place that cant serve its city throughout the night. While I dont work late, I like having the option to go out at night and take the train home. |

Proposal to close Metrorail at 9 p.m.

This would definitely not be acceptable. 9 p.m. is not late to stay out on a weekend (and I'm not a party person!) and I need to ensure a reliable, safe way of getting home at night. I have been very pleased with late Metro service.

Because I have a parent that works late

It's already hard enough to use the Metro to get downtown from the suburbs with the 11 PM close time. With a 9 PM close, I'd never use it except during the day.

Ideally this would not happen, but if I had to choose shorter hours I would choose that over closing many of the northern Virginia metro stations. Especially Virginia Square, Clarendon, and Ballston

even 11:00 pm is too soon for me. I go to many nighttime events that get out later than 9:00 pm. I would have to stop going to these events if this were true.

By January 2022 I anticipate having commitments in the evenings. I need metro service until at least 11pm to get around safely and efficiently.

Once the outside really opens back up people need time to get home from work. Business that close at 9 don't allow time for people to commute. What about attending events in DC that aren't over til after 9. everyone may not have money for Uber/Lyft.

This will disproportionately affect low-income communities that work non-traditional schedules (i.e. overnight security guards and custodians, food service workers, etc).

I would no longer be able to use public transportation for social engagements in the city in the evening, but it would work for my job commute.

If people are still working from home, this might be justified, but if everything has opened back up (including weekend night life) this will be difficult on economic recovery. It will be harder for people to get to work down town or stay out at bars and clubs. This change also would, regardless of the openness and any COVID restrictions, will disproportionately harm essential workers who rely on metro to get to and from work as well anyone who needs to undertake any essential tasks, like going to a doctor. Many people in the city don't have cars. For many, metro is one of the only affordable transportation options.

Why not offer late a d weekend service as normal, but charging a premium, and possibly a steep premium, for evening and weekend travel - kind of like the premium paid at peak workday hours.

This would be disastrous for people working especially late or with more abnormal hours that rely on metro

That eliminates the option of taking the metro to dinner or a performance or sporting event. I hope to be doing those things again by January 2022!

Most establishments stay open much later than 9 and not allowing those services works a public was to get home means that many will have to leave their jobs. It also encourages things like drunk driving and increases late-night traffic in busy nightlife areas even more with ride sharing services.

This would not work well when the City opens back up and there are events to attend like Capitals (and other teams) games and concerts. It will have a major negative impact on the dining and entertainment industry.

I'd like to be able to socialize/support local restaurants/attend sporting events/see live theatre and if the metro closes at 9pm I would have to drive and park somewhere instead since I wouldn't be able to get home. Metro would lose more money than they'd be saving by cutting hours.

In the hopes of revitalizing the restaurant/bar businesses of DC - such an early closing time would be terrible for attracting customers in a post-pandemic world

I would use Metrorail for evening dinners with friends, sporting events, or late work nights, and this would push me and I'm sure others to driving for these events.

11 p.m. was already too early

That's far too early for a major metropolitan area and would impact shops, businesses and restaurants

Closing that early would result in less ridership as people that thought they might stay out would simply drive. I would switch to driving if this becomes policy/operation. If Metro cannot provide better service, it will need to return the tax payer money it received from the COVID Relief bills and some from the dedicated jurisdictions.

I work evenings and this might drastically reduce my availability. I would have to end work early for fear of not getting home otherwise.

During the pandemic, I have been riding much less, but all of the few trips I do make have ended after 9:00 p.m. This change would make Metrorail entirely useless to me until the pandemic ends and I have a regular commute trip again.

For people traveling back to DC at night and arriving at Union Station or National Airport, this is a terrible plan.

We often take metro in evening to go downtown for shows and dinner. So hard to commute and park downtown. This schedule change will prevent people from going downtown at night and further destroy entertainment, restaurants and bars businesses!! Also prevent their staff from going to and from work economically!

I work a lot of long hours. I also enjoy the occasional social outing with my coworkers. closing at 9 on weeknights would make my situation untenable, and I would have to seek to transfer to a different office.

How are people in the service industry who rely on metro going to get home. 11pm service is already early enough. If it needs to remain 11pm fine but any earlier then what's the point? Especially incoming flights from DCA that's way too early.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would limit our ability to go out places because we would not want to take Lyft/Uber to return home. |
| After 9pm most stations are mostly empty anyways |
| Likely fine for me, but its not the level of service typically expected from rail service in a major metro area |
| This is not ideal. During evening rush hour, a lot of trains are packed and doesnt really thin out until 6 -7pm. If you close the metro at 9pm, this affects a lot of us who work in the DC area. |
| Many events last beyond 9:00pm |
| This is not a concern until DC opens up more. Closing at 9pm would be too early for individuals who want a cost effective option of travelling into and out of the city |
| It would be really sad to see service times cut again. 9pm is so early especially if this would apply to weekend hours as well. As someone that uses Metro daily seven days a week I really would be put in a difficult position having to budget for ride share versus using the metro system. I feel like it would also hurt a lot of local businesses that have already been devastated by the effects corona especially our tourism and hospitality. This should be used as a very last resort. |
| I get off work at 11 PM and Im already having to get off a few minutes early to run to the metro so I can get home. If the metro closed at 9, I dont know how I would get home or I would have to pay quadruple or 5 times the amount to get home. Its too far and too late for me to walk. |
| This works for those of us with 9-5 jobs and can afford to use ride share for the occasional night out. However, I do worry that those who work in the service industries during the evenings will not have access to metrorail. |
| many people work late shifts and have to leave place of work by 10:30pm to catch a last train (assuming it comes and is on time!). how do you propose to get people to their residences after you shut the metro at 9:00pm? |
| We need to decrease cars and pollution and the plan will only cause them to increase. |
| Dc area is a cosmopolitan town with many evening cultural activities. Ending services earlier would hurt the Arts. It should stay ozone til 1AM |
| I am not clear if sports will return there would be extra innings in baseball or additional periods in hockey that would run after the metro shuts down. |
| That closing time could impact even early nights. Sometimes 11 is too early but I see a lot of people on the Metro when I ride later at night. |
| We definetly need to have the closing at 11pm allowing enough time to arrive home with any events and meetinhs that ends in DC. |
| This would work for me personally but I know many people work later and RELY on metro for transportation. Also, many of those people may be unaware of this survey or may have barriers to completing it. |
| Some days I need to stay later in the city, for happy hours often, I would not want to be driving or pay for taxi. |
| PUBLIC TRANSPORTATION SHOULD BE AVAILABLE ALL THE TIME! |
| People need to be able to use Metro for nightlife outings, as a safe alternative to driving drunk and to avoid overcrowding of ride service vehicles in nightlife hotspots. In addition, trains need to be available to those arriving into town on evening planes or trains. |
| Evening and swing shift workers need the Metro to stay open late. If the Metro closed at 9 Id have no way to get home from regular shifts ending after 10:30. |
| Wouldn't affect me personally but would be very bad for overall regional economy |
| We attend many baseball and concerts in DC so assuming those are operating in during the 2022 calendar year and 9pm close would be a problem during baseball season and large concerts at Capital One arena. We dont want to deal with car services, but will for those venues not directly on the metro line. |
| WEEKDAYS OK...WEEKENDS NEED LATER HOURS LIKE THE REST OF THE MAJOR METROPOLITAN CITIES IN THE COUNTRY |
| Your timeline is messed up. You should expect to see increased ridership after a bulk of people are vaccinated (which I would estimate to be June 2021). Cutting service at that point would simply drive people away from metro, at a time when they will desperately be wanting to get back onto metro. You will guarantee your own demise. People will be desperate to get OUT of their apartments. Removing any reasonable possibility of a reasonable evening (at least through 10 p.m.) will greatly hurt the bar and restaurant industry, industries that have been greatly hurt already. |
| Assuming the city has re-opened by Jan 2022, this would eliminate the Metro as a travel option for nights out, and greatly impact those who work non-traditional hours (who are most likely the be unable to afford the additional travel expenses of a car or taxis). |
| This closing time is much too early. It would mean that Metro would no longer be an option for evening activities downtown. |
| Please, 11 p.m. at the earliest. The theatre and ballet close at 10 p.m. and I wouldnt go to either if I have to drive. |

Proposal to close Metrorail at 9 p.m.

We need MORE service, NOT LESS! We need to discourage drunks from driving. We need to encourage businesses to stay open late. We need to provide transportation for people who work late hours to get home safely. We need to be able to get home safely from sporting events and/or cultural events that may run later than these short-sighted proposals.

This is impossible!!! We are not able to come back from work using metro so we will not be able to use it on the morning. You don't care about passenger only about budget!!!!

Does this include weekends?

WHAT ABOUT SPORTING EVENTS, LIKE WASHINGTON CAPITALS, WIZARDS, OR NATIONALS GAMES?

I and many others use Metro to get to baseball games and other events. These games always end after 9 pm. Stopping trains after 9pm would leave me and any others stranded. Using a car would really discourage attendance. Parking is limited and expensive and car sharing services require waiting too long. I have mobility issues and can't walk far or stand on my feet for long without needing to sit down.

Given the change and the unpredictability of my work schedule, I'll be forced to drive rather than use Metrorail.

M

Lines need to be open beyond 11pm

No I work night shifts so I would need to have the metro open longer.

If this was necessary I would hope it would stay open for special event like games, etc.

Sometimes I work late and am struggling to make the last train. This would make that worse. But if something's gotta give, it's better than shaving daytime service or closing stations. Is there room for a compromise -- close at 10 pm?

Most nights I would be on the train well before 9pm. However, I have concerns this would affect businesses in the DC area.

9pm is WAY TOO EARLY to close a world-class subway system. 12am is too early, but acceptable.

We enjoy fine dining and often performing arts performances downtown. With 9 PM closing, instead of always, we'll never be using metrorail for those occasions - which are at least 1/wk.

It is important to me to have the ability to ride the train at night, esp after a concert or sporting event. These generally run past 9 pm.

This would be absolutely devastating to people who work in the hospitality industry particularly, and also everyone else who takes the metro.

How about spectators coming after the capitals game or National game. Metro services should operate on these days for the spectators to go back home

This would be fine for weekdays but weekend hours should be extended to accommodate sporting events etc

This would severely affect attendance at concerts, sporting events, etc, and make public use of Metro for work unfeasible for shift workers. A ridiculous solution to revenue shortfalls.

Washington, DC is a large, vibrant city, and residents should have reliable access to public transportation in the evenings. A closing time of 11 p.m. is already earlier than in many other cities, and closing at 9 p.m. would be a major loss to residents. This would negatively impact workers and businesses.

I often work until 10 pm and therefore this change would mean no train home.

It depends on other changes. I normally use public transport to go to concerts and theater. These tend to end after 9pm. If busses will also stop working after 9pm then I'll switch to using Uber/Lyft to go home from events. It's inconvenient but ok.

What about bus schedules connecting to and from Stations/

I don't think access should be limited

This proposal would harm DMV residents who don't work the typical 9-5. As a note, those workers and residents are JUST as important to our economy as high earners.

Late workers will not have access to transit to get home safely and buses do not adequately fill this gap. This directly contributes to inequities in transportation in the city and puts undue burden on those who keep our city and the places we love running. We've called many of these workers essential yet Metro is looking to take away their essentials such as transportation to their jobs.

Evening service needs to be until 11pm

Most folks in food/hospitality industry live in the suburbs. Get on a train around 11 pm and you will see cooks, chefs, dishwashers, servers, busboys, etc. trying to get home on the last train. Cut off at 9 pm will greatly affect the group of people that needs metro service the most-the low income families trying to make a living in the city.

9pm is extremely early for a major city's metro system to close. That's cutting it close even for some of the dinner crowd.

Proposal to close Metrorail at 9 p.m.

It works for work but may not work for leisure activities like trips to restaurants. With Covid19, there is very little by way of leisure travel so during the pandemic, this could work for me.

What is the plan to support people who work late at night and depend on metro to get home? If we assume a reopening of society by Jan 2022 that means people will be going out late to bars, clubs, and other social locations. So what is the plan to ensure that people working at those locations and in those industries will be able to get home?

Additionally this would lead to an increase in car traffic via rideshares, increasing air and noise pollution at night.

Closing at 9 pm is ridiculous...couldnt use metrorail for any evening activities...no dinner,...no theater etc.

Assuming theater is open, Im a volunteer at MANY all over DMV. I dont leave the theater until around 10-11 pm. Id need to rely on my car. This would inconvenience endless staff, volunteers, residents, and visitors. POOR IDEA!

Assuming I am able to return to DC by then, as a young woman, I need safe, reliable transportation options, especially at night. WMATA is essentially asking women to get home by 9 p.m. every night, which just isnt realistic for those of us who work irregular hours and/or late shifts or who simply want to be outside their homes at reasonable times.

Assuming life is approaching normal and theaters and sporting events can be attended, early closing would eliminate going to many such events without a miserable drive and a horrible search for parking.

It is critical that we increase opportunities for public transportation rather than decrease. Closing at 11pm was already too early for many, and 9pm is worse.

This is the absolute worst proposal and I have to hope its the everyone will vote against this one and get in a panic and call their lawmakers about Metro relief one because this guts the citys ability to transport late shift workers and patrons of sports, live music and arts. Again, at this point, why bother having trains, why not focus on improvements to the bus system?

This is crazy!!! Imagine the number of drunk drivers on the road! Metrorail is an essential service for everyone in the DC region. EVERYONE. I take the train when I come home from a concert or event... without metrorail I will be walking! I love how I dont need a car in DC, and I dont plan on purchasing one. Closing at 9PM means more money for Uber drivers? Bad parking in the evenings? (Which doesnt bother me.) And people who shouldnt be driving... driving!

Working late and not being able to take the train home is unsafe

I dont take metro late in evening - take taxi or Uber.

Are you out of your mind? It should close at 1am!

These proposed changes overwhelmingly harm people that do not have cars or the funds to utilize ride share apps. This will negatively impact folks who work later shifts or who attend events in the city.

This would have a very negative impact on the ability of customers to use Metrorail to attend cultural events (concerts, plays, etc.) and/or to patronize restaurants.

A 9 pm closure is too early to make it feasible to take Metro to dinner, concerts, sporting events, or other evening program and will thus likely increase the number of people driving downtown instead of taking public transit.

Catching sporting events and concerts in DC is a huge factor to living near Metro stop. Closing at 9PM would not allow for riders to take the train home. It would also clog up roads and further encourage driving under the influence. I strongly oppose this proposal.

Would be bad when events open

One of the best uses of metro is easy access to after hour events; public transportation eliminates the need for parking and designated drivers. it also helps out of town visitors and tourists to get around the city after hours . this would really handicap Metros services

Awful idea. Metro should return to late-night hours when pandemic control measures end.

I recommend 10 pm

This avoids cutting rush hour service which is the most crowded.

Metro should not operate its full system in predictable extreme low ridership periods. it can develop alternative low-cost on-demand services perhaps in partnership with the private sector, using AI.

Evening service has been really valuable since I live just outside of DC. Sometimes I have to work late, get dinner late, and if metro closes at 9:00PM, Id have to seek alternate ways to get home and that would be a challenge.

That's not right. What happens when restaurants, shows, and downtown business open up again and people want to be able to go to dinner - enjoy an evening in DC. 9 pm closure is unreasonable and would hurt businesses.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| flexibility is dramatically reduced |
| It would make it impossible for service industry employees to commute by metro rail |
| On weekends when I go out for entertainment excursions the 9 pm closure would be too early. The 11 pm would be needed so I could get home after the entertainment performances end. |
| Devastating impact on restaurants, Kennedy Center, theater, cinemas. WOULD BE A HUGE MISTAKE! |
| 9 PM is a very early closure time for a public transit system that a lot of people are relying on in the city. There might not be a need during pandemic but as more people are being vaccinated more people will start returning to work in 2022 |
| Im home by then. |
| Ride shares work well for times outside rush hour. I think cutting back evening service is the best compromise of maximizing service to the greatest number of people while minimizing unnecessary expenditures. |
| Metrorail service hours only works at 9pm can not be a permanent closing time. This only works currently due to curfews and the pandemic, as people return back this work and business close later than no this work not be effective and cause a decrease in metro riders. |
| This would mean I could not use Metrorail at all. I am a licensed tour guide and am scheduled by those groups and my company to meet groups at various locations, ending after 9 pm. |
| Even in high traffic urban areas with busy subway stations, we would need some form of mass transit running past 9 pm at night such as shuttles or trolleys of one form or another. Some compromise would be needed on this proposal. We might now have SSDI and Section 8 but we are handicapped now and cannot be walking up and down hills with 45 degree inclines of such a steep nature. |
| I think this could work given the alternative modes of transportation available to customers (Uber, Lyft, etc.) after 9pm. Also, not all stations are actually open until 11pm anyhow depending on where you are on what line (for example: Wiehle-Reston's last train actually leaves around 10:30pm) |
| I occasionally have meetings or dinners in DC where I would need to take the metro past 9 pm and I imagine a lot of folks who use the metro might be working late |
| Many retail establishments close at 9 pm or later. Closing the Metro at 9 pm would cause a hardship for many retail employees who depend on Metro to commute to work. |
| This work for commuting needs, but evening ridership will increase post pandemic. It is hard to say what that will look like. |
| That would mean I wouldn't renew my membership to the Kennedy Center. |
| For sporting events especially this proposal is unworkable. A major reason the hockey/basketball, baseball, and soccer venues were constructed within DC proper was proximity to subway stations. Shutting Metro service down at 9:00 pm means added pressure on traffic and parking on game nights, not to mention the likelihood of impaired drivers departing games and threatening pedestrians and other drivers. |
| If I am going to be out 9pm is too early. 10 pm would be workable. |
| I don't know my working hours for next year. It is hard to decide now. |
| I would hope to see evening service restored in the future once ridership and revenue return |
| This would not impact my personal use of Metro, but I am concerned about how it would impact low-income workers, like people who work in restaurants. |
| For Friday and Saturday, I would recommend that the Metrorail system would extend its closing hours to 11 pm, so as to accommodate nightlife on those evenings. (Another option: If the closing hours cannot be extended for Metrorail on Friday and Saturday, have shuttle buses available to transport passengers from select stations after 9 pm.) |
| This is a bad idea. You don't build ridership by limiting access to your service. |
| That is just about the most ridiculous aspect of this plan. It's a covid plan for a post-covid environment. If you want to go out in the evening via metro, you should not be subject to the whole system closing down DURING your evening activity. It also doesn't match up with the train station and airports. It really makes no sense. |
| We regularly attend concerts at Kennedy center and use Metro... these concerts often start at 8 PM and end at 10 PM, so closing metro at 9 PM would be a significant inconvenience |
| Concerts, plays and other evening activities often do not end until 10 or 10:30. There is no parking available for many venues or it is prohibitively expensive. |
| No way. How does a city expect its citizens to get around in metro closed at 9 pm. This is atrocious for a major metropolitan area. |
| Would make taking Metro to evening theater and concert events impossible. But as I get older I attend less often. |

Proposal to close Metrorail at 9 p.m.

This is not an equitable way to provide a transit system. It would unduly impact the people most likely to work evening hours such as service employees (waitstaff, janitorial staff, bartenders, etc.) and gig workers (musicians, artists, etc.), who are already at an economic disadvantage. It would also substantially decrease the volume of people who commute into and through the city for concerts, theatrical performances, and other evening activities, causing irreparable harm to the arts. It would also increase dependence on cars. This is a huge step backwards for a metropolitan city.

Punishes restaurant and evening workers. DDOT is trying to limit car traffic in DC. Metro should run past the times that theater and evening events end.

Reduced evening hours makes very little sense to me. What about essential workers that need to get to and from shifts? What about people that go out at night and might have a drink or two? Makes much more sense in terms of public health and safety for people to have a cost-effective and safe way home rather than getting in cars or on bikes. And not everyone can afford to Uber everywhere.

Seems to me that late hours are a convenience for too few people. This would be a reasonable way to save funds to maintain Metro as a primarily commuter system.

My evening travel usually is entertainment related and few evening performances end that early. This will hurt arts organizations because some folks who could afford a ticket might not be able to afford the added expense for Uber or Lyft.

How about staying open till 10 pm?

Workers, restaurants, concert/theater venues, sports complexes, schools/universities, etc. would be impacted greatly if there is no Metro service until 11 pm. This is a BAD idea. Might as well just close the doors.

Perhaps exceptions can be made for stations following concerts and sporting events

Closing at 9 pm would make it impossible to attend evening sport events

This would stop me using Metro for evening outings. Pre-Covid I sometimes took Metro in and got a ride home because night trains required a lengthy wait. I could still do that, but would probably end up driving and paying to park. If the pandemic is still going, I likely won't have resumed leisure outings in January 2022 anyhow, though.

9 pm is too early for having dinner in the downtown areas. 10 pm would work better.

I am shocked that Metro would even consider this. The time to be halting such services would have been at the height of the pandemic; not when we are expecting the region to be emerging from it. This will make it challenging for commerce to take place in the city center and possibly desert major commercial areas that rely on accessibility.

Commercial centers, offices, businesses, and residences are built around Metro stations for a reason. Please keep the Metro running its regular hours.

Probably would work for me - since nothing is open downtown at this time. If budget approved how slow would it be to change schedule times.

Less ridership during these times does not mean that some do not rely on this transportation. This timing seems to be limiting to residents and visitors alike.

Sports events and the theater and concerts last well beyond 9pm.

I often use another form of transportation, such as my bicycle, when I travel downtown during the day. If I want to go downtown to a show or restaurant at night I always use Metro, and with the earlier hours this would not be possible. Also, my husband would not be able to get home from work, as he often stays past 9:00. He always takes Metro to work except this year when he is working from home.

Sometimes early closure would leave me stranded in DC, needing to get back to MD.

I don't have a car. It would prevent me from staying out at night anywhere other than my neighborhood.

Kennedy center performances do not end early enough to get home if service ends that early

Our answer assumes that, when ridership goes back up, you will add later hours again

Fine on weekdays; after 9pm would normally take an Uber from work (but obviously this is massively disruptive to shift workers without that privilege). Not great on weekends but if replacement busses are available it's fine

We need to remain open as late (and as early) as possible to serve those who work or perform other essential duties at non-peak hours of the day.

11 pm closing will be needed on weekends.

This will leave many who do not have flexibility in their work arrangements stranded.

This would leave me stranded in DC on the nights I choose to take Metrorail.

Metro should be used for more than just commuting but this would leave little wiggle room for using metro.

This works for my expected travel schedule.

It would work for me, but I would vote against it. When we need to severely reduce car travel, we need to make sure there are more than adequate alternatives.

Proposal to close Metrorail at 9 p.m.

As someone who works in the restaurant and entertainment industry, this is completely unacceptable and would devastate not only my ability to make money during the evenings, but those industries in general. Both of those industries are the backbone of a healthy economy. You would be shooting the entire city in the foot if you did something as egregious as this. It's truly mind-blowing that you're even proposing it. It's bad enough that weekend hours were cut.

Reduce number of cars and have trains running on an hour basis.

I make multiple late night trips and this would be a huge inconvenience for me

Once again, this leads people to rely on metro less, further driving revenue down. It also contributes to DUIs and is a gift to Uber. Tax people more

I don't ride Metro later in the evening, but I do think this is a bad idea. People working in health care and restaurants or night shifts will struggle mightily with this

I work late this would be a failure of service to me and all others that work late.

It's too early to close. It'll increase DUI. And it'll impact retail & restaurant employees.

I regularly depend on taking metro after 9:00pm. I am fine with less frequent stops, but I depend on metro running after 9:00 pm.

A public transport system that closes at 9:00 pm does not serve those who need later transportation to get home.

Currently, with covid restrictions, restaurants and bars are required to close at 10 pm. It would be beneficial to those who may not be able to support the extreme surge prices that Uber & Lyft use when they know people are in need of transportation. Metro should meet in the middle and close at 10pm.

Metro should be open until the late evening hours. There are many people who would simply drive and thereby add to traffic congestion and urban pollution if Metro were to close 2 hours early.

This would make metro unavailable for evening activities having a devastating impact on restaurants, theaters, and events. 11pm is already early compared to similar systems around the world. This would likely also negatively impact overall ridership: if people are not able to return via metro, they are less likely to take metro to the activity.

Either split the difference and close at 10 or make weekday hours vs weekend

I use the metro to go out to dinners in DC when dining is open!

I already think the metro closes too early, this would make it worse. I'd never be able to use it for my regular evening trips. I take the metro after 9 about 2-3 times a week during covid, post covid I can only assume it will be more.

I could accommodate this by not staying in DC past 9 pm.

Assuming that entertainment and social venues are back to semi-normal hours and operations in Jan 2022, this proposal would severely limit my ability to enjoy any of those types of activities on the weekends. Of all the changes over the years to Metro's schedule, I have been most angered by the removal of late night service, such that the system stops running long before bars/clubs close down and can even be closed when going out for a movie, if the showing is the last of the evening. Making this even worse post-pandemic will not help revival of the city's economy.

I often have classes till 10pm, I need the metro services to be active till at least 11pm.

This is a killing blow to small businesses and public life, which you exist to support!

I expect that by January 22, 2022, we will be back to a more normal life which includes using Metro for sports events. Members of my household use Metro for hockey and baseball teams in DC, as well as cultural events at the Kennedy Center (we are season ticket holders) and the various other live theatre and concert venues in DC. Events of this nature extend far beyond 9 pm and would cause serious problems, especially for seniors and those with mobility problems.

You might as well not even operate if you're going to close at 9. That doesn't even cover someone's late night at the office, let alone happy hours, sporting events, and nightlife. This would be absurd.

Again - schedule changes over service cuts!

As of now, I'm not taking the metro later than that, but if things actually open up in 2022, I think running at least thurs-sat service later, and potentially running service later after big events, would be a better proposal

Prior to the pandemic I used metro as my primary means of evening transit (e.g. for going out to dinner, going to the bar, etc). I would need to find alternate means of transportation and stop taking metro after work if this change were made.

This particular aspect of the proposal will disproportionately affect the low-income households in the DMV, as many of these households are reliant on jobs that do not follow the traditional 9-5 schedule, and in some cases may work until 9pm. These workers can not afford to utilize rideshare services as a transportation system to get to and from their jobs.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would impact transportation for sporting events, concerts, and other entertainment. But I would probably opt to drive to those under this plan. |
| This makes metrorail unreliable. Too many people work or socialize beyond 9 PM and need to be able to get home using the train. |
| Do not change hours |
| No combina con mi horario de trabajo dado que trabajo de noche me afectaria mucho el cierre temprano |
| While this plan might work for the standard officeworker, it seems unlikely to be workable for people who work late, which might include restaurant, retail, and cleaning service workers who are transit dependent. If there is no train for people at those hours it would be important to identify alternatives. |
| I work in a restaurant and frequently do not leave work until after midnight. This would drastically alter my daily commute and likely make it unaffordable to live in the District. |
| I use the metro for nighttime outings, therefore I would like the rail to stay open later |
| I frequently use the metro late at night and having my transportation cut off a 9pm would affect my livelihood. |
| I dont like it but its better than not having it at all. I dont know how people will go to Caps games and other big sports/cultural events all of which take place in the evening and well after 9 pm. But its better than no metro at all. |
| 9pm on weekends as well? |
| I plan use the metro to go to dinner, shows and other nighttime events quite a bit once its safe. This would make that impossible for me unless I drive or begin to use a taxi / ride share. I dont use any of those and prefer using metro |
| I travel mostly the Red line to downtown and mostly for meals and/or shows during off-peak hours. Most of my returns would be after 9PM. If Metro closed at 9PM, restaurants and shows downtown would lose my business. |
| Unsupportable if Metro is receiving fund from the government. You should consider fair and equitable transportation systems to citizens. and urge DC government to grant business licenses to transportation companies that are willing to operate in DMV areas, or to set more Bikeshare and Electronic bikes around the area. Riders should not be victims of the bad management of WMATA who seems to displace every burden on its users. Start applying reduced fare starting from 5PM later and 5AM to 7AM> |
| Afecta a las personas que utilizan mÃ¡s tarde de esa hora, es mÃ¡s deberÃ¡a ser hasta media noche |
| I almost always use Metro to go out into DC at night and avoid driving. This would likely cut my metro use by at least 50% as well as negatively impacting DC's service workers. |
| It might not affect me directly, but I think thats a big mistake for the community of DC and its workers that rely on it |
| While this would personally work for me and my current lifestyle, I think it would be a death sentence to a lot of bars and restaurants especially in downtown DC. |
| definitely would curtail my staying downtown after work for any events. |
| Myself, and many of my friends are working flexiblepart-time jobs, given the state of the economy due to the pandemic. Some days I get off work as late as 10pm. I have always taken the metro rail home, but this would make my night time commute much more difficult. |
| Socialization should return back to normal by January 2022, and many inside and outside of DC depend on the metro to get around in the evenings. Reducing the service hours " especially on weekends " would increase congestion and the demand for less affordable travel options. |
| 9pm? How would we get home from the movies or downtown for night stuff? |
| If things open up again after covid, an early closing of Metro would not work for me. I have used Metro to get to and from movie theatres during the DC Filmfest as well as to other venues involving the performing arts or hockey games. I cannot imagine such an insane schedule. |
| From April to October, I rely on Metro to get to Nationals Park for games--this would not be workable for me, or for hundreds of workers there who rely on Metro to get home |
| 9 PM is cutting it too short and depriving Metro of valuable funds while saving little in return. |
| The metro provides safe late-night transportation. Many people go out after 9PM and time their plans around the availability of transportation. Reducing the operating hours of the metro can lead to increased road congestion, less safety, and other negative impacts. |
| I think because of COVID, I would have to wait and see. Ive only been in the area a short while, so my experience on the Metro is very limited. It would definitely hinder certain choices and force me and my family to make very deliberate planning decisions when in the city in the evening/night. |
| Often use public transit during 9-11pm, would prefer later |

Proposal to close Metrorail at 9 p.m.

Metro should consider staying open later than usual on Friday evenings, Saturday evenings, and evenings the day before a major holiday. This keeps more drunk people off the road and ensures people can get home safely.

Trains may need to run later on nights with major sporting events or similar where masses of people will be leaving at the same time.

I do not usually take the metro during these hours, so its hard for me to say yes or no. But it would be nice to have that option.

This would be devastating to DC restaurants and nightlife, which has suffered tremendous losses throughout the pandemic. It would also make it more difficult for working class--who are more likely to work evenings than middle class people--to commute home from work.

Significantly would impact weekend activities and some weekday; 9pm is way too early given work related activities and social activities.

Would rather have longer intervals in between trains on weekdays and continue having evening operation.

As the rate of covid is dropping rapidly with the increase of vaccinations, returning to normal will happen soon. I plan to attend concerts, sports events, theater, etc and will be stranded in DC (I live near Grosvenor station), as would workers thereby impacting the economy as it starts to recover.

This would be a huge problem for DC entertainment and nightlife. Sporting events and live theater routinely finish after 9 PM, closing Metro earlier makes it a less functional option for folks who wish to attend these events, resulting in decreased ridership and more cars on the streets. This might even affect rush hour ridership, as commuters who take Metro to work and plan to attend an event in the evening might opt instead to drive to work so that they have a way home after their event.

Not good for late night workers or party goers;Metrorail riders will return when pandemic goes away. People are scared now of close quarters travel -- like Meorail train carsMetrorail wotravelers will retyurn as pandemic subsideswould ruin theater and other night life

people do work later than typical rush hour or plan to attend events/classes that go past 830. this would have a detrimental impact on the region.

I often use metro between 9-closing. Ending at 9 would mean metro is no longer an option for getting home after dinner or from a sporting event.

This isnt great, but its better than frequency cuts during rush hour.

If I'm using the metro on a weekday it's likely to meet friends for the evening, and this would guarantee all of my travel would be metro to destination and ride share home.

This would absolutely prevent me from riding Metro for any after-work activities, and most weekend events.

Change nothing

This is disappointingâ€”I would prefer to use metro for evening trips as well as commuting but commuting during business hours is my top priority.

Absolutely not. Pre-COVID I used your system to attend evening activities in DC at least 4-5 times a week. 11:00pm closing was only sometimes a challenge, 9:00pm would ensure I could never use Metro for theater or anything else that makes DC such a culturally rich city. Completely absurd plan. It would make Metro a commuter to work ONLY system. If youve ever tried parking say in the Gallery Place area, youd know how absurd your plan is. Your plan would drive a nail in the coffin of theater and other cultural venues in DC. Dont spend one more minute thinking this is a good idea.

Use METRO to/from Kennedy Center and other entertainment venues in DC (assuming they open by 2022). Closing at 9 pm would require driving instead of using METRO.

This is too early. 10:00pm closing is ok for week days and 11:00pm for Friday and Saturday. You will miss lots of ridership on Caps and Wizards games if Covid is not a problem

What would happen if we take a trip and decide to stay a little longer and perhaps get a drink in town or dinner? we are suppose to drive cars or take other much more expensive ways of transportation? This will be a big inconvenience for everyone!

Having the metro until 11pm (or later) is best for evening activities. Otherwise this just pushes people to look at alternative modes of transport when going out at night. As people start doing more activities, this will be much more important. Maybe this would work as a short-term solution, but long-term, this does not seem to be beneficial to ensure people keep using metro.

Reduced service hours have a huge negative impact on area travel, especially people working off hour or less well paid work.

This closing time is too early for a major metropolitan city anywhere in the world. Businesses would have to close earlier and/or workers would be seriously impacted.

I do not yet know what the scheduled work / shift hours would be for my new work.

One of my primary uses of Metro is to get into DC for sports and cultural events and atopping rail service at 9am would force to to stop using Metro. I am sure I am not alone in this.

For late night work events or sports events in the city, this would disrupt a safe, reliable transportation channel

It works for me personally, but THIS IS A VERY BAD IDEA. Even 11:00 is too early to close.

Proposal to close Metrorail at 9 p.m.

the idea of public transportation is to make it convenient for people who have no other means of transportation AND to incentivize others to choose this option (reduce drunk driving; reduce air pollution; reduce traffic & traffic fatalities; etc., etc.

I am very frequently out past 9pm and would be extremely unhappy with this change. If this were to be implemented, I would almost certainly stop taking the metro, which is currently my primary form of transportation, all together on the weekends and would opt for single transportation options such as Uber, which I do not want to do.

9 pm is way too early - this discourages me from going out to restaurants and bars or events around the city

Many customers get off 9pm. 10pm & 11pm. I use Metro Bus & Rail Daily. Get off 10 pm. Tuesday's. Work Night shift 11pm-8am

Customers would not be able to get home after 9pm.

This would mean that the last trains would arrive at key stations at around 9:30 - a death knell to any prospect of night life using public transportation in the summer. This option would do more harm than good.

The 11pm time is bad enough and has destroyed peoples ability to get to work, engage in nightlife, and just live their lives. This is a ridiculous idea.

once restaurants and indoor activities are allowed/safe, there will be pent up demand to go out and people will need Metro to go home.

11 pm is already early for Metro to stop running. 9 pm means no one who works or goes out in the evening can take Metro.

Not just no but Hell no. Does DC have no nightlife anymore? Shift work? WMATA should never stop, like MTA, and this is going in exactly the wrong direction.

As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

I rely on Metro to go to and from downtown on weekends. Ending service at 9:00 pm will only serve to drive more people to cars, exactly the opposite of Metros purpose.

Only if we want to be Backwater city.

This is not acceptable. I will not be able to get home from working shift work in dc.

I use metro to commute, so aside from Nats games this wouldn't impact my use of Metrorail.

There are times when I have to work late or travel by metro after 9pm. It would an an hour to my commute home if I have to take the bus after 9pm.

This. is horrible for people who work in the evening. And also for evening social activities . Why would Metro want to cut service when we are coming out of this pandemic -- people will want to get back into their old routines --

5am-9pm is a decent time. But you should have express buses from 9-11pm for people who need to get to work between those times. Have a sign up website

This is shortsighted, people will return to Metro when mass vaccination is achieved and the Cory starts reopening. Many people like me rely on the metro in the evening to get home from work on late nights or after dinner or shows and sports events.

what about 10:00 pm? Even for an OAP., 9:00 is early. Id feel like Cinderella, rushing from the ball...

This would cut off options for too many commuters and negatively impact restaurants and bars, which will probably have increased business again by then.

The DC, Maryland, Virginia area is a large metropolis. It is unacceptable to have such restricted hours. I believe the restricted hours would reduce ridership even more because Metrorail will become an unreliable means of transport.

This is unworkable. The proposed cuts will further drive down ridership. This will severely adversely impact the working poor. This DC administration will be remembered for killing the Metro if this is allowed.

only works for 1 year period

Works for me, but probably not for the larger community. This would affect those not working 9-5 jobs and the ability to enjoy what the neighborhoods have to provide after normal work hours.

Metro is often most useful at post 5pm hours, for many of the people I know, including myself.

Absolutely destroys downtown, Friendship Heights, and Bethesda evening activites for me.

That is WAY TOO early!!

Hopefully there can be trains that run until at least 11pm on Friday and Saturday nights....hopefully to discourage people from drinking and driving.

this change would affect our return home several days of the week

People would be stranded if their jobs ended at 9 pm, are you expecting businesses particularly the ones who have been most affected by covid to just offer to pay for their employees transport? Expensive ridesharing will just compound the problem for low wage workers unless there are subsidies.

This would impact my ability to attend concerts at the Kennedy Center and baseball games at Nats Park and such, all of which frequently end after 9 pm.

I could not attend any DC activities in the evening if the Metro closed this early.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Definitely not on Friday or Saturday |
| Absolutely not. The metro is what I rely on when doing late night travel and is even more important because I do not want to wait at the bus stops in the dark. |
| This would definitely not work on weekends. Going downtown with friends wouldnt be doable. Also going to Wizards/Capitals games would become impossible. Driving in the DC area is terrible, so having the metro is a great way to experience some of what DC has to offer without spending too much time traveling only a few miles. |
| Most of my travel is via metro. Stopping trains at 9pm will limit transportation for several riders including those who work at night. This would require them to pay drastically increased prices for alternate transportation |
| Have you all considered if you are closing the trains at 9pm will there be buses that can take customers to their destination? |
| I travel into town in the evenings often for concerts, theatre, and baseball. Evening events rarely end before 9:00. |
| Are you insane? I often work later than 9 pm. |
| We are fortunate enough to have sports teams, theaters and conference centers all accessible by Metro. Closing the system at 9pm would cause thousands of people to drive to the sites instead making our famous gridlock even worse. |
| On weekends, may use the metro later at night than 9pm |
| I am retired and do not take Metro often. However, the cost of a taxi ride to my house from downtown would be excessive if I needed to stay late for a concert or play or for dining out. |
| This is so early! Metro already closes super early to the point that evening activities often have to get cut short if you have a journey home. This is a terrible proposal in my opinion. Please find the money!! |
| It would change my plans about once a month for various functions, I would have to drive downtown from Rockville. It would be horrible for service workers who rely on the metro for transportation. |
| This would be very inconvenient for those that have to stay late at work. Also this could prevent people from going to bars and restaurants because the metro is longer an option for getting home. What about concerts, sporting events that go past 9:00PM? Does the hockey games always end before 9:00PM. What about the baseball games. |
| My use of metro in the evenings is generally for events that finish later than 9pm (i.e. games, theatre, etc) |
| There would be no way to get back from a concert or evening movie by public transit. |
| Workers whose jobs finish late will be negatively affected by this proposal. |
| I do not think that it a good idea considering the people started to work face to face. |
| I believe metro ridership will rise again in 2022. See how ridership picks up in the summer of 2021 and gage it then. I also think metro will be utilized more in the fall of 2021 to winter (sports, holidays) because more people will fill comfortable as long as mask are required. |
| You will lose riders who have to work evenings, plus those attending sports events, concerts, theatres, restaurants, bars--all that revenue will go to parking their own cars and/or Uber. WMATA cannot afford to lose riders. This proposal would do the opposite. |
| If the restaurant, theatre, and sports sectors are to recover from the COVID-19 period, riders must have access to our Metro system until 11:00 p.m. There is no play, concert or sporting event in the evening that is over before 9:00 p.m. And, restaurants that have two evening seatings will not be able to have customers that require Metro transportation for their second seating. Please dont be pennywise and pound foolish in shutting down the Metrorail system at 9:00 p.m. We need our economy in 2022 to be back, not stifled by such a poor decision as this! |
| Does not allow for spectators to get home from major evening events - sports, theater, etc. |
| Many people at NIH need later train times! And 9 pm on weekends is ridiculous and would hurt businesses - and Metro should be encouraging more activity, not less!! |
| it would be cumbersome in terms of going out to eat, after work events, and any sporting events. this would impact my contribution to DCs economy, but not my work commute |
| It would preclude my attending any evening performances in DC. Kennedy Center, theaters. etc. |
| There will come a time after more people are vaccinated where people will go out again and will need metro. Please dont make any permanent changes based on ridership during covid. |
| Sometimes use system later. But not often. Could live with this. |
| To meet my needs for after dinner and after performances, 9 would not meet my needs. Sometimes 11 doesnt meet my needs after downtown performances. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This is basically asking people to drive into the city rather than take the metro for evening engagements. This will increase people drinking and driving. Yes ride share is an option but for people on the end of the lines its extremely cost prohibitive. Also this will increase traffic at large events where metro was previously used and those venues such as Verizon Center along with the Nationals Park and Audi Field dont have the infastructure to handle increased vehicle traffic |
| I dont believe that this proposal offers hours that accommodate non traditional work schedules or support the patronage of non retail businesses. Restaurants, bars and other nightlife already hard hit by the pandemic will be even harder hit, if people cant get to those places because of limited transportation options. |
| This will lose business for individuals leaving restaurants and bars later than 9. This will slow economic recovery once restrictions are loosened and things become safer. |
| I'm visually impaired and rely on Metro for transportation. I do occasionally ride Metro after 9pm |
| Suggest 10 pm closing time. |
| If CoVID restrictions continue to stay in place, this will be all right. |
| This will kill the life in downtown DC. Usually I stay late working, so 9pm is a little too early to close the Metrorail systemThis measures will only increase the traffic jams, gas emissions (because I doubted that by 2022 all cars will be electric) - therefore it totally contradicts the reasons of the existence of metro all together !!! |
| This plan is also an inconvenience to the public but more doable |
| 9 pm closure on weekdays seems rather early. 10 pm would be more reasonable. |
| Govt last shift begins/ends at 11:00 pm. If shutting it down at 11:00 pm how employees to get home. This mean giving public parking making money and reduce funding for metro substantially |
| Too restrictive, would be stranded more often |
| I do not commute after 18:00 |
| This is not an acceptable schedule for a transit system for a metro area of this size. |
| Insane . . the only major METRO system in the world to do so. |
| Given my current life, yes this would work for me, but I think 9pm is too early for many. Years ago it wouldnt have worked for my work schedule. |
| People need the trains later than 9:00 pm some people dont get off work until 10:00 or perhaps 11pm and cant afford Uber or Lyft. |
| People work late!!!!!! |
| DC does not shut down at 9pm (or 11pm for that matter). This is another proposal that will simply push people to cars. And this adversely affects low-income wage earners in the service industry. Metro can do better. |
| When COVID restrictions are lifted would need late travel option |
| As someone who often has to stay at work late especially to clean up events, I rely on the metro to get me there and back. There have been multiple times weekly when I don't get to the metro until 9:30 pm the earliest. Also closing the metro early poses difficulty on anyone who has a second or third or graveyard shift at their place of employment. |
| My anticipated meeting ends at 9 pm. The timing is dictated by the restaurant where the event occurs, which gives us the 7-9 pm time frame. Closing at 9 would force curtailment of in-person meetings or even their abandonment. |
| Sometimes I travel to see friends and family in DC and MD. If the metro system closes at 9 I will not be able to spend as much time in the city or in MD. Driving and parking in the city can be difficult. It is much more convenient to enjoy nice evenings when you can rely on the metro. If metro closes at 9 going to DC during the evening will no longer be an option for me |
| What is the difference? Less service. It is public transportation |
| Need longer weekend hours to cover events in the city! |
| What on earth!!! Why limit options for either folks who work late or people looking for safe ways to travel into town at night or to games... |
| This would not work, once things reopen there are multiple weekly events I would no longer be able to attend that I once could. |
| This will hurt nightlife. |
| I literally have no way to get home if I stay out past 9?? NO |
| Creo que aunque pasen a cada 45 minutos serÁ-a conveniente que trabajen hasta la 1am gracias |

Proposal to close Metrorail at 9 p.m.

I would love to know if you polled restaurants, cinemas and theaters or any cultural institutions that regularly schedule evening events about this separately. This will be a death blow to already crippled industries as fewer people will opt to stay in DC after work because they now need to worry about catching the last metro home at an absurdly early hour. I imagine it won't be great for tourism either.

We almost always take Metro to evening events downtown, including ushering at a theater. The 9 p.m. closure would make Metro travel to evening events impossible, at a time when on street parking has become much more scarce in the District.

Im not sure of my work situation because Im in between Jobs (due to COVID) so its too soon to say but I imagine this would be doable if I find another 9-5 job In DC.

It is too early on weekends if people are out doing things as well as for workers

I want to be able to support DC businesses and cultural spaces, which means coming home after 9pm. It is too expensive and carbon-intensive to use taxis or Uber. I want to take public transportation. DC must decide if it wants to be a village or a city.

When I was working at a restaurant, it saved me so much money being able to catch the last 11p metro from Silver Spring after a night shift. I wouldn't have been able to take the job otherwise because Lyft/ Åæber is so expensive, especially now. An early close time is also more dangerous for people, women especially, who can't afford Lyft/ Åæber everywhere and then end up walking late at night.

This would mean that if I go to DC for dinner or to watch a show, it would not be possible to take metro back. From a business perspective, does this seem like a good idea to dissuade people from spending time and money in DC patronizing restaurants/theaters?

How will I commute home after 9pm if the trains stop running at that time instead of 11pm? Am I to rely on buses or walking or taking an Uber? Buses don't have the same route as metro, so even if I was to bus home, it would not bring me to where my metro stop would. So I would still be walking a good distance after the bus, and that late at night is not safe to be walking in the dark. How am I to arrive safely home during those hours without public transportation? And I do not have the money to take an Uber home every day. Shameful.

Even 11pm has always felt quite early to stop metro service. Ending service at 9pm would decrease safety and convenience.

I mostly take the train to and from work, so as long as the Metro hours covers main work hours, this would technically work for me. It is not my favorite option, but it is fine if needed.

Totally unacceptable for a city of this size and importance not to have travel to evening events in the city.

This will negatively impact people who work evening shifts, such as at restaurants and in the arts, and who rely on Metrorail for their commutes. Additionally, a lot of people use Metrorail to travel to the DC sports arenas and entertainment venues. If Metrorail closes at 9pm more people would have to drive to sporting events and concerts increasing traffic congestion and parking problems. Furthermore, there could be an increase in driving under the influence if people do not have a way to travel home with public transit at night.

We take Metro to KC, Shakespeare Theatre in evenings, where performances last beyond 9 pm.

9 oclock? Are you kidding?

The 11pm closure is already limiting and means planning around the train rather than knowing I can get around when I need to. Ending service even earlier will hurt residents who work evening shifts and in restaurants and entertainment right as we (hopefully) are coming out of the pandemic and ready to support that essential part of DC's culture and economy.

Why open at all no matter what Metro is always inconveniencing the customer.

Though worry about retail-type positions that need to commute home after 9 pm. It seems that these folks would be most likely to be negatively affected by this proposal. (I do not fit into that category.)

Though in most circumstances the would not impact me personally, closing the system earlier, especially Thursday through Saturday, would likely not serve the best interest of the public in the D.C. area.

Stopping early does not help business who stay open later like restaurants,

We are frequent riders for sporting events and concerts. This puts more cabs, ubers and lyfts on the street which is unacceptable for both traffic and environmental reasons.

I think there are a lot of working class people will need to ride a train to go home between 9-11pm in normal time. No need to run it after 11pm.

No, this would not work. As a young woman, I feel much safer using Metrorail at night than waiting at an often remote stop for a bus. 9 pm is too early to close the rail.

I am rarely on the metro outside business hours.

Proposal to close Metrorail at 9 p.m.

Ridership? What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

Closing at 9! Ridiculous. Poor and working class people will be literally stranded, and forced by the government to take an expensive rideshare, destroying a substantial chunk of their earned income. This is a tax placed on those who have the least to give.

Beyond affluent patrons of Capitol One Arena being forced to find other means of transportation (all joining local roads and highways at the same time), this would be devastating to all people commuting on Metrorail after late shifts. Not all of those people can just take a bus, even while ignoring the cuts to Metro Bus service.

One of the great benefits of metro is that it provides transport to and from entertainment, educational and sporting events in DC and other areas of the region. They often end after 9 p. Shutting down service at 9 would eliminate opportunities to take advantage of such events.

We often attend performances at the Kennedy Center, Woolly Mammoth or Shakespeare Theaters. Closing at 9:00pm would make it impossible to take Metro home.

This is too early of an hour to close. People with irregular work schedules would suffer, especially those with lower incomes. Even social activities benefit from hours later than this. Not everyone can afford a taxi or rideshare, and I would be concerned about an increase in people driving under the influence of alcohol or drugs.

What about the people who travel across the DMV region for employment on metro rail? Buses dont always pick up the slack and they surely arent as convenient. And many who cant simply alter their work schedules. You all have already caused issues for some people closing before midnight.

Cant get home after 9pm.

Have just eliminated night time shift people coming and returning from work or home. These are the people that really need the metro transportation. Maybe run smaller trains?

I rely on the metro for trips after plays/concerts/lectures which would not usually be finished by 9pm.

Working people who leave the office at 5:30 or 6:00 and then head out to dinner, or a movie/show are simply not going to be able to use Metro as a transportation source if Metrorail service ends at 9:00 p.m. I know revenue is a major concern, but think of all the riders you will lose in DC as a result; Uber and Lyft must be licking their chops. And as Ive said many, many times, if Metro enforced fare payment, instead of letting every third person jump the turnstile, it would collect a great deal more revenue under existing service parameters.

Dont cut your own throat, here people will give up on you take ubers, bikes, how about concerts and ball games. This is a bad idea.

Later evening transit is important for transit options following evening events throughout the area. While Uber and Lyft are possible options, metro is more affordable and people often plan on where they live so that they can live nearby to metro stations. Later hours of being open well past 9 PM is very, very important!

If you need to do some change in schedule please do it now as people are still mostly working from home. Not sure what is the logic of this proposal assuming that by 2022 we would be vaccinated and probably go back to normal work schedule in the offices or at least close. So if WMaTA needs to change services to make some savings, do it now, not in 2022 when everyone is expecting to go back to normal business.

There are times I need to work late until 10:00 pm and this leaves me no way to get back to Branch Avenue Metro.

Even an 8pm movie ends after 9pm, also trains coming in. I have seen lots of people who work shifts also on the train after 9. It is too early

Would devastate the return to normalcy. Would severely hurt nightlife in the city and inner suburbs and likely lead to more drunk driving.

Again, assuming were back to normal then, this would be a real drag for me.

11pm is already too early. No way. We need safe, reliable public transit options for people coming home from work and to help keep drunk drivers off the road.

For most work days, this would be fine, but there are many nights that I work late or stay downtown to have dinner, go to the theater, or watch a sporting event. I count on Metro to get me home. In fact, many events end after 11:00, making that closure time more difficult, too.

pre-covid (and post covid plans) i use the metro to get home at night, often catching the very last train. this would severely impact my mobility and would result in more cars on the road and i fear more drunk drivers who cant take the train so choose to drive home from the bar.

11 pm is already too early for Metro to close! 9 pm is definitely not at all workable. Please absolutely do not choose this option under any circumstances.

If cuts need to be made, this seems like a reasonable proposal that would still accommodate the 9-to-5 workforce, but it does make me concerned about service workers who would need to get home later in the evening. There would need to be a robust system for those customers.

It'd work for me, but I think you are screwing over riders who work past 9PM, who need Metro to leep their jobs

Yes, I could make this work most of the time, but 11:00 closing would be highly preferable. Or get the Nats to start their games at 6:00 pm...

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Painful plan, but acceptable if it ensures more stations/routes can avoid closures |
| This would remove the system for all evening activities especially evening arts events. |
| In some cases, some special events may cause me to be late for the train. |
| many people work late and go to entertainment that lasts after 9 pm |
| I often have to work late and a 9 oclock close time would destroy the few options I have of getting home in a timely fashion. |
| In the past I have used Metrorail to return home after choir practice at a downtown church. This proposed 9 pm closing would not be late enough to use Metrorail to get home. |
| 9pm on the weekdays is fine; it would be nice to have later hours on the weekends |
| No. Absolutely not. The metro is a safe and reliable system of transportation, and we need to ensure people have a way home after late shifts, etc. 9:00pm is entirely too early for closing a metro station. |
| If I want to do something after work or in the evening, this change would remove a safe and reliable way to get home. I would be stranded or have to find other ways which are expensive and inconvenient. It sounds depressing and will keep people away from restaurants, businesses and social activities. Even museums have evening programs. I dislike the idea of being forced to use rideshare services and especially at night and as a woman. |
| I wouldnt be able to work late or enjoy nightlife downtown. People will be vaccinated by Jan 2022 and will be back at work and wanting to enjoy nightlife. this is a disaster for area businesses, bars, clubs, restaurants and sporting venues, not to mention people who work night shifts. |
| How does this serve people who work at night? People who clean office buildings for example? If I were a cynic, I would say race, ethnicity and class are affecting this decision. |
| This doesn't mean people who use metro to go into DC for the evening would just leave earlierâ€”they would not use metro at all |
| Living in Arlington, I rely heavily on the metro going in and out of the city, especially in the evenings for sporting events and concerts. While sporting events are currently limited due to COVID-19, I plan on using the metro much more once again as soon as restrictions are lifted. |
| This would be undesirable for special events or recreational outings, but makes some sense. |
| I mean... I prefer you didn't. But this would be the least disruptive option to my life as I have a baby and am not typically staying out late. But I do occasionally have to pull late work days, and that would be an issue to have no way to get home to Rockville other than a \$50-60 Uber ride :/ Or spending \$25 to park. |
| People that work late night for extra hours would have to spend more money getting a can uber etc. |
| Would need transportation home after nine pm three or four times a month. |
| 9PM Closure is too early |
| Games, restaurants, and bars, summer site seeing, this would close the city down, terrible idea. |
| This would exclude a lot of workers in restaurants, theaters, etc., so 9 seems too early to close. Its already a reduction to close at 11; again, ridership will have to be assessed after things are more normal. |
| Too early. Should make it 10 p.m. at the earliest. |
| How would you serve people? There are a lot of employees and people that use the system after 9 pm. Why even operate if you close before 11, also, what happened to weekend service that closed later? As a major metro system for a major city, this is crazy. |
| Once again this is Ridiculous. Metro needs to be able to help everyone. Not just the office workers. There are a lot of other ppl that need to be able to depend on the metro that actually can't afford a car, insurance or gas money |
| That's a fair compromise. I rarely ride the metro that late. |
| Closing at 9 helps no one and further sabotages the long term sustainability of the rail system. Dont encourage people to seek other modes of transportation... |
| It would be even more wonderful if the trains ran longer hours. Either because of the airport so I'm not stuck with a 45min Uber back home, or if my work keeps me like it often does, very late into the night, it would be a comfort to know Metro is there to help me home. |
| This proposal is truly nuts for riders, and is likely to be the death of movies and restaurants. Who wants to race to the last train before 9 am?? |
| By Jan 2022, we will be going regularly to baseball, hockey + soccer games. You need to adjust hours for sports game evenings. |
| If the area is fully operational then I would probably spend a significant amount of time past 9pm in DC. |
| This would be ok because I could use ride sharing alternatives if Im out at a concert or sport event. That might not be possible in Jan 2022. So maybe ok. |

Proposal to close Metrorail at 9 p.m.

Particularly if this is intended to apply on weekends, the closing time of 9:00 would be a problem. We often (pre-pandemic) take Metro downtown for dinner or other evening events that end late. Closing Metro that early will really do bad things to restaurants, theaters and such downtown. It will turn into a post-pandemic ghost town.

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming too emergencies. I moved to the Grosvenor area because of the metro being right there, am i supposed to see my home and move ? Am I supposed to take a cab if I have to work late ? Go to the Capital One Arena

11pm is already quite inconvenient. A 9pm cutoff is ridiculous.

Im out of the Metro system by 9 PM so this works.

If this were a temporary measure, perhaps I could work around it. In general, if Im using restaurants and attending cultural events in DC, I need the Metro to run to 11 pm. I doubt whether there are enough Uber/ taxis to meet demand. This plan would not accommodate many service workers, who may not have obstacles in completing this sort of survey (no time to complete survey, didnt see the email, lacking adequate access to internet)

As a city with numerous late night concerts and events, as well as professional sports teams (Wizards, Capitals and Nationals to name a few), not having later service will impact the ability for those that attend to get home safely and will lead to congestion on the highways

Closing at 9pm cuts off most of the people who commute to DC for shift jobs including the restaurant and bar industry. This would disproportionately affect Black communities and other communities of color who rely on metro for commuting to their jobs. DC restaurant and bar industry thrives off of people being able to use the Metro to get home instead of having to drive and not drink. This is also true of baseball game days where hundreds of people depend on the metro to get home from a late summer baseball game. Metro closing early would mean so many more cars on the road, increasing carbon dioxide in the atmosphere.

I occasionally need to use Metrorail after 9pm on weekdays (either working late or attending events after work) or on weekends. Additionally, I rely on Metrorail to get home from Union Station or DCA Reagan after traveling outside of DC. If my evening Amtrak train is delayed and gets in after 9pm (which is not outside the realm of possibility) then I will be forced to resort to more expensive travel options. I strongly urge WMATA to reconsider this proposal as it will have negative impacts for countless people, including low-income workers who work late or night shifts and who may not be able to afford other transit options.

If this is a temporary fix until the pandemic is over, it is still horrible. Its almost as if you are trying to reinstate blue laws- who on earth will be able to dine in the district or have any type of life? What about people who rely on metro to get to a night job?! GET REAL. New York is opened 24/7, think about it.

You are making it difficult for those who work later than nine each night. Public transportation is what they rely on. It seems your service will be set up for those who work 9 to 5

My goodness, what a horrible idea. This would affect my personal travel greatly, in that I would almost never be able to use Metro for recreational trips like going out to eat, see a movie, or any other activity which might run into the night. But more importantly, this would be a terrible schedule for me or any other rider who works unusual hours - the riders who, not coincidentally, rely on Metro the most for their transportation needs! This would be horrible for the thousands of lower income riders who need Metro to get to and from work. Please, do not do this.

TOO EARLY. 11pm is early.

Metro is my primary form of transportation. It would make it very difficult to get around DC if it closes that early; it's already inconvenient that it closes as early as 11 on weekend nights.

This is the worst plan I've heard so far. The DMV has 5 million plus people, many of whom need MORE flexible late night trains, not LESS flexibility. Fewer people would use Metro overall if this happened. I truly question your leadership if this is even on the table.

My daily work commutes wouldnt be affected, but I would be less inclined to go out to dinner, etc if I knew metro wouldnt be available after 9pm.

this is really unacceptable, WMATA is already one of the more difficult metros to use the train in after major events and concerts, limiting hours even further means that you are just GIVING money to rideshare and taxi companies for both directions of a night out as well as for WORKING PEOPLE that dont get off work before 9pm. Pre-pandemic this was the most limiting thing about the train was the early hours of closure compared to other major cities. Theres a reason people dont plan to use it if it closes early and has sporadic service late at night. The number of times i sat in a train station for 30 minutes plus, wondering why i didnt just take a rideshare, shows me that many people did. In fact, more affluent residents have used that as a reason to NOT take the train at all.

This is far from ideal, but I'd rather have shortened hours than wait 15 or 30 for trains

Proposal to close Metrorail at 9 p.m.

With the pandemic probably ending in 2022, And people resuming their normal activities, this schedule will discouraged people from using public transportation which is absurd giving the climate changes.

It would be nice to have a late night option of getting home.

Assuming the public health situations improved, this would likely impact the economy of restaurants, theatres, etc. and customers who depend on Metro for such outings. Reduction in Metro services is inconsistent with DC, MD and VA objectives to reduce motor vehicle traffic and parking in/around the region. It is also likely to impact lower/hourly wage and shift employees who rely on Metro for transportation to work during these later hours.

This would ABSOLUTELY not work for me. I am a tour guide in DC. Tours given at night (which happen more frequently than day tours) end at 10 pm. Guides then need the metro to get back to their homes in DC, MD and VA. We rely on Metro to get us to and from our jobs. Unless DC is prepared to create lots of car parking at a reasonable price, Metro is how all of us get to and from our jobs.

You should keep it open til 11 on Friday and Saturday evenings

Metro is not just for getting people to downtown to work and back home any more. It is also used for going out to eat, to visit etc. Also this leaves restaurant and other service employees with no transportation.

I often work later so I dont know what I would do.

So many essential and frontline workers rely upon metro to get to work. Further limiting operational hours in favor of a more frequent train schedule (assuming this proposal would forego the need for reduced train frequency) would disproportionately affect these workers.

Ending service this early would harm my ability to participate in community building activities that occur after work hours. I'm sure that it would also disproportionately harm professionals who work late shifts and particularly lower income, BIPOC.

stopping trains at 9 pm takes away critical extra time for families that need to shop for food, get home if they are working late, getting home safely after having a couple of drinks etc.

This will cause issues for users who have weekly night meetings and would deter me from using the service. I would regularly use metro after 9:30pm due to leaving work meetings in the urban corridors.

I frequently use the metro to avoid driving after drinking as it is a cost effective alternative to ride sharing. This is a safety issue to reduce service for those using metro to get to/from events and evening outings

9pm is not the end of the day for many people, including me. not everyone has a 9-5 job.

This is not a world-class system. Better to not offer service at all than to provide a half-baked one.

Its possible that once or twice a year I might need the 11 p.m. closing time

I think ridership will be much increased by January 2022 and this wont be necessary

I worry this would strongly affect economic activity in downtown DC as many of the younger citizens living in DC and the greater metro area typically rely on metro to travel safely at night to and from work and to and from various entertainment venues, restaurants, and bars. I also worry that this could cause a rise in drunk driving.

9 PM is too early to close the Metrorail system. Closing at 10 PM would be acceptable for weekday service, but weekend service should run until 11 PM.

This might not work for people who must work in the evening, especially low-income workers and workers who cannot drive. Metro must provide an affordable alternative for people who must work in the evening.

Caps games and concerts often go to 10-10:30.

While this doesnt impact me significantly it would reduce the likelihood that my wife and I would have dinner in the city after work which is something we used to do frequently pre-pandemic.

I use metro to go to rehearsals, from Grosvenor metro to Tenleytown metro. The rehearsals end after 9 pm.

Sporting and theater events often go past 9pm.

The change would certainly impact downtown activities in the evening. For example going to the Kennedy Center would mean having to find another way home after the event.

Run every 30 or 45 mins after 9 so that restaurant workers at least have the option to take the metro. To stop after 9 is unacceptable.

Proposal to close Metrorail at 9 p.m.

Public transportation is very important for large cities for to protect the environment. It is also important that we can rely on public transportation for our daily needs. The whole world is taking steps to improve on the public transportation, limit individual/private vehicle use. DC shouldnt go the opposite direction. Metro should be made available to whole public for an extended period of time - actually none stop. If cost is a constraint, the frequency can be increased to 30 minutes or so, but we need access to metro minimum until 12 am every single day.

This would make me less likely to participate in activities such as going to dinner and seems exclusionary to blue collar workers

Closing the system earlier creates even more problems for the most vulnerable in our communities. Not to mention the economic impacts as nightlife starts to return as the pandemic winds down.

This likely would result in us and many others driving more often especially in the evenings. Could be a problem because of recent DC actions to limit on street parking - will result likely result in much higher costs to park in the District. Maybe also a boon for ridesharing services, Lyft and Uber, etc

I can imagine I staying late in the city a few nights, perhaps for a baseball game or a theatrical event, and therefore needing transportation to my Virginia residence after 9:00 p.m. I can, of course, drive to the event, but may prefer not to and would rather take Metrorail. I am not an everyday user of Metrorail but do utilize it in nearly all my trips to DC and return.

Once we get back to some semblance of normal, this recommendation would ensure that anyone who does not have a car, and does not have money to afford a cab (and for whom bus service isnt available) would be left without transportation. Many of us work late and, given the up to half hour delays on train lines, would leave us without transportation. This is particularly true for workers who are wholly dependent on the metro and who work in the evening, such as cleaners, hotel and restaurant staff, etc. Seems extremely unfair to such folks.

