As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

15 minute intervals, let alone 30 minute intervals, is way too long for red line service. during rush hour. As a daily commuter from and to Grosvenor,, when trains ran more than 5 minutes apart during rush hour they became very crowded.

Trains every 15 minutes isn't a reliable way to get to work.

Same comments as before. However Metro had just brought parity of service to the stops beyond Grosvenor - those users need to weigh in on this question more than I. However I will have a high school student who will be using metro to get to school next year -- I can't imagine they and their fellow students would be happy about having to wait 30 minutes for a train.

The every other train is interesting, but again its preferred to adjust the schedule to increase frequency during rush hour and have larger gaps during non-rush hours

This is unworkable. There has to be more trains during rush hour. The proposed cuts will further drive down ridership. This DC administration will be remembered for killing the Metro if this is allowed. Trains on all lines should run at a minimum every 10-15 minutes and more during rush hour. People will find other methods to commute.

Needed to keep times reasonable for those that need to switch to other trains at Metro Center and arrive at work on time given wait times for connecting trains

Not clear here: Are the departures the same? If so, the trains could be packed by the time they get to Grosvenor. Not good since covid may still require distance between people in January 2022.

I don't know the data but it seems that stations like Shady Grove as the last stop on the line would draw a lot of people who live even farther out where there are no stations, so only running trains every 30 minutes would not be often enough

the last station for me and my family is Grosvenor-Strathmore

I do not plan on using the red line consistently. This seems like a fine plan.

Again, I am lucky that would not impact my travel, but know a number of people that would impact negatively.

Personally I rarely travel outside the beltway on the Red Line.

While I do not know what my travel needs in January 2022 might be, I do know that having to wait 15 minutes between trains at any given time would greatly reduce my use of Metro, and I think other folks would say the same.

The Grosvenor-Strathmore stop should remain open with q15 minute stops because it supports a performing arts center as well as the community.

Would definitely need to be a set schedule that is adhered to

I am retired and do not use metro often so the changes would not unduly affect me

If this plan helps to save money for Metrorail then it is worth doing.

| |
|---|
| Proposal to implement Red Line turnbacks |
| This plan doesn't affect me or my commute at all |
| I volunteer for the Smithsonian museums and expect to do so in person in 2022, times are rush hour times. I walk to the subway at White Flint . Every half hour to White Flint, and from White Flint during rush hour was awful previously and will be worse as trains are only every half our. |
| This plan would make wait times longer and unpleasant, driving customer away from using the metro. With the 15-30 wait times between trains could cause crowding during rush hour and possible cause unsafe conditions on the platforms in the stations. |
| I am not sure if Grosvenor-Strathmore station will be serviced. |
| This is ideal as it used to be like that before they extended all trains to shady grove. |
| Its not applicable to me directly, but as someone who lives in the Phase 1-2 area of Silver Line, I can relate to their challenges. Youll lose riders, which WMATA cannot afford to do. |
| Many work commuters travel from these stops and to make people wait a half hour between trains will result in delays getting to work and home from work. In rush hour times, these trains are already packed. Making them only available every half hour will mean that there will be no room at all for riders to get on the trains - resulting in an hour or more wait for a Metro train - this is a formula for disaster! |
| Doesn't seem reasonable. |
| More frequency needed at stations central to dc. |
| This is NO DIFFERENT than proposal #1. Is this a reading comprehension test? It still says every 15 minutes for stations grosvenor through silver spring, 30 minutes everywhere else. It is inadequate unless your rates go down to \$2 per ride. Even then, service levels are ridiculously low, would increase commutes by 30 minutes AND riders would continue to be treated like cattle, jamming in each car. I rode standing on the train many times pre-covid with frequent trains...with people basically in my butt, back, stomach, and face. |
| This was the prior system and seemed to work well. |
| That would fit my needs, I can adapt to the schedule |
| this proposal only works for me since, I live off a red line stop that gets 15 minute service. |
| Time should be less for rush hour. |
| Whatever it takes to cover all the usual stops. |
| during rush hour times, the waiting times should be less than 15 minutes |
| This is unfortunate for those living that far out, but wont impact my likely travel needs in 2022. |
| Metro is a main transit in DMV. Cutting down time will cause inconvenience to everyone which will force people to drive and cause air pollution versus being eco-friendly |
| Important that everyone on the platform can fit onto the train |
| It is understandable to reduce schedule operation based on low ridership. However, Metro acknowledges and identified stations that have higher rider participation and made it a point to keep those stations run frequently because of that, which is fair. |
| This frequency of service is untenable. |
| Too slow |
| I dont go to the ends of the red line often. However, every 15 minutes is fine for the red line downtown. |
| Trains every 15 minutes is still unacceptable. Why so much reduction in service? |
| This is a similar comment to my response in the prior situation. The redline runs through many lower income parts of DC and serves as the main transportation for it. Alternating the lines poses the same problem as running every half hour. |
| Trains are packed even when they run back-to-back during rush hour--you wouldnt be able to get on the red line downtown during rush hour at all with them coming every 15 mins. |
| I catch the train at Shady Grove so this would greatly impact my travel to and from work. There are typically many individuals waiting for the train at Shady Grove in the morning with the rush hour schedule in place. Without that schedule, trains could be full each time they leave Shady Grove. |
| They should leave the red line route as they are. Many people use and rely upon all routes of the metro system. If they cut down on the number of stops people like me will have more difficulty getting to and from work |
| Red line lies at the heart of the metro system, why penalize those who live further out and a more likely to be more dependent on regular and reliable service |
| This would work for me for both work and non-work transportation needs |
| Way too confusing! |
| No uso estas l neas s lo la naranja y gris. |

Proposal to implement Red Line turnbacks

See previous answer with regard to trains every 15 minutes. Since I live near Silver Spring and Takoma stations the other aspect doesn't affect me as much but I'm sure it's not great for people living at either end of the red line.

This seems an extreme measure and very premature without knowing the status of COVID and the re-opening of businesses once everything is under control.

Same problem, too crowded and too much time spent commuting especially transferring to other lines

I use Metro to get to the courthouse in Rockville and every 30 minutes is not frequent enough

Trains would be overcrowded

I rarely ride between Grosvenor-Strathmore and Silver Spring, however trains coming every 15 minutes for the rest of the Red Line would mean absolute misery for those of us living from around Van Ness to Dupont. Trains will be too crowded. My two-stop commute means that I would choose a different mode of transportation.

My only comment is that it is already so far between Shady Grove and Grosvenor that less times going to SG would make it more difficult for people to come into DC from there. They wouldn't necessarily want to wait or drive to Grosvenor to catch a metro

My closest metro station is White Flint. During commute to and back from work, it would be too long to wait 30 minutes in between trains. Of course, if trains are actually on time, maybe this could be fine with careful planning (This is what I used to do when I lived and worked in NYC, but my past 5+ years of living in the DMV has taught me that metro rarely arrive according to the published schedule so I now don't even bother to look). I think for rush hour, it is very important to keep trains running every 15 minutes.

This adds potentially an hour to commute time for the far out redline stations.

I never use the red line to go to those locations anyway, so it is perfectly fine by me to reduce the frequency of the trains at those stops.

For what reason Metro train not stops at the Grosvenor-Strathmore Station?

I don't use those stations.

Every 30 minutes at Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen would create major problems for me and a lot of other people. Lousy idea.

It's wrong for people to pay for that type of service. It's poor customer service.

Seems most likely to best serve most Red line customers. For folks at Shady Grove, they also have the alternative of MARC to get into the District. I think there are similar options on the other side of the Red line as well.

This would seem to have the least impact based on other proposals. When I take the Red Line it is in the downtown core so this would work for my expected post pandemic use of Metro.

I live just north of the 15 minute schedule. I feel that I am penalized for living further away from the "center" even though I pay more for my trips downtown.

Between Rockville, Twinbrook, White Flint there are a lot of demand in normal time. Please consider January 2022 normal time other than Covid-19 time. You can't use Covid-19 data to decide what you will do in January 2022. People are not working and commuting on a daily basis during Covid-19. Of course the ridership is low. It will go back when everyone has to go back to work at least three or four days a week.

It's fine from my perspective to concentrate service on the center of the line, but we need service more frequently than every 15 minutes on weekdays.

I do not generally use those stations.

What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

See previous comment.

The Red Line was a crowded nightmare before the Pandemic. Please do not make it worse.

Again more overcrowding. I take it that none of you in management actually catches or uses the metro on a regular basis, if at all, do you? If you missed a train, heading to work, would you want to have to wait for 30 min? SMH have some consideration and empathy.

Has anyone looked at the bus schedules to see how or if they will match the new proposed schedule? Also how is this related to Arlington budget these are Maryland stops.

I am considering moving out to MD along the red line and this could have a huge impact on my commute. But as of this time, I do not currently live in MD.

More trains and more options are needed for as many stations as possible for red line travel. Many commuters need consistent transit options to get from point A to point B

2022- people would be back to in person work. Ideally by 2022 service should be as close as possible to pre covid time

I rarely use the red line

| |
|--|
| Proposal to implement Red Line turnbacks |
| I think this would be fine for me, but what about rush hour? 15 minutes for a rush hour red line train sounds like a complete disaster. |
| personally i rarely use the red line so this would not affect me very much. |
| While this might work for me, I dont live or work near the outer stations that would be affected, so I would encourage you to listen to the concerns of primary stakeholders. |
| I dont ride the Red Line. |
| That is a return to the previous model of service that was provided for years and I found it to be acceptable because of my location, even though I frequently went to the White Flint station. Moving back from the relatively recent extension to not turn trains around a Grosvenor is not desirable but it highly preferable to dropping service to some stations completely. |
| I have used the Red line to get to appointments and would hope to do so again. |
| Not as good as option 1 |
| I do not live in the affected areas, so I do not understand the focus of these stations in both of the budget proposals so far. Nevertheless, the Washington metro should first and foremost be meeting the needs of Washingtonians. |
| I guess there has been an analysis. Why 30 minutes? |
| Same concern as before: very crowded rush hour trains, and increased delays when missing connections. |
| Holy crap! No!!!! You can't have trains running every 30 min from Rockville! This will destroy my commute and lead to insane overcrowding as at Rockville trains were already too full. If I miss a train I'd have to stand on the platform for a full half hour and be a half hour late?! Currently I can't afford to drive into DC, but if you do this I may have no other option than to figure that out... |
| Dont care about the red line. |
| I dont travel on the red line |
| The whole reason to park and ride was to save time and money no make the roads a little less congested. This will result in even fewer ppl using the metro and more traffic for our roads |
| It was not a good idea before the pandemic and is not even a good idea now, much less 2022. In situations like this...it might help to seek ideas outside the limitations of the U.S. concept of rail operations and ponder why Europe/Asia doesnt do this. Stop trying to discourage ridership. |
| I take the last stop, Glenmont, daily to work and could not wait an entire half hour for the next train to get to work downtown. |
| I personally would not be hurt by the proposal, but again, a possible wait of 15 minutes is a strong disincentive for taking Metro. |
| I live in DC, do not know suburban ridership. |
| Im a yellow blue line mostly. So red didnt affect me much. |
| I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies |
| It is fine to have trains turn back at Silver Spring and Glenmont, but the frequencies in the core need to be less than 10 min for it to be usable and to stem more ridership loss. |
| I dont take the Red Line so this works. |
| I am looking to move and will plan to stay within the boundaries of stations that have service every 15 minutes. I will not move into an area with 30-minute arrivals. |
| Most people commuting into DC live on the Red Line at these stops and this schedule would harm their ability to get to work on time, especially for shift workers. Decreased train service also negatively harms employees of Metro who would suffer job losses. |
| As noted, a 15-minute wait time during rush hour is simply not feasible for my daily commute to work. However, it may be a good idea to keep trains running more frequently at core stations and less frequently at outer stations (as described in this proposal), provided this does not lead to delays that cascade into the core of Metro. I would appreciate being able to review any data or surveys that would demonstrate that this risk has been mitigated. |
| you should encourage riders to use metro not force them to use uber and lyft to get to a metro station. Make wise choices that will ultimately increase ridership. You wasted so much money on the silver line for who? |
| I dont live or regularly commute to any of the affected stations, but reduced trips to the suburbs would dramatically hurt downtown businesses which survive on dollars spent by people who ride Metro to eat, drink, and shop downtown. Please do not do this. |
| The schedule does not allow for transfers to MARC Train Schedules |
| I would adjust train times so you have more running during rush hour. |

| |
|---|
| Proposal to implement Red Line turnbacks |
| As I dont generally ride this corridor, it wouldnt directly affect me. |
| It seems like a ton of riders get on in Rockville, making this exceptionally difficult for them. Plus those trains would be packed for riders closer to downtown. And 15 minutes between trains w/in the city is still way too big of a hap |
| This would overload trains at northern stations, and make boarding difficult at Stations from Medical Center heading into DC.. |
| I dont use the red line up that far, so this would not affect me. |
| I live on and use(d) the red line and I want to get around more next year. It would take forever. |
| Again, adequate consideration for transfer station timing would be appreciated in this scenario. |
| by reducing the frequency of trains to stations outside DC would then have the adverse effect of people opting to drive which will create traffic congestion for longer periods of the day and not to speak of wear and tear on the roads, accidents, etc. and DC residents end up paying the price through taxation. |
| How does this help anything? The issue is trains are already full when they arrive at Grosvenor. Reducing train operation at the ends of the line will exacerbate the problem. |
| i rarely use the red above silver spring or grosvenor but this will cause overcrowding further down the red. |
| Is this at all times of day? What about rush hour? People will be returning to office commutes in the future. 15 min between trains at that time will make the transfer hubs a nightmare of overcrowding. |
| If I am commuting to work on metro, I will be going to the Twinbrook metro station from Grosvenor and one train every 30 minutes is not frequent enough. My company may be requiring all employees to work in the office at that time. |
| I don't use that section of the Red Line. |
| This would mandate a change in my daily routine for getting to work. I can manage the change, but all riders may not be able to. |
| It's frustrating that red line commuters seem to be getting preferential treatment over other commuters. |
| The many people that would connect to the system from outside the immediate DC area would have much fewer options and wait times between modes of transportation would increase drastically. |
| See previous noteâ€” this might work on weekends but obviously could never work during rush hours |
| This frequency would be OK on the weekend, for all red line stations. But on weekdays I would rather have 15 minute frequency to Shady Grove |
| It hurts the city to delete train service, this would increase Emissions of residents are forced to drive more if you reduce train service. |
| This would typically be non-applicable for me because I mainly have not travelled that far on the Red Line (handful of times in the past 20-30 years) and I dont travel a lot on the Red Line (Metro Center, Union Station, Judiciary Square, and Farragut North are the stations I would travel to & from). |
| See previous comment on timing constraints and how such changes would negatively impact most riders. |
| I depend on Metrorail for my commute into the office. Any cuts in service would not be good and would discourage me from using the system. DC needs a robust public transportation system. |
| Yes, I seldom use the stations that are out-of-town |
| reducing some red line trains to only every 30 minutes would just move people to driving or ride share options. |
| There needs to be increased service during rush hour. Trains running every 15 minutes is not enough to satisfy demand once businesses start operating again. |
| This might be OK for people living in the city, but makes things harder for far out commuters and others. This again risks driving ridership down. |
| I do not use the red line. |
| This plan would reduce the appetite for commuting by metro and increase rush-hour traffic on the road. |
| Do not use Metrorail, only Metrobuses |
| Long wait times uncomfortable in very cold or very hot weather. |
| As long as the timing with bus routes is aligned |
| I am an essential work. I need bus early to go to work |
| I don't use the red line often. |
| Really don't understand what exactly this proposal is saying! Poor explanation. |
| I dont use the red line. |
| That would not accommodate the number of passengers during rush hour or increase in passengers due to new construction around Grosvenor and white flint |
| Foul weather and longer travel times negate benefits of Metrorail too much at 30 min intervals |

Proposal to implement Red Line turnbacks

I work night shift (10PM-6AM) on Capitol Hill. I take Silver Spring to Union Station at 9PM and I take the 6AM train from Union Station back to Silver Spring. The trains arriving 15 minutes for the Red Line is very accommodating for my schedule.

I dont mind extended arrival times, but please keep the Grosvenor-Strathmore stop.

Trains need to run more frequently between Grosvenor and Silver Spring.

I rely on Metro to commute from Twinbrook to Eisenhower Metro station. I would anticipate much greater crowding with that schedule, which means not always being able to get on a train. I would also anticipate longer commutes. My commute is already very long - about 80-90 minutes from door to door.

I dont live in this area, not sure what it would do in practical terms.

I do not have confidence in Metro sticking to these timetables; thus, I would not rely on the train and definitely would not use it if I needed to transfer trains. If Metro shows itself to be reliable with its timetables then I could make the every 15 mins work.

Reducing train service is not acceptable. Does the Metro Board even ride the Metro? This proposal is not worth considering for the Nations Capital.

Grosvenor does not get me near enough to where I live. Getting rid of alternating trains was the best improvement in my commute in years

I know if these trains get backed up they would influence my area so I would also want their lines to be more often but I currently do not use them.

Since I live at Grosvenor-Strathmore, this would be ok for me.

This will extend the commuting time from Shady Grove. Having to wait 30 minutes between trains is way too long. Trains should run no longer that 15 minutes apart (at the most) at all stations. Delays will on cause over crowded trains (especially during rush hour) because everyone will be forced to leave around the same time to make the earlier trains to make connecting buses/trains.

If social events increase, the long wait would probably increase my decision to take uber to events downtown.

This station must stay open.It serves monobloco the adjacent neighborhoods, but people off 270 and Potomac who park and ride. Pandemic ridership should not determine burger closing.

While I would prefer to have trains to run more frequently in rush hour, I can work with the 15 minute increments from and to Grosvenor Station

I dont use this line, but I imagine it would be bad for people who do.

Less than 15-minute service on the Red Line could reduce overall ridership.

I do not use Red line very often.

This would return DC to the collection of semi-isolated neighborhoods that existed before Metro arrived. We will lose the sense of DC as a single, unified city.

Depends on my return to work schedule.

Metro is very important to be on time wherever we go (work, Doctors appointments, etc) It has to run regularly as before Covid.

Im in town, so this wouldnt affect me. But on the rare occasions Im heading out into the suburbs, and for those who live out there, it would be a great inconvenience.

Try to reduce inconsistencies in servicing throughout the system. I dont believe varied wait times can be a good thing for predicting time to travel or predicting travel or arrival times....

Do you have any idea how much they have built up the communities around these stations? You are going to overcrowd the trains to levels where they are inoperable and too heavy to ride the tracks.

Although this works for me (I leave by Grosvenor-Strathmore), I think more weight should be given to answers from riders starting North of Grosvenor-Strathmore. 30 min waiting time may not be as acceptable for them

This entire plan would make it take forever to get around the city, especially when transferring stations. Ive ridden metro almost every day for 11 years and honestly love it. If I ever have to move I will miss it. But every time service dips, especially on weekends, I find myself starting to find alternatives because it takes too long and is too much of a hassle to bother.

If DC is serious about Vision Zero and reducing carbon emissions, Metrorail service needs to increase in frequency in order to move more people away from private vehicles. Metrorail has historically been a commuter service and 30 minute gaps would make relying on Metrorail rather precarious for commuters. If one train is missed, the commuter will be significantly late.

30 minute is a very long waiting time and trains will get constantly over-crowded leading to further delays

I have not used those stops in many years.

I would try to find alternatives to get downtown. This option is unacceptable.

Proposal to implement Red Line turnbacks

| |
|--|
| As I said in the previous comment, I do not have a car, I am disabled, I live far out on the red line, and I commute to work on metro. This would be terrible for my well-being. Do not do it |
| I believe this will make commutes very challenging for low wage workers who tend to live further away |
| Red line trains need to operate more frequently than every 15 minutes. |
| I commute from White Flint. Trains every 30 minutes would be an unacceptable transportation for me. I would find other solutions instead of taking metro to work. |
| As long as other lines are not affected |
| For example, ,any people commute from those station (Shady Grove, Rockville, Twinbrook WhiteFlint) to other red-line station including Medical center station for NIH and naval medical center. |
| I don't use the Red line, so this wouldn't affect me. |
| No |
| it should not be 30minute for the red 15 minutes going both way |
| Too many nearby residents living in building developments around Grosvenor Metro rely on the station for daily commuting needs. The corollary damage done to surrounding property values is a secondary concern yet notable. |
| That would work for me but I would understand if the people affected were upset. I am guessing that people who live at the ends of the line make less money and have decided to live at the end of the lines for less expensive housing. Thus this solution would fall more heavily on people who make less money. |
| This would not affect my commute and thus would be totally acceptable. (I assume we are supposed to be self-concerned here so that you get a strong polling of individual preferences, so I am not considering any other factors but my own experience.) |
| Again, the general idea is that this sounds like a bad idea due to likely overcrowding. I am a DC resident and I use the train and bus lines to get to work. I am lucky that I am only going to a downtown location to get to my office and not to the end of the line. If I have to wait a half hour in the hopes of getting a train that has enough room during rush hour to get to the end of the line, I probably wouldnt take metro. But this doesnt apply to me since I live in NE and only have to take the train about 7 stops. These restrictions will be a major problem if I compare it to the current plan (pre-covid) where there were already delays and crowded trains with arrival times of only 3-4 min between trains. |
| All reduction in service plans would create a death spiral for Metro train service. |
| This would crowd the cars because many people get on at the last stations (Shady Grove/Rockville, Glenmont/Wheaton)... Youd have twice the amount of people getting on the trains with a 30-min schedule and therefore it makes no sense if were still expected to socially distance |
| See previous comment. This is somehow an even worse idea than the previous, terrible proposal. |
| I live in Wheaton. There should be more trains running the entire length of each line. Please do not do this. We need to invest and encourage people to take the environmentally friendly transit option. WMATA is the only way we have to move large numbers of people in a green, equitable, and inclusive way. If it has better service more people will ride it. Thank you! |
| I dont travel between those stops |
| For the life of me, why are we talking about shutting down public transport in an environment where we are trying to revive the economy, clean the environment and mitigate climate change. This is one of the poorest public policy proposals Ive seen in years. We should absolutely not curtail Metro services once the economy starts opening up. |
| To have an effective means of transportation, trains must run at a minimum 15 minutes apart. |
| its okay, most can work with this option; its not ideal for workers on a time crunch but if its just a few stations on one line people can plan accordingly; but if Metros goal is to increase ridership, it needs to assure a schedule that gets people to/from work on time |
| It will make travel longer and more difficult. |
| Why is it that any time there is a budget shortfall, its only the riders who suffer? Why doesnt WMATA also make cuts to employee salaries, employee benefits, etc? |
| The red line is a very busy line and this would cause people living near those stations to drive in instead of riding the metro, reducing revenue further and causing you to propose further cuts to services that many rely on. |
| I do not use Red Line on a regular basis but the proposal seems to be reasonable to me. |
| I would like to keep the Grosvenor Station even if I have to wait more than 15 minutes. |
| I do not use this portion of the Red Line on a regular basis. |

Proposal to implement Red Line turnbacks

I live close to Grosvenor metro and I walk to metro daily going to white flint or medical Center is difficult. In addition I bought property near Grosvenor because of the proximity to metro. I paid premium price for my condo and will lose the value.

The train schedule is too infrequent and would lengthen my commute too much, taking time away from my family and work.

With work from home I do not travel regularly to white flint anymore

Not sure of the ridership between these two destinations. Guessing that it isn't a heavily used route for working people. I might be wrong.

It would inconvenience others but it would work for me since I use the Grosvenor/Strathmore metro most of the time.

Not during M-F peak commuting hours. Yes, for everything else.

Since I live and travel primarily in the district, this would not affect me

This is really inadequate. The COVID situation should be resolved by that time, so we will need more service again.

The 30 minute waits are too long

I don't live on the red line and typically don't use it so I'm not sure what that would do to people that live on the red line would have to do to make other arrangements.

since I do not use any of these stations regularly

This schedule can be conflicting at times. Also, scheduling adjustments for trains running a few moments ahead cause scheduling for your customers. Yet, scheduling for customers who utilize the system to get back and forth to work suffers for sometimes with little reasoning. The red line is a major hub and there needs to be more thought into the back-up plan.

I will most likely only use the red line downtown.

I do not ride the red line to the outer stations. The 15 minutes between other stations would likely discourage ridership and result in crowded trains and stations.

I am a poor African American female. I am 81 years old and I travel from Mount Rainier, Maryland to Vienna, Virginia to go to work 8 hours per day 5 days per week. I get up at 4:00 am to be on time for work. I have never owned an automobile. I totally depend on WMATA metro bus and train to go to work. I have to work full time until I am 107 years old or I am homeless. Please do not take away my METRO buses and trains. God bless all of the WMATA men and women who make it possible for me to get to work to earn a living. I have only me and God. If I do not work full-time all the days of my life I am homeless and without food.

This would not personally affect me, but would cause difficulties to people living on one end or another of the Red Line, and would cause people to abandon transit for commuting and accessing other areas in the region.

The wait time for trains to arrive every 30 minutes throughout the day, with the following exceptions listed is too long. Will trains be waiting at each station for 4-5 minutes and allowing passengers to board?

A frequency of anything less than every 15 minutes renders the train essentially useless for anyone who needs to get anywhere on any kind of schedule.

My commute terminates at Brookland station, so this would not affect my commute.

I don't use those stations

Every 15 minutes is too long to wait for a train during rush hour.

Any cuts to red line service are probably the least advisable. Perhaps other lines make more sense?

No reason to stop at Grosvenor. More residents and businesses are around White Flint and you should encourage this public transportation route. More importantly I take metro from White Flint daily to hospital which starts at 7 am. Cannot afford missing trains.

I am not impacted by any of the listed stations. However, any changes on the outskirts of the rail system make significant issues in the heart of the rail system which I rely on.

I don't ride the red line often, so this would impact me only in a limited way.

This would work better for me than the previous proposal. I would much prefer if rush hour trains were even more frequent.

We operate a 24 hour workforce for those without cars. The change to operating hours would cause a hardship for employees that work overnight hours.

I'm concerned that this schedule would disadvantage the lower socioeconomic bracket of our county...thus making them into 2nd class citizens.

Trains should arrive every 15 minutes at all the stations on the red line

This disenfranchises people who live outside of the District and commute for work or school. People should not be penalized for where they live.

Thirty minutes is excessive. It would mean I have to choose specific dates when I don't mind waiting.

I don't use this line, know too little to answer.

Proposal to implement Red Line turnbacks

For the Red Line, this looks more or less the same as Metrorail Proposal 1. Same comments: This plan *might* work for me. A lot depends on what happens with people returning to their workplaces. If a lot of people do go back to their workplaces and dont stagger commuting hours then the frequency will be too low to handle rush hours, especially if people remain hesitant to ride in crowded cars.

Intermittent schedules do not help! Make all frequency 15 minutes or better! For transit to be useful, it needs to be more frequent or the risk of missing a train and not getting to work on time is too great - 15 minutes is manageable, but 30 minutes is not!

Isn't this the same as the first one, just expressed differently? Again, more frequent trains would be required during commuting hours.

I think this would work because I don't have to go to most of the distant stations

DC-bound trains are packed for morning rush hour., esp. from the terminal stations (e.g. Shady Grove). The reverse is true in the evening. Is pandemic use really the best time to evaluate usage? Why 30-minute and 15-minute intervals? What are the benefits/costs of 20/10-minute intervals?

By Jan 2022 I expect people will be commuting to work again and will need more trains during rush hour. If Metro wants to encourage people to take the train rather than drive, cutting rush hour service is not the way to do it

Every 15 minutes is still insane.

For the same reasons I stated previously

Trains need to be a lot more frequent and hitting all the stops.

My concern with this proposal is that the metro should serve as a cost-effective and timely alternative to driving into the city and serve as a timely option for those without cars.

Same concern as previous: there would need to be a provision for additional trains for large events that end at a specific time (i.e., not a fair or festival, where people leave when they want, but huge concerns and sports events).

This appears to mean that Red line service within DC would be every 15 minutes with alternate trains turning back (at an intermediate point) or traveling to stations at extended ends of line.

Less frequent trains makes commuting by train less practical

I believe that all stops should be open and available.

30 minutes is too much time between trains

Im not sure b/c I do not know how crowded trains will be in the stations in DC during rush hour.

I suspect this plan would further curtail Metro ridership from northern areas of the redline and increase crowding all along the red line. Again overall transportation investments for new road space and parking would grow, defeating goals to decrease carbon emissions from transportation.

would be unfortunate for such a busy line (pre-COVID) would have such a cut back

As mentioned earlier, trains should arrive every 30 minutes on the red line trains, unless there is current ridership evidence to show that 15-minute service increments are warranted.

This basically makes the metro irrelevant

Again, it is hard to rely on the metro to get to work if some trains only come every 30 minutes.

I do not object to the proposal that every other train on the Red Line Operate between Grosvenor-Strathmore and Silver Spring. But the spacing should be every 20 minutes at Shady Grove, Rockville, Twinbrook White Flint, Glenmont, Wheaton and Forest Glen.

this is only about the red line. would other lines maintain current service levels?

This is a reasonable proposal.

I do not travel past Grosvenor-Strathmore so this plan would not negatively impact me.

As a person who lives in Wheaton, and has a daily 1 hour metro commute each way, I am constantly frustrated by the lack of service beyond Silver Spring. We are always bearing the brunt of Metros money woes - this station frequently has service cut and I am sick of it. I recognize that on weekends and off hours there is much fewer passengers going to these stations. But during normal rush hour, Wheaton station is just as heavily used as silver spring. Taking the metro into northern Virginia doesnt save me any time, but if it is going to potentially add an another hour a day to my commute I will at this point switch to driving.

Time changes are a much more reasonable and appropriate proposal than closing stations. People can adjust their schedules to the train schedule. If some peoples train stations close, they may not have a way to get to another station or it may add a significant cost burden to them. Many people choose where they live according to their train station, so I encourage you in the strongest manner to change train schedules and not close stations.

Proposal to implement Red Line turnbacks

Yes, as long as there is still service on the red line and prevents closures.

I do not generally access the stops beyond those endpoints, though I have occasionally travelled to White Flint for morning meetings. This would make metro an extremely unreliable choice for that trip if I had to potentially wait 30 minutes for a train out there.

I am a senior citizen I have Doctor appointments. I can not live my life to accommodate your schedule I can not afford Uber

I do not live on the Red Line and given the nature of how close the stations are together, I think this would be sufficient if I was traveling on the Red Line.

I need the more frequent arrivals every 8 minutes during the work week. With 15 minutes, if I miss a train, I'd be late.

If rider numbers return to normal by Jan 2022, then this would lead to massive overcrowding at many stations during weekday rush hours.

I don't understand this proposal. The writing is unclear.

This could have a substantial impact on my need to travel between job sites during the day.

I see no issues with the proposal, but admittedly, I am not a Red Line rider. WMATA should perform an analysis to see the percentage of ridership is getting off at Grosvenor-Strathmore and Silver Spring. Further, if staffing costs are the main driver of costs within the system, then routing every other train to a system or routing all trains to the system will not alleviate the problem. While it may speed service in some areas and require fewer trains, having the stations serviced at all will not decrease costs significantly.

Is not clear what the weekend evening hours will be

This was the way it was originally. It's my understanding that the change worked better. Why go back?

This is too similar to option one. Red line is busy and would get overcrowded

With only a single route on this line, the possibility of a breakdown anywhere on the Red Line would cause immeasurable problems throughout the Metro system. 30-minute waits would likely increase.

I do not regularly use the red line. Trains during rush hours would need to be more frequent.

Trains would be too crowded.

Most critical for me and our family to have the Grosvenor Station getting a train going into DC every 15 minutes, at a minimum.

This disregards the fact that many people choose their homes around access to transportation and rely on these stops to get to work. While not as offensively short sighted as the proposal to make every train this useless, it is still a blatant disregard of the needs of users in these areas and you know as well as I do that the savings that would actually be achieved by doing this would be a pittance.

Trains should stop at worst every 15 minutes in the city during the work day. Ideally it should be every 5 to 10 minutes.

I commute across the Grosvenor-Strathmore station, so this Proposal will likely be annoying for me.

I think having less access to metro lines outside of DC is really going to disproportionately harm Black and brown communities who have been pushed out by gentrification. It's going to have a racist impact, even if it's not in itself a racist policy. Please continue to value the time of people of color living on the outskirts of the city in the same way you do white people living in the city

Cutting service on the Redline would have a severe negative traffic impact on the 270 corridor and beyond and would adversely impact ridership.

As I said in the first question, 30 minutes is too long to have to wait if you missed the train at left right before you got there. If we want to build ridership on Mitchell we need to make it very convenient for people

I don't feel it is fair to those who ride from those stations, they are tax/rate payers like the rest of us. Those writers are paying the same distance costs for worse service.

This proposal addresses what I thought one big issue with proposal one would be, but people commuting in from MD suburbs might find morning commutes annoying with this proposal.

If that is consistent then I am sure that the trains will be too congested during the morning commute but will work the rest of the time.

This might make vehicular traffic worse in the District because people near the outlying stations would drive and try to park closer to downtown to have a more flexible schedule.

This kind of arrangement discourages use of metro. If I have to consult a timetable every time I want to attend a meeting or go to a restaurant out in Rockville, I just won't take metro - I'll drive. That reduces revenue for metro and increases greenhouse gas emissions. That doesn't make sense. People anywhere in the metro system need to be able to estimate on the fly how long it will take them to get from point A to point X, and this approach does not allow for that.

Over crowding on metro during rush hour

Having lived close to the Shady Grove station, this proposal does not meet the needs of riders living north of the Grosvenor Station. I do not support this proposal.

Proposal to implement Red Line turnbacks

I use the Red Line infrequently now to get to medical/business/shopping/entertainment destinations in DC/MD. It is inconvenient already. This change would make it impossible for me to use the Red Line â€” I would just drive.

This is less convenient for me, but better than shutting down the Grosvenor Strathmore station completely.

This would create a hardship for working people to wait up to 1/2 hour for a train and overpack the trains when they do arrive - social distancing will still be in practice for a long time to come and this is not the time to provide crowded trains.

My wife and I would still requires more frequent times during morning and afternoon rush hours.

Not frequent enough on weekdays

No issues with this.

I dont use the Red line

This seems similar to plan 1, unsure how it would be better for budget to not have trains running more frequently due to blue/orange line overlap.

I only use the red line infrequently, I live on the Orange Line.

Additional time mentioned above would be true in this case. Any appointment such as a scheduled dinner or theater would be difficult.

Again having long headways like this will cause people to use it less and to turn to ridersharing making the problem worse! Look at what the Europeans are doing and follow their example since they seem to do it better than we Americans do! If you need increased funding get it from Congress!

Same reasons-- Metro is the only way to get around-- hardly any taxi cabs left and I am terrified to use Uber.

Trains would arrive every 15 minutes at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

As a resident of Glenmont, the extended wait would dramatically add to commute time and may push commuters to just drive. Maybe every 2 out of 3 trains go to the end.

You have to take in account that people must go work, and be on time. You know Metro always has problem, 30 minutes will create more late arrival to work or appointment for ridders.

I agree with anything that will keep open the Grosvenor=Strathmore Metro Station.

As long as the changes are temporary.

It seems unfair to people who live a few stops beyond Grosvenor to cut service completely. Metro is supposed to make the city more accessible for those who cannot afford to live in downtown condos and townhouses.

the metro is most important for people who dont have any other way to get to work or home and this plan would most impact those people who live further out.

I think this is what it used to be, right?

I dont ride red line regularly, but I know its generally a mess during pre-pandemic levels. How is this going to help anyone or bring riders back? If you dont get riders back, you will continued to bleed money. Thats how it works. Instead of trying to cut you services (the whole point of public transportation), you should be taking a look at your overhead. Im sure there are administrative and personnel costs that could be cut. I used to regularly see an abundance of metro workers sitting around. Ask yourself the hard questions: are all those workers needed? The answer is not to cut services.

This would be non-optimal, but would be workable for my planned commute. Would likely lead to over-crowding on trains if/when ridership approaches pre-pandemic levels.

Rush hour frequency needs to be greater than every 15 minutes.

This would not help Grosvenor clients who are on tight schedule for work.

I dont live on Red line.

Insufficient parking at Strathmore most of the day. At busy times (during weekdays especially I have to park elsewhere at white Flint, Twinbrook or rockville.

I would be able to plan accordingly.

While still difficult for commuting purposes, this solution would be much more manageable.

Since I live at Grosvenor, this works for me.

I rarely use the Red Line to these stations.

suburbanites deserve frequent trains too. we want to persuade them to use transit, not their cars

If trains are only coming every 15-30 minutes, some people may have to wait an hour to be able to get on a train which takes them to their end station. This is too much wasted time for riders. This is also a time frame that will not work during high ridership times because there will not be enough trains to accommodate the number of people who need to take the train (with or without social distancing).

Proposal to implement Red Line turnbacks

We dont use the red line.

If only every other train will operate between Grosvenor-Strathmore and Silver Spring, how do you maintain a 15 minute arrival schedule between these stations?

This is marginally better than Proposal 1, but still an omnishambles with respect to commuter needs.

This would be okay for most of the day, with the exception of rush hours. During rush, I would worry that trains would be overcrowded.

I am not sure about the impact from Strathmore to DC. I moved to this local area specifically as an Essential Employee to get to my DC (Capital Hill Job).

Every 30 minutes between Grosvenor and Wheaton would be a hardship.

15 minutes between trains would be difficult when I am back to commuting daily in Jan of 2022, this might lead me to switch to biking in more days.

I will be negatively affected with the closure of Grosvenor-Strathmore

I dont use the red line often on that end so this wouldnt impact me much. However, we may see crowd surges at some of the transfer stations I use more frequently downtown.

Shortening the red line every other train is a hardship for commuters. Every train should do full red line.

This is simply not enough service for the me and the people who rely on these Metro stations to get to work, go to the grocery store, visit family, or any number of essential activities.

While this would not directly affect my commute, I think it would be a real burden for those who live north of Grosvenor and would lead to more people commuting by car and further declines in ridership

Again, making trains run less frequent will result in crowding, which is bad for health! U need to ensure that people feel safe taking metro again, and noone will feel safe after this pandemic if they r packed in like sardines into a train, considering there is still a lot to learn about covid-19, new strains and how effective vaccines are. We r the capital of top country in the world and our metro system is comparable to 3rd world! Please work with congress and do all u can to make sure no disruptions are made, no less frequent trains and no closed stations! I dealt with metro delays before pandemic and would at times not be able to get on the train at all because of crowding. Do not create it on purpose please! Find funds from congress and do not punish riders!

This plan is good because all other train lines would have less time intervals. Most of the red line stations are not utilized as often due to the federal government teleworking. Another option would be to close stations with low ridership like Judiciary square in comparison to the beginning of the pandemic with closing stations with low ridership levels.

Same answer as before. I have to tranfer trains at Metro Center. Having to wait 15 minutes for a train--assuming it wasnt too crowded and I had to wait another 15 minutes for the next train--would make my commute too long to fit within childcare hours.

Though I personally live near Silver Spring station and use it the most, 30 minute intervals, especially during the work week, are not feasible for commuters living beyond Grovesnor and Silver Spring. Arguably, 15 minutes is too infrequent even.

Leave it the way it is. My community needs this. Congress appropriated 1.9 trillion. Only 9% is going to covid. Get Congress to give more money

Since Im located in DC those locations in MD do not impact me. Keeping the train at every 15min means Im more likely to use it (over Lyft/Uber).

Trains beyond Strathmore are too infrequent. Need to get to work and back in late evening.

This would not be fair to some residents who depend on Metro, but it seems most reasonable to limit service toward the ends of lines where stations are less used.

These are the same as my concerns with the previous scenario. In fact, I dont see how they are different.

30 minutes is too long to wait for a train. I have lived in capitals of much smaller countries where train comes to the station every few minutes. That is the way it should be in the U.S. We need to offer better service, not worse. The Metrobus and Metrorail system need to be subsidized by local governments and the Federal Government.

I live in Virginia on the Yellow Line, and rarely use the Red Line.

I live in DC and very rarely travel outside of DC.

Not sure of the service needs beyond Grosvenor Strathmore.

Thankfully, I no longer need to ride the Red Line for work. I feel terrible for those who must still do.

Since I use Grosvenor station, this works for me.

I dont use the red line very much.

Strathmore is my jumping off point usually for most trips so I would like to catch trains from there as frequently as possible would be great

Again, resources should not be used to make rich folks comfortable and make the more vulnerable and poor communities that rely on public transportation as their only method of travel to differ even more. Resources should be for those who rely on metro as their source of transportation. Cut your salaries revise we know how much you all are making at our expense.

Proposal to implement Red Line turnbacks

I would not take Metro on the weekends. Prior the pandemic, I used Metro red line constantly on the weekends and it was crowded; If this proposal is adopted, I would not use Metro due to overcrowded cars

Please see my previous response.

This would make it harder on people who cant afford to live closer in. Their commute is already long(er) and having to wait as much as 30 minutes for a train would be an additional hardship.

The wait time of 30 minutes for the Rockville station is too long.

Again, the Red Line at Union Station was already inadequate.

Trains are not frequent enough. Metro should adopt a flexible budget to allow for more frequent service and can adjust based on the situation at the time. Additionally, by setting such infrequent times at stations north of silver spring and Strathmore will result in a crush of parking and crowding at strathmore and silver spring.

It will easier if trains arrive sooner for the stops at the end of the line, which are major access points outside of the DC stations.

I live and work within DC limits so I cant comment on a proposal that affects those commuters.

Trains must run at least every 10 minutes.

There are a lot of high rises around the Grosvenor metro. Many of the residents depend on Metro to get them to work. Once every 30 minutes is not frequently enough to support this ridership.

Buy Uber

Trains arriving every 15 minutes at all other stations on the Red Line would not work for me. As a regular user of the Woodley Park and Dupont Circle Metro stops, I anticipate that this would cause serious overcrowding and prevent timely arrivals for myself and other Metro riders.

As mentioned in previous response, this would create massive congestion and the 30 min trains would be overcrowded and inconvenient. Riders at this stations might choose to forgo metro altogether due to the lack of trains

I think this would not affect me if we are talking about trains heading north from Silver Spring and not into DC from Silver Spring.

Strive for a consistent clockface schedule at the stations only served every half hour.

Dont use this metro line during my current commute

Those traveling the farthest and paying the most are penalized. This will lead to more commuters on the roads.

Skipping the endpoints is fine, but every 15-30 minutes per train is entirely unworkable.

There is not a significant benefit of a train every 30 minutes - and at some point, the commuters from the suburbs will be so jammed that no one will want to use it and traffic will increase.

With other service cuts, my commute would double in length.

I take grosvenor station most days

It could work, if the time between the trains could be reduced to 10 minutes as opposed to 15 minutes. And 20 minutes, as opposed to 30 minutes on the outlying stops.

I only go to this section of the red line once or twice a year so it will have little impact on me.

I hope this is a temporary problem and not a permanent solution.

The headways seem way too long. It would be awful to try to plan around those headways.

This poses a barrier for those that live farther north and actually encourages driving rather than discourages it. This would increase congestion on the road.

It should not be every 30 minutes. It should be less than 30 minutes. People going to those other red line stations already have a far commute this proposal is just making it worse.

I dont often travel to those stations on the red line but it will hurt ridership for commuters in those areas. With the inconvenience of 30-minute wait times, people will be less likely to ride Metro.

If this helps to keep the trains at Grovesnor. This is a station with many apartments and metro ridership is essential part of living in this neighborhood.

Because it means missing buses to getting to work or home as it is there every 15 minutes example now I get a train from white flint at 4:26pm & get to shady grove at 4:36 miss my bus by one minute then hav to set there 25 minutes til the next one if it's ever 30 minutes that means I wait an hour to go home

This will work because the trains would operate

Trains should arrive more frequently than every 15 minutes at all other stations on the Red Line.

My doctor is located on the Red Line and this would double the travel time.

Proposal to implement Red Line turnbacks

Service to Grosvenor on 30 minute schedules would hamper access to Washington DC and points in both directions as well as access to the Strathmore Performing Arts Center from points beyond Silver Spring.

This would be fine. Not great for others, but would work for me.

Just two trains an hours is not how the metro should function. Silver Spring is too close to DC to consider it a remote and non-important area.

Again, there are people like me who have jobs in which we are not professionals and that comes down to not being able to take taxis, Ubers, Lyfts nor purchase vehicles! We depend solely on Metro trains and buses.

I like this plan a lot. The bulk of ridership is in the city center, we need that capacity, I think, to handle within-city foot traffic. People on the outskirts can wait a little longer and still get a seat on the metro cause they are the first or last stops. Cutting service in the center or across the board does make as much sense, cause the ridership isn't evenly distributed.

Since I travel to the ends of the Red Line infrequently, this does not affect me as much personally as some of the other proposed changes. That said, Im sure itd have significant impact on individuals in those areas.

Very inconvenient for weekday commuters.

I live near Grosvenor-Strathmore, so the proposal would give me 15 minute service, but that is still too infrequent during peak hours.

This will adversely affect the most vulnerable workers with no private transportation nor ability to hire Uber or Lyft. It is unconscionable that they be more burdened than they are already now.

Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

Trains still need to run more frequently than every 15 minutes!

Would need to adjust any plan travel differently to accommodate this schedule. It does seem to my though, that some of the stations that are skipped affect groups who need to have access, like employees working at holy cross hospital who need to use the train to forest glen station.

I dont use the Red Line.

Grosvenor-Strathmore is shown as a closed station. How will this work?

I live by Grosvenor so this is alright with me.

I dont travel frequently on the outer portions of the red line, so I probably would not be personally effected as much, but 30 minutes is a long gap. My teenage daughters travel to wheaton via metro from PG Plaza. They would notice.

I live at Rockville Town Center which is adjacent to the Rockville Metro Station and commute via the Metro everyday to Metro Center. Reducing service to 30-minute intervals would add a significant duration to my total travel time.

I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else.

As a Virginia resident that works in DC, I do not use the Red Line in Maryland. That said, 30-minute train intervals for any line is not an option.

30 minute intervals are simply an admission of failure. Just not acceptable in a major city in an economically advanced country

Better than Prop. 1.

Can you imagine a red line train coming every 15/30 minutes during rush hour? How crowded those cars and platforms would get? Better-off residents would skip the metro, clog the roads, whereas only those with no other option would ride.

Again, this could work only if you guys got a really accurate and consistent schedule.

My lack of concern for this item is only because I do not live or need to get to those stations.

The stations on the Red line where the train arrives every 15 minutes are the ones I usually use.

I do not use the Red Line for commuting.

This would significantly and negatively affect weekday commutes.

While this change wouldnt affect me, I dont know enough about the needs of riders in those areas to say one way or the other.

Proposal to implement Red Line turnbacks

Its the same as Proposal 1, only with only one train line affected. Dont you read your own materials? Why should only one line have very little service??? Actually, then I would just drive to Grosvenor, because I am wealthy enough to have a car to drive there anytime I want. A lot of people near Shady Grove and Twinbrook might not like it. Will you also provide more service to bus riders in Potomac?

I do not have any plans to take the Red Line. Orange Line is my primary line.

Looks ok to me

Again, the trains are likely to be so crowded as people return to the office that the trains will become inaccessible to people like me who have disabilities. I have to have a seat on the train to ride safely. The disabled seating pre-Covid was hard to get because people without disabilities ignore the signs and sit there and take up all the seats and/or put their bags on the seats next to them. If I cant get a seat on metro to accommodate my disability, the train system becomes inaccessible to me. Running fewer trains like that, especially during rush hour, will make the trains so crowded that I wont realistically be able to ride.

This would be acceptable for many of those living in the DC metro area, who rely only on public transportation to travel within the city.

Trains need to come more often during rush hour (perhaps, every 5-10 minutes). 15-30 minutes during off peak times is fine.

Seems like a good idea to have high-traffic areas run more often.

I dont often use the red line, but I am looking to move. This change could dissuade me relocating to those areas that are lesser-served.

Glenmont is my station and I have to travel there by bus. If my bus is late and I miss the train that would mean waiting 30 min which would make me late to work. Most commuters to DC already have to leave earlier in case of unexpected delays. This proposal would make matters worse and make me not want to rely on metro and instead invest in a commuter bus or van pool.

By January 2022, I expect to be back in the office (as will many people) BUT I imagine that wearing masks and social distancing will also be still in effect. Having METRO run every 15-30 minutes based on line, etc. would mean incredibly packed and therefore unsafe trains, especially during rush hours. If I am traveling NOT at rush hour, sure, this is fine but I plan to be back 9-5 and this seems unsafe.

Yes, I could manage with this. Just DONT CLOSE GROSVENOR OR WHITE FLINT!!!!

It's too infrequent given that offices will probably reopen in 2022. Why not have more frequent trains in the morning and evening?

Every 15 minutes would work for all stations.

Like many other Metro riders, I live beyond Grosvenor-Strathmore and use the Red Line to commute into DC to work. Before Metro stopped turnbacks several years ago, my commute from Twinbrook station to Metro Center could be over an hour during rush hour, if I wasnt lucky enough to catch a Shady Grove train. All trains coming out of DC were extremely crowded, sometimes to the point where you had to wait for multiple trains to pass before you could get on. When Metro stopped turnbacks, the same commute was cut in half (at about 35 minutes) and crowding was significantly reduced. I hope that Metro will keep trains arriving at all Red Line stations every 15 minutes.

Keeping the service hours before the pandemic will be great.

GROSVENOR-STRATHMORE metro station should not be closed because the metro station near many apartment buildings and condo buildings. Alsomany people uses the station.to get to their places. This idea is a very bad choice.

I live near Grosvenor-Strathmore and will be commuting every day again by January 2022. I would not mind every other train on the Red Line operating between Grosvenor-Strathmore and Silver Spring. However, 15-minute intervals are not acceptable for my commute, especially coming on the heels of a large federal stimulus. This proposal would force me to consider commuting by MARC or car instead and, more globally, it would permanently reduce Metro ridership across the board.

I dont use this line

I don't usually take the Red Line so it would not affect me that much.

I frequently go to Silver Spring and Wheaton metro because my family lives in Silver Spring and they are old and sometimes need my help. I do my shopping at Costco in Wheaton along with other retail shopping there.

Because I get on the metro at Gro-Stra this is not a major issue for me. However, I would prefer it to come a little more often than every 15 minutes.

Screws over every long commuter but at least you keep some semblance of a somewhat normal-ish service tht should be your barest of minimums inside the city

I ride from Twinbrook so that sucks

One train every 30 minutes is just not acceptable to practically use Metrorail to get to work. Miss the train by 30 seconds and youre late by 30 minutes.

I do not normally take the Red Line. the alternating end station destination - believe this used to be a pattern - can be confusing if you arent familiar with the routes and could cause someone to get on a train going the wrong way

Proposal to implement Red Line turnbacks

I use the red line to get to my dentist. It is already a very long journey.

This wont work for commuting on the Red Line from Takoma to Union Station/Capitol South. If were back up and running in the office, as I expect we will be, the train will be too full to get a seat. I dont want to have to retire or start driving to work due to Metro service cuts. I dont think this is going to work for my colleague who comes in from Wheaton at all.

Being that Y-bus service will remain the same along the Silver Spring-Glenmont segment, riders will be able to travel to the appropriate destination. With the Shady Grove-Grosvenor segment, there will be additional transfers necessary depending on the destination with the potential elimination of the Q-bus service. The Q-bus lines are pretty crowded, especially between Rockville and Wheaton, which it doesnt make sense to eliminate this service along with Red Line service.

Im not really sure if this proposal will work for me. Its a bit better, but still highly inconvenient for those who rely on the metro for their everyday existence. I do rely on the metro to see my friends, get to work, and to get to shopping areas or dining areas. I dont own a car and I dont intend on buying a car.

N/A

I do not normally use any of the listed stations, so I marked this not applicable.

That might work EXCEPT during rush hour.

This plan wouldnt work for me I would prefer that every lines run every 15 mins at the minimum

This works for me. For people north of Silver Spring or Grosvenor, this plan is an invitation to travel by automobile instead of Metro

This option is a little more reasonable with my work schedule than option 1

truly not sure what type of environment we will be in 2022

It already takes too long to visit family and friends on the red line. This would be a disaster.

Thats fine with me

That will be very inconvenient

My neighbors and I all bought into the Grosvenor Park area (30 years ago for me) because of easy access to the Metro. There are countless apartment buildings and townhouse neighborhood that use Grosvenor Metro. We would have to drive into DC or drive a ways to an overcrowded parking garage which defeats the purpose of public transportation. Closing this stop will add 100s to 1000s if more cars to our already congested part of the county. Many retired neighbors and families without cars totally rely on Metro for getting around. It affects our ability to work or visit DC, and it will greatly affect Strathmore Hall once it reopens. Please do NOT close our Metro station!

This is significantly less than rush hour frequency even between Grosvenor and Silver Spring and would add significantly to my daily commute

These distant stations are not usually on my travel route

The same comments apply here as were applied to the first question.

I mainly catch the Yellow or Green lines.

You really have to be concerned about those riders on the fringes of the system. They live in the Suburbs and in some cases the train is their best way to get into the metropolitan area. Its not fair to give them less service.

This proposal would be much better than closing Metro stations. I live in the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro Station.

I dont use the red line very often

I dont live on the Red Line so this does not impact me as much (as long as trains arrive every 15 minutes at Red Line stations within DC).

I go to Forest Glen station to get to my neurologist. If it would be every 30 minutes I dont know how much that would increase my time and how much earlier that I would have to get up to do that. I am already getting up at 3 or 3:30am to leave the house by 5:30am when I take Metro to my neurologist. I dont have my license so Metro is my main form of transportation. I would have to know how much that this would lengthen my trip before I could say for sure if it would work for me.

I personally don't ride the red line to these destinations on a regular basis.

During peak times, 6:30 am-9:30 am, and 4:30 pm-6:30 pm, I need those trains that run every 30 minutes to be every 15 minutes. But just during the peak times.

You already stopped doing this because its stupid. Dont start doing it again.

Peak hours have to be different. I use the grosvenor station to go to work to downtown and the number of people is overwhelming.

-

Proposal to implement Red Line turnbacks

Most of my sentiment from the prior question regarding all stations every 15 minutes applies here as well, even when considering them independently. As someone who lives at Shady Grove and works off of Twinbrook, I'd rather pay for a rideshare than deal with such a horrible wait and risk being late to work due to bad luck in timing. While I can theoretically afford it, rideshares are expensive and many cannot. The people living at the end of the red line have the same needs for the metro as everyone else. This will absolutely NOT encourage ridership or bring in more fare money.

I do not typically use the red line

This does not affect my travel.

With the social distance will be difficult to keep safe.

THIS WOULD INCREASE MY COMMUTE DRASTICALLY AND BE DETRIMENTAL TO MY CONTINUED (10 YEARS) SUPPORT OF WMATA!!!!!!!!!! PLUS WITH CORVID - WE WOULD BE EXPOSING YOUR RIDERS TO MORE PEOPLE - IF YOU REALLY THINK THIS WILL BE OVER IN 2022... RESPECTFULLY... YOU ARE NOT TAKING LONG-TERM THREAT MANAGEMENT INTO CONSIDERATION...

My federal agency is headquartered at White Flint metro station. Shifting to this proposed schedule would not only reduce the proportion of staff commuting by rail, it would impair stakeholder and public visits to the agency and adversely impact public participation and transparency in agency decision-making and operations.

I travel from Woodley Park to White Flint. I would not enjoy the 30-min wait between trains, but I can work with it. I'd just have to use the next train info to time my arrival at the station so I don't have a long wait. I might have to go to work earlier and leave work later because of this.

Please consider providing fans and heaters for outdoor stations if trains have to run every 30 min. Thirty minutes can be a very long time to wait in extreme hot and cold temperatures.

The metro during 8:00am-9:00am is full of commuters, and often on the red line when trains you cannot get on as the train is full when they are running every 3-5 minutes. If trains are running every 15 minutes, I envision lots of commuters having trouble getting to work on time. This would lead to people not being able to rely on WMATA.

I do not typically ride the red line.

What are the commuter needs at those particular stations?

This is close to what the trains currently do from my perspective. I feel like this would be a change that could have the smallest impact. Again, with trains being spaced out by half an hour a timetable for when trains leave stations would make this plan more feasible for riders.

This seems feasible with more options in the core of the line and less frequency at the further out stations

Too much confusion with train arrivals and departures. Red line trains are overcrowded enough.

I rarely ride the Red Line but this seems like a bad time to reduce service when people are expected to be going back to work in their offices

I'm retired so I go downtown much less than I once did, especially since the pandemic, but this would work for me because my home station is Grosvenor.

I sometimes have appointments in Rockville and in Wheaton. If the trains don't run more often I would have to allow extra time in both directions. I'm more likely to take a taxi or ride share than metro, so I'd effectively lose access to public transportation.

15 minutes is acceptable for in town stops

I don't use the red line

I commute btw Grosvenor and NoMa for work. The garage fills up with just Grosvenor people. This change would mean WF and Twinbrook commuters would park at Grosvenor, too, making Grosvenor essentially unusable after 8, and forcing the rest of us up the line, making the commute potentially adding 45 minutes or more to our commute because of the extra driving and the longer wait time.

Not sure what is being proposed above. As long as there is still service from Cleveland Park Metro I can adjust my schedule.

The White Flint, Twinbrook, Rockville and Glenmont stations are primarily used by individuals who cannot afford to live closer to DC. This would disproportionately impact their ability to get to and from work every day. I am not OK with that.

Perhaps if Metro had the normal frequencies (e.g. trains every 2-3 min during rush hour, every 10-15 min during off peak hours), it would be ok for the trains to alternate, but 30 min is too long a wait. I have friends in Forest Glen by the Metro. We also need to encourage people who live in the suburbs to use the trains more, not less, which this would not do.

The Red Line requires more frequent arrivals than 30 minutes at ALL Red Line stations, particularly as this year progresses and also into 2022.

here again in the am and late afternoon early evening all trains should run more frequently.

Have you ever been to these stations during peak hours?? In normal times, a train could get half full leaving from Shady Grove and 100% full by the time it gets to Grosvenor.

Proposal to implement Red Line turnbacks

| |
|---|
| Whats the point of mass transit? Assuming I could get on one of these 30 minute trains (how many cars per train on this revised schedule?) I can drive to most of the destinations given the new time frame. What would the fare be for Rockville to Metro Center? |
| I am not sure of the commuting needs of the population on the outer most parts of the lines. |
| Again, time between train arrivals is too long, especially during rush hour. |
| 15 min between trains is still too long, but its better than the previous proposal. |
| Rockville, Twinbrook and White Flint should have a schedule with trains arriving every 15 minutes too |
| This could be acceptable on weekends, but would not provide sufficient service during rush-hour and normal weekday traffic. |
| I didnt ride on the Red Line very often, so I dont think this would affect me much. You might want to consider how it would affect traffic to/from Union Station - especially if the tourists start pouring in again. |
| It may work in non-rush hour and weekends, if its a weekend with no city-wide events where many folks use the subway. This plan would not work during rush hour -- platforms and trains could become very crowded and may have to bypass stations as the crowds build on both the trains and the stations. after leaving the starting station(s). |
| People are more willing to travel when trains are more frequent with shorter wait times. |
| I rarely use the red line outside out the District so it would not impact me at all. |
| They would likely get really crowded after work from home ends and many of those are outdoor stops which would be really hard to wait at for long periods of time during winter and summer. |
| I do not use that section of the line but ultimately it is 30 minute arrival interval which my previous comment om 30 minute arrivals still apply |
| 15 min is still pretty long wait time - I use grosvenor as my origin |
| A reasonable approach that while limiting service to some stations, does not eliminate it. |
| I very rarely travel to any of the 30 minute stations, so this would not meaningfully affect me. |
| This would work as long as the trains arriving at Silver Spring arent completely filled up with the commuters who have waited 30 mins at the other stops. But otherwise it could work for me. |
| I do not live on the red line |
| I live on the Green Line and rarely use the Red Line, so this plan would be fine for me personally. However, it is still an unacceptable cut to frequency. In the core urban section from Grosvenor to Silver Spring, trains should come at least every 10 minutes. On the outer suburban branches, they should come at least every 20 minutes. |
| No, I heavily rely on the Shady Grove and Rockville metro stations and this would be extraordinarily inconvenient for me. |
| I currently do not have plans for 2022 wherein I would need to ride Metro to these locations. But, my thoughts are for those who live in those areas and work in the city, presuming the city returns to normal or close to it as possible. |
| Too much time in between stops for the Red line. |
| The long wait times would highly discourage use of the metro station. The metro doesnt need fancy services or anything in it. It just needs to run promptly and consistently. Businesses and events need to be open so people have a reason to travel into downtown. |
| No, if this is affecting times during rush hour |
| I agree. These schedules would make it easy to go to and from destinations. |
| Every 15 minutes the platform at Dupont Circle in rush hour will get crowded if the trains only come every 15 minutes during rush hour. |
| Some trains already arrive full when they get to Grosvenor from Rockville. This plan will be a disaster. |
| The pandemic would end sooner than January 1, 2022. So, once this is all over we will have to increase the frequency at the red line, blue line, silver line, and the orange line, two every 5 to 10 minutes at all stops including the Arlington national cemetery. So just to let you know that they'll have to run more frequently than what they're doing right now they're just only doing the cuts because of the pandemic so just to let you know that |
| But service every 30 minutes for the affected stations would discourage ridership for anyone located near those stations. |
| My main use of the metro is for Monday to Friday commuting and I do not use use the Red Line at all for this - so this plan has no impact on me at all. |
| Then there are the derailings, the smoke filled train cars, the collisions, the worker deaths. |
| I do not typically travel to those stations and dont expect to start in Jan 2022. |
| Wait times are too long! |

Proposal to implement Red Line turnbacks

If all trains are 8 car trains, capacity might be sufficient.

Yes this definitely works too. Again, not ideal but we (the customers of metro) have to work around the metros schedule. It's a small sacrifice, but worth it if we can keep the service on for these communities. Removing it indefinitely could be detrimental.

I live within walking distance of the Grosevenor-Strathmore station and mainly use it to go to Bethesda, Friendship Heights or into downtown Washington.

Dont travel by metro beyond Forest Glen. Use bus service and walk.

I do not live in Maryland nor commute to that neighboring state.

While 15 minute intervals are not ideal I would personally be minimally affected. If this proposal were adopted I would probably spend THE SAME on metro per year.

I think I would probably not use Metro as often as I have in the past due to the length of time this would add to my commute.

We need more frequent trains at those highly trafficked stops,

It is helpful to have more trains available at high-traffic stops. However, much of the professional population in DC dont live in DC but rather the surrounding areas. Having fewer trains available to them penalizes them for seeking affordable housing.

This will again, result in packed trains during rush hour, especially in the Grosvenor - Shady Grove corridor. It is important to consider that theres a lot of newer construction in northern MoCo. Those people likely work in DC but are not willing to drive an hour and a half. Mixing it up by driving to any of the MoCo stations and parking there to continue their commute into DC will result in a more-comfortable commute for them. By having trains arrive every 30 minutes, this will discourage those commuters. Additionally, the corridor between Shady Grove and DC is further urbanizing and demand for public transportation will be considerable in the long term. By increasing frequency there might be savings in the short term, but its affecting the image of public transportation in the long term.

It is my understanding that the red line is the most frequented route and to cut train service would disrupt the commute for many.

This schedule makes it harder to connect to buses to our destinations from Shady Grove, because of the long wait for Shady Grove trains.

I rarely use the rest of the red line.

The hours of operation of services would really cut riders to depend on the station services. Per haps every 10-15 minutes may can be a start

The cost of living and working in Metro corridors has become excessive. Much vacant office space is for lease. Many other transportation modes compete with Metrorail, e.g., Uber. Time is overdue to make Metrorail a tightly scheduled transit service where a few trains run with passengers rather than many trains running almost empty.

We need more frequent trains

Every 30 minutes is very inefficient. How can someone plan a work day around that?

That would not work out. Cause sometimes I have to ride to those stations. Plus I think we would have crowded conditions if we get to back to normal life.

Currently ok as Im on the red line within the SS-Grosvenor tract, but if I move further out that would be a problem. The main problem is that all the (large) park-and-ride stations are outside the SS_Grosvenor tract, so one could not drive to e.g. SS to shorten the wait. Also, the red line is quite crowded during rush times, in normal times. I assume youd revisit the plan later on based on ridership, so assuming rush hour is not an issue, this is an acceptable proposal. However, we should be vaccinated and taking metro again in 2022, so it may not be the best time to turn away customers.

every 15 minutes isnt frequent enough-it will cause me a slower commute and make trains more crowded in a time of social distance.

I do not know if more than the essential-only businesses will be open by Jan 2022, but based on our current vaccination rates, I expect more to be open by then. This proposed schedule would be discouraging and deter me from using Metro for my transportation needs. The walking distance between several downtown redline stations is about 15min or less.

I rarely use Red line and not to areas affected

I normally do not take the trains to these destinations at this time.

Unfortunately, Metro is a money pit that has to be scaled back because of permanently reduced ridership and revenue.

by the time the trains arrive to white flint, it is already really full. I am not sure how it is on the other end of red line as I am not familiar with it.

I have to wonder if this is such an issue why do we continue to build stations further out. The Dulles trains should have been a light rail to Metro, or something similar. Dont continue to cripple the system, and dont continue to mess around with the lives of those who do not have a vehicle. All those making decisions should be people who do not have a vehicle and must rely on transit options, bike, uber/lyft, etc. In all seriousness, everyone who is a decision maker should not have a vehicle.

Closing the Grosvenor Metro Station would be disastrous for me and my family. It is easily accessible for us, and we rely on that station. We used it regularly before the pandemic and expect to do so again again.

Proposal to implement Red Line turnbacks

This proposal would create the need for additional public transportation in the Maryland suburbs, simply transferring WMATAs financial problems to other taxpayer-supported services.

Standardized published arrival/departure times are key. So that riders can plan ahead.

I rely on the Metro

I very rarely ride on the red line.

While this works for me, because I am (for now) served by the Grosvenor-Strathmore Metro station, it will create hardships, due to extended wait times, for others who are served by the outer periphery stations with arrival times every 30 minutes. These passengers/customers will have at least 15-30 minutes additional non-productive down time added to their respective commutes.

As a red line rider, I fear that trains would be too crowded during rush hours if operating at 15 minute intervals and a real hardship for those living further out and needing to wait up to thirty minutes.

The Silver spring turnbacks aren't that bad in my humble opinion because the 3 stops north it usually aren't that big in crowds. The Grosvenor turnbacks are definitely a problem though because those 4 stations are crazy busy on a normal day and it'll only lead to big crowds.

Dont really use the Red line

15 minutes is about the lowest acceptable standard for a bus system, much less heavy rail transit. I understand that funding and ridership are key variables here working against you, but not maintaining a basic standard of transit functioning in a place like DC weakens both its strength as an institution and the Citys overall vitality going forward, because the 2 are integrally linked. If you are not incorporating MMT into your appeals for federal funding, I would suggest you do so, at the very least! This is obviously much needed investment (simply re-utilizing resources that have dropped off from previous levels, meaning the inflation risk isnt present) and the federal government can always spend money if/when it wants, given that all of its spending is digitally conjured out of thin air in bank accounts at the Federal Reserve and never intrinsically tied to how much in tax revenue it has or chooses to borrow through Open Market Operations

This would literally make my commute impossible. Pre-COVID, trains running every few minutes were still so crowded that I would often have to wait for multiple trains to pass before being able to board. If they ran every 15 minutes, I could be waiting 45 minutes for an open train car *in addition to my commute time*. Also it is unconscionable to disincentivize people commuting from afar from taking public transit, both from an environmental and equity standpoint.

I would embark from Grosvenor, so it would be acceptable, but availability of parking there is a big issue. More people would drive to Grosvenor to start their trip, parking just is not there.

Being 94, I cannot wait 30 minutes at Forest Glen to transfer to a bus to and from the doctors office.. especially in cold wintry weather.

I think you are penalizing passengers who live in the suburbs by having the trains run every thirty minutes rather than every 15. This extends travel time and puts an additional burden on these people. If these people decide to drive to work rather than wait the elongated time then other problems are created with increased traffic, expensive downtown parking, additional loss of revenue to Metro.

During COVID-19 people were told to stay home, so ridership decreased. By January 2022 people will need to commute to work once again. With many people taking advantage of low mortgage rates and moving out to the suburbs during COVID, the demand at stations beyond Grosvenor and Silver Spring will be even higher than pre-pandemic. If you limit service you are not going to resolve your budget issue. Instead, people will find alternatives to the metro and you are going to decrease your long term revenue.

Shady Grove is an important Park N Ride location for the entire northern 270 corridor. Having trains leave Shady Grove only every half hour will cause significant crowding on trains.

i don't really take the red line

Same feedback as the previous question. I use the Rockville station, and it was hard enough in the mornings when the trains originating from Shady Grove ran every 8 to 12 minutes. Or in the evenings, when I had to either switch trains at Grosvenor-Strathmore or stay on the platform in D.C. and wait for a Shady Grove train. Trains arriving every 30 minutes at Rockville would be unreasonable.

Actually it would work fine for me, but certainly wouldnt accommodate my daughter, or my son and his family who live near Shady Grove.

I am retired, so it is easier for me to plan a schedule around train availability.

This would further reduce customer usage because of delays from mostly residential neighborhoods where most customers start & end there daily rides.

Metro would need to have the bus routes feeding into the stations where the trains arrive every 30 minutes synchronized to ensure connections could be made from bus to the rail and rail to bus.

too infrequent

Proposal to implement Red Line turnbacks

| |
|--|
| I travel on the Red Line frequently to DC, MD and VA. All delays in arrival of trains, in either direction, will create major delays for those who are working at the office to be late. |
| I am not on this line daily. However when I go to the silver spring station for the doctors appointment. I will check metro iternary to figure out the schedule to arrive on time. |
| Metro makes it easier to use public transportation to the suburbs. Making it less convenient to use the outer stations encourages the use of cars the contributes to climate change. |
| As I stated in response to the previous question, I really dont want WMATA to have to cut Metro service on any of the lines. |
| If I have to wait a bit longer to get to where I need to go, between Fort Toton and Rockville/Grovsner, that is fine as long as I can get there. |
| I dont travel on that part of the system so it wouldnt effect me at all. |
| It would mean we'd be more inclined to take our car to Red line destinations, which defeats the purpose of public transportation. |
| again, you metro people need to keep the train schedule updated and adhered to strictly in order for this to work |
| Every other train would be impossible to get on with the amount of riders that accumulate at the farther out stops. |
| Grosvenor -Strathmore Station is nearest to my home which I use to get to my work every day. Otherwise I may have to drive. I very much want to take Metro instead of driving that is for sure. |
| none |
| More frequent trains are needed |
| This is feasible, but planning of train schedule and frequency should be based on an analysis of ridership frequency and trends over time, including different time points during a single day. Train schedules and frequencies can thus be adjusted based on observed trends (e.g., passenger volume) so that optimal service is provided during peak periods and scaled with decreasing need. Such a strategy would be dependent upon analyzing key data points (such as ridership, average number of passengers, etc.) over time and then extrapolating such historical data (predictive analytics) based on observed trends (descriptive analytics) to arrive at a data-driven, flexible schedule. See also: Comment to Metro Proposal 1. |
| See answer to proposal 1 |
| Not sure how this would affect me personally, red line is not on my regular trip except for some special circumstances, regardless 30 minutes seems too long a wait, Id imagine red liners at the affected stations would feel the same. |
| I dont live or work or play along the red line in general, but for times that I have and/or will, I think this would work. |
| These changes would render the metro unviable for our son, who commutes to a high school on Capitol Hill (orange line to Red line). The infrequency of trains on both lines (but especially on the transfer point to the Red Line) would make it difficult to plan a commute that predictably gets him to school on time. Reducing frequency to this level would be a disaster. Metro would cease to function as a proper commuter line, and the platforms would likely be over-crowded and dangerous during peak commuting hours when trains are expected. Trains would be unlikely to accommodate everyone on the platform, which would lead to frustration. Commuters would revert to their cars thus contributing to gridlock, pollution and parking challenges. it would also lead to the further demise of Metro by creating conditions that are so unfavorable that ridership will drop permanently. Please dont do this. |
| A 15-minute interval at rush hour on the heavily used/heavily needed Silver Spring--Grosvenor arc of the Red Line is too long. It makes it difficult to arrive to timed-appointments on schedule. Such an important metrorail corridor should not be cut back in service. |
| 30 minutes is a long time to wait on train. I think every 15 minuets sounds more reasonable for all stations. Wheaton Station is a busy station and has lots of riders who use to the train on a daily basis. As someone that commutes from Wheaton station to rhode In island avenue station I can confidently say Wheaton station has more passengers/riders than most of the stations in between and should not be subjected to wait for 30 minutes on a train. |
| I dont go out that far unless its to the Strathmore. I think Montgomery County should be asked to pay in if it wants more frequent headways than this proposal -- and every other county outside DC. |
| This is a reasonable change given lack of funding. |
| That is a long time between arrivals, and an inconvenience, especially at Shady Grove, etc. |
| I do not take metro regularly, and would plan accordingly when I do take it for occasional meetings or special functions downtown. But I would hope that if the trains were getting really crowded with this plan, there would be a backup plan to increase trains etc. |
| 30 minute frequencies is really unacceptable, but for the suburban, higher income sections of the red line this is a less worse option than others Ive seen. |
| I do not know my travel plans in 2022 but a reason to live where i do is based on proximity to Grovenor Strathmore Metro and reducing the trains servicing that station is a disincentive to use Metro for travel. |

Proposal to implement Red Line turnbacks

That is too long to wait for a train.

The elimination of the grosvenor turnaround made sense when ridership was high, and helped with extreme crowding during evening rush at Shady Grove. Sadly, if there isnt capacity to support it, it makes sense to run every other train to the ends of the line.

Trains would be absolutely packed -- to the point that people would have to wait for the next train, IF THEY CAN FIT ON THAT ONE -- during rush hours. Additionally, I take the MARC to the Metro as it is. So, Id have two transit lines with relatively long wait times in between instances, and that would likely mean Id opt to drive.

Eliminate overtime and reduce wages.

If I accidentally miss the train for work I have to wait another 30 minutes. That is if they do come on time

15 minutes is too much time during rush hour in 2022. Stations will be crammed.

Trains need to be more frequent so they are not as crowded

Considering that riders traveling from the above stations outside of Grosvenor-Strathmore/Silver Spring are entering the city from further away, it seems unfair that they now also have to wait longer times to also endure a longer ride.

I dont take the red line enough for this to be a problem for me

I don't use the red line

I dont use those station - ill leave that to people using those stations

No, I dont believe that will work for me. If I miss a train, having to wait 30 minutes for the following train would be detrimental to my job.

I commute from Shady Grove station and waiting for a train to arrive in 30 Mins which causes 1 hour wait time (to & Fro) daily is something absurd to even think about.

Most of the people who live in the area from Forest Glen to Shady Grove are not as dependent on Metro as a lot of people in the rest of the DC Metro area are, so I think this would be a good decision.

Again, this discourages ridership from stations served by a younger, less affluent communities and will cause road traffic and congestion that degraded the environment.

Im not sure if this would work. Right now I dont use red line so it wouldnt affect me. But if I were to change jobs it might..

This would significantly increase my commute time since I have to catch a shuttle at the end of the red line

As said previously, Metro is used not just by commuters, but also by retirees and tourists, who rely on Metro to get them where they want to go quickly. Reducing the time between trains would considerably lengthen travel times, especially for those who need to transfer between lines to get to their destination.

I use the trains in the downtown area, but If I lived further out, this would be unacceptable.

I often transfer from the Green line to the Red to complete my trip. An every 15 minute frequency goes against the idea of arriving on time. I currently sit for 8-10 minutes depending on when I get to Gallery Place waiting for a train toward Shady Grove.

During rush hour, those trains are going to be packed if they only come every 15 minutes, especially between Union Station and Metro Center.

I dont use the red line. So not sure how popular those 30min stations are, but I would think 15min with every other station would be fine.

If these stations are frequented less then every other train seems appropriate.

Sounds like the Metro execs must live on the Red Line

I don't usually ride the red line.

If I worked in Montgomery county, MD, it would.

No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab.

No, by January 2022 it is likely that workers will have returned to offices. 15-30 minute headways will result in very crowded trains and stations.

I rather use the outlying segments.

Given the amount of people that go all the way to Shady Grove is not practical to wait so much for the train. This would also allow for unnecessary amount of people to pile up on the next stations. Having to wait for the next train to get into a Shady Grove one has always never been a great experience and extend the time that you are around other people

Yes , because the time schedule is reflective of daily ridership and patronage , prior to 2022 . In effect , wouldn't require modifications, that don't coincide with increase ridership.

Proposal to implement Red Line turnbacks

I have never used the line out to Wheaton, so I cant opine on that, but failing to run all trains out to Shady Grove places a severe limitation on its usefulness to those residents and commuters. Further, so many use this line to commute, including passengers arriving on commuter buses who have nowhere to wait but the open station platform, that running trains once on the half hour is inhumane.

I go to these stations, end of line, etc. for dentists and others. I meet friends at end of lines and this slows down and makes it frustrating to use mass transit. This is unacceptable for those of us who rely on metro for doctors appts., having to go to these stations and environs. This is worse than a bus schedule and that is just crazy for a train system. And to charge us the same price or more for this longer wait--as well have to err on going early or else will arrive late. I stayed in DC BECAUSE of metro access. i cant drive for medical reasons. You are penalizing those of us in most need of train service. DC will be a laughing stock as it is a major city and tourist and vacation destination but it will be downgraded due to lack of a proper and modern mass transportation train system. You will be competing against UBER and lose. This is just a white flag going up and you are dooming the system by such a proposal. This also smacks of past mismanagement. No other metros in other cities doing this/proposing this. SHAMEFUL and you will lose more riders.

I get that this is a big deal for people who live in those areas. But I am more concerned about getting from home (in Navy Yard) to work (Federal Triangle - Navy Memorial area).

I use a different station, so this is not inconvenient for me, but I am concerned that it does not meet the travel needs of the people who live or work near Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

I will need more frequent service to reliably use metro to get to work, appointments, the airport, and personal destinations such as visiting with family and friends and attending cultural events.

My family lives nearby the Rockville red line station and I expect to be visiting them in January 2022 starting from downtown DC. Trains arriving at Rockville only every 30 minutes would be very inconvenient for me, and would probably force me to make the choice to travel on metro less.

Shorter wait times during rush hour are crucial. Proposed changes would likely lead to crowding during rush hour as pandemic precautions are eased. Strongly recommend that there be short wait times during rush hour.

Again, headways are way too long...

When transferring onto Red during evening rush hour, this proposal is a non-starter. While this may be realistic mid-day, this should not be applied during rush hour. This makes transfers exceedingly unreliable. Additionally, commuter congestion will increase. While this wont be as extreme as trying to catch a train to a Nats game, this is an extreme adjustment. To be reliable, trains should run at least every 10 minutes during rush hour. Outside of rush hour, if this adjustment is made, I will take uber in situations where a transfer may be required. This proposal is disrespectful to the metro-area tax payers who have invested over \$6BILLION in metro-area improvements over the last several years.

I dont take red line

I would suggest making the arrival times consistent for all lines

I won't be able to get to work on time if I get to miss my train. There is no flexibility with this plan.

This plan would not impact my commute.

I don't really use the red line much

I depart from Greenbelt Metro station and transfer at Fort Totten to the Red line regularly. If I miss my train, waiting 30 minutes for the next one would be detrimental to my arrival at my workplace in a timely manner.

I commute from/to the Rockville station and cannot allot 30 minutes waiting for a train. My concern would be that, if my timing is not perfect, I would not be on time to pick up my daughter before daycare closes at night. If this plan were implemented, I would either not use metro at all or would try to park at the Grosvenor station, which does not have sufficient parking for everyone to make such a decision.

As a current resident of Rockville, I can guarantee that this proposal would disadvantage folks like myself who rely on Metrorail to get to work and cant wait an extra half hour to get to our jobs once offices re-open. This proposal will push more individuals along the Red Line to purchase cars, which will decrease ridership on Metrorail and increase emissions within the DC metro area. All the while, low-income individuals, essential workers, and people with disabilities would be stuck at Metro stations for extended periods of time and be disproportionately harmed by this proposal.

This would only work for me if trains and buses stay on schedule even with unplanned delays.

Vitally need metro service from Grosvenor

This proposal would have the same consequences as the every 15 minute plan presented in the first scenario: packed trains with fewer options to take the next train because of decreased frequency. Given the number of redline stops that are above-ground, this solution would also pose a problem in the winter if passengers are forced to wait for lengthy periods of time outdoors.

Proposal to implement Red Line turnbacks

This option would lead to overcrowding on trains. Also, its unclear if anything would change on the other lines. If this would be that would be experiencing a scheduling change and the other lines operated as normal, this would be more palatable.

I can see it would be inconvenient for some, but not a major inconvenience if there is a published schedule. It is similar to how Amtrak and Marc work the trains and platforms would be too crowded and packed

The slowing of the arrival time at these stations would be acceptable as a compromise in convenience should that prevent the elimination of service from that station.

Its sad that we have to make choices that might not affect some, but that will affect others such as those on the Red Line, in this case.

I use closer in stations, but this would definitely disadvantage those in the outer suburbs (where, conveniently, multi unit, more affordable housing is concentrated.)

Trains operate every 15 minutes on the Red Line.

Freezing cold to wait for a half an hour or even 15 minutes, exposed to our terrible winter wind chills and and Arctic blasts as well as our scorching hot summers. Both of these are very risk to health and wellbeing, especially for elderly and those already health-impaired. This would be brutal and unworkable.

As long as it is 15 minutes at the most. It would be ideal to leave rush hour times the same way - that way more trains can arrive every 5/7 minutes and not 15 minutes.

Shady Grove, Twinbrook and White Flint have some of the most parking available. It wouldnt make sense to deter riders from these locations. Grosvenor also has parking, but once you pass there, there are limited stations with parking available. This would discourage people to park and ride - to pay for parking, only to have to wait 30 minutes (2 each hour) for a train.

I do not use the Red Line that often.

I need service to move more quickly especially during rush hour

I rely on frequent red line service between Dupont Circle and Union Station to catch Amtrak trains from my office in Dupont Circle. Planning around Metrorail frequency on these trips would require me to leave work earlier and reduce my overall productivity.

Same comments as the first proposal. There could be issues boarding inbound trains during rush hour.

Although this would not affect my typical Metro travels, 30-minute headways on the outer portions of the Red Line will encourage potential riders to drive, when those are the drivers who will contribute most to local air pollution, greenhouse gas emissions, and traffic congestion (which aggravates the first two as well as all drivers). It also discourages those who drive from farther-out and then take the Metro from one of the terminal stations, exacerbating the problems caused by passenger cars commuting into the business areas. 30-minute headways also would not reduce staffing and maintenance needs at those stations, while significantly reducing fare revenue from those stations.

My daughter needs to commute to Montgomery College using public transit.

I use orange line so this doesnt directly affect me.

With this proposal, is Metro planning on returning to the switch back that was discontinued? If that is the case, I am confused by this, because the Grosvenor-Strathmore station is one of the stations to be closed. So, the station will be closed, but is allowing for the switch back to occur. If that is the case, then why close the station?

i do not ride the red line, so not affected.

I am located near the Orange Line

It would be confusing. Longer connute

I am reliant on the Red line for my travel throughout the city and this plan to slow down service negatively impacts my ability to conduct personal business using the Metro because businesses will not have extended hours while Metro cuts its hours. This is a horrible idea for people reliant on public transportation.

This would make taking metro extremely inconvenient. Also, it would like make trains more crowded and people would feel less safe on the metro given that it would be difficult to socially distance. Therefore, you would likely lose more ridership and continue in a never-ending downward spiral.

There is a large federal building at twinbrook with limited parking. If we are back in the office in Jan 2022 this plan would not work.

My commute is affected by the Orange, Silver, and Blue lines only.

I have never been a fan of this business plan of operations from a personal and practical sense, as it relates to my business and personal travels via Metro Rail. However, I can certainly respect this opportunity from Metros perspective, even though, I would disagree with it. It is very confusing sometimes, trying to pay attention to Silver Spring or Grovenore when you see a Red Line train. I am required to make frequent trips to Walter Reed for my health care services and at times to Wheaton.

People in this locations still gotta go to work and school!

These are critical high volume stations, this plan will inconvenience lots of people. The supply will not meet demand.

I rarely take the Red Line, so while this proposal would work for me, I am not the best person to weigh in on this topic.

| |
|---|
| Proposal to implement Red Line turnbacks |
| Again, decreased frequency of trains is not the answer. |
| This would be really tough if/when I need to commute. During Covid it's fine but in normal times that would be really tough |
| I feel this plan will add to my travel time and subject passengers to crowded trains. I was a crime on a crowded train many years ago and have yet to recover from the trauma!!. |
| While I do not regularly take the red line beyond Grosvenor-Strathmore or Silver Spring in either direction, I do so occasionally, and this change would make doing so far harder. |
| Again, I live near the Twinbrook metro station in Rockville, MD, and this proposal of trains arriving every 30 min. at stations north of Grosvenor would make trains too crowded. Even with the previous pre-pandemic schedule, many south-bound trains arriving in Twinbrook for the morning rush were full. I have waited for up to 3 trains at Twinbrook during the morning rush in order to find space to board safely. Post-pandemic, no one is going to be thrilled about being in such close quarters with so many others riders. People will start to drive to work instead of cramming into metro trains like sardines. Loss of the riders north of Grosvenor station post-pandemic will compound Metro's budget issues. It's not clear why metro hasn't reduced service now, when there are fewer riders, to save money now instead. I see trains at Twinbrook much more frequently than I would expect during the pandemic. It doesn't make sense. |
| 30 min & 15 min intervals is not reliable transportation to get to work. |
| My intellectually disabled daughter travels home on the Red Line second shift from Medical Center to Shady Grove. She finishes work at 8 pm. 30 minutes between trains will have her getting home very late and I'm worried about her safety. |
| I'm at White Flint, so this is pretty bad for me. 30 minutes is way too long to wait. |
| No sure if this plan will work for me. |
| Not riding the Red Line |
| The proposed time changes would impact my decision to use Metrorail to commute for work and it would impact my decision to live near the stations without the option for private transportation. |
| I'm fine with reduced service to the suburbs but the 15 minute arrival times in the city are too long and make transfers unusable. |
| This proposal is better than any proposal that closes stations. |
| I still worry about overcrowding with trains every 15 minutes in the center of the line |
| Metro is essential for the everyday work of the Community. |
| Waiting 15 minutes for a train during rush hour is nonsensical and counter-productive to having mass transportation in the capital of the United States. Especially given the need to transfer lines: if one train is late, and I miss the connecting train, I could be delayed getting work by more than 20 minutes (which affects my leave and my pay). |
| I don't use the red line. |
| Trains should go to Shady Grove/Silver Spring during the midday, evenings and weekends (unless track work is required). During peak periods, Red trains should either operate from Grosvenor/Silver Spring or Shady Grove/Silver Spring. Again, 15-30 minute waits are UNACCEPTABLE! |
| Trains arriving every 30 minutes at the beginning and ends of the lines seems to put people at a disadvantage, especially those working at or need the hospital or need access to the MARC train. |
| This is perfect for me as I live at Grosvenor and I was unhappy when they stopped the trains not ending at Grosvenor because it made the trains ending and starting at Grosvenor less crowded |
| This would be preferable to some of the other options presented. |
| higher frequency during rush hour would be needed |
| While I'd much prefer trains come more frequently than every 15 minutes, I live in Cleveland park and could make this work if cuts have to be made. |
| I do not and have never lived on the red line so I am impartial. |
| I hardly ever take the red line. |
| 30 minute headways don't work period |
| See previous thoughts. It will literally be dangerous to be on the narrow red line platform at Gallery Place during rush hour if trains are only arriving every 15 minutes. |
| Trains should arrive every 6-8 minutes instead of 15 minutes in order to avoid overcrowding at all other stations on the Red Line. |
| Too long a time between trains. |
| My kids would have to wake up a lot earlier to get to school as they transfer on the red line |

Proposal to implement Red Line turnbacks

Do not close/shut down any metro station even if there is low ridership-- to compensate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals.

These extended wait times will adversely affect connectivity with transfers to Metro Bus service. Please consider operating trains more in sync with bus service at metro stations.

All trains should run every 20 minutes.

red line trains should be coming every 7-8 minutes at rush hour and really 10 minutes through the rest of the day

This plan makes no sense to me and anyone who rides the train and uses an End of line station. Stations such as Shady Grove are crowded and with only one platform entrance and exit this causes the ability to social distance impossible. Riders would be forced to cram on trains or wait an addition 30 minutes for the next train. All a metro employee would need to do is (pre-COVID) ride a redline train during evening rush hour and see the hoard of people who exit a Grosvenor train to only wait on the platform for the next Shady Grove train. In most cases all the riders on the platform are unable to get on the next train due to space limitations.

The proposed closure of Cleveland Park station and less frequent service would greatly reduce my use of Metrorail service.

This plan would cause overcrowding and would disadvantage commuters from the suburbs.

No - I work at White Flint. a 30 minute wait can be the difference between me having a job, and not having a job. I've already lost a job since the COVID state of emergency, this is my third!

That would be too long of a wait.

This will make it impossible for everyone else that lives past Grosvenor to make it within 2 hours to DC (and back)

Right now, I don't have to take the trains to that area.

I currently do not use the Red line, this would not impact me.

I don't typically take the red line out to Shady Grove

I use Grosvenor-Strathmore, and during normal rush hours, every 15 minutes is not often enough -- and the Grosvenor garage will be swamped with commuters choosing to board at Grosvenor. One of the beauties of Metro has been that during the week, trains run either every 3 minutes (rush hour) or every 7-8 minutes (the rest of the day). That convenience is so important to my willingness to use Metro.

Not using the Red line frequently, however, 30 minutes is too long of a wait.

A 30 minute cycle is really not workable on so many levels for commuters that need the trains.

I rarely use the red line

I don't use the Red line frequently. However, the times I have used it, I have seen a lot of traffic. Less frequent trains equal more people on each train which won't allow for social distancing.

I don't like the idea of the red line trains running every 15 since in rush hour since I have to make connection to another train at Gallery Place, but I will have to make time adjustments so I can reach my destination at the proper time to get the final leg of my daily commute to Southern Avenue train station to get the P18 bus. Instead of 2 or 2 1/2 hours, it will take me 3 or more hours to get to my destination.

No objection to the proposal to only run every other train on the full red line, but trains should run more frequently than every 15 minutes for the core stations during prime commuting hours

15 minutes is better than 30 but really, can't you just run shorter trains, e.g. 2-car trains every 10 minutes? We need to transact business efficiently, lower carbon footprint and avoid/reduce traffic.

Wait time is too long for commute to work.

my commute is from Pentagon City to downtown DC - I can take the blue line or a combo of yellow and red - every 15 minutes seems long during rush hour

I would have to make changes to my schedule, but as long as the trains were reliably on time I could make it work

I do not typically use the red line often

The metro would need set times at each station for this to work. However, this would almost defeat the purpose of the metro as missing one train during rush hour would force someone to drive to work. This would likely cause a clogged car, which in the short term will not be attractive to customers following a pandemic.

Again, Wheaton is where I need connectivity, typically. Since I am already riding either 1 bus and 2 trains, or 3 trains with a 90-minute commute, more frequent service is critical. Otherwise I will just drive, thus adding to Beltway congestion.

Proposal to implement Red Line turnbacks

Those stations need to be serviced more frequently than the further out ones.

I rarely need to visit the locations at the ends of the Red Lines. The stations on the red lines further from the DC borders are less transit-oriented (e.g., especially Forest Glen) and likely have riders who also have access to a vehicle to make a trip or who could use Metro like a commuter rail and plan ahead with clear schedules.

I feel that 30 minutes at the stations said is too long, 22 minutes is a much better solution.

I am a teacher at Montgomery college in Rockville. I use metro from Crystal City metro. I do not want to rush and run late to teach my class in Rockville if this runs every 30 mins.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around—especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinated, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around.

This is more complicated for riders. Not sure I see how this will save money.

I generally use the Red Line the area where trains would arrive every 15 minutes so that would be acceptable for me at this point. I believe, however, that it would be very difficult for my friends and colleagues who live in Gaithersburg, Bethesda, Huntington, Reston, and other places where service would only operate every 30 minutes. That could contribute to many more people driving themselves rather than taking public transit, which could have long-term detrimental effects on mode share by transit, customer loyalty, overall ridership and WMATAs bottom line and its ability to maintain and sustain operations into the future. With the significant value of the sunk investments the region and the Congress have made in the showpiece Metrorail system in particular, I would hope that WMATA and its partners would work hard to get as full return on the investment as is practicable, as long as there are people who could potentially be riding.

I only take the red line on Tuesdays and Sundays so this would not affect my schedule.

I live near Grosvenor station and use the red line stations as White Flint and Twinbrook very often for my arrangements as I don't have a car. It will make incredibly hard for me to wait 30 minutes for the train.

Technically this would work, but this is a HUGE inconvenience. Although the furthest I usually go on the red line is Silver Spring, it would require much extra planning to go to other stations.

(same comment) I am retired and not frequently traveling into the District. However, how will ridership be rebuilt after the pandemic, if the community's rush hour needs are ignored?

Need trains more frequently during rush hour and not as much otherwise.

This would create longer travel times and increase the amount of people I come in contact with. Also, with metro usually having unexpected delays, it would cause a lot of issues to have trains running a full hour behind. This takes away from the convenience of the metro rail system.

Every 15 minutes is insufficient during rush hours and 30 minutes is insufficient for non-rush

Rush hour service needs to be faster to arrive at work on time.

Right now it would be OK for places I need to go, but those locations can change.

I don't think every 15 mins will work; especially during rush hour.

This is not the worst plan but it is also not a good plan because it would again make the trains much more crowded and difficult to get on.

When ridership increases to pre-pandemic levels, why can't the train service be restored to pre-pandemic frequency??

I rarely need to take the red line and when I do I don't go all the way to those end stations.

This would work for me because I use the Red Line most for travel in the inner core.

This would work mostly because I have never used the Maryland stations mentioned.

Frequencies that poor would make the metrorail system basically unusable for my needs

I don't use those lines

Higher frequency is necessary.

I would hope to see a train at the Grosvenor Metro at least every 10 to 15 minutes during peak hours.

I don't use Metro in this area.

I work at Twinbrook. Having a train again arrive every 30 mins will lead me and others to find alternate means of getting to work.

Montgomery County is for the super-rich. I don't go there anymore, so this is fine with me.

Proposal to implement Red Line turnbacks

| |
|--|
| Depends upon accuracy of schedules. If trains dont run on schedule, it would not work; if they are reliably on schedule - and do not depart early - schedules can be arranged. ALSO - this may or may not work depending upon the number of transit users. 30 minutes between trains may not allow for sufficient space on the trains as they approach downtown. |
| I usually stay at Takoma Park, so that would be one of the 15-minute stations, which is reasonable, particularly if consistent throughout the week.. |
| People will be late getting to work and other destinations. Metro ridership will decline as people will look for alternative modes of transportation that will have shorter wait times such as Lyft, Uber, taxis, personal transportation such as personal cars or carpooling. |
| I believe you underestimate how many people work and take the train in the areas were you are proposing 30 minutes between trains. By 2022, hopefully, the economy and jobs will really begin to rebound. There are a lot of businesses, restaurants, homes between Shady Grove and Forest Glen that would benefit from more frequent train service. |
| This potentially lengthens my commute, depending on the bus schedule to/from Silver Spring Sta. or having to rely on Kiss n Ride to Forest Glen Sta. |
| I worry about over crowding during rush hour on platforms and in the cars |
| 30 minutes is way to long between trains. This would harm commuters immeasurably. |
| I rarely travel that far on the red line, so it would not affect me |
| Probably late for work every day until I get used to the schedule. |
| I do not take this part of the red line. |
| I mainly use the green line, so this would not drastically affect the red line stations that I use. |
| Missing a train at forest glen would result in doubling the length of my commute by creating a 30 minute delay. |
| It's fine |
| I largely use Metro in the core - within DC, or a station or two over the District border. |
| I live at Twinbrook but may move out to Rockville or Shady Grove. This would make me late for work if I just miss a train or trains are too crowded to get on. |
| For work this is fine and meets my needs since I commute from Gallery Place to Tenleytown.I do have family and friends near the Rockville and Wheaton lines though, so the extended wait is certainly frustrating. But not impossible to work around. |
| I dont live on the redline so I would be unaffected |
| I dont regularly take red line. |
| I do not regularly take Red Line; however, I still believe that 30 minutes between trains makes Metro no longer a viable option for transportation. |
| I dont ride the red line in my typical commute |
| I do not live on the red line so this one doesnt apply to me. |
| Those stations have or are planned to have large population centers |
| It will give me a better way to plan my travel at a price I can afford. |
| Run more trains. |
| I work in Rockville. |
| It should be a shorter time between rides. |
| I ride orange line primarily |
| As long as there are no station closures |
| It would make it hard to plan my travels to work from Morgan Blvd Metro to Twinbrook Station. My travel time would increase dramatically. Before the pandemic it was already between 45 min. and 1 hour. |
| Keep all stations open |
| No, the Pandemic should be over in 2022. More service will be needed. |
| It would work for me, as a user only on occasions, but it might make a long day for many commuters. |
| I am part of a large population that rides from the Shady Grove Metro |
| Dont use Red Line that often..... |
| I don't live in those areas but I don't see how those headways would be sustainable. It would turn more people away from public transportation and to cars which is the exact opposite of what we need as climate change intensifies. |
| There will be no appeal to take public transportation. |
| I am legally blind and take Metro to Rockville. The 30 minute timeframe is not acceptable for my ridership requirements. |

| Proposal to implement Red Line turnbacks |
|--|
| I don't ride the red line |
| The CP metro station is a major draw to the neighborhood for new residences |
| I personally do not normally use the last few stops of the red line. |
| Are you nuts? |
| You first need to provide the service and then the riders will come |
| See previous response re: commuting and racial-social injustice |
| Many people who depend on these routes will have returned to work by Jan 2022 |
| A strategy like this that focuses on the measured traffic & usage that Metro monitors makes sense. |
| I don't use the Red Line much. Both of these solutions seem fine to me. |
| I only travel on red line for a portion of my commute downtown. |
| Red line train runs to medical center! We need more trains! |
| My main stations used are Friendship Heights - Bethesda - Medical Center, so it seems I may have the 15 min interval access. |
| WAY too infrequent (Red line is my most traveled line for work) |
| Again, these exterior points are very important for commuting. |
| I don't use Wheaton that often, but when I do (for shopping) it would be really infrequent. So I think that's not enough service. |
| One of the best parts about the metro is that I can catch it regularly from near my house, despite being far-ish from DC (I'm located between the Glenmont and Rockville stations). This would make it harder for those who don't live in the city but use the metro regularly. I don't know if it would seriously impact me. |
| I commute from Silver Spring, so this would be fine. |
| Same as above, nowhere near enough service. 15 minutes past Grosvenor/Silver Spring is fine at off-peak, 7 minutes more centrally. During peak, it has to be half that—7 minutes in the suburbs, 3 in the city. |
| Waiting too much will make me buy a car or move to another neighborhood. |
| I rarely go to any of the out-lying stations on the Red Line, so this would have little or no affect on me - and when I would need to reach one of the out-lying stations, again, as long as I know the schedule - I can adjust. |
| I rarely use the Red Line. However, if the outer stations have less ridership, this seems like a reasonable proposal. |
| I use the red line often to get to and from work, and if there is any delay, I would be very late to work. To account for this, I would have to take the earlier metro, but that would be I would be consistently 45 minutes early and have to leave other responsibilities |
| If you proceed with this plan, everybody who lives in Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen will drive into the city. That will make driving in the city unbearable. |
| The proposal suggests WAMATA believes it does not need to serve the WASHINGTON AREA METROPOLITAN AREA. What exactly was WAMATA mean again? |
| This will cripple commuters traveling from MoCo to DC. Not in favor of this |
| 15 minutes is too long to wait and too infrequent. It would stretch my commute out to where it would be more efficient to use a car. |
| The White Flint to Shady Grove section of the Red Line serves MANY Montgomery County residents who may need to get to work in Bethesda, DC, or on the other side of Montgomery County via Metro. In addition, there are large campuses where many are employed, particularly by the Federal Government that are served by the White Flint and Twinbrook stations. Reducing service to once every 30 minutes on this leg of the Red Line would seriously impact their commutes and quality of life. |
| esta división es confusa |
| Again, trains would be too crowded during peak times |
| This is better than option 1 |
| When I visit Washington, I do not regularly use the Red Line, as I usually drive to the Greenbelt station (from my home in Pennsylvania), and use the Park & Ride lot there. |
| I travel by metro bus and trains |
| I live in Takoma Park and work in Wheaton. Waiting 30 minutes for a train to work would be a huge inconvenience. I would probably just get a bike. |
| It's reasonable |
| Seems counterproductive. Why make patrons who need to access points outside of the shortened terminus wait longer for the next trains? |
| I Mostly Ride The Blue, Silver, or Green Line To The specific areas need. |

Proposal to implement Red Line turnbacks

| |
|--|
| Usualmente no uso esa línea roja, pero sería bien que en el invierno hace mucho frío y no es conveniente que estén aguantar frío las personas |
| 15 minute headways are unacceptable |
| To extend timing at the ends of the lines will be challenging considering that the trains are operating 15 minutes... So does that mean that once you get to White Flint you are either holding there or waiting for one of the next trains to take you out to Shady Grove? I ride the Red Line and for me having a set time every 15 minutes would be feasible to plan accordingly to catch the bus or walk to the metro.. but I transfer lines to get to work and that would be a concern. |
| This is kind of meh, but I suppose it's not absolutely terrible. |
| Trains should arrive every 15mins at all stations during non rush hour |
| Demasiado tiempo para llegar al trabajo |
| La propuesta es buena basada en las estaciones que es la que más personas utilizan, eso me parece bien |
| It's not ideal, but better than every 30 |
| While this wouldn't impact me directly, the cluster it would create would have a trickle down effect. |
| Due to where I live and work this would not impact me. |
| No uso el metro |
| Not to arrive at work so late. |
| None |
| That's too much time waiting, especially when you're going to catch a bus after getting off the train |
| Same as before |
| I still don't know, because I would have to time the bus schedule to the train schedule. I think it would take more than an hour everyday to get to and from work and home. |
| trains should arrive every 15 minutes at each train station because it's not fair that some stations would not have the same wait time |
| I by Brookland station and commute to Georgetown. This plan wouldn't affect me much. |
| Every 15 minutes is still an abysmally long wait at rush hour or if you have a long trip that requires connections. |
| We go to work |
| Me parece bien la propuesta |
| Está bien, pero en la hora de congestión más sería cada 20 minutos . |
| Why is it necessary to alternate these trains? If necessary, WMATA would have to prepare for possible big crowds at those stations. Again, train schedules would be necessary. |
| Las estaciones mencionadas de la línea roja no las uso. Uso con mas frecuencia las otras estaciones de la línea roja, es decir, de Rhode Island a Metro Center. |
| It will be more difficult to reach me destinations. |
| Yes this would work for me I don't need to travel that far on the red line |
| N/A |
| That will affect my time at work. |
| Trains every 15-30 minutes is ridiculous and unacceptable unless there is track work. |
| Again too long to wait for a train |
| I live on the red line and need more train arrivals to allow me flexibility if I miss a train. |
| I have regular travel needs that take me to Glenmont and Rockville. This severely detracts from my ability to get to those places in a timely manner. |
| Living in Rockville, I am reliant on Metro to get to work with no car. This is a long interval between trains and made longer if there are delays of any sort. |
| 15 minutes is still a long wait time. I'd honestly rather you raise my taxes to cover the deficit - everyone deserves reliable transit and this would hurt our most vulnerable residents the most |
| Too confusing to keep track of and too long waits for transferring commuters. |
| This works fine for the Red line but does not mention any changes to the other lines. If no changes to the other lines then it works. |
| This would be likely to push commuters at the ends to drive due to how infrequent service would be, but return to the office is uncertain |
| It would suck but if all other lines can stay at normal (pre-COVID) schedules, that would be tolerable. |
| Too far apart |
| It sucks, but I don't use the red line as much. |

| |
|---|
| Proposal to implement Red Line turnbacks |
| Ive seen this happen before so this isnt new. |
| Do not need to travel to these stations |
| This would be good because it gives you time to be early what I mean by that if I know they run like that and I gotta be to work a current time it allows me to improve time management |
| I live in Virginia. |
| pretty bad for those at ends of the line |
| We seldom use the Red Line, so this proposal would not greatly effect us. |
| N/A |
| I don't use the red line that much so I am not affected by these changes. |
| Im assuming the traffic at the affected stations are not as great as the non-affected stations? |
| Trains should arrive every 5 minutes |
| Since I only travel in town, this would work for me. But it wouldnt work at all for my friends who commute from Maryland into the city and those who go from the city to Shady Grove for work. |
| 15 minutes at all except the highly visits visited red line no |
| I dont ride the Red Line. |
| Not on red line |
| Please do not cut frequency |
| This will likely further reduce ridership, especially for stations with other options like Rockville. People may be drawn to MARC or rideshare options vice wait for 30 minutes. |
| No that too long and Red line is always pack |
| I don't need the red line or use it much |
| This wait time is too long between trains. |
| Would be confusing to riders throughout the entire DMV metro area. |
| I don't live in those outlining areas. I live in central DC where I wouldn't be impacted as much. But I still think waiting 15 mins during rush hour is not good. |
| I dont ride the train only bus |
| I dont ride the red line frequently, only for certain doctors appointments, so it would be fine. |
| I do not ride the red line |
| The proposed stations are used by many passengers. It would be great to provide additional bus service to cover the 30-minute-interval route for people who really need to access Metro right away. |
| Don't know what the future holds |
| Same as previous comments. |
| In 2022, I fully expect most of the country to be vaccinated and to be busier than ever. As a result, more trains running during rush hour will prevent overcrowding and still provide some type of safety protocols. Metro needs to stop focusing on the bottom line in dollars and focus more on customer safety. Limiting end of the line train service seems nonsensical. |
| Again, I do not use the metro rail, however, I feel that during rush hour trains should run more frequently. |
| This will not work.....trains will be too full during rush hour. People would be pushing each other. In this environment, this plan is not feasible. |
| My only means of transportation is metro. This is not conducive to my getting to work on-time. |
| it works for me because I ride a short distance on the red line anyway from metro center to rhode island avenue. |
| Again I need consistency and these times dont work for me. Im scheduled to be at work by 60 am daily. Its hard enough with the busses still on a covid scheduled. I cant afford ride share every day. I rely heavily on the transit system because I dont have a car. |
| Designated stop that I use are scheduled to close. |
| Not a red line commuter |
| I don't use the Red Line. |
| I do not utilize the Red Line. |

Proposal to implement Red Line turnbacks

I rarely ride the Red line

It wouldn't be my first choice, as I use the Glenmont station, but it would be acceptable and I could make adjustments. It would require more careful planning of my transit than I am used to doing.

The platform would always be crowded with people waiting on the train and make people late for work

Starting to sound confusing.

I only go in the direction of Shady Grove and get off at Van Ness, it would depend when I end up at Gallery Place to know how it would affect me

I don't use the red line so it doesn't apply to me, but would definitely negatively affect those who use the red line to commute

I don't take the Red Line. Again, you all look lazy.

I don't ride the Red line.

I only use the silver line

This is less egregious than a train that runs only every 30 minutes but still does not meet the needs of the majority of metro riders who rely on the trains for work commute.

never take the metro that far up

Not frequent enough!!!

no opinions

I ride mainly the Orange line

Many commuters travel on the MARC and VRE; therefore the proposed schedules would be acceptable.

The trains should always run faster during rush hour, it prevents overcrowding.

The best possible solution, I don't live on the red line.

I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus

No cuts to service, WMATA has received stimulus money and long term backing. All cuts should be made in administration to insure service remains at current levels.

