| No this would drastically impact my travel to and from my job and therefore cause a significant inconvenience. Although numbers maybe low now it is due to the large amount of individuals not riding the metro. I believe this will change in the months ahead and should not be inacted. |
| Morgan Boulevard is the station for Washington Football games. How would fans access the stadium? |
| we rely on archives for adult and student travel plans. likewise we frequent Smithsonian for student use (direct to mall is essential regardless of nearby stations), VA Square (likewise essential to get student to central library and doctors offices without getting turned around at busy Ballston station, which overshoots our destination). |
| Every effort should be made to provide at least some scheduled service to all stations. |
| I cannot comment on any other stations, but Grosvenor-Strathmore is my nearest station and I use it frequently |
| Will College Park reopen once Purple Line is operational? That would be the only transfer node to lines to downtown within miles. Not having it would probably seriously affect Purple Line ridership. |
| McLean serves major corporations in the area that employ thousands, many of whom use metrorail to commute. You would contribute to increased traffic and pollution in those areas by closing stations. |
| East Falls Church is our primary station for work, assuming Covid will end offices will reopen. This station is also used by MANY students at nearby Bishop OConnell High school, and closing it would be a disaster! |

Proposal to close 22 Metrorail stations

Need to go to Cleveland park station 3 times a week.

Again, not sure why Metro is planning on being worse in a year rather than better. Maybe Im missing the point.

This would absolutely not work for me. I need to get off at the McLean station to get to work everyday, and I dont have a car. If the McLean station closed I literally would not be able to get to work everyday. If the Metro wants to save resources, they should close these stations now when everyone is working from home and then OPEN them in 2022. It makes no sense to me that the Metro would close several stations right as people will be going back to work in person and ridership will go up.

Especially Archives-Navy and Judiciary square, those are 2 stations where the courts house are near, which would make it difficult for people who work, live, or have to go to court.

pedestrian access (adequate sidewalks, intersection crossing, etc) should be deemed in good condition before any closures.

Closing the Eisenhower Station would negatively impact the Alexandria community. Many individuals, including myself, rely on the Eisenhower station to commute to and from work on a daily basis. It's closure would do irreparable harm.

Would urge you keep Smithsonian open, as it leads to the group of Smithsonian museums, which are one of DCs premier tourist attractions.

Rather than promoting increase in metro traffic, you would be discouraging riders from using metro especially in some of these suburban locations. This would be a great disservice to many of us who routinely used metro in the past.

This would be economically disastrous for many of the residents living in these areas. I based my decision to live in the Clarendon neighborhood based on the Clarendon metro. To close the Clarendon metro, along with the other proposed closures, would accelerate the already negative economic hardships we are currently facing.

I bought my home near East Falls Church because I can walk to the Metro station to commute to work. Closing EFC would negatively impact the value of my home.

Closing *both* clarendon and virginia square at the same time would be a potential problem. The gap between Courthouse and Ballston is too large for all the usual final destinations to be reachable given the range of north / south walking often done from these stations (though East-West is potentially doable as noted).

The metro stations exist for a reason. If you closed them, you would be increasing auto traffic and overhead for riders, defeating the purpose of convenience. Furthermore, most stations are already at capacity for parking and would have severe issues accommodating more cars

East Falls Church is my local metro station. I can walk there, eliminating the issue of parking and parking fees. The next closest station, Ballston, swarms with buses, cars and commuters, making it considerably less attractive or practical for me.

Several of these stations are important for my commuting into/out of the District and Arlington/Falls Church.

I have children going to school out at the location

I can walk to East Falls Church, but not to Ballston. And hasnt Metro been doing work on East Falls Church station? Why then abandon the station?

This probably isn't applicable to me, but it's still a terrible idea.

Many people with mobility issues specifically live near Metro stations for ease of travel and this would be highly detrimental. Also, Grovesnor- Strathmore has a major garage which makes metro ridership easier for many. Taking out that stop would greatly limit the number of passengers who would otherwise be ready to ride on Metro again.