Again the pandemic will be over by January 2022 and I expect to return to going out at night " rather inconvenient for thousands of us to have no way home" not everyone can afford "super high demand" fees on Uber!

I mostly take the Metro to and from work so the reduced hours would likely not affect that routine travel. However, I do frequently stay in the District after hours for dinner and events. These reduced hours will be seriously limiting. I believe they will have an adverse affect on the Districts restaurants, theaters, and sporting venues.

For my late commutes, prefer Metro to run until at least 10pm

Train service should remain accessible until 11pm, city residents shouldnt be inconvenienced. Need ability to attend concerts, sporting events around city. Less trains and shorten time to close stations is unacceptable.

Im thinking that 10 pm might be a better time to compromise closing the Metrorail system if funding is below anticipated/ridership does not increase before September/October 2021. Closing earlier than 11 oclock might reduce revenue to Metro if the new normal begins before January 2022 and once former customers begin driving to substitute taking Metrorail, getting them back will be almost impossible. This will be a loss-loss scenario for Metro.

By January 2022 Im hoping well be back to relatively normal activities, and those often require me to use Metro in the late evening hours.

This proposal has many advantages.

There are a great deal of people who work/attend school past 9pm who rely on metro to get to and from work/school. A change like this would require individuals to instead rely on metrobus, which can take over an hour depending on their location, as well as numerous transfers, or to rely on rideshare services as an alternative, which are more expensive

I work in theatre in the district. This will increase my commute budget by a very high percentage each week and month. I will have to take a Taxi home 5-6 nights/week, or start driving. Parking fees will also cripple my budget, not to mention what I will contribute to traffic, congestion , and poor air quality.

DC needs a robust public transportation system that operates like any other major metropolitan area. I think it should operate 24/7, actually. It is the NATIONS CAPITAL, not some provincial Southern US town.

When I go to the theatre or out to dinner (if we ever have the chance again), 9 is too early. Its also too early for the actors, theatre and restaurant staff.

The earlier metro closes, the more I get used to using ridesharing services.

Once more of DC opens after vaccinations are almost complete , there will be a huge demand for metro after 9 pm. Again, people would not leave early, they would just use ride share instead. Reducing metro rail service will only help metro lose more passengers.

No. No. No. No. The DC area is not a retirement home. Things happen after 9 here. Also, this removes Metro as an option for people flying into the airports, especially National, as well as all the service workers in the area. This hits both ends of the economic spectrum, especially the service sector workers who have been hit so hard already by the pandemic. No. No. No. No.

Proposal to close Metrorail at 9 p.m.

This would be devastating to my main reason for using metro, attending sporting events in Washington DC, since service would be suspended before the conclusion of sports events.

I often use Metro in evenings

This change would affect the young population. For example, metro would not be an option after sports events or more generally to avoid driving after an evening out.

11 pm is often too early for us. Many people work late, not just service workers. This change would drive them to using cars for commuting. While I understand this would be bad for public transportation, it would be even worse for the environment and for traffic congestion impacting those who must drive. Metro's job is to provide usable, workable transportation, and with a cutback like this, you would be abandoning that responsibility.

Do not use Metrorail.

I expect many events (dining, theater, sports...) will be back in service by January 2022. Ending metro service at 9pm would continue to hurt businesses that will badly need income. Metro should work to help improve the economy.

It would work sometimes, but make using Metro for some evening activities impossible.

People who work shifts need the rail.

Well, I'm from NY, public transportation runs all night, I move from NY to MD in 1981, not sure what's happening over there these days.

Consider a compromise of 10pm closing. That would make it more practicable for people at evening events to take Metro home - and more likely that they will take Metro in evenings as well.

Yes, so long as buses/ride share/etc were available after 9 pm, including in an adequate volume to absorb the need from baseball games and other events.

I am to work at night

A major reason that I use Metro is to attend Nationals and Wizards games and to go to the Kennedy Center and other theater venues. Nine pm closing would preclude use of Metro to attend these events. Unacceptable

The V14 to Deanwood is a part of the route that is set to possibly be eliminated. I have no other active bus route near me in the morning when I leave to go to work. I would have to wake up a hour earlier to walk to the nearest subway station which is Addison rd. which is a 2.5 mile walk for hill rd. Please reconsider eliminating the V14 route it is essential for my travel needs to work and back.

The metro should stay open at night but with less frequent trains. Closing early inconveniences people and discourages them from taking the metro in the first place. Not a good way to build customer loyalty.

Evening events in Bethesda (like the theatre and Strathmore Music Center, as well as dining out events, and late work hours) would be harshly affected!

I only use metro to commute to work so this works for me. This forces other workers to find alternative modes of travel but I suspect they have already found them at this point?

I use metro to commute to my office, go to museums and shopping. I'm finished by 9pm.

HELL NO!! How will this help anyone who works evening shifts? What about special events at the Verizon Center. I was stranded there once before when the last train never showed up, at that was on a weekend at 11 pm. What about all of the folks working in restaurants, bars, etc?? Not everyone can afford an Uber ride every night.

Later hours on weekends and for major sporting events

Would eliminate evening Metrorail travel for me

Use metro to get to evening events, this would cause me to have to drive more

I work night shift (10PM-6AM) on Capitol Hill. I take Silver Spring to Union Station at 9PM. I would not be able to commute via train to work if the stations closed at 9PM. This proposal would not be accommodating.

We use metro in the evening for social purposes rather than driving our car. We would take Uber instead.

Many people use Metro to get to and from work late nights

That would work for me most of the time, but it would be inconvenient at times when I'm in town later at events, restaurants, or visiting friends. That creates a lot of problems, especially for large sporting events where masses of people use metro after 9pm. I can't imagine how I would get home from a Nats game or a concert with so many people competing for the same resources. Unfortunately, I would have to skip more events, thus decreasing commerce.

I think that is too early, even 10pm would be better, especially for service workers.

This would not be ideal, but could be manageable

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would certainly discourage me from taking metro for evening activities in DC, but I dont go out much to DC as a rule so not sure how that would work for me. |
| Need to be able to get home from work, bars, and restaurants. With normal hours coming back on line we need the opportunity to go out to visit local businesses. |
| Moving from an 11p to 9p closing seems like it would be like a chicane for restaurants and entertainment districts as they look to rebound from the pandemic. |
| As it is, 11:00pm is annoying for going out in DC - Ive had to leave concerts early to catch the Metro, or Ive walked back to Rosslyn for up to two hours if I want to stay out. Even going out to places like Tysons, where I might get dinner and a movie, those activities would conclude at at least 10:00pm. The Metro should be open longer if anything. |
| Of course, I would prefer to have the Putin of traveling later into the evening, and Im sure many of my fellow citizens depend on travel later into the evening for their employment, but if this is the only option other than losing all service, than it is the more acceptable option. |
| 11 PM was too early to get me home when I would go out at night anyways so it doesnt matter |
| My Job goes till 9 PM so I would be unable to use the metro at all. Would ruin my ability to access public transportation. |
| Although I dont go out much right now it is conceivable that we might go to a show in DC or an event like 4th of July fireworks and use the metro to do so. Closing at 9 PM would make it hard to get home. I also see this early closing as having a negative impact on many service workers who work longer shifts (e.g. grocery store employees). |
| No. What major city does this. Keep open til 11 or even 1. |
| This would limit after work gatherings and entertainment choices |
| I often get off work at 10:30pm and have no way to get home other than metro. The metro closing at 9pm would leave me stranded, and Id be out of a job. |
| If buses are still running from Downtown to NE, between 9-11 pm then, this would be inconvenient but manageable. However, for essential workers working the late shift this removes the metro as a commute option completely. |
| Could cause problems/ bog limitations to travelers. |
| This will impact those of us that like to take the trains to the Basketball, baseball, and football games. I do not believe 2 hours will/should make a significant difference. |
| I would not consider metro as a possible transportation choice. Its already crazy during sporting events and concerts. I dont trust Metro to schedule longer service for events after 9 or arriving on time. |
| We need more public transport connecting the metro area not less. Pandemic ridership should not determine metro closure |
| My job necessitates late evening hours several times each months and due to lack of parking at my job site, I need to use Metro after 10 PM at least 8 times per each month. |
| Any time I wanted to have dinner or see a play, I would have to use some other mode of transportation. Metro would lose *all* such business. This is a foolish idea. |
| Nothing just remembering when metro used to close later than popeyes |
| Keeping service until 11 pm would avoid reduction in overall ridership |
| Do not use Metro in the evenings |
| This should destroy both the restaurant industry and the regional theater industry at the same time. Not bad for one proposal. |
| But I assume it would not work for many others, and would foreclose the possibility of using Metro for people dining out, attending movies/ballgames/concerts etc. |
| Sometimes I work late and I rely on Metro to go home. |
| This would preclude being able to use Metro for theatre, often dinner, other socializing, as well as getting home when working late hours. |
| Metro should consider extending its service instead of reducing service. This really limits the options we have for getting out of work late or working a schedule that isnt your normal 9-5. |
| Too many events such as sporting and theater end well after 9:00. |
| There are still people who need train service that late, although maybe not as frequently. |
| This would remove public transportation as an option for getting home after doing anything other than going out for dinner. Having to use Uber/Lyft would be very expensive! |
| Service until at least 11pm is so helpful for getting dinner or visiting friends in the evening. |
| Im so thankful I got a job where I can walk to work. I took this job, in part, because the DC Metro just keeps getting worse. You need more trains running more frequently. Why does everyone in the DC Metro area understand this except you clowns? |

Proposal to close Metrorail at 9 p.m.

Late trains are needed to provide transportation after sports events, concert and theater venues in DC for those living in outer areas. This encourages less traffic and sustainable travel for those living outside the DC city limits.

Although I would rarely use metro after 9:00 pm, consideration should be given to riders for whom the time between 9:00-11:00 pm is critical to allow them to return home quickly and safely.

Closing the metro at 9 pm eliminates it as an option for attending the majority of events - such as cultural or sporting events - at locations in DC or elsewhere along the metro system. This would even make it difficult to have dinner in these locations. I would likely no longer participate in these activities as I do not own a car and this would be a much higher expense in car sharing costs compared with metro costs. As such, this is revenue I would no longer be putting into these areas of the economy along the metrorail system.

This is the worst of all of the proposed changes, perhaps other than just eliminating the D6. People work after 9pm. Movies and events events after 9pm (at least when were vaccinated and can do that safely). 11pm was bad enough and was already creating problems -- 9pm makes metro even more unreliable. I can afford an uber/lyft/cab if needed, but that again puts more cars on the road. All of these cuts just serve to put more cars on the streets, which is the opposite of what DC should be doing. And what about people who cant afford to drive or take ubers/lyfts/cabs? Are they just out of luck? These service cuts will make all of our lives worse but they will -- as is always the case in these situations -- disproportionately hit those who can least afford it, in a city that is already too expensive to survive in for so many.

Metrorail is an essential service for workers, residents, and visitors. Closing at 9 makes the city even more expensive because people will need to either spend more time by taking the bus or spend more money by taking a car.

11 p.m. is inadequate. Closing at 9 p.m. is a complete joke.

I have never found it necessary to use Metro after 9:00 p.m.

Totally unacceptable! Double the fare before you consider this.

I do not have a car. I am disabled. If I want to have a social life after the pandemic, I need metro to run late enough that I can get dinner with a friend! Not to mention nights when I have to work late. This would be terrible

This will make evening transportation especially challenging. 9pm is just too early. Also restaurant workers will suffer.

People are going to want to stay out late and party when we are finally on the other side of this pandemic. Metro should remain open late to ensure everyone can get home safely.

Think about people that are getting off work

ABSOLUTELY NOT!!

9pm is too early. With this schedule nobody really can have plan after work for having dinner, doing sport, watching game etc by using trains.

With vaccine rollout, we cannot expect the ridership to stay the same as it is today. Reduction in hours hurts the people who rely the most on public transportation - low wage workers, many of whom work jobs that are not 9-5 and are instead, hourly. For example, restaurant, retail, office cleaners.

Closing at 9pm makes it virtually impossible to go anywhere (visit friends, go to a restaurant or a performance), as one would need to leave by about 8 to ensure you could catch the last train. This would stifle nightlife...or more likely drive people to use ridesharing and avoid Metrorail altogether. Great way to start a death spiral.

I take the red line home at night (from Silver Spring to my neighborhood in Dupont Circle area) and often dont get out until 9 pm so Id have to try to leave early which wouldnt always be possible.

That would make it more impractical for persons who want to go downtown for commuting, to dinner, attend theater, or for baseball or hockey games. That will encourage more people to drive instead of taking public transportation and for people in the suburbs to consider travel in and between suburbs, but not to downtown DC. By discouraging people who live in suburbs to go downtown, that would be bad for the economy in DC

Assuming there is a return to some sort of normality, how would people who work in restaurants, theaters, etc. get back home?

This proposal would render Metro almost useless to me.

No

Assuming the pandemic becomes controllable this would impact businesses/night life as the metro closer earlier.

Metro is the only reliable and affordable way for people living in the suburbs to reach DC. There are various events that involve the consumption of alcohol, so driving would be illegal and using Uber would not be affordable. Shutting down the metro at 9 pm would only lead to an increase in drunk driving.

9 p.m. is too early, particularly during the summer.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| i work to 10:00pm so 9:09 will not work for me 11:00 will |
| By January 2022, I expect the restaurants and theatres to reopen. Shutting down at 9 pm means I will not be able to enjoy them after the long lockdown. |
| People need to get around the city after 9 pm. This would be a terrible change |
| It would get me to and from work (Hyattsville to Dupont Circle) and dinner out near where I work or gallery place, etc, but I would not be able to go to plays, movies, lectures etc -- something I enjoyed doing pre-Covid |
| That the subway closes at all is unfortunate, so anything that reduces operating hours is bad news. I sometimes hit the closing hour during weekdays as it is (well, pre-pandemic--RIP Codmother). |
| If the metro closed that early, I would largely stop using metrorail on weekends. This would be a problem for tourism, sports, restaurants and nightlife, and all of the locals who work late. |
| This plan restricts the ability to use the system at all hours of the day. If I commute to work in the morning and then have to worry about leaving a meeting, or work, or dinner early so I can catch a train for a system that closes at 9pm, that is completely inconvenient and means I need to take a different mode of transportation (like driving) to work. This is a horrible and ineffective idea if you want this to be a livable and thriving city. |
| THAT IS NOT GOING TO WORK WELL WITH ME. I NEED THE TRANSIT METRORAIL, COMING OFF FROM WORK FROM ALEXANDRIA, VA AT 9PM , AND CERTAINLY NOT GOING TO WORK WITH MAJORITY OF DC RESIDENTS & MARYLAND RESIDENTS TRAVELING TO DISTRICT OF COLUMBIA COMING TO & FROM WORK EVERYDAY. THAT PROPOSAL IS SIMPLY GOING TO CAUSE A STRICKING DISTURBANCE WITH DC RESIDENTS BECAUSE MAJORITY OF THEM WORK ROTATING, NIGHT SHIFT, & DIFFERENTIAL SHIFTS, THEREFORE THE RESIDENTS WHO WORK DAY SHIFT TEND TO TRAVEL AFTER THEY GET OFF, AND THEN TRAVEL BACK & FORTH TO METRORAIL STATIONS SUCH AS (ANACOSTIA STATION, GALLERY PLACE, SOUTHERN AVE STATION, LNFANT PLAZA, RHODE ISLAND - BRENTWOOD STATION, ETC.) THIS PARTICULAR PROPOSAL IS DEFINITELY NOT GOING TO WORK WITH THAT TIME ADJUSTMENT CLOSING AT 9PM. DC RESIDENTS AND MARYLAND RESIDENTS COMMUTING TO & FROM ARE IN NEED ESPECIALLY AT NIGHT TRAVELING ON PUBLIC TRANSIT AND ESPECIALLY ON THE WEEKENDS WHEN THERE OFF WORK. |
| Expect to resume low-wage work with evening hours and would force me to take taxi/Uber home, substantially reducing my wages |
| This plan will require anyone going to a meeting or a concert or other event downtown to drive. The plan will surely have a deleterious effect on businesses. As a single woman, I always felt safe using the Metro to come back from events in the evening; and I am not sure how I would feel about driving alone after an event that closes after nine oclock. This plan would make commuting difficult for those whose work schedules involve unusual hours. |
| This would eliminate my ability to use Metro to go to Capitals hockey games and Nationals baseball games. Those are the primary times I use Metro train service anymore, so I would almost never be able to use Metro train service again. |
| Too early of closure. Concerts, sporting events, and other activities go beyond 9pm. Not only will this lose WMATA even more domestic riders, tourism will suffer as well, making WMATA lose foreign riders too. This means hours will be cut from your employees also. It is possible some employees will quit because they are not making enough money. Wmata will lose more money in the short run and long run. |
| It works for me personally but would be detrimental to those in the service industry who do NOT work 9-5 |
| Closing at 11 pm is already a problem. Closing at 9 pm exacerbates the problem when I am working a night shift, forcing me to take a ride share/taxi. |
| Entertainment venues run much later. |
| This would prevent anyone who works in evenings or nights from using the metro and anyone looking to go out at night from being able to use it. |
| Not much good happens on the metro after 9, though metro should include events that are taking place, like caps and nats games. |
| I do a lot of business in DC and attend different organizations fundraisers and networking events and I attend via the metro. Most events dont start until 7-8 p.m. People need reliable and cheap transportation to get to and from the city. If NYC can accommodate their citizens without shutting down their subway system, so can WMATA. Figure It Out. Maybe the top guys at WMATA should take one for the team for a few years and take a million dollar pay cut! |
| I probably wont ride the metro after 9 p.m. But I care about other people who work late and need an affordable way to get home. Please keep it open until 11:00pm and consider making it even later. |
| No ability to go out after work and get home, no ability to use Metro on weekend nights. And if people work afternoon / night shifts there's no Metro option. |
| Not ideal, but I could live with it. Although I think for any major events metro should stay open later |
| 9 PM does not allow enough flexibility for night travels. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| 9 pm is too early |
| So much for going out downtown. |
| Again, while we are relatively shut down, this is fine. However, as soon as things start to open up, I would assume that Metro would quickly revert back to normal operating hours. |
| 9pm is too early and will have a negative impact on DC businesses in particular. |
| 11pm is a more reasonable closing time for most people; would Metro buses pick up the slack if Metrorail closes earlier? then again this could work for certain lines/stations |
| I use Metro to go to plays and sporting events, which rarely end before 9 pm. |
| Any evening performance or sporting event would require a later time frame. Most people who go to games take Metro as there is no parking for these events. Any theater or music venue would need later hours. Metro should be supporting re-opened businesses after the pandemic. Also, essential workers at hospitals and pharmacies downtown would need later service. |
| Why even have a metro system? Already 11pm is bad. |
| 9pm is way too early. A lot of us get off work at that hour. |
| We should strive to get businesses back to full operation by 2022, including restaurants and entertainment venues. By closing the metro at 9 pm, this would encourage surge pricing for shared ride services and cabs. Consider closing metro at 10 pm, which would cover most events and dining experiences. |
| Horrible idea. |
| Really? Who thought of this proposal? Are you trying to permanently reduce ridership? If so, this seems like an excellent option. |
| This would drastically affect DC businesses. It would reduce the ability of people to go out at night using metro, which means people would either have to drive after drinking or avoid drinking, spending less money. It also would make people who live in the suburbs and might go out after work to either have to go home earlier than they may want to to get home before the metro closes, or choose to drive in to work those days avoiding the metro all together. This also hurts those who work in the service industry. People who work at restaurants, bars, retail, hospitality, etc. would not be able to get home from work via metro, yet none of these jobs pay enough for them to take Ubers or own cars. |
| This fundamentally disadvantages service workers and shift workers who need late night access to the metro for their jobs. |
| Would prefer metro stays open longer on weekends and closes sooner during the week. |
| I like to be able to come home via the Metrorail at night when we get back to traveling after Covid ends, still wearing masks, of course. |
| This is a laughably terrible idea. Honestly hours should be extended past 11 p.m. My ability to go to dinner or movie would be significantly limited by this change. Also Im often not finished work by 9 p.m. |
| Hopefully with pandemic restrictions lifted, I would like to be able to socialize in DC and go to events in the evening. Ending service at 9pm would make this impossible. It would also cost metro all ridership to sporting events in the evening at both Navy Yard and Gallery Place, as many sporting events do not end until after 9pm when games are scheduled for the evening. It would also cut out metro as an option for people wishing to attend concerts and other events. While this kind of measure makes sense during the pandemic, it would be fatal to metro ridership after a recovery allows the events to resume. |
| I dont have car and rely on metro to come back home and get to places. 11 PM was Ideal and cost effective for me. I recommend reduce metro buses as not many people use them and less CO2 emission. |
| This would not affect my daily commute but would reduce my use of the metro for recreational purposes to and from DC, to see museums and meet friends at restaurants etc. |
| This will not support local sports venues Washington Caps and Wizards and Mystics also can anticipate restaurants returning to normal operations |
| This plan works for me, but 10pm might be better for the customers who work the late shift. |
| I worry for peoples safety being stranded places. 9pm is way to early. 11 is the bare minimum |
| Maybe close all stations without intersecting rails at 9pm but keep major transfer stations open until 11pm |
| Probably not great for younger folks than me. Especially people who are employed. How about 10pm! |

Proposal to close Metrorail at 9 p.m.

This idea is hilariously bad. When my students have a 7:00-10:00pm class on the Orange line, they would have no way to get home, so I guess only the students who can afford to live near campus can take classes after work? Likewise, when my wife attended college in the city, she literally couldnt have attended her evening classes in the city with a schedule like this. How are the people who cant afford city rent, but whose jobs go into the evening supposed to manage. Finally, though this is more about luxury than necessity, I would never come into the city for dinner, theater, or the arts if you did this. 11pm is already way too early and Ive gotten stuck, causing me to pay \$50 (!) to get out of the city by Uber - this already makes me less likely to come into the city and spend my money. Surely I wouldnt be alone in this. I just cant even with this proposal: this idea seems more like a symptom of brainworms than a legitimate public policy idea. I get it that metro is going to make some hard choices here, but this one seems like it designed by people who think the metro is a fancy limo to get to work with, rather than a public service.

I can see this working for weekdays. If things open up more this upcoming year, I think having later hours on the weekends would encourage weekend ridership.

this is literally the worst idea ive ever heard in my fucking life. the fact that it closes at 11 is already stupid and dangerous-- you are literally going to encourage people to drive drunk, and put people ESPECIALLY working-class women in increasingly unsafe positions when they are trying to get home at night. I understand that cutting hours is the easiest way to save money, but it is BY FAR the most consequential. the second most consequential change is definitely train frequency. I think shortening and even eliminating train services at stations is the best alternative-- so long as there are still workable bus routes.

Metrorail service need to operate 24/7 and shouldnt be limited by 11:00pm or 9:00pm hours. I understand that the side effect of the pandemic plays a huge role in hours reduction but we still have essential workers who rely on the metro being open 24/7.

Yes, it can work for me, but it is a miserable idea.

It would not allow me to go to concerts, restaurants or other venues downtown and use the metro to get there. It would mean than the Metro system would only be useful for people who need it to commute 9-5.

If concerts, theater, basketball games etc are a thing again, this would not work. And put risk of a lot of intoxicated drivers on the road on any given weekend

Two to three days each week I need to use the metrorail system after 9 PM. I am 71 years old and female. I dont feel like its safe for me to stand outside to take a bus at that time of night.

I work until 10:00 PM most nights and that early closure would force me to lose my job.

This will definitely kill the system. And maybe several jobs for people who work till 9 or 10 i.e. grocery stores and rely on metro to get home. Im part of a running club and there are thousands of other clubs in DC where people are out past 9, but home by 11.

This is horrible. It makes it completely impossible to travel for evening activities into DC from Maryland.

i have used Metro to and from the airport in the past and closing at 9 may impact that. i have also use Metro to attend Smithsonian night courses that end right at 9pm.

This is the absolute worst of all the options. Many businesses, even during the pandemic, are still open at 9pm (meaning people would need to finish whatever theyre doing even earlier to catch the last train), so this would be terrible for customers and employees, and obviously the business owners. This would crush the retail and service/restaurant industries. I cant believe this option is even being considered. Why even bother having metro at all if it doesnt run past 9pm? For those willing and able to continue patronizing these businesses, they will be forced to drive, resulting in more people on the roads, leading to more congestion, more pollution, and more vehicle accidents. Find another solution, any other solution but this one.

Not all riders work the typical 9-5! Many work late shifts that require a need for accessible transportation

There is travel after 9.

I often use the metro when I go out in the evening to events in downtown DC which last longer than 9:00 pm

Some people work late, this is not convenient

What about people who work later hours and depend on the service for transportation. Also, when the time comes for major events to return to the city most people use Metro. Will there be exceptions for special events and those who are essential workers who depend on the system.

Fine on weekdays, not weekends

This would make it difficult for people who work nontraditional schedules to use transit. It would affect university students, and people who want to do things in the City in the evenings.

I finish working at 9 pm, how will I get home?

I, along with many other people who rely on Metro, have a job. That job does not keep bankers hours. I would have to quit my job and try to find a new career, which wouldnt be great with a pandemic and economic depression going on.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I do not rely on metro rail past 9pm. |
| Would mean you can't use metro for dinner outings, theater downtown, nighttime sports events, concerts, etc. ridiculous for a major world city. |
| There are people who work at night. The best way to encourage ridership is to offer a night time option for those who want to visit DC at night a safer way home than drinking and driving. |
| This is fine for office workers, less so for service industry workers. Given the importance of service industry workers to post-pandemic economic recovery, a 9pm closing time is not advisable. |
| Absolutely not! I work late (until 10:30 p.m. at night) and would have to resort to the unaffordable alternative of ride-sharing. I cant afford to ride Uber, Lyft, or taxi cabs every night. |
| Will be devastating to DC businesses. |
| Not preferable but workable. |
| How would I be able to attend baseball games, etc., that end after 9:00 pm? |
| Once the pandemic is under control, restaurants and other places of business will be open and many, including myself, are looking forward to being patrons. I would ordinarily take the metro 2-4 times a day depending on my activities. Closing after 9pm instead of 11 would reduce it by at minimum one ride a day. |
| This would work, but would inhibit me from going to the District in the evenings. |
| This would require me to drive into DC for any nighttime events. I dont do this frequently but I much prefer to take Metro. |
| Absolutely not. Too early for either late work or safe travel from dining. |
| Unacceptable. Our workforce will experience undue hardship if metro closes at 9pm. Metro will forever lose riders as many will need to purchase vehicles for transportation. I don't see how this temporary shift will help Metro in the long-term. |
| Transportation by Metro is a public service that should be available as an option for all. |
| Im concerned about the economic impact on nightlife in DC and tourism to DC. |
| Metro should remain open until at least midnight. Many customers rely on the last night service despite the pandemic. By limiting hours you lose customer to rideshare services. |
| hope this is only temporary, it was great having metro stay late when we came back from concerts etc |
| This is completely unacceptable. During non-COVID times I am often out well into the evening supporting local enterprises through dining, shopping, or attending events. if service ended at 9 pm I wouldnt even be able to get home after attending a hockey game. |
| That would be inconvenient for me. That would mean I have to leave home early, and finish all my errands by 9 PM |
| The service industry, especially, sports attendees, theater goers and on-the-town folks need these metros to support businesses and the economy of the downtown area. Important! |
| This would probably work for me. But it would mean higher costs to me (driving, parking, etc.) on some nights, and more traffic on DC & MD roadways. |
| NO! Businesses need the extended hours, frequent trains, fewer disruptions, and reliable service! You cant go to an after work evening meal, movie, or event if the system shuts down at 9pm. No one plans to take the last train, so that means you have to plan for at least 30-45 minute earlier arrival at the station to be guarantees to catch a train home.- Metro is critical to the economy of the National Capital Region, Tysons and the entire Silver Line corridor.- Transit is crucial to the Tysons envisioned by the Comprehensive Plan. Much has been accomplished in the decade since Fairfax County adopted the Plan, and transit remains key to continued progress and to MY BUSINESS.- Ever increasing vaccination will result in increased activity and reopening. Employees and customers will need more trains and buses to get to work and entertainment. Bus and train service should be increased and needs to be reliable in order to lure riders back to the system.- While it is understood that mechanical or construction issues may delay opening Silver Phase 2, no delays should occur due to financial constraints. We must make Metro a priority in the economic recovery of the region.- Metro is essential to reducing traffic and greenhouse gases. We need more people using Metro, not less. We need reliable, frequent and safe metro service in order for that to happen1 |
| I am an ICU nurse in.a DC hospital. I leave work very late most of the time and I would like to have the metro close at the current closing time (11 pm) as I need to get home via metro. |
| 11PM is already too early, 9PM is unacceptable. |
| 9 p.m. is simply too early to close the system |

Proposal to close Metrorail at 9 p.m.

Once I start traveling again on Metro (after vaccination) and go to the sporting and other events in DC where I use Metro (like Caps and Nats games and concerts downtown), 9 PM will not work for the ending time of these events. A really bad idea.

Shutting down at 9 will discourage people from doing anything in DC. Its too early to tell, but when restaurants and other venues re-open, its very difficult to be in the station by 8:30.

As long as this is temporary. Once we get back to full in-person living, I hope that the metro will be open longer. The Metro is the best way to get in and out of DC, and to not have it available later in the evening would make it difficult to enjoy the city's after-work amenities. I prefer to take public transportation, and its not feasible to regularly take taxis or Uber from downtown all the way to Grosvenor-Strathmore (or beyond).

This is completely unrealistic for people who work late shifts, and visitors who appreciate being in the city after dark. Even an 11:00 p.m. closure creates many changes for many who work late.

I am lucky in that I could afford to take a Lyft or another mode of transportation after 9:00pm, but I worry about people that work nights and cannot afford other modes of transportation.

If this is the only change and Metro can demonstrate/justify the numbers (e.g. profitable until 9 p.m. and seriously in the red most days/weeks after 9 p.m.) then this at least supports people working for most typical working hours. Will busses or bus routes be added for the 9-11 p.m. range? Specifically, dedicated (express) routes or runs taking people from the event and socializing hotspots (e.g. Calvert St. corridor) or large hospital centers back to the Metro station they may have used at 7 p.m. to head out for the evening?

Metro should operate until at least 11 PM every day, if not see expanded hours, assuming ridership continues to rise as January 1, 2022 approaches.

I work as a tour guide in Washington, DC. I rely on the Metro to get to and from my work assignments, most of which have me dismissed from my group sometime between 9:00 and 9:30 p.m. I would not be able to use the Metro to get back to my accommodations at the end of the day.

Not at all. It cuts out users who need metro to get home from late shifts or even dinners out. NO.

Washington D.C. is more than a commuter city. People live here too -- if were to be a world-class city, we need the public transportation as a backbone. Even 11:00 p.m. is too early.

Consider closing at 10pm. If bus lines are cut as proposed, that extra hour of service would make a big difference.

An economic impact study on bars and restaurants and sports venues (not only downtown but as far west as Tysons corner) should be done before enacting this option.

This definitely would not work. It would greatly harm people in the service industry (restaurants, events workers) whose hours are later than this. Personally, we are season ticketholders for events that end later than 9.

Important to keep trains running in the evening to facilitate theaters and concert venues, games attendance

Is this a joke? So anyone coming into the city for the evening will need to drive? Why do we even have this system if it wont help reduce traffic.

METRO would no longer serve those going to restaurants or any of a wide range of cultural activities in the city center.

We take metro to/from sporting event, including at night

Dependent upon social distancing protocols in 2022, this could hurt other businesses/events that end later.

This would make it much more inconvenient, for example, to go into the city for anything in the evening as youd either have to plan on leaving earlier to get some sort of cab/Uber/Lyft.

I believe this would work on weekdays however not on weekends.

I use Metro to attend evening events at Kennedy Center, Entertainment & Sports arena in southeast DC.

My graduate school classes often take place in the evenings, as late as 10 PM. Closing stations at 9 would necessitate me having to take a ride share which is much more expensive.

Reliable public transit options need to be available later than 9PM.

That would presumably make last trains sometimes be between 8pm and 9pm (maybe even earlier!?). I need to be out in the evening for work sometimes, and in non pandemic times I am often out for fun as well. This would leave me effectively stranded downtown unless I pay for an expensive rideshare home.

We would take uber or taxis after hours if needed.

Proposal to close Metrorail at 9 p.m.

We often use Metrorail to attend evening events (theater, etc) in downtown DC. This schedule would make that impossible since such events typically end between 10:00 and 11:00 pm. We'd be forced to drive in a private vehicle, contributing to carbon pollution and to pay for expensive downtown parking. I suspect this would decrease audience size for our vibrant downtown performing arts groups.

I typically take metro if attending concerts, ballet, or plays at the Kennedy Center or other venues. And when going out to dinner with friends. This would make those evenings difficult.

This means no use in the evenings for concerts, even going out to dinner. More car traffic -- something we dont need in DC.

I need to use metro when I get back from work at 10:30

would likely impact evening out and about --- post-COVID

As a senior, I no longer drive at night. Having no Metro service would mean that I could no longer attend movies, concerts or theater, which would be a huge loss for me.

Closing at 9 pm is a great idea, especially since restaurants, businesses, and other establishments are also closing early. There is no warranted need to keep metro open past 9 pm.

As a shift worker this would end my ability to use metro for commute to/from work, and as a result I would have to drive every workday.

Only issues I see are disadvantaging night life establishments like food service, bars and music venues who (by 2022) may likely re-open. Most nightlifers value relying on metro into later hours on weekends to attend concerts, grab drinks, sporting events, etc. This would significantly diminish fan travel to say, Verizon Center for hockey games if they return to play by then

My wife cant drive. We rely on transit for all sorts of situations. That includes late night travel of all kinds.

I would rather have access to the metro until 11 PM, but it probably wouldn't affect my work commute.

It is important that Metro operate until 11:00 pm. So many workers depend on it for their commute and it hurts retail/service workers the most when Metro closes early.

I don't get out of work until 10pm

Metro should run until 2 AM every night. Once COVID is controlled, late service will be absolutely crucial for restaurant workers, bar workers, night time cleaning crews, etc. Businesses throughout the city rely on Metro to get their employees to and from work. This proposed schedule will cost jobs, discourage workers and be disastrous for many businesses.

Metrorail should remain open until 11pm. 9pm is way too early. It will impact restaurants, businesses and personal activities.

This plan does not support entertainment in Washington, DC.

I only ride occasionally in the evening. This would constrain my ability to choose metro. I would have to seek alternative transportation in the evening hours. This would be difficult for my budget.

I use Metro primarily for cultural and dining events. 9pm is too early for Kennedy Center, Strathmore and movies.

many people work after 9pm. once the pandemic abates, i anticipate traveling again for work or personal reasons after 9pm and it would be a disservice to our region, to our economic recovery, and to our chances for mitigating the worst effects of climate change to eliminate all metro service after 9pm

It really cuts an evening short when you use Metrorail to go to restaurants, lectures, movies and theaters. In many cases in makes it impossible to get back home afterwards without using your own vehicle - that is assuming you have one.

Blanket closure does not work, but a 9pm closure would work if there was allowance for extra transport during major events.

Thats way too early for weekends

When sports with fans starts again this would be a disaster for night games!

This is a terrible idea! Presumably businesses will reopen and this plan, I believe, would discourage people from patronizing businesses and services that may be later in the evening. An example is that malls and stores close at 9 p.m. Shoppers would be less likely to patronize the businesses, thus not helping the economy.

Closing the metro at 9pm is a disastrous idea! It would make traveling after an event, dinner, or any evening activity incredibly difficult.

A lot of people work late and would definitely need those extra 2 hours to travel home.

Maybe a third of the time I travel will be for evening events with plans that last till 9pm or 10 pm & therefore I would need train service till 11 pm.

9pm is too early in my opinion. 10pm sounds more reasonable and acceptable.

How can I enjoy the other neighborhoods of DC, for dinner or movies or games, if the Metro closes at 9pm? This is a ridiculous proposal.

Can we split the difference and say 10pm? Youre going to kill DC night life

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| It may well work for my schedule, but for many others it would force the use of higher cost transportation alternatives that are less desirable |
| Even 11pm is a ridiculously early closing time, I use the metro when I go out in the city...Im never going to be coming home BEFORE 9pm so this would render the metro entirely useless. |
| Before the pandemic, I often used Metro to travel from my home in Rockville to downtown DC. If the Metro were to close early, I would likely need to drive rather than to use Metro. This change seems self-defeating and counter-productive. At a minimum, it would be good to maintain the 11 pm closing time on Friday and Saturday (and possibly Sunday as well). |
| Many people who rely on the train work late and depend on it, this would unfairly burden them. This would also likely increase the incidence of drunk driving. |
| Compromise and close at 10pm if you need to change hours. Think of the individuals who get off work at 9pm and need to travel. |
| This would eliminate metro as an option for late evening travel home, which I regularly relied on it for in the past. |
| In January 2022 things will be back to normal, some people work late night shifts and rely on metro to get back home. |
| This eliminates all recreational activity including arts theatre and sports |
| I would much rather the Metro be open later, with less frequent stops, and less frequency of time in between trains rather than close early. |
| 9pm is too early. How do we, who can't afford a car, get home after 9pm? |
| We rely on Metrorail to get home after evening downtown events at the wharf, Nats park, Audi field, Capitals Arena. |
| Essential workers work after 9pm and would need a way to get home safely. Please don't close at 9pm. |
| Limits attending events and also transportation for restaurant/special events employees |
| As long as stations are not closed. |
| I would not be able to get home from work in DC on nights I work late. It would be impossible to take metro to any evening activities in DC or Bethesda or downtown Rockville. |
| This would affect attending Kennedy Center, Smithsonian programs; affect eating at restaurants, affect work schedules. Life does not end at 9 p.m. |
| Prefer earlier closing to complete shut down of stations |
| This would preclude attendance at dinners, evening meetings, athletic events and cultural events - plays, concerts, operas, etc. My family is very active, especially in the latter examples I give. |
| Assuming that the pandemic has abated enough by January 2022 to allow for regular restaurant visits and entertainment, reducing hours will eliminate metrorail as a safe travel option. And 11 pm is still too early when you consider all of the employees who work in restaurants in DC. |
| Closing the entire system at 9 PM will leave more time for repairs and service, as well as alleviate the costs of staffing and running trains for two more hours. However, instead of blanket closure at 9 PM, WMATA should consider closing some stations at 9 PM (or another time) when there is significant decrease in ridership from those stations. For example, Arlington Cemetery Station closes at dark, and trains bypass this station. Similar approaches could be used in the business centers where many stations - Federal Triangle, Federal Center SW, Judiciary Square - see dramatically reduced ridership after hours. |
| Does not accommodate weekend entertainment needs. This is particularly important for the young, who spend a lot on this |
| Absolutely not; I am a regular metro rail (and metro bus) rider. |
| That's ridiculous. Many people are still coming home from work and evening school and if you want to use metro for any entertainment or many sporting events it would be impossible and anyone not able to afford a car , Uber or taxi would be left out.. |
| People who have drunk alcohol above the legal limit should not be driving a car home from the bar or restaurant where they consumed the alcohol. They often leave for home after 9 pm so it is imperative that Metrorail stay open until 11 pm. Also entertainment venues offer concerts, plays, etc. which do not end by 9 pm, so this is another reason to have Metrorail stay open until 11 PM. Also, for people who work late and cannot afford a taxi or Uber or Lyft, they need the Metrorail open until 11 pm. |
| Metrorail is an integral part of evening transportation, particularly during the spring and summer when baseball games end well after 9pm. This would inconvenience thousands of fans who use Metro as their preferred method of transit. |
| This basically would force anyone going out for the evening, even for dinner, to plan on using alternative modes of transportation. Metro is going to lose whatever remaining customer base it has. |
| Pre-Pandemic, several times a month I took Metro downtown and back to dine in the city with family and friends. This would not be practical to do with a 9pm closing. |

Proposal to close Metrorail at 9 p.m.

I use the Metro to get to the Kennedy Center, and Harman and Shakespeare Theaters. Evening productions end later than 9 pm. Also, I go to museums and often go out to dinner after they close at 5, 6 or 7 pm.

A lot of late night workers depend on the metro. Leaving sporting games would become a lot more hectic

Metrorail closing at 9pm is extremely too early.

There would be times when I need a late metro train.

This would have devastating effects on activities (theatres, restaurants, etc), both downtown and in other parts of the metro area.! Not only for customers, but for the employees who work in these places. Crazy....

Essential workers in health care, grocery, restaurants, postal service, etc. and shift workers need metrorail service until at least 11pm daily if not 1 or 2am.

9 pm is far too early to close the metro given that people rely on it as an affordable option to get home from work and from other evening plans. I feel like closing the metro early will disproportionately impact people who work in service industry jobs (which are often low-paying) who rely on the metro to get home from work.

This is a major city. We do not close at 9 pm. Even moving it to 11 pm has been a major inconvenience. You are encouraging drunk driving and should be ashamed of yourselves.

I live in the District and dont have a car. 9pm is too early.

DC is so great for so many, in part, because of how many students live here and genuinely love living here. While the metro is most important for its ability to transport people working from one place to another, it's also important for students and those in their 20s who are still moving around the city to enjoy their lives. Not to mention many working people also work shifts at night, where they may need metro accessibility for a shift that starts at 9pm or after. The metro is the main way i travel to see friends "whether at bars and restaurants or to their homes. With the pandemic, it's been difficult for me and many others to visit each other. But again, come August 2021 and through 2022/2023, were all going back to relying on the metro to move around. Many of us prefer metro to uber and lyft and other rideshare apps. Moreover, with the increasing exploitation of its workers by uber/lyft, many people are choosing to boycott the apps in some way in order to call for better wages/treatment of workers. This will be made easier by having the metro accessible later in the night too because that is when uber/lyft's are even more relied upon

This is just plain dumb. No major Metropolitan has mass transit shut down at 9, or 11 for that matter. The economic impact would be huge and the potential loss of life due to drunk driving is unconscionable.

We often travel from Rockville to arena stage and home again, taking the last train home. We would not be able to do that with this schedule. I think it would also inconvenience people who work your regular hours. If they can't get home when they need to come home then they won't use the metro to go in either. Mitchell needs to build it ridership by being convenient

This would increase drunk driving on Fridays/weekends. The Metro is a safe, affordable, and accessible option in place of Uber.

I think this would be the worst of all the proposals. Going out on weekends would be more expensive this way, and I wonder how workers affected by this change in hours would or wouldnt be able to adapt their commutes. Not everyone can afford to rideshare all the time. Also,, if people commuting are going between any combo of DC/MD/VA via wmata bus, how much longer and/or more difficult will their day-to-day be? (Not a rhetorical question, honestly curious)

I would prefer the station staying open until 11pm. People travel and sometimes, uber or the shuttle isnt available.

Not when events return to the area. This seems to be a plan that is not attentive to the fact that the Metro is great for weekend events and evening events. This change will force more evening and weekend traffic.

I see this creating an extreme hardship on people who must work late hours because they need to work two jobs to make ends meet.

Last time I checked, our region does not shut down at 9pm, how are people supposed to get home from work? You are not proposing any new solutions here and WMATA had previously absconded their responsibility to provide proper service planning for those who are not 9-5 office commuters. This is just further proof of the need for your planning practices to join the 21st century.

It works for me but what about all of the people who work late hours and depend on metro to get them safely home at night?

9 pm too early for a region like ours

Seems really early to close. People would be forced to take taxi etc., which would be more expensive

People like myself relying entirely on public transportation will be heavily restricted on this proposal. I will not be able to attend cultureal events in DC in the evening and have to cut short visits with friends to return home by metro. The alternative is returning home using uber or lyft, which is very expensive and counterproductive in the fight of climate change and getting more people to use public transportation.

Proposal to close Metrorail at 9 p.m.

I think this change is crazy. Metro provides PUBLIC transportation â€” you want the PUBLIC home and in bed b 9pm? People shop, go to the movies. It may not affect me much but I think being available when the public needs a public service is part of the job.

Metro supplies SAFE transportation for millions of sports, entertainment, or otherwise night life go-ers every year. I am sure there could easily be statistics to prove that by closing metro 3 hours earlier a couple years ago (instead of 2am it was moved to 11pm), there were more DUIs and other reported crimes. Moving even 2 hours earlier will only compound this issue. Do the research, this proposal may save a few \$, but only puts the safety of others at risk. If that is a wmata prerogative, please be upfront and just tell us that you care more about profit than our lives!

I guess no one goes out in DC anymore? Restaurants would need to close before 8 so their workers can get home. I still think it would be nice to go out for dinner and drinks in the evening without always having to take a ride share.

9pm close would not allow people to attend concerts, shows, sporting events in their entirety. It would be prohibitively expensive to have to Uber home from downtown DC to Rockville, for example, and seniors who would often being the ones attending concerts and shows would not be able to do so because of the cost. I realize this is a moot point right now, but hopefully, concerts, sporting events, etc. will be able to have audiences by 2022. These happen most nights of the week -- not just on weekends. You might consider closing at 9pm on Sundays and Mondays and later the other days of the week.

The whole purpose I, and thousands more, moved to this neighborhood was for the reliable, dependable and convenient Metro service that weve come to rely on. This shortening of hours of operation would eliminate evening workers and many downtown activities (dining out, movies and shows) that make taking the Metro desirable. That is precisely the reason I moved here. I cannot drive into D.C. after 9 PM and thus, would curtail many social activities. This proposal goes against everything the Metro system stands for and would be a terrible betrayal of the citizenry who have depended on Metros commitment to the community for 40 years!! You cannot offer a certain service that people build their lives around and suddenly take it away. You must come up with a better solution.

We often stay in the city after work as well as return to the city during the week.

Work and personal commitments extend beyond 9pm

This would be extremely disruptive for me as I use Metro exclusively for concerts at the Kennedy Center. Even 11 is problematic. A system that essentially accommodates only the 9 to 5 workforce is unacceptable in a metropolitan area of our size.

It wont impact my commute, but itll definitely cramp my style in terms of enjoying DC-area nightlife Thu-Sat nights. Will there be late-night Metrobus service?

Late night metro use is not as necessary these days without being able to go out to events/concerts, etc.

If things start to go back to normal, I usually ride metro later at night when Ive been out drinking with friends. I could find other modes of transportation, but usually that is the best option rather than trying to sober up to be able to drive, take a bus or expensive cab/uber.

I am in agreement with the above and also would like to propose closing will adjust as travel resumes or increases to pre-COVID status

The early closure would preclude using Metro for evening activities such as theater, ball games, concerts, etc.

I dont think the metro is safe that late at inte so I dont take it at that time

My travel often occurs after 9 PM. Closing at 11 would mean I wouldnt have access to Metrorail public transport to return home after work, and would thus have to drive (no car) or use Uber/Lyft (very expensive when done semi-regularly as I would have to do).

Terrible idea,. it would really hurt those that need metro to work, and would be terrible for the entertainment industry.

Emphatically no. I would not be able to use metro to go to Nats games, theatre, evening concerts or other meetings or events in the District or Virginia. It would be a disaster for me because I do not drive.

Downtown evening travel would be out of the question for theater, dinner or events with friends.

during the winter, this would not be an issue, but as the weather warms I am out later and more frequently so closing at 9pm would be a severe issue given I ride the metro that late to get home after sports games or social gatherings in which it is unsafe for me to drive home and expensive to take a ride-sharing service.

I believe that late evening service is critical! For one thing, it is necessary for those employed in the DC area who live -- and have chosen their home and work locations -- based on Metrorail services. For another thing, it is an essential means for ensuring that DC restaurants and night life spots can remain open -- having a safe way to drink and get home will be critical once those establishments are able to extend their hours and/or seating capacity. PLEASE do not cut us off at 9 p.m.!

I would not be able to get home from work when I work 2nd shift

Proposal to close Metrorail at 9 p.m.

No, this is a terrible idea! Again, reducing hours will make people turn to other transportation options like ridesharing apps or their cars. WMATA should ask Congress for additional funds until service returns to pre-Covid levels. Also consider expediting the selling of land around the stations to developers. Have them build Transit Oriented Development (TOD) and that will help with ridership long term as well as giving funds to WMATA. We also have a housing shortage facing the country now.

I would have to resort to driving on those days when I might not be able to get home before 9PM.

For the most part it would since I usually am leaving work by 1800. However, there are certain days on which I will be needed at work until after 2100 (9pm).

Stores, libraries, restaurants, bars close after 9 pm-- how are they supposed to get home.

This is very inconvenient especially visitors from other states and countries

Presumably once the pandemic recedes theaters and sports events with fans will resume. Shutting Metrorail at 9 will affect travel to see hockey games or go to Arena Stage.

so many people work late and rely on the Metro. Are these changes based on reduced ridership during COVID? If so, is there a plan to revert back to current operating schedules?

Not able to go out to dinner and get home

I would not be able to spend an evening downtown if downtown activities and events end after 9 p.m.

I will prefer metro to work at 11. pm. Most essential workers and minimum wage workers get off around 10 or 11. Why Metro wants to make it harder for them.

As long as the changes are temporary. Hopefully by January ridership will be nearer to pre pandemic levels making the changes unnecessary. Hopefully, consideration would be given to operating later for sporting events, etc. that finish at a later time ten 9pm.

This would hurt bars and restaurants so it must be temporary. Hopefully hours would increase as budgets improve.

Again, those who need the metro most are those who dont have or chose not to use alternative transportation. many of these people work late or early and need the extra two hours.

On days that people work overtime, the convenience of having the rail system end at 11pm instead of 9pm is greatly appreciated. Yes, the current pandemic may have lessened the travelers for now, but once the pandemic is under control and/or eradicated, usage will reflect the continued need. I believe the proposal is basically a punishment for those that used it prior to the pandemic.

This would effect individuals who drink and make them have to pay for ubers or drink intoxicated. This would also effect retail workers who historically haven't needed cars to get around. This would cause them to have to spend more money on a car, insurance, gas, upkeep, and or take ubers.

What are those of us who go from work to other activities (classes, hobbies, after-work fun, etc.) supposed to do to get home? And what about those who dont work a typical 9 to 5 job? Restaurants, stores, other businesses stay open later to cater to those who work 9 to 5. Their workers are likely your customers too. What are they supposed to do when you close the same time or an hour before they do? Again, cutting services isnt the answer. Youll lose additional ridership and money. Instead, focus internally on your administrative and personnel costs.

This planned hour change would have a hugely detrimental effect on many service workers and any workers who are dependent on public transportation, and will probably hinder the regions economic recovery.

Restaurant and theater use of Metrorail would be totally undermined.

If person is at an event lasting longer they would be stranded

A little worrisome. Assume this is just weekdays? More context on the specifics would help assess. Why dont you expect ridership to resume post-COVID?

It wouldn't affect me but what about the restaurant and hotel workers who have no other option. Will Congress pay for their Ubers?

This would be an issue with attending sporting events, but not for normal commuting.

I just cannot believe how you are proposing the fail the community in this manner! Many, many, many people need those late evening trains to get home from service-industry jobs or from patronizing those service-industry jobs, not to mention any kind of sporting event that will be happening.

This would severely limit my attendance at events held in the Metro area.

I am often required to work past 9pm and rely on metro to get home.

Im hardly ever out late at night. My only concern is to and from the airport if theres a late flight

This might be ok during the week for me, but weekends (once Covid is over) need to keep late hours for me and for all businesses that DC hopes reopen

We rarely use the Metrorail system in the evenings, largely because the service is already limited.

Proposal to close Metrorail at 9 p.m.

theatre, sports, movies all end after 9pm! this is a terrible idea if you want people to have evening activities using the system. Not to mention everyone who needs to get home from work after 9!

This change would make it next to impossible for workers to travel late at night. Many people who work in bars, restaurants, and medical facilities use the metro to get home at night. These are often people who work late into the night. Closing Metrorail at 9 PM would cut these workers off from their jobs and income. Closing the rails at 9 PM would also make it difficult for people going out to bars, restaurants, and other nighttime events to get to and from these events. Metrorail is an easy way for people to get downtown in the evening. Without the late-night service, a lot of money would be cut off from large portions of the city.

I sometimes work late and also like to use metro to get home from dinner or cultural events downtown that run later than 9.

There are times I do use the train at the later hours. There are a number of riders who need the later hours to get from school and work. Moving to 9:00 pm would put a hardship on them.

I work for WMATA. I work for WMATA because I believe mass transit is important for society. I believe I should be able to use Metro to commute to/from work for WMATA. My current shift ends at 10:30 PM, so the system closing at 9 PM would mean that I couldn't commute to work for WMATA by using Metro. My future shift could start at 10 PM, so in order to use Metro I would have to arrive an hour early for work, without the option to leave an hour early. The change in service hours would work for me if my office cared about scheduling shifts to accommodate when the stations are open, but using Metro to commute does not seem to be important to my colleagues, or many other of my 689 brothers and sisters.

I can make that work

Completely closing by 9pm would significantly affect the hospitality and entertainment businesses in the center of DC. These are essential to maintain and grow a thriving economic and culturally rich city. I would also be concerned about access to safe transportation for patrons and well as for those working shifts later at night.

This would not work for me as everyone doesn't just work 9-5 I work my part time 4-10 I go from Clarendon station to Largo I work this job Mon- Friday and on Sunday if the train closed at 9 I would have to use a ride sharing option everyday and it's about 32\$ I don't have 200\$ a week to waste on just getting to and from work

It is looking like, while remote work/school will remain an option for many, by January, many things will return to in person and I'd like to be able to go to shows and restaurants downtown without constantly checking my watch and worrying about catching the last train home. Many UMD classes in my department don't end until nearly 9pm and on other days, Maxiflex work schedules mean needing to work until late too. Maybe if the additional time was to allow for serious track maintenance like the London Tube does nightly, I'd feel differently, but it doesn't sound like that is the case here.

This would affect me only for DC based night events such as nighttime baseball games or 4th of July fireworks. If special service for those days can be accommodated it would be no problem for me. Even if that is not possible it would be much preferable to closing stations.

I am a Season Ticket holder to Both Washington Basketball and Hockey at Verizon center and solely rely on the Metro as I am Blind and have No alternate transportation. This would be a major impact to my means of transportation to DC as I would have No alternative means of transportation.

Earlier closings on weekends would be a hardship.

I am a security professional who relies on metro to get me home. 11pm is bad enough since most security shifts end at 11. please keep in mind of the essential workers who do not own a vehicle. we work in d.c just because of how reliable the metro system is.

Just switching to single tracking at 9 was discouraging. The days when I work late the ones where running for the train missing it is least bearable.

Ridership levels have fallen off due to the Covid pandemic. That is a short-term problem. Making the metro rail system less usable will not increase ridership especially When the pandemic retreats

This would be inconvenient, but not affect my commute.

I attend sporting events, so this would leave me largely stranded well after games end.

Dinner, movie theater or concert - I leave for home later than 9 pm. I have appreciated being able to take the Metro to get home.

Would not be able to get home from work.

The 11 p.m. service cutoff is already on the edge, as far as usefulness goes. If it goes down to 9 p.m., I fear that Metro would permanently lose two sets of customers: People who go out in the evenings and don't want to worry about anyone in their party driving drunk; and restaurant, hotel, and other service workers who have unavoidably late hours, and often get off work after 9 or 10 p.m. THOSE are the people who really need Metro's services! (For the record, I am now in the former category, but I was previously in the latter category.)

Proposal to close Metrorail at 9 p.m.

This is simply too early. The restaurant I work at closes at 9pm and we often have to stay later than that. I would not be able to make it to the Metrorail to get home. What are people supposed to do instead if there is no bus route that serves them efficiently? This is a threat to human security, as no one should be left to walk home late at night because the Metrorail closes at 9pm, well before the time most food businesses close.

That it utterly ridiculous; 11 pm is already ridiculous for anyone attending theatre, concerts, late dinners, etc., again, the more you retract the worse it will get! We need to expand hours, when hours went later ridership was higher..

This plan is good because unless youre an essential worker you should not be out in public due to the ongoing pandemic. This plan will help slow the rising cases in COVID. This plan was utilized when the first spikes in COVID cases began to rise.

I seldom ride Metro after 9 pm.

I do events in DC area and many end at 10 pm. I would need to drive and not be able to take the train or bus as options.

9 pm closing would mean that many people, especially those in hospitality, service, and sex work industries would be cut off from crucial, reliable transit to and from their place of employment. This would lead to a large portion of DC and area residents losing access to jobs and general physical safety. Just because the Metro would no longer be operating does not mean folks wouldnt need to get from home to work and vice versa. The 11 pm current closing time during the week is crucial to so many residents livelihoods.

Closing the metro so early is laughable considering the number of commuters who get out of work late who it would leave without reliable affordable transportation. This absolutely will put people in dangerous situations or leave them paying money they can't afford to lose for late-night transportation. The only thing I can think of when looking at this proposal is how me and countless other young women in the district who get off work late at night would be robbed of the safest and most reliable transportation available to us. I seriously can't stress how much safer a form of travel the metro is compared to a bus, taxi, uber, or walking - more cars means more ability to escape uncomfortable or dangerous situations, and the metro is always going to go where it says it's going, whereas the driver of a bus or car can choose to go off-route. All working commuters regardless of gender rely on the metro though. Most restaurants and retail businesses in the metro area don't close until 10 at the earliest. Hospital staff who rely on the metro might be getting off work at midnight. Why would you stab workers in the gut with something like this? Literally what's the point of having the metro, who's it for? Tourists and office workers? There was a time when the metro closed at midnight weekdays and 3 am weekends. Y'all used your never-ending quest to get back to chip away at the number of hours you had to stay open but this is just crass. Seriously take a moment and think about this, like actually think, because I can't possibly imagine you've used your brains to consider this yet if it's gotten this far.

This would make it difficult or impossible for me to travel by metro in the evening after work. I would use metro much less often.

There are many of us that work in the medical field after conventional hours that solely depend on metro. Taking this away is an undue hardship. If this passes, I promise a class action suit. Rush hour and normal schedules should continue. Commuters need this. I need this. My community needs this. Congress appropriated 1.9 trillion. Only 9% is going to covid. Get Congress to give more money

my job only requires me to work until 6 or 7pm and if I needed to stay out past 9p downtown Id likely use Uber/lyft anyway but I also have the financial means to do. There are many hourly workers that rely heavily on public transportation and likely need later hours. Could service run much more slowly from 9-11p to accommodate them?

9 pm is far too early for a major metropolitan region with an international reputation! This will be horrible for the regional economy. Personally speaking, I travel into the city using metro rail for events, activities and to visit restaurants. If the system were to close at 9 pm, it would affect my decision to patronize businesses further from my home.

H-E-L-L NO! As events are coming back to full audiences and as the city opens up; this IS NOT A VIABLE OPTION FOR EITHER SPECTATORS OR FOR WORKERS IN THE AREA WORKING EVENTS. Just like New York or any big city; DC is home to a rich sporting, and ARTS community. Events start between 7 and 8 pm. People need to be able to travel to and from these events to the most extended stations on the system. No Bus goes as far as Vienna at night. Actually, I would like a 12am closing time. Its no use attending events in this town if you CLOSE DOWN THE SYSTEM THAT EARLY. How are concession workers, theater staff, bar, waiters, actors and athletes supposed to get back to their hotels.?YOU ARE SUPPOSED TO BE PUBLIC TRANSPORTATION. SO SERVE THE PUBLIC!

9 p.m. is an absurd time for a major city to close its transit system. I will once again (post-covid) be depending on Metrorail to get me home after attending performances and dining in restaurants.

I work late in restaurants in Washington D.C. and need metro rail to get back later than 9 pm.

This is a completely insane proposal. 11pm is already very early for a mass transit system to close. 9pm would cause economic chaos for the region. Think about the impact of people who work in retail settings, bars, restaurants, theaters. Would all of those stores and venues have to close before 9pm? What would that do to the city?

Proposal to close Metrorail at 9 p.m.

I can leave performances at Strathmore early enough to catch an 11 p.m. train (missing only a small part of most performances) however if the system closed at 9 p.m., it would be impossible for me to access Strathmore via Metrorail. I realize this would be a selfish concern, but I have seen a number of people accessing Strathmore via Metrorail.

Closing the metro at 9:00 P.M. would be most inconvenient. It would adversely effect poor people who work late and cannot afford to take taxis.

I rarely use Metro after 9 p.m. except during special events that are held late at night.

This hurts anyone out in the evening and forces them to pay for uber or lyft. Plus if there are big events, metro should still consider having exceptions for those circumstances.

If people are out dining, 9 pm would be too early for them to get home. This would not encourage people to dine out and help the economy.

This is really a bad idea. It will hurt businesses, workers and people who go to restaurants, bars and entertainment at night and do not want to drive or use Uber, Kyft or taxis.

This would severely impact my incentive to use MetroRail unless necessary, I would likely invest more into carpooling and transportation apps.

Closing at 9pm doe not serve essential workers that work non-standard hours.

I attend nighttime functions downtown and an earlier closing would impact my attendance.

Im a single woman and riding the metro is essential for social activities that end later than 9pm

Assuming that bus routes to my home and the metro stations near me remain open.

While service on weekdays ending at 9PM may work, service on weekends should be open later than on weekdays and 11PM makes sense for ending service on weekends.

If people are attending sporting events (or other large events) that end after 9PM, it would be difficult if no Metro service is available.

seems very early to close for a national transportation system in the nations capital. I dont usually stay downtown but a few times each quarter I go out with coworkers for drinks or dinner and then take the train and/or bus home. otherwise I try to leave work by 630pm. It will hurt all the people that work in restaurants and it will hurt the restaurants in hiring people as we come out of this covid pandemic and limit customers wanting to stay downtown so you are going to hurt the economy of businesses but especially low to middle income people that depend on metro at night coming off their work shifts. Really sad!!

This would impact downtown DC restaurant business - not allowing people to take Metro home after dinner hours

I live in DC and use metrorail to safely return home after social events, which can include alcohol. I need a metrorail service that is safe, so I can keep others safe by NOT DRIVING. Additionally, this would significantly impact low wage service jobs, where their hours are not typical 9-5, and they may rely on metrorail to get home at night between 9-11

Seriously!!!! As Metro is one of my primary means of transportation, what if I want to go out after the street lights come on. I wouldnt want to have to walk home from DC if I decide to go out either during the week or the weekend. And I despise UBER.

Definitely not. I have to work late and there is no parking at my job. I definitely would be able to have any kind of social life such as happy hour or meeting friends after work. The answer is No!!!

It would depend on whether any nightlife is anything close to normal. I am a frequent concert-goer and having to Uber back from a show after I Metroed to it has been annoying, given how many people participate in DC nightlife and could probably use the ride back and the 24 hour service in other rail systems. But if there is nothing to go downtown to in the first place... then probably no need for late service.

Most stores/malls close between 8pm-10pm, so would be hardship to get home for workers and shoppers.

This would not work for me as I attend and participate in events that end between 10-10:30pm

There are many people working late that depend on public transportation.

This is a terrible idea and would push many of us using Metrorail during the week and weekends to use ride-sharing services. It would negatively affect restaurants and nightlife in the District as well. Of primary consideration is additional costs that low-paid workers assigned to night shifts would have to carry as a result of this service cutback. We have a wonderful public transportation network in the DMV and should use it to the maximum for the benefit of all citizens who need to use it, and who have been using it. In addition -- to state the obvious -- these proposals are in response to current budget shortfalls due to the COVID-19 pandemic. What sense does it make to punish and reduce services in the future, when everyone will be back at work and we will need all stations and routes to provide transportation to workers, business visitors, and tourists -- all of whom are necessary to get our economy going again? How about making some plans that will provide only adequate services now but will allow for the transportation we will need in the future as well???