I commute from Union-Gallery and change to green line to head to WNY and vice versa on the way home. This may/may not be impactful particularly if I change route and go shuttle from L'Enfant Plaza to get to a red line back/forth to Union.

I don't travel on red line.

I don't plan on traveling to Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen, so this plan works for me. But for those who do plan on traveling to those places, I imagine they might feel differently.

I don't take the red line at all and especially to get to work so this proposal would be fine for me.

The red line is largely irrelevant to my commute at this time, but as a tax payer and customer of the DC Metro, I think this is an unacceptable level of service for any customer.

Why can't this service be rendered for all stations including Rockville, White Flint, Twinbrook, etc especially during rush hour instead of 30 minutes

Thirty minutes is a long time to wait for a train, especially outside trains; please consider the weather and comfortability of the riders.

Waiting 15 minutes for a train on the Red Line in the city seems like a very long time. The metro is supposed to be efficient.

I use the Wheaton station, & would need higher frequency of trains after the pandemic.

It is hard for those at the terminal stations, especially since those have the larger parking structures for people from outside the DC-metro area but it would not affect my ridership. The trains will be likely packed though so the intermediate stations will be also likely getting a train every 30 min bc once every 15 minutes a packed train will come from the terminal stations.

Really don't have any thoughts at this time

don't like to 15 minute wait at Strathmore to get to Shady Grove

Would it be possible for the redline train to run every 15 minutes for all of the red line stations?

This reduces transportation to options too much.

I would keep this red line because it's the busiest route. I would predict Gallaudet students would use this route. I sometimes visit Gallaudet University for some special events.

Again, this works for me because of where I live.

Sounds good to me.

I am unfamiliar with the normal traffic numbers so I do not know what problems may arise from this change.

Proposal to implement Red Line turnbacks

There are a lot of people who live near the ends of the lines. it is very annoying to have to get off a train at Silver Spring only to wait for one that goes to Glenmont. This also causes extremely long waits at the ends of the red line for anyone going into the city.

It already feels that way

No comment

One train every fifteen minutes is not nearly enough. If I have to switch trains to get somewhere, Ive now got up to 30 minutes of waiting on the platform in EACH DIRECTION of my commute. People rely on metro to get places. Im begging you not to make me spend my entire day waiting for my train.

N/A - I hardly ever take the red line

My commute is from Shaw to White Flint. This would be extremely inconvenient for the purpose of making it to one additional station.

This also doesn't work for me because the longer I am inside the metro waiting for the metro I am being changer just to wait for the metro.

30 min to long to be waiting for a train

Trains will be much too crowded during rush hour.

Waiting 15 minutes is too long

Does not effect me directly, so others can speak better to its fairness. I do like the idea of reducing the amount of trains only in slow areas.

Not a red line user.

I would feel bad for my colleagues that work on the red line if this goes into effect. Red line is notoriously the worse line and this won't help gain back a good reputation.

I dont take red line regularly

I typically do not ride this portion of the red line. I do believe ridership will improve

dont use the red line very often

This is a bad idea too many people ride the red line.

I agree with the new plan

I don't live in Montgomery county, not applicable.

This proposal would make metro non viable as a transportation choice.

We do not use Metrorail.

I don't go to those impacted stations often.

I remember having to get off a train at Grosvenor to get on the next train to go to Twinbrook. This is a huge inconvenience.

30 minutes is okay to wait because I would make allowances for time needed.

I am against any proposal that stretches train timelines to arriving every 30 minutes.

The issue for me is not the train arrivals but the closing time. Metro doesn't consider essential employees that work at night

I dont too much care for this proposal.

I dont really ride the red line.

Trains should arrive every 15 minutes

Again, my commute is an hour and a half as it is. This could add 15 minutes to my commute since I have to change lines (and therefore can't arrive strategically to avoid an15-minute wait).

Many DMV residents live in Rockville and Twinbrook residents and need to commute within the metropolitan area.

This year

Definitely not enough time to plan for one missed train in the morning to make it to work on time.

Again, I rely on both Metro Rail and Ride On bus services. Longer wait times mean I also struggle to make connections. My commute time doubles and potentially triples. I might be forced to abandon Metro and simply drive my own vehicle to work because over two hour commute times each way are not a responsible use of my time.

That is ridiculous, we would all have to start driving. It would suppress the need for commuter trains even further. And the moment things go back to normal, the trains would be too crowded to use.

I dont ride the red line often but I imagine this would make it rather inconvenient when I did.

Shady grove and rockville have so many riders, 30 mins is too far apart

It would make me late for work.

Proposal to implement Red Line turnbacks

I rely on the train from Shady Grove to maintain my employment. Every 30 minutes is not a high enough frequency to ensure that I could maintain my position. Without more frequent trains from Shady Grove (at least every 15 minutes), I could lose my job.

Also 15 min for other stations

Again this would mean length if my commute by 15 min if I need to wait for the Glenmont train. I travel daily from Glenmont to East Falls Church and then catching a bus to my final destination off 3A or 1A. My commute currently one half hour.

It would take time to adjust to new schedule. In my experience, the bus has been harder to gauge accuracy.

Living in Rockville this would create consequences for individuals who rely on a specific timely manner living outside of Grosvenor-Silver Spring area.

Doesn't effect me

15 minutes between trains in the middle of the route is too long

Again, this would work as long as you didn't miss the train because it was too full. I would stop taking the metro if it were at capacity regularly and I had to wait up to 30 min for a train.

Glenmont is my closest station. I could go to Silver Spring if affordable parking is provided.

Shady Grove trains are half full even in pandemic during rush hour. With 30 min wait between trains they will be packed just leaving Shady Grove with no space for Rockville, etc. passengers.

I'm in Brookland and often use metro to just go downtown so this would not affect me.

I would want them to arrive in a shorter period of time.

I don't ride the red line.

I don't take the red line too much but when I do I would rather not have to wait longer if I am going to Wheaton as it is already an hour train ride on a good day.

It could be a big problem in my travel and being in time for work. Going home would get me home later.

I get on at Twinbrook and if I just missed a train I'd have to wait 1/2 hour up on a cold or hot outside platform.

This will kill the metro ridership. The metro will never recover. Look at cities with successful public transit systems. They're reliable and very frequent, therefore people use it. Decreasing times and stops will encourage people to never use it.

I utilize red line for work. Every 15 minutes is not acceptable.

Still too infrequent for the red line.

Living in Wheaton, there seems to be no difference between proposals 1 and 2.

In the past when a similar schedule was in place it worked because the arrival times were more frequent. I use the Wheaton and Forest Glen stations so the extra long waits would be problematic.

Is this an increase or decrease in frequency? Please outline the current situation for accurate responses.

All red line trains run every 30 minutes

My son commutes to Ft Totten for school.

I rely on McLean station for my commute to DC

This would work for me but I have a feeling it would make for ridiculously heavy congestion at times, esp on professional sports nights once sports are back to normal. During weekday rush hrs, the red line should have a train arriving not fewer than every 7-10 min, period. I don't think you can really forecast redline ridership until several months after people come back to work post pandemic. Better to err on the side of ridership optimism w red line bc it can get out of hand quickly.

No. I'm not waiting 30 minutes for a fucking train.

I primarily commute during rush hour on the Red Line, so this would completely change my perspective on the metro. I would reconsider driving instead, which would be upsetting in many ways.

Why turn trains around at Grovesnor and have station closed

By the time these changes take effect the restrictions will be less and there will be more riders. The time to cut services was during the beginning/middle of the pandemic not the end.

I was thrilled when this was removed two years ago and would make traveling home to Forest Glen a long and drawn out process if I have to wait for a specific train to come into the station. Every 30 minutes would mean that the train will certainly be full of travelers needing to get to those stops, plus normal travelers on the red line.

| |
|---|
| Proposal to implement Red Line turnbacks |
| Trains should stay the same interval on red line. Ridership will increase as soon as covid is over |
| The Twinbrook stop is essential for me and many Maryland residents working in Bethesda/DC. Waiting up to 30 minutes for a train is so immensely inconvenient |
| Not applicable to me. |
| I dont really travel on the Red line much as the Green line is closer to me. |
| Coronavirus isn't gone. Too much people on the platform and too many people on the train. |
| Right now I'm not sure how this will impact me I take the train between 7:00 and 7:30am on weekdays into Metro Center, and then return from metro center it to Grosvenor station around 430 or five every weekday |
| Parking is an issue around the metro area. There are times when I am on a time constraint. It is not always possible to take an earlier or later train. Flexibility is needed |
| If this is the case, there needs to be a reliable tracking system so we know when each train will be at the station, so we can avoid waiting at the station for 15/30 minutes. |
| I ride the red line to Wheaton mall and it's going to take a lot longer to make a trip to the mall |
| All trains arrival time being the same is preferred. Why keep the station if it only needs a train every 30 mins? Eliminate low rider stations? |
| Horrible and is not for every day working Americans in Washington DC!! |
| This seems quite ineffective. Trains should take no longer than 15 minutes for every stop. |
| I dont understand how this is any different than Proposal 1. |
| Way too large of a gap between trains |
| You would have less ridership because of the infrequent train times. You would lose more money. |
| I think this will severely impact riders from Maryland. |
| I just moved next to Woodley park station in order to have accessible metro. I have a disability and need access to trains instead of cars or walking. |
| You have been doing this for years when I had to rely on Metro to get to my father and sister in Montgomery County. No one likes it, but you have been doing it before Covid. You really have to change this plan if you get more funding as 30 minute waits for a train is not practical for people. |
| I don't frequent the area as much |
| I like the idea of express train but I don't think that supported on two rail system during a pandemic. |
| Same reasons as last question. |
| As I travel from Glenmont to Foggy Bottom every day, this will significantly increase my already long commute. |
| I would prefer that trains that continues to carry the greatest amount of riders leave approximately every 12-15 minutes |
| See previous comment |
| Porque hay complicaciones con los horarios de los pasajeros para sus trabajos |
| Not a convenient schedule for commuters nor those that rely on metro to get around the city. If people usually park and ride from the stops mentioned they may choose to drive into the city since trains are less frequent. We do not need more cars in the District |
| i think this could work as long as communication to riders is VERY clear. When I would commute to DC on the red line, i didnt always check when the next train would be, i would just walk over knowing my max wait time would be 6 or 7 minutes during rush hour. So in this scenario, if i am walking up and just miss a train, then realize i have to wait 30 minutes...ugh! |
| COMMUNICATION TO RIDERS!! |
| Depends on dependability of J2 bus. |
| I take 2 different line trains, so if the other line will operate every 15-30 min, then it will be the same as the proposal 1. It wont work for me |
| Same issue described previously, although I don't use these stations so would be ok for me personally. |
| This proposal is not good for me but I could accommodate to it |
| Mucho tiempo de espera llegarÁ-a tarde al trabajar |
| Trains should arrive every 10 min for rush hour |
| I dont take the red line during commuting times, but my previous comment generally applies. |
| There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy |
| I do not use Red line since February 2020. However, I have one concern - is the decision based on the current flow? Every 30 mins that is a long wait especially if it is rush hour |

| Proposal to implement Red Line turnbacks (Spanish) | Translation |
|---|--|
| Necesito más trenes en Grosvenor. | I need more trains in Grosvenor |
| No me afectaría porque yo uso la parada de Bethesda | It wouldn't affect me because I use the Bethesda stop |
| Es mucho tiempo entre uno y otro metro, ya no resultaría conveniente viajar en metro y prefería utilizar uber o lyft | It's a long time between one metro and the next, so it wouldn't be convenient to travel by metro and I'd prefer to use Uber or Lyft |
| Demasiado tardados requeriría de mucho tiempo adicional | Too late, requires a lot of additional time |
| No me afecta | Doesn't affect me |
| No uso estas líneas sólo la naranja y gris. | I don't use these lines, only orange and gray. |
| esta división es confusa | This division is confusing |
| Usualmente no uso esa línea roja, pero sería bien que en el invierno hace mucho frío y no es conveniente que estén aguantar frío las personas | I don't usually use the red line, but it would be good because during winter it's really cold and it's not good for people to be out in the cold |
| Demasiado tiempo para llegar al trabajo | Too long to get to work |
| La propuesta es buena basada en las estaciones que es la que más personas utilizan, eso me parece bien | The proposal is good based on the stations that most people use, that seems good to me |
| No uso el metro | I don't use the metro |
| Me parece bien la propuesta | The proposal seems good to me |
| Está bien, pero en la hora de congestión más sería cada 20 minutos . | It's good, but during minimal traffic times it would be every 20 minutes. |
| Las estaciones mencionadas de la línea roja no las uso. Uso con mas frecuencia las otras estaciones de la línea roja, es decir, de Rhode Island a Metro Center. | I don't use the stations on the red line that were mentioned. I use the other stations on the red line more often, like from Rhode Island to Metro Center. |
| Porque hay complicaciones con los horarios de los pasajeros para sus trabajos | Because there are complications with passengers' work schedules |
| Mucho tiempo de espera llegaría tarde al trabajar | Long time to wait, would get to work late |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I live next to Grosvenor Strathmore!! Don't have a car

Please don't close it! I chose to apartment based on this station.

Opening the Silver line as soon as possible is key to the regions economic recovery.

This does not affect me.

Please don't do this

Need trains more frequently

do not close the strathmore stop

i take the metro from Grosvenor to Twinbrook

Should not close

I live in Gaithersburg near Shady Grove. This would severely reduce my ability to plan travel.

leave Grosvenor-Strathmore open

DO NOT CLOSE Strathmore station

this would negatively impact my commute to work

Need Grosvenor Strathmore

dumb

Grosvenor is my main station, and the only one near me with reasonable parking

Don't close Grosvenor

Do not close Grosvenor and don't use data indicating reduced ridership during COVID as evidence the station isn't needed. Grosvenor has Parking that nearby stations do not. Don't close Grosvenor!

Can walk to grosvenor

Please dont close Grosvenor-Strathmore!!!!

Need service to wheaton more regularly than that

We need Grosvenor-Strathmore to remain open.

Again, not a Red Line guy.

Please do not close Grosvenor-Strathmore station. I have no means to travel north to White Flint station or south to Medical Center station. Without access to Grosvenor-Strathmore station, I will not be able to maintain my current employment.

Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members.

Bite me

This would dramatically impact my ability to get to work

I live by Grosvenor and use it often. This is why I moved here. Please don't shut it.

Don't close Grosvenor

keep it as before please!

Don't close the station.

I suppose thats fine

Do not close Grosvenor

Grosvenor-Strathmore is our station. We need it. This proposal is not beneficial

do not support closing Grosvenor-Strathmore

Need Grosvenor open

I heavily rely on this service. Please do not cut it

Please do not close Grosvenor-Strathmore Station!

i would stop using wmata

Dont close Grosvenor-Strathmore

Grovesnor must remain open

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This is unacceptable and nobody would want to wait on them platform for that long

Absolutely do not close Grosvenor

need end of red line access

Don't use Red Line.

I use Grosvenor metro station every day to get to work

Do not close Grosvenor

Please keep Grosvenor open

Workable if trains arrive on a pre-determined schedule

I don't think stations should be closed!

It would work but not preferable

Do not close the Grosvenor Strathmore station. It is about 4 miles between White Flint and Medical Center, so we do need Grosvenor station to open in between.

Again, I live at one of the end stations so wouldn't be ideal for me.

I don't use the red line.

Depends on how the Post-Covid ridership resumes and when.

Dont close Grosvenor -Strathmore

Red line not part of my normal travel plans.

Doesnt hurt me, impacts others.

would be unable to ride the metro reasonably given proximity to Grosvenor Strathmore closure (residence at Inigos Crossing at Tuckerman & Wisconsin)

Don't close grovesnor!!

Too infrequent

Need the Grosvenor station open

Grosvenor must stay open

Terrible idea to close grosvenor-strathmore. Would kill a cultural center (Stathmore)

Please do not close Grosvenor. Many of us walk to the station and rely on it to get to work.

No closure of grovner

Every 15 minutes for all Red line stations, at least during the rush hours in the morning and evening would work better.

As long as Grosvenor-Strathmore stays operating I have no problem

Must keep Grosvenor-Strathmore station

I would no longer ride the metro

This is my station. Adjacent stations are too far to get to.

Terrible plan!

Critical stop don't close

grosvenor strathmore is the only station i can get to - the others are too far walking distance

This will make the metro impossible to use.

Do not use red line

We use Grosvenor regularly

NO!

See previous comment. Also it's a long distance between Medical Center and White Flint.

Some of us ride the train to medical center. We have been working from home but will return to our offices once the vaccine is widely distributed.

Keep Grosvenor-Strathmore Open'

There is a major parking area at Grosvenor that would be wasted if it is discontinued.

I live on the red line and this would greatly impact my commute time when we are back in the office.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This is a huge burden upon residents of the area who rely on the station for transit needs, and would be disastrous for the institution of Strathmore, who hopefully will be able to welcome patrons back to their institution via Metro starting this fall.

If Grosvenor is closed, you should extend to White Flint rather than stopping at Medical Center. Otherwise the people that Grosvenor currently serve would be disproportionately affected as Medical Center is MUCH farther and harder to get to than White Flint.

Dont close Grosvenor-Strathmore

Grovesnor station should remain open and just run every other train if necessary. Too many people rely on using this station for commuting in normal (nonCovid) times.

Trains every 30 minutes at Twinbrook would not work. See previous comments. I would not ride Metro.

Dont use these stations

Dont close Grosvenor Stratmore

I need the Grosvenor station to stay open.

Do not wat Grosvenor-Strathmore station to be closed. Its our families primary station.

Please do not close Grosvenor metro

GROSVENOR IS AN ESSENTIAL STATION!.,

I never go past silver spring

I dont live or work in MD.

I live right by Grosvenor-Strathmore and ride it to get to work

Too few trains to Wheaton

Need grosvenor

Not frequent enough at White Flint

I use white flint. Only every 30 minutes is too infrequent

What does this mean for Strathmore patrons?

NO! It makes no sense to close Grosvenor-Strathmore.

30 minute intervals are much too spaced out to be useful for commuting. This would ONLY work if it became like real rail (Amtrak) where trains kept to a PUBLISHED SCHEDULE, which Metro never does.

Need lower headway in rush hour

Please do not close Grosverner

Grovesnor is the only station I use to get to downtime DC for work

Alot of people use this stop. Its only down because offices are closed right now. You would lose so many people to this

will work

30 minutes is too long to wait between trains esp in very hot or very cold weather

This would result in severe overcrowding during peak travel times.

Considering how densely populated grosvenor is surprised this is an option

Need more trains through white flint more often

This does not affect me

This is a terrible idea.

Great idea! This way you can wait a little longer if you have to go to a low ridership station, but you don't have to close them completely.

This is just stupid

Absolutely not. This would be a disaster for me and would effectively force me to drive to work instead of taking the Metro.

Fifteen minutes is too long at rush hour. Trains will be so full people can't get on.

No-- I live between medical center and Grosvenor stations but theres only parking at Grosvenor so to ride the metro I need to go from Grosvenor unless I first hire an uber for the last mile which isnt practical

I would only use the Red Line if this were the case and stay between Medical Ctr and Silver Spring.

i walk to the Growsvener station and no other station is close enough to walk at my age.

| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
|---|
| Awful |
| dont close Grosvenor! |
| Please keep Grosvenor Station open |
| Please include Grosvenor |
| Frequency and regularity are essential in order for Metro to be more attractive than my car. |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| I live near grosvenore-strathmore so I am near the metro. If I have to drive to the metro, I'll just drive to my destination and not use metro. |
| 30 minutes is too long |
| Shady Grove needs every 15 minutes |
| Trains would be very overcrowded. |
| These stations need coverage |
| I need the Grosvenor-Strathmore stop! |
| I travel from Shady Grove to Faragut North. This type of change could conceivably add an hour to my daily commute. |
| That would be impossible and would severely pack the metro cars to make it almost unrideable |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| Keep Grosvenor strathmore open |
| Too many immediate communities would be negatively impacted. |
| Just stop |
| DO NOT CLOSE Grosvenor-Strathmore station!! |
| Please do NOT close Grosvenor-Strathmore. |
| Would work very well |
| Again -- you should do this NOW, then open it back up in 2022 when the world (hopefully) opens back up again! |
| PLEASE DO NOT CLOSE GROSVENOR |
| These headways are abysmal. |
| I have aging parents who rely on and need the Grosvenor-Strathmore metro station |
| I use the Grosvenor station daily for wokr |
| Do not like trains every 15 minutes. |
| Keep Grosvenor-Strathmore!! |
| I need to connect to the red line for work |
| No parking at Medical Center. Grosvenor has larger parking facility |
| I would drive instead of wait 30 minutes for a train at White Flint to get home to downtown DC. |
| Do not close grosvenor strathmore. It is necessary. It has parking spots. |
| Not workable for business commuters |
| My station is Grosvenor Strathmore, and there are no other stations within walking distance. If a station needs to be closed, why is Medical Center not being considered instead? Medical Center is within walking distance of Bethesda Station, and there are circulator routes that can take people close to it. Also, Grosvenor Strathmore has massive parking facilities which Medical Center does not. |
| 10 mins on the main part of the red line is bearable, 15 mins is not. |
| Don't live in the burbs so I don't (really) /I- |
| I do not anticipate using the red line. |
| There is no parking at medical center. |
| 30 minutes is too lengthy between trains - wheaton |
| As someone who lives past Silver Spring on the Red Line, this would guarantee that I would not take Metro to work. |

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Shut it all down. Rip up the tracks - sell for scrap. Sell off everything else. You will save a lot of money. |
| Please do not close Grosvenor-Strathmore, it is a very important commuter station with ample parking. |
| I only use Grosvenor-Strathmore. If its closed, Ill stay home. |
| inequitable for working poor with no choice for alternate transportation |
| Would prefer that no stations close. |
| Horrible idea. |
| Don't close this station |
| The red line running so infrequently is a deal breaker for me. Grovesnor closing doesn't matter. |
| Grosvenor needs to stay open. Many people in that area dont have cars, and medical center has no parking. It would also hurt the concert center a lot. |
| 30 minutes is very long to wait. |
| 15 min not enough |
| I used to commute every day to work from Grosvenor. This puts a real obstacle in my path to using metro. |
| Same as the rest of the survey, how is the city supposed to reopen but Metro cuts services? |
| I would have to drive to work. |
| Ridiculous. Stations are spaced to provide adequate micro-regional transportation cover. If you take Grosvenor-Strathmore out you literally take out a key link in that cover. Again, closing stations = the end of Metro. |
| I use this metro stop every day for work, errands, and leisure. Closing this station would have very negative consequences on my daily life. |
| Again wouldnt affect me, but I think limiting trains is a much better idea than closing stations altogether. |
| I oppose the closing of Grosvenor-Strathmore. |
| This would ABSOLUTELY NOT WORK. We bought a house in Grosvenor Park and a big reason for the purchase is the proximity to Grosvenor Metro. We need the metro to commute to and back from work in 2022. |
| Grosvenor metro station needs to stay open. |
| Absolutely not! |
| We need this station and so do thousands of others. Having this cut after a pandemic is absurd. Numbers are skewed. |
| See above " to/from downtown to Takoma. |
| Strathmore attendees and those who rely on Metro to get to their educational programs will be greatly impacted, not to mention that neighborhood.we go to Strathmore all the time in normal times. |
| I use it infrequently but this is the stop for concerts. There are many apartments there as well. |
| Need more frequent times |
| every 30 minutes???? |
| Minor. |
| This is better |
| The east side 30 min is really long time to wait |
| I don't ride there |
| This would negatively impact my work and social travel. There is no parking at Medical Center! |
| I live at Grosvenor and need ro reach adams Morgan and medical center |
| Every 15 minutes is not frequent enough during rush hour. Trains would potentially be packed and waiting for the next train when it was 15 mi items away would be u acceptable. |
| This wouldnt impact me either way. |
| frequency too low. Please look at Singapore and Hong Kong metro systems as models, |
| This is irrelevant because I would have to park somewhere like White Flint. |
| I dont go out to the outer burbs so it doesnt effect me. But as a DC resident I dont want all those folks driving in either. |
| Dont close grosvenor |
| Cut staff not service |

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| I do not use the red line. |
| Lack of frequent and timely service will result in my abandoning use of Metro for my commute, resulting in my driving to work instead |
| dont close grosvenor-strathmore |
| This would be very inconvenient. I don't want to be forced to drive. |
| I dont typically use the Red line. |
| see response to last proposal of similar caliber-this impacts the whole red line |
| Do not close Grosvenor-Strathmore!!! |
| Thats great. Just make it harder to use the red line. Already a brutal, inefficient and unsatisfactory experience. |
| You cant possibly close Grosvenor. And what of the huge garage expansion that is going on? |
| Grosvenor-Strathmore is the station I board. It is used by a large number of individuals who drive and park. |
| Grosvenors parking lot is often completely full. How does this count as low ridership? |
| There will be overcrowding in red line trains with riders boarding after white flint heading into DC possibly not being able to get in the train. |
| Grovesnor is over of my closest stations. This would affect me a lot. |
| I need to be able to reach Strathmore via metro for work. |
| I would be unable to get to another train station due to handicap status. |
| I would stop riding metro if Grosvenor-Strathmore station closed because I live beside it. |
| 30 minute wait times would dramatically reduce the accessibility of the system |
| I would not travel to Medical Center, I would drive to work instead and not ride the metro at all. |
| This would be hugely inconvenient as it would couple loss of Grosvenor, lack of parking at Medical Center, and less frequent trains out of White Flint. |
| Please dont close the Grovesnor Strathmore staion! |
| Why are you cutting service in 9 months as opposed to now? Well be back to work in 2022. |
| I take Grosvenor Strathmore metro station everyday to work. Please keep it open. I can accept lower or reduced service at non work hours for the station but please have it functional otherwise during work hours. |
| Georgetown Prep students and at least four apartment complexes near by |
| Those are very useful stations. They should never close. |
| We moved into our current house because of its proximity to Metro. Closure of the station would force us to move far away, uprooting our kids from schools, and causing SIGNIFICANT socioeconomic disruptions to our family. |
| N/A |
| I live at white flint and this would make my commute a nightmare |
| why cant you make trains arrive every 30 minutes between med ctr and silv spring? |
| See previous answer - closing Strathmore when there's no parking available at medical center will negatively impact my life in a massive way. |
| I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I dont care if they have to raise my taxes for it. |
| I don't ride on the red line |
| This isnt a station I am familiar with. |
| More service needed |
| This would add roughly 30 minutes to my commute time daily. I continue to use the Red Line 4-5/week and depart from Twinbrook. I would consider switching to driving into work if these changes were implemented. |
| We need Grosvenor Strathmore |
| No metro station bc I use grov |
| This is not frequent enough to meet my needs. I use the Wheaton and Forest Glen stations often. |
| I generally take the train from White Flint and waiting 30 mintues would not work for me. |
| Need Grosvenor open |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Why close this station?

Please don't close Grosvenor-Strathmore

I think the lack of parking at Medical Center would be a nightmare for people who commute to Grosvenor-Strathmore and for people who live walking distance to Grosvenor-Strathmore, but too far to walk to Medical Center.

If There a 15 minute wait for a train I'm just going to Uber

During rush hours on weekdays, trains should be more frequent than every 30 minutes

Again, less trains - fine. DO NOT CLOSE STATIONS!

It will make it more difficult for our employees to get to our offices.

Do not close any stations!

This adds appropriately 120 hours a year to my commute. Higher fares, less service. You suck metro....

I use Grosvenor-Strathmore as my primary station. This wont work for me at all.

Every 15 minutes is still not enough

Closing the Grosvenor metro station would have a huge impact on the community I live in.

Any delay would be compounded and it would take HOURS for suburban riders to get into DC! And getting back out would also be a mess!

I use the Twinbrook station and 30 minutes between trains would be quite a negative impact on my commute.

This completely cuts off to every 30 mins a huge chunk of Montgomery County that relies on this. If things are starting to pick up again in 2022 as most expect, having a single train every 30 minutes go past Medical Center is a disaster. Not nearly enough capacity. It would be pandemonium.

Grosvenor Strathmore is the last station with a large parking structure available

My husband and I bought our home, which is within walking distance of the Grosvenor Strathmore METRO rail station so that we could walk to and from METRO and commute to work via METRO. Closing the Grosvenor Strathmore METRO rail station and implementing the schedule above would make it impossible for us to commute via METRO.

I live at and use the Grosvenor-Strathmore Station

The red line was already getting crowded before they brought back six minute intervals. By the time more people come back the red line will not be safe.

We really need the Grosvenor stop to stay active.

We need Grosvenor Strathmore

Terrible plan for those who ride the red line especially from the Grossvenor-Medical center Twinbrook areas

Difficult to get to those stations

Don't use the RL much.

Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors Profitability should never be a factor in decision-making

Please remove peak hours fares if there are not additional trains during peak hours.

Please do not close grosvenor Strathmore

Again, ridiculous to close Grosvenor. Ridiculous.

No to closing Grosvenor Strahtmore

There would be more packed cars and changing to busses, a major disruption for so many who rely on Grosvenor metro on a daily basis

I used to attend concerts at strathmore

I rely on Grosvenor Strathmore to be open

That is not often enough

I ride the Red line only in downtown DC

If Grosvenor closes, trains must run regularly to White Flint and beyond.

PEOPLE WORK AND LIVE HERE HOW DARE YOU CLOSE A METRO STATION

the traffic is horrible going towards rockville, twinbrook or whiteflint, please keep it open

I live at the Grosvenor Strathmore metro station. One stop before or one stop after the proposed stops above.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Given that many of us are expecting to be back at a normal work schedule by next January, this proposal falls well short of what I would need/expect.

Im not using the metro right now because of the pandemic and the situation. Once Ill be vaccinated, I intend to reuse the metro station and my metro station is Grosvenor strathmore . I only rely on the metrorail since I do not have a car.

i go to shady grove; timing my trips to get the train on that schedule will be hard if metro timing is unpredictable. i will prob not use metro much to commute to work.

Stupid and more stupid

Again trains every 30 minutes renders this system useless.

Keep Grosvenor open is critical

If I had to wait 30 minutes for a train I would drive instead.

keep Grosvenor!!!

This station is the closest station to my residence that offers parking. Without access to this station, I would be forced to consider other transportation options.

I really dont ride the red line.

why are all of these proposals horrible???

This would make me drive instead of using Metro.

This is not frequent enough during the morning rush hour.

Dont close stations. Reduce the systems service hours if you have to, but keep the stations open and the headways between trains under 10 minutes.

No parking at medical center. 30 minutes too long a wait.

abysmal service in this scenario

Grosvenor-Strathmore station is imperative

I will not wait 30min for a train. I will find an alternative way to get to work or telework

30 minutes is too long to wait for a train at any station

Would not affect me personally because I rarely travel to the outer stations on the Red Line. But as a matter of general practice, this is not acceptable.

Would remove my 2nd closest station and send trains only every 30 min to my closest station. I would spend more time waiting for a train than just driving the commute

I need Grosvenor-Strathmore to stay open.

You cant park at Medical Center.

Again -- why close Grosvenor-Strathmore station, if the plan is to stop some of the Red Line trains early? Why not stop at Grosvenor, where the pocket track is?

I dont use this portion of the Red Line

This doesnt mention where Grosvenor falls. Dislike the 30 min INfrequency.

Grosvenor stop is essential the area. There are many people that live in that area and living has even been built around that stop. Not to mention Strathmore would be heavily affected.

This is a terrible idea.

Not frequent enough

How are people supposed to get Strathmore?

Closing Grosvenor Strathmore would cause major problems for commuters and then the overcrowding would be even worse at the other stations listed above! This would in turn cause riders to stop using the Metro and that would lead to less funding. Again, a vicious cycle!

I need the Grosvenor metro station to get to/from work in DC once we go back to work in DC

Please do not close Grosvenor Strathmore Metro Station. I do not have a car and it would impact me greatly.

I live at the Rockville station and this would greatly impact my work schedule. If I need to arrive somewhere more frequently, thats not possible. I do not own a car and therefore rely exclusively on the metro for transportation

post pandemic, the ridership will return to normal at Grosvenor Strathmore - closing the station would affect thousands of people who depend on the station and the surrounding property values when we return to normal

Im not even sure White Flint, Medical Center or Bethesda has the parking required to handle all of us from Grosvenor-Strathmore

Trains must stop at Grosvenor-Strathmore!

Thinking of moving to glenmont

as son as the pandemic is over ridership will be back up

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Too infrequent

How are people suppose to get to the Grosvenor. Mansion for performances. Might as well close it!

Too long a wait

G-S station is indispensable to us.

Developers are basing plans on metro. This is stupid.

30 minutes is too long to wait

This proposal closing Grosvenor would affect me as well as everyone else that I ride with regularly into the city. I would no longer use metro if this occurred

That would be terrible for me.

Medical center a hassle at best with security measures to enter NIH, Walter Reed that impact even getting to Metro at Medical Center by car for drop off in either direction and no safe way to travel south from the Grosvenor area by foot or bike.

Grosvenor has great parking

I live near Grosvenor-Strathmore and do not have a car

Any solution that involves closing grosvenor is not a solution

30 mins to rockville is not frequent enough

I am moving into a new development being built at Shady Grove Station with the assumption that trains would run much more frequently. This will not only affect my daily commute, but may also negatively affect the value of my new home.

Need Grovesnor to stay open - It's a regional hub for commuters.

Stop trying to strangle the Maryland suburbs!!!

I dont use station--no issue

Grosvenor-Strathmore is the closest station to me and the main reason I bought my house where I did.

This would result in inconveniences to many commuters and crowded trains.

These cuts will lead to lower ridership overall.

make those rich Marylanders pay!

I do not use the red line regularly

See comment to earlier question

Do NOT close Grosvenor station!

I travel from Shady Grove and would therefore face waits of up to 30 minutes

I could possibly be late to work

Intervals are too long after Grosvenor

It will be impossible to get to work. Given that pre-pandemic sometimes I couldnt even get on a train because it was so crowded, this is absurd.

Please do not close Grosvenor-Strathmore Station. Why of all the Montgomery County Red Line stations would you seek to close this one? There are so many residential units, thousands, within a 10-minute walk of the Station.

I need the Grosvenor Strathmore station for my commute.

Closing Grosvenor is hugely problematic, as are lengthy waits between trains

This plan would push significant ridership back to cars.

I don't use the red line

I rely on Grosvenor to get to work downtown.

This would make it impossible for me to commute to work from Rockville, as I might have to wait a long time for a train home.

Would just have to take the medical center train

Dont close stations or cut service

Strathmore Music Hall relies on metro for participation

I dont use the red line much

i would have to start driving to work and cease using metro altogether.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

No! No! No!

Grosvenor-Strathmore has efficient parking & kiss & ride. White Flint has neither.

Trains would not run frequently enough

I work in Rockville that would make my commute much longer

See previous comment.

Don't close Grosvenor!

No. What happens when people return to work????

It's all good

Can't travel to Strathmore.

I take the Glenmont train to Judiciary Square, and I need it to run every 5 minutes.

I do not utilize this section of the red line.

The 30 minute arrival for the listed stations is too much time in-between trains.

If I have to wait 30 minutes for a train at Forest Glen (the metro stop nearest me), I would stop using the metro

There are way too many people who live past medical center and ride metro.

I drive to grosvenor to park and then take metro into the city. How would I park and take metro from medical center? As of now, you can't.

I live in dense hirise populationnext to grosvenor station and can walk to metroThis is extremely important to me you keep this station open

again, terrible idea

Again, unclear if the 15-30 minute interval is part of the proposal or just an example of how shutting the line would work....?

I live a 15 minute walk from Grosvenor and this would likely end my use of Metro until re-opened

Red line needs to run more frequently, especially during rush hour.

By January 2022, it seems likely the federal workforce will be back to in-person work instead of telework. If that is the case, running trains only every 30 minutes will mean the trains are overcrowded and commuters will not be able to rely on metro to get to work. Why dont you cut service NOW, while most people are teleworking rather than in January 2022 when most people will be back to in person work?

Again, this amount of time between trains is unacceptable

I'm at white flint. Every 30 minutes during rush hour would not be manageable. As it is (in normal times) many of these trains are uncomfortably full.

Will keep me tied to my car, instead of returning to Metro as the pandemic wanes.

Please offer trains to Wheaton more often

Would add extraordinary amount of traffic to Rockville pike, already overflowing with traffic

I like to see shows at the Strathmore and this would make that impossible.

Really need Grosvenor-Strathmore open to park in the garage for Music Hall at Strathmore events.

I don't own a car and rely on grosvenor metro for transportation, especially in the winter.

There is NO viable parking options at Med center. This would be ridiculous. No one could use that station and 30 min gap would create terrible overcrowding at other stations

Every 15 minutes doesn't seem frequent enough.

I need Grosvenor.

Too long of a distance between trains. This is a system people need and you're making it unusable and going to lose more riders if trains are this far apart

It would be a massive personal inconvenience for me if metro were to close the Grosvenor Strathmore station.

That would make it impossible to get to work on time if you miss your train. The difference in a half hour in getting to work is enormous, plus this lack of trains would cause them to be extremely packed. This is a very concerning once people start to go back into the office.

You cannot close Grosvenor. It is a crucial location for many riders.

Not soon enough

Keep grosvner open

I dont ride red line.

Will impact the value of my property and use of metroâ€”probably cease using it.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Same answer as before, by January 2022 things will be back to normal and so Metro should return to normal service at all stations.

Yes

We rely on the Grosvenor station for our daily commute. We expect to resume our regular commute in 2021.

I dont ride red line

30 minutes is too long at shady grove station

need trains to arrive more often to make travel easier. the reasons i prefer not to use metro is it is too slow

NO CUTS!

There is a high school right next to strathmore who's students use the metro to get to and from school

I depend on the Grosvenor-Strathmore station for transportation.

Many nurses depend on these trains.

I dont use that station.

We need grosvenor metro

Grosvenor Strathmore station needs to remain open

Much too limited

No, I live at Grosvenor-Strathmore. I would not take the Metro if this stop would close.

I have friends in Wheaton; Id never be able to get to see them in a reasonable journey.

Please do not close Grosvenor Strathmore.

Dont close Grosvenor Strathmore.

Dont close Grosvenor-Strathmore!

Do not close Grosvenor Strathmore

Closing Grosvenor Strathmore is a bad idea. Ridership will go up after pandemic.

We need the Grosvenor strathmore station open. It would cause a big inconvenience to my community if it were closed

One of the reasons I live where I live is to be near (within walking distance) of the Grosvenor station. Going to other stations would not be convenient.

My wife uses our one car to commute, so I would have no way other than ride share to get to a train station. Since I can walk 10 minutes to Grosvenor-strathmore, having to travel elsewhere makes no sense.

Making less stops and increasing the time between trains will make ridership a worse experience

There is no parking at Medical Center. Please ask people who actually ride the Metro to commute about what stations to close.

ONce again, can you ensure q15 minute service during rush hours

See previous comments - closing stations is bad, less trains is bad, turn-backs are mostly ok in my view but bad overall.

My station is Grosvenor

DO NOT CLOSE GROSVENOR-STRATHMORE

Sparsing out trains to a Medical Center doesnt seem like a good idea, does it?

No Grosvenor, no ride.

That's too long in between . We use Grosvenor stop especially once hockey games begin again in person

There is no parking at Medical Center. If this chnage is necessary, the turn-back site should be White Flint, not Medical Center.

I commute using Grovenor

Theres no parking at Medical Center, so Id have to go to White Flint or another further out station. 30 minutes is too long to potentially wait for a train and overcrowding both on the train and in the parking lot would be a significant problem. I would resort to driving.

See prior concerns about crowded trains.

It would be better than closing the station entirely.

Every 30 minutes is too infrequent.

I need Grosvenor-Strathmore to stay open!

Strongly do not want Grosvenor- Strathmore to close

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Need Grovesnor to commute to work |
| prefer Grosvenor to medical center |
| Grosvenor-Strathmore does not have low ridership during non-pandemic times, to state that is ridiculous! To close any stations is ridiculous! |
| Not a Red Line rider |
| This is terrible. |
| I don't use that station. |
| If you close Grosvenor,, then White Flint needs full service (plus a bus shuttle to Grosvenor) |
| You would lose me as a daily rider because I can't wait 30 minutes for a train at twinbrook |
| It would take too long to get to Governor-Strathmore station, which I use a lot pre-pandemic, post-pandemic |
| I know people who take Metro to concerts at Strathmore, and this would not work for them. For me its OK. |
| Grosvenor is close to Medical Center only if youre in a car. I walk to that station from my apartment. You guys need to think from the perspective of your actual ridership. |
| I live near Shady Grove station. Once vaccinated, I plan to return to work full time, unless Metro service cuts like 30 mins between trains make that unfeasible. |
| This would add a great deal of time to a household members commute between Shadygrove and Medical center. |
| I would not use Metro if I had to wait 15 minutes for a crowded train during rush hour. This would be useless given Metros poor operating history. Metro should focus on reducing employee pay and benefits include the prior overblown pensions. |
| As I wrote, Id rather you increase the pricing than decrease availability of trains. |
| More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable. |
| I don't regularly use the red line. |
| I live near Grosvenor Metro and rely on that station. While I suppose it is technically close to White Flint, the reality is that Grosvenor-Strathmore has advantages (parking, etc) that White Flint and Medical Center lack. |
| I dont commute on Red |
| We stopped turn arounds because so many north of Grosvenor need it...stop cutting their commutes! |
| Need more frequent trains during rush hour. |
| it needs to be the same 15 minutes each way |
| i have no way to get to medical center. and even if i could drive there is no parking there. |
| Terrible idea. Strongly oppose. |
| I rely on the Grosvenor station and would hate to see that closed |
| All of these proposals seek to hobble Metro. No one will ride it at all if trains only run every 30 minutes. |
| Please don't close Grosvenor-Strathmore. |
| See other comments. |
| This is the closest metro to my home and will prove to be a great inconvenience for my ride downtown |
| Grosvenor Strathmore has development planned in the near future. Closure of the station will be a set back for the community. |
| No, please do not close Grosvenor. If all the residents in this area have to drive to another metro station and then to have to wait 30 minutes that would be an extreme hardship |
| It didnt seem to work in the past, so i doubt it would now. This is especially true in adverse weather. |
| n/a |
| Rush hour trains are too full for there to be a 15 minute gap between trains. |
| DO NOT CLOSE THE GROSVENOR STATION!!!! DO NOT DO IT!!!! |
| Closing Grosvenor means adding significant time to my commute so I will drive to work instead. |
| Would no longer take metro |
| TEMPORARILY --- until normal ridership resumes |
| This plan would increase my travel time and cost. I would not ride metro anymore |
| I do not ride to the stations that would have 30 minute service. So this would have no impact on me. |
| . |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Medical center is difficult for the average rider to use

If Grosvenor is closed, the options are NIH or White Flint. Neither have adequate parking.

Again, running trains only every 30 minutes at high volume stations, such as Shady Grove and Rockville, makes no sense. By January 2022, we will be back to the new normal, with workers commuting into the District.

30 minutes is way too long and the trains would be terribly overcrowded once things go back to normal. I don't think this would work

This will only further diminish ridership on the Red Line.

I rarely travel to those stations, so this change likely wouldn't affect me.

How is Silver Line construction and ridership looking? 7 years later, and we don't even have a train to our international airport.

Keep Grosvenor open and running regular schedule.

If you want people to use the Metro system, it must be expedient. Fewer people will use the system if it is so inconvenient. That is a no brainer. Close stations, prolong wait times and of course ridership will go down.

Too long of a wait

Too long between trains.

Don't travel on redline

This stop is essential for the apartment complexes near Grosvenor-Strathmore

I moved to the area because of the Grosvenor station. If it closes that would inconvenience many people and unfairly affect property values.

By closing Grosvenor, you would be funneling that traffic - for the most part - to White Flint. And then you are saying there would be trains every 30 minutes at that station?! Untenable.

With these proposed changes, METRO will become useless

We need to keep everything as is.....

see earlier comment.

Longer commute

This is poorly written: headline says between Grosvenor-Strathmore and Medical Center (which is absurd because they are adjacent), while the question itself does not even list Grosvenor-Strathmore (so it is unclear what the frequency would be at that station). Assuming G-S would be grouped with the 30-minute stations, this plan would not work for me.

Please do not close any stops

I would likely not use the metro system if the Grosvenor-Strathmore station closes

The waits are too long and the risk of not finding a seat seems too high

GS closing does not work for me.

Medical center is inaccessible to most metro riders as it has no parking.

Again, red line outskirt stations can take the hit.

Don't close any!!!

30 min wait times for those that need to get to work is unacceptable

No parking at medical center

15 min is a far too long headway between trains in the downtown core. This would cause metro to shed ridership.

The trains would no longer service my neighborhood and myself and many others would have to walk.

Very problematic

There are many large apartment buildings within a short walk of Grosvenor-Strathmore plus a parking garage with kiss & ride, this is not a smart station to close.

Trains would need to hold longer at stations if there is more time between trains.

Possible Yes only if the same parking capacity were added at medical center.

This is preferable to closing the station all together.

Every 15 min won't be sufficient during rush hour

Many people would have to use Twinbrook stations and the trains there should arrive every 15 minutes

The closure of Grosvenor is not my concern, the 30 minute frequency at Twinbrook is the problem.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

We definitely depend on metro to get to and from work, run errands

I would need to move to another apartment

Defund MPD instead

Reducing transit access, frequency, and reliability reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself.

very inconvenient to get to another station instead of Grosvenor

I dont use the affected stations.

This would affect my work commute. An increase in time intervals would be better.

How does this proposal affect Grosvenor?

DO NOT close the Grosvenor-Strathmore station. Once again its a terrible idea there are thousands of people that live around and use that station. Its not that close to other stations and again this is unacceptable.

As with broader proposal - 30 minute headways are unacceptable.

We depend on metro for access to DC

Medical center station has no parking. It makes no sense to close Grosvenor -- it would be wholly unreasonable to expect neighborhood commuters to have to travel away from dc to be able to find parking at a metro stop that wouldnt get as frequent service.

Visitors of the red line already have a 60-90 travel time. It would be worst!!!

I do not take the red line.

I need Grosvenor station

Horrible. Would destroy commuting from Montgomery County.

This does not really impact me.

Grosvenor-strathmore is needed

i desperately need the frosvenor metro and many people use it for the strthmore arts center which will reopen when covid is less of a threat. The metro stop at Grosvenor is a big pull for Strathmore arts center.

I ride daily from forest glen and would stop using metro if this change is made

no parking at medical center - need to be able to park at grosvenor

This would further depress ridership in all of upper Montgomery County, and would greatly impact people who need to use the rail service to get to work.

I don't use this line.

Same reasons!! We NEED these stations!!

Closing Grosvenor is a BIG mistake. Metro already made a mistake when it changed the policy that every other train departed from or arrived at Grosvenor during rush hour. PLEASE do not close this station.

Do not cut level of service.

WE NEED STRATAHMOE TO REMAIN OPEN

Support the less frequent servicing between GS and Medical center, but every 15 minutes on the primary line still feels too infrequent.

As stated before, trains have to be closer together. 8 minutes at the longest

I live at wheaton station and this would make my commute much more frustrating and longer

Grosvenor-Strathmore needs to stay open

I commute every day from grosvenor

Station at the far ends of the red line should not be treated better than stations at the end of the other lines. Why do politicians in tax heavy Montgomery think their residents deserve more service that the entire region pays for. Also, Silver trains should turn at Stadium as Orange line trains used to do in the mid 2000s.

No transportation to Medical Center

Not enough frequent trains to accommodate the amount of passengers

Having Medical Center as one of the ending points for frequent service is not a sensible alternative, as there is no parking there, and the station is not really available to anyone who does not work there.

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Very much in need of Grosvenor/Strathmore |
| As long as Metro maintains existing bus service between Wheaton and Silver Spring. |
| Same as the other proposed changes to the red line - its the most crowded line, once commuters are back this would absolutely not work. |
| No parking at Medical Center would be a major issue. Most of the bus service only runs during the week to Medical Center. |
| Anything less than full operations is unacceptable. |
| MEDICAL CENTER IS LESS USED THAT GROSVENOR-STRATHMORE. THIS IS A FACT!!! Medical Center Station has never made any sense at all--you can literally walk from there to Bethesda station in 10 minutes. Why do none of your proposals suggest closing that one? Wealthier people, I suspect. |
| I live by Grosvenor Strathmore. This would turn my commute from a 30 minute train ride to an hour to hour-and-a-half bus and train ride. I would probably just drive instead, which costs more money, causes more congestion, and increases CO2 emissions. |
| Parking at any other metro stop nearby is prohibitive!! |
| Grovesnor strathmore needs to stay open |
| Such a radical cutback of service would force me to telework every day, which I dont want to do; and would make it impossible to continue to see the doctors I am used to seeing in Chevy Chase and DC, neither of which I am comfortable driving to. |
| See answers to previous questions |
| I do not travel to the far reaches of the red line. The Q bus line can easily provide service to an open red line station for those that need it. |
| 15 minutes between trains it too long! That is Sunday service! |
| not frequent enough |
| I need forest Glen at least every 10 min |
| Frequencies too low |
| Need Grosvenor strathmore to stay open in order to utilize metro often |
| What other national capitol has a metro system that runs trains every 30 minutes. This is insane. Visit Paris, London, Amsterdam, etc. The trains actually run. |
| This is not sustainable...given the number of people who regularly use the metro (outside of COVID). |
| Dont use these stations. |
| See response to question 2 |
| Many riders who frequent the Shady Grove metro station, are already affected by MTAs reduced commuter bus schedule. I currently use the transit link card which allocates \$255/month to Metro. The commuter bus schedule has already been cut to the S (holiday) schedule, which runs the buses every 1/2 hr verses 15 minutes. Currently if I miss a bus the most I have to wait is a half an hour. IF Metro Rail reduces trains to run every half hour, versed 7 minutes during rush hour, I as well as other commuter bus riders who miss a metro train, we must wait a half hour worst case in metro, then run the possibility of missing a bus which will add 1 hour to an already 1-1/2 hour commute which would cause most of us to rethink whether to ride metro at all. IF I pay out of pocket for parking, in DC, I can reduce my current commuting time by 1/2 hour, which means if I drive my commute is 1 hour each way. IF Metro cuts trains to every 1/2 hr, my commute balloons to 2-1/2 hr each way.Â Metro stands to lose \$255/month already guaranteed per MTA program rider.Â Metro better figure another way to reduce costs, because sooner or later, you will have no riders and you might as well set up beds for the homeless people to sleep in the station, because that will be the only clientele you will have. I would not be surprised if the commuter bus companys pick up the slack to provide bus routes all the way in to DC from Maryland and take that business from Metro.Â Most buses also stop running at 6:45 in the evening from Shady Grove, which means I would have to leave work at 4:30 in the afternoon and cannot work Administratively Uncontrolled Overtime for outages which is sometimes required by our job.Â I currently can stay as late as 5:30 and have been able to make the last bus from Shady Grove in the evening.Â If this cut happens, I will certainly miss the last bus, then I have to pay an exorbitant taxi fair home from Shady Grove. It would no longer be worth my while to ride Metro. |
| That would be too long between trains |
| Keep Grosvenor open |
| I live near the Grosvenor station and built my work-life balance around this metro station. I need it to stay open. |
| This is way too much time to wait!! |
| Run all trains on full red line route |
| No as this would still result in closure of Grosvenor Strathmore , my primary means of transport to and from work. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

What length of trains are you planning.

I am opposed to closing ANY existing stations.

Terrible idea

Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office.

Don't shut stations down. Do whatever else you must but don't shut down stations.

Closing Grosvenor-Strathmore would be disastrous for us. We live near Grosvenor and use it daily when there is no COVID

Would not be able to ride Metro for work

you would be disproportionately impacting commuters from lower income communities that live north of Grovesnor, who are more dependent on the metro

Cf. other remarks about plans which assume that travel needs of DC wont rebound. Why lock yourselves in?

Potential impact on Strathmore

Suburban users of the metro drive to the station; this would have little impact on them, none on city residents.

I don't support station closures.

Grosvenor was packed with morning commuters between 7am and 10am before Covid. Vaccine is here, so will be return to normalcy soon. Please leave us those commuter hours!!

Not sure I understand this proposal

The Red Line is way too packed to consider cuts in train frequency. This is just crazy to even consider.

I need access to Grosvenor-Strathmore, its the station that I use most regularly

Stop messing with the Red Line -- you must have more trains than every 15 minutes, especially during Rush Hour!

See last question. I USE the Grosvenor-Strathmore stop for work!

Closing Grosvenor-Strathmore station would remove a vital vein of commuter travel for me and my neighbors in the North Bethesda area, impacting my ability to report to my essential worker job in Washington, DC. The walk to either Medical Center or White Flint stations is prohibitive due to distance and hills. Please do not close the Grosvenor-Strathmore station!

My preference is to continue working from home rather than having my commute time elongated by service cuts.

Unless Metro provides shuttles between Grosvenor-Medical Center

I dont use the red line

Closing Grosvenor will not work for me

How would I get to medical center stop? Senior cannot be taking additional bus to get to station

The population density north of While Flint is great. We need frequent trains White Flint on and please keep Grosvenor!

I do not use Red Line trains. But is would lead to crowding of other trains at red line transfer stations!

Please keep Grosvenor open When life gets back to normal we all hope for normal!

I live in the Grosvenor Park area and I do not own a car. Closing Grosvenor-Strathmore would make it impossible for me to go to work and would cause me to become unemployed again, just like your last closure of that station cost me my job.

Dont use red line

I recently bought by Grosvenor BECAUSE it has metro access. This would harm my Commute and my property value.

NP

Grosvenor station should remain open

I don't travel on the red line regularly and don't use it to commute.

yes this is workable if nessecary

Less trains means more crowded trains. Trains less often means we arent able to rely on it to get to work.

Closing stations should only be a last resort.

There is not good parking at the nearby stations.

do not close Grovesnor....why its a hub and they are building even more apartments near there

It will increase my commute time.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

| |
|--|
| Why close stations? That would put more cars on the road. Stop bombing other countries and use that money to improve public transport for Americans. |
| Too far to walk to the metro I am 70 year old |
| Not acceptable to close Grosvenor Strathmore. This should be a hub with buses connecting to Montgomery Mall and Wildwood shopping at Giant and Balducci's |
| Again, every 30 minutes? Why bother? |
| 15 minutes between Medical Center and Sliver Spring is still too slow -- red line take riders to Metro Center and Gallery Place, two hubs. |
| Grosvenor is my home station and any other station is too far for convenience |
| I need the Grosvenor-Strathmore station to be able to ride to work. Please keep it open! |
| One of the main reasons I moved to Grosvenor was to be able to walk to the Metro. |
| This is a critical stop, very much so for DC commuters and anyone attending events at Strathmore. |
| Again no! |
| The Grosvenor-Strathmore location is NOT walkable to other locations. This metro station must remain in order to serve the community. |
| Exceptions -- when concerts resume at Strathmore. Perhaps time extra trains for show times? |
| Closure and fewer trains are detrimental to overall growth and enter a death spiral while exacerbating climate change |
| I consider Grosvenor to be my home station. Even though there are other stations "nearby" they do not have a good amount of parking and/or are inconvenient for other reasons. If Metro closed Grosvenor, I would likely stop riding Metro altogether. |
| Many people live near this station and it would hamper use of the metro as a viable commuting option |
| Commute would take too long and be too crowded |
| who wants to spend that time waiting and then possibly be killed or infected |
| Grosvenor-Strathmore is relied on by many students that go to AU! DO NOT CLOSE IT!! |
| Shady Grove is my station. If trains only arrive once every 30 minutes the system will be unusable for me and many others. |
| Ridership will increase post pandemic... |
| I don't use Red Line. |
| Closing Grosvenor-Strathmore will not work for us. It does not matter how frequently trains before or after the Grosvenor station are operating. Closing the station will be a hardship and an inconvenience to me and my family |
| Closing stations would be unacceptable |
| Again, if there was a train schedule, a change like this could work because people could plan for it. Please put Metro trains on an actual schedule. |
| I need the GS metro to get to work. |
| I'll be working in the Washington, DC office five days a week. The Grosvenor-Strathmore Metro station and parking would be the best alternative for the commute. |
| I need Grosvenor-Strathmore to remain open! |
| Would mean driving to Strathmore, which is exactly the opposite of public transportation philosophy |
| Grosvenor-Strathmore must stay open |
| Family members commute regularly using the Grosvenor station. We purchased a home based on this access |
| I commute from Twinbrook and sometimes Grosvenor. Having fewer and fewer options would make more likely to start driving instead of using metro at all for work. |
| Again making it harder to ride the metro will make people not see it as a viable mode of transportation and eventually the whole system will be worthless |
| This assumes G-S is closed, which is bad |
| Need parking and more frequent service at Grosvenor |
| I use Forest Glen. If this plan goes thru I'll be driving into the city. |
| I will drive rather than commute by metro if Grosvenor closes. Except for the pandemic, I've commuted by metro from Grosvenor since 1991. I bought my house because it's near Grosvenor. |
| I need the Grosvenor Strathmore station to stay open. |
| This would significantly interfere with my commute. This station also offers parking availability which is needed. Closing this station would increase my commute by 50% or more. |
| This would increase numbers of riders to individual stations, but would also make it difficult for riders to safely social distance. |
| I don't metro on a regular basis, but Grosvenor is the only one in walking which I will use from the home I own, and would be disappointing. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This would add so much more time to any commute I might have!!!

I don't understand the proposal. The title says every other would operate between Grosvenor and medical center but the description says if Grosvenor station closes. If trains don't stop at Grosvenor at all, this plan would not work for me.

I would commute to work via car before using Metro in this type of situation.

I would need trains to arrive more frequently at Rockville.

Need all trains to operate between Grosvenor and Medical Center.

15 minute headway's are unacceptable.

No comment.

What about the new work places like Marriott in down tow Bethesda - they were built to serve people commuting to and from work.

This will not be workable during rush hour, too many people commuting from these busy suburbs

Grosvenor-Strathmore is critical - there is no real parking at medical center. Bad idea

I think more often is still needed.

Closing Grosvenor would be disastrous for my family

do not close the grosvenor stop

Closing Grosvenor-Strathmore would be detrimental to those who do not have a car in the area, and cannot get to another station easily.

If Grosvenor-Strathmore closes, my familys only other viable stop option is White Flint. Having a train come to White Flint just once every 30 minutes will not be often enough.

Keep public transit running!

By doing this, you shut down my ability to get to work

Ive never ridden the Red Line -- defer to others who would know more than me.

I use Grosvenor station and a spacing of a train every 30min is too long a wait between trains.

If Grosvenor Strathmore were closed, I and many others who currently use stations on the closure list would likely not ride metro any more, only further decreasing ridership. Proximity to an operational station is key to riding - take away the convenience and theres no value in metro.

There is no parking at Medical Center. Is this proposal to scare people to generate funds? I hope so.

All of these suggestions are terrible for the consumer. Get more federal aid and dont ruin the experience of your customers.

I commute using Grovesnor-Strathmore

The alternative stations to Grosvenor are impractical. No parking at Medical Center, limited parking at White Flint. Bad traffic on Rockville Pike already now, this would get worse.

Very inconvenient for those who live between Medical Center and White Flint.

I specifically moved to an apartment walkable from Grosvenor Station this year for when my work resumes in DC after the pandemic. I do not have a vehicle and specifically moved here because I need the metro to get to my work which is currently temporarily remote.

Still not often enough for rush hour traffic once the pandemic ends.

I live at Grosvenor and rely on the Redline for work.

low ridership is a result of the pandemic and poor service

Please do not close the Grosvenor-Strathmore station. That is my station. I moved to this residence for that reason.

I live at Grosvenor and closing is not an option for me

No, I will have to drive to work instead.

You need to keep the grosvenor station

I would never ride metro again if I could avoid it

I dont live over there but I imagine it would be bad.

Please do not close Grosvenor/Strathmore. A large community relies on it and will use it more and more as the pandemic starts to slow down. We cannot wait to make regular use of this station very soon and know that many others in this area feel the same way. Also Strathmore Hall is such an important and vital part of the arts community and needs to be supported in every way possible. Cutting off metro service to this venue will have very negative impacts.

much too infrequent. I live in Rockville.also no way to get to Strathmore concerts if you close that station.

these stations are too far from my home

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This would add 45-60 minutes onto my existing commute. I strongly oppose closing Grosvenor-Strathmore.

The Grosvenor Station is important to me

I can go with this if this is a temporary measure.

Please do not close metro stations.

Grosvenor Strathmore is my closest station. Parking at White Flint can already be an issue, especially if all of the GS riders now needed to utilize WF station.

A 30 interval is too long

Dont close Grosvenor

Do not close Grosvenor-Strathmore!

Works for me because I am in the more frequently serviced area, but would not work for a lot of folks further out.

Do not close Grosvenor/strathmore

As I rarely take the Red Line, this would not impact me much.

Same Reason

Will there be bus alternatives between Medical Center and Grosvenor? How often do the buses run?

We need more stations, not fewer! We need a station at Brightwood Park in between Petworth and Tacoma

By January 2022 things will have reopened. This will not provide enough capacity on the red line.

Any change that ends with 30 minutes between trains at Wheaton Station means I won't be riding Metro.

I have no way to access another Metro station if Grosvenor-Strathmore closes.

Grosvenor Strathmore is my metro station for commuting into downtown DC. This would have an immediate negative impact on my ability to get into downtown DC.

30 minutes at Glenmont makes zero sense

This plan does not work for me. I need the Grosvenor-Strathmore station open.

I would not use Metro any longer.

Do not close Grosvenor-Strathmore station. It is very far between Grosvenor-Strathmore and Medical Center stations and there is no easy walkways connecting between these two stations. The 495 and 270 also cut through the middle of the two stations.

I'd likely stop using Metro.

This would be absolutely disastrous for my husband and myself, as we both commute downtown every day and walk to White Flint. A 30 minute wait in the cold and with a schedule thats only approximate will really have us thinking about leaving this metro area for another part of the country. You will ruin the suburbs.

Need Grosvenor station

Grosvenor-Strathmore is the one I would least like closed

The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming.

Why would this be implemented in January 2022? By then I think well be back to almost normal, this would be useless.I use that station sometimes to go to concert and friends houses

I only use this station. Low ridership has a lot to do with all the construction that was going on there which limited parking

more trains and run them more frequently please

As noted, I attend many performances at STrathmore and metro there from DC. I can take my car, but much prefer to support metro and public transportation.

Having to wait longer and then drive further since my station would be closed would make my travel time too long. I would not use metro

I don't take red line.

As long as Grosvenor Strathmore remains open.

This is the station I use most.

No - in this case I would be out of a home station and have worse service at the next closest station - White Flint.

A great deal of traffic comes in from Shady Grove, making people wait an additional 30 min for a train in the morning is insane.

I do not use these stations

Without Grosvenor Strathmore I can't get to work in DC especially in a timely manner.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I have no other option to get to work if this station closes! Please don't close it! So many people use Grosvenor and will again once they're vaccinated

Don't close any stations.

Yes, Only because I dont ride those lines

Need courthouse access

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

Unsafe waiting

Grosvenor-Strathmore should not be closed.

Trains every 30 min doesn't work for anyone commuting.

My husband works at Twinbrook. We need more trains going there.

Again, much too long to wait for a train at rush hour.

Closing my station (Grosvenor-Strathmore) in any capacity would be detrimental to my ability to get to and from work, as well as visiting and caring for family members. I chose to live at this metro station for the safety and security of the neighborhood and the metro station and would struggle immensely without east access to my metro stop.

I think that with housing right at Grosvenor-Strathmore and even more being planned for 2022, the demand is too great to close that station.

It doesn't apply to me; but feels as if it would be a better plan for the weekend rather than rush-hour times

Our station is Grosvenor-Strathmore. It is walkble.to our home. Things will be normalin Jan 2022. Dont close the starion.

I wouldnt recommend closing that train since its essential for nih and wrmmmc staff who live nearby without a good way to walk to work

Will not work with schedule at work

I live off the Silver Line in Fairfax County.

I use Grosvenor station

Since I have to change from one line to another the likelihood that my commute would be extended to an unacceptable level is a concern. Since I can drive in in 22 minutes, if it takes me 50 or so to use Metro, I might go back to driving.

We dont use the red line, so these changes would not affect us.

15 minute intervals too long on red line.

Read every previous answer.

I depend on the Grosvenor-Strathmore station so this is not a reliable plan for me.

In order to faithfully take the train on a daily basis, I would need more regularity

My doctor office/Bethesda hospital is my main hospital that I go to. This is not a great idea.

This plan would make my commute slightly more inconvenient (due to longer headways) but overall I would be fine with it.

I live near the Glenmont station, so a train only every 30 minutes would be very difficult.

What about performances at Stathmore - this is not a good idea.

There is NO PLACE TO PARK at Medical Center. How do you expect people to get to the metro! Grosvenor-Strathmore is a major station where prior to the pandemic thousands of people got on and off everyday for work.

If you close Grosvenor-Strathmore I will largely stop using the metro.

15 minutes is not often enough for a crowded red line once the pandemic has waned. 30 minutes is a JOKE.

Grovesnor station is needed

Red line trains would only become more crowded than they already are.

I wouldn't ride Metro. No parking at NIH.

Grosvenor-Strathmore should stay open.

I moved to the Grosvenor area specifically because it was across the street from Metro and we have been encouraged to use public transportation instead of our personal car

Please do not close Grosvenor-Strathmore station.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Please do not close the Grosvenor-Strathmore Metro Station. Having just graduated from college, I moved to Rockville in 2020 for a new job and do not have car. I rely on the Grosvenor-Strathmore metro station in order to go to work...and truly to go anywhere. My only other options would be taking the bus or calling a Lyft or Uber, but the metro has been the most affordable and reliable mode of transportation for me. I had, in fact, specifically moved to the apartment complex that I am at right now because it is situated right next to the Grosvenor-Strathmore metro station. Many other folks living in this apartment complex and the front desk staff also rely on this metro station.

Closure of the Grosvenor station would be a major disruption in my commute. I would need to drive daily into DC.

The red line is not a normal part of my commute or regular usage

The trains from Wheaton and Shady Grove would probably be very very crowded when they arrived at the more interior Metro stops. Overcrowding could be a problem, and if a rider could not board b/c of the packed train cars, a wait of 15 to 30 minutes would leave riders very frustrated.

Not enough service to stations near high residential populations.

As for previous proposal

Keep Grosvenor OPENED close White Flint

I commute downtown from Rockville every work day. This change would significantly extend my commute time. I have intellectual disabilities and cannot drive, so Metro is my only way to get to work.

Need every 15min service at White Flint if Grosvenor-Strathmore station closes.

MANY people get on at Glenmont. FEWER trains would be BAD and result in more cramming bc wait is also INDOORS vs. outdoor stations it is very hard to social distance. CONSIDER LONGER WAIT Times at outdoor stations vs indoors

I would really like it if Grosvenor station stayed open

Grosvenor-Strathmore shouldnt close as many people walk to the metro from nearby communities

30 minute headways are ridiculous and will drive more people to using cars. The goal should be to make transit as convenient as possible if we are going to get people out of their cars.

Grosvenor-Strathmore is my station that I commute to and from

If you close the Grosvenor station Im done with Metro its not worth my time

I depend on Grosvenor-strathmore station.

NO!!!!

Too long between trains north of Grosvenor

I dont live here but, Metro should be planning to increase service not decrease. This will bring ridership back when vaccines are widely available this summer. Decreasing service will put Metro into a downward spiral.

not enough trains

I go to Strathmore fairly often

Dont close grosvenor. Thousands of people rely on it to get around. Relative to the budget, it costs almost nothing just to keep the lights on. The trains have to go through the station anyway

I live right behind the Grosvenor Strathmore station and know many people who depend on it to commute to work every day. It would be a hardship for all of them to go to another station.

Commuting from Shady Grove necessary - would add up to 24 minutes in each direction.

I use and NEED Grosvenor-Strathmore. If it is closed and I must use White Flint, I would need more frequent service than every 30 minutes.

Red line trains need to be more frequent during Rush Hour. In non-rush hour times this would be fine.

I would have to drive an extra 20 min out of my way to the closest station with parking and those are the ones with 30min arrival times which means I am either on a super crowded train or late for work. Please do not close this station!!

Still worry about trains being even more crowded during rush hours.

what happens if only way to the other stations is to drive, what happens with over crowded parking?

No stop at Grosvenor-Strathmore!

Decreased train availability to Shady Grove and Rockville would prompt me to drive to those locations.

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Overcrowding would still be a huge issue on the red line with this proposal. |
| Trains should run at least 8 to 12 minutes intervals |
| I use the Grosvenor station to get to work. So many others do as well. Do not use the current ridership as an indicator of future ridership. This is a really bad idea please do not do it |
| This is a HORRIBLE idea! One of the things that make a good and effective public transport system is the frequency of trains during heavy travel periods (rush hour, etc). This also discriminates against people who get on the train further north than Medical Center. I recommend trains coming every 5 min. (if not more frequent) at every station in order to make taking public transport more attractive. |
| This is not acceptable for commuting wait times. I commute to work from White Flint metro. |
| It would work presuming ridership rebound doesnt fill all shady grove trains beyond capacity. |
| where are the hundreds (thousands?) of those of us who use Grosvenor-Strathmore supposed to go?? Neither White Flint nor Medical Center is feasible, nor is service every 30 minutes. |
| We live at Grosvenor-Strathmore area. Medical Center station does not offer parking. This would lengthen & complicate my husbands work commute & any trips I take to DC. All of it just puts more cars on the roads & increases Climate Change. |
| This could curtail suport of the Strathmore...which is a major cultural institution. |
| Again, at this point with 30 minute headways Ill just walk downtown from Twinbrook. |
| Por qu  cerrar Grosvenor Strathmore? Hay mucha gente que usa sta estaci n. Para que ampliaron el parqueadero entonces? Que va a pasar con los eventos de Strathmore. Cerrar esta estaci n seria una p sima idea |
| Necesito trenes en Grosvenor |
| I dont tend to use the red line. |
| The 30 minute wait for a shady grove train is a total deal breaker for me. Ill just buy a car if this happens. |
| Need better access at Rockville |
| People working from Shady Grove would not take metro to work if transfer every 30 minutes. Just make it every 20 minutes or some thing instead and have the full route. Remember the research of why you ended the turn back service, it was pretty terrible and just ended up with a really crowded trains from Shady Grove |
| Closing Grosvenor-Strathmore station would be an extreme hardship for me. |
| My only option is Grosvenor station. Otherwise I would have to stop using public transportation. |
| Grosvenor-Strathmore is the only convenient station with sufficient parking, Medical Center will not work |
| This doesnt affect me personally, but it will affect riders who depend on consistent, frequent trains in these locations. |
| Grosvenor-Strathmore is key for park&ride commuters. At the two adjacent stations, there is insufficient parking at White Flint and no parking at Medical Center. Park&ride customers would be forced to travel 20 minutes north to Twinbrook or 15 minutes south to Bethesda Metro Stations. At that point, customers will simply drive and skip the metro. |
| Not frequent enough |
| Not often enough!M |
| My destination for work is at the White Flint metro. The proposed changes would severely disrupt my commute and be a huge inconvenience |
| the new dense development at grovesnor will greatly impact the neighborhood negatively if service discontinue.this would be outrageous in light of the approvals given for the building project. |
| Why is Whit flint open and not Grosvenor- with the longer times proposed; we would be further away and it would take longer to get the metro |
| I live at Grosvenor. This would not work for me and THOUSANDS of others, including all the new people planned to be moving into the metro-adjacent development being built |
| See earlier Red Line response |
| Do not close Grosvenor-Strathmore! |
| I dont use the line, but dont close stations. |
| Please dont close Grosvenor-Strathmore. It is essential for Grosvenor Park large community and new buildings around the neighborhood. |
| This change does not affect me. |
| dont close grovenor |
| Turnbacks were clunky before and theyll be clunky now. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Glad i am not a Red Line user, too much WMATA hate their way, yeesch.

I use Grosvenor most.

There is a whole community around Grosse or-strathmore specifically because of the metro station there.

There is not enough parking at Medical Center to replace parking at Grosvenor-Strathmore. If Grosvenor-Strathmore were closed additional parking would be necessary.

I would have more expenses getting to those stations.

You'd be getting rid of the station closest to me to ride to work and make it so taking the train at the next closest station is more difficult to plan due to travel to the station and different timing.

Grosvenor is an essential station. Do not close

Same as my previous comments.

Still unfair to riders directly outside the beltway who have no other way of getting into the city.

This station is often used by me and all of the others who moved into the apartments built BECAUSE they were near a metro stop. Don't close this station

This would make the train cars so full and have to wait a lengthy time for a new train to arrive

Ok look. Working from home is killing me. But the thought of having to wait 30 minutes to get to my windowless cubicle is enough to make me prolong this WFH torture even further.

Please don't do this and make me choose between a rock and a hard place.

The Red Line is my main line and I know myself and others need consistent, frequent service along it.

Grosvenor metro is needed for commuting by local residents

I don't use the red line.

I don't use red line

Need access to Grosvenor Metro to get to work

Closing Grosvenor-Strathmore is an unacceptable premise.

Major service disruptions have occurred in my experience when stations are closed. I'd be concerned about overcrowding and delays.

It would not encourage me to use Metro more often for commuting to work, but I think it would probably be workable if I was to use it (to/from White Flint & Medical Center)

This plan would result in commuting by car rather than taking metro at all for daily work commuting.

Trains will be overcrowded during rush hour.

Closing Grosvenor Strathmore will affect performance at the Strathmore music Center.

Is there parking at medical center? If no, who will be walking there? Metro will guarantee low ridership by making it harder to access with less trains and fewer hours.

Trains should operate every 5-10 minutes

I need to keep Grosvenor metro stop open!

Grosvenor-Strathmore MUST REMAIN OPEN. There are too many residents who live within walking distance of this station to shut it down. Metro Center is not a feasible alternative for these residents because it is not within the average person's walking distance and even if it were, the walk is along a main highway and unsafe.

No. This would drastically impact me and I would no longer utilize metro rail if the Grosvenor Station closed.

I walk to Grosvenor and if I drove to Rockville service is too infrequent.

This means I would need to get a ride to White Flint every morning. That would not work.

I bought my condo to be across from the metro

I need Grosvenor. Many apts are located here and so is Strathmore when it opens

The Grosvenor station is my home base and the one I use most often. If the Grosvenor station is closed I will be forced to abandon metro completely

We walk to Grosvenor+Strathmore station. This would require the need for a ride to another station

Closing Grosvenor Station would lead to all the people living in those apartments to just get up and leave. It would crush property value for the condos as well. There is future development slated next to the parking garage, so that would probably get cut since there isn't a station there.

Again, there will be tremendous financial and time hardship on my commute if Grosvenor Strathmore closes.

I expect to be back at work in January 2022. These head times are too long and would lead to overcrowding.

I live at White Flint. This would be awful. I would be furious at Metro if they implemented this plan. 30 minute wait? No Grosvenor metro? Do not do this. I would never be on time anymore.

And I'd be waiting out in the cold for up to a half hour. This is awful.

| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
|--|
| No no no no no ...every station needs servicing |
| We plan to move further from metro to save money on rent |
| White flint needs more trains. And every 10 minutes. |
| This is the worst plan. There is not such thing as low ridership at Grosvenor. |
| Riders in the Grosvenor area will migrate medical center which will then be crowded. Not into crowds these days. |
| Grosvenor Strathmore is a stop I use frequently and if the changes to train frequency happen, the parking at that station becomes more valuable |
| I dont use red line often |
| Closing Grosvenor-Strathmore station will directly impact my ability to use metro for commuting purposes. I would likely not utilize metro train service for commuting and instead carpool. |
| N/A |
| Too infrequent |
| I would like headways shorter than 15 minutes on the Red Line. |
| Would make commuting to work very difficult |
| i need the red line, keep the stations, trains, times |
| I dont understand how this proposal is worded. Every Other Train on the Red Line Operates Between Grosvenor-Strathmore and Medical Center seems to contradict the concept of closing the Grosvenor-Strathmore station. |
| Train operation is acceptable, but please maintain Grosvenor-Strathmore open. |
| Grosvenor is too popular to be the station to close. |
| This would not work for me as I use Grosvenor-Strathmore to go to work. |
| Absolutely not. |
| That would be completely unacceptable. |
| Again, you already basically tried this; it was terrible for those of us at the end of the red line. AND, Medical Center does not have an easily accessible parking facility for riders. |
| Grosvenor is critical to Strathmore Music venue; it should not be closed. White Flint is critical to Pike and Rose and Countys new bioscience center planning and cant be considered as an alternate to closing Grosvenor. Too much population now in the North Bethesda area that needs to be accommodated by transit. Montgomery Countys 30 plus years of planning for the White Flint sector relied on both of these stations, so both Grosvenor-Strathmore and White Flint need to remain open. Both will pick up metro ridership when covid restrictions affecting venues like Strathmore and shopping/entertainment in Pike and Rose change, and when working in offices for NRC and other nearby offices resumes. |
| Grosvenor Strathmore is a good spot and takes many people to Bethesda. I chose to live nearby because the apartments are cheaper than living in Bethesda, so closing the station may make people chose to live in Bethesda in which point they could walk everywhere. |
| I use Grosvenor almost everyday when the office is open. Do not close it. Ridership will come back. |
| Grosvenor-Strathmore station should not be closed. |
| This extreme delay interval between trains would make Metro unusable for many common tasks. |
| I dont use the Red Line out there |
| Considering I live at the Glenmont station, waiting at a track for 30 minutes or more is not conducive to my work or lifestyle. I would drive instead. |
| This is a travesty for people who live there. My family used to be here and I know the area well. A despicable solution. |
| This schedule wouldnt enable me to commute to work; I would have to drive. |
| Not enough frequency at Grosvenor and north |
| Thirty minutes is too long to wait for a train. Will put riders into cars. |
| This may negatively impact NIH workers. |
| This is doable, but it deals a serious blow to outer Maryland suburb service until/unless the Purple line rematerializes. |
| There is not enough time in a day to have to wait 30 minutes between trains. This is a crazy proposal. |
| 15-30 minute waits are too long. |
| Unacceptable |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

15 minute intervals are too long. I anticipate working from the office in 2022 and at 15 minute intervals, I could not trust metro to get me home in time to pick up my son from after school care.

I am not impacted by this - but it sounds horrible.

Keep Grosvenor-Strathmore open

My local buses do not run on the weekend, which is how I get to Medical Center. I need the ability to park at Grosvenor, when needed.

Before the pandemic, this station was packed at rush hour - hard to find a parking space, every train packed going into town in the morning. You do realize that the pandemic will end?

Shady Grove needs to be 15 minutes

It would be better if trains arrived every 15 minutes in Shady Grove as well. Since it's the end of the red line it is unfortunate for those who commute from here when trains arrive in 30 minute intervals.

Grosvenor Strathmore station is a huge convenience and great connection are. This station should not be closed.

I do not use the red line.

I travel to work every day from Grosvenor

Silver line rider

Proposal will not adequately serve customers during rush hour times. Anticipate overcrowded trains, alienated customer base, and double commute times.

Headways are too long to ensure reliability of service. I would rather drive a car if thats the case, especially if I have an appointment.

The wait time would make me want to by a car and drive. I am a public transportation person and I hate traffic. This is horrible!!!

Too long a wait at Rockville for my daughter and many other people with disabilities who live at Town Center BECAUSE of the Rockville Metro

15 min intervals please including Grosvenor station

I rarely take the red line outside of downtown, so this proposal would not affect my typical usage of Metro.

What a stupid proposal. Why close the station. Thousands off people depend on it. Especially with the new residences proposed!

Dont use red line

this is insufficient service

But I dont take the Red Line.

Huge burden on accessing home walking distance to Grosvenor station.

Seldom ride the Red Line.

Need more frequent train access from Rockville

Reducing service hours is better than eliminating service in some locations.

Reducing service to forest Glen and white flint would cause drastic impact on my essential worker commute and prohibit me from using metro services at all sending funding that I am provided by employer to the parking services locally vs having it be funneled into public transport and would add additional cars on the road creating a negative environmental impact as well

Grosvenor must remain open.

Terrible!!! Grosvenor Strathmore is critical to the Tuckerman, Old Georgetown Rd environs. The loss of that metro station would cause me to rethink tanking metro and drive instead.

For environmental reasons and to reduce traffic congestions, WMATA should make Metro train riding more user-friendly. The best way to do this is to run trains more frequently. The frequency of train arrivals should thus be *increased*, not decreased at Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen. European cities encourage their residents to use their mass transit by running more trains. Trains in London, Paris, Berlin, Munich, Rome, Brussels, and Madrid arrive every few minutes. WMATA should do the same for residents of the Washington DC area. Otherwise, our nations capital and its suburbs will become ever more dependent on vehicular transportation.

Please dont make these changes!

I could deal with this. It would just mean a longer commute, but my stations and hours of work and play would be accomadated.

Would not use metro in this event.

Service every 30 minutes is not frequent enough to make using Metro worth it. I would probably drive instead.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I'm an essential worker.

I dont use this section of Metro.

It does not make sense to close metro stations due to low ridership when reasonable models predict numbers will return to pre-pandemic levels once vaccinations have been fully deployed.

I do not use Red line

I don't travel the red line

Removes transport to a major cultural venue, further stratifying culture consumption.

To get to Georgetown University Hospital you need to travel from Shady Grove to DuPont Circle to reach the complimentary services. For cancer patients and the elderly this service needs to be there and more accessible to make ends meet

Absolutely not. If you're closing a station, at the very least you will need to increase trains to make room for the additional riders that will be utilizing nearby stations.

It would be preferable not to close Grosvenor-Strathmore since it is the only station north of the Beltway that has trains arriving at 15 min intervals. If that were to happen, at least White Flint should then have trains at 15 min intervals.

Medical Center is too far to walk to from current Grosvenor-Strathmore station

Reduce wait times between trains and make it easy for people to get where they need to go

This would make it very difficult to get to work

See Previous Comments.

DONT CLOSE GROVESNER!

Closing Grosvenor would be a disaster. Medical Center is further out and does not fill the same need as Grosvenor. You would be forcing many Bethesda area residents to drive who would otherwise take Metro if Grosvenor were open. Cutting off your nose to spite your face. A sure recipe to further decrease ridership and inconvenience many, many people.

If Grosvenor closes I will just drive. I would never again take metro. Grosvenor is the most important station to me.

I use Grosvenor-Strathmore as my primary station. Like me, there are many other individuals who live within walking distance of Grosvenor-Strathmore. There are many more apartment buildings and homes in the vicinity of this station than in the immediate vicinity of White Flint or Twinbrook. It would make more sense to close one of those stations. Also, what about all the patrons who use Metro to travel to the Strathmore Music Center, which is literally connected to Grosvenor-Strathmore by a pedestrian bridge? If you close Grosvenor-Strathmore, you would greatly diminish patrons access to the Music Center.

Dumb

There has been transit oriented housing built at Grosvenor-Strathmore

Once again, scrap the silver line stations, before these changes.

This would harm most of the people in Maryland who rely on WMATA

This proposal would be accepted if the other proposal is to close the station. I've lived within Grosvenor park for nearly a decade and use the train to access the city for work. Thankfully my station, New York ave is on the red line as well. I think it's important for most residents that live within walking distance to the station to continue to have access to the station. There are many apts and condos that were built ride on top of the station to gain access to the service. Unless there is going to be bus service provided to other stations close by, I think it would be a real disappointment to see this station closed.

This will not be acceptable during rush hour downtown

30 minute headways are unacceptable and will lead to a death spiral for Metro rail as people start buying cars. I will use Metro service for commute and non-commute trips, but would most likely try to work from home more often if service is cut.

With new developments rising up in the area I think it would be a mistake to close Grosvenor station. Running every 30 minutes may work instead bc of lower ridership.

Closing Medical Center makes much more sense than closing Grosvenor. Or White Flint. Grosvenor is heavily populated and it has parking. Have some common sense!!!!

Dont ride the red line

You will lose more riders by forcing them to take crowded trains when the virus will obviously still be circulating.

I do not ever take the Red line so I cannot speak on this.

No affect on my daily commute.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I dont take the Red Line much, but I hope youll work with the Strathmore to provide shuttle buses to their venue in lieu of having their own stop.

quicker than every 15 minutes preferred during peak

Do not close strathmore!!!

Grosvenor is where I live

Please do NOT close the Grosvenor Strathmore station! It has adequate parking to be able to access downtown, is extremely useful for accessing Strathmore, and is a bridge station between Bethesda and Rockville, which given the buildup at Pike and Rose, becomes important to be able to go even from that area to Bethesda or Silver Spring.

This would greatly impact my ability to get to and from work.

This is my closest metro stop and the next closest requires over a miles travel.

I use Grosvenor Strathmore

Closing stations should simply not be an option.

15 minutes is too far in between cars.

Closing Grosvenor is not an option that is acceptable

Don't close Grosvenor Strathmore!!!!!!

This would severely impact our livelihood and mobility.

Grosvenor Station is critical for a large community and in particular for staff from NIH and WRNMC.

I rarely use this section of the rail

Sounds like a bad idea, but better than closing stations.

If cuts are necessary, this seems sensible given ridership needs in the core Metro area compared to stations that are farther away from downtown.

Im handicapped and need to access Grosvenor-Strathmore

I do not take the red line to/from work.

It will add commute time but it is doable

The Grosvenor station is open to cold air/winds and summer heat/humidity that have both comfort and medical impacts for riders. Prolonging exposure for medical reasons and our aged population is very concerning.

Closure of Grovesnor-Strathmore means I would cease using metro.

DO NOT CLOSE GROVESNER!!!

Once again, running trains only every 30 minutes leads to crowded cars.

DO NOT CLOSE GROSVENOR!

Would be an absolute disaster and make Metro unusable when I used it daily.

Wheaton is my station and 30 min waits are tough

Keep Clarendon, Virginia Square, and 38B line open and have ways for people to get to Bethesda MD from Washington DC.

Strathmore is how you get to concerts.

Metro would no longer then be a commuting service my family could rely on.

We have kids who use the metro for school and will need to be able to walk from the train station to home. If grovesnor station closes that will be impossible.

N/A because I rarely ride the red line.

There is a real problem making medical center an effective terminus. There is no parking there.

No! Lengthens my commute by up to 60 minutes

Too long between trains

There's no parking at Med Ctr!!

Still too infrequent for rush hour commutes. My wife and I use the Takoma stop, so it wouldnt really affect us except for a longer wait at rush hour.

A terrible idea for regular Grosvenor commuters.

too long to wait for public transport

Doesnt affect my commute.

KEEP GROSVENOR STATION! This is ridiculous.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

As previously said, wait times of 30 minutes for an already long commute is not acceptable

the longer intervals not only between Medical Center and Silver Spring but from White Flint would make Metro useless for commuting. It is a destructive move that I see as a way to put pressure on the federal government to provide the level of support to metro thats needed.

I dont use the red line.

The redline train at grosvenor is standing room only when I got on pre pandemic. I'm not sure why it's thought to have low ridership

Do not close Grosvenor

This is a major point of connection for both people commuting on the beltway and from lower income areas. Grosvenor Strathmore is a vital station

I strongly urge you not to close Strathmore. And if you were to anyway, having trains come every 15 minutes at the next station over is just insulting to everyone who has to make the trek due to the closure. So many Strathmore riders walk to the station, they cant easily access another station!

Dont ride the red line that far north

Please keep grosvenor open.

30 minute headways are far too infrequent to make Metrorail a viable form of transportation.

When the pandemic is over I plan on returning to the Metro for my daily commute, with 10 rides per week. This proposal would eliminate that possibility, which is the main reason I chose to move close to grovener strathmore station for work a few years ago.

distance between Medical Center and White Flint is several miles, too far to walk, infrequent bus service on Rville Pike, Keep Grosvenor open.

No. It would add 30 minutes to my husbands, sons and my commute. I need to pick up my children from school and will be late.

During regular (non-COVID) times, red line trains are so packed even as far out as Brookland/CUA and even when spaced out every 4 minutes that it can take waiting for multiple trains before you can even fit in one. Trains every 15 minutes would introduce too much uncertainty in the time it takes to commute to work, because missing one would mean waiting another 15-30 minutes (or more) until you can get on a train. Red line trains should be more frequent--at least every 8 minutes.

Grosvenor and Cleveland Park are vital and must not close under any circumstances.

I ride to three of these stations, including Grosvenor. My condo is right at Grosvenor and I need this station.

I live off the red line so this wouldnt work for me.

those two stations I travel through mostly. But again, the change in timing of trains for rush hour is an issue.

All of these proposals to cut service to the outer suburbs will have the inevitable result of putting more cars on the road.

Dont tend to need the red line.

Commuter trains need to operate more frequently than every 15 minutes

Have used Rockville station before and need more frequent service.

I do not travel to these stations.

15 minutes still a long time to wait

cannot cut out stops on a direct rail line; given where people live, they should be able to catch the train nearest to where they can

30 minutes between trains is not enough for riders beyond Grosvenor-Strathmore.

This will add 1-2 hours to my commute every day, based on the need to get to Medical Center and the fact that with the variability of bus timing and weather, plus my requirement to have a hard start time as a commissioned officer that works downtown, I have to depart conservatively early to ensure I meet the job requirement.

15 min trains during rush hour will mean I wont be able to get on a train into the office. So I will probably have to not take metro.

dont use red line much

Would significantly add to my commute time.

We use the Grosvenor stop! The others are too far to walk to!

I would be in the every 30 minute zone which is not feasible for my work downtown. Missing a train would mean possibly missing an important meeting and/or being stuck in the cold or extreme heat for a long period of time before the next train.

Again, Metro is being shortsighted. Because of the pandemic, ridership is significantly down. However, once the pandemic has ended, ridership will increase. These stations currently have low ridership because of the pandemic. Most previous Metro riders are working from home and there are not in person events. This is absurd.

The closure of Grosvenor-Strathmore would devastate the arts activities at Strathmore.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Again, closing some stations due to low ridership is not helpful for people who live and/or work near those stations. Please do not close any stations.

30 min from shady grove is too long time of a wait in the rush hours

Again, I think trains on the red line will get overfull if they dont run every 5-10 minutes during peak times.

Depends on if I need to travel to this area, which I have not confirmed.

This would impair the medical center area medical personnel

Do not close the Grosvenor-Strathmore station

See last comment, but there are many apartments and condos near Grosvenor. Driving to White Flint and waiting up to 30 minutes would add so much time and cost to the commute.

The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station!

I need Grosvenor Strathmore to remain open for my public transit needs.

We almost never use those stations that would see longer wait times

Again, this is not helpful for me at the ends of the red line, which I frequent. However, at least it is only one station. Still not good for those who live near there!

I depend on the Grosvenor Strathmore station.

This station is a commuter spot so once things are back to normal ie 2022 ridership will be up

This is similar to a question I already answered and this is incredibly complicated and will cause many more people to drive to stations rather than walk there because they will no longer be close to their houses

Unacceptable. Half metro salaries and enforce turnstile skipping instead

I need the Grosvenor strathmore station open

We greatly depend on Grosvenor. There is no parking at Medical Center

closing Grosvenor is unacceptable

I cannot commute to any of the proposed station here so please dont close Grosvenor-Strathmore :(

This would no longer be a worthwhile alternative to driving.

I don't ride the red line

I guess this is fine for me. Sucks for those people though

Grosvenor station must be open for easy attendance to the Strathmore Center of the Arts.

This will not work. There is no way for riders to get to Medical Center by walking (very unsafe and no side walks across 270/495 bridge). There are thousands of people living in Grosvenor who commute only to Medical Center (for Walter Reed and NIH). Closing access of Grosvenor would be a disaster. If work opens back up before 2022, the ridership will certainly increase. Many people who live in the Grosvenor area have been teleworking this past year. I dont think that the data from 2020 or 2021 on ridership is fair to make a judgement to shut down a station.

Not feasible during rush hour.

Trains every 15 minutes is not reliable and makes metro a poor alternative to ride sharing apps

Please do not close ANY metro stations, especially Grosvenor-Strathmore.

This still seems not ideal for all of the stops further out in Montgomery County (where my family lives).

Keep Grosvenor open - many people bought condos there due to proximity. Also hoping the Stratmore reopens!

I rely on Grovenor station and would have to figure out where to leave my car or go to another station.

As stated previously this could impact me significantly.

Dont use that station.

Once the pandemic risks subsides the grovesnor-strathmore station will be as important as ever to the rockville and bethesda community. This plan will have dire consequences.

Planning as though pandemic ridership levels will continue in 2022 is harmful.

Do not close any station

More trains are required.

Again, headways would be too long to make Metrorail trips attractive to me.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Absolutely not. How the hell am I supposed to get to work with 30 minute arrival times? Absolutely unacceptable.

I dont use the Red Line. If I did, this would be unacceptable due to crowding/COVID-19 and general timeliness.

30 minutes between trains is to long.

This will not work for me or anyone that take metro train

I live in downtown DC and work in Rockville. Its already a long commute but decreasing the number of trains would make that an even more torturous commute. In addition, the statistics say that more people have moved to the suburbs and will need options for coming into the city. Making it more challenging to take convenient public transport will increase traffic and pollution as more people drive in.

If close Grosvenor, Ill stop taking the metro.

At the very least, Twinbrook should be one that arrives every 15 minutes. That would allow people living closer to Shady Grove/Rockville the chance to at least catch a bus.

in order to go to another station I have to drive and pay parking or wait for a bus.

just rob bezos, jesus christ

Stop proposing these draconian measures. The low ridership is directly correlated to the current pandemic, which will be over by 2022. Stop trying to run this like a for-profit enterprise and instead remember that youre a public service. People live at Grosvenor and have paid millions in taxes for that station.

Not frequent enough.

I live at Forest Glen, this would not work for me, I would have to drive to work

I strongly disagree with the closure of a metro station.

My stop of Grosvenor. Closing that station doesn't work for me

I plan to commute from Shady Grove into DC. This would be a disaster.

Need good red line for commute

I do not ride the red line to these stations.

Post pandemic this will not work when there is a return to higher ridership. This plan makes it look like metros advisory board is actually trying to close the entire system down and leave DC as a city without a public transit system.

Same as previous - Closing Grosvenor would be the biggest inconvenience to me.

The Music at Strathmore would loose patrons.. This station just completed a major garage renovation.

I would probably cease to use the metro if the Grosvenor-Strathmore station is closed.

That's ok! Better than closing Grosvenor Station.

This doesnt affect me personally but will cause unnecessary crowding and will disenfranchise communities by limiting access.

This will kill Strathmore music center

I would opt to come in less if my commute took longer. Md has only 1 means of public transportation for almost as many people as Va. We have no bus service that goes into DC. No car pool/vans/slug lines. If you cut the only line we have, this is going to create problems and less ridership.

Please see previous comments: people require more frequent trains to get to and from work. As cost of living in the city is exorbitant for many and living in these suburbs is the only option. 2 trains an hour is not acceptable and will only push further decrease in ridership as driving would be a more dependable option

Absolutely not.

If this happened, I would stop taking metro.

People live here and chose to live here based on that metro stop why would you make it more inconvenient to get around the metro it's already not great. Maybe there should've been better budgeting with the purple line and we wouldn't be in this situation. Or maybe if the silver spring station build had been better managed you wouldn't have to take stops away from people.

This would disrupt the transit system. Bad idea.

Similarly to my previous response re: red line trains running every 15 min - I believe that this is unreasonable to do particularly during rush hour hours (think it is less an issue outside of rush hour).

This measure forces more cars in the roads and also delays commuter times.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

By January we will be post covid and ridership back to normal. The proposal would be wholly inadequate. In normal times, even trains every 5 minutes were full at rush hour. The proposal is simply ridiculous.

Do not close Grosvenor - People and local Gov made development plans based on Metro. To late to close the station. If you do close it will metro refund the tax dollars MoCo and Maryland pays to metro>

I will not shift to medical center, I will start driving to work instead

This is smart planning. In-district is much different than commuter service to MD/VA. But 15 minutes between trains in-district is too low.

Again can you explain to me how long-term closing stations and reducing public transit is good for DC or for the climate. We need to make transit easy and driving HARD and expensive.

This proposal goes in the wrong direction, discouraging ridership.

the delay in train arrival times would detrimentally affect my commute.

Many people use the mines to get south to medical center. Every other train would cause crowded trains to medical center.

I use the Grosvenor-Strathmore metro station that I understand will have trains arriving every 30 minutes. This will be very challenging during rush hours.

I believe I already answered this question, but there are a LOT of us who rely on metro to get to work in the morning. Trains every 30 minutes is simply not going to work.

I use this metro station to get to work and back home

without strathmore grosvenor I would not use metro

I would have to consider driving to the MARC or something else to get downtown in a direct way.

This will negatively impact citizens as we return to normal after the pandemic.

This is making it hard on us. YOU know that

Increased frequency from 15 to 5 minutes at all other red line stations

As state previously

Grosvenor-Strathmore is my station - I will not use the Metro anymore if this happens!

As in previous comment, I commute Grosvenor to Medical Center, this proposal would mean I stop using metro entirely and likely have an unsafe commute.

My disabled daughter works at NIH. She takes the Metro. It would be an undue hardship on her not to have trains to Medical Center.

i rely on the red line to medical center running every ~5 mins during rush hour since arrival times arent always accurate and delays can be expected

No goes to medical center except during work hours and you cant park there. keep grosvenor open as it allows those from fartgher away to come and park. its been a station for years and close it now?

Shady Grove is my pick up point from Frederick

Do not close Grosvenor-Strathmore and keep trains starting at Shady Grove every 15 minutes like most of the other stations!

Please DO NOT CLOSE GROSVENOR STRATHMORE as it would drastically affect my commute and those of hundreds of people in the area, where this station is their hub. It would be the end of the Strsthmore Cultural Center.

Do NOT close grovesvenor metro.

Need Grosvenor-Stathmore open

I wouldnt be able to get to work on time

again, makes use of metro less appealing

This will make it difficult to get to work at the NIH campus.

Please dont close stations.

These are incredibly busy stations; now you want to make them even more crowded and unhealthy.

If you close Grosvenor-Strathmore, trains must arrive every 15 minutes at White Flint as well.

Please do not close Strathmore station

Doubt that make sense from a population density or financial need perspective

terrible idea, The worst idea of all the proposals.

We need more frequent service during rush hour

Grosvenor station provides access to Metro for my family.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Grosvenor is essential to my commuting needs - I cannot take any other station

The train must stop at Grovsnor!!!

I rarely ride Metro in that area.

We are in walking distance of the Grosvenor-Strathmore station. Taking a bus would add another layer of complication. Would prefer less frequency over closing the G-S Station.

I dont use that station but Im sure it would affect other people.

I rarely take the red line.

My commute into the office in DC is normally 1 hour door-to-door using Metro and walking. With this plan, my commute could easily extend up to 90 minutes or longer, especially if I just miss a Red line train at Forest Glen station and have to wait 30 minutes for the next one.

Closing the Grosvenor Strathmore station would be detrimental and catastrophic to myself and the community.

I take the red line in the areas with greater headways.

This makes sense. At least riders on the west end of the red line can avail themselves of MARC

Please do not close Grosvenor-Strathmore Station. With vaccinations steadily growing, commuter stations like this one will certainly have more use by 2022.

Either of those 2 stops are too far walking distance for it to make sense to want to use the metro (40 min+ walk)

If you close Grosvenor-Strathmore, you're lengthening my commute AND forcing me into my car, which increases my transportation costs. I don't want my commuting time increased too. At that point, it makes sense to drive rather than take Metro.

no

This will likely not affect me.

I live next to Grosvenor and was planning on using it to get to work.

Closing Grosvenor Strathmore would significantly impact my travel plans.

I dont use this part of the line

Do not close Grosvenor.

Trains need to run more often

Closing down Grosvenor Station would make it incredibly difficult to move around the area because the buses do not run reliably enough to ensure that we could make it to medical center or white flint stations in any definite time. When the station temporarily closed at the beginning of the epidemic my commute times were at minimum doubled, and often tripled, because I had to wait for busses to get to places that were easily accessible previously. Closing down this station would cause a lot of difficulty in the lives of the people in this area.

Same comment on surging red line trains as needed

Similar to one of my previous answers, this would be a disaster when there are unexpected delays, causing trains to arrive to the station jam packed resulting in having to wait an additional 30 minutes for another overly packed train or abandon metro altogether for Uber or Lyft.

Grosvenor Strathmore is my metro station and I cannot go anywhere without it. As soon as Ill get vaccinated, Ill use the metro again

I don't use the red line

Grosvenor is a key red line stop with important access for parking and walking riders

Please do not close Grosvenor. There is nowhere to park at Medical Center Metro.

I do not ride on this portion of the system.

For one thing, I live at Grosvenor-Strathmore and specifically chose this location for its proximity to the metro station. Secondly, every 30 minutes is completely insane, particularly for post-pandemic rush hour.

This is a terrible plan.

I dont use the red line.

Please keep Grosvenor Metro station.

I dont think I understand this one. Not sure how it is different from Proposal #2.

sure, the c4 go there.

We need Strathmore to be open

Not at shady grove. Main commuter hub. That train need to come more often. Even when it came every 8 minutes sometimes it was too full.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Greater frequency is required for these stations.

Too many stations at 30 minutes. Reduce the number.

I work in silver spring and this would cause a major hassle for me especially as these metro stations are outside and above ground. To do this in the winter would be hard. Instead I recommend to do it in the warmer months.

See previous question - parking is an issue and 30 minutes between trains is wayyyy too long to wait.

Grosvenor metro station is very useful to go to Strathmore and i use it regularly

trains every 30 minutes to shady grove do not make sense given the heavy use pre-pandemic

I know individuals who would need to access places that have low ridership including twinbrook and glenmont. The essential workers will still need access who live and access these stations.

Public transport in this area is already limited - why make things worse? Surely, we should be encouraging more use of the facilities we have rather than doing things that will simply result in more people driving their cars more often.

Please do not cut down on operating times as many of the residents who cannot afford private transportation rely on the metro for essential needs such as transportation to jobs.

You would need to provide accurate and reliable arrival times somewhere so that people do not waste extra time waiting on the platform

This proposal works for me because I infrequently use this part of the Red Line, vs. daily use of the Orange/Silver Lines.

Frequency problem

Similar to the previous response, the entire community would be affected by this closure. Home values, businesses, etc. are all affected in a negative way. Also, the proposed stations do not have adequate parking available to facilitate an influx of riders who would need to use these other stations. The communities around all metro stops are built with those stops in mind.

It will need to be every 16 minutes

I rarely use the Red Line.

30 minutes is too long a wait in the winter or middle of the summer and not adequate service for those commuting. The platform at White Flint can get very crowded and unsafe.

Inconvenient, but does not cut off total access. Would need to ensure trains dont overfill and leave passengers stranded.

Use Shady Grove and Rockville stations and this adds a burden to travel and transfer to buses

But I am not using that line usually. I can see how this would impact people who do.

30-minute headways make metro unreliable for workers, which hurts everyone

Crappy metro hours leads to low ridership. All of these terrible ideas will continue to feed lower ridership and lower revenue numbers. You're stuck in a broken cycle you need to fix.

This would cause too much disruption of my rest. I propose trains every 15 minutes to get to a hub like fort totten then every half hour from there so its really 15 minutes to get a green line train then 15 minutes to get a red line train for example from the hub. Have trains go back and forth from single line end to hub and some go the full route to make it every 15 minutes to some train everywhere.

Also there is a high density of apartment/condo buildings right next to Grosvenor metro. You would not be going green by forcing many people to start driving there vehicles.

I need Grosvenor stop.

Ridership is already difficult in the MD area, this would make it significantly more challenging to choose metro.

Medical center needs consistent arrivals all the time!!

No parking at Medical Center.

Work in office starts next year. Its not okay to close these stations as everyone will be going back to work.

I go from work downtown to events at Strathmore. I would then instead have to drive vice using metro.

If Grosvenor-Strathmore station is closed, this would make it incredibly difficult for me to get to work. I would likely need to move apartments in order to make my commute easier, which would be a huge burden.

I have been able to walk to Grosvenor-Strathmore, saving fuel and getting exercise (needed the garage when I knew Id be coming home after dark). If having to drive to Rockville to park, more time and more CO2.

If the closure were temporary, then it would be OK.

Why would closing grosvenor due to low ridership impact rockville?

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Medical Center has no parking and the bus to that station does not come anywhere near me.

Get what you wish for... if the proposals intent is to adapt to fewer riders, one way to guarantee that is to run every 30 minutes. Packed trains and stress over consequences of missing a train will drive poor ridership and anger at Metro.

Government/other work offices near the end of the metro lines would be severely impacting "reverse commuters"

A

I would have to stop taking the metro completely as this would destroy the whole idea of taking the metro to get to work. Driving to another station and waiting there would make me late to work daily and I would have to stop riding completely. I can't even believe metro would think of doing this to the Grosvenor riders it's insane.

I live within walking distance of Grosvenor Strathmore and this would significantly inconvenience my commute.

See other comments

As previously state, I purposefully live near Twinbrook metro in order to commute downtown, at 30 minute intervals I am unlikely to find space on trains during rush hour intervals

I rely on Grosvenor-Strathmore. Closing it would be a huge loss to me and the rest of my community around the station.

Eliminates public transit to Strathmore Music events.

This is a horrible idea during rush hour!!!

Extending the number of stations with less frequent trains is not serving the community.

I use Grosvenor. I would need to drive to Medical Center or the one north to me, find parking and lets say traffic on Rockville pike is already rough enough.

See previous comment.

Similar to my answer for proposal 5, this would really affect NIH workers who live nearby the Grosvenor-Strathmore station and who commute to the NIH, myself included. We would all need to start driving in and parking at campus, where parking is competitive. Some of us may even need to purchase cars. Please reconsider closing this station, many NIH workers rely on it due to the proximity to campus.

The walk between stations is too dangerous and lengthy. Grovesnor Strathmore station is a safe, close, and guarded location from traffic . People probably don't know it's open.

Waits are too long. To increase ridership you must decrease wait time.

Rarely take the Red Line

I get on at Shady Grove. every 20 min is much better. Otherwise, we might as well take MARC

Dont provide sub- and ex-urban metro services until vehicle ticket reciprocity is implemented.

I dont travel that route, ever

I would prefer that the 15 minute rides stretch to the Grosvenor station.

As I mentioned in a previous answer, without schedule that's tailored to the rush hour needs, a lot of people will accumulate on the platform and that won't be safe for multiple reasons.

This is completely unworkable for me. I need Red Line Grosvenor Station Access to get to work or to DCA airport for work travel. I moved recently to be 1/4 mile walkable road Grosvenor Metro Red Line station.

In 2022, Ill be using either Twinbrook or Rockville stations and I have concerns about the 30 minute frequency at those stations under this proposal.

Need Grosvenor-Strathmore open for chorus rehearsals

Do not close Grosvenor! I'm sure once the pandemic is over, ridership will get better.

Grosvenor/Strathmore will be highly used when Pandemic is under control and should not be closed

As long as I know the schedule, I can work with it.

Do not close the Grosvenor station!!!

I will lose consider commute time if Grosvenor-Strathmore station is closed

Not a smart move - the people on the other side of the red line suffer the most.

Many residents still depend on Grosvenor station to go to work, etc.

Closing Grosvenor-Strathmore would not work for me, so this question is irrelevant

I need more than one train every 30 minutes at Wheaton.

I do not plan to use the Red line.

i rarely go to the far-out stations.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This would be highly disruptive and inconvenient for many government employees and their families who rely on this route daily, especially those working at NIH. It would also bring a great deal of stress which ultimately is transferred to work, leading to a decreased production and efficiency at NIH.

Running trains every 30 minutes will not accommodate riders once the community is vaccinated.

the next closest parking is quite far in terms of time during rush hour

See previous slide

Use grosvener

Please don't close Grosvenor station

We need to keep open the Grosvenor Strathmore metro station, people need it to get to work and to attend events

I depend on the station to get to work and get groceries since its one of the few stable modes of transportation that isnt late like the bus.

I dont use the red line

I use occasionally so this is fine with me

I rely on safe, efficient service from Grosvenor.

I commute to near shady grove. Half an hour wait times would make me just drive.