Please dont do this plan. This is the worst by far. Id much rather have trains run less often and/or metro close at 9 pm during the weekdays and maybe even weekend than start closing down stations. One of the great benefits of the metro is the flexibility of all the stations, even ones relatively close to each other. If you start closing down stations....I really think many will never open again. And people who bought houses or rent apartments near those metro stations for the easy access to the metro will be penalized for something out of their control (the pandemic and ensuing recession)

I use the Grosvenor station and chose my apt based on this station! It would be really unfortunate if this station closed.

East Falls Church is my primary station for daily commuting. If this station closed I would likely not use Metro at all.

My stop is Federal Triangle. While I could get on and off at Metro Center, I worry again that with all the Federal triangle passengers the station at Metro Center would be dangerously crowded.

We use the East Fall s Church station and ore Covid it's parking lot was always full and it's the start of the silver line. It's a critical link for our growing neighborhood

These stations are critical (especially junction stations such as Grosvenor-Strathmore) for the entire system to work properly, keep platform crowds down, etc. Also, there are entire communities built around these stations (home values, businesses, etc.) that would be negatively affected by this proposal. I and Im sure a large amount of people in this area would be strongly against this.

No station deserves to be closed due to budgetary concerns. Constructon/Track Work is fine but not to save money.

I live at one station thats on this list and work at another on this list. This would require a huge financial lift to find alternatives.

Proposal to close 22 Metrorail stations

Closing Arlington Cemetery makes it much harder to visit relatives buried there, but not impossible. Closing nearly every stop in Arlington makes it difficult to see relatives who are still alive.

Some of these might work; others wouldn't. Closing the Smithsonian would have major tourist implications. A bus would be needed to get to Arlington Cemetery as well as several others.

Some of these stations (EFC, for example) are not close to other stations. I would deem close to mean you could easily walk to another station in a few minutes (for example, McPherson Square and Farragut West)

This suggestion is dumb - closing Van Dorn and Eisenhower? Get real - might as well shut down the entire Metro

East Falls Church, Smithsonian, Virginia Square, and Federal Triangle are the stops I need for home, work, and childcare respectively

Why close Clarendon and VA Square stations. They are contiguous. One or the other could be workable. I get off at Clarendon to shop at Trader Joe's. That station facilitates my grocery shopping. I couldn't buy as much during each visit if I could use the train.

Closing both the Virginia Square and Clarendon Metro stations takes away the two nearest, walkable Metro stations for the George Mason University Arlington campus. Ideally, at least one of those two would remain open (maybe Clarendon?).

We rely on Grosvenor and closing it would make the White Flint platform too crowded and unsafe.

I have no other way to get to work and am unable to walk to any other station

Cleveland Park is my primary station, I strongly oppose its closure. I also use Judiciary Square, and Federal Triangle, frequently. And the Smithsonian stop??? It's the only one on the mall! Are you guys insane??? It seems crazy, why even have a metro system if it operates so infrequently, closes early, and closes so many stations?

I would expect usage to pick up as vaccinations increase. This proposal would eliminate the only option for many commuters. I could understand eliminating one or two downtown given the density of stops near Metro Center, as well as Arlington Cemetery since it does not cater to commuters. Another alternative may be to keep the above listed stations open during rush hour and close them early.

While some of these stations are very close to others and closing them may make sense, others don't have stations near them and they should still operate. Also, don't close Smithsonian. It'll confuse the tourists.

This is just plain stupid. I use the East Falls Church station - you close it and I start driving. Also you just refurbished the station. This plan is a death spiral for metro. By the way I really like metro so keep it available to people.

I live near the Clarendon station and commute to the McLean station. Those changes alone would add close to 30 minutes to my commute. If I chose to drive, the traffic near the McLean station would likely be unbearable with the station closed. I chose to live where I did because of its proximity to the station.

This cuts off access to entire areas of the city!

Need East Falls Church and Virginia Square to

operate silver line to correspond to Dulles peak needs and not worse than every 30 min.. Less frequency is better than closing stations

Grosvenor is by far safer and easier to access than White Flint parking structure which is scary at night - there is also parking on the street for shorter times - do not close Grosvenor

I think closing stations is a bad plan - cutting off people from being able to ride. I think this plan would lower ridership even more.

Keep Grosvenor strathmore open. Many people in my neighborhood walk to this station

We love East Falls Church metro!!!!

I use East Falls Church regularly. It is the closest station to my house. I rely on public transportation because I don't have a car.