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This suggestion is not practical for the public transport system in the U.S. capital. There is no point to a subway system that doesn't actually serve the public's needs. |
| After a very difficult year, this would be an additional hardship on anyone working in the service industry who needs to close. Also, would reinforce the shift to Uber/Lyft/etc. for anyone staying out late. |
| I do not drive due to medical reasons and rely on Metro to attend evening events. A 9 pm closing would prevent me from attending these events. |
| Cmon |
| It would not affect me, but Im sure it greatly affect others. |
| I propose that the timing for the Metrorail be increased instead of decreased. Utilizing public transport is great for a city and we should be focused on expanding rather than shrinking the use of public transportation. I utilize the train during the evenings when I am returning from a work event or school in the evenings. |
| this would cause me some inconvenience but not a daily inconvenience... I can compromise this adjustment. But I think it will hurt many businesses who rely on customers being able to metro to events especially on weekends. Think about how this will effect the Washington Capitals events. If this change is adopted, I would recommend operating extra hours for Caps games. |
| ABSURD! This is a major metropolitan area. Trains need to continue to run until at least 11pm on weeknights. |
| I have late shifts that can be as late as 10:30. I would be stuck at work |
| Earlier closing will be difficult for those traveling by bus or with unexpected delays and arrive too late to catch a train home. |
| This timing makes going out for dinner problematic. I would probably drive rather than take the Metro and have to rush to make the last train. This may cause you to lose revenue, but I guess its not a huge deal for me. I use the metro mostly for commuting. Picking up people from Reagan National Airport in the mid-to-late evening would also be problematic, but not a show-stopper. Again, Id either drive there, or take the Metro to the airport and then take an Uber home. |
| As restaurants will most likely be able to open more fully in 2022, this would greatly impede workers from getting home |
| Metro is used by working people finishing late night shifts. It is also the means of transportation for lots of people going out on weekends and even week nights. 9 pm is a slap on the face to people who rely on public transportation to LIVE and WORK in this town. |
| I disagree with metro closing that early. 11pm is good enough due to the pandemic. Should not change |
| This would force so many workers to not have access to the metrorail when traveling to/from work. Also, it would discourage DMV residents from staying in the city to frequent shops and businesses in the evening if the metro closed at 9 p.m. A compromise would be 10 p.m. |
| a 10pm closing would be preferred. |
| Many working people who use the Metro have shifts that a 9:00 closing time would not accomodate. |
| Run late fewer trains weekends, ballgames, supporting DC Businesses |
| My time is flexible; however many, because of work my need it to operate longer hours to get to or from work and home. |
| This would mean re-shuffling evening plans and/or transportation options. I would take either bus routes (assuming convenient service) or a car service, or forgo the evening plan. If implemented, could Metro work with evening establishments (movie theaters, theaters) to see if it is possible to have events begin earlier so patrons can still use metro? Perhaps a 10 p.m. close time instead of 9 p.m.? I think this option may affect second shift workers quite a bit. |
| Works for me. What about people who work later and metro workers. How would they arrive home? |
| No, I want to know that I can take Metro home after going out to dinner, to visit friends, to see a movie, etc. One of the great things about going out in this city in the evenings is knowing that you have an affordable option for getting home. Furthermore, for people who work evening hours, closing metro early prevents them from using metro for their evening commutes. Closing at 9pm is way too early. |
| 9 isnt even late. Ive had to stay at the office later than that before, and Im not the only one. This would increase car congestion since people are still commuting at that time, not to mention people starting their entertainment for the night are heading out |
| This would be ruinous to the many people who work late at night or attend events at night. It can put people at a safety risk to cut nighttime service. |
| This depends on what ride services look like. If getting an uber, lyft, etc. is difficult and prohibitively expensive then early closure would be a tough pill to swallow. If ride services are available at a near pre-pandemic level then this should be fine. |
| Still having the ability to switch lines or get to somewhere with a longer wait is one thing, but those proposal does not consider how people get home from work and is not friendly for tourists. 9 is too early. 11 was already a stretch. The Washington Metro DC area is a major hub and not a sleepy town with fewer than 1000 residents. |
| This seems grossly unfair to people who rely on Metro to return from work later in the evening. |

Proposal to close Metrorail at 9 p.m.

Implement bus services serving rail stations radiating from Metro Center/LEnfant Plaza to compensate for the lack of late night service. Under this plan, have timed transfers at hub stations so customers can transit across the network easily.

Im no longer in this industry but people who work at restaurants and other venues (plus customers) rely on this. Closing early would be disastrous.

It could be an inconvenience if works extends to after metro hours. Alternative modes of transportation would be more expensive if working after 9 pm. It would be counterintuitive to work a couple of extra hours when you have to spend more on transportation than what you earned for the overtime

The DC area does not shut down at 9:00 pm and this move would hurt the economy which should be coming back by next January.

This will lead to a massive increase in drunk driving and a massive hit to the entire hospitality industry.

It would work for regular commuters. However, it would be disastrous for workers that are not on a 9-5 schedule, for students, and for the regions restaurants and music venues.

Either you want to provide a functional metro service, or you dont - you might as well just shut it down completely and stop playing games. Its pathetic that it closes at 11PM now but at least bars and restaurants arent fully open these days, but when they reopen later this year....we get to 2022 and have even LESS service. Asinine - its a COMPLETE waste of money to run this public service so poorly. Does it even become cost neutral to run metro at these low levels?? I imagine not, and youre certainly not going to gain customers with this kind of schedule. Metro is already one of the worst transit systems Ive seen around the world and it continues to deteriorate. Shut it down if you cant use all this money to actually serve the population and put that money elsewhere. So ridiculous.

Airline travelers arriving late at the national have no choice but ride a cub?

This would eliminate a necessary ride option for Capitals and Nationals post game. There are 122 home games in total, and most home games start at 7pm and end between 9pm and 11pm.

Particularly on weekends I rely on Metro to get me to and from theater productions. An early closing time would mean I could not take Metro, and, realistically, would probably not attend a production. So Metro would lose my fare and the beleaguered theaters would lose another patron. And of course this is true of all riders who rely on Metro for evening events in the city.

Having already cut the service hours of the Metro to fit the lack of ridership during the Covid-19 constraints, I think the additional 2 hours will severely affect the ridership even more. I believe that many have already found alternative transport during this time and will be even less likely to return to Metro ridership if another two hours are cut.

Granted, this may not have to happen if more financial help can be provided soon, or in the forthcoming months.

11pm was already too early a closure time! All major cities Ive spent time in have metro services that last until at least midnight, and often much later. This change will discourage me, and undoubtedly others in DC, to engage in evening outings - concerts, theater, cinema, restaurants, etc. This move will hurt businesses in DC - particularly downtown - and, as a result, reduce the revenue that the city garners from local taxes. It simply doesnt make sense.

This would make it difficult for many employees working night or evening jobs to use metrorail. This is especially bad since many of these employees do not have a car and work low paying jobs.

Seems early to close the trains, but Id rather this than longer headways.

but it would also mean that i am less likely to go to DC for dinner or entertainment

This negatively impacts individuals with night jobs or who work late in the evenings. This also encourages more cars on the road.

If there is a strict curfew then this may make sense but if there is no curfew this proposal does not make sense. A

The nighttime service hours are extremely important for low-wage workers in the service, hospitality, etc. industries. Cutting service during this time would also result in more drunk driving by people that are out at dinner, bars, and entertainment venues; and more street traffic when people are forced to rely on cars to get around.

No, so many people rely on Metro at these hours.

Be better if it closed at 10/10:30pm cause I do work evening sometimes till 8:30 or 9pm

Personally this does not affect me because I don't often take the train in the evening, but what will the effects be for workers who work later shifts? Will there be sufficient alternative cost-effective transportation options for shift workers?

I have engagements that end around 8:30 on a weekly basis having services end earlier than that would put me in danger of not being able to get home. Could it be 10pm

I am one of the DC residence that work after 9pm

Proposal to close Metrorail at 9 p.m.

This would leave many people completely without a ride. Before covid, I had work and class (downtown, Red line) that let off at 9pm. It would take me roughly 20-25 minutes to arrive at the metro to go home, and the station was always quite full. Why stop the service when it is obvious that so many people are still using it up until 11pm?

This is a terrible idea. This is only a good idea if you are interested in destroying the nightlife of downtown Washington.

I seldom need to travel after 9pm, however for commuters with night jobs or students with late classes, this could be a deal-breaker for easy public transportation

if stores/restaurants closed earlier, then this might work; however, i think summer later hours would encourage more utilization;

To make this work, I would have to switch to Uber for my commute home and/or not meet up with friends/go to gym/run errands downtown after work, things which frequently end around 9/9:30ish.

Absolutely not this would limited the lower class worker that cant afford car the opportunity to be able to work without worry about how they are going to get home. This is a bad idea and I hope metro think about this very heavily before making this decision.

This would adversely impact the ability to attend theatrical and other performances as well as to dine out once these opportunities become available.

If you want your ridership, it has to be at least until 11 PM.

This would prevent using metro for late evening events like concerts theater and ball games.

There are many times that I work well past 9 PM! How would I get home if there are no rail services after 9 PM?

While I may not personally be a night owl, the number of essential workers who utilize public transit to get to and from work and home is significant, and I cannot imagine that closing at 9 will be sufficient for them.

Bus service would need to replace the rail service from 9:00-11:00 PM for this to work for me.

I anticipate going into town via metro and would find a 9pm close to be WAY too early.

Not for folks that go to events in DC like baseball and basketball games

This plan greatly limits the ability of many people to enjoy the city at night, as well as greatly harms retail, food, and other workers who would be serving the city at those times. (Honestly, even 11pm is too early.)

I used to take the train to go out in Washington 1-3x per week. The 11:00pm close is bad enough. 9:00pm would be awful.

Metro is my way to and from the airport. To cut the time by 9pm will unable me to come home from coast to coast travels also from intercontinental travels. This also affect business travelers, student travelers who take evening classes. A great number of people using the Grosvenor-Strathmore station rely on the train fir their commute.

Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA. They would certainly run the late-night buses that WMATA has failed to provide.

Are you trying to make the system un-useable? This would absolutely not work for me.

This would absolutely be a great solution-my condo faces Rockville Pike and the Strathmore station- because it is above ground, the noise (not from the trains but from the people giving announcements) is awful and disturbing after the street traffic slows down! I have personally filed complaints about the noise. It would be wonderful not to have to keep my windows closed in nice weather, and not to have to try and sleep with the loudspeakers going.

I dont generally ride Metro after 9pm

10pm would be better. Will this also apply to weekends?

This would be inconvenient, but manageable.

I work later than 9pm some nights and when we go out after work or during the weekend 9pm is not late enough for dinner, theater, concerts. This is a terrible idea and many people will end up drinking and driving, teens will not be able to get downtown and parking and driving will become even more problematic.

11 pm was already very early for me. There should be late services for people who shouldnt drive because they are drunk, or those who work late shifts. Its safer for them to ride public transportation than to rely on lift services/taxis

I work at a news station which means my shift tends to extend into the evenings, oftentimes close to 9PM. I also expect to attend various events and gatherings after work. Should Metro service be halted at 9PM, this would hinder any plans I have in the city after work, as I would be forced to consider rideshare services which are extremely expensive compared to the Metro.

Proposal to close Metrorail at 9 p.m.

that would effectively remove metro for use at National airport and use by anyone who would attend a theater. also many people work at jobs that require night hours---such as restaurants and theaters.

This is the WORST proposal of all! I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else. In addition, since I have many disability-related appointments during the week, I have to make up time at work so I often work until 8 pm. However since, I am unable to count on the Metrorail elevators working whenever I need them, I must allow at least an additional hour to get to my destination so I can plan to take an alternative route to get to my destination in the event of an elevator outage. I would have to cut back on my hours and possibly quit since I could no longer work until 8 pm! I dont know how I would be able to get out of a station if I was on a last train for the night and encountered an elevator outage. I would be STUCK! In addition, I would not be able to go to movies, sporting events, or plays with friends in the evenings. Please Dont Cut the ServiceHours Back.

This will prove difficult for spectator sports like the Capitals, Wizards, and Nationals and surrounding businesses that depend on those games for patronage. Restaurants, bars, clubs will all be adversely affected by no night service on weekends. Beyond that, the lack of nightly Metro service increases the chances of drivers under the influence of alcohol on the roadways. Metro has an obligation to keep service open late into the night.

Many workers especially on the weekends have to stay past 9pm. This would also hurt bars and restaurant downtown as commuters would have more difficulty to stay past 9pm

This works for me, except for how it would impact people traveling home from events. The metro often stays open late for large events and the ridership is very heavy at this time. I would suggest any plan to close early should include exceptions for large events to which people typically travel by metro. Metro could also try to negotiate earlier start times with event organizers, though TV times might be a bigger factor.

Again, this is an insane proposal for the metro system in one of the major cities in the world with an active night life. We should be encouraging LESS driving (especially drunk driving) and MORE economic activity--this proposal would have the opposite effect.

This will create traffic and parking nightmares around pro sports games at Capital One arena and other big events downtown in the evening, plus likely increase the risk of drunk driving as people drive to bars/restaurants vs. taking Metro.

Not everyone works from 9am-5pm, and if the metro closes at 9pm that means the last train will leave around 8pm and that just isnt enough time for people who has to work late to get on the last train.

Absolute not! As a woman, it is key that I have safe transportation options at night. I would prefer to not be effectively taxed for being a woman and forced to take an Uber at ~\$20, about 10xs the price of a subway. 11 pm is already too early in my opinion.

metro already closes way too early. hell no.

Makes sense since there are not that many travelers after 9. Plus, there's Uber/Lyft.

This means I likely would be unable to have dinner out and rely on the Metro for a ride home.

By that time, the theatrical and musical scenes should be the same as before the pandemic. The evening shows usually end at 10:00, which would be after the Metro had stopped running. This plan effects not only the people working in the theaters, e.g., ushers, but also the patrons who get to the performances by Metro. This plan will greatly hurt the theatrical and musical venues of Washington Metropolitan area.

Earlier closing every night of the week would interfere with transportation home from weeknight events and late flights. An option of some late nights (even two or three per week) would be helpful if this proposal is adopted.

i commute during daytime hours.

This would force use of vehicles for any evening plans.

I frequently take Metro to & from DC for events that end after 9:00 p.m.

Then anyone being out after 8 PM will drive, because they will be afraid of missing the last train. Just charge Rush hour fares, and run them every 20 minutes until 11 PM

Are you even thinking about all the people who work different shifts? I mean everybody does not work a 9-5 job

There may be the occasional day I would want to ride metro later than 9pm, either because of work and/or social activities along Metro stations.

Proposal to close Metrorail at 9 p.m.

Many riders, including myself, use the metro due to an inability to afford a car. We must accept less-than-ideal working hours, either longer hours and/or later shifts, to solve the very same issue that forces us to rely on the metro. Limiting hours would be hugely detrimental for commuters and their families. Buses are slow and easily/often filled to capacity already. This proposed closing schedule would make busses slower (with more frequent stops) AND fuller. This is by far the most challenging and upsetting of the proposed metro adjustments. I would believe that riders would be far more receptive to less frequent trains running at each stop proportionally at later hours rather than an earlier close.

I use Metro to get back home after 9:00PM

this is too early and I have in-person meetings that will start up again that dont end until after 9 p.m. and I need rail between 9 p.m. - 11 p.m.

Many other businesses are closed around 9pm at 10 pm and the metro is the only public transportation to get back home. 11pm its a reasonable time ...

Would force use of car in evenings when need to travel downtown and add significantly to traffic and parking problems.

Works for me, but will there be an alternative for the evening workforce?

Id really prefer 24hr service. Having to keep track and plan around service hours is the biggest impediment to use.

What about sporting events, concerts? Are there going to be exceptions.

This proposal doesn't support riders needing rides back from downtown events (eg, theater, sporting events). Even if people continue working at home, they may soon want to get out at night.

Not applicable. I only ride metro during the day to go to and from work or to things like medical appointments or meeting friends and family. I am rarely up that late at night. However, it does seem like it would cause a great deal of economic harm to DC businesses.

I get out of work at 10pm, and rely on the metro to get home.

But I would hope it would be a temporary change only with the goal of re-extending the hours.

This is very important. Please do not cut off workers on shifts that don't end in time to catch a 9PM train.

This will make it difficult for restaurants, as they are able to serve post-pandemic, as many people wont be able to get around in the later evenings anymore.

A metro system that runs until 11pm would help support restaurants and encourage more people to go to concerts, sporting events, etc.

I work in a theatre and I also serve as a volunteer theatre judge--when theatres reopen (hopefully by Jan. 2022), my evenings ALWAYS end after 9 p.m.

Given my history of working for food service in the Dupont neighborhood of DC, but living in Alexandria, I feel that a 9pm closure would be a significant issue for essential workers making close to minimum wage.

NO!! ABSOLUTELY NOT!! We would NEVER be able to attend entertainment venues anywhere without the later trains.

That's TERRIBLE. The whole purpose of public transportation is to allow you to get around & it really cuts down on traffic at night, particularly when the bars & restaurants open up again. That's way too early to close.

Seems early if there a sporting events and dining allowed in the city.

I am a DC tour guide, and we (in normal times) escort large groups of students or other visitors around the city all day, often with the tours ending at 10 PM. Because our tours rarely begin and end at the same location " and to provide flexibility " the guide service that employs many of us require that we use Metrorail to travel to and from our group meeting and departure points. Our most popular destinations are the Memorials at night. Ending Metro service at 9 PM would make this important part of our service impossible "unless Metro can negotiate cheap, reserved parking for all licensed tour guides right on the National Mall!!

Since I rely on Metro it is important have available service before midnight if possible..

Ending Metrorail service at 9:00 p.m. will cripple peoples ability to attend evening public events, especially in DC, once the pandemic is over, and prevent many people from working evenings in the District. This could have a ripple effect on the local economy as businesses see fewer patrons and lay off employees. I understand and support the need to close Metrorail at 11:00 p.m. to ensure that critical trackwork is accomplished. But I hope Metrorail will not close at 9:00 p.m. I think this will only decrease peoples access to vital public transportation and lead to fewer people riding Metro, which will compound budget problems.

Closing at 11 pm will work better.

I dont expect this will affect my weekday travel plans, and closing at 9pm vs. 11pm on a weekend is no different in terms of inconvenience

Its important to have Metrorail available for those who work late hours, including essential workers.

People cannot go anywhere if the stations closes earlier. Metro officials should ride the metro system because they can see the whole problem. People use the metro system to get around.

Proposal to close Metrorail at 9 p.m.

This proposal would make it impossible for me and countless others living in MD and VA to attend evening events in DC. Adopting it would reduce Metro to a commuter rail, as opposed to a real metro system, and would permanently reduce ridership. In addition, I do not see why Metro needs to reduce service after the large federal stimulus it received.

I don't use the train at night

I would have to consider another mode of transportation home if my travel was later in the evenings

This might not affect me, but it would certainly affect people who work at night. It would also have an adverse effect on the entertainment industry such as restaurants and theaters. For many theaters, 11 pm is too early to close, but given the situation with the pandemic, I can see why you'd want to cut back on night hours.

This is far better than Proposal 1 - 3. While this does not affect me personally, consider keeping some lines open later on Fridays and Saturdays or after hockey games to reduce drunk driving.

Again, this proposal is not a functioning mass transit SUBWAY system. This will disproportionately hurt riders who RELY on mass transit -- night workers, other shift workers, people who simply want to go out post-pandemic and see a movie or a show or a ballgame, drink, and NOT get behind the wheel, etc. I have been forking over ridiculous Metro fares (and I've lived in other mass-transit cities so I can say that with confidence) for OVER A DECADE. For what? Less service, more risk to me as a rider between the crime left to go unchecked and the filth and the safety issues...and this is the last straw. Start your money quest by actually ARRESTING FARE JUMPERS. Before the pandemic I saw entire groups brazenly jumping the fare gates at Gallery Place and Pentagon City on a DAILY BASIS. Arrest them, fine them, and start cracking down on DC Public School students reselling their free Metrocards to others. If these blatant fare-jumpers and Metrocard-resellers refuse to pay, why should I be penalized by losing service AND paying for them? And then you can look at your contract structure, your union issues, etc., etc. before you cripple the riders who have been, silly us, thinking we might DESERVE SERVICE IN A MUNICIPALITY FOR THE TAXES WE PAY?

I work late at least 3 days per week and I live in Congress Heights and I feel safer riding the train than using the bus to get home.

9 p.m. is really early. People should be able to take the metro home after dinner, movies, late night at work, etc. The less frequent and fewer hours of the metro, the less riders you'll have. Metro should strive to be like NYC--common means of transportation--versus L.A.--a last resort. Metro has such potential with the clean trains, nice stops, and accessibility to popular destinations, limiting the opportunities for riders to access the metro is a shame.

When I work, it is usually until 10 or 11 at night so this is not a good plan for me.

I do occasionally travel on the metro at night, especially if there is inclement weather

Metro will not be available after events, baseball, hockey, basketball, entertainment venues, etc. and will not be available for those who work late.

So you're just going to leave nighttime money on the table for Uber to grab? You need to provide service to get fare money to help get your budget right again. People will be there and want to travel next year after the pandemic cools, if you cut nights then they'll find another option and probably stick with that in the future.

Working and traveling outside of DC, with hours ending AFTER 9pm, people like myself rely on the subway system to get us to where we can take the bus home... If rail service ENDS at 9pm and I'm coming from Arlington or Rosslyn, how am I supposed to get home? I can't afford to MOVE to VA nor will I get a salary increase that would be able to COVER my DAILY ride-share rides... Getting off at 10p is a push just to make connecting rides from rail to bus.

I use the metro regularly at 10pm

This would limit my ability to leave DC in the evenings to only Uber or Lyft. Frequently (pre-pandemic) there would be surge pricing in DC that time of night leaving me the ability to take Metro to Virginia and possibly pick up a cheaper ride there.

Please consider keeping weekend service open a bit later. Assuming theaters, bars, etc come back online in late 2021, 9pm is too early.

If entertainment options open up after COVID, I look forward to attending events @ Kennedy Center and others. Metro rail is very convenient after the shows, and sporting events which can end as late as 10PM.

It would depend on whether or not museum events will be able to go back to in person events.

Good gravy, Metro, how the heck can an office worker stop and pick up something to eat or a few items at the store if the train stops running at 11? Do you really think nobody will ever want to go to a movie after work or hear live music again, once we're vaccinated?

Closing Metrorail at 9pm eliminates service for the service industry workers. Being in my Finance Manager position in Fairfax, I often times leave late and will catch Metro home to Hyattsville. Closing earlier usually will prevent me from getting home and will either require me to drive or take an absurd amount of bus transfers to get home, especially if the 1C and 2B are eliminated.

Proposal to close Metrorail at 9 p.m.

When I take the metro, I wish I could take it home instead of relying on Uber or Lyft to carry me home. 9 PM is so early! For some people that's when they're just getting to their night out! Or for those working a night shift - when they start work!

It's already a shame that metro service was cut on the weekends, and closes at 11 p.m. Ending all service at 9 p.m. would effectively cut commuters off from traveling home by metro if they are working late or attending evening events in the city. It's also very short sighted, considering the damage it would do to the long-term recovery of the service industry -- prior to this past year, I regularly stayed in the city after work 3-4 nights a week to go to my gym, meet up with friends and colleagues for dinner and drinks, and attend evening events. I prefer to travel home via metro, as opposed to cabs and ride-share apps, because it's much more affordable. If metro was closing every night at 9 p.m. I would either have to drive to work, pay more to take cabs home, or just leave the city right after work and change gyms / stop going out downtown.

You could however terminate Blue at Stadium-Armory after 9PM; all stations would still have coverage.

Doing this eliminates the ability to use metro to travel for theater, music, or other performances.

Simply too early ... WAY too early!

I work evenings until 10:00 pm

I don't support this. I have family members and friends who rely on the metrorail system after 9 PM who need to get home or work. Please reconsider.

11 pm is too early to close. 9 p.m. is ridiculous. If I need to attend an evening meeting, that requires a car or a taxi.

I have consistent late nights at work (not every day but at least twice a week) where I don't get out until 10 so I would have to take alternate transportation home on these days. That will add up cost wise and at that point I may as well ride Metro much less frequently or find a complete alternative to Metro (i.e. - stop riding Metro for work).

the position that I am applying for it's possibly will be a night job

This change would increase the number of people drinking and driving or attending cultural events (which will likely be open in 2022) who would otherwise take public transit. It would also strand more workers who work late hours.

This idea would force people to drive or not do activities like have dinner with friends, go to the movies, eat at a restaurant. Terrible for people without cars, for old or handicapped people. Buses are very unreliable and don't run often enough. Also, those with cars will drive and add to climate change.

Why begin this service reduction in January 2022 when the impact of the pandemic likely will be significantly reduced? Suggest reducing hours now and resuming longer hours in January 2022.

How will people get home after sporting events, or get home safely after hours if they're going out after work? What about people who work service jobs who can't afford to maintain a car or take a taxi home? 11 PM is already too early, 9 PM is absurd.

It would be useful to extend at least to 10pm if possible once the pandemic is at a different phase (in order to be able to go to plays, dinner, etc).

This is a terrible idea! This would have a terrible impact on the economy of DC! People use the Metro to go out at night, have dinner, etc., and closing it so early would take away people's ability to participate in the local economy. It would also make the traffic so much worse with all the ride shares.

I'm not on the trains till 11:00 but that works with me

Will affect all my outings

Already our museums, restaurants, music venues and theaters have suffered devastating losses. During the pandemic we have all been anxious to return to enjoying evening events in DC. Closing Metro stops makes it impossible for many of us to get into town and closing at 9 PM is too early for most events. This will put more cars on the road late at night, as well as drunk drivers. I would rather pay more for the service than to see it disappear.

This would make it impossible for me to attend evening events outside of my immediate area, and I hope that events like sports and concerts will be happening again in 2022.

You have people that either work late or they are getting off late past 9pm and Metro is their means of traveling. I for myself have to be at work by 11pm. I take the metro and the times I ride metro is after 9pm.

Too early! It would mean that for any evening concerts or meetings I would be forced to drive.

It would not be possible to work an afternoon shift. Most retail jobs end after 9pm.

Using the Metro in the evening after work and after attending an event would be out of the question if the system closed at 9:00pm. The idea makes no sense, making the system only available to daytime commuters and some tourists.

Who would want to be out too late with ALL the new Lawlessness???

Proposal to close Metrorail at 9 p.m.

Look. The subway system in New York NEVER stops, and that is what enables a great night life, a thriving economy and honestly very efficient transportation.. As far away as Connecticut, you can easily get into the city. We need to be aiming to maintain the service we have and expanding it so that people have a way into the city that is better for the environment.

This proposal would be much better than closing Metro stations. I live in the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro Station.

Not feasible for my later work schedule. My schedule won't change or I may have to find other job because of these changes

Pre pandemic, i used Metro Rail when i attended evening events that often extended to 11pm or later. By 2022, I hope to resume attending such events. Driving is not a good option for me.

Again, this would work only because there are almost no places that I (and I think others) would go in the evening given the pandemic.

That is a terrible idea. I would be at risk of physical harm and possibly with no way home. - even if I could afford to keep taking cabs, cabs are much harder to get now, especially around Metro Stations, and especially at night, and especially when its cold and/or rainy or icy If you want riders to come back, and to stay employed, then you have to provide service..

This would interfere severely with many of our dining and entertainment activities, especially on the weekend. Metro risks losing more riders and lower revenue.

This seems like a pretty good compromise, since it seems less likely that people would use the Metro from 9PM-11PM (Im personally less inclined to take public transportation as it gets later at night and might take taxis or rideshares instead).

I am usually home by 7pm at the latest on weekdays (including the W14) and dont travel on the weekend because the W14 doesnt run on the weekend, but if it did I would still prefer to be home by 5-6pm.

It would be more convenient to stay open at 11 pm. If that is not feasible, perhaps only on Fri and Sat would be an option.

When I go to events in DC, we nearly always use Metro, and if it runs late, it would cost us more in parking, plus add the hassle of needing to drive. I do not think closing at 9 is a good idea, maybe limit service, but do not completely close.

This is what happens when public utilities are profit-driven.

Closing times of 10:00 p.m.

I regularly finish work at about 9PM and rely on metro for my commute home from Reston on the silver line. There are no bus or other alternatives for me.

Pre COVID, metro had plan to open stations late pass midnight. That plan should be kept due to me work schedule requiring me to leave late. And train is my only option of transportation.

This hurts low-income riders who need to get home from their jobs.

If I were still in my past life this would be a huge issue. I hope that if early closure is planned alt transportation for people working late or attending events can get home.

There are some businesses, like the food industry, that do not shut down until 10 PM. customers who work beyond 10pm will be stranded if you have to transfer to another line.

I work in the cultural arts sector and when working on projects that end after 9pm I would be forced to spend upwards of \$30-60 to return to my home in MD. I will also add that by shutting down trains at 9pm you are basically shutting down access to theatres, music venues, restaurants, museum evening programs, and other entertainment settings. The cultural arts, live event, and food / hospitality sectors of DC have suffered disproportionately in this pandemic. These sectorsâ€”and the services and retail that depend on them to surviveâ€”are an economic engine for DC. They employ thousands of workers, they provide economic stimulus through resident and tourist participation. Shutting down access to these venues by shutting down transportation options will deeply impact the ability for the industry to recover and survive. Please DO NOT make this change.

I would suggested extended hours Fridays, Saturdays and Sundays. I worried about the economic impact for the other days, though. People will not be able to go to shows, dinners etc.

9 pm is early to close on weekends as well.

Id be concerned for all the shift workers and hourly wage earners.

There are days when I have to work late. With proposed closing at 9pm I won't be able to use metro to come home from DC to Falls Church City on orange line

-

Proposal to close Metrorail at 9 p.m.

I think this is a terrible and ridiculous idea. It could leave tourists and late commuters stranded in the city or forced to use other forms of transportation. It will prevent people from participating in events in the city, having a negative impact on restaurants and entertainment venues in downtown DC. What is the point of having public transportation at all with such limited hours?

Due to covid, my place of employment, like many others, has cut down its operating hours. But by January 2022, I anticipate that we and everyone else will be back to regular business hours. My store closes at 9pm, which would likely be already too late to catch the last train, but employees dont leave until 10pm. Once again, the issue is that rideshares are expensive and cutting service like this renders people like myself unable to depend on the metro.

there are many essential workers and other professions that require people to work past 9 pm. Additionally, to rejuvenate the city and support our local restaurants, entertainment venues etc. closing at 9 pm is way too early, especially on weekends!

I believe that a significantly reduced service schedule would still be better than no service at all between 9-11pm. Metro is still the most efficient way to get around the city safely and affordably and a shut off of service at 9pm seems too early and too disruptive.

Normally, each 15 minutes was very crawly and many people

Are we a major city or not? A 9 pm closing would put us in the league if Tulsa, Oklahoma, not a major capital city. Hours should be expanded to accommodate late night workers and a reopening economy.

Yes - with a caveat - if businesses start to open back up - this will have a serious economic impact on merchants which are already stressed by CORVID economic down turns. Seriously, this would be a case of cutting off your nose, to spite your face... Business and ridership support the existence of metro.... does not seem to be a valid cost/ration analysis done on this...

This COMPLETELY defeats the purpose of using public transport for an evening on the town. You lose the going-home trip, and ALSO the going-out trip, because people cant return the same way they started. Better to use expanded intervals for trains. You could also print hand-out cards for riders showing train times at night in individual stations, so people can make sure not to miss the last train.

This is a blatant disregard for service workers who need to use the metro

This would impact my travel for work, inter city travel (eg to National Airport and Union Station), and recreation (e.g., nationals games, evening museum and cultural events, live theater, sports / performance events at Capital One Arena, dinners in metropolitan Washington restaurants).

I rely almost solely on Metro to visit my son, who lives in DC, and to dine and visit entertainment venues, particularly major sporting events (Redskins, Nationals, Caps, Wizards, etc.). I am 70 and refuse to drive into the city if it involves night time driving. I live in Fairfax, which means Uber/Lyft is far too expensive to use more than occasionally. Discontinuing Metro service at 9:00 p.m. would severely disrupt my activities and would significantly reduce my trips into the city. That, in turn, would significantly reduce my spending in the city.

I sometimes rely on metro for travel at night, but not very often. However, the concern is that more people will take uber and drive. Uber costs will go up and parking would be more difficult. Some lower-income people might not go out as much. Maybe the rowdy kids wont hang around Gallery Place. If theres a sporting event or something at Gallery Place, this could be really bad with a giant crowd of people trying to catch the last trains.

A 9pm closure is too early for a city with night life and a work force.

11 pm would be much better for many employers and for city activities.

Any of my metro use for the foreseeable future would end before 9pm so that would be fine for me. Big sporting events and concerts would suffer, but who knows when those will be back.

There are a number of reasons for why I might be out in DC after 9 PM (like a later work schedule) and if the trains close then I will be stranded and unable to get back to Arlington

Im not a nocturnal person but from time to time it would be nice to have service available beyond 9PM

This would not work for me. I depend on the METRO train to get back to DC from VA. I work in VA but live in DC

This is a terrible idea for a major city economically. How would I get back from restaurants, from shows, movies, sporting events. This CRAZY!! I do not have money to Uber.

I could make it work, but it would be sad. I would never go to sporting or entertainment events in DC again.

Before the pandemic, I used Metro Rail heavily in the evenings, to attend meetings downtown. I do not know whether I will be attending meetings downtown again by Jan 2022, but if I am I would have no other way to get to these downtown meetings unless Metro Rail is open until at least 11pm.

Proposal to close Metrorail at 9 p.m.

Although this would work for me, I'd be worried that it would leave people who work later shifts without an easy or affordable way to get to and from work.

That would hurt restaurants and sporting venues. The idea is to take public transit instead of environmentally damaging gas guzzling cars.

If the DC sports teams have fans in attendance at the time of this proposal being implemented it would mean that fans cannot take metro to/from games. Seeing as DC does not have enough parking in the areas surrounding any of the sport venues this would mean a large portion of fans would no longer be able to access live sporting events in DC. The same would go for other events, such as concerts, that would be trying to attract audiences again.

If this is a temporary measure to help save costs and build back up ridership, I think it is workable. I plan to ride the metro more again in 2022 after being vaccinated.

This would not help hospitality venues or the arts recover. Perhaps a surcharge on train fares after certain hours. People who don't want to deal with driving into the city and parking will just not bother to come into the city at all if they are still working from home.

We live in a MAJOR metropolitan area. Your proposals are not geared for the area. Does life end at 9 p.m. in the downtown and sports areas? NO. Not everyone is going to take a scooter or a bike or uber, cabs to get around. Many essential workers and the general public depend on Metro to get to and from their jobs and events. It is embarrassing that you would even consider suggesting that METRO close at 9:00 p.m. The city will come back from the pandemic and so will ridership.

People who work night or later-in-the-day shifts need public transportation. The burden is going to be on the workers who have no other reasonably priced transportation -- the workers that keep tourist and (DC resident) businesses in the city running: hotels, restaurants. These workers can least afford to revert to Lyft or Uber. The city should give lower income workers a stipend towards private transportation costs based on where they work (to qualify). Closing early is sure to put off a lot of people on Metro's reputation as dependable public transportation in the metro area.

Hopefully by Jan 2022 I will be able to visit friends and enjoy dining and entertainment venues in DC that would likely require service past 9PM.

Any city of any interest or importance should have trains running much later than 9 PM, or 11 PM for that matter. What are people who must work at night, many of them already disadvantaged, suppose to do? It would be impossible to go out to dinner and a show and be sure to be able to metro home. This renders metro just a means of getting the proletariat to and from the salt mines. Also, doesn't late night train make travel safer by service preventing drinking and driving?

This is insufficient for a large number of riders outside of normal commuting hours including but not limited to people working 2nd or 3rd shift jobs (i.e. not 9AM-5PM), part-time/evening students, those engaged in local government or community organizations, and those engaged in department of parks and recreation activities.

That would eliminate the ability to use metro for evening trips into the city or elsewhere for dinner, sporting events, shows. It also would impact our work commuting schedule since we often work past 9:00.

Close at 10:00 pm instead of 9:00 pm

How about 10pm?

This would work with my everyday travel plans, but would there be special extended hours for special events like a Nationals game or a concert at Capital One Arena? I live in Arlington, and many events at these venues in D.C. require me to transfer trains to get back home. For a concert that starts at 7 and wouldn't even end until after 9, would event attendees have to take an alternate form of transportation after the event?

This would mean I couldn't get a train after the theater or evening event at the Smithsonian. It is difficult to find a taxi at that hour, and especially unpleasant in January.

I support whatever changes affect the fewest travelers and save the most money

I depend on the metro coming home from work, and that can be later than 9pm.

I personally could drive rather than use the metro when we go out in the evenings. However, hourly wage workers are less likely to fill out this questionnaire and would be really hard hit by this.

If out and about 9 am is too early. As restaurants and theaters come back 9 is too early. I personally refuse to take Uber and Lyft. Not many taxis seem to be available as before.

This is very restrictive for people who rely on metro in the night hours, not to mention weekends. Not having metro available until 11:00 pm could have a negative impact on the economy, as fewer people might go downtown for dinner and events. I would at least keep service till 11:00 pm Fridays to Sundays.

This would severely impact workers who rely on Metrorail to get to and from work. Moreover, it would make it harder for many of the businesses that were hardest hit by the pandemic (e.g. restaurants) to maintain reasonable hours.

My concern would be for events should the world ever return to some sort of normalcy. There are businesses that currently operate until 11 and 12am, how do you propose those people get home? Are you going to add shuttle buses to these stops on a 30 minute interval past 9pm to ensure patrons and workers of these businesses can make it home?

Proposal to close Metrorail at 9 p.m.

That is absolutely FAR too early for any public transit system to close. If this system is to survive, it has to be used for more than just 9-5 work commuting, it needs to be available for people who are using it to travel to dining, bars, theater, and other events. This is an area that isnt under threat from telecommuting.

Metro closure at 9PM would be a grave inconvenience to anyone who lives and works within the DC and surrounding areas and would become a sort of big operation with limited use.

There are a large number of people that work late and metro may be the only way home. so closing early may be problematic for some people.

if I actually wanted to use the system for social purposes in DC and get home, this wouldnt work. You cant even see a late movie by 9pm. What about everyone whos work hours are later than 9pm. This is a non starter for the regions economy and for equity.

Again, this addresses the needs of 9 to 5 officer workers, but makes transit more difficult for shift workers. These are the wrong priorities in terms of rider needs.

Yes but you should consider extended hours when the games are on or there are major events in DC.

Metro cuts service hours, reduces train times, increases fares and shuts stations on a system that has been iffy at best over the past several years and wonders why ridership is down? Really? Metro is quickly becoming an afterthought as a transit option.

I dont need the service after 9pm

This would have no impact on my work commute, as I commute home on the metro during regular business hours. But, it may have an impact on venues attended in the evenings (theaters, restaurants, athletics), but that gap could be filled by private services (taxi, Uber, Lyft, etc).

Sometimes I stay at work until after 9:00 PM. I work in Virginia and I live in Greenbelt. I need for trains to continue running after 9:00 PM. Also, if I go to see a play or a movie downtown, the show will usually end after 9:00 PM. With no Metro service at that hour, I will have no way of getting home.

Im often at work late, and 9 PM (which means lines will begin closing at 8:30 PM) is too early

This would greatly impact those needing to travel to/from work, those with various familial responsibilities, and those providing caregiving activities

Reducing the night time hours has been horrible. Previously, I went with my son to the Kennedy center and dinner and walked around Georgetown waterfront and forgot about the changed weekend times and was stranded. Please don't kill the night life of DC and turn it into a sleepy town. It just pushes people into ubers.

Strongly opposed to this early closure. This would significantly cut transportation options during peak hours for service industry patrons and employees (restaurants, bars, events). It would also generally make DC a less appealing city/less competitive with cities with public transportation with evening hours.

Although this would be a small inconvenience for me, I could manage, if it allows for not closing Van Dorn station entirely.

People use the Metro as responsible transportation when theyre going to go out drinking. Close the metro at 9 and drunk driving will skyrocket, and all the revenue for restaurants, bars, and clubs in DC will plummet, as people from the suburbs opt to not travel downtown. The economic impact would be huge, not to mention the human toll of having more drunk drivers on the road.

I typically dont take metro when its late/past evening rush hour. Instead, I would opt to take taxi or uber.

I responded yes because this service cut is less objectionable than the others being proposed.

Could this at least be extended on weekends (Fri & Sat nights)?

Metrorail system should close at midnight (12:00 AM).

9 pm it's too early. Please consider it at 10 pm.

This would severely limit any plans we would make in the city. Plays, Nats games, meeting for dinner and going out for drinks would not be an option with Metro involved. We live in Herndon and it takes around 40 minutes on average to get in the city. If after our plans we have to be on the platform before 9, and I expect to work a full day at the office, the earliest I could expect to get into the city would be around 6:15-6:30. That doesnt leave much time to spend in the city before having to pack it all up. This, along with the 30-minute train schedule would make it nigh impossible for my wife, my friends, and me to get into the city reliably during the week, and would hamper our ability to plan for the weekends.

This would increase greenhouse gas emissions in the region, as patrons of bars, restaurants and cultural activities shifted to vehicular transportation. It could have detrimental effects on nightlife and neighborhood congestion in certain parts of DC.

I would be less likely to go downtown or to be able to stay at work late if this happened. 9 pm is way too early.

Proposal to close Metrorail at 9 p.m.

While this change wouldnt affect me personally, it would potentially impact, and even cripple, those that require public transportation and work alternative shifts. Not to mention that hopefully by January 2022 we are getting back to some semblance of normalcy, which means people going out and increased tourism. Reduced hours would severely impact both those that work in the service industries as well as tourists who rely on metro to for site seeing and night life, which further impacts economic revitalization.

This isnt Salt Lake City. Does DC want nightlife money to come back? Keep metro open late!

If I was out between 9 and 11 PM I would certainly want the option of Metrorail available to me. Im an older woman and concerned about safety. Wouldnt want to find myself in a situation where I felt stranded or compelled to walk alone late at night. A 10 PM close time would be much better. The Metro schedules already felt restrictive to me, before COVID-19. Ive been stuck at Union Station early in the morning waiting for Metro to open. Ive spent a lot of time in NYC, where public transportation runs essentially 24/7, and its really nice having the option of using it. I dont know what mask enforcement has been like on Metro, since I havent been on it in over a year. If enforcement is similar to other venues (i.e., limited to non-existent) then its understandable why many people dont want to take a chance with it. If you have strong enforcement of the mask mandate, then I suggest you advertise it.

There are nights when I need to leave the office later, and this would likely leave me stranded. Many jobs in this area (e.g., in law firms) require employees to work well past standard business hours, and often without advance warning. This proposal would encourage many such employees who currently use Metro to drive instead. It would also render Metro essentially useless for travelling to and from any evening events (e.g , at Capitol One Center, Nats Park, etc.).

We regularly attend sporting events and meet with friends in the evenings for dinner/movies, and would be heading home later than 9pm. This is especially concerning for sporting events, where its already difficult to hail a cab or find an Uber/Lyft driver in a safe place, even with the vast majority of people using Metrorail. If ALL attendees suddenly had to find parking or Uber/Lyft services, it would be absolute chaos and wed be in gridlock for hours trying to get out of those areas. The fare for such a ride would then become to expensive and we would not be able to attend those events, or frequent the businesses in the area as a result. This would be harmful not only to attendees, but also to those area businesses.

This plan would likely work Mon-Fri. for many folks, but would discriminate against many workers who are night workers and rely on metrorail between 9 and 11 PM. It would also be a problem on weekends for those who use Metro on Friday and Saturday nights, in particular.

9 PM is not late enough to accommodate my work schedule. I would be unable to use Metrorail regularly.

No. My job at restaurants close at 11pm or later.

With all of these bus and rail stations closing it will be hard to transfer from one train to another after work for some people. A lot of metro users cant afford to use uber or lyft after work on a daily basis at night.

10pm would be a better cut off given dining experiences in the District can be crowded and slow. Having dinner at 8pm is typical, so youre done at 9pm and then you need time to get to the station and get home.

Closing times could be differentiated across stations or lines. With the opening of the Silver Line connection to Dulles Airport, one would expect increased ridership on the Silver Line and possibly other lines in the late hours.

This is a terrible idea. People would no longer be able to take the train home after Nationals, Wizards and Capitals games. For me personally, 9 PM close would make it hard to take Metro home from nights out

This leaves no public transportation option available for those who can not afford a ride share/taxi nor have some one to pick them up

It removes any leisure use of the metro on evenings and weekends. It also means that if one commutes in and may have to stay late for work or dinner, they can't reliably get home meaning just won't take metro at all. Also a huge problem for non-9-5 workers.

The Metro services the Nations capital and advertises itself as world class. Many people work late and this would diminish the ability of people to reliably use the metro. I would run less trains (every 20 minutes say) and extend the hours to 12:00 midnight.

There are times when I use the metro rail system pass 9PM. I would compromise with closing at 10PM

That would eliminate night travel, terrible idea!

I heavily rely on metro to commute to work from McLean to DC and would need to find an alternative mode of transportation if I have to work late.

The fastest and most affordable way to get home safely at night is by metro. This would increase the reliance on Uber and Lyft. The metro closing later is always better.

The main time I take the metro is when I feel unsafe walking home alone at night, and closing it at 9pm ruins this.

This would mean metro isn't available after evening events, such as bars/restaurants, sporting events, concerts, etc.

Proposal to close Metrorail at 9 p.m.

People are starting to return to work and everyday life. 9pm closing will hurt more than help especially for those crossing state lines to get to work, school and home. Most employers do not reimburse for uber/lyft or cab rides but they will reimburse for metro expenses. If this alters there work schedule, ridership will definitely decrease substantially.

This is an absurdly early closing time that would destroy DCs nightlife economy and drastically harm the impact of essential workers in hospitals, police stations, and other workplaces that have shift changes between 8pm and midnight.

No, me gusta esto porque yo salgo a las 11- 11:30pm del trabajo o si no a las 12am. y necesito el train para ir a la casa porque no manejo y Uber o Lyft es muy caro aveces, y aveces no hay carros durante esa hora.

This would be incredibly inconvenient towards anyone that attends or works at anything related to DC night life. I attend many Capitals and Nationals games and have lots of friends that work these. Additionally, there are so many people who work at restaurants, bars, etc. that this would very negatively impact. From a financial perspective, I would think this would hurt DCs local economy as well.

I expect work arrangement to go back to pre pandemic by 2022

My real answer is Yes, but. I think if you shut at 9PM, you eliminate the beneficial aspects of mass transit as it can alleviate climate change. It would mean the entire nightlife of the DMV moving to cars, which in turn will kill restaurants, theaters, and bars that do not have convenient parking nearby.

If ridership after 9 does not justify keeping the metro open beyond 9 pm, closing early seems like a good way to save money. Uber and Lyft could provide rides after 9

This will prevent mass transit from being used for live music and sporting events.

Although I do not ride Metro after 7:00pm., my concern again is for the frontline workers whom must use Metro to get to and from work. Now Im thinking of those whom are task with cleaning offices and hospitals after normal business hours and whom often do not get off from working until 9 or 10 pm. Will you then offer shuttle busses for passengers whom must take a later than 9:00 pm train?

Too early. Will encourage more congestion around nightlife-friendly areas like Dupont and U st.

Life is intended to be more back to normal starting next January...an earlier close time, will not work. If anything close the metro earlier now, when there are restrictions against staying out/drinking late.

Earlier closure means metro wouldn't work for anyone going into the city for a movie, play, concert or dinner out. Also negatively affects workers who have to work late.

I suggest keeping current schedule

Non-drivers (including my son, who doesnt drive due to having survived childhood brain cancer) would permanently lose their ability to independently travel for work if they work outside normal hours (which is true of my son), or use the system to attend social and recreational activities during evening hours. This would unfairly disadvantage them, and might affect area businesses

There are many people that work later than 9pm that take public transportation, if you close the stations at 9pm it will add the expense of a taxi and that is a big added expense.

When public spaces, food industry, and gatherings opening up to the masses, events will be going on after 9pm and I think that metro closing at 9pm will be a detriment to our community. We have such a vibrant community after work hours and on the weekends. People like to go out at night 7 nights a week in DC. Metro closing at 9pm may discourage people from going out. Will WMATA partner with LYFT, Uber, Via, or other car services so people can get around easily? Will there be more metro shuttle buses available? Not everyone can afford using Uber on a regular basis.

I used to use the subway for night classes in DC. If the classes restart after life returns to normal, it will affect my budget dramatically.

This would make metro a non-option for me because I would not be able to get home by 9pm.

As soon as the pandemic is over like I said it could be sooner than January 1, 2022 but, yes soon as this is over, we will have to change the time from 11 PM to 2 AM Sunday through Thursday and 3 AM Friday and Saturday so just to let you know in 24 hours a dayAs soon as the pandemic is over like I said it could be sooner than January 1, 2022 but, yes soon as this is over, we will have to change the time from 11 PM to 2 AM Sunday through Thursday and 3 AM Friday and Saturday so just to let you know in 24 hours a day

I would be unable to participate in evening events.

It would rule out Metrorail as a useful transportation choice for evening dining and entertainment, as well as evening travel to/from Reagan National.

Weekend travel ending at 9p.m. would occasionally affect me.

This would have serious repercussions on the life of the city and its businesses, both from a work standpoint and an entertainment standpoint.

Proposal to close Metrorail at 9 p.m.

I use the metro mainly for Monday to Friday commuting and so am not usually riding during these hours. However, I live outside the city and do use the metro at times to attend events in DC during the evening (concerts, theater, etc.) - this plan would be difficult for that situation since I would often be left with no way home on the metro during the late evening. So overall it would be ok but my usage during off-peak hours would decrease a lot.

The contractors hired for the Silver Line used substandard concrete and it was widely known in local news. How much needs to be remade?

I should be able to find alternate forms of transportation on the rare occasion I am out past 9pm. However, the earlier closing time would be problematic for people who rely on metro to travel to sporting events in DC. I hope there would be some flexibility for later closings for big events.

Several of us - especially essential workers need to work beyond 9 p.m. If the metro closes at 9 p.m. then I would have to leave at 7 p.m. to take the metro bus to make my transfer to the metro rail. I would probably lose my job if I leave before my contractual hours.

I would prefer and recommend Metro stop at 10 pm.

I frequently work late and would not have a way to return home.

Yes, this would totally be ok!! The metro is most used for work-commuting, so this is another easy sacrifice. With the availability of other travel services like taxi, uber, Lyft, people can find another means to travel.

Shouldn't there be differentiation between weekdays and weekends?

This would be very bad news for any businesses like restaurants, stores, movies, theaters, sporting events, bars/clubs and anything else that will be trying to recover from the pandemic. It would negatively affect both customers and employees of such things.

I only travel this late at night on weekends. The early close on weekdays isn't an issue for me. How would this work for station stops near medical facilities for patients and staff? If numbers show high ridership in those areas I would vote in support of their needs.

Yes for Sunday-Thursday. No Friday-Saturday.

Though this proposal would create inconvenience for me, I could live with it. Meanwhile, this proposal remains silent on higher fares and increased fees for parking. Perhaps, your survey highlights these two variables later.

Closing at 9p would strand many workers who work evening shifts and rely on public transportation. It would also reduce the capacity of the hospitality industry to adequately cater to its customers past certain hours. If businesses are open in Jan 2022 in a capacity similar to pre-pandemic times, this will reduce their ability to recoup losses.

While this would not affect my commute, it would eliminate the possibility of using metro as safe, reliable transportation home from evening events such as sports or concerts. If this plan were adopted I would probably spend LESS on metro per year

This time change would only affect our family minimally; however, as a result to the proposed change, we would decrease our late evenings visiting city events or friends and family. For example, when pre-COVID events resume, we intend to catch more baseball, soccer, football, and hockey games as well as increase our dining out and visits to the national sites of DC. As the metro is our primary method of travel around the city, these plans would be hindered by the proposed changes; and we would have to second guess our decision to stay out later.

Of all the options, this would be the most preferable, so long as there would be exceptions for things like sporting events ending past 9pm.

Not applicable to me personally, but would strongly prefer that Metro consider lower income workers in its service cuts. Longer commutes are inconvenient to me, of course, but the financial hit to retail and restaurant workers should be considered above my inconvenience.

Im at student at GW getting a doctoral degree and classes end at 9pm so I wouldnt be able to get home if service stopped at 9pm.

For caregivers and shift workers, this plan is unacceptable.

This affects people in the hospitality industry, nurses, lab techs, and many others. Many of these workers would face the extremely high cost of parking in DC without metro, which would make a significant dent in their finances.

As someone with a disability I rely on the metro for my daily commute and this would greatly impact me.

This proposal would critically affect the commutes of essential workers who must work until close of retail hours. In some establishments this means the employees do not leave work until 10pm and they rely on those evening trains.

How would that work for those that work late?

10/10:30 pm is an idea, but again if the business are closing at 9 pm, then how can a employee be able to return back home with there family.Keep the hours with effective services to the business so they can operate upon the communities...

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Its becoming too dangerous to be in and near Metro stations late at night. I take a cab instead. |
| This is a disservice to those of us who work late. |
| Why live in a city if you cant access it easily? |
| Absolutely not! |
| This is ridiculous. It means I cant attend a show or enjoy a meal in town without coming up with an alternative to metro for getting home. I would have even fewer flight options available for returning to DCA because Id need to get there in time to collect my luggage and catch a stupidly-early last train. |
| It needs to stay open until at least midnight. Most work late, so people would like to commute by train better than taking cab or Uber. |
| Not my favorite since I do take metro to go out in the evening, but I could live with it. I suggest to still have longer hours on friday and saturday (assuming public places will be open). |
| Once things have opened up again, the convenience of riding the Metro after work would be curtailed by having to be on the train by 9:00pm. Meeting for dinner or some other after-hours activity would be constrained by the early closing time. |
| I frequently work evening hours. |
| How will anyone working in a restaurant or evening hours get home? Sort of defeats the entire purpose of a public transit system. |
| With the addition of the station at Dulles, this seems like it would be a problem for people using this as a method for getting home. |
| I am a woman so I would probably opt to take a rideshare if I was traveling late at night anyway. |
| Metro should canvass the travel needs of healthcare and frontline workers whose night shifts may be affected by such service cuts. |
| If it's travel needs beginning in January 2022, that would take away Metro as an option for many evening activities like a concert or play or evening dinner or evening ball game. While we don't often go into DC in the evening, this change would preclude nearly ever using Metro rail in the evening. |
| I think about individuals that are working late hours and could benefit from safe transportation service to and from home. |
| Going to evening cultural performances downtown or even in Bethesda would require us to drive. Parking downtown is difficult and expensive. We are senior citizens (86 and 89) and do not like driving at night anyway. It would also mean that everyone who couldnt walk to Strathmore Hall would have to drive. The parking lot would be stressed. |
| This would be tough, but wheres the money to continue as if were still in the pre-2020 world? |
| This proposal would hurt restaurants and entertainment venues, as well as their employees or others who work evenings and nights |
| There is good portion of the workforce that are not on 9-5 schedule and it would not be feasible for them. Maybe until 10pm on certain weekdays might work |
| My job in theater has performances that end after 9pm. How would I get home from work? For who is the Metro system for? Only those who live outside of the District? Only those who are commuters? What about the people who live here? |
| It would make it impossible to use Metro for DC theater and for all other evening performances in the city, as well as for dining. With parking at a premium, it would prevent many suburban residents from patronizing Washington events unless they were willing and able to go the much more expensive alternative of Uber, etc. |
| Service hours should be extended to 1 am, not reduced. Increasing automobile traffic in the city at night would make the roads much more hazardous, exacerbate the incidence of DUI, and harm local restaurants and bars. It would make the Washington area a less attractive location or young people and create hardship for low-income people who work at night. |
| This would have a negative impact on those workers using metro to commute home in the evening or going to evening shifts for over-night work. This proposed change would impact our decisions on using the subway in the evening. |
| I understand that ridership is down but, at the very least, a temporary schedule amid COVID-19 for Metrorail service hours should be until 11 p.m. weekdays and 12 a.m. weekends. I would be more likely to patronize Arlington and DC attractions, restaurants if I had greater Metrorail flexibility. |
| How are we the few major metro systems in the country and world that at least close until midnight or 1 am? I'd be a dream to have metro open 24/7 but the least that can be compromised is having it closed late. Most workers in DC leave very late (restaurant, labor, cleaning workers) |
| Has there been any mention or thought of individuals who work beyond the 9PM hour been placed? If so, what are the alternatives that mirror the WMATA mode of travel similar to or at a lower expense to the rider? |
| I frequently rely on metro later in the evening, particularly for special events (concerts, sports games, etc) |
| Id support staying open longer with a reduced number of trains (say every 30-45 minutes) |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I would not be able to get home after a Nationals game. I go to about 12 per year. |
| This plan would absolutely NOT work for me. I depend on the Metro rail system to visit friends and socialize. Sometimes I might be traveling after 9 pm but no later than 11 pm. Closing the system at 9 pm is not convenient. |
| This would be catastrophic to any night life revival (and the workers dependent on it) in the city. |
| This would limit my travel to Friendship Heights and Farragut North (for example) to patronize local establishments in the area (especially those convenient to the Metro Stations). |
| I work evening shifts. |
| Closing at 9pm is awfully early. If the system really can't close at 11 pm, I'd recommend doing 10 pm rather than 9pm so people who rely on this have a better chance at getting home |
| There are many times I would need service after 9pm, if there were certain considerations for sporting events, concerts, etc. itd be ok, but just as a stand alone that would really impair my riding |
| This would hurt me a as I take the metro to work |
| I would expect that nightlife will have returned by then, so that service wouldnt fit with the trips I would have taken pre-COVID in that window that will now cease to exist. Transit is still my most reliable mode of transport when going out, and I wouldnt want for that to change |
| In current covid issues working environment I have had to work night shifts at airport... 9 PM is too early a closure time any day of week, including for airline passengers arriving at DCA, most flight arrivals are in early AM and evenings until 10 daily, until 9 PM weekends. |
| This would make my commute impossible. I frequently work late and have other work events that go into the evening. I quite literally would not be able to get home from work. How on earth would this work for anyone? What is the proposal for the thousands of people per day who ride the train at this time? |
| Please consider extending time to 10 pm. This would allow mall and restaurant workers to use metro once businesses are closed in the evening. |
| Closing time of 9pm is too early to be able to use metro after any evening events or plans, really screws people who take metro to work but cant return if they have to stay late or have an evening shift. |
| It would hinder going to movies and concerts. Lyft gets pricey depending on how far you need to go. |
| What options are available and/or being proposed for shift workers (I.e. bus operators, security personnel, police, custodial workers etc.)?? |
| Once its safe to go out again, I shudder at the thought of being out in DC nightlife with no way to get home after 9pm. Perhaps extending the hours on the weekends (Friday and Saturday nights) would be possible? |
| I would curtailing my volunteer and travel commitments because I would have to take a taxi after 9 PM. My Smithsonian volunteer and Kennedy Center evening commitments last until 9:30-10:30 PM. Planes from the East often arrive after 9PM at National Airport. |
| This would discourage people from attending downtown functions if they knew the Metro stopped at 9:00pm. What would you do forevents such as the 4th of July at the Monument Grounds, the baseball games, theatrical performances? Make exceptions or stick to the rigid schedule. It could be confusing to people if changes were made and they were not notified. I can see the cars as they come to the Grosvenor Station. Perhaps you could put on fewer cars and stay op later. |
| If restaurants and businesses downtown do not want my money, then this is fine. My priority is to use the metro for my commute, so I am ok not spending money on restaurants, entertainment and retail in DC after work if the city does not want me there. |
| Anyone commuting into the city for evening events needs the ability to metro home afterwards. 9pm is much too early. |
| Closing metro at 9pm prioritizes commuters, but would increase reliance on rideshare for individuals who are going out socially and may be drinking. Worst case scenario, people will be more likely to drive themselves after drinking, making roads more dangerous all around |
| Would be really tough to get home if out at night. |
| Personally, with the exception of an occasional event at Arena Stage, I could probably adjust. However I do have some strong feelings about cutting off transportation for those who work long hours to make a living and for the benefit of us all. 11 PM is already problematic. |
| Essential workers in transit need service hours to help them get to and from work. |
| This will be cruel for Evening shift workers. |
| The late night use of Metro is vital for the hospitality industry, both entertainment & restaurants. |
| Could disadvantage workers |

Proposal to close Metrorail at 9 p.m.

Some weeks I work later than 9 and this would leave me stranded.

I think it would be useful to keep late closing at the weekend when people are attending events downtown

The hours of the metro rail should be returned to the normal hours of closing at 11:30 pm Sunday - Thursday and 3:00 am Friday and Saturday. This would allow the night life and businesses to regain financial footing. As by this time the vaccine will be given to most people according to the way things are currently going.

I am concerned for riders who work evening or overnight shifts, where they would need an affordable commute option past 9pm.

bring back midnight

Restaurants and small businesses will definitely be affected by early closing at 9:00pm. The pandemic has already reduced their funds and employees. Closing metro early is not a good idea for those who do work at night when closing.

Working late at the Library of Congress - being able to ride the rail to Potomac AV station to ride the M6 to Fairfax village 38th and V St SE is required at least 4 times month.

This assumes that people will quite going to concerts and eating at DC restaurants. No more evening shopping and events at museums. Bad for the economy.

As I stated in response to Proposal #1, I really dont want WMATA to have to cut Metro service on any of the lines.

This would work for me as for safety I never get on the metro alone past 9 or 10 now. However, I have the means to pay for a taxi or ride-share service. This again concerns me about the disproportionate impact it will have on a certain race or socioeconomic group.

It would for work but it not socially on Fridays or the weekends.

I am concern about closing the metrorail down at 9:00 p.m. instead of 11:00 p.m. because this is my only mode of transportation.

Will need to adjust to make 9pm work at some cost. No problem if it will save metrorail significantly.

this could be problematic for Nationals games and other events that might end after 11.

Any proper public transportation runs after 9pm!!! This is ridiculous. How are people who work late going to get home? People out drinking - will they take their cars? Even If we simply go back to using car shares, that means more cars on the road - what about climate change? This is the Nation's capital; no 1st world capital city has such a limited subway system as what you propose. Other funds must be found to keep Metro operating at an acceptable level!

this is too early for weekend hours. Weekends we need at least till midnight

For regular commute yes, but not for helping with transportation for social events. We would be stuck after any sports or cultural events (which would impact our wanting to do those)

This would not impact my projected usage

When Covid is over, people will be going to sports and music venues. People greatly rely on Metro for sports events that often go late. Please dont go down to 9 pm

Some of the Flights arrive at Reagan Airport after 11 PM, which will create real serious problem.

With the expansion of rider and ride share services across the metro DC area coupled to this timeframe being well outside the scope of the traditional work period (e.g., 9am to 5pm or variations thereof) for a predominant amount of individuals, this proposal of earlier closure appears to not only be the most feasible, but also completely concordant with metros stated objectives of providing services when demand most dictates.

What about when baseball returns and servicing the crowd that uses the metro to go to and return from the games ?

This leaves anyone who works nights (including lots of essential workers, like healthcare professionals) stranded and reliant on expensive services like Uber if theyd like to get to work or home from work.As a woman, I also feel much safer taking the metro home in the evening rather than getting in the car of a total stranger who I called from an app. This change really feels like it would impose a de facto curfew on women under 50 (maybe women over 50 too, honestly), which is bad for businesses like restaurants and also bad if you like gender equality and womens ability to participate fully in society (which I do). So if the train is closed and you dont want to get in a strangers car, your options left are either to walk home (which makes you extremely vulnerable too, as the news out of the UK is currently highlighting with the murder case in London) or to buy a car and drive yourself (which for many people is not a practical solution)

While our family could probably work around this change and use ride-sharing services, etc. This would likely limit employment opportunities for the DMVs underserved communities who rely on metro for commuting to service jobs. it would certainly increase cars on the road and would likely lead to more incidents of driving under the influence and associated tragedies.

I think it will be much harder for people in service industry and people out with friends. It will not affect us as much.

Proposal to close Metrorail at 9 p.m.

My wife and I frequently attend events in Washington DC that let out after 9 p.m. Our attendance at paid events (concerts, lectures, etc.) supports the lifeblood of the City, and we get there overwhelmingly by Washington Metro. If the daily service ended at 9 p.m., our patronage of all that Washington has to offer would greatly decrease. In the interest of doing our part to combat climate change, we drive into the city less and less these days. We much prefer to ride Metro. Please do not close the system early at night. This would affect not only us but many people of like mind.

Absolutely disagree with this proposal. (1) let's be honest, this time would only work for people who work a standard 9-5 white collar jobs, guess what!? Those people are currently not working using the rail system because they are all working from the convince of their homes. How about essential workers like who work odd hours everyday? A lot of use work until 9pm so how are we supposed to manage? Having the time until 11 makes more sense cause it allows us to time to use the bus and still catch a train our homes. (2) the Buses are almost always late and that makes it even more difficult to try to hurry up to catch a 9pm train. Please 11 sounds great

Absolutely not! Cutting service hours is a dreadful idea. Many people work late at night and rely on metrorail to get them home safely. In addition, people who are at late-night gatherings may be tempted to try to drive after drinking or when tired, which would cause accidents to skyrocket and would make our roads much less safe. In addition, cutting hours would cause Metro to lose even MORE money, which would then become a vicious cycle. So, PLEASE, do NOT cut metro operating hours!