Essentially prior red line service with instances where grosvenor was closed.

do not typically use this line

Please dont close Grosvenor-Strathmore! People do depend on it as a station option

I live in Grosvenor Park and need the Grosvenor Metro station to remain open for travel.

Fewer trains on the red line will increase the time of my commute. If it increases by half an hour I will opt out of using Metro.

There is no parking at Medical Center so poor substitute for Grosvenor-Strathmore.

Grosvenor-Strathmore is now low volume due to COVID. Ridership will increase with the increase vaccinations. Very short sighted. Otherwise we will be filling out a similar Questionnaire next year asking whether we should just shut down all of metro for 2023!

Walking to Medical Center is not feasible. It is easier to work to White Flint.

As mentioned before, I use the Red Line to commute to downtown from Rockville during rush hour. Having trains arrive every 30 minutes adds significant time to my commute, and means that I may even miss a train due to the crowd waiting for the fewer trains.

This would make it impossible to take Metro to Strathmore Hall for performances, totally removing one of that spaces major benefits.

For commuters (MARC), trains every 30 minutes at MARC stations (Rockville, for example) dont coordinate efficiently with the commuter trains.

Trains need to arrive more frequently in the suburban communities to encourage riders.

Many in our community could walk or take a short bus ride to Grosvenor Strathmore. Youve got to be kidding that Grosvenor-Strathmore is low ridership, outside the pandemic.

I would likely not be using the metro if this were the case. Without a train arriving near my home every 20 minutes or so, the use of Metro would not be appealing.

Hate to see this reduction, but view it as a necessary cost-cutting measure.

Trains every 15 minutes is too infrequent if ridership goes back to pre-pandemic levels.

My one concern is the impact on platform crowding during rush hour.

Sounds good to me

Would prefer more frequent trains. It is not safe on the platforms, particularly for an elderly female like me.

Similar problems as residence neighborhoods are far away from where most work is at the moment

Closing a station is not something we should consider.

Again, work travel will pick up and trains will be so overwhelmed that it will be impossible to get to work on time. No one will want to take Metro, forcing more cars and emissions.

15 minutes is too long an interval

Grovesenor-Strathmore has a huge park and ride garage and serves a community with a lot of multi family housing. Keep it open.

Concerts, etc., at Strathmore.

Dont use the Red Line so I cant weigh in here.

I use the Grosvenor station. Parking doesnt exist at Medical Center. I would stop using Metro. Thirty minutes between trains makes it faster to drive.

We use Grosvenor to get downtown.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This would work for me as long as there were more trains during rush hour.

I believe the main purpose of this stop is to have access to the music/concert venue. Why not have special service there during events like NYC does to baseball stadiums?

This would add 1 hr onto my commutes in this area. This limits rider equity.

Not a red line user

Closing stations impacts neighborhoods and workers. This should be the absolute last thing considered.

This plan would not affect me.

Why closing this station that has parking for commuters!! Are you crazy!!!! If you really want people to ride keep it open

The time isn't that much of an issue, but I don't know if I can get to another station if Grosvenor-Strathmore closes due to a disability affecting my mobility.

I use the Grosvenor-Strathmore station consistently. Also, it serves the Strathmore Music Center, essential once that art center resumes its offerings.

This is a wide time gap between trains, and would not work during rush hour when many people are relying on trains. Trains need to arrive every 2 to 3 minutes as previously done, not every 15 minutes! If I miss a train or two because it is packed, I'm late to work!

so far I see myself leaving Metro for the Marc train

I think the description is wrong

Grosvenor is my neighbourhood station and part of the reason we bought our house. I cannot drive and this would be devastating.

I do not ride the RL regularly.

While there is a bus, it's just adding to my time to get downtown for anything. Not helpful at all.

I do not use the Red Line.

What is wrong with you people? In order to improve customer service, we will discontinue the following services. I'm now outraged by every single question on this survey.

Every 15 min for all stations on the red line.

See prior statement about this. This would increase commute times and make people drive more than take the metro system. You should be wanting to attract people, not force them away.

Again we are looking at places with large areas of people of color and low income areas in word cutting service of them who need this most.

Would this option be re-evaluated if the pandemic affect lessened?

I might be moving to the apartments around Strathmore, for the very reason that the metro stop is there

I picked living at the apartments next to the Grosvenor station because the prime location it would make sense if other stations were at least a close distance to shut this station down but they're not. As long as bus routes are still available fine. This is really an inconvenience.

This would work okay for my commuting patterns.

Again, red line commuters from Maryland already have a long commute. People will return to work but they won't return to Metro if they have to wait forever and ride a crowded train. Build it, they will come.

Never go there.

will just make the train more crowded.

I use Grosvenor-Strathmore so this is not acceptable.

Grosvenor is my stop. ALSO if you are going to close a station on the Shady Groves side of the red line it seems to me to make more sense to close White Flint. Grosvenor at least has parking for riders and from what I can see White Flint does not.

This forces me to drive to work and social events.

I use Grovesnor, except during COVID because I don't trust the idiots who run METRO to keep it safe and clean (safety has never been a priority among Metro managers). I will use Grovesnor when COVID eases. Thousands of us use the station. Stop building the purple line and expanding the Silver line to keep the red line running and Grovesnor open. Also you can cut many of your idiotic middle managers who don't know what they are doing. Start with your worthless public relations staff. talk about incompetents.

Though I don't often use the Red Line, back when I did, this would have crippled my ability to work my job. Do not implement this.

I don't use the red line.

I live in Wheaton, and this would be awful for my commute.

depend upon Grosvenor-Strathmore

Are you trying to completely undercut everything that'll be going on. At the Strathmore Music Center complex, once the pandemic winds down and things reopen? For shame.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

If I'm taking the red line I'm taking it like from a far end like rockville or silver spring so this is inconvenient to say the least.

Thirty minute time spans removes metro as a viable transportation option. It is much easier and more efficient to operate a private vehicle if the trains are 30 minutes apart.

Is 30 minute timeframe guaranteed or an estimate?

Mathis kind of proposal seems to undercut future economic health and recovery

I expect to return to an office and regular commute by January 2022 and trains every 15 minutes and subsequent crowding would be unsustainable. I would drive instead.

Closing Grosvenor-Strathmore is a horrible idea. This area has been built up significantly with more expected attractions in the very near future. G_S has been a key metro stop for commuters, which will resume normal ridership once COVID restrictions are over, and should reasonably expect to be an even busier and more used metro stop in the near future.

i dont use the red line much, but this seems like a major inconvenience for people

I don't typically ride the red line so this is not applicable to me

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

As a Shady Grove rider this does not work. We pay by the mile and should receive the service we pay for - period. Reducing service will keep riders away.

Too few.

Red line trains running every 15 minutes is not a good solution to our problems, especially in downtown.

I often go to Silver Spring and Takoma Park. I do not want limited train service there or t anywhere else on the red line!

Why are you anticipating low ridership? Grosvenor-Strathmore should remain open and you should aim for 10 minute arrivals overall.

Timing trains to arrive only every thirty minutes will make it impossible for anyone to rely on the system to get somewhere in a timely fashion. This will push more cars onto the roads.

No station closures!

We use Grosvenor-Strathmore ALL the time!

Please provide transit to low income neighborhoods.

I rarely take the red line.

The Grosvenor stop is the one I use the most. Its in a residential area close to multiple facilities. Do not close this station.

This is terrible for residents of Montgomery county who live in these areas. The roads can't handle the amount of traffic. You need to keep these open. Many things will open up again and maintaining metro service is important.

You would force me back into my car. I will not spend 45 minutes getting to a stop other than Grosvenor when I can walk to Grosvenor.

Might not impact me, personally, but I worry about others losing this vital service.

Closing any stations is a bad idea. The goal should be to increase ridership again. None of the proposes so far seem to have considered that.

Again,too many people on the train wthi wait times like this

Grosvenor Strathmore low ridership is directly tied to pandemic. Once we are able to return to work and access entertainment venues, ridership will increase.

I use the Metrorail explicitly to get to work at Tenleytown. When the station was closed at the start of CO-VID. When I got off work at 6, I wouldnt get home until 7:50p due to how long the 46 can take to pass. I may end up moving if I had to deal with this everyday.

I cannot comment on this, as I do not use this line.

Do not cut service

Strathmore is an essential station!

These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options.

Seems counterproductive.

I and so many others are able to walk or bicycle to Grosvenor-Strathmore Station, reducing vehicle emissions. Most folks who use Grosvenor-Strathmore would not be inclined to walk, but would drive their vehicles, to the Medical Center and Twinbrook/Rockville Stations. This makes no sense.

I live at Grosvenor-Strathmore and I guess one reason for low ridership is that residents that typically use the metro are able to work from home in this area. When things start to return to normal hopefully by January 2022, closing Grosvenor-Strathmore will significantly effect my travel plans to and from work.

..EVEN WHEN YOU THINK IT CANNOT GET WORSE IT DOES!!!!!!!!!!!!!!

I need the Grosvenor Strathmore station.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

No. 30min headways on outer Red Line stations is not viable for me.

Again you are closing off north Montgomery county completely this service is much needed to relieve congestion

Low ridership is temporary and due to the pandemic but changing stations will only ensure that low ridership will continue post-pandemic.

Trains need to run more often

Quite a few of the several thousand people who live in the apartments near the Grosvenor Strathmore station are elderly (including me - I am 73). It would be a hardship for us not to have the Grosvenor/Strathmore station there.

Again, every 30 minutes, even 15 minutes, during rush hour does not work.

We bought close to Grosvenor-Strathmore Metro because we prefer to take the Metro than drive. In addition, at some point one or both of us will be unable to drive and Metro will provide a needed freedom. We planned for this before retiring.

I need the Medical Center and Grovesnor stations to remain open and not wait 30 or more minutes as i will have missed my shuttle bus to work from Medical center station.

More people are moving to MoCo suburbs. You would be losing out on a lot of money closing those stations

Don't care I don't go there

Grosvner stop is important keep.

Rockville station should not have a 30 minute wait

Again. Missing the point on the wide demographic that uses Grosvenor including the density that has been built around that station. And Metro is adding another parking structure. That's should say something.

While I don't use many stations outside of DC, the long wait would hurt my commute.

I am speechless - this is forcing even more people back into cars - not the future for a healthy urban society

Again, I live directly at the Grosvenor-Strathmore station, and its closure would ensure I and most of my neighbors would switch to using cars rather than going to another station, thereby reducing Metrorail fare more than expected.

I use the red line. I suppose every 15 is better than nothing but it's not great compared to other major cities

Starting to close subway stations is a downward spiral. The less options, the less likely people will use or continue to use the metro. Metro needs to be looked upon like the Postal system. Yes some parts lose money but necessary for folks to get to work. Its usually the poorer ones that cant afford cars or parking costs that need to ride the Metro.

To increase ridership metro needs to be more convenient, not less. When you can get to most places in 15 minutes by cab in D.C., having to wait 15 minutes for a train to even start your commute is not workable.

Before NIH hardened off its campus, I could walk to Medical Center, but now the closest station to my house is a two-mile walk. I cant always take the Ride-on bus (which already doesnt come often enough or reliably enough to be commuter-friendly) so I need to be able to park at Grosvenor. Bethesda station parking is much more expensive.

Add G-S to the every 15 minute schedule. No one uses Medical Center

It is better than closing the grosvenor completely but Grosvenor tends to be a busy station but for the pandemic. There is also a lot of parking at Grosvenor

I do not personally go to this stop, but presumably many people do once Strathmore is open again!

No this would not work for me as I travel 100% via metro and I get to and from these locations regularly.

Rockville metro serves commuters from many apartment buildings. One building - Main Street - houses many people with disabilities who rely on Metro to get to work and other activities because they cannot drive.

Reducing service anywhere hurts riders everywhere. You need to build trust and reliability with riders, not make basic transportation a nightmare.

Maryland side congestion will worsen and has the same problem as any closures in Virginia. Shortsighted to make plans using covid ridership as a basis for the future

TThis is too much time to stand at the metro station especially during inclement weather when it's extremely hot or cold and the platform is very icy I think you need to think this carefully over

Please noooooo I live at the Grosvenor station and depend on it to get to work. Please do not close the station!!

This seems like a terrible idea

Again, 30 minutes is too long between trains in the upper red line. Trains are already very crowded in the morning rush when they are 6 to 8 minutes between trains.

Do it now to save money for more important things.

I worry about the impact on ridership of low frequency service.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

A parking garage/parking place is needed. Grosvenor has place for parking, but Medical center does not. Closing Grosvenor would be a significant hardship.

Having to get to White Flint or Medical Center adds too much time to my trips to DC

My commute relies on the red line, so this would make my commute very difficult, if not impossible

This is the worst possible outcome for anyone who lives in Rockville- the red line would become too difficult to travel on.

I have never been that far north on the Red Line.

That station is best travel for me,

This proposal is not applicable to me as I ride the Orange Line.

See response to previous question re: Proposal 5

I NEED the Grosvenor-Strathmore stop to make a living. If you eliminate this station, I won't be able to get to work and will lose my job. This is not ok and pathetic that I even am reading that this is potentially an option.

I think Red Line trains would be too crowded.

See my previous comments

Closing the Strathmore/Grosvenor station, would be devastating. Not only to venues like Strathmore hall but also to quality of life for area residents that depend on that station

I need Grosvenor Strathmore open !!!!

This would make it really hard for me to get to work

This is a terrible idea. Grosvenor-Strathmore is a much needed metro stop for people in lower montgomery county.

Closing Grosvenor is not acceptable and people moved further out during the pandemic will still need easy access to the city once we return, so 30 minute and more crowded trains is also not acceptable

There is no parking available at the Medical Center metro - thus getting there will be very hard - and White Flint will be only every half hour. Right now, Grosvenor is an extremely convenient and well run station.

Fortunately I work and live more centrally than these two stations.

If Grosvenor is closed, the nearest ones are white flint which runs only 30 minutes or Medical center which doesn't have parking.

Doesn't meet my needs.

N/A

Low ridership is currently due to covid-19. Fairer comparison are the numbers pre-covid.

Run red line trains every 15 minutes between Shady Grove and Silver Spring, and every 30 minutes past Silver Spring.

The distance to the next station is unmanageable.

IMPOSSIBLE! A TERRIBLE IDEA! How can you forget about all the people who live beyond Grosvenor? Trains that run every 30 minutes are worthless. They do little or nothing to make a commute by train reasonable. Do this and I would NEVER USE METRO.

Absolutely not!!!! I depend on the Grosvenor station-thats why I moved there!!!!

I live at Grosvenor

Low frequencies (and high headways) would discourage me from using metrorail.

my thoughts? this fucking sucks

Undermines housing cluster strategy, negatively impacts property values and unfairly punished those who live out there for affordability.

We live at Grosvenor metro, and this would be devastating for us. We bought our home with metro access in mind.

Please do not close Grosvenor-Strathmore station, that would make commute very hard.

Close Grosvenor and then have 30 mins between trains at the closest stations? This is a terrible decision that makes it more inconvenient for everyone in the area.

I seldom ride the Red line, but this would not be optimal.

I don't use the red line

I'd move to turn backs to Twinbrook

Again, there is parking at Strathmore. Parking is very limited at the closest options

30 minutes is too infrequent.

As a resident of one of the Grosvenor complexes, I've relied on the Grosvenor-Strathmore station and its service. Closing it would be a detriment to my commute (post-COVID).

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| DO NOT CLOSE ANY STATIONS. |
| See answer to previous question. |
| I wont be aboto get to grosvenor |
| Again, curious if you're cutting service for people who would need it more |
| Possible |
| I rely on public transport to see friends and to do my work. This will force me to take expensive taxis, adding even more cars onto our roads. This will increase the risk of accidents, and it will increase pollution, which means you are increasing the risk to public health with this decision. You are also making the climate crisis even worse. I thought we were meant to be building back better or was that just a nice phrase that had a catchy ring to it? |
| This returns to the prior service of every other car originates at Grosvenor. Provides a chance to sit for once. |
| Every 20 mins is better |
| Again, absolutely no. You are isolating Strathmore Hall, where thousands of people are going to be going to afternoon and evening concerts whenever the Baltimore Symphony starts live concerts again. Plus there are music and dance schools at Strathmore, attended by children who cannot drive. |
| Horrible impact on area traffic. People bought houses out there solely due to a Metro station. |
| its not a very good joke |
| I am completely against closing the Grosvenor-metro station. |
| People in charge are not realizing many people are using metro on Grosvenor station either live in apartment in the close by area or drive to Grosvenor parking park there since any station close to Bethesda station has no parking for park cars. Now, you close this station and all you will do create a huge mess with people trying to park at nih or white flint. People are coming up with these decisions never think through what would happen to people live on high rises cross the street on Grosvenor! |
| A lot of housing has been built along the red line in Montgomery County. Are we all foolish for doing that? |
| Na |
| I live within walking distance to Grosvenor and have no way to otherwise get to Medocal Center. Ther would need to be free shuttles to Medical Center. |
| As I have noted in earlier comments. Having trains only arrive every 1/2 hour at Shady Grove would not work for me. Additionally, as this is the end of the line that many people from farther west use to access the system, I think this would push people into their cars and abandon the system all together. |
| You have just done an enormous amount of work on the parking lot at Grosvenor. This would be silly and irresponsible to close the station. And another thing: have you discussed this with the Strathmore Music Center?? |
| Too infrequent at certain stations |
| how is this helping to remove the grosvenor site AND then increase the time between trains for the white flint site? this is causing more congestion for passengers. will you be increasing the # of trains? |
| Here again, timing would be everything. Should we have to wait too long to transfer to a Red Line train at Medical Center and then wait again too long at a transfer station downtown, we might choose to drive. |
| I take the Metro to see events at Strathmore Concert Hall (i.e., the Grosvenor-Strathmore station). Hopefully, by 2022, events will start being held at Strathmore again. |
| That is too much time between trains. |
| I don't use those stations so not directly affected. |
| This would not help me or anyone in my Grosvenor Park area. We would be shut out of any station, requiring finding a way to Medical Center to take Metro |
| I dont commute on the red line so it should not affect me. |
| Again, 30 min is entirely too long to wait. |
| I live on the red line in the area that would be directly impacted by this. I dont own a car, so metro is the only way I can go to work, get groceries, visit restaurants and venues, see friends and family. Such a proposal would force me to use other transit besides the metro. |
| The frequency at the ends of the lines would be unacceptable. |
| Oh dear! Please don't close that station! That is a very useful station for me and my family to get downtown to museums. |
| Would never be able to get to another station. Would cause me to never use metro again. Used frequently before pandemic. |
| I dont use those routes very often. |

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| We need Grosvenor-Strathmore station to stay open!!! |
| I often go to Strathmore for concerts. I would not take metro any more. |
| I only take the silver line. |
| I dont get off there so I dont know how it will affect the people who do. |
| It is very important to us that the Grosvenor Strathmore metro stay open. |
| I would need to figure out how to get to Medical Center to catch a train. White Flint would take me out the way and have infrequent trains, adding more time and cost to my commute. Also consider people coming to events at Strathmore. |
| I dont understand how the description of this proposal matches the text. Is the description supposed to say that the red line would operate between Silver Spring and Medical Center? If so, as mentioned in my comment to the previous proposal, permanent station closures should be an *absolute last resort*. |
| No parking for the public at Medical Center and not enough parking at White Flint. |
| Do not close Grosvenor station |
| How many people use the Strathmore station to go to events there that cant use it now due to Covid. This seems rather short sighted. |
| Dont. Close. Grosvenor. (See comment to Proposal 5.) |
| 15-30 minute wait times seem excessively long. If anyone misses train, it is all but guaranteed that they will be very late to their destination. I don't think this is a very reasonable change. |
| This would be a tremendous inconvenience for people who rely on public transportation. |
| Waiting 30 min for a train on a weekday is unacceptable and would prevent me from taking the train at all |
| Again, I go often to strathmore for music. Walking from another station is not feasible |
| Medical Center does not have parking like Grosvenor Strathmore. This plan is wholly inadequate for commuters in this area. |
| I dont ride Metro to those stations |
| I use grosvenor for my daily commute. This is not acceptable |
| Are you crazy? I will not ride metro again if you implement this plan. This would cause significant overcrowding on a long metro ride. |
| I dont live in an area where this would effect me |
| Would need grovesnor metro |
| I rarely use the red line |
| Medical Center is not near Grosvenor in terms of walkability for anyone living in the Grosvenor area during ideal weather conditions. During inclement weather this becomes more profound, particularly for anyone with mobility issues. |
| See previous comment about the reason we MOVED to walk to Strathmore station! |
| I use this station, so I do not want it closed. |
| I do not ride the Red line very often. |
| Closing the Grosvenor Strathmore Metro would significantly impact 10101 residents like myself. Most people utilize the station in some capacity and closing it would cause major transportation issues for the entire community. |
| I probably will stop using metro completely if Grosvenor-Strathmore station closes |
| Need grosvenor - parking, hi residential volume, if downtown opens back up it's an important station |
| I will stop using metro if Grovesnor closes. I believe this survey is a sham meant to pressure for adequate funding |
| Again here, this seems only to further decrease ridership as people decide that driving it just way more convenient. A bad idea. |
| Its confusing. |
| Grosvenor-Strathmore should not close and will not close. Over my dead body |
| Do not use red line |
| I don't use these stations |
| I need grosvenor to stay open |
| This would be a problem during rush hour. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Please keep Grosvenor-Strathmore open, it's such an important asset for people who don't use cars in this area. Also it will be such a big stretch to walk to the closest metro stop, for example white flint or medical center. This area needs a metro !!! Thanks

I rarely ever take the Red Line, even in pre-pandemic times, and so this change will have little direct effect on me.

This is a short sighted proposal - it is cutting service, making it a less attractive option, which will drive more riders away. They should open all stations 24/7. Metro should make it attractive and convenient to use, not the opposite.

Again, don't see Strsthmore and White Flint listed. Considerable development served by these stops

Up to Rockville station, not just Medical

This would completely ruin things for my family and the entire North Bethesda community

What about service to Strathmore music hall

My residence is adjacent to the Grosvenor Metro Station. My place of employment is National Institutes of Health (NIH) at the Medical Center Station. I rely on Metrorail for travel to Washington, DC locations, Arlington Cemetery, and National Airport. Closure of the Grosvenor Strathmore Metro Station is definitely NOT ACCEPTABLE.

Grosvenor is historically a heavily used stop and ridership will return. The stop is used by MANY nearby residents who have invested in housing to be near. The parking lot has just been expanded. In addition Strathmore is a large venue with need for people to be able to access without driving there. DO NOT CLOSE Grosvenor

Absolutely not. We need Grosvenor Lane to remain open with regular service. We work at Walter Reed and Live on Grosvenor Lane. We need this transportation.

See previous comments related to commute time and space on trains. Trains were jam packed with 3 min between rides, assuming we have even 50% of the workforce back, you would need more space.

Medical center is too far to go from Strathmore.

We need grosvenor station

Limited service to/from Grosvenor station would make commute marginally workable, but cause significant hardship.

I can not walk to Medical Center!

I frequent Grosvenor Strathmore for all my transportation since I do not have a car. I would not be able to get to work.

See last response

Too far for these high school children to walk on such major high ways. Unacceptable and dangerous.

If there were a substantial amount of public parking available at Medical Center, like there currently is at Grosvenor, this would be fine. The location of Medical Center is still fairly convenient to my home, but I cant get there without a car.

However, if the proposal is to close stations and to reduce train frequency, then I see that as further diminishing the viability of the system.

30 minute headways are not appropriate for a transit system. Id rather just drive.

Grosvenor is the station I prefer to use.

This proposal is also infeasible because it would cause congestion to already congested stations on the upper red line

The stations were paid for with tax dollars, etc. so they should remain open.

Essential workers who live in those communities need more Metro options.

The closing of the Grosvenor Strathmore station is not a good idea. I am a senior citizen and no longer drive. I purposely moved to be near the Grosvenor-Strathmore Metro Station. The closing of this station would require a bus ride to either White Flint or Medical Center. This will add additional time and cost. I use Metro for medical appointments and groceries.

No, this is outrageous, people will eventually go back to work to their offices in dc and need to use metro and all the stops the line had

This is a big problem for those who walk to the Metro station from home. Im having a hard time believing that there is low ridership at the Grosvenor station--maybe because parking has been a problem during construction? or the pandemic? There are many residents nearby who chose to live here because of the convenience of the Metro.--3 high rise buildings, garden apartments at Parkside Condominium, the relatively new high rise apartments built specifically for the Metro Strathmore Park at Grosvenor and Im blanking on the other condominiums next to Parkside

Fire anyone connected with this plan ASAP. Enough ransoming the core functions of the system.

I will have a much longer commute because I will be relying on different bus routes

I do not use any of the above stations on a regular basis. As a matter of fact, I have never used them at all.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I dont typically ride Red Line currently.

Many people live near Grosvenor-Strathmore, including many who work at the NIH (Medical Center).

No personal plans

Do not close Grosvenor-Strathmore! Also, I do not believe there is public parking at Medical Center (or not much) and traffic to get or from the Medical Center Station during rush hour is insane for all points north, include those of us who live in the Grosvenor- Strathmore area, which defeats the purpose of Metro saving commuters time and stress.

It would make it that much harder to ride the redline in my area.

Why are you shortchanging Grosvenor? How would concerts at Strathmore be served? Huge developments with high density have been approved and built based on the Grosvenor METRO station!!! The traffic would be unbearableâ€”gridlock.

The very reason we live at Grosvenor-Strathmore at the top of our rental budget is to be near the Metro. This would render that meaningless, and wed have wasted our money.

Definitely NO please. This would mean you close Grosvenor-Strathmore Station which the Grosvenor Community needs OPEN.

If Strathmore Music Center is open then (presumably it would be), many people prefer to use the Metro to attend events there. Traffic in the garage is heavy, and not everyone has a car. Again, people with less money, or without cars (seniors too), would be penalized. Maybe it would be okay not to have service in the middle of the day, or even mornings, but the Red Line needs to stop there in the evenings.

Please don't close Grosvenor-Strathmore station

DO NOT CLOSE STATIONS. Find other ways to cut cost. Citizens are depending on Metro to get to work, home, restaurants, etc. Closing stations will have a big impact on businesses.

15 mins seems like a long time.

15 minutes is too long between trains on the heavily used part of the Red Line, on which I depend very heavily to get from Greenbelt to NIH.

The purpose of metro is to allow those who can't afford high cost of living areas close to dc and who have to live far out in the suburbs, to still work in dc. You can't shorten the line and run less often and still expect riders to be able to get to their jobs much less punctually.

30 minute headways are not useful for essential travel/workers.

As a frequent rider using Grosvenor it would negatively impact my commute if this station was shut down

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport, so the schedule proposed here should not be a major inconvenience for me.

need more flexibility

Again, not personally affecting me, but is the same issue of paying full price for half service. Its ridiculous.

I would have to move as I would have no way to get to work in DC or my kids to Deaf school in DC. My husband would need to find another way to get to NIH.

Theres no parking at the Medical Center station, and this would create an impossible parking situation at the already crowded White Flint and Twinbrook stations. BAD IDEA TO SHUT Grosvenor.

Closer of Grosvenor-Strathmore would be unacceptable! It would increase a traffic to already congested area between Bethesda and Grosvenor-Strathmore. I chose to purchase the place to live based on the proximity to the Grosvenor-Strathmore metro stop, so I would use public transportation to work! Please do not close Grosvenor-Strathmore! The pandemic is almost over and we will increase our ridership soon!

These plans are basically ensuring that Montgomery County, Maryland residents are NOT served by Metro. We should not have to pay any money into a system that through these plans have gone out of its way to ensure that Montgomery County residents are disenfranchised. These plans mean that I would never have a reason to ever use Metro again as it would be too inconvenient to waste time on. I would become FURIOUS about having any of my tax money wasted on such a system. I am INCREDIBLY ANGRY that there is consideration of making environmentally friendly public transport even less accessible. Why are other lines not being targeted in this way????? Why are Montgomery County tax payers being unfairly targeted and disenfranchised????? What is WRONG with you people??????

i depend on the grosvenor-strathmore station to get to and from work. i have been burning through my savings with the full expectation that the station would be operating oncede got back to some level of normalcy

Not workable for me

Same comments as before. Trains arriving every 30 min at the stop near my house would have me skipping Metro altogether. It is just as inconvenient to drive to Silver Spring as it is to drive to my office downtown.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

See previous statements. Trains should come at least every 10 minutes.

See earlier comments

I am a frequent metro rider in Glenmont. service every 30 minutes is not acceptable for me.

Well, Strathmore concerts will be less attended.

Don't close stations !

I need Grosvenor! Great parking, easy access. Medical Center is a bleeping nightmare!

I'm a performer looking forward to reopening concert halls

I dont often use the Red Line, but when I do it is to Medical Center for dr. appointments. Every 15 minutes to get to Medical Center would be ok.

Red line trains every 15-30 min would make commuting a disaster. Trains would be so full, people would have to said for many trains in order to board one. I could see waiting an hour or more! Also, trains every 30 min at Glenmont and Shady Grove could add up to 30 min to my commute even if I could get on the first train after I arrive at the station. That would be unbearable as my commute is already 1 hr 40 min.

This would be a nightmare. The entire DC area would grind to a halt. The roads are already overcrowded with many people taking Metrorail to get to work. No one would be able to reliably get to work if trains ran this far apart. I know no one is taking the trains right now due to COVID but they are going to send us all back before 2022. The trains were always packed. I often ended up having to stand for the entire commute. It already takes me an hour and a half to get to work at Union Station from Shady Grove including driving to the station and parking. It would take up to two hours if this schedule were implemented. That is 4 hours of commuting each day. This proposal would destroy peoples lives. In addition, closing Grosvenor-Strathmore is a horrible idea. Many people live within walking distance of Grosvenor-Strathmore but would have no option for another station. Are they supposed to drive up to Shady Grove? That is the nearest station with any parking. Shady Grove parking lots already routinely fill up. And with the horrible 30 minute wait for each train these people would end up commuting over hours every day - 30 min drive from Grosvenor to Shady Grove, 30 min wait for a train, 60-90 min trip to their final destination = 2+ hour commute in each direction.

Would like more often than every 15 mins

Can walk to grovesnor / strathmore station... others aren't an option to do this.

If you close G-S you simply lose riders. When we can travel again safely, G-S will pick up.

I need more frequent trains at Twinbrook, and I also rely heavy on grosvenor metro for my condo. My tenant relies heavy on Grosvenor. Removing Grosvenor would highly affect condo value.

I prefer Grosvenor to stay open, given that I use it for my normal commute

Red line needs more frequent trains

30 minutes at Shady Grove is too long

If the grosvenor metro station closes, I would stop using metro.

Again the community around Grosvenor metro has some of the worst traffic in the county and this would simply compound it. And again cut the neighboring communities off from access to DC.

If Grosvenor was closes i would not ride the metro anymore nor pay for wmata parking. I would drive to work instead.

If the Metro is to serve as commuter alternative from the DC area, all trains need to be every 20 minutes.

If trains only arrive at every other station I will be less likely to take the metro at all.

Does not solve needs for the many residents living around Grosvenor, including many who do not have cars. Would shuttle buses be added to make the situation tolerable?

Do not close metro stops (see previous answer)

30 minutes is too long between trains...period.

Most current Grosvenor-Strathmore riders would switch to White Flint...closing the station, plus changing the schedule to every 30, would surely force some riders to abandon metro all together (for daily commutes, at least).

This makes it completely stupid to use Metro for commuting beyond Medical Center, which I can readily walk to, so why bother ever using Metro. The only way any part of this plan makes any sense is as a way to kill Metro without letting on that thats the plan. It is a guaranteed death spiral - service cuts that will cut ridership, cutting revenues, leading to further service cuts. In short, death spiral.

I rarely ride the Red Line, and dont think Ive ever used that station

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Again, trains are already ridiculously infrequent. This destroys the feasibility of metro as a useful option

no problem for me

This train frequency is unacceptable for a rapid transit system.

I am so sorry for you. You have a heartbreaking task.

Again, I walk to Grosvenor. I will do so again once I go back to traveling to work. If you close it then I would need to drive to another station and then park my car and then get on the train. NO NO NO, please do not close this station. I have neighbors that do not have cars. And the reason they bought here was because the station was a walk away. What are they to do? Please do not close this station.

Need more frequent service at White Flint.

The whole point of having access to metro is to lessen the need to drive a car. Very contrary to lessening our foot prints.

I live near Grosvenor Strathmore. Losing that station would be a horrible outcome for me and all my friends and neighbors.

Same as earlier question related to 30 min intervals to white flint and north.

I have been commuting to work for over seven years via metro. As a person with no automobile and limited income, it is essential that I manage my finances very carefully to keep my transportation costs affordable. Forcing me to commute to a different station would put an additional burden on me financially as well as significantly increase my travel time to and from work. Currently, Grosvenor station provides metro train service to the Grosvenor Place complex, a huge complex of three 18-story buildings, as well as two other high-rise structures close by. A sizeable majority of the residents in these buildings depend on Metro as their main mode of transportation and closing this station will create a major hardship to those affected.

No! This is terrible. There is crowded ridership at grovesnor that will pick up post pandemic. This is a vibrant community that can not get to the other stations nesr it very easily. Closing this station will result in deadened economy for local businesses and housing near Grovesnor not to mention it is a critical location from which folks switch to bus lines to get around MoCo. Please do NOT close this station ! The kids, elderly, disabled and commuters rely on it!

I ride a metro bus to shady grove and if the bus happens to be late to arrive, then the potential 30 minute delay plus delays from the increased wait time on other lines for transfers would require me to leave for work up to an hour earlier

While the closure of Grosvenor does not directly affect me, the 15 minute time between trains does.

Wouldnt hurt me but it will hurt many of my co-workers.

30 minutes is too long between trains.

I utilize almost primarily the stations between Shady Grove and White Flint to go into work in DC or to travel to appointments.

Do not close the Grosvenor-Strathmore station..

I dont use the Red Line

See prior comment. This change effectively eliminates metri as a viable option to commute to work for many people living in the surrounding area.

Bad idea

Good idea.

Where would I take the metro from when I live here because of the station? Also, where are you going to put more parking for the other stations and DC with Metro pricing for me to take the metro? NIH does not have the level and accessibility of parking as Grosvenor Strathmore, Close Medical Center/NIH, not Grosvenor Strathmore, which is not just a commuter hub, but also a cultural center in the community.

As said before, I need Grovenor station for my commute. By the way, it is unclear whether this closure is temporary or permanent.

I walk to Grosvenor and use the Metro very often, so this would be terrible.

Please don't close stations.

See prior comment, red line trains are highly congested during peak travel times. Individuals often have to wait for multiple trains to pass in order to clear a platform

I dont use the Red line.

Makes me less likely to take the metro

I rarely use the red line.

It would work for me, but it would significantly impact commuters on the upper red line.

I don't currently regularly use but could.

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Bethesda is replete with NIH employees - this will hinder access immensely |
| No useful metro rail system works with 30 minute schedules. |
| Don't close Grosvenor |
| Reduced service will continue to force people to find alternatives and continue the trend of falling ridership. Metro needs to be a better alternative in comparison to other options to retain and attract riders. |
| Again, no to all service cuts, no to greater emissions, no to making life harder for workers who rely on Metro to commute. |
| I would not take the metro to work. |
| Trains should be running every 3-5 mins in 2022 to ensure people are able to get to and from work. This is my only mode of transportation |
| As above, this would make my commute very inconvenient, probably leading me to work remotely and drive more, and thereby not contributing to the revenue shortfall |
| Si no hay muchoa psajeros se debe cerrar la estacion |
| Closing any station is not an option in my opinion. |
| I have no opinion on red line service modifications. |
| Where does that leave people who live at Grosvenor and moved there because of the Metro station? |
| How could you POSSIBLY justify closing one of the most popular stations in the Metro system? Because people worked from home during Covid? Are you not aware of how much housing development has gone on around this Metro stop so people can live close to the Metro? This is the craziest, most short-sighted idea I've ever heard of. |
| Again, this is giving up on the people who need Metro to get to work from the suburbs. If you make it harder for them to get to work by giving them fewer trains and less flexibility on timing, theyll just drive and youll lose more riders. |
| Grosvenor is an above the ground open to the elements station. Waiting a half an hour there in the winter could be very uncomfortable. |
| DO NOT close Grosvenor!!! So many of us chose to live in this neighborhood bc of the station. The pandemic will ease and things will go back to normal. Please don't close this station!!! It is a lifeline for many of us who cannot afford a car!!! |
| I use Grisvenor Strathmore station. |
| 15 minutes is too long between trains during rush hour |
| Every 30 minutes is unacceptable. Trains will be more crowded than Pre-pandemic levels. |
| I use the stations that are further out on the red line and having trains 30 minutes apart just doesnt work for me time-wise. What about the parking at the Strathmore station? How would people who park there get to the Metro train? |
| Ideally, the Grosvenor station would remain open, but if it cannot proved full service, we could adjust to this alternative. |
| This is not applicable to my travel plans. |
| Why would you want to harm the Strathmore Performing Arts Center by cutting off access?!?!? |
| I don't ride the red line only orange/silver/blue |
| I will use Grosvenor-Strathmore every day to commute! It is the only one I can easily access. Please do not close it!!! Ridership is down because offices are closed due to COVID, it is still an important station! |
| While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options are available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes. |
| It is quite far between Grosvenor Strathmore and Medical Center stations Both stations are not within walking distance and there is no convenient pedestrian walkways connecting both stations. |
| Need Grosvenor statoon open |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Predictable arrival times for trains at the outlying stations would be key to this working. People should not have to wait 30 minutes because they just missed a train or did not know when a train was expected.

During repair days we already experienced bus and other transport problems. this is a tragedy as the coming of the Metro was great years ago.

Frequency can not accommodate ridership, which would be expected to return to pre- pandemic ridership. Don't you dare use 2020 data to predict anything that except when a global pandemic shuts everything. Ridership should be expected to return with additional capacity for tourism.

Grosvenor-Strathmore is the only station available for Strathmore Hall performances, which will hopefully be happening by the time this proposal goes in effect.

Trains need to come more often on red line to avoid crowded trains.

Red line trains need to arrive every 15 minutes period.

I dont use the Red Line

This is totally unacceptable, it cuts off everyone who lives above the beltway from decent service and trying to drive to Bethesda and park to get a train faster is not an option due to traffic on 355. This is the worst idea I've heard.

More frequent trains

Not at all - closing Grosvenor-Strathmore would disrupt both my commute and my wifes commute

again, this is a selfish answer as i rarely travel that far out on the red line.

During work days when you miss a train and have to wait a FULL hour for the next one makes the system completely ineffective at moving people.

I don't see what this improves over option 1. No service is faster.

I rarely go there.

The wait time would be too long

So long as I can still park at the station when I go to Strathmore, its fine.

I need the Grosvenor Strathmore station open

These changes would not affect my commute.

Does not make sense. How do you operate a train between two stations next to each other?

I do not use this line

There is no parking at Medical Center. Grosvenor-Strathmore is a major station. There is now way that it is a low-ridership station, and it is the only station nearby with available parking. This would make it very difficult for me to commute downtown every day.

With trains running this infrequently you may as well start handing out coupons for ride sharing because it will be time prohibitive to take the metro

Living at Rockville makes this very hard

I have never used the Grosvenor station.

White Flint, Twibrook Medical Center are too far from Grovesnor-Strathmore. They are not within walking distance. I would stop using metro all together if that happens.

I dont ride the Red Line.

The pattern is not too concerning but the frequency of trains is too low.

I dont normally ride the red line beyond Dupont Circle or Cleveland Park so it wouldnt be a problem for me.

Pre pandemic the red line was often overcrowded durign rush hour, in particualr if a train was delayed. reducing the trains to every 30 minutes, if ridership bounces back will be a disaster.

The proposal text seems totally inconsistent with the description detail. What happens to Grosvenor-Strathmore?

I dont usually use red line if I can help it

I dont care about Grosvenor. But red line trains must run much more frequently.

Horrible idea. There are tons of massive apartment buildings that use Grovesnor Strathmore. What are all of these people supposed to do? Insane.

If Grosvenor has to close this would be the best option. But its not ideal as there is no parking at Medical Center. There would have to be increased bus service in the surrounding area to get to Medical Center.

Same answer as for previous proposal. the Grosvenor-Strathmore station is critical to the many people who live in adjoining Grosvenor properties and along Tuckerman Road

Look at Spain or Montr  al, their metro systems work really well. And are very simple to understand

The 30 minute wait between trains to Forest Glen would severely impact my day both morning and evening.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

If Grosvenor Strathmore closes, I will rarely use the metro

White Flint metro services U.S. NRC staff. Limited hours will impact agency staffing. It's also dangerous to have large numbers of people on the platforms during peak use. Form a safety and security perspective.

Again, 30 minute waits are really unacceptable unless you are going to publish time tables. And it isn't just the 30 minute wait at the start of your journey, if you have to change trains you could theoretically be waiting 1 HOUR during your trip.

I regularly use the Red Line and would be impacted by the more spaced out arrivals at Shady Grove and Glenmont in particular.

This would make me choose not to use Metro at all.

I don't use the red line

I think this will affect people who can least afford other options. You must consider equity in your decisions

Parking problem & traffic problems at medical center

Honestly, I have to walk at least 25-30 minutes to Grosvenor as it is...medical center would be another 30 odd minutes...the only solution is driving to it or another station, at which point I may as well just driveis there even parking at medical center for the average commuter?

We just need East Falls Church to stay open.

The metro station at Strathmore, one would think, would have a higher ridership given the possibility of normalcy following vaccine rollout

I am not personally reliant on those stations.

Anything proposal that calls for shutting down the Grosvenor station does NOT work for me!!!!

30!minute intervals would make Metro an undesirable commuting option, despite having rode Metro to DC for 20 years pre-COVID.

I would stop riding metro entirely. A lost customer forever. Please do not do this.

I DON'T want to see Grosvenor-Strathmore station closed. Aside from my response to the last question, the population around this stop is growing rapidly and should continue to be serviced.

I do not take the red line at this time

Cannot have Grosvenor closed!

There should be more frequent train services so please don't cut service to every 30 mins.

Getting to medical center, esp if needing to park and go in is exceptionally more difficult than parking at Strathmore. Ending the red line at medical center adds so much more heartburn to everyone up the red line than going the one more stop to Strathmore where there is actually OK parking options!

I don't use this line often.

No. Would not handle ridership every 30 minutes. Plus there is no parking at Medical Center and other closer in stations.

We often use the Grosvenor station and park there. This would be an inconvenience.

This would not support my expected travel needs at all.

It curtails participation in some community groups. Will there be adequate space on trains?

I work at Twinbrook so it's not ideal for me, but I would rather this than closing the Cleveland Park metro station

I pay extra to ride from Shady Grove and should have the same level of service. Turnbacks are not acceptable and will lead to overcrowding, which you don't want during a pandemic.

Again, do not use the red line, but suspicious

I don't agree. It would be a hardship for the commute and impossible to take metro at all

This sounds inconvenient when I need to use that line, but it would not impact my every day commute.

I don't use the red line.

I'm not really on that section of the red line very often.

There are many highrise buildings close to the Grosvenor station and many people use this station everyday.

Closing Grosvenor-Strathmore makes no sense whatsoever. There is no parking at Medical Center and therefore large segment of Metro users would be unable to use system.

would leave riders, workers, in large populated area without viable transportation to work, business, school, medical appointments

I have submitted written testimony against this proposed closure.

Medical center is difficult to access. Go out for local residents. Need you to use White Flint if you close Grovesnor.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Please see previous comment about how closing Grosvenor-Strathmore station could squash the upcoming project to build 1400 units of Strathmore Square residences located *at* the Metro station.

I would likely drive to work

I will be traveling between Alexandria, Va and DC every weekday once the pandemic ends. I believe this proposal would extend my travel time.

COMMUNITY AND SCHOOL STUDENTS LOO LOSE A WAY OF COMMUTING AROUND.

The 30 min gaps for the outer stations is too long.

Grosvenor/Strathmore is our most frequently used stop...we haven't used it much this past year due to COVID but expect to go back to using it once things 'open up' again.

We need Grosvenor-Strathmore kept open!!!!

There is no reason to shutdown metro because less riders have been using it due to the pandemic. More funding needs to be proposed to keep this metro open for the many of us who still use the metro on our daily commutes and would have no other means to commute otherwise. I have to take two buses to get to Bethesda from here, the 46 only goes to Medical Center. My commute to work would take an hour in a half instead of 30 minuets if the metro was taken away. The J2 to Bethesda does not go to Grosvenor, the J4 doesnt go to Grosvenor. The 6 and the 96 dont go to Bethesda. Name one bus that goes from Grosvenor to Bethesda. There are none.

Closing Grosvenor very problematic.

If Grosvenor is closed I would probably not use the metro very often at all.

Closing stations due to low ridership is undefined and limits access to cultural venues for people needing to obtain medical care who do not own cars.

This would destroy our lives that are delicately balanced between work and family

Technically, I personally would likely be fine with this change (though not the affected frequency). However, this plan (for reasons already outlined) would still be problematic for my mobility and that of others.

Inconvenience!!

Thirty (30) minutes is a long time to wait for a train, and over crowding when a train finally arrives could make commuters decide to find alternatives.

I do not ride the red line

I do not use the red line.

If Grosvenor closes then we need White Flint to run every 15 minutes.

This would cause me to stop riding metro after 21 years. It would be too inconvenient and make driving to work or teleworking a much more practical choice. It would result in more cars on the road, more traffic, and more pollution. Horrible. Why so many proposed changes to the red line but not the Virginia lines/stations? Hmm . . .

Closing Grosvenor-Strathmore would force me to move.

Again, my commute time to work will significantly increase. I have two kid and I can't make it to send them to daycare before work and pick up them after work.

Medical Center is very important due to NIH and Walter Reed but Grosvenor is needed for all the parking.

Very bad idea effect businesses and Strathmote attendance.

????????

It's important to have a line that goes to a cultural center to keep people interested in art and culture

Currently, I am working from home, so I have fewer transport needs than before.

I dont normally travel to those locations and wont in 2022.

Like the other red line 15-30 min proposal, it seems like a compromise in terms of still offering service without overly stressing the Metro staff. Perhaps something like this could be done with the orange/silver line, rather than eliminate service altogether?

Getting to work would take even longer during weekday rush hours and rush hour travel times are already too long. Driving would become more of an option which would crowd the roads further.

This would likely be confusing and cause station crowding

I use this stop to go to and from work.

Having trains arrive every 15 minutes will not be enough when people are going back to work which many believe will be later this year.

Metro is the only way to get to doctors appointments in Maryland from DC. Would mean I would need to change from doctors I have seen for years.

I don't use Metro often, but I would likely not use Metro again if the Grosvenor station closed.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Grosvenor has much needed parking. This would be a terrible idea

I do not travel on the Red line as part of my daily commute, so I would not expect this to impact my metro usage very much.

Very against the closure of Grosvenor-Strathmore as I know many individuals, from many different aspects of life, prefer the parking and convenience of Grosvenor to downtown Washington than other stations, like White Flint and Twinbrook. If people had to chose between the 3, I have always noted they would pick Grosvenor. Furthermore, on more than one occasion, people have driven from past Gaithersburg (and Shady Grove) to take the metro at Grosvenor as they prefer the parking and location of Grosvenor station

Another terrible idea. Parking at Medical Center is not possible. Waiting at Medical Center for a train continuing on to Grovesnor is inconvenient.

Grosvenor is a critical stop for Bus and Auto connections as well as large condo locations near by.

Too long a walk without strathmore station. This station serves a big community and lots of senior citizens

n/a

I need Grosvenor-Strathmore to be open to get to work.

This would be a nightmare for Montgomery a county Commuters, people using metro for special events, etc. you will drive people back to the roads.

It would be an inconvenience, I'd rather just be charged more more when I need to access these stations.

If a train is missed, the delay will be terrible for those going to work. People will resort to driving and gas usage will increase. Reducing convenience will make fewer people ride. Don't kill the metro. Convenient access to stops and frequent trains as well as affordability are the ways to increase ridership.

This plan works for me because I dont take the Red Line

Once people return to commuting to work, this will make trains way too crowded

Closing Grosvenor strathmore would be bad!! And only every 30 mi items at next closest station (White Flint) would not provide enough flexibility especially given it would be so much harder for me to get there.

Trains should arrive every 30 minutes at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

The tragedy of the Pandemic has contributed to decreased ridership. Changes are coming as people are now vaccinated and DEPEND on Metro to enable them to reach destinations.

You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!!

Where is all that money now, when times are slim?

This does not affect me personally but I would propose the same as I answer for the previous question. The station should remain open without any staffer.

Grosvenor Strathmore serves Strathmore Music Center and has many densely populated dwellings within walking distance. Nearby residents would have much more convoluted commutes without Grosvenor-Strathmore. Patrons visiting the Strathmore Music Center would no longer be able to walk from the subway station.

SHAMEFUL!!!! All in our area NEED this station. Those other stations are in NO WAY Accessible OR CLOSE!!! Are you kidding me?!!! DONT DO THIS!!!

I am very much against this proposal. As a resident at Grosvenor-Strathmore I depend on the metro for work

absolutely irresponsible idea

My commute time is no longer manageable under this scenario. Medical Center is nearly a one hour walk from Grosvenor-Strathmore.

Same with an earlier proposal, how would this work without creating backups on the tracks.

Alternate stops would require me to drive to catch the train

Grosvenor has parking; parking options at Medical Center are severely constrained, expensive, and in a closed garage, which is not safe. Close White Flint - Twinbrook is nearby.

See previous comments. GS is my local. Closing station worst case scenario for me.

30 minutes is way to long to wait. I can accept the 15 minutes, but no longer.

Metro should keep grosvenor station open and turn trains around there.

Grosvenor is a key station and one of the few with parking in the area. It services several nearby private schools and the Potomac / Montgomery Mall area. Not to mention Strathmore depends on metro for an option to reach it for its patrons.

You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

I need to use the Grosvenor-Strathmore station

I would like to have access to the Grosvenor-Strathmore metro stop.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

15 mins is still too infrequent during rush hour. U will be forcing people into situations where they are packed in too tight with too many people, especially after a year of social distancing guidelines and a pandemic that is likely to not have fully disappeared

I live at this stop and count on its service

We need more and more accessible public transportation for all, as an anti-poverty and anti-climate change measure.

This would destroy one of the reasons I live where I do. I would probably just leave the area entirely.

Would be easier to use a car

I need Grosvenor-Strathmore station because no other station is close enough to me.

This would be a fine schedule, though I am extremely opposed to the closure of Grosvenor-Strathmore.

We moved to a condo with easy access to Grosvenor Strathmore metro and would be financially affected by its closure.

See previous response on station closures. This is completely unacceptable and would result in my never riding metro again. This would destroy any chance of meaningful ridership from my home into DC as there are no nearby stations that are as accessible by walking for so many high-occupancy residences, including my own, and none have anywhere near the parking availability. Ridership has been low this year because the station was already unacceptably closed due to COVID needs. Montgomery County is even revitalizing the area around that metro stop with more shops and residences, only exacerbating the problem if the station closes. If this station closes, i will never give another dime to Metro in any capacity.

How am I to get to performances at Strathmore if the station is closed?

Keep Grosvenor Strathmore open

Absolutely not acceptable. The thousands of people who live around Grosvenor-Strathmore will not fall for some half-assed bus bridge system. It is also patently unfair to close Grosvenor and STILL CAUSE ALL YOUR NOISE IN THE NEIGHBORHOOD, ALONG WITH YOU LIGHTENING-BRIGHT SHORT CIRCUITS. DO NOT CLOSE GROSVENOR-STRATHMORE.

I live at Grosvenor and utilize the metro. If the station closes I will not be able to travel to work.

closing Grosvenor-Strathmore is an awful idea. This is a high density area they is critically important to thousands of residents who live there and use Metro to get to work and get around the DC area.

We need grosvenor strathmore station..this plan will further reduce the ridership as grosvenor has many commuters.

I work full time in Wheaton, I depend on metro for transportation.

Do not close Strathmore. Medical Center has NO PARKING so we could not use that station at all.

I do not ride the red line, but trains that arrive every 30 minutes is not the solution.

Again, I can not afford the extra commute time in childcare costs. This would be hundreds of dollars a month

Every fifteen minutes is a long time to wait between trains when you are in a hurry, but is at least better than thirty minutes.

I generally do not ride the red line, so this would have minimal impact to me.

15 minutes is too far apart. Again, once public transportation drops below a certain level of service, it is difficult to keep riders or get riders back. I am concerned this level of decrease makes the Metro too infrequent to be convenient, and will cause more riders to leave or fail to return. Having a turn-back is NOT ideal, but a modification of this plan might be a reasonable worst-case option.

Trains dont operate often enough under this proposal

30 minutes is too infrequent. 15 minutes during rush hour is the maximum time. Perhaps on weekends and off hours 20 minutes would work.

30 minutes is unacceptable.

We would no longer ride Metrorail since the other stations are too far away and lack adequate parking. Other residents, too would likely find other means of travel and Metro would suffer even lower ridership.

Dont ride red, but I do think having outer suburb traffic and inner city traffic on different routes is more efficient. Like a loop system that some other cities have on their transit.

This would cause loss of ridership, as commuter choose to drive instead of use infrequent service. There is substantial new residential housing development planned at Grosvenor/Strathmore and White Flint. This conflicts with the long planned Montgomery County Smart Growth policies of denser development near Metro Stations.

I dont use those lines

That would be wrong to close Strathmore station. There are busier traffic and no or very limited parking at Medical Center and White Flint stations.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Im against closing Grosvenor. Its possible I could use medical center but Im not familiar with that station.

Again, this is unclear to me. I do not understand how trains could arrive at Medical Center every 15 minutes and the other listed stations every 30 minutes. The frequency of trains stopping at Grosvenor is not stated. These proposals are extremely unclear and I do not see how the data collected via this survey can possibly be meaningful.

Please keep the grosvenor station

Might work for me, but not for others.

Closing stations will result in no ridership for the future. Think ahead.

I specifically bought a home at Grosvenor because of the turn-backs and ability to get a seat. You eliminated that and required me to stand both ways. Now you are talking about closing the station entirely. Shame on you. If thats done Id stop riding Metro entirely and will drive downtown to work instead.

See my first comment

There is no parking at NIH except for staff. There is some visitor parking but not for Metro riders. The 30 minute wait is too long. Appears to eliminate Grosvenor Station which is a bad idea. There are alot of high rise apartments and townhouses that currently avail of that station not to mention nearby neighborhoods that park at Grosvenor.

Horrible idea to close Grosvenor. So what happens to the Strathmore music center - how do you expect people who do not have cars to go there and enjoy their music offerings? Are you also going to close the metro garage that is used by Strathmore for their patrons as the only large parking available? There are alot of apartment buildings close to Grosvenor that have NIH employees that dont want to drive to Bethesda for work at the NIH campus. How do you expect them to get to work? The NIH employees have to go to work even with COVID due to lab work that cant be done remotely.

Do not close this station please

I don't use these lines so it would not impact me.

This is too long to wait for a daily commute

I do not take this route

I need Grosvenor Strathmore to remain open. I use it everyday.

As stated previously, I live at Grosvenor-Strathmore. I would have to buy a car and drive to work, or potentially bike. I would no longer use metro, ever. I couldnt even park at work, and board Medical Center to go have dinner in DC, as service is so unreliable and hours unpredictable. BaD.

DO NOT TURN BACK TRAINS AT SILVER SPRING.

This Metro stop is one that should definitely not be closed.

I already said why. This will be a hardship and inconvenient.

I use the Stratmore station when I attend events at Strathmore

No further comment.

Many people, including myself, commute from Grosvenor-Strathmore to Medical Center for work. It is not safe to walk between stations, and driving isnt an option for a lot of people. Closing the station would seriously impact this community. Reducing the amount of trains running is a far preferable option.

This isnt going to work for the people.

I cannot get home from Medical Center. I need Grosvenor-Strathmore to remain open and in operation.

Shady Grove line has medical buildings need to get to them...

15 is too few trains

This does not seem practical or helpful to Metro riders.

No me afecta

The closing ends access to the concert facility and would create a shortage of parking spaces at Metro stations for N. Bethesda residents. This plan would mean I would rarely use Metro in the future.

If you close Grosvenor-Strathmore Station, you will have to have trains arrive every 15 minutes at White Flint.

This would be be a huge problem. No one can park at Medical Center, so people wont be able to arrange for rides and pickups if that is the last station. Grosvenor is absolutely necessary to remain open and serve all the people who depend on it for reliable transportation..

Even though I dont ride the red line very often, I will re-iterate that I believe the world is on the cusp of returning to normal, and that so many people rely on the metro. I think it would be a shame for you all to cut services before this happens and then for you all to feel the complaints from people as it no longer suits their commute needs.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This makes my commuting more difficult. You would lose many customers around Grosvenor Strathmore.

Again, no with capital N!! Is Metro going to have shuttle buses from Grosvenor?? Ha!

I do not currently take the Red Line so this does not affect me.

I do not regularly take the red line or rely on it.

This would result in overcrowded platforms.

I do not depend on Metrorail to get to work. I am commenting as an occasional rider.

Grosvenor-Strathmore station is my home station for my commute. That stations closing, and that of its parking garage, would add a significant amount of time to my commute as I would need to drive farther out on the Red Line to park, or add an additional, time consuming bus ride to get to any other Red Line station. Further, service changes on the Red Line prior to the pandemic caused significant crowding on trains during rush hours. By all credible estimates, the pandemic will have subsided and Metro ridership should recover by January 2022. Further service cuts would only exacerbate pre-pandemic issues for commuters. Additionally, station closures of any kind are a short-sighted solution that would inconvenience many riders at both ends of their respective commutes.

Same as earlier comment -- a 30-minute wait would potentially quadruple my (rush hour) commute time (from the current 6-7 minutes between trains) and lead me to explore alternative commuting options.

Horrible idea. More train frequency at the current stops will be needed, not less.

I walk to the Grosvenor - Strathmore metro and live near the station. I don't have a way to get to other stations. It would be totally inconvenient.

I dont use these as much.

I would have no way to get to Medical Center - that would be a disaster for me.

I am indifferent as to the alternating destination schedules, however the time between trains will cause unnecessary congestion.

Please see previous comments. My family and I use the Metro regularly. Closing the Grosvenor stop will also have a negative impact on Strathmore Arts Center. Lots of people use the Metro to attend events there.

Dont close Grosvenor

Low confidence in metro's ability to maintain a schedule. Would be completely unreasonable to wait on the platform for 30+ minutes until the next train.

This would make it impossible for me to work or get food and medicine. DO NOT CLOSE GROSVENOR STRATHMORE

Please do not close the Grosvenor-Strathmore station. As previously mentioned, the adjacent stations are not within reasonable walking distance. White flint is nearly 2 miles, and there is not a sidewalk to get to medical center. This would have a significant negative impact on our community

My commute is Grosvenor to Medical Center, so closing Grosvenor would make Metro Rail unusable for my commute.

The Grosvenor-Strathmore station is just too important for the community to be closed. There are too many elderly, people with disabilities, and retired folks living in the area who depend on the service and access at this station.

Longer headways between grosvenor and shady grove would reduce ridership, upend and decimate the economies of the activity centers being built around white flint, twinbrook and rockville who are planning all of their future development based on the existence of the metro stations.

Shows at Strathmore would be hard to get to.

Unacceptable for the residents and for the visitors of the Strathmore Music Center!

Decreasing frequency would make our Metro rail system inferior and decrease ridership even more because of the inconvenience!

I am closer to DC, but infrequent stops at these stops means overcrowded cars for us.

I rarely use these stations, but do so on occasion. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

Waiting 30 minutes for a train at White Flint would make my commute much harder and mean that I would be less likely to buy a home in Rockville.

Again closing stations is unacceptable. Funds for the purple line should be redistributed to already existing metro lines.

I do take metro to visit my parents, the closest station to them is Shady Grove, it will make my travel time even longer with those time gaps

Given that there is no parking at medical center, it is not an equal substitute to Grosvenor-Strathmore

The commute to DC will not work without the Grosvenor-Strathmore station

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I dont use the Red Line.

Not frequent enough

If I need to transfer to Redline - will a train be available?

We do NOT want to see the closing of Grosvenor-Strathmore as we use it regularly and if we were to use Medical Center which is further away there is no parking. Also Grosvenor-Strathmore just did a huge parking lot expansion recently so why would that station be now closed? On weekdays it is all parked up (non COVID times) so clearly this station is highly used for commuters.

This plan will not work for me.

Too long wait time.

Same applies as previous

15 Minute intervals are okay, but 30 minutes is excessive.

Again, 30 minute headways not acceptable in my opinion.

Medical Center makes more sense anyway. Hospital staff

For many people, the Grosvenor-Strathmore station is the only reasonable way to access Metrorail.

Only because I never use the red line.

Closing the Grosvenor-Strathmore station would pose a hardship for me since I rely on it to get to work. Having trains arrive at White Flint every 30 minutes would make the situation doubly worse, and may deter me from taking Metro altogether.

Cant even believe this is on the list! The county has built up housing all around this cultural center and many schools in the area rely on the metro for student commutes.

Im most concerned about the Yellow line, but as mentioned before, if you cut service to every 30 minutes during normal work days - Im sure the majority of prior riders with commutes that are not horribly long will simply use other modes of transit instead (e.g. Uber), or go back to driving their own personal vehicles.

30-minute headway is ludicrous

30min is too long. 15min is too long on the red line.

Life will be back to normal in 2022. This will not only cause massive back ups and crowds in the platforms but it is wholly inconvenient for the riders who drive to the metro. Medical center has no parking. This plan does not take into account rider needs or the rider experience.

I have concerns about crowding at Metro Center and Union Station. They are crowded anyway, and if trains are arriving only every 15 minutes, I could be waiting for several trains to pass before I could get on one. It might end up being faster to walk and not take metro at all.

This would cause severe overcrowding on all red line trains.

I dont really use red line.

There is too great of a distance between the Grosvenor-Strathmore metro station and the nearest stations. It is not a comparable distance to make any real sense. Using the other closest metro stations does not support the Grosvenor-Strathmore community. More people will take to the roads and car services to bridge the gap which means more traffic, more pollution, and more congestion in an already congested area. Schools also use the metro stop as a drop off and pick up point. By closing the metro station, you are directly impacting the school transportation system and the ability of children from other areas to have access to these schools. Many of the kids use the metro to get to and from the buses. It will put an unfair burden on the kids and make private schools inaccessible to a group of talented and deserving children.

with 30 mins between trains, I would need to find alternate transportation. Metro would lose ridership.

Neither medical center or white flint have particularly good pick up spots vs Grosvenor does. This is a major station for visiting people in that part of the county. The additional cutting of trains for the further outlying stations would also discourage use to get there even though Im within walking/biking distance of a station.

I use Wheaton station too

I can't get to Medical Center station quickly. I use Grosvenor as station closest to my home. Switching to another station under this plan would double the time for an already long commute due to increased travel to station time and then half hour wait for train.

Again, any plan that increases the time between trains on the red line will negatively impact my daily commute to work and be a major inconvenience.

I do not use the redline

The mentioned stations have parking and high ridership with riders parking and taking the metro. Those trains are usually crowded. Waiting 30 minutes will be a big inconvenience. The Shady Grove train is always crowded during rush hour. Has metro considered how many people are on the trains.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

See my previous answer. Closing Grosvenor-Strathmore would be a tremendous burden for me and many others. I need a station I can walk to, both for my personal mobility and my operating budget. We must not make major changes based on pandemic status, it will come to an end and people will need transportation again.

Interested to hear how that would impact last trains. Last, late-night Red Line trains can take 25 minutes to arrive. Would this schedule impact that?

Again, Grosvenor-Strathmore offers parking and Medical Center does not. If metrobus service is cut in half, this is particularly problematic for anyone not living within walking distance of a still-open Metro station.

This is B.S.

If you close this station it will make it so much more difficult. I am physically disabled, and many of my neighbors are elderly and we are both similarly dependent on transit being physically nearby. I can deal with less frequent transportation, but complete lack of it will make my life a lot harder

I am rarely on the stretch of the network referenced in this proposal, but I imagine a significant inconvenience to many others.

I don't use the red line.

This could be a temporary resort during low ridership times. By 2022 the ridership demand will rise back. Then you are again going to be criticized for not providing sufficient services.

I do not ride the red line.

Once again, you need to consider the Federal employee and where the bulk of them live. Its been my experience that a great many of them live in the outer suburbs that Metro reaches so reducing the timings there will only buildup people waiting on platforms and for available trains.

Unless the schedule aligned perfectly with the yellow line to get between Alexandria and Rockville, no.

Ill switch to uber.

I do not ride Red line trains for work purposes.

Where would we park? On a personal note, it takes less time for me to drive to DC, yet I almost always take Metro from Grosvenor because I dont want to take a car downtown if I dont have to. Metro is more convenient. If you close Grosvenor, DC traffic congestion will increase as well. I can only speak for the red line, but this is poorly thought out. When Grosvenor traffic was measured, was the full parking lot taken into account?

Please do not close the Grosvenor-Strathmore stop.

I live on the red line and do not typically travel this far north.

It is ok with me if you close the red line.

Please do not close Grosvenor-Strathmore. White Flint or Twinbrook could be closed. They are not as much used than Grosvenor-Strathmore. I will be commuting again in January 2022 and needs this station to go to my DC office. Please do not penalize commuters due to this pandemic. All have lost so much already!

I live within walking distance of Grosvenor-Strathmore and use that station as part of my regular commute. Closing the station would be highly inconvenient for me and would require me to drive to White Flint, pay for parking, and wait longer for a train.

This would just make an already (at least pre-pandemic) overcrowded red line even worse.

As stated earlier, I purchased a condo at the Grosvenor station to prevent driving to the district for work. Driving is not feasible, as there is limited parking at my office bldg. in Southeast, D.C.

I cant predict my ridership in 2022 based on the uncertainty of remote-work. If I need to use Metro for my daily commute, then this would not work for me. If restrictions are still in place then it would work.

From time totime, we must make tough choices.

I do not use these stations.

I have not traveled to Grosvenor-Strathmore recently, but I may need to in the future and I believe the station should be open.

I am not affected by this.

Not ideal, but I can deal with it

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

Only use the Red line once a month but 30 minute spacing would drive me to take a taxi instead

No, this will not work for me as a young person who is very much planning on using the metro as my primary source of transportation in 2022 because I do not have a car, nor can I afford to buy one. At that point, I largely expect to feel safe enough to go about the city, which includes going to work, going to dinner, fueling the local economy, etc.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Not applicable to me but I feel for the folks this would negatively impact, there are many of them I'm sure.

I don't live in this area or use this station.

Please do NOT close Grosvenor-Strathmore!!!!

These headways are unacceptable, and Northern Montgomery County deserves more frequent rail service than this. Trains were regularly at crush loads before the turnback was eliminated.

If this station closes, I would likely not use Metro.

This change will not affect me.

I answered this question in my response to Proposal 1. Seriously, how much more would it cost to run trains to Grosvenor? Yes, I know there is scissors switch at Medical Center, but again why can't trains run to what has always--until recent years--the normal short turn station? Honestly, this proposal makes absolutely no sense.

This would work for me because I use the medical center station.

All ridership is low right now. You can't use that to close a station. What has ridership been in previous years? In non-pandemic times, if you aren't to Grosvenor station by around 8:30, parking is extremely limited. Basically, with this plan you're pushing people further out and overcrowding other stations, all while having people wait far longer. People are going to stop relying on metro, altogether. This plan is a way to lose more money, not help your budget crisis.

Wheaton and Glenmont need more frequent service than every 30 minutes.

The distance between Grosvenor and Medical Center is too far. I cannot walk that much.

I rely on Grosvenor, I walk to it. You can't have the end of the line at a station with no parking like medical center., for other passengers. Traffic on Wisconsin near medical center is a disaster, and would make it difficult for me to get picked up. There are no good buses for me from medical center either.

again, the 30 minute timetable is quite infrequent and could cause crowding. Although I hope COVID is more under control by next year, I think many people will still be concerned of being in large crowds of people.

See previous comment. This would be an economic disaster for elderly, poor people who are depending on sale of Parkside Village condos.

30 minutes is too long for people who are they my to get to work and home.

Keep the rush hour return around @ Grosvenor in the direction of Silver Spring

If the plan is to have economy improved, how can people get to work with such long train wait times?

Although I don't regularly go to Grosvenor-Strathmore, I do not want to see service restricted in case I ever need to.

Terrible headway for my station (Twinbrook) and amazingly crowded trains. The trains were already arriving at unreliable intervals before the pandemic so now you have to build in 45+ minutes to your potential commute each way? No thanks.

If the Grosvenor-Strathmore station closes, I will no longer use Metro. I am not willing to drive to another station and pay money first to park, and then to ride, when I would already be utilizing my car on a daily basis and navigating rush-hour traffic.

You don't know how to time a trip. You don't know which is 15 or 30

My concerns would be the same as the other Red Line-15 minutes proposals -- that if there is any kind of return to the office that train frequency would lead to over-crowding and insufficient trains.

No, no, and no. Remember also, there is additional density planned around Grosvenor-Strathmore, along with the White Flint property owned by Lerner (46 undeveloped acres!!!) 3 blocks away from that station.

I do not regularly travel to Grosvenor-Strathmore. This would impact those who do.

Waiting 30 minutes for a train is an enormous waste of time. I believe it will convert many people to find alternative, reliable and quick ways to commute.

This is not applicable to me.

That's how it worked before and it was fine.

I will not be able to use metro to commute to work.

This makes Metro a commuter rail, need to make a timetable, publish it and stick to it.

You shouldn't be closing stations at all, but if you do, I personally don't mind this one that much.

I use Wheaton, so there would be an impact, but it could probably be worked around.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

You absolutely should not close Grosvenor metro station. Many people like us walk to metro to take it to DC every day for work from the many apartment buildings that are around it, and many other people also drive to it from nearby houses in Potomac, Rockville and Bethesda. Many people outside of this area also take the metro to visit Strathmore theater and growing surroundings. It's an essential station on the metro.

Please take into consideration the people who live at Grosvenor Strathmore because of the red line - this could be disastrous to those who live in apartment buildings where sidewalks to Rockville or medical center are just not there or indeed would require walking on busy/dangerous street.

Grovesnor should not be closed. It is too important a stop.

30 minutes is too long of a gap between trains. Living by the Grosvenor-Strathmore station, this would make commuting very difficult.

I need to commute from Grosvenor-Strathmore station to Union station. Please stop at Grosvenor station every 10 min, instead of 30 min!!

Is your goal to eliminate all riders who use the parking lots North of Medical Center. Why would people want to wait 30 minutes for a train. I guess you also want to reduce the use of parking lots at Glenmont ad Forest Glen and Wheaton.

Commuter train instead of reliable central public transportation. More pollution.

This would add more time on my commute and other thousands of riders

Uh, dont close Grosvenor!

Please don't close Grosvenor-Strathmore!

I work at Twinbrook, and this would make me need a car rather than use the metro

Grosvenor-Strathmore is located in a residential area and shutting it down would mean limiting transportation for people living in that area who do not have access to other means of transportation.

I would stay with ride on you wood fillThe platform and train with too many people and too many people don't ware there masks at all or correct

I dont use these stations

The whole reason I bought my home near Strathmore metro was because its near my home and I can walk to the station, and go downtown, and many of my friends depend upon Strathmore to come to the Strathmore Music Hall. Why would you even consider closing Strathmore when you have the music hall across the street??? This would be a very poor decision

Every 15 min is still a little far in between trains but keeping the frequency higher between Medical Center and Silver Spring makes sense

Easy access to the Grosvenor-Strathmore station is integral to my ability to commute readily on metro. Without this access, I would have difficulty accessing metro, since I would have to drive to and find parking at another station, which adds time, money, and difficulty to what otherwise would be a good commute. For a lot of people who dont have cars, this closure would add a very heavy load/many additional difficulties and complications.

I would just need to allow for more extended travel time.

N/A

We moved to Grosvenor-Strathmore specifically for this metro access. Closing this station due to low ridership is unfair given that weve been under COVID restrictions for a year. This would be a hardship on us and would likely result in our relocating to an area with metro access.

I dont use the red line.

Need the Grosvenor metro station remain open.

There is zero parking at Medical Center and White Flint leaving this entire section of people with no Metro options!

Again, my trips usually start and end in Bethesda.

Grosvenor shouldnt close, and the northern county should still be served.

I am opposed to closing Grosvenor.

This also would ensure I never ride metro.

I live in between Medical Center and White Flint - there is no parking at Medical Center (which is in the right direction to Foggy Bottom) so I have to drive back to White Flint (pay for parking, which would be an extra expense) It would lengthen my commute time to well over an hour, (it is currently at 1 hour); Unsure whether or not there is or will be a bus to take from Grosvenor. I cant drive to work at Dept. of State in DC because there is not parking available, to be honest do not want to drive, due to traffic.

Closing Grosvenor station is the worst bad idea ever. We will protest openly and take WAMATA to courts of this happens!!!!!!

There is no parking at Medical Center and very little at White Flint. I would suggest that white flint is a better choice if a station needs to be closed.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

See previous response. Closing Grosvenor is not acceptable. Medical center and White Flint may look close on a map but it is not safe to walk to either for many people from many areas that Grosvenor now serves. This is not only an inconvenience but also dangerous if people, e.g., try to walk down Rockville Pike to Medical center, where there are no sidewalks and not safe crossings over the highway entrances.

fGrovesnor has many apartment buildings with residents that do not have autos. The closing of this station would be a hardship on them.

I dont understand what youre proposing.

Frequently use the Red Line to Grosvenor for concerts at Strathmore in the summer.

Prefer to have Grosvener-Strathmore open.

15 minutes too slow for rush hour

It would still be passable, because I could take the bus or bike to Medical Center. But that is much more difficult and adds substantial time to my commute.

Having to go further up Rockville Pike to park to take Metro downtown for evening performances, and then having to wait 30 min. for a train is unacceptable.

Too long a wait time

Terrible proposal. We depend on trains at Grosvenor!Don't close Grosvenor station.

I occasionally use this metro station to visit friends in the Rockville area, which is not super walkable to other stations. Please dont cut this station.

As stated before, trains every 15 min during rush hour won't work if ridership returns to normal by this time. Trains were already very crowded during rush hour prior to the pandemic when trains ran every few minutes. At 15 min, it will be impossible to board trains.

If Im not in classes, sure.

Keep Grosvenor Strathmore open and more frequent stops at the above stations

For me personally I wouldnt be too affected but for others, particularly hourly workers, the wait times would be major inconveniences.

As previously mentioned, I don't like trains Turing around in the middle of the red line.

Same comment as before consider rush hours and weekends. During rush hours It should be every 3 mins.

Other stations are too far from my home and I do not have a car.

Again. Thats not service. Its a denial of service that will never be profitable.

I guess. But it still ignores the reality that many Metro riders come from outside the Grosvenor-Silver Spring loop.

Grosvenor is a very busy station. Metro just expanded the parking garage for that reason. Shutting it down would create an overload in the nearby stations. And with the outer stations only getting trains every half hour, it will cause serious overcrowding.

Once again, I live at the Grosvenor Metro. Eliminating our station would be devastating. Please PLEASE keep it open. Also, this doesnt make sense, its essentially cutting the red line in half.

Please dont close the Grosvenor-Strathmore stop!

Negative impact to riders.

See previous comments. If low ridership is the issue, these changes seem likely to make ridership even lower.

Grosvenor-Strathmore is a highly used station with a bus hub and lots of parking. Running buses between grosvenor and medical center would cause more delays, overcrowding, force some metro riders to drive instead, increase road congestion, and more

If this happens I will stop using metro

30 minutes is long time to wait for a train. 15 minutes is better.

We want the full old schedule!

Very disturbing trend to see all of these stations closing when we should be encouraging public transportation usage. Municipalities may need to consider funding assistance to keep these stations open.

bought our house to be close to Grosvenor station

I can't predict my Metro travel needs in 2022. But for others who will be gradually returning to work in D.C. as Covid wanes, it will make their lives SO much more challenged without frequent Red line service beyond Grosvenor to and from work.

These are outside of my daily commute so this plan would work for me.

will you provide transport options for people who live near/use grosvenor-strathmore station? will there be space for waiting for taxis/uber, etc. bike racks?

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Parking becomes an issue, and If we have to get in our cars and drive to either Silver Spring or Bethesda to get on a train might as well drive all the way into town.

We need the stop here!

No. There are so many commuters who use the Grosvenor Strathmore stop. There's no way people could get to Medical Center and park plus commute. There are many apartment complexes near Grosvenor Strathmore that keep people from needing vehicles and this stop is crucial to the area.

No entiendo que razon tienen en insistir poner largos periodos de espera y existiera mucha gente esperando y exponerse a infectarse de cualquier enfermedad

Medical center does not have parking to handle increased ridership from closed Grosvenor station and White Flint may also not have adequate parking, assuming a return to normalcy. Again, this option makes no sense if you hope to see a return to ridership with return to economic activity.

Dont close GROSvenor metro station. Going to another metro station adds time to my trip. and I will drive downtown instead of taking metro. Ppl going to Strathmore Arts Center need a convenient subway stop. Every 30 minutes is not acceptable. We need better service than that. 30/60 minutes adds too much time to a trip.

You want to run about 6-7 trains between opening and expected arrival/office-opening-hours for most workers in downtown DC ? are you trying to lower the ridership intentionally ? we used to have 4-6 trains per hour in the morning.

Plan is absurd. These moves would absolutely destroy any confidence left in WMATA particularly after receiving a large infusion of cash from the federal government. These doomsday budgets hurt riders directly, as well as businesses & any faith from the the general public

I use the grosvenor station everyday (in non covid) for transportation.

better service and the riders might come

Adjust based on weekdays and weekends.

We take the metro to strathmore for concerts regularly. Closing the station would essentially take that venue off the table for people who don't have cars because of the added inconvenience and travel time.

I live near metro in Bethesda and go to Groevsnor to see friends and my daughter. I am elderly and am hoping Strathmore will open up. Starving for good live music.

Weekday rush hours may not work on a 15 minute schedule if ridership returns to pre-pandemic levels or even close to that.

This could potentially double my commute on the Red Line

This is a very confusing service pattern to communicate to riders.

I take red line to take to work

This is by far the worst proposal. Do not close Grosvenor! You just spent a ton of money expanding the parking there. It makes no sense!

I don't use the red line as frequently as other lines, but I would prefer less frequent metros on the line than completely closing stations.

I am against closing the Grovesnor Strathmore station

The parking situation at Medical Center is terrible and impossible to get out of at the end of the work day. I hope you're doubling the capacity and fixing the infrastructure in place there if you're going to send everyone from Grosvenor to Medical Center in the morning.

Short sighted. Hard for commuters living at Grosvenor and when Strathmore Hall reopens.

Depends on future events that may return to Strathmore. If Strathmore reopens, patrons will need this station. Perhaps opening the station during scheduled events would be helpful.

I do not want grosvenor closed. The station at Medical Center is a nightmare of traffic. Especially the rush hour with Walter Reed. To dump even more people out at that stop would be a disaster.

The only reason there is low ridership is because of the domino effect the mandated shutdown has created among businesses. If everything opened back up again, ridership will increase!

Not everyone has the luxury of working from home!

Again, my answer would be different if I used the Red Line regularly.

30 minutes at twin took would lengthen my commute terribly

Related to the last question, if you remove Grosvenor, will there be alternative services between Medical Center and White Flint? When would this closer be reviewed for reopening?

Close Grosvenor?!?! Why? Low ridership??? The garage and station always seems to be well-used to me.

This would result in no service benefit to the eastern side of the red line so is even worse than proposals 1&2. There are also serious racial equity considerations for this proposal given MoCo demographics

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This would work for me now, because my station is Grosvenor-Strathmore -- but I'm planning to move in 2022 and may be closer to the White Flint and Twinbrook stations -- at which point it would not work well for me at all.

Waiting 30 minutes for a train is unacceptable. It would limit my ability to get from work at a decent hour and extend my travel time which is already 1hr

The loss of Grosvenor-Strathmore would lead to the loss of my full-time job and be devastating to myself and my family. I absolutely depend on Grosvenor-Strathmore remaining open in some capacity.

Grosvenor Strathmore is extremely important for me.

Closing Grosvenor, particularly after investing so much in the new parking project, seems like a bad idea.

There is no parking at Medical Center for commuters. This would be a terrible plan. It would be better to close Medical Center and keep Grosvenor-Strathmore that offers parking,

Absolutely not. Parking at the nearest stations to Grosvenor would be a nightmare.

I will stop riding metro altogether.

For me it's fine but I know some young people that go to church near there.

I use Grosvenor-Strathmore to get to work from where I live in DC. This would cause me to go to another station causing delays when getting to work

How am I supposed to get to Medical Center to continue my travel if the Grosvenor-Strathmore station closes??

It would be a nightmare a simple commute would take an hour.

I usually ride from/to Grosvenor.

Definitely would not work out for me. The Grosvenor-Strathmore station is convenient and helps me travel from place to place easily. The reason why I moved to this area is because there's a metro station.

No way! It's SO FAR to another station it's a 30+ minute walk to medical center and 45 min to twinbrook. There are so many people in that area that would be devastated and have no other real way to get to work in the city if Grosvenor shuts down! If it stays open and trains were every 30 min then it's manageable if it wasn't forever.

I am not a frequent Red Line rider, so this proposal would not have a significant impact for me.

Again a terrible idea, low ridership is due to COVID, COVID will be over by January 2022

Do not even discuss option to close any stations. It is not a solution.

As I shared in the last question, closing Grosvenor AND making trains every 30 mins would be horrible, especially as the number of commuters increases in 2022

This would make the service unusable. Options that are walkable would be eliminated for me. Reduced service is something I can work with. Complete closure of the Grosvenor station would make the service no longer be a travel option.

Rarely ride Red line

I don't think it's wise to close Grosvenor-Strathmore.

This does not affect me right now.

Why are you shortchanging Grosvenor? How would commuters at Strathmore be served? Huge developments with high density have been approved and built based on the Grosvenor METRO station!!! The traffic would be unbearable gridlock.

Turning half of the trains around at Medical Center (and I assume Silver Spring) is a horrible idea. There are large amounts of housing (and more being built) near all of the following stations (White Flint, Twin Brook, Rockville and Shady Grove). Additionally, many commuters drive to those stations to park and catch the train. This change has the impact of 30 minute waits at all those stations which will increase platform crowding. 30 minute trains are a huge inconvenience. I will add that having watched trains turn around for some years at Grosvenor, it's time consuming for the conductors, a pain for commuters who have to get out and wait, and I don't see what it gains Metro.

This would make transferring during rush hour very difficult

Our neighborhood needs this option for commuting.

This seems good since much of the red line would maintain acceptable service levels.

These stations don't affect me so I don't know

Again, this would work only if full service is restored post-quarantine. Also - is there convenient bus service between closed station(s) and nearest open ones?

Grosvenor-Strathmore must remain open with the same service it has now.

I am not affected by the above proposal. Again, I am only worried about my daughter who's planning to move to Rockville.

This option, though inconvenient, is a better plan than closing any station.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Substitute Grosvenor for Medical Center. there are many who travel from Grosvenor to Medical Center, and will be more as the area opens back up from the pandemic and go back to work. More new apartment buildings are planned for north of Grosvenor.

Terrible idea to cut service to Shady Grove for many working class people and to deny the parking garage at Grosvenor.

Whoever thought of this is missing the point of the increased parking they just completed, as well as the commuter population that lives in the area and will require train service to return to work once the pandemic subsides. This option was not thought out for the long-term consequences of both the local population as well as the countless commuters who park at Grosvenor to commute into DC for work once the pandemic ends.

Much of Rockville/North Bethesda is becoming a more prominent population center and economic hub. This proposal would stymie that growth and in turn harm metro in the long run

15min headways are too long.

There is no parking at medical center. It does not work for people who don't work there, i.e. the people who normally use grosvenor.

I typically dont take the red line to these stations, but in general 30 minute headways to any station is embarrassing, ridiculous, and will be guaranteed to be the death knell to the system.

Need to get to work and my shifts vary

See comments on prior redline proposal

We live between Grosvenor-Strathmore station and Medical Center station. But, we use Grosvenor station often due to the availability of parking.

As a person with a disability I rely on trains at grovesnor

I dont currently use the Grosvenor-Strathmore station, but I have had friends who live at this station and can imagine closing this station would have horrible economic and travel impacts on the many people who live here.

People would like to actually be on time for work. A fast flow of traffic would make the most sense.

I use the Silver Line

Grosvenor-strathmore is my main transportation to my job. There is not parking at the hospital where I work (walter Reed medical center) like many of my co-workers when are provided with metro benifits to use the metro due to lack of parking

Although this is damaging to Metro ridership, I agree with prioritizing frequency in central stations

Dont close Grosvenor-Strathmore-----When there isnt a pandemic, we ALL ride metro.

My works metro stop is at NOMA, and lowering the train frequency at those locations will undoubtedly affect my ability to board at rush hour.

I live close to Forest Glen and work in Tenleytown. The metro is already challenging because of the U shape. The reduced transit would make it unlikely that I would take public transit to work. In addition, as I am charged with TDM at my school, removing these lines and reducing service, especially during morning and afternoon times, reduces options for staff and students to take transit to school.

Not applicable to me, but strongly opposed to closing stations and further limiting access to public transportation to those who dont have other means

I think closing Grosvenor-Strathmore is a mistake. I live near Forest Glen/Wheaton and have had long cold waits for a train at Silver Spring. Commuting like that every day would be very wearing.

I dont understand the plan but assume that it has been carefully analyzed to be sure people are safe getting to/from work, especially in bad weather and late at night.

The trains will be packed by the time they arrive to the next station with these schedules

Too inconvenient, but better than closing the station altogether.

I don't live or work on the red line.

The music center at strathmore!!!! Also I consider 30 minutes to be a completely unacceptable waiting time between trains under any circumstance.

Not within my ridership area.

I should not have to pay for half as much service if I am at a 30 minute station. This would create major delays and extend my commute. The stations that are the end of the 15 minutes stations do not have adequate parking.

Dont close stations

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

The Grosvenor-Strathmore metro station is the sole reason I purchased my home in Grosvenor Park in 2015. The station does not have low ridership numbers. Countless Maryland residents rely on the Grosvenor-Strathmore metro station to commute to work in DC. Pre-COVID, the Grosvenor station would be completely with passengers during morning and evening rush hour times every day of the week. In fact, the Grosvenor station is such a highly utilized metro station that many times passengers would not be able to get on a train due to the large number of commuters, or, is passengers were able to get on the train it would be standing-room only. The Grosvenor metro station's ridership numbers are not low, and that station supports numerous Montgomery County communities.

I don't live along red line. So I can't answer this question.

I personally would be fine. You're going to have a lot of angry residents of Grosvenor and some traffic issues on Rte 355

How would people going to events at Strathmore get there if they usually rely on Metro? This would negatively impact an entertainment venue that has been severely impacted by the pandemic.

Depends on the level of crowding, and it is exacerbated by any delays on the tracks.

The red line is not one of my primary lines of commuting.

Severe degradation of Metrorail service

Again, a train every 30 minutes is basically unusable

So anyone going to an event at the Strathmore would just have to suck it, right?

15 minute headways are not acceptable

Closure of Metro stations is not the answer. Currently you have an overwhelming number of people teleworking, who pre-COVID would be taking the Metro. Prematurely closing Metro stations before knowing how ridership may increase is a faulty approach.

I don't personally use Grosvenor-Strathmore station but it would be nice to have it available to go to the concert hall for instance. This is basically the same as proposal 2.

A wasted infrastructure

At this point, I'm working from home as my employer has shut down our DC office because of the COVID-19 pandemic. Once life gets back to normal (when the pandemic is over), whenever that is, employees in my office are likely to be expected to go into the office again, so while a schedule like this may work now (i.e., in 2021 while the pandemic is still going on), it's not likely to work once the pandemic is over and other workers like me go back to working in the office.

I rely on Grosvenor-Strathmore for my transportation, so this would prevent me from being able to get around.

If the Grosvenor-Strathmore station is closed I will cease using the metro.

At least the trains would be running

This would play into the problem of more private car usage for commutes. Many people choose to live along the Red Line for its convenience for accessing the urban core of the District and other areas served by Metrorail. Reducing service to that of a country commuter train - albeit one without the comforts of a system like Metro-North or LIRR - is failing people who moved with Metrorail access as part of their preference for location. Sorry - this is a silly proposition.

Yes because I do not often use these stops (but understand others may).

Half an hour between trains in Rockville is too long.

Closing Grosvenor station would be devastating to my family's commute and home value. Likely requiring us to relocate.

Metro should not be closing stations unless work is being done or for an emergency. Again, Red trains should go to Shady Grove during the midday, evening and weekends unless work is done reducing service to a single track beyond Grosvenor

Trains will be too crowded.

How would I get to the other stations? I can't drive and park (no parking at White Flint, limited, I believe, at Twonbrook and Rockville and silly to drive all the way to Shady Grove. Not to mention I would have to get to Shady Grove so early that it would be silly. You built a large parking lot at Grosvenor for a reason.

Terrible delays to get to work; and trains will be overcrowded. This would force a backlash - people will work from home more - rather than buying tickets to get to work; this would reinforce your losses.

This will result to overcrowding, just like before. Please keep trains running the whole red line from Shady Grove to Glenmont & back. Thanks.

I am not currently dependent on the red line. This may change as 2022 approaches as I may be working a new job or be living in a new neighborhood.

Yes keep it as it now

Not enough trains running

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I rarely use these stations but think access to them is essential to people who work or live near them.

Not a red line user

I rarely travel this stretch and would not be impacted.

Would be impossible to get to work. White flint is too far to walk to

With funds allocated, no need to make any changes.

The stations with reduced service are generally outside of our regular usage patterns; thus we could easily adjust our timing to correspond with the reduced schedules. This note applies to other options also: reduced service would be much easier to cope with assuming that arrival times are accurate and easily available on phone applications so that planning is facilitated.

I dont know how I would get to work. My stop is at grosvenor.

Please do not close Grosvenor station. I can't commute.

Same as my comment on proposal 2. I live near Glenmont and wouldnt be happy about having to adjust my schedule so finely to take the train, but its doable.

I have a family member that works near the twinbrook station

I use the Grosvenor-Strathmore station several time a year

I don't use those stations.

I have no way to walk from Medical Center or Twinbrook to parking or apartments at Grosvenor. It is not walkable because of distance and an additional bus fare would be cost prohibitive. I would just drive to work and stop using metro altogether.

Like I said previously please dont close any stations

Need Grosvenor

Need Grosvenor

It would not affect the stations I use most frequently.

Due to work and volunteering, closing Grosvenor Strathmore station would be very debilitating to me and my family. We moved here to the Grosvenor-Strathmore area to be as close as possible to the metro!

Dont use that line

Need to keep Grosvenor open

As stated in an earlier question, this would increase my overall commute time from 4 hours to 6 hours or more.

again, same comments as previously. ridership will pick up soon as life returns to some normalcy and nothing should be changed to the detriment of riders.

This makes more sense than the other cut backs.

Every 30 minutes to Forest Glen seems like a long time. Would have to make more use of Silver Spring station. It seems Forest Glen was pretty when I was using it to commute.

I rarely ride the Red line.

SHORTER TWO CAR TRAINS EVERY TEN NOT EVERY FIFTEEN MINUTES.!

WE need B=Grosvenor Station to stay open. This is why I moved to Garrett Park Estates so I can walk to the station and travel to DC.

This would still be concerning with increased crowding on trains, especially considering the red line has delays once a week (at least) so for some stations with delays it would be ~45 minutes which is a long time to wait

Dont overcrowd the red line! WTF!

turn around to create higher service in red line core makes sense; 15 min headway way too low

I do not have a car. It is not possible to walk to the Medical Center metro from my home (there is no pedestrian walkway on the bridge that goes over the Beltway). My only option would be to take a bus to the Medical Center metro. The bus would take time, and metro would only be running every 15 minutes. Simple errands would take hours and commuting into DC for work on this schedule would not be feasible. If metro closes the Grosvenor station, I will have to sell my home and move.

There is no parking at Medical Center, so if Grosvenor riders are forced off there, how are they supposed to get home? If we have to go out to White Flint, is there enough parking? You are also adding more commute time. Honestly, if Grosvenor closes and you sell off the land, as I suspect you are trying to do, for more housing, the chances we would use the metro for anything - Nats Games, Concerts, work - would be non-existent and we would just go Uber and Lyft. We live by Grosvenor for a reason, if you take that away, we will not use the metro at all.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

AS STATED BEFORE, WAITING 30 MINUTES FOR A TRAIN (ESPECIALLY IN THE WINTER) IS NOT ACCEPTABLE. I LIVE IN THE CITY PRIMARLY BECAUSE OF THE AVAILABILITY OF PUBLIC TRANSPORTATION

DO NOT Close Grovsnor-Strathmore. It is the first station on the north side of the beltway. Closing it will cause a MASSIVE TRAFFIC JAM between the beltway and Medical Center (which has a terrible kiss and ride area). Traffic at Grosvenor-Strathmore will be the fastest to pick up after people are vaccinated as it has a large number of apartments within short walking distance, and is the logical place for drop off and pickup at all hours when the system is open. The traffic is far enough away from Rockville Pike to not burden the Pike with dangerous cross-traffic (which would definitely happen at Medical Center). It is NOT REASONABLE for people to have to walk across the beltway to Medical Center. Its almost a 1.5 mile walk up to the White Flint Station. DO NOT close Grosvenor-Strathmore. In the past when Ive travelled the red line, about 80% of the traffic on the train gets off at Grosvenor-Strathmore, with very few people continuing on. This is clearly the WRONG STATION TO CLOSE for any period after June 2021.

While I would need to wait longer for trains at my home station Van Ness, it is better than not turning trains around again. I pity people using the stations further out since I think a 30 minute wait is a terrible idea.

Do not routinely use this route.

Pre-CV-19: The Grosvenor station lies within walking distance of thousands of people. People in my neighborhood of Parkwood, walk and cycle there all the time.

MY AUTISTIC SON NEEDS THE GROSVENOR-STRATHMORE METRO STATION TO BE OPEN SO THAT HE CAN GET TO AND FROM WORK. HE CANNOT DRIVE A CAR.

This proposal pushes commuters currently using more distant Red Line stations to drive to stations with far fewer parking options. Due to Red Line changes, it pushes me as a commuter back to driving every day, rather than using Metrorail and risking an extra 30 minutes on my commute. I pay a premium for the a long trip, almost the max fare, and Im unwilling to pay that premium for inefficient service.

I dont use that section of the red line very often.

Medical center doesnt have good parking so it would be a poor choice for the last frequent train station on the red line. Grovesnor has the parking infrastructure needed to perform this role.

OH HELL NO. Not a chance. See comments to last proposal.

I do not use these stations.

See comment to proposal 1.

We have many elder residents living in this neighborhood who are dependent on Grosvenor-Strathmore station on the daily basis. Closing this station will be a huge problem for them.

How are riders without cars expected to get to Strathmore events?

A 30 minute window is an absurdly long wait for a train. If I needed to get somewhere this would take massive amounts of my day and would make Metro not with riding. I would seek out biking or rideshares instead as some places a rideshare would get me to my location in the 30 minute wait I may have for a train.

No parking at Medical Center. Keep Grosvenor Strathmore open!

The purpose of metro is to safely and quickly bring labor force in from suburbs and help them get back home. There may be fewer stations that are too close to each other (like Fed Center and Capital south) and that can be replaced by bus service or bike. We need service to help families who have 1 car and greatly rely on WMATA for transportation to and from work.

Closing Grosvenor-Strathmore means I drive to another station and pay for parking or take a bus to and from another station adding more than 1/2 hour to each trip. It's more convenient and cheaper to drive at that point then to use metro at all.

Leading to an increase in car ridership and pollution potentially I suppose. Not great for our green goals of, you know, saving the planet.

Grosvenor is a popular station...it has a lot of ridership with great parking.

Would work for me but not for many seniors in the Rockville area.

Assuming I am able to return to DC and work in-person by then, 30 minutes is far, far too long a window to work during the work week. Trains would be far too crowded, and any delay could cost another half hour. Many people who work in DC live in Rockville, Shady Grove, etc. Its not realistic for those people to bear such burdens and costs.

We would plan fewer trips and would have to use car travel far more.

It is critical that we increase opportunities for public transportation rather than decrease.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Im very sorry for all of the personal stories, but again, not all families have cars or want a car. I have six children and am so happy to live near a metro station and can take the train everywhere that I want to go. My daughter takes the red line to her Kendo class!! We will all be very sad if trains arrive only every 30 minutes. Imagine if she has to stand there with all of her gear on the platform for 30 minutes. The crowds... people will come back to metro once the pandemic is over!!! I also worry so much about those that are truly dependent upon the metro for financial reasons. Not everyone can afford a car. Some people need to take the train and get to work. They have children and cant really leave for work 30 minutes earlier or get home 30 minutes later.

I dont usually ride past Bethesda metro stop

These changes would directly lead to overcrowding and more delays on the trains.

No one could take Metro to Strathmore events. Much less likely that people would attempt to go there for entertainment.

So Grosvenor station would close increasing my walking time to 30 minutes to the White Flint station where Id potentially have to wait ANOTHER 30 minutes? No way will I add an additional 2 hours of commute time. Again, we literally chose our home because of the Metro station proximity. This would hurt tremendously.

This solution would serve both my work and leisure needs

Closing Grosvenor is unacceptable

When there are separate trains that stop short of Shady Grove, they are half full, and the ones to Shady Grove are overcrowded.

I dont use the Red line.

I park at Forest Glen and commute downtown to various locations. In the late evening I return. Waiting an additional 15 minutes on the exposed platform at Silver Spring would impair my return time significantly, especially in inclement weather.

Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely reamining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations.

I don't use the red line and these stations enough to provide a stance on the issue at hand.

Grosvenor is our stop.

I'm not a typical rider of the red line.

If I take the red line at all, its to get me to Medical Center.

I rarely am out that far on the red line.

The long interval between arrivals at Shady Grove concerns me. I worry trains would be overcrowded from their departure. This was not the case before the Grosvenor turn back was removed in 2019, but the interval was 16 minutes rather than 30

I rarely ride the red line, so this wouldnt affect me.

This is a bad idea. You dont build ridership by limiting access to your service. Why dont you close the Bethesda station instead?

Yes to 15 mins for medical center - silver springNo to 30 mind for stations north of grosvenor. Would prefer a shorter wait 15-20 mins if closing grosvenor.

This would make use of Metro to get to Strathmore for events impossible.

Having to wait a few more minutes for a train is preferable to stations closing.

If Strathmore Center resumes programs, this likely will kill attendance.

Do not use Red line for commuting, so largely will not be affected

Please do not close Grosvenor-Strathmore. It is close to large communities that rely on it for transportation to DC and other transportation systems.

What happens when Strathmore is back in business for events?

In the last several years I have rarely ridden the Red line and never that far out.

I commute between Shady Grove and Braddock Road. If trains arrived every 30 mins, I would drive instead of riding the metro.

Too long of waits between trains. Poor parking at those stations. Strathmore Theater was great to go to because the train stopped there and did not have to worry about parking and driving down the Pike. I think this plan will have a negative effect on Strathmore.

It will change why I moved here and may cause me to consider moving.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Thirty minutes is too long a wait. Elderly people using the Grosvenor Strathmore Metro would not have a good way to get to the performances or another Metro.

Closing Grosvenor would not work for me (see comments on that proposal).

DEFINITELY do not want this. There's no parking at Medical Center to use that as our primary, you would be forcing us to go to a station with service only every 30 minutes and parking was already too hard to find at White Flint. THIS IS ABSOLUTELY A BAD IDEA... you would be crippling The Strathmore in a terrible place w/o a metro stop when they've developed their business plan as having that available. There are so many existing and new apartments at this stop, and they moved there with the understanding they'd have easy metro access.

I don't take the red line so this is fine by me

HELL NO. WHERE THE HELL ARE FORMER GROSVENOR RIDERS SUPPOSED TO PARK IF THEY NEED THE 15 MIN TRAINS???

Shady Grove needs more consistent trains. Have you considered trains with fewer stops and better service to stations like Shady Grove?

Trains running every 30 minutes on the redline north of Grosvenor would be prohibitive to commuting to DC.

I moved to my currently location solely for the Grosvenor-Strathmore station.

Not applicable to me, but it seems to me the distance between those stations is quite long. If I had difficulty in general getting around, that would be a clear hardship. I'm wondering now what the ages are of the people who are considering these closures. Are they / you so young that you have difficulty imagining getting older and being way less able to move around?

Again, this works for me because I do not go to those places, but I hope you listen to the people who live and work there over others.

Reduce number of cars and have trains running on an hour basis.

No this should not be shut down because this is very close to my home and it would be a huge inconvenience. I would stop using the metro

I commute from Twinbrook or White Flint and 30 minutes waiting for a 30 minute commute? Does NOT work for me!

My job is off of White Flint. This would add significantly more time to my commute and would not give me the flexibility I need in my schedule.

Medical Center is NOT an easily accessible station. If anything it would make more sense to close that station and maintain trains at Grosvenor-Strathmore as there are no NIH checkpoints to deal with. The fact of the matter is the stations on the redline that are NOT in the city are all paramount for commuters.

I think train service every 30 minutes is much too infrequent and it will trigger road congestion as commuters seek faster commuting solutions. It is also a disservice to those who must wait outdoors in bad weather for a train.

I don't take the red line outside of DC

Ridership from Grosvenor has dropped during the pandemic because many people who live in this area work for the federal government and therefore telework. Ridership will pick back up as the pandemic ends and people return to work. Reducing frequency at Grosvenor will drastically affect their ability to commute.

As I stated previously, I have lived near the Grosvenor-Strathmore Metro for nearly 30 years. I use Metro for entertainment, family events, doctors visits, and volunteer work. I expect that as I age, I will become even more dependent on Metro. I expect that life will have returned to normal by 1/22 and I think it would be a hardship on my neighbors if the Grosvenor station closed -- not just Seniors, but the young people who use this station for school, classes at Strathmore, and much more.

I need frequent rides in red line between Grosvenor-Strathmore and Shady Grove.

If the metro closes Grosvenor Strathmore, white flight is the closest option for many people who don't have cars, because of the way Rockville pike cuts through, so ridership at that station will likely increase. Again, closing Grosvenor Strathmore would DRASTICALLY reduce mobility for so many people- I literally chose my location of residence because of its proximity to the train station, as I know the majority of my neighbors have as well. I understand reducing time, but closing stops altogether - and I think this goes for anywhere, not just Grosvenor - is a terrible solution because of how far away stops are from each other. This is not a walkable city. Even if I were to consider biking to the other stops, there is no easy route to either White Flint or Medical Center - the most direct route to White Flint is biking up Rockville pike, which does not have a bike lane. This city is made accessible by its metro stations, and removing those would be a tremendous loss to the community

This is not a station that I frequent.

Keep current schedule

This is a terrible idea. Housing is quite dense between White Flint and Medical Center. Thousands of people will probably be returning to work at NIH main campus and Walter Reed by next January, and you would be forcing riders either to compete with them for platform space or go to White Flint, where they will be jammed on a platform only to get onto a jammed train. If Grosvenor is closed then trains should be every 15 minutes past there. This is not fair to people who can't afford Bethesda housing. Bethesda is close to both Medical Center and Friendship Heights, but it doesn't seem to be on the chopping block.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I will be using Grosvenor Strathmore once things return to normal.

If Grosvenor station is closed, I would drive downtown instead of using Metro. I only board/disembark at Grosvenor/Strathmore.

Do not close Grosvenor. It is ridiculous. There is a station already and you need to keep it open. It is convenient for people and businesses. Keep Grosvenor open.

YOU MISTYPED THE HEADING

Again, if I miss a train, I'm screwed. I live by Glenmont, and if the trains are running off schedule and I miss one and have to wait 40 minutes... at that point I'll just drive.

While one can coordinate a bus-rail transfer, scheduling such is always difficult. Also, the last time I used Medical Center, the escalators made such a loud, ear-piercing sound I swore I would not use Medical Center until that situation was solved. It was difficult to hold onto a handrail while trying to block the sound out so that my hearing would not be harmed. Again, this would make any commute undesirable.

NOT Grosvenor-Strathmore, where you would be inconveniencing thousands of patrons who come to Strathmore Center for the Arts via Metro, not to mention the commuters who live nearby or on bus routes to Montgomery Mall and the Rock Spring Office Park

Provide as extensive and efficient service as possible.

Grosvenor is better than White Flint with the extended parking that just completed.

Grosvenor-Strathmore is the station I use and walk to. Closing it would make my commute downtown much worse and severely damage my property values. In addition, the longer wait times at other stations would make my commute so long that I would not longer be able to take the metro.

WMATA has never embraced the elimination of the Grosvenor-Strathmore turnaround, and this is yet another attempt to go back to pre-2018 ways of operating. Studies have shown that train overcrowding was significantly reduced with elimination of the Grosvenor-Strathmore turnaround and that ridership at the four impacted stations grew. This whole plan is shortsighted as people will be returning back to the office in the fall.

As I mentioned before, covid is on the decline so this plan needs to change. People will be returning to work, and heading to DC for other reasons. This would cause overcrowding on trains and parking lots and create chaos.

As a Wheaton resident, trains every 30 minutes are not sufficient for me. If such a proposal needs to be enacted, a published schedule needs to be made available so that riders know when to expect trains, rather than arriving and discovering that the next train is 25 minutes away. At Wheaton I also worry that these headways might lead to injuries if people try to run down the escalator to make it to the train on time.

don't use red line in MD

I'll leave Red Line folks to fight about the Red Line.

I will not need to travel to stations further out.

Grosvenor Strathmore is an important neighborhood station.

I don't ride the red line often, but it's usually for after-work plans. I would never use it if I had to wait 30 minutes outside after dark.

Everyone knows that Grosvenor is the hub for North Bethesda and South Rockville. Must be the same imbecile who proposed the previous idea. Now he/she DEFINITELY needs to go.

How do we suppose to get to Medical Center? I use Grosvenor-Strathmore to get to Medical Center

I do not know if this would impact the commute from Metro Center to NoMa / Gallaudet University station (morning) and return (evening).

Low ridership over the last year at Grosvenor has two OBVIOUS causes: (1) a global pandemic that has forced people to work from home (2) the construction in the parking there. Please think long term not short term. The expense and improbability of re-opening a Metro station impacts public transportation for generations.

Please don't close the Grosvenor/Stratmore station

Medical Center is just too far south to drop the number if trains so low.

I hope to go to Strathmore again some day and the Metro is the only way for me to get there.

I do think trains should run more frequently, but do not think this change would specifically impact me.

A11 is a key station for bus connections. Once again, 30 minute headways from A11 A15 will not do any good to the Metro system and will dry up fare revenue. Keep the stations open and operate at 15 minute headways along the entire line.

Closing Grosvenor-Strathmore is a terrible idea. It isn't possible to walk directly to NIH station due to lack of sidewalks on Rockville Pike by the Beltway. White Flint has no parking.

As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

for the same reasons it wouldn't work if Grosvenor stayed open--15 minute intervals is way too long.

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| No plan in which you close Grosvenor works for me |
| I don't use this part of the line. |
| Horrible, horrible. I just dont understand why Metro would close down Grosvenor. Pre pandemic, it is a very busy station. |
| Every 15 minutes is not enough during rush hour. |
| Not opposed to the timing, but I dont think closing a station should be an option. |
| I live right at Grosvenor-Strathmore and having the train right there was a major factor in my decision to live there. |
| Recent low ridership cannot be used as an excuse to gut Metro. The proposed cut will further drive down ridership. This DC administration will be remembered for killing the Metro. |
| This becomes a terrible burden of additional time required for commuters to arrive at work on time. In addition for those that use Grosvenor, likely would go to White Flint where the parking garage would be overloaded, adding even more time to find the need to go further north to find parking at Twinbrook. |
| This question has no logic. It says Every other train operates between Grosvenor and Medical Center and then says If Metro closes Grosvenor. If Metro closes Grosvenor, I have no use for Metro. |
| Do NOT close Grosvenor!!!! Yes it is close to Medical Center but Medical Center has no parking for the public |
| The Grovesnor area is slated for further residential development. If an investment was made to make the closer Kensington neighborhoods a more reasonable walk, that further increases potential ridership. |
| We need access to the Grosvenor-Strathmore station. The other stations (medical center or White Flint) are too far to consider the impact of the time change between trains |
| I do not use the red line consistently enough for it to matter to me. |
| Like I stated it depends I feel that if people do not live or commute to any of the locations that METRO takes into consideration other options like maybe a shuttle for those that do only if the ridership is extremely low. |
| But again, I am lucky that I just need the part in between. I know people that this would hurt. |
| I live by the Grosvenor-Metro station on purpose, to facilitate Metro access and use. Closing that station would make living in this area no longer possible or attractive to me. Some level of bus or shuttle service that could operate at stops by the Grosvenor-Strathmore station could mitigate some of the issues caused by closing the Grosvenor-Strathmore Metro. |
| No. I live at Grosvenor and work at the Medical Center exit. I would have to drive to work everyday |
| I live within walking distance of grosvenor strathmore and depend on this station |
| As a senior citizen, I would need to take a bus to White Flint. I moved to this area because of the convenience of the Grosvenor-Strathmore metro. I feel safe using metrorail but not so safe using the bus, waiting outside and using the stairs to enter the busy are dangerous. |
| Doesn't affect me at all |
| This is a terrible idea. This puts all Montgomery Co passengers in the western suburbs at a huge disadvantage. There is no parking at Medical Center and limited parking at Bethesda. This makes Metro very unattractive for passengers from North Bethesda north and west who rely on the metro. If you close Grosvenor Strathmore, at least have trains turn around at White Flint where there is ample parking and more passengers can take advantage of every 15 minute trains. |
| Do not close Grosvenor station. It makes no sense to close a station. |
| Why would Grosvenor-Strathmore close with the upgrade in the parking garage taking place? This is the closest station with parking in the area. What is the ridership percentage at White Flint and Twinbrook? |
| Ridership is down because of COVID but business, courts ect will start opening back up. Should take this time to make improvements! |
| Im not sure how this is different from the earlier proposal--you still have trains arriving every 30 min at the sub-urban stations, which will cause riders to shift to their cars. You cannot afford to lose riders. |
| Neither of these proposals works. Grosvenor-Strathmore should not be shut down. |
| Closing Grosvenor is a terrible idea! |
| Our entire community depends on the Grosvenor-Strathmore station and this would leave us with few travel options. I wouldnt want to take the bus and would avoid using Metro Rail if forced to do so. |
| Trains need to run more frequently between silver spring and medical center. |
| any plan where you close grosvenor is a bad plan. any plan where trains arrive every 30 minutes is shitty. the delta shuttle between DC and NYC runs ~ hourly... |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Makes system unusable. Also destroys use of Strathmore Arts Center by public transportation further damaging the arts.

I live at Grosvenor because of the Metro!! And Strathmore. Too long a walk to Medical Center and White Flint.

I live off Grosvenor-Strathmore stop and closing it will decrease my usage of the metro almost completely. Metro Center and White Flint are walking distance from my home nor easily accessible by MetroBus.

The proximity of Grosvenor-Strathmore to the Strathmore Museum and Beach Drive is very important to the community. Closing this stop would be very challenging for riders, given that White Flint and Medical Center are both located more than a mile away.

Grosvenor-Strathmore station serves large number of population and should stay open.

I would like Grosvenor-Strathmore to stay open.

We are in the middle of a pandemic. Of course the ridership is lower now !!! How do you know that it will continue as low for January 2022 ??? Ask for more money to the Federal Government. Closing Grosvenor-Strathmore, with the amount of users in the area, with a concert hall nearby, that WILL reopen before the end of 2021. The walking distance to get to the other stations is huge !! With this measure you are destroying the mere existence of metro all together.

Again, this would be unfortunate for commuters on that line, but it won't likely impact me.

See all previous comments

I do not commute the Red line.

The question is not clear. You said Grosvenor would be closed.

I use Grosvenor metro.

I would assume that a lot of residents live around Grosvenor station are the citizen who work in the government in and around downtown DC. However, with the COVID pandemic and the flexibility of the teleworking possibility of government employees make the ridership of Grosvenor station. When the pandemic restriction lifts and all the federal employees to go back to work, the access of the Grosvenor station will be back to normal. I wish the Metro system consider this fact in the decision making. By 2020, all government employees will be able to work and ride the Metro daily basis.

See prior red line comment.

I catch the train at Shady Grove with a large number of other people

I use the red line and I like the route the way it is

Need service to Grosvenor-Strathmore for above reasons—Strathmore Hall cultural events, 3 schools within walking distance, parking accommodations, residential community that is undergoing transition/expansion

You will lose our family and many others as regular riders if you close Grosvenor-Strathmore and significantly cut back on trains as proposed.

Anything that involves closing the Grosvenor-Strathmore station is a major inconvenience and not an acceptable solution.

Keep Grosvenor open.

Too complicated

This would be totally unacceptable. Many people depend on the metro that live in the Grosvenor-Strathmore area (me included)!

One of the most used lines doesn't need less service, again these plans will make people find other ways to get around nobody wants to tack extra time to commute or get places. The whole is convenience and no traffic

Less metro times available to riders would inherently decrease ridership since people will be/ are likely less willing to wait 30 mins or plan an extra x min into their schedule to get to places. So this creates, again, the exact problem of not enough riders/ fares that were dealing with now.

Nearest metro to me is White Flint. It is highly inconvenient to have to wait 30 minutes between trains for commute to work and back. At least for rush hour, this needs to stay at 15 minutes.

I do not often use the redline, and when I do, I never go to those 6 stations, so this option is completely fine with me.

Metro may run trains more than 30 minutes apart, or skip Grosvenor-Strathmore Station during off peak time, but never Metro should think about closing this station. Proposal for high rise dwellings are at work, therefore ridership demand will increase and Metro can return to full time service operations. Metro is imperative valuable transportation for this area.

But what about the Strathmore Theatre which is a public entertainment and cultural site.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I have already shared my thoughts concerning the closing of Grosvenor-Strathmore, so Ill just say that it is a lousy idea. If Metro is using this past covid-laden year as a model to judge ridership, I would say that whatever group of individuals who are making decisions regarding this should probably seek another line of employment. I understand that McDonalds has openings.

If we are close to regular capacity, you are going to pack people on a train while we are still dealing with a highly contagious virus. We dont know how long this with last even with people getting vaccinated. The Red line is always a problem.,

Closing Grosvenor-Strathmore doesnt seem like a good idea. Its a major part of the Bethesda community and would negatively impact more than just commuting times.

This will hobble the system into being so unappealing as to be unusable for anyone with a better option like access to a car or the money to Lyft, and be a huge harm to anyone who chose their residence based on walkable access to one of these stations, especially in va/md where the next station is often miles away. These stations closing will hugely change whether I chose to drive or ride

I rarely took this part of the Red Line, so do not feel qualified to comment.

I rode on redline between Grosvenor-Strathmore and Farragut North every working day between March 2019 and March 2020. There were a lot of ridership no matter in the morning or in the evening. Between rush hours, you cant run a train every 15 or 30 minutes. Non-rush hours, maybe. When you talked about low ridership, the reference is the ridership of covid time. It is a wrong reference. It is a wrong reason to consider cutting off service for normal time. Most people on this redline will be expected to go back to work around summer or fall 2021. My husband, our friends, colleagues and me are all on this timeline.

Concentrating service in the center of the line is fine with me, but we need service more often than every 15 minutes on weekdays.

I do not live or work near these stations.

What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

I dont know how you expect anyone with a conscience to tolerate these proposals.

End of line stations should be car magnets, getting cars off roads far away from the city center. Why close stations at or near the ends of a line?

I attend performances at Strathmore Hall so this would make an already long trip from VA impossibly inconvenient..

How about management takes a paycut? That never gets thrown into the pot of suggestions.

Is this a Maryland budget concern or an arlington? Rockville and shady grove seem to be popular stations? If these stations are pared down and are forced to close at 9pm has there been any consideration for increasing bus routes?

You cannot move between these stations easily.

More trains and more frequent times need to be offered 7 days a week

I rarely ride the red line

Grosvenor strathmore should not be closed

This wouldnt impact me at all.

I dont use this station, but I am opposed to closing any stations. Metro needs to find another solution besides discontinuing service to particular stations or bus stops. All areas need to be accessible via our public transportation system, period.

Not my problem, but it appears you are suggesting screwing over the commuting populations in the affected areas unnecessarily

This would not work for me. No access to Strathmore Art and Music Center and friends at the nearby residences... I might as well drive.

I could work for me, but not for everyone.

Strathmore Theater will open again and the Metro keeps cars off the road. #0 minutes is too long between arrivals. if one misses the train it is a LONG wait. Who would bother - they would go get uber/lyft - another vehicle on the road.

Same comment as previous, plus: Medical Center would likely become very crowded as people try to get on the least-bad alternative for getting from Montgomery County to the city. I have a considerable sense of dread reading these proposals. Living in this area would become much less pleasant without reliable and sufficiently-comfortable Metro access (packing into crowded trains with less-frequent service is not good enough).

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Again, if you make trains run every 30 minutes to further out red line trains it will be a disaster. Shady Grove and Rockville are high-volume stations. Last year, when you increased times between trains past Grovesnor, by the time trains arrived from Shady Grove to Rockville they were already over-full. Sometimes dangerously so. This proposal is a disaster and you should not do it. If you do, I imagine myself and many others will have no option but to find other means of transport, further decreasing ridership and your funds dramatically. You'll be almost assuring I'll never be able to get to work in reasonable time. For example, drop off times for my daycare are inflexible, and if it doesn't coincide with me catching a train immediately after drop off I'm then liable to be 30 minutes late to work consistently. Pick up times are also non-negotiable, so if train times don't line up perfectly, I'd either be forced to leave work much earlier than allowed by my employer, and risk my career, or I'd have to routinely be late and be charged a \$5 late fee for every minute that I'm late to pick up my kid. If you do this you will not only make my working and commuting life unbearable, but you may force me to seek other forms of transport, which will also have a huge impact on my finances as paying for parking in DC is much more expensive, but at least it doesn't involve never being able to get to and from work on time. You have to consider that the red line suburbs are filled with commuters and largely families, many of whom will have similar concerns and issues around childcare and commute times that will become near impossible to manage should you do this.

Stop paying management such ridiculous amounts of money in salary and bonuses and put it to good use such as making the trains work for all classes of ppl

Kind of combining two new problems for riders with no clear point or benefit beyond WMATA simply wanting to do less. Doing less can come off as a slippery slope to doing even less later. Not good.

Again, I rely heavily on the Redline to get to work and I do not wish to have a longer commute. It is already an hour each way.

I seldom use this part of the red line, but I'm against closing any of the stations.

Grosvenor is a major meeting place for a lot of people since there's no parking anywhere closer to DC. Anything further north in the line would make more sense.

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies. I moved to the Grosvenor area because of the metro being right there, am I supposed to see my home and move ?

Fine with turn backs, but 15 min frequencies in the core is far too long to wait for a train.

Not feasible. Grosvenor needs to stay open

This cuts off access to people who use that station to commute.

This seems repetitive of the option shared earlier. It would not work for me for the reasons I have already outlined - namely, delays and disruptions cascading into the core of Metro.

loss for words

I don't live or regularly commute to any of the affected stations, but reduced trips to the suburbs would dramatically hurt downtown businesses which survive on dollars spent by people who ride Metro to eat, drink, and shop downtown.

I don't generally take the red line so it wouldn't directly affect me.

30-min arrivals are unacceptable.

Please do NOT close the Grosvenor Strathmore metro!!! You are being very short-sighted! We are vaccinating so many people, we are going to reach herd immunity very soon and people will return to work! The STRATHMORE CENTER FOR THE ARTS will soon resume performances as well, which brings lots of money to Montgomery County, and you will harm that as well, as it is right next to the metro and brings many people to the area. Furthermore, there are several thousands of people who live mere blocks from Grosvenor metro and work at NIH—one stop away—but can't walk down Wisconsin because there are no sidewalks, as entrances to the beltway are along the route. PLEASE SAVE THE GROSVENOR METRO!!

I do not go that far regularly.

It would be much more convenient if Grosvenor-Strathmore would stay open.

Please take consideration for holding trains at transfer stations.

Grosvenor strathmore is my home station, I do not have a car to get to another station. This would make it impossible for me to get to work in Clarendon

this will cause more crowding on the red line once everyone gets back to work.

Grosvenor-Strathmore is the only station within walking distance for me

Feasibility is dependent on if this timing applies to rush hour travel as well.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Grosvenor metro station is walking distance to our home and we use the metro frequently. The proximity of metro was an important reason for buying our home here. Most of our neighbors feel the same way. Also the Strathmore Music center is here and people who come to concerts on metro would not be able to get here on public transportation. That would likely have a deleterious effect on attendance at concerts and on the Strathmore music centers financial stability. Our quality of life and property values would be seriously affected by the closure of Grosvenor metro station.

If some red line trains must terminate before Shady Grove, Grosvenor Strathmore is the better stop, because it has multi-story public parking and serves a popular performance venue

This works for me. Typically I would drive to that area for activities vs. taking Metro rail because of the amount of travel time & costs for me and my family.

This is like we have a resource that other cities pay billions to create and we simply choose to shut it down. There are families in the Grosvenor-Metro residential area that own a single car thanks to the proximity of the metro station. This option would send all of those people out into the already congested roadways.

DC needs a robust public transportation system that operates like any other major metropolitan area. This is a NO GROWTH mentality and wrong for the region.

This is fine since it doesn't impact my commute in a negative way.

Any reduction in service threatens to drive ridership down, creating a downward spiral for Metro. Reduction in service also impacts those who cannot afford other modes of transportation.

I do not use the red line.

In 2022 it will be important to avoid crowded trains. Therefore, reducing the number of trains when we expect that ridership will be similar to pre-COVID does not help.

30 minutes is too long to wait when weather is uncomfortably hot or cold.

I am not sure of the area mentioned above, I have been living in MD for forty five years.

No, because I don't live close enough to these stations. I would have to see if maybe a bus could take me to the nearest station or move to another apartment located next to an open Metro station.

Especially in the morning, we need rush hour train and buses. I don't mind late time if the buses and metro mid day. We all go to work in the morning

NO, NO, NO, NO. STRATHMORE WOULD NEED TO CLOSE. THIS FACILITY IS A CENTER FOR ENTERTAINMENT AN COUNTY WHICH IS VISITED BY THOUSANDS FROM ALL OVER THE METRO AREA. THE ONLY WAY THEY CAN DO THAT IS VIA METRO. BAB, BAD, IDEA!!

I don't ride the red line often, so it would not affect me greatly.

It is a very long walk, especially for senior citizens, to homes along Rockville Pike, like the Grosvenor condos.

There would be a mess at White Flint. Would need trains more often to accommodate the increase in passengers using that stop as well as the increase in new housing.

I work night shift (10PM-6AM) on Capitol Hill. I take Silver Spring to Union Station at 9PM and I take the 6AM train from Union Station back to Silver Spring. The trains arriving 15 minutes for the Red Line is very accommodating for my schedule.

Medical Center is an added bus ride. I think as the economy recovers the need for the Grosvenor stop will be important.

See above.

I rely on Metro to commute from Twinbrook to Eisenhower Metro station. I would anticipate much greater crowding with that schedule, which means not always being able to get on a train. I would also anticipate longer commutes. My commute is already very long - about 80-90 minutes from door to door.

No! Closure of the Grosvenor-Strathmore station is unacceptable! If I have to listen to every train going by my window, I damn well deserve the ability to use the station near my residence! The priority values of the homes and condominium is partly based on the convenient proximity to that station. The success of Strathmore is partial based on easy access to that station.

Reducing train service is not acceptable. Does the Metro Board even ride the Metro? This proposal is not worth considering for the Nations Capital.

No, this would substantially extend the length of my daily commute

The only time I need to go into Maryland this would be the stop I would use. Again cutting off Marylanders from utilizing DC resources and cutting off communities from one another.

If Grosvenor-strathmore closed and I was forced to commute to another station to get to work, and then that station had trains running only every 30 minutes, I would simply have to get a different job and never ride metro. Its usability would be completely destroyed.

Grosvenor NEEDS to STAY OPEN!!!

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I notice that a lot of riders park at Grosvenor to catch the Red line. Closing this station may impact ridership. 30 minutes arrivals will extend the commuting time from Shady Grove. Having to wait 30 minutes between trains is way too long. Trains should run no longer than 15 minutes apart (at the most) at all stations. Delays will cause overcrowded trains (especially during rush hour) because everyone will be forced to leave around the same time to make the earlier trains to make connecting buses/trains.

Since I live in twinbrook, its just going to add to my frustration with metro. Honestly, I would never use metro if my wait was that long.

Medical center is overwhelmed by hospital and NIH customers while White Flint is overwhelmed by the businesses in the area. These two stops service people who are commuting -to- their jobs. Grosvenor is the only stop suitable for the home owners and commuters in the area that need to travel -from- their homes to their jobs. By closing Grosvenor-Strathmore it would become an undue burden on the existing and new homes being built in the area which would have no suitable access to metro service.

Absolutely not! Why Grosvenor-Strathmore, and not Twinbrook? The pandemic ridership should not determine this closure

I use the train from Grosvenor or White Flint for daily travel to work and cannot wait up to 30 minutes.

Closing of Grosvenor would deprive many thousands of nearby residents with any practical access to the system, since there is no parking at Medical Center and it is too far to walk to White Flint, and 30 minute intervals beyond Medical Center would effectively deny tens of thousands of residents practical access to the system.

I dont use red line

This would make my commute a giant pain. I would more than likely stop using metro all together as it would just be easier to just drive to work.

No. It would not work at all. This would take at least 30 minutes extra to go to either White Flint or Medical Center and then wait another 15 or 30 minutes to metro to arrive. This will keep people away from metro.

As frustrating as it is to wait extended periods of time when traveling over the weekend (I think having to wait more than 15 minutes is problematic), on weekdays it would lead to overcrowding, in addition to frustration.

Ride a train one stop, back and forth? Constant single-tracking to get around it? Might as well just go on strike and shut the whole city down.

30 minutes waiting will lead to over-crowded trains and further delays on the red line. Not reliable to go to work.

I have not used those stations in years.

Would have to go to Med Center which means dealing with Bethesda traffic. No joy nor convenience there. You are really pushing us to Uber/Lyft arent you?

See previous comments. I dont have a car, I am disabled, and I live far out on the red line. This would be terrible for me

I commute from White Flint. Trains every 30 minutes would be an unacceptable transportation option for me. I would find other solutions instead of taking metro to work

I and many people live near Grosvenor-Strathmore and use it. After pandemic, people need train to commute and closure make large impact on our life.

I don't use this station.

I think it is a mistake to close the Grosvenor-Strathmore station.

Do not close Grosvenor

Grosvenor-Strathmore is a key metro station for work commuters and families as this location has parking. the next closest stations, White Flint and Medical Center, are not as easily accessible. Closing this location would have noticeable harmful impacts to the community.

As a regular commuter from Grosvenor-Strathmore to Metro Center in pre-pandemic times, the cars would fill up from Grosvenor to Bethesda and every next station would require people to remain standing up. Every car was packed, which presents a huge concern in terms of public health. The trains in pre-pandemic times during rush hour would arrive every 5 minutes and would present the challenges described above. If trains arrive every 15 minutes there will be no way for people to get on once the train reaches Grosvenor. The Red Line would ultimately serve populations at the very ends of the line. This, in turn, will increase traffic on the roads leading to more accidents and overall negative influence on the environment. The proposed changes are simply not feasible.

Trains should every 15 minutes at Shady Grove, Rockville, Twinbrook, White Flint, and Glenmont.

Ive already commented that I think this has more of a negative impact on poor people than wealthy people but it does not affect me personally all that much.

This would have no net effect on my commute. I could handle this.

This would negatively affect the workforce at NIH, Walter Reed, and USUHS... So many people live around the area and use the metro to get to their workplaces in Bethesda. This would crowd the trains during rush hour and mid-day shift changes, and we need to keep our biomedical and support staff safe by allowing them to socially distance on public transportation.

I dont use that station, but the unacceptably infrequent trains would be a major problem.

As stated before, to be an effective means of transportation, Metro needs to run the trains 15 minutes apart at a minimum.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

there are so many people who depend on quick access to the medical center/NIH; it would be detrimental for healthcare workers for sure

I know lots of colleagues who live in these neighborhoods and come to work in non-pandemic times every day from these locations. This would be a huge disservice. Waiting 30 mins for a commuter line is too long.

This is fear-mongering. Why are you throwing out these counterproductive proposals during a pandemic when no one knows what their post-pandemic commute will be??

This would significantly hurt ridership for commuting purposes and therefore negatively affect revenue and further reduce metro service. Add service so people want to use the metro, stop cutting!

We absolutely do not want Grosvenor Station to close.

I explained in other questions

No this does not work at all. It increases the length of my commute too greatly.

I no longer travel to white flint since work from home

Many people live close to and use the Grosvenor station, and moved in its proximity to get into DC and Rockville area. This would add extra burden on those people, especially folks still employed and who might not have a car. Perhaps the weekend trains could be further apart to save \$\$?

im answeing yes but, just for the record, even a 15 minute wait is very difficult for working class commuters to accommodate. yall better pick it up the literal MOMENT you get some funding

Ask for more funds but keep all metro stations open. Partial closure is not going to work, either close them all or none. Closed metro stops cost us money, what is the point for throwing money away for something we cant use?

The ridership at Grosvenor-Strathmore can only be estimated after the garage is open again and Covid is behind us. Plus, thousands of new housing units will be opening up within the foreseeable future due to nearby construction. Grosvenor-Strathmore will not be a low-ridership station in the future.

Not during M-F peak commuting hours. Yes, for everything else.

I live next to Grosvenor Strathmore, so the closure of Grosvenor Strathmore would prevent me from using the Metrorail at all.

Walking from the Grosvenor -Strathmore Sta area to Medical Center sta is virtually impossible due to the ramps to and from MD 355 and the Beltway. And, walking instead to the White Flint station is tedious and uphill, along MD 355, a major highway, on a narrow sidewalk immediately adjacent to the road.

Parking at the Medical Center is not as good as at Grosvenor therefore making it a very poor alternative for Grosvenor.

I will likely only use the red line in downtown DC

People use the redline to access the National Institutes of Health. This would cause hardship for people seeking treatment and participating in research studies as well as for the people who work here.

The wait time for trains to arrive every 30 minutes throughout the day, with the following exceptions listed is too long. Will trains be waiting at each station for 4-5 minutes and allowing passengers to board?

Anything less than 15 minutes makes the train essentially useless.

I believe this would work for my commute.

I don't use these stations often

I do not utilize this station, as I live in a different area.

See reason in other questions

Not walkable distance from Grosvenor-Strathmore where I live. We need Grosvenor-Strathmore to stay open. We made our home and work choices based on the location of that Metro and depend on it enormously. Please keep Grosvenor-Strathmore open.

I am not impacted by these stations, but have noticed through the years the significant negative impact changes at other stations have inside the city.

Closing stations is not an acceptable solution and will be very disruptive for regular Metro riders.

See previous answer. I cannot believe G-S would have low ridership post-pandemic. It is amazingly convenient and the only not-auto access to the Strathmore Performance Center.

Once again closing stations defeats the purpose of metro. Once the pandemic is over what options will people have to use the metro.

Grosbenor-Strathmore is a busy station and plenty of residents in this area are dependent on this station

n/a right now, dont know in future

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Again, people should not be penalized for where they live. It is important to provide equal service for all.

I would find it inconvenient, because I don't like waiting.

don't know area.

If this proposal is adopted then Metro should consider running shuttle buses (or extra buses along Rockville Pike) between Grosvenor-Strathmore and nearby stations such as White Flint at times when there are events at Strathmore Hall. Part of the value proposition of Strathmore Hall is the convenience to public transit, and if the Grosvenor-Strathmore is closed and nothing is done to make up for that then you'll be killing this important taxpayer-financed entertainment venue.

Consistent reliable service, not on-again off-again service!

Medical Center is a useless station, unless you work there. Very inconvenient, traffic is horrendous, no parking. What are you thinking??

As long as the trains are consistently arriving/leaving at specific times, then I would be able to time my arrival time at the station. For example, as regular as the trains in Tokyo. If the trains come and go whenever on no set schedule or have delays, this makes it impossible to plan getting to work on time.

Works only because I don't have to go far on the red line.

How to accommodate for heavy space needs during rush hours at the most distal stops?

This might work in the middle of the day, but not during morning and evening rush hour.

For the same reasons I stated on the first proposal

Trains need to run at frequency intervals of less than every 10 minutes. This is ridiculous.

Part of the economic appeal of these outlying regions is that they have timely metro access to the city. While I can see the advantage to limiting service, it should be done provisionally with an option to increase the frequency for early morning and evening rush hours.

Same issue: every 30 minutes for the further stations would not work for large events. Keep in mind that people board whatever train comes first; someone who needs a further station and is in the station but can't get on the train because it's crowded is now waiting an hour or more for a train.

We use Grosvenor Strathmore nearly daily.

If Grosvenor-Strathmore station is closed, I will no longer use METRO north of Bethesda.

Infrequent trains could be a problem

No, this is inappropriate. Students use Grosvenor station to walk to Georgetown Preparatory school. Child could not travel to school if station is closed.

I live at Grosvenor and do not have car, so no this would not work for me unless you were adding very frequent, regular, reliable shuttle service between Grosvenor and medical center.

I would need to understand how this could affect crowding on trains during rush hour in downtown DC.

See previous comments about further crowding on the Red Line, decreased Metrorail ridership, new investment requirements for roads and parking, and the increase in the contribution of DC area transportation to global climate change.

It is a nightmare to negotiate the bus ride to Medical Center and walking is an impossibility due to the lack of through streets from my home to the Medical Center site. If patterns of use return to anything like normal by January 2022, crowding creates real difficulties at Medical Center. There are many, many seniors in this area. This plan would leave us stranded and isolated--it would be a continuation of the reduced world that seniors have experienced through the pandemic. We also have a lot of care-givers for seniors in my building who rely on the Metro to get to this building and serve their clients.

I would recommend having trains arrive every 30 minutes between Medical Center and Silver Spring stations unless there is current documentary evidence to show that current ridership warrants the 15-minute incremental train service.

We are considering Wheaton because of the Metro

I don't like any of the options where trains operate every 30 minutes.

Get this straight: Metro can ONLY be successful if you provide clean, safe, reliable, rapid transportation during all hours of operation and at all stations on all lines. Beyond Strathmore, the time between trains can be stretched a bit to every 15 minutes, but from Silver Spring to Strathmore, every 10-12 minutes is needed. The more you cut back on service, the fewer riders you will have. You're just driving yourself further into bankruptcy.

I live on the Red lines. Trains should arrive every 10 minutes between Medical Center and Silver Spring. I do not use the trains on the Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton and Forest Glen, but they should be spaced not less than every 20 minutes.

Do NOT close Grosvenor-Strathmore.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

this makes no sense Every Other Train on the Red Line Operates Between Grosvenor-Strathmore and Medical Center these are 2 adjacent stations.

When I use Metrorail my trip starts at the Grosvenor-Strathmore Station and my return trip ends there.

This is not an ideal plan, but it is one that is feasible.

I dont see how this proposal is different from an earlier one. I will repeat my answer: As a passenger who commutes daily from Wheaton, I am sick of bearing the brunt of the Metros issues. During rush hour Wheaton is a heavily used station. I will not add a potential hour to my already long commute, Id switch to driving.

If this change is implemented, I would likely stop using Metro altogether. There is insufficient parking nearby the Medical Center metro station. If I were to need to drive to the Bethesda station, I would almost always decide to drive to my final destination. Not to mention that I have used Metro to travel to NIH from the Grosvenor station. If you close Grosvenor, I would interpret this as a statement that you dont want my wife and me as customers for Metro.

Time changes are a much more reasonable and appropriate proposal than closing stations. People can adjust their schedules to the train schedule. If some peoples train stations close, they may not have a way to get to another station or it may add a significant cost burden to them. Many people choose where they live according to their train station, so I encourage you in the strongest manner to change train schedules and not close stations.

This station is great with the stratmore and the many condos bringing in lots of riders. You would lose so much ridership its not worth closing this location at all. The lot is always full and there is always a constant draw of riders with the residents there. The condos are visible to the highway and therefore the station would be known to prospective residents. Its not worth closing this location. This would only create more parking hassles at the other lots. Please keep this one open!!!!!!

I dont regularly access these stations

How do you expect people in the stations you close to get home. Do you provide free shuttles???

I and my out of town visitors would have to use cars to go to Bethesda and DC.

I do not live on the Red line, but if I was to use the Red line, I think this would be sufficient.

I would have to use White Flint to commute to work, I would need frequent arrivals like currently 8 minutes to get to work on time.

I live at Grovesnor and work in DC. I need to commute to get to work. Please don't close.

If rider numbers return to normal by Jan 2022, then this would lead to massive overcrowding at many stations during weekday rush hours.

Medical Center is not a viable alternative to Grosvenor. I would have to drive there and traffic and parking there are unusable. This option is confusingly written. Its not clear if it WILL or WILL NOT close Grosvenor.

The 495 beltway makes it impossible for riders who normally use the Grosvenor-Strathmore station to walk or drive to the Medical Center station. Rockville Pike/Wisconsin avenue is not walkable along that stretch. There is no public parking at Medical Center.

My wife and I would have to drive separately to our jobs because of different start and stop times at work. We now walk, and have already gotten rid of one car, and were planning to sell the other during this year.

No, as it stops supporting the Strathmore events, which is badly needed

This would impact travel to and from work.

30 minute intervals are not conducive to ridership.

Closing Grosvenor would be very problematic

As with other proposals, the increase in populations along the Red Line in the White Flint and Rockville vicinities should not warrant such a drastic measure. With the White Flint redevelopment, the reopening of the Strathmore Music Center, these outlying stations are going to be negatively affected by such a proposal.

If I wanted to go into DC, I wouldnt be able to get on the train, it would be too crowded!

As long as trains arrive at Grosvenor every 15 minutes daily and weekends, that is fine.

No problem.

I have friends who live near the Shady GR station and have used it, previously, to commute into downtown DC. A 30-minute interval would be very inconvenient, and would further diminish ridership, and revenues!

People depend on these stops. People planned their lives around these stops. Do better.

Waiting up to 30 minutes at peak times will likely be too annoying and Ill find other ways to commute (bike, car, bus, etc)

For the same reasons stated previously, current and more frequent train times will be much better for people who actually use the metro (which will increase in ridership in a few months)

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Cutting service will more negatively impact ridership.

I use the Rockville station and every 30 minutes is not convenient during rush hour. It might work in the middle of the day if the schedules were published and strictly adhered to. That would be a big change for metro and it's hard to imagine Mitchell would be able to do that. So I have to say Every 30 minutes won't work at all. It is too long of a wait between trains

This would have an adverse affect on commutes. Prominent businesses are based in Rockville. A 30 minute wait would disincentivize people from riding Metro anymore.

I wont have a way of getting to and from work without a line from Grosvenor station to Twinbrook.

My easy commute to Rockville Center and to downtown events will no long be an easy commute and will put more traffic on the road that is a mess

The turnarounds were phased out for good reason and should not be brought back. Treat the red line as one line and not two.

Over crowding on metro during rush hour

I would have to take the bus, bike or walk from Medical Center to Grosvenor where I live (without a car). This proposal is backwards with regard to fighting climate change. Please apply for funding from agencies supporting the fight of climate change and change your marketing strategies so that more people are taking metro.

This is not a destination for me

If Grosvenor-Strathmore is closed, I will no longer have a need to ride on the Metro. Ill just drive.

#6 is incorrectly headed -- if Grosvenor-Strathmore is closed then why would you be asking about every other train operating between G-S and Medical Center???

Grosvenor is a much busier and more accessible station than the other 2 on Rockville Pike. The thousands of riders at Grosvenor would likely NOT go to the Rockville or Twinbrook station and would opt for driving, which defeats the whole purpose of rail service. This is a plan plan and will create hardship to current riders. Remember, when the pandemic ends and people go back to work the ridership will increase rapidly.

As stated the Grosvenor-Strathmore station is the closest and most convenient to us.

My previous comment regarding the closing of stations is the same for this one.

I use Metro to access Strathmore from Arlington. Closing that station would make it impossible for me to go to programs at Strathmore.

I dont use the Red line

Seems similar to plan 2

I try never to go that far up the Red Line.

Again alternative stations add too much time to a planned trip. In our case there are no alternative stations for 15 min arrivals.

Dont close any stations!! Get additional funding from Congress until ridership returns to pre-Covid levels!

I would no longer be able to ride metro from Grosvenor-Strathmore to downtown DC for meetings or to airports (or be able to get home from downtown DC or airports by metro).

What about the arts? What about students-- there are schools in the areas you want to close--and diminish service to students.

Im not sure how this is different from a previous proposal. Can Metro apply for COVID funding to help carry it during low ridership due to COVID? I have avoided riding Metro during COVID but very much look forward to resuming ridership soon!!

stated earlier. Plus, it would make more sense to close White Flint, since there is no parking there.

I need to use the Grosvenor-Strathmore station.

I need Grosvenor-Strathmore Metro Station to stay open.

I live near Strathmore metro. Moved there because of metro station.

I may be misunderstanding this plan. I can support a plan with all stations receiving service even if some stations have reduced service. Do NOT eliminate a station.

As long as the trains run until at least 11:00pm. I do understand the need to budget cut, but remember who your most needy riders are.

I promise, Grosvenor will return to its high occupancy and ridership within a few months when the pandemic lessens! To close it entirely in 2022 solely based on pandemic ridership levels would be a shame and, truthfully, quite foolish.

This would work for my needs, although it would make accessing an important regional cultural site more difficult.

The expansion of Walter Reed will require more not less Medical Center commuting access.

I need grosvenor

Dont use red line much.

If Shady Grove station arrives every 30 minutes, I may be more inclined to use other transportation.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

It wouldn't work for multiple reasons including lack of parking at medical center and insufficient parking during workday at Grosvenor transportation beyond to my home. (My daughter who lives elsewhere so has different needs than I do uses medical center for her work and sometimes Grosvenor when she has to drive and has to metro to medical center since there is no parking there)

I would be able to plan accordingly.

Ideally, we would want Grosvenor open. It would be a huge inconvenience to close Grosvenor. If Grosvenor is closed, yes we would want trains to medical center to run every 15 min

I do not expect to use this route or stations.

suggest you increase bus service and bike parking instead to boost ridership at this station

This would not be a good change because it would force some riders to wait at most an hour for a train to arrive which would take them to their destination. This would make it difficult to plan journeys and would leave people transferring from other lines to the Red line waiting for long periods of time in stations.

My understanding is that patrons of these stations largely own cars and use metrorail mainly to commute for work (not for other life needs). I believe that reducing service at these stations is reasonable.

For the same reasons listed in the previous section, the closure of Grosvenor Strathmore station in particular would be devastating to my current situation. Other stations are too far in terms of foot distance for me to realistically consider as a viable alternative for daily use.

Requiring commuters to add a bus leg to their rush-hour routines would be a huge hardship.

I need Grosvenor.

The drop off in ridership and Grosvenor Station is due to a temporary condition - the pandemic. Ridership wasn't always low at Grosvenor, and it will return once The thousands of people who live adjacent to the station return to their offices. In addition, causing the Grosvenor Station will cause the Strathmore auditorium to close permanently.. The idea is a very bad one that will have significant unintended consequences.

Again, this is simply not enough service for 2022, which is when we are expected to go back to normal from the pandemic.

This is ridiculous, Grosvenor is essential to many commuters "if we were not dealing with COVID you would not even be asking this question! Grosvenor is usually very busy.

Another same type of issue: u will have crowding that can kill people as we do not know yet how long vaccines will work, how the new covid strains will evolve! Keep things as is! Metro CEO and high payed leadership can all take a paycut and save ordinary people who rely on metro and want to be safe and healthy. Change leadership otherwise! Keep metro running as 1st world country, not 3rd world as u propose!

Once again train intervals and service should not be impacted. Shut down stations that are not being used frequently and close at 9PM.

I do not use those stations.

As Ive stated before, the outer branches of the rail system are often where folks are most in need of access. Extending already unreasonable wait times in Glenmont and Shady Grove to 30 minutes weekdays and weekends alike would be devastating.

We at grosvenor NEED this transportation in order to get to our jobs. Many of us are after hours watch

I live and work in DC and do not use the MD stations

Id rather you close Twinbrook which isnt by events than Grosvenor-Strathmore.

I rarely travel to that end of the Red Line so not sure how that affects me.

My previous comments cover this. It would be a travesty.

I have friends who live at Grosvenor. They need the metro to get around, Closing the Grosvenor Metro Station would have an enormous impact on the theaters at Strathmore.

I don't use Red Line often, but closing any station is always an inconvenience at best. It could reduce ridership even more.

I live in DC and rarely travel outside of DC.

If I have to drive to another station, Ill use a lternative transportation to my destination. Probably will drive.

Grosvenor is my station so I do NOT like this option. It would also hurt Strathmore Music Center. Grosvenor is the closest parking for getting into DC on this side of the Red line.

I would rather close White Flint than Grovesnor. BTW if you were going to shut the thing down, why do all the parking upgrades. You got a beef with the performing arts center next door or have you completely taken leave of your senses!!!

All trains should run 30 minutes. Why do they receive special treatment?

I would stop attending any events at Strathmore.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Please see previous responses.

This would hurt efforts to redevelop the corridor accordingly to TOD principles, however, and potentially undermine some of the good things happening around White Flint/Pike & Rose, etc.

I use the Rockville station. Thirty minutes between trains is too long.

Again, the Red Line at Union Station was already inadequate.

How can you possibly be considering closing Grosvenor-Strathmore. Consider all the affordable apartment buildings adjacent to the station that make it possible for lower income mothers to have a place in a great school district and be able to access the metro on foot to get to a decent paying job in the city. The social impact on this idea would be traumatic.

This is a horrible plan. Where will people park at Medical Center? PLEASE DO NOT CLOSE STRATHMORE.

If its going to be ever other train, then it should be ok to make such change

Red line trains should arrive at least every 10 minutes.

It may be better idea to close White Flint metrostation instead of Grosvenor-Strathmore Station, because there are no residential areas and no large business areas around White Flint Station.

Presently, I walk to the subway station. I have no means to get to other subway stations.

Leave Grosvenor open, add trains when Strathmore has shows, bunched pre and post showtimes, Turn White Flint into a cab / Uber stand.

If schedules were regular, people can time their arrivals to meet the trains. Trains must be large enough to accommodate passenger demand. More education on not taking up two seats would be helpful - no leg spreading or, when the train is full, using a seat for your bag.

Trains operating every 15 minutes between Medical Center and Silver Spring would be a serious problem. It would cause serious overcrowding and prevent timely arrival. Weve already seen what happens when there are serious delays on the red line. I want Metro to remain my preferred method of transportation in DC and this would really prevent me from regularly choosing Metro.

Im not familiar with this route. See previous comments about effects on congestion

Open the station back up when concerts at Strathmore open back up or there is sufficient demand for the parking garage.

Would be a hardship for those in the 30 minute arrival stations and will encourage more commuters. Also, this could make life difficult for lower-income service workers who tend to live further out from the city center and use many of these stations.

Skipping stops is difficult, but every 15-30 minutes is far too infrequent for trains.

Fortunately I dont go out there

Too inconvenient for anyone needing to travel to outer stations. Many DC residents do not have cars and do not want cars, but are now having to reevaluate this, given huge public transportation gaps.

See past answers. I need grosvenor station trains

I dont use these stations frequently, but I feel that there can be a reduction in the time gap between trains, that may make this option less severe: lower the gap between trains of 15 minutes to 10; lower the gap between trains of 30 minutes to 20.

I dont have a car and have a good friend that I visited frequently at the Grosvenor Strathmore metro stop. Not sure how Im going to continue visiting her if this station is closed.

Again, please dont cut costs by closing stations. Isnt doing this contrary to your fundamental mission to provide transportation to those who need it most?

This would impact individuals commute greatly to / from work, potentially being late to their job by an hour if they miss a train. This also relies on accuracy of other services, like bus service.

Absolutely not!

I dont often travel to those stations on the red line but it will hurt ridership for commuters in those areas. With the inconvenience of 30-minute wait times, people will be less likely to ride Metro.

I rely on Grovesnor Metro.

Trains need to leave out of shady grove every 15 minutes on the weekdays due to working early mornings buses & trains are not friendly to meeting up right example if I have to be to work at 7:15am I have to come to shady grove at 5:30am

It has been some time ago when I used Grosvenor stop.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Please do not close Grosvenor-Strathmore. Many people rely on that station who will be taking the train again post vaccine. This would cause great inconvenience. I do not have a car and walk to Grosvenor-Strathmore. There is no straight forward bus route to allow me to get to White Flint or Medical Center without taking multiple buses. Please do not close Grosvenor-Strathmore. I will be taking the train again post vaccine.

This would not work for me.

This plan would add to traffic and parking congestion in Wheaton and White Flint or other adjacent stations. I suspect this will become a problem since the parking lot at Grosvenor is often close to capacity, at least during the day

Fewer cars are longer wait times, but I could make it work. Not ideal.

A train every 30 minutes is not a metro. This is the schedule for VRE, but not for a metro in a big city, not to mention in the capital city. This is simply pathetic.

Personally, since I do not ride out to the ends of the Red Line very often, this proposed change doesn't significantly affect me. However, I can only imagine the significant impact it will have on those who do live in the area, esp. those trying to be climate conscious by not hopping in their cars for every trip. Kiss that good-bye.

Every 30 minute service is NOT convenient for commuters.

So the proposal is to close Grosvenor-Strathmore, causing riders to have to travel a mile further to the next closest station, and then wait 30 minutes in between trains? Its become necessary to destroy Metro in order to save it? That didn't fly in 1968, and its not a philosophy that has gotten better with age. Is DeJoy running Metro too?

Not one of the considered "close" to metro line is walking distance to Grosvenor-Strathmore station. This will be a disservice to residents using it. It should remain open, otherwise people will start using their cars and all together not use the metro at all. No one will go to the perceived closest station at all. That is a guarantee.

Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

We need trains more frequently than every 15 minutes.

Medical Center is a packed station already? I would prefer Bethesda and work with local bus companies to close the gap.

There would need to be some bus that would be able to take work riders to and from Grosvenor to the available stations, but I don't like the closure.

I ride the redline infrequently, but when I do I don't want to wait 30 minutes between trains. It will encourage driving. We need more frequent trains and a robust schedule to encourage people to get out of cars and into mass transit.

I live at Rockville Town Center which is adjacent to the Rockville Metro Station and commute via the Metro everyday to Metro Center. Reducing service to 30-minute intervals would add a significant duration to my total travel time.

I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else. I see doctors at the Holy Cross Hospital from time to time so I don't like this proposal either.

I am not a Maryland but I suspect those who live near those stations will oppose this proposal.

Closing stations should be a nonstarter.

trains running too infrequently to be viable. Metro should keep to trains every 10 minutes or less except at night and weekends (but even then more often is better)

This seems like a waste of \$

Grosvenor-Strathmore now has low ridership since the BSO and the National Philharmonic are not performing at Strathmore, By 2022, both organizations should be performing at Strathmore and ridership should be back to the pre-pandemic levels. If you close Grosvenor-Strathmore, the BSO and the National Philharmonic will lose my and many other persons attending the performances.

Again, the Grosvenor-Strathmore station should definitely not be closed. The proximity of the station to the Strathmore and residential areas makes it essential for transportation for both work and entertainment. The area is continuing to grow as townhomes, etc., are built, and ridership is also expected to relatedly increase.

This would significantly negatively affect weekday commutes, adding need for additional planning to ensure one reaches the station in time. Not to mention that it would lead to platform crowding and crowded trains at Medical Center and Silver Spring.

I feel like you need to wait at least year post-pandemic to accurately gauge ridership needs. January 2023 may be a better target for assessing.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Is this written by a literate person? The headline has nothing to do with the paragraphs below. All you are really proposing is to add Grosvenor to the lousy 30 minute service of the other stations. This is awful, because then there is no place to park AT ALL for 15 minute service. Perhaps you could hire actual railroad experts to figure all this out. Are you going to turn the train around after Med Ctr, or still go light past Grosvenor to turn it around? Unbelievable. But then again, this is the same system that allowed people to leave the entry station for free 20 years after London permitted it on the Oyster Card. The same system that waits 10 seconds to open the doors, and wonders why the trains go so slowly. The same system where the drivers dont the lengths of the cars, yet they have known it NYC since 1904.

Again having long wait times are not a good thing especially since it's always delays for some reason or another

I do not regularly take the Red Line. Orange Line rider.

I rarely go past Medical Center or Silver Spring

This plan for closing stations it is stupid and make peoples live worse

I use the red line to commute to and from work and for non-work travel needs. I live close to a red line station. Reducing service will make the trains so crowded as to make them inaccessible for people with disabilities like me who need to have a seat on the train in order to ride it safely. Pre-Covid, it was already very hard to find a seat during rush hour. People without disabilities ignore the signs and sit in the disabled seating, or there is not enough of it. When I politely ask for a seat, people have their headphones in and pretend they cant hear me or just outright ignore me as if Im not there. Reducing service will only exacerbate the problem of disabled seating not being available because the trains will be so much more crowded. As DC employers call people back into the office, the train system wont be able to handle the crowds if it reduces service. You will be making WMATA inaccessible to people like me with disabilities.

Will likely not affect many riders in the DC metro area who rely on public transit,

My bus goes to Grosvenor. Its important to my commute.

I am against closing the Grosvenor Station.

Seems wise to maintain frequency in higher trafficked areas.

I rely on frequent trains to get to and from work. I need to take a bus to Glenmont and Wheaton stations. Any delay in the bus would make me late for work. I already have to account for any delays now so I would have to leave even earlier to ensure I get to my job on time. The trains would also be overcrowded.

This doesnt immediately affect my travels but will impact those in the suburbs heading to DC for work.

NO!! NEVER!! THOUSANDS OF PEOPLE LIVE AROUND THE GROSVENOR METRO, AND OTHERS NEED A WAY TO GET TO THE STRATHMORE MUSIC CENTER!!

The time between trains is too limited on the red line.

Please do not close the grosvenor-strathmore metro station. I use it everyday to commute to work.

Grovesnor is central to suburbs. I think it should stay. It would make going to the strathmore less desirable from the city.

Like many other Metro riders, I live beyond Grosvenor-Strathmore and use the Red Line to commute into DC to work. Before Metro stopped turnbacks several years ago, my commute from Twinbrook station to Metro Center could be over an hour during rush hour, if I wasnt lucky enough to catch a Shady Grove train. All trains coming out of DC were extremely crowded, sometimes to the point where you had to wait for multiple trains to pass before you could get on. When Metro stopped turnbacks, the same commute was cut in half (at about 35 minutes) and crowding was significantly reduced. I hope that Metro will keep trains arriving at all Red Line stations every 15 minutes.

I dont ride this section of the Red Line

GROSVENOR-STRATHMORE metro station should not be closed because the metro station near many apartment buildings and condo buildings. Alsomany people uses the station.to get to their places. This idea is a very bad choice.

This is absurd. Maryland and Montgomery County have to continue funding public transportation in the DC metropolitan area. The citizens depend on it. The highways will not be able to accommodate the increased traffic if metro is unreliable. We need increased and more reliable public transportation, which is the opposite of What you propose. You are very shortsighted.

Read my previous comments

I live near Grosvenor-Strathmore and will be commuting every day again by January 2022. This proposal would force me to abandon Metro use entirely and, more globally, it would permanently reduce Metro ridership across the board. In addition, Metro just received a large federal stimulus. Closing stations after that would mean acting in extremely bad faith.

Please do not close Grosvenor-Strathmore station please!

This would not affect me much.

A 30 minute wait time to get from Glenmont to Wheaton or Silver Spring is way too long, I can see maybe 15 minutes.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

To close Gro-Stra would be dreadful. I imagine that everyone else living near a closing station would say the same. I moved here near Gro-Stra because of the proximity of the metro station

30 mins is too long for a train from Twinbrook. Grosvenor would be the alternative station to ride from in order to get to a 15-min station, but would not be available then if Metro closed it. Medical Center does NOT have the parking capacity to be the end of the good line. Better option would be to complete all the parking construction at Grosvenor to accommodate riders driving farther down the line to pick up a train.

One train every 30 minutes is not acceptable to practically use MetroRail to go to work during rush hour periods

I use the Twinbrook and White Flint stations

I guess if I never get to go to events at Strathmore anymore because I cant get there, thats just how it is. What bleak prospects we have to look forward to after this pandemic. Who are these grinch-like philistines and enemies of fine music who propose closing the Strathmore station?

As a frequent traveler between Fort Totten and Shady Grove on weekends, it seems very absurd for trains to run every 30 minutes, especially among the Shady Grove-Grosvenor segment. This will force me to transfer multiple times between Ride On 46 to either the 55 or 59 depending on the time at Rockville to catch the bus to Shady Grove. I imagine other riders will be forced to be put in the same position or Uber or wait for up to 30 minutes for the next northbound train.

Its so difficult to know what the world will look like in January 2022 but I do believe there should be no further cuts to train times or stations until we understand that. I know its difficult but there is hope at the end of the tunnel and I do feel like the world is slowly reopening. And then once ridership does go back to normal, youll have to reopen these stations and revamp the train times so I see no necessity in altering anything at this point.

N/A

Grosvenor vs. Medical Center on the West Branch of the Red Line is N/A for me, but the whole proposal wouldnt work because trains would be too infrequent.

I would prefer that all Red line trains run from Shady Grove to Glenmont because I go to stations like Wheaton and Rockville most often.

I like going to the Strathmore Music Center for events; however, I could work around the station being closed. I gather there would still be bus service?

This is way too infrequent! For commuters the trains would get too crowded and take way too long. It would take impossibly long to transfer from one line to another. People who could afford it would by cars, causing terrible traffic, bad air and add to climate change. People who are too poor or who cant drive would not be able to visit friends or family.

See prior comments. I strongly oppose closing Metro stations.

Are you going to install a pocket track at Medical Center so trains will be able to turn around there like they do at G-S, or will they still have to go all the way up to turn around? If so, why not keep the station open?

That works for me

Too long to wait

This is absurd! Medical Center is an option for no one who lives in the Grosvenor area because there is NO PARKING!! White Flint does not have adequate parking. That area has been building up quickly with residences and businesses and it can't handle all that neighborhood plus the Grosvenor neighborhood. The traffic patterns today in no way reflect the day when people return to working as before the pandemic. This is a step backwards and discouraged people from taking public transportation!

This lower frequency at rush hour would add significant time to my daily commute no matter the endpoints

None!

This really feels like Metro doesnt care about its suburban passengers, because all of these changes seem to affect the outlying areas. Its like you forgot that people in the suburbs work in the city, too.

I live at the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro station. My wife and I bought our condominium here to support Metro and public transportation generally by taking Metro as often as possible. Our entire community here depends on this station.

I use this route infrequently.

This will work if Grosvenor-Strathmore does not close

We would no longer ride Metrorail since the other stations are too far away and lack adequate parking. Other residents, too would likely find other means of travel and Metro would suffer even lower ridership.

I dont live on the Red Line so this does not impact me as much (as long as trains arrive every 15 minutes at Red Line stations within DC).

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I use Forest Glen Metro Station to get to my neurologist, and it already takes me 2.5 hours on Metro to get there and that is Metro running regular. This would substantially lengthen my trip and as a result I would have to get up earlier. I already get up at 3 am to leave the house by 5:30am and cause me to go to bed extremely early and get up extremely early.

I don't frequent these stations.

At least run trains through every 15 minutes during the peak hours.

No one will ride the metro if it only comes every 30 minutes.

The Grosvenor Metro station provides Transportation access to thousands of people in the immediate area of the station. This station also has a parking lot which provides access for several people who drive in and park in order to access METRO. The stations that would remain open do not have parking facilities and are not in walking distance to thousands of residents in this area. This is not a feasible option for many who do not have cars and depend on access to Grosvenor Metro station. This would also completely cut off the Strathmore arts center from having any metro access to their facility.

People who use grosvenor station now would have to go to white flint station because the medical center station doesn't have parking. That means that the parking at white flint will be overflowed, the number of people at the station will be greater than a train can accommodate. During Peak hours it will be a disaster.

Grosvenor-Strathmore Station should not be closed.

I believe that ridership will increase at Grosvenor-Strathmore by January 2022. I feel that many of riders starting and ending at Grosvenor have been able to work from home during the pandemic but will be eager to get out and about.

-

I discussed earlier how trains arriving every 30 minutes would be devastating and hurt everyone living there who depends on the metro, like myself. Same sentiment still applies to this as it did before - 15 minutes is barely an acceptable wait, and has made me late to work before, but 30 minutes makes the metro useless for me (so why am I paying the rent to live close to a station?).

The impact doesn't seem to great in this scenario given my very specific reliance on the red line.

Open grosvenor. Station please

I walk to the Strathmore-Grosvenor Station... if this station is closed, I would have to DRIVE TO WHITE FLINT AND PARK!! It would double my commute time and my COST! This would be a serious breach of our social contract with WMATA. I am a government worker and my cost is subsidized by my agency, BUT NOT PARKING! I would be petitioning my county, state and national representatives to seriously intervene in this foolishness! Again, again, we moved to Grosvenor (North Bethesda) for the life-style, commuting and the Strathmore being near by... we rent but are planning to buy... this would seriously, seriously impact our decision to stay in North Bethesda...

While I do not currently use the station, I strongly oppose closing Metro stations.

I travel from Woodley Park to White Flint. I would not enjoy the 30-min wait between trains, but I can work with it. I'd just have to use the next train info to time my arrival at the station so I don't have a long wait. I might have to go to work earlier and leave work later because of this.

In the strongest manner possible, I oppose closure of the Grosvenor-Strathmore station. I am a federal employee and rely on dependable public transportation and do not own a car. I have taken the bus to work also but do not anymore unless there is no other option because it is routinely not on time or does not come at all. In addition, the bus line that provided a direct route to my employment was cut. Even though it takes longer, I take the Metro to work every day because it is much more reliably on time. Furthermore, one of the main reasons I purchased my condo is because it is in walking distance of the Grosvenor-Strathmore Metro Station. There are numerous housing complexes and residences that are built around and are dependent on this station and this station gets high use so it is incomprehensible that the Grosvenor-Strathmore Metro Station would even be considered to be closed. In addition, a primary purpose for public transport is to reduce the number of cars on the roads and to reduce use of fossil fuels. Closure of this central station will put many more cars on the road causing more traffic and burning more fossil fuels. This is in direct opposition of President Bidens policies to stop climate change. PLEASE CONSIDER OTHER OPTIONS AND DO NOT CLOSE THE GROSVENOR-STRATHMORE METRO STATION.

Unlikely. Keep system open until 11, esp employers like NIH medical center. Maintain Weekend strathmore services stops Or later service adjacent to 11 pm with Shuttle buses from strathmore during concerts. Ask Strathmore

The metro during 8:00am-9:00am is full of commuters, and often on the red line when trains you cannot get on as the train is full when they are running every 3-5 minutes. If trains are running every 15 minutes, I envision lots of commuters having trouble getting to work on time. This would lead to people not being able to rely on wmata.

I do not typically ride the red line.

Strathmore would reopen. More ridership would be needed!

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Since I live within a 5-minute walk of the Grosvenor-Strathmore station, I would not only be significantly farther from working stations but in addition I would have the extra 15-minute wait added to that. Together, these changes would be totally unworkable for me.

I dont know what those commuter needs are.

I think the proposal is worded incorrectly, I assume you are suggesting trains run between silver spring and medical center the way they currently run between silver spring and grosvenor-strathmore (and also closing grosvenor-strathmore). If so, this could hurt strathmore if they are trying to attract audiences again. Also, with 30 minutes between trains regularly, a set timetable would make this plan more feasible for riders.

Closing Grovesnor is not a good option.

This would stop my wife and me, as well as many others I know, from ever using metro.

Trains should arrive every 15 minutes between Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

My answer would be Not very well. I would have to take a bus, from the Grosvenor Metro station, to reach a nearby station, since neither Medical Center nor White Flint have parking available. Since this would take more time, I would only do this for longer trips downtown. For shorter trips, as far as Tenleytown, I would drive.

I dont understand why we should lose this station. It doesnt make sense to make permanent changes like this just because ridership is affected by the (temporary) Coronavirus crisis.

Twinbrook and White Flint are ghost stations. Grosvenor is actually useful for park and ride and has more housing nearby than either.

This is terrible and probably the worst of all. (Im sorry, but I cant help but compare on this one, and closing Grosvenor is the second worst.) There is no parking at NIH (not the mention its near some of the worst traffic congestion in MoCo). That forces all of us who are closest to Grosvenor to commute north and potentially wait 30 minutes-- both ways). I would no longer be able to ride metro for work, as the metro ride would no become worse than driving, as miserable as that would be. We actually chose our home based on its proximity to the Grosvenor metro. Why pay more for housing to live near a Mero and closer to downtown if there is no commuting benefit? This option would be just awful. I imagine the lost ridership would offset the cost gains. Please note: there is a major flaw in this survey: the title of this option (or the contents) is inaccurate. The title indicates Grosvenor stays open. The contents says it closes. This may give inaccurate results for this question and for the later ranking question for all the options, where this options title is listed as keeping Grosvenor open.

I rely on access to Grosvenor-Strathmore under non-pandemic circumstances.

Again, I think waiting for a train for 30 minutes is excessive. Additionally, metro isnt safe enough (and especially on the red line) to have any patrons waiting 30 minutes on a platform.

30 minutes is too long a travel interval for a subway. When my roommate sees 30 min intervals on weekends she says, Guess Im not going anywhere. You would be sabotaging the system by driving people away so much it would be in a true death spiral.

All Red Line stations should all remain open and normal service (as it was pre-COVID) should resume. WMATA must anticipate increased ridership in to days ahead.

again all am and late afternoon early evening trains should run more frequently.

DO NOT CLOSE GROSVENOR STATION. It is a major hub esp. because of the location and parking. You are making it more inconvenient for people to use the Metro and will simply drive ridership further down.

See previous remarks.

Riders will not want to wait 30 minutes for train unless they have no other option. Most of these options will ensure that ridership stays low.

Could not be more strongly opposed to this change. This is a vital stop that provides great value and accessibility to the nearby community. This stop must remain open, and the proposed 15 minutes between arrivals should also be shortened.

This is just stupid. Grosvenor-Strathmore is not a low-ridership metro station. Anyone riding Metro from downtown knows that more than half the train empties at Grosvenor, and the rest of the riders are split between White Flint, Twinbrook, Rockville, and Shady Grove.

Medical Center is too far from where I live. I would have to find alternative transportation.

So trains would arrive every 30 mins at Grosvenor-Strathmore?

Again, trains should arrive every 10 minutes during rush hour at these station including some not mentioned above:Shady Grove, Rockville, Twinbrook, White Flint

This plan would be very problematic for the Strathmore music hall.

I am a frequent Grosvenor rider during the week and I connect to Ride-On buses from the metro at that station and those buses only go to that station, not to other subway stops. In addition, this would be devastating to Strathmore because many of those folks who attend Strathmore events use the subway stop that takes them directly into the theater.

| |
|---|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| Operate trains from beginning to end of every line |
| It would be too crowded after work from home ends, and it'll be too hard to wait at outdoor stations for long times in the winter and summer. |
| My usual metro is Grosvenor. Additional concern with closing it is that it has more parking availability than White Flint does and a lot of the travel will shift to White Flint |
| Reduction, not elimination is a reasonable approach. |
| My family is against the closure of Grosvenor-Strathmore metro station. We live very close to it, and would not have a way to get to work without it. Due to disability we cannot drive, and Metrorail is the only option for us. |
| This station closing wouldn't affect my travel plans. |
| I rarely use the Red Line, so this plan would be fine for me, but the frequencies that you are describing in the urban core would make it very difficult to keep Metros function as the backbone of a truly urban transit network. |
| Please refer to my previous answer on the Red Line question. |
| Too much lag time will create major congestion inside the trains during rush hour. |
| Wait times would highly discourage me taking the Metro. |
| Long wait times discourage use of metro. |
| As stated in previous proposal, stopping service to existing stations unfairly affects people with residences or businesses in affected area, possibly affecting property values or business traffic. It's not clear that would substantially help the situation: closed stations would still require some upkeep, security, etc. Nearby stations would experience greater parking load and surrounding roads might have traffic patterns/load affected. |
| Again: maybe ridership is lower in Grosvenor, but it does not mean that it is ridiculously low to merit a shutdown. |
| As I mentioned before the pandemic could end sooner than January 1, 2022 but, if that happens, ridership will have to increase as soon as this is all over we know that you guys are in low ridership right now because of the pandemic but, ridership will increase completely and more and more people will take advantage of the metro rail as soon as this pandemic is over there's no need to have to do Low rider ship after the pandemic has passed As I mentioned before the pandemic could end sooner than January 1, 2022 but, if that happens, ridership will have to increase as soon as this is over we know that you guys are in low ridership right now because of the pandemic but, ridership will increase completely and more and more people will take advantage of the metro rail as soon as this pandemic is over there's no need to have to do low rider ship after the pandemic has passed |
| Grosvenor is strategically located, and generally provides adequate parking. Discontinuing service to Grosvenor, and cutting service in half for outlying stations, would result in unacceptable crowding of trains to those stations, or discourage ridership from those stations, or both. Making plans for 2022, based on ridership patterns during the pandemic, isn't rational. |
| I do not regularly use the red line so this plan would not impact me. |
| The International Airport and Metro in the nation's capital should impress. These are many people's first impression of the United States. |
| I don't usually travel that route but I would imagine such a move would be highly disruptive to those who do. |
| My family members work and take metro rail back and forth from Medical Center. the wait times are too long. The ride is too long anyway - especially when I have to transfer from the Blue/Orange/Silver line from the end of the line to the Red Line and the ride on the red line to get to Glenmont. This is not okay. |
| Depends on ridership levels. |
| No! Why not close Twinbrook or White Flint? Grosvenor receives a significantly higher amount of foot traffic than these other stations (I've seen it having been a rider for 7-8 years). As a result, the parking lots remain open for people traveling from afar, to park at the only red-line station with parking, closest to DC. This community has built homes, apartments around the metro for walkable access. At all other red-line stops leading to Shady Grove, these stations are mostly accessible by driving. If you take away metro access from surrounding Grosvenor communities, imagine each of those riders now requiring a car to park at another metro stop. It will cause a huge influx of cars requiring parking at nearby lots that are already full. If you are going to close a station, it should be one with the least foot traffic because for those stations accessed by cars, it will cause the least inconvenience since those folks were driving anyways! |
| If the Grosvenor-Strathmore station is closed, using Metrorail at all would be almost impossible for me. Any possible work-around like taking the Ride-on bus from Grosvenor-Strathmore station to Medical Center to get a Metrorail train there would add maybe an hour to what should be a 10 minute Metrorail trip to Bethesda. |
| This would not be a problem for travel within the DC portion of the system |
| My commuting patterns do not apply to this scenario. I do not live in Maryland nor commute to that neighboring state. |
| I live near Grosvenor-Strathmore and cannot walk to another station. If this plan were adopted I could no longer use metro and would spend NO MONEY per year on metro. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I wouldn't use Metro for shopping or for medical appointments anymore as it would be very inconvenient for me due to the long wait times and crowded trains.

Grosvenor-Strathmore Metro has many apartment buildings near it with residents relying on public transportation.

That service is too infrequent for my travel needs.

Not at all. Grosvenor is an essential station for those living in Potomac. Personally I would recommend pushing Montgomery County to further urbanize that area and increase walkability as they have done to other parts of Rockville.

It is critical that Grosvenor metro is open for my commute, this would also be a complete below to all the folks that work in my building as they take the metro to work.

It is my understanding that the red line has always been the highest in traffic.

Every 10-15 minutes would be effective....

More service is needed

Why live in a city if you can't access it easily?

Couldn't get anywhere on time

Cause I need to travel beyond Medical Center or Silver Spring if I ride the Red line to get to certain places.

I live near the Grosvenor station, so this plan would mean no metro at all for me and my neighbors. No other station is in walking distance, and biking is terrible in this part of town. I would need to drive to downtown DC, or drive up to Twinbrook and spend \$350/mo for parking. This could be different if there was a regular shuttle to the next station.

This is still a half-hour wait in between trains, and the bus service is not as timely or reliable. This proposal would add an additional half hour to a daily commute, and would raise the price because of the necessity of riding the bus.

15 minutes is too long-- increases my commute and crowding.

I do not travel frequently to these stations.

Metro should canvass how many healthcare and frontline workers use those stations with low ridership.

This station isn't one we'd use.

There is no parking at the Medical Center station. How do we, and the many others who walk to Grosvenor or park at Grosvenor, get there? Pre pandemic Grosvenor was a busy station. As employment in Downtown Bethesda increases with the opening of the new buildings under construction, e.g. just the Marriott Headquarters will add several thousand workers. No way will the many who live in this area and have worked in the buildings off Democracy Blvd. find parking in downtown Bethesda. Some portion will be able to walk to Grosvenor. I suspect the other new buildings will offer similar possibilities of increased Metro use.

Unthinkable

See all earlier comments.

If anything get rid of medical center station. When post COVID life in Maryland gets to a stable/positive state, lots of commuters will rely on Grosvenor Strathmore station, more than medical center riders. Like in the first comment I think express lines can be beneficial as lots of commuters get on between Shady Grove and Grosvenor, but then very few get off until Farragut North. so every 15 minutes and express line during rush hour will be beneficial

Go back to the drawing board and work these issues out.

Grosvenor-Strathmore is an important location for the community due to the location of the music center and music school there. Metro access provides an important service to the community. 30-minute intervals would increase automobile traffic, unfairly deprive low-income residents of essential service, and damage the economies of localities in the Maryland suburbs..

Do not close Grosvenor-Strathmore metro station. Ridership will improve as people receive vaccines and the impact of the pandemic lessens. This option is very short-sighted. Many people and businesses depend on this station being open. Walking to either of the alternative stations, given the traffic on Rockville Pike, is dangerous. Have fewer trains or longer wait times between trains but please don't close this station!

The continued operation of Eisenhower Metro Station (Yellow Line) is my greatest concern. I'm not aware of any of the individuals I live amongst or work with that are required to commute to Grosvenor-Strathmore and Medical Center (Red Line).

DO NOT CLOSE STRATHMORE. Do not close strathmore. Honest To God - What the hell are you thinking. People were not using metro because of covid. Many many people use this station - Staff that work at nursing/assisted living homes, people that do not have cars and depend on this stop to get back and forth to work and into DC, VA, MD and surrounding areas., doctors offices, etc. People bought houses and condos, etc to be close to metro, walking to White Flint or medical center is dangerous and too far. The music center is right here. People use the metro to visit museums, get to the airport, shopping, etc. DO NOT CLOSE THIS STATION.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I walk 1 mile to get to Grosvenor-Strathmore during the day. At night I drive and park at the station. There is no parking at Medical Center and I worry that there wont be enough at White Flint to handle all of the Grosvenor-Strathmore spillover.

I dont ride the red line very often but when I do its usually to one of those stations.

I believe that this is a good plan but trains arriving every 30 minutes is too long. Every 20 minutes would be acceptable.

The closure of Grosvenor-Strathmore Metro station would severely curtail my patronage of the Metro and Washington, DC.

As a red line user, I am afraid red line trains will be too crowded during rush hour if running at 15 minute intervals.

The headway's are insane and should never be accepted. Also, overall like I said the Silver Spring turnbacks like I said are fine but the Grosvenor Turnbacks are ridiculous especially if they're actually going to turn back at medical ctr if Grosvenor is closed

I would hope that detailed analysis would be done (if data is available) on who/levels of people currently dependent on reliable transit service in the areas affected, outside of what you may receive from the survey. I understand the suburban context gives those stations an uphill battle in attracting ridership to begin with, but I hope youre considering the underlying tradeoffs regarding who is most dependent on the service in the first place.

Grosvenor-Strathmore is key to my commute.

I have to drive to metro because it is too far to walk to a bus, especially in poor weather or when carrying things. I cant get to NIH/Medical Center station because there is no parking. Every 30 minutes from White Flint is unacceptable because of the total commute time, so I would not use metro but drive instead.

I FRQUENTLY RIDE TO MEDICAL CENTER FROM VIRGINIA SQUARE BY TRANSFERRNG AT MEDTRO CENTER.

Again, you are punishing some of your ridership. Its not fair.

No. This plan would not work for me. Not at all. I would like to know more about your premise. Due to low ridership. So, ridership was low during a once in a lifetime pandemic, where everyone was closed to stay home. Your response is to reduce services 2 years after the start of the pandemic, and after people are expected to be vaccinated, when demand will increase.

People arent going to Strathmore because theres a pandemic. Have you heard? Ridership will increase once Strathmore programming resumes.

My daughter takes metro between Shady Grove and Grosvenor to attend a nearby high school. This would cause significant issues for multiple schools.

Same feedback as before. Residents north of Grosvenor-Strathmore station had to endure years of train service that wasnt the same as what other riders received. That changed when all Red line trains became through trains. Reverting back to a north of Grosvenor gets less service plan isnt acceptable.

DO NOT CLOSE THIS METRO STATION!

Again, it would be likely to cause difficulties for my son and his family, and my daughter.

Optimistically assuming things are â€œnormalâ€ by then, Strathmore is a performing arts center and Metro is used by its patrons.

I only use Grosvenor-Strathmore

I can walk to Grosvenor/Strathmore, but would need to drive to all other nearby stations causing more traffic on Rockville Pike & clogging parking spaces near any & all nearby stations

It would be harder but would work.

As described before, Closure of Strathmore will be inconvenient for me

Grosvenor-Strathmore is a major concert area and in January 2022 it will most likely be back to conducting entertainment. In addition, Grosvenor-Strathmore has parking (garage and outside parking). The Medical Center area is operated as office space area, so this would depend on the office space traffic.

too infrequent

Any employee that has to arrive to work, in these areas, to get to work on time, will become quite agitating due to the long wait for a Metro train to arrive, at that specific station. It also reduces the amount of employees that work with Metro, employment at high levels and cutting off employees will begin a number of growing of unemployment.

Hope this helps with budget. If you notice crowding. Will you make a change?

As I stated in response to Proposal #1, I really dont want WMATA to have to cut Metro service on any of the lines.

It may work for my but it would take more time.

Closing Grosvenor-Strathmore will be highly inefficient for my travels.

I dont ride this part of the red line, so it doesnt affect me.

Grosvenor is a huge commuters hub and should not be closed. Medical center is hard to get to and does not have parking.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

There is no parking facility at Medical Center Center. We do not have anyone to get rides to the station. There is no bus service from close to our home. Considering inconvenience for all riders, please do not consider closing Grosvenor - Strathmore Station at all.

Please do not close Grosvenor. It is the station many rely upon due to parking.

As indicated in comments to metro proposal 5, this proposal should be viewed as the last possible course of action to rectify fiscal challenges, taken only in instances wherein EVERY OTHER COURSE OF ACTION HAS BEEN ATTEMPTED AND DULY FAILED. The closure of Grosvenor-Strathmore would negatively impact thousands of employees at both the NIH and Walter Reed Medical Centers, front-line personnel who not only constitute part of the national response strategy for the provision of care during the COVID-19 pandemic, but who are/were also directly responsible for the very research and science that led to the successful development of the very COVID-19 vaccines (e.g., Pfizer, Moderna) that are now saving the lives of citizens across the DMV areas and the United States. Closure of this station would displace thousands of these critical and dedicated employees, whose expertise will continue to be counted upon to develop effective responses to the additional strains of coronavirus currently being discovered and for which public vaccine boosters may become necessary in January 2022 and beyond. It is unlikely that the metro board intends to slap these critical front-line personnel in the face, but the closure of Grosvenor-Strathmore would be interpreted as such, given that it would constitute the functional equivalent of this action if implemented. This is just one example of the reactivity of this specific proposal. The proposal does not appear well thought out nor grounded in (or driven by) data or careful analysis and consideration. Given its implications for metro and its stakeholders, coupled to its impact on employees deemed critical for public health and safety, this proposal should be used only as an absolute last resort. The low ridership experienced at this station - as referenced in this proposal - is likely due to the federal policies allowing for telework and remote work (e.g. MaxiFlex policies) during the COVID pandemic and thus would constitute an intermittent data point. Historical, pre-COVID ridership data and trends would represent a more accurate data point or analysis. Note, too, that service can also always be scaled commensurate with ridership data and trends over time (including those over the course of a single day, week, or month). This proposal to close stations, including Grosvenor-Strathmore, should be used only as a last resort.

See answer to proposal 1

If this means substantially reduced frequency further down the line (Metro center - cap hill), then no, it would not work. Infrequent trains mean that commuters cant rely on the system and likely wont be able to get on the trains because they are so full. Theyll stop riding and Metro will fail permanently.

For the previously stated reason, 15 minutes between trains on the heavily traveled Red Line corridor between Medical Center and Silver Spring (or Grosvenor and Silver Spring) is simply too long an interval.

30 minutes is a long time to wait on trains especially on week days

Just collect more from MoCo for the 15-minute service headways.

What about all of the people in the apartments that will definitely be inconvenienced, and back to driving carbon-producing automobiles? Last I checked, electric automobile charging stations wont be in apartment complexes for quite a while.

If I walk to Grosvenor how would I get to Medical Center?

White Flint and Medical Center Stations are not as accessible as Grosvenor station, so this would be difficult. There is more traffic around the medical Center Station in the mornings, so people getting rides to the metro would have to deal with traffic, and would be creating more traffic-it is very congested there in the mornings and evenings when people are going to and coming home from work. Having Grosvenor open helps alleviate and prevent that. People could drive away from traffic to White Flint, but that means going in the opposite direction of work if traveling downtown.

Seems like there would still be reasonable wait times to more frequented stations.

Will there be a free shuttle to Medical Center?

Again, not great to have anything less than 15 minutes, but for suburban, higher income areas, I guess.

Unless the Panemic situation worsens and no one is travelling anywhere, the density of the population surrounding Grosvenor Strathmore is very high and growing. I cannot comprehend the rationale behind these decisions??? To shut down this once bustling station at the time we hope normal travel to resume? The crowds that would potentially gather if service is reduces is likely to alarm most still recovering from social distancing frenzy.

Grosvenor-Strathmore stop needs to stay open. It is a vital stop.

Responding to reduced ridership with a reduction in service is going to cause a further reduction in ridership. Why would anyone choose MetroRail if they can drive in half the time?

Trains would be absolutely packed -- to the point that people would have to wait for the next train, IF THEY CAN FIT ON THAT ONE -- during rush hours. Additionally, I take the MARC to the Metro as it is, and have a Metro transfer to a different line. So, Id have three transit lines with relatively long wait times in between instances, and that would likely mean Id opt to drive.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

There are people that use the metro, especially medical Center because they work late at night hours or returning home

Closing Strathmore would keep us and many, many other people from attending performances at the beautiful venue. Could Strathmore even survive without Metro access? It would be cruel to make Strathmore inaccessible for so many people. The place is packed for every evening performance we have ever attended.

I dont use those stations

I say no to this mainly because of the Parking available there.

I dont use that part of the Metro typically.

Closure of Grosvenor station would be a major obstacle to my ability to utilize Metro as I require parking at the station-especially when I use Metro for evening trips into the city and back. I also know that many older people who reside in the Grosvenor apartments and the condos that have been built in the area specifically due to metro proximity and access will be negatively impacted by the closure of this station. My husband and I most strongly object to closure of this station and sincerely hope that Metro can find other means to reduce costs.

Grosvenor-Strathmore must remain open for my travel purposes. Maybe, you should not open the Silver Line if you cannot afford to maintain services to existing stations.

This will significantly increase my commute time. I would likely no longer take metro

While I dont regularly travel to and from these stations, I have occasionally used Metro to get to restaurants or cinemas near them to meet friends. Traveling by Metro saves me driving the Beltway which feels increasingly unsafe to me as an older driver. Increasing times between trains would mean adding up to an hour more to my travel time.

the 15 minute frequency works toward delaying an on-time work arrival for me, not to mention for those coming from the far suburbs.

During rush hour, trains should arrive faster than every 15 minutes because there are more people and typically train delays. If a train breaks down or is delayed for any reason there will be twice the number of people on the next train, and those people will be waiting 15 minutes to get to work. Moreover, the Red line has two of the bigger stations in the metro system with large transfers - Metro Center and Gallery Place/ChinaTown.

Im sure 270 can handle the extra traffic...

I don't ride the red line often but generally oppose service cuts.

Doesn't Grosvenor-Strathmore serve a major music and theatre venue?

I would like to be able to rely on Grosvenor to commute from.

This will severely jeopardize my sons ability to find a job. He has a disability which prevents him from driving and walking long distances, and we bought a house specifically within a walking (10 min.) distance to metro (the Grosvenor-Strathmore station) to increase his chances to have a job for which he is studying so hard and have more chances to socialize which is a lifechanging opportunity for him. Without a realistic access to metro, he will be confined to our neighborhood, continue staying at home, with very serious long-term negative consequences.

No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab.

By January 2022, it is likely workers will have returned to the office. 15-30 minute headways will result in crowded stations and trains.

I rarely use these outlying segments

I don't usually ride the red line, but when going to some locations in DC where parking is horrendous, I still consider taking the metro off I can get to my destination without walking miter than a short block or two. As a woman, I don't feel safe during darker times of I have to walk through unfamiliar areas alone. Plus, if I'm going to an unfamiliar area, I can get turned around trying to destination, so I really hesitate if the destination is a long walk from the station.

Closing Grosvenor station does not work for me. It will make it pretty expensive to get to the closest station

This would increase travel time for service workers.

Your projections aren't reflective of municipal demographic goals insight of economic recovery from covid - 19 .

Confusing and likely will create lots of complaints.

See prior response regarding Shady Grove.

NOOOOOOOOOOOOOO. Go to NIH for doctors. Go to Walter Reed for training. Go to end of these lines to get to other parts of the city. THat will stop as im not adding even more time than it already takes to get to those places. nor will my friends. You are destroying DC and making it a horrible place to retire. Im already rethinking that. NO NO NO NO

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

The Grosvenor area is very densely populated With lots of traffic at peak hours. Metro is the only efficient and reliable mode of transportation in the area even with the existence of the Rideon bus lines.

I live inside the Beltway, so this does not affect me. However, if you reduce train service at the stations outside the beltway, that makes it much more difficult for those riders to access the Metrorail system. It would be a much better proposal if you ran a supplemental train from Shady Grove to Medical Center and from Glenmont to Silver Spring, this might be passable. I used to live outside the Beltway and didn't use the Metro at all specifically because the bus did not come frequently enough for my trips to be worthwhile. If you reduce trains to become that infrequent, you will lose more riders than you will save money.

As mentioned previously, this train service would not be frequent enough.

Lowering frequency to the northern red line stations would make it harder for me to choose metro to visit family.

See prior response regarding reduction of red line service during rush hour.

I live within walking distance of the Grosvenor Metro station and frequently take red line train. I would be very upset if it were to shut down !!

Grosvenor-Strathmore is a popular station for access to the Strathmore Music Center. Closing that station would increase reliance on vehicles for transportation and force more cars onto 355/Rockville Pike which is already crowded and dangerous for cars, pedestrians and bike riders.

This would not impact my commute.

I use public transportation to travel from Prince Georges County, Maryland to downtown Washington, DC. I don't travel into Montgomery County, MD.

As previously discussed, I commute from/to Rockville, but I could not rely on a train once every 30 minutes because it would almost inevitably result in me missing school pickup on a semi-regular basis. As a result, I would either drive to and park at an already crowded station/parking garage further down the line, or I would not take metro on weekdays.

Maryland residents who rely on the Red Line to commute into the DC metro area, whether for leisure, work, or other purposes, should not have to wait 30 minutes for a train to arrive. Rockville, in particular, has a sizable commuter presence, and reducing operations in the area would harm our economy and reduce interest in moving out here for DC transplants like myself. It's unreasonable that essential workers, low-income riders, and passengers with disabilities would essentially be trapped at a station for 30 minutes if they just happen to miss the train. This proposal is offensive to the Maryland residents who strive to be environmentally friendly and use WMATA rather than drive around the DC metro area for their various needs.

Other stations are too far away for seniors with mobility problems- this works slowly to walk to the Grosvenor station

I am concerned that even retaining an every-15-minute schedule will make the Red Line a difficult commuting option because of increased numbers of passengers per train and the impact on arrival times during rush hour.

While it would be better to close one metro station than several, I think this is also not an ideal option. An option earlier, maybe option 2, seemed to do a similar thing to do this without any closures. I would prefer that option to this one.

I do not understand this question. Please don't close Grosvenor

Trains & platforms would be too crowded & packed

Somewhat inconvenient. but workable.

It's sad that we have to make choices that might not affect some, but will affect others, in this case those on the Red Line.

You called time on me. Moving on.

Trains operate every 15 minutes between Shady Grove and Glenmont. No turnaround on Red Line.

NEVER CLOSE GROSVENOR-STRATHMORE. It is WMATA's crown jewel. It connects with EVERYTHING and the massive development all around this station was erected for precisely for SMART GROWTH so that people could have very close access to the subway and not rely on their cars to get everywhere, which kills traffic, kills the environment, contributes to climate change, overcrowded schools. I have relied on this amazing station which is very close to where I live to get me to buses (including Ride On in my own neighborhood and areas nearby) to Union Station, to National Airport; to downtown festivals which are many, to museums, to conventions that I attend; and to the Zoo. If we lost this station, the county's economy and quality of life would be doomed. My relatives also rely on it when they come to Maryland to visit me. Its closure would be brutal for everyone--including the whole DMV who come here via the subway to attend performances at the Strathmore Concert Hall and outdoor summer concerts. It could even threaten the Concert Hall itself. Use this station to go to all sorts of concerts everywhere every weekend all spring, summer, and fall.

No, no, no. Shady Grove, Twinbrook and White Flint have some of the most parking available. It wouldn't make sense to deter riders from these locations. This would discourage people to park and ride - to pay for parking, only to have to wait 30 minutes (2 each hour) for a train. Also, closing Grosvenor is a ridiculous idea - it is an incredibly popular station, majorly convenient given access to highways, and has lots of parking.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

There arent any stations in walking distance of Grosvenor, so Im afraid those communities (and the Strathmore Center) would be stuck without a metro.

I dont think this would affect me.

Those time gaps are too big and will lead to crowding or reduction in ridership and more traffic.

This will impact theatergoers adversely especially older folks who prefer not to drive at night.

I use the orange line so this doesn't affect me.

The closure of the Grosvenor-Strathmore station would add additional time to my commute. The nearest station would require using a bus to get me to either Medical Center or White Flint depending on the travel needs. I am 100% dependent on public transportation, as I do not drive due to medical reasons. I use Metro for all my daily needs: work, grocery shopping, medical appointments, and pre-COVID time: religious services, visiting friends, community events, and other activities.

I do not use this metro station

This proposal would be extremely burdensome for my family. We have two full-time jobs and a young child, but only one car. This proposal would be seriously harmful to us and our ability to get to work and obtain child care.

This is a terrible plan to make Red line train service slower and more limited. I use the red line the most often since it is near me station Fort Totten and would be hindered from timely arrival for work and medical appointments by such a horrible plan as this.

I work at the federal building at twinbrook and 30 min during rush hour would be problematic.

This effect getting around the DMV for jobs and checking on family members without a car

Grosvenor station is our bloodline

There is a critical high volume station, this plan will inconvenience lots of people. The supply will not meet demand.

I rarely take the Red Line, so while this proposal would work for me, I am not the best person to weigh in on this topic.

Please refer to previous comment about proposed reduction in train frequency.

Parking resource at Grosvenor-strathmore is valuable complement to metro service inbound to DC.

Again, I live near the Twinbrook metro station in Rockville, MD, and this proposal of trains arriving every 30 min. at stations north of Grosvenor would make trains too crowded. Even with the previous pre-pandemic schedule, many south-bound trains arriving in Twinbrook for the morning rush were full. I have waited for up to 3 trains at Twinbrook during the morning rush in order to find space to board safely. I experience a similar issue during the evening rush hour from downtown DC to Twinbrook when trains to Twinbrook only leave from DC every 30 min. Post-pandemic, no one is going to be thrilled about being in such close quarters with so many other riders. People will start to drive to work instead of cramming into metro trains like sardines. Loss of the riders north of Grosvenor station post-pandemic will compound Metro's budget issues. It's not clear why metro hasn't reduced service now, when there are fewer riders, to save money now instead. I see trains at Twinbrook much more frequently than I would expect during the pandemic. It doesn't make sense.

Issue of traveling between Medical Center and Shady Grove in the evening home from work shift that ends at 8 pm.

As a White Flint resident, this is pretty terrible.

Not sure, only if it is due to low ridership.

The Grosvenor-Strathmore station is a very important part of the neighborhood it is in. Many people chose to live where they do because of the close by metro. The next two metro stations are not accessible by walking and would make Metro much less accessible.

This is really terrible. This makes public transit entirely unviable for our commutes.

Closing Grosvenor-Strathmore will not work for me

I can accept this proposal because it does not close stations.

I worry about overcrowding in the middle of the red line with trains only every 15 minutes during rush hour

Such plan would leave the important Grosvenor/Strathmore community without service.

30 minute headways at stations is unacceptable. Be a reliable mass transportation system, or close your doors so we can get another business to service the needs of the people.

Metro does NOT have an alternate service connecting Medical Center to Grosvenor which makes travel more difficult. In addition, Ride On (Montgomery Co.) service provides NO service between Medical Center & Grosvenor either except for Sunday. As stated, closing this station and 21 other would hurt customers who live in that part of Montgomery County. Metro used to have a bus route that connected Grosvenor & White Flint before it was eliminated (J5). Senior citizens would suffer the most under this proposal if Grosvenor was closed, as well as people who live and work along that stretch of Rockville Pike.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

If the Ride On buses were not running, I would be in deep trouble. I have no car and this would also add to my cost of transportation. I bought my Condo based on the fact that Metro had a stop there. That was the main reason for my buying my Condo.

I dont understand why Metro would abandon Grosvenor, with the parking garage there, which is the closest parking garage to DC on that side of the Red Line.

Not sure because other people go that way.

need higher frequency during rush hour

I do not frequently travel to these locations so every 30 minutes would work for my specific travel needs

I do not and have never lived on the Red Line.

I currently do not often use the Red Line.

30 minute headways dont work period.

Red line trains arriving every 15 minutes is just bad.

While I dont ride this segment often, there is too much time between trains for those who do.

Do not close/shut down any metro station even if there is low ridership-- to compinsate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals. Essential workers, elderly & schoolchildren use subway & bus to get around.

Absolutely not! My commute is Grosvenor to LEnfant EVERY WEEKDAY (Monday through Friday). GROSVENOR IS AN ESSENTIAL METRO STOP -- ESPECIALLY OVER TWINBROOK AND WHITE FLINT BASED ON RIDERSHIP DATA COLLECTED PRE-COVID. I need to use the metro to get to Department of Homeland Security (DHS) campus everyday. Please dont make my life harder than it needs to be. I already have to take the red line to switch lines to get to LEnfant to then take a shuttle to DHS campus. I dont have time to take a metro bus from home to another red line train. I currently walk to Grosvenor-Strathmore metro and need to be able to do this instead of moving as well as losing value in my home.

Wait times are too extensive especially when one has to connect to another line or bus transport.

Trains should be at minimum every 20 minutes to each station. Alternative bus service exists between Grosvenor and Medical Center but should be increased in frequency.

I dont have particular affection for grosvenor-strathmore but every 15 minutes is slow

See prior comments. 30 minute wait times for end of line stations is not in the best interest of riders and I can assure you, I would rather drive ten wait the additional time.

This proposal seems consumed within the others. Not sure how it is different than Proposal 2 (I think).

Would cause overcrowding

No - this segment of the red line is essential for my work commute!

If we can afford tax breakers for billionaires, we can afford to pay for mass transit. Simple as that!

Basically, the working class is doomed with this plan. This isnt manageable for us

This might work for the short term. This doesnt affect me right now.

I dont currently use the Red Line, so this wouldnt impact me.

You would be asking me (a neighbor of the Grosvenor station) to wait up to 30 minutes for a train? Unless Metro could publish a reliable schedule of train times, why should I ever take Metro? Answer: I never would. I would count on Ride-On, which runs more frequently up and down the Pike now than Metros proposed 30 minutes and can at least be counted on as to time of arrival.

No comment

I would have no way of getting to medical center . I would be very upset if you do this.

Again, less frequent trains equal more people on the train once it arrives which does not allow for good social distancing. Additionally, what service will you provide to those without means of transport who will lose their metro access at grosvenor.... will you provide free shuttle services to other stations? If not, then cut costs elsewhere.

Will have to find a way to get to that area by bus, which will cause many people problems to get to area. Having the station open help everyone to get where they need to go without commuting a few hours to get to that area.

No objection to the proposal to run a train every 30 minutes at the listed stations, but trains should run more frequently than every 15 minutes at core stations during prime commuting hours

See above.

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| if i take the yellow/red lines to work, I change at Metro Center. Given how busy Metro Center gets, every 15 minutes would likely be too infrequent |
| Too much time, 30 minutes. Too many trains packed with too many people at rush hour |
| I rarely use this section of the system but given the push to remove the turnback in years past I believe that this will be difficult. |
| I dont use the redline, but this again would hamper DC traffic. If it must be done why not reallocate and do this now when there are fewer riders? |
| It would work far better for me if the more frequent service was extended to Wheaton, which is already a giant nexus for outer MOC residents. |
| I do not regularly use this station |
| Too long between trains. |
| If you consider running 30 minutes to Rockville, that would discourage me from using the metro to work at Montgomery College in Rockville. |
| People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around—especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinated, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around. The hours listed above also create a hardship on riders. If you miss a train, you have to wait a considerable amount of time for the next train to arrive. This can impact riders dependent on Metro to get to and from work. |
| I dont use the stations youve named as likely to get service every 30 minutes, but I do occasionally go to Strathmore and Rockville in the evening. A train every 30 minutes is a daunting wait for someone who is tired after a long day and wants to get home. I know you know this. Each of these proposals is drastic and would shut off an important share of your riders and prospective riders, turn their attitude against Metro, and lose their patronage for the short and long term. |
| This sounds very complicated especially for those visiting the Washington, DC area for work or family visits or other things. Consider keeping everything at 20 minutes between stations. Its hard enough to plan. |
| I live near Grosvenor -Strathmore station (3 minutes walk). It will make it extremely hard for me to get to Medical Center station in order to get to work or going to downtown DC |
| I dont use Grosvenor Strathmore and havent in 7 years. |
| Need trains more frequently during rush hour. |
| Our hiking club bus uses the Strathmore parking lot every weekend. |
| From Medical center to strathmore - road are not pedestrian friendly. |
| I don't use Grosvenor-Stratmore but the time between trains is insufficient |
| Grosvenor is an important stop for me, because I live here! |
| Need shady Grove and White Flint more regularly than that. |
| As someone who used to live right at the Grosvenor Strathmore stop, I can say that reaching another station from that area is not convenient. Some people who live there would be terribly cut off- it would affect their commutes horribly. |
| I will be commuting to work as I did before the pandemic and will need reliable train service more frequently during the week. If the trains run every 30 minutes I will not use the trains and will find different way to get to work. |
| However, I think this removes an important option for those who travel to Strathmore for performances. |
| Strathmore is a culture icon in the DC metro area. Closing the closest station would only hurt one of DCs oldest cultural venues. |
| Closing Grosvenor-Strathmore is a very bad idea and will result in even lower ridership. |
| No, no, no! People headed to the District of Columbia DO NOT want to drive away from their end destination in order to find a Metro station with parking. If I drove south towards my final DC destination, I would find Metro stations with little to no parking spaces available. This makes no sense and would not work for me or others. |
| Again, I dont do Montgomery County unless I absolutely have to. |
| I need Grosvenor station to stay open. |
| My family commutes from Rockville to the last stop on the Silver line. This would adversely impact that commute |
| Are you basing these decisions on pre-pandemic ridership or pandemic ridership. Once more people are vaccinated and venues in the District are open for business again, the ridership patterns will change. Pre-pandemic, I don't think the ridership from Grosvenor was low. |
| This is probably not an issue, but I would need to check the map. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

All of these 30 minute intervals between trains is ill advised, especially during the winter months. Jan, Feb, Mar, and sometimes Apr dont have the most hospitable weather for public transportation.

My commute is impacted just the same as I indicted on previous questions.

I worry about over crowding during rush hour on platforms and in the cars

Not my region.

30 minutes is not frequent enough

Again, Grosvenor is only station walking distance from my home.

My family depends on the Metro train from Grosvenor-Strathmore.

I would need access to Grovesnor Strathmore.

I do not regularly travel on that part of the red line, so not sure how those changes would affect me or others.

I mostly use the yellow/green lines with occasional red line use in the city.

Again I am at Twinbrook this schedule is outrageous

Similar to plan 2:For work this is fine and meets my needs since I commute from Gallery Place to Tenleytown.I do have family and friends near the Rockville and Wheaton lines though, so the extended wait is certainly frustrating. But not impossible to work around.

I dont take the red line.

This would not affect me personally.

This would cause inconvenience and severe crowding at downtown stations, particularly change points and those adjacent to sporting arenas

Run more trains.

I work in Rockville.

Should be shorter cycles.

I don't ride red

Not for 2022. 2021 perhaps. But not 2022

My travel time for work would increase drastically.

I oppose to the shutting down of entire stations in any scenario.

Can metro adhere to a fixed time schedule make available to the public.

There will be no appeal to take public transportation.

I ride red line to my job Rockville. I am legally blind but there are many others without cars riding these trains. This is not a good solution. I have to leave on the first train of the day to get to work on time. Changing the times would not work for many, many riders.

One of the places I often use metro for is Strathmore, where I rehearse and perform.

Are you nuts?

I dont use the Red line much so these scenarios seem ok to me.

This is the best so far

More stations equals more access and the metro is a key environmentally friendly and cost effective travel network..

This is getting more and more ridiculous. WE NEED TO GO PLACES.

Lame

I do not often need the Red Line to those out-lying stations and have used Grosvenor-Strathmore station only once. Again, the important thing is schedule and consistency of train operation so trips and connections flow.

I rarely ride the Red Line.

Your proposal disproportionately affects the working people and the poor. This is structural, economic discrimination.

This station is important because it's the one I use. Please do not close

15 minutes is too long to wait and too infrequent. It would stretch my commute out to where it would be more efficient to use a car.

Please see my remarks re: trains every 30 minutes on the Red Line previously in this questionnaire.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

I am not in favor of closing stations, in general. I tend not to take the red line as often as the orange line, but I don't relish the thought of a 30 min wait in the instances that I do need to. It would discourage me from taking metro"which sets up a vicious circle (fewer riders" > less income" > less convenient metro service " > fewer riders...)

When Metro needed us to support its expanded service, we responded by encouraging the building of this station. Now that we have supported you for decades by building businesses and new homes, you are saying we are no longer necessary. The pandemic has affected us also by having to work from home. Now that offices are opening back up, help us to get back to work and maintain our lives and ability to exist.

This does not appear to affect my anticipated travel needs as an infrequent, out-of-town Metro rider.

none

I think it would make more sense to turn back at White Flint instead. White Flint has been a pretty regular stop for me for the 24 years I have lived in the area.

I take the train home and i work in that area. My family and friends work by these metro stations

Not sure but please keep in mind those who depend on metro at these stations to get to and from work.

Dont use any of them routes

I live in Bethesda. I frequent the metro to Rockville and other places North of me. My concern would be what other alternatives. Are their conversations with Ride On? Because they have already reduced services so if these are the proposed cuts, will they increase services?

Similar to an earlier plan, I believe this one is more viable

Keep it 15mns arrival in all the train stations

Porq yo vivo en glenmont y es demasiado tiempo para la espera

Is ok for the metro to runs every 30 minutes is not that bad.

None

...

That might work.

Again, frontline healthcare workers and medical researchers rely heavily on dc metro transit systems, especially the metro rail system for daily transportation back and forth to work or to the connecting Marc train lines to get to work. We need frequent service at peak times

Si debido alo que esta pasando creo que si

Si cierran estaciones, tienen que dar facilidades a los usuarios, para que lleguen a su destino. Usando buses. Y en la relaci3n al tiempo, cada 20 minutos.

To date, Ive only used Rockville, Medical Center& Bethesda stations.

If this is absolutely necessary, schedules must be made available to help people plan accordingly.

Suelo usar mucho la IÃ-nea roja

It interferes with ability to reach locations

Leave that alone because it is another route to going to work or the hospital.

No parking at Medical Center means this is not a good replacement for Grosvenor-Strathmore even though the two stations are close to each other.

I don't use these stations

I need higher frequency on the red line since it's my main line.

Go

Same as previous reasons, this drastically impacts work commute

My commute on the Red line starts at Silver Spring so this is fine for me

Too far apart

Keep that station open.

This sucks, but I don't use the red line as much.

Do not travel to these stations

This would be good because it gives you time to be early what I mean by that if I know they run like that and I gotta be to work a current time it allows me to improve time management

If Strathmore reopens, wont this be a problem for its audiences

N/A

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| I don't travel to none of those stations. |
| I'd like to see every red line station in service plus that was the first line that was create it |
| Trains should operate every five minutes |
| I dont ride the Red Line |
| Heck no. Please upgrade technology to self driving and cut labor, not decrease transportation options |
| Likely further reduce ridership, especially at major stations with other options like Rockville. |
| No |
| This acceptable with planning. |
| Again, what determines "low ridership"? |
| I rarely take the red line, when I do, I usually dont need to go further than Medical Center on the western side or Silver Spring on the eastern side. |
| I dont ride the red line. |
| That's a long time |
| My work needs dont require me to travel to any of these stations, however, i think Metro is making these suggestions based on 2020 trends, which isnt accurate at all. |
| too long in between trains |
| FAMILY MEMBERS ONLY MEANS TO WORK AND WILL NO LONGER WORK IF STATION CLOSES. |
| This is my daily commute, 15 mins is too long to wait for a train. |
| None |
| Not a red line commuter |
| I don't even understand this plan. Rewrite.. |
| Again, as with earlier proposal, I could make this work though it would not be ideal. |
| That would effect the working class |
| Again, I dont take the Red Line really. Plus, this looks like youre just making excuses to pay your employees way too much money. |
| I don't ride the Red line. |
| I f do not use red line |
| This closes a valuable station and still runs too infrequently to be functional. |
| don't use these stations |
| Rarely ride those lines |
| I don't use the Red line, as much |
| This works. |
| Ideal solution. |
| I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus |
| Impacts commuter time to meet other trains to get home in a timely manner |
| Don't use red line. |
| This would work for me, but I also dont plan on traveling through Grosvenor-Strathmore station. I imagine those who do will feel differently. |
| not using it metro now, later i will |
| There will be a increase especially during summer mouths. The Fall seasons... people need to go and come as is... do not close out the above mentioned stations maybe the 30 minute wait is negotiable |
| I dont travel that far up usually, so Im not directly affected. |
| I use the Wheaton Metro station, & would need increased frequency of service after the pandemic. |
| That works since it will also maintain the trains underground more which maybe helps? Medical Center is important for all the workers at NIH and WR. |
| My stop is silver spring |
| The trains are going to very over-crowded |
| I will do everything to plan around the schedules. |

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

This plan could possibly work for me.

a longer commute time

wouldnt like to see Grosvenor-Strathmore closed

Would it be possible for the redline train to run every 15 minutes for all of the red line stations?

30 mins. is a long time in cold or hot weather. Absolutely against this too.

these are very long waits if your are near the end of a line.

I do not use the Red Line frequently.

No comment

I commute to White Flint so it would be my preference for trains to come more regularly to that station

digo que si pero desconozco esta ruta

No will not work for me because the red line heavy traffic all hours of the day

Low ridership could be temporary.

I dont have first-hand experience with whether these get busy or not, but seems reasonable.

No impact to our travel.

Why is the Redline being targeted?

I do not regularly take red line

None

As I recall every time metro has expanded service ridership has increased.

We do not use Metrorail.

I have never been that far out on the Red line. Close it.

Getting off one red train to get on the next one is very inconvenient.

When I lived in the Bethesda/Rockville area, Grovesnor was my #1 location for ridership. I still use it when I go to Strathmore events. A lot of neighborhoods rely on it, especially with how hard it is to get into the Medical Center station if you must park.

No comment.

This would not affect my travel.

You will force everyone to find alternatives for their commutes.

Closing grovesner okay but trains need to run from shady grove to glenmont

I use the Grosvenor-Strathmore Metro Station Daily.

I live in Wheaton so I would still be late for work.

Every 30 minutes to Shady Grove is not a high enough frequency to ensure that I maintain my job. Every 15 minutes would be the bare minimum to successfully maintain my current employment status.

15 min for all stations

Long commute If my commute becomes longer with longer delayed connection I will most likely start drivingMy commute currently 1 1/2 hours30 min to metro transfer 20 minutes in orange/ silver line sNd 20-30 minutes on bus 1A or 3 A

This plan will not work for me at ALL. I live in Glenmont area and wait 30mins for a train is way too long.

This would work as long as the trains were not at full capacity such that people could not rely on the train that arrived having enough space for them.

Again, with 30 min wait from Shady Grove that train will be packed just leaving the station

I would just have to plan and hope for no delays when going to wheaton

Absolutely not - I get on at Twinbrook!

This will kill the metro ridership. The metro will never recover. Look at cities with successful public transit system. Theyre reliable and very frequent, there fore people use it. Decreasing times and stops will encourage people to never use it.

Don't use these stations

I would not feel comfortable taking more crowded trains while social distancing.

Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure

Living in Wheaton, this is essentially the same as proposals 1&2.

In the past when a similar schedule was in place it worked because the arrival times were more frequent. I use the Wheaton and Forest glen stations so the extra long waits would be probelmatic.

This would cause numerous obstacles for those who use these stations.

Just have all red line trains run every 30 min

my son rides to Ft Totten from Naylor Road or sometimes PG station where I work.

Between the NIH and WRNMMC there are far too many employees at Med Center that don't have the option to telework (nurses, orderlies, service staff, etc) and with all the parking restrictions in Mo County, slowing service to Med Center is simply hateful, lol. Surely you've seen that even during COVID, Med Center patrons are pretty consistent.Plus, don't forget that once school is back to normal, many of us will be avoiding certain train times due to all the loud and awful HS kids that ride around 3:30p. Please Metro, use this time of low ridership to figure out a better plan on how to deal with the unruly, loud, smelly and ever-harassing school teens! You know exactly what I'm Talking about too...

I'M NOT WAITING 30 MINUTES FOR A FUCKING TRAIN

I primarily commute during rush hour on the Red Line, so this would completely change my perspective on the metro. I would reconsider driving instead, which would be upsetting in many ways.

It adds longer time to my commute to the office. People will have start to consider transportation that is not clean for the air such as Lyft and Uber

To the same point as the other proposal, getting home to Forest Glen would be very difficult and make the trains packed with travelers going to those limited locations. Taking the metro would not be continent anymore in that case.

This is terrible. I need this station to commute to work. The next nearest station would be a 30 minute walk away. This is a terrible idea and the station is incredibly important to me. I work for the navy and have to commute to navy yard

people in rockville need transportation! 30 minutes is a ridiculous wait

Not applicable to me.

Coronavirus

I don't understand what metro is trying to do closing such a big and important station Lake Grove now I think this is ridiculous they should not happen they have spent a lot of money creating more parking it is one of the biggest stations for parking on the red line this absolutely cannot close it is vital to my commute every single day I have lived in this area for over 20 years and grove the station is an absolute lifesaver for so many people that live within walking distance of this metro station

Why are you picking on the red line people this way? Is ridership that low? WHY? Explore that - metro isnt a build-it they will come - something is wrong, either they cant get to the stations by walking or bus or with parking or some other inconvenience is keeping them off your trains. Parking is so expensive, that something is forcing people to drive instead - you ought to explore WHAT that is.

Not terrible. This is a good compromise... Can there be one train that goes back and forth on the last few stops of the line? A dedicated train with fewer cars. Just to transport the outer edges to busier stations.

Does not affect where I get on and off on the subway.

During rush hour, they should come more than every 15 minutes between Medical Center and Silver Spring. Everything else is fine.

I ride the red line to work. This would decrease ridership even more leading to lower revenue.

I think this will be terrible for people in that part of Maryland. Any train breakdown will destroy peoples commute, which will have the biggest impact on low wage and hourly workers. There probably isnt enough parking to absorb the additional riders that have to use a different station.

You might as well shut down the entire Metro rail system that my taxes have paid for for years. This is disgusting. You need to try to get the country to return to work in office buildings rather than fire everyone and shut down! Montgomery County has done a lot of new growth (residential) in the Grosvenor/Strathmore area and developers sold people on moving there because of its proximity to Metro!

This will prolong my commute from Glenmont to Foggy Bottom

Work and no car

This works for me but would probably be bad for many others.