11 works

Terrible, 3rd world service. Not acceptable. Eliminate off peak rates and keep service through 1 AM every night.

Public transportation is vital to safe nightlife in the District. Closing metro early exposes us all the dangers of drunk and impaired drivers.

Usually it is easy to use metro at a late hours (after 9pm) after returning home from visiting friends, concerts and other city events.

You would absolutely push people back into using their automobiles, if you do this.

If there is a special event or sporting event how would people get home? A 9pm closing time with trains infrequently means it will be very hard for people to get home.

That is extremely early for a major urban area like this, and would increase traffic and would reduce people going into DC for entertainment on evenings and weekends. I would hope that at least there would be extra rains and extension of hours whenever there is a sports event, or concert etc., or at least later hours on weekends. This would be difficult for people who have to get to work early or work late and do not have a car.

I generally do not Metro after 9 pm, so this would be ok for me personally; however, for the many others who depend on Metro for their job commute and they work past 9 pm - this would NOT work.

I work evenings and would like train stations to close at 11:00 pm.

Unacceptable!!! Many workers and people attending events in the later part of the day would be forced to drive themselves (both ways) or make use of share ride services. The negative effect on employees who must rely on public transportation would be extremely high. The environmental impact of increased car traffic would be detrimental. Metro ridership would decline tremendously. Downtown businesses (e.g. theaters, restaurants, sporting teams) would lose revenue. The idea of a car-free life would be over.

This plan does not seem to take into account the many shift workers in DC that might need later night trains during the week after work. In addition, it doesn't seem like this plan would even allow for people to grab a bite to eat in DC, attend a show at one of the many theaters, go to a Nats game, etc., then use Metro to get home afterward. It seems to discourage Metro use overall, which would have lasting effects.

Metro already closes too early, but 9 pm is really pushing it. Not everyone works 9-5, and we all have lives to live. I suppose if buses are still running late on many parallel routes and corridors this could work, but if you cut the span more people won't find it useful and will get a car or bikes or use cabs, reducing your ridership during the day as well.

Pre COVID my main transportation especially in the evenings was METRO. Assuming that travel will resume post Pandemic the reduction in availability of mass transportation when we are trying to simultaneously prevent the devastating effects of climate change seems like the WRONG approach. I would hope creative ways to put people back to work would allow for Metro to continue its essential service.

Too many events run past that timeframe.

I rarely travel late at night. However, I know people who do and this will be an inconvenience for them.

That option all but eliminates MetroRail as a choice to go to shows, dinners, sporting events, and other evening activities in DC. There's not nearly enough downtown parking around Verizon Center and not enough by Nats park. Let alone the other sports venues.

I use Metro primarily for commuting, and I commute normal hours, so an earlier closing would be fine. The same may not be true for those who work later shifts, though -- they would need a transportation option.

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Eliminate overtime and reduce wages. |
| No late dinners, concerts, theatre, opera, etc.? Way to kill your businesses and tax revenue. |
| So the people that works overtime and sleep at work. Or take Uber. Not everyone can afford to pay for Uber. |
| This proposal is insane. Many riders are still working up until, or even past 9:00. And this is their only form of transportation. Not only will this hurt metro, it will hurt the Districts economy and culture |
| Closing at 9pm would NOT work for all of those who attend all evening baseball games or other sports, all evening theatre performances (music, drama, dance) - patrons who depend on evening Metro would probably have to leave early, especially seniors and any others who do not drive at night. It would be awful, cutting down on opportunities to have an enjoyable evening. Many people who work at the venues we patronize would also be unable to work evenings. My husband and I are 78 and 79 and we are very frequent theatre goers and very frequent baseball game attendees - if we could not take Metro home at night, this would eliminate many of our beloved activities. |
| Many activities - concerts, bars, conferences - end after 9pm and metro is needed to travel through the city. |
| Closing the Metrorail system at 9pm instead of 11pm would lead those who work evening shifts, or late nights, to either take the bus (if still operating in the needed areas) - which could then lead to overcapacity, a rideshare - which is expensive and dependent on surges, walk (if able), or cause individuals to not be able to work that shift. Similarly, to not provide those who go out to clubs, bars, etc at night puts these people at risk of not being able to get home safely or comfortably. |
| this will make it impossible for me to travel to DC for evening plans without having to take a taxi/uber home which was never my choice mode of transportation |
| We are a world class resilient city and bars/restaurants are already hurting. 9pm is ridiculous. |
| But for this plan , it must be taken in consideration of consumers who have late night employment |
| Eleven PM is a much better closing time for Metrorail: We use Amtrak between Union Station to NY City and often arrive back in DC after 9 pm. We also use Metrorail for Arena Stage and the Kennedy Center. Performances do not end until later than 9 pm. |
| Many of our most economically vulnerable neighbors are stuck working late shifts and they are the ones most in need of public transportation. Please survey the employers of front line workers and the workers themselves to determine the need for even later transportation. |
| 9PM is crazy. that is way to early -- even 11 is way to early. That shouldnt change -- if anything it should be 1AM |
| I do not commute frequently after 9 PM but in some cases due to work related activities, i have to commute after 9 PM. Even though this is not the time which i take my metro ride, but i prefer having the service till 11 PM due to the fact that i will give me peace of mind that i have reliable service when needed. |
| Work culture in this area is nasty, a lot of people have to work late. Closing the Metrorail at 9 would cripple peoples commutes. |
| We often use the Metrorail service in the evenings after attending events in the DC area. This would severely reduce attending events due to parking and driving issues. We would like the evening service continued. |
| Utilizing metro for trips into the city and back for dinner and other evening activities is important to me. |
| If this is just for the weekday, it would be fine. but if its everyday, including weekends, it might impact me greatly. |
| 9 pm is awfully early. Even just 10 pm would help. |
| This would absolutely not work. I need the metro to be open past 9pm given work obligations |
| This would reduce my ability/desire to attend evening activities away from my neighborhood.. |
| This would prevent me from getting home |
| We are avid theater-goers who use Metro to travel to and from performances at various local theaters: Shakespeare Theater, Arena Stage, Fords Theater, Studio Theater, Kennedy Center, etc. We also regularly attend evening lectures at the Smithsonian. Closing Metro at 9 pm would mean we could not use Metro to return home. Driving ourselves or taking cabs are not good options for us. |
| I rarely use public transportation this late in the day. However, many people do: some for play, many for work. AND, frankly, closing the system at 11PM is, in itself, just a just a terrible policy, let alone proposing to close it two hours sooner. |
| While my work time ends at 4 pm, this will severely limit spending any time in the city for shopping, dining or getting together with friends once the pandemic restrictions are lifted. Not to mention how evening and overnight workers will suffer. |
| I feel safer taking the Metro at nights than walking. It is an easy and safe option when getting across the city. |

Proposal to close Metrorail at 9 p.m.

This would be fine I think. Kinda sucks, but theres always uber if Im out late with friends. I would like to see exceptions for nights when there are big events, though. Like extending service for after a ball game, hockey game, etc.

If all days of the week this would be difficult and 10pm would be more feasible for my current employment schedule. Would exceptions be made for large sporting events and other events that do not allow for ample parking?

I mean, god forbid you work in the service industry. And as we all know, Nats games end promptly at 9pm.

I don't ride the Metro after 9 p.m. on a regular basis, but I like to have the option when I'm returning from a special event. Public transit needs to be open most of the time for it to be useful.

I have often had to leave the office downtown late, after 8pm, and having the system close before I made my switch to the final train. And Uber would be prohibitively expensive.

No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 9pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab.

Assuming bars and restaurants are able to operate normally in 2022, this would cause inconveniences and reduce revenue of certain business in the DC metro area. Buses near my residence don't operate after 9pm, and while I could take Uber/Lyft, it would likely reduce the frequency with which I would patronize bars and restaurants.

Things do not close at 9 pm. Closing metrorail at 9 pm will just mean people have to hail cabs/rideshare unnecessarily.

Working in the hospitality/hotel industry this would drastically impact being able to commute home from work later in the day.

This would severely impact my social life which is already hurting because of the pandemic.

I can see this being a problem for circulation in general and for restaurants/bars that serve alcohol. Closing the stations early could make more drivers tempted to drive drunk. Even if people used driving services or taxis, this would cause circulation problems (that already exist, but would be worsened) as the drivers wait to pick up their clients and block roads.

I can see why this will be a problem for people that work until late hours. Seems that 9pm is pretty early to close

How would we get home from errands and other appointments after work??? This would defeat the purpose of their being a metro system entirely. 11pm is far more reasonable.

This is inconvenient, especially on weekends, but it would be less disruptive than the other proposals.

Many DC resident are members of the service industry less than 50% of them drive and must utilize public transportation to work and carry out important lifes crucial functions

In regards to WMATA Police Department , with the continuation of the excellent toward Maintenance , and Operation (M.O.) , plus further upgrade for passengers , and line ; WE in conjunction, both service and patron will be able to motivate a 2:00 A.M. closing .

Two reasons:1. Late work departure from DC or other weekend or late night venues along the whole Red Line would likely loose potential employees and evening customers who live or park cars in or near Redline stations. 2. The condominiums, homes, townhouses., apartment houses, etc., would loose value if the Redline was lost as an attractive sales feature to potential buyers.

I have often used Metro go into DC from Virginia for concerts, dinners, and evening events. Even closing at 11PM has meant picking and choosing events that ended early enough to make it to the train - and/or leaving early and sometimes running(!). As I live on the orange line, such trips would cease - simply not possible.

9pm is often too early for my needs

Proposal to close Metrorail at 9 p.m.

This is UNACCEPTABLE and insane. Talk about becoming a laughing stop. So those who go to Kennedy Center via metro will have to stop? Most go to foggy bottom and use shuttle but strike any evening shows. Or any shows, live performances, restaurants, businesses, book stores, bars. The Shakespeare Theater Company and other theaters will be harmed significantly as many use metro for evening performances. you are not catering to those who RELY On METRO. You will have more drunken drivers. We will be a laughing stock across the country. Who would get a monthly or weekly pass now? That took AGES when other systems have had for ages and now who would do? This is insane. And you will kill DC as a place to live. Businesses and theaters will move out. They will have to find a way to survive with fewer coming in evenings. Restaurants too. DOOM DC by doing this. IDIOCY at best. IRRESPONSIBLE at best. Do your jobs and find a better way and also with funding coming to the states, table all this NONSENSE. DC already too high in taxes. You are going to lose tax base more and more. Get more federal funds from VA and MD who rely on this too. Sue them for their share. In any case, as a district and capitol of the country and seat of federal power, you have CIOU. USE IT. Not like this is a state issue or district only issue so take care of this responsibly.

Oh wow. I regularly go to the movies after work and on weekends and use Metro to get home. Could you just close it on the outer parts? But things inside the city ... keep that open, right? I mean, RIGHT? Wow. Also, not that I advocate drinking, but there are people who drink who use Metro at night to get home. So, we move them to ... Uber? Drunk driving? Eek!

My proposal for this point is one metro from 8 pm through 11 pm instead of closing at 9 pm

I would not take the Metro anymore.

Sometimes I work until 9p and ride metro home. Sometimes I go out in the evenings to attend cultural events such as plays, concerts, movies, etc, and use metro to get home. This would make it impossible to live in DC without a car and would be very, very sad and disappointing. Our transit is what makes this city vital, thriving, and different than the rest of the United States.

This change would force me to abandon metrorail as a transportation option in most cases. Since I am not a metrorail commuter (I live close to work), most of my use of the system is at night, and virtually all my trips before the pandemic ended after 9pm.

DC and the surrounding area have a large number of workers who may not finish work until after 9 PM. It is increasingly expensive to use ride share services and bus service may not always be viable depending on where a worker is. Having closure stay at 11 PM will alleviate this burden somewhat.

I do not think this is a good idea because many people who enjoy nightlife in city wont be able to use metro to get home late.

No, closing at 11pm is already pretty early and forces us to rely on taxis/Uber.

Would it be possible to extend to 11p.m. on weekends? Especially to Foggy Bottom when the Kennedy Center has events?

This is absurd and disrespectful of metro-area tax-payers who have contributed funds over the last several years. Not only does this affect employees who clean buildings, etc., until 10pm...this will negatively affect me as much of my metro ridership is between 10pm-11pm (or later on weekends). I will also no longer eat in DC as metro will preclude transportation home and make an evening out too expensive.

Rarely take metro past 7p

Many of the people (myself included) who rely on metro the most - service workers (bars/restaurants/grocery stores/etc) would be affected the Most by these cuts.

A expansion of hours is preferred. Rather than close the metro at 9pm, extend the hours to 12am weekdays and 2am weekends.

I most frequently use metro after work hours for commuting around town, particularly to baseball games. This plan would leave me stranded at the park.

This will harm service workers in particular. May also lead to people driving rather than taking Metro after imbibing alcohol.

I work late and need the Metrorail to get home. I cannot afford to uber home, and walking would be unsafe. I am strongly opposed to this proposal.

9 PM is too early to close since many businesses/restaurants and art venues (Kennedy Center, others) are open until 11:00 PM. It also depends on which areas have the most need to stay open so the workers at these places can use Metro to get home.

Removing evening access would make it much more likely that I end up stranded in the city and have to pay a significant amount to take a rideshare instead. It would drive me away from public transport.

How does this affect late night sporting events, concerts, movies, etc? This also discourages people from staying out late at restaurants and other forms of entertainment. But maybe you only want a subway system for commuters, in which case you arent doing that well either with 30 minute wait times between trains.

It would be better if it was open until 10

Sometimes I am expected to work overtime, and with the trains running every 30 minutes, I could miss my last bus. I dont own a car and rely exclusively on public transportation for my travel needs.

Proposal to close Metrorail at 9 p.m.

Metro needs to be open later. Even 11pm isnt late enough. I know the budget troubles, but public transportation is a public good. MD, DC, and VA need to fund any shortages through their budgets to ensure that service is available for all in need and for as many hours a day as possible.

Impact would be minimal. I could make it work.

I use metro to get to and from my grad school classes, which end at 8:50. I would not be able to get home using metro

The Metrorail system closing at 9pm instead of 11pm, particularly on Friday and Saturday nights, would pose a significant safety threat to members of the community who utilize Metrorail as a safe way to get back home after a night out. It would also pose a safety threat for low-income individuals and essential workers who rely on Metrorail to return home after their work shift has ended. This proposal is dangerous, reckless, and disappointing to see WMATA even consider as a valid option.

This would cripple the city's ability to function like a metropolis.

It would not be good for people working in service industries, attending concerts and games, tourists, or people in downtown late. Hopefully we should be in post-covid operating way of life by then and if, people will be interested in going out at nights.

Better to close early than close down entirely

Although I typically leave work before 9pm, I would be concerned about the impact this might have if I am forced to work late. It could also impact my ability to get to and from restaurants in DC for dinner.

9pm is entire to early to close the Metrorail system. There are work events and social events that, when people are allowed to attend them, will end after 9pm. Closing the system earlier (I assume everyday, not just weekdays) would be the worst of the options thus far.

It works for me. I do not know what normal (pre-pandemic) ridership was like after 9pm so I almost selected Not sure. But it would work for me personally.

I would support 9:30 p.m. Sunday-Thursday. 11:00 p.m. Friday and Saturday evenings. Closing the stations earlier on the weekend nights will have a detrimental impact on Restaurant and entertainment sector of the city. A very short sighted proposal.

I use the Green Line on a daily basis, including weekends. It is my only mode of transportation to and from work, errands, health care, entertainment, and shopping. Also, I often work late past 9PM and use Metrorail to go home. We need the train to run past 9PM for work reasons or to attend events downtown DC.

The Metrorail should close at 11:00 pm; earlier wouldnt work for my family that use public transportation.

I regularly work late and would have to switch to driving to work. It would make much more sense to follow commuter rail paradigms, like Boston, NY, etc, where rail service continues after peak demand, but at reduced intervals. Economic backbone of the region, remember,?

I normally dont use the train at those hours for anything essential, but that WILL affect a lot of people who work during late hours of the night. Itll certainly also increase use of cars, whether personal or Ubers, at a time when we should be reducing due to climate change.

The Metrorail is the primary way I travel into and out of DC. Closing it so early at night would drastically curtail my ability to go into the city for evening events.

IT would be terrible for taking the subway to the downtown theatres (Verizon Center, Kennedy Center, Warner & National Theatre); to museums and festivals downtown; to multiple conventions that are held downtown; to be able to have a flight or Amtrak ride from anywhere that would necessitate arriving at the airport or Union Station after 9pm, thus severely limiting plane and train scheduling which are already severely limited in arriving or departing from many, many places in the country.

I would be ok with this if it is just a temporary change, it is nice to take metro to sporting events and know I have a safe, eat ride home. I am worried this would be a long term change and that would again I think have poor long term repercussions to ridership (if someone knows they have an evening event, they may drive in the morning too and remove more morning ridership/revenue)

It's nice to be able to use metro post 9 pm when I am out

That would probably be pretty detrimental to restaurants and bars and theaters.

Can it be proposed to 10 pm as oppose to 11pm.

I dont usually ride the metro past 9pm, and with the increased use of apps like Uber and Lyft, there are other options. However, it would seem more beneficial to have a more nuanced approach - instead of closing at 9pm across the board, close early on Sunday - Monday - Tuesday, at 10pm on Wednesday and Thursday, and 11pm on Friday and Saturday. This allows access to riders when they would more likely use it (and also encourages use of downtown bars and restaurants). Another consideration is to replace trains with buses, especially outside the city - likely costs less, but maintains access.

I am not using the Metro at those hours now, but if we intend for business to return to normal in the DC area, Metro must run at least till 11:00.

Proposal to close Metrorail at 9 p.m.

Closing the metro at 11pm was already a hassle for my schedule on weekends. 9 pm is even worse, and I doubt many people would even see the metro as a viable option to getting to/from DC with those hours. Would like to see the weekend hours get extended instead of cut short again. Besides/before the coronavirus, the reason that there weren't as much riders on the metro on the weekend was because of its early closings

This would not affect my commuting.

Metro would still open at 5am, right?

I frequently like to use Metro to travel home after visiting bars in the city, either after work, or on weekends. 11pm is already earlier than I'd prefer the system to close but closing at 9pm would make Metro basically unusable for my recreational purposes. If I'm visiting friends in Reston, the earliest train back to my home in Ballston could leave as early as 8:15!

While early closure would have little effect on my use of Metrorail, when I have ridden late at night on weeknights, it appears that many if not most of the passengers are hourly workers returning from or going to jobs like office cleaning, security, and the like. Depriving that cohort of affordable and reasonably fast public transportation should be avoided if possible. If that means that those with day jobs and probably higher pay have to pay more to ride Metro during the day and early evening, then so be it.

That is crazy. We are all still out at night and it is best we not all drive cars.

I live where I live (across the street from Virginia Square metro) not only so I can get to my job easily in the morning and come home at night without a wait, but also so I can do things in DC and come home later. . Businesses, entertainment, schools and churches are geared towards this population -- in my case Rosslyn to Ballston on the Orange line commuting to work, socializing, viewing entertainment and sports, exercising, etc. in DC. There's an implied social contract here. We've paid more for our condos and higher taxes for it. We've had enough stress with COVID. Forcing people to drive to work is bad for the environment, bad for area residents, and bad for the health of the metro area. We may end up just not going to DC, which is bad for the health and wealth of the city and its residents. Unless there's a health risk from COVID in January 2022, it's a bad idea for public transportation to be eliminated at night when we are back at work.

Waaay too early.

I only use Metro for business commuting.

Most of my current or anticipated Metrorail use is recreational and it closing at 9 pm on the weekend would conflict with that (I am hoping that by 2022, recreational trips to DC will be reasonable once again)

Absolutely not! How in the hell do you expect people to get home from their social lives, let alone sports events, concerts, or even late workdays?

This is a horrible plan for customers who work late hours or who want to attend events that may end after 8:00 PM. Metro is trying to keep people who rely on Metro limited in their ability to engage in work and services throughout the region. This sets up a society of haves and have nots. The people who do not rely on Metro will be able to have employment and services that people who do rely on Metro will not.

I use metro not only for work commute but to access social and recreational activities. Reducing nighttime service would increase auto trips and also reduce access for those who don't have the financial means to own cars.

I do not have a car and I'm out past 9 pm and I can not afford to pay for car services (LYFT and UBER)

9pm on weeknights and 11pm or later on weekends might be more feasible.

As someone who uses the Metro for pretty much all of my transit around the city, having to either be home, walk home in the dark, or take an Uber home after 9pm would be quite troublesome for me.

It is bad enough any major American city and the Nations Capital discontinue running train services before Midnight, for the general public.

9:00 pm is too early to close for most tour guides that do night tours

What about workers who need to work late night shifts, or come home from late night shifts. How will they get home? What about for events like sports and concerts? Closing at 9 may lead to drunk driving and stranded people in dangerous locations.

Commuters need later trains especially for airport arrivals and weekends.

Not convenient but understandable

I work as a tour guide. We often finish later than 9pm. We often are dropped off at Metro stations than are different than where we met the groups.

Proposal to close Metrorail at 9 p.m.

This change significantly reduces access to public transportation, with a disproportionate impact to those with lower socioeconomic status, as well as hourly workers. At a minimum, the metrorail service should keep 11 pm service hours and in some cases extend its hours. A 9 pm closure would likely turn away more riders as they would be forced to seek alternatives modes of transportation.

My husband and other service workers in the restaurant industry in DC would be severely hampered in ability to use Metro to get to and from work. This would subsequently limit ability to work in DC given parking issues/cost

I sometimes work late and this would make it difficult to get back home.

Metro is the MAIN reason I moved here. Having to spend money on Uber instead of metro would be unaffordable to me and many others

The later hour allows for attendance to various events/restaurants/nightlife all over the metro area. Cutting these back will dramatically impact these activities across the region.

9 pm is too early to stop mass transit in a city, for restaurants, other nightlife etc and their employees. 11 pm or midnight is better.

This doesnt address the extra time needed for special events not does it accommodate 2nd and 3rd shift workers.

I usually do not need to use the metrorail beyond 9 pm, but sometimes, it is an essential service without which it would be far more costly to travel in the absence of a car. Closing the metrorail at 9pm is simply absurd from a usability perspective, and it would put the WMATA metrotrail system to shame if enacted. The D.C. metrorail would become the laughing stock of transportation systems.

I think Metro should consider staying open at least until 10:00pm on weekdays and at least until 12:00am on weekends to encourage ridership of all ages, help control traffic levels in DC, and give a flexible and reliable public transportation option.

That would negatively impact night life patrons and workers. Frankly, 11:00 is too early.

It depends on what time the last train leaves from Medical Center. If it leaves before 8:30 pm, my intellectually disabled daughter will have no way to get home from work.

Id be highly unlikely to use Metrorail if this happened. I like to use Metro to see theatre and music in DC. These events do not wrap up by 9.

No, Metrorail system should close at 11 p.m.

I travel some months, I need the train service

I think this would have too great an impact on people who rely on Metro service in the evenings. This includes essential workers and those working in service industries, many of whom already struggle to rely on Metro service that doesnt run late enough. Additionally, I am concerned that closing earlier would have unintended consequences for businesses like restaurants that rely on customers being able to get to/from their establishments.

Local universities (George Mason in particular) has classes that end at 10pm and ending service at 9:00pm would impact students who rely on public transportation. In addition, many front line workers (food service, etc.) may need later access to metro.

This would really affect any night activities, so this would be a huge blow.

I use Metro for transportation for work but on occasion I stay late for a ballgame or concert. WOuld have to re-think my plans.

The earlier closing time would impact decisions to meet up with friends or go out in the city in the evening because if we are out later than 9 pm we will have to find alternative transportation.

Again, I purchased a home walking distance to Metro. I use Metro in the PM to go into the city and not out. I go to have dinner and drinks and most times I go home late.

9pm is ridiculously early, especially for people who work in the service industry or anyone who wants to go out to dinner.

Assuming precovid air travel conditions resume, flights that arrive before 8:30pm tend to be significantly more expensive. Also, this rules out taking metro to return home from summer league games, dinner dates, work receptions, concerts, and other common evening events.

While this proposal would work for ME, Im not certain it would work for others (i.e., individuals who work late night shifts, individuals attending late night social events, etc.).

Metro is critical to safety by avoiding driving to after hours events. DC and s a large city; we need an increased metro presence- not decreased!

I do worry that closing earlier will continue the downward spiral of pushing more evening traffic out of the metro system (and thus decreasing revenue further). Why take metro instead of an Uber? If metro wants to lean in to being mostly a commuter service, this is probably fine.

It is not clear to me the mony saving of this plan versus the service to the community between 9 and 11 PM.

Proposal to close Metrorail at 9 p.m.

Many have plans to return to socializing after the pandemic, and are quite excited. I fully planned on supporting local businesses by going to sports events, plays, restaurants, and bars, however it will be difficult to do so after 9pm. I will be sure to notify local entities that have struggled this past year that my inability to patronize their establishments is directly affected by Metro's 9pm closure.

Depends on events at places like Kennedy Centre, Smithsonian classes, Capital One Arena

I'm a night person. 11:00pm is already early for me.

Metro should leave closing at 11pm or work to extend service to midnight. Closing at 9pm would cost Metro two hours of service and the fares that would have been gained by not changing or extending service by one hour. During SafeTrack, Metro closed at 12am seven days a week (Fri & Sat nights @ 3am before SafeTrack). If Metro closed at midnight, the transit would gain three hours of fares instead of losing 2-3 hours by closing at 9pm.

Hundreds of thousands of residents of the DMV utilize metro because they don't have cars. A vast number of these residents have occupations that require them to work past 9 pm. Closing Metro at this time is a step expected in small town cities, where nothing happens after that. We have all five major sports teams, some whose game times often start only 1-2 hours before Metro closes and stations are only yards away from the venues. Were these purposely built close to the stations because of accessibility?

I use the Metro mostly during the day but there are times when I would like to attend the Kennedy Center when it opens and since I don't own a car, this is my only form of transportation.

I would think that after the COVID-19 impact is reduced, we'll go back to using Metro to go downtown for evening events and closing this early would mean we would have to travel by car.

ABSOLUTELY NOT. It was bad enough when trains would stop running around midnight before, there is no way we can ever hope to return to nightlife and evening travel if the train stops running so early, not to mention the huge number of people in service industries who rely on metro to travel at night.

Precludes using Metro to get home from Kennedy Center, and from virtually all professional sports venues. Will make parking anywhere near these venues virtually impossible or ridiculously expensive.

It would be better to keep it open until after 10:00

this would make it impossible to catch the metro for a concert, movie etc

I'm often out later than 9pm running errands after work. 10 pm would be more reasonable if cuts must be made.

What? I mean, aside from nightlife, just a dinner can run later than that and it would leave people stranded. Unless that is the goal - to keep people from going out or to increase traffic throughout the DMV late at night or to increase drunk driving at night. I think this is the worst idea that I have seen yet.

This isn't helpful for people who go out after work, maybe go to the theatre in DC or out for dinner (once those options are available again). If the goal is to have less cars on the road than the Metro needs to be available.

This is absurd, this is functionally like not having a Metro system at all, it will be unusable for doing anything in the evenings and leave even more people unable to get to or from their employment.

This will greatly impact the patrons and the restaurant business for those who want to take the Metrorail down to DC to have dinner, especially on a weekend.

Closes too early!

it would be very tough for classes I teach at AU 5:30-7 pm in order to get to Tenley station by shuttle then home to Virginia Square before 9 pm closure, (One-way can take 90 minutes+) But I could probably make it home instead by taking an Uber at least on the return.

This is a ridiculous cutback

Metro closing at 9 pm will adversely impact those who work at night and who may be unable to afford additional modes of transportation like Uber.

Do not close/shut down any metro station even if there is low ridership-- to compensate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals. But still keep open till 11pm, because some essential workers need to get to & from work.

I often work late in the office until after 9:00 pm. Closing Metro at 9:00 pm would make it very difficult for me to get home safely.

I need to work late or attend work functions after work and will need a safe and cost-effective way home after 9 pm.

Proposal to close Metrorail at 9 p.m.

Like many who live in Maryland and work in Virginia and is dependent upon the service especially in the evening since I get off work at 9:00 pm. The proposed closure timeframe will leave me stranded and Alternative transportation costs will wipe out my travel budget. Again with the reopening of businesses such as bars and restaurants and the return of the hourly paid employees who travel across state lines to work and are not released before 9:00pm, it appears that there is no consideration for these folks if Metro moves forward with this closure schedule.

Metro hours should stay the same with possible frequency adjustments after 9pm. Especially weekend hours should stay the same.

No, dinner in the city gets me home about 10:00. 9:00 would mean some stations would close at what, 8:30?

Problematic for shift workers who get off at 9 or later especially restaurant workers

As I said, I live close to EFC-- unless I use the metro to travel to/from the District after 9pm on weekends, I don't think I need late metro service otherwise.

Hell fucking no, this would bite gigantic ass. I am not done at 9 pm and my metro system better not be either.

I attend night class in Virginia that ends at 10pm. ending train service at 9pm would mean I would create a large expense for me to pay for a car ride back to D.C. after class. Most major cities have late night rail service and it is essential D.C. does as well.

I would MUCH rather close Metro earlier than close stations.

I need reliable transportation for my job

Whether working late or going to dinner, a Nats/Caps game, or the theater downtown, this early closure will just make driving and parking a nightmare. This will make Uber/Lyft millions! Frankly, this makes me think that Metro can marginally raise rates to increase revenues.

Late night service is important to me personally and to the Districts economy broadly. Closing should be moved later, not earlier.

9pm is too early - these proposed changes really affect people like me who don't have a car and RELY on metro to get anywhere affordably. If the metro closes at 9, then I can't afford to take ubers everywhere!

I work late some evenings. The hours are too short.

I often work late and this will make it IMPOSSIBLE for me to make it back and forth.

With longer travel times due to less frequent train and bus service, this would hurt essential workers and leave behind those who rely on public transportation as primary means of travel. However, it may be doable if metro still opens early, allowing workers time to switch to early shifts.

This is OK most of the time. But I may need to ride the train after 9 p.m. sometimes.

Before the pandemic, there were plenty of times that I needed to take Metro between 10-11pm. Assuming Jan 2022 looks more like Jan 2019 & 2020 instead of Jan 2021, then I need Metro to stay open until 11pm.

This would stop me from spending money in DC, MD, and VA businesses late at night in 2022.

My office is on shift work to accommodate COVID distancing needs, and the late shift ends at 10pm. This change would prevent me from using Metro to get home. I would have no choice but to seek alternative (more expensive!) transport methods and stop using Metro.

This doesn't allow enough time for workers who depend on the metro to get home.

I'm too old to go to theater or concerts at night, but before I aged out, I would often return from downtown later than 9 p.m. How about keeping the later trains but making them shorter?

One benefit of metro is to offer transportation for the DMV. Early closure would impact accessibility for restaurants and night life and impact businesses. It's convenient to be able to go to Happy Hour or dinner and take the metro home. Closing metro by 9pm would impact folks who rely on public transportation.

I don't take the train at night but a lot of people do. I'm not sure why you're going out of your way to drive away ridership

Way too early to close!

Closing so many stations and 9 PM closing of Metrorail system will prompt more use of vehicles and increase of air pollution! Measures planned are too vast and unacceptable for a commuter reliant metropolitan area.

it works for me as a professional, but probably not for the service industry that cleans buildings until 9 and 10 PM.

This would severely impact the usefulness of the metro, as I regularly work late and would be concerned about my ability to get home. This would also impact my ability to visit friends or other recreational activities using the metro (restaurants, movie theaters, Tysons), and force me to drive more often. I would use the metro less if I could not reliably count on it staying open till 11 p.m.

This will not work for service and/or essential employees in the District.

Proposal to close Metrorail at 9 p.m.

I think that closing the trains services at 9:00 pm is a bad idea for those that need to get home using public transit.

I dont usually use the metro after 9pm, but I expect that by January 2022 people will be out socializing more at bars and restaurants, and closing earlier likly means more drunk drivers.

Again, this is not the plan of a modern, international city. This would be very regressive and would further more reliance on cabs/ride-share/driving, which is the exact opposite of what any major city should be encouraging for congestion and environmental reasons.

Many people are still out and about between 9pm and 12am. Closing at 9pm would SUCK.

Could live with this if the frequency was good at other times.

9 pm is too early a close time - should be at least 10 pm, preferable 10:30pm

If I dash out of my meeting in NY at 5, I can grab a 5+ Amtrak but will have no local commute in DC. 9 oclock is early. Can we make that 10 oclock?

If public transportation is the only means of transportation, this makes work schedule changes and extracurricular activities impossible. In fact, metrorail hours need to be extended beyond 11PM.

This will not effect travel to work, but will make me think twice about staying downtown for dinner and drinks.

The metro provides a reliable form of transportation at night and this would impact a lot of commuters

while the majority of the time, I have no need to travel via Metro after 9 pm - there are or may be times I do. perhaps changing to 10 would be a good compromise?

I use Metro to get in and out of DC in the evenings, this would stop me from getting where I need to go without a significant increase in time and cost

Does not allow for any trip home from any venue like the Kennedy Center. Bad solution.

Pre-pandemic, I used to take Metro to cultural events, sporting events, and other events that go well beyond 9 PM. I would never, EVER, be able to attend one of those events again and use Metrorail as a means of transport. Instead of punishing riders and forcing them to give up activities or take expensive ride-shares, every single Metro contract and expense should be gone over line by line by an independent forensic accounting firm to find cost savings. Why is your GM still making over \$400,000 during the pandemic? How many Metro contracts are no-bid, sole-source, or simply awarded illegally to a buddy of someone in Metro? Considering Metros negligence has caused more than one death, Metro cannot be trusted to tell its taxpaying riders an honest accounting of its budget.

Would not affect me personally, but I dont think its fair to people who work late.

Later nights at work and event downtown I would have to take Uber's.

I do not use the trains late at night typically

The metro system should argue the effects this would have on restaurants and night establishments in the area where people would not have an option for getting home later.

The DMV should not close this option off, we are a city and should act like one.

This is likely to hit shift and low-wage workers harder. I have a white collar job.

I frequently work until 10:30 5-6 days a week.

I frequently work past 9 PM on weekdays and use the metro to ride home from nighttime social events on weekends

This is really sad. This is a city. How can we not have a metro service. You cant go out if you cant get home. we should be running later, not closing earlier

I rely on Metrorail to visit friends in DC since no buses go directly from Alexandria to the city. If the system closed at 9pm, it would make seeing friends Monday-Friday difficult and more expensive (i.e., relying on Uber/Lyft).

I often use the metro after 9PM and given my work hours, it would be challenging to have the metro close before 11PM

Still many peoples work until 9 p.m. some around 10 p.m. I would give up too 11:30p.m. since you have reduce or taken away the Midnight hours time slot weekdays. I still say that Fridays and Saturdays hours should be closing around 2 a.m. peoples like to enjoy late nights.

Not ideal, but not horrible.

I teach night class at Montgomery College in Rockville. Metro will close by time I arrive at the station from school. If time does change from 11pm to 9pm, it will increase in car traffic. You would not help the environment at all.

Proposal to close Metrorail at 9 p.m.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around—especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinated, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around.

sometimes it would make early evenings affairs in DC difficult. Don't make it harder on riders especially families.

Having a subway system close as early as 9 pm would make it an impractical or impossible option for a huge number of people who are going out for dinner, to the theatre, to an evening ball game, to visit friends, or other activities, and would mean that people who do essential work at bars and restaurants, entertainment establishments, and many who work at a health care facility on the afternoon shift or going to evening classes. I expect all those things will be going on by January 2022, so this proposal would be devastating to large numbers of riders and to the system itself. I have often used Metro in the evenings to travel after 9 pm and would be left to rely on much slower bus service. This step could cost WMATA a major share of its ridership..

Not everyone has work-from-home options. How would this impact employees working late shifts, who are metro dependent? What would happen on evenings when there are major sports and/or entertainment events?

9:00 is too early

There are a lot of us who work different hours than 9-5. Most stores near metro stations don't close until 9pm. Can you please change it to 10pm. This will greatly help those who work at Starbucks, other coffee and cafe shops who have adjusted their schedules to close at 9pm. Thank you.

Hopefully by January 2022 we will return to normal life. It means going to the theaters, performances, events, visiting friends etc. If the metro will be closed by 9pm - it will make a problem of returning home using the metro and will force me to use alternative forms of transportation as uber or lyft which are much more expensive.

11 is already early. Metro used to be a go to source of transportation for cheap late night travel, no matter how inefficient. Would likely decrease my metro use because I would rely more on uber and lyft.

Even on weekends?

If we were working, 9 would sometimes not be late enough. If we went to a play, we'd need the system open until 11.

The DMV area is busy and has a lot of businesses that are open past 9pm. This would cause transportation issues for people getting to and from work. Also, everyone doesn't have the luxury of using ride share apps or getting a car themselves in this area.

small business would be affected economically by this proposal

That's like a curfew for happy hour.

I don't often ride Metro after 9 p.m. but I do sometimes, such as when I have a late flight to National airport. I regularly rode metro late at night when I worked retail, sometimes rushing for that last train, and our essential workers should have continued access at night.

Late hour service is extremely important for late night employees, especially with low pay.

This could result in unsafe driving behavior on Fridays and weekends. Also, it could increase the risk of sexual assaults while waiting for a bus/uber outside in the dark.

Not late enough to get home from ball games or concerts.

This could work for me. When I was younger I really needed late service- now I rarely take the late trains.

Makes it unlikely to enjoy a night out without taking rideshare.

People need reliable transportation home after going out to dinner and bars, if you close metro at 9pm that could result in more people having to drive and potentially driving drunk. Also, what about all the people that work in the service industry? They rely on the metro for transportation. Parking is expensive and limited in the District.

This would again undermine the value of the flexibility offered by Metrorail. 11pm is already early compared to other city's public transportation infrastructure. An earlier close would encourage drunk driving from riders, would drive ridership down, and wouldn't meet the needs of those with atypical schedules or social schedules.

Want them night riders

This changes the metro from a means of transportation in a city to a commuter train. Don't do this. This would increase drunk driving and keep people from using it to go out to restaurants and night life. Change the hours back to midnight closure during the week and 3 am on the weekends. People are going to give up on it entirely if it's not useful other than for commuting.

Proposal to close Metrorail at 9 p.m.

The metro provides a much needed method of safe evening transportation.

This would have me driving to work on days I needed to stay late and driving into if I wanted to go somewhere otherwise metro accessible when I anticipate needing to travel after 9 PM. Or I might not go into DC at all and do something else since traffic and parking in DC is so terrible. It would be like trying to go to Georgetown--just dont bother!

This is insane.

This would make it much harder to get around DC and the surrounding areas.

From personal experience certain Metro stations have the tendency to close rather early than what the schedule on displays says. My concern is if thats the case then does that ALL Metro stations close EXACTLY at 9pm? Also I do not think that the stations should close that early for me. Having to rely on Metro bus takes A LOT longer than train. So I prefer to keep the closing time 11pm.

I frequently work past 9 pm and need a way to get home

I only take the train to work (9-5) so this wouldnt affect me

It would work personally for ME, but I think it would be terrible for younger people/people without cars/people who work later shifts and need a way to get home.

Even 11 pm is early. Metro should be open later

It would have a significant effect if I wanted to use Metrorail to attend evening events in DC, such as Capitals and Nationals games or evening Concerts or shows.

This would be very bad, as it would remove an option for safely returning home after visiting DC restaurants.

This closing time will not work the DC workforce that comes, and goes at all times depending on their shift, or bussiness. Empolyees of bars, and resturants will suffer, and car services like Lyft will make more then metro.

I work until 10pm, the system closing at 11 is already tough enough to run late night errands and help with my parents

Would make going to events downtown (Caps etc...) not an option.

With all the sports and concert venues downtown, this is unreasonable to close that early. Also, people from around the DMV travel to DC in the evenings and should feel comfortable staying as long as they want and not worrying about Metro closing early.

Not fair for those that work late

Sometimes essential workers have to stay a little late at work to provide services beyond our need or wanting to do overtime. On January 6 I stood at a bus stop for two hours watching police car speeding past me. I was refused and terrified that was not be able to get home safely. It would have been to nice to know if the bus line I catch for decades wasn't operating could have gotten on subway. Not all us have the operation to work from home. I'm trying to survive through this pandemic also.

How is this meant to support businesses in the district. Business hours go until 2 am during the week and 3 am on friday and saturday. Metro should extend at least 30 minutes beyond business hours.

Need to accommodate riders who stay downtown for after hours events.

Ive only occasionally taken Metro after 9 pm so Im sure I could adjust.

This would make Metro useless for evening events.

It will be hard for food service and others who work past 9 PM

This is terrible. Trains should at least run once-an-hour in case someone is late getting off of work, or whatever. Most people who ride trains every day dont know the complex bus routes. If you require that we take buses, there should at least be a free transfer to get to our home destinations. Again, this existed a few years ago, but the last I heard, yall got rid of it. Im sorry that a couple of your employees were robbing your cash reserves, but it is not good to pass that on as penalties to your customers. Also, just like Amtrak, Metro is not a profitable system (remember the ads on the sides of trains a few years back?) You all are funded by the government. Without Metro service, people cant do their jobs which pay taxes which keep the Metro system running. At least keep the final trains running until 10pm or 10:30pm, and place large signs outside the station so everyone knows this, including tourists.

Cutting the metro transportation early at 9 pm will not let me work longer hours which I usually do. It will also be harmful for businesses in dc as less people from metro area will go shopping or go to restaurants and gyms after office hours.

Often use the metro after 9, particularly for late nights t work, sporting and concert events.

If events can take place at Capital One Arena, such as hockey which we attend frequently, closing a 9 would be a problem.

I occasionally attend Nationals and Capitals games that end after 9 p.m. and having Metro access to get home is important

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Would not work every day, but could be planned around when late nights in the office do occur. |
| This would generally work for me on weekdays. However, some people do work late. |
| I often arrive after 9 p.m. from New Jersey (trying to be sure that it is before 11 so that I am not stuck in Union Station overnight), and attend evening meetings and events that run until 10 or 11 p.m. Hard No on this one! |
| Many people use Metro in the evening hours to commute to and from their evening jobs. Also people including myself use Metro in the evening for personal and recreational reasons and would utilize Metro after 9. |
| You have already handicapped people who rely on the train to get to and from their jobs and school at night by closing the stations back from 2am, then back to midnight, and currently 11pm. To go back further would disrupt those folks even more. As a result of your pulling back your closing hours you have already made the people who can least afford it look for other ways to get home. Rideshare services arent cheap and those that cant afford them are relying on unsafe methods of walking and/or biking at night to get home. Please reconsider this. Instead open the stations later at night. |
| Reduce the interval of trains for these later hours rather than stopping hours altogether. Major events, dinners, and social gatherings all easily go past 9 and would leave people without a trustworthy commuting option |
| This is going to have a negative impact on access to concerts and baseball downtown, meaning less revenue for Metro and the DC businesses. |
| I think this is bad idea and should not be considered. It will negatively impact the ability of commuters and young people to socialize, eat out, attend sports and cultural events. People who work split shifts, janitors, office cleaners, and hourly wage people like waiters etc will not be able to get home. This seems like it will hurt low wage people the most. The negatives for businesses would be overwhelming. Pushing everyone to use gig drivers to get around. Dont do this. |
| If the world is trying to return to normal this means that metro is not an option for any work or other plans that extend into the evening. This will kill metro as a viable option, people will stop using it altogether. Please please run it until at least 10, many businesses and restaurants normally stay open until at least 9 (again I am imagining a world emerging from a pandemic) and this proposal would hurt both employees and patrons. |
| 2 hrs of labor saved will result in much more revenue loss is people see their services being curtailed. |
| I only ever use Metro to commute to work, so having it stop at 9 pm would have any impact on me. |
| 9pm is too early! |
| This would seriously impact residents/riders who work late across the city - and lack of service beyond 9 would disproportionately impact these riders. |
| This would harm those working later, but it may be more acceptable than 30 minutes between trains |
| Students going to and from university have class often til 9pm or later. This would severely limit transportation options. Consider 10 pm or later. |
| As someone who commutes to and from work on the Metro and who often works late, this would be extremely inconvenient. |
| Definitely the least disruptive option. |
| We would often take the Metro to see shows, concerts, or go out to dinner, so it would be inconvenient to not have that option in the evenings. I suspect youd have a lot more drunk drivers in the evenings as a result, as well as increased issues with traffic and parking in DC. |
| The only times I take the metro past 9pm are trips home from hockey games. Assuming spectators are still not allowed at sporting events, an earlier close wouldnt be an issue for me. |

Proposal to close Metrorail at 9 p.m.

We use Metrorail primarily for non-work travel, so usually during non-rush hours, to attend museums, cultural attractions like plays, concerts, and the like, as well as associated destinations like restaurants. This is ideal for Metro because it means revenue during non-rush hours (both parking revenue and transit fares). Only about 30% of those trips are daytime; the majority are for evening events, all of which end well after 9 p.m. Without the ability to RETURN from these events by Metro, we will not travel TO these events by METRO. For us, it would not be a matter of using Metro one way and returning by ride-share or another form of transit. Early-evening Metro closure will cause us to re-think travel to events of the kind listed above; we may still elect to attend some events, traveling by car instead of Metro. We note, however, that we have that option; numerous Metro riders do not. Many workers, especially in service industries like restaurants, are heavily dependent on public transportation. Curtailing their ability to travel from jobs that end after 9 p.m. will introduce disproportionate adverse effects on low-income earners. Although those with cars may shift some plans, they may also curtail evening activities in an absolute sense; we would be among those. That diminished patronage will have ripple effect impacts on a wide variety of cultural institutions, restaurants, and other businesses beyond Metro. Local jurisdictions will lose tax revenue from lower levels of consumers at those businesses; that will, in turn, hamper those jurisdictions in generating revenue for their Metro contributions. In other words, curtailed service will have a substantial financial impact on a wide variety of businesses, not just Metro; but Metro may suffer indirect as well as direct shortfalls. We understand that Metro has been adversely affected by the pandemic - perhaps even disproportionately so. Nonetheless, current events suggest that the economy will begin to recover by the third or fourth quarter of this year. Curtailing Metro service at the time when the economy might be returning to normal will introduce a strong negative impact on financial recovery for the region.

East Falls Church commuters will require longer weekday hours post-pandemic.

I frequently leave work after 9pm and would have limited or no other viable transportation options.

I work late hours and depend on metro to travel home.

I just feel that it would be an inconvenience

This is awful for people who work swing shifts.

I don't agree with this due to everyone work schedule

The last 7Y leaves 22nd & Constitution at 6:35 pm. I often have to work as late as 11pm and I rely on being able to walk to Foggy Bottom and get the last train to the Pentagon where I can take one of the last 7s (7A, 7F) home. Making the last train will become a major problem.

i work past nine a lot of nights and so do other folks. this is our only form of transportation

No. I rely on Metro for my travel needs, which do include moving around in the evenings. Both for work (I work in the live entertainment industry and even though I have an office job, I am frequently asked to attend evening events which go past 9pm). It would also have a major impact on my employer, a downtown business that draws over over 100k people per year to see its own shows, plus a large number of rentals and ancillary events that lead to about 300 active nights a year in downtown DC. Our customers use Metro to get to our shows, because parking is scarce and expensive downtown and the metro is extremely convenient. This has a negative impact on me, personally, but also my ability to be employed in the future.

You can't even get home from dinner with this schedule. Let alone transportation for service workers. This will hamper restaurant and nightlife, especially as many diners don't own vehicles or don't want to drink and drive. This is shortsighted and hampers a robust evening/night culture. And again, workers need reliable affordable transportation at later hours!! Even 11 is too early for many. I had to walk many dark blocks as a young woman server to catch a bus after midnight, which was often late anyways. This pushes our city into being a place that only caters to 9-5 office life and nothing else.

I am a volunteer at the Kennedy center and I work evenings and us metro to get home

Lol

I won't be out late anymore as I am having a baby

Keeping Metro open in evening hours is absolutely necessary in this region. Closing before 11 also greatly impacts those who work untraditional hours.

I have graduate class at night and rely on the Metro to get home. This would mean I couldn't commute to and from grad school. Also there are so many people who work nights and need/want to get around after 9 pm. That is way too early in my opinion to cut off public transportation. It's also posing more safety risks if people rely on Ubers/Lyfts/etc. or walk alone home.

10pm is more reasonable

I use metro primarily for work and/or getting to and from doctor appointments, so closing at 9 pm works fine for me.

It would be inconvenient but I don't often take the metro after 9pm and could uber if necessary

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Metro needs to be accessible to late night workers, it is discriminatory to only cater to 9-5 employees. |
| 11pm is already too early |
| One of the best benefits of Metrorail is that it works after restaurants close. |
| Does this include weekends or special events? |
| Please do not do this. It is already hard enough traveling safely at night as a woman. I work long hours downtown and frequently run errands and grab food after work before returning home. This would make it very difficult to schedule those errands |
| I would rather Metro run more frequently during core business hours than stay open later. |
| Some of my work requires I stay late at night and closing at 9 PM would have an adverse effect on my work. |
| It probably would not impact my typical commute. But if were out of the pandemic then I would like to utilize the system outside of business hours and possibly later than 9pm. |
| This would be a hardship for many riders work schedule who work at establishments still open in the evening. Definitely will cause problems for riders using metro for evening activities. |
| This change really impairs people who do not hold traditional 9-to-5 jobs. |
| I think we should retain late night service., at least on weekends. |
| This would mean that many people who wanted to attend a sports event or play downtown would not be able to attend those events. |
| Theaters, cinemas and music venues stay open much later. Why would you want to kill the cultural life of the metro area? |
| Too early a closure for many people who work at night in restaurants, etc. |
| This would be devastating to the bar industry and would encourage drunk driving. |
| We live outside of Washington D.C.. Some of people here has shifts that are done after 9PM. |
| Again, this will penalize shift workers who work a later shift. How do they get to work in a affordable way. |
| This would be a burden for people who work late night hours or people using public transport when going out for dining, entertainment, etc. People would be forced to use other modes of transport such as car sharing services, taxis (Which always have limitations), buses (Longer commute), etc. |
| Run more trains. |
| Metros own delays would make the option unacceptable. |
| This is unacceptable, youve eliminated the entire service industry from safely getting home, and for everyone else going out at night- now theyll just give their money to Uber instead. |
| Yes, this would work for me as a commuter. But no, this would not meet my needs for nights out on the town for entertainment. |
| My wife and I use Metro in the evening to go to restaurants, theater and movies. 9 pm would be prohibitive for such travel and would severe impact the restaurant and entertainment sectors. |
| I use to the metro to avoid drinking and driving. |
| When we usher at a downtown theatre (Arena Stage) we need it to close at 11 pm |
| It Should be an extended work schedule. |
| While I don't often ride late, I do occasionally. However, I realize this is a good cost cutting measure This is a good idea |
| Id hate it, but Id be able to get to work and back. |
| Can no longer go to Kennedy Center events when they reopen |
| How will I get home after a late evening? |
| The #1 reason I take metro is as an alternative to ridesharing for social outings on nights and weekends. 9:00p is far too early to close down. Preference would be 2:00a or 3:00a to give a realistic chance for people to use metro after nightlife venues close. |
| Weekday close urea at 9pm would be okay but not weekend closures |
| This proposal would probably affect mostly low income workers- the costs would add up increasingly for the people who can least afford them. This is PUBLIC transportation, it should work for all. |
| I enjoy taking Metro into the city (D.C.) at night and for events. There is no sensible parking in the city. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Bad for the entertainment sector and service workers. Will further inequality |
| Not ideal, but does not impact commute. |
| having longer hours on the weekend would make more sense for those who are using metro to reach entertainment destinations. |
| This would be highly restrictive to and limit evenings/dinners/theater visits to DC. |
| This would eliminate any metro travel for attending events in Washington. Totally unacceptable |
| Keep all stations open. closing at 9 would make the system unusable to service workers |
| This would effect all sports games/concerts in the city resulting in people not being able to get home. |
| my household members often work late downtown or in Virginia and early closure would prevent them from being able to come home. |
| late evening must be available for all events downtown |
| In 2022, I hope I will be able to use Metro to go into DC for dinner and/or theater and concerts. 11PM would work for most evenings. 9:00 would put me into my car. |
| Not good for most young people! |
| Entertainment and dinner after work often goes longer than the 9:00PM close will allow for. |
| I often work well past 9pm and take the train on weekends for entertainment and dining outings. |
| This would be terrible. People rely on metro to get home from late night events. This is also a matter of public safety -- it keeps drivers off the road who are under the influence. |
| this would leave me stranded after work! |
| This absolutely would not work. What on earth are you thinking.? This proposal would positively destroy our city, and as a native Washingtonian I object in the most vehement terms. |
| For special event s(Nats games) would they keep the metro open later? I use the metro after games and find it a convenience |
| I use the metro to travel home from events at the Kennedy Center or National Field.. These events do not let out until 10:00 pm. I would be stranded in DC. Not everyone can afford to take a cab home or drive in an pay tolls and parking. |
| I don't see how this proposal does anything other than shift more people onto roads and, given the timing, likely shift more drunk drivers onto roads. |
| There will be no appeal to take public transportation. This is certainly not acceptable. |
| My family and I use the Metro to travel into the city in the evening. 9PM is too early to close the Metro particularly on sporting event day/night. |
| WMATA really needs to decide whether it is a commuter rail service or a metro service to enhance shared mobility within a major metropolitan area. Cutting hours would benefit commuters to the detriment of lower-income employees who work in the service industry, etc. Particularly cutting hours to 9PM on weekends would only continue to draw more people away from using metro and towards less efficient modes of transportation such as uber and lyft. WMATA should work towards providing greater reliability - i.e. being available when needed - if it wants to get people to come aboard again once the pandemic is over. |
| While 9 pm might be a good time for tourist or typical daytime office workers, this would be too early for most part time restaurant and service workers. Most of these establishments close after this time, so many folks would have no way home from work. This would definitely hurt restaurants and evening entertainment venues. |
| Many residents work in retail, entertainment, and restaurant jobs that usually call for later hours. There is still a high need for later hours to accommodate the workers with later hours. |
| This would make it very difficult for people who live in the suburbs to come into the city for the night and still get back home. |
| We dont go to Caps or Nats games all the time, but when we do we need to get home |
| I think on weekends it should be open later. Like Friday through Sunday should be open later. 9pm is early closure and could affect restaurants on the weekends. Weekday, sure close at 9pm. |
| Keep open a little later on weekends |
| I use Metro in the evening. This limits my ability to use Metro after working late or staying out to socialize. |
| It would work for me, as a daytime commuter, but it would significantly harm service workers (largely people of color with modest income) who use metro to commute to/from service sector jobs, eg as cleaners, security officers, grocery store workers, restaurant workers, etc |
| It would be ok for me most of the time but I know it wouldnt work for a lot of service workers and others that rely on late service |
| Blanket closure at 9 pm means I cannot use Metro for evening events in town. This would be a big negative. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I didnt take Metro in the evenings anyway. |
| I believe 9pm is too early, especially for the lower income areas that rely on public transportation to get to the suburbs. If one misses the last train, it is very expensive and difficult to get to a destination in the suburbs from inside the district. |
| My evening use of Metro is primarily for sporting events - Nats, Wizards, Caps. A 9:00 pm close would clearly obviate that possibility (assuming fans are by Jan 2022 back in attendance at games.) Also, I operate an Airbnb-certified guest facility within walking distance of the Cheverly station (Orange Line). Station closures and abbreviated hours will have a detrimental impact on guests selecting to stay in my guest facility. al |
| I would hope you would extend the hours for major events or concerts or sporting events |
| I often use the metro after evening events. |
| Are you nuts? |
| That would eliminate any use of trains for dining out, films or theatre events in the DMV -- do the merchants in DC really need another hit on top of CoVID?!!! |
| Seriously, this is horrible. Why cant we run a decent metro system like everywhere else in the world? |
| When my evening activities resume after the pandemic, a 9pm closing time on the train would leave me stranded. |
| It would make it difficult to attend cultural and sporting events in DC where parking is limited. I think it would be very detrimental to businesses that are open after 9:00 pm, and would greatly inhibit my ability to support those businesses |
| That is way too early |
| That will hurt restaurants, bars, theatres that will just be reopening |
| Id rather pinch the later hours than the early morning ones; this change would not feel burdensome unless it was proposed as a permanent change. |
| I think this would be OK as long as we can revisit times for service in the future. |
| Lets meet halfway: 10 pm. |
| I would prefer this over reducing the Yellow Line stops or making regular service to be weekend service. |
| This would ignore all the service employees who work evening hours into the night. It would have a negative impact on businesses whose employees depend on Metro and restaurant and bar customers. |
| The hospital shift ends after 9pm! And we are forced to take metro due to not having enough parking. |
| No, I use the Metro to go downtown for dinner and theater and other entertainment. I would need to return after 9 pm and taxis/cars/parking are expensive. |
| a 9pm closing will be devastating to nightlife across the area -- restaurants, entertainment venues, movies, socialization opportunities and those who work in those settings. Regional transit would be better served by the proposed regional transit tax rather than annual budget struggles between jurisdictions and draconic cuts in service. It is very likely that post-COVID conditions in the region will demonstrate a strong recovery in Metro based mobility. A 9pm closing is not reasonable for a system recovery. An 11pm closing is barely sufficient for what purports to be a world class city. |
| 11 has been too early! |
| When we do travel into DC, it is often for a late night event (including special museum functions), dinner, entertainment, baseball game, etc. (post pandemic of course, when such things are back.) and we ALWAYS have used MetroRail and MetroBus! For some events, even 11PM is TOO EARLY! |
| ideally in 2022 we will be able to be out and about in the district, vaccinated safely. Id suggest closing metro early NOW with plans for more service beginning next January |
| Keep weekend rail service to midnight or 1am (even if just 30 min between the trains after 10pm). And for weekday, Run trains until 11pm (can be scarce after 9pm, but not totally remove service) |
| I work an 11pm - 7am shift. This cuts into my sleep. |
| 11 p.m. already cuts the utility of the Metro for evening travel to DC. You will promote more drunk driving by eliminating a safe way to travel after evening entertainment in DC. |
| Evening hours are important for reducing drunk driving and attending evening events in the city. |
| I have many week night activities (or at least I will in Jan 22) and I travel to/from them by metro. |

Proposal to close Metrorail at 9 p.m.

Absolutely not. Please do not do this! 11pm isn't even always late enough. Many events end after 8:30/9pm, and one common reason to use public transportation is to have a safe way of traveling while intoxicated. Stopping the metro at 9pm would push people into figuring out affordable ways of traveling after events (which often/usually include alcohol). Ridesharing apps are often prohibitively expensive, so many would drive.

We often have school projects that may require us to be in dc at night, or we are there during rush hour and would like to wait to go home until a little bit. This would be ridiculous to force everyone home at rush hour and make trains so crowded please do not do this.

This is a terrible idea, stranding workers and drastically curtailing possibilities to get from the suburbs into DC for evening entertainment, dining, socializing, etc.

Pre-COVID, Metrorail was already inconvenient on the weekends ever since the closing time was moved up to 11pm - post-COVID, if it closed even earlier it would be a massive headache and a huge deterrent from ever bothering to use for non-commuting reasons. I am hoping to do much more after work/weekend activities later this year and in 2022 so would like Metro to be open until 11.

As someone who relies on Metrorail to get to and from DC, an earlier closing time would severely limit flexibility of evening travel, as nearly anything I would do in the city would have to be over by 8pm if I wanted to get back home within the time frame.

This is better during the week than on the weekend, but I know so many people this would harm. It would harm me immensely as well.

All these proposals only will result in people buying cars. And many people would be sad, and feel racially excluded

No, esp during the summer months. This would even further reduce my use of the metrorail.

Closing at 9:00 p.m. is unfair to the retail, restaurant and hospitality industries and its workers who work in the evening and rely heavily on public transportation. This undue burden on members of this employment sector was clearly demonstrated during the shut-down. Why are you even considering this?

I metro to baseball games. Closing at 11 can cause me to leave before the game is over - closing at 9 would make taking Metro to the game useless. Driving to the game is crazy and parking nearby for anything but a ransom is impossible.

Many times I am out past that time and will need to uber to metro and then pay to get out.

Many employers require employees to work until 9:00 so this would leave me abandoned.

Unless Metro plans to significantly increase bus service, this is a horrible proposal. It would have a major impact on moving around the DMV and attending evening events.

I use the metro to get home late at night as an affordable and safe way option, and without the ability to get home later I would have to walk and/or take a much more expensive transportation option

Too early for late dinner or entertainment

There are so many evening events in D.C. that could not be attended using public transport. Ridership can only increase if the focus is not only on commuters but also on leisure travel.

11PM is too early. 9:00 is ridiculous. Does this mean that all restaurant workers will have to drive or take Uber or Lift?

Seriously?! Is the metro to become only a commuter option rather than an urban transportation system?

This would put a big hamper on a lot of my travel - even sometimes coming back into the city from school at UMD- College Park.

This will severely hamper travel and is not preferred

I would no longer be able to stay downtown after work hours.

hurts minimum wage workers

I sometimes have evening meetings for work and they often go past 9. I would be stranded without metro.

Terrible. Come on guys, people use metro to be able to do things that they normally can't due to things like cost, lack of a vehicle, etc. Please don't make life harder 9 pm is too early

For many professions that would mean there was no available public transit when we leave work. Same goes for anyone attending a concert, a play, or a sporting event. This would be disastrous.

WAY too early even for casual diners or theater goers

This would destroy the hospitality industry in DC, where the overwhelming number of restaurant employees depend on for transportation to get home from work.