This is not the best but I could accommodate to that plan

Should be 10 min during rush hour

| |
|--|
| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure |
| I live near Grosvenor-Strathmore metro station and I will need it to commute to work. |
| There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy |

| Proposal to implement Red Line turnbacks with Grosvenor-Strathmore closure (Spanish) | Translation |
|--|--|
| Por qué cerrar Grosvenor Strathmore? Hay mucha gente que usa esta estación. Para que ampliaron el parqueadero entonces? Que va a pasar con los eventos de Strathmore. Cerrar esta estación sería una pésima idea | Why close Grosvenor-Strathmore? There are a lot of people who use this station. Why did they expand the parking lot then? What's going to happen with Strathmore events? Closing this station would be a terrible idea |
| Necesito trenes en Grosvenor | I need trains in Grosvenor |
| Si no hay muchos pasajeros se debe cerrar la estación | If there aren't many passengers the station should be closed |
| No me afecta | It doesn't affect me |
| No entiendo que razón tienen en insistir poner largos periodos de espera y existiera mucha gente esperando y exponerse a infectarse de cualquier enfermedad | I don't understand why they insist on long wait times and there are a lot of people waiting and exposing themselves to infection from illnesses |
| Porque yo vivo en Glenmont y es demasiado tiempo para la espera | Because I live in Glenmont and it's too long to wait |
| Si debido a lo que está pasando creo que sí | Yes, due to what's happening, I think so |
| Si cierran estaciones, tienen que dar facilidades a los usuarios, para que lleguen a su destino. Usando buses. Y en la relación al tiempo, cada 20 minutos. | If they close stations, they have to give users a way to get to their destinations. Using buses. And regarding time, every 20 minutes. |
| Suelo usar mucho la línea roja | I usually use the red line a lot |
| Digo que sí pero desconozco esta ruta | I say yes, but I'm not familiar with this route |

| Proposal to implement Yellow Line turnbacks |
|---|
| I don't use those lines |
| Opening the Silver line as soon as possible is key to the regions economic recovery. |
| This does not affect me. |
| I only take the silver line. |
| Totally unacceptable |
| Need more stops open |
| I do not take the yellow line regularly |
| During non COVID times I take the Metro to College Park from U Street everyday. Shutting down this service is a huge hinderance to anybody who works in College Park and doesnt want to live with college students. |
| almost never ride yellow line |
| The college park station is critical to my ability to get to work and home. |
| Make it to Columbia heights as a lot of hospital workers get off at that station to take shuttle |
| Absolute foolishness. |
| I go to UMD and like going into the city. The metro is the best way of doing so since I don't have a car |
| Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members. |
| Either scrap completely or do your job! |
| Many in the Greenbelt area commute to DC |
| Lots of government employees rely on all routes affected. Leave all routes open. |
| I dont like this because it eliminates stations. |
| I rely on this service |
| Please do not close Grosvenor-Strathmore Station! |
| This would not affect me personally. |
| College Park stop is important |
| That loses a lot of stops that I need. I do not support this change at all. |
| Please do not do this |
| Dont use this line |
| Yellow line trains are super helpful when commuting |
| I do not take the yellow line very often. |
| I commute to the University of Maryland, or will be, from Huntington. |
| I don't use the yellow line. |
| Depends on how the Post-Covid ridership resumes and when. |
| Provide busing between Greenbelt and Huntington |
| Makes for fewer trains for trips going north of Mt. Vernon. Not great. |
| Need the yellow line to Greenbelt |
| Most riders seem to take the YL from Virginia to downtown DC, so continuing to Maryland is not a requirement. |
| Doesnt hurt me, impacts others. |
| I dont use this line. |
| Green line trains would be too crowded on the north end of the Green Line |
| As long as airport transportation isn't further hindered |
| I transfer at Ft Totten |
| Do not use yellow line |
| This would inconvenience me, but based on what I have observed north of Mt Vernon square in terms of (lack of) crowding, I think this is a tolerable option. |
| Again, this would make it very hard to consistently ride metro |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| i live in alexandria,commute at night,work in hospitality, you are cutting off the life blood of people working in restuarants including immigrants |
| Do not use Yellow Line |
| As long as at least 1/3 of the yellow line trains traverse to Maryland |
| Im moving to Greenbelt specifically because its an easy commute into DC. I know so many who choose to live there for the same reason. But its already a choice to take the metro when its so inefficient, especially when you need to get to the other side of the city vs. just to the center. Metro needs MORE stops and more trains and more options! |
| Dont take the yellow line north |
| Greenbelt is a major hub for airport and amtrak transit |
| This cuts off large parts of the district - at least operate to college park. |
| Needed for weekend travel to Elkridge, MD |
| This would work for our needs |
| I dont travel in these areas |
| More frequently |
| I rarely use trains from greenbelt |
| Dca |
| I dont take the Yellow line. |
| I live in College Park and utilize the Yellow line during peak hours. |
| Doesn't impact me |
| Might not work. My work may move to Greenbelt, so I would need to take Metro all the way there from Arlington. |
| people who need service live farther out. By limiting trains, youre adding a burden |
| yes |
| This doesnt affect me |
| Wonderful idea! |
| This is just stupid |
| Whatever it takes, even if schedule is limited, make sure the green line continues to greenbelt |
| Greenbelt is my main station of transport. It is the closest to me. |
| PLEASE, PLEASE do not bring this back-- it is so frustrating |
| People will need the extra service between Mt Vernon Sq and Greenbelt. If they send yellow line trains all the way up there it could be a train to Greenbelt every 15 minutes as apose to every 30 which is better. |
| I am dependent on Metro for my commute. Closure of metro would force me to change jobs or purchase a car. |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| This would hamper travel for northern DC significantly without the yellow line service |
| Having both trains going to Greenbelt is very convenient. |
| Needed: more train coverage |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| I LIVE IN PETWORTH AND WORK IN TYSONS. I COULDNT GET TO LENFANT TO CHANGE TO SILVER. |
| I will be traveling more once more people have the vaccine. I plan to frequently use the yellow line from pentagon city to Shaw. |
| This plan also sucks |
| Service to all George Mason University campuses (daily) required |
| If I recall correctly, this is how things operated several/many years back and it was fine. |
| For work, I go up to Fort Totten |
| No Problem |
| It is not too difficult to transfer trains at this location. |

Proposal to implement Yellow Line turnbacks

Not liking the idea, but I dont use the Yellow Line much - if I did I would not be happy about this.

I like that yellow line trains currently go to greenbelt.

This is how things used to be and its fine in my opinion.

I rely on getting on at Georgia Ave-Petworth to get to work; Green line only doesnt provide frequent enough trains for me to get to work on time

I do not anticipate using the yellow line.

Green belt is helpfulFor the airport.

Shut it all down. Rip up the tracks - sell for scrap. Sell off everything else. You will save a lot of money.

Cutting out the Fort Totten transfer from the Red to Yellow line will increase crowding on the Green line, especially for folks going to/from LEnfant.

I rely heavily on somewhat speedy service from Greenbelt for my academic and personal needs.

I take this line from Hyattsville

Needs to go to Georgia Ave

Need to improve, not pare down, public transit.

This is an equity issue. Many communities of color live in these areas. How exactly are they supposed to get home, to their places of work?

This makes sense and would be helpful for stations along the end of the Yellow line in Virginia.

We will eventually go back to our offices stop this madness

Did cars write this?

This wont affect my commute, but I think its a more reasonable solution than some of the others posed.

Need the Yellow Line from Greenbelt when I go to Pentagon City

Need to be able to go above Mt Vernon Square

I live in columbia heights and commute to Virginia on the Yellow line. This would absolutely not work for me.

This is a great idea as yellow and green are doubling up on much of the same route

same as before

I don't use that line

Trains should go to at least Hyattsville

It would be more inconvenient, but it would still work for me.

I don't use that line

Easy change and does not affect me.

Lame, but wouldnt affect me

Cut staff not service. Most metro workers are incompetent

I do not use the yellow line so this is not applicable to me.

I have to sometimes travel between Greenbelt and Huntington and not having to transfer especially if youre decreasing the time frames will make life easier.

I live on that line past mt. vernon square. We need the access to both yellow and green.

I need the College Park stop

I dont typically use the yellow line.

I rely heavily on the yellow line and this is a terrible idea. Reduced frequency when more people are going to be able to start riding the train is a terrible idea. As people get vaccinated, more and more people like myself will be returning to using the metro. These plans are very shortsighted.

I live in Greenbelt and work in DC, and take the metro everyday. This would not work.

About time

This would harm those who use the line to get to work from MD.

I rely on the Yellow Line and the College Park Metro Station in particular to get to work. This would make my commute much more difficult.

I ride the Yellow from Huntington to Gallery Place, so this would have zero effect on me unless I needed to ride Metro north of Gallery Place for an errand or something else.

The yellow line provides essential access to DCA, but having to switch lines at Mt. Vernon would be acceptable if necessary.

This would reduce ridership from out in greenbelt and college park

| Proposal to implement Yellow Line turnbacks |
|--|
| Limiting access to these lines cuts off access to lower-income wards in the city |
| If Greenbelt AND the College Park station are closed/not running, it really limits the ability of people at the University of Maryland to enter the city via public transportation, which was a draw for many of them to attending. |
| The Yellow line should go to at least Fort Totten |
| I live in College Park and use the College Park station. Please do not close the College Park Station. |
| Could Metro restore yellow line service to Greenbelt if everything goes back to normal |
| Why are you cutting service in 9 months as opposed to now? Well be back to work in 2022. |
| I think this would be workable for me, but as a commuter to College Park, it would certainly affect my commute. |
| I need the yellow line to green belt. |
| N/A |
| I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I dont care if they have to raise my taxes for it. |
| I'm not as familiar with the yellow line but I do not have a problem with this |
| Horrific idea. We pay a fortune for this service and now you want to reduce it. Its hard enough to early a living wage, now we wont be able to get to work! |
| I do not use the yellow line at all. |
| I use the metro to go between Eisenhower and Columbia Heights. I have experienced it when the metro only ran to Mt Vernon Square and then Id had to transfer to a Green line train which is an annoyance and a waste of time. |
| Rarely use METRO in MD |
| DO NOT CLOSE STATIONS! |
| I get on at Greenbelt |
| Would Greenbelt be an area where a transit system is really needed for their residents to get to jobs? What accommodations would be made for them? |
| I use the yellow line from College Park and Greenbelt |
| That does not allow for me to get to areas north of Mt Vernon Square. |
| I only ride GR/YL to Nats Park. |
| Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors |
| Please remove peak hours fares if there are not additional trains during peak hours. |
| I begin my travels at Huntington. I will not be affected by this change, as I offload at Gallery Place/China Town. |
| Im indifferent. I travel to Bethesda Metro. |
| I use Columbia heights and petworth stations all the time |
| I rarely ride the a yellow line. |
| I typically only use the red line |
| It should go to Fort Totten AT LEAST |
| Live in Shaw could switch if absolutely needed |
| this doesnt affect my usual travels on Metro |
| The Yellow line trains should go at least to Fort Totten. |
| Not applicable |
| The green line runs frequently enough. Yellow line service would need to be provided on critical dates for the University of Maryland, though. |
| I do not use the yellow line, so this would not affect me. |
| This is not my area |
| While this would be frustrating, I would deal with it and make my plans around the green line. |
| Yellow line NA to me |
| I live on the yellow line and don't go past mt Vernon |
| As someone living near Mt. Vernon Square, thats the primary way I can get north into town (I end up going to the Columbia Heights and Ft. Totten stops most frequently) |

| Proposal to implement Yellow Line turnbacks |
|--|
| Not planning to travel to the outer stations on the Yellow Line |
| Needs to go until the greenbelt, it cuts out too much access and too many stops |
| As long as green line trains were frequent. |
| At least run the yellow line to Fort Totten to give more frequency to riders along that corridor. |
| Limits commuting options to College Park. I work at the National Archives in College Park. |
| The more access to Greenbelt the better! |
| If you absolutely have to do this, I can cope, but it means I would never use the Yellow Line sine it wouldnt come out to my station in College Park |
| I would need to transfer to another line on my daily commute if this happened. |
| The greatest growth in population in the city in the last decade has been along the Green Line. The Yellow must continue to run to Fort Totten. |
| I do not use this section of the system. |
| Please continue people to have access to the city in an affordable way. |
| I need more frequent trains to go to work in Mt Vernon Sq from the North |
| I use yellow at Fort Totten |
| I do not regularly ride the yellow line. |
| Yes but I am not a big Yellow Line user |
| Mostly I take yellow line into DC, so although it would be obnoxious the occasional times i need to take the Yellow line into Greenbelt, it wouldnt change my commute drastically. |
| Disenfranchises communities of color |
| I often take this line between Pentagon City and stops beyond Mt Vernon Sq, and this creates a great impediment for my daily schedule. |
| This was one of the worst and most inconvenient things that happened in the last 5 years. The yellow line must run further north. |
| Not ideal but workable |
| Please don't close any of these stations. |
| good idea |
| do not use yellow line in that direction |
| This would limit the number of trains going to greenbelt which would make the wait times too long. |
| This is inconvenient because Greenbelt would be a starting point for me. |
| Depends on frequency of Green Line trains to connect to DCA |
| I often take the Yellow Line to stops in between Mt. Vernon Square and Georgia Petworth |
| That would double my commute and I wouldn't take metro |
| same as red line |
| This would eliminate an efficient way to get to Greenbelt. |
| Does not affect my commute |
| I rely on regularly arriving yellow line trains at Hyattsville |
| The pandemic has changed ridership at an unprecedented rate. It's not fair to close items just people return back to work. |
| I dont live on the yellow line so this doesnt affect me. |
| Greenbelt is a critical stop for me. |
| How would passengers get to Greenbelt? |
| I can always opt for the green like going north instead so no big deal if the lines dont overlap |
| Trains would not run frequently enough |
| I use the Green or Yellow line to get to work from College Park, and when only the Green line runs, it does not come frequently enough |
| I use the U street station. |
| I dont really travel north of Gallery Place |
| For me personally? Sure, but you should be beefing up metro. |
| I ran that line sometimes |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| I work at Howard university hospital, this will cause unnecessary delay when going to work |
| Impacts plans to purchase a home in the area. |
| Would be fine if green line still operates |
| I do not utilize stations beyond Mt Vernon Square. |
| I dont use the yellow line between these stations, but Im sure many rely on it to get out to greenbelt, or even just to get to U Street |
| I live in Shaw Howard University. Having the yellow line stopped at Mt Vernon is not feasible to me. |
| As a commuter to green belt this is not helpful and I would need to find alternate ways. |
| Whats the point of this? |
| need to get on the yellow line at Petworth/Georgia Ave. |
| Im located in College Park. Using the direction connection the Yellow Line has to and from the Airport is my main method of social distancing so I dont infect others in case Im infected on the plane. I can stand at least 15 feet away from people while using the Yellow Line. |
| I live near PG Plaza/ College Park so your proposal would cut my access to the yellow line. I strongly oppose |
| Why would you cut out Greenbelt? |
| Greenbelt and college park are needed |
| If this were to happen, I would hope that there would be increased green line service. |
| i dont care about the yellow like in that region |
| I stop at LEnfant |
| This assumes Green Line trains will continue to Greenbelt. |
| Again, this is not a good idea. |
| I would be late because I take the green/yellow line |
| I don't take those trains so this wouldn't affect me as much, but a lot of people rely on Greenbelt and this would make their commutes impossible. |
| Its very convenient to be able to ride from Prince Georges County all the way to Alexandria. |
| This line is a great connector to my job in Virginia and a key connection to the development in Virginia with Amazon. |
| Many people live in Shaw, Columbia Heights; and Petworth and work downtown. Fort Totten is a better end of the line for this type of approach. |
| Ride to college park, so ending at mt. Vernon would be inconvenient |
| It would depend on the frequency of green line trains. Every 30 minutes to college park would not be helpful. |
| I only go as far as Eisenhower Ave. |
| That would make it impossible to get to work on time if you miss your train. The difference in a half hour in getting to work is enormous, plus this lack of trains would cause them to be extremely packed. This is a very concerning once people start to go back into the office. |
| If need to go further now will have transfer. Should go entire way |
| I am a student at the University of Maryland and live out of state. The yellow line train from the College Park station to DCA has been extremely helpful for commuting for breaks and holidays. Please keep the service as it is. Thank you. |
| I dont travel to greenbelt on the yellow line so this would be fine. |
| I dont anticipate needing to use that end of the Green/Yellow line. |
| Same answer as before, by January 2022 things will be back to normal and so Metro should return to normal service at all stations. |
| This is the way it was for when I first moved to DC in 2006, I believe. It seemed to work fine then. |
| Yes |
| Do not go to Greenbelt |
| OK, as long as stop at all stations along the route. |
| q |
| I do not use the yellow line. |
| The yellow line is needed to be full service. |
| The change to push yellow to greenbelt really helped make that commute better, and would be a shame to revert back to a system that cause severe delays and overcrowding. |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| this would be disappointing, but isnt a massive pain? would prefer the yellow line going to U Street instead |
| I ride orange |
| NO CUTS! |
| This goes back to the old Yellow line schedule that seemed impractical before to force people to switch trains at Convention Center terminus. |
| Not a yellow line user (at least for those stops). |
| this is bad but less bad. |
| I'd prefer full yellow line service to greenbelt but understand the need for compromise. |
| I live north of Mt. Vernon Square and this would make it harder to go home. |
| I don't ride the yellow line. |
| No - during rush hour, this causes crowding and long wait times. I would end up riding my bike instead of taking Metro. |
| Why would you have a metro station and not run trains to it? |
| I do not use this line - so I'm not sure of the implications. |
| Archives/Navy Memorial included or no? |
| I need frequent reliable service at greenbelt from yellow and green line for my commute from Baltimore to Greenbelt via the MARC train where I transfer from greenbelt to columbia heights! |
| This would make my riding much, much more difficult |
| I take the Yellow Line into Archives or Gallery Place so would work for me. The proposed changes to train frequency make it far less likely I will take Metro.. |
| Depending on the new working model |
| U-Street, Columbia Heights and Petworth stations are highly trafficked, and are in growing areas in the city that need more service, not less. 30 minute headways (i.e. if the prior cuts go through and they are only serviced by the green line) would be un-workable, and lead to incredibly packed trains. |
| Access to Greenbelt is essential |
| People coming from bwi would have one less option. |
| I do not ride the Yellow Line but I would hate to see Greenbelt, which I assume serves a diverse community, hurt by the lack of public transportation. |
| No. Go to the neighborhood that needs you. |
| Stop reducing operations, INCREASE operations! |
| I take the blue line. |
| I dont currently use the Yellow Line on a frequent basis. |
| I have never understood why you stop at Mt. Vernon Square. It makes no sense to people who dont work for Metro. |
| Pre-pandemic and post pandemic, I use Greenbelt station a lot! This would be insufficient. i would drive instead |
| This dramatically reduces the capacity north of Mount Vernon Square along the Green/Yellow corridor. |
| N/A |
| No, I rely on the yellow line at the College Park station to get to work in Alexandria every day. |
| how does this make sense given Columbia Heights and U Street Metro use levels? |
| would the green line still run throughout? What would its schedule look like? |
| I do not use yellow line for my commute. |
| More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable. |
| My main metro stop is north of Mt Vernon. This would DRAMATICALLY increase my wait times. |
| Not applicable to be as I do not ride this line |
| That would increase the wait time to 30 minutes on the green/yellow line |
| I dont ride Yellow |
| i ride to greenbelt on the yellow |
| Some, if not all trains, should proceed to Greenbelt |
| I need to get to College Park. |

Proposal to implement Yellow Line turnbacks

The purpose of the extended service serves commuters. This would not serve commuters.

I do not ride the yellow line that far north, and am thus unable to answer this confidently.

It would depend on the frequency of Green line trains between Greenbelt and Mt Vernon Square

Trains every 30 minutes from columbia heights on the green line only is unsustainable and dangerous

not sure if my job would change that would require me to go further toward Greenbelt.

The yellow line should extend to accommodate the north central residents of DC. I rely on this service, and the Green/Yellow lines are often packed when I am traveling for work. Should not cut this out.

Don't take those metro lines

I do not ride that portion of the line. So this would have no impact on me.

This would be a terrible idea. Many people need to jump on the yellow line far above mt Vernon and would hurt commuters IMMENSELY. This cannot happen.

This would work for me, but I dont think all trains should terminate at Mt. Vernon Square, some should continue to Greenbelt.

Cutting the yellow line will cut off access to the airport for columbia heights petworth and shaw residents. We could hypothetically switch trains at my vernon square, but it is inconvenient

Reduces the available ridership for me at College Park station

I do not take the Yellow Line.

Need service to Greenbelt

Needs to go to more northern stops.

I rarely take the yellow or green line so this wouldnt affect me

You finally did an obvious thing and reversed this, and now youre going to go back to the bad system. Because you hate your riders, and love not providing service.

I often use yellow line trains from Greenbelt and College Park.

Not on my travel

Greenbelt is an important terminal station - with PARKING

I use Yellow line to get to College Park station.

We need to keep everything as is.....

That's useless should go to at least Georgia ave

Fuck this plan

This would really hurt my ability to use metro.

This would really hurt UMD students and could prevent them from having internships or jobs in DC.

I don't use the yellow line and can't voice an opinion.

I dont take the yellow line

Greenbelt as it is is a VERY hard area to get to and the Metro station is one of the most important transit hubs. Reducing service there cuts off huge segments of low-income folks from getting to better paying jobs downtown. What you are doing is adding an additional burden on our lower income residents by preventing them from accessing a vital public good that was meant to better them. Why are you insisting on not servicing our lower income communities???

Reducing transit frequency (and reliability) reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself.

This will mean a lot fewer trains to U street. Not good.

Sounds good

Ft. Totten would be a better endpoint if possible, to help those who still live in the District north of Mt. Vernon Square (Shaw, U St., Petworth, etc.)

Feedback on this plan should be actively solicited from within affected communities.

Provided headways remain the same, this could work.

I (and many others) am a student at UMD, whose only access to the Metro is via the Yellow Line. For students, professors, and others like me at the school, which is quite walkable, many do not have personal transportation in order to access DC and rely on the Metro to do so. Closing down the Yellow Line beyond Mt. Vernon Square would cut off College Park for a huge number of residents and university students and faculty who do not have the means to access the city otherwise.

This would make my trips home from the gym untenable given the extra time

Proposal to implement Yellow Line turnbacks

| |
|---|
| I rely on the Yellow Line for service to/from Columbia Heights. Even though the Green Line would operate, it would mean an additional transfer with trains only running every 30 minutes. |
| I do not ride the yellow line |
| I do not take the yellow line at this stops. |
| I do not live near or use the green line |
| It would be better to have the yellow line go from Huntington to at least U Street. |
| As long as the green line still operates as normal, this is fine |
| It is imperative to me that Yellow Line service extend at least to College Park. |
| This does not really impact me. |
| Center city stations in DC like columbia heights needs more service. |
| Green belt, Laurel, and Beltsville areas prime areas for commuters. I live in Beltsville and there are also great child care facilities near these metro stations. |
| I don't use this line. |
| I live further north between U street and Columbia Heights metro so service would stop too far south. |
| There will be increased ridership! Dear lord!! |
| Do not cut level of service. |
| I am fine switching to green for points north. |
| I would like to see Yellow Line trains arriving at 10 minutes intervals instead of 15 minutes interval. It can mean a world of differences in arriving earlier to secure my bus ride at the Pentagon Transit. |
| Greenbelt is important |
| Green belt is a vital stop for the yellow line since it's the only direct way for Virginians to get to NE MARYLAND |
| Need trains to travel to greenbelt especially if the frequency drops |
| I do not take the Yellow Line, so cannot comment. |
| This would not work at all. |
| I use this route frequently to Ft Totten and would no longer have a direct route. |
| Anything less than full operations is unacceptable. |
| Does not work the station closest to my home is fort totten station. How would I get there? |
| I go to greenbelt |
| Reducing service to the metro area is a mistake. |
| I work in Virginia. Changing trains in Mt Vernon is a hassle with my bike. When I get on at Lenfant its a disturbance to other riders with my bike. It makes the commute very difficult. |
| Thats the way the Yellow Line operated before, and it was extraordinarily frustrating for those of us living in Hyattsville (and further out). |
| No, it will make commute longer with having to switch trains |
| Why have a line that doesn't support its whole length? |
| See previous response |
| Still not a good idea |
| NA |
| What will happen to the people that need to go out as far as Greenbelt? Why have the infrastructure when it is not being used? This will end up being more costly in the end, when you have to operate more buses, as well as it will exert more pollutants in the air. |
| I rely on service to Greenbelt |
| I rely on the Eisenhower Station. This plan definitely WOULD NOT work for me. Its why I moved to this area in the first place - the Eisenhower Metro station. |
| I am opposed to closing ANY existing MetroRail stations. |
| Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office. |
| As long as Green line is running, this is not a problem. |
| Only need yellow trains to go into DC and not into Md |

Proposal to implement Yellow Line turnbacks

| |
|--|
| I transfer to Fort Totten from college park, so taking away yellow line would only give me and other people the option to take green which would be majorly inconvenient |
| As mentioned before, all proposals must take into account current ridership and the fact there will be fewer commuters as working remotely is expanding. |
| Same comment as before. This would destroy traffic and typical commuting once COVID quarantine is over. |
| Being able to go out to Greenbelt on this line is really nice. |
| Fewer trains to Fort Totten, followed by fewer trains to Forest Glen could double my commute times if Im unlucky. |
| If I have to take a flight, how does this impact connection? |
| I dont use the yellow line |
| The yellow line run to Greenbelt is incredibly convenient when I have a need to commute to National Airport, but transferring along the Green Line to the Yellow Line is not difficult. |
| Important to have more frequent options to travel to greenbelt |
| I currently do NOT use the Yellow Line |
| Cutting service to College Park and the University of Maryland would be detrimental. Many students, faculty members, and other members of the campus community rely in Metro and commute to work/school via Metro. President Pines has already indicated a full return to normalcy for the 2021-22 academic year and the university needs to be accessible by Metro. Further, many airline employees who ride the Metro to Reagan will begin commuting again as furloughs start lifting. |
| I live in Maryland, but work in the Pentagon. Extending yellow line trains to Greenbelt was a welcome change. |
| This wouldnt affect me personally, as I only take the yellow line between Huntington and Mt. Vernon Square, though I would still oppose it. |
| I ride the yellow line all the way to work from greenbelt |
| Good plan. |
| Im a government employee, and need this route to get to work. |
| Don't travel on the yellow line much or commute on it for work, so I don't feel able to accurately state an opinion. |
| yes, i can take green line elsewhere |
| I transfer between yellow line and green belt trains very often |
| The yellow line should at least extend to Ft Totten, especially during rush hour. The stations above Mt. Vernon are pretty busy and could use additional trains. |
| This will cut down the ability of many people to get downtown quickly from further stations such as greenbelt. |
| Yellow Line is one of the most duplicated/redundant lines in the system. |
| Do not use this line regularly |
| This seemed to be the case most of the time during normal service anyways. |
| I take the train to Greenbelt from DC. Until recently the Green Line has been the only train up there and its been a huge improvement to have two line options. Having the Yellow Line stop downtown might work for people in Virginia but it essentially renders it a Virginia-only line. If thats the case Virginia ought to pay for the whole thing. |
| I dont ride the yellow line |
| There are no other stops near Greenbelr |
| This would no longer allow my husband to metro to work. With the bus lines near us also being cut, his commute time would increase significantly. |
| Never ride yellow line |
| Sounds reasonable |
| You've done this in the pst with rush plus and it screwed me over |
| What about for riders on the greenline in PG county? We would have to wait every 30 minutes for a train. |
| The yellow line needs to run to at least Columbia heights I |
| Given the high number of people who live north of Mt Vernon (Shaw, Petworth, Columbia Heights), it is necessary for the yellow line to continue service to these areas |
| Is this saying that Greenbelt wasn't a busy station during the covid-19 pandemic? Wouldn't it be assumed that once people are vaccinated the number of riders will be back to high numbers when things open up again? |
| I do not use the Yellow Line. |
| Closing stations would be unacceptable |
| I live at the waterfront metro, but I liked the option of using yellow line from Columbia heights and walking home from LEnfant Plaza. I go to Columbia Heights & U St. station for personal errands and removing the yellow line would affect my travels. Not greatly, but it was nice to have the yellow line option. |

| Proposal to implement Yellow Line turnbacks |
|---|
| I dont ride there |
| As Federal government reopens, I would ask that this be re-evaluated. |
| It is so nice to be able to take the yellow line to Shaw / U Street! Eliminating yellow line service to these stations will decrease the likelihood that I will visit these neighborhoods for restaurants / bars. |
| If you do this it would force me to have to drive to work. |
| Riders in areas heavily dependent on service would be harmed by reducing yellow line service. |
| Dont take Yellow Line any longer with my present job. |
| I live near-by Georgia Ave/Petworth metro station. Eliminating yellow line trains at that location would drastically reduce my use of metro. |
| Keep public transit open! |
| I am in Virginia, does not effect me. |
| Ive never ridden the Yellow Line. Defer to others to offer commentary. |
| Having two lines, yellow and green, run from greenbelt to lenfant is extremely beneficial and having only one line north of mt. Vernon would cause a fair amount of delay |
| This would affect visitors coming to DC |
| I travel out of the city to College Park (post-pandemic), and this would significantly reduce train frequency during rush hours. |
| Running yellow line trains to Greenbelt significantly reducing platform crowding and wait times during rush hour. When yellow line trains stop at Mt. Vernon they are always practically empty and the platform is full of people waiting for a train to Greenbelt. |
| The people at Greenbelt will certainly still need transportation, please dont remove access from those who need it. |
| no yellow to Greenbelt is a problem |
| How are you going to do that if you close Mt. Vernon Square and trains only run every 30 minutes? |
| Don't ride these stations |
| I dont live on the yellow line so i cant opine |
| I think this could impact where we choose to live |
| Given the amount of travel to U Street this seems like it would hard, causing the green line to become crowded. |
| Yellow line should continue to service all stops in DC. |
| I rarely use the yellow line. |
| I travel from Old Town Alexandria to Mt Vernon Square, so this would be fine for me. I am unsure if MVS is able to handle the transfer traffic. |
| This would limit the number of trains headed past mt. Vernon. |
| Typically a blue orange silver user, so not sure how this would affect me at this point |
| I live on the yellow line and often take it all the way up. |
| If Yellow doesnt go to Greenbelt I would have to stop taking Metro. Its long enough already to go to my College Park stop. |
| Why all the change |
| It would make it very difficult to get from l'enfant to Columbia heights if I needed a green line train. |
| I rarely take the Yellow Line, so this would not impose a significant burden on me. |
| I live in Vienna and use the orange line |
| Now you are going to over crowded trains when people are still feeling unsafe from covid-19/ the recovery. |
| Unclear of impact on GR line service |
| This completely gets rid of my stop at College Park |
| Trains should go the entire distance. |
| I remember when yellow line trains previously only ran to Mt. Vernon Station. |
| This would reduce the number of trains going to the College Park station, which could lead to longer waits |
| Stop changing the yellow line. Its great that it goes all the way to Greenbelt; just keep it that way. |
| Two lines to Greenbelt is great! |

Proposal to implement Yellow Line turnbacks

The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming.

Why would this be implemented in January 2022? By then I think well be back to almost normal, this would be useless.Plus, I use the College Park metro station so that would be bad for me.

THis propoal probably would have the least impact on commuters using the system

I don't ride the yellow line.

I do not use the yellow line to greenbelt

I use metro for work, pleasure, and getting to friends. This plan would impact my ability to utilize metro to get around town.

Yellow needs to go to at least Navy Yard

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

Find the money. Northern Virginia is rich enough.

This would leave our family with much reduced access to our jobs downtown!

I have grown to be accustomed to having the occasional yellow line that goes to Greenbelt (My closest station); and that works really well on the weekends. I can see how it would work but it does not continue to go to Greenbelt, but wonder if any other reduction in service for the yellow and green lines would affect availability on busier times.

I live close to greenbelt and this line is essential for federal workers (and students) to get into DC, to get to the airport, etc

Most people live farther north than Mt. Vernon and this creates a bottle neck for them.

I live off the Silver Line in Fairfax County

I rely on Yellow line service to greenbelt for a half-decent commute

Wont be traveling on the Yellow Line

We dont usually use this part of the yellow line, so these changes would not affect us.

See previous answer.

wouldnt change for me

I live in Ward 4; we need access to that service. I remember what it was like to try to get to VA before the yellow line was extended. The trip was considerably longer.

This would make it difficult for me to get to Virginia, and it would likely increase the amount of time that I have to wait for a train to arrive at Columbia Heights since it would only be served by the Green Line.

I very rarely take the Yellow Line so this would not affect me personally.

I do not use the Yellow Line

The trains should run to Chinatown given that the vast majority of riders need a way to CHANGE trains when they are going into work and this would result in a huge back-up of people at Mt. V.

I am retired and rarely us the rail system. I do use the bus line hen going downtown due to the lack of parking and the high cost.

No change, keep yellow as it was pre-pandemic

I mainly use the Orange line.

Metro to airport needed

This would reduce service at my home station, which is further north on the Green/Yellow line.

This would not impact me

Y'all it's not really necessary

I dont use the yellow line for commuting

Unable to social distance

Im a majority red line user

I use the U Street station. Both it and Columbia Heights get lots of traffic; not sure why the train wouldnt just go for two more stations. I would probably ride less often, as trains wouldnt be frequent enough to make it worth the wait.

Extending yellow line trains to Greenbelt increased my use of Metro, especially on the weekends. Metro should be planning to increase service not decrease. This will bring ridership back when vaccines are widely available this summer. Decreasing service will put Metro into a downward spiral.

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| Yellow line should run from Huntington to at least Columbia Heights. Traffic there is quite high and warrants support. |
| I dont use this part of the line so it would make no difference to me. |
| I dont ride this segment often, but run more trains. |
| I would lose service at my home station and would not ride Metro if this change happened. |
| It used to be like this. So I think it would be acceptable if needed. |
| The suburban MD stops on the Yellow/Green line are the main reason I use Metro. Pre-pandemic I used this route daily and the evening switch-off of the Yellow line stopping in Mt. Vernon Square instead of bringing me to my home station was regularly disruptive and delaying. |
| I live in Petworth and I really like and sometimes depend on the Yellow Line coming up past Mt. Vernon. It makes my use of the system so much easier. |
| Absolutely not! I currently live on the green and yellow line and to watch a train go past you toys for another train is absolutely crazy. The green and yellow line need to run all the way to Greenbelt as they are currently and again whoever is writing this is not taking into account that more people were likely going into the office towards the autumn part of 2021 |
| Would be concerned if wait times between green line trains beyond Mt Vernon Square |
| However, this seems counterproductive; these people need metro service. |
| I park at Greenbelt to commute several times a month. Reducing train availability would decrease efficiency and increase crowding. |
| While this is not ideal, this plan would minimize commuting disruptions. |
| I dont use the Yellow Line, but this would inconvenience others |
| This doesnt include frequent enough service. |
| Service on the mid-city section of the Green/Yellow line is well utilized and serves a portion of the city with high transit use. If trains are going to only be operating every 20-30 minutes, consider running the Yellow Line at least as far as Fort Totten, the frequencies should be such that trains can turn around there even though they foul the mainline while doing so. |
| One of the things that make a good and effective public transport system is the frequency of trains during heavy travel periods (rush hour, etc). I recommend trains coming every 5 min. (if not more frequent) at every station in order to make taking public transport more attractive. |
| Do not use these lines |
| I do not use the Yellow Line |
| The Shaw, U Street, and Columbia Heights neighborhoods now have many residents, shops, and dining opportunities. Better rail service would make these services available and aid the small businesses. |
| The train line I use often is yellow from Huntington up to U St, Columbia Heights, and Petworth. Having the yellow line extend to Ft Totten is important to me. |
| I generally use the blue line from Franconia/Springfield so it doesnt necessarily impact me. |
| Trains seem to come frequently enough at these stations with blue line options |
| This is not my route so I can offer my opinion |
| In really appreciate the yellow coming to greenbelt. |
| Expanding yellow line service to Greenbelt was a big win for public transportation in the DMV area. Cutting that back just eliminates the gains for those that depend on public transportation. |
| I don't take the yellow line |
| I travel to the petworth station everyday on the yellow or green line |
| As long as the green line remains in rapid service, having yellow extend all the way out to Greenbelt only helps me once or twice a year |
| The yellow line is the line I use the least. |
| Cuts off service to NE DC |
| This would be a great improvement. I like it |
| This would work for me, but what about service at the stops after Mt Vernon? Service will be cut off from a section of the city? That is unacceptable. |
| This change would not affect me. I like across the street from Eisenhower Avenue station and work near Gallery Place. |
| Greenbelt is a huge commuter hub and provides access to the largest bus hubs for out of town travel |

Proposal to implement Yellow Line turnbacks

| |
|--|
| Mt vernon square is not a reasonable end to the line for yellow service. This misses the entire commuter population north of mt vernon, makes airport/future amazon travel more difficult |
| dont typically use yellow line... |
| Turnbacks were clunky before and theyll be clunky now. And the outer stations like Greenbelt arent equipped to handle long waits (no restrooms, public facilities, etc.). |
| Would be important to maintain at least some travel to Greenbelt |
| Please dont do this. There are communities that will be heavily impacted by this change. I would gladly pay a higher fee or wait longer for a train than to have ANY of the stops, anywhere, removed. This kind of change is short-sighted. It may stop partial bleeding in the budget, but create long-term problems with the communities impacted. It isnt worth it. |
| I use mainly the red line. |
| I do not use the yellow line very often. |
| PG Plaza is my closest station and losing yellow line service would be a big inconvenience. |
| I don't take the yellow line so sure. |
| We'll still have the Green Line to get us to Greenbelt; this change feels doable. |
| The yellow line must accommodate the increased population along its route. (Amazon) |
| I dont use the yellow line. |
| I don't use those stations for my commute |
| I need a College Park or Greenbelt stop to get to my federal job in DC. |
| Yellow lines going to Petworth would be much better |
| I take metro and the B30 bus to get to BWI airport, which is already takes a lot of time. Fewer yellow line trains means I have to budget even more time to make sure I can catch my flights out of BWI. |
| This would eliminate 15 minute service to greenbelt since it would only be served by one which contradicts the first survey question. This would not be acceptable at all for greenbelt residents |
| I do not take the yellow line. |
| Increased headways at W Hyattsville |
| If this were the case, I would struggle to get to work, as I take the yellow from Columbia Hgts, like many people. |
| This would make sense ONLY if green line service were increased to take up the slack |
| Works for me but would cause quite an impact at U street and Columbia Heights |
| Need the yellow line to go all the way to Shaw and sometimes Petworth. |
| Havent we done this? Assume you have data from when we extended the yellow line already. The Mt Vernon square pockets always lead to delays. More importantly, it creates an unnecessary train switch. With the proposed headways, this would be unworkable. It would more than double my commute. |
| Makes no sense to stop the train in the middle of the city at Mt. vernon sq |
| Shaw and U Street are busy stops and waiting for the Green line train at Mt. Vernon isnt always practical or adds significant time to a commute. |
| Up for a job in Greenbelt so not having train access to Greenbelt wouldnt work. |
| WMATA should not reduce any service. |
| I need to travel to Columbia Heights from Eisenhower daily. Yellow preferred. |
| How will I get to greenbelt if there no train |
| I travel to College Park, and a reduction in service would lead me to select other forms of transportation such as driving. |
| I dont use these lines |
| Can yellow AT LEAST go to Fort Totten?? |
| Depends on the frequency of Green Line trains. Yellow Line trains provide valuable service on this route. |
| As long as there is still a green line |
| I only take yellow to gallery place. |
| I would not want to lose access to greenbelt station. |
| N/A |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| Yellow from Huntington to LEnfant Plaza is my primary work line to FEMA. |
| I dont need to travel north of Mt. Vernon Square on the yellow line, so this change works for me. |
| The Mt. Vernon turnback is insufferable. It makes getting to DCA airport needlessly difficult. |
| i only use red line. i will come back to metro when the world is safe, im sure many people feel the same way, and ridership will increase. cutting the service, stations, times only makes it harder for us to come back |
| I rarely use the yellow line to greenbelt, so this impact would be minimal for me. |
| Frequent Greenbelt access is important to me. |
| Sounds good |
| Lines between Mt. Vernon Square and Greenbelt would still have access to the green line. |
| I think people can transfer if they need to go Green to Yellow or vice versa |
| This works for me because I never go to Greenbelt. |
| I don't use the stations mentioned |
| This is a complete joke. This line serves the core of DC. |
| I can live with this but its not ideal, given that I live off the Yellow/Green line between Mt. Vernon and Greenbelt. |
| I dont travel that route |
| We lived with this before. Again, inconvenient but no more. |
| Cutting Yellow line service to Greenbelt would mean that anyone trying to get north of Mt Vernon Square (which is literally everyone, since no one gets off at Mt Vernon Square and you should probably just close that station) would have even fewer trains, filled with more people, in a pandemic. This would be a public health disaster as well. |
| I used to use Shaw as my primary metro stop and needing to switch lines while on the same track eventually led me to abandon metro as a commuting method. Youd be cutting a quarter of the North/South axis of the city, and the largest residential slice of it, out of easy service area. |
| I dont use the yellow line at Ft. Totten regularly. |
| How come, what about other stations? |
| I rarely ride the yellow line. |
| I think that would work, I seldom take yellow and cant recall going beyond Mt. Vernon Square |
| My yellow line needs are typically between Huntington and Arlington Natl Cemetery |
| I need the yellow line to get to dc or a recommended alternative |
| Not applicable to me now, but I know when I was using the yellow and green lines, having to get off at Mt. Vernon Square or having to wait for a green line train was very inconvenient, especially in the case when the green line trains werent running as frequently. |
| I never go all the way out to greenbelt |
| Sucks for NoVa commuters. |
| I ride from Dupont Circle to College Park, so this would make the commute much harder. |
| I do not use the yellow line very frequently or for business. |
| My verson is my stop. So use yellow to go south and green north is doable |
| Currently don't take the yellow line |
| As a yellow line ryder 8, I was against the extension to Greenbelt anyhow. It was unnecessary and costly. It only makes sense to reduce back to what it was only to Mt Vernon Square. |
| No will be using that line in Hyattsville in January 2022 when I will be again commuting by metro |
| I commute from Columbia Heights to Hyattsville for work. Having both the green and yellow lines reduces my need to wait for a train, which is important to me for health reasons. |
| Does not impact me. |
| When I use that line, I am typically going to Greenbelt or College Park. You would inconvenience college students greatly. |
| this would reduce the frequency of trains going to College Park |
| Silver line rider |
| Metro should not be pursuing cuts, period. This will not help customers at all. |

Proposal to implement Yellow Line turnbacks

I rarely take the yellow line outside of downtown, so the proposal would not affect my typical metro usage.

I do not travel on the Yellow Line

Dont ride yellow line

No impact to me specifically.

please do not increase the need for transfer - makes using metro almost useless

I dont take the Yellow Line.

I usually use Greenbelt as my starting point for my metro commute in the morning and return to Greenbelt stop in the evening so this proposal wouldn't work for me.

I seldom use the Yellow line

This would great

I live on the green line right outside of where the yellow and green split. This cuts off a large chunk of city residents from having decent metro access to other parts of the city.

During service issues which there are intermittent needs to switch trains due to emergencies on the rail, as long as there is service at the major switching stations, ft totten and lenfant, this change would be minimal impact to me

Need yellow line option to Greenbelt

I depend on the Yellow and Green Lines for my daily commute.

This goes back to how the Yellow line worked during rush hour a few years ago. I took the yellow line and it was easy as pie. People just have to adjust a little.

The people who live near and use the metro stations further out from DC are disproportionately poorer and people of color. They should be served at least as well as prepandemic levels. I dont like this proposal. WMATA simply needs the funding required to operate at prepandemic levels.

I used the yellow line to get to my evening job.

I dont use that section of Metro.

I do not use Yellow line

N/A to my commute

Dont particularly use those.

I travel frequently above ft. totten on the yellow/green (but only by one stop)

This would mean that our, generally minority population, would not have access to mass transit to get to jobs in Northern Virginia. Including Arlington where teachers and governmental staff have shifted from single vehicle to mass transit over the last 5 years.

Mt Vernon is so close to downtown, it doesn't really service any people who live further north than downtown

yes, I think you should keep ALL stations on the yellow line open, especially near downtown DC near the federal HQ buildings.

People need access to the metro in Greenbelt

Greenbelt is a terminus station. Terminus stations shouldnt share lines, that defeats the purpose. Shortening the Yellow line would allow more frequent service (hypothetically)

No, youve tried this before while doing construction and it was the absolute worst having to get off only to wait at the very same platform for a green line to come. Led to more crowded cars, and more travel time

No, this would be a nightmare

I really like that the yellow line was extended to go to Greenbelt and provide extra capacity through that corridor. If it goes only to Mt Vernon Sq again, that will make it more difficult for me to get timely service from metro.

No. I live in Shaw, and the frequency of being able to snag a yellow or green line train when going to transfer at LEnfant to visit my parents at Eastern Market is what makes taking Metrorail worth it as opposed to taking an uber or biking.

Close Silver line stations instead of these changes.

This would impact some of the people most reliant on the metro

Makes no sense to do this. Rather lengthen spacing than eliminate a station.

You didnt provide service frequency to the stations impacted.

I do not use the yellow line

As long as the Green line is not affected and still runs to Greenbelt, I think this would be fine.

Sounds good to me - no effect on my daily commute.

Proposal to implement Yellow Line turnbacks

I don't ride this line. However I think the yellow line should consider going to Navy Yard or Anacostia instead of Greenbelt.

This seems like an unwise service cut.

This is a horrible idea. One of your main jobs is to get people from Virginia into the city that means having the yellow line go into the city. Pre COVID I took a bus to the Pentagon and then a seven minute train ride into the city. Going all the way around on the blue line to get to L'Enfant Plaza or any points on the green line is ridiculous. We like cutting off an arm or leg of the metro system. I would no longer take public transportation.

Yellow line should go from Greenbelt to Huntington.

I expect we will be close to normal in person by then, even if more distanced and with masks. so reducing frequency then is going to cause congestion

Mt Vernon Square is one of the 22 stations slated for closure if additional funding does not arrive. How is Metro going to run trains between Mt Vernon/Huntington if Mt Vernon is closed?

30 minute intervals do not work, regardless of where you turn the trains

Waits are too long at U Street and similar stations

If you want to not run the Yellow Line all the way to Greenbelt, stop it at Fort Totten

I don't use the yellow line, but this sounds like the beginning of a death spiral.

If cuts are necessary, this seems sensible given ridership needs in the core Metro area compared to stations that are farther away from downtown.

I use the yellow line all the time to go to U street.

This would add time to my commute.

I rely on Green and Yellow line trains to get to College Park

Is the communities these stations serve suggest this as a need then I would weigh the need/cost/benefit equation and decide.

Once again, this will lead to more crowded train cars on the Green line.

This should only happen at non-rush hour times.

This, coupled with #1 (reducing frequency of trains), would impact me greatly as I currently travel on both the green and yellow lines from DC to Maryland.

This cuts service to the Petworth Metro (my closest) by half. And red line cuts to my workplace are being considered, too, so this would make commutes significantly more time consuming and make me more likely to seek other transportation options

Don't ride that line often

If you're going to make all trains come every 30 minutes, the only save would be for me to have a yellow line and green line option and hope that they're staggered.

Keep Clarendon, Virginia Square, and 38B line open and have ways for people to get to Bethesda MD from Washington DC.

Never been on Yellow line

It wouldn't be a big change.

Not sure because I would like to maintain public transit connections to the airports and I believe there's a connection between Greenbelt and BWI

I don't travel this section of Metrorail.

I utilize the yellow line frequently and this would work well for myself

It made such a huge difference when the yellow line was going all the way up to Greenbelt - both for my commute and during non-commute hours. Once I'm back riding metro again regularly, as I expect to be by Jan 2022, this will greatly impact my ability to get a train in a timely manner and might force me to other options rather than metro.

I commute between Columbia Heights and Crystal City. This would create a log jam at Mt. Vernon and L'Enfant. It's stupid.

I commonly get the yellow line at Petworth to go to Virginia and would ride Metro considerably less if I had to transfer at Mt. Vernon.

I do not use yellow line

My commute wouldn't be affected by that.

I don't use the yellow line.

I take the Yellow Line from Alexandria to College Park every weekday, usually. This would complicate my travel.

This may impact my ability to travel to work and would be a large inconvenience. By Jan 2022 it is likely that we will be able to return to work. I anticipate my office will require me to come in every weekday. Losing the yellow train at my station means I have less options for getting to and from home.

Yellow line is important.

Green Line service between Mt Vernon and Fort Totten would need to be improved to make this viable

| Proposal to implement Yellow Line turnbacks |
|---|
| Never ride the yellow line that far north |
| I frequently travel north of Mt Vernon Square, and turning trains back there makes service north far too infrequent. |
| I do not take the yellow line, but as previous comment this would still cause traffic jams. |
| Yellow line should go to Ft. Totten, especially if the red line is going to have reduced frequency. This allows more options for people further out in NE and beyond to get downtown. |
| I strongly dislike cutting off access to stops. Nearby communities depend on metro stops. I would prefer a solution that limits frequency over a solution that limits access. |
| I dont take the yellow line, so this option is preferable for me |
| I have concerns about how many of the proposed services cuts harm communities of color. This proposal does so by decreasing service to NE DC and Prince Georges Vounty |
| Almost never use the yellow line. |
| I do not travel by Metro to Greenbelt. |
| Dont use this route in general |
| If I have candidates/employees coming from the closed segment of the line, it impacts my business competitive ability with regard to employee retention. |
| I believe you need to keep in mind the Maryland commuters as Maryland does contribute to the metro's budget. |
| Please keep the yellow line to Fort Totten. There are a lot of people in Maryland that need to go to VA, Totten seems like a reasonable location. |
| Can accommodate to it although access to Shaw would be nice |
| I dont use the northern end of the Yellow Line |
| I do not ride the Yellow Line frequently and thus cannot comment on this particular proposal. |
| I typically use the yellow line train for transfers within D.C. ending up on the blue line to home. |
| I still commute to work. This would be a major inconvenience for my commute especially since I work long hours. My primary metro stop is Columbia heights and pet worth so I wouldn't have a good way to get home |
| I utilize Prince George Plaza station and having both yellow and green lines run through helps spread out passengers during rush hour. |
| I work in the Silver Spring area, so, I do not need to use the Yellow line train. |
| I frequently switch from/to yellow/res at fort totten, or on weekends part at fort totten to take yellow line to sportsOr theater |
| The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station! |
| Wait longer for green line |
| Yes, this is perfect. No need to go all the way to greenbelt. |
| We live at the Fort Totten station and all our trips originate from Fort Totten |
| They would close stations completely and that scares me, even if I do not usually use those stations |
| Unacceptable. Half metro salaries and enforce turnstile skipping instead. |
| |
| You may not have to go to Greenbelt but look at where traffic is generated Shaw Howard - U Street - Georgia Avenue - Ft Totten. Just because there is a pocket track at Mt. Vernon Sq - this should be a revenue decision not a mechanical one. |
| I often need to travel from Huntington to points further north than Mt Vernon Square |
| Should run at least to Fort Totten, a major multi-line transfer point. |
| Depends on the underlying headway. At 4-8, it's fine but inconvenient. At 15-30, it's a dealbreaker. |
| I don't ride the yellow line |
| I don't use the yellow line regularly, so this would be fine for me. |
| Given I would never wait more than 15 minutes for a train, this would be allowable. |
| I live right past this top so this would delay my travel time by a large marginâ€"plus this would lead to overly congested trains. |
| We rarely use the yellow line. |
| This would make it difficult to arrive at Reagan Natl. Airport in a timely manner from Greenbelt where I live. |
| You would cut of University of Maryland, College Park? When many students, faculty, and staff rely on this to commute? |

| Proposal to implement Yellow Line turnbacks |
|--|
| Your catering to areas that have higher income rather than catering to low income areas. |
| Yes, since I use the Yellow from Eisenhower -- which you plan to close. That makes Metro rather useless for me. |
| Dont like it, but if this is a temporary change can work with it. |
| I rarely if ever use the yellow line. |
| I dont use the Greenbelt station. |
| I dont know if things will be back to normal in January. Id like to get to U St on the Yellow line under normal circumstances |
| Metro is in a self-destruction trajectory with these crazy ideas |
| This works because I do not travel further than this on the yellow line. |
| This not good at all we need the metro station to reman open you have people work in the dmv area. It will make it hard for them to get to work if you all shutdown 22 metro station |
| If the Yellow line trains could go higher but not all the way to Greenbelt, that would be a better solution. With the increased number of people living in Shaw, U street and Petworth, there would still be extremely crowded platforms and confused tourists. |
| Again, thinking about crowding on trains. Many commuters and travelers need to get to Greenbelt. Shoving all of them onto green line trains and having to get off at Mt. Vernon Square isnt ideal |
| n/a |
| wtf yall |
| The increase in Yellow Line service has been wonderful and youre spending millions to rehabilitate these stations this year. Cutting service to them next year is a sick joke. |
| Yellow Line trains should terminate higher on the green line if possible, maybe Columbia Heights. |
| It works if there is no reduction in service on the green line to Greenbelt. |
| This would not affect me |
| LOTS of people rely on Green/yellow lines beyond Mt Vernon. You'd need to increase frequency of green. |
| Based on where I work and where I live, I tend to travel on the green/yellow line between Columbia heights and l'enfant plaza. This change in service would mean I'd either have to take only the green line or transfer every time at Mount Vernon. |
| I live in NW DC and commit to Alexandria. The reason why I chose this neighborhood is because it is affordable and is a direct line to Alexandria. This heavily impacts someone with limited resources and access, as the metro is the only way I can get to work. |
| I utilize the columbia heights metro station and one of the reasons I chose to live at this location was direct access to both the yellow and green lines. This plan would eliminate my direct access to the yellow line and would make transportation to the airport much more difficult. |
| Fewer trains that travel to College Park would inconvenience me. |
| Fine! Please keep the Grosvenor Station open. |
| This doesnt affect me personally, but this reduces access to and disenfranchises many communities. |
| If nothing else changed, this Metro proposal would not effect my travel needs. |
| Primarily use orange/blue/silver - not sure about impact of yellow line changes. |
| Excluding stops while still building new lines make zero sense. Especially when you continue to build lines to airports that higher income people are more likely to use. Stop trying to take access from lower income areas and make things more convenient for people with money. |
| Works for me. I dont take the yellow line |
| I do not take the Yellow Line. |
| Cutting off the U Street stops would be a serious problem for me. I use the yellow line to get from Old Town alexandria where I live to quickly get to entertainment and shops along the U Street Corridor. |
| Bwi airport shuttle picks up in greenbelt |
| Need yellow line from Petworth station. |
| This will negatively impact citizens as we return to normal after the pandemic. |
| I rarely need to travel past Mt. Vernon Square, so this wouldn't affect me. |
| Greenbelt is where many affordable housing are so need to keep the end destinations available. |
| I live on the yellow line past Mt Vernon towards Greenbelt and thats my most used line, so no, this would not work at all. |

| |
|---|
| Proposal to implement Yellow Line turnbacks |
| Green line gets too busy going to Greenbelt. This would make it worse. |
| This means waiting on the platform for green trains and makes the yellow line almost useless for my commute. Overcrowding on the platform would be the result. |
| In non-Covid times, I often take the Red Line to the Yellow Line to DCA. |
| This is back to where metro was 2 years ago. This means lots of turn-arounds at Mt Vernon, and all of the extra trouble that situation created. This plan assumes that ridership stays at the current low level, which seems likely if WMATA adopts these service reductions. |
| Not my route |
| This was the case sometimes before, so that would be ok |
| Seems like an obvious fix. There's already green line service, and the yellow line expansion was relatively new anyways. There's been less time for people to rely on the expanded service. |
| I rarely ride the yellow line in that area. |
| Green and yellow lines to Greenbelt will become more and more critical in 2022 with development occurring in College Park towards Greenbelt and return of students to in person classes. |
| This would make it extremely difficult to get from my office at Farragut West to Greenbelt. |
| I do not take the yellow line |
| I dont take the Yellow or Green line trains, so this shouldnt affect my commute. |
| I need to get to the air port or Alexandria and do not want to take around about way to get there |
| I don't know how many times we've been through this. Run the yellow line to Fort Totten. To do otherwise creates huge bottlenecks between Shaw and Petworth, which are some of the city's most dynamic neighborhoods. |
| Too many people live between Mt. Vernon and Fort Totten to make this feasible. From U St to Shaw, DC is a vibrant community. We deserve access to transportation. |
| I rarely take this line |
| Again, do not utilize the green/yellow line for my commute. However, I believe this proposal returns service to what was in place some time ago. |
| Reducing the yellow lines range would make it hard to get to important parts of DC from Northern Virginia. Such as Shaw or Columbia Heights for example |
| This would likely not affect my daily commute, however, it would affect my travel to University of Maryland College Park, from time to time. |
| We need all yellow line trains to stay the same. |
| I dont use those stations |
| Service should remain more extensive (i.e. the same as it is now). |
| The trains should go at least to Ft Totten for transfers |
| Irony in flip flopping, but whatever |
| Run more trains between Chinatown and dca |
| N/A |
| For riders in Maryland who use the Greenbelt station, it would have a devastating impact. Also, for rider catching the shuttle to BWI from the Greenbelt station. |
| I do not ride the yellow line frequently |
| I don't use the yellow line on a regular basis |
| This would greatly reduce the number of trains that I could take from Fort Totten, the closest station to my home. |
| I do not rely upon this portion of the system. |
| Retain full service to Greenbelt |
| I dont use the yellow line regularly. |
| then how could pg county go to the airport? maybe if you start the b30 back up, i can go to a better, lower fare airport. |
| Although it makes getting to U Street on the weekends less convenient. |
| Trains are not frequent enough for my daily ridership from Greenbelt. |
| We only use the yellow line to go to Arena Stage so i dont think this applies to our needs/use. |
| Greenbelt serves as an access point to many metro rail riders, please continue Yellow line service as is. |
| we arent usually affected by the greenbelt end (we are in arlington) |

| Proposal to implement Yellow Line turnbacks |
|---|
| I would lose frequency of trains to the stop closest to my home. |
| Because it will eliminate less people on the Greenline. |
| I am opposed to restricting or decreasing transportation options given that I use the metro daily across multiple metro lines to get to my job. This would increase the economic hardships of many residents in the Washington Metropolitan area. |
| I take the Yellow Line most often, but I don't know the downstream effects of these changes (if it would change timing or availability of other stations). |
| I spend money |
| Of the three options I've seen thus far, this is the least egregious. However I also don't live on the green line. |
| This works for me because I almost never use this portion of the Yellow Line, vs. daily use of Orange/Silver Lines. |
| Dr appointments in Maryland |
| I need to get to Columbia Heights |
| Would make it much harder for those like me who commute to northern Virginia |
| Please see my previous comments. |
| Yellow line should continue to serve greenbelt. have it run every 15 minutes |
| I rarely take the Yellow Line, this would not impact me much. |
| I dont ride yellow line much. |
| Definitely would affect my family! We get off at Petworth and/or fort totten |
| Its way more convenient to get on one straight trip versus hopping out at Mt. Vernon Square and having to wait for a Green to go the rest of the way. |
| The Yellow Line is only viable for me if it goes to Ft. Totten |
| No Im on the green line, college park. What am I supposed to do if you do this?? I wont have access. |
| Keep Eisenhower Station |
| these stops are not applicable to my present situation (my own expected travel needs) but I believe they are vital stations and should be adequately serviced |
| I don't take yellow line, but I'm not sure this would be ideal for the folks who do. |
| I live at Mt. Vernon Square and regularly go to College Park, this would mean that I could only access anything north via one line as opposed to 2 and the headways are already ~15 minutes if its just the green line |
| Horrible!!! You basically make it impossible for people who work in Maryland and northern DC to support healthcare and construction jobs in VA |
| This wouldn't affect my commute but not having the option to go to Shaw/U Street/Columbia Heights on the yellow line is frustrating. |
| This provides less access to people who rely on more regular train coverage between the green and yellow lines. |
| I frequently ride metro between U St and Pentagon City and switching trains takes a lot of extra time. |
| Shaw, Columbia Heights, and Petworth are all stations I use frequently. Reducing service to these stations will not work for me. |
| i regularly use Yellow Line from Old Town |
| When more facilities are open, and it is safe with my vulnerabilities to ride Metrorail.this would impeded my travel plans. |
| I rarely ride the yellow line |
| I hardly ever ride the yellow line |
| This is better than option 1 |
| My use of the Yellow Line, while daily, is in the Huntington/Mt. Vernon Square range. This would be fine. |
| I live at U Street so this would seriously impact my ability to use metro. Could like line run to ft. Totten instead so it makes it to the red line? |
| I live near Mt. Vernon Square and often take it north to Columbia Heights. |
| Not ideal - I frequently travel onward to Columbia Heights. |
| I live in College Park. Cutting train service essentially in half will not be adequate. |
| I only take the blue/orange lines to get from my home near Clarendon, multiple stations downtown (depending on why Im going downtown) |
| I don't use yellow line |
| So this sounds like racism to me - make the black people in green belt suffer |
| I dont usually use the Yellow line. |

Proposal to implement Yellow Line turnbacks

I often travel to Shaw, so reducing service to Green line stops would not be ideal for me.

I do not plan to use the Yellow line.

i dont give a rats ass about this one, bro

See the last slide.

I don't ride the yellow line

Do not close any stations.

I dont use the yellow line

Needs to go further north. At least to U Street

I dont use the Yellow Line

I need to be able to get up to at least Columbia Heights on the yellow line.

I dont use the yellow line.

Green line is a viable option for travel this route.

do not use this line

The flexibility of having both Yellow and Green trains in more northern parts of the District speeds up many peoples morning commutes.

Would not affect me.

I very rarely travel in that area.

I don't use the yellow line.

So long as I can still use the Green Line at Greenbelt

Would mostly effect return trip from work but the 2 transfer stations between green and red give some flexibility

My home and work are between a Huntington and Mount Vernon.

Its too frustrating waiting to switch to the green line

The Yellow line trains continuing to at least Columbia Heights has made a HUGE difference in my commute. It was the best change to Metros operation in the 3 years Ive lived in DC.

I think it's important the yellow goes at least to ft totten

If we want people to use public transportation we need to make it accessible and convenient.

Its be a bummer - I live near a yellow/green station, so having twice the number of trains is really helpful for both my work commute and also when I want to go out. Id be much more likely to use Metro after I get vaccinated if I knew I could catch a train every 15 minutes or so, rather than every 30.

I dont use this line so I dont feel I should weigh in here.

This makes using metro significantly less useful for a massive portion of the city.

I dont really take the yellow line unless there are delays/problems on the red line between Gallery Place and Fort Totten, so this would not really affect me.

This limits equity of riders.

I do not use the Yellow Line

I must travel to College Park on a daily basis and rely on Metro. This plan would isolate those who work and live in PG county, including researchers in College Park, many of whom live in DC and/or rely on Metro for transit.

This is what the service used to be, so I could live with it, but there is no indication of how often Green Line trains would run to compensate for the lack of additional Yellow Line service.

This wouldnt work unless you increased the frequency or number of green line trains

We use the yellow line to get back and forth to the airport from College Park.

Why are you reducing the utliity of that giant easy to enter commuter lot in Greenbelt? Ughh.

I dont ride yellow line

But only because I don't travel to those stations

Why not Greenbelt? Trains need to operate at all stations.

Should be better keep working from hunting town to greenbelt

Proposal to implement Yellow Line turnbacks

Why is GL and YL service being reduced again? Why do neighborhoods that are plurality Black (like Columbia Heights and Petworth) deserve worse service than the white neighborhoods on the other Metro service lines? Metro continues to use stations from Shaw to Fort Totten as whipping boys, reducing service at a whim without equivalent reductions to other stations with shared lines. Unacceptable. People buy and rent in neighborhoods assuming a public service will continue. Find a way to serve D.C. residents more effectively.

I think this would result in massive crowding at Columbia Heights and Petworth due to the reduced number of trains.

I don't take the yellow line.

I take the yellow line to Fort Totten.

I will no longer be using the Yellow Line past Mt. Vernon Square in 2022. This does not impact me.

Commuters to the Yellow line in Va rely on this direct route from Greenbelt. This is absolutely necessary to regain those riders.

I have to go to college park for UMD

If eliminating service to every half hour, then this takes away half the potential trains and is a very bad idea. Again, it impacts the lowest paid essential workers.

This affects my my personal billing to get to work and therefore I don't wanna have to keep relying on metro and keep metro making me late just getting me in trouble my own place of work

Extend the line to Columbia heights metro.

Although this would not be convenient for the times I have to travel to Greenbelt, this would not affect my daily commute.

This would work well for me as I never travel to Greenbelt.

I dont use either Yellow or Green often.

This is better than #1 and #2.

In 2022, my husband and I will be commuting from College Park to Chinatown during rush hours Monday thru Fridays for work that requires us to keep to a schedule in order to keep out jobs. Also, we have a child who requires being picked up from daycare at a specific time in order for us not to be charged extra. Our places of work will not provide us with parking (whether it would be free or an extra expense). Before the pandemic, it was difficult to get a train from Chinatown to College Park during the evening rush hour. We need the metro to run more frequently during rush hour in order to keep our jobs, and this change will impact our livelihood (jobs and finances).

I do not foresee using the yellow line as much in 2022, but this would make more sense than the current duplicative service that exists on that section of the Green/Yellow line.

I dont use the yellow line, so Ill abstain from comment.

We don't use that line

How will i get to work?

This seems to disadvantage already disadvantaged populations who come in from the suburbs to work in the city.

This would take away my option of taking either train to Petworth home. Could extend commute by as much as 30 minutes in evening

i dont really use the yellow line, but removing the use of some stations would likely deter a lot of people from utilizing it

I'm not on the yellow line so it wouldn't impact me

What about people in Greenbelt

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

I do not use the yellow line.

I

I tend to travel to Shaw, U St., and CoHi more than almost any other stops except a few on Blue/Orange lines. This would really be unpleasant.

I like being able to get to all Metro stops! Why in a time of climate crisis are we limiting where we can get with public transit!

Might be possible, if everybody was aware before fact and the Green Line trains were reliable and not delayed.

This will improve train crowding considering most riders who board in the Greenbelt direction are transferring to the red line

Yellow Line to Greenbelt would get me from work to home without switching.

Please provide alternate transportation to the Backed Up Green Line. Also, please provide transit to Mt. VERNON and Hybla Valley

Yellow line service should always go all the way to Greenbelt. Weve gone through this before, we know thats what riders are looking for and what will bring them back.

| Proposal to implement Yellow Line turnbacks |
|--|
| Could one train an hour leave from Greenbelt? |
| Unless green line still goes to College Park, but not having to switch is always nice. |
| Greenbelt gets me to BWI and local malls there |
| If this does not also include increasing the frequency of trains to Greenbelt, this has a negative effect. Frequent user of College Park station. |
| Why are we cutting out the rest of the route to Greenbelt? It doesnt seem like enough service to me |
| I rarely use the yellow line - this would not impact me. |
| This would be inconvenient, but it could work. |
| how will people get to work who need mass transit? we are hurting those who are minorities more and more these days |
| I seldom ride this line except for special events |
| I do not travel this line so it does not apply to me. |
| Cutting service in any way reduces the purpose and the value and quality of metro. Service should not be cut. |
| Im a Columbia Heights rider so having both the Green and Yellow lines available during the week has been helpful, so this would probably complicate things. |
| The yellow line provides access to the airport. This would require additional time for people traveling from stations further than Mt. Vernon to get to the airport. We want to encourage people to take the train to the airport. This would discourage people from taking the train and they would end up taking cars. |
| These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options. |
| I rarely use the Yellow Line. So this wouldnt affect me. |
| I dont use the Yellow Line, but cutting out Greenbelt certainly reduces the effectiveness and usability of the service. |
| Would Eisenhower and Van Dorn be shut down with this plan? |
| This is exceptionally exclusive of shaw and neighborhoods north of the shaw stop. This would make it difficult to get to work, and would put an unnecessary burden on buses, cars, and add more people to the roads. Not to mention this would make it difficult for howard students to get to internships. |
| While I understand most yellow line commuters likely get off at Gallery Place, extending beyond Mt. Vernon to Columbia Heights or Petworth would make it significantly easier for those traveling to more residential areas |
| I commute to the end of the line! |
| No impact. |
| As long as the green line still remains this is a fine adjustment. |
| I don't understand ending at Mt. Vernon. It isn't too far from Gallery Place and further stations up the line would be a better stopping point. |
| I dont use this line, but I understand Greenbelt is in an economically lower-middle class area, so this seems like a big disparity and not fair to those who need Metro the most. |
| Rarely go north of L'enfant on yellow line, so don't really care. |
| It appears from the questions so far re Red line that cuts are potentially across the board for all lines. But for those still reliant on Metro regardless of line it doesn't seem fair |
| Not good to reduce service. |
| This is a huge inconvenience for anyone in alexandra or eastern va. prevents any smooth transportation to all northern parts of the city. |
| That will make it difficult for me to travel north if Mt. Vernon square. |
| This option will get the job done, but it wont be easy. |
| Depends on the length of time between green line trains... if it's 30 mini then having a yellow line train come through would alleviate the long wait. |
| It doesnt make sense to cut off service at Mt Vernon since this is directly downtown. I often need to go to Shaw, Columbia Heights, and other downtown stops after Mt. Vernon. |
| I live near the yellow line, and need more service, bit less. |
| I usually only get on the green or yellow at Gallery Place. |
| Reducing service anywhere harms riders everywhere |
| New commuters who need to get to South Arlington from DC will have limited options and housing prices will go up as a result of people wanting minimized commutes, shortsighted |
| I, and MANY other students, faculty, and staff, depend on the Yellow and Green lines to get to College Park for work. PLEASE do not close the College Park stop. |
| Please keep our station |
| This would literally disadvantage thousands of people with no other forms of transportation. |
| I lived along the Green line when the Mt. Vernon turn back was in place. Green line trains were overcrowded and the extension of the Yellow made a great difference. |

| Proposal to implement Yellow Line turnbacks |
|--|
| My regular commute does not rely on the yellow line. |
| I dont use the Yellow Line on a regular basis so there would be no impact on me. |
| This proposal is not applicable to me because I ride the Orange Line. |
| This would eliminate peoples ability to use metro. This is a form of discrimination towards the people who live past the Mt. Vernon Square metro and greatly limits affordable transportation for those residence. This is not acceptable. |
| I dont ride yellow line. |
| Dons use the yellow line |
| UMD will be back in full operation this fall. More frequent trains will be needed. |
| Would render yellow line useless where I live |
| This is similar to pre-covid yellow line service during rush hour anyways |
| This would work for me personally, but limiting travel to Greenbelt in favor of Mt. Vernon Square seems inequitable to me. |
| N/A |
| What about the passengers that attend school at University of Maryland-they will have to find alternate transportation-and the passengers that have to travel to Census Bureau-they already have to change trains several times for their commute/ |
| Not ideal, but would depend on frequency and ease of connection to green line services to complete the Mt Vernon Square to Greenbelt trip. |
| I only use petworth to ft totten. |
| Adversely Impacts communities of color and destroys home values |
| This seemed to work well during pre-pandemic rush hour. |
| I feel that this proposal would result in over crowding at the metro stations beyond mt Vernon square (u street, Howard university) |
| Absolutely Not! This is outrageous! Everyone living in Maryland would have no way of getting around to Washington, DC. |
| I often travel from Mt Vernon Sq to other stops downtown but they are usually short trips so Im not sure how this would affect my trips |
| I seldom use this line, but if I were a rider I would not be happy. |
| I stop at Eisenhower Avenue so it works for me. |
| This would be inconvenient but not horrible. |
| I will rarely take this line |
| I dont typically take this line. |
| I do not rely on yellow line for commuting |
| I need Yello line to go to Columbia heights at least |
| Will work like how it was a couple years ago" quite viable cut |
| I live in Petworth and take the Metrorail from the Petworth station, so the yellow line needs to travel north the whole way. |
| Fine for me but not for the climate emergency and not for low income families. The cuts are a disgrace. Why not try raising the taxes you have control of. Instead you are targeting low-income families who are already struggling because of the pandemic. This will only increase inequality. |
| I need the line to go all the way to Fort Totten to get home. |
| I would not be able to see my family. |
| like you cant even get to ft totten, really? |
| I usually am not on this line. |
| I dont use the Yellow line. |
| While this would not have an impact for me. |
| N/A since I live in Virginia. |
| I don't frequent those stations, so not directly affected. |
| needs to go to greenbelt |
| I use metro in Virginia & DC primarily so doesn't impact me. |
| My commute is from Braddock to DC so I dont think this would affect my commute. |

Proposal to implement Yellow Line turnbacks

Why not consider Huntington to Fort Totten - that would reduce operations but still provide service to central DC

This would greatly reduce the frequency of trains to areas that I frequent to an unacceptable level.

This is essential for people who work downtown

Please provide service to Greenbelt.

I dont use Metrorail very often on those routes.

A single-seat ride the airport is the SINGLE most valuable way I use the Metrorail system right now, riding from Shaw to the airport regularly. I chose to live in Shaw because of the single-seat ride to the airport and in the future I will continue to live along the northern sections of the yellow line for this reason. Ending yellow line service at Mt. Vernon Square ruins this.

As long as the Green line train goes to Greenbelt, that's fine.

I take the silver line.

The College Park station should not be cut

There has to be a way to make the subway work cost-effectively in this area. Less service also means less revenue and less convenience - which becomes a downward spiral.

I plan to live in College Park and commute to DC in 2022 so this would negatively affect me

I would take the yellow line from Pentagon to Fort Totten, this would not work. Travel from Arlington to Silver Spring.

Thats how it used to be before the Green Line

This would greatly increase the time, inconvenience, and number of transfers to get between Shaw/Howard U. and Pentagon, which is currently on five direct stops.

This may cause problems for people who need to get out of areas that have apartments or homes at Georgia ave pet worth or Colombia heights. Depending on how often green line trains run it may cause stress during commute.

Dont use yellow

i dont live in an area where I would take the yellow line often

As long as Green Line service is not drastically pared back as well.

No flexibility

I rarely use the yellow line.

I realize that decreased ridership should result in decreased funding and schedules should be changed.

I need to go from Pentagon City, where I live, to stations past Mt Vernon. I do not have a car.

I do not mind waiting a little longer for another train.

I dont ride the Yellow line very often.

Again, it was this way for much longer than it has been as now.

Currently use only orange and silver lines to East Falls Church and West Falls Church

See previous comments about cutting train arrival times. This just does not work.

I never use these stations

This would completely eliminate the yellow line as an option

I hardly ever take the yellow line (even in pre-pandemic times), and so this change would not directly affect me.

This will create overcrowding on other lines and trains

I never use greenbelt because the yellow has been available

Some of the same comments apply to this question as applied in the case of the orange line on the RB corridor (above).

I do not ride the yellow line

The impact of this proposal is heavily dependent on the assumption that green line service would be unchanged, but with that assumption, this proposal could reduce stress on track and rolling stock without deeply impacting commuter options.

This would increase traffic on the green line for Columbia heights and petworth.

If this would only be temporary until commuting to work gets back to normal as vaccination gets done, this could be ok

Again, adding significant commute times, not to mention space availability on trains.

It is crucial for me to commute between Washington DC and College Park. I need either of the green or yellow lines to continue stopping at the College Park station.

Proposal to implement Yellow Line turnbacks

Yellow line should be continued to Gallery Place if at all possible, as the number of transfers that happen there to head north on yellow and green lines could be alleviated instead of forcing everyone to wait for a green line train to go one stop and transfer again.

As long as there is (green line) train service to College Park, plan is workable.

Why is Mt. Vernon Square the stop point? At least go to Petworth or Fort Totten...

Totally depends on pandemic

I dont use the yellow line trains.

There are many riders at Shaw, Columbia Heights, Petworth, and Fort Totten that need increased service. At a minimum, Yellow line trains should terminate at Fort Totten.

Better than the first option and like the option for turn backs on the red line, focuses where there is higher ridership. Metro should avoid all cuts thanks to the new federal emergency funding of \$30.5 billion nationwide. Any other shortfall should be met by the states of VA, MD, DC and local jurisdictions. Post-pandemic, with increased telecommuting might allow for shift of some peak hour rail and bus service to off peak, evening and weekend which would help workers who dont have 9 to 5 office and help car free and car light households.

I live at U Street, and when we had to rely only on one line, it was terrible. Having both lines service this and the other stops has allowed for greater growth in the area.

30 minute GE-only service mid city would be a disaster. you must keep YL service ti at least Fort Totten if not Greenbelt!!!

This wrecks my one-seat ride from Ft Totten to Crystal City. Transfer times are already terrible - adding 10+ minutes to the ride would make driving easier and faster under almost all circumstances.

Metro rail service has significantly improved since expanding yellow line service to greenbelt.

The yellow line is a currently a great option for those traveling farther north - particularly during rush hour. Just having the green line service the northern DC stations is not sufficient.

Coming from Alexandria, Yellow Line service to Greenbelt is a nice to have. Northern Prince Georges County riders input on this is more important than mine.

This proposed change would not affect me.

Dont generally take metro to those extra stations

I dont typically ride Yellow line trains.

I live near the Petworth station. The increased wait times would push me to other modes of travel.

No effect

I dont use the yellow line, I use the orange or silver lines from NOVA. Those are my priority lines, and closing East Falls Church would be terrible for me.

The region needs a fully functioning METRO to bring back the economy!

What about the commuters/Metro riders from Greenbelt on south to downtown? This seems discriminatory against Columbia Heights -- potentially 90% minority riders, black and brown. DANGEROUS AND WRONG TO DO THAT!

I rode the Yellow Line when that was the case previously and it worked fine.

I live next to the Columbia Heights metro station and work in Crystal city, so this would be very inconvenient for me because I would have to take the green to Mt. Vernon Sq, get off and wait for a yellow line. Please keep the yellow line coming to Columbia Heights, I think it would work well if the yellow line always went to at least Ft. Totten.

I live in Columbia Heights and use the Yellow line often.

There are many people in Greenbelt who do not have cars and, therefore, depend on Metro. The suggested change would be a great disservice to the Greenbelt community especially low-income riders.

It is important to have the Yellow Line supplementing the Green Line at times of high traffic and rush hour. I depend on the Green/Yellow Line for a key part of my travel to and from work at NIH. I live in Greenbelt and use both the MetroRail and MetroBus branches of the Metro System.

Need to provide service to Greenbelt.

I use greenbelt as my start/stop and this would add more time to commute as I have to take addl buses etc to figure shortest/fastest routes

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport, so the schedule proposed here should not impact me.

I often need to get into work early, leaving from Wheaton no later than 6:00

I mean it technically would be fine, as the green line services those stations beyond Mt. Vernon Square, but it sure is inconvenient.

It would mean I would have to change trains to the green line to continue north of mt Vernon which is where I live

I dont use the yellow line

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| I use the station, W Hyattsville in order to catch the f1, f2. So no, this will not work. Need to be able to get home. |
| Means taking two trains rather than one to get where Im going. Annoying but doable provided wait times are not too long. Service used to be like this anyhow. |
| This is ok for me living at Huntington, provided that green line trains arrive promptly and regularly at transfer point stations. An alternative would be that possibly less trains go to green belt and more trains go to mt Vernon sq in order to speed up people' s commutes? |
| When traveling to and from DCA from College Park/ Prince George's Plaza, I have found it especially convenient to not have to change trains. |
| Doesn't impact the majority of my travel |
| Don't change the stops |
| I very rarely ride that section of METRO |
| It's ok, but not as good as now |
| I rarely take the Yellow Line train. |
| I don't use the yellow line |
| I use the yellow line to get to Columbia Heights. When theres only the green line the trains arent frequent enough to make it worth using the metro. Mt. Vernon Square is only helpful for Virginia residents and cuts out DC residents. |
| Dont take the train that far up |
| It would mean I would have to change trains to reach one destination, which I do not have to do now. |
| This has been previously ok |
| I don't take the yellow line all the way out to Greenbelt. |
| Not a big deal; alternative exists, it just takes a little longer. |
| better service please |
| Greenbelt is an essential station for PG residents and employees. |
| The green line is sufficient for my access to the stations between Greenbelt and Mt. Vernon Square. |
| Ok assuming service to the stations that are no longer on the Yellow Line are properly served by the Green Line. |
| Would be a major blow to people needing to get to College Park |
| This plan would not affect me in the least |
| i dont take this line. |
| People without cars need to get to work if we are going to have a functioning economy. |
| Yellow line trains should extend to at least Ft. Totten. Cutting service between Mt. Vernon Square and Ft. Totten will disproportionately impact lower-income areas of the city and residence whose only form of transportation is metro |
| Terminating the yellow line early will add to the frustration of the riders and drive some of them from using Metro |
| As long as the green line trains ran at the same intervals, no issue with that change |
| Only need yellow line between King St and Gallery Place |
| Do not currently use the Yellow Line so no comment |
| While inconvenient to end at Mt. Vernon (instead of continuing north at least through DC proper) this could work but would be pretty limiting. |
| I dont travel this route, but it sounds like a reasonable approach |
| If these changes are approved, people will not be able to get into work without a car. |
| Good idea. |
| I dont use the Yellow line. |
| I dont use the yellow line |
| I rarely use the green line. |
| My children use the college park station to get to school |
| Doesn't affect me now but could. |
| Reduced service and longer commute times will force me to look for alternative forms of transportation. |
| Zero! Service! Cuts! |

Proposal to implement Yellow Line turnbacks

That would mean unacceptably less frequent trains to, for example, College Park.

I need all yellow and green trains to work every 3-5 mins when I return to work

I have never liked the Yellow Line turnback at Mt Vernon Square and I prefer it not be reintroduced after finally being eliminated two years ago.

This is not too bad for me, but I imagine it would make things quite difficult for some people

We live at the columbia heights station and this would remove a commute option

Would like to know if it is anticipated if the green line only from Mt. Vernon Square has enough capacity to safely handle the ridership demand to Greenbelt. This would be a least preferred option since PG county residents are typically more reliant on public transit than other counties in the DMV.

With more people moving to PG county, cutting off the outermost stations on any of the lines will hurt ridership.

Never take that line.

I dont use the green or yellow line, usually

But is seems running trains end-to-end of each route would be just as sensible.

This change would not affect me. I ride the red line a lot and blue/orange a bit, but never use this route.

I would be unaffected by this change.

Does not apply to my travel needs. I don't use those stations

While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options are available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes.

This plan negatively impacts riders who use the Greenbelt station to commute to work.

What about those in Greenbelt? Public transportation is still needed in these areas

Awful idea. What are you going to do with non-operating stations? And how are you going to incorporate the Purple line into this scheme if the College Park and GB stations are closed? You will singlehandedly destroy \$10,000s in property values in College Park and Greenbelt by doing this.

As long as I can catch the green line beyond Mt Vernon Square, this does not affect me.

This would clog green line travel quite a bit at a time where we need to be as far apart from strangers as possible.

I dont typically use the Yellow Line, but it wouldnt be good to cut service to Greenbelt altogether. Maybe one trip to and from there M-F rush hour?

Need to go all the way!

I have clients in this area, and itll be difficult for me to Greenbelt unless I metro, then uber. Im against this.

my answer is totally selfish, as i rarely ride yellow line

The stations that I use on the Yellow Line would continue to receive service, so this does not affects me.

Again, this level of service, especially with the crowding that will result on the Green Line between Fort Totten and Mount Vernon Square, would be untenable. I would drive or take MARC.

I ride the yellow to greenbelt

I commute from Petworth to metro center via Chinatown. Petworth residents really seemed to stock up on cars during the pandemic. If you want us to come downtown by metro, we need frequent Service that isn't crowded. Yellow line to greenbelt was a great adjustment pre-pandemic.

I dont need to go to Greenbelt

This change would not affect my commute

I do not travel that line

Im on the red line, so this would not affect me. On the rare occasions I need to take the metro to Greenbelt, I can wait for the green line trains as before.

Proposal to implement Yellow Line turnbacks

| |
|--|
| I travel from Gallery Place to College Park and rely on both the yellow and green lines to commute. If the yellow line were to cut service, then I would have to rely solely on the Green Train which means I would have to wait longer for the next train. |
| So much for traveling from the district to Virginia! |
| I don't ride the yellow line |
| How long would a transfer to a green or blue line take? |
| no |
| I used to somewhat regularly take the Yellow Line between Fort Totten and Braddock Road, but I no longer need to do that. |
| I do not use the yellow line |
| I do not ride that section of the yellow line. |
| This sounds like it will make traveling to Greenbelt and other areas of Maryland a hassle and would primarily negatively impact communities of color |
| I do not currently use the yellow line. |
| This wont effect me. I dont use the yellow line on the MD side at all. |
| I work in a Federal Emergency Operation Center I will need to get to work on time |
| I commute from PG Plaza every day. Running two lines to that location is very important to me to making the commute somewhat efficient. |
| As I take the yellow line from Fort Totten to U St every day, having the yellow line not go far enough is a major concern to me. With only the option to take the green line, my commute time would lengthen considerably. Not to mention those who live on the southern part of the yellow line (in Fairfax co and Alexandria) would be forced to switch trains, just to go north of Mt. Vernon Square. |
| Wait until the pandemic is over before making these changes. |
| All depends, if you couple this with a 30 minute wait to change trains then I think you realize this is a bad idea. |
| As someone who lives in Columbia Heights and will need the Yellow Train between Mt. Vernon Square and Greenbelt in 2022 for daily commuting, essential doctors appointments, reaching the airport, and other necessities, this would throw significant roadblocks into daily life. |
| having both Green & Yellow line trains serve as far as Greenbelt accomplishes the goal of having more frequent train service at Greenbelt during rush hours |
| Greenbelt is an important stop |
| It's horrible when only one line goes to Greenbelt. If schools open as they are expected to in the next month your ridership will show that yellow line will have significant ridership during rush hours. |
| We dont use the yellow line. We just need East Falls Church to stay open. |
| I am not personally reliant on these stations. |
| It is way better to have the yellow train go all the way to greenbelt instead of having to transfer off/on to the green line. It's the same line and we shouldn't have to transfer, especially when there are sometimes so many green lines in a row. Just let them go all the way to greenbelt. |
| This would possibly work if you consider Metro only for getting into the district and not for getting around metro DC. For my purposes it would be good. |
| I might be affected occasionally, but not most days. |
| I dont take the yellow line |
| I work in Arlington and live in Bloomingdal, so I need to be able to get to the Shaw-Howard station. |
| There should be yellow train services to greenbelt. |
| I use yellow line often and there will be some inconvenience but it would be workable. |
| Given that I live in College Park near the Greenbelt station, this plan would not work for me because I frequently take the yellow line train. |
| I currently do not use the Yellow line for this route so it does not apply to me. |
| I doubt I would take the yellow line. |
| As primarily a Green/Yellow user, this is a reasonable plan. |
| I don't use the yellow line so this doesn't affect me. |
| The yellow extensions during rush hour are never applicable to my situation anyway. |
| I thought this was already happening. |
| Again, i am not relying on the yellow line at the moment but if I did, it would have a negative effect on my use of public transport. |

Proposal to implement Yellow Line turnbacks

I take the yellow line regularly, north of Mt. Vernon Square.

A reduction in the number of these Yellow Line trains going all the way to Greenbelt could be fine--say in the direction of a 40-50% decrease, but not the complete 100% elimination.

Yellow and Green line frequently had delays at the stops above Mt Vernon Sq station. Heavily used stations in the northern part of the city have to rely on a single line where you suggest trains depart every 30minutes? Yellow line should extend further to Columbia Heights or to Georgia Ave since these are high traffic areas and large population hubs of the city.

would leave no viable transportation options

This would not affect me as I do not ride yellow line.

This would seem problematic for people near greenbelt. It's bewildering why cuts are being proposed for exactly the time period when people will need the metro to be functioning at full capacity -- namely, when covid is under control.

Would be nice if it went to Shaw, that is close enough to U street corridor

Greenbelt needs to remain in operation.

Reasonable approach but one issue is if there are problems on the red line. Having yellow line trains go to fort totten alleviates some of the congestion in the system.

Again, eradicating public transport when it was not perfect to start with is a big hit on everything else, including maintenance of the roads that will cost quite a lot, traffic and ecology and impassable highways due to increased flow

I count on the yellow when I miss the green they both will take me to my stops on time sometimes the yellow times will get me there faster

As I rarely use this line, this change would not affect me.

stopping at Mt. Vernon Square cuts off Shaw, U Street, Columbia Heights and Petworth, four of the stations were most residents live.

I would need yellow line service extending to at least Shaw/Howard for my commute

If this service reduction is made (which may be deemed necessary), then Green Line service should not drop below every 15 minutes. Additionally, YL service to Fort Totten would keep more frequent service operating in the busy Mid-City stations.

Rarely, if ever, ride the Yellow Line.

I live in Columbia Heights and use the yellow line almost daily. Ending yellow line (northbound) service at Mt. Vernon Square would NOT help my commute and would make me entirely dependent on the green line, which would be very crowded, especially given the recent boom in housing developments (i.e. more ridership) in Columbia Heights and Petworth.

I do not typically use the yellow line.

I almost never use the Yellow line. So I dont care.

As long as people could switch to the green line at Mt Vernon Square to travel the route to Greenbelt

If the intervals were regular it would work, if erratic, no.

I need the yellow train to include the stop to Petworth

Just need the service

I live in college Park and I use the yellow line all the time

Typically dont use yellow- so cant addresss.

I dont travel to those locations on a normal basis.

I think it is much nicer for the yellow line to go all the way to Greenbelt, and that would be the best thing for commuters. However, since one can transfer to the green line, reducing the yellow line does help the Metro system while not completely cutting the commuter off. Its a compromise.

This will not impact my travel

University of Maryland students rely on the metro to complete internships in DC. Further limiting service will more drastically negatively impact those students access to career opportunities. University of Maryland planned to have a purple line to campus, but now students will no longer have any local station.

This was a terrible plan when it was implemented the last time. Restoring full Yellow Line service was one of the very best things Metro has done in years. Please dont make us get off the train and do a ridiculous train change just to continue up the same track. Its inefficient and annoying, and would make it less likely that Id choose to ride MetroRail.

While this would impact a line I travel (Yellow) my daily commute is within the limits proposed, so I should not be impacted too much.

Yes as long as the green line still goes all the way to greenbelt

Proposal to implement Yellow Line turnbacks

Yellow line should continue to run through Fort Totten to allow the population north of Mt. Vernon higher accessibility.

This works for me because I almost never take the Yellow Line

It is in my opinion that running the yellow line to Greenbelt would be more effective than running it to Huntington. There is more ridership at Greenbelt and the previous stations than it is to Huntington.

I don't take yellow train.

All Yellow Line trains should operate between Huntington and Mt. Vernon Square, as well as Greenbelt.

As long as the green line stays to College Park Station, that should be fine.

This is not a line I ride often, so I'm not sure about impacts.

This eliminates service for many people!

We need trains to Alexandria.

You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!!

Where is all that money now, when times are slim?

I live in Columbia heights you idiots. Please keep green/yellow Trains going to at least fort totten. Columbia heights is one of the busiest stations in the system

I live in Colombia Heights and use both the yellow and green lines. I would then only be able to use the green line. At least have the yellow line run between Huntington and Fort Totten

This does not affect me personally however I could expect it to be an issue for many riders

I will adjust my travel time as needed to accommodate as I understand the ridership is low. I would prefer to be on a more crowded train than an empty/less crowded train as i am concerned about the increase in crime on the metro.

This line serves the DCA airport. This is not going to serve DC residents trying to plan to get to the airport in reasonable time.

I don't use often so can say yes but those who do will be affected.

Seems to me the people hurt most are the further out stations.

The trains to the outer burbs are essential to reducing car traffic. Reductions in metro service will be a deterrent from riding and will increase car traffic

Service worked well previously when peak service only went to Mr. Vernon Square

Mt. Vernon Sq is not very far up the Green Line; thats a lot of stations to suffer service cuts down to twice an hour.

You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

Again you are putting the costs on the folks who can least afford it. bad idea

Lots of students in College park live in Greenbelt and it would be extremely inconvenient for lots of them to go to the city.

People in Greenbelt should continue having access to the same level of public transportation

I have been on the Yellow Line maybe 2 times in the last 10 years.

Only use the Yellow Lune occasionally

I take the yellow line to the airport from Columbia Heights. This would be an unfortunate decision.

It would be annoying to transfer, but it doesnt actually cut any service/trains.

I live on the yellow line and this would significantly impact me in a negative way. The greatest change metro ever made for my commute was extending the yellow line to run to greenbelt.

The Green line on this side of PG needs the increased frequency due to increasing population density

I don't need the yellow line.

Transfers to the Green line could cause overcrowded platforms during rush hour

Critical segment is RR National Airport to Gallery Place.

Concerned that commuters from ft Totten and columbia heights would be over crowded if we returned to offices

Greenbelt needs to be included

This would cause a major inconvenience to me personally because I travel to greenbelt frequently. As a female who travels at evenings/nights my main concern is getting to point get from point A to point B as quickly as possible.

This would be fine if it was the only change. I only need the yellow lines to go from Huntington to LenFant Plaza

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| Yellow line provides direct route to National Airport. Possible to consider running trains during prime time flight departures/arrivals? |
| As a former rider of the green line I think this is the way it used to be and talking to most people it wasn't an issue. Not sure how it would impact those coming in from Greenbelt but I think the normal green line service never had packed trains either way. |
| Whats the point? If need to minimize sure to covid, seems like pausing yellow makes more sense than this little route that could be picked up with blue line service in a more economical way |
| I generally do not ride the yellow line, so this is less relevant to me. |
| I dont like it, but I was able to work around it before so I know I can do so again with only minor headaches. |
| Only if the green line train runs more often |
| Keep them going to Greenbelt |
| It would be a slight inconvenience but not serious for me. |
| This would eliminate the route that I would take to work from PG plaza on the yellow line, which goes directly to Crystal City. Part of the reason we bought this house in this location was to have access to that route. |
| Would I have to transfer and wait 30 minutes for a green line train? |
| I commute greenbelt to Suitland so my trains would end up more crowded but otherwise it doesn't affect me |
| I travel from huntington to downtown |
| As long as trains are every 10 minutes during rush hour. |
| Im not a user of the Yellow line. |
| I live College Park, and would be unable to use Metro.. Bad idea. Your plan will reduce ridership in 2023 because once I get to the office or elsewhere by other means, I am not going to come back to use Metro. So amazingly short sighted. |
| Whether this would work or not is largely dependent on how common telework is in 2022. |
| Severely prohibits getting to work and from at Stadiums and Arena from Greenbelt. Workers have NO options for driving and PARKING at Stadiums and Arena. Not to mention Fans also will be hurt as well. The economic recovery depends on Metro running at full capacity as before the pandemic. |
| I do not use the Yellow line so this doesn't impact me. |
| It makes no sense to cut train service to U Street/Columbia Heights/Petworth/Fort Totten in half. Those are some of the densest areas of the city and most are not serviced by any other line |
| My travel is mostly on the Yellow line from Eisenhower Ave into DC Area, I never go out past Gallery Place on the Yellow line |
| that is not the route I take |
| No additional comment. |
| Keep it how it is already . The same |
| People in NW DC especially Petworth, Columbia Heights, and Shaw-Howard need the yellow line to go straight through. This is a much used route to get to workplaces in DC and Virginia. If you make it to where people have to transfer and you change frequency the train will become more of a burden than it is worth. |
| While I would miss having 2 trains coming to Greenbelt, this would be a minor inconvenience if necessary to adjust the budget. |
| This would not impact my commute, but it would certainly impact folks wanting to get to and from Greenbelt. |
| I can get to Greenbelt via an alternative route. However, the plan would adversely impact overall Metro service and discourage riders. |
| Run it to Fort Totten. |
| Less likely to use Metrorail with 15 min headways and lack of ability to have two line coverage within DC. Would transfers to yellow line be timed? |
| I ride from Huntington to Archives every day, and have been for some time. I also ride from Archives to Shaw-Howard U, to see my girlfriend, so this would be hurting my ability to go see her via transport. This is not convenient. |
| I take the Yellow Line Metro twice a day for work - I start out at Columbia Heights and I go to King Street/Old Town. If the Yellow Line service only extends to Mt. Vernon Square, then I would not be able to take Metro to work. Since I don't drive, this change in service would affect me extremely negatively. |
| I don't regularly need to take the yellow line. |
| I do not depend on Metrorail to get to work. I am commenting as an occasional rider. |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| I do not take the yellow line to Mt. Vernon Square |
| The yellow line should extend up to greenbelt. There is too much strain on the green line for people traveling to and from downtown from petworth and columbia heights. |
| This is fine for me. I use the Yellow Line from Gallery Place to Alexandria so this would not impact me |
| This plan would not impact me. |
| As someone who lives in the Manor Park/Petworth area, having yellow line service at Petworth has been transformative. It would significantly diminish the usefulness of Metro service of Yellow line trains ceased running to these stations. I am strongly opposed to this proposal. |
| inconvenient |
| I dont use these lines frequently right now. |
| My commute includes the Red Line and the Yellow Line (to Eisenhower Avenue)_. I think this is a reasonable option. |
| If this does not effect the frequency of trains on the current yellow/green line, it would work. But that line is quite busy during weekdays (PRE-COVID, which I expect will be over by January 2022) so lower train numbers would be detrimental. |
| Yellow line going all the way to Greenbelt (or at least Fort Totten) has been so helpful. It reduces the need to transfer at L'Enfant Plaza that is becoming increasingly crowded and dangerous. |
| When I take yellow line, I sometimes go to Shaw / U Street, Columbia Heights, Pentworth. I would probably take metro less when I ride to those stations, but its not my main route (usually used for leisure, not for work travel). |
| It is important that the Yellow Line run at least as far as Ft. Totten, to provide 15 minute coordinated service with the Green Line in the populous DC section. |
| I am privileged enough to be using metro stops that would not be effected through this proposal, but I imagine shutting these stops down would impact others which may have long-term consequence in terms of movement out of those areas, an increase in traffic due to more cars on the road, or inequitable access to resources for these people. |
| I very rarely use the Yellow Line. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic. |
| I do not use yellow line frequently |
| My station is college park, plz keep open |
| Yellow line should extend AT LEAST as far as Fort Totten (a major transfer hub). Otherwise many residents will have restricted access to the DCA airport |
| I dont use the Yellow line. |
| How will customers get to Virginia. Will Blue line be running? |
| I need access to green belt |
| I like the original setup |
| I like it. The GR runs along same segment of YL thru Fort Totten anyway. And it covers the important stations in The District anyway from L'Enfont Plaza up to Convention Ctr. Perfect. It also gives the GR more free space between stations to operate at higher speeds |
| The yellow line connection to Greenbelt is relied upon by many people who would otherwise need to transfer trains. This adds significant delay and unreliable arrival times. |
| As a rider of the metro pre-pandemic, I never needed to go on the yellow line past Gallery Place anyway, and if the Green line will still be operating to Greenbelt then I see no issue with this change. |
| My primary stop is Columbia Heights. This proposed change would be acceptable for me only if the green line continues north of Mt. Vernon |
| While it would work, Fort Totten would be a better option. |
| For me, personally, I use the Yellow line extensively during normal times. Im more concerned about the frequency of trains going down to 30 minutes. That alone would be a dealbreaker for me. |
| Doesnt affect me, I dont use those lines. |
| Why would you spend all the money building and deploying a mass transit rail system and then shutter stations? Why not shut down the whole system and just admit defeat. |
| Yellow line service is critical at Fort Totten. This service cut would result in overcrowding of green line trains. |
| I use this line to get in DC. Not to greenbelt |

Proposal to implement Yellow Line turnbacks

The loss of connectivity to Columbia Heights and Petworth would be missed, but this is a weekend need and the Green Line is roughly sufficient. I imagine this has greater impacts on those who live further up on the Yellow Line now, hurting their ability to and from work especially.

I live in greenbelt, and i also believe that once the pandemic begins to fade the commuter revenue will be more prominent and public transport needed. Longer waits may discourage commuters that are already weary of public transport because of the pandemic scare.

I hate that this plan would hurt people who ride the yellow line, but it would not affect my travel needs because I use the red, orange and blue lines on my daily commute to work.

I am not a yellow line rider.

Take the trains from beginning to end.

This is a stretch of the network that I rarely use.

This would seriously impair my use of the metro system.

I don't use the yellow line.

I do not take yellow line past Mt. Vernon Square.

Wouldnt affect me, at least.

Going to Petworth or Ft Totten would be more ideal

The yellow line starting at Greenbelt is relatively new.

Eisenhower is my home station and my work commute takes me to McPherson Square.

This schedule change would mean a 30-minute wait for a green line train. This is unacceptable.

I dont often ride this section of the yellow line, so am relatively unaffected.

Not a problem. I rarely need to go as far a Mt. Vernon Square and I never need to go beyond it.

Given that my home station is College Park, it would not be convenient, and given the growing number of people living near stations in the regions north of Mt. Vernon Square, does not seem to be a good option.

If this proposal were combined with 30 min intervals for greenline, this would be hard and and crowded but doable, a sacrifice to keep metro afloat

I rely on the yellow line to take me to work all the way to green belt

Mass transit is much better than using cars and trucks.

I ride yellow line and I never need to go beyond Mt. Vernon Square.

This eliminates access to the city for hundreds if not thousands of people.

U Street and Columbia Heights are stations I would still want to access so this would depend on green line availability

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

Rarely use the yellow line

No, this will not work for me as a young person who is very much planning on using the metro as my primary source of transportation in 2022 because I do not have a car, nor can I afford to buy one. At that point, I largely expect to feel safe enough to go about the city, which includes going to work, going to dinner, fueling the local economy, etc.

This is not applicable to me.

I need to go from Columbia heights to fort Totten for work. Trains should run to fort totten and occasional trains should run the greenbelt.many people work in the city but live outside and will need access to metro

This would halve the number of train options available to me at the closest stations to my home.

Same as before. I dont particularly use this line, but it would affect many others.

I take the green/yellow line from Fort Totten to College Park to commute, and the yellow line service is essential. By 2022, Metro should be planning on running the same service as pre-pandemic.

This particular change would not affect me.

As long as Reagan Airport and Crystal City are served I will be OK.

Sorry, but I dont know enough about ridership between Mt. Vernon Square and Greenbelt to be able to parse this.

I rarely go to Greenbelt, but thats a long trip for me, anyway, so I expect a long commute.

There are no enough trains going to greenbelt at times, reducing yellow line will add more time between the stations after Mt. Vernon

Trains stopping at mt Vernon square only cause transfers to further north stations and does not make sense.

Proposal to implement Yellow Line turnbacks

| |
|---|
| Suburban neighborhood deserve access to transit. unless it is proven that this station has VERY low ridership, this plan would not be equitable to those in that neighborhood. |
| Your service cuts will not support reducing auto emissions;it will cause more car use as Metro fails to provide service |
| What does this mean in terms of train numbers? |
| While I dont often take the Yellow Line in the direction of Greenbelt, this change would make it more difficult if I ever need to. |
| I don't ride this line and am not familiar with this change proposal |
| This would have a huge impact on traffic in the DMV. Cuts off affordable transportation in disadvantaged neighborhoods, and cuts off access to DC nightlife hotspots which could lead to increased driving under the influence. |
| Green line covers Greenbelt so i dont see the need to double up train service. |
| We are talking about the nations capital metro system and not a suburban train line. Moreover, we should not discriminate against cities and towns within the DMV. Some essential workers live in these places and need the yellow line to work and get back home. Furthermore, by January 2022, a relevant portion of the population will be vaccinated against the coronavirus. |
| Needs to at least go to Fort Totten |
| This makes it harder for those who live further from the city to get to work or appointments on time |
| Needed Greenbelt |
| I dont think every Yellow Line train needs to go to Greenbelt, but Mt Vernon Square is too early to turn the trains around. Fort Totten is a more appropriate terminus to include more of the urban core in the enhanced Yellow Line service. |
| This may be okay as the green line still goes to Greenbelt and transfer is possible. |
| I do not regularly rely on the Yellow Line. |
| I dont know this stretch, but would concede to those who use it. My guess is that most people will feel the same about this as I do about the Red Line. |
| I do not regularly travel on the yellow line to Greenbelt. This would impact those who do. |
| I do not use the yellow line. |
| Id prefer if they went to Ft. Totten for ease of transfer, Mt Vernon square is a little awkward. |
| People bought homes in those areas because of public transit access. You would be leaving a lot of people without transportation (and dont pretend taking 3 buses is a viable solution.) |
| Having both green and yellow go to Greenbelt is very helpful when commuting. This is also helpful going to and from the Reagan National airport. |
| I enjoyed having the yellow line run through Greenbelt given trains used to be more infrequent and this helped make traveling the metro system faster. If this adjustment was made I would still get to my destination, but obviously at a slower pace. |
| Works for me ... thats not the area where I ride. |
| What are the people who utilize greenbelt metro to get to and from work? Are they simply supposed to just walk? |
| This plan would result in reduced service to my home station (College Park). |
| My closest stop would be the Shaw/Howard metro. Also I often travel up to Columbia Heights so ideally the yellow line would also go up that far. |
| Fully fund metro. No cuts. |
| I tend to rely on yellow or green to Columbia Heights and would highly recommend extending yellow at least until there due to the number of metro users in that neighborhood |
| I rarely rid to greenbelt. |
| I transfer at Fort Totten and would prefer not to have to wait for a green line train each time |
| I don't use this line. |
| The change would not affect my commute |
| Given my age , I need as few transfers as possible from Greenbelt to downtown With only green line to Downtown and a need change to yellow for airport, this would be a hardship. Especially if the G12 buss is discontinued in Greenbelt to and fro the station. |
| Parking not sufficient to accommodate change. Loss in ridership guaranteed. In addition, increased driving to get to other metro station increases carbon emissions. |
| Would substantially increase travel time to work in at UMD-College Park |
| No, the yellow line operating only between Huntington and Mt Vernon would disrupt my commute. |
| I live at the Petworth metro and commute to Silver Spring; taking Yellow Line service away means much longer waits for metro |

Proposal to implement Yellow Line turnbacks

Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

I like to go to Takoma

we do not live on a yellow line.

Stations should never be closed. Frequencies ok, but to close stations is to effect access to travel, to work, will disproportionately affect low income and BIPOC communities, and drive housing prices down. It could ruin communities that people moved to specifically because there was metro access. Once built, it doesnt make sense to close stations.

What is the expectation that people get off at Mt. Vernon Sq. and take the green line from there? That just adds to peoples commute times and frustrations.

The Greenbelt station is vital to many who depend upon business in that area

I am a current health sciences student that relies on the metro for morning, daytime and evening hours to get to and from school and various clinical rotation sites in the DC metro area. Having the metro bypass Greenbelt directly impedes my ability to access essential medical educational activities.

I ride Yellow between the Pentagon and Gallery Place, so this would make the turnaround for Yellow trains faster.

Similar to the upper Red line, this negatively affects the people who live further out, who arguably need it more.

Not ideal, but I remember a bunch of yellows used to stop at Mt. Vernon Sq anyway so it doesnt seem like too big a departure from something thats been done in the past.

Need to eliminate duplicate service

Need access to DCA from Ft. Totten.

If the yellow line does not operate all the way to Greenbelt this could make it difficult for some residents who rely on the metro to make it to the airport

Depends on the green line headways

Please dont cut Yellow line service past Mt. Vernon Square- I rely on the Yellow line, both the transfer at Takoma and College Park station, to get from my home and school to the D.C. Center. Cutting these trains would make it harder for me to get the places I need to go.

This would make longer trips on the yellow line more difficult and inconvenient

Yes, hopefully less unwanted people on the yellow line trains. Greenbelt line is full of loud, unsupervised horrible kids who harass everyone and throw trash everywhere.

I usually only use the red line

I live in Columbia Heights. If this proposal is adopted, trains will arrive at Columbia Heights metro station every 30 minutes - even during rush hour. This is simply not feasible or realistic. Columbia Heights is the most densely populated neighborhood in the DC metro area - and the station also serves Mount Pleasant! To do this would be complete suicide for metro in the heart of the city. Trains would constantly be overcrowded and ridership would decrease as a result. I would frankly prefer to walk to work than take the metro in this scenario.

This is extremely limiting to riders who need that station access.

Same comment as before consider rush hours and weekends. During rush hours It should be every 3 mins.

While this plan would work for me personally, the proposed reductions could result in a cascade of other issues, including the accessibility and livability of the DMV

I live in College Park. Please dont ignore people that live further out. Ive been commuting to downtown DC for 20 years.

I dont live near those stations.

I dont use the Yellow Line and dont want to dictate how it should be amended. As a Red Line user, amendments to non-Red Lines are in my favor since they likely pull attention away from my line, but we all need the Metro. So Im abstaining from this one.

Trains should be accessible to everyone

We want the full old schedule!

Do not use those stations

As I get older, I would likely travel by Metro from my home to visit my friend in Greenbelt.

I use the green and yellow lines to get to Columbia heights on my way home from work. If the green lines come on a consistent enough basis this shouldn't impact me too much.

I live on the yellow line and need to go to Shaw. Switching trains makes it harder to use

Use green and yellow to travel to points farther than Metro Center

This would not work for me because you are cutting off additional line services in which I would need to change training adding to my commute time.