I often (I non-pandemic times) work until after 10 pm. Closing Metro before 9 pm would remove it as a way for me to get home.

absolutely unrealistic because of people who work later in day

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Closing early would hurt businesses that operate at night in the city. |
| I would like to see 24 hours of service on public transportation. So this reduce time is a BIG NO! Why would you do this?! |
| This would make going out in the evening very difficult. This would impact local businesses |
| I need to have connection from DCA-IAD late. |
| If I am in DC for theater or dinner I would be returning to Virginia closer to 11 PM> |
| It's better than closing stations, but it limits mobility for people who can't afford to take taxis or Ubers. Also there are some nights when I need to work late and this proposal just complicated things. |
| How are people supposed to rely on this service if it closes so early? |
| Hard to go to events using public transport |
| I rely on the metro for shifts that end later than 9pm |
| Closing the metrorail at 9pm leaves people without an affordable and relatively safe way to get home. This leaves women especially vulnerable. |
| I cannot afford to get around the city without the metro, this would keep me homebound on evenings or rushing to catch the train without being stranded |
| la 9pm es muy temprano!! si ya es injusto que cierre por la noche, que cierre con ese horario har  la ciudad m s insegura e inestable por la noche |
| the cleveland RTA has 2 percent (!) the ridership of metro and offers service past 1am. yes, even during covid. but the second largest rapid transit authority in the country cant muster the competence to run trains past 9pm?? |
| This would be extremely inconvenient for sporting events, concerts etc. at locations such as Nationals Park and Verizon Center, potentially leading to an increase in drunk driving. |
| It would be unfortunate only if the pandemic eased up and allowed for late night events in DC again, not having that option to get home will lead to extremely expensive ride share trips |
| Maybe at least until 10PM. Much more flexibility if it goes until 11PM though. |
| 9pm is too early. I think an hour late, 10pm would be better. sometimes I stay at work late and cant leave until 8pm and it would be very difficult for me to get to the station and make my transfer home in time. |
| Metro is probably the safest way to get home after a night out. When ya'll first cut service in the evenings (used to be open until 2am or so) most people I knew who used it stopped doing so. This will make that worse. |
| 9PM is way too early for the Metrorail system to close. People working in the restaurant service industry might not get off of work until 10! For me personally, if the metro stopped operating at 9PM Id have to walk home at night more frequently. As a woman, this sets off alarm bells in my head and makes me worried. |
| The metro feels fairly unsafe after 9PM anyways, you can probably get away with this one with minimal impact |
| I strongly disagree with this idea. The Metrorail system being open until 11pm is very important and I do not want service hours to be shortened. There are already limited transit options in the evening hours and it takes time to walk to a station and wait for a train anyway. This would mean many people could be working and not have any transit service when they get out of work. It is not equitable or logical for people without cars in DC, whether residents or tourists. |
| Would prefer weekend hours to close later at least 12am |
| This proposed change in MetroRail service hours would certainly affect me, as I would most likely use MetroRail to attend sporting events in the afternoon/evening that would finish after the 9PM closure time. I would be able to manage in case Metro provided event-related bus service to (roughly) parallel the various MetroRail routes for the ease of occasional, out-of-town transit riders such as myself. Barring that, if regular MetroBus service was extended (with an army of Metro Ambassadors) to help people get back to their park & ride lots, that would also be acceptable. |
| The hours should not change |
| 9pm way too early! Please no! |
| You will lose more risers if you do this. |
| A *lot* of people work past 9pm and rely on transit. This one is a hard no from me. |
| This seems extremely early for the system to close given that its before I would even leave dinner most times. |
| I dont get off until after 9 |
| No. Whatever you do please dont do this. Its far too many of us who depend on metro to get to and from work at night. This would really hurt us. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Please do not cut service hours even further. Cutting service hours further was devastating already as someone who worked late nights |
| Per the answer to your first question, you seem to be catering to those folk who work and are out during the day hours. Systems in other urban jurisdictions operate virtually around the clock. If Metrorail can't stay open til at least 1:30a, you exclude a sizable portion of your riding public who work during the "off hours" |
| This basically assumes that the tourists are not coming back and that venues will not reopen |
| It works for me but not my son. His shift is 3p-11:30p. Thats went he and others have to Uber/Lyft |
| The DC region has a lot of shifts workers (restaurant, hotel, event venues like Nats Park) wherein a metrorail close time of 9p will force riders to use uber, lyft, etc and/or spend greater than an hour trying to get home on limited service operating bhses. |
| Workers who gets off later than 9pm and have to catch the metro rail and bus home |
| Don't even think about it. Next |
| Sometimes, My elderly mom comes on a train from another state late at night. I dont want her stranded on a faraway train station late at night. |
| Porque yo salgo de trabajar alas 10 de la noche |
| I work up to 11pm so would be inconvenienced |
| I would suggest 10pm. |
| This wouldnt work because myself and others dont get off until 9pm and the subway is the way I get home on them nights. |
| My ability to return home from work would be impossible. |
| Many people who work in DC work beyond 9pm |
| Hay muchas personas que trabajan hasta tarde, por ejemplo las personas de limpieza que salen alas 10pm y hay gente que vive lejos y le toca agarrar metro, no es justo que hagan eso, tal vez los podria an que corran hasta las 11pm pero de las 9pm que pasar a c/d 30mnutos en mi opinion |
| I understand the need for reducing train service, but this shorts people who rely on the train, public transportation. The service industry is already taking a massive hit. And currently restaurants close at 10. With metro closing at 9 what alternatives then do those individuals have to get home? Thats not draining their budgets... Additionally, I recognize that Metro needs to prepare their budget adjustments independently. But an issue with considerations such as these are that there are not decisions made for informing support among the bus routes. This will increase crowding when we are still mitigating COVID. So will this mean that buses will increase? |
| No, absolutely not. We need later trains, however if later trains were less frequent then that wouldn't be so bad. Maybe every 20-30 minutes after 9pm |
| All train stations should close at 11pm |
| That impacts night life and those working after 9 pm. Not everyone can afford ride sharing or their own mode of transport. |
| This would strand a lot of workers who cannot afford a car but who work in the restaurant industry and would curtail business to many establishments because people cannot afford late night taxi fares all the time. |
| I finish work late at night and I rely on the train to make it home to my family |
| This would force me to drive into the city to attend functions. Many parking facilities are now closing early as well. |
| Working midnight shifts staying open to 11 is helpful |
| There are essential workers who need the metro at that time |
| How would you expect people to travel if trains stop running at 9pm? Could you extend it to 10pm instead? |
| Some people get off work after 9pm and would have no way of getting home |
| As someone who lives in VA, late night service will once again be critical once COVID is more under control |
| This is ridiculous. Closing the metro that early would be catastrophic (not a word I use here lightly). |
| I work until 9pm some nights - I need later service. What about 10pm? |
| Only because ppl rely on the trains after 9:00pm if commuting to and from work. |
| Restaurant/bar patrons need and rely on Metro as part of socializing. These businesses have suffered too much under Covid restrictions. Remember hospitality is a multi billion dollar industry in DC. This would only further help Uber et al. |
| Disagree cuz I visit my friends and come home around 1045. |
| I work late and I depend on metro rail to get home. |
| Would Prevent me getting to work |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| I think they should stay open till 11 pm |
| I work late nights and would need access to the t metro station after 9pm |
| Once COVID is done, it would be nice to be able to take the Metro home after 9pm. Especially if there is a sports event or a night out. Relying on taxi and ride services all the time will just degrade Metros ability to retain customers. |
| Considering the fact that I get off work at 9:45 so I can get home with the train before the station close. |
| Fine for commuting, bad for anything else |
| While this works for me personally, I worry about access for those who do work less traditional hours outside of the 9:00-5:00. |
| as long as the buses are running later than 9pm is ok. |
| Hospital workers are crying for the train hours to go back to its usual, this is more than a killer time 9pm NO! |
| My fear is that reduced service timeframes would complicate shifts for workers who rely on public transit service. Restaurant shifts don't end at 9PM, and I don't expect that to change to make employees' lives easier. |
| If i work late how will i get home |
| 10 p.m would be better |
| 9 pm would be to early for me to get home using metro rail |
| Not realistic, especially for nightshift worker and for the weekend. |
| 9 pm to much early I work evening shift finish at 9:30 pm |
| Some people work late and depend on the train to get home. 9pm is to early to stop service |
| This is too early to close |
| Hell No!! Essential workers and restaurant employees wouldnt be able to get home from work. They have already sacrificed so much to keep the city moving forward. |
| Same as before |
| Its very early. 11 pm was a better idea. |
| Metro should stay open at least till 11pm like it does. Plan should be delaying closing till 12am or 1am not earlier. |
| Please be mindful that people get off at 11pm and they need metro to get home. Everyone cant afford uber. |
| Only reason is because riders should not get stuck at certain places or if a person has to be a work at a certain time and that person needs the metrorail and it closes |
| I enjoy traveling from MD to DC and it would cut off my access to dining, events, and other DC things. This would be a tragic loss for the whole DMV. |
| Im sure it would be an inconvenience for people that dont get off from work or go in work until after 9 pm or later. |
| sometimes me and my friends end up being long where we are and if the train closes at 11 we could potentially be stranded in the area |
| If possible, Perhaps extend to 10p. |
| Horarios de salida de trabajos son mayormente alas 10:30 de la noche |
| I work swing shifts (6a-2p, 2p-10p, 10p-6a) and ending service at 9p takes away a big option. |
| This new schedule isnt intended or designed to help DC residents who work in essential jobs such as groceries, restaurants that have to work sometimes until midnight. This new schedule is unacceptable, especialemtne with the metro rates still high. This is robbing a public service to us, who are already paying the highest federal taxes in the country! |
| Closing at 9p is extremely early for a metropolitan transit system. We should be able to do better than this. Some frontline healthcare workers work 2nd and 3rd shift hours...even in Baltimore, using the DC metro system as a connector to the Marc train lines! |
| Busses are unreliable and I get off work past 10 sometimes and ride the metro as early as 5:30. PLEASE don't change the hours. Uber rides cost too much to get from Brookland to Georgetown. If anything, I wish the trains ran later anyways. Closing early means I can't get home. |
| I leave for work anywhere around 7-8 am and am commuting home around 6-6:30 pm |
| Working late hours, I would prefer 11pm as end time for metros |
| High traffic lines (stations) would continue to be in service until 11PM |
| I work in food service. I close at 10 several days a week. I would have to quit my job because I would be unable to get home from my shifts. I can't work in the day because I have school. This policy would unfairly target service workers |
| It would make it harder to do things at night in DC. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| Why all these cuts?? People may not be using metro now but they will when COVID abates. Many retail workers need metro at off hours. You'd cut off safe transit and enable drunk driving at night. No. |
| I use metro to attend events all over the metro area and many of these events end at 10 or 11pm |
| Sometimes I get off late from work |
| People who work at night must have a way to get home. Stopping services at 9 P.M. would prove detrimental, especially for the working poor. |
| Me parece bien |
| I work 8 hours a day from 2-10 I depend on metros 11 pm closing |
| People work beyond 9 or even 11 pm. This traps hundreds of workers who can't afford cars in an expensive Lyft/Uber dependency or traps them at work until the normal hours start up again |
| Because there is a lot of people that work later than 9 pm 11pm I think might be ok but 12 would be better |
| Si van a cortar el horario de cierre, tendr  an que poner buses que puedan dar el acceso a las personas que usan ese horario, para llegar a su destino. |
| I dine with folks, attend concert SW waterfront Fridays, etc. and will be on Metro after 9 PROVIDED the pandemic is securely behind us. |
| Terrible idea. You're damaging DC's nightlife scene while giving up a sizable revenue source to Uber and Lyft. |
| This absolutely would not be convenient for many of us who rely on metro rail as our main source of transportation and do not have the money to use Uber or Lyft on a regular basis. In addition, there are those of us who, if the NBA, NHL and MLB return to allowing fans back in the arenas, would have to leave well before the games are over. NHL and MLB evening games do not end before 10 pm on a regular and NBA not usually before 9:30. This may backfire for metro, as opposed to helping, because many people park at metro stations and ride to Capitalone, Nats Park, or even some college games. Also, the soccer fans- can't forget them. DC United. |
| Trabaj   en las noches y siempre tomo el   ltimo Metro de las 11 pm |
| It wouldn't work because some people and me get off late so try to be considered to those who get off work around 11 and 12 pm |
| I travel at night for work and depend on the metro operating later in the night. Its been difficult that the metro doesnt operate past 11pm but cutting it another 2 hours when many citizens have requested for it to be open either loner or 24hours is inconsiderate of the many workers in DC, Maryland, and Virginia. There are essential workers, students, and other employees that depend on the operating hours to be longer. This will cause many job losses and seems to be tailored towards non essential workers who work during the day. I believe the last two years have taught us the importance of assisting those who work around the clock. |
| Hay gente que trabaja hasta muy tarde , metro deber  a seguir hasta las 11 pm |
| This is major city , shouldn't close that early ,DMV has thousands essential workers that depend later closure |
| If most of your customers at retail workers or medical professionals, they work until 10 or 11pm. If the rail is closed at 9, they wont get home until midnight or later because the fastest way to get from 1 side of the state to the other closes early |
| Esto no beneficiaria a personas que trabajan en restaurantes en jornada laboras de la noche y que no pueden salir antes de las 9 recomendar  a que descargar  n est   propuesta |
| When business and events start opening more regularly, 9 pm closing would be too early |
| I work late at night, until midnight sometimes |
| I work at a place that's open 24 hours, please keep it open until 11:00 PM |
| People, including myself , have late work hours. Also, people want to go out and the train is supposed to be accessible. |
| If it is closed early I wont be able to get to work |
| I along with others are still coming and going to work. |
| I work in Crystal City and I already dont get enough hours because I have to leave work early to make sure I catch the last train. |
| Stay open til 10 or 11 pm. Night shift workers must leave hours and arrive hours before work starts. I am one of them. If youre not allowed in your work place beforehand your shift, youll hang out in streets til your work time. |
| Must close 11pm |
| No. Never. If You do that it will hurt business as a whole. |
| I work late and the train is the only way I can save money instead of calling excessive uber's or lyft rides |
| This makes metro useless for anything beyond commuting. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| Even though I get off work in the afternoon it would impact quite a few people and cause an inconvenience |
| People work past those hours. How would the mass public get to there destination |
| I am a service industry worker and often work late hours so this would not work well for me or my colleagues. |
| I will not be able to go anywhere in the city to get food or go to events in the late afternoon and will have to spend much more on ubers. |
| If you would like to see an increase of ridership closing metro at 9 would not be feasible. |
| This drastically cuts into my ability to work, as my primary means of transit is Metrorail |
| 10 PM would be doable. Pushing back the opening time by an hour to 6 would be fine. |
| This would disproportionately disadvantage women who have more limited options for traveling safely after dark |
| But this will not help the recovery of the restaurant industry in the metro area. |
| I rely on night trains to commute from school & work. |
| DO NOT CLOSE EARLIER |
| Impossible to go to events, or evening work and classes |
| I only use the Metro for my work commute from around 0530 to 1700 |
| This would have a horrific effect on essential workers who have different shift times than this could accommodate. And in the recovery as people start going out again, this would eliminate any possibility of viewing transit as anything but a commuter service |
| You would be killing businesses that are trying to rebuild after COVID if no one could get around. And then the people that do still make the effort would be taking ubers. |
| People that rely on metro rail the most need it at later hours |
| My employees work a night shift that exceeds 9pm. To close down before then will cost us a considerable amount of money. |
| Issues going out and getting to airport |
| Consider a period of reduced frequency service until 10pm... perhaps 30 minute headways |
| Yes, but metro needs a night owl bus to run the metro lines, so that the people that rely on late night public transportation still have a option. |
| This would be detrimental to the NCR to have safe transport late at night. |
| Many people work late and this system would be very unfair and inconsiderate. |
| If you want to assist the community and cities to become greener and more sustainable isn't this counterproductive to offer no alternative but Uber/Lyft etc |
| Do you really want people drinking and driving? That's your call to make |
| Because of my hours, I work later than the time expressed and it will hurt my chances of going home safe. |
| That wouldn't be good because I know that there's people that might work at night and work Pass the time of 9pm |
| This part of the plan is the worst thing in the proposed budget. I will just learn how to drive and buy a car, or only Uber. How exactly am I supposed to get home after the pandemic ends if you do this? |
| Would make this work, but would likely impact many lower income people who work in the service industry. |
| I would have to leave at 7:25pm, which would put me to work at 9pm. Thats too early for me when i start at midnight. I would have to stand around looking stupid for 3 hours. No good. |
| I think it should remain it usual time for the elder that I see catch the train during the hour of 8:00 - 10:00pm |
| Some ppl work night shifts and need to get to work. Or are either traveling home. I personally have taken night classes and would be stranded if i had a class that let out at 8. |
| As a medical worker, sometimes I leave the hospital much later than I would like, which includes past 9pm. It would be very detrimental to those of us who use the metro past 9pm. |
| Eliminating late night service mean I will drive or take Lyft if I want to go downtown at night. While this could work for me, it would be hard to go home on special events like 4th of July or the baseball game. |
| Some people get off work later than 9pm |
| I get off work at 11pm. I prefer metro over Uber because Uber is so expensive. |
| Some of my family members work late hours and this is not amenable to their schedule. |
| 11.00 is to early to close |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| How are we supposed to combat climate change if public transportation is being cut!! |
| I normally drive in my vehicle if staying out late. |
| If you are depending on metro to get home from work at night this would be a problem for many who rides the train at night. |
| cannot work for those who are working at stores or restaurants, or shopping or eating |
| Good idea |
| I hope to be able to be out later in DC in 2022, closing the metro at 9pm would make it harder for me. |
| This is absolutely ridiculous! There are a lot of people like myself who rides metro daily. Therefore closing early is not a good idea. |
| That not enough time for people to get home from work |
| Many people need the late night train service |
| This precludes using Metro to attend any events, plays--sports--long dinners, etc., downtown. Standing alone on a dark corner for a bus is not what this 80-year-old woman would feel comfortable doing. 11 pm. still doesnt help a lot of our service workers downtown. |
| many people work late. 9pm seems early to close all public transportation |
| It would depend on if DC and other locations were still under covid restrictions with limited dining & entertainment options. If there are restrictions 9 pm might work but if all have returned to pre lockdown hours & options 9 pm would NOT work, |
| So it's gonna close early what about the working mom dad grandma granddad and some students who are supporting families too it's just not a good call to close at 9 pm instead of 11 pm |
| Im heading into my 40s with kids so I dont use metro late at night. Ill imagine it would make the occasional baseball game much more difficult to attend. |
| Bad idea. Evening workers would be punished. All nighttime activities ...restaurants, downtowns, and the economy...would suffer. Stay open until midnight. |
| Absolutely not. Sounds like Russia in 1950s.Invest in self driving tech to be 24/7 like NYC, not cut hours. Fire employees before cutting hours. Do NOT cut hours. Makes travel expensive and affects state of mind and usually life happenings. |
| I would be unable to work later shifts at my job due to being unable to get home. |
| Why not just close the system entirely? |
| Train nA©ed to run back to back |
| It depends on if bars and restaurants are open again. If they are, to prefer to ride the metro versus a bike or walking because it allows me to drink during dinner and not have to pay for a taxi home. |
| Could it just close at 9 on weekdays? |
| No this is unacceptable, the workday is later and longer hours. |
| This is the most absurd proposal of the bunch. Professional post-work conferences are routine during non-Covid times. Additionally, travel via airport is a regular consideration for working professionals and tourists alike - DC revenue is also generated through tourism. |
| I often go out to restaurants and sporting events past 9pm. |
| What about workers whom ready rely on Metro to get home whom work late nights. Not good at all. |
| I would not be happy, but late night service is the least service I use. |
| One of the things that I had liked about Metro in the past was when it would stay open late-ish. If Im out with friends (well hopefully be able to do that by January 2022!) and have a lot to drink, it would be great if I could hop on a metro instead of calling an Uber in the later evening. |
| Again, if COVID restrictions remain, this would not impact me. If COVID is lifted, this could be a problem. |
| Passengers may not be able to travel for work due to limited city access late at night. |
| Yes, theres a pandemic, but there are still businesses that are open later than 9p, how would ppl get to their destinations without Metro? |
| Too early for closure stores are open and trains are faster than buses |
| July - September is a busy time at work as this is the end of the Federal Governments fiscal year and I normally work late hours. I will be force to drive to work. |
| What type of transportation would be available to those people who work pass 9 p.m.? |
| As late night entertainment returns to a pre-pandemic level, people need a safe, inexpensive option for getting home. |
| A lot of service workers who take metro get off work after 9 or later such as retail, restaurants, etc.... Please do not force them to take UBER, LYFT, or Taxi. |
| One of the benefits of living in a city with public transportation is to go out in evenings and not having a car as a result. |

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| What will people who work in restaurants do if they get off later than 9 and need a quicker way to get home aside from buses? This is ineffective for a metro area with a large population of people who use public transportation often. |
| Late night work hours would make this arrangement untenable, and it would force me to choose transportation alternatives if there is no late night service available past 9pm. |
| Going to dinner and a drink with friends would be impossible any evening and this would increase danger to public safety from drunk driving |
| This plan doesnt consider essential workers who have done so much for us during the pandemic. Why close that early? |
| This seriously limits alternative work schedules and night life |
| Metros my only means of transportation. My tour-of-duty ends near closing time. THIS DOESNT WORK!!!! |
| This would be a horrendous inconvenience to essential workers that have to physically go into work, and also wouldnt this downsize some of your Metro employees as well. |
| I might need to be out late and traveling by train might be one of my better options. |
| I utilize trains later during the school year and I have late classes. Again this would be hard for a person who doesnt have a car. |
| Almost every type of essential worker works outside those hours. This is how you thank people? This city is already barely accessible by metro...great, just make it worse. |
| This schedule might be tight for healthcare workers like me who can get out of work by 8pm. |
| While this plan would not hinder my travel needs, i am concerned it would place huge hardship on hourly and third shift workers who rely on late-night trains for affordable transportation. |
| Definitely a better option to reduce the opening hours, rather than limiting service to every half an hour. The vital functions of work and leisure can be finished by 9. This is so much better for the economy. You have to understand that if the metro only comes every half an hour, it effectively becomes a train rather than a metro. And we've all seen how well Amtrak has performed in recent years... |
| Early closing puts a burden to commuters esp those that work late nights |
| Would impact my social use of Metro, but not commuting. |
| My daily commuting needs sometimes require service after 9pm. |
| This does not meet the needs of my work schedule. |
| Buses may need to increase to support the additional transportation needs. There are persons in the city that work off hours. |
| Its hard to predict travel needs for 2022 when there are still unknowns with the coronavirus. For 2021, this seems like a suitable option. Most of the time when I take the metro after 9pm its because of sporting events or concerts |
| There are occasions when I use the trains late at night. Closing at 9pm would eliminate that option and force me to seek alternative options. |
| It need to stay open until 11pm |
| Metro has to do what it has to do; however, why not consider going private rather than government funded? |
| I often took the metro during the evenings. This would preclude that. |
| Late night service is good for restaurants and businesses. |
| Keep trains running at least until 11 pm! |
| Midnight would be good. |
| what about a person working passed 9pm |
| When I travel into and out of D.C., I need the Metro hours to be more flexible. What about a compromise of 10pm? |
| This plan penalizes people who work later hours. |
| Normally this would work since I work between 7am and 6 pm. There are occasions that I would be at work later and this would be an issue, however it is rare to be at work that late. |
| Again, people have to plan accordingly for any travel outside that period |
| This would be relatively low impact on most days, but would require that I drive in on days when I expect to be late. This is OK for me, but perhaps not great for DC. |
| This would be devastating for me- I have no alternate transport and wouldn't go out to restaurants with friends at night as often |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| This would make getting home from work extremely inconvenient for many people. And I imagine it would have a chilling effect on nightlife. |
| That would effect people coming home from work |
| Shift workers rely on the Metro. Most businesses close by 9:00 p.m. workers need time to make it home. 11:00 pm is a crucial time to stay open. |
| If for some reason I got off later that 9 I would have trouble getting home since I have no other way to get home than take the metro rail |
| Help when go to work |
| I work a rotating shift schedule and work the night shift 6 days week. Now I would need to buy a car. |
| The ability to take metro late at night allows me to have flexibility with my work hours. Taking that away would be terrible |
| Perhaps on Sundays the trains can close at 10pm |
| 9 PM? What a way by WMATA to screw everyone, especially those people who will need you the most. |
| Sounds like the, "Give money to Uber" plan. |
| The hours are already too narrow and should be 24 hrs just like every other major city in the world |
| That is way too early. It should run much later than that. |
| This option would make it impossible to attend the entire Capital game if it were an evening one. |
| Difficult if down town activities return |
| I frequently use the metro after 9pm when possible as alternative modes of transit like Ubers are too expensive for my budget |
| I often use the metro to go out to dinner and this would be very inconvenient |
| No pueden cerrar a las 9:00 pm demasiado temprano. Las personas necesitan trasladarse sobre todo en horarios nocturnos es indispensable |
| 10pm would be preferable. Might be relieved from work at 9pm |
| That will. Not work with my work schedule metro is my own way of travel |
| Too early. Working people come home between 11 and 1 AM |
| Horrible mistake. 9pm is way too early and would prove disastrous. NYC is 24/7. For the longest time, we had barely respectable closing times at 2:00am. 9pm is a joke, just run fewer trains. |
| This would work unless there would be a major sporting event and concert which require later hours on the Metrorail system. |
| I use Metro for traveling to events and outings which usually let our after 9pm. |
| Not sure how this would work for people who rely on the train to get to and from work. |
| Really ridiculous. Metro needs to become a grown-up system and provide 24 hour or close to 24 hour service. I don't know why it typically opens at 5o'clock in the morning anyway. It should be available for people who go out to dinner at night and if the Pentagon wants to open at a ridiculously early hour they can figure out their own method of transportation. Metro should get people to the office for 9 AM and get them home after an evening out after the bars close. There's absolutely no reason that should be running at 5o'clock in the morning and they close at 11 PM |
| The Metrorail system already closes too early as it is! Keep closing time at 11pm or make it later. |
| There are still working individuals trying to get home safely from work and they depend on metro. |
| Not often but I occasionally get home late. If the metro weren't working it would be a disaster. |
| 9pm? Seriously ? |
| I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus |
| Again, reducing services is systemic racial and socia discrimination reducing the ability for these populations to work and obtain basic services. |
| I'm a commuter with work hours outside of this closure. I would drive if intent is to work late or some other activity like a ball game or dining. |
| I only use it to get to work. |
| My shift at work at times doesnt end until 9 and closing early wouldnt help me |
| How about 10? Compromise? |
| This plan will work for me, but it may not work for my community which has to rely solely on metro. I live in southeast DC and would like to see Metro remain open at least until 11pm for my community. |
| After COVID, people will certainly be out past 9 p.m., and to not have those last two hours would be a huge loss. Also, it would kick the homeless population out earlier, which in colder months could prove deadly. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| That's too early for many people that have evening activities |
| I would no longer be able to get home after work. |
| As of now my part time job at capital one arena is closed but if and when the arena opens back up and concerts and games resumes how will us employees and fans be able to get home etc. Most events aren't over until after 9pm. |
| I work for the government and do sometimes need to catch a train home from work later than 9 pm. |
| I regularly rely on metro to safely get me home from either late work events, evening classes, and late-night public events such as Nationals and Capitals Games (unless it is an afternoon game, there is ZERO chance a sporting event will end before 9 PM). Frankly, 11 PM is really unfair to people in this area, and I think it should be 24/7 service - reducing it to 9 PM basically renders metro irrelevant to me. |
| why depend on the train if its not going to be there after 9? |
| Because a lot of us may have to either work late, or some type of emergency may occur and the only way of transportation would be Metro ... so closing instead at 9 PM is not and fair option |
| It will work for me, but Im concerned about others who work later than 9 and dont drive. And may or may not be able to catch the bus; the train may be more convenient. |
| Given the other proposals so far, if there had to be any change in order to save money, I would choose this one. |
| Do not do this. People need a safe, affordable way to travel about the area during happy hour and dinner hours to avoid driving under the influence and high ridesharing fees. |
| If we must have a service cut, this cut would affect me least, but please do take into account those who may work night shifts. |
| That would mean metro could not be used for any sporting event, concert, plays etc. Huge booms in metro travel would cease because you couldnt rely on it to bring you home. |
| That is very bad. Some people rely on Metro for transit and if you are later, then this will further decrease ridership since the option is gone. I would say look at the current and expected numbers to understand the financial impact from historical data pre- and current-covid ridership |
| I would like to see this only for the week days and preserve it for at least Saturday/Sunday. |
| Pre-COVID, I would rely on later trains regularly throughout the week. I would need to purchase a car or take expensive ride share options. |
| If a sporting event or concert ends after 9:00pm would have to find another way home. |
| This would effectively shut down the city at 9. |
| Sometimes I work late or what to go out late. Service should be 24 hours to accommodate all work schedules or at least till 3am |
| Sometimes I along with others work until 11p.m. and use the metrorail as our means of transportation and then we have to get on a bus |
| Most people will be served rightly. Most jobs close before 7:00pm |
| Not ideal but I would continue to utilize metro for my work commute. |
| People work overnight & everyone doesn't have a car. It's a pandemic you all cannot do this. |
| This would not work for me because if Im at a friends house out at a restaurant after 9pm I will not be able to get home unless take a taxi or some other car service. |
| It should stay open to 11:00 PM |
| Will I turn into a pumpkin if I stay out after 9:00 p.m.? |
| would permit Rush Hour travel for work but inhibit after-work socialization? |
| That is too early since I work late |
| I sometimes get off work at 8pm. So taking Metrorail wouldnt be an option. |
| I think 10:00 PM would be appropriate, probably. |
| I work late some evenings and/or meet people for dinner after work. I prefer to use Metro to get home in the eveningbut would be forced to use a rideshare service or cab if Im out later than 9:00. |
| Thats pretty early |
| Too early. There are many people on late shifts and they pay taxes too. |
| I am often out past 9pm due to work, social activities, and errands. Trying to maneuver the bus system across the city (especially if bus service is decreased as well) would severely limit how long I can be productive in a day. |

Proposal to close Metrorail at 9 p.m.

This definitely does not work. it would make it impossible to attend any lecture, sporting event, concert or any other evening event, including going into the city for dinner via metro. Scrap this option.

I normally do not use Metrorail at night.

That's too early. And too many ppl who depend on metro to come home from evening work hrs

Think about the people that work very late and depends on metro to go home.

It is important to maintain transportation options considering the gradual opening of restaurants bars and entertainment

Close at 11pm

This is insane. Does the city stop existing at 9 pm? No one who gets off work at 9 pm can go home? No one can use public transit to get to a show after work? This is completely unacceptable.

Would prefer 11pm closing time.

Even more than impacting me infrequently, this is a proposal which moves Metro to a non-functioning option for many people under many circumstances.

Terrible idea -- what about events in the city that people depend on metro to get to? 9pm service end would make it unrealistic for lots of people to attend Nats games, Caps/wizards games, concerts, etc.

This only works for me because I try not to be out too late at night. Otherwise, Im not sure.

Extended hours with reduced number of trains on the weekend is preferable to earlier closing.

I use the metro to avoid drunk driving and it's an immense safety issue if the metro was to be closed earlier.

My shifts change so I'm not sure how this will impact me

9:00 is too late for people that work into the evening. Closing that early puts more drunk drivers on the streets, especially in Virginia.

This would not be my preference at all but could work

Porque las personas que no disponen de carro necesitan un horario hasta las 11:00 pm o mas.

This proposal affects me negatively because I get off from work very late, and if this happens there won't be public metro transportation for me.

For the workers who have to work late hours, maybe lesson the train schedule after 9.

Sometimes, I dont get off until 9pm. This would significantly negatively impact my ability to get home, after work. :(

If work out Maryland ,how I get home if the bus dont run after 9pm,if I close store 11pm ,please how would I get home !!!!!

Many people work evening jobs and may not have access to transportation other than rail.

This discriminates against shift workers and populations of people who rely on the metro for work late at night (I.e. service industry and healthcare workers).

I go to the theater in the District frequently. This would prevent me from doing that.

Will be more difficult for late evening crowd to get home, must rely on ride shares which is unfair to people without a cell phone or on a budget

what about the people who work evening and night shifts, absolutely not!!!!

I'm not typically out past 9 pm.

Makes it impossible to get home from work if I have to work late.

Safety of people in DC, traveling light at night after going to events - metro is paramount in those circumstances. Also for late night employees working midnights, need the metro

As of right now this would work but in the near future it could be problematic for me.

Thats so early! Students couldnt go home from late classes, you couldnt get a casual dinner or see a movie after work... youre basically losing anyone who uses metro for non-work purposes.

We often use Metro to attend performances in the DC area to avoid parking issues. These events often go later than 9 pm so we would have to find alternatives.

This would have a MAJOR impact on people that have different shifts and would also mean that I just simply wouldn't use the Metro late at night and actually would probably stop me from going into DC because I would have to leave my 8pm just to get home. That's crazy!

I am not usually out that late anyway; if I am I can probably walk or find alternate transportation.

I need the metro to get back if Im coming back from visiting a friend

Too early to close I don't get off work some nights till 9pm.

I do a lot of late evening travel on the metro. As someone without a car, this would dramatically impede my mobility.

| |
|---|
| Proposal to close Metrorail at 9 p.m. |
| To early |
| I understand metros budget cuts, but with Metro needs to understand that a lot of money that is made in DC is from restaurants that don't close until later. By cutting the metro off sooner you're affecting peoples paychecks and you're affecting peoples lives and how the city makes money |
| Assuming the pandemic recedes by this time and business happy hours come back, I think this would be very inconvenient for people, particularly those based in Downtown. |
| I am concerned about, however, folks who work later hours and who don't have other modes(or means) of transport. |
| This is much too early for most people working a minimum wage shift job who rely on metro for transportation. Please do not choose this option. |
| The summer/daylight savings time you will not be able to ride the rail to Bethesda or Shady Grove. Bummer. |
| Reducing transportation options will promote drunk driving and will severely hurt hospitality outside of people's immediate neighborhood. |
| This plan would affect hospital employees that rely on the metro system. Healthcare workers would lose there jobs which would have a negative impact on the community |
| We do not use Metrorail. |
| When I use Metro, late night departures are the most important. Otherwise, I wont use Metro at all |
| 9pm is way too early to close metro. |
| I do not frequently take the metro during those hours. So this would work fine for me. |
| I use the metro to provide transportation to evening performances in the commuting area. Cutting service would reduce my options |
| Getting stranded after an evening business or social event would discourage me from taking Metro at all. |
| Many people work the late shift and need to get home after work. |
| I do not like this, but if it means the trains can still run on their current timetables I would prefer it to lengthening the time between arrivals. |
| I would prefer 10pm. Sometimes my work day goes late and 9pm would be too early |
| It has been a while since I traveled after 9pm, but it would likely impact travel post-sporting events and other things downtown for people who park at metro and use it to get into the city, so I think this is a bad idea. |
| During this period of closing at 9pm previously, if I started work at 11pm at Bethesda, I arrived at 9:15 pm at work, to sit & wait til 11pm starting time |
| People who rely on Metro and work late into the evening need Metro to stay open past 9 pm to make it home to their families, not everyone has a vehicle. |
| Many service industry worker heavily rely on the metro to get home after 9pm. I think keeping the metro open till 12-1am would be best to service those who do not have another transit option |
| Since I work the third shift (overnight) I rely on metro so closing at 11pm works for me. |
| From a work schedule (assuming were back in our offices yes) but I often meet friends and go to after work events so no. |
| Sometimes I get off work at 10:30 as I am an essential worker. |
| what about the workers who shifts are after 9:00 pm, give them some thought,, |
| I don't work in a restaurant but I do often work late at the office. I could handle 10 pm but 9 pm is likely to leave me stranded. In either case, would exceptions be made for high-volume events like hockey games? (A good revenue source, right?) |
| Metro should operate later on Friday and Saturday nights. Patrons utilize Metro to get to and from places that have little to no parking such as ball parks and events downtown. |
| I think the weekend operations should be rethought. |
| This is the optimal option for my travel needs which are primarily Monday thru Friday, 8am and 6pm |
| Just closes an hour earlier. Not that much activity due the pandemic going on Anyway so this makes sense |
| This is my primary form of transportation to go out in the evenings/weekends. This would prevent support of local businesses. |
| This plan is insanity. This assumes the economy will never reopen. Such a short-sided view. |
| This would be highly inconvenient to any business dinner that ran late during the week as well as use of metro on weekends. |
| I would still be able to get home from work. As for hanging out, I would just find another way home. |
| Not always. Some times I'm required to do shift work and the current operations are convenient for me when I do those odd shifts |
| Use the metrorail frequently after 9 pm |

Proposal to close Metrorail at 9 p.m.

By 2022 I think life will be back to almost normal and it will affect the nightlife in the DC area and also it will affect people that come out work late. 9pm is way to early to close stations

My classes end at 8:30 PM so this proposal might result in me relying on an alternative form of transportation.

I get off work at 10, this would be very detrimental.

It is imperative that shift worker continue to have access to transport. Metro could possibly cut trains on the track and extend run time.

Fine with me

What about the people they get off about 10 o'clock and the only way they have to get home he's on the train to get to the bus

most of the time this is fine but does make going out on Friday or Saturday evenings more expensive as Id have to take a Uber/Lyft home (unless busses will still be running later)

I travel late sometimes

I often leave work late and need to catch the metro as late as 10-11 pm.

I rarely ride the Metro late.

I work in the foodservice industry and sometimes I get out late and Ubering home would become too expensive

I would have to rearrange my schedule if I am to work late.

Would be a pretty big hindrance to those who work late essential jobs that use metro as a only means to get home

No way!

Do not do this. This will destroy public transportation in DC for decades.

Would you stay open later for Nationals or Capitals games?Also, how would DC have ANY nightlife under this plan?

i work until 9:30-10pm and the metro is my main mode of transportation home. this is a terrible decision that would affect many people's livelihoods

I sometimes work later than 9pm

This would not effect me, but think of others who rely on metrorail as their only means of transportation.

This is unacceptable and unsafe, especially as bars and restaurants reopen. This will have a negative economic impact on businesses and events in the district.

This could disrupt my ability to get home if working late.

closing it that early would be detrimental to so many people.

Service workers need late trains.

Work sometimes runs late I need the transportation

This doesn't help me if I want to do anything in the evening, it would force me to cancel evening activities.

This would interfere with evening events in DC and force us to drive all the time.

Is there any way to close at 10:00? I am not often in need of metrorail in the evenings but occasionally I do.

This would cause numerous barriers to those without access to private transit.

The Metrorail closing at 9 p.m. would be extraordinarily limiting for my schedule, especially on weekends

some public events/convention center, etc. that I attend

This would work for me and others with a regular 9-5 type of schedule, but not so much for those who have the evening/night shift.

Service should last until 00:00

It works for me but I think it's too early. Remember, sports will be coming back and there are lots of colleges in this town. I don't think u should close earlier than 10p unless absolutely necessary.

It should run all fucking night. It's dumb that Nats fans have to wait for a taxi or something after the trains stop running.

Closing metro earlier would make it hard for working people to get home after stores close around 10pm.

I work at Rosslyn , i rely on metro to get me to and from work closing at 9 well make me switch jobs in the morning and lose work hours because I need metro after 10 PM most of the times

This would provide an unneeded obstacle for those who have to work and commute after 9pm. Many people who work past 9pm are in the service field and may not be able to afford other means of transportation

Should my work schedule revert to what it was prior to covid, I'll be leaving work after 9 p.m. regularly

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I don't tend to stay at work that late during the week. On the weekends/Friday evenings, that would be disappointing to have to use alternative transportation. |
| Yes. Metro is a great way of staying safe while drinking and then getting home safely and cheaply without driving. If you close earlier you will have greater instances of drinking and driving |
| I work past that time and would not be able to make it home. |
| Continue service to 11pm |
| 9PM is far too early... think about people whose sole transportation is the metro... are we supposed to never be able to go out after 9PM? This is far too early and no major city has a metro that closes that early |
| Awful idea. Would have an adverse impact on businesses and on employees. |
| I would not ride at night with any frequency, but I suspect these early closing times would have a significant, harsh impact on night workers and access to entertainment as the city opens up again. |
| I don't get off work until 10pm. This would be disastrous. |
| The minimal ridership at night can Uber, definitely cut the hours. |
| Often I am in downtown DC after 9 pm and need to take the metro home !!! |
| This change may be OK during the weekdays but on the weekend having access to the train would be both convenient and safer as people like to go out for entertainment and if they drink, we would not want to have them putting others in danger. |
| Reduced frequency past 9 (every 30, every 45) - completely eliminating service may leave late shift workers with no options. |
| I get off work at 430 |
| There are times when there are after work events that might end late, and having an earlier closing would impact people's ability to use metro as a safer option for getting home |
| So many people take public transportation and are essential workers. Yes, metrorail has lost money due to the pandemic however by closing the metro at 9pm, you'll be losing a lot more. |
| I often times go home from work at around 10:30 pm and catch the last train. Essential workers rely on the metro staying open to 11 to get home from work. |
| This will have significant impact on communities and special events. Nationals games, etc. |
| I hope to be staying out later at restaurants and bars by the time this would take effect. |
| I often work later than 9pm and would have no way to get home short of a \$50 cab ride, which I had to do during your restricted hours! |
| Seriously? What about people who everyone else depends on and who are working part-time to feed us or clothe us and need mass transit the most? They are working lower-wage jobs odd-shift jobs and generally get off slightly later. What is your mission statement? Who are you intending to transport? What are you exactly hoping to do? This one makes little sense. You won't even support part-time or night students if you close at 9. Title this question: How to make Metro irrelevant the fastest. |
| It may work however it's going to be difficult to get to places. Since time is money sometimes I rather pay extra to keep the current status |
| This unfairly hurts customers who rely on metro after hours |
| I work until 9:30. This is no good :(Perhaps run trains every 30 mins after 9? |
| If my work schedule is still on shift work it would close too early |
| I will have to Uber or leave the city now. I can't afford to Uber every night |
| Sometimes I work late - not often but I would be forced to take Uber between downtown and Bethesda |
| That is the stupidest plan |
| I don't use the metro late. |
| Myself and all my coworkers can't get home from work |
| This seems like a much better option than reducing intervals of trains arriving at stations. I believe most commuters will see an early closure as a temporary circumstance and regular Metro riders will be on the lookout for when this changes. Reducing intervals of arriving trains could drive riders away permanently and then it would be a lot more work for Metro to get the word out to those individuals about future improvements. |
| There are still workers who work late night shifts. Take that into consideration, you won't make millions but workers have to provide and this method of transportation is important. |

| |
|--|
| Proposal to close Metrorail at 9 p.m. |
| I frequently use the metro after 9 pm and I believe others will to as more businesses open |
| I would probably stop using metro if the above proposal occurred. |
| Much of my metro travel happens after 9pm |
| 10 pm works better. There are times when I don't finish at work until close to 9 pm. If subway closes at 9 pm I won't be able to get home to Laurel, MD. |
| Salgo a las 10 de mi trabajo ,la m3jor opci3n para muchos sin duda ser4 comprar auto y descartar uso de tren y bus |
| I believe this severely impacts essential workers and minimum wage workers |
| Closing the train stations at 9pm will leave people with no way home that take the train after 9pm. |
| Fine with me but for essential low wage workers it is bad plan |
| The earlier closing time will likely reduce the types of evening activities that I can participate in and probably force me to use more expensive ride-share services more than necessary to get home at night. |
| 9pm is a little early to accommodate outings in DC |
| Once people are vaccinated, we will be out more. Essential workers, grocery workers, health workers, etc. will take transit late. This will force people to rely on expensive alternatives like Uber. It is not safe for women to walk at night |
| I like using the rail in the evening, so closing at 9pm is a large impediment to my current public transportation uses. |
| That is ridiculous- what if you want to go to dinner& then go home |
| How would this work with events like Wizards games, Capitals games, Mystics games, Nats games. Are you going to get all of the owners of these teams to have games commencing much earlier so people can get home before you shut down service at 9 p.m.? Thinks of what this would mean for double headers in baseball. There are also things like theaters, the Kennedy center, etc. What does this do to your employment numbers? |
| Dont shorten hours. Hours are already severely reduced from 5-6 years ago. |
| I work some nights until 11pm |
| Strongly against. Time changes make it very hard for non-commuter, city residents. Also, dangerous for people at night. |
| Not good for late workers and folks going out Friday after work. Closing at 9PM on weekends is fine. |
| Theres a lot of riders that have to travel late at night and this wont help at all |
| Terrible idea. |
| This wouldn't be optimal and would reduce nightlife in areas that depend on foot traffic. |
| The purpose of Metro is to get people to where they are going. By reducing hours, you are crippling a city in direct need of economic and social growth and that is not including people to venture out to sports and entertainment and other nightlife activities much less those who depend on it for work. |
| Most businesses don't close until 11pm but if there must be a reduction maybe closing it at 9pm on weekdays and weekends at 11pm |
| Work and dont drive |
| This works for me, but does bring up concerns for potential drunk driving for others |
| There are times when I have to work late in D.C. and have no other way to get home. |
| I dont drive. If I wanted to hang out, I would have no way home |
| Most of our grocery store and service industry people rely on metro to commute to work. They do not get paid enough to have to pay for ride share to commute |
| Sometimes I work until 10 pm. |
| Businesses stay open later in the evening and workers need to get home. This would also put more cars on the road in the evening. |
| They ridership decline is mostly 9-5 commuters. Schedule doesnt need to cater to their needs. Focus on the second shift service workers 3 to 11. |
| It is more than likely that more businesses will reopen by 2022. This includes bars and restaurants. Closing metro lines earlier could potentially put people in dangerous situations, and lead to unnecessary injury or even death. |
| Sometimes I don't get off until 10pm. If the trains stop running at 9pm I would have to catch a Uber home and I can not afford that everyday |
| This plan does not work for me. I am working on flexible schedule and my work day ends 3/5 per week at 10:30. With that new schedule I cannot come home using metro on those days |
| that does not benefit anyone working late, or works off hours |

Proposal to close Metrorail at 9 p.m.

It would help local businesses if the trains ran longer hours so people could get around and go out to bars/restaurants without using ride shares (which are more expensive).

It would kill night life in a vibrant city. Please dont.

I dont mind more limited service in the evening hours, but I still use metro to get home from visiting friends in other parts of the DMV and like to metro home sometimes.

There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy

9pm? It does not affect me but I am thinking about those who work late shifts.Do you have alternatives?

I cannot agree with this as my job is scheduled from 2pm to 10:45 pm so I would not be able to get back home after working.

| Proposal to close Metrorail at 9 p.m. (Spanish) | Translation |
|--|--|
| No cuento con vehiculo y el metro es el unico medio para movilizarme en el DMV, al cerrar el servicio a las 9pm limitaria mi forma de movilizarme, me afectaria mucho. | I don't have a vehicle and the metro is the only way for me to get around in DMV; by closing service at 9pm it would limit my way of getting around, it would impact me a lot. |
| Trabajo hasta tarde necesito poder asegurar a mi empleador puedo quedarme las horas que me necesita | I work until late. I need to be able to assure my employer that I can stay for the hours they need me |
| Porque los horarios de trabajo a veces hacen que uno se quede hasta m  s tarde | Because sometimes work schedules mean you have to stay later |
| no estoy de acuerdo porque muchos trabajos y negocios cierran a las 10. La economia se alteraria mucho y tambien los presupuestos familiares | I don't agree because a lot of jobs and businesses close at 10. The economy would be impacted a lot and family budgets as well |
| No combina con mi horario de trabajo dado que trabajo de noche me afectaria mucho el cierre temprano | It doesn't fit with my work schedule since I work nights. The early closure would impact me a lot |
| Afecta a las personas que utilizan m  s tarde de esa hora, es m  s deber  a ser hasta media noche | It impacts those of us who use it later than that time, plus it should be until midnight |
| Creo que aunque pasen a cada 45 minutos ser  a conveniente que trabajen hasta la 1am gracias | I think even if they come every 45 minutes it would be good for them to run until 1am |
| No, me gusta esto porque yo salgo a las 11- 11:30pm del trabajo o si no a las 12am. y necesito el train para ir a la casa porque no manejo y Uber o Lyft es muy caro a veces, y a veces no hay carros durante esa hora. | No, I like this because I leave work at 11-11:30pm or if not, at 12am, and I need the train to get home because I don't drive and Uber or Lyft are really expensive sometimes, and sometimes there aren't cars at that hour. |
| la 9pm es muy temprano!! si ya es injusto que cierre por la noche, que cierre con ese horario har   la ciudad m  s insegura e inestable por la noche | 9pm is very early!! It's unfair to close at night, closing at that time would make the city more unsafe and unstable at night |
| Porque yo salgo de trabajar alas 10 de la noche | Because I leave work at 10 at night |
| Hay muchas personas que trabajan hasta tarde, por ejemplo las personas de limpieza que salen alas 10.pm y hay gente que vive lejos y le toca agarrar metro, no es justo que hagan eso, tal vez los podr  an que corran hasta las 11pm pero de las 9pm que pasar  a c/d 30mnutos en mi opini  n | There are a lot of people who work until later, for example cleaning people who leave at 10pm, and there are people who live far away and have to get the metro. It's not fair to do that, maybe they could run until 11pm but from 9pm on they could run every 30 minutes in my opinion |
| Horarios de salida de trabajos son mayormente alas 10:30 de la noche | Most people leave work at 10:30 at night |
| Me parece bien | Seems good to me |
| Si van a cortar el horario de cierre, tendr  an que poner buses que puedan dar el acceso a las personas que usan ese horario, para llegar a su destino. | If they're going to cut off the closing time, they would have to add buses that can provide access for people who use it during that time, to get to their destination. |
| Trabaj   en las noches y siempre tomo el   ltimo Metro de las 11 pm | I work nights and I always take the last metro at 11pm |
| Hay gente que trabaja hasta muy tarde , metro deber  a seguir hasta las 11 pm | There are people who work until really late, the metro should continue until 11pm |
| Esto no beneficiaria a personas que trabajan en restaurantes en jornada laboras de la noche y que no pueden salir antes de las 9 recomendar  a que descargar  n est   propuesta | This wouldn't benefit people who work in restaurants on night shift and can't leave before 9. I would recommend rejecting this proposal |
| No pueden cerrar a las 9:00 pm demasiado temprano. Las personas necesitan trasladarse sobre todo en horarios nocturnos es indispensable | You can't close at 9:00m, it's too early. People need to get around, especially with night schedules, it's essential. |
| Porque las personas que no disponen de carro necesitan un horario hasta las 11:00 pm o mas. | Because people who don't have a car need a schedule until 11:00pm or later. |
| Salgo a las 10 de mi trabajo ,la m  jor opci  n para muchos sin duda ser   comprar auto y descartar uso de tren y bus | I leave my work at 10, the best option for many people would definitely be to buy a car and stop using the train or bus |

| Proposal to implement Red Line turnbacks |
|--|
| I still need to travel to Rockville |
| Opening the Silver line as soon as possible is key to the regions economic recovery. |
| My metro is cleveland park. If it is closed I cannot take metro. |
| This would not affect me. |
| Totally unacceptable |
| Need trains more often |
| 15 minutes everywhere |
| I do not take the red line regularly |
| Arriving every 15 minutes is way too sparse and would lead to severe overcrowding in a time we aren't even sure COVID will be gone yet. In addition I transfer train lines. I would definitely be late for work if I had to transfer and trains only arrive every 15 minutes |
| this would negatively impact my commute to work |
| stupid idiotic idea number 2 |
| Transferring from one line to another could get really hairy with such long gaps between trains. |
| This would double my commute time |
| I dont ride the red line often, so fine |
| Need service at grosvenor on a regular predictable basis |
| Again this is really a deal breaker for me |
| I live near Grosvenor-Strathmore - do not want reduced trains! |
| Concerned about lack of service at wheaton as a daily commuter |
| Not nearly frequent enough. |
| Be awkward if trains were every 15 min |
| Not during rush hour, I hope; every 15 minutes wouldn't be enough! |
| 15 minutes is still too long, but I also dont ride the Red Line, so, |
| Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members. |
| Metro is a joke, thanks to the union. |
| This would dramatically impact my ability to get to work. |
| I live by Grosvenor and use it often. This is why I moved here. Please don't shut it. |
| Every 15 minutes is way too long between trains on the red line |
| Ren more trains. Even 15 minutes makes taking the train to unpredictable especially when you dont actually follow a schedule or have a time table published. |
| See last message |
| 15 minutes is a long gap between trains |
| I rely on this service |
| Please do not close Grosvenor-Strathmore Station! |
| would have to stop using metro and drive to work if this happens. |
| Again, not ideal but workable. |
| Not frequent enough"trains will be too crowded |
| Just seems like it would lead to a ton of confusion |
| This would be a pain for me trying to get from Twinbrook to Bethesda. Thinking about how packed the train was pre-pandemic, these cuts would make it so much worse. |
| too long |
| Way too slow |
| Don't ride the Red Line so no problem. |
| Dont use the red line |
| I can drive to work faster than this. There would be no point in taking the train |

| |
|--|
| Proposal to implement Red Line turnbacks |
| Again 15 mins in btwn trains seems crazy |
| Would be workable if trains arrived on a pre-determined schedule |
| No. During rush hours on weekdays, frequency should be doubled. |
| do not use the red line, but 30 min headways mean no ridership at those other stations |
| I do not take the red line. |
| This seems like the stations and trains will be overwhelmed during rush hour. Ive gotten sick to the point of almost passing out on crowded metro trains before - crowding people in like sardines seems like a horrible and dangerous idea. |
| I would want the red line to arrive more often than that--especially during rush hour. |
| Well, I live at one of the stops at the end so would be inconvenient. |
| Nowhere near frequently enough |
| I don't use the red line, so this would be okay. |
| Depends on how the Post-Covid ridership resumes and when. |
| Do not cut service. |
| Gaps between trains are too long. |
| Would like more frequency |
| I do not ever ride the red line |
| Red line is not part of my usual travel. |
| Doesnt impact me, hurts the suburbs. |
| 30 mins out is too long |
| Too infrequent |
| I try to stay away from the Red Line as much as possible. |
| Trains will still be co |
| Based on the volume of riders from shady grove all traffics should start at shady |
| Too long wait |
| Trains arriving every 15 minutes at all stations on the Red Line, at least during rush hours in the morning and evening would be a better alternative. |
| As long as Grosvenor-Strathmore stays operating I have no problem |
| I ride to Wheaton |
| I work at twinbrook station. Every 30 min is entirely useless |
| Trains should operate at normal time intervals. It is expected people will be back in the office in January 2022. |
| Do not use the red line |
| Im on the red line but not at one of the stations that would be every 30 minutes. However, I imagine that by those being so infrequent, the trains that I would be on would be REALLY crowded. |
| Union station and NoMa should both be open |
| Service at Silver Line should be more frequent. |
| This would be very difficult to work for commuting |
| I do not use the red line. |
| If you do this you should return the funds that Montgomery County has offered for this service. |
| Do not live or work on red line |
| The 15-min interval is manageable but would be inconvenient. |
| Trains should be every 15 minutes at Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen |
| I have children in childcare in Md and a job downtown. The margin of error in my commute is about 5 minutes. I could barely manage it before The pandemic. Need redline trains every 5 minutes.. |
| Not good, but may be necessary given available resources. |

| Proposal to implement Red Line turnbacks |
|--|
| What about rush hour? |
| 30 minutes is excessive to wait. |
| Very insufficient frequency |
| I still believe rush hour service is needed, reducing the amount of time between trains during those periods. |
| While I will not be impacted because I live in the inner city, I worry about the people who live far out whom it takes a while to conjunte for anyway |
| Dont use red line very often |
| There is a very large ridership at Shadygrove/Twinbrook stations. I would definitely drive instead of only having a train every 30 minutes. One issue could cause me to miss daycare pick-up times. |
| I dont take the red line so this would not affect my opinion |
| This would work for our needs |
| Do not turn metro into a commuter rail |
| I never go past silver spring |
| I dont take the red line. |
| Please increase train frequency during rush hour 7:30-9:30 AM and 4-6:30 PM |
| Again, this is going to cause major chaos. |
| Too long on Wheaton headways |
| I expect more people will be working at the office and more capacity will be needed. |
| Not frequent enough trains |
| Not frequent enough at White Flint |
| Too long between trains. Lead to crowding and being late to work. Will not ride |
| Dont Red Line Much |
| Only every 30 minutes??? are you kidding |
| I like this |
| Operating is fine but why such a long wait inbetween trains?! |
| 30 minute intervals are much too spaced out to be useful for commuting. This would ONLY work if it became like real rail (Amtrak) where trains kept to a PUBLISHED SCHEDULE, which Metro never does. |
| 15 minute headway is too infrequent for rush hour |
| This is the worst proposal. |
| will work |
| This would result in severe overcrowding during peak travel times. |
| Every 30 minutes is not ideal. A lot of ppl commute from the suburbs too, this would drive people away from using it |
| This doesnt affect me |
| I don't understand the change. It's not clear. |
| This is a great idea! |
| This is just stupid |
| I do not ride red line |
| Trains need to arrive quickly at all stations |
| This is not frequent enough. |
| Too long to wait, but I dont care about stations after Grosvenor |
| We need to have rush hour service on all lines. |
| 30 minutes is too. long. How about 20 minutes? |
| I would maybe only use the Red Line due to it running more often. |
| No issues closing down the red line. |

| |
|--|
| Proposal to implement Red Line turnbacks |
| Regular and frequent train service is essential; otherwise, I'm taking my car. |
| This makes it very hard for those living outside the direct city center to plan for getting into work |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| Shady Grove should be every 15 at least |
| I use Forest Glen to travel to and from work. At this time I am remote through Sept 2021. This will not work if I am supposed to return to work but will be fine if I am still remote |
| Needed: more train coverage |
| i take the train at white flint and 30 minutes is shockingly infrequent for a capital city |
| I would worry about frequency at the Grosvenor stop at rush hour |
| This would make it incredibly difficult to commute to work from grosevenor |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| We need pre-pandemic schedule!! |
| This plan sucks too |
| This would not be ideal for me, but I could make it work. |
| Live in the District and commute to Rockville. |
| Metro should not take away the Grosvenor station. It is critical to many and is also one of the prettiest Metro stations. |
| I use the Orange and Silver lines |
| Very unfair to people who live beyond Grosvenor. |
| OK by me |
| I do not live along this line, but would definitely not take it if it was traveling only every thirty minutes. |
| LOL |
| Why are the headways so long? |
| Cars will be too crowded |
| We fought hard to eliminate the Silver Spring turnback. I use the Forest Glen Station and that would add extra time and leave me outside in all kinds of weather when I just need to go one more stop. |
| I do not like trains every 15 minutes. |
| We might all be back at work. This is ridiculous. |
| this is a good plan |
| I want more often schedule |
| Again, all trains should service ALL stations. |
| Again, 30 minutes between trains for business commuters is not at all workable. |
| Again, headways are too long, even between Grosvenor-Strathmore and Silver Spring. |
| I use metro (no car) and this would make traveling around using metro very inconvenient. |
| 10 minutes on the main part of the red line is bearable, 15 mins is not. |
| Typical travel does not require the end stations |
| Yeah still trash for the same reason I mentioned earlier. |
| For me personally I commute from silver spring down so this would work. But again think 30 min is too much and suggest 20 for the other red line stations. Maybe 20/10 |
| I do not anticipate utilizing the red line in Maryland. |
| 30 minutes is too lengthy between trains - wheaton |
| Need more trains at grosvenor |
| As someone who lives past Silver Spring on the Red Line, this would guarantee that I would not take Metro to work. |
| Just shut down the system. You arent using it for its intended purpose. |
| Shut it all down. Rip up the tracks - sell for scrap. Sell off everything else. You will save a lot of money. |

| Proposal to implement Red Line turnbacks |
|--|
| See previous answer. Still too much time to catch a train. |
| This would add significant time to my commute |
| Too far apart on most of the red line |
| inequitable for working poor throughout region |
| Too long between trains at Shady Grove. The trains going to the end of the lines would be too crowded. |
| Trains are already busy enough to just barely allow social distancing north of Grosvenor-Strathmore as it is, without switching to every 30 minutes. |
| We need grosvenor |
| I don't take the red line. |
| Rush hour should be prioritized with train frequency |
| This makes the service useless. It's no better than a commuter train. No functional city can work like this. |
| 30 minutes is very infrequent. |
| Trains need to be more frequent than 15 min during rush hour. I am fine with part of the proposal that makes trains less frequent for red line stations north of Grosvenor. |
| We should not be cutting back on public transit. |
| Too infrequent |
| As a person living in Glenmont, no. That would not work. At all. |
| This would make it so that I have to drive to work. I take the red line from Glenmont. |
| 15 minutes during rush hour is absolutely unacceptable. |
| WHAT ARE YOU GUYS DOING |
| I currently live in Silver Spring, but I might move close to one of the further out stations in which case this would not work for me. |
| I don't use the red line out that way much anymore, but back when I did, this would be very difficult to get to work and I couldn't afford to uber or have a car. |
| If I miss the train at 7:00 am in Wheaton I will be 30 minutes late to work.... |
| This would make it more likely I would travel by car. |
| 15 minutes is unacceptable at busy times and stations |
| Too infrequent! |
| I live near the Takoma Station so this proposal wouldn't affect me |
| Trains more than every 15 minutes are needed. |
| I could see fewer trains to outlying stations but time interval is too big |
| The timing listed above would be fine if you keep Grosvenor open past 2022. |
| I work at a hospital and need more frequent transport times. |
| I am at Takoma; 15 minutes between trains all day every day is not good |
| Same thing: fine as a temporary measure. |
| I live in Arlington and work in DC this doesn't affect me |
| I don't use the red line. |
| I don't use those stops |
| Less desirable, for sure, than regular service, but I could work with this. |
| Having a young daughter, and grandparents on the red line this plan would be very inconvenient |
| Do not ride red line. |
| Same as above- every 15 minutes is not frequent enough |
| N/A, no use of red line. |
| Same issue, waiting 15 minutes for a train at rush hour doesn't work. |
| going back to the grosvenor - silver spring trains every other train is fine. but the 15/30 minutes is not sustainable if ridership comes back anywhere close to pre-pandemic. |
| Cut staff not service. Most metro workers should be fired |
| I do not use the red line so this question is not applicable to me. |

Proposal to implement Red Line turnbacks

This is personally selfish. I dont use that route during those times.

Too much of a wait

same issue - longer commute, more time inside the station or on a crowded train with potentially infected people? No thank you. more trains to provide less crowding please.

Rush hour at White Flint is already incredibly packed with trains every 10 minutes - every 30 minutes means that some people literally wont fit OR will have to be squeezed in like sardines.

I dont typically use the red line.

due to delays that can happen I question the efficiency of this proposal as a red line frequent flyer

Brutal

Again, trains will be too full, specially during rush hour periods. This is a COVID risk.

That is a long time to wait for trains during the week

I change from orange/silver to red at metro center. I suspect this plan will cause a crazy/unacceptable wait time at metro center.

Red line less relevant to me because I live in Arlington

I live on the red line and this would be rough for during the week/rush hour. It would be ok for weekends.

Way too infrequent.

If trains are going to be that far apart you must find a way to make them scheduled, a la commuter train schedules. Missing an unscheduled train by a minute and having to waste 29 mins is not workable.

I do not ride this route.

I think every other train is a good idea but 15 minutes is too far apart

I need regular train service during peak mid-week hours to go to-from work each day. Every 15 minutes would be an inconvenience because it is not frequent enough.

Budget cuts will not solve underlying issues in profitability, the federal government needs to give more funding

Same comment but I will be less likely to take metro since I live north of Gaithersburg and it will be hard to time trains

Covid-19 and social distancing within trains.

I dont ride the Red Line

Why are you cutting service in 9 months as opposed to now? Well be back to work in 2022.

Georgetown Prep students and at least four apartment complexes near by

What about rush hour or weekends? Is this the proposed schedule ALL the time? This is not made clear.

We need more frequent travel options, not less!

The availability is crucial. My work hours can vary and this would dramatically affect my ability to be at work when I need to be.

Somewhat better proposal but still very long wait times

Existing service already results in severe overcrowding; I frequently have to let 2 trains pass before I can board. THis solution is untenable.

N/a

Same comments as previous, as I enter the system at Grosvenor

I live on white flint and this would make my work commute a nightmare. North bethesda has become a commuter hub and this ignores the growing commuter population.

Red line has tons of residents using it. Trains would be packed and impossible to social distance and your staff won't enforce a mask mandate or social distancing. Trains should arrive during rush hour every 2-3 minutes

I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I dont care if they have to raise my taxes for it.

N/A because I do not travel on the red line

What a terrible idea. After years and years of higher and higher fees, and all that time spent on upgrades, to then reduce the number of trains for people who need to get to work. I have a hard time grasping worse ideas from policymakers.

Service to Grosvenor Metro MANDATORY very frequently

This would add roughly 30 minutes to my commute time daily. I continue to use the Red Line 4-5/week and depart from Twinbrook. I would consider switching to driving into work if these changes were implemented.

| Proposal to implement Red Line turnbacks |
|---|
| Same as previous comment |
| I take the train from White Flint and cant image waiting 30 minutes for a train. |
| Need better service |
| This will significantly impact commuters and increase traffic/crowding on the other trains |
| Rarely use the red line |
| With my work I occasionally have to take the red line between Bethesda and Silver Spring, unfortunately, my schedule is never consistent so it makes its difficult to know what adverse effects this would have |
| Also awful |
| i get on at Wheaton. |
| Not bad at all |
| I use the Wheaton station - would complicate/delay daily commute |
| Again, having trains every 30 minutes during weekdays rush hours would negatively impact commuting. |
| DO NOT CLOSE STATIONS! |
| We need more trains especially during rush hours. |
| This will add appropriately 120 hours a year to my commute. No thanks. |
| As long as Grosvenor-Strathmore remains open, I can make this work. |
| Every 15 minutes is too much time between trains. |
| Again, 30 min service is not acceptable. This will cause ridership to fall even further. You cannot expect people to wait 30minutes for a train. |
| More trains please |
| Far too long between trains. This would definitely negatively affect my commute. |
| Again. This is a commuter line. It is essential that trains are plentiful |
| This would make it impossible for my husband and I to commute to work via METRO rail. |
| We live at the Grosvenor stop and would appreciate more frequent trains. |
| I rarely ride the red line outside of WDC. |
| Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors |
| Please remove peak hours fares if there are not additional trains during peak hours. |
| 15 minute intervals for the core of the red line is barely acceptable. Anything higher is not. |
| Every 15 minutes at rush hour would be a nightmare. |
| Too infrequent. |
| If it is set times, e.g. 1, 1:15, 1:30 and 1:45, that would be ok but not if it is random 15 minutes. |
| I would like for the station to keep it's existing time schedule. I take the Metro daily. It is critically important for my commute. |
| Again, over crowding and safety issues. |
| I think a 20 minute span is better. |
| I get off at Forest Glen so this would significantly increase my commuter time. |
| Not during business hours. This basically changes metro from a subway system to a commuter rail and gets rid of a ton of the utility of the system |
| I dont take the red line |
| Regular metro service is necessary to perform my job |
| With the increased development of housing/commercial from White Flint to Shady Grove, trains should not turn around at Grosvenor |
| We need more service and public transportation. We cannot close metro stops. |
| ten minutes is better and five is best |
| I think trains should run more frequently |
| when i take the metro to work, i go to shady grove. meeting this schedule will be a big inconvenience and i may not take metro much at all. |
| I challenge WMATA board members to go stand on a platform station in 30 degree weather for 30 minutes. |

| |
|--|
| Proposal to implement Red Line turnbacks |
| Core Metro stations retaining 15-min service makes this proposal tenable. |
| I live near Grosvenor & take the train regularly excrr et Pr during this past year |
| This is absolutely unconscionable! |
| Way too long between trains. |
| This proposal essentially says if you live outside of the inner core, you are not important. |
| Same thoughts. We shouldn't be extending times between trains, but shortening them to encourage more use. |
| Not applicable |
| Same as my previous answer - this would be an awful commuting experience for Maryland residents. It's already busy (pre-covid normal ridership) and this would make it unbearable. |
| I do not use the red line, so this change would not affect me. |
| THis would hamper my ability to arrive to DC from Wheaton metro |
| I don't ride metro anymore |
| want to keep Grosvenor; moved here to be near this station |
| Absolutely not. Frequency is abysmal |
| Every 30 minutes is not frequent enough during the morning rush hour. |
| 15 minute headways between trains is simply too long. 10 minutes between trains during the day is the most Id be willing to accept and still use the system. |
| thats the way it used to be. not ideal, but doable. |
| need trains every 7 minutes maximum on red line at grosvenor starthmore station |
| I will not wait 30min for a train. I will find an alternative way to get to work or telework |
| Limited train service at big stations like silver spring would create unsafe ridership situations |
| Not affected by outer stations on the Red Line |
| Major rush hour congestion |
| If youre not going to provide adequate service, people are going to drive to work. Why not impose a parking tax to fund Metro? |
| The red line is always crowded. 15 minutes between trains in the city is unacceptable. |
| Same as before. I think if trains are not coming every 3 min it will be impossible to get on |
| I dont ride this portion of the Metro |
| Red Line--I seldom use it. |
| Dislike the time frequency. Otherwise, the every other aspect okay. |
| I would like to see full red line service into Maryland |
| I do not use this section of the system. |
| Again, trains should arrive more frequently or people will just take other services. |
| I dont use the redline that often. |
| Not frequent enough. If a train were too crowded for my stroller to fit, it would be 30 minutes just to get on a train. |
| I dont ride those stations enough to have an opinion |
| Again, too much waiting leads to overcrowding and less likelihood riders will stay with the Metro. this then leads to a decrease in ridership |
| Trains arriving every 15 mins on the Red Line is much too infrequent |
| I am unlikely to need to use the Red Line outside Silver Spring or outside Grosvenor-Strathmore. Those suburban areas I think do not need as much Metrorail service as DC proper, where fewer residents have cars. |
| My commute to work would be greatly impacted. Trains need to arrive more frequently |
| Isnt this the way it was before? I admit, as a Grosvenor station traveler, it worked just fine for us. |
| Trains must stop at Grosvenor-Strathmore! |
| Given the prominence of Strathmore Hall in the areas cultural scene, I believe it needs more service on evenings of performances, but also please keep in mind the many educational programs and rehearsals that go one in that building.... |

| |
|--|
| Proposal to implement Red Line turnbacks |
| If public transportation is convenient, we use it. If not, we drive. |
| Not workable for commuting |
| Too infrequent! |
| Same reason as previous - 15 minute headways is not practical for commuting. On the weekends, it would be fine, but it would be a huge pain for commuting. |
| These waits are unacceptable for a major commuting route. Will lead to crowding, already a problem, and further decrease ridership and related revenue |
| Works for me but I am not a big Red Line user |
| Difficult timing, seems like the trains in the morning and at night for peak rushhour would be overcrowded and therefore not serve the majority of people that need the service. |
| Too long of a wait |
| This length of delay would adversely affect my commuting and would encourage me to use alternate means of transportation. |
| I am reliant on the Blue line for my daily commute but have little use of the Red line. |
| I will likely be going back into the office and having a train arrive every 30 minutes would severely impact my commute. |
| Im often at Shady Grove waiting for a train late at night. Having to wait half an hour is unpleasant and unsafe. |
| 15 minute headways during rush hour are still too long, but if the question is whether every other Red Line train would run a shorter route, then that wouldnt affect me. |
| 30 minutes between trains is ridiculous |
| I do not take red line train |
| This is less horrible than proposal 1, but only gives my apartment an excuse to double my rent |
| I use rockville |
| seemingly the best of a bad bargain; again, if commuting to the city for work, these kinds of waits are not good |
| I am moving into a new development being built at Shady Grove Station with the assumption that trains would run much more frequently. This will not only affect my daily commute, but may also negatively affect the value of my new home. |
| NIH campuses are served by the shady grove and Rockville stations and have been working in person, cutting down on train frequency would hinder transportation. |
| Please don't cut the suburbs off. That's not how public transit works. |
| As with option 1, not ideal, but it would be OK. |
| Understand restrictions |
| The 30 minute stations would not affect me, but I do not want to wait 15 or more minutes for a train in inner DC. |
| This would result in inconveniences to many commuters and crowded trains. |
| Red line has been an issue in the past with service levels. This is not ideal. |
| yes, screw the people in rockville and make them pay more for bad service |
| I do not regularly use the red line. |
| This is way too much time between trains. |
| I dot mind having fewer trains go all the way to grosvenor, but Red line trains only every 15 minutes will wreak havoc! Jeez. Before the pandemic they ran every 4-6 minutes during rush hour. |
| Again, 15 mins seems like long intervals |
| I travel from Shady Grove so I would face waits of up to 30 minutes |
| 15 min is too long since trains are never on time |
| Still inconvenient, I would have rethink my work schedule in order to make it work |
| Intervals too long after Grosvener |
| Same as previous answer. It will be impossible to get to work. Given that pre-pandemic sometimes I couldnt even get on a train because it was so crowded, this is absurd. |
| Trains should arrive more frequently during rush hour. |
| dont use the red line very often so not sure about this one |
| I ride the silver line |
| I don't need the red line, so no problem |
| This would impact many of my employees needing to commute from Rockville to Cleveland Park |

| |
|--|
| Proposal to implement Red Line turnbacks |
| This sounds like either no service or very poor service |
| This would eliminate most of the stations with parking on the red line, making it hard to park and ride. |
| Hate the idea and would make travel to downtown DC a nightmare |
| Waiting 15 minutes (or more) for a train during rush hour- with a transfer- would significantly increase my commute time to unacceptable |
| The pandemic has changed ridership at an unprecedented rate. It's not fair to close items just people return back to work. |
| Too long a wait! 30 minutes wow |
| I live on the orange line and it is very busy. We need trains more than every 30 minutes! We are going to be going back to the office in Fall 2021 and will need to commute every day. Trains every 30 minutes is a nightmare scenario. |
| Dont reduce service at stations |
| I need trains more often between Grosvenor-Strathmore and Silver Spring |
| every other train staying within the core would be ok |
| I believe trains will be too overcrowded with that amount of time and having to wait for multiple trains to get a spot is not feasible. |
| If this approach results in the closure of stations in Clarendon and Virginia Square, I am not supportive. These are high density areas that need to be appropriately services |
| 30 min is too long |
| Trains must run every 15 min during the week, 20 min on weekends and holidays. |
| 30 minutes is too long to wait |
| Trains would not run frequently enough |
| That would be too long to wait between transfers and for people who work towards the end of line stations. |
| 15 minutes max time i would prefer |
| See previous comment. |
| Not sure about this one |
| I have to be to work by 6:00 am so I need the trains to run every 5 minutes. |
| This would severely impact arrival and departure times at work. |
| 15 minute wait times are really challenging |
| I do not commute or plan to commute using any of these stations on the red line. |
| 30 minutes is too much time in-between trains. |
| No. |
| Im moving to be near the Forest Glen metro station and am currently planning on relying on the metro in order to get to places, including work when it reopens, and having to wait potentially 30 minutes for the train would make using the metro untenable |
| A big concern that I have about this is safety: a person waiting alone on a platform for 30 mins is more vulnerable to experiencing crime or assault, especially if they are without protection and not a male. |
| Ridiculous! |
| The trains should come much more often!!!!!! |
| Every other train being a reduced portion of the line is ok, but it's unclear from how this question is worded if the 15 - 30 minute intervals are part of the proposal. That is way too long between trains. |
| Im fine with the trains reaching those stations mentioned with 30 mins, but 15 min for every other red line station is totally untenable |
| Where is Grosvenor |
| Impossible to rely on this level of frequency. The trains will be packed once folks are vaccinated. We will all have to drive. |
| Too infrequent during rush hour |
| Same issue as I listed before. Overcrowding trains and not reducing fares. |
| By January 2022, it seems likely the federal workforce will be back to in-person work instead of telework. If that is the case, running trains only every 30 minutes will mean the trains are overcrowded and commuters will not be able to rely on metro to get to work. Why dont you cut service NOW, while most people are teleworking rather than in January 2022 when most people will be back to in person work? |

| Proposal to implement Red Line turnbacks |
|--|
| Same reason as before |
| This is far too long between service. I strongly oppose this. |
| I'm at white flint and this is not frequent enough. |
| This is the death knoll for Metro. |
| Very difficult to get to work on metro with this schedule. Will look for options. |
| Please ensure there are more trains that run to Wheaton. Every 30 min is not enough! |
| This plan works since the farther stations arent as heavily populated as the urban stations. |
| 30 mins is too late need every 10-15 mins |
| I live near Shady Grove, my significant other lives near Twinbrook, and we both commute into DC. |
| Again, if metro service deteriorates, I'll stop riding metro |
| Not as long in between trains. |
| Again, this would lead to overcrowding and no flexibility. |
| Wait times too long |
| I live north of Grovesnor. Will there be enough parking at grovesnor to absorb people drive there to catch more reasonable trains and get a seat or space? |
| Would add major time to my commute to work |
| Same as previous, I don't think every 15 minutes is frequent enough |
| Many CUA students take this train line, this would be a terrible change. |
| I dont care about the red line in that region |
| This is a better compromise. |
| Rarely use the red line, so N/A. |
| There is a huge commuter community at those lines. The parking lots are always full, this would cause a huge back up further down because so many people would be getting on further up at the red line. |
| Need more frequent trains |
| Not during rush hour. |
| This makes sense, given the relatively lower ridership between those stations |
| Wheaton is a typical destination for my households Metro travel. More cars will only clog the roads and the air. |
| That would make it impossible to get to work on time if you miss your train. The difference in a half hour in getting to work is enormous, plus this lack of trains would cause them to be extremely packed. This is a very concerning once people start to go back into the office. |
| No soon enough |
| I dont ride the red line. |
| I dont anticipate needing to use that end of the Red Line. |
| To infrequent and would lead me to own vehicle use |
| Same answer as before, by January 2022 things will be back to normal and so Metro should return to normal service at all stations. |
| Need more frequent transport options |
| I don't use the red line in Maryland ever. |
| Yes |
| Please consider the amount of commuters who join the line at shady grove and the amount of people that will be on the train during rush hour if businesses fully open back up in person. |
| I do not use the red line. |
| I dont take the red line |
| Im not on the red line, but I think adding the extra capacity here would be helpful |
| I cant tell how this proposal is different from the last one for lines other than the red line |
| very bad idea |

| Proposal to implement Red Line turnbacks |
|---|
| Do not use the red line |
| need trains to arrive more often to make travel easier. the reasons i prefer not to use metro is it is too slow |
| I ride Orange |
| NO CUTS! |
| If this is implemented, ALL stations need temperature control- AC in the summer and heat in the winter. Likely not worth the financial trade-off. Cant say how many times Ive inadvertently single-tracked the entire Metro by fainting because its too hot/cold. |
| I am not a regular rider so it would work for me personally, but it might be an issue for regular riders. |
| Rockville and shady grove metro are paramount to businesses, colleges, and hospitals. |
| this is also death-spiral nonsense. dont do this either. |
| Too complicated for average rider |
| Every 15 minutes at Union State on a weekday morning is going to be insane. You will have people 10 deep or more on the platform. |
| I run a business that depends on non-rush hour Red Line traffic; this would doom my business and how I market it to the greater community. |
| I don't ride the red line |
| Way to long in between trains. |
| Same as before, how is rush hour not going to create lines around the blocks? |
| Headways too long to be useful for commuters to downtown. Those of us with options will drive instead. |
| I use twinbrook station |
| I travel weeknights at 6pm and 9 pm. I cannot wait 15 minutes for a train. |
| Not enough service. |
| Even worse. Assuming this means trains every 15 for grovesnor |
| Would prefer every 15 min trains on all stations |
| I do not take the red line when transporting to and from work, so this would not affect me in that situation. It could be inconvenient in other situations. |
| How does this plan save any money? |
| Trains will be severely overcrowded. |
| This plan is terrible. There are not enough trains, you might as well shutdown. |
| Could this change be done only when it is not rush hour. Need access to routes when going to work and leaving work |
| Depending on the new working model |
| Way too much time leading to crowded, full trains, with more delay waiting for the next 30-minute train. |
| 15 minute headways on the red line is awful, considering the red line is the most congested line. The turn backs are not as big of a deal, but I would prioritize car travel to far out suburbs. |
| I rarely use the red line and when I do its the closer in stations. |
| Too long of n between |
| same comment as the previous question. less frequent trains = more crowded trains = less safe |
| Access to Wheaton is essential |
| I frequently travel to shady grove station and this would make travel significantly challenging |
| I do not use the red line to commute, thus this has no impact on me. |
| That is too long between trains. |
| Grosvenor is closest to my house, so yes. |
| See same concern as question one. |
| I do not ride the red line so although this would work for me, I still object to trains arriving every 30 minutes. That is too infrequent. |
| Will not get to work on time |
| live near Grosvenor no problem |
| Sucks for everyone north of silver spring |

| Proposal to implement Red Line turnbacks |
|---|
| You need have trains arriving faster than 15 minutes, that is unacceptable as is it! |
| I dont travel on Red Line |
| So many people depend on being able to ride the Red Line from Grosvenor-Strathmore to Metro Center. |
| I don't take the red line |
| I dont use the Red line so this doesnt impact me |
| This would work but wouldnt be as convenient as proposal 1 |
| I dont currently use the Red Line on a frequent basis. |
| You will lose my fare because I will have to drive to work |
| This would take too long, I would drive instead |
| Trains should run more frequently to account for social distancing. |
| From my casual observations, this would actually make a lot of sense. |
| See previous answer. |
| It works for me selfishly, because I live in the 15 minute zone |
| I am a shady grove user - this would add significant time to my commute and would not work. |
| I would not use Metro if I had to wait 15 minutes for a crowded train during rush hour. This would be useless given Metros poor operating history. Metro should focus on reducing employee pay and benefits include the prior overblown pensions. |
| Again during rush hours this train frequency is grossly inadequate. |
| As I wrote, Id rather you increase the pricing than decrease availability of trains. |
| More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable. |
| I don't use the res line regularly. |
| I would like to see service increased to normal levels once the COVID-19 situation improves. |
| We are on the orange and silver lines. |
| I dont ride Red. |
| Full service needed...we are the daily workers whos jobs depend on us |
| I use Metro to go downtown to work |
| See response to proposal 1. 30 minutes wait at my line, forest Glen, would be a disaster and delay my commute significantly. I'd have to drive and would rather take the train. |
| i live at strathmore. BUT its not really fair to those living north of me |
| No because some people don't live near there |
| Too much time between trains |
| I do not live or work on the red line, so I cant answer this confidently. |
| I live in DC and work in rockville, it would significantly increase my travel time if only every other train stopped at rockville. |
| Train cars would be too full after Shady Grove. |
| This hS been done before, so i would think that someone at Metro has the ability to determine if it worked or not. |
| n/a |
| With trains every 15 minutes at rush hour the trains would be too full for me to board. They were often too full for me to board operating at 6 minute increments. |
| I live at the Grosvenor-Strathmore metro stop and have found that the train is already too full by the time I get on it many days. Having more frequent trains originating at the Grosvenor-Strathmore stop (like used to happen) would be fantastic. |
| Trains would be absolutely packed going towards shady grove. |
| as long as the arrival times can be known through the app, then one can pan arrival to the station accordingly |
| Least disruptive option |
| TEMPORARILY --- until normal ridership resumes |
| Very inconvenient to get downtown at proper times |
| I dont typically travel red line. when I used to during red line construction, this was a super frustrating part of the service, and half hour wait times during the week are unacceptable |

| |
|---|
| Proposal to implement Red Line turnbacks |
| I very rarely ride the red line. This plan would have almost no impact on me |
| The red line is the least important line (in my opinion) so slowing down red line service seems to make the most sense. |
| Reasonable. |
| See last answer |
| Too long of a wait between trains |
| I wouldn't be happy about waiting 30 minutes but I could live with it. |
| 30 minutes? That is too long! |
| Not sure how this is different than proposal #1 |
| i do not take the red line so this does not affect me |
| Trains coming from Rockville north will be too crowded for others to get on at Grosvenor or south |
| This does not work at all for passengers at the stations where trains arrive only every 30 minutes. The number of passengers at the outer Red Line trains is significant--the train is typically fully (pre-pandemic) by the time the train reaches Grosvenor-Strathmore (coming from White Flint). |
| I live on the red line and having such reduced service would highly impact my ability to travel around the city in a timely manner. |
| 30 minutes is way too long to wait. And the change used to be packed when they arrived every five minutes. I think a lot of people will be going back to work by then. |
| Please don't close the Grosvenor-Strathmore metro!! I need it to commute to work. |
| Not enough service during rush hour, especially at Grosvenor Strathmore, where Metro or someone just spent a fortune adding parking spaces. |
| A better proposal, but still inadequate. |
| I rarely take the red line, so this wouldn't affect me. |
| Would hurt ridership from those living outside Grosvenor and Silver Spring. Long wait times plus crowded trains will lead to more people driving/uber-ing |
| Keep Grosvenor open and running regular schedule. |
| This is insane. Every thirty minutes, and every 15 minutes? You should try this. It would be refreshing to see you all lose your jobs. You are attempting to manipulate us with this survey. What you need to do is replace most of your incompetent administrators with fewer, more competent, lower paid people -- which you could easily do -- and put the savings into *transportation* like making the trains run often and on time. |
| There would be no point in riding the metro, at that point I would ride share or consider driving in. This is adding hours to my commute. |
| It will impact my commuting time |
| That is a long time to wait at those stations which are farther out. |
| Commute times will skyrocket and make the Metro an unreliable method of traveling into the city in a timely manner. People will begin looking to alternatives, and ridership could decline further. |
| Dont travel on redline |
| every 30 minutes is way too short for my travel needs. And it would mean less people would rely on the metro because of the infrequency, damaging the metro's reputation |
| every 15 minutes is still a ridiculous length to wait for trains |
| Given climate change this is a very poor decision. Only encourages more cars |
| We need to keep everything as is..... |
| I like this better because it gives me option of taking a train every 15 minutes to get closer to home, Forest Glen metro, and then taking bus, walking or getting picked up. |
| same as previous - 15 minute frequency is only workable if the trains stick to the scheduled times. |
| This option would only work if the Cleveland Park station stays open |
| Still too infrequent |
| Wait time is far too long |
| These stops would be difficult to get to for regular commuting. With this change, I would likely not use the metro very often. |
| This seems to be too big of a time gap in between trains and will likely overcrowd available trains |
| Selfishly because I rarely use the red line. Reducing trains on the outskirts of the system seems reasonable. |
| Fuck this plan |
| That duration between trains would make the Metro not worth using. |

| |
|---|
| Proposal to implement Red Line turnbacks |
| 15 min is far too long a headway for trains passing through the downtown core. |
| Would be helpful to be able to look up arrival times online before going to the metro. |
| This also seems reasonable and goes back to the previous schedule that was manageable. |
| The train length alterations is great, but even every 15 min won't be sufficient during rush hour |
| Selfishly, it does not impact my commute |
| This interval is unacceptable. Please raise fares instead. Or make trains wait longer at stations. As it stands, if I miss these 30 minute trains, I would have to wait for an additional 30 minutes before the next one. |
| If you really want to increase ridership INCREASE the service. Build it and they will come. |
| Reducing transit frequency (and reliability) reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself. |
| I dont use the affected stations. |
| Keep the peak-hour schedule 8 to 10 minutes |
| As with broader proposal - 30 minute headways are unacceptable. |
| The turnaround at Grosvenor and Silver Spring is fine for every other train, but they should still be more frequent. |
| only use metro center to unio station |
| commuting would be more difficult to get to work on time |
| 15 minutes is too long during rush hour. |
| I do not take the red line. |
| We purposely live within walking distance to Twinbrook because Walter Reed doesn't have enough parking for all of its staff. Some incident that would cause us to miss the train by a few minutes would have us late for work having to wait a whole half hour for the next metro |
| too long to wait for trains - would make commuting too cumbersome and would clog traffic on the roads along the red line |
| When we go back to the office, my home station is White Flint. This reduced service would be devastating to my commute, and lead to massive overcrowding at Grosvenor. |
| This does not impact me |
| I would need more frequency. |
| I take silver line, not red line |
| i need to take Grosvenor metro ecery day to dupont or metro center to change trains. for work |
| I am moving near Forest Glen metro and believe by 2022 communting to the office will be back to normal |
| Service every 30 minutes isnt frequent enough for people to rely on Metro. |
| I ride from Forest Glen. This change would be catastrophic and would mean I would stop riding metro and drive to commute instead. |
| I dont take the red line at all so this does not affect me |
| Not enough service would mean packed trains. |
| Metro is the most convenient way for me to access DC, especially since I work there. Without that, I have to drive and Im worried about the safety of the roads. |
| I live in West Falls Church and would meet clients throughout downtown. Not much on red line is applicable to me. |
| I don't use the red line. |
| Same reasons as previously stated |
| I dont use the Red Line to commute for work, but I do use it for non-work related travel in the District. Such a schedule would decrease my use of the Red Line. |
| Seems reasonable. I think residents would appreciate slower service at all stations vs. elimination of some stations |
| Might work if trains are more frequent at Silver Spring |
| Do not cut level of service. |
| Support the plan of some red line trains operating between GS- and Silver Spring only, but even every 15 minutes feels too infrequent. |
| Trains have to be closer together than 10 minutes, or even 8 minutes. |
| I live at wheaton station and this would be highly inconvenient when commuting into dc on the red line |
| Trains arriving every thirty minutes to the select stations wouldnt affect my commute. But trains only arriving every fifteen minutes during rush hour would mean that trains are absolutely packed, and I might have to wait for other trains to come by. |

| |
|---|
| Proposal to implement Red Line turnbacks |
| Blue, silver, and orange lines need to run more frequently |
| No- 30 minutes between trains (I live in Rockville) is too long. I would just end up driving. |
| I rarely ride the Red line |
| Works for me but for those who cannot afford to live close in they will be penalized - seems like a social justice issue |
| Glenmont and Shady grove need more frequent train due to being the only trains on those lines. |
| Not enough trains to handle the amount of passengers on the redline |
| I take the train at Shady Grove every day and it's always crowded I will need more than every 30 minutes for the train to come |
| Very much in need of grovesner/strathmore |
| The red line is the most crowded train line; this would absolutely not work once commuters are back in offices, which is likely by January 2022. This would make WMATA one of the worst-run metro systems in the world. |
| Anything less than full operations is unacceptable. |
| Didnt you just increase service to the stations you are now cutting service to? |
| Same as before. Service every 30 min will result in even less ridership. |
| Trains need to arrive at least every 7 minutes during rush hour |
| Too long wait time |
| Not helping for travel |
| The first part wouldn't impact me but 15 mins between trains on the redline is way too long |
| See previous answer. Not rush hour service! |
| not frequent enough |
| I used Forest Glen the most and cannot wait 30 minutes for a train. |
| Whilst this proposal is OK, the frequencies are awful. 15 mins already not good and at 30 minutes you need a timetable. |
| Full service from Grosvenor on redline needed. |
| Mass transportation doesnt work if it is sporadic. What other national capitol has a metro system that runs trains every 30 minutes. This should be taxpayer funded rather than expanding beltway. |
| 30 minutes is too long to wait |
| This would be chaos -- so many people live in Rockville and the surrounding areas and travel into DC to work-- when we no longer telework, the metros are going to get overrun. This is not sustainable, please dont do this! |
| I would prefer every 10 minutes from Silver Spring to Grosvenor |
| too long between trains |
| I have not lived in the area during non-pandemic times and therefore am unsure which stops I will be using then, especially since I am considering moving to a more dense area once businesses begin to reopen. |
| Every 15 minutes is not enough |

Proposal to implement Red Line turnbacks

Many riders who frequent the Shady Grove metro station, are already affected by MTAs reduced commuter bus schedule. I currently use the transit link card which allocates \$255/month to Metro. The commuter bus schedule has already been cut to the S (holiday) schedule, which runs the buses every 1/2 hr verses 15 minutes. Currently if I miss a bus the most I have to wait is a half an hour. IF Metro Rail reduces trains to run every half hour, versed 7 minutes during rush hour, I as well as other commuter bus riders who miss a metro train, we must wait a half hour worst case in metro, then run the possibility of missing a bus which will add 1 hour to an already 1-1/2 hour commute which would cause most of us to rethink whether to ride metro at all. IF I pay out of pocket for parking, in DC, I can reduce my current commuting time by 1/2 hour, which means if I drive my commute is 1 hour each way. IF Metro cuts trains to every 1/2 hr, my commute balloons to 2-1/2 hr each way.Â Metro stands to lose \$255/month already guaranteed per MTA program rider.Â Metro better figure another way to reduce costs, because sooner or later, you will have no riders and you might as well set up beds for the homeless people to sleep in the station, because that will be the only clientele you will have. I would not be surprised if the commuter bus companys pick up the slack to provide bus routes all the way in to DC from Maryland and take that business from Metro.Â Most buses also stop running at 6:45 in the evening from Shady Grove, which means I would have to leave work at 4:30 in the afternoon and cannot work Administratively Uncontrolled Overtime for outages which is sometimes required by our job.Â I currently can stay as late as 5:30 and have been able to make the last bus from Shady Grove in the evening.Â If this cut happens, I will certainly miss the last bus, then I have to pay an exorbitant taxi fair home from Shady Grove. It would no longer be worth my while to ride Metro.

again, rush hour is horrible on the Red line. However, this is, what i believe is previously done. It was very inconvenient.

I would work with any schedule if it means keeping all stations open.

This is too long in between trains

Run all trains to all stations every 15 min at minimum

I use Grosvenor-Strathmore daily and the reduce frequency will significantly delay my commute

15 minute differences during rush hour are extremely problematic. The red line is packed especially around dupont, noma, and tenleytown. Most times people wait for a lighter car because slamming into a car especially in the midst of coronavirus is dangerous. This would be extremely negligent to do

Dont live close to the red line.

Trains arriving every 30 mins is too far apart

Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office.

I use grosvenor station for red line and would like the train to come every 5 mins ideally.

I live right near Grosvenor station, so does my husband and so do my two grown sons. We all travel to Metro station and to Union Station on the Red Line daily

This would make my commute extremely long or just not work at all

I live in Twinbrook and this is unacceptable. A change was made last year to stop the turn around at Grosvenor. With the many new housing developments in process for metro areas north of Grosvenor, more train service is needed. This also impact lower income communities that live north of the Grosvenor who depend on the metro more than those who live closer to DC.

Same comment as before. This would destroy traffic and typical commuting once COVID quarantine is over.

Theres could be an issue with Strathmore if the last train left after a concert

As a city resident who seldom visits the outer suburbs, this would not affect my usage of the metro.

This is not a workable plan for working.

The principle is fine, but the frequency is not nearly enough. If Metro doubled the frequency (every 7.5/15 minutes), that would work.

Will not work for hourly workers that could get fired for being late for any reason. This is classist.

I use metro to commute 2 stops to and from work. I could drive to my office faster than the proposed wait time between trains and may seriously consider changing my method of transportation if this proposal is implemented.

No. This is awful. People will depend on the Metro. Don't make drastic cuts like this when you don't know what the future will be like. This will be a death spiral for Metro if you proceed.

You need more than 1 train every 15 minutes during rush hour for the red line! They are PACKED.

This is terrible for commuter coming down from mid/north Montgomery County.

It would seriously screw up my work schedule as I live in Forest Glen.

My preference is to continue working from home rather than having my commute time elongated by service cuts.

| Proposal to implement Red Line turnbacks |
|--|
| This seems more reasonable than 30 min all around |
| The wait is too long |
| I dont use the red line or these stations |
| As noted, Ill ride again when I am vaccinated. |
| White Flint to Silver Spring! |
| Trains should run more frequently to save travel time |
| I currently do not use the RED LINE. |
| Not my line, but it sounds pretty rough for people on the Red line. |
| This makes it very difficult for people in sections with already limited public transportation to be even more isolated. |
| I dont commute on the red line |
| I generally do not take the red line out that far so it doesnt apply to me as much, though I would oppose doing so. |
| Same comment as prior- I understand starting a train at end of line means all stations impacted but the difference of 30 min will overcrowd trains. |
| I personally do not travel to the end of the Red Line so focusing service between Grosvenor-Strathmore and Silver Spring would work for me. |
| 15 minutes is certainly better than 30, but this will still lead to overcrowding of trains. |
| Fine |
| I live near the Shady Grove station |
| Don't really travel on the red line and do not commute on it, so I don't feel I'm informed enough to say how this would work. |
| yes, suburban trains are not my priority |
| I only take the Red Line when Im in downtown DC trying to get to Union Station. |
| Same as before the expansion |
| This proposal basically means going back to the way Red Line service used to be. |
| Lots of people onboard at Shady Grove. Prefer not to have Grosvenor as a terminus. |
| It seems like this would be difficult to keep track of for commuters. |
| Its not fair. I know Metro has cuts because of the Covid 19, but dont let the people suffer. Especially in the African American areas. Seems we always have to suffer for things that are not our fault. |
| Please do limit service to Wheaton. |
| It would increase my commute time. |
| I dont ride the red line. |
| 30 minutes is too long to wait |
| I commute from Grosvenor-Strathmore to Medical Center |
| Trains every 30 minutes? Why bother? |
| Trains arriving every 15 minutes at all other stations on the Red Line would be too slow |
| Times are too far apart for practicality |
| Sounds logical -- I dont live on the Red Line so this doesnt impact me. |
| Trains need to arrive more often |
| My two sons are visually impaired. Metro is their sole means of transportation. Reliable and timely transportation is vital. |
| 15 Min between trains during rush hours is not realistic for me, an essential worker, to get to my work in a timely matter. |
| It is essentially that Grosvenor Strathmore run as normally scheduled. |
| I dont take this line to work |
| Too few trains at some of the highest use stations |
| Inadequate to facilitate use of metro |
| We live closest to Grosvenor-Strathmore which also has good parking so a train every half hour would be too long between trains. |
| Commute would be too crowded and take too long |

Proposal to implement Red Line turnbacks

Im okay with the trains operating b/t Grosvenor-Strathmore and Silver Spring, but the time intervals between trains are too long.

This area is congested - this change would be a disaster to Riders in this area.

Shady Grove is my station. If trains only service the station every 30 minutes I won't ride Metro. Period.

I do not use the Red Line.

It would work for me for there to be reduced service at the ends of the lines, but I would still like to see the center part of the route happen more frequently at rush hour

Closing stations would be unacceptable

Again, trains need to be on a specific schedule to make this plan work, and also no incur rush-hour fares.

Don't use red line often

I know a few years ago every other train used to start at Silver Spring. That is great for me, but I still think the timing may produce exceedingly crowded trains. But Im not entirely sure.

Would work for me, but maybe not others. Are we not trying to reduce cars coming in to city?

Intervals at all red line stations is inadequate for rush hour post pandemic

With more people moving further to the suburbs during the past year, the further out stations would likely see an increase, not decrease in ridership.

You should be working to make metro more accessible not less

Need more frequent train service from Grosvenor to Union Station

I'd be using forest Glen station. If it's 30 minutes I might as well drive. And it's too difficult to coordinate arriving there a couple of minutes before when you're not walking distance and have to drive and park.

use Orange, Silver and Red lines to get to work. Using Metro would take to long and I would drive to work instead

Would prefer greater frequency during rush hour.

I would hate to miss that train! Would it be guaranteed to arrive on the half hour?

Infrequent stops will cause greater crowding and make it harder for people to justify riding the metro if they are not safely allowed to social distance.

15 minutes is too long to wait for the next red line train.

This would work for me and is still better than closing some stations

if I come off telework I will find alternative to Metro

Again, that is excessive time between trains.

I frequently use the Rockville metro stop and would like more trains to run to stations beyond Grosvenor

15 minute headway's are unacceptable but the every other train to Grovesnor does not impact me.

i still feel that the other stations will experience impacts, but the plan (as stated) will work.

I dont live in these areas

Keep public transit open!

I dont use the red line, so this does not effect me.

15 minutes between trains is still too slow, especially for people transferring, who could have to wait over half an hour on each trip.

Ive never ridden the Red Line -- defer to Maryland riders to have relevant commentary.

I do not ride the red line from these stations. However, trains every 15 mins at downtown stations is not enough trains as the red line is one of the busiest metro lines.

I don't ride red line so won't weigh in

I would never ride the Glenmont side again and switch to the Grosvenor station

Keeps trains running as they are. Get more federal aid.

This would make it difficult for me to travel north on the red line

15 minutes is not frequent enough. But 30 seems reasonable for the further out stops.

Frequency of trains should be more than 30 minutes, especially during rush hour

KEEP THE ELEVATED WALKWAY CROSSING RT7 LEESBURG PIKE OPEN AND ACCESSIBLE TO PEDESTRIANS DURING DAY AND NIGHT DESPITE WMATA OPERATIONS, THIS ELEVATED WALKWAY IS ESSENTIAL FOR PEDESTRIAN SAFETY AND IS AN INTREGRAL PART OF THE TYSONS COMMUNITY.

Sharing ridership data to support this would be helpful.

| |
|---|
| Proposal to implement Red Line turnbacks |
| I live at Grosvenor and rely on the Redline for work. The more frequent, the better for me! |
| I plan on not or rarely taking metro till the pandemic is done or I am vaccinated and it is undercontrol. After it though metro needs to be more proactive about giving good service and expansion. |
| limits use of Shady Grove station |
| Is this a joke? How would trains every 30 minutes help anyone? You wouldnt be able to get on. Did Uber write this survey? |
| 15 minutes between trains at Grosvenor is too long. |
| As long as there are MORE red line cars so riders aren't packed in this will work. I've commuted 30 min via metro for 30 yes, but won't - even after being vaccinated, if I have to stand on a packed platform or am standing crammed in a car. |
| I live in NOMA and do not go out to the suburbs that the red line services. 15 minutes is better than 30. |
| I fully expect to return to work and cannot spend 30 minutes waiting for a train between both legs of my commute everyday. Would seriously look into driving instead |
| As long as schedules are up to date and passengers can plan to arrive before train arrives at station to get on |
| Again, travel every 15 minutes on the red line would make it hard to find space, if you miss your train you have to wait another 15 minutes in a dirty station being catcalled. |
| The back ups and congestion on trains would be unimaginable |
| I dont live on the Red Line so i cant opine. |
| Please keep Grosvenor/Strathmore as part of the regular route. It is such an important central station and our very large neighborhood (which includes apartments, housing developments, condos. etc.) depends on it. |
| I live in Rockville. This service is too infrequent. |
| too limited |
| This would make riding Metro significantly less feasible for commuting to work. I would not be able to meet family obligations in the morning and commute to work on time should this schedule be implemented. |
| Im not a RedLine rider, but it seems too long an interval at those stops. |
| This is too long to wait during rush hour for glenmont. Glenmont is a major station with two garages. The trains will be too crowded if ridership return a to anything resembling normal. |
| This plan would allow the core of the network to keep more service than the outlying stations |
| Unclear if this reduces rush hour train frequency--like previous comment, reducing rush hour train freq. would be bad for commuters and clog train stations |
| Red line is already overly crowded. This would further render Metro unusable and send it into a death spiral. Work harder to get Federal Funding. |
| Im blue and silver line |
| I still worry about overcrowding during rush hour. But previously, more frequent trains beginning at GS worked well. |
| I dont use the red line, but this seems more reasonable |
| Increasing the interval between trains during the week is not a good idea |
| too long an interval for train to arrive |
| Keep the metro the way it is! |
| by not going to the end of the line for each train, more space would be freed up on certain trains during rush hour. |
| Works for me because I would be in the more frequently serviced zone. However, this likely would not work for folks further out. |
| I do not use the red line. |
| A member of my household would likely commute via the red line. Trains running along 15 minute intervals would amount to considerable inconvenience and time wastage over the long run. However, I have no objection to reducing service along the peripheral metro stations. |
| not bad |
| I depend on the medical center stop. |
| I don't typically travel on the redline. |
| I do not regularly take the Red Line, so this would impact me minimally. |
| Same reason |
| See my last comment. |

| |
|---|
| Proposal to implement Red Line turnbacks |
| Red line isnt as traveled but this still feels like a not good solution. |
| Trains should be more frequent. |
| By January 2022 things will have reopened. This will not provide enough capacity on the red line. |
| I would not ride Metro if I have to wait 30 minutes for trains near my closest station. Also, will just lead to more overcrowding at stations like Silver Spring, so driving to a station with better train service will also not be worth it. |
| Way too long to transfer between lines |
| I love at Glenmont and need to get to work on time |
| this is better than the first plan that I previously answered. |
| Red line is redundant with metro bus service. |
| Because I use the Grosvenor station, it is acceptable. I would not like to have to wait 30 mins. for a train. |
| Frequency should be doubled during rush hours on weekdays |
| Wheaton is my home station; this is unwelcome. |
| I walk to White Flint to commute, but a potential 30-minute wait would absolutely not work. |
| The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming. |
| Why would this be implemented in January 2022? By then I think well be back to almost normal, this would be useless. |
| This has no impact on my travel on Metro, but would seriously impact commuters seeking to arrive at their places of employment on time. |
| I use Grosvenor- Strathmore station. |
| Since many commuters drive to the end line stations and park, this would make commuting by train difficult |
| I don't ride the red line. |
| Too long a wait |
| I do not commute at those stations |
| I live in Maryland cutting out stops could be very detrimental since I don't own a car |
| Same as before. Too infrequent for 2022. |
| I live in Falls Church City. Cant remember the last time I took the red line anywhere, so it wouldnt affect me. |
| Express trains that skip stations are needed if trains are going to run so little. |
| Makes access to the courthouse in Rockville too difficult |
| Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station. |
| Find the money. Northern Virginia is rich enough. |
| I personally, use the Grosvenor-Strathmore station and ride downtown. |
| I live in Wheaton. We need more train service here. |
| That is way too long of a wait for a train at rush hour. |
| Not applicable to me; but this seems like it would cause more crowded trains during rush hour; these lines are already quite full |
| I use Grosvenor station and get off at Farragut, so this proposal favors my stations. However 15 minutes is too much time during normal rush hour, which will be back in Jan 22 |
| Will make thing worst |
| I live off the Silver Line in Fairfax County. |
| Wont be traveling on the Red Line |
| Since I have to change from one line to another at Metro Center, the likelihood that my commute would be extended to an unacceptable level is a concern. Since I can drive in in 22 minutes, if it takes me 50 or so to use Metro, I might go back to driving. |
| We dont use the red line, so these proposals would not affect us. |
| 15 minute intervals too long on red line. |
| See previous answer. |
| I dont take the red line |

Proposal to implement Red Line turnbacks

Commute to and from work. When pandemic is over resume your service to normal pre pandemic levels

Whats the purpose of this proposal & what is the end goal of doing this. Again I am paying for a fare that will not be reduced!

This would likely work for me. I only use the red line to get from Fort Totten to Silver Spring so these service cuts would have little impact on my travel habits.

I live near the Glenmont station, so a train only every 30 minutes would be very difficult.

Only every 15 minutes during rush hour is not enough.

The White Flint station has always had tremendous commuter traffic, which I expect will get back to normal in 2022.

I think having every other train operate between Grovesner and Silver Spring is a good idea, however the frequency noted is not enough.

I commute on the Orange line.

I believe trains are needed more frequently

This is a better plan but still insufficient service for weekday rush hour.

The Grosvenor-Strathmore station is very important and needs to stay open and running.

The red line isn't a part of my commute or regular use

Please don't do that. It'll literally slow people down

These are busy stations that require better service.

same as for previous proposal

I rely on the red line to travel and get places quickly. I need trains to come more than every 15 or 30 minutes

Trains arriving every 15 minutes still turns the metrorail into a commuter rail system - this is preferred to the 30-minute intervals, for sure(!), but it still does not allow the metro to effectively operate as a hop-on/hop-off city subway system one can count on to get between the office, appointments, etc.

NO I work all over the city and this would cause significant delays even more for me

Except rush hour OK

I commute downtown from Rockville every work day. This change would significantly extend my commute time. I have intellectual disabilities and cannot drive, so Metro is my only way to get to work.

15 minutes much better than 30 minutes

Unable to social distance on metro, result with need to drive to work.

The stations where trains would arrive every 30 minutes are areas that are ripe for increasing density and by having 30 minute headways you decrease the desirability of those areas and instead push development into already expensive and dense areas.

Bring back the rush hour train to Grosvenor station

Also a good place as all stations on the red line can stay open

Metro should be planning to increase service not decrease. This will bring ridership back when vaccines are widely available this summer. Decreasing service will put Metro into a downward spiral.

I live & work by the yellow/blue lines, so this wouldn't impact me

Although I don't take the red line, this proposal sounds like it would be problematic for many people who will rely on the red line again for their transportation needs.

Trains only every half-hour at Twinbrook would be very difficult for my family, as trains only every half hour would make it very difficult to make childcare drop-off and pick-up and manage the commute to Twinbrook.

Less trains make sense due to less travelers. But don't close stations.

I don't ride this leg often, but run more trains all the way to the end.

Too many people would either have much larger commuting times or put more cars on the road.

See prior response.

Only because I use the NoMa stop.

Stay in the district on red line

Commuting hub from Shady Grove, adds about 24 minutes to commute.

If this is what is required for Grosvenor-Strathmore to stay open, then I support it. Otherwise, I prefer more frequent trains.

Such a low frequency will cause people to seek alternatives to using Metro.

Proposal to implement Red Line turnbacks

This would not be helpful for work and living

I dont think this survey properly accounts for the fact that the government has ramped up the vaccination schedule and that likely by the end of 2021 more folks will be going back into the office including those in the federal government many more ridership for Metro

more useful due to the amount of people moving through downtown and less on the outskirts

Im at Cleveland Park. During Rush Hour, its impossible to get on a train when they come frequently. I wouldnt be able to use Metro is they were this infrequent.

I am worried about trains being even more crowded during rush hour.

I live in a high rise at Grosvenor Station and there are people who work in the building and ride the Metro. Therefore, it would be unwise to close it down or make the in between arrivals too many minutes long.

A very long wait time is not good at the stations furthest away, where nearby public transportation options to the city are limited.

I dont use the red line often so this wouldnt affect me much, but this would still be a major inconvenience to many others

This isnt frequent enough service downtown.

One of the things that make a good and effective public transport system is the frequency of trains during heavy travel periods (rush hour, etc). This also discriminates against people who get on the train further north than Grosvenor. I recommend trains coming every 5 min. (if not more frequent) at every station in order to make taking public transport more attractive.

These changes are severely limiting and racist.

I commute from WF -- see prior comments

As I am off shady grove this one would impact me the most. However as a system the 15 minute intervals are more likely to handle ridership as people rebound post vaccine. Responding to increased ridership is critical to avoid permanently losing riders due to india-packed trains (but that level of ridership fixes some of the revenue gap problem).

Too infrequent.

Same as above.

30 minute intervals are way to long. This is not appropriate level of service for a major metro area.

30 minutes? Quicker to walk to work in Dupont from Twinbrook.

Necesito mÃ¡s trenes en Grosvenor.

I rarely, if ever, use the red line so this does not impact me.

Id commute from Shady Grove and waiting half an hour for a train is unacceptable. As an end point station, this one is heavily trafficked

We need Rockville access

This is a terrible idea. The trains from Shady Grove are going to be so packed, why would you do this?

Plans like this one allow for ease of use with proper planning in (my) the commuter's day. Reliable transport!

No. Rush-hour interval should be 4 minutes, at least on the Red line between Grosvenor and Silver Spring

Need interval to be shorter, 5 min for stations between between Grosvenor-Strathmore and Silver Spring, 10-15 acceptable at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

This is a bad plan for the people of that area. Again, WMATAs focus should be on finding funding to expand service, not cut it.

While this would certainly be inconvenient for metro riders who live past Grosvenor-Strathmore and Silver Spring stations, the number of people on red line trains, even during rush hour, that exit or board at these stops is small compared to other stops on the Red Line and would only be disruptive for a small group.

Although this plan works for me because of my location in DC, this will inconvenience commuters from outside the city itself that depend on the Metro to get to work/school/etc.

We just got rid of this. It will only reduce ridership further if you re-implement it.

Every 15 minutes not frequent enough for essential workers who need to report to work daily

My station is white flint, I need service at least every 15 minutes!

By January 2022 I will be commuting to work and my destination is White Flint metro. If I could only get to Grovesnor in a timely manner that would be a problem and a huge inconvenience to have to disembark and then wait 30 minutes to go one metro stop.

Absolutely NOT/ my family relies on red line w wet week day for work AND school

Proposal to implement Red Line turnbacks

Living in Rockville, I depend on the Metro for my access to DC. Trains arriving every 30 minutes would make it impossible for me to reach the city without a car. Without a car necessarily available, such timings make it significantly more difficult to meet appointment times, and will result in me having to avoid using the metro. Also, many lower income people do live in the suburbs affected by this change, and will significantly impact the use of public transportation.

Again, not enough service for a time when passenger volume will be much higher.

I dont go out to the far reaches of the red line very often, but that sounds pretty inconvenient

This would be HORRIBLE for commuters.

This would make commuting times via Metro too long and force me to drive instead.

I do not currently use the red line on a daily basis.

This is too infrequent.

I live in Alexandria and work in DC so this change would not affect me.

i primarily ride silver and orange

same as previous question

Turnbacks were clunky before and theyll be clunky now.

This plan severely impacts area residents that live outside the beltway, which will disproportionately affect working class folks who have to live farther out to find reasonable housing options.

This is disruptive to ridership

This will make everyone late

Same answer as previous question

Thats fine. I specifically live at my residence for its ease of access to Grosvenor station on the way to Walter Reed- I know many military personnel in my area that do the same thing. As long as that route isnt effected we are good to go.

This poor level of service is unacceptable in a major city transportation system.

Very unfair to those who live farther out on the red line and only decreased travel on metro due to the pandemic.

This sounds like a very good option. The same could be done with the orange/silver lines from Arlington to Metro Centet

Better than the last one, but I commute to my workplace at White Flint. It was GLORIOUS when the stupid "every other train stops at Grosvenor and doesn't go to white flint" thing ended.

The Red Line is my main line and I know myself and others who rely on it need more frequent service than 15 or 30 minute intervals.

I dont use the red line

I don't use the red line to commute

Access to Grosvenor Metro critical for our family including a person with disabilities to get to work

Again, while this wouldnt impact my specific commute (NOMA to Bethesda) the reduction of service has caused major crowding and disruptions pre-pandemic.

I do not use the Red Line.

I use Grosvenor

With trains arriving every 30 minutes, car travel would probably be preferred due to the wait time.

See previous comments

You need more frequent service than this during rush hour

I would personally not be affected by this change.

Trains should run every 5-10 minutes. At most 15 on the weekend.

I don't commute that far out, but it would be untenable for those who do

Need to run more often for rush hour

Train arrival time is too far

I assume this means no changes to times at other stations. If so, this is ok.

This schedule still is too slow for workers based in Maryland.

Proposal to implement Red Line turnbacks

This would create delays in getting to work. With a family, it is quite an imposition if there is any delays at home to start with the day and then have to wait extra 30 minutes to get a train.

Many people from northern areas drive in to park at the furthest points on the red line (e.g. Glenmont and Shady Grove). However, speeding past and not stopping at the other stations would not have an impact.

15 mins between trains would be better.

WMATA should not reduce any service.

Too infrequent for rush hour

in the dead of winter you would have to wait in the bitter cold if you missed a train or it came early

Again. I want to do whatever feasible to keep this Grosvenor station open

No one should have to wait 30 minutes

That works as long as grsvenor continues every 15 minutes

WMATA should adjust based on peak hours for this. I would imagine a lot of people being at the stations from Shady Grove to White Flint where if the metro car is too full, they would have to wait another half hour for the next train. Making people wait would greatly decrease ridership.

Again, social distancing would likely be zero with these headway's, making myself and others not likely to return to riding.

The proposed headlines are too long. I expect to be back at work in person in January 2022 and would need more rush hour trains to avoid overcrowding

I live at white flint. This would suck. I would never use metro again if this was the plan.

No no no no...if we miss a train we miss our bus connection ...I would need a new job

Need more trains during rush hour. This proposal would have detrimental effect on traffic into the city.

Unsure what our future work from home posture will be. We are planning to move out of our apartment to somewhere further from metro to save money.

This makes travel inefficient and I would have to look for alternatives to metro

Every 10 minutes and expand to white flint and Wheaton

During rush hours, it is essential to have frequent trains. Imagine the working parents who earn hourly wages. They may miss the train, and have to wait for 30 minutes before the next one; consequently, it may lead to loss of wages.

You have literally one job, run more trains

I usually dont take the Red line in this direction so it would not affect me.

Limiting the 30-min service reduction to one line and only certain stations might be more doable than Proposal 1.

No because this infers Grosvenor is closed

This could significantly delay my commute to work

I dont ride red line.

Not frequent enough

N/A

Too infrequent

For Metro to be convenient for commuting, I would need to see more frequent headways than 15 minutes.

Insufficient red line service.

I dont really take the red line.

I get in at Twinbrook 30 minutes is too long between trains and would make my work commute very difficult.

Those stations seem less busy

really difficult getting out to shady grove without the more frequent trains

Seems to provide acceptable service level to densest stations

30 mins is not frequent enough

Main corridor for workday commute.

I don't ride the red line.

Yes, I only travel from Grosvenor to DC so this would not affect me.

Proposal to implement Red Line turnbacks

This plan would overwhelm parking at Grovesnor Strathmore as people who would use White Flint and the other stations would travel to Grovesnor to assure 15 minute service and then get in their cars to drive home increasing traffic on Rockville Pike and Montrose Road to get to 270. .

I would have to drive to work instead.

The answers to Metro's problems are not to reduce service and make it less valuable.

I would prefer more frequent trips, but if this is the only way to have service then I prefer this proposal over closing my station, Grosvenor.

No. You already tried this around 2018, and it was horrible for those of us living at the end of the red line.

prefer every 15 minutes to White Flint, then 30 minutes between White Flint and Shady Grove

Many people live near Grosvenor-Strathmore and ride the metro daily. I use it everyday to get to work. This would not be a great option.

Too long between trains.

Every 15 minutes is reasonable service

People were already stacked on top of one another on busy red line segments when the trains were every 4-6 minutes and sometimes would not fit on a train. The overcrowding that would result from 15 minute intervals would make the system unusable by people with disabilities.

I dont use the red line

More people have moved out of the city to find affordable housing. that means needing access to the Red line to get to work in DC. Having to plan half hour to an hour extra means it would be easier to drive to work which will completely negate what WMATA wants to do by saving money. It will cut ridership even more.

I don't use the red line

I dont travel here, but this is unacceptable.

I dont use the lines that would have 30 minute arrivals, so Im less averse to this plan, but I favor more frequent service with more limited hours at night or on weekends.

That schedule would not enable me to commute to work; I would have to drive.

you need a budget for salaries of over 100 worthless positions you have just because youre afraid of letting some of the double and triple managers and not for the stations. Your construction crews have people managing managers that dont do anything.

30 minutes is too long between trains

Better than previous option, but I still think this will drive people away from trains and onto roads. Thirty minutes is a long time to wait for a train.

This covers, Im sure, the majority of riders needs.

While this would work for me personally, it would cripple outer service along the Red Line and means a lot of people would drive into downtown instead.

The red line works best when they run from Glenmont to Shady Grove with no turn back.

30 minute wait is too long for commuters who rely on Metro to get to work every day. Every 5 minutes as before the pandemic is appropriate.

15 minutes is too long to wait!

I don't take trains after they switch to 30 min arrivals (in normal times) because they are often late, on top of being too delayed.

Again interval is too long, trains will become very crowded.

This plan does not work because of the 15 minute intervals. I anticipate working from the office again by 2022 and I need to be able to get back home after work in time to pick up my son from after school care. 15 minutes is too long for me to rely on metro to get me back on time.

I commute via East Falls Church. It would be difficult to park at the other stations which are not convenient to my house

It sounds terrible for those customers - having lived in that region before, it already felt like trains were slow.

I seldom ride the red line.

I live between Grosvenor and Medical Center, so this would not affect me.

Again, trains leaving on the hour and half hour would allow me to better plan my trip and hopefully not spend one hour a day on the platform.

Shady grove needs to be 15 minutes

I do not use the red line very often and not for business.

Again if rush hour trains were implemented so travelers safely then rain at this speed during no. Rush hour it should be fine

I do not take the red line to get to and from work.

Does not impact me.

If I am going to a special event (ex. - Capitals hockey game) from Shady Grove Metro, this could create unsafe crowds.

| |
|--|
| Proposal to implement Red Line turnbacks |
| As long as station hours remain the same. Waiting longer for a train is OK I guess. |
| Im on the silver line |
| Proposal will not adequately serve customers during rush hour times. Anticipate overcrowded trains, alienated customer base, and double commute times. |
| Headways are too long to ensure reliability of service. I would rather drive a car if thats the case, especially if I have an appointment. |
| My stop is Grosvenor Strathmore. |
| My daughter is disabled and needs to ride from Rockville to Medical Center Mon - Fri. It is very upsetting for her to have to wait too long for the train. |
| As someone who boards on the metro at Twinbrook station, a 30 minutes interval seems too long. |
| 15 min intervals please if possible during morning and evening hours used to be called rush hours |
| I rarely take the red line outside of downtown, so this proposal would not have an affect on my typical Metro usage. |
| I do not use this part of the Metro system |
| Dont ride red line |
| I dont use that section of the metro lines at all.... So this doesnt impact me one way or another. |
| The stations past grosvenor are so busy too! Even busier I would say. The red line is the busiest line and to cut down the frequency of the trains would cause huge commuter turmoil |
| I dont take the Red Line. |
| see response to previous question |
| Once every 20 minutes |
| Need more frequent train access from Rockville |
| Reducing service hours is better than eliminating service in some locations. |
| I don't head up that way on the red line incredibly often but this sounds like delays will be inevitable and I will be waiting 45 min for a redline train in the city like I have numerous times in the past. |
| Still worried about not enough red line trains during rush hour to meet my commuting needs. |
| Such a drastic reduction in service at forest Glen would require me to terminate parking and train usage w wmata |
| Inconvenient. I suppose people will cope. Bad for our region. |
| Every 15 minutes is far too long between trains during rush hour. |
| I live in silver spring so I depend on the metro getting into DC and need it more frequently. |
| I do not normally ride the Red Line. |
| For environmental reasons and to reduce traffic congestions, WMATA should make Metro train riding more user-friendly. The best way to do this is to run trains more frequently. The frequency of train arrivals should thus be *increased*, not decreased at Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen. European cities encourage their residents to use their mass transit by running more trains. Trains in London, Paris, Berlin, Munich, Rome, Brussels, and Madrid arrive every few minutes. WMATA should do the same for residents of the Washington DC area. |
| Too much time elapses between trains |
| Waiting longer between trains is not as big a deal as having service hours cut or stations closed. People will just have to change their commute a bit. |
| Need more frequent stops/times |
| These are unacceptably long headways for a major transit system |
| Too long between trains even at 15 minutes, and risk of significant overcrowding on trains going to limited stations such that waits could always be in excess of 30 minutes for a train |
| 30 minutes is too long. Wait time should be 15 minutes max. |
| I do not use red line |
| N/A to me |
| Dont really use that line/stations. |
| * this would work ONLY IF trains at Silver Spring are every 15 minutes |

Proposal to implement Red Line turnbacks

To get to Georgetown University Hospital you need to travel from Shady Grove to DuPont Circle to reach the complimentary services. For cancer patients and the elderly this service needs to be there and more accessible to make ends meet.

My station is Grosvenor, and as I mentioned in my prior comment, it's necessary to have more frequent trains to account for the unexpected variations in people's day to day schedules.

My office will return to work by then.

30minutes between trains is far too long

Too long to wait

Whenever Ive had to go to work over the weekends (I take the red line from Dupont Circle to Medical Centre) I feel Ive spent a lot of time waiting for the metro and thus wasting a lot of time on my commute. I worry having the metro running on the same schedule over the week as well would deter people (including me) from taking public transport to work. By January 2022 were likely to have some normalcy with many returning back to work with vaccine distribution likely being complete by then

Wait too long during commuting times

After Covid ends, consider restoring service to current levels. This is a temporary situation.

See previous comments.

Should be more frequent during rush hour.

This would only add to a growing frustration with the red line. Its a popular line because it follows major hubs of residential areas within the city. If the red line were to change like this, Id consider moving off the red line area and likely decrease my metro ridership in general

I use near-in Red line stations.

Every 15 mins is ok. Anything less frequent than that renders Metro useless.

I use Glenmont station, so this would increase my wait times. But it's tolerable.

I'm not a frequent user of red line

Dont ride at the ends of the red line.

The Red Line should be running every five minutes at all stations at a minimum.

Close silver line stations instead of these changes.

This would be extreme harmful to most of the WMATA users in Maryland.

My trip is fromGrosvenor station to New York Ave so this would work for me.

This would not work during rush hour in Jan 2022

I do not use the red line

You will lose more riders by forcing them to take crowded trains when the virus will obviously still be circulating.

I do not ever use the red line.

This sounds great to me - it would have little to no effect on my daily commute.

I pretty much never take the Red Line.

the 30 minutes works for me, but the 15 minutes wouldn't work during peak hours

A lot of people commute from those stations and trains get very crowded.

While I am not impacted by this option, I would imagine those that live past Silver Spring would be negatively impacted. The current housing trends indicate that people with less income have moved further out of DC for cheaper housing. Limiting train services would put additional strains on low-income households who rely on public transportation.

The frequency of red-line trains is integral to my livelihood. I prefer more frequently if possible.

This plan does not allow for the tight window between federal tours of duty, and those using Metro to catch commuter rail trains, e.g. VRE and MARC. Those trains already have very limited schedules. Missing a train when the next would not arrive for 15 minutes, would mean missing a commuter train, ad potentially disrupting a commute by 45 minutes or more. This is incompatible with those who live in the suburbs and need to pick children up from daycares, which already barely accommodate a full days work in the city plus commute.

15 minutes between rides is too spaced out.

Proposal to implement Red Line turnbacks

This change would pose a tremendous inconvenience borne mostly by people without cars, who work outside of their own neighborhoods. This is classist: people who can afford cars will use them to get to work and do chores promptly, while those who rely on public transport will be left with sluggish service. Frankly, this proposal is a disaster for the environment and class equity in DC. Do better.

I live near the Noma metro stop, it is the main station I use. Many people use the redline to get to union station for bussing and trains. Also, the red line is what connects metro station and gallery place.

I expect we will be close to normal in person by then , even if more distanced and with masks. so reducing frequency then is going to cause congestion

This would work for me provided that Grosvenor-Strathmore station remains open and operational.

Waits are too long on the red line even in the inner section

This is a section of the rail I rarely use.

This sounds like a terrible idea, though I don't use the red line. It sounds like the beginning of a death spiral.

If cuts are necessary, this seems sensible given ridership needs in the core Metro area compared to stations that are farther away from downtown.

Need to go to work and maintain social distancing

I am not a daily metro rider.

I do not take the red line to/from work.

It would potentially add 30 minutes to my commute home

I may reverse commute to Rockville. Too infrequent

This should be done based on the community need and use of the station. I am not sure why these stations were selected. 2020 should be taken into account but not used as reasoning to pull back on service.

Less than ideal, but definitely better than the 30 minute option. Still, in rush hour, this is too long between trains.

Trains arriving only every 30 mins would lead to more crowded train cars. This isn't what we want as we recover from COVID.

Should be more frequent.

Trains would be too packed. Unfair to have to wait so long for a train too.

Going to be too crowded in silver spring

I dont often have to use the red line, but I do think this sounds like a more reasonable solution than every 30 minutes for all other lines.

Keep Clarendon, Virginia Square, and 38B line open and have ways for people to get to Bethesda MD from Washington DC.

I live in Rockville and ride form Twinbrook, so NO.

This would not impact me.

N/A because I rarely ride the red line.

I dont travel this section of Metrorail.

I commute from white flint or twinbrook.

I do not rely on the red line and do not live near these stations to properly provide feedback

30 minutes too long at my station . Run all trains to Glenmount

15 minutes between trains at gallery place is wayyy to long to wait, especially during rush hour.

No reduction in service. Full stop.

This timing also seems too infrequent for rush hour use.

While alternating trains ending at Grosvenor might work, the 15 minute interval is far too great.

I do not use the red line for my needs

I dont need to use the red line, except occasionally downtown, so this wouldnt affect me.

As a Glenmont station rider my commute to GalleryPI-Chinatown is already long enough. Missing a train and having to wait 30 minutes for the next is not acceptable

When I return to work in the city, Ill be coming from White Flint. The time between trains makes them close to worthless for commuting. also, by closing Grosvenor-strathmore, commuters will shift to White Flint. I expect that the parking garage will be overwhelmed. It just doesnt have the capacity to handle commuters for both stations. I see the proposed WMATA cuts as a bargaining ploy to get more federal funding. I hope it works because the proposed cuts are disastrous, destructive and unacceptable.