I live off the green.

| |
|---|
| Proposal to implement Yellow Line turnbacks |
| As long as another train still gets to Greenbelt, this is okay |
| Once again I feel as Virginia is being discriminated from receiving public transportation services. My taxes have gone to help the metro service. |
| But please do a Green Line shuttle between Mt. Vernon and Anacostia, if operationally feasible. |
| ride it sometime |
| This makes train service much less useful for people north and east of the Mt Vernon Square on the green line |
| Dont live on yellow line |
| This is a self-defeating service cut. The last time Metro cut back service by turning trains at Mount Vernon Square, the net result was a large decrease in service at Shaw, U Street, and Columbia Heights, and thus a corresponding decrease in ridership. When service increased, ridership did as well. Magic! Metro must avoid that death spiral. The pandemic will be over soon. Do not shortchange the recovery of ridership with short-term cost-cutting. |
| While i primarily use the Red line, I live at the fort totten station and the ability to take yellow all the way to my stop was a great addition when the service was expanded a few years ago, particularly when traveling to the airport |
| I don't take the yellow line to and from work. |
| Most convenient for me since I don't take those |
| Commuters from Mt Vernon to Greenbelt need trains to get to work too |
| This service reduction would exacerbate the problem of dangerously crowded platforms at rush hour because it force more train transfers. This would increase crowding on train cars and limit the ability of people to safely commute from home to work. |
| I go to the museum |
| I and many others depend on specifically getting to Greenbelt from the direction of Yellow Huntington routinely for our jobs. Please don't make this change, I rely on it every day. |
| That eliminates too much access to the metro and I often go past Mt. Vernon Square to Columbia Heights. |
| I dont use the Yellow Line often |
| REMOVE the yellow line from Greenbelt , Gallery Place and Fort Totten |
| I'm a yellow line user... |
| I had been taking Metro back when this was the norm. It was nice to have an extra train to Greenbelt, but it's not crucial for me. |
| I rarely use the yellow line. |
| I dont travel to Greenbelt, so for me this plan would work. |
| None |
| I dont use the Yellow line on a regular basis, so this change would not affect my work-related travel needs. |
| Operating from Huntington to U street would be better. |
| Wouldn't affect me |
| For those who do ride from greenbelt to reach yellow line and other connectors this would be a major hardship I only ride yellow between Lenfant Plaza and Gallery Place |
| As long as the green line is still going to college park and greenbelt of course |
| Greenbelt already has a greenline. That is fine! |
| I ride the Yellow Line regularly, but never go beyond Mt. Vernon Square. |
| No impact on me |
| I live in Petworth, and this solution this would make my commute much longer, as I would have to switch (particularly given how infrequently the trains are now expected to come) |
| Almost never ride the Yellow line. |
| I do not go to Greenbelt, but if there are people who work in the district and live near the Greenbelt station it seems like keeping access to all stations currently operating would be important to maintain. |
| The trains are already at capacity during rush hour and these changes will make it even worse. Its a safety issue as people will be trying to pack themselves into trains. |
| This makes since due to them being mostly as one, the yellow green and blue line over lap way more than bother lines |
| It would be hard losing the additional service between Mt. Vernon Square and Greenbelt so that would definitely be an issue sometimes, but given that theres still the green line, it wouldnt necessarily be terrible. With students back for UMD this lessened service may be an issue though. |

Proposal to implement Yellow Line turnbacks

I would prefer that the trains went to U st instead of just Mt. Vernon Square. But at least there is a green line train. It is annoying needing to switch trains going the same direction, but I don't use this line very often

Having the yellow line go at least to Fort Totten would be ideal.

I don't use these stations.

There is alternate service available from downtown to Northern Prince Georges County via the Green and Red Lines.

Should extend to Fort Totten for interlink between Red and Yellow. Not rider-friendly.

Metro did this temporarily once before and it was chaos. DC residents who live in NE DC live between Mt. Vernon and Greenbelt. Those areas are historically less affluent and would be a huge disincentive for people to live there if the volume of metro carts decreased.

It is better for me if the Yellow Line goes to Greenbelt. Otherwise, I can only take the Green Line to reach College Park.

I dont ride the Yellow, so am not sure.

I live on the green line (Columbia Heights), and the acceptability of this depends on headways on the green line. If headways on the green line are what they were in the past (7 minutes), this is acceptable. If they would be 30 minutes without the yellow line servicing the station, it is unacceptable.

Its important that I can take the yellow line from North DC, as my partner commutes to Maryland while I commute to Crystal City.

Deal with your high paid workers. Cut their salaries and keep the service up for the other "blue collar" workers who need to earn a living. This makes it even harder for regular people because WMATA refuse to address the costs of their workers..

I have had to commute from LEnfant to Brightwood, and often take the yellow line to Petworth station, then a 62/63 bus from there. It would be extremely time consuming and annoying to switch trains at Mt Vernon, and then to not have a 62/63 bus for the last miles home. I honestly dont know how I would commute with this proposal. It would be a nightmare.

No because we need to continue to expand. This is the first time we were headed towards a direction where you could travel more efficiently without expenses that would limit low class citizens.

Not great but I agree with concentrating service in central stations

Predictability is my largest concern, so having a schedule I can depend on is best. I also use a tracking app (i.e. DC Metro) so can plan accordingly.

But that would remove service from folks who might need it more (be more reliant on metro only).

While Im not impacted personally by the yellow line, I am responsible for TDM at my School. Reducing transit offerings makes it much harder for employees and students to take transit .

Would the Green Line still go to Greenbelt? That might work for me.

As with the 30 min service Sunday-Saturday, with no rush/non-rush distinction, this would seem to make METRO much less useful and responsive to traveler needs during the work week in particular.

It would add a transfer from yellow to green for those people continuing in the direction of Greenbelt but if the trains run frequently enough, this would not be so terrible, especially given that the transfer could be done at an indoor station.

This is an inconvenience for me, but is better than closing stations I use.

Ending Yellow Line service past Mt. Vernon leads to really long trip times, particularly in off-peak frequencies, for northbound riders.

Green belt is needed to get to BWI and the MARC train. If green still goes then it is fine but otherwise those services would need to be covered in another way. Also the yellow and green lines support people that may not have other commuting options. That is not where cuts should be made. FYI I live on the red but use yellow and green to get to meetings and the airport and Baltimore periodically, not every day. I can make other commuting arrangements from Bethesda. I would argue in PG county many cannot make other arrangements.

I may be moving to Columbia Heights / U St before Jan 22. I work in Crystal City and would then need to transfer at Mt Vernon Sq.

It seems you might want to make the north end point Georgia-Petworth? That corridor is dense with things I go to. Yes, Green also goes, but it strikes me that if we assume a return to pre-Covid, it would make sense to extend that northern stopping point. Im not sure why Mt. Vernon Square.

Students/faculty at UMD rely on yellow line metro going past Mt. Vernon

Its more convenient to have 2 lines coming and going from Greenbelt.

No change to my end station at Huntington.

How will the Green line operate? How often will the other stations be serviced by trains? Not enough information is provided.

Proposal to implement Yellow Line turnbacks

I rely on metro and I live in Greenbelt. This is inconvenient and will deter me from riding metro.

I am not living along yellow line.

That would be fine ONLY if frequency is very high!. If frequency is cut then NO

Why go back on what took so long to put into place - running end to end?

I live near Fort Totten and if I needed to get to Reagan National, which I often do, I would have no problem taking a Green or Red train and changing. I work on the Mall and so this would have little effect on my commute.

As long as the Green Line trains go further out and you can transfer at Gallery Place

I live by West Hyattsville on the north end of the Green Line, and reductions in train availability may really limit my interest in taking metro. But it would work, in a narrow sense.

Potential downside with 1/2 of the trains as usual on the north end of what is currently Yellow/Green

Will this reduce service from China town going north? Will green line trains run more frequently along this route?

There needs to be a prioritization of more trains during rush hour, because the likely outcome if (Metrorail Proposal 3) adopted would be in the long run a push for current riders to adopt new methods of transportation, i.e personal vehicles and thus further lowering ridership for Metro as a whole.

I am not a commuter. I use the Franconia-Springfield Station. Eliminating the Yellow Line would not affect my travel.

I expect to visit friends at the University of Maryland often, and since I currently live in Arlington, the yellow line is my best friend to get there. This would render it useless and I would have to take a much more circuitous route.

At this point, Im working from home as my employer has shut down our DC office because of the COVID-19 pandemic). Once life gets back to normal (when the pandemic is over), whenever that is, employees in my office are likely to be expected to go into the office again, so while a schedule like this may work now (i.e., in 2021 while the pandemic is still going on), its not likely to work once the pandemic is over and other workers like me go back to working in the office.

same

Having formerly lived in Columbia heights and frequently still traveling to Northwest, this idea could only be thought of by someone who had NEVER been on the train leaving work to go north. This is not a practical solution.

This is acceptable given the redundancy of lines to Greenbelt station. That said: Green Line trains would need to operate on a 10 minute schedule to remain viable.

Yes because I do not often use these stops (but understand others may).

Yellow line trains should go to Fort Totten during the midday, evenings and weekends. Trains should go to Mt Vernon Sq during rush hour and select weekends when track work is done beyond Mt Vernon Sq.

I dont use the yellow line

I am not currently dependent on the yellow line. This may change as 2022 approaches as I may be working a new job or be living in a new neighborhood.

With problems on the red line the option to switch to green at Ft. Totten saves a lot of time.

I need to go to greenbelt

If anything there are more people living in the suburbs now who will be commuting to DC. There wont be enough trains to meet demand.

I seldom ride those trains

Not a yellow line user

I dont normally take the Yellow line.

I travel to greenbelt

Make sense , it would increase trains arrival time on the green and yellow

This covers the core are for which we use the yellow line.

This would not impact my ride

I need the train to run at least to Fort Totten (Huntington to Fort Totten). Stopping at Mt. Vernon Square would not work for me.

It seems like this would cut service to areas of the city that are build around transit, i.e. Columbia Heights, Petworth, Ft. Totten. If service is reduced on the red line with it ending at Silver Spring, it seems like there are more options for people to drive to a station that is serviced more frequently and park. Thats not a practical option at Mt. Vernon.

Though it didn't apply to me I don't think we should be cutting train rides short. So many people select housing biased on public transportation availability and making this change would not satisfy their needs.

Proposal to implement Yellow Line turnbacks

It's not ideal, but I made it work when that was the case a few years ago

Another very good plan.

To limit only one train that goes to greenbelt is also very impactful for commuters.

Greenbelt is already covered by the green line.

This would make it much harder for me to get to work

I dont have any reasons to travel to Huntington, Mt. Vernon Square or Greenbelt. I dont expect this would impact me.

Since metro is currently doing this (with yellow service ending at Mt Vernon Square) the Green trains that come to the platform after the yellow trains get crowded due to service ending

I do not use the trains in this area.

I dont use the yellow line routinely

My terminal stop is either Greenbelt or College Park. This works for me best if wait times at Mt Vernon (to change between Yellow and Green lines) are not more than 15 minutes.

This would work for me only if Yellow Line frequency remained the same, but that is not clear from this proposal.

As long as the green line continues to go past Mt Vernon

I dont use this line.

Doesnt affect me. But sounds like it would work.

I do not use the Yellow Line often.

I rarely if ever use the yellow line to the stations beyond Mt Vernon Square

This proposal would make it more difficult for residents of Columbia Heights and Petworth to access the airport.

I don't use this train often so I can deal with this.

Reducing service on frequently-used lines is not a good idea. Hopefully 2022 will bring more opportunities to be outside and having people crowded indoors on platforms when were still recovering from a pandemic sounds...not too good.

I frequently take the yellow line to get from work to my home. This would cause me to need to switch to the green line which would increase delays, particularly when morning commutes are inconsistent.

Well it depends on how often the Green Line runs, doesnt it? If I have to get off at Mt. Vernon but know the next train is 5 or so minutes behind thats a lot better than if the next train is in 15 or more minutes.

This doesnt affect me. For those whom it may, I hope the Green line would reach Greenbelt.

Assuming I am able to return to DC by then, what would I do if I needed to get to Greenbelt? What would residents around the Greenbelt area do to get into DC? This would increase costs and burdens for those residents.

It is critical that we increase opportunities for public transportation rather than decrease.

Cutting off the north of the city is no way to return ridership to normal levels.

I

I mainly use yellow to go to Pent. City or King St. metro

What the fuck.

The greenbelt stop is great for commuting to work when my car is in the shop, but I do not use it often and do not have enough data to make a determination. Therefore, I do not have an opinion

i do not use this the yellow line frequently

I would like the number of people that take both lines prior to the pandemic and determine what the impact would be removing one line.

If the Blue line is available, I probably wont use the Yellow line. If there is limited or no service at Franconia-Springfield, the Yellow becomes my best option.

I dont use the Yellow line.

While two lines traveling through those areas are not justified during the pandemic, they are have some of the most popular living areas in the city, so when work, schools, and events venues get back on their regular schedule, it would be helpful to have both lines running these routes.

Proposal to implement Yellow Line turnbacks

As I only need to travel to Greenbelt when flying out of BWI this proposal is okay. Instead of completely removing the the travel the Greenbelt, consider making it only a Rush hours stop in evening during the weekday when travel expectancy is at its highest peak.

Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely remaining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations.

I do. It utilize the yellow line enough for it to impact my travel needs in a significant manner at this time.

I am a rider of the yellow line, and rarely if ever take it begin Vernon square. I wouldn't mind needing to transfer the handful of times I need to go further.

I think it makes sense because there is a lot of overlap between the yellow and green lines.

I just need the yellow line to get from Arlington to downtown.

I have never used the metro to Greenbelt.

I do not use the yellow line.

This would not impact me personally, but I imagine would cause a lot of stress for people north of Mt. Vernon.

As long as green line still running the same

Do not use Yellow line for commuting, so largely will not be affected

How would everyone get to Howard University? Petworth? A whole section of the city would no longer be served? How can that be?

Yellow is my main Metro line from Virginia and I usually use LEnfant, Navy Yard, or Gallery Place, so this wouldnt change that.

Why stop at Mount Vernon Square when the center of Washington extends to the U Street corridor?

I only take the red line into work. I am not fit to answer the question.

Im on the Red line and have little need for those others

Having the additional yellow train during rush hours and large public events has been a godsend. If that were kept during rush hour, but limited during other times of the day, that would be acceptable.

Id still like to use the yellow line to get to college park

This would completely cut off people like myself in Columbia Heights and limit our access to Reagan airport. Not acceptable.

This doesnt impact me directly, but I feel bad for others impacted.

Does this reduce service on the green line?

Both my spouse and I depend on Green and Yellow line service to Greenbelt.

This would double my wait from Greenbelt Station to get into the city.

I live at the PG Plaza metro stop and removal of Yellow Line service at that station would significantly impact wait times for a train into the city from my house.

This is a good idea.

This would involve removing service for some of the population, would much prefer to accommodate via schedule changes.

I don't use this part of the stations, so this change doesn't affect me

As I take the yellow/green line to get to and from work and board north of Mt. Vernon getting off at Crystal City, this would cause a decrease in convenience that would make commuting by metro untenable for me.

Con las linias verde y amarilla funcionando asta greenbelt se me haria mas facil los viajes

I travel frequently from DCA to Columbia Heights. I chose to live in this neighborhood because of the extended yellow line service. Returning to the previous schedule would greatly disrupt my access to the airport.

I have not taken the yellow line to Greenbelt; so dont feel qualified to judge.

I seldom use the Yellow line except to Regan Airport.

This would be one of the more acceptable proposalsFor saving money. Maryland commuters have the Green line. And turning the Yellow line would save a considerableAmount of train time.

| Proposal to implement Yellow Line turnbacks |
|---|
| Yellow line needs operation until Greenbelt. |
| Afecta porque es mi forma de llegar a la estaci3n de Columbia heights |
| Its nice to have more options when both Yellow and Green run further north, both for frequency and for crowding. |
| yellow line to Lenfant plaza is my backup if orange line down. |
| That has a huge impact on everyone who travels northeast and depends on having either the green or yellow line as options. |
| I rarely ride Yellow. |
| I rarely use the yellow line, when going to DCA, |
| Need more extensive service. |
| Gentrification has already pushed significant populations of DC out and this would further limit access back to the city |
| This would not affect my commute. |
| This is annoying because I would have to wait for or transfer to a green line train to complete my commute,, but if it would allow for green and yellow trains to run more frequently, I am okay with it. |
| Having the Yellow Line run all the way to Greenbelt (or at least Ft. Totten) is useful for folks traveling from MoCo/PGC to DCA but otherwise this proposal seems fine. |
| I ride from E Falls Church |
| This seems like a reasonable cut. You do this sort of thing on an ad hoc basis anyway constantly on multiple lines. |
| This is a part of the line I simply don't need access to. |
| I dont ride the segment between Mt Vernon Square and Greenbelt often. |
| Change nothing |
| The trains need to go Greenbelt especially during rush hour! |
| It is convenient to have the yellow line to Greenbelt |
| Fort totten would be a better place to end the line. Or at least i street which is more of a pedestrian hub. |
| I feel that the Yellow Line can be completely shut down. |
| it is so much better when the Yellow Line runs all the way to Greenbelt; stopping at Mt. Vernon Square is awful and inconvenient... do better, please! |
| Columbia Heights and U Street would be massively impacted by this change. Already, the platforms there are probably the most packed in the entire system at rush hour. Cutting an extra train every 15 minutes and serving it every 30 would detract anyone from using Metro; theyll go on buses instead, increasing the people per bus (70/79/52/54/59 are already packed plus the Circulator) and would lead to a decrease in fare revenue. The most barebones option would be to operate to Fort Totten: the headways would be already spaced out perfectly for the E06 crossover to be used to turn Yellow line trains without any interference to service. |
| No, yellow should continue service to greenbelt. The wait times are insufficient and inappropriate. |
| Not ideal but Ive dealt with this before. I will need some sort of regular service beyond Mt Vernon Sq. |
| No that would make the yellow line nearly useless for me. |
| As soon as I am called back into work my travel needs will be exactly as they were in January 2020. |
| This would make me switch to driving |
| Having to de-train at Mt. Vernon Square makes the commute too long to tolerate. |
| Thats not fair for people who rely on Metro to get to greenbelt. How will i get there? |
| Yes, but it will be a downer to wait at the station for a long time... |
| Can still switch to Green if needed |
| People working in Crystal City need the rush hour trains to and from Greenbelt. |
| See above... |
| The Yellow Line should go at least up to Columbia Heights, please! :) |
| We do not use this route |
| I need to travel further than MVQ sometimes. |
| For me the Yellow Line needs to go to College Park. Mr. Vernon Square isnt close enough to campus. |
| It would be a little inconvenient (I live near the Green Line) but manageable. |

| Proposal to implement Yellow Line turnbacks |
|---|
| I am retired and do not use Metro very often. . |
| This doesn't affect me at all. |
| Not do not use the yellow line. |
| this used to be the case in 2005. not sure when it changed, but i havent used this route much since |
| This was a prior method that worked. |
| Rarely travel on yellow |
| This would overcrowd trains during rush hour and for passengers that live past Mt. Vernon Sq toward the Greenbelt area this would be a huge inconvenience! I remember having to take the train late at night after grad school and my stop is Prince George Plaza, and having to wait late at night for a train back to PG Plaza stop. It was terrible and not safe! I was relieved when Yellow line service was restored to Greenbelt. |
| The YL-Line should continue to go to Greenbelt. My normal commute (pre or post-lockdown) is from Pentagon to College Park, and the schedule you had worked really well. |
| It doesn't work if I have to get to Greenbelt. Technically what you tell us directly is we are shutting down metro for good and drive the car. This will affect metro employees aka conductors income |
| Prefer yellow line to Greenbelt, to access airport when ready to fly again (that was my primary travel to airport). If that was no longer available, I would take a car service. |
| I do not commute the Yellow line. |
| Yellow Line trains crossing the river more frequently is good, since thats a major bottleneck, but it was always convenient to not have to change trains to go to Columbia Heights or U St. |
| I dont understand the proposal. |
| If the world returns to normal this could have a severe negative impact on reaching destination on time |
| No. This would be a huge inconvenience. I travel from Van Dorn to Fort Totten. This could cause me to be extremely late to work due to an delays or train malfunctions. |
| I am not entirely sure how shortening a line will lower costs and be more cost effective. We already have the trains and the lines in place. Also it seems counter productive. If you are trying to increase revenue, then you are alienating any revenue that would be generated from the longer riders who do take the yellow line beyond Mt. Vernon. |
| Metro is going backwards instead of staying like it is now. Think before acting |
| I rarely take the yellow line |
| This would be dependent on the elimination of bus routes 63 and 64. My ridership would increase on the metro if these routes would be eliminated. |
| What happens to the rest of the community north of Mount Vernon Square? Are they to simply use buses or walking when there's already an established train track that's capable of running up to Greenbelt? This is not acceptable. |
| That is perfectly fine by me, as if I needed to get to Shaw or some other stop passed Mt Vernon Square, towards Greenbelt, then I could just take the green line instead. Plus, I do not go up that way very often anyways, so this really would not affect me much |
| Having the yellow line extend to Greenbelt opens up travel opportunities from the Prince George County stations on the green and yellow lines. This will also reduce the number of people having to transfer Mt Veron Sq or another stop. The yellow line is very helpful for those in this area of Prince George for traveling to National Aiport, therefore reducing to amount of cars on the road, Additionally the students , faculty, and staff of the University of Maryland would be negatively impacted when traveling to campus for work and school. This could increase commute times and traffic congestion. |
| Trains every 30 minutes, plus trains not going all the way to the end of the line, is unacceptable. |
| That was the old school design of the yellow line. |
| I am not in general affected by this line, but I strongly think it is wrong to cut off services just because during Covid-19 period the ridership went down a lot. Of course it would go down a lot! It would be reasonable for you to cut off services during March 2020 till summer 2021 to save money, but when people are required to back to work, you should look for resources to satisfy the demand. Make it work! |
| I would prefer for the line to go further north, at least to Columbia Heights |
| This would cut a lot of BWI travelers off to and from the airport. |
| I frequently travel to Greenbelt. In pre-pandemic times it was helpful not to have long waits for green line only trains and appreciated that the yellow line went all the way to greenbelt. |

Proposal to implement Yellow Line turnbacks

Ridership? What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

Do not cut service, EXPAND service.

Have you thought about the conditions on station platforms near Capitol One Arena after events? How many thousands of patrons would be affected (delayed) by this, even if stations stayed open until 11?

I take the metro rail to get around DC and MD. I don't have a car and cutting service to Greenbelt would greatly impact my ability to get around.

Overcrowding. Especially at stations like MT Vernon not built to be a transfer station.

Again this probably does not affect me but it seems as though the outlying areas are suffering the majority of the cutbacks?

I would rather see the yellow line expand to the green line stations in high peak times instead of stopping at Mt. Vernon Square

I rarely use the yellow line

Depending on what the green line is doing, I could work with this.

The expanded service only started recently, but it helped increase frequency of trains further up the green line, where I live. That meant more frequent, less crowded trains.

I do not frequently use the yellow line between Mt. Vernon Square and Greenbelt, but I recognize that this service may be important to some.

How would people get to/from Greenbelt? If you are suggesting that Metrobus is the answer, you will have to put many more buses in service, no? How does that save anything?

I can wait for the Green Line if needed.

This doesnt work for me because that will mean that I have to take an extra train and that will make be late for work

I would suggest extending the Yellow Line to Columbia Heights. Then, the Green Line could sustain the rest of the stations through to Greenbelt.

I live in Petworth so no this doesnt work for me as the train would stop short of my stop. and then Id have to get out and wait 30 minutes for another train. these proposals are ridiculous - you wont get riders back if you dont provide any reliable service.

Why not Greenbelt? What is the rationale? If I were a cynic, I would say race.

Dont care about the yellow line.

This goes back the the original train schedule arrangement, and would save a lot of time/money

I do not use the yellow line, only Red.

I take the Yellow line very infrequently; its not right for me to vote on this one.

I only take Yellow line trains when my work sends me to certain locations. Schedules vary.

Yes, this might even help my commute be faster if trains turned around at my. Vernon.

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies. I moved to the Grosvenor area because of the metro being right there, am i supposed to see my home and move ?

The section from Mt. Vernon Sq to Ft. Totten is already crowded and, given its densely-populated nature, would have to most to lose from more service reduction.

I take the Yellow line between Huntington and the Pentagon on the weekdays, so this works.

I dont often use these stops

Greenbelt is a huge stop for thousands of people in the metro area. If the yellow line stopped operating to this station, even with the green line still in tact, hundreds of people would have to opt for driving or taking the bus which has harmful impacts on our environment including increased carbon dioxide from more cars on the road.

I do not use the Yellow Line for my regular travel needs. But once again, I must note that delays or service disruption on one line tend to cause problems for other lines, including the Red Line on which I rely. Therefore I would urge WMATA to share with the public how it plans to mitigate such disruptions.

Again, now people living in Greenbelt have to uber to get to a station. And what is mot awful is that low income people have to live further away where housing is more affordable.

Reduced trips to the suburbs would dramatically hurt downtown businesses which survive on dollars spent by people who ride Metro to eat, drink, and shop downtown. This would also severely affect frequency on the Green/Yellow trunk line, effectively making it Green Line only and cutting frequency in half, and reducing the ability for transfers at Fort Totten. Please do not do this.

As I dont generally take this route, my commute wouldnt be directly affected.

| Proposal to implement Yellow Line turnbacks |
|--|
| Longer waits for the green line. |
| Primarily a red line rider. |
| I have places to visit in MD as well as work opportunities. This would kill that plan. |
| The Mt. Vernon layover is sooooo inconvenient. There are so many riders who need yellow line to at least go to Fort Totten. |
| I never go to Greenbelt but it would be important to particularly ask people from those communities. I suspect that will disproportionately affect those riders. |
| same as preceding comment |
| The stations north of mt vernon are very busy and serve some of the neighborhoods that are the most populated! allow the yellow to at least continue up to ft totten. there are already so few trains as it is. |
| 30 Minute intervals is too great, and while it may save money, will most likely cause, through unacceptable inconvenience, a decrease in ridership |
| If service on the Yellow Line needs to be scaled back, Fort Totten would be a better terminus. |
| Do NOT eliminate Eisenhower Metro Station. |
| How frequently would green line trains run? The feasibility of this change is dependent on adequate greenline service to make up the difference. |
| This would work although frequency of Green Line train arrivals/departures would be important to know before accepting this proposal. |
| I don't use that part of the Yellow Line |
| I dont take Yellow Line frequently enough for this to have a meaningful impact. |
| While not ideal, changing trains to continue on to Greenbelt would be an acceptable cut. Only if headways continue to remain under 12 minutes. |
| This would work for me because until the past year-18 months this was typically the operation of the Yellow Line. Im not sure whether ridership has increased on the Yellow Line with operating to Greenbelt because of the pandemic. |
| As long as there is a reasonable interval between green line trains, I do not need the yellow line to also operate on my commute. |
| ending the yellow line at Mt Vernon square is incredibly inconvenient and makes no sense. There are a great deal of riders who take metro to/from the the Howard, U St, Columbia Heights, and Georgia Ave stations. No one wants to take the Green line to Mt Vernon or Gallery and have to wait on the exact same track for god knows how long for a yellow line train to show up to continue their journey. Like the red line changes, a change like this would inconvenience most riders, make commuting incredibly difficult and waste everyones time, thus making people less willing to take metro |
| I feel sorry for anyone dependent on that service. I dont think services should be cut. |
| Ive never used the Yellow Line |
| I'm not sure how that works but I take the Huntington |
| This plan works for my commute, although it may not work for others. |
| Any reduction in service threatens to drive ridership down, creating a downward spiral for Metro. Reduction in service also impacts those who cannot afford other modes of transportation. |
| I do not use the yellow line. |
| Do not use this line. |
| Hello, I cannot say much, because I do not ride public transportation as often as I did a year ago,but when I did, train, or the bus, sometimes the bus took a long time to arrive, but it was moreabout the time I arrived at the station, not the bus being tardy. |
| I mostly use the yellow line. I rarely go farther than Mt. Vernon, so this would work for me. |
| I commute from Greenbelt to get to and from work. This gives me fewer options for times and trains to get to and from work. |
| I dont use the yellow line. |
| I do not ride the yellow line often. If I needed to get to Greenbelt I would ride share or rent a car. |
| Greenbelt s important station for Marylanders |
| Yellow line riders would still be able to get to Greenbelt by changing to Green, so service isn't lost. |
| I never go further north on the yellow line than this stop, so it would be okay for me. |
| Need more opportunities during rush hour to get to and from work. These long wait periods would Congest peak travel times and make commuting twice as long waiting for the next train. |

Proposal to implement Yellow Line turnbacks

I think the Yellow Line should go to at least U Street, but in general as long as the Green Line is there I would agree with reducing some of the scope of the Yellow Line.

It would not affect me.

I do not normally take the Yellow line.

I dont use the yellow line

Need more info on when yellow trains will come online at mt Vernon

Not a part of my daily commute

Again, the goal here seems to be to re-make Metro into a system for bringing Federal workers in and out of DC and not as a vehicle for bringing people into all parts of the city. Metro is a wealth creator and your turning it into a wealth destroyer. Congratulations!!!!

Can transfer to Green line

Yellow line to at least Fort Totten is super important!

Just increase the number of trains. Other cities can do this without the endless budget catastrophes.

I primarily use the yellow line to travel within Virginia or to downtown stations like LEnfant Plaza or Gallery Place, so this would have minimal effect on me.

For anyone traveling further north than Mt. Vernon Sq, it would no longer make sense to take the Yellow line out of the city center. itd be better to just wait for the Green line. But the Green line cant run as frequently as it might, because there needs to be space for the Yellow line trains still. So youre just increasing time between trains for everyone except those going no further than Mt Vernon Sq

I have not been on a Yellow Line train in years.

I used to take the yellow line from gallery place after work to my girlfriends house. It was SO annoying to choose between standing like packed herrings on the Gallery Place platform amid people going to Verizon center for an extra 5 minutes to get a green train or get on a yellow line train, ride one stop, and get off at mount vernon. I dont take that route anymore but others do and this would suck for them

This may have negative impacts on low wage workers who commute from further out and don't have other transportation options.

This would make it more difficult and expensive to visit my friends who live in Laurel, but it would not affect my commute.

You should keep this the way it is . Cause anything can happen on the green line going to Greenbelt. Remember when someone just got shot at anacostia last week

As long as other lines are not affected

I don't use the Yellow line to commute northwards, as I live on the Green line. However, I would expect this to result in degraded service on the Green line north of Mt Vernon Square.

I commute to College Park from the Pentagon. My commute would increase in time due to transferring. Maybe alternate trains can go North.

I live in Hyattsville and work in Dupont Circle.. When the yellow train stops in Mt. Vernon square it not only reduces the number of trains I can take, it also causes frequent delays when the green line train has to wait for the yellow line train to cross over and change direction. Ugh.

As much as I use the green/yellow lines, they are either backups for the red (routing around downtime, for example) or means to access nightlife after work. In this sense, they are strictly optional, albeit extremely useful. This means that I would be able to absorb the effect of this change (in my case, reduced access to/from Shaw, U St., Petworth, less reliable workarounds to the red line). I could live with this.

Greenbelt is the stop closest to my house. Since yellow line trains began permanently running to Greenbelt, it has made the Metro much more convenient for me. However, since I rarely travel past the middle of DC on the yellow line (only when going out to the airport), I really only need one line to take me into DC, running on a regular schedule.

In general, despite not being impacted by this, I am in favor of a full service train system with no restrictions on the lines. Make it a functional system.

To me, this plan would make trips into Washington for those of us living in Northern Prince Georges County much more difficult and time consuming. The proposal seems to unfairly disadvantage those using stations in the District of Columbia and Prince Georges County who travel regularly beyond Mount Vernon Square in the direction of Greenbelt.

As long as you keep the Eisenhower metro station stop. The bus routes do not run on time most if the time and I cant walk to Huntington metro.

I live in Wheaton, and I like to go College Park on the Yellow line. There should be more trains running the entire length of each line. Please do not do this. We need to invest and encourage people to take the environmentally friendly transit option. WMATA is the only way we have to move large numbers of people in a green, equitable, and inclusive way. If it has better service more people will ride it. Thank you!

Yellow line trains running to Greenbelt made a HUGE difference

I dont use the yellow line from Greenbelt so it would not necessarily affect me; I just think about the people who need to get to/from work

I dont ride the yellow line

Proposal to implement Yellow Line turnbacks

This would lead to overcrowded trains during rush hour, causing people to avoid the metro if they have other options.

I routinely commute between College Park and South Arlington, and avoiding the transfer between the Yellow and Green lines is hugely important to the timing and reliability of my commute (I also need to make bus connections at both ends).

I do not use Yellow Line on a regular basis

Should go to at least U-Street or Columbia Heights - especially if metro wants to reduce frequency of trains

This would significantly lengthen my daily commute between North Bethesda and College Park, and cause too much congestion on the train cars, increasing the spread of infectious respiratory diseases such as flu and coronavirus.

Prefer to keep

Greenbelt is a major transfer point

I regularly use the green/yellow to get from U Street to Petworth

Won't this just congest the platforms at Gallery Place and L'Enfant, when northbound yellow line riders have to switch to green line?

This works as long as the green continues its regular route and yellow track riders from northern VA have the opportunity to catch the green line to get to Greenbelt

Not during M-F peak commuting hours. Yes, for everything else.

I live on the yellow line at Georgia Ave so wouldn't be able to make it home

This severely increases the need for those traveling between Ft. Totten and L'Enfant to transfer more. If Yellow Lines ran from Ft. Totten to Huntington, that would be a better solution.

You strangely don't want to run yellow line trains past Mt. Vernon half the time anyway so I'm not sure why this is a question.

I do not regularly use the yellow line

Service to Greenbelt is needed. There is a major Court house there and there are some who don't drive to the location.

I live in Greenbelt, and use the Yellow Line train to access downtown DC on the weekends and when I need to travel to Ronald Reagan National Airport. These service cuts would drastically add to the time to access an airport, especially coupled with the reductions to the B30 bus line.

I personally don't generally have to go that far on Yellow, so I don't know how that would affect someone who does.

I do not rely on the yellow line for my commute.

I don't use these stations

Coming home from Silver Spring, I pick up the yellow line at Fort Totten. If you expand the Yellow line to end at Fort Totten, it would be better.

This is the most reasonable suggestion of those given in the survey so far.

I often catch the Yellow Line from and to Greenbelt if I miss the Green Line, so that would make it more likely I would be late to work.

When this was previously done, it was a significant issue for my travel and often resulted in long wait times for my train. Knowing this was happening would result in my walking more often instead of taking the metro.

Disparate impact on communities of color?

I often travel on the yellow line beyond Mt. Vernon Sq

Since I use the Yellow line occasionally, I see no problem.

Don't know.

I rarely use the Yellow Line.

Businesses need all stations operating and all lines operating with the greatest frequency!

Just keep them coming in no less than 15 minute intervals

Is Greenbelt significantly underutilized compared to the rest of the Yellow Line? What happens to stations that are shut down? There are a lot of sunk costs and related property values.

So, getting rid of them permanently seems short sighted. Does Metro sell off closed stations or let them sit and become eyesores or danger points? If the infrastructure can be repurposed, maybe...

Stopping at Mt. Vernon Square makes this train pretty much useless for my everyday needs.

This does mean that people traveling on the yellow line from Pentagon City would need to transfer to the Green Line at some point, crowding those stations.

This would make metro unusable for me. I only take the blue line from Braddock.

Proposal to implement Yellow Line turnbacks

| |
|---|
| It appears that the Yellow line would no longer bring train service to the busy business district(s) at 14th and Columbia Road, an area that appears to benefit heavily from METRO service. |
| I don't take the yellow line for my commute |
| I believe all stops should be open and available. |
| The extension of the Yellow Line to Fort Totten has been a HUGE help for my commute. Now I can transfer at Fort Totten instead of Gallery Place, which is a very crowded station. Please dont terminate at Mt. Vernon. Extend at least to Fort Totten! |
| I dont often ride the Yellow Line. |
| We live in 16th street heights and this would make getting to VA would take 3 different metro lines. |
| See above comments about decreasing Metro ridership, increasing overall transportation investments, and defeating efforts to mitigate carbon emissions from transportation. |
| Not using the green line is a great idea. |
| Ending the yellow line at Ft. Totten wouldbe a better solution, allowing for transfers to/from the red line from Silver Spring. This would also enable weekend travel to U St corridor once bars and restaurants are re-opened, helping them recover from the COVID lockdowns. |
| Same answer as orange/blue/silver. This hurts front line and service workers most who don't have a car or stream of income to afford ridesharing regularly |
| I wouldn't feel comfortable making a decision about the Yellow Line since I rarely take it. |
| not enough info. how often would the green line run between greenbelt and mt vernon? would the rest of the yellow line maintain current levels of service? would red/blue/orange/silver lines run at current levels? |
| This would certainly inconvenience a lot of people who live in the affected areas past Mt. Vernon Square, but this option would not dramatically impact me. |
| If yellow line trains don't go to Greenbelt then Green Line trains are only once every 30 minutes & if I don't know exactly when they are getting to my station it is going to be Very difficult to get anywhere on time . Which means I am more likely to take a Taxi if I am on any kind of time schedule. With that the cost of travel goes way up & I'm no longer protecting the environment. |
| I am on the red line going from Wheaton to Crystal City - you will place more passengers on the red line during rush hour |
| I live in Rockville and dont use the Metro to travel to Greenbelt. So, my views are not really relevant to this question. |
| I think as far as station closures, this might be the only reasonable one because the Green line overlaps the yellow line north of Mt. Vernon. |
| Rarely take the yellow line |
| I regularly use the Yellow Line from Greenbelt to get to appointments downtown as I do not have a car. This would be a major inconvenience |
| My nearest metro stop in Columbia Heights. The expansion of the yellow line up to greenbelt, and ending MVS turnarounds during rush hour made that trip much more reliable. It also helped with the problem of crowding on the platform at gallery place in the evenings as everyone waits for the green line to take them to where most people live (north of MVS!!) |
| I think this would work for me as I do live close to the Yellow line, but do not travel north past Mt. Vernon Square very often. If I needed to, I could take the Green line. |
| As long as a route (including train switch) allows travel to National Airport from Grosvenor its OK. |
| Im very concerned about fewer trains travelling to the Northern end of the Green line requiring long platform waits in the morning and extra transfers and waits in the evening. |
| I see no issues with this proposal. |
| Does not make clear what the weekend evening hours will be |
| I occasionally travel to the above stations. |
| I dont think it fair to eliminate Greenbelt with many working people needing transportation in that area. |
| I can make it work. |
| Students and workers in my neighborhood use this metrorail line to commute to school and work. |
| Fine. If this will actually save you some amount of money that could put a stop to the other horrible ideas (it wont), at least the folks at the excluded stations would still have green line service and thus not have been completely cut off from their lifeline, even if they will have less dependable and useful transportation. |
| I do not commute on the Yellow Line |

Proposal to implement Yellow Line turnbacks

This will cut out access to *so* many people and *so* many places. We're talking about university students at UMD and HU who will be unable to navigate to each other and also to central DC or Arlington or other schools. We're again talking about communities of color/low income communities being cut out of services because they were pushed out by gentrification in the last decade or two. This cuts out accessibility to columbia heights and u street for so many " those living in MD and in downtown DC/chinatown. The green and yellow lines do have a similar stretch but that makes up for the large groups of people who need to move between these areas listed. Again, I truly believe ridership will increase after the pandemic, especially initially because everyone will want to go everywhere. This trend will be during 2022, especially as the anxiety as well as actual covid wear off in the DMV. Moreover, closing these station is shutting down jobs for our communities, again disproportionately harming Black and brown communities in the DMV. Please keep these stations up and running

Cutting service on the Yellow Line would have a negative impact on traffic on the Beltway, the I95 and Rt1 corridors and more negatively impact ridership.

If this means people can't get on the metro let them build any more then I think that would be a big mistake. To build ridership, make metro convenient .

It is wrong to take service away from those who had paid the taxes and rates to enjoy Metro service. Many would have to reconsider commuting options, which some may not be able to afford. Those who could afford cars would have to spend money they otherwise would not need to, and contribute to a sharp increase in traffic.

Selfishly, as someone who lives near U Street Cardozo and goes to see friends near Braddock Road 3-4 times a month this would extend the length of my trips. Also, having double the number of trains, in terms of frequency, at current green-yellow stations is clutch.

I use that line too rarely to have an opinion

This would reduce frequency in the core of DC to unacceptably low levels.

When the country opens back up, were going to need a normal level of service again (noting that normal for metro was already not a comparable level of service relative to other metro systems).

I do not live in that direction and rarely travel that way.

Yes, as long as the Green Line still goes to Greenbelt.

I dont go in that direction

It would be mean less service north of Mt. Vernon Sq.

Im okay with this for the time being since the Green line comes up to Greenbelt. I think long term we should return the Yellow line service to Greenbelt as this will be attractive to people commuting to Arlington especially with the Amazon HQ2 in Crystal City.

As long as I am able to get into DC for work from Huntington it should not be any problem.

Think of all the poor people that live in Greenbelt. Metro sounds as though it is a Republican entity-- serve the rich--who cares about the poor and the essential workers?

As long as the changes are temporary.

This works IF the green line continues operating out to Greenbelt.

Would mean fewer trains available for my commute (the Green/Yellow line). Would probably be workable, but not optimal.

I live inside Huntington.

I would be able to plan accordingly.

What happened to the yellow line Huntington to fort totten trains? That seems like a better end point for the yellow line than mt vernon

I expect rarely to use the Yellow Line to these stations.

this cuts off trains to high residency areas north of MTV Square

This would be inconvenient, but not impossible. This would only work if there were enough Green line trains operating to accommodate people trying to get to Greenbelt.

I remember when the yellow trains stopped at Mt. Vernon, so Ive especially appreciated that they have been going all the way to Greenbelt. Ill be sad to lose this service, since Greenbelt is my primary station, but Ill manage.

Those affected by this change would only have to make a minor adjustment to their commute by transferring between the yellow and green lines at Mt. Vernon Square. This seems reasonable and viable.

The stops in NE and PG County are very important for local travel. As of now, UMD is planning a return to in person classes in the fall so the PG section of the line will need the additional service and the revenue it will bring.

it would be awesome if it stopped at Georgia Ave Petworth because most of the crowd on the train gets off at Columbia heights and Georgia Ave. if green line trains operate frequent enough to prevent clutter to stop the spread of covid-19 then all is well.

Proposal to implement Yellow Line turnbacks

I rarely ride the yellow line and to not travel to Greenbelt.

This does not benefit me as I need to take the metro to College Park - UMD.

As long as I can get green line further north, its ok but not great. It is nice to have both trains running along the north end of the yellow/green line.

I use the U Street Station, and would like the yellow line to go that far.

Although a transfer to the Green line can serve passengers who are travelling to Greenbelt, this means there would be less trains available to Greenbelt and the destinations past Mount Vernon Square. This proposal could increase crowding on trains, which should be avoided even in 2022 if the pandemic has been defeated.

Again, the more services and options you remove the less people will see metro as vital and they will find other options and we will have more cars on the road

During the 2019-2020 period where Yellow terminated at Mt Vernon Square, rush-hour Green Line trains serving the (nominally) Yellow Line stations north of the Convention Center were CRAMMED during rush hour. Like, you-cant-even-board-the-train crammed. I stopped taking Metro in the morning to work because of this... I couldnt be guaranteed that I wouldnt have to wait for 2 trains to pass during morning rush hour. When Metro finally re-established Yellow Line service to all supposed Yellow-Line stations, I went back to riding daily. If youre going to terminate Yellow service at Mt Vernon Square, then re-draw your maps and stop pretending the Yellow Line actually reliably and regularly serves stations north of there. I chose my home because it was on the Yellow Line, and then... you moved the goalposts and all of the sudden I was stuck living near a Green Line station with crappy service.

Once again this plan is detrimental to both the service and human health. You will have more crowding on rail cars due to limited service. Yellow line trains should run to Fort Totten to alleviate crowd control and social distancing on rail cars.

I do not ride Yellow line.

No -- again, these cuts will cut off large groups of community members from access to downtown, from jobs, grocery stores, and child and healthcare. When the Yellow line was extended to Greenbelt it was hailed as a necessary addition, and should remain in place.

do not use the yellow line

Cutting access to the Greenbelt station on the Yellow Line would prohibit connectivity to BWI airport. Airport access from public transportation is important.

Im not on Yellow a lot. But I hear Greenbelt is a really busy station in need of more trains.

This is cruel unless you carefully coordinate transfers. People should NOT have to wait 20+ minutes at their original station and then another 20+ minutes at Mt. Vernon Square to transfer from Yellow to Green if they are going further north.

Those who use the yellow line should have their concerns addressed. I have not used that line.

If Fort Totten, then you give people more options to get to the red line near silver spring. Stopping at Mount Vernon could be workable if the green line still functions regularly from Mount Vernon to Greenbelt.

I live in Petworth and having both green/yellow helps me to get home more easily. If only left with green, it would take much longer to transfer.

I dont use yellow line stations.

This would significantly restrict transportation options in Ward 4. DC public transportation options need to work for the residents of DC, not just those who are commuting in from (in this case) Northern Virginia.

This would work given that the Strathmore station remains open. If not then I would like the option of yellow line trains having some sort of connection still with the Green line so that one could still connect at Ft. Totten

I live in Greenbelt. MD and take train to Huntington, VA to work.

That doesnt affect my station but Im sure it inconveniences many others who wont be riding metro.

This would merely go back to former range of the Yellow Line.

Any reduction of services on a particular line will cause ridership to increase on other lines, including greater demand for parking which should be projected to return to pre-CoVid levels by January 2022

There are only two stations exclusive to the yellow line. If those two stations keep service, riders can get to greenbelt on the green line instead! I cant imagine there are too many Greenbelt-to-Alexandria commuters

I use the Yellow line between Huntington and the Pentagon.

Id suggest Huntington to Ft. Totten, given that the stations between Mt. Vernon Sq. and Ft. Totten are busy and are neighborhoods that will need to rely on WMATA for economic reactivation.

Proposal to implement Yellow Line turnbacks

Given that I live in College Park and work at Gallery Place, having the yellow line go all the way to Greenbelt is very convenient. However, if it helps to keep the College Park station open, I am fine not having the yellow line as a 2nd option for commuting to/from work.

OK. NIMBY

I rarely go to Greenbelt

As a regular user of the Columbia Heights metro station, I have already experienced the differences in service when the Yellow Line runs all the way to Greenbelt versus turning around at Mt. Vernon Square. Service is greatly improved when the Yellow Line regularly runs all the way to Greenbelt. It limits overcrowding on trains and makes it much more likely to arrive on time at your destination.

I am not familiar with this route, but it seems like it would increase traffic on the green line and disproportionately affect disadvantaged or less wealthy areas

While I would prefer to have yellow line service extend to Greenbelt, it would be a luxury for my purposes that I could do without. Greenline would get me where I need to go as well.

My commute is long due to family. I travel from Old town to college park. So removing the service of the yellow line to greenbelt might take away more time from my family.

While this proposal generally does not impact me, seems very unfortunate for all the high density communities and night life areas north of Mt. Vernon Square who will get screwed with trains every 30 minutes.

It has been great that the Yellow Line goes to Greenbelt! Wait times are considerably less than what they were when only the Green Line serviced Greenbelt. Note that the Greenbelt station is out of doors. Waiting for a train on a cold day is brutal.

It works for me because I do not use the Green line past Columbia Heights except upon a rare occasion. However, Many people rely on the Metro from the outlying areas that the Green line provides.

During normal times, I have used the Yellow line very regularly to travel from Columbia Heights metro station to Reagan National Airport, and back again. So this change would slow down my travel between these two destinations, probably leading me to use a ride share service more frequently than public transport to make the trip.

Again this is far from ideal but better than closing stations and/or the system.

I've already spent too long waiting at Greenbelt - the headways are already too long there. Taking away a line would make that longer.

This excludes an entire community from public transportation.

This would reduce the number of trains coming to my neighborhood, which has a lot of Metro riders. There is so much development, and therefore, strong/increasing ridership pool along this part of the yellow and green lines that it is not a good place to cut service. Prior to the pandemic, these trains were typically very crowded during rush hour, so decreased service would result in overcrowded trains, increased wait times, and likely decreased ridership from the inconvenience.

I always am riding the red line starting at shady grove to white flint for work home from white flint to shady grove

Greenbelt is a useful transfer station

It is great to have more than one opportunity to get to a station.

Considering how rarely you plan to run the trains, the line change may add another 30 minutes of waiting time. It looks like it will be a 2-hour commute from VA to Silver Spring, which is simply not doable. No one has that much time for commute to work and back home.

Wouldn't affect me personally

As with the Red Line, I travel infrequently to the end of the Green/Yellow Lines, so this impact for me would not be significant. However, for those who do travel to/from those areas, this will likely have significant impact.

I do take the yellow line but have never gone out to Greenbelt. Unsure if my future needs would be affected by cutting the route down so drastically.

This plan is a noticeable reduction for UMD-College Park students, which isn't very palatable to me - those students deserve easy access to DC.

Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

It depends on the frequency of both yellow and green line trains.

While I have never used the train to greenbelt (only have gone as far as downtown), I believe this plan would impact an area where people need to use the trains to move about the area.

I don't use this line regularly.

MTA Commuter Bus services uses Greenbelt for some commuter buses. I don't like that Eisenhower station will close.

I am almost never on the yellow.

Proposal to implement Yellow Line turnbacks

I ride the green/yellow line from PG Plaza into Lenfant plaza for work. I like having more trains available on the two lines so that my commute is reasonable.

It works for me, but this is not good for those living in greenbelt who rely on the metro to commute to work

Eventually things in the metro area will return to normal--hopefully. Having the yellow line run to Greenbelt was a real help. So many in this area are dependent on metro for work the Federal Government and the District, Maryland and Virginia should all find a way for metro to have dedicated funding.

I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else. I hate to see any service cuts because I don't know where in the DC area I will be living in the near future

As long as a Green completes the rail line beginning at Mt. Vernon Square in something less than 30-minute intervals, I think this proposal should be fine.

This seems reasonable because it doesn't cut off service for anyone and it was standard for a long time, but I'm not familiar with the ridership north of Mount Vernon and how running the yellow line throughout this part of the green line has impacted those neighborhoods.

This would be very unfortunate and it's hard to imagine it would save much money. It would clearly be a big step backwards. If the system needs more funding, it needs to get more funding. I hope this survey is largely intended as a reality check for stakeholders to point out the financial realities resulting from dramatically decreased ridership during the pandemic. If funds are made available to carry the system through to what is hopefully the end of the pandemic this summer, much of this ridership will bounce back. Slashing service, however, would severely jeopardize recovery.

Some of the stations that are being cut off are high-use stations, like Columbia Heights, I don't think it's a good idea to reduce the number of trains that go there to bring people around the city and to their jobs.

I thought you guys already did that.

I do not use the Yellow Line for commuting.

While this change wouldn't affect me, I don't know enough about the needs of riders in those areas to say one way or the other.

Is it that hard for the trains to go to Fort Totten, I thought you guys had that all figured out.

If I'm using that train I shouldn't have to get off and transfer to other train to get to Greenbelt when I'm already on the train that service that station

I do not regularly take the Yellow Line. Orange Line rider.

I do not ride the yellow line

that means all the communities North of Mt. Vernon would have trains every 30 minutes going to one train instead of two - part of this section of the DC Metro area would be heavily impacted as many essential workers use rail

No suggestions on this

Yellow to Greenbelt adds a lot of value by reducing transfer steps

Not applicable, as this is not a route I would typically use.

This won't severely affect many people living within the DC metro area who rely on public transit.

Obviously preferable if it could go a few stops farther..,

This doesn't apply to my regular commuting.

Why not have the train go to Fort Totten? Columbia heights is a major shopping district in the city. Or do this during the day or during low ridership periods.

This means if you want to go north beyond Mt. Vernon Square, you need to wait for a green line train. So that means longer wait times and more crowded trains on that travel line.

It is a bad idea to close stations on the yellow. People cannot go to work, if their station is closed. People cannot go anywhere if the stations closes earlier. Metro officials should ride the metro system because they can see the whole problem. People use the metro system to get around.

I do not travel north of Mt. Vernon Square on the Yellow Line often enough to make having to switch to the Green Line more than an inconvenience. That said, I do not see why Metro needs to reduce service after the large federal stimulus it received.

Even only a few times a day going to greenbelt will be very helpful please keep yellow line to Greenbelt

This would affect me since I use the Yellow/Green line, but I think I could make it work.

Yellow Line customers are too often treated as lesser than the Orange and Blue Line ridership. Do better.

Reducing service will lead to longer trips and then increased of vehicles as customers abandon Metro.

This is only somewhat ok if GL to Greenbelt is operating every 10 minutes instead of 15-20+

Proposal to implement Yellow Line turnbacks

I dont ride the yellow line

The elimination of the Yellow Line service north of Mount Vernon Square will cause longer waits for the Green Line and will also increase crowding. This does not sound like a reasonable favor, especially with low-income riders making up a good amount of service east of the Anacostia.

I dont take the yellow line all the way to the end, usually just to Petworth, but it seems very inconvenient for those that live beyond Huntington to deny them transit due to budget costs. Transit is a public good and public goods should both non-excludable and non-rivalrous.

N/A

Terminating the Yellow line at Mt. Vernon Sq will hve negative impact on riders, especially to Prince Georges Plaza and College Park. I used to depend upon this to get to the National Archives, but I no longer work at the National Archives. Thus I answered yes reflecting my personal situation, but Proposal #3 is a bad idea.

I hardly ever travel the yellow line, so that would be N/A for me.

I would prefer if the Yellow line still when to Greenbelt station but Im ok with this if it only temporary for a year.

I use the Fort Totten station a lot. This could have negative implications for my Metro use

My yellow line usage is less frequent and I could work with this.

It may matter in 2022 because I maybe traveling as far as Ronald Reagan Stop

You would not have proposed this if you had ever ridden the yellow line when it ended at my Vernon square during rush hour. It was awful. The platforms were over flowing, the trains were packed, tourists were lost. How could you not take the train to at least the transfer at fort totten?

Would this allow the Yellow Line to originate sometimes from Franconia Springfield, if theres work being done on the blue line? We rely on the yellow line to start at Franconia Springfield is the blue line is not operating for whatever reason.

During this stage of the pandemic it would be fine but once I start having to commute again the lack of the yellow line going to Petworth and Fort Totten would cause my commute to be too long to be feasible on public transit.

Keep the yellow line as is.

Let the train go to Greenbelt

Have not used that line much

Depending on if Nursing Homes open back up or NOT, if I could get off and then catch Greenbelt, then it would be okay. Otherwise, I dont go into DC for anything! Fort Totten needs a shuttle bus because the regular buses to Nursing Home are Terrible!!! Most of the other buses seem to come on time. I complained for a few years, but NOT much change!

If you add more green line trains to make up for the lack of yellow trains then this is an okay plan. Yellow trains used to only go to Mount Vernon Square anyways, so this isnt a big shake up.

This proposal would be much better than closing Metro stations. I live in the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro Station.

This would seem to leave quite a few people from less advantaged areas at a further disadvantage.

I dont live on the Yellow Line so this does not impact me as much.

I dont use the Yellow line that much and when I do I am currently coming from Southern Avenue on the Yellow Line most of the time. Occasionally, I will take the yellow line from College Park or Greenbelt to LeFante Plaza and then transfer to the Green Line to just get out of the weather quicker, but it wouldnt be a deal breaker if the yellow line was temporarily removed from Greenbelt until things got back to normal given the fact that it was reinstalled after things got back to normal. Metro is my main form of transportation due to not having my license due to my disabilities.

I usually ride the yellow line between Huntington and Gallery Place.

During peak times I need that yellow line to go all the way out to Greenbelt.

-

I commute from Greenbelt and having the option of the yellow line decreases commute time in both directions.

While I seldom use the yellow line, Im broadly not in favor of measures that cut down service. Riders at the end of the yellow/green line may have stronger feelings on the subject and desire multiple lines heading their way. As someone who has lived off the red line for a while, it can be a bit of a pain to only have one line coming through for the bulk of it. I can empathize with people who use yellow and green who would not want that taken away as it would make their commute harder to schedule right.

recommend having alternate yellow line trains or every 3rd train etc. end at mt. vernon square instead of greenbelt instead of having all trains terminate there

Proposal to implement Yellow Line turnbacks

| |
|---|
| It seems to me that in this scenario, if the green line provides services between Mt. Vernon and Greenbelt, that would provide the connection necessary to fill the gap with the new yellow line service. |
| Service is needed between Greenbelt and Mount Vernon. Statistically, more people who live in Huntington have more access to vehicles. This is an oversight. |
| I utilize the yellow to go from georgia ave to go downtown or fort totten when the red line is too crowded to go to work. This would eliminate another line I rely on. |
| I do not typically ride the yellow line. |
| As long as the Green Line is available |
| My headway would be doubled if Yellow Line service no longer ran to Greenbelt. |
| Ideally, think that all lines should run all times as intended. It would be hassle and take much longer for people on the yellow going to get to an end of the line station. Also, I have had the impression that the green line, which was so long in coming serves a population that is more depended on public transportation and may also have a larger parentage of people of color. This change seems aimed directly at that population. |
| This proposal is insufficient and detrimental for yellow line passengers who commute to/from stations north of Mt. Vernon Square from/to yellow line stations not also served by the green line such as King St. Proposal is further detrimental for all airport passengers. |
| This wouldnt affect me, I only use the yellow line in Arlington and downtown DC |
| For me personally this would work. However, does this mean no service in some areas? If so, this won't work for people who work and gave up cars in order to get around. Also merchants are dependent on customers getting to them. |
| Service to Greenbelt is important to me. |
| Again, Im not OK with excluding people who cannot afford to live closer to DC. |
| This was the absolutely the dumbest change made. When the green line first opened, the yellow line ran from Greenbelt to Huntington. what is the point of stopping it at Mt. Vernon? I think you all underestimate the amount of traffic on the green line and especially during rush hour. It is such a huge convenience to have to get off the train, wait for it to turn around and clear the platform, and then wait for a green line train. I personally go to Petworth. If it wasnt broken, dont fix it. Let the yellow line train run the full extent. |
| If I had to choose one sacrifice, it would be this, although I find the Mt. Vernon Square turnaround to be quite insufferable and useless. It is annoying to have to change trains to go to Columbia Heights and Shaw and U St, and it might be a problem for people at these stations to suddenly get less service. However, this at least is something the system has survived before. |
| The Yellow Line services many points throughout the system and should not decrease operation nor eliminate any normal stops between stations. |
| I absolutely do not think its a good idea to take away the yellow train from going to and from greenbelt. It gives md residents a way to connect to the yellow line easily without having to go through a lot of transfers. |
| This is less service to Greenbelt, which is a major parking hub. Why is the Green Line facing cuts when the Red Line which serves the more affluent and white Montgomery County having more frequent service? |
| Riders would have the Green Line option so the impact would be lessened. |
| I live in Greenbelt, and I work in Virginia, so I need for at least some yellow line trains to come to Greenbelt, especially during rush hour. Also, if train service is cut back to once every 30 minutes, and the yellow line trains no longer come to Greenbelt, Greenbelt Station will have service only once every half-hour. I need for at least some yellow line trains to continue to come to Greenbelt. |
| Would want to include service extended to 14th St. |
| It is difficult to predict the impact of telecommuting in the future. |
| If this plan does not require closing the Van Dorn Station, then it can work for me. |
| I would not be able to get to work with this adjustment. This completely cuts out people north of mt vernon, including columbia heights. |
| This would likely work for most passengers for most of the day, including weekends. However, by implementing such a plan, there is discrimination for many passengers who live between Mt. Vernon and Greenbelt. In addition, a number of passengers often go to the Greenbelt Station to connect to a bus to the BWI airport -- this would no longer be possible of this change were to occur. |
| Keep yellow line all the way from Huntington to Fort Totten to cut down on wait times between transfers. |
| I only go north of My. vernon Square on the yellow line for social events where waiting for a green line train would not be too onerous |
| It would not impact my personal travel |

Proposal to implement Yellow Line turnbacks

reduces but does not totally eliminate service to several stations. Reasonable approach.

This would significantly cut service to Columbia Heights, where I would otherwise be traveling once per weekend. I may choose not to make that trip anymore.

Going to the airport, having to transfer from Red Line to Green Line to Yellow Line, that would make it much more difficult and inaccessible.

I do not travel that far out on the yellow line

More trains to greenbelt would be better since it is one of the airport express buses.

This plan would directly harm my commute. I live in Petworth and work in Alexandria. The Yellow Line extension to Greenbelt has cut my commute down to only 50-55 minutes door to door. If the Yellow Line went back to Mt. Vernon Sq. only, I would return to having a commute that is more than an hour.

necesitamos la verde y amarilla para greenbelt. Si solo va ser verde de Mt. Vernon Sq. espero que el verde pase seguido.

I do not use the yellow line, so this has no impact on me.

If you cut out the Greenbelt stop, this would affect several frontline workers whom live in Greenbelt but must use the Yellow Line to get to work in the District. What would be there alternative?

This would reduce train service and accessibility to the massively expensive metro stations.

I don't use yellow line

Bus service from Hyattsville to Greenbelt is no existing so the train is the only option, having both the green and yellow lines running cuts down on wait times in between trains.

As soon as the pandemic is over, the greenlight will have to increase to every 5 to 10 minutes at all stops including Greenbelt metro station so, just to let you know and again, the pandemic could end sooner than January 1, 2022 so just to let you know but yes it will have to increase it every 5 to 10 minutes at all stops on the green line including the Greenbelt metro station
As soon as the pandemic is over, your green light will have to increase to every 5 to 10 minutes at all stops including Greenbelt metro station so, just to let you know and again, the pandemic will end sooner than January 1, 2022 so just to let you know but yes it will have to increase it every 5 to 10 minutes at all stops on the green line including the Greenbelt metro station

If this would mean discontinuing all service for some existing stations, that would be wrong.

My main use of the metro is for Monday to Friday commuting and I do not use the Yellow Line at all for this - so this plan has no impact on me at all.

You should implement the safety recommendations of the NTSB. There is no oversight of WMATA to compel change.

I don't typically travel to those stations and don't expect to start in Jan 2022.

Yes I don't see a problem with this since the green line can take folks to Greenbelt!

This is a Metrorail line that I almost never use.

Don't travel this line.

I live further than Mt. Vernon square. It would be incredibly difficult to get home.

My commuting patterns do not apply to this scenario. I do not live in Maryland nor commute to that neighboring state.

This would affect me very minimally. If this plan were adopted I would probably spend THE SAME on metro per year.

It is more convenient when the yellow line extends to Greenbelt during rush hour but it is doable without it.

Although I travel the yellow line, not sure this proposal will effect me and my family with exception of perhaps more ridership during our commute and visits to the city.

I take the green line or yellow line from Petworth to chinatown for work, and limiting the number of trains that come by would make it harder to commute.

Personally, I will be unaffected by this choice.

Would require careful planning and probably reduce metro use relative to private automobile.

I live in the pg area, then I would be able to enjoy the community services that's offered in these area. Historic Museums Restaurants Mall College visits/campus Grocery stores Banks Movies and etc... Business would not be able to operate with our services.

Close stations which are lightly used to reduce costs and which will reduce the trip time for commuters because now every train stops at every station.

More service, not less

Why live in a city if you cant access it easily?

National Airport to College Park is very important to me. I am already unhappy that B30 bus is gone so I cant use BWI as an airport anymore because of the inconvenience and expense of getting there and back, the idea of making my 2nd-choice airport less convenient is not attractive

I think rather turn back at Fort Totten is better than operating to Mt. Vernon Square. Because I board/exit at Georgia Ave often.

Proposal to implement Yellow Line turnbacks

I take the yellow line only occasionally these days. Most traffic seems to be between VA and central DC.

really? Those of us north east of Petworth already have a long public transit commute downtown (give the relatively short distance traveled). This makes it even worse!

I live closest to Mt Vernon Square so choosing lines at this station based on the direction I want to go would be fine.

This change doesn't apply to our travels.

Greenbelt line is developing over the years to be a very busy station and stop b/c of all of the new homes, apartment complexes in Greenbelt, College Park, and the surrounding areas. This summer according to our legislators, we anticipate some of the restrictions for businesses will be eased due to progress with CV-19 vaccinations beginning this summer.

Same response as with previous question.

not ideal but as long as there is a green line for some of those crucial stops then it might work, it can also just go until gallery place, mt vernon square metro stop is not all that busy.

Dont continue to cripple the system, and dont continue to mess around with the lives of those who do not have a vehicle. All those making decisions should be people who do not have a vehicle and must rely on transit options, bike, uber/lyft, etc. In all seriousness, everyone who is a decision maker should not have a vehicle. Try grocery shopping without a vehicle. Try getting to your office without a vehicle. Try carrying everything you need for the entire day while youre dealing with transit: that means your gym items, your work clothes, your study books/laptop. Try thinking about families with children and luggage.

Reduction of service to Maryland suburbs would disadvantage low-income residents and create need to some other public transportation service, transferring WMATAs financial burden to another taxpayer-supported service and decreasing the cost efficiency of public transportation. Reduced service to Greenbelt would adversely affect public transportation access to BWI at a time when localities are trying to improve such access to Washington area airports.

Living and working along the Yellow Line (Eisenhower Metro Station), Im not sure of the impact of those who are required to commute beyond The District i.e. to Greenbelt.

Keep this frequency during normal hours, yet during peak hours it'd help to have yellow run all the way to greenbelt

If there is an alternate mode of travel provided by WMATA that would be of similar cost to riding the train, then this option would work.

It would be beneficial to extend the yellow line to transit from Petworth - Huntington

This would affect the commutes of students who are attending the University of Maryland that need to travel to DC and Alexandria for additional studies and/or supplementary work.

I don't think this is right! The 9 stops north of mt Vernon sq are on the same segment as that stop and the 3 south. It's unfair to have people pay full price but get 1/2 the service. That is awfully discriminating to those between Shaw Howard and Greenbelt. Shaw Howard's is the closest stop to Howard University and college kids use that stop. Fort Totten is also one of the major transfer points with the red right above and we all know how chaotic the red can be with crowds at rush periods. Greenbelt is also the closest station to BWI airport and people working in that area need that stop and equal service like everyone else. Plus, It would also look weird on the map because all the other lines go end to end so if they can do that the Yellow line should as well! Doing turnbacks on the Yellow will only dissuade people from riding the Yellow so this would be a huge mistake. The whole point of extending the Yellow to Greenbelt all the time in April 2019 (instead of only rush periods like before) was to make service equal to everyone no matter where they are in the system and to ride that route more often! It is supposed to be permanent as well meaning lifelong, irreversible or untouchable no matter what. Hopefully my advice helps and these turnbacks never get reinstated again whatsoever.

I think thatd be fine given the Green line overlap and that this is independent of the every 30 minutes suggestion previously in the survey

I live N of Mt. Vernon Square, so it goes without saying that this would impact me negatively. I dont know/remember what the green line would look like, but youve said to evaluate independently anyways, so the only answer for me is no in that case.

I do not take the Yellow Line.

Dont use the yellow line, so I am not affected.

None at this time.

I do not ride the yellow line, but I think that reducing service in 2022, after demand increases is very short sighted. Service should follow demand, it is that simple.

don't really rely on the yellow line during my commute

This is how the yellow line operated prior to going all the way to Greenbelt. However, this proposal would work if the green line trains ran every 10-15 minutes from Mt. Vernon Square. In addition the yellow line running from Huntington would need to be running every 5-8 minutes.

fort totten is life

Passengers just need to transfer from the Yellow Line train, to the Green Line train, to Greenbelt, if they want to go that far down the rails.

When I need to get to greenbelt, what is the plan?

Proposal to implement Yellow Line turnbacks

When I worked I commuted from the Greenbelt station. When the yellow line opened up to Greenbelt, my commute was greatly improved. Metro makes it easier to use public transportation to the suburbs. Making it less convenient to use the outer stations encourages the use of cars the contributes to climate change.

As I stated in response to the Proposal #1, I really dont want WMATA to have to cut Metro service on any of the lines.

I have concerns on the impact on tourism and the convention center but as long as no issues or changes are made to impact the greenline service this should be ok. But it cant be this AND only doing cars every 30 minutes. This impacts an entire section of the city and could have impact on the convention center and tourism. If youve got a multiple thousand person event coming in for an event at the conference center limiting the train and public transportation options is concerning.

I dont use the yellow line so if that is disrupted a little, not much, then that is fine with me.

Since I ride the green/yellow line between mt. vernon square and greenbelt this would increase my wait time.

I mainly take Redline to go to Gallery Place and catch either Green line or Yellow line to Laphant Plaza. So, as long as Yellow line runs between Gallery Place and LaPhant Plaza - it would work for me.

It would make my commute time much longer as I would have to wait additional time for green line, instead of having yellow line option.

Provided that ridership data support such a proposal/decision.

Leaving everyone between Greenbelt and Shaw-Howard dependent exclusively on the Green Line when trains already dont run often enough is a bad idea and a disservice to people in those communities. If train frequency were reduced in combination with this, that would be even worse.

An important aspect of the Green Line to Greenbelt is that service from Mt. Vernon Square to Greenbelt is supplemented by the Yellow Line during busy times. My son and I frequently use the Yellow Line to Greenbelt when it is available, he for work and me for making appointments on time. I am not in favor of this change in Yellow Line operations.

Again, let PG County chip in to retain and improve full service.

Reducing this service would be going back in time.

This seems to have been in place for a while with Metro that the Yellow line has stopped at Mt. Vernon. People have had ample time to adapt to this method of operation, so continuing it would not likely have a substantial impact on travel.

I have bus services in Greenbelt

Yellow trains can be run from Huntington to Mount Vernon but they should be planning for them to arrive a few minutes before northbound Green trains, and then leaving Mount Vernon southbound a few minutes after southbound Green trains. This would give seamless connections for Yellow riders into points north on Green while reducing service hours on Yellow, and providing more core capacity north to the red line. (If this could be also lined up to provide a cross platform wrong-way transfer between Yellow and Green, facilitating trips between Alexandria, etc. and SW DC, that would be even better.) Given my commute from Shaw to Crystal City, short turning without a close-to-timed transfer, and instead requiring waiting an average of 15 and up to 30 minutes to transfer on top of a similar wait to board, is just way too long given how dense areas from Shaw to Petworth is, and how many jobs there are at Pentagon, Pentagon City, Crystal City and National Airport. If frequencies are going to be very low, either make the connection timed as suggested, or run Yellow trains to Georgia or Fort Totten, as such long times between trains means it should be easy to turn the trains there on the simple crossovers without needing a pocket track, and then do driver breaks at Huntington.

While I use the Yellow Line between College Park and Ft. Totten, I could take the Green Line (as long as it runs frequently enough).

I am part of the green line that go to Hyattsville, pg plaza, college park and greenbelt. That is used everyday by me and my children. My husband uses the Hyattsville to go to downtown. You can't make a move like this based on the fact that there is no use of metro now when there is a pandemic

Yellow line trains need to make it to Fort Totten. I visit my friends who live in Columbia Heights, or need to go to U St, and it is challenging to switch to the bus.

This cut would limit the accessibility to/from PGP and College Park, both of which have large populations working or traveling into the city.

I have never traveled to Greenbelt so that would not likely be a problem

I only use the red line

A lot of people coming in from Northern PG County, Howard County and Baltimore area use the Greenbelt Station to come into DC, so having the Yellow Line there is important.

As long as the trains dont take too long, I could live with it.

This is a major inconvenience for me and my family! We often take the metro from the college Park station to access areas in the District that don't have good parking options.

Metro serves not just commuters but also retirees and tourists who use Metro in place of driving, thereby reducing reliance on automobile travel in the Metro area. Increasing wait times between Metro trains makes Metro a less desirable means of transport, especially for those who have to transfer within the system to get to their destination.

I rarely, if ever, use this route. However if I lived along this route, or if I had reason to use this route, this proposal would be unacceptable.

Proposal to implement Yellow Line turnbacks

| |
|---|
| A bit inconvenient for me. I liked having the Yellow Line as a second option to the Green Line because I frequent Shaw-Howard, U Street and Columbia Heights stations regularly. |
| I've never been on yellow. |
| This may be feasible depending on the timing of trains to continue north of Mt. Vernon Square. |
| Why is Alexandria prioritized over Prince Georges? Is it because of Bezos? |
| I don't ride the yellow line frequently, but I am opposed to limiting service as it will further decrease ridership and revenue and could lead to further cuts. |
| That's how it used to work, and didn't make sense then. The Green line needs more trains, not less, particularly because Greenbelt is an end-of-the-line stop, serving people who live beyond and park at Greenbelt. It also serves the Bolt Bus to NYC, and transportation to BWI. |
| No, this plan would not work for me because I'm an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers who'd rather pay more to ride metro than an over-priced Uber/Lyft/cab. |
| By January 2022, workers will likely have returned to offices. Turning yellow line trains back at Mt. Vernon will lead to crowded trains. |
| I rarely use this |
| When the Yellow line switched to running from Huntington - Greenbelt in recent years, as opposed to Huntington - Mt. Vernon, it was the most significant change for my commute and was the deciding factor in my deciding to regularly use the metro on the weekends. |
| This would cause unnecessary crowding and extended travel time to the most vulnerable population of DC city residents that must work, attend school and visit hospitals or shop for groceries |
| Proposal 3. Mt. Vernon Square is a seasonal and eventful at its best, because of the District developmental elements, and ideas. In comparison of Greenbelt, which is in its infancy of development, and should be promoted for uniform, whole system health. |
| I will stop going to parts of the city where I use this line. And you will increase traffic in cars and in stations. |
| That yellow line to Greenbelt is super sweet. I use it regularly to get to U Street and Col. Heights. Could you extend it to Columbia Heights or Georgia Ave or Ft. Totten? |
| When I am in Virginia, unless I am traveling on the Orange line, I rely on the Yellow line to take me to transfer at Ft. Totten. Sure, I can compensate by transferring earlier, but if I miss my stop at Gallery Place-Chinatown and the train only takes me to Mt. Vernon Square, it is incredibly inconvenient to wait for a Green line train to take me to my transfer, and less inconvenient but much more frustrating to wait for a Green or Yellow line train to take me back to Chinatown, only to immediately transfer again. If you're going to reduce service on Yellow, cut it off at Ft. Totten or at Chinatown, not in the middle of the route. |
| Especially with train service so limited, this would be a very long wait for first the yellow line and then the green at Mt. Vernon Square to continue the trip. This would render the yellow/green lines useless for my needs. |
| I have friends that live nearby the Greenbelt station and will be visiting them in January 2022, starting from downtown DC. Yellow line trains running to Greenbelt means that service to Greenbelt is more frequent, thereby making it likely that I will use it more often. |
| Running as far as U St. might be of use to more people. I go that far on occasion, but could transfer to the Green if necessary. |
| The cut-off before Fort Totten makes no sense. The rush-hour cut-off will also impact travel. If services are cut (such as the drastic proposal above), will WMATA be returning funds to the federal government? |
| Yellow should run to at least Ft. Totten. Mt. Vernon isn't enough for yellow. |
| The Greenbelt line needs improved service not a service reduction. |
| Depends on the headways on the yellow and green lines, because will likely increase need for transfers between these two lines for ongoing travel. |
| This would make it more likely for a small delay on my commute, but this is how things used to be, so it would not be a huge difference. |
| It would be less efficient for me to get to National Airport if I couldn't catch the Yellow line to Huntington from the Greenbelt Station. |
| Does not affect me. |
| I do not plan to commute on the Yellow Line in 2022. |
| Reducing service to an area that serves the University of Maryland at College Park and other parts of PG County is unacceptable. I would prefer Option 2 to this option. |
| I don't live in VA so can't say |
| trains & platforms would be too crowded & packed |

Proposal to implement Yellow Line turnbacks

I use the Green Line to and from Petworth and College Park on a daily basis, including weekends. Having the Yellow Line run to Greenbelt is a blessing. But if the Yellow Line ceased to run to Greenbelt, we need the Green Line to run more frequently.

Why -- is there no one travelling to or from Greenbelt? Are you somehow providing parallel service elsewhere? Answering these questions in a vacuum like this does not seem to be helpful. I think the core problem is the misbegotten idea that Metro must pay its own way. A safe, clean, reliable mass transit system is the backbone of a metropolitan economic system - no recovery can be successful without it. Further, these cutbacks will surely drive anyone who can manage it back into POVs (privately owned vehicles), greatly exacerbating already difficult road commutes and causing our carbon imprint to balloon, smashing hopes of holding down global warming. This region is pennywise and pound foolish in its approach to Metro (and the Purple Line, and MARC, and Baltimores mass transit options....)

As long Mt. Vernon Square station is open.

Im not sure, but if we get the Purple Line in Maryland, I think we will have a train that goes to Greenbelt. Maybe it only goes to New Carrollton and not Greenbelt. Im not sure exactly where it goes, but it could perhaps resolve part of this problem.

What are the specific reasons for not going to Greenbelt?

I use the outer Green Line from Fort Totten, and I think that would work.

I use Columbia Heights or Georgia Ave - Petworth metro station to transfer to the H8 bus to go home and go to work

With Amazons HQ2 in Crystal City, I expect that travel from Greenbelt and College Park (home of UM) to Amazon would need a reliable metro service!

Thats ridiculous. Even though rely on the Orange line, I have gone out to Greenbelt on the metro and I know people rely on that line. I know I live where I live (across the street from Virginia Square metro) so I can get to my job easily in the morning and come home at night without a wait. All the businesses and schools and churches around here are geared towards this population -- Rosslyn to Ballston on the Orange line. Theres an implied social contract here. Weve paid more for our condos and higher taxes for it. Weve had enough stress with COVID. Forcing people to drive to work is bad for the environment, bad for area residents, and bad for the health of the metro area. For public transportation to be eliminated when we are back at work is devastating to the citys health and wealth.

i do not ride the yellow line

I live near the Orange Line and primarily use Metrorail for non-work related trips

Yellow line travel should at least include south Arlington to far northern DC.

I depend on being able to get on the Yellow line at the Fort Totten station. It is terrible for Metro to cut services for people who live near the Fort Totten Metro station and impede their ability to use the Yellow line from the Fort Totten station.

Although I do not regularly use this line, I regularly use metro to get around the DMV area. I dont own a car and chose not to for environmental reasons. I think it would an environmental and social equity disaster if WMATA service is permanently cut. You will only loose more ridership and this region will become like Los Angeles, car-dependent, congested, polluted, and unlivable.

This is the shortest train service of all the lines. If Yellow Line Trains receive Federal Funds, run them. If you are running Silver Line Trains from Whiele Reston East to Largo, why would you not run Yellow Line from Huntington to Greenbelt? It allows for greater services shared with Green Line services from LEnfant Plaza to Greenbelt. Right now, it sometimes gives the impression your Yellow Lines are primarily for White and Your Right, to Huntington to Federal Employments in WDC? As an African American Male of Color from Ohio, this was always my initial impression when I first arrived to Washington, DC.

I rarely take the Yellow Line, so while this proposal would work for me, I am not the best person to weigh in on this topic.

As long as counteracting measures are taken on the green line (e.g. increasing green line train frequency) to limit the impact of the reduced yellow line, then this modification is reasonable.

I do not take this route and so I can't comment on the potential effects.

Making it more cumbersome for people to use metro to travel to the airport will create a self-fulfilling decrease in ridership.

Rarely travel on the Yellow Line

This would only work if service on the Green line was maintained at a reasonably short interval.

Not sure, if this plan will work for me.

I use this Line for work and home.

I moved to the Greenbelt - College Park Metro stop areas to be able to use the Yellow Line to access Reagan National Airport non stop. If you make the change, I will just use UBER or Lyft instead.

Proposal to implement Yellow Line turnbacks

Those of us North of Mt. Vernon station need a train every 15 minutes.

Im fine with reduced service to the suburbs (i.e. Maryland) but need the yellow line to run up to at least Petworth (personally, cutting service to Columbia Heights would be terrible for me).

If this proposal closes stations, I disapprove of it.

It seems like several years ago metro determined that is made more sense to have yellow line trains run to Greenbelt. Can metro explain what has changed--- other than metros continued mis-management of funds and budgetary problems.

I volunteer at DCA and often people need the trains to go to Greenbelt, especially if they are going to BWI

If Yellow line service is reduced, Metro should operate trains as it did in 2017 when rush+ was eliminated: Huntington/Fort Totten (midday, evenings, weekends) and Huntington/Mt Vernon Sq (peak & select weekends).

I live on the Red line and would not be affected by this but I would imagine that would cause problems living beyond the Vermont Square.

I seldom travel on the Yellow line

There was already a lack of yellow and green line trains, and when they were operating only to Mount Vernon Square in 2019 it was a nightmare. Hardly any passengers are traveling just to Mt Vernon Square, and the other half of the yellow/green lines will be inundated.

Please just keep this mtr

Prior to the pandemic, I lived on blue / orange but am potentially moving to Alexandria where yellow / blue would once again be applicable for me. With that in mind, this would work as the most important thing is to get into the city and to Chinatown. I could switch to green there to proceed. In truth, I think you should have it run to either Chinatown or to U Street / Columbia Heights (nightlife and my church). Mt. Vernon seems kind of like an odd place to stop it but that is just from my perspective. If you are going past Chinatown, I would recommend getting it to U Street as that is where people will want to go, especially as they come out of the pandemic and seek a sense of normalcy / social life. The more that I think about it, why Mt. Vernon?

While I take the yellow line (when I commute to DC) I dont go to Greenbelt, so this change will not effect me.

ending the yellow line at Mt. Vernon Square is massively annoying and a waste of time and ensures people are needlessly crowded onto the platform at that stop all the time

I dont ride this line.

Do not close/shut down any metro station even if there is low ridership-- to compinsate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals.

Has Metro considered that readership could increase in 2022 and folks would be left with the burdeon of having to take a 2nd or 3rd means of transport to connect with trains to a final destination and with the delayed wait times for service will definitely discourage folks from riding Metro.

Not ideal, but okay as long as routes run at minimum every 20 minutes.

never been to greenelt

Having the yellow line run all the way to Greenbelt is essential to helping residence of northern D.C. access the rest of D.C.

Yellow line access north of downtown is important to me.

Its OK for now. But occasionally, I need to go beyond Mt. Vernon Square and I dont like getting off the train to catch another one on the same side of the track.

I use this train to get to work. Im currently working from home, but I expect that to change by 2022.

I rarely use the Yellow Line, and do not ride to Greenbelt; this would not impact me.

If the yellow line stops at mt. Vernon, would the green line go pass Mt. Vernon? If so, how often would the green line run?

Not using the line often.

this seems to cut off those commuters in need of getting to and from greenbelt.

I rarely use the yellow line

Not sure what benefit this would add, beside making lots of people use the same train... which would not permit for good social distancing. Instead, maybe this stretch of metro (from Mt Vernon to Greenbelt) would be a good line to implement the one train every 30 minutes approach.. and use green and yellow trains so that at least 1 train (either yellow or green) would arrive every 15 minutes... Green train at 8:00, yellow train at 8:15; green train at 8:30, yellow train at 8:45...? and so on

Dont use the this train lines to get to work.

Proposal to implement Yellow Line turnbacks

I live in Pentagon City, being able to take just one line to places like Columbia Heights is very convenient. In this scenario I would need to switch trains, which would be a pain. That being said, if green line trains would follow these yellow trains such that the wait at Mt. Vernon to continue north is only 1 - 5 mins, this would not be so bad.

Really, what is the magic of Mt. Vernon Sq. Why can't you run the trains 2 stops further and get us downtown?

This would increase the wait times at the end of the green line on the section I use most.

College Park is my destination stop. It depends on how that would affect me getting on and off there. I change trains to/from the Red Line at Ft Totten - how long would I have to wait to make a connection?

I never take the yellow line past U Street

I visit friends who live in Columbia Heights and U Street quite frequently (I live in Alexandria). Having the yellow stop at Mt Vernon Square means that I would need to transfer to continue heading North and would face additional challenges getting home (i.e., timing connections) at the end of a night.

The yellow line is a critical conduit for me to get to Virginia and cutting service to only Mt Vernon would make it substantially harder for me to get to VA. Would strongly prefer the yellow line at least go to DCA as it's the main way I get to the airport

This plan if implemented would bring heavy crowds at Mt. Vernon Square during week days rush hours for those who would be working in Virginia, but for the weekends this plan would work better and after rush hours times this plan is also better.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around - especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinated, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around.

Your questions ask about me. I seldom ride the Yellow Line, and typically don't ride outside the downtown area. However, the Yellow Line provides essential service for many friends and colleagues who live in Columbia and rely on service to Greenbelt to get to and from work in the District. They would be seriously inconvenienced by cutting the Yellow Line trains at Mt. Vernon Square. That would be a particular problem for people who work in Alexandria and live outside the downtown core of Washington and into the northeastern suburbs. Forcing riders to change trains creates another deterrent to using public transit.

I change trains at L'Enfant Plaza. Can adjust my schedule.

Need to go to Fort Totten. This is a major hub.

I assume that by January 2022 most people will be back in the office so limited service would not be able to handle the number of commuters. This used to be the situation and it was a nightmare trying to take the train.

I am retired and not frequently traveling into the District. However, how will ridership be rebuilt after the pandemic, if the communities rush hour needs are ignored?

With the increased ridership coming to Fort Totten as a result of large residential construction projects, we need the Yellow Line to continue to Fort Totten

It's convenient to have the option of a Yellow or Green Line to Greenbelt, but we had many years without it so it could be doable.

It has been very convenient to have the Yellow Line go to Pentagon City and beyond.

This would reduce the available trains for commuting to and from work at the yellow/green line stations. I live in Petworth and this would negatively impact my morning and afternoon commute.

I live near Petworth station so this option seems like it would definitely extend my commute

As I am retired I do not use Metrorail very often. When I did work this change would have had a significant effect on my daily commute from Arlington to College Park.

These are stations I don't use so it wouldn't affect me.

With green line trains projected to only run every 30 mins, trying to get to green line stations beyond Mt Vernon will be an unwelcomed challenge

I just catch the bus

The yellow and green line are already underserved above Mt. Vernon Square. This would only make matters worse.

College Park metro station on green line is vital to my commute

This is fine. I think that's how it used to work a long time ago, anyway. It's easy enough to switch to the green line if I need to go further north. But please STOP CALLING TRAINS THAT GO TO Franconia-Springfield THE YELLOW LINE. Please come up with a new name, such as the Light-Blue Line, or anything less confusing. It costs a lot of time if a person gets on a train marked Yellow and ends up at the Blue Line's final stop. You did this a couple of summers ago, and it's just as annoying now, as it was then.

| |
|---|
| Proposal to implement Yellow Line turnbacks |
| I use those trains to commute daily and need them to go to Greenbelt, or at least College Park. |
| This is not a line I take frequently, and generally not all the way to Greenbelt, so I am not sure. |
| People including myself will be on more crowded trains. If I or others miss the train the wait time would be longer than currently. Metro would lose customers as more people would look at alternatives such as Uber, Lyft, taxis, carpooling. |
| Im not sure, I live on the green line and Im not sure of the impact this would have to the trains in my area. Please elaborate on what the effect to the green line trains would be. |
| This would mean fewer commute options from many heavily populated residential areas of the city (including for myself), and areas that rely on restaurants/bars would potentially see much less traffic due to the change in accessibility. |
| I would need to know what's connecting to these endpoints and the frequency. |
| Having access to travel to the airport from Ft Totten provides a great service to residents living in upper NW DC. |
| My family rarely uses Yellow Line. |
| I rarely travel on the yellow line, so that would not affect me |
| This could be implemented permanently with no complaint from me, since the green line goes to the remaining stops. |
| It's fine |
| As a user of the Petworth and Columbia Heights stations as my home stations, I have greatly appreciated the extension of all yellow line trains to Ft. totten and eventually Greenbelt. Its also a huge boon on the weekends, when headways are much lower (assuming theres no track work that has curtailed YL service to begin with). When I take metro on the weekend, I really notice the difference between having and not having YL service at my home station. |
| There has been huge growth along the green line north of Mt. Vernon. Only on line servicing Shaw, Columbia heights, Petworth, etc is unacceptable. We tried this before and crowding was terrible. Could not even get on trains for work sometimes. These areas are continuing to grow and attract residents without vehicles and who prioritize public transportation. |
| Ill never live there |
| I live near Mt. Vernon so this isnt an issue, though it seems like limiting peoples ability to commute to National Airport is a drawback of this plan. I think people who live more north and east of the city would benefit from the Yellow Lines accessibility to Reagan without needing to take a Green line train and wait up to 30 min to transfer. |
| Provided the green line still travels all the way to greenbelt |
| Yes I dont live on the yellow line so would be unaffected |
| I use the green line, all the way to Greenbelt, and could affect my planning for my family. |
| Need service to Greenbelt. Are you trying to force more cars back on the roads? |
| you are leaving out Prince Georges County |
| This would completely ruin my work commute and I would not be able to get to work via metro |
| This would not affect my typical commute |
| Please keep Greenbelt open. This is a regional location, near the beltway and available to people from north of DC. |
| College Park and Greenbelt are destination centers and will increase in popularity with the opening of the Purple Line |
| I should be able to travel on my nearest metro if I live either in Greenbelt or community near Greenbelt. |
| Run more trains. |
| Seems like youd be cutting service in half for everyone north of Mt Vernon, not great |
| I ride the yellow line extremely rarely |
| There are those who need to commute and/or travel to DC from Greenbelt |
| Populations at green line stations have significantly increase. When yellow lines trains stop at mt Vernon, especially with such low frequency, it creates overcrowded trains and would hinder my ability to pick my daughter up from daycare. |
| How long would be the wait time between trains? If it is 30 minutes, then my train commute would become 1h 20m - compared to driving 45 minutes to 1h . No this would not work for me. |
| I rarely use the Yellow line. |
| As long as the green trains are running every 15 min! |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| I commute to Dupont Circle from College Park. |
| I depend on the Yellow line at College Park Station |
| I work at college park, and also yellow line connects DC to the bus that goes to BWI from greenbelt. |
| Keep all stations open |
| It is very convenient to have the yellow line park of the green line. |
| How else am I supposed to get around in MD? This is a terrible idea. |
| I have used the Yellow Line service between Shaw-Howard University station and College Park-University of Maryland station for my commute. But if this would be a cost saving measure over closing the College Park station entirely, then I would not oppose this update to the Yellow Line service. |
| Would be a major inconvenience; since I often travel from College Park into Virginia. But I could live with it -- especially if Yellow and Green Line trains were synced at Mt. Vernon Square. Side note: On long BART runs where a transfer is necessary, the schedules are synced with specific transfer stations. At those stations, one gets off one train, crosses the platform, and gets on the waiting train to continue ones trip. |
| I would advise against this if U. Maryland goes to in person classes |
| Greenbelt is my stop, so I need that train to go to Greenbelt. |
| I am a College Park resident that will be traveling into DC via metro in January 2022. It is imperative for my economic livelihood that the station remains open. |
| Riders on all points between Mt Vernon and Greenbelt rely on the increased frequency of trains offered by both the Green and Yellow lines. |
| I live in College Park and rely on Metro to get to and from my job. It was awful when yellow line service was cut previously. Please dont do it again. |
| It is essential to me that it stop in Greenbelt. I rely on the Greenbelt and College Park stations to remain full service. |
| I use the early yellow line in College Park to get to DCA |
| This would impact College Park residents who commute to DC and those that use this line to Reagan National Airport. |
| I live in Petworth and the termination at Mt Vernon Square has always been an issue moving people through the city core. Getting on the metro at Gallery Place, most people on the platform wouldn't even take the Yellow Line because it wouldn't move them to where they needed to get, and it just caused more congestion on the platform. |
| If the green line train runs every 15 minutes this would work for me. Otherwise the option of yellow or green trains is extremely helpful for my comute. |
| It is critical for Yellow line trains to extend all the way to Greenbelt. Having trains turn around in the middle of the District honestly makes no sense, and it also causes delays to other train service because the trains have to turn around in the tunnels themselves. This is in effect changing an existing line of service for WMATA in a rather substantial way. Furthermore, this plan would clearly benefit the Virginia suburbs to the detriment of the Maryland suburbs in a way that is not equitable. This should not be on the table as an option. |
| This proposal could be very harmful to local residents from outer suburbs such as Greenbelt that are just now trying to promote smart growth development around Metro stations.. Also, many workers in this area rely on Metrorail to get to work in DC. Keep in mind that in counties like Prince Georges have not had the benefited from the explosive residential and commercial development, like other Metro areas. This is finally beginning to happen now. |
| I live in College Park and require this metro to get to and from work. I bought a home in this area because of this metro system |
| I often ride between Mt. Vernon Square and Colombia Heights, Fort Totten, West Hyattsville, and PG Plaza Station. |
| Depends on how frequent Green line service would be north of Mt Vernon sq |
| I regularly use the yellow line train from college park to the city and on to Virginia on occasion. |
| I take the yellow from college park to pentagon, so I would need to transfer but I can adjust my schedule |
| I need to go to and from College Park with enough trains available to make it a viable option. |
| Are you nuts? |
| So NE DC and Maryland (the state that pays for most of your annual budget) are now irrelevant? |
| You asked us to evaluate each proposal separately, so I am doing that. My answer to this question is based on the assumption that trains are running every 8 minutes or so on the Green Line. Yes, you read that right. I want 8 minute trains (or more frequent) on the Green line. |
| I live in College Park and depend on the College Park Metro Station. Loss of service mean that I -- and thousands of University of Maryland staff and students -- would need to find alternative ways to work. As more people get vaccinated, more people will be working and studying on campus. The result is that people will drive to campus, creating gridlock and more pollution on the surrounding roads. |
| I live in Columbia Heights |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| Greenbelt is a major transportation hub |
| This will leave many folks in a bind. Please don't do this. |
| This is my main commute route; and its fine to return to what I view as a previous level of service for the Green line to Greenbelt. It doesnt feel like a major downgrade in service. |
| Why would you want to skip Greenbelt? This affects the local commuters who live and work in that area. Bad idea. |
| This would absolutely NOT work for me. I get on the metro at College Park, so if Yellow line only went to Mt Vernon, then I would never take the train again for my commute (and also demand that Metro refund me the \$1300 that are saved in my transit funds). |
| Again, think about sports events. |
| But only if the Green line was operating frequently and was stopping in College Park. |
| Although due to the pandemic, I have not used the Yellow Line, I would plan to use it once again in the hopes that the pandemic will be under control soon. |
| do not typically utilize yellow line trains |
| Not at all. Covid is not going to last forever. college park and riverdale park have plenty of new construction walking distance from metro. This would be the most impactful to me. It would effectively keep me from going to work in Crystal City, VA. For a myriad of reasons, I do not drive, and metro has always provided a safe, reliable and timely alternative. Id rather double my fee than lose its service. |
| Please continue service to College Park Metro and Greenbelt |
| It depends on the frequency of green line trains. If you are cutting the frequency of service out to the end of the line at Greenbelt it would not work. |
| Greenbelt is my preferred station to enter the Metro system and its connection to BWI is key for travel. |
| Having yellow lines going to Greenbelt has made my commute (from Petworth to the University of Maryland) infinitely quicker and easier. I dont want that to change! Also, I often travel between Petworth and King Street, and this would add a transfer which I dont think sounds good. |
| This would work if the green line is available to greenbelt. |
| Would work for me, but could cause congestion during busy times. |
| I believe this proposal would create overcrowded trains to and from Greenbelt during commute hours and could propagate delays throughout the yellow and green lines. |
| I would still live near the College Park - U of Md station and would like to continue having access to Yellow line. |
| UMD students and residents of College Park rely on the yellow line to get into DC for work, internships, and other opportunities. To remove the yellow line station without replacing it with another metro station would mean that thousands of us would lose our transportation to and from DC. |
| Greenbelt is an important stop. |
| I need the added frequency from Petworth to downtown/Virginia. |
| This makes me sad, and I would buy a car or move to another neighborhood. |
| I dont like it, but I lived with it for a number of years before the Yellow ran to Greenbelt, I can deal with it again. |
| Greenbelt station is necessary for my travel needs. |
| I travel to the Shaw/Howard University area multiple times a week and this would increase my commuting time. Also, with increased development in NW DC and PG County, this proposal would have an adverse impact. |
| It was a great asset to the College Park and Hyattsville area to have 2 lines operating, with very short wait times to get into D.C. |
| I often travel out of Ronald Reagan National Airport and the connections from College Park (where I work) to the airport are incredibly valuable. |
| It depends on how frequent the green line service to College Park and Greenbelt would be. Those are the two stations I most often need to go to when commuting out of the city. |
| I use the northern end of the Green line and prefer to have both the Green and Yellow as options for riding to and from downtown. |
| need trains to run past Mt Vernon sq |
| I live in Greenbelt and I use the metro. Please Do NOT shut the service down! |
| I rely on the Yellow line running between U Street and L'Enfant to commute. This reduction in service would creat challenges for that unless replaced by increases Green line trains. |
| I depend on the van dorn station |
| The trains stopping at Mt Vernon Square has always been an annoyance. It makes wait times long and green line trains too crowded during peak commuting hours |
| While still not great, this is better than option 1 |
| I rarely use MetroRail to travel to Virginia, as I live in Pennsylvania, and would be more likely to drive the entire route. |
| it should stay like it is |

Proposal to implement Yellow Line turnbacks

This might be ok. It was great having the yellow line to Greenbelt but it might not be too painful of a change.

I would want to know how frequently the green line trains would come between Mount Vernon and Greenbelt, but this is basically what it does during my commute anyway.

This can work

Although this plan functions my current travel, it is entirely inequitable.

Coming from the Huntington Metro, I like not changing train to go to U Street in the District..

This would depend on the frequency of the Green line train. I transfer trains for work and depending on the frequency of the Green line train this wouldnt be an issue, but could.

I believe this is doable definitely. So far I approve of this one.

That's how the schedule used to be.

I ride the yellow line from Pentagon city to Chinatown frequently. The shortcut of the yellow line is a significant time savings over riding the blue line all the way around.

Living at Petworth the yellow line coming thru being able to ride straight thru to Crystal city is helpful

I don't take that line

Reston to ft Belivor

The yellow line train is the only train accessible to Greenbelt so it needs to remain that way in my opinion

Green line only makes commuting to College Park much longer

I dont use this line.

Trips to Columbia heights and U street are very common so reducing access to those areas can potentially be a problem.

Same as before

I ride the yellow line and green line and live at Greenbelt, I was excited about the expansion of the yellow line and it helps me when I'm running behind on the trains getting to work. This would not work for me.

Yes, as long as I can connect to the red line from the green line in a timely manner. Rush hour schedule needs to stay as is.

the yellow line going to greenbelt could be important to people who use it . take either off mt. vernon or gallery place because they are too close .

More service is better than less. People on the ends of the public transit lines are already stuck with just the green line or just the red line. If there's anyway to allow several trains to run (even if they run in the same direction) would allow more options.

Yellow lines should continue to extend to greenbelt

I would need travel to Greenbelt Station open

I commute to College Park from DC and this would severely limit my ability to get to and from campus. I understand that the Green Line is available but the flexibility between choosing the more convenient of the two routes is why I moved to DC out of College Park in the first place

I go to the museum and dc

A lot of times I travel from pentagon to greenbelt

Si se da acceso rápido de buses desde la estación de Metro para que los usuarios puedan llegar hasta Greenbelt

I frequent Greenbelt station into DC. Were heading to Greenbelt shortly.

Would create a minor inconvenience of having to transfer from green to yellow when I need to fly out of National

If you could explain how this helps financially, this would be great. Right now, it is a great advantage having the Yellow Line extend to Greenbelt, which is the line I ride. (PG Plaza and Fort Totten)

Nunca uso la línea amarilla.

Many people travel as far as greenbelt and to not have the stop will cause many complication especially for those who live closer towards southern Maryland. Until theres a better station option for that location, removing Greenbelt will not as customer friendly as it may seem.

There a loads of people who run through greenbelt to catch that yellow line train to get to that Huntington line. I see it every morning. That would basically hurt customers who pay to catch that train

I live in columbia heights and need to get to Crystal city fast

Please consider to run it until Columbia Hights.

Only if there's less time between green line trains..

I use bwi for my travel needs. Also its essential to get people home and to work.

| Proposal to implement Yellow Line turnbacks |
|---|
| How will I go beyond. Should we pay uber or taxi... |
| Going to Greenbelt by the yellow was a great idea. |
| I would not be able to be at the closest station to go home. |
| Es mejor subir tarifa nesecito yegar temprano a mi teabajo |
| I only use the yellow line south of gallery place |
| Two lines are better |
| I would prefer it go all the way to Greenbelt |
| Yo estoy viajando 6 dÃ-as a la semana desde west hyattsville y con la lÃ-nea verde y amarilla se me hace mejor porque el tiempo de espera es MÃ¡s corto |
| I rely on yellow line trains at P.G. plaza station. |
| I take the Yellow and the Red line each day. The reduction of two possible connecting points to one negatively impacts my commute |
| This would only work if trains run at frequent enough headways (10-12 minutes) as it is a vital connection to the airport |
| I very rarely ride the yellow line so it would work for me. But would be important to hear from people who actually use the yellow line. How can you be sure that the people taking this surgery are representative of riders from all lines? |
| Extension of the yellow line is one of the most important things WMATA has done with rail and it should never be reversed |
| Keep it the same way, because if the green line acts up on the way to Green belt, the Yellow Line will be helpful. |
| I take the yellow line between King St and Columbia Heights frequently. I would not like this. |
| Thats how it worked originally back in the day. So basically, metro will just be going back to old schedule. |
| Do not need to teavel to Greenbelt |
| This would be good because it gives you time to be early what I mean by that if I know they run like that and I gotta be to work a current time it allows me to improve time management |
| as long as Green Line is running |
| Very seldom use the Yellow Line. |
| N/A |
| This change doesn't affect me, I rarely use the yellow line. |
| Keep the yellow line train going to greenbelt that the best thing metro every did |
| People still need both trains to travel to the end of the line to include Greenbelt |
| I rarely go to Greenbelt; have generally used the yellow line from Gallery Place to Washington National Airport because it is a more beautiful ride than the blue line from Metro Center to National. |
| I still need access to College Park. |
| As long as the Blue Line trains continue to stop at all of the current stations and the trains came no longer than 15 minutes apart because now I can take either the Blue or Yellow to get to my destinations. |
| Why |
| I dont ride the Yellow Line |
| Not on yellow line |
| Please do not cut frequency |
| I live in Columbia Heights and dont own a car. I depend on the metro to get anywhere outside of the neighborhood. |
| Don't use yellow line frequently. Not used in my work route or getting around city muxh |
| Do not use yellow line |
| Another inconvenience to riders. |
| I dont think Ive ever had a reason to take the yellow line to or from Greenbelt. |
| I do not go to Greenbelt but I do pick up and drop off at Huntington. |
| Not my line |
| I use the green and yellow line often and it would be an inconvenience to only have the train go to Mt. Vernon Square. I will be forced to drive to work. |

| Proposal to implement Yellow Line turnbacks |
|---|
| Im not sure because of the trains not stopping at Greenbelt |
| This is a horrible idea! What about the folks in Petworth, Columbia Heights, and Fort Totten. They need to get to Gallery Place or Mt. Vernon. Waiting for the green line to get there would be torture. |
| I sometimes ride this line and i would like to know that their are other options when traveling through town. |
| You're making commuting impossible for so many people when it's already way more difficult than it should be. Talk to the NYC subway and get a real plan together. |
| Not a yellow line commuter |
| I do not use the Yellow line. |
| i do not ride the train. i am retired senior. |
| I rarely travel on this line and never the full distance. |
| Use Yellow line Monday through Friday from Huntington to Archives so I would be unaffected by this change. |
| This may over crowd the green line |
| I rarely go north of Mt. Vernon Square. Again, looks like Metro bosses and employees are being lazy. |
| This change would not negatively affect me currently. |
| I only use silver line |
| Green line very important as many commute from Greenbelt |
| does not directly affect me |
| don't use yellow line much or go to greenbelt |
| You did this before and it was awful. It made it so the most densely populated Metro Station (Columbia Heights) is only served by a single line. |
| Not frequent enough!!! |
| I never use the Greenbelt station, so the change is ok. |
| Does this mean Greenbelt station will be closed. |
| Excellent solution, I never travel to those stations. |
| Green and yellow are daily commute. Don't mess my shhht up fam |
| I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus |
| Reducing hours and service severely impacts the moderate and low income residents restricting their ability to travel to work at off hours. Reductions are systematic discrimination to these populations. |
| That impacts options to get to Union Station |
| I only use yellow from L'Enfant to the pentagon. |
| That limits access to u st corridor |
| I think this would forsake the residents living in NW D.C., especially in Columbia Heights, because now all they have is the Green Line, and one line every 15 minutes is imply not enough for all those residents. I would be more open to it if the Green Line came more often as a result of cutting the Yellow Line in that area. |
| I don't need yellow line to get to work so this proposal would work for me. |
| Yellow line beyond Mount Vernon Square is irrelevant to me |
| Not happy with that decision making more issues to happen |
| What was the reasoning behind this decision. Im confused about this proposal plan. |
| I ride to LEnfant Plaze and transfer to the Yellow Line to Georgia Avenue-Petworth for work. This means I would have to get off a sencond train and transfer to a third train. That doesnt make any sense! |
| Many will still be able to go successfully to their daily work. |
| I Work Downtown. This is an inconvenience to me |
| This plan will work for me |
| I dont use this route much, so my opinion shouldnt matter |
| I go to greenbelt pretty often |
| How many people will be impacted by this change? You do not indicate. You are asking these questions with no real info for us to evaluate. |

| |
|--|
| Proposal to implement Yellow Line turnbacks |
| I am active duty military and stationed at the Pentagon. I need the yellow line to run from downtown DC into the Pentagon stop otherwise my commute will be lengthened 300% |
| Whether or not this works depends on what it means for the frequency of the green line trains. if it causes long waits to get to Greenbelt then it will stretch out my travel to and from Nationals games. |
| I personally do not use yellow line past Mt. Vernon Square. |
| No comment |
| Turnaround at U street would work better for me. |
| I dont use the Yellow line that often |
| Would prefer it to go to Columbia Heights or Petworth given its access to the national airport. I imagine I'm not the only city-based metro rider without convenience of a car. |
| Please keep it running to U st |
| I use the College Park metro daily and I need it to go to work as I don't have a vehicle at the moment. |
| Yellow line has been shut down for so long in the past that we found alternatives |
| Nunca he usado esta ruta |
| As long as the green lines went to Greenbelt. |
| This would limit frequency of trains to Greenbelt... if trains run every 15 minutes this would not be such an inconvenience. |
| The farthest I have ever needed to go on yellow/green lines is Mt. Vernon Sq. |
| Does not affect me directly, others can speak better to this one. |
| Do not travel out to green belt. |
| I dont take yellow line regularly |
| None |
| No, I do a large portion of my shopping in Greenbelt. |
| Expanding options for riders is the only way metro can restore and expand ridership. I patronize the college park station, taking the yellow line direct to national airport is very important to me. I moved to my current home specifically for the service provided by metro. |
| We do not use Metrorail. |
| I need to get from Columbia Heights to Pentagon/City daily and the Mt Vernon Square terminus would be unacceptable by necessitating a transfer and possibly tripling my commute time if I have to transfer to Blue at LaEnfant due to a Yellow/Green timing mismatch. |
| I live near one of the impacted stations. It would be annoying, but probably not a dealbreaker. |
| I dont travel either the Yellow or Green enough to care. |
| I dont travel the yellow line so this doesnt affect me. |
| It would take away a line from the Hyattsville area, where I live. Not being able to take either train would cut out a large number of options for me on my commute. |
| I do not take those job locations any more because of inconsistencies. |
| No comment. |
| I often go to Columbia Heights and U-Street and the direct ride is quite convenient. |
| This is understandable because you have the green line to use |
| Stop cutting services. Why don't you just hand the trains over to Uber. |
| You would be cutting off a significant portion of the community from being able to take the metro |
| this would not affect me |
| I dont ride the yellow line. |
| Dont take the yellow line much and would be willing to sacrifice it when going to Pentagon and just take the Blue line |
| This will kill the metro ridership. The metro will never recover. Look at cities with successful public transit system. Theyre reliable and very frequent, there fore people use it. Decreasing times and stops will encourage people to never use it. |
| i need the yellow line to get to georgia ave metro |
| Don't use this for work |
| I am in essential service and my arrival to work on time is of utter most importance. This creates a delay in my arrival time, thus delaying getting my job done. |

Proposal to implement Yellow Line turnbacks

I live near Columbia Heights and I need to get to Alexandria for work. I do not want to transfer.

My commute is from Braddock Road to Columbia Heights, so I would prefer for yellow to keep going to Greenbelt.

This would lead to more crowded trains with standing room only. This kind of density is unwise for social distancing.

This would depend on how frequently trains run on the green line.

I need to get to greenbelt for home

Is this fewer or different stops? Please outline the current situation for accurate responses.

Ideally it should go to ft. Totten.

my son connects to the yellow line sometimes traveling from Ft Totten to Naylor Road

Yes. Exploring the reduction of redundant service absolutely is good business sense.

I think the greenbelt idea is smart. Keep them running there.

I currently travel mostly on the Red Line

I travel to college park so is better if I get to use yellow line to

Not applicable to me.

I dont usually ride this line, so I am not familiar enough to comment on the impact. I am not likely to include this line in my travel plans.

I primarily use Huntington, so this is perfect for me.

I don't use the yellow line for my commute

NO PLEASE KEEP YELLOW TO GREENBELTAs a DCA based airline pilot I rely on the yellow line between U st and National airport to get to and from work. This would severely effect my ability to commute to work. Not only for me, but for Cardozo/columbia heights/ PG County residents who commute to downtown and Arlington county. Out of everything that is proposed this one would be terrible for me and other district residents who work at the airport and alexandria.

I would need to change to the green line just to go a mile to Columbia Pike.

Often when the BLUE line is in fail mode - which is often unfortunately - I depend on the yellow line and add twenty minutes to my commute. In those moments, I wish there was a bus to the 23rd street to 21st street area directly from Crystal City high density housing - have you considered that if the metro train cant do it?

Transfer at gallery place is fine. Usually faster anyhow.

Would extend waiting times having to wait for a green line train

No! So sad

I dont use the yellow line.

I almost never ride the yellow line.

Way too large of a gap between trains, less service to my neighborhood

Absolutely not! This will not work. Depending on just the Green line to get to and from Greenbelt will reduce our ability to practice physical distancing on trains. The Green and Yellow lines at Greenbelt are mission critical modes of transportation for commuters. Scrap that plan!

It would make getting to BWI harder for some people who take the buses from Greenbelt, but they can take the MARC train instead.

I hope foot traffic, safety, and workers rights are factors in the decision of editing the yellow line

U go to College Park 4-5 times per week all year long.

I live in west hyattsville. This would decrease the amount of trains in my area which would make riding the metro harder.

I live in Hyattsville. I moved here because I can metro into work. The expansion of yellow line service significantly improved access and timeliness. One train breakdown means I will very be late to work.

The people of DC need and deserve accessible metro that's why we pay the cost of living here

When the University at College Park reopens, ridership will increase and over pack the single Green Line trains.

Unfair to Howard U students - mostly POC and young, so not much money yet

I always thought there should be a rail line down 295, as well as rail line in VA or MD that goes around the beltway.. However the metro station are not close like to business or residential hubs. Metro should follow the traffic and commute flows as best as possible.

This is preferable.

Proposal to implement Yellow Line turnbacks

It would be not work for me. We need green and yellow from Huntington to Mt. Vernon Square to handle all the people commuting in on the trains. Furthermore, reducing the number of trains will increase the wait time for commuters. I need a train to show up at least every 10 minutes during rush hour.

Shorter travel time.

That train addition made it easier for those commuting to one of our largest universities in the area, UMD. Decreasing number of trains to Greenbelt will make it difficult for commuter students and staff

I dont take that line

Can they run to U Street?

Aunque causa mucho inconveniente transbordar ya que uno ya viene con un horario y luego hay que esperar

It should at least go as far as U street

I travel between king street and Shaw. This would require me to change trains. It would be awful!!!!

I would propose that the yellow line end at Columbia Heights

I dont take the yellow line frequently, however, my comments in response to the first question generally apply.

There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy

I take Yellow Line at IEnfant Plazza and stop at Pentagon City.Sometimes I can stop at Pentagon and vice-versa; but I prefer Pentagon City due to some errands (shopping at Whole Food or Costco on my way going back home)

I cannot agree with this proposal as I require to go from PG Plaza Station to Crystal City via the yellow line and this is the only metro rail option for me to take. This plan, in turn, would interrupt my ability to get to work and I would not be able to provide for my family if that is the case.

| Proposal to implement Yellow Line turnbacks (Spanish) | Translation |
|--|--|
| Con las lineas verde y amarilla funcionando asta greenbelt se me haria mas facil los viajes | If the green and yellow lines run to Greenbelt, trips would be easier for me |
| Afecta porque es mi forma de llegar av la estaci3n de Columbia heights | I'm impacted because this is how I get to the Columbia Heights station |
| necesitamos la verde y amarilla para greenbelt. Si solo va ser verde de Mt. Vernon Sq. espero que el verde pase seguido. | We need the green and yellow for Greenbelt. If it's only going to be green from Mt. Vernon Sq I hope the green comes often. |
| Si se da acceso r3pido de buses desde la estaci3n de Metro para que los usuarios puedan llegar hasta Greenbelt | If they have rapid access to buses from the metro station so users can get to Greenbelt |
| Nunca uso la l3nea amarilla. | I never use the yellow line. |
| Es mejor subir tarifa nesecito yegar temprano a mi teabajo | It's better to raise the fare. I need to get to my work early |
| Yo estoy viajando 6 d3as a la semana desde west hyattsville y con la l3nea verde y amarilla se me hace mejor porque el tiempo de espera es M3s corto | I'm traveling 6 days a week from West Hyattsville and it's better for me with the green and yellow line because the wait time is shorter |
| Nunca he usado esta ruta | I've never used this route |
| Auque causa mucho inconveniente transbordar ya que uno ya viene con un horario y luego hay que esperar | Although it causes a lot of inconveniences to switch lines since you have a schedule and then you have to wait |

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| Opening the Silver line as soon as possible is key to the regions economic recovery. |
| This does not affect me. I do not ride the yellow line. |
| Totally unacceptable please don't bring back turnbacks |
| Need more stops open |
| if people are not riding then it would make sense to close |
| This would not work at all, I wouldnt be able to get to work or home |
| Jesus christ imagine the crowding at Gallery Place |
| UMD needs a metro station |
| Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members. |
| All or nothing |
| Nationals game would be very backed up |
| I mean I guess its not a dealbreaker but its annoying |
| I heavily rely on this service. Please do not cut it |
| Please do not close Grosvenor-Strathmore Station! |
| Don't use Yellow Line. |
| How will people get to the convention center? |
| I don't think stations should be closed. How much is that really going to save? |
| Too limiting |
| I don't use red line. |
| Depends on how the Post-Covid ridership resumes and when. |
| YL from Virginia to Gallery Place is suitable for my needs. |
| Doesnt hurt me, impacts others. |
| We are a capital city. A closure at the center of the city is sad. |
| Mt Vernon seems important to the convention center but for me, gallery place and Shaw are close enough to each other |
| Do not use yellow line |
| I use Mt Vernon Square. Can we keep that stop open? |
| do not use these lines as much |
| Shame on you for doing this..what if I need to go further?? |
| Mr. Vernon square is in the heart of dc, that is the stop most people get off at when traveling to dc. |
| Doesnt affect me |
| I do not plan on using these metro stops. |
| Conventions in DC depend on that metro stop for their attendees who join in for hotels further away. This would cause a decline many conferences from the city which would cause a decline in revenue. |
| The equivalentns are not close enough |
| Doesn't impact me |
| will work |
| This does not affect me |
| This is just stupid |
| Would like to go to U St |
| Yellow line should continue all the way to Greenbelt as it is now |
| People need the extra service north of Mt Vernon Sq |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| My office is at Mt. Vernon, and there are no nearby stations. |

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| The Maryland stations need coverage |
| You are talking about closing College Park and greatly limiting service to a heavily minority part of the system. Is this equitable? No. |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| I DO NOT WANT TO CHANGE TWICE TO GET FROM TYSONS AREA TO PETWORTH. |
| No no no |
| Yes, good plan |
| If I used the Yellow Line at all, I would hate this proposal. |
| Needs Ft Totten transfer |
| ...would it kill ya to run them to Mt Vernon? |
| I do not anticipate using the yellow line. |
| This is blatant racism. |
| Shut it all down. Rip up the tracks - sell for scrap. Sell off everything else. You will save a lot of money. |
| Please do not cut off Fort Totten transfer - having two options to and from LEnfant is especially important |
| People with limited mobility are required to disembark |
| Take yellow line to Hyattsville |
| Gallery Place is already crowded and chaotic. Now you want to make it a terminus station and add to that? This is a terrible idea. |
| Need to go to Georgia Ave |
| Should not be cutting back on basic service. |
| We will eventually go back to our offices stop this madness |
| Closing of station would alter my plans on using Metro again. |
| The last point should be further north |
| I guess everyone that goes to school or work in that area, or goes to Caps games when they come back, will have to go...where? |
| Cut staff not service. Contract out most work |
| I do not use the yellow line. |
| Mt Vernon Square is important for the growing area by Mt Vernon Square and Shaw. |
| I ride and work at U St from Alexandria. This would not be ideal but much better than other proposals. |
| I dont typically use the yellow line. |
| Seems like a waste of yellow, and having a metro stop at the convention center is a huge pull for meetings and events |
| Mt. Vernon Square is pretty close to Gallery Place anyway. |
| That would get so congested and messy at metro center. It's already so packed there. |
| Stations should not be closed. |
| Please continue service to College Park. |
| Why are you cutting service in 9 months as opposed to now? Well be back to work in 2022. |
| Just shut down. |
| Green and yellow through PG metro at minimum |
| N/A |
| I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I dont care if they have to raise my taxes for it. |
| This isnt a station I am familiar with. |
| Why close this station? This will increase crowding at other stations |
| Once the federal govt has opened and returned to in person work this would make commute longer and crowded |
| Do not close any stations! |

| |
|---|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| Gallery is a dump and crime infested. If you push this, increase police presence. |
| The green line would be increasing packed and given the trains would only come every 30 mins I would be stuck commuting much longer |
| How would we get to National airport? |
| Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors |
| Please remove peak hours fares if there are not additional trains during peak hours. |
| This would not interrupt my commute, however, I will be on this train. I suspect the capacity will increase. |
| Does not impact me. |
| I work at the mount Vernon square stop |
| I use Mt Vernon square as my work stop and all of my dr. are around there too so that would make things less accessible. |
| PEOPLE WORK AND LIVE HERE HOW DARE YOU CLOSE A METRO STATION |
| This closes my home station |
| Stations should not be closed |
| U st and Columbia heights are destination neighborhoods and need more transit options. |
| The yellow line trains should go to Fort Totten at least |
| I rely on Anacostia station |
| I frequently use Yellow Line Trains at U St and Columbia Heights. |
| I use Mt Vernon Square station often. This would also have an impact on Conventiona Center traffic. |
| I can deal with this. |
| I'd prefer it to stay open for easier access to the convention center and city center rather than walk from Chinatown. |
| This is just pathetic |
| I love near Mt. Vernon, and this is the main way I get around town. |
| I have niece who lives close to the Mt Vernon Square station. She could not visit her grandmother who lives close to the Innovation Center station. |
| This is a terrible idea, when the vaccine is rolled out, these stations will increase ridership. This is a main artery for these neighborhoods |
| I live in Columbia Heights and I value being able to have both the yellow and green lines |
| I think it is a mistake to do this |
| This would require me to transfer to the green line on my daily commute. |
| The largest population growth in the city is along the Green Line!! |
| Gallery Place is already very congested, i would not like to have to transfer. |
| Closing stations is not the answer. |
| I sometimes utilize Mt vernon place to get to my job |
| I would need more frequent trains North of gallery place. It would be helpful if the Yellow line kept going north. |
| This change would require more frequent green line service past gallery place to maintain service |
| I take Yellow at Fort totten |
| We need riders to be able to transfer to green. Many residents. And visitors to the area utilize the metro for Nationals games. If you make it harder the use, tourist will not use the metro |
| I sometimes need to take the Yellow line into Maryland, but it is infrequent. |
| Too many issues having to change trains |
| I often take rides from Pentagon City past Gallery Place that are of high importance. |
| I get off at Mt Vernon sq and it will be a hassle to switch trains for one station and lengthen my commute |
| Why are metro trainsâ€”complete eight-or nine-car trainsâ€”operating through midnight during a pandemic?? 2022 is when we'll need it more, not less! |
| This would significantly increase my commute time and general level of crowding on trains I regularly use. |
| It needs a longer route. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Why kill off the convention center. YOur plans are simplistic. Reduce staff and salaries to survive, not service. Your bureaucracy forces you to impact the customer first, rather than your actual business operating expenses.

I still need to access this station

Work.

Yellow Line trains need to transport between Alexandria/Pentagon area up to Shaw, Columbia Heights, and Georgia Petworth.

Most racist proposals. This severely cuts service to Columbia Hts and Mt Pleasant, representing most diverse and dense neighborhoods in the region. Stop being racist.

That would double my commute and I would not take metro

would impact too many riders

Would probably be ok, but would need to test it out

The pandemic has changed ridership at an unprecedented rate. It's not fair to close items just people return back to work.

Would be absolutely horrible!

This will greatly disrupt baseball traffic.

I would have much longer wait times with no yellow line service to Greenbelt.

My primary station is U street. Eliminates my use of Metro.

Keep mt Vernon square

Delay reporting time to work

This seems a more viable way to problem solve. Limit duplicative services.

I live in shaw. I like the option of taking either the yellow or green line.

YOU SHOULD NOT CLOSE ANY METRO STOPS

How many times do i have to say this - dont close stations!

Mount Vernon square is adding riders!

this would concentrate crowds at Gallery Places which pre pandemic was often a dangerously crowded platform at rush hour.

Not fair to to have to transfer. This would be twice. Will the purple line help those going to Greenbelt?

having to switch halfway before destinations is silly and a waste of time and will lead to overcrowding

I use mt vernon metro a lot this would not work for me!

I use the Mt Vernon Sq station regularly

It would work for me but would be awful for the people who rely on the way it is currently set up.

This would cut off a direct line to the new Amazon development for people in Prince Georges.

I do not travel to Greenbelt.

This would be overly burdensome

This would be preferable to the other yellow line option since gallery place connects to other lines, it's a better location to end service

Eisenhower Station is very much needed.

I take the yellow line straight from DCA to College Park, and this makes travel much harder.

I would use yellow to Lenfant Plaza.

Same answer as before, by January 2022 things will be back to normal and so Metro should return to normal service at all stations.

Its it my need but others need it

Yes

I live off of Mt Vernon Square so it wouldnt be ideal, but I could walk home from Gallery Place if needed.

Please keep yellow line to greenbelt!

Please don't close MVS!

30 minutes would be way too long of waits for stations like Columbia Heights

Gallery Place is one of the most unnavigable stations when it gets crowded because of the trains that must pull forward to the end of the platform, leading to lots of crowds going against each other. Youd be better off terminating at the Convention Center.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I dont use that station.

This would discourage riding on Metro

only because people are already used to this

I dont like closing stations. Lobby to stop building roads.

A line that only goes partway into the city instead of mostly across it is not a viable option for transit

The distance between Chinatown and Mt.Vernon square is very small, so this doesnt seem to be a big deal. However, these cuts are absurd.

I quite often get off at Mt Vernon square when I go downtown (particularly for theater). Im not familiar enough with the nearby stations to tell whether alternates would work or not.

Low ridership will be done by 2022!! This is again unacceptable

many UMD students and myself use the green/yellow line to get around and have access to DC. cutting off this part of the line would be a huge blow to all of us.

All this is fixable. You pay too many people too much to do too little

Again, I live at Mt. Vernon Plaza, so I would want that to be the last stop for Yellow line trains.

Mt Vernon Square Station also DOES NOT HAVE LOW RIDERSHIP during non pandemic times! DO NOT THINK ABOUT CLOSING ANY STATIONS!

What about access to convention center and locations at MVS? Access there is also needed.

As O said, I use the my Vernon Square station to visit a friend.

This seems reasonable enough.

Why would you close the station serving the convention center?

This dramatically reduces capacity/service north of Gallery Place along the Green/Yellow corridor.

N/A

No, I rely on the yellow line from College Park to Alexandria. This one line option was why we settled in College Park and a change would be detrimental to my work life balance in causing delays to pick up my children from daycare in time.

What a stupid idea.

More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable.

My main metro station is north of gallery place- this would greatly reduce service on the lines I regularly ride.

I dont commute on Yellow

i get in mt vernon square

Gallery Place is very complicated and always too crowded

Same - planning to have one line every 30 mins from Columbia heights is unrealistic

n/a

Extend the Yellow Line, end at Columbia Heights. Not at Gallery place.

I do not ride to the stations that would no longer be accessible via the Yellow Line. So this would have no impact on me

Keep yellow line all the way open! It's the most popular line and necessary for commuters.

This doesnt require the closure of stations - it just requires riders to transfer.

I rarely travel to those stations, so this change likely wouldnt affect me.

STOP TRYING TO CLOSE STATIONS

No one really cares about the Yellow line.

Metro must meet peoples needs!!!!!!!!!!!!

All of these closures seem like a great way to make sure people dont use the metro anymore!

Dont travel on this line here

My Vernon square is where the convention center is so not a good option

It would be technically sufficient, but I would be concerned about the volume of riders who would be congregating at the Gallery Place metro stop. The metro stop is already generally overcrowded and suffers from poor security. I routinely find myself witnessing unsafe behavior, disruptive individuals, and violent activity in and around the metro stop. My concern would be this would increase if this stop requires more and more people to transfer here.

We need to keep everything as is.....

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Do not close any stations

There are too many people who live in this area. And use this train.

What a great plan said no one ever

If the convention center is open this seems shortsighted as it will cause major crowding at gallery place. You will need to hold trains longer at gallery place.

I don't use the yellow line and can't voice an opinion.

AGAIN with negatively picking on the lower-income communities along the Green and Yellow lines!!!

Stop citing metro line services and defund MPD

Reducing transit access, frequency, and reliability reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself.

I rely on Mt Vernon.

Seriously why not come up to U street?

Inconvenient.

Good idea in theory but Ft. Totten would be a better end point for people looking to go north of Gallery Place (Shaw, U St., Petworth, etc.)

Depends on headways.

I regularly take Metro to restaurants in Mt. Vernon Square.

It would make gym trips back untenable

This. plan would work for me personally but I imagine would have significant effect on tourism and the Convention Centers ability to attract clients.

Please stop closing stations!

I do not ride the yellow line

I dont live or work near the Yellow line

It is imperative to me that Yellow Line service extend at least to College Park.

I use the yellow line from Greenbelt as a straight shot to the Pentagon 5 days a week.

I dont ride the Yellow Line frequently enough to have a strong opinion either way.

I don't use this line.

NO. This is my metro stop!! How dare you all!

Do not cut level of service.

I think the stations should return to pre pandemic plans

I use the Mt Vernon Square metro station frequently and it would be very inconvenient if it no longer was in service.

I use the Mt. Vernon station

This will cut off Virginians from upper Maryland

Youre going to hurt all those developing areas above Gallery Place

would be better to have trains continue to Greenbelt

I frequently travel on this line beyond mt vernon. changing to green line and waiting for a new train would increase my journey excessively

Anything less than full operations is unacceptable.

Curious to know how you are measuring low ridership

I always transfer at Gallery, if I need to go to Fort Totten just take green line.

What other national capitol has a metro system that runs trains every 30 minutes. This is insane.

This is even worse than transferring at my vernon. The number of riders switching will be untenable. When vaccines are complete people will go back to needing normal operations.

Your Low ridership is based on a pandemic when there were no conventions! Crazy.

I rely on the yellow line and this would prohibit my travel.

This is even worse than the other option

See response to question 2

But you still shouldnt.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

This is very short sighted.

I live in Columbia heights. It would affect my commute to and from work (Smithsonian station). I transfer at L'Enfant.

Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office.

Just want yellow line trains to go into DC

As mentioned before, all proposals must take into account current ridership and the fact there will be fewer commuters as working remotely is expanding.

Same comment as before. This would destroy traffic and typical commuting once COVID quarantine is over.

Transferring is annoying.

I take green or yellow from L'Enfant Plaza to Fort Totten. If there are only half as many trains going to Fort Totten, I'm liable to have to wait longer for a red line train.

Would prefer going to Mt Vernon. Good the airport is still accessible

I don't use the yellow line

This would overwhelm the Gallery Place metro station on days in which ridership levels returned to normal for commutes to DC and would be dangerous for all commuters.

Gallery place is already a shitshow. Having everyone off boarding there will create extremely overpacked situations

Why keep convention goers from arriving at the Convention Center. Makes no sense.

The NW area of Columbia Heights is growing more every day. Limiting this community to one line could lead to over crowding.

This isn't feasible

NP

Why have the yellow line at all then if it will barely service busy stations like Mt Vernon and north?

This would severely impact the convention center which may decrease use of the center and not to mention the yellow line would barely take you into the city.

Please don't close this station

Why close stations? That would put more cars on the road. Stop bombing other countries and use that money to improve public transport for Americans.

See previous comments about the Yellow Line. This is just an Alexandria commuter line, and if that's the only purpose the Yellow Line serves, DC residents shouldn't pay a dime for it.

Never used that station

Yellow going up to Hyattsville was extremely helpful for those working in Crystal City or going to the airport.

This would generally work for me -- I usually transfer at Gallery Place anyway

My job is closest to my Vernon square and a 15 min walk at that. This would really screw Logan circle people taking the yellow line.

expand yellow to Columbia Heights and it is workable

Would this affect my station at Columbia Heights?

The yellow line needs to run to Columbia heights at least

Ridership will increase post pandemic...

Closing Mt. Vernon Square sounds very foolish since it service the convention center.

Closing stations would be unacceptable

This is a vital downtown station.

This may be ok, but not ideal.

I ride the yellow line to easily access entertainment and dining in Shaw / U Street. Making this journey more difficult will decrease the number of times I visit those neighborhoods.

If you're going to try and operate a public good like corporation you realize you have to make it actually good right

Riders north of Gallery place need reliable service.

No comment.

A huge part of the city uses yellow and green lines as the only way to get home...ended yellow line service at Gallery Place makes service to this wedge of the city extremely limited

I live near the Georgia Ave/Petworth station. Eliminating all yellow line service to that location would drastically reduce my ability to use metro.

Keep public transit running!

I've never ridden the Yellow Line - Defer to others who have more info than I do.

My Vernon is a needed hub

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

depends on how often there are green line trains

What if people need to go to the convention center area??

Isn't this station that you're proposing to close located near a university? Then it should not be closed.

No -- yellow line trains need to run to Greenbelt to reduce crowding and wait times. It's ridiculous to stop the train in the middle of the line when people are always waiting for a train that runs to Greenbelt.

It is the closest metro to me and it is very limited for entrances.

Gallery Place was closed for inauguration so I needed Mt Vernon square

I don't know this area well enough

Basing where we are choosing to buy based on current metro lines, will drive higher prices in city or option to drive if we choose Mt Vernon area

It would be a shame to cut off this station.

You should have included small graphics to accompany the questions about specific lines.

I currently work on and live on the yellow line - Crystal City to Greenbelt. Closing my station would mean \$216 the metro would lose a month.

Yellow line should continue to service all DC stations.

Please do not close metro stations.

I live in Alexandria and work at Mt. Vernon Square. This would be terrible for me. Metro is acting incredibly shortsightedly in making these proposals. Get more funding!

seems the least problematic of the proposed ideas

I often take yellow all the way up

It takes too long to transfer. I would like to see the Yellow line remain as it is.

I work in Columbia Heights and after a transfer needing just a green line train, but green or yellow, would make commuting via train potentially no longer feasible.

I rarely take the Yellow Line, so this would not impact me much.

I use the Mt. Vernon station every day. This would add significant time to my commute

Super inconvenient for anyone who lives past that stop. Those people are just as valuable as those who live before that stop

We need more stations, not fewer!

Keep yellow line all the way to Greenbelt.

I need to be able to get to Reagan airport

I don't use that line

This would create problems with my commute

The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming.

Why would this be implemented in January 2022? By then I think we'll be back to almost normal, this would be useless. I ride from College Park so that would be annoying

I don't take yellow line.

This would add additional time to all trips.

Although most of the time this would work for me, it wouldn't work for me all the time.

It would work for me, but I think others find the Mt Vernon Square station useful.

Just run the yellow to Ft Totten

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

It doesn't affect me directly; but having an option of not having to go for five extra blocks from Mount Vernon to the convention center would be a loss that would hurt for a little bit. I can imagine that persons who have accessibility needs who are closer to the convention center would not appreciate walking up hill to the closest station.

Gallery Place is already very busy. Metro should keep the yellow line to at least Fort Totten and should not close Mt Vernon Square. Conventions will pick up in 2022.

I live farther north than gallery place. This would create a bottleneck on the green line for no reason.

I live off the Silver Line in Fairfax County

This would actually be okay- this is the farthest I usually take the yellow line (I frequently use it to travel from King Street to Gallery Place).

See previous answers

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Gallery Place is already an exhausting station. There's so much activity, so many people. Why add more to it?

Whats the next best proposal for this

The walk between MT Vernon square and Gallery place is not that far and Gallery Place is a hub point.

I get on yellow LINE at FORT TOTTEN KEY TRANSFER POINT

Trains wouldnt be frequent enough to U Street / Columbia Heights.

Metro should be planning to increase service not decrease. This will bring ridership back when vaccines are widely available this summer. Decreasing service will put Metro into a downward spiral.

Recommend going to at least Columbia Heights due to number of commuters.

Would be significantly more difficult to access most NW neighborhoods

Given the growth of Shaw, U St and Columbia Heights, this could cause huge backups on the limited Green Line trains running north.

This seems like a problem for people who live at the other end of the Yellow line.

Dont travel that route frequently but it would be inconvenient when I do.

Our convention center is a huge economic driver for the city, how can you close the metro station connected to it?

See my comment about terminating the Yellow Line at Mount Vernon Square.

This is a horrible idea. One of the things that make a good and effective public transport system is the availability of trains in areas where people live! This plan doesnt take that into account at all.

Dont use this line. Please respond to ridership growth quickly.

I dont tend to use that end of the yellow line.

The yellow line already really overlaps with the blue and green. Seems fine.

That would work for me. You can still get to Suitland from Gallery Place

I prefer the yellow going all the way to greenbelt

Ive shared my thoughts earlier in the survey on this and think it is a mistake.

I have depended on the Mt. Vernon Station, as do lots of other residents.

I like this idea. Would make yellow line more convenient for me

I usually get off at Gallery Place, but this is a stupid idea. Do not close stations.

Closing any station is absurd. This whole plan is absurd.

Pasting from previous question: Please dont do this. There are communities that will be heavily impacted by this change. I would gladly pay a higher fee or wait longer for a train than to have ANY of the stops, anywhere, removed. This kind of change is short-sighted. It may stop partial bleeding in the budget, but create long-term problems with the communities impacted. It isnt worth it.

Isnt that where the convention center is? What sense does that make?

Seldom use the yellow line. Cant imagine how any yellow line riders could accept this.

Yes. Mess with yellow/green line, not red. The poor red line has enough drama as it is. (Cue fire emoji)

This would work, the green line still goes to Greenbelt.

I dont use the yellow line.

as long as there are still, College park and Greenbelt stations open.

Can yellow go to Columbia Heights and end there

Trains should to at least to petworth

That reduces the number of options I have at the stations I need access to.

Its absurd to discuss decreased times and say theyll have minimal effect due to multi line stations and then to shut service at multi line stations

Once Pandemic is over, ridership will return, need to look at reducing trains to 15 minutes apart, but not cutting stations.

increased headways at W Hyattsville

I need this line to get to work

I rely on the yellow line to get to work and gallery place would be a 40 min walk from my home in columbia heights. This wouldnt work for me

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Would dramatically affect the nightlife of U Street and Columbia Heights

I really need the yellow line to run all the way through to be able to get to work.

This makes the Yellow Line little more than a connector to other lines instead of an efficient choice of transportation on its own.

After Covid, that's used by lots of government folks.

I would need to transfer instead of taking the direct route.

This limits access to a courthouse, that's a terrible idea.

This survey is too long

I hate this so much. Take us to Fort Totten!!!

This would increase congestion at Gallery Place but I am unsure of the impact it would have on my personal commute (via Green and Blue/Orange lines).

Bad idea to close lines in 2022

N/A

I don't usually travel North of Mt. Vernon Square.

Gallery Place can already be a congestion point in the system and forcing more folks to get off/on there could make that worse.

Gallery Place platforms are crowded enough without making it the yellow/green transfer point.

Mt Vernon Square can wait until that neighborhood is more densely settled.

Not practical

This is clearly just trolling. At this point it's just a commuter system for Virginia residents.

I use the yellow line frequently, so this isn't ideal for me. Is there low ridership between Mt. Vernon and Greenbelt? I would think there is a fair amount of traffic going to U Street and Columbia Heights, but I don't have the data...

More logical than Mt Vernon Square, I guess, but still leaves anyone going north (Columbia Heights is a pretty busy station, I hear) out in the cold. Ridiculous idea.

I used to live in Shaw and the need to transfer to a Yellow line train was what eventually drove me to switch to using a car to commute to that job instead. This would be a serious step backward in terms of making commutes simple and reliable, which are the strongest persistent obstacles to increased metro ridership.

It would be super inconvenient to have to make a double connection to get to a green line train.

I rarely ride the yellow line.

This is too severe

This could be a problem for me.

This would add too much time to my commute.

This will be a hardship as I use Mt Vernon daily

No need to go further into DC.

I would be using yellow line from Hyattsville.

As stated before, having both the green and yellow lines available to get to and from work makes it faster for me to get a train which is necessary for health reasons.

Ok, but overall don't want to see decreased service north of Gallery Place

I rarely take the yellow or green lines outside of downtown, so this proposal seems reasonable and would not affect my typical use of Metro.

Gallery Place is already too crowded and a station where people are targeted for crimes, from petty theft to violent assaults. Closing this option would force all riders to go to Gallery Place and increase potential for crime, as well as crowd trains and platforms.

I do not regularly use this part of the system

Don't use yellow line

Limiting transfer opportunities make riding the train less desirable and makes travel more cumbersome.

But I don't take the Yellow Line.

It might be a problem if Gallery Place becomes crowded.

Would need U Street station to still be in operation on the yellow line

Need yellow line to Hyattsville and College Park

I need the Yellow Line to get to Columbia Heights in the evening.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

| |
|--|
| I hope to return to volunteering in the Petworth area in 2022; not being able to take a Yellow line train to Georgia Avenue could add to my travel time from transferring at LEnfant. |
| This works for my commute. I would just adjust times. As long as stations are open and service hours are good, I can make it work. |
| This is removing a necessary station used in a very dense, residential part of DC |
| I use the yellow line to U Street several times a week. |
| I rarely use this section of Metro. |
| This makes sense, though Im not sure Gallery Place needs the added chaos of even more transfers being required to take place there. |
| I do not use Yellow line |
| Thats a super short route, comparatively. |
| I would want yellow line to operate between Greenbelt and Huntington. If Mt Vernon needs to close, that's ok, but yellow line should continue beyond Gallery |
| I think you should keep archives open. Archive is closest to many government buidings that have essential workers that come to work everyday during the workweek. |
| It effectively cuts off another option for people who live/work in Virginia, resulting in overcrowding on other cars/lines. By limiting lines/stops, youre risking the day when one line is down and there are no other options for riders |
| Do you really think people are going to want to cram into crowded gallery place to transfer right after a pandemic? I already didnt want to transfer there before covid and go to mt vernon to avoid it. Mt vernon has just started to increase businesses and residents, it seems like youll be harming the whole neighborhood. |
| Both the yellow and green lines should continue to go to Greenbelt and the Mt Vernon station should remain open. |
| I need the yellow line to run north of Gallery Place to reliably use Metro to get from Shaw to LEnfant, Shaw to Columbia Heights, etc. |
| Close new silver line stations first. |
| This would cause massive overcrowding |
| Closing Mt Vernon is not acceptable in Jan 2022 |
| I do not mind having to transfer, as long as there are still options that take me to Greenbelt. |
| No affect on my daily commute. |
| This would negatively impact riders looking to attend events in southeast DC. If you are looking to stagnate development and negatively impact residents in this area, then this is the best option. |
| This question seems to forget that Mount Vernon Square serves the convention center. Conventioneers need access to Metro, and making it inconvenient, with a station right below the convention center, is ridiculous. |
| It would at least get people into the city on the other line. The deal line should run through the city. I would also make Gallery Place even more crowded and you don't want crowds. There should be mini access points to change the trains |
| Gallery Place is crowded enough without adding another transfer point there! |
| Gallery place is already a crowded station. Making people connect to the green line from that station will create crowding |
| Death spiral |
| If cuts are necessary, this seems sensible given ridership needs and the availability of other lines in that area. |
| THE yellow line should go at least as far as U street. |
| Same as my answer to many of the other responses- cutting service leads to more crowded trains. This isn't what we want as we recover from COVID. |
| I mostly take red and green lines |
| Keep Clarendon, Virginia Square, and 38B line open and have ways for people to get to Bethesda MD from Washington DC. |
| The transfer isnt a big deal. Closing Mt Vernon would be a big deal. |
| N/A because I rarely ride the yellow line. |
| Pre-pandemic I regularly got off at the Mt Vernon stop and expect to do so again post-pandemic. I also very much want the yellow line to go all the way up to Greenbelt again. |
| This would create more logjams at an already busy transfer station. I'd be furious. |
| This sounds awful. Gallery Place is the biggest shitshow of a Metro station and Id avoid taking Metro just to avoid the clusterfuck that Gallery Place would become. |
| Doesnt affect my commute. |
| I dont use the yellow line. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

| |
|--|
| I frequently take the Yellow Line from Pentagon City to Fort Totten. If trains are running only every 30 minutes, I dont want to have to switch from Yellow to Green and maybe wait 30 minutes for a train. No point in taking Metro then, so Id switch to Uber. |
| I take the Yellow Line from Alexandria to College Park every weekday, usually. This would complicate my travel. |
| this cuts down my options for traveling home |
| I travel north of Mt Vernon Square, and this would reduce service north of Mt Vernon Square to an unacceptable level. |
| The last station should be Ft. Totten to accommodate those in NE DC who have limited options for getting downtown, and a long ride. A better solution would be to extend out to Ft. Totten but have fewer Yellow Line stops in between (express train). |
| Do not use this part of the system. |
| Closing the stations when ridership is going to pick back up is stupid and shortsighted. |
| I do not use these stations. |
| Gallery Place is a cluster during the AM/PM rush and before Nats, Caps games. Everyone I know would use Archives or Mt. Vernon to switch easier than Gallery place. Would you really close Mt. Vernon Square when the convention center is full? Hotels have been built down there too! |
| No way. Mt Vernon Square is my station. This area is being developed and bringing in a lot of new investment. Closing the station would only further reduce metro's budget by discouraging and sapping that investment. |
| dont use that route much |
| Many people commute between MD and VA, stop making their lives harder. |
| Again, Metro is being shortsighted. Because of the pandemic, ridership is significantly down. However, once the pandemic has ended, ridership will increase. These stations currently have low ridership because of the pandemic. Most previous Metro riders are working from home and there are not in person events. This is absurd. |
| I do not ride the Yellow Line frequently, so I cannot comment on this particular proposal. |
| I use the Mt. Vernon Square station frequently for work and personal uses. |
| People live north of the gallery place metro stop- I know so many of us who live on U st, Columbia heights etc. we'd have very little means to get around. When only one line is available it gets really hard for us, esp when trains run so infrequently nowadays |
| The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station! |
| It would take me more than 3 hr to arrive home. |
| We live by the Fort Totten station, so this would mean we can no longer use the yellow line |
| I don't usually take the yellow line but I worry for people that do!! |
| Unacceptable. Half metro salaries and enforce turnstile skipping instead |
| I don't ride the red or green lime |
| Similar opinions to the previous question about the yellow line. My wait time is more important to me than the color of the train |
| This would add uncertainty to my trips from Greenbelt to Reagan Natl. Airport. |
| I do not ride the yellow line, but I believe its completely unfair to shut down any metro station. |
| Access to the airport is important to me |
| Its not ideal but I can live with that. But thats if you keep Eisenhower Ave open -- otherwise I wont be using Metro at all!!!!!! |
| Again dont like, but possible. |
| I rarely use Yellow Line and never use Mt Vernon Sq station so it would not negatively affect me. |
| I used to live at Mt Vernon square but no longer do so this does not immediately affect my commute. |
| This makes sense that someone can just transfer to a green line train. |
| Not a good idea |
| n/a |
| This is utterly ridiculous. |
| Yellow Lines need to go further north in DC. |
| Yes if there is no reduction in service on green line trains to Greenbelt. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

It's not great but better than alternatives.

I would pretty much just stop taking the yellow line northbound because I'm always going much farther than Gallery Place

See my previous answer about the yellow line. This would greatly affect my metro use in a negative way.

Fewer trains to college park is inconvenient, but workable for my needs.

Does that affect travel to Regan Airport?

My opinion about closing stops remains the same

This would disrupt the flow of people attempting to attend baseball games even though they would be utilizing the Green Line. Not good.

As previously stated, this provides no metro access to the U Street shopping and entertainment corridor

If you kept open until 11

need yellow line from Petworth

Concerns with airport travelers

This will negatively impact citizens as we return to normal after the pandemic.

Going to be FUN for those traveling to sporting events, right?????????????

Want last stop to be fort totten rather than gallery place

Always consider people from those low ridership destinations.

Continue yellow line until Fort Totten at least

Need more transfers to Green line

Same as above for Mt Vernon, except this is even worse, given that Gallery was usually over crowded due to red line transfers. Those would cause even worse crowding on the platforms if headways go to 30 minutes.This is a plan for failure.

This would be ok, but not ideal for my needs traveling to the airport.

Please consider the needs of the convention center

I rarely ride Metro in that area.

The more options to Greenbelt the better with purple line coming and massive development occurring in College Park towards Greenbelt and return of students to in person classes.

That is the metro stop closest to me and I am to see it go. Chinatown can be a mess and I much prefer to use Mt Vernon. For safety reasons I also now get on or off the metro at judiciary square when I need to get on the red line.

Having the yellow line travel to Mt Vernon Square is very important for those of us who regularly use metro to get around the city.

If the green line was running at normal capacity/time, this could work

Appreciate transfers at the convention center because it is less crowded. Gallery Place in particular is nightmare on Nats games

This works for me. I dont need to take the Yellow line for my commute.

I'll say it again: close Mt Vern if you must but YOU MUST RUN THE YELLOW LINE TO FORT TOTTEN. There's barely a point in having the Yellow line if it only runs up to Gallery Place. You will create bottlenecks for the Upper NW section of the Green Line if you do this. It was a mess when trains were every 8 minutes it will be a disaster with longer headways.

Population north of U St is significantly higher than what this can accommodate

This would add a lot of time to many commutes

What happens to the DC Convention Center?

This is an especially bad proposal as it cuts areas north of downtown off. Leaving access to the Airport and incoming Amazon jobs not available to people living north of downtown or in Maryland

This will likely not affect me.

Ridiculous

I dont use this part of the lines

Do not close Mt Vernon Square.

The trains should travel to Ft Totten

| |
|---|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| Should keep some green stations in DC open too |
| N/A |
| I don't use the yellow line on a regular basis beyond gallery place |
| This would severely limit the number of trains that I could take from Fort Totten, the closest station to my home. |
| I would say yes if Gallery Place was more safe. It's uncomfortable to get out of the train station with people seating outside staring at you, specially at night time. |
| I do not use mt Vernon station |
| I dont use the yellow line. |
| that goof up pg county going to the airport. i am not sure because thats only okay if you run the b30. |
| I board at IEnfant Plaza and take the yellow or green to Columbia Heights. |
| Gallery place is already a very busy station, given covid this would make this station even busier causing safety and health issues |
| Would prefer to keep Mt Vernon Square open as an option since Gallery Place can get quite busy |
| This would not be a great proposal because this would cause confusion to most riders who access the green/yellow lines currently. Please do not go through with this proposal. |
| Will make more people on Green line |
| This would negatively impact the residents who rely on the ability to switch between train lines for their essential transportation needs. |
| The Yellow Line is my primary means of commuting into and out of the District and this would damage my ability to easily commute. |
| This plan works for me because I almost never use this portion of the Yellow or Green Lines, vs. daily use of Orange/Silver Lines. |
| Again, frequency |
| I often need to switch lines for my work commute. |
| I usually get on the Green Line long before Gallery Place, and most people think of it as the transfer hub anyway. |
| Disproportionately affects commuters with the longest trips from city's center already |
| I dont ride yellow line much. |
| Gallery Place is too heavily trafficked. Some people like transferring at least traveled stations |
| I dont think closing stations is a good plan. |
| Seems short sighted considering how many more people now live near mt vernon square. Also, the convention center will someday again be busy. |
| Transferring from yellow to green is way less convenient than going the whole way on yellow. |
| Do not close Mt Vernon Square |
| This would cause too much disruption of my rest. I propose trains every 15 minutes to get to a hub like fort totten then every half hour from there so its really 15 minutes to get a green line train then 15 minutes to get a red line train for example from the hub. Have trains go back and forth from single line end to hub and some go the full route to make it every 15 minutes to some train everywhere. |
| No, since I live at Mt Vernon Square station. This is absurd. |
| Limiting the yellow line is unhelpful and cuts off access. |
| It would take much more time to travel between U St and Pentagon City as I do regularly. |
| This platform at Gallery Place gets very crowded in rush hour. This would be worsened if people had to get off Yellow trains there to switch to Green. |
| I rarely ride the yellow line. |
| All the stops past Mt Vernon have large communities that need metro access! Personally, I'm at Shaw - |
| See other comments |
| Extending the stations without service is disruptive to the community. |
| Gallery Place is already a nightmare to navigate and you would be forcing more people to transfer there. |
| Getting to the museums downtown or to National Airport, this should work ok. |
| Again, I live at U St so this would exclude me from being able to use the metro to get to and from home |
| I wouldnt want the Mt Vernon Square Station closed at all. |
| Id prefer Yellow to continue but could live with this. |
| Again, absurd. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

| |
|---|
| I currently live on the yellow line. This would hamper my abilities to get places beyond Gallery Place, which may be problematic once the pandemic eases and travel for leisure resumes. |
| I dont travel that route, but I expect those who do (low wage workers?) will be seriously disadvantaged. Closing stations after building them, seems beyond crazy and short-sighted. |
| I don't use yellow line |
| I live near this station and use it on a daily basis. |
| Keep the trains running. Ridership will be back to normal soon. |
| Though this would be immensely obnoxious for others who need go further. It's like you're trying to discourage ppl from using Metro. |
| Nonsensical |
| When I take the Metro to the airport I like to sometimes catch the Yellow line at Fort Totten. |
| I do not plan to use the Yellow Line. |
| dont give a rats ass about this, either. |
| Interchange patterns would be severely disrupted. |
| I don't ride the yellow line |
| People use this line to reach family and commute to work. |
| dont use the yellow line |
| I never use the yellow line |
| I need to be able to get from Mt Vernon Square to Reagan National Airport on the yellow line. |
| It would be super inconvenient though. Gallery place is always crowded and if I have a seat on a train, Id lose it moving trains there |
| Could make it work but it is a long walk to convention center given my capacity. |
| Green line is a viable option. |
| do not use this connection |
| Transfers at Gallery Place are already so hectic/crowded, I am concerned that requiring all transfers for points north to happen in GP would make the crowding/delays even worse |
| The flexibility of the Yellow line running farther north is important for my commute |
| would not affect me |
| This would add significant travel time to getting downtown. |
| Is this survey even for real? Youre essentially proposing eliminating all practical use of public transportation in a major Metropolitan area, making the Metro just another unreliable bus and relegating us to clogged roads. Itll take us back to the 1970s. How far youve fallen! |
| I do not travel to this area. |
| I don't ride on the yellow line that often. |
| There would be some inconvenience to me. If I needed to go to someplace near Mt. Vernon, I would likely take an Uber or Lyft if this proposal were to go through. |
| Can just catch Green Line if I'm north of Chinatown |
| The transfer station would become too crowded, with long lines that discourage the transfer |
| We shouldnt close Mt. Vernon Square station at all. |
| I live at Mt Vernon Square so..id like to see it not closed if at all possible |
| If we want people to use public transportation we need to make it accessible and convenient. |
| Again, I live near the green/yellow lines, so having the option for both is really helpful. It would be unfortunate to lose one in the northern half of the city. |
| I dont use this line, so I cant say. |
| Closing stations impacts neighborhoods and workers. This should be the absolute last thing considered. |
| I transfer from red line to green or yellow at Fort Totten, not sure if this would affect my daily travel plans. |
| depending on other changes to the green line to accommodate |
| Dont ride those lines |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Do you understand how crowded GL trains would be if you ran them every 30 minutes, with service above Gallery Place limited to one line? As a resident of Columbia Heights, our neighborhood demands better service than every 30 minutes. That's what you also offer to suburban stations. Please find a better solution and stop discriminating against low-income city residents who depend on reliable Metro service.

When metro switched to yellow line trains going to Greenbelt it was much easier to get around. I don't support turning yellow line trains around at Gallery Place.

I commute from NW DC to Arlington. This would result in me having to potentially take 4 trains home every day, and it sounds miserable.

Keep the yellow line going north to Fort Totten!

No. Do Better.

This would be devastating for us as we rely on Shaw to National Airport. This is how people get to the airport and eliminating this is an awful idea.

This area is a vinyl area especially for me in terms of transporting myself to both work and other places in old town because you guys currently have the blue line completely shut down. So if there was an accident in the blue line would be absolutely no other way except going way up into northern DC to transfer. This again is ridiculous

I ride from Huntington to Columbia Heights metro.

This makes it so difficult to travel downtown. Still punishing to anyone who isn't able-bodied.

While I like the Mt Vernon Sq station, I use Chinatown far more often. At the same time, Chinatown Red Line trains are frequently extremely crowded during peak periods.

We lived a long time without the yellow train we could probably manage some months.

I don't ride Yellow or Green often.

What happens if the convention center reopens?

In 2022, my husband and I will be commuting from College Park to Chinatown during rush hours Monday thru Fridays for work that requires us to keep to a schedule in order to keep our jobs. Also, we have a child who requires being picked up from daycare at a specific time in order for us not to be charged extra. Our places of work will not provide us with parking (whether it would be free or an extra expense). Before the pandemic, it was difficult to get a train from Chinatown to College Park during the evening rush hour. We need the metro to run more frequently during rush hour in order to keep our jobs, and this change will impact our livelihood (jobs and finances).

Mt Vernon Station is in a heavily BIPOC community. This would be a clearly discriminatory decision by Metro to adopt this proposal. It is ONE MORE STOP that provides access to Metro for a huge amount of people.

I don't use the yellow line.

I don't use the yellow line much, but this seems like a major deterrent to metro use

I don't usually go to these stations/lines so it wouldn't impact me personally

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

No! It is hard enough to transfer lines now without cutting stops!

Fort Totten?

No station closures!

Please provide transit to Mt Vernon Sq and points north.

There is a lot of ridership on the green/yellow line north of Gallery Place

For some a smooth ride without having to transfer is better

Please consider low income workers! Who rely on public transportation. Just cuz ridership is down now won't mean as we open back up it'll be forever. How do you propose they get to work????!!!!!!

Like an earlier proposal this would effect the Green Line in Prince Georges County negatively.

Mt Vernon Square is an important station for me. Closing it would have a very negative impact on my ability to get around the city.

I do not think this would have a severe impact on my travel plans/needs, but I only rarely use this route and would be fine so long as I could get off or switch at Gallery Place.

Cutting service diminishes the value of metro

My main metro stop is U Street

As a Columbia Heights rider, this would probably complicate my commute.

These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Isn't Mt. Vernon Square the closest to convention center?

The frequency of the green trains would need to increase for this change.

As I live in Shaw, this would make it difficult to get to and from work.

Would make Gallery Place WAYYYY too crowded

I frequently have professional events at the convention center and expect this to normalize post COVID. Traveling to Chinatown and walking is not convenient

I travel frequently to Mt Vernon Square

I use the Mt. Vernon station especially on weekends

Mount Vernon triangle should not be closed!

Keep the times similar to before the pandemic

If Mt Vernon Square closes, The Yellow Line should run to Howard station instead of cutting the line short.

Don't care I don't go there

I really dislike this option. Especially if trains are not frequent it would make my commute untenable

Again do not close the yellow line. It is by far the easiest way for anyone traveling north-south in DC and Virginia.

I rarely use the Mount Vernon station.

Again it depends on the wait time between Green line trains

As I wrote with the previous question: Starting to close subway stations is a downward spiral. The less options, the less likely people will use or continue to use the metro. Metro needs to be looked upon like the Postal system. Yes some parts lose money but necessary for folks to get to work. It's usually the poorer ones that can't afford cars or parking costs that need to ride the Metro.

Dear god. What is wrong with you?! You are cutting off people who need trains to get to work, get to school, reach their children. Stop.

Airport accessibility and more Amazon related functions will bring increased demand

Green and Yellow lines are already bursting during peak hours. How does this make sense?

Do it now to save money for more important things.

I don't take the Yellow line from VA

I have never been that far south on the Yellow Line.

This proposal is not applicable to me because I ride the Orange Line.

I used to live at U Street metro when this was the old operating pattern. It's fine as long as trains aren't crowded.

This would increase my commute time as I live near Mt. Vernon Square and not having access to this stop would incentivize me to drive rather than walk to Gallery Place. Please do not make decisions for 2022 based on ridership in 2020 – the needs will be very different!

Going to the Convention Center would take longer. Many meetings take place there; I and others find that station very convenient.

Only use the green line occasionally.

Not ideal, but would depend on the frequency and ease of transfer to Green Line trains to complete the trip.

Assuming the world would be going back to some sort of normalcy, this will affect too many of our travel routes. This is ridiculous.

Would there still be green line trains every 15 between Petworth and Fort Rotten? This is crowded when schools let out

It makes more sense to have trains stop one station beyond to account for all the passengers who work at businesses on the other side of the station.

College students at Howard University would not be able to travel home and get to work. As a college student, this was pivotal for me to travel to and from school and work. This will be extremely harmful.

I seldom use this line.

I only go as far as Eisenhower Avenue

Closing stations in areas where lower income riders rely on public transportation is unfair and problematic.

This plan does not affect me, but it seems beneficial that it still allows people access to Greenbelt.

Would have been great if you included a map with each question.

This would drastically impact my commute to work, to the point where I could no longer use the Metro and have to rely on a car service.

Sure, transfers are fine as long as frequencies are still high

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| Not relevant to my travel arrangements. |
| I would not be able to see my elderly family members |
| are you trying to kill u street what is wrong with you this survey just gets worse |
| The main challenge for me in this proposal is getting to National Airport |
| What about the Convention Center? Really no service?..?? |
| Na |
| Isnt closing down Gallery Place to Ft. Totten a bit racist? |
| I don't use those stations, so not sure of the impact. |
| Transferring at Fort Totten provides a less busy, safe option and eases burden on the red line. |
| need m |
| Why not continue to Fort Totten so better service to central DC |
| This would reduce the frequency of the metro along a core area dramatically, and would not be acceptable. As someone who lives near the Columbia Heights Metro Station, this reduction in frequency would cause me to reduce my usage of Metro. |
| I may go to the Washington Auto Show. |
| I dont use those routes very often. |
| Minimal impact to me. |
| I use the yellow line to get to the airport and this proposal would ruin that. I chose where I live in Shaw based on a single-seat ride to the airport. Ill Uber instead. |
| Would there be a shuttle that allow them to their home? Mt. Vernon Sq has a lot of residential spaces. |
| I only take the silver line. |
| Less Metro stops is always an inconvenience. Frequently it impacts those who cannot afford to make other arrangements. |
| Would I still be able to get to Congress Heights to the Entertainment and Sports Arena for Mystics games via Metro? |
| This would affect the length of my commute significantly |
| This is a tremendous inconvenience to people who use public transportation. |
| Don travel the Yellow line |
| As you know there are a name of sociatal issues at the Gallery Place metro station (homeless, youth engaging in illegal activities, cleanliness) particularly at the north entrance. Mount Vernon is a necessary access point to alleviate pressure on Gallery Place. plus you are considering closing Archives on the Green Line, producing still more transit pressure on Gallery Place. An unworkable plan. |
| Gallery Place is already very crowded with transfers to the Red line. Needing to add a transfer there between the Yellow and Green lines would increase congestion. |
| This may not work because people may need to get around town and gallery place isn't an ideal ending stop for people who need to get into neighborhoods. |
| I dont live in an area where this would effect me |
| Again, as long as Green Line service is not dramatically pared back so that cars become packed and traveling the former Yellow route becomes intolerable. |
| I dont use the Yellow line |
| I use this station, and closing it would not be good for me. |
| I dont ride the Yellow line very often. |
| Seems reasonable to me. |
| There is absolutely no need for existing train stations to close |
| Do not use these lines |
| WMATA has so few transfer points (another reason why its difficult to use). Why eliminate another one? |
| I rarely ever take the Yellow Line (even in pre-pandemic times). This proposal has little direct effect on me. |
| This is a short sighted proposal - it is cutting service, making it a less attractive option, which will drive more riders away. They should open all stations 24/7. Metro should make it attractive and convenient to use, not the opposite. |
| the characters at gallery place are sometimes overzealous and another transfer spot is always good |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Metro should be cautious about reducing service to increasingly popular destination neighborhoods such as the U Street corridor and Columbia Heights until we have more data about restaurant and other entertainment facilities in these areas. It is possible that users will no longer travel to these areas, but Metro should not make this decision in the absence of information about post-pandemic travel behavior.

There wouldnt be enough space for riders.

Transfer from red to green or green to red at Gallery Place is workable.

How does this work if conventions return to the convention center?

No, if anything the Yellow Line should continue to Fort Totten.

I live in the U Street area because it was serviced by the Yellow and Green lines. Cutting back service would disrupt my work commute, as well as my sons commute to school at the Archives.

Yellow line needs to continue operating to Ft Totten or beyond. Mid-city is too busy an area to be served by the current long headways of a single line. With a wait that long, Id rather bike or walk.

I work right off Mount Vernon Square. Im not feeling the extra walk to avoid a transfer.

The metro rail has been greatly improved by extending the yellow line to greenbelt.

The yellow line should continue further north

If the Convention Center is in use, the station should be open. I dont know that riders in that neighborhood should be cut off either.

No, this is outrageous, people will eventually go back to work to their offices in dc and need to use metro and all the stops the line had

For the most part, this would work for me. Although, during Inauguration Week, I had to take the Yellow Line to get to work because Metro Center was closed. I connected to the Red Line at Fort Totten, which is beyond Gallery Place. In four years, if this proposal goes through, I would have to take four different lines to get to work during Inauguration Week, difficult but not impossible.

I currently dont typically ride Yellow Line at these locations.

Longer wait times on the northern green line would push me to other modes.

No effect

The region needs a fully functioning METRO to bring back the economy!

again, penalizing black and brown Washingtonians who rely on the Metro to commute to work.

I used to live near the Mt Vernon Station to commute to Arlington and I usually walked to Metro Center anyway because it was more convenient than the transfer.

This would be unfortunate for me because I use the yellow line for Columbia heights. It wouldnt be much different for if there was Mt. Vernon Sq turn around for yellow. But either way I want the yellow line to come to Columbia heights.

what is the point of an entire line with 11 stops?

I use the Yellow line frequently living in Columbia Heights

It will work for me, but what about other people?

I rely on the Yellow Line to supplement the Green Line during busy times in my Monday-Friday workweek.

not if you also reduce frequencies.

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport, so the schedule proposed here should not be a major inconvenience for me.

Parking has been cut severely around the stadiums in SW/SE and if Metro access is cut people will lose the primary means of getting to the stadium.

yes, because the green line runs there

See previous comment re: closing Mt Vernon Square.

The convention center is a major stopping point and would hurt dc events industry and businesses

Again - preferable to still have some yellow line trains continue to Greenbelt

I rarely take trains to any of the affected stations.

Mt Vernon Square is the station for Logan Circle and office workers at 13th and L etc. and northbound. DO NOT CLOSE.

I don't use the yellow line.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Adding a change of trains and longer wait times is a bad combination.

Green line trains were already overcrowded pre-pandemic with service going to Greenbelt prior to the extension of the yellow line.

Really dont have thoughts on this.

Keep all train options! We need them!

This is not good. We need yellow and green line train access there is a hell of a lot of development in neighborhoods using these lines --- literally 1000s of apartments 1000s of condos and 1000s of offices coming on line. Very bad idea to limit green and yellowline

Need to get to at least lenfant plaza

The green line would be sufficient for my purposes.

I frequently use Mt Vernon Square station

Do not close metro stops

I rarely use the Mt. Vernon Square Station, but know it can be crowded and busy when there are large conventions. That would be the only time this plan would not work. In the brutal heat, or driving rain, it is a very unpleasant walk from Gallery Place to the convention center.

Pls stop.

My thoughts have been expressed. Thoughts of sadness and incredulity.

As already mentioned, yellow line trains should go to Ft. Totten

Having Mt. Vernon as an alternative to Galley Place during large sporting or music events - and obviously conventions - is essential. It also serves some of the more residential areas near Chinatown.

The yellow line should remain operational through the center of the District. Making people going to the convention center change trains is stupid.

As long as green line trains to greenbelt still ran at the same frequency

OK, but not preferable

I do not currently rely on the Yellow Line so cannot provide meaningful input.

Yellow line service at the College Park metro station is incredibly valuable to me.

Please be specific about what closing a station means. Does this mean always or during certain times?

Very bad idea.

Good idea.

I dont use the Yellow line.

I dont take the yellow line

I rarely use the yellow line.

I don't currently regularly use but could.

How about we dont close the Mt. Vernon Station (or any other station) and WMATA pressures DDOT into building more dedicated bus lanes downtown instead?

What if I need to go further?

This is even worse than the Mt Vernon Square turnback and would make traveling north on the Yellow Line very inconvenient.

As above, this does not effect me personally, but would inconvenience a lot of peopl

We need the columbia heights station

Deben agregar una estacion amarilla mas

IDK if this is gonna work WMATA, if conferences begin to happen in-person after January 2022, not having access to the Mt Vernon station is gonna be a huge burden

Closing stations should not be an option.

Similar to response to prior question with Yellow line termination at Mt. Vernon Square. Similar impact/concerns except that this would eliminate service to the Convention Center, which seems short-sighted assuming that DC tries to attract large tradeshow in 2022 to bolster the local economy.

Yes, as long as the trains on the green line do not arrive every 15 minutes.

Not enough transfer points with this plan.

This plan would likely work with my travel needs.

Isnt Mt Vernon Square station in a business/residential area that would have higher ridership once the pandemic has abated? This seems shortsighted.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options are available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes. As a DC resident, I took the DC bar exam in 2018 at the Convention Center. I rode the Metro to Mt Vernon Square to/from the exam on both days. Now you want to CLOSE THE STATION??? This is one small example of how thousands of residents will be adversely affected.

Frequency can not accommodate ridership, which would be expected to return to pre-pandemic ridership. Don't you dare use 2020 data to predict anything that except when a global pandemic shuts everything. Ridership should be expected to return with additional capacity for tourism.

I need regular green AND Yellow Lines to get to my home in Greenbelt.

This would clog train traffic at a time where we need to be as far apart from strangers as possible

I use the yellow line every day but primarily for crossing from VA into DC. So as long as there is some type of connection there that makes sense. Now that is why I don't think the 15-30 minutes wait is right especially if you're anticipating closing so many stops of the yellow line. There is already so many people on the yellow line since the blue line was closed for construction.

Run all trains to greenbelt

I don't ride the yellow line over gallery place very often.

It would be a lot less convenient but it wouldn't be the end of the world as this inconvenience would affect me maybe 1-2 times/month

Worst option yet on the Green Line - turning around Yellow Line trains at a location other than the pocket track at Mount Vernon Square will cause gridlock and drive more people like me away from the system.

Mt Vernon is a much more family friendly place to board than Chinatown. Please don't force more people to use Chinatown. I can't even count how many times I walked a little further to be safer and quieter at Mt Vernon when I had my stroller and kid with me.

These changes would not affect my travel.

I rely on the yellow line train, as well as the green line, to get to and from work four days a week so this change would prove inconvenient.

Gallery place will be overcrowded if this is the only hub

I don't ride the yellow line

I rarely use the Yellow line anymore, and have no reason to travel to Mt. Vernon Sq.

I do not use yellow line

I do not generally ride past Gallery Place, so that's fine.

This will be very confusing and cause unnecessary congestion during the holiday season.

I don't generally travel to Mt Vernon Square

Don't use the green or yellow line much, only a few times a year so I can work around that.

I work in a Federal Emergency Operation Center 24/7 I will need to get to work on time

Yellow line trains should extend at least to PG Plaza.

This would cause significant problems to my daily life, particularly since I use the Yellow Line for commuting purposes.

Sometimes Gallery Place is so crowded that I walk to Mount Vernon Square instead. With Mount Vernon Square closed, that would not only no longer be possible, but would add all of the traffic entering the system at Mount Vernon Square to the traffic entering the system at Gallery Place. Gallery Place is already so crowded as to be almost unusable.

We just need East Falls Church to stay open.

I live in Arlington. While this would not affect my work commute, it would make it much harder for me to get to cultural and lifestyle spots in Shaw and Columbia Heights. These areas have been hard hit by the pandemic and businesses there are already struggling.

Waiting to change at gallery place is a nightmare!!!

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| I do not take the yellow line at this time |
| I work in Arlington and live in Bloomingdale, so I take the yellow line all the way to Shaw-Howard U. It would increase my commute time to have to transfer to the green line every time. |
| I dont think its a good idea to close Mt Vernon Square Station. I go there often with the metro and your proposal of closing the station will cause inconvenience. |
| I could make it work |
| This route would work because it gives me additional options in returning home. |
| As primarily a Green/Yellow rider this is acceptable, albeit perhaps inconvenient at times. |
| This would not impact me, but I oppose the closure of stations. |
| I dont use the yellow line. |
| I mean, yes, technically that works. Its just not excellent service. |
| Ridership at Columbia Heights and Georgia Ave would need to be shared to answer this question with better poignancy. MT Vernon Sq is a low ridership station, but Columbia Heights and Georgia Ave are not. |
| I dont know if there is any other place to share general thoughts, so here they are: I love Metro and look forward to riding again when the pandemic is over. Metro must do everything possible to maintain robust service and get its ridership back. Metro should consider corporate naming of any and all stations in exchange for \$\$\$ and should see if some sort of an auxiliary body can be created to take donations from the public and corporations. Paul Wiedefeld has done a superb job and is a personal hero of mine. Long live Metro! |
| This would affect traffic and parking at the convention center very adversely. It's already hard to get around there, and this would strip people of a key way of getting there. |
| I have not started commuting into DC yet due to the pandemic. |
| I do not use this line enough to comment. |
| Closing stations due to low ridership is an arbitrary solution to a more complex problem. If low ridership is caused by unreliable service, then closing stations simply adds to the problem by making the system permanently unreliable. |
| Having to transfer from the yellow line to go past Gallery Place would significantly extend my commute, especially if trains are only running every 15 minutes. |
| Inconvenience!! |
| I live in Columbia Heights and having only green line trains serve Columbia Heights would be extremely difficult, in my opinion. Green line trains would be extremely crowded, especially considering the high rate of housing development in Columbia Heights and Petworth. |
| I do not use the yellow line. |
| The metro system is poorly designed and inadequate as it is. Further reduction in service is self defeating. |
| I almost never ride the Yellow line |
| I dont use the Yellow Line and it seems duplicitous of the Green Line. |
| Think of other businesses and people being effected plus the economy which is also suffering now. |
| I need the green line to go to Petworth |
| ???????? |
| It is not ideal, obviously it is best for the yellow line to continue all the way to Greenbelt. But if it has to be done, it has to be done. |
| Green and Yellow lines are basically the same past gallery place |
| Transfer at Mt Vernon Sq is easier than Gallery Place, which makes it much less likely that riders will miss their trains. Additionally Mt Vernon Square is usually less crowded, making travel more comfortable. |
| This was a terrible plan when Yellow Line service ended at Mt Vernon Square previously. Restoring full Yellow Line service was one of the very best things Metro has done in years. Please dont make us get off the train and do a ridiculous train change just to continue up the same track. Its inefficient and annoying, and would make it much less likely that Id choose to ride MetroRail. |
| While Yellow line trains are my preferred daily commute option my travel is within the operating stations and would not be affected by this closure. |
| You are cutting off people living in lower income communities from public transportation which is racially as well as economically inequitable for the DC population. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I live in Silver Spring and often transfer to Yellow/Green at Fort Totten to get to places like U Street. Its usually a remarkably quick trip, especially when the yellow is running. But by cutting back Yellow, youre almost forcing people to go all the way down to Gallery Place and just walking from there... Now the trip may take me 50-75 minutes since I could miss the Green transfer and have to wait half an hour for the next one.

n/a

I use the yellow line to travel between Franconia-Springfield and LEnfant Plaza for work. It would negatively impact me if I had to take less direct options.

This plan works for me because I rarely take the Yellow Line

This would make trains way too crowded. These stations will have more ridership once people return to work. It's embarrassing that even RTD light rail in Denver is not cut service the way WMATA metro is proposing

Don't take yellow train.

That is very inconvenient.

Again, as long as green line stays open

Again, this elimianates people to get to their destination.

You milked away at taxpayer money and fates for YEARS. You all are expensive! And inconvenient! It takes me almost 2 hours round-trip to go 4 miles on you! And costs me \$10!!

Where is all that money now, when times are slim?

Need to think about back ups for times when lines get backed up.

I live in Colombia Heights and use both the yellow and green lines. I would then only be able to use the green line. At least have the yellow line run between Huntington and Fort Totten

Having the switch at GP versus Mt Vernon sounds like a very bad idea. It will add to congestion and confusion.

Same as before. Keep open without staff

I will adjust my travel to accommodate.

no comment

Walkable Metro service is one of the main reasons I chose to live at my current location. It is a well-used stop and is the most convenient way to get to downtown DC whether for business or pleasure.

Gallery Place is a reasonable destination.

I do not use these lines that often.

I often take the yellow line to Greenbelt, and waiting for 30 minutes for a green line train at Greenbelt sounds awful. This would have a big negative impact on me

Greenbelt and College park, besides having a lot of DC workers living in them, are huge parking hubs for DC workers who need the train.

You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

The green line would be too bloated if not only it would have to serve PG county commuters but Montgomery county commuters as well without the yellow line offloading some of the ridership in Montgomery.

We need more and more accessible public transportation for all, as an anti-poverty and anti-climate change measure.

Gallery Place is the most dangerous Station

It will be hard to bring back conventions. and large events to the Convention Center if there is no Metro service. Even for an event being booked in 2023-2024-2025, it will be hard to sell a Convention Center for events if spectators cant see a working Metro.

I love yellow line service going to greenbelt and would be very disappointed if this ended. Yellow line service to greenbelt has been the best and most time efficient change wmata ever made for me and my commute.

Transfer to go to Union station would become complicated

Gallery place is already an extremely busy station. It will only get worse if this is the end of the line for the Yellow line.

I typically use the yellow line from Gallery Place to National Airport.

Critical is Gallery to RR National Airport.

the Mt. Vernon Sq area is densely populated and still growing. closing it is ridiculous and foolhardy.

Ridership is very important for citizens there, many of whom do not have cars.

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| I use Mt Vernon Square to go to the convention Center for events throughout the year |
| The Huntington metro station is where I would get on the Yellow line and I would transfer to the Green line before Gallery Place. This would work for me. |
| Again, shortening yellow to not go to greenbelt negates the use of yellow relative up budget cuts |
| I generally do not ride the green or yellow lines, so this would have minimal impact to me. |
| This is not ideal, but I have lived with the turn-backs on the Yellow Line before and can work with it. I am concerned about platform crowding, however - Gallery Place is a busy station as a transfer station, so the additional people who would get off there to change trains should be considered. |
| Dont close stations |
| Inconvenient only |
| I use the Yellow line to commute to work from PG plaza to Crystal City. This proposal would affect my commute time and experience significantly. |
| 30 minute wait would be a burden |
| Ill tell you transferring yellow to green at rush hour is already a nightmare of overcrowding. |
| This is going to change by then. People are going to be traveling again by 1/22. This years data is unfair to leverage to make these decisions. TAX US and keep our service. |
| That is a ridiculous distance to areas that are walkable from Mt. Vernon Square, and the inside of the Gallery Place metro is not going to handle the capacity of that many more people exiting there, what with the narrow walkways of metro platforms. People push each other - as it is now Ive almost been pushed into the tracks. |
| When Ive had to do this transfer, Gallery Place and Mount Vernon are not that far apart. |
| Closing any station for 2022 is dumb beyond belief and so shortsighted that only Metro could think it is a good idea. |
| Frequency of trains would be important because of increased crowding that would be anticipated. |
| Whether this would work or not is largely dependent on how common telework is in 2022. |
| Yellow line service all the way to Greenbelt helps workers get to and from work from PG and Howard Counties and Baltimore. |
| This would cut service in half for some of the densest areas of the city |
| I only go as far as Gallery place on the yellow |
| No comments. |
| This is not humane |
| See comment before about the yellow line, but to reiterate this line is VERY IMPORTANT for everyday workers trying to either come into NW DC or to leave out of NW DC to the surrounding areas. |
| I cannot imagine trying to change trains to get to Greenbelt at Gallery Place. That station is already incredibly busy, it doesnt need to be made worse by more people switching trains. |
| This will create a hardship for many riders. |
| This plan will adversely impact the quality of services across the Metro network. |
| Is this evaluated based on pandemic era ridership? Would the station open for convention center events? Seems this might increase crowding at gallery place. Would terminating and starting trains at Gallery impact that station's operations? |
| Once again, I travel from Huntington to Shaw-Howard U to see my girlfriend. This causes me to transfer to another line, but to get two more stops down the line the Yellow line would take me in general. This is very inconvenient. |
| I take the Yellow Line twice a day for work - I start at Columbia Heights and I go to King Street/Old Town. I would rather stay on a train than have to transfer to the Green Line because then I would have to wait for a Green Line train and that could take ages. |
| This is not a portion of the metro I would normally utilize on a regular basis. |
| I do not depend on Metrorail to get to work. I am commenting as an occasional rider. |
| The strain on the green line north of gallery place would be untenable. It would be unusable. |
| Still sucks though |
| See my previous comments on this proposal. |
| I do use these lines and stations some but not regularly. |
| WHY are you even thinking of closing these stations?!? How about making the trains actually run on a REAL schedule where you know the minute they are coming in. |
| Are you effectively writing off the Convention Center? |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

This question was already asked

I need my Vernon sq if close I have to walk

I take Mt Vernon Square Station so Im hoping it doesnt get closed.

This will really hurt people who rely on these trains and may not have the resources to afford alternate travel plans!!

I have not used this station, but I can imagine that persons with disabilities would find it difficult to negotiate other, farther stations. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

With much of the population also moving to petworth and Georgia Ave, this leaves only the Green line to service those stations, which is unacceptable.

Very inconvenient

Assuming that the Covention Center becomes fully operational in FY 2022, this makes no sense. If the Convention Center does not fully open, then OK.

The Yellow Line should continue to extend to Fort Totten (a major transfer hub) in order to shuttle residents to DCA

Until the Convention Center reopens then I am sure this station would need to be open.

Regardless of low ridership- this should be mandatory and provided as a right for our city. Uber's are not cheap, taxis are not cheap, parking is not cheap and I cannot afford a car after being unemployed by the pandemic...

No problem here, except in cases where they could be delays.

The yellow line connection to Greenbelt is relied upon by many who would otherwise need to transfer, which adds significant travel time and results in unreliable arrival times.

Gallery place is already a mad house during peak hours. having one less place to transfer would make it worse.

I dont use those lines.

I live near Pentagon City and worked at Navy Yard. The commute was great. The trains were packed.

Yellow line trains need to continue north to Greenbelt. Fort Totten is a critical transfer station that needs Yellow line service and increased train frequencies.

I use this line to get in/out of DC. Gallery place is fine with me

This is my station - and the station that tourists and visitors use to go to the Convention Center. Cutting travel off at Chinatown - particularly requiring a change in trains from Reagan National Airport - makes no sense from a business standpoint and cuts off traffic up to neighborhoods relying on public transport (Shaw, Columbia Heights, Petworth, Ft. Totten & upper Northeast).

Would depend heavily on how often teen line is running. I dont think this is a bad idea provided you run green line more frequently.

This proposal severely reduces transportation options for anyone.

I feel bad supporting a proposal that would hurt riders on the yellow line, but it would work for me because my daily commute involves the red, orange and blue lines.

I do not use the yellow line

Gallery Place Station platforms would become overcrowded, particularly with trains only running once every 30 minutes.

Why metro? dont close down the stations, you know I ride your trains to work!

I rarely use this stretch of the network. The Green Line may be sufficient for those who do.

This would be unfortunate, but possible if necessary.

I don't use the red line.

I do not usually go past Gallery Place. Does this mean you could offer more security at the Gallery Place station?

Again seems illogical for conventions events. When planning conventions, mass transit is a huge consideration in planning a conference in a city such as DC.

This would severely limit my use of metro if these were closed.

This is ridiculous and cuts a whole area off from the metro.

I do not take the Yellow line beyond Gallery Place for work purposes.

Leave the Yellow line as is.

I dont often use the yellow and green lines, and when I do, I typically change at Gallery Place since I live on the red line.

I think you should close down the green line.

While it would reduce options for going north of Gallery Place towards my home station of College Park, it would be better than some of the other options.

This option would not impact me

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Again, we have to make tough choices.

I use the yellow line, but not the stations mentioned.

I do not take the Yellow Line, but anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

No, this will not work for me as a young person who is very much planning on using the metro as my primary source of transportation in 2022 because I do not have a car, nor can I afford to buy one. At that point, I largely expect to feel safe enough to go about the city, which includes going to work, going to dinner, fueling the local economy, etc.

Again not applicable to me, but by forcing green line to also switch at Gallery Place (already a packed station) is only encouraging more chaos. Rethink this.

Again another terrible and garbage idea might as well shut the whole line down if you guys are doing all this mess

As mentioned earlier, this would halve the number of train options available to me going to and coming from my home.

I don't use this station or live in this area. Since it's downtown, by Jan 2022, we would hope that things are closer to normal, with possibly more office workers and tourists. Closing this station will affect those populations.

The Yellow line should continue on to Greenbelt.

This change will not affect me.

Stop closing stations.

My commute requires a Yellow line ride to Mt. Vernon square. Stopping at Gallery Place would be a substantial inconvenience and may discourage me from using Metro to commute.

Can I still connect with Red Line to the Airport?

This sounds reasonable, but it's so hard to answer intelligently without any data.

Green line already takes time in between trains, further reducing the trains between Shaw-Howard U and Greenbelt might deter current riders to continue using metro rail

Yellow line trains should continue north on the green/yellow line.

shut WMATA down!

I frequently transfer at Gallery Place. The station is already packed whenever trains pull in to transfer. If Gallery Place is the final transfer point from the Yellow Line to the Green Line, Gallery Place will be even more crowded during transfers.

Unable to take Metro to Convention Center for conferences

This wouldn't be the end of the world, as there are opportunities for line transfer.

I do not regularly rely on Yellow or Green Line.

I do not regularly travel on the yellow line to Mt. Vernon Square. This would impact those who do.

I do not take Yellow line trains but this seems like an easy way to reduce yellow line wear and cost as an individual could just switch to green at Gallery place or seek alternative methods of transport from Gallery place.

I think if the yellow doesn't run to Ft. Totten, cutting off at Gallery place is better than Mt. Vernon. Those platforms already get crowded though so we'd have to think about solutions.

Having the green and yellow lines go to Greenbelt is very helpful with commuting and getting to/from DCA.

You shouldn't be closing stations at all, and you should keep the Yellow Line service to Greenbelt.

Gallery Place is already an extremely crowded station. Doing this would increase the congestion.

Columbia Heights is vital, please connect yellow to Columbia heights to allow better transportation there

I transfer at Fort Totten and would like more options

I don't use this line.

Shutting down Yellow Line north of Gallery Place/Huntington hampstrings riders on the Yellow/Green Lines. The waits are so long when Yellow Line doesn't run.

Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

I take it sometime to Maryland

we do not live on a yellow line.

In a previous question you asked if it was ok for the Yellow Line to go to Mt. Vernon Square and not Greenbelt, and now you want it to go only to Gallery Place. Um...??

Stations should never be closed. Frequencies ok, but to close stations is to effect access to travel, to work, will disproportionately affect low income and BIPOC communities, and drive housing prices down. It could ruin communities that people moved to specifically because there was metro access. Once built, it doesn't make sense to close stations.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Mt Vernon Square should either not be closed or be capable of being reopened for specific convention center events.

Again, not ideal but this is only one station short of Mt. Vernon Sq so I dont think it would be a huge difference.

These particular short trains are INCREDIBLY disruptive for commuters from Petworth, Columbia Heights and U St who take metro into downtown and back home after work.

It would work but would delay transfer to Suitland from Pentagon.

While it makes sense. Gallery place Chinatown stop is full of homeless people, people using drugs (openly), hanging out, etc. I often will go to Mt. V to avoid GP in the evening because it feels unsafe. Especially entering on the H street side and going down the long corridor. I also can't imagine trying to access the convention center and having to go to Chinatown to do so. With long waits between trains, this sounds like a nightmare.

I use the Mt Vernon Square metro station to get to and from my church (Holy Redeemer), as do many other parisioners. Not to mention, it is the main way that people access the convention center. Please dont cut it.

This is not part of my normal commute, but I think this could negatively affect Reagan Airport operations if only one line services that station.

Don't close the station. It's an accessibility issue for people living and working nearby

Yes!!! Get rid of the rif raf from the green line.

See my thoughts on the proposal concerning the Yellow line trains operating between Huntington and Mt. Vernon Square. Same concept applies here. Truly ridiculous.

Same comment as before consider rush hours and weekends. During rush hours It should be every 3 mins.

While this plan would work for me personally because of my current home and work locations, I know it will create difficulties for others who rely on the yellow line for transit to/from DCA.

This would probably work for me, but overcrowding -- pre-pandemic -- was already an issue at Gallery Place. It was iffy to even find a place to stand on the platform. This plan seems to invite an exacerbation to that problem.

I dont live near these stations.

I dont use the Yellow Line and dont want to dictate how it should be amended. As a Red Line user, amendments to non-Red Lines are in my favor since they likely pull attention away from my line, but we all need the Metro. So Im abstaining from this one.

This will cause more overcrowding at gallery place, which is already a nightmare to navigate at rush hour

I regularly use the mt vernon stop for grocery shopping.

We want the full old schedule!

Gallery place is where I typically transfer to the green line anyways so closing mt. Vernon square would likely not be an issue.

Anything that delays makes Metro worth less to me. To make Metro viable it has to run more not less. Once you have a station why not use it.

Metro should also end service to National Airport, Union Station and any other high traffic station because people should suffer. I agree with Metros stance to make travel the worst possible scenario for the unwashed and lower class trying to do anything. Metro should also install spikes on seats on the train to make sure people cannot sit.

I like the access to both the yellow and green lines. I live near U St Metro

I use the Yellow line to travel between Archives and Pentagon stations. This is very inconvenient for everyone who travels from DC to the Pentagon.

bad serice not good

This greatly reduces service to Ward 4 in the district and the eastern suburbs

Id be able to transfer at Gallery Place, thats fine

What a sad, sad, proposal. Operationally this makes no sense. The trains will still turn at the pocket track at Mount Vernon Square, right? Only that station might be closed? Stupid, stupid, stupid. You should take this proposal to the feds and say look at this stupid proposal we are considering; give us more money.

the green line is already TOO CROWDED and busy. if yellow line service wont go all the way to greenbelt the Mt. Vernon stop was a good place to make a transfer because theres ample room for people with luggage to wait to transfer to the yellow line and vice versa. adding more people to Gallery place to wait is not a good idea

Due to the routes being similar between yellow line and green line after Gallery Place, this seems logical.

I go their to my friends

Mt Vernon Square is at the convention center. what do you all propose to do during tourist season, fall fundraising events and conference season in the spring???

Please do not do this. It is unreasonably burdensome.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I take the Mt. Vernon Square Station or go past it and anticipate doing so in 2022. Many people live beyond Mt. Vernon Square. This would disproportionately affect lower-income communities.

DO NOT service Gallery Place ---- too congested and too many kids hang out there

We do use it now and then.

Given the other options to get further (green line) that is fine but waiting 30 minutes for a connecting train at Gallery Place is not.

Gallery Place is crowded enough as it is- I dislike transferring there.

Mt. Vernon Sq is for the Convention Center. I don't mind walking from Gallery Place, but not sure how people attending a convention will feel, as well as the businesses in the area.

This would not affect me at all.

It should continue to U Street

The Green line is always packed with passengers by the time it arrives at Gallery Place, so this will be most unfortunate for riders needing to catch the green line from Gallery Place towards Greenbelt. Perhaps add an additional train in that case going to Greenbelt.

No, this makes it inconvenient for transfer to the Yellow line for travel to DCA Airport.

Gallery place would be a nightmare when there are events at the convention center.

Gallery Place is one of the most crowded stations in the system. Removing Mt Vernon Square as an option will only make it a more virulent public-health hot spot.

I live at King Street, so this would be within my frequent routes.

Closing stations will destroy communities

I live in Petworth, and it is a huge benefit not to have to switch between green and yellow. This proposal would materially impact my travel time

Almost never ride Yellow line

I don't think it is wise to close Mt Vernon

I need a little further north on the yellow line, like Shaw.

This is ridiculous. This is going to make the metro so crowded in very unsafe ways.

I rely on Mt Vernon Sq for work

Gallery Place and Convention Center are a close walk. This is not an issue for me.

Seems a bit extreme to have Gallery place as the last transfer station, but given that the Yellow line runs alongside the green line much of the way, it may not be terrible.

With larger conventions likely returning in 2022, it would be inconvenient for the closest metro stop to the Convention center to be closed.

This would add a significant walk time to my trip, or significant waiting time if I wait to transfer trains to go one additional station. I would reconsider using metro all together

I would like to see more options for traveling to greenbelt

I use the Archives metro station

I'm not familiar with these stations but I'm sure the riders that depend on the Mt Vernon station would be against this.

If this helps save money I think this would be fine as gallery place is usually as far as I need to go.

It would be okay since I can still take the Green Line to College Park.

Again, I work near Mount Vernon Square and cannot drive due to medical reasons and disability. I rely on metro to be able to keep my job.

This would destroy my commute.

These changes would impact commuters negatively. Long term Changes should not be considered for public transportation due to the pandemic.

Cut WMATA worker pay. Everyone else has seen big pay cuts. They need to pitch-in as well...

Im on the Silver Line

Although this would probably meet my needs, this reduction in service should be avoided if at all possible. Metro is a critical component to equitable economic growth region wide and cuts in service would disproportionately affect low-income workers. Metro is a public good and should not be run like a business. Although I understand if no further subsidy comes from Congress cuts might be necessary, please keep fighting.

Gallery place is a zoo. It's much less hectic to transfer between yellow and green and MV square.

again, seems to remove train options at the other end of the green line.

Not applicable to me, but strongly opposed to closing stations and limiting access/increasing travel times to those who don't have other means of transportation

Remember that this was an anomaly year. Rush hour is already ramping up. Ridership will too.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Unfortunate to potentially close Mt. Vernon, but Gallery Place is a good hub, and close to Mt. Vernon so this could work...

Although an inconvenience for me, this is better than closing stations.

I may be moving to the g/y line north of Mt Vernon this year and I work in Crystal City. If the yellow line went to Greenbelt during rush hour, this would be ok.

I could live with it, but see previous answer. I would think you would make the end point further out, like Georgia-Petworth.

I change to Yellow line at Mt Vernon Square

Rarely travel as far as Mt. Vernon Square on the Yellow Line.

Yellow line service through Fort Totten is important to relieve pressure on the Green Line and Red Line.

This would cause major route complications and delays and extended commute.

Dont close stations

I dont know how much extra utility anyone gets from having the Yellow line travel to Mt Vernon Square. I expect people thought that conference center would get a huge amount of passenger traffic, but that has not been my experience. Of all of the questions so far, closing Mt. Vernon Square makes the most sense.

I don't live along yellow line. So I can't answer this question.

No cut to service other than Shorter trains is acceptable. If you're want ppl to use metro it needs to run like a metro: not like Amtrak

May depend on how reliably timely and efficient the transfer between line would actually be.

Least bad of the proposals so far re yellow line

This would work, but would significantly reduce service to my stations on the north end of the Green Line

Gallery Place is already a mess and the last thing it needs is more people.

Only so long as service on the yellow and green lines is frequent enough to make transfers to the green at Gallery Place feasible.

Closure of Metro stations is not the answer. Currently you have an overwhelming number of people teleworking, who pre-COVID would be taking the Metro. Prematurely closing Metro stations before knowing how ridership may increase is a faulty approach.

As mentioned earlier, the yellow line is the best way for me to get to College Park, where I expect to frequently be visiting.

Id deal with it

This would fail the large number of lower income families who live within a short walk of the Mt. Vernon Square station. Gallery Place is a longer walk, especially for those with mobility impairments. The Green Line would need to run more frequently for this to be practical. Also: when the Washington Convention Center re-opens this would be a patently foolish move.

People live & work in the area of Mt Vernon Sq and the station should be open so customers can either get home or to work.

I am not currently dependent on the yellow line. This may change as 2022 approaches as I may be working a new job or be living in a new neighborhood.

I rarely use this station but it should be available to those who need it

I dont typically travel this route, and would figure out how to make do when needed.

It is not ideal, but if there are other places to transfer, it should not be a problem.

That shouldnt cause an enormous problem

Given that this is duplicative service with the Green line we can use the Green line for that direction

I need the yellow line to run to fort Totten at least (Huntington to fort totten). Transferring to the green line would add time, hassle, and risk to my commute.

Please dont close down any stations.

It's not ideal but could probably make it work

While Mr. Vernon Square might not get a lot of riders, Shaw, U Street and Columbia Heights does and all of those riders should be able to take either Yellow or Green. If Metro cannot provide better service, it will need to return the tax payer money it received from the COVID Relief bills and some from the dedicated jurisdictions.

It doesnt affect how I ride Metro now.

Seems short-sighted, given the effort DC has put into trying to redevelop that area. And, again, much of the low traffic is COVID induced.

That's absolutely horrible for getting to the airport. The train needs to at least run to the airport. It's the fastest way to get there given that traffic can be very bad.

If you can get to that station with another line, dont see a problem

I routinely have to go past Gallery Place and I can usually take the Green and Yellow lines interchangeably

Given my usual ridership, I wouldnt expect this to impact me at all.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

This would lead to increased crowding on greenline to greenbelt trains

When Covid is over, people will need access to the convention center at Mt Vernon Sq

I dont use this portion of the Metro system.

Do not routinely use this route.

Same comment as for the proposal about ending Yellow line at Mt Vernon Square. It depends on how long we have to wait for a Green line connection (and the reverse).

This plan works for me only if Yellow Line trains operate as frequently as they did during most of 2020.

While it reduces the frequency of trains that I can take from my home to downtown it does make sense.

Wouldnt affect me. Sounds like a raw deal for Mt. Vernon Square passengers. But I have no useful knowledge to contribute.

I do not use the Yellow or Green lines currently.

Why would you close a station so near the convention center? It just doesn't make sense.

We enjoy dining in many of the restaurants in the southern section of Shaw, served by the Mt. Vernon station. Its quite a walk from Gallery Place, especially in the winter or in inclement weather. Those establishments would lose our patronage and metrotrail would lose our fares.

I frequently take the yellow line to Columbia Heights station. This would cause the need to transfer trains mid ride and would cause delays and increased ride length

Ridership will increase in 2022 with pandemic under control. These proposals seem short sighted.

If the Green Line runs frequently enough this would be potentially helpful. However, it is wholly dependent on Green Line frequency.

N/A

I think this would just increase traffic for Yellow and Green Line riders and could create bottlenecks at Gallery Place.

It is critical that we increase opportunities for public transportation rather than decrease. Stop making the system harder and more confusing to use.

I actually used to live in Greenbelt! I rarely go that way any more, but if I did then I would definitely be sad.

I dont ride Green line

This is not what providing adequate transportation looks like.

The train will already be going through this station to get to the others, why would you close it!

i do not use the yellow like frequently

Gallery Place is already a madhouse. Making it the last option to transfer to the Green Line is tough!

I dont use the Yellow line.

This disrupts service to some of the areas with the most housing, event venues, and restaurants/bars in the entire region - it seems short-sited to permanently deprive them of service and will likely have negative financial impacts across many areas.

This would not affect my particular commute, but I do wonder if it would increase the crowds and bustle of the Gallery Place metro in an untenable way

Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely reamining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations.

Given its the district with other options for commuters this option appears to be reasonable.

it would be inconvenient. I do not go beyond Vernon square, but it do go to Vernon square. The closure of of Vernon square would impact me more than not being able to go beyond.

I rarely use the stations in question, so this wouldnt affect me.

I think this may be shortsighted. When the convention center is back with conferences, wont Mt Vernon Sq be busier? Also growing popularity of Shaw etc neighborhoods.

If this one closure would prevent the closing of multiple locations it would be preferable. This does not sound like a major inconvenience to most people.

This would work if they increase the frequency of green line trains

Do not use Yellow line for commuting, so largely will not be affected

This leaves a whole section of the city without Metro service - not a good idea.

Yes if I need to transfer to another station this will work

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Yellow was my usual line prepandemic and Gallery Place was as far as I ever needed to go.

Do not travel that direction more than three times a year.

Then I wouldn't be able to take the yellow line and my commute would have half of the options.

I do not take this line and not fit to answer this question.

Same comment as immediate prior question

It could technically work, but what are the plans to deal with all the extra traffic if you close it? The Chinatown metro is already unbearable during rush hours and public events.

Reduce number of cars and have trains running on an hour basis.

This would be very inconvenient for me.

Absolutely unfair to those citizens living in ethnic neighborhoods to the North and it means lack of airport access to Reagan without a train transfer

It seems very likely that by January 2022, we will be largely past the circumstances that caused low ridership at Mt Vernon Square. It would be irresponsible to estimate future usage based on pandemic ridership levels. By planning to close a station that is likely to return to pre-pandemic levels in January 2020, WMATA will discourage returning commuters from using metro, magnifying the ridership problem.

This decision should not be considered until the pandemic is "over" What happens when conventions start again and all tourists and people coming into that area that rely on station.

These closures only make sense if you keep the train frequency up. removing train frequency and closing stations makes the metro useless.

This would double my weight time to get into the city from Greenbelt Station.

I disagree with this, mostly due to the termination of the Yellow Line south of Greenbelt and not so much due to the closing of that particular station.

I rarely ride the yellow line, so I don't know the specifics here, but I believe closing stops altogether is too great of a detriment

My commuting route is to take the yellow line from Columbia Heights to Crystal City. If the yellow line stopped running from Columbia Heights the train frequency would be reduced and inconvenience increased such that I would be forced to commute using a different mode of transit.

As long as Green line trains run more frequently to accommodate the increase of riders transferring from yellow line.

Seria demaciado difícil y tardado mi viaje

The access to the Shaw neighborhood from Downtown would be greatly affected

I seldom use the Yellow line except to Regan Airport.

This is one the less painful ways of saving money because Maryland commuters have the Green line and few people commute between Virginia and Greenbelt.

Its nice to have more trains that go all the way, for both frequency and crowding, but the reason makes sense.

Rarely ride Yellow or use that station.

a little inconvenient, but workable

Provide more extensive service, people need to get to various locations on this line.

This would not affect me.

Gallery Place is already a huge transfer point, with people transferring from the Red Line to the Green/Yellow Lines. Allowing Yellow Line users to transfer to Green Line trains at the next station would help control the number of people on the platform at Gallery Place.

it seems like it would just make sense to turn around at Fort Totten if Mt Vernon Square is closed?

use EFC station

This isn't great, but it's workable.

I do not often need to travel to Mt Vernon specifically.

Mt Vernon Square is an important station for tourist traffic and revenue

I ride the yellow line a lot, but maybe not often to Mt Vernon Square

It would be best if Yellow line trains went all the way to Greenbelt at least during rush hour. It was so helpful when Yellow line trains started going all the way to Greenbelt and I don't want to see Yellow Line trains not going to Greenbelt during rush hour.

Mt Vernon is a good station, especially for the Convention Center, however it is pretty close to Gallery Place, so it's not the worst idea.

I have no need of both lines.

horrible idea! Gallery Place is challenging enough (crime, etc.) . don't close stations.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Most people exit the train at Gallery Place anyway, in order to transfer. The few that need a Green Line train would exit here as well, to not wait at E01 and watch the train terminate and enter the pocket track.

This is terrible. Do not cut off metro access to residents that pay so much to live in the district. Increase metro fares instead of cutting off accessibility. Many people in this neighborhood don't have cars and depend on the metro to get them places. This proposal is also a list against disabled residents who cannot simply walk to another metro station.

Only if Green line service is maintained.

People take Metro to the convention center. If you're judging ridership at a time when the convention center is closed, that is a mistake.

As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

The Rush Plus idea is bad, but it doesn't really matter where the turn back happens if it is to happen.

sad, about it...but I could bear this.

I am opposed to any station being fully closed (i.e., no line is servicing it), but Yellow ending at GP is not a big issue. As with other proposals, I hope it would be revisited once ridership increases, although ridership may never increase if certain stations close.

This makes sense because every station would continue to be serviced.

Gallery Place is the most difficult and logistically unsafe place to transfer. To force more commuters to transfer at this station will increase injuries and decrease ridership. This DC administration will be remembered for killing the Metro.

The Yellow line should continue to at least Columbia heights. Close the Mt. Vernon stop except for when there are conventions.

The yellow line should run more frequently if this change is implanted so those who use either line are not stuck waiting an exorbitant amount of time to transfer.

I need to go beyond Gallery Place!

This would be fine, not ideal since taking the yellow line all the way to college park would be the most ideal situation, but it would technically work.

It just depends on other alternatives

This might be inconvenient on occasion, but would be manageable.

Doesn't affect me at all.

This was in place during Rush Plus and seemed to work okay. Gallery Place is a well functioning station.

Closing Mt Vernon is a terrible idea. Convention Center. Closing stations means an end to safe and convenient METRO travel. Entire system will fail as ridership drops from very diminished from Covid to nearly zero.

Makes sense to limit transfer points in the city rather than the suburbs.

the same reasons I stated before

Cutting Yellow line service from Greenbelt is a terrible idea! We already had to deal with this! Trains were overcrowded, commuting to Greenbelt late at night was not safe, abort this idea!

This would be disastrous if YL-Line doesn't run to Greenbelt. Gallery Place is a major transfer hub -- it doesn't need to have the additional traffic of additional transfers.

See previous comments

This works because of an option to transfer on another line.

I don't like the idea of closing Mt. Vernon Square (this would be bad for the Convention Center) but this is more reasonable because it focuses on the Potomac crossing while still allowing Red Line transfers and giving Virginia commuters a choice when arriving in the District when the Blue/Orange or Red tracks are backed up.

So long as I can get to Columbia Heights on the green line, it's okay.

When restrictions are gone Gallery Place is too crowded to transfer so need more options for transferring

I need a direct metro line from Van Dorn to Fort Totten. Just close all stations at 9pm. That's the best option I've heard so far.

See comment about closing stations.

Again Metro backwards process at work

Rush hour is crazy on the green/ yellow lines between these stations. When people start going back into the office (federal employees in particular), more people to a car is more dangerous for future COVID strains. Also this would force people to transfer back to a yellow line if they need to, where transferring is inconvenient especially if you're on a time crunch.

This technically works for me, since the greenline trains would still be available to get to the stops between Gallery Place & Greenbelt

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Having access to the yellow line at the Maryland green line stations is beneficial for accessing the national airport without a car or vehicular travel. Additionally this will increase commute times for those along the Route 1 corridor .

Covid-19

I think it would be preferable to not close stations and instead alter train commuting times instead. Completely closing stations impacts much more than just commuting time. However, of all the potential stations to close, Mt. Vernon Square-Convention Center is most likely the easiest to close since it is so close to Gallery Place.

I rarely take the Yellow line at Mount Vernon Square, so do not feel qualified to comment.

I think the line should go further north, at least to Columbia Heights

I think this would cause a crowd of people in what has been a typically crowded station.

Workforce? What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

Gallery Place is crowded enough, especially on days with events at Capitol One Arena.

Again considering that we dont have any numbers of cost or ridership or alternative transportation methods it is hard to say if the elimination of these stops are affecting the people that really require metro.

I think these proposals assume we will never go back to metro, they will exacerbate pollution and increase the number of cars everywhere.

I rarely ride the yellow line.

There are already not enough trains that continue up to green belt.

Mt Vernon Sq is my home station. This would severely impact my mobility in the city along with thousands of other downtown residents.

Again, Im not okay with any of your plans to close stations or bus stops. Find another way.

I think Mt. Vernon Sq. should stay open, especially if passengers are trying to head to the DC Convention Center for special events such as the Auto Show.

I need to take the yellow line to get to work and if I use the blue line I will be really late for work

This would work, but I wouldn't be happy about it.

It would make a busy station, even busier, and potentially even more unsafe with crime. Which although currently down due to low ridership, with increased ridership in this station, it could increase both exponentially.

Seems to me there would be a big impact on Walter Washington convention center events

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies. I moved to the Grosvenor area because of the metro being right there, am i supposed to see my home and move ?

The section from Gallery Place to Ft. Totten is dense, populated, and would suffer more than a similar service reduction in less populated areas.

I do not use the Yellow Line regularly. Once again, I want to urge WMATA to reconsider what seems to be a strategy of drastically reducing service in order to lower costs in the short-term. The less reliable Metrorail becomes, the more ridership will decrease and the more WMATA revenues will decline, forcing further service cuts in the future.

Cant believe you would close stations, how much wasted expense was put into MATA when those were built?

Yellow Line service north to Fort Totten and College Park is very important! Most obviously it makes it far easier for everyone in the north area to get to Reagan National Airport, but most importantly for me is it makes it far easier to reach destinations along the line because combined with the Green Line it increases frequency and makes transferring much easier. To get from Reagan National to Union Station, you would have to change trains twice! This would make my travel much worse.

My commute wouldnt be directly affected.

Gallery Place is already insane.

I think its important that the yellow line continue service beyond Gallery Place. I live in Columbia Heights and travel to NoVa frequently.

Primarily use red line

That would be ridiculous given the proximity to shopping and businesses.

Again, I really think yellow line needs to continue to Fort Totten at the very least, even if you cut out Mt. Vernon.

gallery place is already too crowded on the shared green/yellow platform

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

What about the Convention Center???

Fort Totten would be a much better terminus for the Yellow Line.

The platforms at Gallery Place get overcrowded as it is. If more people are forced to offboard and transfer there, it'll only get worse.

Gallery Place is already a very crowded station and you often have to wait for several trains to go by before you can get on one.

I hardly ever ride Yellow and Green Lines.

I've typically haven't taken the Yellow Line to Greenbelt and this change is going back to the original operation of the Yellow Line before the change 12-18 months ago.

As long as green line trains run at regular intervals, I do not need the yellow line for my commute.

Technically, this would work, especially when transferring from the red line. But see concerns noted in section regarding yellow line stopping at Mt Vernon Square

DC needs a robust public transportation system that operates like any other major metropolitan area. This is a NO GROWTH mentality and wrong for the region.

I don't use the Yellow Line

This is crazy. This would be devastating for DC residents who commute to Northern Virginia (Arlington, Crystal City, etc), which is a huge hub of business activity. Do not do this.

Mt. Vernon is one of my most frequented stations, under normal circumstances, because it gets me to and from Reagan National.

I transfer to green line at L'Enfant

I don't ride that area the way I used to, but it seems like an inconvenience for the public that need to go that route.

I don't take in that direction

Gallery Place is one of my main destinations when taking the metro, so this plan would work for me.

This decreases the options for people who are making the trip to Greenbelt.

I do not ride the Yellow Line often. The possibility of being able to still transfer at Gallery Place would still accommodate my needs.

Need more opportunities during rush hour to get to and from work. These long wait periods would congest peak travel times and make commuting twice as long waiting for the next train.

Additionally these lines are key to DoD operating and commuting. Need these to get to work since parking is limited.

Same reasons for last Yellow Line proposal, this has just shortened it further.

The transfer would work if trains could be coordinated without a 40-50 min wait between one train and the next.

Do not use the line

This doesn't seem awful, as the Green Line is an option.

And wait 29 minutes for the next train going on the same track? No.

don't use yellow line that often

Living in Virginia, I rely on the Metro to go cross town to visit friends, see plays and eat at favorite restaurants in Maryland.

Mount Vernon Sq is an important stop because of the convention center.

This answers my previous question and is bad! The yellow line needs to go further!

More trains, more train stations, higher frequencies means more people, more ridership, and higher revenues.

The Mt Vernon Square station serves the DC Convention Center and a vibrant restaurant and shopping district north of Gallery Place. With gatherings and events increasing at the DC Convention Center in 2022, this station serves an important purpose in bringing visitors in from all sections of the DMV region.

I typically use the yellow line within DC or to L'Enfant Plaza or Gallery Place so this would have minimal impact on me.

How are you gonna close the Convention Center station? If the Center is being properly, it's drawing in visitors to the District and they should have a convenient method of public transit to arrive there.

I have never used Mt Vernon Square Station.

Unclear what the actual impacts would be for workers but seems reasonable

As long as green line trains run very frequently between Gallery Place and Greenbelt this wouldn't be too bad for me.

Stay going to Greenbelt anything could happen on the green line to Greenbelt

Wouldn't that limit transportation options for going to the DC Convention Center?

Unclear how you can make decisions based on this is necessary???

that convenient for me

I would force to change trains again but then I had to do that for years previously.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I use mt Vernon sq stop

This feels like a repeat question -- I have already said that in addition to this meaning fewer trains servicing my metro station (hyattsville) it also means that the green line train needs to wait for yellow line trains to get out its way. Just wait on the platform a few times while thats happening and youll see what I mean

The effect here seems similar to the last yellow/green proposal, but I am not sure how crowding at Gallery Place would be. Getting out of the tourist zone before switching lines has its benefits. I am guessing I could live with this, same as the last one, but I am a bit more uneasy about it.

Because I live in Greenbelt, having the yellow line run all the way to Greenbelt has been really convenient for me. Still, Ive been here long enough that Im used to having to switch trains around Gallery Place if I need to get on the yellow line. I could make that work on those rare occasions when I need to go that far south.

Transfers would be much more difficult for anyone with mobility issues, because the Gallery Place station is simply more complicated.

Gallery Place would become a useless station if we could no longer use it to go to Capitals hockey games, Wizards and Georgetown basketball games, and any other evening events at Capital One Arena.

This station is close to the convention center and the verizon center. This just doesnt make any sense.

having options to switch to the green line is very important because of intersection of other lines

I need the Mt. Vernon Sq. stop

Since I hace lived in the DC area, I uave never seen a more mismanaged public transit system. Fares keep going up, service keeps going down. Rampant system delays and unpredictable track fires. What incentive do I have to ever use Metro rail again?

While this could work during non peak times, having both yellow and green line trains running during peak hours is necessary to avoid overcrowded trains or lengthy waits when transferring between green and yellow is necessary, causing people to be late for work or need to leave home or arrive home later than necessary, which reduce ridership and revenue from those who have other means.

This closure would have devastating effects on residents and workers who rely on the Yellow Train to Greenbelt, such as the people who work in our grocery stores and hospitals, support city government services, public safety, healthcare, eldercare, childcare.

I regularly use the green/yellow to get from ustreet to petworth

Not during M-F peak commuting hours. Yes, for everything else.

The green line would need to operate just as often as yellow for this to work for me as I live right off of them at Georgia Ave/Petworth

Again Yellow line should terminate at Ft. Totten to ease the increased transfers for elderly and disabled riders

It has low ridership because people are working from home and mainly because no conventions are being held at the center. Although I imagine rideshares will greatly enjoy the massive bump in revenue if you close the station for all the people going to conventions.

This would cause difficulty for Yellow line train users and contribute to crowding at the Gallery Place station with people having to transfer from one line to another.

I dont generally use Yellow in that area, so Im not actually sure what this would do.

I do not rely on the yellow line for my commute.

Changed trains will add to a journey. The Yellow and Green line should remain as is. With both going to Greenbelt, there isnt a long wait for trains.

As I stated before, Id like to see Yellow Line trains continue running to and from Greenbelt.

This is a terrible idea. Turning around a train right after gallery place, a busy transfer station, only spells doom.

Closing stations is not a good solution, and will be very disruptive for regular metro riders.

dont know in future.

If there is no other option to get to Greenbelt, the Green line would be my only choice.

dont know area.

Consistent reliable service at every station should be the goal! You cant build ridership if trains arent running! Give marketing and promotion time to build ridership.

Gallery Place gets too crowded too quickly.

This could work during the middle of the day but not during rush hour

Please, more trains, all the stations, and more frequency. Avoid the death-spiral of reduced service leading to reduced demand. The city and region needs the access WMATA can offer as we recover from COVID.

In a non-COVID time, Gallery Place is already very crowded during rush hour. This step would make it marginally worse.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

The inconvenience of a transfer to continue in the same direction for only a few stops would cause me to find other means of transportation.

As I answered earlier, please keep Yellow line service to Fort Totten at least.

See previous comments re: the additional loss of Metrorail ridership, increased demand for investments in road space and parking, and the increased contribution of DC area transportation to global climate change.

This is a great idea to save on costs due to low ridership. Once the ridership improves, service could be reimplemented.

How frequent are the green line trains in this plan?

I don't take Yellow and Green Lines as frequently, so I don't feel comfortable voting on this option.

If double trains (Green line and Yellow line, for example) are running on the same rail between the same stations, one of those could be eliminated for that stretch of rail. People won't stop taking Metro just because they have to transfer trains once. But Mt. Vernon Square station is crucial - don't close it.

Metro should NOT reduce the parking fees as proposed. If anything, WMATA should INCREASE the parking fees to \$5. It is critically important to increase funding from the Federal, State and local governments. Maintaining bus service is especially important for low income. METRO should consider allowing vendors to operate in METRO stations, such as T shirt vendors, sundries and non-food items. Food products could be sold (e.g., canned goods). While food consumption should NOT be permitted on the METRO, METRO/WMATA should explore the idea of setting up food stands that sell coffee, tea and counter food items as they do in European subways, NYC subway system. METRO/WMATA needs to find new revenue sources. Allowing vendors to operate in Metro stations would provide additional revenue.

If this option is adopted, it needs to be well publicized.

Do NOT close Mt Vernon Square.

not enough info - what will green and yellow train frequency be?

This proposal is reasonable. My only concern would be about travelers who may be coming from the airport and are staying at one of the hotels near Mt. Vernon station.

Reducing the Green Line so drastically would NOT be a good option. This decreases mobility around the city and makes it more difficult and more time consuming to travel.

How can you NOT stop at Mt Vernon? Do you realize how many people work in that area? Does anyone at Metro have a population map? Or just a map? Mt Vernon is a major stop! There is no other stop in that area! Why don't you shut down Farragut North while you are at it - or does Farragut stay open because it serves mainly white people working on K Street?

Don't use yellow line

Gallery place would be a nightmare, and that's a key transfer location for me.

I think if I needed to go north of Gallery Place, this would be sufficient.

Limited transportation options to PG County

There would be no access to Chinatown or Smithsonian Museums or Verizon Center.

In normal times, Gallery Place is such a busy and crowded station. If forced to transfer from a yellow to green line train, it would be better to wait at one of the less busy, single platform stations North of Gallery Place.

Mount Vernon Square station only ranks 60th among 86 qualifying stations in ridership, according to 2016 data. If low-ridership stations are to be closed, shouldn't the lowest ridership be targeted, and not a station (seemingly randomly) selected from the middle? There are no concerns about terminating Green Line trains at Gallery Place. However, it should be due to sound financial planning and not nonsensical selection criteria.

I could adjust

I occasionally travel on the Yellow Line.

No problem.

Stations beyond (north of) Mt Vernon Square serve major destinations -- eg Shaw/Howard, U Street, Columbia Heights -- and allow workers, students, visitors and families to access their needs.

Again, people depend on these stops. This is a short-sighted plan that will take effect likely after this crisis is over, when people will be returning to the convention center, which doesn't even begin to get at the fact that people live near this stop and depend on it. There are quite a lot of homes near this stop that are not actually close to another Metro stop at all, but I guess because they are not wealthy ones you all do not find them worthy.

The Metro is my primary mode of transportation as I don't have a car.

Cuts in service and making transfers harder will negatively impact ridership.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I live near the Gallery Place station, this limits a great deal of places where I can get to relatively easily.

Green/yellow stations are a blessing

Gallery Place station is already an overcrowded station.

This would reduce core capacity in dc to unacceptable levels.

There are a lot of people who use Mt. Vernon station. What happens to them?