I dont use the red line.

| |
|---|
| Proposal to implement Red Line turnbacks |
| I only rarely ride the Red Line. |
| I use Grosvenor so I hope this would not be affected |
| Never ride the red line that far north |
| I work and use grosvenor every day |
| 30 minute headways are far too infrequent to make Metrorail a viable form of transportation |
| I do not take the red line. |
| When the pandemic is over I plan on returning to the Metro for my daily commute, with 10 rides per week. This proposal would inconvenience that plan, which is the main reason I chose to move close to grovener strathmore station for work a few years ago. |
| Grosvenor station services too wide an area to be taken out of service. |
| The trains have always been full during rush hour going out to Shady Grove. Even with diminished ridership, more trains are needed than the plan above. |
| There will not be enough trains. |
| During regular (non-COVID) times, red line trains are so packed even as far out as Brookland/CUA and even when spaced out every 4 minutes that it can take waiting for multiple trains before you can even fit in one. Trains every 15 minutes would introduce too much uncertainty in the time it takes to commute to work, because missing one would mean waiting another 15 30 minutes (or more) until you can get on a train. |
| Trains need to arrive at least every 15 minutes if not more frequently to all stations. |
| This is not ideal, but is better than the last proposal about reducing frequency of ridership along the whole line. It would inconvenience me living near Forest Glen, but I think it would have the least disruptions. I would hope it would return to usual frequency once ridership is back up |
| Again, delaying departure times would only delay my arrival needs during peak rush hour times. If it is off-rush, dont care because I would be at a more leisure schedule and could allow for the extra travel time. Work days, this would be immensely difficult and stressful and Id revert to driving to work instead of metro service. |
| Same comment as earlier. The issue already is that metro takes significantly longer than driving due to the wait times between modes of transport. This will only make it worse. |
| Trains arriving every 15 minutes would make for very crowded trains and delayed arrival. |
| Rarely use the Red line. |
| I do not ever use these stations. |
| How will you prevent overcrowding with the less frequent trains? |
| 15 minutes is still a long time to wait |
| rush-hour is the same for everyone, so making some trains stop every 30 minutes and others every 15 minutes is useless |
| 30 minutes between trains is not enough for customers beyond Grosvenor-Strathmore. |
| I don't use the red line |
| 15 mins between trains will mean that in the morning I wont be able to get on a train. They will be too full by the time they get to my station. |
| I mostly use the orange line but 30 minutes between trains could cause an hour wait if a train is full. |
| Not sure why Red Line is getting all the attention. I do not generally ride the red line. |
| This would be devastating to the ability to get around for medical appointments and other purposes. It's totally irresponsible. |
| I dont ride Red Line much, so it wouldnt affect me on a regular basis |
| Ill reiterate, at Union Station, if the wait between trains is longer than 5 minutes, the platforms overcrowd and become very unsafe - especially if we are still expected to social distance at some capacity in 2022. 15 minute intervals is NOT acceptable during rush hour. |
| No, this would not work - I live closest to one of the stations that would receive service only every 30 minutes. Service once every 30 minutes is absolutely unacceptable and too long to wait for a train. |
| I only use Orange to DC - baseball games.. support the Nats! |
| I dont use the Red Line often. |
| I take the red line regularly but these stops would not affect my commute. |
| This means from Shady Grove to Medical Center it takes 30 min and may reach 45 min wait to synchronize with Grovener |
| Again, I think trains would need to run more frequently (more like every 5 minutes) during peak times on the red line. |
| I am unsure how often I will be using the red line, but if it is a frequent mode of transportation for me, this proposal would NOT work. |

Proposal to implement Red Line turnbacks

| |
|--|
| The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station! |
| Grosvenor Strathmore is critical to my public transit needs since that is the station I am located at. |
| We travel primarily between silver spring and downtown |
| Again, I am at least comforted that every station would continue to get service, but I need to get on at the ends of the red line. So it's bad for me. |
| Much too complicated. Metro is an essential part of a persons work day and ability to travel for non work. You will also be pushing huge numbers of people to drive to stations rather than walk there with this kind of weird plan. It will not work. |
| Unacceptable. Half metro salaries instead. |
| I use Shady Grove. The thirty minute wait would not work for me. |
| seriously disadvantages low income riders who come in from the suburbs |
| I reverse commute to white flint and this would be a huge headache |
| I dont use those stops, but just because I dont, doesnt mean it wouldnt be detrimental to other commuters. |
| Trains should be more frequent like every 10 minutes on all other stations. |
| Run the trains to the end of the line. |
| The every-other-train proposal is fine, but 15 minute headway's are not |
| I don't ride the red line |
| I dont ride the redline that far out. |
| I don't use the red line regularly, so this would be fine for me. |
| As before, these wait times seem way to long for any traveler to use the METRO reliably. |
| This is even worse than the previous plan. |
| I am fine with this however, the trains get very busy and crowded at Grosvenor and can create a packed situation. |
| Not feasible for rush hour. |
| Even every 15m is insufficient |
| This makes more sense than proposal 1 as ridership seems to go down on outer stations but still trains every 15 minutes is infeasible. It would be faster then to use Uber. |
| This would make it impossible to travel to/from work in a timely manner. |
| Although this is not good for those affected, it would not affect me. |
| I think running every 15 minutes during rush hour would back up commute times and lead to severely overcrowded trains |
| Really punishes the riders who live further out in Montgomery County -- and who may not be able to afford to drive or live closer in. |
| If this makes sense due to decreased ridership, that is one thing. Personally, my office is at white flint so this would Impact my company's use of metro (400 people on Executive Blvd) |
| As long as I know the schedule, I can accommodate my time to coordinate |
| 30 min between train is bad service. |
| It doesnt directly affect me but I know many people who live in Montgomery County who use the Red Line -- and this would be devastating. You are setting the system up to fail when things start to re-open. |
| To be fair this would only have a minimum impact on me. |
| Jan 2022 ridership will be vastly different than pandemic ridership. This plan wont work for daily commuters like myself. |
| Same answer as before. I would be concerned about excessive packing in of riders if there are fewer trains. |
| These headways are unacceptable. They contradict the concept of rapid transit. It is not just the speed of the rolling stock but the headways which need to be short. |
| I rarely use the Red Line, so this wouldnt affect me. However, I cant imagine Red Line riders accepting this. |
| This is too long between trains! |
| The overcrowded metro cars would push people further away from Metro. Other major metropolitan areas in major countries are doing the opposite and here in Washington DC we are opting for the absolutely ridiculous option. |
| This plan could work, but it would make my morning and evening commutes via the red line much harder. |

Proposal to implement Red Line turnbacks

With the increase in people moving to the suburbs, this will make those trains more crowded and create more delays. Currently living in DC and working in Rockville would make an already long commute unbearably long.

Keep the pre pandemic service frequency and level.

I dont understand why the red line receives preferential treatment?

The timing of this would need to coincide with other lines. For example, if Im someone that commutes to Farragut North from Navy Yard, I typically take the green line to Chinatown and transfer to the red line. But if I have to wait 29 minutes for a green line and then another 15 for a red line, during rush hour, that is not a viable option for me to get to work. Especially when considering crowds and breakdowns or delays.

It suits my needs.

like, not enough trains

when I need to get around town to make appointments I can't always make life match to train schedules. 15 min waits during the daytime are too much, too long

Cutting service right as we all start using Metro again is stupid. Full stop.

I live at Forest Glen and the Silver Spring switchback was very disruptive to me, and caused me to drive more. A similar plan would cause me drive to work

I plan to commute from Shady Grove into DC. This would be a disaster.

I do not use those red line stations.

If this time increases, I would stop using metro to commute to work which on the aggregate will cause net revenue to fall greater than the reduction of costs. But you all dont really care and I would be incredibly surprised if anyone reads this.

The areas where you want to reduce service are being developed expressly because of their proximity to metro stations. This change would create ridiculously crowded trains and discourage the continued development. Rush hour would mean even 8 car trains would require passengers to be shoulder to shoulder. You would be creating more discouragement from using the system.

This is not an efficient schedule for me.

Yes it is better than closing the station.

This doesnt affect me personally, but reduces access to and disenfranchises many communities.

I will drive. I want an urban subway system, nt regional rail.

As stated, we have a business on the Orange line with over 50 Metro commuters and growing. I am unsure how this would impact some of our Metro commuters.

Again, one cannot rely on metro apps for exact times. If my commute becomes an hour and 1 minutes, I will opt not to come into work and remain working from home. Also, it is unsafe for women to be waiting on platforms alone 30 minutes.

I plan to move out of the city to the end of the red line and would continue to take the metro into work. The reason I dont want to live by a MARC station instead is because the times are not convenient. Many people live in these outer areas and need to get from Glenmont/Wheaton/ forest glen not only into DC but into and out of Silver Spring for work

Trains running at 15 minutes could be very crowded at peak times (especially during the parts of the Red Lines between NOMA and Dupont Circle).

Primarily use orange/blue/silver. Not sure about the impact of red line schedule changes.

30 minutes will cause overcrowding

Yes, but I might take the bus instead sometimes, if timing is better

I am ok with this because this doesnt affect my travel to work.

Every 15 minutes is still too much time between trains.

I travel on the Red Line between Grosvenor-Strathmore and Silver Spring stations every weekday, so this would not affect me.

Even at every 15 minutes, knowing that offices will be open and knowing how overwhelmed tracks got when trains were running at every 3-4 minutes, I think it would be incredibly difficult to even find room on a train to get to work with this plan, once trains get to downtown DC (i.e. Dupont Circle, Farragut North, Metro Center, etc.)

limited service at those stops is ok; but 15 min between trains is far too long

Unacceptable. Many commuters live in these areas.

By January we will be post covid and ridership back to normal. The proposal would be wholly inadequate. In normal times, even trains every 5 minutes were full at rush hour. The proposal is simply ridiculous.

Proposal to implement Red Line turnbacks

Id be interested to see the makeup of the commuters who use the redline at the stops that have been proposed to have trains arrive every 30 minutes. How do they compare to other commuters?

30 minutes is to long to wait. Also bad timing as MoCo is trying to move traffic off highway and onto metro

You can serve all the white people in Bethesda but not the POC out in Rockville?!

I could live with this since the train wont be full necessarily by the time it arrived at my station

In-district trains need to be 5-10 minutes; out of district does not.

Trains would be too crowded to enter at Cleveland Park.

This is a good idea if it is temporary until the system recovers financially.

Every 15,30 minutes is poor service for a major city metro system.

I live and work on the red line. I depend upon easy travel to-and-from work as I often have to travel between work and home multiple times per day. Waiting for upwards of 15 minutes would not be congruent with my work.

Other than the increase in wait times between trains downtown, which is not acceptable, this would not otherwise affect my commute.

Fine. The further out people go the less people on each train.

This proposal screws all of us that live at the northern ends of the train routes and also the lower SES folks that live to the north.

might prove unworkable

This will negatively impact citizens as we return to normal after the pandemic.

The Red line is always crowded -- dont short change us!!!

As I answered in previous question, 15 minutes between trains is not sufficient for handling Red Line commuter traffic during rush hour. Would result in massive crowding.

Increase frequency at all other stations to 5 minutes instead of 15.

Every 15 minutes? Come on. Needs to be 10 max during high traffic times

alot of people have devended on the metro from White Flint to Shady Grove for commuting into D.C. and other places along the line. While ridership may be down right now due to the Pandemic, I would expect ridership to pick up once things start to get back to normal. That is unless the Trains would arrive every 30 minutes at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen. If thats the case then I would expect that commuters who changed to driving due to the pandemic would continue to drive as the times. would not be sufficient for making meetings on time unless they increased their commute time.

This would make my commute impossible and would force overcrowding on trains and platforms during peak hours.

Wheaton and Glenmont riders pay more than any other commuter using Metrorail service and have longer commutes than any other riders in the system.

I need the East Falls Church station to DC & Airports.

Need more trains at Shady Grive & after 9:00 pm.

I would like to have a schedule of the times when the trains would run between Grosvenor and Shady Grove, so that I would not have to wait up to 30 minutes.

Dont normally ride the red line.

i rely on the red line running every ~5 mins during rush hour, especially since train arrival times arent always accurate or if theres delays

I pick up the train at Shady Grove from Frederick

I am switches commuted once Covid is over from orange line to red line and I'm not sure how this will affect my commute.

I typically get on Metro at Shady Grove

I use Rockville much. This would affect my commute.

This would make it difficult to use the further stations - I have regular drs appointments at the Wheaton stop

This just makes Metro such an unappealing choice for getting places, we will end up using other options which is really sad - our family loves Metro and up to four of us rode it daily for work and school prior to the pandemic. We have four children and have been car-free since 2012 thanks to Metro - we use it to get to where we need to go on the weekdays and on the weekends we use it to go to the fun places we want to go. These cuts in service will make it so much less of an option - already on weekends it was frustrating to wait so long for the red line trains.

i dont go to Maryland often so it would not affect me;however I suppose it would be unfair to only comment on Virginia service which I am most interested in

You propose to bypass the most busy and important stations. Again, trains will be overcrowded and unhealthy.

| |
|---|
| Proposal to implement Red Line turnbacks |
| This would only work if arrival times were adjusted for rush hour. |
| I am fortunate to live and work inside that zone. But I don't approve of the disproportionate burden on people living further out, who pay more and often earn less. |
| I take the train from White Flint so this would not work. I could try to take it from Grovesnor but even before this change it was impossible to get a parking spot in the Grovesnor garage. |
| Its unfortunate for people who live further out, but the trains are definitely more crowded within the city. |
| We need more frequent service at rush hour |
| although I dont use the further out stations every day- this plan would mean crowding to the extent we may not be able to board at the closer stations. |
| It is imperative that the metro stop at Grovsnor!! |
| I rarely ride the red line in that area. |
| 15 minutes is still too long to wait for a train. I take the red line to go to work every day. |
| Not ideal but workable |
| I rarely use the red line. |
| This would not impact me |
| Doesnt apply to me, but seems reasonable |
| Once again, this is systemically racist and oppressing to remove trains. |
| My commute into the office in DC is normally 1 hour door-to-door using Metro and walking. With this plan, my commute could easily extend up to 90 minutes or longer, especially if I just miss a Red line train at Forest Glen station and have to wait 30 minutes for the next one. |
| Having trains come only every 30 minutes will be a serious inconvenience and will also make rush hour commuting difficult since trains will be more full. While not ideal, I understand this type of adjustment may be necessary and is a reasonable approach to continue much needed service at the Grosvenor-Strathmore Station. |
| I take the red line where the higher headways would be. So this could be adequate during non-rush periods. |
| This wouldn't be ideal but it would be liveable for me, as someone who lives in Silver Spring |
| It seems much more equitable to keep more stations open with longer wait times than to close stations. |
| I say yes, but only because I do not utilize the red line trains for my commute. |
| That is still too long to wait, but it is better than the other proposal |
| I do not ride the red line. However, I can imagine how this can have a negative impact on commuters |
| This would likely not affect my daily commute as I take the green and blue/orange/silver lines to my office downtown. |
| I would leave work at White Flint Station, and I was planning to use it. |
| 30 minuts is too much time for people being at metro station!!! |
| I dont ride there anyway, so no opinion |
| Service should remain more frequent (i.e. the same as it is now). |
| In commute to work daily and need more frequent trains |
| Think this would cause a lot of congestion during rush hour. Youre not good at differentiating trains on the same line, and this assumes youre actually able to run a time table, which youve proven over the last ten years is beyond your technical competence |
| Same comment on running trains more frequently than every 15 mins if needed |
| As long as faster service at Red line stations are more frequent, this is fine |
| 15 minutes during rush hour would leave the platforms packed and dangerous. |
| It would be too hard to catch a train every 30 minutes at White Flint. What would happen when there are breakdowns or unexpected interruptions that cause the train to arrive already jam packed once it reaches the station? This would result in potentially having to wait an additional 30 minutes for the next train or ditch the station and seek out other options such as Uber or Lyft. |
| The option is irreparable to the others and provides the best accommodation to riders. |
| I do not ride the red line frequently |
| I don't use the red line |
| Prefer additional trains during rush hours |

Proposal to implement Red Line turnbacks

The trains between Grosvenor and Silver Spring are a great addition, but the time between trains is still too long.

I do not ride the red line daily.

This would make the trains dangerously crowded.

I dont use the red line regularly.

Sometimes I take the red line from Grosvenor-Strathmore up to Rockville Station to get to work, if I dont take the bus. That would be much more difficult if trains were running only 30 minutes (so less likely Id opt for train over Ride On bus).

thats fine, i could go there on the c4.

I rarely use the red line right now.

Shady grove is major hub for commuters. 30min between trains is way too long. Would need to leave earlier and if you miss a train by a few minutes you will be waiting too long and will be late for work. snd trains will be too full. Commuting to SG takes a long time already and this could add another hour. Wouldn't be worth taking the metro and would just drive. This defeats the purpose of the metro in reducing traffic into NCR.

Greater frequency is required.

This seems highly inefficient. You will lose customers and revenue and you already incurred the fixed costs!!!

The trains are not frequent enough for ridership for daily commuting that is expecting to pick up again this fall.

Many riders come from the metro stations you included. It would impact their ability to come to work

We use Grosvenor, so the above in N/A to us.

I used to commute in from Shady Grove and trains every 30 minutes will mean that by the time you leave SG the train is FULL

The proposed changes will not work for my schedule. I believe this should go back to the previously utilized schedule again, every 30minutes is not feasible for all riders.

we are on yellow blue lines

I can foresee problems for commuters coming from or going to Shady Grove

Every 15 minutes is bleak if I am to return to work and my child to school, both of which activities hinge on the red line or bus routes.

Please see my earlier comments on any changes to the schedule would be economically disastrous to Virginians as we all rely on the metro for our essential transportation needs.

This works for me because I do not use these stations often.

The red line doesn't impact my ridership, as I usually take yellow or blue.

Sometimes we had to wait almost you 1hour and half for. Train is should be 15min

It would be important for real time arrivals to be available in the WMATA app so that passengers could time their station arrival accordingly.

This works for me because I use the Red Line infrequently vs. my daily use of Orange/Silver Lines.

Frequency problem

Please see my previous comments.

I was under the impression that wmata was not using gGrosvenor-Strathmore or Silver Spring as a turning around point anymore??

I rarely take the Red Line, this doesnt impact me much.

This may work during the pandemic, but once we start returning to work places, this is not frequent enough

I don't use those stops on the red lines of this would not affect me. But I still have concerns about the extended wait through rush-hour's

Trains should come as often as possible

Somewhat inconvenient, but it would at least maintain the ability to get to all stations at all times of day. Need to make sure trains dont overfill and prevent people from boarding.

This forces white flint riders to drive to strathmore-

Use the Rockville Metro station to go to work and if the train is missed, it makes a significant increase in my arriving at work on time and for medical appointments. I depend on Metro to get around.

Having trains on the red line (one of the most frequently used lines for commuting) arrive so infrequently would completely alter the lives of do many in DC and would make the entire train essentially defunct.

But I dont travel to-from those stations much anyways.

Peak ridership headways were 5-8 minutes downtown and even then the trains were packed. I think anything less often would make it really congested (and difficult for workers to rely on!)

Proposal to implement Red Line turnbacks

Again, every 30minutes is terrible and disenfranchises those that most depend on a public option for travel, especially with high home costs etc in the DMV. 30min intervals should be removed from all points of discussion.

Too long of a wait time to meet my commuting needs, especially if Im in a rush or the trains are full.

This is still too infrequent on the Red Line

This would cause too much disruption of my rest. I propose trains every 15 minutes to get to a hub like fort totten then every half hour from there so its really 15 minutes to get a green line train then 15 minutes to get a red line train for example from the hub. Have trains go back and forth from single line end to hub and some go the full route to make it every 15 minutes to some train everywhere.

Yes, except the reduced frequency of train arrivals (15 mins. in my case)

It happens I live at Silver Spring and work downtown so this wouldn't affect me.

these stops are not applicable to my present situation (my own expected travel needs) but I believe they are vital stations and should be adequately serviced

As long as trains never run late. Why not.

Wait period is too long and would impact my decision to use metro.

Two trains every hour at Rockville and Shady Grove? No way.

Yes, I live in DC proper and don't use the Metro to go outside of Silver Spring/Grosvenor. Waiting 15 minutes between between red line trains is fine for me.

Need more frequent trains at Grosvenor.

I dont take the Red line.

When this current schedule went into effect pre-covid, it caused jammed trains into DC as all the seats were gone from the Shady Grove to White Flint passengers. Made them happy, Im sure.

The frequency is too low for rush hours.

30 minute wait times would cause me to switch to driving to work

If you need this schedule I will have to find a way to make it work. But I am concerned about platform crowding

I don't live in Maryland and don't use the Red Line.

I no longer live where the Red Line is my primary transport, but if I still lived there this would make me quite angry, and would be very inconvenient. Have you tried to get on a Red Line train at rush hour?

again, same as the last question. the red line is the busiest normally, but with people returning to the office space starting maybe as early as the end of this year, is hard to predict how the impact would be for next years commute.

I only use the red line in the heart of the city so this works for me.

Might take a bit longer than usual but I need the metro to work and survive! I would never make it to work if I had to drive to another station if Grosvenor was closed.

Trains would get too crowded

There needs to be increased service during weekday rush hour periods. This city needs Metro!

This effectively strands people at the end of the lines and causes significantly more strain on lines closer to the city that don't have the infrastructure to support those commuters

I purposefully live walking distance from the Twinbrook metro, at 30 minute intervals I would likely not be able to find space during rush hour service

Not sure I understand the difference with the previous option - I think this may be even more time restrictive and therefore, less beneficial to a workforce getting back to the office

frequency is too low

Not workable M-F during rush hour

Understandable given rail infrastructure and uncertainties cited in previous text box. If Moco and Metro bus service continues, plus taxis, ridesharing, and instant car rentals remain in service, there would be sufficient alternatives for travelers.

No I depend on the metro for commute. I already walk 10-15 minute to the metro station for grosvenor Strathmore station. The next nearest station is white flint. Which does not make sense for me to walk there.

Needs to be more frequent during rush hour

The closing of Grosvenor station would be a disaster for those of us (many, many) dependent on service. We moved to Grosvenor apartments because of the service!

This is better than option 1

Proposal to implement Red Line turnbacks

Again, I hope demand for metro will increase with more widespread vaccine rollouts.

I only use the far ends of the Red Line rarely and even then only with significant buffer time. This would work fine for me.

Not a fan of such infrequent train service, so I would most likely take buses instead whenever possible.

The purpose of public transportation is to get the public, those who live outside the city limits, to get off the highways and use it. But eliminating regular, timely trains at the outer most stations, you are doing the opposite and forcing more people to give up on public transportation entirely and to use their cars afterall.

As long as the DC lines are running frequently, this doesnt affect me.

See previous comment.

I have a disability that curtails my walking; the other stations won't work for me.

Trains were often too crowded by the time they hit Medical Center after the Grosvenor turn around ended

Although it would work for me, this seems unfair to residents who live at the stops only getting a train every half hour

From Grosvenor I need to get to work downtown DC or Northern Virginia. Train frequency is critical as my work schedule and location vary from day to day.

rarely take the Red Line, though I do on occasion.

Do not currently take the Red Line.

Dont provide sub- and ex-urban metro services until vehicle ticket reciprocity is implemented.

Don't use the red line very often

the redline is my main method of commuting- every 15 minutes is the time too big of a gap. if the train were consistent every day this wouldn't pose an issue , but inconsistency would mean that i wouldn't know when the train is coming-and if i miss it by a minute i would be at the risk of being much later to work

As I mentioned in a previous answer, without schedule that's tailored to the rush hour needs, a lot of people will accumulate on the platform and that won't be safe for multiple reasons.

Missing that single train only coming every 30 minutes would have a serious impact on my commute and I worry about how crowded those trains would be.

Its a little unfair- I dont ride the red line.

Depends upon what hours trains were running.

Not happy about the service level of 15 minutes on the rest of the line

Grosvenor/Strathmore is highly used metro with great parking. Ridership will come back to normal when land media under control. Do NOT close Grosvenor:Strathmore.

30 minutes is too long of a gap at Shady Grove.

I wish trains would go to the end of the line before turning back.

I'm not usually on the red line

Why does the Agency continue to impact the residents this way. Reduce the. Lost in management and eliminate duplicative administrative functions.

Prefer more frequent, Takoma to DC.

The 15 minute gap between trains would not be feasible due to overcrowding during rush hour. However, my travel needs rarely require me to travel to stations outside of Grosvenor-Silver Spring, so the every other train proposal would not affect me.

Please see previous comment.

I do not plan to use the Red line in 2022.

if i take the red line, i am usually not going to the outer stations.

Every 30 minutes will not work when I am back commuting.

This proposal would leave countless commuters in Gaithersburg, Glenmont, and Washington Grove without a frequent transit option, and would be disastrous. These areas need Metrorail service that is frequent and fast in order to continue current economic growth.

I get on the train at Grosvenor

Thirty minutes for a train to arrive is much too long

Commute will be hindered for those who live near these areas.

I dont use the red line

I need to access occasionally the red line but I live on the Orange and Silver line

This would make stations and trains more crowded, less safe in the pandemic

Proposal to implement Red Line turnbacks

It would certainly be inconvenient, but it might be doable? Frequent trains are the whole point of metro utility. It should be faster than other options for the cost of sharing the space with others

I am not impacted

This used to be how the red line was and seems a reasonable proposal.

do not use this line

If the my wait time increases by a half hour to an hour, I will opt out of using Metro.

I use Grosvenor metro station, so this works for me.

I get on at Rockville for my commute. Having trains arrive every 30 minutes would add a significant time to my commute, where I would most likely stop using the service. Also, with trains arriving at that frequency during rush hour, theres a significant chance Id miss a train due to the crowd waiting to get on.

would not affect me -- I dont use the Red Line to commute.

My main metro station fits within the stations that'll get trains every 15 minutes, so this does work for me.

For commuters (MARC), every 30 minutes at the MARC stations (Rockville, for example) simply doesnt coordinate well with the metro rail schedule.

People who have longer commutes from White Flint will have trouble with this. The residential and commercial build-up especially near white flint will hinder peoples availability of metro.

Doesnt work for rush hour.

This would not impact me as I live at the Grosvenor Station at really only take the train to head south. However, I worry this would make getting to work and downtown hard for people that live farther out. It also would make businesses north of my stop less attractive.

Yes, but only as a temporary cost-cutting measure.

Trains every 15 minutes during rush hour is too infrequent if ridership goes back to pre-pandemic levels.

While every 15 minutes would be tough during rush hour, given potential crowding on the platforms, I would make this work for me.

No problem with me

Too long a wait will make the trains too full to board

Would prefer more frequent Red Line trains

A problem as I reside on the green line but work in white Flint

I work on the yellow line, and my clients are on the blue and orange lines. So the red line only impacts my personal life.

Such a long wait will drive away many riders..

A 15 minute wait time is unacceptable. 30 minutes is aggregious.

I dont travel on the red line but this sounds not great...needs to be more frequent

This would extent my work commute by 45 minutes to an hour. Driving would be faster than taking metro which defeats the purpose of public transportation

Again, all trains would be incredibly packed by the time they reached widely used stations at Grosvenor and Bethesda.

Shortening the route is fine but 15 minutes between trains at rush-hour makes no sense.

The red line gets me from Metro Center to Gallery Place when I commute daily. I could manage reduced service, although during extreme weather, it wouldnt be my preference. Also, it would be an issue traveling to Capitol Hill for work when that is necessary first thing. Not sure how much this would adversely affect either commute.

The schedule works as long as the train is on time or the app can provide accurate status of coming trains.

I rarely use the Red Line so I dont feel qualified to weigh in here.

Dropping these suburban stations in 2022, when the pandemic is likely over, will hurt your ability to grow ridership in the future - these places are growing and becoming more transit-focused. They are your next generation of riders.

This would be fine with me as long as its not during rush hour. During rush hour trains should arrive with more frequency.

I commute to Rockville and used to experience this every other train situation. I was constantly late to work and considered purchasing a car because of it

I use these stations for long haul trips. This would build an extra 1 hr into my commute time.

I do not use the red line

This would not affect my personal travel plans greatly

30 minutes is too long an interval at the Metro stations listed

Proposal to implement Red Line turnbacks

This is a wide time gap between trains, and would not work during rush hour when many people are relying on trains. Trains need to arrive every 2 to 3 minutes as previously done, not every 15 minutes! If I miss a train or two because it is packed, I'm late to work!

By 2022 I will probably be going into the office. Trains every 15 minutes is not great for commuting.

Are you attempting to reduce Ridership? Late trains would make 45 minutes arrival leading to decreased ridership for SURE. a step backward for 30 min

I'm at Grosvenor-Strathmore

I do not take the RL regularly, so I have no comment on this proposal.

I live in Virginia; these stops don't affect me.

If you have to make a connection, it would make the travel time very long. The system would not be a viable transportation option.

Yes, but only because I don't use those stations.

I don't take the red line.

Can't imagine waiting 30 minutes will cause ppl to want to take metro more

Gaps too large.

The arrival times are too long and far between.

Too much still up in the air in regard to the pandemic and if people are back in their offices by then. Shady Grove is a huge station with lots of riders. A 30-minute wait could contribute to crowded trains during rush hours.

I do not use the Red Line. This is fine.

This couldn't possibly meet the needs of the most populous county in the state of Maryland. Shame on you for even suggesting this.

Getting to DC from Montgomery County in 30 minutes is ideal. Please keep the red line equal on all fronts.

I need the Shady Grove Train and I this schedule would increase my commute time and most likely force me to drive rather than take train so I can have more flexibility.

Again, the more you cut commute time the more you cut trains and the ability for people to arrive on time the last ridership you will be this is a self-fulfilling decline prophecy that will hurt you guys in the end and cause an absolute shut down the metro since that's hurting everyone across the city relies on you and again especially people of color and people in low income areas

I don't take the red line.

Would this option be re-evaluated if the pandemic affect lessened?

This proposal would work well for my commuting pattern, and the delay would impact only the furthest Red Line stations.

I'm okay with this and I live nearest the White Flint station. No biggie.

I live in Virginia and don't use the Red line very often.

If this proposal involves no DC-bound trains from Grosvenor-Strathmore, not acceptable

Don't use those stops

I use Grosvenor-Strathmore so as long as that stop is preserved, this works for me.

PLEAAAAAAAAAASSSSSSSEEEEEEE Keep Grosvenor-Strathmore open.

I often use Forest Glen and Wheaton. I understand less frequency but once every half hour is designed to make trains too crowded and commutes impossible. Perhaps if you spent money on the train lines you have instead of building new ones that you can't afford to run. Please hire smarter people.

I do not live on the Red Line.

I don't use the red line, so I probably shouldn't weigh in here.

We are by Navy or Cleveland park. We use the metro a lot.

Trains should arrive every 15 min max during rush hour

Metro was designed to support suburban commuters, this is not supporting them.

I live in Wheaton, and this would be awful for my commute. Would prefer that trains ran every 15 min on the whole line.

Same comment for proposal 1 is valid here

This is not sufficient for the increasing ridership demands in 2022 once the pandemic ends, more offices open up again and people who have been teleworking remotely for 2020 and 2021 due to COVID go back into the office. Additionally, once events open back up to the public with fans/attendance, ridership will increase and the demand for metro will be back to normal levels again, especially during peak hours.

| |
|---|
| Proposal to implement Red Line turnbacks |
| The trains at the ends would get so backed up that once the train gets to Bethesda, Friendship Heights, Tenleytown, etc. there would be no room. |
| People in the suburbs need to reach the city !!! |
| This would preclude using metro for commuting purposes as well as for non-vehicle transportation options. Consequently, I would have to use my vehicle daily for work and also for travel to DC/VA. I would no longer use metro. |
| As stated before, enter system at Shady Grove. Could be an issue if, especially during inclement/cold weather, the timeframe slips more toward 35 to 40 minutes (or longer) due to scheduling issues. |
| 15 minute waits during rush hour and subsequent crowding would be unsustainable. I would drive instead. |
| I ride from NOMA to Rockville every day, even during the pandemic and cutting times to this would force me to miss my bus more times than not! This is all about making money not about the service for the people of the DMV |
| i do not use the red line much, but this seems like a confusing proposal and would make traveling more difficult |
| I'm not on the red line so I don't think it would impact me personally. |
| I sometimes split living between Wheaton and Tysons corner. Waiting for 10 minutes or more would make me late to work. |
| This is too long between trains. |
| It's not ideal if that's your station being skipped but creating an "express train" option and bypassing stations that don't get a lot of entry on certain days is preferable to waiting on huge delays with every single station. |
| The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too. |
| Riders pay for service to Shady Grove per mile. We just fixed the turn around. Crowded trains and long waits in stations will be less tolerated going forward. Ridership will come back if service levels remain tolerable. Do not undo the good work done. |
| I do not use the red line. |
| This would be disastrous. |
| Again, trains running every fifteen minutes on the red line is not a good option. Varied service for stations beyond Grosvenor-Strathmore and Silver Spring wouldnt impact my commute, but I imagine this would be a problem for other people. |
| Central part of the line would be 15 minute intervals which would be acceptable to me if the schedule was known in advance |
| I want frequent train service and to easily be able to see my family in Silver spring! Invest in public transit!!!!!!!!!!!!!! |
| See previous comment. People have jobs and have to get to them, and waiting every 30 minutes should not be a solution. Additionally, this would cause over-crowding on the trains when they do arrive since so many people are waiting. |
| Trains need to arrive every 10-15 minutes, especially for those who rely on this transportation to get to work on time |
| Works for me but tough for folks at affected stations of 30 minute wait time, especially if we are returning to offices. |
| See previous comments. |
| Timing trains to arrive every 30 minutes completely destroys the ability of the community to rely on public transportation to get somewhere by a certain time. It will push more cars onto the roads. |
| More trains per hour would be necessary. |
| Platforms and trains could get very crowded at rush hour and during tourist season, |
| too infrequent for many people |
| There are lots of residents along the Red Line who depend on Metro that cannot afford a cab or Uber. |
| Have trains arrive every 10 minutes at all other stations on the red line. If you cut too much ridership will decline further. |
| I do not use the red line hardly at all. |
| As long as trains are arriving every 15 minutes for all other stations, besides the one with 30 minute arrivals, this would work. |
| Assuming some normal return to work, which could easily happen after mass vaccination this is not enough service |
| Not sure what the purpose of this change is without knowing current (pre-Covid) frequency of trains along the Red Line |
| I know from last experience living on both ends of the red line that this would feel inconvenient but is completely manageable so I think it is a reasonable proposal |

| Proposal to implement Red Line turnbacks |
|---|
| Yes, I do not take the Red Line. |
| I live at the Grosvenor stop |
| Im concerned that the low frequency of service would result in further erosion of use of the system. My understanding is that frequent, timely service encourages more people to use the service, and thats what I want to see. |
| I rarely use the red line so this would not affect me. |
| I need to get between Takoma Park and Metro Center, so this proposal takes away half of the trains I could ride. (Also, even 15 minutes apart is too far during rush hour.) |
| trains will be far too crowded with that long of a wait between trains |
| I use the Metrorail explicitly to get to work at Tenleytown. When the station was closed at the start of CO-VID. When I got off work at 6, I wouldnt get home until 7:50p due to how long the 46 can take to pass. I may end up moving if I had to deal with this everyday. |
| I do not travel this line so it does not apply to me |
| Quicker to drive |
| This would significantly harm my commute time. |
| Every 15 minutes at all other Red Line stations besides the ones lifted would be better than 30 minutes. |
| Every 15 mins during rush hour is just too long to wait for a train and if you miss one, you are very late to work. |
| These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options. |
| I would prefer more frequent service. Im retired, so Im not in need of extra service during rush hours. |
| Way too little service to make it worth riding. |
| The time between these is far too long and it will cause the trains to be overcrowded. |
| Same comment as before. Works for me as I'm at Takoma, but it would reduce access for many users at other stops. |
| As long as Grosvenor strathmore station remains open |
| Same as before. Might as well use MARC if Metro switches from rapid transit service to operating on a timetable, which 30min headways would require. |
| You are shutting everyone north of bethesda those are the people that need metro the most to get in the city. |
| I would prefer of course to have more frequent trains by 2022 a on the assumption that work will resume in the office full time by fall 2021. But to save money, this is a good proposal. |
| They should arrive as consistently as before the pandemic. |
| Why would trains run 30 between some stations and 15 minutes for others. |
| 30 is a long time... |
| I don't ride to the stations being impacted by later trains but this plan does not work as trains need to run more frequently. |
| Keep the times similar to before the pandemic |
| Express trains on current lines is a great idea. I think it should be done for every train line at all the high traffic stops. |
| 30 minute intervals during rush hour just doesnt work. This is a weekend schedule, and not conducive to commuting - is that what you want Metro to be? |
| I thought this was the way the service currently works. |
| A lot of people live this these areas you want to reduce service. Rent is getting more expensive inside the beltway and people are moving to the suburbs. These people still have to get to work. They still matter. |
| Rarely go to end of Red line, so don't really care one way or another. |
| I and many rely on the metro rail to come in a shortly timely manner. As stated we need to get to work on time. And with a pandemic the longer you wait the more people arrive and less social distancing. |
| I don't use red line much |
| Doesn't seem fair |
| Im sure this will be a negative for the people living near the affected stops. |
| I dont use the Red Line. |
| Way too long a wait to make metro a viable travel option. |

Proposal to implement Red Line turnbacks

Again, crowded trains would mean those of us downline would not be able to get on the first or perhaps even second passing train with this plan causing immense delays in getting to and from the office. With a full workday and responsibilities to pick up and drop off children, there is only so much wiggle time in a day where one can wait around for trains before compromising either the ability to work a full day or to reach a school/daycare before closing time.

Consistency in waiting time will help.

Again, having 15 minute service on the Red line servicing the stations I use to get between work and home would make it possible for me to use Metro to get to work. Anything less frequent would be very challenging given that my schedule at work isn't fixed enough to guarantee arriving in time for a twice hourly train.

This is not acceptable for the number of commuters at G-S. Hardly any passengers board at the next stop, Medical Center, during rush hour or non-rush hour. It makes no sense that stop would have more frequent service.

This would work for me, but there was a lot of opposition from the outer MD suburbs for these requests in the past

I use White Flint station and 30 minutes is too long. I have to add half an hour to my trip each way.

I live in an apartment building near Rockville metro with many disabled residents and most residents will use metro to get to and from work.

This would, quite honestly, make my work commute miserable.

Reducing service anywhere harms riders everywhere.

Would affect lots of Maryland commuters and add considerably to congestion which will worsen when people with no metro accessibility get back on the road, would not recommend

Fifteen minutes is too long especially those who have a long commute

This is the way it was and it makes a lot of sense given how much the trains clear out at Grosvenor

Please keep our station

Again, I think the trains would be way too crowded by the time they reach my station at Twinbrook. Once people start taking trains again during normal commute times, by the time the train reaches Twinbrook from Shady Grove (only two stops), often every seat is already taken and that is when trains come every 10 minutes.

This would not meet my needs since I frequently use Glenmont.

This is a joke, right?

I don't live at an affected stop, but I know that frequency drives ridership and worry about the ability of Metro to attract passengers who have other options if frequency is reduced to once every 30 mins.

I live closest to the Grosvenor station. It is imperative to keep steady service at Grosvenor. I would suspect the decrease in ridership has lots to do with inefficiency of service and service breakdowns. The pandemic will dissipate in time. We NEED the Metro.

Because I enter/exit At Grosvenor this works for me

My commute to work relies on the red line, and such infrequent trains will make it impossible to commute on a timely basis.

This is the same issue- turnbacks make commuting from a further station much more difficult.

I don't use the Red Line on a regular basis so this would have no impact on me.

Great plan

This proposal is not applicable to me because I ride the Orange Line.

When DC returns to normal after the pandemic, 30 minute windows would be terrible and the metro cars would be overly crowded. This would make it impossible to use the metro for those who live in the suburbs. This is also a form of discrimination to those who live outside of DC. 30 minute windows for trains is 100% not manageable.

I think red line trains would be too crowded.

the 30 and 15 min is still too long but alternating trains makes sense.

See my last comment. The red line trains are already sometimes too crowded to get on. Reducing the number of them would make them even more crowded. Plus, the time between trains would be longer. This would make it difficult for me to get to work and to pick up my kids on time and I would have to find alternative transportation.

I use Strathmore

I work off the Twinbrook metro and this would make it harder for me to be on time to work and to get to appointments after work

Unclear why this is being proposed.

Since I get off at the Grosvenor station this would work for me.

| |
|--|
| Proposal to implement Red Line turnbacks |
| I am fortunate to live and work more centrally than those two stations. |
| I believe all stations on the Redline should have trains every 15 minutes. |
| Forest Glen gets far less traffic. |
| I do not commute on the Red Line, but this will impact others. |
| No guarantee it will be every 30 minutes, so people will just stop taking it if alternatives exist. |
| Before you finally eliminated the Grosvenor turn-back, the red line trains were so packed BEFORE the Grosvenor station that Grosvenor riders would only board trains starting with them. The red line past Silver Spring may be different, but past Grosvenor is INCREDIBLY busy and always would pack a train. Why not have the train go from Shady Grove with every other train turning back at Silver Spring instead of shortening both sides?? |
| While the read line portion of travel would be better, the connections still would be hard to manage. |
| The population outside of the Grosvenor Metro is huge. We need the metro to stop more frequently at stations beyond Grosvenor. |
| No-again trains every 8-10 mins would work. |
| Low frequencies (and large headways) will not facilitate using metrorail. |
| Grosvenor has parking!!!! and is the end of the line after certain hours. There are thousands of homes as well as Strathmore Music Center where commuting by way of Metro is necessary. also w/ NIH closed this is too far from Twinbrook down Rockville Pike. This is Not a Good idea it will also hurt property values in an already challenging RE Market! |
| This is ok, but not ideal. Trains are supposed to be faster than busses. That's why we spend more. If I want to go slow I'll just go for the free transfer on the bus. Which means you need more bus service. And that increases traffic. |
| I do not use these stops, however, this added complexity is not customer-centric. It would result in increased messaging, signage, and overall passenger confusion. |
| This would not work if in office work starts up again |
| 30 min wait is egregious |
| It contradicts Montgomery county's cluster strategy around these stations that was done to invent metro use. |
| Office is at White Flint station |
| not applicable to me since at this time, i would not be using the Red line for my daily commute |
| My station is Reston town center and this is not applicable to me |
| Every other station? Huge inconvenience for anyone who lives closer to the stations not mentioned. |
| This would force me to drive rather than wait that long for a train which is much more likely to be overcrowded. I dont think Ill ever be comfortable in crowds again, even with the vaccine. Also, with more riders returning to the rails I suspect that the cleanliness of the trains will begin to suffer again and with fewer trains and more riders I dont see how theyll have time and space to keep them clean. |
| I seldom use the red line, but if I was a regular rider I would not be happy. |
| I dont take the red line anywhere (except the zoo, but thats been closed). |
| Red line trains coming only every 15 minutes would be pretty brutal, but workable. I think it is the right tradeoff to serve the ends of the line less frequently. |
| 30 minutes is a long time to wait for an "unscheduled" train. With delays that are inevitable, this option is not safe or sustainable. |
| This plan will work well for commuters living in the city who are less likely to have cars than those in the suburbs. |
| No, I will be commuting from twinbrook. 30 minutes is too infrequent. |
| I do not rely on red line for commuting purposes |
| Need more frequent options |
| This is not preferred but would be better than shutting down the station altogether. |
| Those stations on the red line need the service the most. Don't cut arrival times. How can you possibly waste tens of billions of taxpayer dollars while simultaneously cutting service to areas the developed largely because of the availability of Metro? You will decimate those areas. Why not cut service to the still-developing areas around the silver line? |
| Interesting, but I'd be curious if you're extending headways for those who might be commuting more than those within the 15 min zone |
| Topanga time between trains. 30 min have to wait? |
| This is closer to possible, but obviously screws people living beyond Silver Spring. I would NEVER use the train to go further north on either end of the Red Line. |

Proposal to implement Red Line turnbacks

I live in Takoma Park, so yes it would work for me personally but the framing of this question is misleading. We are not all entirely selfish. We share this world with other people and we are able to act with concern for others. So in my opinion this plan is terrible: bad for the climate emergency and bad for low-income families.

Every 20 mins is better

I never go past Silver Spring at one end and rarely go past Strathmore at the other end.

are you trying to cancel yourselves if so please keep up the great work

I dont use the red line often.

This is an unacceptable suggestion. The frequency of WMATAs metro rail system has been bad enough during normal weekdays (before the pandemic), worsening this by cutting it further will push more and more people away from using transit in DC. This approach has led to failure in many places over the world: Reduce the service and you will reduce the passengers, because if they cannot count on the system to run when they need it, they will not even use it at times they could because they have switched to other modes instead.

I dont use the Red line.

Shady Grove is my point of entry into the system. This proposal would discourage me from using the system as it would no longer be efficient or a wise use of time/dollars.

I think this will be horrible for Red Line riders, post-covid, but I dont take the Red Line.

Without knowing the implications for transfer wait times at Metro Center or Gallery Place, it is hard to know if this would work for us. If wait times for the trains to which we would transfer would be substantial, this might not work for us and we might, unfortunately, choose to drive instead.

N/A since I live in Virginia.

I do not frequent those stations, so won't be directly affected.

I used the Tacoma station

need to be less minutes

Not a frequent route for me, but 30min between trains is a significant length of time, especially during rush hour.

I live in Virginia so this does not impact me.

I dont travel on the red line for work so I dont think this would affect me. I commute on the blue and yellow lines.

Same comment as before--this plan works only if real-time info on trains arrival times at each station is easy to access (before one arrives at the station).

This would not work at all. The train would be incredibly overcrowded at those stations.

I live on the red line in the area that would be directly impacted by this. I dont own a car, so metro is the only way I can go to work, get groceries, visit restaurants and venues, see friends and family. Such a proposal would force me to use other transit besides the metro.

I do not ride the red line so this would not effect me, but I view the reduction in service as unacceptable.

As more and more development takes place in the White Flint and Pike and Rose area, there will be more need (post COVID) for frequent transportation to shopping and restaurants.

This wouldnt work for somebody taking Amtrak from Rockville or Union Station.

I rarely use Metrorail servicing those stations.

Better than proposal 1

Not ideal, but workable.

That is unrealistic during peak travel times. The trains are full during rich hour. This would create more crowding and actually increase the spread of disease

Does this proposal mean that if I board the red line train that is in the 15 minute mark, I won't be able to get off on one of those stations? So I would need to board the correct red line train? This seems unnecessarily confusing.

I would not be upset at fewer trains at the end of the line. But please dont cut service to that few trains downtown and during the week!

I don't take the red line.

Again, this is dependent on the status of my office, and if we are in person.

It is a huge inconvenience on any day that I miss the train I need to get to work on time. But if no other option is possible I will have to plan on being at the train station 45 minutes ahead of when I want to catch a train. That would mean I would catch the train before I normally would, but if I was delayed getting there, then I would catch the train that I used to catch and still make it to work on time.

I seldom use the Red Line, so I am not affected by this change.

| Proposal to implement Red Line turnbacks |
|---|
| Would trains be packed? |
| See my response to the previous question. The same concerns hold: would people be willing to wait potentially 30 minutes to catch a train? I live at Grosvenor, so this would not be an issue for me since I could plan to catch the train that terminates at the Grosvenor Station. |
| 15 minute intervals are not enough for redline trains during rush hour, especially at the Van Ness, Cleveland Park, Woodley Park, Dupont, and Farragut North stations. |
| I don |
| During rush hour this would be dangerous. |
| All trains every 15 mins |
| Wheaton is near by a mall which may have people who work at retail or fast food jobs that may need to get there faster. |
| This plan would not work if you close the grosvenor station. Please don't close grosvenor! |
| Dont use red line |
| I dont live in an area where I would take the red line often |
| 30 minutes seems long |
| I rarely use the red line. |
| You are alienating ridership in Montgomery County, Maryland in favor of those of us who can afford to live closer to the city. Many lower-income people totally depend on Metro for their daily needs. This proposal is absurd. |
| I realize that decreased ridership should result in decreased funding and schedules should be changed. |
| I ride the redline frequently, stopping at many of the stations. Waiting 30 minutes would be a problem. I do not have a car and am only able to live without a car because I have access to frequent rides on public transportation, esp. metro trains. |
| This need would likely meet my personal need as Im at a terminal station, however I expect this means commuters would simply try to park closer in than the satellite lots and greatly increase demand (but not capacity) at the new end of regular service lines. If youre looking to reduce road congestion for traffic into the bottleneck areas this would be counter productive. |
| I could just plan for a longer ride. |
| I dont ride the Red line very often. |
| Efficient, still not ideal |
| Too soon to know what Jan 2022 will bring. Hope to be back in metro. If so rush hour willNeed more trains at grosvenor. |
| Will have very negative effects on commuters! |
| No. It will just lead to mire overcrowding on the trains I ride and lead people to stop using metro, which won't help the budget problems at all. Or DC traffic. |
| Thats how it used to be on the rod line. Sounds doable. |
| Metro should be seeking to expand to the areas that are further out of downtown DC, not reducing its service to those places. |
| Currently use orange and silver lines |
| I do not use the red line. |
| I never travel between these stations |
| Effective service needs to be equally provided to all stations on a line. |
| I usually get off at Grosvenor going north so reduced service north wouldn't affect me very much |
| Need to have shorter Rush Hour service frequency. |
| I am planning being back in the office by then. This would make it less likely for me to use metro and metro bus, and I would drive instead. |
| I get on at Grosvenor so would get more service. As I said on last answer, it depends on levels of ridership. Rush hour will certainly need more attention. |
| trains should arrive more frequently than every 15 minutes. |
| I hardly ever take the Red Line (even in pre-pandemic times), and so changes to this metro line wont have a direct impact on my life. |
| Rush hour more request or when there are sporting events |
| 30 mins in rush hour is not enough! |
| I would now have to take a bus to SS instead of walking to,Forest Glen because I won't use metro,if I have to wait 30minutes for a train and if I have to take A bus to SS I would use my car instead |

| |
|---|
| Proposal to implement Red Line turnbacks |
| It would be annoying, but I rarely use the red line |
| Again, need schedule and need to be assured trains during rush hour can hold the capacity waiting. Can NOT spend 30 minutes waiting for the next train. |
| I do not ride the red line between those stations |
| 30 minutes between trains is too long. It would cause crowding at stations that would alternate stations. |
| We need regular service at the Grosvenor station. This is important to property value and work/school communte |
| I dont use the red line. |
| This will significantly add to any commute. Would there even be space on trains for the amount of people that would need to commute in January 2022 and beyond. The assumption is that kids will be back in school and vaccines will have been made available to everyone. Work will not be 100% remote. |
| This sounds confusing and it sounds like there is lots of opportunity for error. Especially for those who run on a tight schedule. |
| Sub-optimal, but workable with some hardship. Daily commute would be significantly lengthened. |
| dont ride red line much |
| I don't use the red line with high frequency |
| I commute to work, so every 15 mins would mean the trains are extremely crowded during rush hour. |
| I always thought it was a good idea for every other train, especially at rush hour, to go between Grosvenor and the rest of the line. This gives people who live closer-in an actual chance to get onto rush-hour trains and even get a seat, and people who live further out but cannot stand or are uncomfortable standing for the entire trip the opportunity to get off the train at Grosvenor and get a seat on the next train., |
| Needs to be more often during rush hour. |
| Every 15 minutes feels not frequent enough during rush hour, but the general concept of having every other train only service Grosvenor-to-Silver Spring seems fine. |
| Better than the previous alternative. But transit works best with every 15 minute service or better everywhere. Metro should avoid all cuts thanks to the new federal emergency funding of \$30.5 billion nationwide. Any other shortfall should be met by the states of VA, MD, DC and local jurisdictions. Post-pandemic, with increased telecommuting might allow for shift of some peak hour rail and bus service to off peak, evening and weekend which would help workers who dont have 9 to 5 office and help car free and car light households. |
| I am concerned that if I had to wait 30 minutes for the next train, it would delay me substantially |
| It just seems like the people who cant afford to live in the city are being hurt by this and our local economy also benefits from people to be able to travel into and out of the city. How can we help make this happen? |
| The potential for a 15-minute wait time in each direction to/from home is not a viable alternative when I can ride my bicycle in approximately 26 minutes in each direction (no uncertainty of arrival time). |
| Fifteen minute headways are already a dealbreaker on weekends. Longer than that, and I will never use this under any circumstance. |
| This option is infeasible for all workers, and will create congestion at 30-min stations that are not large enough to support that capacity (Twinbrook, White flint etc) |
| If 15 minutes is as low as it gets, then this works. Would still prefer under 15 minutes if possible. |
| No, I dont have a regular schedule |
| Trains should be more than every 15 minutes on the red line, especially at peak hours. |
| There will be too much overcrowding. |
| I use the red line to get to work. I feel like it should be more frequent during rush hour. Cutting back on red line service would not make my commute impossible but it could make it more lengthy. |
| I dont typically ride the Red line, but again, 30 minutes between arrivals does not work for my transit needs as I cant depend on service being there when I need it. |
| Doesnt affect me living in Herndon |
| With all options, the only serious hardship would be to close the Grosvenor station. Our living here was based on proximity to the station. |
| I dont use the red line, I use the orange or silver lines from NOVA. Those are my priority lines, and closing East Falls Church would be terrible for me. |
| That would make arranging travel much more complicated. And not allow the easy flow of public transportation. |
| Why are you shortchanging Grosvenor? How would concerts at Strathmore be served? Huge developments with high density have been approved and built based on the Grosvenor METRO station!!! The traffic would be unbearableâ€”gridlock. |
| Expand and increase the Red Line, not the other way around! |

Proposal to implement Red Line turnbacks

For people that live furthest it will be a 30 minutes wait to get a train!! Way too much.

Isn't traffic lighter on Fridays and maybe Mondays, due to people taking long weekends? Can that be factored into arrival frequency?

I no longer live or work on the red line. But I used to live in Takoma so every 15min would be better than 30min, but still not ideal.

These changes will add time to my daily commute. Adding an extra 2 hours per day to my already long commute to the office.

We live in the twinbrook area and that wait is too long during peak times.

Trains need to run at least every five minutes during rush hours.

My stop for work is on the redline and worry such a change would increase my commute time from AdC to Bethesda.

Even a 15-minute interval between Red Line trains between Grosvenor and Silver Spring is too long on busy workdays. It would make for difficulties planning my workdays, given that I also depend on MetroBus to arrive at the Greenbelt Metro Station.

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport, so the schedule proposed here should not impact me at all.

I need more stops at Wheaton.

While this would not affect me personally, it is absolutely absurd that people paying a full fare (and a more expensive one at that if they are traveling more than a few stations, given they are at the ends of the lines!) only get half the service. If you institute turnbacks, people boarding at those stations should get a fare discount.

Every 15 minutes isn't ideal, but we could try to make it work.

We've had schedules like this before.

Inwiukenbeginna d end my commute at Grosvenor Lane. I feel the extended time for the stations north would be untenable

I only really travel from Grosvenor-Strathmore into DC and back.

This is a terrible idea.

I get on and off at Grosvenor so this would work for me.

Same answer as the last proposal. I don't see how this would encourage anyone outside of Grosvenor/Strathmore-Silver Spring to take metro at all. I'd probably have to switch to driving into the office.

Why not just shut down trains and let people take the bus. The schedules seem to be much better, plus it doesn't do much for ridership when it's cheaper and more time efficient to drive your car than take metro.

I don't use the red line

Not great for those in the burbs, but wouldn't affect me much

I hardly take the red line, no applicable

Same as previous page. These delays will further hurt metro riders and cause less people to use metro to commute.

This does not work for me or the many riders who get on the trains at Glenmont and Wheaton. Would consider taking an alternative to Metro to get to DC

Not relevant to the majority of my travel plans.

I live in Glenmont and am a frequent metro rider

Ridiculous. You will be receiving federal funds to resume service so do it.

This is too long between trains

I rarely take the Red Line between any of these stations.

I don't usually take the Red Line unless I am heading to Union.

I board the train at Shady Grove or Glenmont. This would make my commute quite difficult, adding up to 30 min if I just missed the train. My commute is already 1 hr 40 min as it is.

This would be a nightmare. The entire DC area would grind to a halt. The roads are already overcrowded with many people taking Metrorail to get to work. No one would be able to reliably get to work if trains ran this far apart. I know no one is taking the trains right now due to COVID but they are going to send us all back before 2022. The trains were always packed. I often ended up having to stand for the entire commute. It already takes me an hour and a half to get to work at Union Station from Shady Grove including driving to the station and parking. It would take up to two hours if this schedule were implemented. That is 4 hours of commuting each day. This proposal would destroy people's lives.

Don't use the redline that far up

Every 15 mins during rush hour is still way too long!

| |
|--|
| Proposal to implement Red Line turnbacks |
| I rarely take the red line, but the 30 minute wait isn't ideal in more normal times. |
| Would still work for me. |
| Every 30 minutes is not frequent enough. More service means more riders and long term stability of the metrorail--its not that complicated. |
| It was like this for years, so going back to it is not a big deal. |
| better not less service |
| I work at Twinbrook, and less frequent trains would possibly make me late for work. |
| I prefer more frequent service, especially during rush hour |
| NO, Shady Grove needs trains every 15 min for rush hour, the trains are packed by the time they arrive to Grovesnor. |
| Every 30 minutes at Shady Grove? No way. |
| This is reasonable for my purposes. |
| Same as above. I only travel as far as the Grosvenor Train station. My concern would be available parking as most of the people who travel from White Flint & Twinbrook would park at Grosvenor. |
| It is great you are introducing new trains from Grosvenor again. It worked really well in the past for all those entering trains from Grosvenor to Metro Center . When you stippled that it became impossible at times to enter trains as they were too packed. |
| Not really using this directions usually. |
| If the Metro is to serve as commuter alternative from the DC area, all trains need to be every 20 minutes. |
| I rely on the Cleveland Park station. Im unclear from the way this proposal is worded what the arrival frequency would be at Cleveland Park, but I need trains there every 15 minutes. |
| 30 minutes is a long time to add to a trip. I think Having 15 minutes between trains is too long, so 30 minutes is really bad. I think all you will do is make more people choose to drive rather than take Metro. |
| 15 minutes is too long to wait. The trains will be too crowded once people go back to work downtown. |
| my commute currently is Bethesda-White Flint. With this plan, if I just miss a train I could practically get to work just as fast walking as waiting for the next train! |
| I ride the Red Line very rarely, Im not sure this would affect me much at all |
| Too infrequent |
| I ride the red line from rockville; 30 min between trains is too long to be useful. |
| Trains could be extraordinarily crowded. |
| With spacing between people, we need more trains and buses, not less. |
| I love the Red Line. Keep it open |
| The extended wait time continues to be problematic, especially since I live in an area solely serviced by the Red Line and have no other station options. |
| Need more frequent service on Red Line at White Flint station. |
| This plan eliminates an important population of workers who may or may not have access to other transportation to get to and from work. For those with access to autos, there will be a preference to drive if metro travel is not sufficiently timely. This will increase traffic issues in the 270 corridor and pollution. |
| The outer red line stations get very crowded during rush hour so more frequency is needed please for when we get back to regular commuting. Also the time of every 30 minutes disadvantages suburb riders who will have to plan extra time. Might as well drive if the trains are so infrequent! |
| I ride a metro bus to shady grove and if the bus happens to be late to arrive, then the potential 30 minute delay plus delays from the increased wait time on other lines for transfers would require me to leave for work up to an hour earlier |
| As before, I need trains to arrive more often than every 15 minutes. Previously, they were very crowded and they came every few minutes. |
| It would work for my family in DC but would be tough on employees vomiting to work from suburbs. |
| Dont ride the red line, so it doesnt really affect me |
| Time between trains is not acceptable. it should be every few minutes |
| Dont use those lines |
| Fifteen minutes still feels too long to wait for a work day train but its more manageable than 30 minutes. |
| This would be sufficient for my planned travel needs. |
| I dont generally ride the Red line, so I do not want to muddle the data. |

| |
|--|
| Proposal to implement Red Line turnbacks |
| I dont generally use those stations on the red line, so it wouldnt impact me |
| I do not ride the Red Line, but 30 minutes is far too long between trains. |
| I frequently need to travel from the stations being excluded, and this would drastically impact my travel plans to exclude Shady Grove - Grosvenor. |
| Leave the train system as is, at the usual frequency. |
| I dont travel this route, so will defer to Red Line users. |
| See prior comment. As long as the Grosvenor station operates this woul work for me. I think thus could make it difficult for passengers at 3-minute stations. |
| Dont give up on downtown dmv. |
| Good idea. |
| During Rush Hour the trains are always full even, 5 minutes between trains is not enough, how would you cram the number of people who take public transit into 1 train for every 3 normally? You would have to run only 8 car trains as well |
| Two few trains. I go often to the Twinbrook station. |
| The cut to service on the red line, and elimination of Grosvenor-Strathmore would be a severe inconvenience and increase daily commutes |
| I dont use the Red line. |
| Makes me less likely to take the metro |
| I connect from Orange line to Red line at Metro center. I only care about thoughtful planning during the morning commute. Send more trains in the am commute and fewer in the evenings when time is not of the essence. Thank you |
| I rarely use the Red line. |
| The wait times are too long - especially for school children |
| It doesn't affect me now but could if I have work, etc., there. |
| Being late to work because you can't get into a jam packed wagon will force people to stop using wmata |
| Same as above. Metro is supposed to be RAPID transit. This is not. |
| There is lots of high density building going on at White Flint, Twinbrook, Rockville and Shady Grove stations and there should be more frequent service at those locations like there is at Grosvenor etc. |
| Again, all service cuts are bad. We should expand bus service and rail service on all six lines, run trains more frequently, and extend hours. If we were able to use emojis on this survey, I would do several clown emojis in these comments. |
| See my previous comment. |
| Just kill me now. Okay, more seriously, I wouldnt use metro. Id take the bus, buy an electric bike, or switch jobs. |
| I dont travel to these stations, but I imagine people who do would not welcome these changes. |
| This would make my commute from ft. Totten to Rockville incredibly inconvenient |
| As a regular rider from Grosvenor, this level of service would make driving to work a much better option.! |
| It's not ideal since many places of work will reopen before then but if there must be a reduction in service, this seems manageable. |
| This proposed measure would not impact my MetroRail travel at all as I rarely take the red line and never as far north as Silver Spring. |
| I live at the Wheaton station and this proposal would mean that it would take a very long time to get a train. Metro is discriminating against those who live farther out. The only other alternative would be to transfer to a bus and take at least 30 minutes longer to get home. I think every train should to to every station. |
| I stress the importance of keeping the station open and keeping the trains frequent. The pandemic will lessen as people become vaccinated and we develop herd immunity. The only reason the station has low ridership is bc of the pandemic. But the pandemic won't last forever. |
| I do not rely on the red line. |
| Have my doubts that every 15 minutes is frequent enough at rush hour |
| For the least busy stations it might work, but for the busiest ones 15 minute waits are way too long. More "popular" red line stations will get busy and the trains will be packed. |
| 15 minutes between trains is way too long. Can barely get a seat as it is during rush hour. |
| Every 30 min is unacceptable. Trains will overcrowd even more than pre-pandemic levels. |
| Since I use stations further out on the Red Line, this doesnt work for me unless there is cheaper parking in Silver Spring. I used to sometimes use the Silver Spring station, but now its too hard to find parking there that isnt too expensive. Its cheaper for me to drive into the District than park and ride Metro. |

Proposal to implement Red Line turnbacks

This change is not applicable to me.

While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options are available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes.

The rush hours frequency of the above should be increased by 100 percent

Grosvenor Station MUST be open

This would work so long as there was a well publicized schedule. In other words, riders would know that at White Flint (for example) trains would arrive at 10 minutes past the hour and 40 minutes past the hour. This would be a set schedule. Riders would not have to check the website every day to see when the next arrival was expected. Without some certainty in the schedule a 30 minute wait between trains would not be acceptable.

I use silver spring station but am currently unemployed- depending on where I work this may or may not work for me personally

Works for genetel times, but not rush hour (7am to 9am and 5 to 7 pm)

People who live at the further edges of the Red Line (Shady Grove, Rockville, Twinbrook, White Flint, Forest Glen, Wheaton, Glenmont) would be severely impacted by this proposal.

Frequency can not accommodate ridership, which would be expected to return to pre- pandemic ridership. Don't you dare use 2020 data to predict anything that except when a global pandemic shuts everything. Ridership should be expected to return with additional capacity for tourism.

I dont use the red line frequently enough for this to affect me.

More trains needed to avoid crowds.

I dont live along the Red Line.

I dont use the Red Line

More frequent trains!

I only use grosvenor-strathmore

Please see my previous response, where I talk about the fact that missing my train even once can mean I get in trouble at work.

15 minutes is too much time betwwen trains, especially on workdays.

If you miss one train you will have to wait an hour for the next train. For those who have to commute from farther out (and likely can't afford the inner home prices close to the city) it becomes completely ineffective as a metro system.

I don't see what improvement this has over option 1. Nothing is faster, and even worse for those above silver spring.

I am not affected by the Red Line.

I often used the metro to get from downtown metro center to dupont. Metro is so quick compared to downtown traffic. But not if there are 15 minute wait times for a train.

I dont need to go beyond Shady Grove or Silver Spring

This change would not affect my commute.

This would be an acceptable wait for me but I think it would not encourage people to use metro. You need new riders and returning riders. Make it convenient for the future.

It would be difficult during rush hour

It is a problem for the trains to come so infrequently. Ridership will be way up after the pandemic.

Depending on what is selected, youll need to make it clear why only the Red Line is getting impacted in this way.

I rode the metro for a decade under this schedule (when I lived in Wheaton) and it was fine, if not ideal. If metro needs to save money, Id rather trains come less frequently than not at all at certain stations.

as long as the schedule is regular (for example: 8:15, 8:30, 8:45) and punctual.

I live in NoMa and travel to Bethesda for work

Proposal to implement Red Line turnbacks

Trains need to arrive at a more regular frequency during rush hour, especially if you are still charging peak fares. The trains will be too crowded at the stations especially those in the middle of the line so is there a guarantee that people could even get on? Imagine waiting 15 or 30 minutes for a train only for it to be too crowded to get on.

I live at Rockville. This would be horrendous

the train would be overly crowded

I very rarely take the Red Line beyond Grosvenor or Silver Spring.

I do not ride the Red Line.

Again, assuming that metro trains will operate without any downtime, this will still cause a significant level of traffic inside the metro carts with a lot of people. Penn station's trains are more frequent, and it's not even a metro station!

The pattern is not too concerning but frequency of trains is too low.

I dont normally ride the red line so it wouldnt be a problem, but Im not the best judge because of that.

Same as before a delay in the train would be a disaster and if ridership is back to pre-pandemic levels the system would be massicly overcrowded.

Much too infrequent service. Far too congested platforms. Would opt for other means of transport.

It would work for me because I live and work within DC limits, but I know it will be frustrating and cause overcrowding for those who live in MD and commute via metro.

I dont currently use the red line for much of anything right now.

Red line trains during peak hours need to arrive every 3 minutes (or less!). 15 is absurd.

Too long for this to work for anyone. It will lead to much more car traffic and accidents. Make the rail system clean, convenient, and you will get your ridership back. (Plus the end of pandemic/ vaccines) will help this too. Look ahead, not behind.

The 2 closest stations to my home are Forest Glen and Wheaton. The above would make my commute much longer. I expect the trains would be too crowded to serve all who need service.