Don't like it but could probably adjust

Ditto my previous comment on closing stations.

I travel back and forth between Van Dorn and DC so that works

Overcrowding at Gallery Place seems likely.

No station closures! Ask Congress for more funds!

Yes this should not be a problem, seeing that making transfers for going north could be made right there on the platform.

All the conference goers use Mt Vernon-- traffic would be horrendous and Conference goers would go elsewhere-- and DC would lose money.

To get to the volunteer work I did in the Shaw neighborhood prior to the lockdown a year ago, I got off at Mt. Vernon Square Station.

I need to access College Park station.

This works for me because I ride the green line and red line. I do not know how it would impact others.

None of these proposals make sense if youre intending to keep or gain ridership.

This would be non-optimal, but workable.

Mt. Vernon Square businesses would be severely impacted.

I live inside Huntingdon.

I am just astounded that WMATA is proposing the PUNISH the residents, visitors and commuters who have been loyal to you for decades. Yup, theres been a pandemic that no one individual is responsible for and yet here you are using the skewed data of a year of tremendous hardship to push your agenda. I cannot even say how incredibly disappointed I am with WMATA, just so sad and utterly unacceptable.

Have yellow line go to ft totten like it used to

I do not expect to use this route or stations.

cuts off service to high residence areas north of GP.

This plan may work, but it would be very inconvenient for many people.

As I mentioned before, my time waiting for a train would most likely be while I am on the WMATA clock.

This would have minimal impact on riders trips, as it requires just a simple train transfer and does not increase time between trains or reduce service significantly.

please keep in mind how crowded gallery place can get with all stations running normal. workers are stating to return to the office. stopping at Shaw-Howard or U st may prevent less clutter and help stop the spread of clovid-19.

I need to ride the train to College Park, stopping at Gallery Place doesnt help me.

I would just have to only use green to get home.

I think there would be more riders if the yellow line went further.

Important to service convention center.

First, you proposed stopping Yellow Line service at Mt Vernon Square, now this? Although it is only one stations difference it is still significant for people.

I don't travel the line much, but again the more you take away the more riders will walk away from metro and create a more disastrous car-based commute

Green Line trains do not run frequently enough to handle the crowd of commuters that rely on the Yellow Line north of Gallery Place. THE GREEN TRAINS SHOW UP FULL.

U want to cut stops where majority of federal govt is situated! How do u expect people not be crowded at rush hour and not miss trains! U r about to create a crowded mess that can be detrimental to getting out of this pandemic! Keep metro as is! Do not punish riders!

All trains should run to fort totten to decrease crowded cars to help promote social distancing.

I do not use those stations.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I use the Yellow and Green lines at Fort Totten regularly to access areas of the city not serviced by the Red line (I live near Silver Spring station). Stopping Yellow line service beyond Gallery Place would severely limit my access to the city, including access to my job. Columbia Heights, Georgia Ave, and Fort Totten are all crucial stations that need both Green and Yellow lines coming through to serve the large groups of riders dependent on transit in those neighborhoods, and the Yellow and Green lines combined continuation through to Greenbelt is crucial for me to visit family living in that area.

Most of my metro travel is on yellow/green, but having to transfer from green to yellow on some longer trips wouldn't be a big problem for me.

All the schedules should continue. Commuters need this. I need this. My community needs this. Congress appropriated 1.9 trillion. Only 9% is going to covid. Get Congress to give more money

If I needed to go to somewhere where the yellow line was I'd use Uber/Lyft. My work travel is off the red line.

What happens to Convention Center events! Why the heck are you closing stations that are near MAJOR EVENT VENUES.?

However, closing any station is, to me, a bad idea.

It depends on how often the green line would come. but like i said on an earlier proposal, making a decision based on low ridership numbers today is invalid. Its a false number and you are doing us all a great disservice.

Having only green to transfer to would make it very inconvenient.

Dont use the Yellow line.

doesn't apply to me but again there are a lot of people who live in PG county that depend on METRO and the greenbelt and college park subway. these are the lower wage earners who don't have cars and need public transportation to get them to and from their jobs or school. Your inability to manage metro budget from the beginning has been an issue and again maybe you built too many stations; instead you should have steady and reliable bus service.

This significantly impacts the accessibility of metrorail for DC residents who live in Ward 4.

After your other questions I am worried that I would need a canoe to get across the Potomac river to Alexandria if I ever wanted to go there.

Except for days when there are special events at the convention center

There are only two stations that are exclusive to the yellow line, as long as these stations keep service, these riders still have easy access to most of the city with blue and green lines

I commute using the yellow line between Huntington Station and Pentagon.

Mayyybe. Again, as a frequent user of Red/Green/Yellow lines the transfers are already hard enough because trains usually don't have a lot of time for transferring without having to wait 15 minutes or so.

That is reasonable

As a regular Columbia Heights station user, we have already seen the improvements to service when the Yellow Line runs all the way to Greenbelt. Stopping the Yellow Line at Gallery Place will create overcrowded trains and delays in timely arrival.

See previous comments about congestion and taking service from the less wealthy side of town

This would make Gallery Place even more crowded as a transit point. Platforms would be very chaotic.

This will inconvenience a small number of passengers as there is still a required transfer. Operationally continue using the Mt. Vernon Square pocket track to turn trains around to head back to Huntington.

Unless you add more trains from Gallery place to Greenbelt, this will put a huge hindrance to my daily commute

During rush hour the trains are crowded going to U Street/Columbia Heights/GA Ave - and now you're cutting service in half. Brilliant.

I think transferring to the Green Line at Gallery Place would be fine - I tend to do that anyway - but I can't be sure.

Too inconvenient for persons living in Greenbelt and points along the way.

Mt Vernon Square is a neighborhood that started to blossom in the last 15 years and many people use this stop. I used this stop many times before Covid-19 altered the businesses in this area. I have still used it now.

I cited the reason for my objection to this plan earlier. I regularly use the Yellow line to travel from Columbia Heights to Reagan National. so shortening this line would create a significant inconvenience for me.

Again, please don't cut costs by closing stations. Isn't doing this contrary to your fundamental mission to provide transportation to those who need it most?

Closing any metro station is the wrong thing to do.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

This would reduce the number of trains coming to my neighborhood, which has a lot of Metro riders. There is so much development, and therefore, strong/increasing ridership pool along this part of the yellow and green lines that it is not a good place to cut service. Prior to the pandemic, these trains were typically very crowded during rush hour, so decreased service would result in overcrowded trains, increased wait times, and likely decreased ridership from the inconvenience.

The transfer option will work for me to get to the stations further than Gallery Place going towards Greenbelt.

Mt. Vernon Square is a station for the Convention Center, a huge complex where a lot of people work. There are many residential houses in the area as well. Why close what already exists?

Tourists WILL come back to DC--if Metro doesn't care about the locals, which these proposed changes imply--then at least think of the lost revenue from frustrated tourists who return from their DC visit disgruntled because the much-touted public transit system barely runs and they're left to wander around trying to find places and/or spend money on rideshare or cabs. Or they drive and complain about parking options. Go ahead, shoot DC tourism in the foot with all these reduction proposals.

Not sure if I would need to go further into the city which Mt. Vernon Sq allows.

Bad idea to deprive easy access to both UMD-College Park and the U St corridor.

Why not close the line entirely? Alexandria, Arlington, and DC could provide a reliable bus service. Metro is already so unreliable that it is a poor way to get around. Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

Never on yellow personally.

I ride and live on the green and yellow lines (PG Plaza) I don't want to have fewer options for trains or wait longer. I commute to work via metro, and also socialize and play in DC via metro.

All these stations were built to serve people in those areas. It makes no sense to close them.

I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else. As I wrote before, I don't know where in the DMV I will live in the near future.

Fine as long as the transfer includes waiting intervals of less than 30-minutes.

This will negatively impact commuters

See comments on running yellow line only to Mt Vernon square.

Stations should not be closed. This is a recipe for sending the system into a downward spiral

Public transit needs to be a convenient NETWORK to get ridership up and collect more fare money. Closing stations and reducing frequency cause ridership to downward spiral, then you will close more stations since there isn't enough money to cover costs, then fewer people will ride. Unfortunately, public transit is built and they will come. People will ride a convenient network complete with frequent reliable trains and buses. Get rid of low ridership stops and you will see decreases all over since many people who were riding there before stop using public transit all together

I don't think that you should remove any stations, but if you did then at least send the yellow line to Shaw.

Do not agree with closing of Mt. Vernon. Or limiting commute to Greenbelt, negatively impacting a specific segment of the population.

I feel like you need to wait at least a year post-pandemic to accurately gauge ridership needs. January 2023 may be a better target for assessing.

As if people are too dumb to know that if a train ends one joint stop early, you can change there instead. This isn't bad because Shaw and Gallery Place are not too far away. Finally: A good suggestion.

Why should I have to get off and transfer wait 30 minutes of the other time if I happen to miss it when I'm already on the train I need to go where I need to do

I do not regularly take the Yellow Line. Orange Line rider.

I do not usually ride the yellow line

Again, traveling from Yellow to College Park is very valuable

Not applicable as this is not a station I tend to use.

Cutting Yellow Line service to U Street and Columbia Heights may be tough, but manageable.

Cutting central stations seems like a big mistake.

Someone needs these stations. Keep them open!

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I no longer live in Columbia Heights but this doesnt seem that much different than the pattern I remember there.

See my comments on previous proposals, they address this point

It is a bad idea to close stations the stations mentioned because these stations impact on people getting around.. People cannot go to work, if their station is closed. People cannot go anywhere if the stations close earlier. Metro officials should ride the metro system because they can see the whole problem. People use the metro system to get around.

I do not use Mt. Vernon Square enough to make this more than an inconvenience for me personally. That said, I think that closing stations after receiving a large federal stimulus would be acting in bad faith and would negatively impact ridership.

I dont think this will work

This might affect me since I do use the Gallery Place metro, but I might be able to make it work.

Mount Vernon Square station serves a neighborhood that is trying to turn itself around. Closing the station would be a serious blow. And its also convenient for getting to places like Logan Circle that dont have a Metro rail station of their own.

Gallery Place is already a busy station and transfer point, closing Mt. Vernon would mean people would have to walk or take the bus to/from Gallery Place in order to get to/from home in that area... That may not be feasible for seniors or those with disabilities.

The Gallery Place metro station is very crowded as is.

For many years, I have gone to conferences and the National Book Festival by Metro, via the Mt. Vernon Station. If the Convention Center isnt open, then I can understand closing the station temporarily. But wouldnt it make more sense to see where we are with public health in Jan. 2022 before making this decision?

Given that the Green Line will most likely be crowded during that time, it does not seem right that the Yellow Line is turned back at Gallery Place. I often use the Green/Yellow Lines as alternatives if the Red Line has delays between Fort Totten and Gallery Place.

Please dont close Mt. Vernon Sq.! I know the main driver of that station is the convention center but there are people that live in that area and that is one of my top three stations I travel to! No one should have to sacrifice the opportunity to use the convenience of the metro!

I rarely ride the yellow line.

No I dont support this rather the Yellow line to go to Greenbelt or Ft Totten station at least.

I dont rule out any stop because I use train/buses to travel for now

Young people would take too long to get to work, old people cant walk that far between stations. This is a terrible idea!

Please ensure that the Yellow Line can originate at Franconia Springfield during those times when Blue Line needs some work. Thank you.

Dont close Mt Vernon Square

Gallery place is a dirty hangout station. I would rather it close than Mt. Vernon Square. Not to mention all the hotels near Mt. Vernon Square that I have stayed at that depend on the metro service

I have done this in the past, so it is okay.

Okay, but Mount Vernon is the Convention Center stop. Arent you forgetting all the HUGE conventions that use the Center like Otakon, USA STEM fair and others that bring huge amounts of money into the local economy there; I really dont think you have thought about the actual economic impact your cuts would make to the communities that rely on the public.

The closure of Metro stations is not a good solution to Metros financial problems. One of the reasons that passengers choose Metro over other forms of transportation is the ease of access to MANY locations. Every time Metro closes a station, it loses not only the passengers who live in that neighborhood, but also other passengers who might want to travel to that neighborhood. Metro should find some other way to close its budget gap.

Again, this would seem to disadvantage people from the area served by the Green line.

I dont live on the Yellow Line so this does not impact me as much.

As long as I can get to Pentagon Metro, King Street Metro, and Gallery Place I can get to my doctor appointments.

I usually ride the yellow line between Huntington and Gallery and can use the transfer to the green line at Gallery Place option if I need to continue to Greenbelt.

This inconveniences everyone north of Mt. Vernon Square with infrequent train service.

Family members may be impeded.

-

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Leaving Greenbelt I would not be able to take a Yellow Line train, but would have to wait for a Green Line train to get to U Street since Mt. Vernon Square would be closed. Returning home by losing access to Mt Vernon Square I would have to walk over a mile to get to U Street, then watch Yellow Line trains to Greenbelt pass right by while waiting for a Green Line train.

Although my travel would be impacted by not having both the yellow and green lines operate past Gallery Place, if cuts need to be made, this seems sensible. Especially since it still provides for a yellow-to-green line transfer.

But I used to live in Greenbelt, before moving to North Bethesda - I can tell you that, that plan would have a serious impact on their commute.

This eliminates my ability to use the yellow line as I am north of Chinatown. Going to Reagan on the yellow line was such a great transit option.

I do not typically ride the yellow line.

I think most of the places I personally tend to visit are close enough to the Gallery Place station that I could make this change work. But Mt. Vernon Square is closest to the Convention Center, and so getting to conferences and meetings would be more difficult. But I just don't know whether I will need to go to the Convention Center as soon as Jan 2022. The extra 15-30 min in addition to walking from Gallery Place Metro might be difficult but not impossible. On the subject of closing the Mt. Vernon Square Station, I would hope that instead of permanently closing Mt. Vernon Station, service could be temporarily suspended instead.

As long as the Green Line is running

If the convention center starts hosting events again by the time this proposal is implemented it could hurt their events trying to attract audiences.

Again, why are you proposing to close Mt Vernon Square. Conventions will come back to DC plus this neighborhood is being transformed into a vibrant part of the city. Also Gallery Place can barely handle the number of riders using this station. The platforms are too small for the crowds that pass through during rush hour, after sporting events and generally anytime 4 trains roll into the station. Not a good idea.

See my earlier item about the yellow line.

This plan is inadequate and detrimental to Yellow line train riders who do not enter or exit the Metro at Mt Vernon Square, but commute past the station as well as airport passengers. As an example, take a rider commuting from Petworth to the Pentagon, or an airport passenger living in Shaw or U St. Corridor. Such riders would be required to make an unnecessary transfer, detrimental to their own metro ride and increasing congestion at transfer stations.

I explained this earlier. The yellow line originally ran from Greenbelt to Huntington. People going to Virginia can ride that train from Maryland as far down as Gallery Place or Archives (where ever it splits off) and most do when that is the first available train that pulls up at the station. Just like if I was at Archives and needed to go to Petworth. If a yellow line train comes, I'm going to get on it regardless of the fact it's the yellow line, it's still going in my direction. Why is that concept so hard? Is there any other train that cuts off not even halfway through the line and turns around?

This would be hard on all the people living in the apartments near Mount Vernon Square, but at least it is still walkable to Gallery Place...

The Yellow Line should not reduce its schedule. To do so would curtail the many itineraries followed by riders everyday who use the Yellow Line from home to work and from work to home each day.

absolutely not because that would limit access to DC and Virginia who live in the greenbelt and college park area from coming into the DC Virginia areas

Please extend to 14th St. Closing Mt. Vernon Square is fine.

No, this stop should remain open.

This would make the metro very hard to use for someone living in Columbia Heights

No, I live in Mount Vernon Square and that's my home station. I don't use it every day now because I'm working from home, but I'm expected to go back to the office soon. Now what, I won't have a metro station?

There are many folks who use the Mt. Vernon station and to eliminate that station is not wise. Perhaps reducing weekend hours at that station would be another option.

It's only one more stop. How much are you saving.

Gallery Place is an historically crowded station particularly after events at Capitol One Arena. If I'm at the arena I often walk to Mt. Vernon to avoid the crowding. This would remove that option, and I would be concerned about that crowding for safety.

This is a good idea because you can still get to Greenbelt or Glenmont with a transfer. Reducing but not eliminating service. Reasonable.

Gallery Place is already a giant hub with so many people transferring, that increasing the likelihood of people needing to transfer will continue to clog up traffic.

Try to get the amount of transfer needed to one. Two or more transfers will make things worse.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Again, I work in Alexandria and live in Petworth, so any plan that eliminated Yellow Line service to Greenbelt would ruin my commute. Id have to work up even earlier than I already do, or be late to work, or get home later. In other words, this change would be painful and hurt my quality of life.

Once again, I think closing stations is NOT the answer. Please reconsider and think of the many persons whose jobs will be affected.

Low frequency of service and long wait times would discourage me from taking the metro.

Open during week and closed weekend

As stated in previous proposal, stopping service to existing stations unfairly affects people with residences or businesses in affected area, possibly affecting property values or business traffic. Its not clear that would substantially help the situation: closed stations would still require some upkeep, security, etc. Nearby stations would experience greater parking load and surrounding roads might have traffic patterns/load affected.

Yellow should go to U Street

Lol ridership could increase before January 1, 2020 to sell, just to let you know that because the pandemic credit end sooner than January 1 so just to let you know

I do not regularly use the yellow line so this plan would not impact me.

In South Korea, they beam free public WiFi from all public transit. Even through tunnels.

I dont usually travel that route.

I never use this segment of the Yellow Line.

Dont use

My commuting patterns do not apply to this scenario. I do not live in Maryland nor commute to that neighboring state.

I would not be affected. If this plan were adopted I would probably spend THE SAME on metro per year

Overcrowded trains are my main concern.

While Gallery Place is very close to Mt Vernon Square, this station is essential to the convention center. I would consider only enabling this station during major convention center events such as the Auto Show, and having them subsidize the usage of that station during those events.

Reduction of trains to College Park would be a problem.

Why live in a city if you cant access it easily?

I think it's better to just turn back at Fort Totten instead. Because I don't want to wait or need to switch trains if I'm coming from Virginia. The wait time is way annoying.

Similar to the other yellow line plan. It would work for me, as occasional rider in that direction. Most traffic indeed seems btw VA and central DC.

My objection to this relates to the closing of the station. Otherwise, transferring is not great because of added delay. At least the wait would be indoors.

frankly, this just makes the commute totally suck even more for people living north of Petworth and working downtown.

I live closest to Mt Vernon square station. I would not walk 12+ in the opposite direction or 17min to Shaw to travel a few neighborhoods away.

We've taken Metro to the DC Convention Center, and Mt Vernon Square serves it. Closing this station would seem to adversely affect the convention center, built at a cost of over \$800 million dollars.

I would recommend different suggestions especially those that do not impact the green line.

Again, this sounds like a Washington Monument strategy intended to forestall cutbacks. But given the current reality, large cutbacks are needed.

not ideal for commuters between shaw and college-park, but could be possible

Flooding Gallery Place of people as they transfer is not a good idea. This system was not built for growth or ridership. Look for solutions from other countries who know how to implement mass transit options.

Reducing Yellow Line service would unfairly target low-income residents of Washington, making it harder for them to get to work and increasing their transportation costs.

The continued operation of Eisenhower Metro Station (Yellow Line) is my greatest concern. Mt. Vernon Station is one that I often utilize when patronizing restaurants, attractions in The District.

Need yellow line to travel between Petworth and Huntington

The Convention Center station should not be closed if D.C. wants to have a chance to recapture its place as a premiere conference destination and all the spillover revenue that generates.

Other riders will suffer, operations at these stations need to be maintained.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Like I said earlier, I think this not only unfair but discriminating too! The stops north are on the exact same segment as the 3 south. People paying full price but will only receive 50% of the service should not be tolerated. The whole point of extending the Yellow to Greenbelt full time in April 2019 was to let people know that they deserve better and should get the same service as everyone else no matter the circumstances. People aren't gonna want to ride the Yellow line if this returns. Also like said earlier it would look weird on the map because everything else goes from end to end so I think the Yellow should as well!

This would pose a challenge to my riding, its my closest metro and given an additional walk, my likelihood of riding decreases

See my previous answer regarding the Yellow line operating up to Mt. Vernon Square

I dont use Mount Vernon station.

None at this time.

I CAN WALK TO THE CONVENTION CENTER AND MY CHURCH ON SUNDAYS FROM GALLERY PLACE.

My travel needs do not include traveling in this area.

Mt. Vernon square is convention center and office space area. This office space traffic and convention center traffic would need to be evaluated.

fort totten is life

Not sure. Any passenger traveling between those areas would find it kind of difficult to transfer trains when they have always been used to traveling on one line instead of transferring to another to get to their destination.

Just as long you have monitor ship to determine if this is really working.

As I stated in response to Proposal #1, I really dont want WMATA to have to cut Metro service on any of the lines.

I usually dont have to transfer but if I did Gallery place is the last stop.

I often ride the yellow line during rush hour to greenbelt and this closure seems to put a stop to that.

Provided that ridership data support this proposal.

As explained earlier, the Yellow Line supplementing the Green Line between Gallery Place and Greenbelt at times of heavy use/traffic is critical to making appointments and, for my son, arriving to work on time.

Bad idea. Redundancy is needed for emergency evacuation, protests and special events management, plus growth. Dont close stations or go backwards. Developers in DC need to pay into a fee for WMATA.

Not because I use that portion, but essentially metro is saying that we just want to do what we want to do without providing the services that are necessary for a functioning subway. So, why not sell the subway to a party that will provide the proper services? This really sounds like you wish to go out of business, or reduce your ridership, or play the victim. This behavior is typically all about money, or just greed.

Closing the station at the convention center is a ridiculous idea.

Having to change to Green line at a multi-Metro stop seems reasonable. Also, the stops are close enough in-between to not cause excessive changes in travel time.

This would only work if, like the Mount Vernon proposal, Yellow trains are timed to arrive NB just before Green trains to allow a quick transfer, and Yellow trains SB arrive just after Green trains. I dont see how this saves anything vs. going to Mount Vernon as theyll likely have to crossover there anyway, but sure. Without the timed transfer this makes access to jobs in Arlington on Yellow from dense areas from Shaw to Petworth basically impossible.

This would work for me as long as Green Line trains to/from College Park come frequently enough.

I use the yellow line to go to the conduction to take me to the green line

Gallery Place to George Ave-Petworth are still heavily trafficked routes. Closing one line and forcing riders to have only one line for the remaining stops would lead to heavier surges and overcrowding.

.

I dont use those stations

I would likely significantly reduce or stop taking metro is this were the case

Having to transfer to another Metro train adds time to my trip, especially if Metro lengthens the time between trains.

No, I use Mt. Vernon Square station often. Changing trains/lines to get off one stop later is irritating.

I use this metro stop when there are events at the the event center, I worry that increasing the distance between stops during major events may cause additional stress and issues at gallery place an already busy stop

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I mean, why not just close the Yellow Line altogether? With Eisenhower closing, youre really only servicing one station.

I don't ride the yellow line often but am generally opposed to service cuts.

That would cut the available train service in half, through the growing (gentrified) NE part if DC, and the growth in Prince George's county.

No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab.

This proposal will result in crowded trains and stations.

Would not affect me

Rather than closing stations, which will snowball into decreased ridership & decreased revenue, making more efficient use of the revenue, such as making changes such as switching light bulbs to LED bulbs in order to use less electricity would make more sense. With vaccines under way, metro would do better to regain public trust in its system and making it MORE convenient to use, not by closing stations and rendering it less and less useful.

This would be a problem considering the amount of people that would be affected

Will cause crowding and increased travel time to service workers and the most vulnerable needing consistent medical attention.

Yes, it this means a transfer to another train. Could work. It how much time would riders wait for the transfer?

Gallery place already insane when STC and Capital Arena have events. Also, close to smithsonian, portrait gallery, chinatown, so much. It will be an awful situation and crowded place so more crime and more waits. NO NO NO.Also taking the metro to national airport becoming harder with these insane proposals. Consider travelers coming in from airport who rely on the trains. You are forcing them to take other transport. why not just give up now and close up. You are on the path with these insane proposals

I like Mt. Vernon Square. I feel like, as that area grows, that metro station will be more important.

It is moderately inconvenient, but I can transfer to the Red line at Gallery Place instead of Ft. Totten. I would much prefer Ft. Totten to be my transfer point out of convenience, but this change is acceptable.

This would be a huge disappointment and with the proposed infrequency of trains, would make riding metro extremely taxing and potentially untenable.

Strongly recommend keeping yellow line trains running past Gallery Place to allow riders to switch without needing to ride back down to Gallery Place for a transfer.

See prior regarding regarding yellow line reduction. Furthermore, this move would force all yellow-green transfers to occur at the already overcrowded and awkwardly designed gallery place station.Please consult your WMATA map. Please also, ride your trains during non-covid-19 periods (especially rush hours).

What's the point of even having the yellow line running? It's not a useful line if it can't connect NOVA to most of DC.

Gallery Place is already a crowded station. Funneling more rider traffic to that station will certainly create chaos and contribute to much frustration. Also, Mt. Vernon Square services the Shaw area including the Howard University community. Eliminating a stop at that location would cut the University and community off from metro access.

Depends on headways.

It would make the transfer station a nightmare

I transfer to and from Gallery Place as an alternative to Fort Totten to get to Greenbelt, MD whenever the Red line is experiencing delays.

No real impact.

I live near Mt. Vernon Sq, this would double my commute time to get to Chinatown if they close the station

hard to visir smithsonian museums when they do re-open for us

Given its proximity to the Convention Center, I would not like to see Yellow Line trains stop at Gallery Place instead of continuing on to Mt. Vernon Square (ideally continuing to Greenbelt).

trains & platforms would be too crowded & packed

Its sad that we have to make choices that might not affect some, but will affect others, in this case those on the Yellow Line.

I rarely ride that line. But it seems like it would trap riders who got confused or distracted and missed the ONE transfer spot.

I dont go to those places, except for Gallery Place, which i get to from my neighborhood station, Grosvenor-Strathmore. I attend performances at the Verizon Center and go to museums nearby in Penn Place.

Gallery Place is the station I use to pay my electric bills and my moms electric bills. We also use this station to access Government buildings that we need to go to yearly. This proposal is unrealistic.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I often visit U Street from points south, and yellow line service between Gallery Place and U Street improves these trips drastically.

Thats ridiculous. Even though rely mainly on the Orange line, I have used these other lines on the metro and I know people rely on these lines. I know I live where I live (across the street from Virginia Square metro) so I can get to my job easily in the morning and come home at night without a wait. All the businesses and schools and churches around here are geared towards this population -- Rosslyn to Ballston on the Orange line. The same holds true of other lines. Theres an implied social contract here. Some paid more close to the metro and city for properties and higher taxes; others moved farther out where properties are cheaper and taxes are lower, but relied on transportation. Pretty sure theres racial inequity here. Weve had enough stress with COVID. Forcing people to drive to work or move again or change jobs or schools is bad for the environment, bad for area residents, and bad for the health, wealth, and community of the metro area. For public transportation to be eliminated when we are back at work is devastating to the citys health and wealth.

I do not use these stations

Again, absolutely not. The convention center is a critical stop. Do not close it.

This is a terrible plan. The Mt Vernon Square station is closest to the Convention Center. How is the city going to ever generate money from future conventions if visitors have a hard time accessing the Convention Center. This also a terrible idea as a person who lives near the Fort Totten station and relies on being able to ride the Yellow Line to Fort Totten.

effecting transportation to work for individuals without a car

I know it would affect some of my coworkers but it would not affect me much.

I rarely take the Yellow Line, so while this proposal would work for me, I am not the best person to weigh in on this topic.

Please refer to previous comment regarding how if this proposal takes effect, countermeasures are necessary to reduce the impact to the green line.

I can't comment on this route because I don't use it frequently, but I suggest considering the relative impacts to low income communities vs high income communities.

Again, limiting access to the airport is not good. Gallery Place is a busy metro stop & having to drag luggage through it to transfer is very unappealing.

This will not work for me., only if low ridership.,

I use this for work and home

PLEASE extend yellow line trains all the way up. Those of us north of Chinatown need regular/frequent trains like the rest of the city.

Cutting service to Columbia heights would severely impact my daily commute and my use of metro to travel to DCA

If proposal closes a station, I disapprove. If stations remain open, I approve.

It can be very difficult to get a green line train after certain events such as Nats and Caps games, the yellow line service eases that burden during those time, and when there are delays on the green line (again, I believe several years ago, metro said it made more sense to run more trains along the yellow rush line--- what changed, or was that all a lie?). Did metro consider any other factors such as how and when people use system in proposing these recommendations (it does not appear so).

Another terrible proposal because if events took place at the Convention Center (in the future), no customer could use the Green or Yellow line to attend them. In addition, people who rely on the Mt Vernon Sq station to get home would be negatively affected with this closure because unless they could connect to Metrobus to get home, they would have NO way to get to their destination.

As long as there was a connection beyond Gallery Place

I dont generally use the Yellow Line

I strongly support this plan ... unless stopping at U Street is an option.

I often take the yellow line further than Gallery Place, this would impact my commute and make me more likely to drive into DC.

How do you have a worse proposal than terminating all the yellow line trains at Mt. Vernon Place

I use Mt Vernon Sq more than most other metro stations. And Gallery Place is a nightmare at the best of times and making it even more crowded sounds like a disaster.

Do not close/shut down any metro station even if there is low ridership-- to compinsate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals. Also have MD, DC, VA supplement WMATAs budget needs.

Seems reasonable providing that the Red line is not plagued with substantial delays between Rhode Island Ave and Gallery Place. If this were to occur hopefully Metro will consider temporarily restoring service between Fort Tottenham and Gallery Place until Red line service is fully restored.

Mt. Vernon Square train turn-backs should remain in order to keep existing turn-back operational plans intact. Turn-backs at another station that doesnt normally have them could affect operations on other lines in area.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

that station is important. wtf.

Gallery Place does not need further stress.

Right now, its ok. But I do go past Gallery place sometimes.

When I use the Yellow Line, I dont travel as far as Gallery Place or Mount Vernon Square. This would not impact me.

Pending on the frequency of the green line to supplement the lost of the yellow line.

Next Question

If this is implemented, then both lines need to operate in a 15 minutes basis..

Dont use the train to get that area very often. I will have to find a bus that goes near or walk from Gallery Place to get to that area of the city.

This is a dumb decision for purposes of congestion, increased crowding in one of the busiest stations (Gallery Place), would just add an unnecessary negative to efforts to draw conferences/activity to the convention center. Would hurt business and neighborhoods north of convention center.

It would depend on when the green line trains arrive at G Place. If 5+ minutes after the yellow line train

Having been in Mount Vernon Square during normal times, I dispute your claim of low ridership.

This would increase the time between trains along the north section of the green line to a point that I would not use the train

Not ideal, but at least this doesnt involve a train closer. However, what would people who live in Mt Vernon do? Many residencies and establishments are built around a metro.

Current.y I change from the Red Line at Ft Totten. How long would I have to wait for a train to College Park? It could become impracticable.

I occasionally use the Yellow line to ride from Braddock Rd. to U Street or Shaw. This is mainly for social events and I would use a ride share service if Metro was not available.

My partner regularly travels by metro between College Park and Takoma for work, so this would not work for us.

This would make Gallery Place even more crowded in already station.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around—especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinate, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around. The hours listed above also create a hardship on riders. If you miss a train, you have to wait a considerable amount of time for the next train to arrive. This can impact riders dependent on Metro to get to and from work. This is too limiting for people who are dependent on Metro.

do not drop stations needed by working class riders

Mt. Vernon Square is a huge stop for convention goers, who will be starting to come back to Washington by January 2022. It is a long and not entirely safe walk to get from Mt. Vernon Square to Gallery Place on foot, especially after dark. If theyre going to attractions downtown, the Capitol One Arena, other theatres or to the southwest in Virginia, theyd have to make a transfer if they want to use Metro.. This is not a good way to treat thousands of visitors, especially U.S. taxpayers who helped pay for the Metrorail system..

I use the yellow line to LEnfant Plaza and impact my travel.

There is no other station that serves the mt. vernon square and convention center areas. It is important for business in blagden alley.

I expect things will be closer to normal in January 2022 so this would not be able to handle the number of commuters on this line.

This would significantly limit transit options.

I use the yellow line train to Fort Totten when it's available. I ride to and from Columbia Heights metro station frequently. DC Public Schools, my employer, uses Columbia Heights Educational Campus as a training site. CHEC is also used for a winter futsal league in which my daughter participates. I also ride to and from Mt. Vernon Square occasionally.

What would happen to all the convention center traffic?

Having more than one line coming through the Columbia Heights Station is convenient.

This would reduce the available trains for commuters along yellow/green lines, which I use since I live at Petworth.

I use Mt Vernon Sq frequently. It is close to many bars and restaurants in the area.

This is so shortsighted. People are not taking metro currently because offices/entertainment venues are closed and socializing is discouraged. This will not be the case in 2022. The service cuts should have been in 2020 when ridership was down FOR A REASON - not two years after the fact when that reason will be over. Shaw is one of the densest neighborhoods in the city and this is the stop at the convention center where hopefully there will be conventions in 2022/tax revenue from conventions.

| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
|---|
| Keep Mt Vernon open |
| Not having the Yellow Line going to College Park would have been an issue for my when I commuted to work before retirement. |
| Okay, so I know there was this crazy disclaimer about looking at questions individually, but seriously? How does looking at these impacts individually work? Closing a station that previously was targeted as being the last stop seems arbitrary, not helpful to the businesses that have started to grow in the area and not helpful to the economic health of the district as a whole. |
| Again, this is fine. Gallery Place and Lenfant Plaza are great places to transfer so long as the crowds are not too big and were not afraid of terrorism like after 9/11. |
| This would make going to Nats games and that area very hard. |
| The yellow line train going to Greenbelt was a hard won battle and we should not be moving backward. This pandemic will be closer to over and ridership will pick up. |
| Cutting out a transfer point is a bad idea, and I am one of the "low-ridership" folks who use that station. |
| Before deciding to close stations due to low ridership I think you should get a better idea of whether or not ridership will increase as more businesses, especially downtown, reopen. So much is going to change once the majority of the country, and specifically this area, is vaccinated. |
| No, that reduces the option for many people that live along the rest of the yellow line (myself included). Businesses and restaurants in the dense Shaw/U St/Columbia Heights neighborhoods would also surely suffer. If there are less busy stops on the yellow line, like Mt Vernon, then maybe it could be skipped while still serving other stops beyond |
| I worry about over crowding during rush hour on platforms and in the cars |
| Don't know enough about this region |
| This would negatively affect NW DC resident riders ability to travel directly to National Airport |
| My family rarely uses the Yellow Line. |
| I dont normally travel on the yellow line, so I dont think it would affect me |
| I live next to Mt Vernon metro and this plan will be very inconvenient for my commute. Also, I would think Convention center will open up fir conferences etc. |
| that station is crap for waiting on the yl/gr platform. And as my home station is Petworth, cutting the train short at all does not work for me. |
| North of China town is densely populated and growing. Needs more transportation options not less. |
| I will never live there |
| I live two blocks from Mt Vernon so would be frustrated by this change, though that means I could walk the extra half mile or so to Gallery Place. I wouldnt be happy about this change, especially when using the Yellow Line to get to Reagan Airport. But the alternative isnt horrible. I do think that limiting access to Reagan through the Yellow Line by requiring a potentially lengthy transfer wait is problematic. |
| But I do not think stations should be closed if at all possible. |
| I use the mt Vernon station on a near daily basis. |
| Run more trains. |
| This cuts service in half for anyone living north of gallery place |
| Should be shorter cycles. |
| This would extend my commute time"impacting my ability to pick my daughter up from daycare. It would also lead to dangerous overcrowding on Green Line trains and on the platform at gallery place |
| It affects me but how much depends on how long I would have to wait for the next train. If I have to wait for 30 minutes for the next train, then my commute becomes a 1h20m long, riding my car would be 45m to 1h. I love to be able to go all the way on the yellow line between greenbelt and Crystal City - the commute regularly is 40m riding the train. The more you cut services, the less ridership you are going to have. There must be a way the system can be made more efficient. |
| Again, this sounds reasonable for 2021 until Fall but not 2022 |
| I oppose the shutting down of entire stations in all scenarios. |
| I depend on Yellow line trains at College Park Station |
| Keep all stations open. |
| Transfers will become more difficult and extend travel times. We also need access to these areas. |
| This option is another example of discontinuing Yellow Line service to Greenbelt which would be a major inconvenience for me. Transferring anywhere in mid-DC is essentially the same for me. But Gallery Place is designed in such a way that transfers are often difficult and even unsafe. (The Red Line platform can easily get overcrowded.) |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

| |
|--|
| Why does Metro rail only want to provide Yellow line service to majority white areas such as Arlington, Crystal City and Alexandria? Why are you only contemplating cutting service to lower income and diverse areas such as NW DC and suburban PG County? |
| Why would you close the stop that serves the Strathmore Art Center? Is there |
| I often have used the express yellow early in the morning from college park to DCA. I would like to see that option continue to be available if possible. |
| Gallery Place is so congested. By having to transfer during peak hours, the Gallery Place station would be very crowded and chaotic. |
| The individual suggestions/options are totally unacceptable for my requirements. Is Metro even considering the disabled and riders that depend on public transportation? It doesnt seem like ti. |
| The Yellow line goes to Greenbelt. This is in effect the same as closing all the stations north of gallery place - and making WMATA service at least half as reliable - and likely more. 30 minutes between trains is an unacceptable outcome for commuters. |
| Are you forgetting that you have a major DC Convention Center within walking distance to Mt. Vernon. You taking away the very amenity that caused so many neighbors to improve walk scores to 90 and above. This is crazy. Seems like you are trying to close the entire Metro system. This would not be good. |
| Would not be able to use Metro to attend events at Convention Center where parking is limited. I have a disability that makes walking difficult. |
| There are schools close to Mt Vernon Square that rely on Metro for access for their student body. You may cause dips in enrollment at these schools if you close Mt. Vernon Square Station. |
| This could work in the sense that Mt Vernon Sq is quite close to other stations (unlike College Park and some of the others suburban stations on the potential closure list), and there's no issue changing at Gallery Place. |
| Mt Vernon Square station is a destination. Metro should consider people who disembark there as well as people who embark at that station. |
| Need to use yellow line train to get to National airport |
| It would be inconvenient but doable |
| I currently transfer to and from the Green line at both Gallery Place and Fort Totten to go to and from College Park. |
| Are you nuts? |
| Sure my comment on the previous, related proposal. This proposal would work, assuming Green Line trains run frequently. |
| Not ideal, but workable. |
| I live in Columbia heights |
| That hurts PG county residents specifically. There is a ton of development around the Greenbelt metro. |
| I use Metro to go to the convention center at Mt. Vernon Sq. I havent done this recently of course, but I would really like to be able to do this in the next year. |
| Again, I need access to the College Park metro. If that closes, then I just wont ride metro anymore. |
| It would make Gallery Place even more crowded. Please remember that by January 2022 your ridership should be back up to normal conditions. |
| Not ideal, but better than closing stations. Again, its not easy to bring back customers youve lost. Would these solutions be temporary? |
| College Park is my closest accessible station. Please keep access open to College Park. |
| You should not base ridership on the Covid year. |
| The yellow line alleviates commute traffic on the green line. |
| I could make this work, but it would make me commute longer. It would also add a transfer to other trips. |
| Sure, just shut me out of the system entirely. This eliminates my commute. It would be gone. |
| And also 30 minutes between trains? :(|
| Seems like that would increase wait time. Will more seating and access to restrooms be created? |
| Again, I wouldnt like it, and lived with terminus at Mt. Vernon for years. The difference between Gallery Place and Mt. Vernon as terminus of Yellow Line is inconsequential to me. |
| Closing stations is the exact opposite of what you should be doing. Yes, COVID has hit many areas, but what about reopenings? What will you do then with surges in business openings and increase in travel? It does not make sense at all to do, especially in such a high-demand city such as Washington |
| This station is located at the DC Convention Center in which there is limited street parking. It is also close to a grocery store. The 70/79 bus lines are already overcrowded and closing this station would make the situation worse. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Limiting or truncating the service of the green and yellow line is inherently racist. As these lines go through historically black communities and redlined districts, the communities they serve would be most disparately impacted by such cuts even if they are low ridership.

Dont cut service to Greenbelt

More absurdity.

It depends on how often the greenline trains come. If they come frequently enough - say every 15 minutes, it wouldnt be an issue.

I use the Green Line, and would prefer to have the option to take the Yellow Line to College Park. But I also dont see how WMATA can not operate the Mt. Vernon Square station, when that is the main stop for the Convention Center, one of the Regions single largest economic drivers.

As someone who needs to go to Alexandria from Logan Circle using that station that would not work for me at all

Again, not a fan of station closures. What might this mean for foot traffic in the stations next to Mt Vernon Square? Lots of conventions are held there.

I depend on van dorn station

no entiendo estas decisiones, son muy perjudicial

As with the Mt. Vernon square plan, this would just increase crowding on the green line and its already quite crowded at Gallery place as is during peak hours

Again less bad than a few options, but not great

This service change does not appear to affect my needs as an occasional, out-of-town Metro rider.

no

This may not make much of a difference given how close the stations are to each other.

It would be possible but would make the transfer far worse given how busy gallery place already is.

This can work

I would need to understand the Green Line proposal. That hasnt been shared.

That's perfectly fine with me.

I would hinge this upon conferences returning to the Convention Center.

Keeping the yellow line across the river is very important.

Bueno en ese sentido está bien porque siempre queda la opción de la línea verde que se moviliza por la misma línea que la amarilla

This would only increase crowding and not have the desired effect of cost cutting.

That makes it harder to access Greenbelt

I dont use this line

Yes Gallery place is busy and thats a good sign!

If this were to happen, the green line needs to run more frequently

How would that affect the trips to U street or columbia heights?

...

If implemented, everyone would have to see how it affects their individual travel arrangements.

No hay otra forma de llegar mas que el metro

UNACCEPTABLE!!!

I would need lines that transfer to Greenbelt to remain as they are

Makes it harder to get to the WEW convention center which could hurt business in the area, especially when conventions like AwesomeCon, the News4 Health Expo and Otakon are in town

Inconvenient, but doable

This is not so much different from previous proposals. The preference is not to have to close any stations.

No suelo usar la línea amarilla

These stations need be open

My commute

People work there too.

I live near gallery place so fortunately this works better for me.

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

I only use the yellow line starting at gallery place and south.

I see a lot of people they now want to pay on the mattress station And nobody say something I take Metrofor everyday

I rely on yellow line trains near P.G plaza

Do not close any stations or cut rail lines off

I connect to the Yellow line at Fort Totten from the Red line

Yellow line trains would have to run frequently enough to maintain their useful connection south of the Potomac and, critically, to the airport

This would work for me personally because I don't ride the yellow/green too often but for those that do, it would be important to hear from them. Maybe this will happen later in the survey but even if you asked us what our primary train lines are, you'd get a sense of what kind of riders are answering this.

Keep that station open, because people do travel to that location no matter what is said or thought.

I take the yellow line between King St and Columbia Heights frequently

As long as a shuttle bus or green line train can drop me to the archives. Dont want nobody to miss theyre court date.

Do not travel to Greenbelt

This would be good because it gives you time to be early what I mean by that if I know they run like that and I gotta be to work a current time it allows me to improve time management

N/A

I often travel to MT Vernon metro station.

Keep the yellow line train going to Greenbelt do not close Mount Vernon square station

All stations should remain open

A pain but maybe ok except for the commuters.

Still need to get from L'Enfant to College Park for work.

I don't know why that's just seem like a lot of getting on and off the train

I dont ride the Yellow Line

Surprised at low ridership

No way- cut labor replace with self driving not cut operations

No

This would make traveling to work in VA frustrating if I have to wait a long time between trains. My current commute time on the train is 20 min.

Will be confusing to riders because of riders being programmed for this line to travel further.

I so rarely ride the yellow line, that I wouldnt worry about it.

This would be ok for work purposes but it would impact restaurant visits but since COVID, I have not ventured into DC for food. It would be a shame to stop service to Mt Vernon Square Station.

Are we cancelling events at the convention center now? Closing this station makes no sense with all of the events that will return to the center, and the people who will need transportation to those events.

My work needs dont require me to travel to any of these stations, however, i think Metro is making these suggestions based on 2020 trends, which isnt accurate at all.

I sometimes travel this route and I would love to know that I have other options when traveling through town.

Having previously commuted on these lines, I am supportive of this proposal.

Not a yellow line commuter

Closing a transfer station would be problematic

I only commute to Archives so this would work for my commute.

I work part time at the Convention Center so what station would I use to get to the convention center? or I guess I would have to ride the bus to downtown

That would make the platforms crowded for people to get around

If I happened to get on the wrong train, I would have no easy way of switching back if gallery place was the only transfer point

I go to Mt. Vernon Square maybe once a year. Thanks for giving me more of a reason to drive.

I font use this line

| |
|--|
| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure |
| I don't use this route but it sounds logical |
| I really dont understand what Metros fascination is with not serving Columbia Heights |
| Does this affect the Service to National airport. If so, it's a bad idea |
| Yellow and Green in Mt Vernon Square and Gallery Place are very important connecting routes. Running these routes at a lower efficiency has ripple effect and even lower efficiency across the whole system |
| Again, why do Metro Rogers have to take the brunt of this? Don't you have a pretty ridiculous union negotiated salaries and benefits that could be throttled back? |
| Great solution. |
| Seriously? |
| I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus |
| This is a major transfer point between R/Y/G lines and would impact commuting scheduling and planning for travel to/from work |
| I don't travel on green line. |
| Again, this would leave only one line for NW D.C., especially Columbia Heights. That is simply not enough for the number of people who live there. |
| Don't let this happen due to the crimes are already hope and not unless there are more security in place |
| I don't take that line |
| Same thoughts. |
| Inconvenience |
| I have no issues with this proposal. |
| short time period to downtown |
| note that I dont use this line often, so Id not be giving up much. |
| I can still travel to some of the places I go using the green line |
| Depends on the dates - if Washington Convention Center is expecting to have events. The station should be opened on any given date. |
| Depends on the people impact -- numbers affected, locations affected. |
| Need access from all points in downtown dc to Pentagon vis yellow line |
| This would cause people two have to wait to get to Greenbelt |
| Events at the Convention Center will resume at some point and not having Mt. Vernon Square would greatly impact attendance of these events. |
| Uncertain at this time |
| Prefer yellow line to go to U street. |
| I dont use the Yellow line that much |
| I use the green and yellow lines to get to and from Columbia Heights for my commute (when in the office). This would make that much more difficult if there aren't more trains available on green line for the sake of congestion and frequency to replace yellow line trains. |
| Please Keep it running to U St |
| I take both the green and yellow lines to go from college park to Gallery place in DC. |
| This works as long as the Yellow line still goes to Gallery Place |
| si realmente hay baja de pasajeros esta bien |
| As long as green line would still go to Columbia heights |
| Low ridership could be temporary. |
| Fort Totten needs to have service |
| Inconvenient but workable. |
| This seems like it will negatively effect low income areas on the other side of DC. |
| I do not regularly take yellow/green lines |
| None |
| Please do not close my Vernon square metro |
| There is a lot of shopping and restaurants we will be missing. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

| |
|---|
| I choose to live near the college park metro station specifically for yellow line access to national airport, when traveling with luggage changing trains makes metro unattractive. |
| We do not use Metrorail. |
| Do not cut Yellow line service to Columbia Heights. It is how we access NoVa/airport without necessitating a horrible transfer. Gallery Place is literally the worst transfer station ever. Too many people already transferring to/from Red line. |
| Similar to the Mt. Vernon proposal, this would be fairly annoying given I use this line regularly. |
| Having to change trains is so difficult and again, would cut down my options. I would be having to take a green train to Gallery Place and then walk to 14th and K, due to a lack of other options nearby, or change to Metro Center. |
| No comment. |
| This proposal will not work once the businesses nearest to Mt Vernon Sq Station reopen |
| This would not affect my travel. |
| You can if necessary walk to Mt. Vernon square from gallery and judiciary centers stop. You will have to address the disabled riders need in this decision. |
| Everyone will get into better shape with all the walking they will have to do. |
| I like to have my options when I transfer in Fort Totem from red line to either yellow or green line, so definitely this will affect my options and will reduce my chances of getting to work on time |
| The volume of passengers transferring to the green line would not be met by the amount of trains running |
| This seems obviously fine. Just one stop. |
| This will kill the metro ridership. The metro will never recover. Look at cities with successful public transit system. Theyre reliable and very frequent, there fore people use it. Decreasing times and stops will encourage people to never use it. |
| the yellow line is a major train for getting through the center of the city and this would greatly reduce the number of trains servicing the northern part of the city |
| Closing Mt. Vernon metro does not impact my travel but only running the trains to gallery place does not benefit me because I get off at U street. |
| I need to get from Columbia Heights to Alexandria / the airport. I do not want to transfer, especially if transfer times increase. Youve effectively eliminated the benefit of living near the metro for me. |
| I would prefer for yellow lines to continue going to Greenbelt. Stopping yellow at gallery place will add a lot of time to my commute and cause more crowding on the green line during a pandemic. |
| This would delay my commute |
| This proposal would not be rational, as a great deal of commuters rely on Yellow line stops which are already limited before further cuts would be applied. |
| my son and I use the green and red lines and sometimes we catch the yellow train if it comes. |
| Stupid. Unless you're building more routes than closing stations is a stupid idea. |
| I often transfer to the Green and Yellow Lines at Fort Totten |
| Does not sound like a major disruptor. |
| This transfer to the Green Line from Gallery Place MUST be operable on a regular basis as this would be the only option for that link. Any impediment to this connection would cause major hardship for many. |
| No issues with this plan, its strange the lines overlap at the end of their route anyway, seems like a waste of resources. |
| See before the explanation. DO NOT DO THIS PLEASE. YELLOW TO GREENBELT MUST STAY |
| That would add significant time to my commute to the hospital for work |
| Again - tourists and leisure travels who PAY instead of using commuter benefits would go to LYFT, UBER, and taxi services. Not very green of you. |
| Good. Its redundant anyhow. |
| Too much wait time waiting for a green line train. |
| Not applicable |
| Me parece bien porque son pocas las personas que usan tales estaciones. Mas en cambio si necesitamos una estacion en Langly Park. Tambien que los trenes se limpien y que se desinfecten. Tambien se requiere mas personal que reguardes las estaciones para haya paz y tambien eviten el que personas pasen sin pagar. |
| I rarely ride the Yellow or Green lines. |

Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure

Would reduce my access to the city

I prefer to keep the Yellow line running between Greenbelt and Huntington. Just eliminate or close the Mount Vernon station while keeping the rest of the Yellow line open. Just eliminate or close specific stations on the Yellow line.

It doesnt sound useful to have the yellow line train operate for two stops.

This would make Gallery Place station more crowded than it already be.

I ride the green/yellow line to work. This would make my commute worse and make me less likely to ride the metro at all.

Gallery Place/ Chinatown will be a nightmare to navigate and catch a train. Even if not many people enter or exit at Mt. Vernon Square, it is an important station for people to transfer.

What about events at the convention center? Is anyone thinking about the ripple effect this will have on communities, etc.?

The Green Line also services the Red Line riders to and from Fort Totten.

Again, not fair to Howard U students. Also, Columbia heights is used a fair bit. Like to see it stop there.

Yellow Line should run to U Street.

No. I plan to commute between Shaw and king street. This would be awful for me. I would have to change trains

Doesnt impact me much personally, but seems like it wouldnt lead to much of a cost saving.

There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy

This is decision will make the commute time longer.

| Proposal to implement Yellow Line turnbacks with Mt Vernon Sq closure (Spanish) | Translation |
|---|--|
| Deben agregar una estacion amarilla mas | They should add one more yellow station |
| Seria demaciado dificil y tardado mi viaje | My trip would be too hard and delayed |
| no entiendo estas decisiones, son muy perjudicial | I don't understand these decisions, they're very harmful |
| Bueno en ese sentido está bien porque siempre queda la opción de la línea verde que se moviliza por la misma línea que la amarilla | Well in this sense it's good because there's always the option of the green line which is on the same line as the yellow |
| No hay otra forma de llegar mas que el metro | There's no other way to get there besides the metro |
| No suelo usar la línea amarilla | I don't usually use the yellow line |
| si realmente hay baja de pasajeros esta bien | If there's really a decrease in passengers it's alright |
| Me parece bien porque son pocas las personas que usan tales estaciones. Mas en cambio si necesitamos una estacion en Langly Park. Tambien que los trenes se limpien y que se desinfecten. Tambien se requiere mas personal que reguardes las estaciones para haya paz y tambien eviten el que personas pasen sin pagar. | It seems good to me because there aren't many people who use these stations. What we really need is a station at Langley Park. Also for the trains to be cleaned and disinfected. We also need more people to guard the stations so there's peace and to avoid people getting on without paying. |

APPENDIX B:

FY2022 Budget – Customer Feedback on Proposals

FISCAL YEAR 2022 BUDGET

Public Outreach and Input Report

Docket B21-01

Appendix B: FY 2022 Budget – Customer Feedback on Proposals

Summary Results of Survey Responses
Collected from Metrorail and Metrobus Riders
through Public Outreach Efforts

Office of Customer Research
Document Date: 3/24/2021

FY2022 Budget Proposals: PPP Outreach

- WMATA's Office of Customer Research worked with the Budget Project Team and External Relations to collect feedback from Metrorail and Metrobus customers on the following proposed service changes:

Metrorail – beginning in January 2022:

1. Operate Metrorail service every 30 minutes on all lines
2. Operate every other Red Line train between Grosvenor-Strathmore and Silver Spring
3. Operate Yellow Line trains between Huntington and Mt. Vernon Square
4. Close Metrorail System at 9 P.M. instead of 11 P.M.
5. Close up to 22 Metrorail stations with low ridership that are near other stations
6. Operate every other Red Line train between Medical Center and Silver Spring (due to proposed closure of Grosvenor-Strathmore).
7. Operate Yellow Line trains between Huntington and Gallery Place (due to proposed closure of Mt. Vernon Square).

Metrobus

1. Improvements to Metrobus service in 2021 with service increases planned in March, May, and September.
 2. Operate approximately 50% of pre-pandemic Metrobus service beginning in January 2022. This plan focuses on providing service where customers will be riding in January 2022, to low income riders who rely on Metrobus for travel, and to essential workers.
- The survey was in field from February 20th to March 16th. Over this period, WMATA collected 21,808 responses via the internet and 97 responses over the phone.

Executive Summary of Public Feedback

Metrorail Proposals

For each proposal respondents were asked: “Would this plan work for you—given your expected travel needs in January 2022”. The percentages of “Yes” versus “No” answers are summarized below.

- 1. Operate Metrorail Service Every 30 Minutes:** Yes-44%, No-44%. (See Slide 5.)
- 2. Implement Red Line Turnbacks:** Yes-56% No-32%.
Notably, support is lower among Maryland residents: Yes-47%, No-42%. (See Slide 6.)
- 3. Implement Yellow Line Turnbacks:** Yes-57% No-29%.
Notably, support is much lower for respondents who use the Yellow Line and reside in DC (Yes-34%, No-56%) or Maryland (Yes-32%, No-54%). (See Slide 7.)
- 4. Close Metrorail at 9 PM:** Yes-30%, No-60%.
Notably, support for this plan is much lower among respondents who currently ride the Metrorail after 7 PM (Yes-14%, No-81%) and low income respondents (Yes-16%, No-76%). (See Slide 8.)
- 5. Close 22 Metrorail Stations:** Yes-13% No-80%. (See Slide 9.)
- 6. Implement Red Line Turnbacks with Grosvenor-Strathmore Closure:** Yes-41% No-47%.
Notably, respondents who reside in Maryland are much less in favor of this proposal (Yes-14%, No-79%) than they are in favor of Proposal 2 above (Yes-47%, No-42%). (See Slide 10.)
- 7. Implement Yellow Line Turnbacks with Mt. Vernon Square Closure:** Yes-50%, No-32%.
Support is much lower among respondents who use the Yellow Line and reside in DC (Yes-28%, No-60%) or Maryland (Yes-34%, No-48%). See Slide 11.

Overall, respondents were least in favor of the proposal to close 22 stations.

They were most in favor of (or least against) the proposals to implement turnbacks on the Red and Yellow lines.

Executive Summary of Public Feedback

Metrobus Proposals

For each proposal respondents were asked: “Would this plan work for you—given your expected travel needs in January 2022”. The percentages of “Yes” versus “No” answers are summarized below.

1. **2021 Service Improvements:** Yes-68%, No-10%. (See Slide 14.)
2. **2022 Service Proposal:** Yes-40%, No-34%. A high proportion of respondents (26%) answered *not sure* to this question. (See Slide 15.)

Parking Proposal

Respondents were asked about reducing parking fees at certain stations in Prince George’s County.
72% of respondents answered Yes in response to the question of whether the change in fees would work for them.
87% of respondents who reside Prince George’s County answered “Yes” in response to this question. (See Slide 16.)

Capital Budget

Respondents were asked to weigh the use of capital funds for long-term safety and infrastructure improvements versus providing more service in the shorter term. 49% of respondents selected “provide more safety and maintenance without cutting too much service.” (See Slide 17.)

Metrorail Proposal 1: Operate Trains Every 30 Minutes

Question

Beginning in January 2022, Metrorail service would be the same every day of the week (i.e., no differences between weekday and weekend schedules). Trains would arrive every 30 minutes throughout the day, with the following exceptions:

- On the Red Line, trains would arrive every 15 minutes between Grosvenor-Strathmore and Silver Spring stations.
- At all stations with service from more than one line, trains would arrive every 12-15 minutes (for example, Blue, Orange and Silver Line service at Rosslyn).

There would be no difference in arrival times between rush hour and non-rush hour periods at all Metrorail stations.

Would this plan work for you – given your expected travel needs in January 2022?

Response: Operate Trains Every 30 Minutes

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 19,841 | 44% | 44% | 12% |
| <i>Weighted to Match System Demographics*</i> | – | 45% | 43% | 12% |
| <i>Notable Subset:</i> | | | | |
| Current Metrorail Riders | 7,872 | 45% | 46% | 9% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 4,783 | 47% | 41% | 12% |
| Low Income Respondents | 904 | 45% | 40% | 15% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Metrorail Proposal 2: Red Line Turnbacks–Grosvenor-Strathmore and Silver Spring

Question

Beginning in January 2022, every other Red Line train would operate between Grosvenor-Strathmore and Silver Spring only. This means:

- Trains would arrive every 30 minutes at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.
- Trains would arrive every 15 minutes at all other stations on the Red Line.

Would this plan work for you – given your expected travel needs in January 2022?

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Response: Red Line Turnbacks

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 14,157 | 56% | 32% | 12% |
| <i>Weighted to Match System Demographics*</i> | – | 51% | 36% | 13% |
| <i>Notable Subsets:</i> | | | | |
| Current Metrorail Riders | 5,943 | 53% | 37% | 10% |
| Use or Used Red Line | 8,910 | 49% | 39% | 12% |
| Maryland Residents: Use or Used Red Line | 4,792 | 47% | 42% | 11% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 3,639 | 52% | 36% | 12% |
| Low Income Respondents | 764 | 44% | 40% | 17% |

Metrorail Proposal 3: Yellow Line Turnbacks–Huntington and Mt. Vernon Square

Question

Beginning in January 2022, all Yellow Line trains would operate between Huntington and Mt. Vernon Square, instead of to Greenbelt.

Would this plan work for you – given your expected travel needs in January 2022?

Response: Yellow Line Turnbacks

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 11,285 | 57% | 29% | 14% |
| Weighted to Match System Demographics* | – | 49% | 36% | 14% |
| <i>Notable Subsets:</i> | | | | |
| Current Metrorail Riders | 4,919 | 53% | 33% | 13% |
| DC Residents: Use or Used Yellow Line | 1,457 | 34% | 56% | 10% |
| Maryland Residents: Use or Used Yellow Line | 912 | 32% | 54% | 14% |
| Virginia Residents: Use or Used Yellow Line | 1,653 | 70% | 22% | 8% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 2,997 | 51% | 35% | 15% |
| Low Income Respondents | 700 | 41% | 44% | 15% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Metrorail Proposal 4: Change Metrorail Service Hours

Question

Beginning in January 2022, the Metrorail system would close at 9 p.m. instead of 11 p.m.

Would this plan work for you – given your expected travel needs in January 2022?

Response: Close Metrorail at 9 P.M.

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 20,011 | 30% | 60% | 10% |
| <i>Weighted to Match System Demographics*</i> | — | 26% | 65% | 9% |
| <i>Notable Subsets:</i> | | | | |
| Current Metrorail Riders | 7,889 | 27% | 65% | 8% |
| Currently Use Metrorail After 7 P.M. | 3,279 | 14% | 81% | 5% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 4,806 | 29% | 61% | 9% |
| Low Income Respondents | 915 | 16% | 76% | 8% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Question

Beginning in January 2022, Metro would close certain stations with low ridership if they are near other stations. The stations that would be closed include:

Archives, Arlington Cemetery, Cheverly, Clarendon, Cleveland Park, College Park, East Falls Church, Eisenhower Ave, Federal Center SW, Federal Triangle, Greensboro, Grosvenor-Strathmore, Judiciary Sq, McLean, Morgan Boulevard, Mt Vernon Sq, Smithsonian, Van Dorn St, Virginia Square, Innovation Center*, Loudoun Gateway*, and Reston Town Center*.

**Pending opening of Silver Line Phase II*

Would this plan work for you – given your expected travel needs in January 2022?

Response: Close 22 Metrorail Stations

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 20,081 | 13% | 80% | 6% |
| <i>Weighted to Match System Demographics*</i> | – | 17% | 75% | 8% |
| <i>Notable Subset:</i> | | | | |
| Current Metrorail Riders | 7,871 | 14% | 81% | 6% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 4,775 | 16% | 77% | 7% |
| Low Income Respondents | 914 | 17% | 72% | 10% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Metrorail Proposal 6: Red Line Turnbacks–Medical Center and Silver Spring

Question

If Metro closes Grosvenor-Strathmore in January 2022 due to low ridership:

- Red Line trains would arrive every 15 minutes between Medical Center and Silver Spring stations.
- Trains would arrive every 30 minutes at: Shady Grove, Rockville, Twinbrook, White Flint, Glenmont, Wheaton, and Forest Glen.

Would this plan work for you – given your expected travel needs in January 2022?

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Response: Red Line Turnbacks with Station Closures

| | Response Count | Yes | No | Not Sure |
|---|----------------|------------|------------|----------|
| All Survey Respondents | 13,689 | 41% | 47% | 12% |
| Weighted to Match System Demographics* | – | 39% | 48% | 13% |
| <i>Notable Subsets:</i> | | | | |
| Current Metrorail Riders | 5,761 | 40% | 48% | 11% |
| Use or Used Red Line | 8,573 | 28% | 61% | 11% |
| Maryland Residents: Use or Used Red Line | 4,764 | 14% | 79% | 7% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 3,550 | 39% | 48% | 13% |
| Low Income Respondents | 765 | 35% | 49% | 16% |

Metrorail Proposal 7: Yellow Line Turnbacks–Huntington and Gallery Place

Question

If Metro closes Mt Vernon Square Station in January 2022 due to low ridership, all Yellow Line trains would operate between Huntington and Gallery Place only. The last station where you would be able to transfer to a Green Line train that continues to Greenbelt is Gallery Place.

Would this plan work for you – given your expected travel needs in January 2022?

Response: Yellow Line Turnbacks with Station Closures

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 12,472 | 50% | 32% | 17% |

Metrorail Proposal: Least in Favor of Being Implemented

Respondents were least in favor of Metro implementing the proposal to close Metrorail stations. Notably, low income respondents were nearly evenly split between the station closure proposal and closing of Metrorail at 9 p.m.

Question

Of the proposals presented earlier, which would you be LEAST in favor of Metro implementing in January 2022 to reduce operating costs?

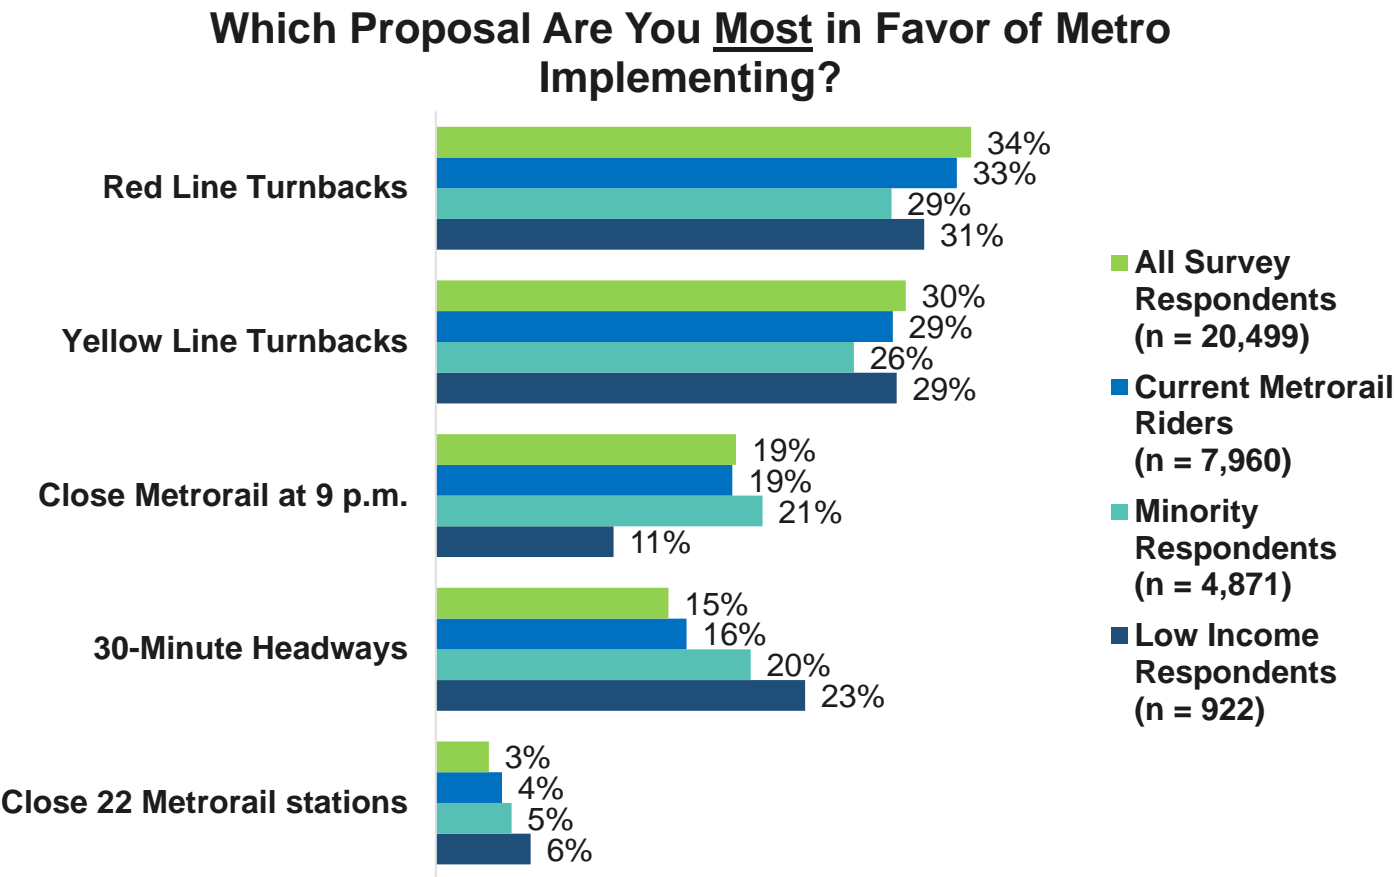

Metrorail Proposal: Most in Favor of Being Implemented

When given the choice, respondents chose Red Line and Yellow Line turnbacks as the cost saving proposal for Metro to implement.

Question

If you had to choose one, which of the following proposals would you be MOST in favor of Metro implementing in January 2022 to reduce operating costs?

Metrobus Proposal: 2021 Service Increases

Question

Through the end of 2021, Metrobus service would continue operating at current levels (75% of pre-pandemic levels), with service increases as more people return to work.

The schedule for improving bus service is as follows:

- March 2021:
 - Restore Saturday service on the following routes: C14, D2, E2, G2, M6, NH2, R12, X8
 - Restore Sunday service on the following routes: D2, E2, G2, H12, M6, NH2, T14, V12, X8
- May 2021:
 - Restore full or partial service to 10 additional lines to add more access across the region
 - Add late night service until 2 a.m. on 34 lines
- September 2021: Expand coverage to support commuter and school-based travel

Would this plan work for you – given your expected travel needs in the coming months?

Response: Metrobus Service Increases in 2021

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 5,872 | 68% | 10% | 23% |
| <i>Weighted to Match System Demographics*</i> | — | 70% | 11% | 19% |
| <i>Notable Subsets:</i> | | | | |
| Current Metrobus Riders | 2,085 | 71% | 12% | 17% |
| Ride Metrobus after 7 P.M. | 811 | 71% | 14% | 15% |
| Ride Metrobus on Saturdays or Sundays | 1,043 | 73% | 12% | 15% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 1,708 | 70% | 10% | 20% |
| Low Income Respondents | 461 | 72% | 10% | 18% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Metrobus Proposal: January 2022 Service Changes

Question

Metrobus service would be reduced to 50% of pre-pandemic levels beginning in January 2022. Some Metrobus routes that travel through the same areas, would be combined. Also, some routes would be re-designed to allow for easier transfer to Metrorail.

In order to serve as many customers as possible, this Metrobus plan focuses on providing service to:

- Areas that will have the most riders in January 2022 (not pre-pandemic);
- Low-income customers who rely on Metrobus for travel to medical appointments, to shop for groceries, and for other essential purposes; and
- Essential workers, including those with jobs in healthcare, food service, social services, and other important societal functions.

To view a detailed description of the proposed service plan please [click here](#).

Would this plan work for you – given your expected travel needs in January 2022?

Response: January 2022 Metrobus Service Changes

| | Response Count | Yes | No | Not Sure |
|--|----------------|------------|------------|----------|
| All Survey Respondents | 6,392 | 40% | 34% | 26% |
| <i>Weighted to Match System Demographics*</i> | — | 44% | 33% | 23% |
| <i>Notable Subset:</i> | | | | |
| Current Metrobus Riders | 2,282 | 38% | 40% | 22% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 1,877 | 46% | 30% | 24% |
| Low Income Respondents | 497 | 45% | 32% | 23% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

Parking Proposal: Reduce Parking Fees at Metrorail Stations in Prince George's County

Question

Parking fees would be reduced at Metrorail stations in Prince George's County as follows:

- Landover parking fees would remain \$3.
- Addison Rd and Prince George's Plaza daily fees would be reduced from \$4.70 to \$4.45.
- At all other Prince George's County Metrorail stations parking fees would be reduced from \$5.20 to \$4.95.

Would this change work for you?

Response: Reduce Parking Fees in PG County

| | Response Count | Yes | No | Not Sure |
|--|----------------|-----|-----|----------|
| All Survey Respondents | 3,612 | 72% | 20% | 8% |
| <i>Notable Subset:</i> | | | | |
| Residents of Prince George's County | 534 | 87% | 8% | 5% |
| <i>Protected Populations:</i> | | | | |
| Minority Respondents | 1,071 | 75% | 17% | 8% |
| Low Income Respondents | 216 | 74% | 14% | 12% |

**Note: These percentages would obtain if the survey responses were properly adjusted to match the demographics from the 2016 Metrorail Passenger Survey and/or the 2018 Metrobus Passenger Survey. For more information, see Slide 19.*

1 in 2 respondents selected “provide more safety and maintenance without cutting too much service.”

Question

Each year, WMATA must determine whether certain maintenance costs should be charged to the operating budget or the capital budget. When these costs are placed in the operating budget, there is less money for service, which may result in fewer routes and longer wait times for customers.

When these costs are placed in the capital budget, there is less money for large capital projects, which may increase the risk of safety issues due to old or unmaintained equipment, fewer station improvements, fewer new rail cars, and fewer new buses.

How would you balance these competing needs?

Balancing Competing Needs: Operating Budget and Capital Budget

(Responses = 9,572)

Overall Survey Demographics

| | Responses | % |
|---|-----------|-----|
| Household income | | |
| Less than \$30,000 | 1,136 | 6% |
| More than \$30,000 | 17,055 | 94% |
| Latino or Hispanic Origin | | |
| Yes | 1,647 | 8% |
| No | 19,004 | 92% |
| Race | | |
| African American or Black | 1,986 | 10% |
| American Indian or Alaska Native | 190 | 1% |
| Asian | 1,870 | 9% |
| Native Hawaiian or other Pacific Islander | 82 | 1% |
| White | 16,086 | 78% |
| Other | 496 | 2% |

Note: Our approach was to include the count of responses excluding nonresponses.

Weighted to Match System Demographics*

The rows marked *Weighted to Match System Demographics** reflect Washington Metropolitan Area Metrorail ridership population.

The design of the weighting plan was based on onboard survey data collected by the 2016 Rail passenger survey and 2018 Bus passenger survey.

Weights were applied to the dataset to help balance the individual demographics of the survey, including **matching the income, race, and jurisdiction to the actual Metrorail and Metrobus ridership population.**

SUBJECT: Title VI Equity Analysis of
Proposed Service and Fare
Changes – April 2021 FY2022
Operating Budget

DATE: April 2, 2021

Summary

When a transit agency proposes fare changes or major service changes, the Federal Transit Administration (FTA), in its Title VI Circular 4702.1B, requires that the agency conduct an equity analysis to determine whether the changes will result in a disparate impact (DI) to minority riders or a disproportionate burden (DB) to low-income riders.¹

This memorandum summarizes the results of an equity analysis of low-income and minority riders who would likely be impacted by the parking fee changes, and major Metrobus and Metrorail service changes proposed in the FY2022 Operating Budget. This action item will be reviewed by the Finance and Capital Committee at the April 8 meeting. As proposed, the parking fee changes and service changes do not result in a disparate impact (DI) to minority riders or a disproportionate burden (DB) to low-income riders.

Service Changes

In January of 2021, the Board of Directors authorized a public hearing docket that included a number of service changes on Metrorail and Metrobus. Given the level of funding available at that time, the proposed public hearing docket for FY2022 was divided into two phases.

Phase one, which was expected to operate from July 2021 through December 2021, included:

- Metrorail service levels at approximately 80 percent of pre-pandemic service levels; and
- Metrobus service levels at approximately 85 percent of pre-pandemic service levels.²

¹ As defined on page 15 of Metro's 2020 Title VI Program Narrative

² Metrobus service changes that are currently scheduled for June of 2021 have been analyzed as part of this FY2022 equity analysis. Additionally, this analysis includes Metrobus service changes

Phase two was expected to operate from January 2022 through June 2022. It included reductions of service to the following service levels:

- Metrorail service decreasing to approximately 30 percent of pre-pandemic service and
- Metrobus service decreasing to approximately 50 percent of pre-pandemic service.

Following the passage of federal relief funding in March 2021, Metro received additional funds for operations. In response, Metro will no longer reduce service levels in January 2022, and will maintain the phase one service levels for the entire FY2022. Therefore, this equity analysis focuses on the service changes associated with phase one. A complete list of these changes is available in the Board presentation materials.

As requested by the Board, this memorandum also includes an evaluation of the equity impacts of the combined Metrobus and Metrorail service changes. This additional analysis is not required by Metro's current Title VI program.

This memorandum does not include Silver Line Phase II or any associated service changes. That analysis will be conducted on a timeframe determined by the commencement of revenue service, as per FTA guidance on new fixed guideway projects.³

Assessment in Detail

Background- Metro's DI/DB Impact Thresholds

To determine whether the proposed service changes would result in a disparate impact (DI) to minority riders or a disproportionate burden (DB) to low-income riders, staff applied Metro's Board-approved DI/DB thresholds adopted in Resolution 2013-27 (see Table One).

Table One: Ridership Thresholds for Disparate Impact/Disproportionate Burden

| Total Daily Riders Impacted | Threshold for DI / DB |
|------------------------------------|------------------------------|
| Up to 10,000 | 8% |
| 10,001 to 20,000 | 7% |
| 20,001 to 40,000 | 6% |
| Over 40,000 | 5% |

that restore service to pre-pandemic levels and new service that did not operate pre-pandemic. These service restoration and service increases are analyzed separately in this equity analysis.

³ Specific to new fixed guideway projects, FTA requires that the equity analysis not be conducted more than six months prior to the start of revenue service (FTA Title VI Circular: Chap. IV-21)

The thresholds set a target for the percentage of minority or low-income riders impacted by a service change that may exceed the percentage of minority or low-income ridership for the mode. For example, if a set of Metrobus service changes impacts 15,000 daily riders, the threshold for this service change would be seven percent, as it falls between 10,000 and 20,000 riders. When conducting the analysis, if the difference is less than seven percent, there would not be a disparate impact. If the threshold is exceeded, there would be a disparate impact and Metro would have to try to change or mitigate the impact of the proposal.

Equity Scan of Metrobus and Metrorail Service Levels

For this equity analysis staff used the most recent comprehensive survey data to determine which riders would be affected by the proposed service changes:

- 2016 Travel Trends Metrorail Passenger Survey (Spring 2016);
- Supplemental Survey of Sunday Metrorail Ridership (Fall 2016); and
- 2018 Metrobus Passenger Survey (Fall 2018).

Staff analyzed the cumulative change in the level of scheduled service relative to pre-pandemic service levels for each mode, and then applied this ratio to the pre-pandemic ridership and demographics to compare the impact of such changes across demographic groups. Note that pre-pandemic ridership is used because service is being added back on routes that have not yet been served during the pandemic. Without these data, the equity impacts of such changes could not be analyzed.

Equity Analysis of Metrobus Service Modifications

The public hearing docket included modifications to service on Metrobus relative to pre-pandemic service levels. The analysis focuses on whether or not minority and low-income riders are experiencing more of the impact of the service reductions. In other words, is service reduced disproportionately more for these riders than average? To do so, staff analyzed this cumulative impact of all changes made on each Metrobus line for each service day (weekdays, Saturdays and Sunday) to calculate the percentage of passenger trips taken by minority and low-income riders.

Table Two shows the percentage of minority and low-income Metrobus riders impacted by service reductions. Approximately 71 percent are minority and 35 percent are low-income. For the Title VI analysis, these percentages are compared to the Metrobus system average (80.7 percent minority; 46.4 percent low-income). Overall, the proposal impacts more than 40,000 riders each weekday. Therefore, the DI/DB threshold is five percent.

Table Two: DI/DB Test, Metrobus Service Changes

| | Minority Impacted Trips | Low-Income Impacted Trips |
|-------------------|-------------------------|---------------------------|
| Impacted Ratio | 71.3% | 34.6% |
| System Average | 80.7% | 46.4% |
| Difference | -9.4% | -11.8% |
| Threshold | 5.0% | 5.0% |
| DI or DB | No | No |

As shown in Table Two, the proposal impacts a lower proportion (by 9.4 percentage points) of minority riders and a lower proportion (by 11.8 percentage points) of low-income riders than the system average. **Therefore, there is not a DI to minority Metrobus riders nor a DB to low-income Metrobus riders.**

Equity Analysis of Metrorail Service Changes

As discussed in the Board presentation materials, the rail service in FY2022 includes the same level of Metrorail service as approved for the last months of FY2021. This analysis is a recap of the prior analysis prepared for the November 19, 2020 approval of the Amended FY2021 Budget. As shown in Table Three, staff calculated the percentage of passenger trips taken by minority and low-income riders impacted by reductions in Metrorail service (43.6 percent minority, 10.5 percent low-income). Staff compared these percentages to the system-wide profile for Metrorail (44.8 percent minority; 12.6 percent low-income). The number of daily riders impacted is more than 40,000; therefore, the DI/DB threshold is five percent.

Table Three: DI/DB Test, Rail Service Reductions

| | Minority Impacted Trips | Low-Income Impacted Trips |
|-------------------|-------------------------|---------------------------|
| Impacted Ratio | 43.6% | 10.5% |
| System Average | 44.8% | 12.6% |
| Difference | -1.2% | -2.1% |
| Threshold | 5.0% | 5.0% |
| DI or DB | No | No |

As shown in Table Three, the proposal impacts a lower percentage of minority riders and a lower percentage of low-income riders than the corresponding system averages. **Therefore, there is not a DI to minority Metrorail riders or a DB to low-income Metrorail riders.**

Combined Equity Scan of Metrobus and Metrorail Service Proposals

Metro's Board and FTA-approved Title VI equity analysis methodology considers the Metrobus and Metrorail systems separately when applying DI/DB impact thresholds. Although not required by Title VI or the Board's Title VI program, analyzing the impacts of the combined Metrorail and Metrobus service changes may provide a deeper understanding of the impact to minority and low-income riders overall. Staff conducted an equity analysis of the proposed service changes that combined the impacts to minority and low-income riders for both the Metrobus and Metrorail systems. The results are shown in Table Four.

Table Four: DI/DB Test, Combined Metrobus and Metrorail Systems

| | Minority Impacted Trips | Low-Income Impacted Trips |
|----------------------|-------------------------|---------------------------|
| Impacted Ratio | 49.6% | 15.7% |
| Rail and Bus Average | 58.0% | 25.0% |
| Difference | -8.4% | -9.3% |
| Threshold | 5.0% | 5.0% |
| DI or DB | No | No |

According to the analysis, the proposal would impact a lower proportion of minority and low-income riders than the combined Metrobus and Metrorail system average. This is in part due to the demographics of Metrorail riders, which typically have fewer minority riders than Metrobus (45 percent compared to 81 percent), and fewer low-income riders (13 percent compared to 46 percent). The proposed service changes for FY2022 reduce service levels on Metrorail more broadly and severely than on Metrobus, which has proposals that are more targeted, resulting

a higher relative impact to Metrorail riders.

Equity Analysis of New Metrobus Service

The previous sections focused on service reductions to analyze if the adverse effects of the service reductions are disproportionately borne by minority and low-income riders. However, the Title VI Circular also requires transit agencies to conduct an analysis of new service to see if the benefits of the new service are distributed in an equitable way. Some of the late-night bus service changes are new service, not service restorations. Therefore, they are analyzed separately to allow an understanding of the benefits of the new service.

Staff has reviewed the demographics of riders benefiting from this new service and found that 78.5 percent of riders are minority and 47.3 percent of riders are low-income. The minority percentage is somewhat below the system average; however, there is not a disparate impact to minority riders as the difference is below the threshold of eight percent (based on a ridership of less than 10,000 daily trips). The low-income percentage is higher than the system average, therefore, there is not a disproportionate burden to low-income riders.

Table Five: DI/DB Test, New Late-Night Metrobus Service

| | Minority Impacted Trips | Low-Income Impacted Trips |
|-------------------|-------------------------|---------------------------|
| Impacted Ratio | 78.5% | 47.3% |
| System Average | 80.7% | 46.4% |
| Difference | -2.2% | 0.9% |
| Threshold | -8.0% | -8.0% |
| DI or DB | No | No |

Fare Changes

The FY2022 operating budget also includes a proposal to lower parking rates at stations in Prince George's County, Maryland. For purposes of Title VI, parking fees are included in the customer's overall fare. Therefore, increases or decreases in parking fee rates require a Title VI equity analysis.

As identified in the public hearing docket, staff proposes lowering the rates at all Prince George's County stations from \$5.20 to \$4.95 with the following exceptions: Addison Road and Prince George's Plaza, where the rate will be reduced from \$4.70 to \$4.45. At Landover, the current rate of \$3.00 will be maintained.

This proposal does not result in a disparate impact to minority park and ride users or a disproportionate burden to low-income park and ride users. As shown in Table

Six, the proposal results in a higher fee reduction for minority and low-income park and ride users.

Table Six: DI DB Test, Parking Fee Reduction

| | Minority | Non- Minority | Low- Income | Non-Low-Income |
|---------------------|--------------|---------------|--------------|----------------|
| Fee Change % | -2.9% | -0.9% | -1.9% | -1.9% |
| Difference | -1.9% | | -0.1% | |
| Threshold | 5.0% | | 5.0% | |
| DI/DB | No | | No | |

1. In addition to deferred subsidy, FY2022 Base subsidy reduced by \$6.6M for delay of Silver Line Phase 2 and \$0.8M for Bus line 3A to be operated by Fairfax County effective July 2021

2. Gross Revenue Bond Debt Service

SERVICE CHANGES

Proposed Metrobus Service Changes

FY22 Proposed Metrobus Service

Specific proposals for each Metrobus line are included in the tables by jurisdiction on the subsequent pages. The table below provides a legend which provides a brief summary of how each line is affected:

| | |
|-----|--|
| | Continues to operate at current service level |
| | Service is modified providing partial coverage on the line, or another line has been modified to provide a partial replacement for that line |
| | Service is currently operating and will no longer be served in the proposed plan |
| | Currently not operating and will continue to not operate |
| n/a | There was no service on this line pre-pandemic on this service day |

FY2022 Proposed Service Plans – District of Columbia

| Rte | Line Name | Weekday Status | Sat/Sun Status | Description |
|-----|--|----------------|----------------|--|
| 30N | Friendship Heights-Southeast | | | All stops covered by 31,33 & 32,36, eliminates one-seat trips from SE to NW |
| 30S | | | | |
| 31 | Wisconsin Avenue | | | Maintain FY21 span & frequency, add service until 2 am 7-day-a-week on route 33 |
| 33 | | | | |
| 32 | Pennsylvania Avenue | | | Maintain FY21 span & frequency, add service until 2 am 7 days-a-week |
| 34 | | | | |

INDIRECT COST RATE PROPOSAL

Table of FY2022 Budgeted Indirect Cost Rates

For FY2022, Metro prepared and submitted an Indirect Cost Rate Proposal (ICRP) to the Federal Transit Administration (FTA) on December 31, 2020 for a set of department indirect cost rates that, excluding a carry-forward calculation, establishes a composite rate of 50.45%. The FTA is still reviewing the proposed FY2022 ICRP. The indirect cost rates by department used to develop the budgeted composite rate of 50.45% are as shown below.

| Department/Area | Indirect Cost Rate |
|--|--------------------|
| Access Services, Mode 10 – Paratransit (ACCESS) | 197.23% |
| Bus Services - Transportation, Mode 01 (BTRA) | 38.11% |
| Bus Services - Vehicle Maintenance, Mode 01 (BMNT) | 43.98% |
| Rail Transportation Administration, Mode 02 (RTRA) | 50.69% |
| Rail Maintenance, Mode 02 (CMNT) | 51.18% |
| Rail Infrastructure and Facilities, Mode 02 (INFR) | 57.89% |
| Metro Transit Police Department (MTPD) | 57.78% |
| Customer Service, Communications, and Marketing (CSCM) | 65.95% |
| Overall Composite Indirect Cost Rate | 50.45% |

In preparing the FY2022 Capital Budget and Six-Year CIP, Metro proposes use of the indirect cost rate set that corresponds to a composite rate of 50.45%. This rate is less than the composite rate of 67.18%, which was provisionally approved by FTA by letter dated August 10, 2020.

Mr. Dennis Anosike
Chief Financial Officer
Washington Metropolitan Area Transit Authority
600 Fifth Street, NW
Washington, DC 20001

Re: FY2021 Indirect Cost Rate Proposal – Provisional Approval

Dear Mr. Anosike:

The Federal Transit Administration (FTA) has received the Washington Metropolitan Area Transit Authority's (WMATA) Indirect Cost Rate Proposal (ICRP) on FTA-funded activities. The proposal received a cursory review by FTA Region 3's Financial Analyst who determined that a formal review by our Financial Management Oversight Contractor (FMOC) was warranted.

Unfortunately, the process of issuing a task order to the FMOC was halted as activities related to the COVID-19 Pandemic and subsequent CARES Act took precedence. FTA has recently re-initiated the process of having a FMOC assigned to review your FY2021 ICRP. It is expected that their review will be completed within the next 60 days.

While we await the FMOC's report, the indirect cost rate of 67.18% proposed in the WMATA Indirect Cost Rate Proposal is provisionally approved by FTA for application to direct labor charged to FTA grants during WMATA's Fiscal Year 2021 that extends from July 1, 2020 through June 30, 2021. FTA expects to make a final determination regarding the proposed rate within this period, at which time, any necessary adjustments to the rate will be made.

If you have any questions, please contact Kelly Tyler in the Washington, DC Metropolitan Office at (202) 366-3267 or via e-mail at Kelly.Tyler@dot.gov.

Sincerely,

PRESENTED AND ADOPTED: February 27, 2020

SUBJECT: DEBT MANAGEMENT POLICY

2020-04

RESOLUTION
OF THE
BOARD OF DIRECTORS
OF THE
WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY

WHEREAS, WMATA's Dedicated Capital Funding Agreement with Maryland requires the Board to adopt a formal debt management policy and then review and adopt that policy annually; and

WHEREAS, Staff has prepared the attached debt management policy for Board consideration;

NOW, THEREFORE, be it

RESOLVED, That the Board adopts the Debt Management Policy in Attachment A; and be it further

RESOLVED, That the General Manager and Chief Executive Officer shall bring the Debt Management Policy with any recommended changes back to the Board for review and approval annually; and be it finally

RESOLVED, That this Resolution shall be effective 30 days after adoption in accordance with § 8(b) of the WMATA Compact.

Reviewed as to form and legal sufficiency,

Patricia Y. Lee
General Counsel

WMATA File Structure No.:
4.1.0 Bonds

Motioned by Mr. McMillin, seconded by Mr. Graham

Ayes: 8- Mr. Smedberg, Ms. Gidigbi, Mr. Goldman, Mr. Horner, Mr. Letourneau, Mr. Marootian, Mr. Graham and Mr. McMillin

WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY

Debt Management Policy Guidelines

February 2020

I. Introduction

Section 101. Purpose

These Debt Management Policy Guidelines (the “Policy Guidelines”) document the Washington Metropolitan Area Transit Authority’s (“WMATA” or the “Authority”) goals for the use of debt instruments and provides guidelines for the use of debt for financing the Authority’s infrastructure and capital projects. The Authority’s overall guiding principles in issuing debt is to (a) identify transactions that utilize debt in the most efficient manner, (b) make timely debt service payments, and (c) achieve the lowest possible cost of capital and maintain high credit ratings and access to the capital markets.

Section 102. Authority, Scope and Review

WMATA is an interstate compact agency, and an agency and instrumentality of the District of Columbia, State of Maryland, and Commonwealth of Virginia. WMATA’s continuing power to issue revenue bonds is set forth in Article IX of the Compact. Notwithstanding any provision of these Guidelines to the contrary, all debt obligations of WMATA will comply with the requirements of the Compact as well as all other applicable laws, regulations and Board Resolutions.

These Policy Guidelines will be reviewed annually by the WMATA Board of Directors (the “Board”) and any changes to the Policy Guidelines must be presented to and approved by the Board.

Section 103. Administration of Policy Guidelines

Both the Executive Vice President and Chief Financial Officer and the Vice President and Treasurer will be responsible for managing, implementing and reviewing the Policy Guidelines and recommending appropriate debt offerings to the General Manager and Chief Executive Officer from time to time.

Section 104. General Best Interest of Authority

The General Manager and Chief Executive Officer will bring to the Board for approval prior to closing, any deviations from the Policy Guidelines that may be appropriate to address 1) changing financial goals, 2) emerging financial products/debt structures and 3) unique market opportunities.

II. General Debt Issuance Policies

Section 201. Use of Debt

WMATA will issue bonds for the sole purpose of financing the Authority’s Capital Improvement Program (CIP). Bond proceeds will not be used for ongoing operating needs except as provided for in this section.

WMATA may use a mix of pay-as-you-go and debt to finance capital projects and other short and long-term financial needs of the Authority. The financing purpose will guide the type of debt WMATA uses, which may include:

Long-Term Debt: Long-term bonds/notes (instruments with a maturity of more than two years are preferred for financing essential capital activities including the acquisition, construction and rehabilitation of major capital assets. Long-Term Debt may not be issued with a maturity exceeding thirty (30) years. Debt will be issued for a duration matched to the overall economic life of the CIP projects financed.

Short-Term Debt: WMATA may use short-term bonds/notes (instruments with a maturity of two years or less) as a cash management tool to provide interim financing for capital financing activities, to bridge temporary cash flow deficits within a fiscal year, and/or to reduce interest rate costs. Short-term debt obligations may include commercial paper, grant anticipation notes, working cash notes, variable rate bonds, bond anticipation notes, lines of credit as well as any other appropriate instruments.

Variable Rate Debt: In addition to fixed rate debt, WMATA may issue bonds/notes with a variable interest rate to 1) diversify its debt portfolio, 2) reduce interest costs, 3) improve its match of assets to liabilities, 4) provide budgetary relief or 5) allow grant funding flexibility to accommodate changes in debt service levels. The aggregate amount of WMATA's outstanding unhedged long-term variable rate debt, however, is not authorized to exceed 20% of its outstanding long-term debt.

Direct Borrowing: Where direct borrowing/lending (such as TIFIA loans) would prove more economically beneficial, WMATA will consider direct loan obligations. However, WMATA will only proceed with a direct loan transaction if the transaction creates tangible benefits of greater value to WMATA than the burden of additional costs and administrative requirements of such direct borrowing.

Bond Premium: Bonds can be sold at par or as premium bonds or discount bonds. If bonds are sold with a premium, the premium shall be deposited to a Cost of Issuance Account to pay bond issuance costs, and, if applicable, any residual premium will be transferred to a Capitalized Interest Account to pay any capitalized debt service on the bonds; and, any further residual premium will be deposited into the Capital Projects Account specific to that bond issue.

When issuing Gross Revenue Bonds, WMATA will attempt to "right-size" the issue so as to minimize any excess premium derived after covering 1) bond issuance costs; 2) and capitalized debt service, if any. Any remaining premium will be deposited to the project fund to satisfy the CIP Project Fund requirement.

Section 202. Financing Purposes

The Authority may issue debt for either new money or refunding purposes.

New Money Bonds: New money bonds may be issued to provide additional funding for essential capital activities or other activities suitable for bond financing, as detailed under Use of Debt.

Refunding Bonds: WMATA may issue refunding bonds to achieve debt service savings on its outstanding bonds by redeeming high interest rate debt with lower interest rate debt. WMATA may structure the savings from these bonds on a uniform, proportionate or accelerated basis depending on the Authority's financing goals. When refunding outstanding bonds, the Authority will generally seek a per bond net present value savings guideline of 3% based on market

conditions. Refundings with lower savings rate may be appropriate to maximize overall financial objectives. Notwithstanding the above, the 3% savings guideline will not apply for bonds with a call date between one and three years from their stated maturity, or for small principal maturities.

In certain instances, it may be advantageous for WMATA to issue refunding bonds that do not produce positive economic savings but serve to restructure debt or retire a bond issue in order to remove undesirable bond covenants. Prior to issuing such refunding bonds, WMATA will evaluate the benefits (both intangible and tangible) as well as the economic costs for approval by the Board.

Section 203. Issuance Processes

There are three basic processes for the issuance of long-term bonds:

- **Jurisdictional Capital Contribution Debt.** This form of debt may be issued using the process contained in the applicable Capital Funding Agreement which may provide for an opt-in option for the funding jurisdictions and formal agreement by the opting-in jurisdictions to fund that debt service. The security for these bonds will be WMATA's Gross Revenues as defined in the applicable bond resolution.
- **Dedicated Funding Debt.** This form of debt may be issued with the approval of the Board without any jurisdictional input. The security for these bonds shall be the Dedicated Funding contributions received from the District of Columbia, the State of Maryland, and the Commonwealth of Virginia pursuant to the following legislative enactments: (a) from the District of Columbia under D.C. Official Code § 1-325.401 or any successor statute, as the same may be amended from time to time in the future; (b) from the State of Maryland under Md. Transportation Code Ann. § 10-205(g) or any successor statute, as the same may be amended from time to time; and (c) from the Commonwealth of Virginia under the Va. Code §33.2-3401.B or any successor statute, as the same may be amended from time to time. Dedicated Funding shall also include funds paid by any of the District of Columbia, the State of Maryland, the Commonwealth of Virginia or any other Participating Jurisdiction in-lieu-of such amounts.
- **Debt Secured by Other Revenue Sources.** WMATA may issue debt secured by other sources of revenue not described above. The approval of the Board is the only approval necessary unless the source of revenue is from one or more of the local funding jurisdictions; in which case, those jurisdictions will have the same rights as under Jurisdictional Capital Contribution Debt.

Section 204. Combination of Security for Bonds

WMATA may issue bonds with one or more types of security provided that the issuance requirements and process for each type of security is met.

Section 205. Borrowing Capacity

In addition to complying with the financial covenants for outstanding Gross Revenue Transit Bonds authorized under the 2003 Gross Revenue Bond Resolution (2003-53) and subsequent supplemental resolutions and other applicable bond resolutions, the Authority will manage its debt to ensure sufficient revenues are available to meet its obligations under its various liens. WMATA will monitor debt capacity and analyze impact of additional debt on the Authority's short- and long-term debt capacity. Any debt cap will be based on

the overall needs of the Authority and the Debt Service Coverage requirements contained in any applicable bond resolution.

Senior and Junior Liens for each revenue source will be utilized in a manner that maximizes critical constraints, including cost and capacity, thus allowing for the most beneficial use of the revenue for the most efficient security structure. Prior to each lien, the Authority's Board will approve a maximum annual debt service (MADS ratio of pledged revenue divided by annual debt service) or other debt service coverage requirement necessary to satisfy the constraints.

Section 206. Use of Short-Term Debt

Short-Term Debt may be issued by WMATA. Lines of Credit not used for credit enhancement may be used for interim funding of the approved capital program or to ameliorate the impact of any shortfall in the Operating budget. When used in the capital program, the costs of such usage shall be charged to the applicable capital program or project. When a Line of Credit is used to ameliorate the impact of any shortfall in the Operating budget, the costs of such usage, including interest, shall be paid solely out of the Operating budget and charged to the jurisdiction or jurisdictions causing the need to use the Line of Credit or charged pursuant to the applicable subsidy formula when the use of the Line of Credit is from a non-jurisdictional requirement but never from any capital funds.

All forms of Short-Term Debt must be approved by the Board of Directors before closing; except that Lines of Credit meeting the following parameters may be issued without further Board action:

- Aggregate amount not to exceed \$350 million unless prior Board approval is received;
- The interest rate shall not exceed the then-current one-month LIBOR (or any generally accepted substitute for LIBOR) plus an annual rate of 1.75%;
- Have a term which is less than one year;
- Fees and transaction costs paid by WMATA on a Line of Credit may include the fee types and transaction costs contained in the existing Line of Credit program in effect upon passage of this policy and additional fee types and transaction costs (and each in amounts) which are reasonable and customary for the industry at the time of entering into a new or renewed Line of Credit; and
- If financial institution indemnification is required as a condition of the Line of Credit, such indemnification shall have already been granted by the Board of Directors.

Section 207. Credit Ratings

WMATA's credit ratings goal is to achieve the best economic benefit from the Authority's debt issuances by attaining appropriate balance between minimizing borrowing cost and maximizing financial flexibility and result.

For existing bond programs, WMATA will attempt to maintain or improve current credit ratings without adversely affecting levels of debt that may be issued for any particular program. For new bond issuances, WMATA will generally seek investment grade ratings from at least two Nationally Recognized Statistical Rating Organizations. However, WMATA acknowledges that as market conditions and financing needs evolve, so should the Authority's credit ratings strategy. WMATA may accept a lower rating (and thus incur a modest financing cost

differential) in order to gain flexibility needed to effect significant policy initiatives. The Authority will periodically review its credit rating strategy to see if market or capital plan developments warrant a revision in WMATA's approach to its ratings.

WMATA will strive to communicate regularly with rating agencies. As requested, the Authority will provide information to rating agencies, arrange regular conference calls to update rating analysts on significant financial developments and communicate with rating agencies prior to each WMATA public bond offering.

Section 208. Subordinate Liens

WMATA may determine that for some of its revenue sources it may be advantageous to issue subordinate lien debt. However, WMATA will only proceed with subordinate lien debt if the transaction creates tangible benefits to WMATA and is approved by the Board.

Section 209. Tax Status

WMATA has a preference for issuing debt on a tax-exempt basis to take advantage of interest costs savings compared to issuing taxable debt. However, WMATA may issue debt on a taxable or tax-exempt basis.

Section 210. Credit Enhancement

WMATA may secure credit enhancement for all or a portion of each bond issue. Credit enhancement may include municipal bond insurance or a letter/line of credit (which shall not be covered by Section 206 of this Debt Policy). The Executive Vice President and Chief Financial Officer or designees shall recommend use of credit enhancement considering such factors as economic benefit of the enhancement, and future secondary market trading conditions. WMATA will not secure credit enhancement unless the premium cost is less than the present value of the projected interest savings or if such credit enhancement improves capital market access and/or facilitates liquidity in the secondary market for the securities. For municipal bond insurance, or other forms of credit enhancement which are paid for with an upfront premium, WMATA will analyze the economic benefit both to the maturity of the bonds and to the first optional redemption date.

WMATA may also fund a debt service reserve fund to enhance the marketability of its bonds.

For bond issues that require a debt service reserve fund, WMATA may purchase a surety bond policy or letter of credit to satisfy the reserve fund requirement in lieu of funding.

III. Sustainability and Environmental, Social and Governance (ESG) Debt

As a mass transit system, WMATA promotes low carbon emissions and an environmentally friendly "green" platform encompassing its operations and infrastructure. The Authority's debt collateral attracts investors who want to contribute to its sustainable business model and may have mandates to invest in a socially responsible manner.

WMATA is under no obligation to certify "green" for any debt issuance or as a compliance requirement and can solely rely on its energy efficient asset base of environmentally friendly collateral as qualifying its debt as "green" and socially responsible.

As investors continue to pursue "impact" investments and WMATA fulfills that socially responsible objective with programs such as Metro Access, fares for low-income and disabled customers, subsidized student fare programs, and outreach programs to the low income and non-banked community, WMATA's investor relations when appropriate will emphasize its

positive impact in the community to broaden the Authority's investor base and highlight the Authority's federal mandate to serve lower income customers.

Debt issuances, when logical, are permitted to be marketed and labeled as "green", "sustainable", or "ESG" investment opportunities to potential investors. WMATA will leverage this marketing advantage to lower its cost of funds and/or to diversify investors when possible as the ESG market continues to grow worldwide.

IV. Method of Sale and Use of Professionals

Section 401. Method of Bond Sale

The General Manager & Chief Executive Officer or his designee may choose between the following three different bond sale methods: negotiated, competitive and private placement. A competitive sale is the preferred method of sale unless market conditions at the time of sale indicate a negotiated or private placement sale will result in lower overall cost to WMATA. In such cases, Board approval is required to proceed with a negotiated sale or private placement.

Factors which may be considered when determining the most efficient bond sale method include:

| | | |
|--------------------------------------|------------------------------------|------------------------|
| • Bond market conditions | • Bond structure | • Market timing |
| • Credit demand | • Credit acceptance | • Credit ratings |
| • Use of proceeds | • Bond size | • Financing complexity |
| • Desire to negotiate bond covenants | • Credit enhancement participation | • Credit Complexity |

Section 402. Selection of Bond Financing Professionals

Bond Financial Advisory Professionals including firms that provide financial advisory and underwriting services to WMATA in connection with the issuance of debt shall be selected on a competitive basis to create pools of qualified vendors. The Executive Vice President and Chief Financial Officer or his designee have been delegated the authority to select Bond Financial Advisory professionals. The Authority will strive for diversity and provide opportunity for DBE firms, veteran owned, and other minority and women-owned firms as part of each underwriting team.

WMATA will select and retain at all times one or more independent registered municipal advisors (IRMAs) to review financing ideas provided to the Authority by Bond Underwriting Professionals. Further, concurrently with the planning for a debt issue, WMATA shall obtain the services of Bond Financial Advisory Professionals and, as needed, Bond Underwriting Professionals.

In addition to the above, WMATA may periodically solicit separately for specialized services, including short-term lending products, based on the financial needs of the Authority and market factors at the time of the solicitation. As the market for financial institution offering short-term lending products to governments evolve, WMATA may solicit bids for short-term borrowing programs from firms meeting the Compact requirements and whom the Authority deems viable at the time of the financing.

WMATA requires its Bond Financial Advisory Professionals to provide services in accordance with all currently applicable Municipal Securities Rulemaking Board (MSRB) rules and any subsequent MSRB rulings or requirements.

V. Derivatives

Section 501. General Policy

Interest rate swaps and options (Swaps or Derivatives) are appropriate management tools that can assist WMATA to meet important financial objectives. Properly used, these instruments can help WMATA increase its financial flexibility, provide opportunities for interest rate savings, enhanced investment yields, or reduce interest rate risk through more effective matching of assets and liabilities. Derivatives for commodities used by WMATA also provide opportunities for financial benefit. The Executive Vice President and Chief Financial Officer or his designee must determine if the use of any Swap or hedging instrument is appropriate and warranted given the potential benefit, risks, and objectives of the Authority.

- WMATA may consider the use of a derivatives if it achieves one or more of the following objectives:
 - Provides specific risk mitigation not otherwise available;
 - Produces greater than expected interest rate savings or incremental yield over other market alternatives;
 - Results in improved capital structure or better asset/liability match.
- WMATA will not use derivative products that are speculative or create extraordinary leverage or risk; lack adequate liquidity; provide insufficient price transparency; or as investments.

WMATA will only do business with A+ or higher rated counterparties or counterparties whose obligations are supported by A+ or higher rated parties.

Section 502. Interest Rate Derivative Policy

Financial transactions using Swaps or other derivative products used in lieu of a fixed rate debt issue should generate greater projected savings than the typical structure used by WMATA for fixed rate debt.

- WMATA will limit the total notional value of interest rate derivatives to an amount not to exceed twenty percent of total outstanding fixed rate debt and 100% of variable rate debt.

Section 503. Commodity Derivative Policy

WMATA is authorized to hedge or execute contracts for diesel fuel, electricity, CNG, carbon credits, and other commodities (excluding financial derivatives discussed above) that have a direct business relationship to WMATA's operations but not to exceed 95% of the expected use of the commodity to provide budget stability.

VI. Disclosure

WMATA will periodically review the requirements of the MSRB and the recommendations of the Government Finance Officers Association ("GFOA") including the GFOA recommendation that financial statements be prepared and presented according to generally accepted accounting principles.

The Authority will also comply with Rule 15c2-12 by filing its annual financial statements and other financial and operating data on the Electronic Municipal Market Access (EMMA) repository for the benefit of its bondholders within the timeframe required under each financing. WMATA will make its financial statements, annual budget and official statements available on its investor relations website. The Vice President and Treasurer will comply with all SEC requirements for disclosure by providing annual financial information and notices of material events as outlined in the Continuing Disclosure Agreement executed for each series of bonds.

VII. Post Issuance Considerations

Section 701. General Compliance Requirements

WMATA will comply with all debt covenants and comply with all post issuance tax requirements as detailed in the individual tax compliance certificate executed in connection with each bond or note sale. Specifically, WMATA will comply with Federal tax law to establish and maintain the exclusion from gross income tax on the Authority's bonds. WMATA will particularly focus on arbitrage requirements and will evaluate and ensure compliance with all applicable tax law during the debt issuance process, and on an ongoing basis thereafter, monitoring the Authority's debt portfolio in light of regulatory changes and case law, including arbitrage rules, including the Authority's arbitrage rebate position and any attendant rebate liability, as defined in § 148 of the Tax Code.

Section 702. Investment of Bond Proceeds

WMATA will invest the sale proceeds of its bonds in accordance with the provisions of the WMATA Compact and the Internal Revenue Code. WMATA will invest bond proceeds in a manner that allows proceeds to be available when needed.

Section 703. Trustee Relationships and Monitoring of Trustee Activities

The Vice President and Treasurer is responsible for monitoring trustee activities made on behalf of WMATA on a quarterly basis.