To get to any of the stops not serviced as frequently, my travel plans would have to change majorly, as I would either be arriving extremely early or late, instead of having the flexibility to arrive in a timely manner that metro offers now.

While this would personally work for me, I dont think it is a good idea during rush hours.

This decision should not be made now given the current pandemic circumstances.

This would affect me personallyâ€”these are already underserved communities!!

The wait for the train becomes longer than just driving into the city. Why wait and then still have to ride the metro?

I work at US NRC. Limiting train times would impact the work force at this location and the business operations. Having platforms build up because of reduced operations is also a safety issue. The operations, if limited, should be modified for normal business commutes for personnel safety at this location.

Again, every 30 minutes during rush hour is stupid times. If you are going to go down this route then you need to have very specific times when the trains will leave and you need to publish the schedule and stick to it. At that point you are less of a subway and more of a train line...

I regularly use the Red Line, and this would make traveling to Shady Grove and Glenmont very difficult.

Again, 30 minute waits during rush hours is too long.

I dont use the red line.

Need more service / stops @ Grosvenor

We dont use the red line so this one does next affect us. We just need Easy Falls Church to stay open.

The time allotment between trains would stay the same as the previous proposal, how would this be a better solution ?

This seems to favor the stations that are central for most commuters. I am personally not reliant on any of the stations mentioned here. 15 minutes still feels like a long wait but I recognize we have to make sacrifices. 30 minutes is too long.

Every 30 minutes is totally unacceptable. Thatnow not frequent enough and completely cripples the city public transportation option. It should run even more regularly to allow people a safe and efficient way to travel to and from the city!!

Again I think that there it too much potential for overcrowding.

This one wouldnt affect me.

This is going backwards. The Grossvenor/Silver Spring turnaround was unfair and inefficient before and it would be now as well.

Proposal to implement Red Line turnbacks

This would make the commute unbearable.

That wouldnt impact my family, but 30 minutes between trains would be intolerable for passengers using the limited-used stations. Also, I would think that the trains would be packed between Shady Grove and White Flint, making it difficult to get onto a train in the closer in stations. The same would be true for the stops on the eastern side of the Red Line.

This schedule, given my current residence, would not be frequent enough - so I would abandon metro ridership.

At this time, I dont take the red line at those stations, and as such, dont feel my opinion should be counted here

unacceptable wait times. Makes metro much less attractive for regular use.

Not enough trains at stations with parking

Train coming every 30 mins is absolutely ridiculous. It should come every 5 mins

I don't often use this line

Many active duty military personnel have chosen to live along the Red Line due to guidance in their military orders. They may not be at a stop that allows them to commute during that time. Within most units, managers cannot provide parking passes for all, or even half, of military personnel.

This route does not apply as I will be travelling from the opposite direction from the Virginia side.

It used to be every other train operated from Grosvenor . Good idea.

There are a large number of residents in the Grosvenor and Silver Spring area who commute into DC for work during rush hour and will resume ridership after the Covid pandemic has been resolved with mass vaccinations.

Metro should plan for more frequent arrivals as more people are immunized and return to work.

Will there be adequate room on the trains to accommodate ridership?

I work near Twinbrook and (before the pandemic) commuted every day via metro. A train every 30 minutes will cause very crowded trains, and I could foresee trains being so crowded that you cannot get hour causing a wait for another train which would mean up to 1 hour waiting.

We just finally got the same service levels on the outlying stations of the red line (which we pay extra for) right before the pandemic and it would be a shame to lose it

I do not use the red line. However this could really eff over red line riders

I think k every 15 minutes it's too long specially in rush hour

I dont take the Red line often so wont apply to me

This would be inconvenient on occasion, but not as challenging for my every day commute.

I am currently not relying much on the red line but if I did, this would have a negative effect on my dependence on public transport.

This is probably not fair to those who live further out for financial reasons (affordability of housing) and again, this is only okay if Metro is open 5 a.m. to 12:30 a.m.

I use Grosvenor station to go to the Howard University everyday so Grosvenor station should be open.

This was system in place before Pandemic. Excellent because gave riders inbound between Grosvenor and DC opportunity to have seat.

completely undoable

I do not ride Red line so this would not affect me.

If riders can get on at these stops and proceed onto the city, this could be manageable.

Because I live in Silver Spring, this plan would work for me -- given that Silver Spring would once again become a turnback station.

Fine assuming trains will have capacity for all passengers waiting at stations

As long as it arrives every 15 minutes at Eisenhower! Thats what I need.

Reasonable approach to maximize convenience for the majority of riders.

Times would still be extended for the stops I needed

My daughter uses the metro to get to Montgomery College in Rockville and this would be devastating if the line closed at Grosvenor.

I frequently use Grosvenor so this plan works for me. Weekdays should be a bit more frequent than every 15 minutes but still this is better than every 30 minutes.

I use the orange line now, but may have to use the red line next year.

15 minute interval is too long

Definitely better for commuting than every 30 minutes, although obviously not ideal.

Proposal to implement Red Line turnbacks

Living past these areas on the Red Line and frequently using it for shorter, intra-suburban trip purposes, this sort of service would absolutely not work. Halving the frequencies in this peripheral area, if necessary, is understandable, but anything less than every 15 minute service is unacceptable and loses the essential turn up and go quality that rapid transit should entail, especially when the regions off-infrequent bus routes are built around the ability to then make a dependable Metrorail connection.

Rarely, if ever, ride the Red Line.

Everyday I take the Green line train, and I witness many customers without masks and also when they exit the station, they turn sideways and move through the gates without paying. If metro needs additional money , why do they allow this to happen? The supervisors in the booths and the metro police witness this happening. This is an inconvenience to those riders who do the right thing!

Thirty (30) minutes is a long time to wait for a train during rush hour, and over crowding could make hardships if one had to wait for the next train.

I do not ride the red line with any regularity so this proposal does not apply to my metro travel needs.

I dont typically use the red line.

This is slightly better than the other proposal, because I use the Grosvenor Metro. But still not great. Changes should not be made to the Red Line, the most utilized of Metros lines.

Seems okay. Since the bulk of the longer wait periods occurs along a consistent segment of track, it seems more logical and easier for me to remember.

I am assuming there are less people, so this makes sense

Grosvenor station needs to go often to downtown DC

Would be a problem for people who May commute to and from work.

Just need the service!!!

I take the red line train a lot

I wont travel to those locations on a normal basis.

More service during rush hour

Getting to work would take even longer during weekday rush hours and rush hour travel times are already too long. Driving would become more of an option which would crowd the roads further.

That is not fair to service people less further outside the center hub in dc. Those individuals live out there due to the high cost of living in dc and still needs a reliable means to get into the city. Spacing out those trains could make it difficult for those individuals to get to work

Reducing service on the Red Line will seem to have deep implications for Wilson HS & Deal MS.

Waiting 15 minutes between trains is not acceptable during rush hour. It will not work and trains will be packed.

This puts people who live outside the city at a disadvantage. Hundreds of thousands of people commute into the city at work. You can only plan so far ahead. That would be 6 trains between 6am-9am. Everyone wouldn't fit, people would have to start using other forms of transportation to commute. If anything, rush hour trains need to be where they were before the pandemic started, if not better.

I do not ride the Red line as part of my daily commute, so this would not have a major impact on my usage.

Not a frequent red line user

During work rush hour this is too much time.

Not a great situation, but we use the Grovesnor-Strathmore station, so would be unaffected by this outcome.

I can deal with this because I live in Silver Spring.

This should be a last resort if no federal funds arrive and ridership stays low.

This proposal would work best on weekends and after rush hour. It would not work during rush hour Monday thru Friday.

15 minutes is still too long to wait and will increase car usage, a detriment to the environment.

How would one change trains from red to orange for example which is typical for those living in Arlington and working in DC or vice versa

This works for me because I dont take the Red Line

A lot of people rely on the red line. Please keep as many trains possible running on the red line

Trains should arrive every 15 minutes at all stations on the Red Line.

I won't be using that section of the red line.

This might work at non rush hour times, but would be terrible at rush hour.

Proposal to implement Red Line turnbacks

Because we have a terrible crisis as our environment becomes worse and worse which leads to illness and other problems, we MUST have more trains , more frequently with service for longer hours. We must enable people to have services provided by metro to get more cars off of our over-crowded streets.

Again, 30 minutes is too long between trains.

You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!! Where is all that money now, when times are slim?

This is massively inconvenient for commuters who live in those suburbs and depend on metro access.

I rarely take the red line that far out, usually only transferring briefly within the major transfer stations downtown. My major concern would be overcrowding in the Chinatown station if too many people are waiting for a specific train. This was an issue pre-pandemic without long headways.

See comment to previous question

Same reason as previously. This would be fine nights and weekends but rush hour needs to remain unchanged.

Assumes this mean no service at all at the other metro stations between silver spring and grovesnor. Question is confusing because it later says "all other stations on the red line" so it's unclear if this includes stations between silver spring and grosvenor. If this isn't part of your current process, I suggest doing cognitive interviews before your surveys go out.

Its not good to not have the flexibility and SAFETY as a woman waiting for a train with Grovsener being skipped to every other.

no comment.

First morning train at Rockville no later than 5:30

I live near the Grosvenor-Strathmore station and do not have any other transportation to different lines. This would greatly lengthen an already long commute into the city, which I have to make daily for work

Go to Paris - every 4 minutes anytime. Go to Moscow, Russia - every minute. 30 min interval is unacceptable plan

That does not sound like a feasible option without creating backlogs on the tracks.

Grosvenor is my destination station and has good parking. This works.

Same comments as first proposal.

30 minutes to far too long wot wait for a train. I see 15 minutes as a compromise, but not 30.

Trains need to be more frequent between grosvenor and silver spring. Every 10 min minimum, 6 trains per hour.

The redline trains to the outer burbs are essential to reducing car traffic. Reductions in metro service will be a deterrent from riding and will increase car traffic

Less frequent to end of lines makes sense, but 30 minutes is too long to depend on service

You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

This would not impact me personally but I think its unconscionable to cut service to poorer areas who are more likely to rely on public transport. Again we need to be making long term investments in sustainable transport for this city this is the opposite!!

This will ensure that every single train is jam packed like sardines. Trains will be so crowded that people won't be able to get on and have to wait 15-30 minutes for the next one. You'd have to allot an extra hour into your commute just to make sure you are late for work due to the metro. It's like the people making these recommendations have never actually ridden the metro themselves

Lots of people, including myself, live in Rockville and need to get to work every day and 30 minutes is way too far apart.

We need to be increasing public transportation options and encouraging more people to use it as a strong measure against climate change

Unsure of my travel needs in 2022. Seems like a bad plan but it depends on the number of people who go back to work.

When every other train was turned around at G/S and SS it made using Merto Rail mor efficient

Every 15 min is still not realistic. These trains will be extremely overcrowded.

Id have to better plan when I arrive at the station and it assumes that the trains are running on time. If they are not on time, a 15 minute wait could be 1/2 hr or more and that would not be ok.

I dont take the red line.

Thus would technically work fir me but the decreased frequency is undesirable.

See previous comment.

Proposal to implement Red Line turnbacks

This plan preserves the most frequent train schedule through the densest parts of the District and Northern Virginia, which is most important to me.

Acceptable option. We just need to plan our schedules.

Wheaton is an important stop for me

This would personally would likely serve as a inconvenience to me, as I work in Wheaton and live in Takoma.

This is not currently applicable to me, but putting myself in the shoes of someone who would use those stations to get to/from work, these would be awful. Massively increased waiting times would cause me to not use the metro service.

Again, I will not be able to afford the additional childcare costs associated with the delays in trains. How can you expect someone to pay for an additional 30 hours of day care?

See previous comment - 15 minutes is too long during rush hour. 10 minutes tops, preferably 8 minutes.

Potentially but if there is no difference in the rush hour then the same comment I had on the first question applies. You need to have reliable rush hour service to make your entire system feasible.

Every fifteen minutes is still too long a wait for many stations during rush hour and will create a lot of morning work delays, but it would be better than thirty minute delays.

I generally do not ride on the red line, so this has minimal impact to me

Decreasing service on the Red Line will have the most impact on my regular commutes. A decrease of some kind is understandable, but changing to every 15 minutes is too much of a decrease and will add a significant burden. Also, once public transportation drops below a certain level of service, it is difficult to keep riders or get riders back. I am concerned this level of decrease makes the Metro too infrequent to be convenient, and will cause more riders to leave or fail to return.

The plan seems to be fare considering the lost in revenue

Trains should be arriving more often at all stops

Again, this is absurd. This would make Metro a daily hell, as trains are already crowded at rush hour with service three times more frequent than this.

It was like this before and was unacceptable then.

Green line is my main concern, use of red/blue/silver/etc is more of a weekend occurrence.

Same comment as previous question - you would lose commuters from Shady Grove, and there is substantial new residential housing planned at Grosvenor/Strathmore, and White Flint.

This would be an absolute deal-breaker for me. I rely on this train to take me: To and from work, to and from friends, to and from meals on the other side of town. If this happened, why would I ever take the train. I'm going to buy a car, I'm going to ride my bike, I'm going to take an UBER/LYFT. - I'm probably going to move. This is the only benefit of living in DC Proper.

Dont use that line

There are a lot of people using these station's

Just make sure the parking at Grosvenor or the next metro stop is adequate.

The wording of this is confusing. I don't understand how trains will arrive every 30 minutes at the surrounding stations but every 15 minutes at Grosvenor. Further, I don't understand how this differs from Option 1 for Grosvenor Station. It's still saying trains would arrive every 15 minutes at Grosvenor station. The difference in options 1 and 2 is unclear.

This would work for my personal usage as I rarely go beyond those stations on the Red Line, but I imagine it would be non-ideal for others.

It is a shame but I understand. Recommendation that would increase social and tourist ridership is to create a new tunnel access for L'Enfant Plaza at corner of 7th and E, SW or 7th and Frontage Road (on the east side of the street.) Reason for recommendation is that currently the three L'Enfant Plaza exits are further away from the Wharf and do not obviously place tourists in line of sight of the shortest pathway to the center of the Wharf (on 7th and Maine, SW). The new tunnel access would take about 5 minutes off the walking commute which is huge. The new tunnel would enable people to walk to and from the wharf in about 4 minutes. I recognize building a new tunnel entrance at a Station that already has 3 access points seems wasteful but it is not. With all the savings for closing 22 Stations it could be in the budget. The new access tunnel would be the Wharf Exit. It would end up paying for itself. Wharf parking is super expensive and SW population has become revitalized and more residents use it for commuting to work. I would think that the Wharf contractors would be more than happy to partner with the City and provide cost effective materials, resources, and workers. Love this City! It is a shame that the Wharf remains an under utilized asset. The Wharf was intended by L'Enfant to be the entrance to the city and connected to the National Mall. Hope this finds you all well. Please, please share this with the highest levels even if it seems unrealistic and hair brain. One never knows :)

I will not take Metro at all under these stupid times. 1/2 hour? You are pretty incompetent if you call that running railway. Walking will be faster!

Proposal to implement Red Line turnbacks

A return to turn-backs at Grosvenor is a welcome step. When trains are crowded, it provides the ability to get off and board an empty train. But having to wait 30/15 minutes for a 20 minute ride is no acceptable.

See my last comment

Too long a wait to make this viable.

This is only ok if you provide 8 car trains for anything arriving.

Whether this would work or not is largely dependent on how common telework is in 2022.

I don't use the Red Line so this has no impact on me.

This is too long to wait for a daily commute

I do not ride on the routes listed

It would work during non-rush hours, but during the morning rush, when ridership should be increasing significantly before January 2022, trains arriving every 15 minutes would result in trains being impossibly crowded.

Its better if it ran every 10 minutes.

DO NOT TURN BACK AT SILVER SPRING.

I take train from Twinbrook, this will not work. even 15 min frequency during the rush hour is not low.

Terrible idea!

Time spans are too long for people who fully depend on the metro for work, getting to school, doctors appointments

No additional comment.

Please do not close any Metro subway stations on the Orange or Silver lines.

This would discourage me to take metro and instead drive or taxi. Might as well close system down.

We need our late night weekend hours back

This would make it totally impractical for people living in these areas to go to work in downtown dc

It would work for me because I would use the Takoma stop, but for those living beyond the Silver Spring stop, this defeats the purpose of having a Metro system that reaches into the suburbs to discourage automobile traffic.

See last comment regarding time between red line trains.

No me afectarÃ-a porque yo uso la parada de Bethesda

This plan means I would rarely use Metro and would be forced to seek other transport services. Frequency of service is one of the keys to rider use. Infrequency significantly deters ridership.

I think trains should arrive every 15 minutes on the Red Line.

Yes but could imagine this resulting in crowding on peak hour trains from those stations or more defecting to driving

I do not use the Red line very often

Trains need to run more frequently so there is less congestion on the roads. People will start driving if they think they will be stranded at a station for more than 30 mins if trains are full, break down, etc.

Even though this is not my line, I know so many people who rely on Red line trains, and this would be extremely inconvenient.

I have a friend who lives near the Twinbrook station. She still works, and commutes (before pandemic) to Pentagon, and takes a bus from there. I am sure this would impact her commute very negatively, if/when they return to the office.

I do not ride the Red Line currently, so this proposal does not affect me.

Much depends on what the usual Metro use is between Grosvenor and Shady Grove

I have no need to take the red line on a regular basis.

This plan had worked well in the past, which helped to alleviate the crowded platform at Grosvenor-Strathmore station.

I do not depend on Metrorail to get to work. I am commenting as an occasional rider.

I do not take the red line.

I dont use the Red Line in Maryland much but these frequencies are terrible and will lead to greater loss in Metro use.

Proposal to implement Red Line turnbacks

Prior to the pandemic, service changes on the Red Line caused significant crowding on trains during rush hours. By all credible estimates, the pandemic will have subsided and Metro ridership should recover by January 2022. Further service cuts would only exacerbate pre-pandemic issues for commuters.

I don't ride the red line to those stations so it would not impact me directly, however this degradation in rail service is going to harm a number of transit users and will lead to additional cars on the roads, which DOES impact me. I am opposed to this proposal.

Same as previous -- a 30-minute wait would potentially quadruple my (rush hour) commute time (from the current 6-7 minutes between trains) and lead me to explore alternative commuting options.

Horrible, there should be more train frequency, not less. The trains are always packed once they get to Grosvenor. That was the case pre COVID and will be worse with this plan.

I don't use the red line that frequently.

I use the Grosvenor Strathmore station and it is a busy one (pre-pandemic). Also, it is close to the Beltway and I-270, with a newly-expanded garage (which was sorely needed by the way), so the station will become busy again. I think trains every 15 minutes is reasonable.

I am indifferent about the alternating train routes, however the time between trains will cause excess congestion

The closest Metro stop to me is at Grosvenor. So this works for me. But I don't think it would be the preference of people using Metro beyond Grosvenor and Silver Spring.

Better than the more draconian plan.

I would use the Friendship Heights, Van Ness, or Tenleytown stations, so this would not impact me.

This is a very severe service cut that will make rush hour worse and will make it harder to take children.

Low confidence that metro would be able to maintain a schedule. The chances of missing a train and having to wait 30+ minutes on the platform until the next one is completely unreasonable.

I am not very familiar with the red line, however it seems like once people can come back to work in DC traveling from the suburbs will be nearly impossible.

Ridership would decrease if passengers knew they had to wait 30 minutes for the train to leave the station and therefore would find alternate means of commuting. This plan is disastrous.

Need to have a higher frequency than every fifteen minutes during rush hour

I don't usually take the red line, but when I do, I take it to either Bethesda or Silver Spring so this would not effect me.

I live on the portion of the redline that would be impacted by this proposal. 30 minute headways are not acceptable and will lead to reduced ridership. People like me who are lucky to have a choice will stay away from metro and work from home more. My understanding is that when metro eliminated the "Grosvenor" turn back and sent every train through to Shady Grove, ridership numbers increased.

See comments above in previous Question for the outer ends of the line. The portions with 30-minute headways MUST run on a PUBLISHED Memory-Pattern timetable.

UNACCEPTABLE !!!

While I don't regularly use those stations, I am further upstream (closer to DC) and infrequent stops at these sites means overloaded cars reaching the later stops, which potentially means we may have to wait till a later train arrives - effectively making our wait time 30 minutes. Without a way to plan for this consideration, which could occur very frequently, it would make commutes very long. I already felt the trains were inconsistent with timing before the pandemic, this slowed down schedule would make metro travel very very difficult.

Rarely use the red line so doesn't affect me

I rarely use the Red Line, but do so occasionally. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

This would not work for me. I work near White Flint and a 30 minute wait for a train would make my commute much harder.

It is hard to plan timeline with arriving on time as trains do not have correct schedule.

15 minutes between trains is too long. 10 minutes would be preferable.

Makes no sense to do this

The full schedule barely worked during rush during normal times, and I expect myself and many of my peers to be back in the office by next January. This is better than a weekend schedule on weekdays, but still would make metro service unusable for me.

Union Station would be overwhelmed with riders.

I don't use the Red line.

Proposal to implement Red Line turnbacks

Would not be often enough.

Every 30 minutes is too slow. When you were repairing tracks during the summer the connecting trains did not connect properly therefore the wait time was an hour if connecting train was missed. Your schedule didnt seem to take this under consideration. The commute was terrible.

Don't take Red line

Makes commute too long. Add waiting time for a ride on bus.

Same applies to previous answer

Extending the wait time would probably curtail my use of Red line.

That works. Most stations I use on RD are between those. Union Stn, Gallery Place, and Metro Center

Every 30 minutes is not often enough for people who rely on the trains.

Im not sure how this would impact return trips from other stations. And would this overload stations like Grosvenor-Strathmore? There is rarely enough parking as it is.

See prior comment. So what happens to all of the property owners and renters who already bought property near closed or degraded stations with reduced train times? They (and the property developers who built all that housing) will never forgive this kind of approach.

30-minute headway is ludicrous

30 minutes is too long. 15min is too long for a major corridor such as the red line

With this schedule, it is essential that the trains be on time.

Life will return to normal in 2022. This plan will result in severe back up riders on the platforms and there will not be enough room in subsequent for waiting passengers to load. It will creat massive back ups and no one will want to wait til the next train, which may also be full. This plan does not take into consideration rider experience or needs.

I have concerns about crowding at Metro Center and Union Station. They are crowded anyway, and if trains are arriving only every 15 minutes, I could be waiting for several trains to pass before I could get on one. It might end up being faster to walk and not take metro at all.

I live north of Silver Spring on the red line. This service cut is unacceptable. Southbound trains will be full by the time they reach Silver Spring.

I dont use red line much except going to/from NoMA.

This was done before - and it made no sense, it was great to see Metro stopped the practice. Now we are going back to every other train turning at Grosvenor. Meaning that commuters who go all the way to Shady Grove pay the same for less frequent service.

Again would prefer to just run more trains. Makes usage going out past silver spring fairly useless.

I use Wheaton metro station

Depends on ridership level, which may approach pre-pandemic levels with completion of vaccination program.

This is worse than the proposed frequency for second part of 2021, and by January 2022 it is very likely people will return to their activities pre-pandemic, therefore the need for public transportation increases, not decreases as your proposal implies.

This would force me to change my work hours, because it would require me to get to work much earlier than needed or get to work much later than required.

I am not a rider of the red line.

Those trains were already crowded at those stations, waiting for 30 minutes will not be acceptable. Consideration needs to be given to how many riders there will be especially during rush hour.

This would cause me no problems since Grosvenor-Strathmore is my neighborhood station

This would work for me but selfishly: I live/commute between Grovesnor-Strathmore and Silver Spring so I would be on the 15 minute plan. I dont know how that would work for outliers.

This is much better than Proposal 1, however overcrowding during rush hour commutes would still be a significant problem.

I live in Glenmont, and I find this as a bad thing for me. I have a tight schedule to go to work, and leaving Glenmont is unacceptable to the residents living in the Glenmont community.

It would definitely make life more difficult but I think could be doable

This is a stretch of the network that I rarely use, but I imagine it would cause great inconvenience to many others.

I don't use the red line.

I do not take the red line. I get on at Braddock Road and take the yellow line to LEnfant and then transfer to Capitol South.

Proposal to implement Red Line turnbacks

| |
|--|
| Although not applicable to me, this could increase travel times to Shady Grove, especially impacting students/faculty, staff at the University of Maryland Shady Grove |
| Again, a great number of Federal employees live in these outer suburbs and the potential to clog both the Grovesnor and Silver Spring stops with commuters waiting for the further reaching trains is high. I recommend having trains (perhaps 4-6 cars) running just between Grovesnor and Shady Grove, Silver Spring and Glenmont. With shorter runs, these trains could be flexible to accommodate the build up of commuters on the platforms. |
| This is fair. You should definitely consider more frequencies within city limits to allow those who transfer from other lines (Silver, Orange, Blue at Metro Center; Yellow and Green at Gallyr place) who need to get to popular places on the red line (Union Station, Cleveland Park, Etc) |
| I travel between Alexandria and Rockville weekly. This would be a huge problem if the red and yellow line schedules dont align to make connections possible without long delays. |
| Please see previous comments. |
| I do not take Red line trains for work. |
| Parking at Grosvenor is already impossible. This plan will not work unless garage space dramatically increases. Todays Rockville, Twinbrook, and White Flint commuters will take up even more spaces at Grosvenor. The same issue would occur in Silver Spring and would create further congestion on the roads. |
| I use the Grosvenor station |
| I live on the red line in the section served every 15 minutes, so this is better than the alternative. With that said, trains every 15 minutes during rush hour is not a good way to improve ridership next year. Most people with any flexibility in their work will choose to take another form of transport or work from home instead. |
| Not a problem. I neither live nor work on the red line. It is OK with me if you shut down the entire line. |
| Fine with me as I dont travel further than Grosvenor-Strathmore |
| As someone whose home station lies north of Silver Spring, this return to the Silver Spring turnaround would signal to me how little Metro cares about my community. While receiving half as a many trains as those living in the lower part of Montgomery County, we are still expected to pay far higher fares. So the part of Montgomery County that is among the hardest hit during the pandemic may now be expected to bear a higher burden as a result? Seems grossly inequitable. Meanwhile, reducing train services to Forest Glen (located near hospital facilities) during a pandemic seems like a strange plan. |
| This schedule would interfere with workers transferring to downtown Metro stations. |
| As in my previous comment, if ridership spikes because of mass vaccinations, waiting at these 30-minute stations will become extremely frustrating, especially as the train goes down the line and there is no capacity for more passengers to enter the train. |
| I live within the area where trains would arrive every 15min. |
| We need to educate the public on the benefits of mass transit |
| I do not ride the red line. |
| This makes it basically impossible to use the metro to get anywhere. If there are train delays and you have to use more than one metro line, it will result in having to wait 2+ hours just to get somewhere! |
| I do not take the red line to those destinations so cant make an assessment on this |
| Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station. |
| a 30 minute schedule makes metrorail unusable. Ill end up taking a taxi instead. |
| No, this will not work for me as a young person who is very much planning on using the metro as my primary source of transportation in 2022 because I do not have a car, nor can I afford to buy one. At that point, I largely expect to feel safe enough to go about the city, which includes going to work, going to dinner, fueling the local economy, etc. |
| While red line is not applicable to me, it seems absolutely bonkers to propose a 30 minute delay at some stations. See my previous comments. They apply here, as well. |
| No just no |
| I dont use the Red Line, so its not applicable to me. Of course, Im sure these changes would affect others. |
| The turnback adversely impacts Montgomery Countys plans for more transit oriented development. 15 minute headway are unacceptable. This plan will lead to further declines in ridership. |
| I already explained why I dont support 30-minute service from Shady Grove in response to Proposal 1. |
| Less than ideal for those stations further out. Again, leads to far more crowded trains, or potentially the loss of ridership, which is the opposite of what you need. |
| Stop lessening the time and the number of stops. |
| Thirty minutes is too long to have to wait for a train. |

Proposal to implement Red Line turnbacks

OK for me since I get off at Grosvenor. I wouldn't like it if my destination was Shady Grove or Rockville.

That's not going to be enough trains during rush hour. If I have to wait that long, I'm probably better off driving.

I may switch jobs and if I do, this plan won't work for me.

The red line is essential for work commuters and due to delays, switching lines, etc a 15 minute wait time is not conducive for work commuters.

same as previous response

Again, the timing is so long. This is a very big burden.

I don't normally travel to the outlying stations on the Red Line, but if I ever need to, it will be very hard to get there if trains are running only every 30 minutes.

100% unacceptable. As a rider who lives past Grosvenor 30 minute headways make for extra crowded trains, extra late everywhere, and potentially not seeing my kids before she goes to bed any day I have to work in the office.

If you miss a train you will be late for appointments.

Again, we are talking about the nation's capital metro system and not a suburban train line. Moreover, we should not discriminate against cities and towns within the DMV. Some essential workers live in these places and need the red line to work and get back home.

Does not impact my commute

I never use the stations listed and do not plan to use them with any regularity.

This is a terrible idea as so many stations on the red line are used for commuting and travel - DuPont Circle, Farragut North, Gallery Place, Union Station, etc.

Does this proposal make any adjustments for rush hour? Again, if there is a return to the office, trains every 15 minutes would likely be too crowded and too infrequent.

You are going backwards!!! We fought for ages to get all trains to go to Shady Grove. See my comments for the previous question. Also, the White Flint station NEEDS a kiss-and-ride lane. Why on earth have a station that is conveniently located to a major growth center and then cut it off at the knees by placing the garage 1/2 block away down a hill and not providing a drop-off lane?

I do not regularly travel outside Grosvenor-Strathmore and Silver Spring. This would impact those who do.

30 minute headways to/from my home station would be miserable.

A complete waste of your customer's time making them wait 30 minutes for a train during rush hour. It makes the Beltway look desirable.

I do not use the red line.

This is how it was before elimination of the turnbacks, and I thought it worked alright.

For me personally, it wouldn't impact me unless I move. That said, the only affordable housing is further out on the Red Line, so mid-lower income folks would be severely disadvantaged.

No, the services are too infrequent during rush hours.

If trains are reduced to every 30 minutes, you need to have a timetable and stick to it. That's a commuter rail.

See previous comment.

I personally don't use the outer red line stations very much, so this is OK.

This would be harder than pre-pandemic full service---coming from the Wheaton station---but it would probably be manageable.

Congress needs to subsidize the metro. This is an essential service and should be a main priority for our nation's capital. Not funding this service that thousands of Americans rely on to get to and from work is criminal.

No so good. Thinking of people who do not drive.

It isn't ideal, but it is moving in the right direction. I still think you will end up with overcrowded trains on the red line. You should get rid of the seats except the handicapped section on all trains. Then you could fit all those people in with long intervals between trains.

unacceptable to skip Grosvenor.

I think every 30 minutes during rush hour is too infrequent for these stops.

It's difficult to know which train stops which station. The trains need to stop every station.

I don't use the Red Line for my daily commute.

I think it will result in a total loss of revenue at the parking lot that was usually full when you turned around the trains at Grosvenor-Strathmore. This looks like good planning for shutting down the red line. Do you know the ending date for service on the Red Line.

Proposal to implement Red Line turnbacks

Again, 15 minutes wait time is a bit long. 10 minutes I think we can deal with.

This is not part of my regular travel

The stop closest to the VA and MedStar hospitals should stay open.

I work at the Twinbrook metro, and with this schedule, would need to buy a car and use that instead.

No it would take too long just to get to Bethesda from Shady Grove

I start my commute at Silver Spring, so this works, but remember - the areas listed (Shady Grove, Rockville, Twinbrook, etc) have experienced a huge housing/population boom in the COVID era and the trains would potentially be even more crowded.

Does this impact other lines? I don't particularly use those stations very often, but the every 15 minutes (even during peak periods) for the red line stations I DO use is annoying. 15 minutes is fine for non peak, but I don't like hearing that for peak

15 min between every train is still a little long. But keeping the frequency between Grosvenor-Strathmore and Silver Spring higher makes sense

It would make trains much more crowded and just because my station is within the train every 15 minute section doesn't mean I don't care about other riders.

Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

N/A

As I understand this, Grosvenor-Strathmore would still run every 15 minutes. Since my husband and I both use metro daily (when not under COVID restrictions) this would work well for us. We live in this area due to the METRO at Grosvenor-Strathmore.

Does not really apply to me. I live on orange line

I live at Brookland - my comments for this proposal are the same as my comments for the last proposal.

I don't use the red line.

Trains will run too infrequently and people in the suburbs who need to get into DC will drive instead, keeping your ridership low.

I am a current health sciences student that relies on the metro for morning, daytime and evening hours to get to and from school and various clinical rotation sites in the DC metro area. Having the metro run less frequently directly impedes my ability to access essential medical educational activities.

I live in Bethesda and am generally heading into DC

The gaps should be every 20 minutes for the end stations and every 10 minutes everywhere else.

This isn't ideal, and further negatively affects the people in northern Montgomery County. It took a lot to get this process changed, it would be a HUGE step backward.

As noted on Proposal #1, run the service like a regional rail service.

I personally would originate most of my travel from Grosvenor going into the District. I would anticipate that would increase the demand on parking at Grosvenor, though, which might be inconvenient.

I get on at Grosvenor with end point of Foggy Bottom or Dupont Circle (and walk)

Having trains every 30 minutes for Forest Glen, where I get off, is too long.

There is no metro parking at Silver Spring so I use Forest Glen (I live near both stations) and I have loved having all trains go the full line in the past.

30 minute intervals would compromise work schedules.

I am a rare user of the red line

Doesn't sound so great for commuting by public transportation.

I'm fine with the limitation for the further out spots, but 15 minutes is not enough for rush hour

Might be a better way to make things work. The ends do seem to be important for the morning commute. But perhaps phasing in as people forget about covid would be good.

I use the red line only sparingly and generally late at night when I can afford to wait around a bit.

I recognize that Silver Spring-Grosvenor contains the bulk of Red Line stops, but again, only providing 1 train every 30 minutes to Shady Grove, etc will make it so that people using those stops can't rely on Metro to serve their transportation needs. Even 15-minute trains at the core of the Red line is still not that frequent.

Same reason as previous question. The every other train aspect would not impact my commute but to have a train only every 15 min during rush hour is a horrible idea.

We need to increase the reliability of metro, not decrease it to improve service for riders

Proposal to implement Red Line turnbacks

This will result in overcrowding and extremely long waits for transfers. It will increase travel time by at least 20-30 minutes. Assuming fares will also rise, reduced service will be a double penalty for riders and further reduce ridership.

If that happens, I won't be taking classes at Maryland

I live nearest a Red Line station, but I don't commute on the Red Line so I hesitate to answer "this would be ok for me for my non-commute needs."

Union Station needs much better service than that!

I only ride the red line downtown so this option is not a problem at all for me.

This is not ideal, but it is feasible. It gives people at and below Grosvenor a better chance of getting a seat during peak hours.

again, not enough time at these stations. These metro stops shouldn't be any different than any other metro stop, in terms of timing.

Again, I think this would increase crowding on trains.

Please don't reinstate trains stopping at Grosvenor. It was so much easier (for me, at least) when trains went all the way through.

Same comment as before consider rush hours and weekends. During rush hours it should be every 3 mins.

I thought Metro had come to the realization that providing more frequent service between Grosvenor-Silver Spring was a relic of the past. More and more people are being pushed out. Metro needs to serve the 21st Century, not 1960.

I think that would be fine, although I don't want to know how crowded those every half hour stations would be.

Again, better than nothing. Would be a bit irritating but still doesn't deprive customers of access at the outer edges of the WMATA map.

Potential negative impact to commuters.

Grosvenor-Strathmore is my primary station

If one missed the train due to bus delays, etc. it would be way too long during rush hour to make the next train and be at work on time. Additionally, the trains would likely be too crowded to be able to get on

15 min should be the longest that busy working people need to wait for a train at any station within the system

30 minutes between trains is long period. 15 minutes would work better.

Why are you acting like the virus will still be here? The Federal Government has purchased 600 million vaccines!

I'm guessing you'll still expect to increase fares. I hope to never use Metro again if it's possible for me to continue working remotely. What you're proposing is costing me my personal time. Time = money. A pandemic year is not the norm, these plans are not meant to ease the burden of working people's lives, but to make public transit a poor option for getting to/from work! Maybe you should be cutting the pay and benefits of people making these decisions.

30 MINUTES!!!!!! YOU'RE CRAZY!!!!!!

The long wait between trains could create problems for the commuters requiring to meet appointments or work related travel,

Need more frequent service to commute to work

30 mins between trains beyond Grosvenor is too long.

Part of my commute is on the red line (Chinatown, Judiciary and Union Station) and though it is only two stops it was very crowded pre-pandemic. If trains run every 15 minutes not only would it significantly slow my commute, it's possible I wouldn't get on the train because of space issues. The first bullet point would not affect me (every 30 minutes from those stations).

Trains from north of Strathmore will be close to full by the time they reach Strathmore. Use more cars for each train to accommodate passengers.

This seems like a good compromise to keep all stations open

No. Many people at the Grosvenor-Strathmore metro commute for work. This would mean people would have to leave an hour or more early just to arrive at work on time. The amount of people on each train would be astronomical. Plus, there are so many musicians who rely on this line and station to attend practices and shows at the Strathmore.

Better than the last proposal but still not really great.

Es mucho tiempo entre uno y otro metro, ya no resultaria conveniente viajar en metro y preferia utilizar uber o lyft

Every 30 minutes?! Not frequent enough

Again, I would implement this option now, with the phase in of normal service beginning in January 2022, consistent with the return in ridership.

This is a good idea! The very ends of the Red line don't need to be serviced as often

Proposal to implement Red Line turnbacks

I do not understand the reason for leaving Virginia without access to the metro. This will have a negative impact in persons, lives, business, recreational activities, entertainment and real state.

Wash DC is a major world city. We need a world class subway system. trains already run late. Times between trains are too long. 30/60 minutes adds lots of time to a trip. I live near grosvenor station and would be adversely affected.

get home late

See my prior comment re rush hour schedules.

This could potentially double my commute time and also make it difficult for my fellow commuters

I dont ride the red line frequently. However, if this proposal is actually implemented, its critical that Metro operate those trains on a strict clockface schedule. Meaning that if the trains are supposed to arrive every 15 minutes, they are scheduled every 15 minutes. Not the platooning that Metro often does, where the advertised headway is every ten minutes, but the reality is two trains 3 minutes apart, and then a 17 minute wait. Sticking to a clockface schedule is critical. If the train will leave my station every 30 minutes, then it should leave at the exact same time each hour so riders can plan. e.g. a train will leave at 9:07 and 9:37, then 10:07 and 10:37, etc. If you want to turn metro into a regular railroad, then you MUST run a schedule, adhere to it, and communicate that to riders.

same comments as previous answer. my stop on the red line is Fort Totten

I don't take the red line to and from work.

Too long between trains

Do not cut service on the red line. It is already overcrowded. It would be good to reinstate trains that run Grosvenor to Silver Spring only. Only objection is to trains every 15 minutes. Needs to be more frequent during rush hour. By January 2022, most people will be back to regular commutes.

This disproportionately adversely affects lower income workers who have to live further away and commute to jobs in the city. Cutting train services will only force these commuters to drive instead in order to accommodate less flexibility with start times in service industry jobs. That will overall decrease Metro ridership and cost more in environmental, road, and transportation costs.

I do not often take the red line.

I use the Grovesnor Strathmore station for commuting downtown and rarely use it to go further uptown.

Youre further marginalizing people who cant afford to live closer to the center of DC by reducing their access to public transportation. You phrase this as best serving a busy area! but in reality youre making life more difficult for people who cant afford to live in more expensive areas. I cant believe this wont be challenged as discriminatory.

Dont live in those areas---dont care

I travel via Grosvenor station, as do many of those that live in the area. I would not take the metro at all if this station was closed.

I say yes because I dont typically use the Red Line.

I work in Rockville and commute from Alexandria. My commute time would be crazy long!

When the ridership goes back up when in-person work resumes, this would cause VERY FULL trains which also doesnt help with social distances which will likely need to continue after more people have been vaccinated.

Why the people using the service and paying higher ticket price should suffer -- 30 mins service instead of 3min or 6mins is not viable option. This is the longest train line connecting with DC and this proposal is not good at all for people like me using it from Rockville.

Nice, but would it save enough money as making all stops 30 minutes? What about parking at Grosvenor--will it be overwhelmed?

Young people use the metro to get to holy cross high school, Georgetown prep, or jobs in Bethesda and DC- having to wait in the morning is difficult and inconvenient.

I don't understand how this differs than proposal 1 for red line travel

This would work for me now, because I use Grosvenor-Strathmore. HOWEVER, I am planning to move in 2022 and will be closer to White Flint and Twinbrook. At that point it would not work. If I miss a train at the half-hour point, Id be waiting an additional half hour.

None

It would be in incident to wait thirty minutes for a train from Rockville to get into the city

Since Grosvenor-Strathmore is my local station, and my job is in downtown DC, this change would not affect me and therefore be okay with my work-related travel needs.

This could work for me. I dont know about the wisdom of this though. Everyone would drive to grosvenor metro and the parking would be wasted at all those northern stations.

Proposal to implement Red Line turnbacks

Maybe. Since I get on the train at Grosvenor station, and if forced to return to my office in person, and given the options so far presented. This proposal may work for me. Too many unknowns at this point.

This proposal only works if metro publishes train arrival times for every station like MARC does. If ridership goes way up post pandemic metro must be prepared to increase train frequency or lengthen trains.

I live in Silver Spring, so this works for me. 15 minutes is not too long of a wait. If I lived further out, though, I'd be disappointed.

It is also acceptable one!

For the same reasons I expressed before. Longer waiting times means crowded trains and missed connections to buses mean longer standing times which is difficult for me and others.

Train arrival every 30 minutes at any station is potentially disruptive to commuting schedules.

Just shorten the rush hour time

My travel is between Dupont and Takoma so the difference doesn't matter but the intervals do

This would not be convenient as the metro is the only way of travel that I have.

I am not a regular Red Line rider, so this would have minimal impact on me. I would be able to work my schedule around this for my infrequent use of the Red Line.

Every 15 minutes is better because I take the Wheaton/Glenmont line and would need it more frequently.

No impact on me

I do not use this route often

If schedule is strict: train every 15 min, it is ok

It will cause a crowd and traffic. And with COVID do we need the long delays??

Note that ride the Red line infrequently.

I do not take the Red line much right now, but I have in the past. The speed of the red line was always a great benefit of living close to it. It might have been helpful to include a Metro map here.

The trains are already at capacity during rush hour and these changes will make it even worse. It's a safety issue as people will be trying to pack themselves into trains.

People who have moved further north of Bethesda to more affordable housing rely on the Metro north of Grosvenor-Strathmore. M-F they will need trains running every 15 min like the rest of the Red line.

Turning half of the trains around at Grosvenor (and I assume Silver Spring) is a horrible idea. There are large amounts of housing (and more being built) near all of the following stations (White Flint, Twin Brook, Rockville and Shady Grove). Additionally, many commuters drive to those stations to park and catch the train. This change has the impact of 30 minute waits at all those stations which will increase platform crowding. Finally, considering the Grosvenor station was closed for months during the pandemic (I assume due to lack of commuters), I don't understand the logic behind using it as a turnaround.

I take the silver line

This proposal seems good since most of the passengers on the Red Line would still maintain acceptable service levels while still saving considerable money for metro.

I don't use these stations so it wouldn't impact me

Absolutely not!! Grosvenor-Strathmore must remain open with the same service it has now. Non-negotiable.

Could make it work but we'd definitely create work time loss

No trains during week day rush need to be more frequent than 15 minutes; weekend can be less frequent

During peak hours, train should arrive at least every 10 minutes.

I don't take any of those trains so it's not applicable to me. I'm only thinking of the viability for my daughter who's planning to move to Twinbrook.

Really eats up smart trip fare to go out there from Arlington VA

As long as Grosvenor-Strathmore metro remains open time changes are acceptable.

Again - headways should not exceed 15 minutes at any stations.

If this were to happen, I would use the Grosvenor station to the exclusion of Wheaton.

every 20 minutes would be a more tolerable interval

Proposal to implement Red Line turnbacks

| |
|--|
| My local train station is Grosvenor, and it is quite busy when people are commuting in normal times (pre-pandemic). Once we return to a sense of normalcy, this schedule would work to bypass lesser used stations such as these. |
| Yes. This is feasible for someone who exclusively uses the red line to move around within the city only. |
| This proposal does not affect my regular travel patterns. |
| 15min headways are still long. If this includes rush hour, its unworkable. |
| Absolutely not acceptable to have trains running every 30 minutes. |
| Will there be a strict schedule, so if my train only comes every 30 minutes I can count on it being at a specific time? Getting to work on time will be quite challenging. |
| Thirty minute intervals are too large and will lead to crowded platforms and trains. |
| I do not take the red line often, so I do not have thoughts on this proposal. But in general, 15-30 minute headways during rush hour is not acceptable for a functioning subway system. You might as well just shut the whole thing down. People will only ride it if they are desperate. |
| I don't want to spend all my time commuting. Cut your workers pay like we all have had to do.....!!! |
| I have considered purchasing a home near one of those metro stops. I would no longer evaluate that, nor would I take metro to visit friends at those stops. I would use other transportation-likely driving myself or ride share. |
| Trains will be over crowded during rush hour |
| Again this would negatively affect my travel to and from work. |
| With the extended wait times, Im concerned about how crowded trains might be. |
| This issue with trains every thirty mins on the redline is reliability. It is hard to plan a daily commute when they train doesnt arrive at the same time everyday. |
| Not great but I agree in prioritizing more frequent service in central stations |
| I very seldom, if ever, go to these stations. Thus, I have no idea how many people would be affected by this plan. I am thinking only for myself here. |
| I solely rely on Metro to and from work to Washington DC and to travel to Twinbrook and White Flint for shopping etc. This definitely will cause extreme difficulties to me. |
| Would cut down on my use to Rockville. |
| The frequency will be too low and trains will be crowded |
| Only works for me because I don't live by those stations. This is just going to contribute to more cars on the road. |
| Predictability is my largest concern, so having a schedule I can depend on is best. I also use a tracking app (i.e. DC Metro) so can plan accordingly. |
| My closest metro station is Grosvenor-Strassmore so this would work for me |
| It is important to understand the interoperability of so many of Metrorails lines - functioning similarly to a balloon, squeezing one portion will undoubtedly pressure the others leading to more problems with the other trains. As such, slowing the Red Line at the terminus points as this proposal does will harm the Orange/Silver line which I rely upon for my work transportation. |
| As someone who lives closest to Forest Glen, this would prevent me from taking Metro to work in Tenleytown. I'd need to look for ride alternatives. |
| I travel to and from Forest Glen or Wheaton. A half hour between trains is a long time to wait. The rush hour trains are already pretty full as it is. Remember we will have rush hour again - it's already ramping up. |
| 30 minutes is not frequent enough. Even 20 minutes is a hardship in very cold, rainy, snowy, icy weather, but 20 would be better than 30. I think that people in a big city need to get where they are going. Better trains should be max 18 minutes apart. |
| I ride the red line infrequently so it does not impact my commute |
| In the mornings and rush hour metro is packed, reducing time will make it even more difficult. Meaning more traffic on the roads, school buses need to take more time to school, more cars driving |
| I am retired. |
| This also provides reasonable service while enabling Metro to reduce operating costs. |
| I do not work or live on the red line |
| Trains are too far apart to function as anything other than novel traveling. Will greatly minimize usage. |
| I am not a frequent Red Line rider. |
| The commute to work for many people with the current schedule is often 45 minutes to an hour. This would make it closer to 1.5 - 2 hours |

Proposal to implement Red Line turnbacks

I don't live on the red line and rarely travel to these extreme ends, but I think 30 minutes is a completely unacceptable gap between trains at ANY time of day or week.

Most of my likely travel is Yellow, Blue, Orange and Silver (Virginia)

Would work, but is not optimal.

Why should I pay twice as much for less service if I use a station that is designated as 30-minute? The train needs to be arriving every 15 minutes on the entire Red Line.

I live right by Grosvenor-Strathmore. The metro will no longer be accessible to me. Trips will take much longer as I will have to take a bus and then the metro.

Im not on or near the red line.

I am not living along Red line. This question is not applicable to me.

I don't use Metro to commute, but this schedule might discourage me from taking Metro on weekday trips. I anticipate that Chinatown and Metro Center will have surges of crowdedness, perhaps dangerously so.

I don't tend to use the affected stops but every 30 minutes is too much of a gap for a subway

Not equitable to those who rely on regular service from those station.

My current commute is on the Silver and green lines. I only take the red line when needed to travel to a specific location.

I probably would not be affected by this plan since I ride mainly within DC's borders.

I live near Tenleytown and basically take the Metro between Friendship Heights and Gallery Place. But I assume it will affect other people negatively who go downtown but live in Maryland negatively

This would work, but the only way I see to ensure the population continuously chooses Metrorail is for consistent service that makes it more enticing than taking a car. The less frequently trains run, the more people will just drop metro entirely.

More people live outside of the beltway than in it. Again, would just not use metro

every 30 minutes? really? Uber would be faster and cheaper.

15 minute headways are too long for redline service.

Probably won't work well for commuters from Shady Grove or Wheaton, though.

There needs to be a prioritization of more trains during rush hour, because the likely outcome if (Metrorail Proposal 2) adopted would be in the long run a push for current riders to adopt new methods of transportation, i.e. personal vehicles and thus further lowering ridership for Metro as a whole.

I grew up on the Red Line; it is very busy so it makes sense to run trains more often from Grosvenor to SS. However, even the 15-minute headways are extremely long and more reminiscent of a regional rail system.

How will this dovetail into our new green energy plan to reduce carbon emissions if we reduce mass transit? Are all other major cities following this plan?

At this point, I'm working from home as my employer has shut down our DC office because of the COVID-19 pandemic. Once life gets back to normal (when the pandemic is over), whenever that is, employees in my office are likely to be expected to go into the office again, so while a schedule like this may work now (i.e., in 2021 while the pandemic is still going on), it's not likely to work once the pandemic is over and other workers like me go back to working in the office.

same

I do not currently live on the red line but this would disincentivize my ever looking for a permanent residence along this line.

15 minutes is too long for all other stations. However, I do not mind the 30 minute wait at Shady Grove, etc.

Again, this is scaling things back to the point where ridership will plummet. People count on public transit in an urban space to have short lead times and frequent trains to allow for ease and convenience of movement. Scaling back like this is anathema to a system as major as Metrorail.

I don't use these stations often so I am not as impacted by their changes but understand it may impact others.

Same answer as previous question: So, commuting from Rockville to Farragut North, I could potentially have to wait half an hour for a train on any given day, depending on a hiccup in traffic or my children's morning routine. That's awful.

Trains should go to Shady Grove during the midday, evenings and weekends unless track work is done beyond Grosvenor.

Trains will be too crowded.

This would be great for me as I get on and off at Grosvenor. Pre-pandemic you stopped the originating at Grosvenor and it was not great and the trains were packed at rush hour.

Proposal to implement Red Line turnbacks

Meaning - I live at the Grosvenor station, so you are servicing that station. But to have trains only every 15 minutes is concerning during morning rush hour. Isn't it true that rush hour has more dense crowds as so many converge on the stations between 7:30 and 9 am? Whereas the evenings experience customer density more spread out from 3:30 to 7 pm? as peoples leaving times are less predictable?

20/10 minute intervals are more acceptable.

I am not currently dependent on the red line. This may change as 2022 approaches as I may be working a new job or be living in a new neighborhood.

I seldom ride between those stations

Not a redline user

The 15 minute arrive time within the city makes a cross-town commute much slower than biking... I would probably opt to bike unless the weather was horrible and I was forced to take Metro.

I rely heavily on the red line to shady Grove from Grosvenor. Please keep plan as is.

Arrival times are too slow

Again, easier to plan for reduced service compared to no service to a particular location.

Im a Glenmont user and I would be unhappy but okay with this. Im concerned about this service cut in some of the more populated affected stations, such as Rockville.

Because I use metro to get around due a disability

This wouldn't impact where I am coming from.

I don't use the outer stations, so this is not a problem for me.

This would be unfortunate for people who rely on the metro stations with cut service, but with some planning on the part of commuters, it would probably be ok. Though, I would suspect some people who were previously red-line metro riders would stop riding metro due to the inconvenience.

I think this would fit most people's needs

Need to utilize Grosvenor metro

This sounds like a very good plan!

The red line is heavily used by commuters especially those how live in the city.

Dont take red line

I live in Frederick Maryland and it is convenient for me to drive to Glenmont and end up at McPherson station. That is a 4 hour roundtrip commute. The 30 plus minute wait times would be quite too much as it would probably increase my overall commute time by 2 hours or more.

having to get kids to school on time and then get to place of work will mean spending about an hour or more just to ride metro. this is unacceptable!

Will there be a schedule similar to bus services. This will allow for better planning when to arrive at station.

It would add additional time to my commute if I have to commute to the office in Virginia Square.

I rarely ride Red line.

BIZZAIRRE SCHEDULE - USE TWO CAR TRAINS ON EVERY TEN MINUTE SCHEDULE.

This would lead to more crowding on the trains running at those intervals, especially during rush times

Dangerous overcrowding in an environment where use of masks cannot be controlled and will probably still be necessary. Also note that you havent specified how many cars in these trains.

frequency too low for the red line leg of my commute between union station and gallery place

At this level of service, Metro would not be a viable means of transportation. Also, as noted above, the proposal calls for closing my stop, Grosvenor. If metro closes Grosvenor, I will have to sell my house.

WILL BE GOING BACK TO THE OFFICE (DC) STARTING FALL

While I would not really like the reduction in service, I would understand it, and 15 minutes between trains is bearable, provided you increase the number of trains to prevent overcrowding (if and when it occurs).

I do not use the Red Line routinely

Same comment as first option.

Proposal to implement Red Line turnbacks

This proposal pushes commuters using more distant Red Line stations to drive to stations with fewer parking options. Due to Red Line, it pushes me as a commuter back to driving every day, rather than using Metrorail and risking an extra 30 minutes on my commute. As offices start to re-open and road traffic drives commuters back to public transportation, this is a problem waiting to happen. Why should I continue to pay a premium for a longer Metrorail trip?

In the rapid change environment of Govt consulting, the 30m option is the difference between taking the metro, and taking an Uber- and asking my work to pay my commuting benefit to my metro card, or reimbursement of my ride share expenses.

Slightly better because it provides an option to get to metro stations in MD.

That is far too long a wait time.

Id prefer to see trains every 10 min everywhere in the downtown core during rush hour. every 30 min isnt practical for commuting.

Since my commute is on the red line, I dont see how this differs from the first proposal. Same answer. This seems like things used to be on the red line with the grosvenor-silver spring thing, just less frequent. Same comments to Proposal #1 apply for me.

I do not use the Red Line often.

See my answers to proposal 1.

I rarely if ever use the mentioned stations.

Same answer. Missing a train would add 15 extra minutes to my commute.

The city should use its budget surplus to ensure that riders have equitable transit. By reducing train arrival times in areas that at predominantly low income and people who commute into DC for essential jobs and tend to be lower income the transit system is contributing to inequity.

More frequent service needed during rush hour.

A large number of people drive to Glenmont and Wheaton to get on a train. Trains need to operate every 10 minutes at least. 30 minute waiting time might work out for weekend service but absolutely not during the week.

This works for me especially when using metro coming and going to work where I travel from Grosvenor-Strathmore to Silver Spring.

A previous study showed that increasing frequency between the full length of the Red Line increased overall ridership, because people were willing to wait for the Red Line and less likely to take a car to their destination. This is also crucial if WMATA wants to increase ridership from the suburbs to the District and decrease overall car pollution in the area. Please re-review your own studies and independent analyses before making a policy choice like this.

This works for me because Grosvenor is my station but I would probably be upset if I needed to go further north.

Highly inconvenient when I need to get to The Bethesda station and back to E. Falls Church Metro round trip.

Assuming I am able to return to DC and work in-person by then, 30 minutes is far, far too long a window to work during the work week. Trains would be far too crowded, and any delay could cost another half hour.

Unacceptable wait times, especially difficult in bad weather conditions and for seniors and those with physical disabilities.

It is critical that we increase opportunities for public transportation rather than decrease.

While this penalizes the city somewhat less, I fail to see how it enables a return to normal ridership levels.

I do not take the red line often - only on the weekend and for special events. I dont think this plan will inconvenience me personally, but Im not sure what the weekend ridership will look like.

30 minutes to wait for a train, especially at rush hour seems quite long and could cause trains to become over-crowded leading to more delays as people would force their way onto already crowded trains.

Too infrequent to maintain ridership levels

I use red line trains to get to work and back to work (8-9 am; 5-sh); and occasionally for leisure activities (after hours happy hour, access to downtown events in nights and weekends). this schedule would work for me

Dont know why you stopped grosvenor turn-arounds in the first place

I dont take the red line so I dont know how this would impact me.

When there are separate trains to Grosvenor-Strathmore, they are half full, and the ones to Shady Grove are overcrowded.

30 min is too long a wait for those living and commuting from the suburbs.

I dont use the Red line.

Proposal to implement Red Line turnbacks

I usually part at Forest Glen and take the Red Line downtown to various locations. I finish work at 9:30 to 10 pm. Waiting at Silver Spring -- an exposed platform -- an additional 15 minutes late in the evening would significantly delay and impair my return home.

Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely reamining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations.

I approach this from a commuters perspective & it would be an inconvenience for those customers. I do not commute via the red line so it does not apply to me at this time.

I am not a regular rider of red line

I rarely take the red line, but at times I do.

Very rarely do I use the metro to go that far out.

I live in Arlington Va. do not use the redline that often.

This was not a concern when I began commuting in 2018 (before the elimination of the Grosvenor turn back) but the frequency at that time was still one train every 16 minutes, rather than every 30

I rarely ride the red line, so this wouldnt affect me.

See above.

We regularly use Metro to go to concerts, galleries, and museums in DC from Grosvenor and reducing metro service from this station would be much more inconvenient

See previous comment. Long since gave up taking the whole U of Red Line from Silver Spring to Mont Comm College when I attended, to my favored auto repair near Rockville, to Rockville for courts, etc. Used J buses.

If the crush of ridership would be eased with this schedule, that would be a good idea.

Do not use Red line for commuting, so largely will not be affected

I havent ridden the Red line to outer stations in years so this one wouldnt affect me.

I commute between Shady Grove and Braddock road. If train frequency were reduced to every 30 minutes, I would drive instead of taking the metro.

If the schedule is available to the public and maintained. I would not wait 30 minutes in a tight area with multiple people- probably unable to maintain CDC guildlines.

same thoughts as for proposal one

I dont think this will work for extended family that use the Wheaton Station.

We do not general travel beyond Grosvenor toward Shady Grove

I rarely use the red line

Shady grove is an important option for those commuting through the dmv. This is one of the more valuable options to commuters. Perhaps a "bullet" train with 1/3 of the other stops as an option.

I get on at Rockville and this schedule would be prohibitive to using the red lien to commute into DC once we return to work.

This is fair and works for my schedule. As mentioned, this changes my margin or error and forces me to be more responsible.

I live in Cleveland Park

This would work for me, but I also never travel to those places. I hope you put emphasis on people who live and work there's responses.

I board at either Twinbrook or White Flint. Trains every 30 minutes is totally unacceptable.

Again frequency is why we ride.

I take the red line to White Flint. This plan sounds terrible and would disrupt my work commute.

If by every other train you are implying that the return of the trains that STOP at Grosvenor would be brought back and alternating trains would travel all the way to shady grove every 30 minutes that would be wonderful. While many ignore that the train will offload at Grosvenor the alternating schedule would hopefully deter riders from hopping on a train that doesnt go all the way to their destination leaving them on the platform waiting for an additional 15 minutes or more

I dont take the red line outside of DC.

I need more frequent rides.

Proposal to implement Red Line turnbacks

| |
|--|
| Living by the Grosvenor Strathmore stop, I do rely on the metro to go north as well as into DC, and I wonder whether this plan would exacerbate inequity for lower income individuals |
| It is more important for me to have accessibility to other stations from Grosvenor/strathmore station, but comparatively less important to get to other stations quickly |
| I don't use the red line so this does not apply to me. |
| Keep current schedule |
| Demasiado tardados requererua de mucho tiempo adicional |
| This will drive more people to Grosvenor from White Flint, as the stations are close together and both have parking. This will lead to crowding at Grosvenor, as well as crowding on the few trains that leave north of there. Before the turn back at Grosvenor the trains running north of there were consistently packed and SRO by White Flint. Also, for people who need to be downtown at a certain time having two trains an hour is really not reliable.. |
| I don't use Red line as much; but this would work for our needs. |
| I use Grosvenor-strathmore so would not be able to get to work on time |
| I travel mostly the Red line and mostly between Grosvenor and Silver Spring |
| As long as Grosvenor station is open. |
| No me afecta |
| Way too long of a wait. If I missed a train or a train was operating off schedule (which is 90% of the time) I would have to wait a half hour. At that point I would just drive to get to where I was going. |
| Whenever they open Montgomery College again, I use Metro to commute to the campus. Again, I would have to plan for a far longer commute. This is very inconvenient. |
| I'm okay, that no stations are completely closed |
| There needs to be more extensive and faster service. |
| Would have to monitor ridership and ensure if there is a need to social distance that enough trains are running to not overcrowd. |
| Again, once life is back to normal and the pandemic is over, which should be by the end of 2021, I will be commuting downtown again. Trains arriving every 15 minutes (let alone every 30 minutes) would be very disruptive and make my commute much more difficult. |
| I don't take these lines. |
| The rate of covid infections is dropping rapidly and it is already apparent people are emerging from their homes and headed to restaurants, etc. All the experts expect everyone to be vaccinated by May and a return to normal pretty soon so cutting metro service to every 15 -30 mins will cause chaos on working people and the economy. I have back issues and can't stand on trains which will happen if there are fewer trains as they will be overcrowded. |
| There is a reason that this format was changed so that all trains complete the entire red line route. Fewer trains servicing Wheaton and Glenmont means that those trains will be more crowded when they arrive in Silver Spring. Trains every 30 minutes also make Metro a less desirable means of getting into DC for folks in Wheaton/Glenmont, which results in reduced ridership, as it can add a significant amount of time to the trip and requires allowing significantly more travel time for any given trip. |
| too long a time between trains. might as well drive. |
| don't use red line in MD |
| I ride the orange/silver line |
| I never use those specific stations, so the lower frequency at the ends of the line doesn't affect me. But the 15 min frequency in the middle is too infrequent for me. So I would be less likely to use metro at all. |
| I don't use the red line, so of course this works. |
| I personally don't need to travel past Silver Spring or Grosvenor very often. |
| I don't ride the red line often, but it's usually to go to Shady Grove or Rockville to visit friends or see a show, and I'd be less likely to ride Metro if I knew I might end up waiting half an hour outside after dark. |
| No Opinion. Only use silver, orange, blue, and yellow lines. |
| This is WAY out of line |
| I suppose this will work however, there is added hardship. We need the metro and I suppose most people will say that this will work even though everyone will need to adjust their schedules and expectations. |

Proposal to implement Red Line turnbacks

This will still be a problem. Fewer trains during rush hour will lead to massive crowds of people waiting to board and not everyone will be able to board once the train arrives. This will create serious delays in our commutes. At crowded stations we already have to wait sometimes for the next train because the current train is too crowded. Fewer trains will be a disaster during rush hour.

This part of my pending commute would be from Metro Center to NoMa / Gallaudet University station.

As more apartments and other condensed living units are built near the stations at the end of line, there will be more and more need for frequent trains and if they are not available potentially cause crowding at other closer in stations.

I was used to this arrangement for years. It was inconvenient, but workable.

that's a very long wait for anyone using those stations

I am reliant on the red line to commute to work and need more frequent trains than every 15 minutes. While I don't object to a difference in trains running to the furthest stations, I would like more frequent trains at the middle stations (i.e. I am fine with the every other train proposal but on a more frequent basis).

No - this is even worse.. I don't think that trains on the red line be reliable

Imagine the massive decrease in service people will have outside of A11 B08. From 6 minutes to 30. A 24 minute increase. This will vastly decrease fare revenue. MARC will become a much more desired option for those in Rockville, while Silver Spring would still survive due to the 15-minute headways. Apart from that, all other stations would become utterly deserted and commuters will take buses/cars instead. A massive loss of fare revenue. Operate at 15-minutes through the entire length: this is the maximum headway time that commuters will tolerate.

No, I need service that goes to Union Station.

Could timing work out so that changing trains at Metro Center would not necessarily be another 15 min wait?