Ridership is lower at these stations due to the pandemic. Ridership will significantly increase once the effect of vaccine is felt and the local economy reopens.. Ridership at the Virginia Square building will increase when George Mason University and the FDIC building are both reopened.

No way. I plan on utilizing the Reston Town Center metro stop once it opens hopefully in the near future. There are many large companies also out in the Reston Town Center area that has employees living closer to D.C. It is imperative that the station open as soon as possible and not close in January of 2022.

This is the opposite of what the city needs. We need MORE stations in more areas of the city.

East Falls Church is the only metro stop in the eastern part of Arlington County. Eliminating it would severely disadvantage a huge portion of Arlingtonians.

I do use Clarendon station (at least pre-pandemic) at times, and I don't think that you can say the other stations are really nearby because they are quite far to walk to.

Virginia Square station needs to remain open for George Mason University law school and graduate school and the FDIC, both of which are located at Virginia Square.

Proposal to close 22 Metrorail stations

This is SO inconvenient and changes the metro line math considerably (to be way more complicated!). Dont make it complicated, or people wont use it. And dont close stations, because then theyre harder to reopen later. I really dont like this one.

These different locations have different levels of accessibility and "closeness" does not mean you will not exacerbate the needs of those who depend on those sites. What does "close" mean to metro management and how do they propose people get to locations without these stations? That information should be provided. Provide possible solutions when you talk about reductions. If you can't come up with decent solutions, you remove a "people-centered" approach that's needed for PUBLIC INFRASTRUCTURE. .

Do not close Clarendon. Do not close Mt Vernon Square

We bought our townhouse because of its proximity to the Grosvenor Metro station.

Closing stations will push people into cars.

I use the East Falls Church station regularly for work and personal and especially since it has a parking lot, it should not close. It would cause extreme travel time increases and wasted time to not be able to utilize this crucial station

My closest two stations are Clarendon and Virginia Square, both would close on this plan.

Im on the green line, college park. What am I supposed to do if you do this?? I wont have access at all

This will stop me from being a customer and will start driving to work. We bought a house here because it is close to the metro. You cannot be serious. I hope you are not serious.

I would object to the closing of Cleveland Park Station if there are changes to the H4 route that meant I could no longer get a bus to Tenleytown

Keep Eisenhower Station

Cleveland Park is an essential station for me and many others. It must remain open!

Clarendon and Virginia square are the stations near me??? How are you closing two in a row? What the hell! Do you think about anything??? How are people in this area supposed to get anywhere? Buses are impossible and cars are so expensive. Seriously please keep Clarendon open!!! It might have low ridership now but it didn't before the pandemic. Please!

I am a healthy walk to Clarendon with the next closest station being Virginia Square. If I had to walk to Ballston or Courthouse, that would make my walk too far for me to consider the metro. I would not use the metro if this change occurred. I would rather see Courthouse and Virginia Square closed and keep Clarendon open. That leaves a healthy every other stop.

Clarendon and Virginia Square are the closest metro stops to me. My ridership on the metro would decline if I needed to go to Ballston or Court House. With the longer walk and the reduced schedule, I would be nervous to miss trains.

Station closure is the largest potential savings in terms of infrastructure costs. Lighting, climate control and staffing could be lightened. I suggest that endpoint and major downtown stations be given priority, with lesser importance given to mid-route stations. Further, proximity to other assets (such as the bus yard near White Flint) and early-morning access by that staff should be weighed.

I live at Grosvenor-Strathmore. White Flint is not that close. There is no direct sidewalk to walk to Medical center. You have to walk in the Rockville Pike roadway from around Grosvenor Lane to Pooks Hill Road.

My job is moving to Downtown and I'd need the metro. I live at Grosvenor and part of the draw was the metro.

I work at McLean station and I live at Mt Vernon Square. I would basically have to switch entirely to a car if this was the case. Metro would be rendered completely useless to me.

Keep Grosvenor-Strathmore open, especially since it has parking.

This is beyond terrible. People live close to these stations for a reason. You close them, you alter everything from child care to home ownership.

very short sighted to close the Smithsonian station. Also if Clarendon and Virginia Square are closed this would cause a large problem with parking near Ballston and Court house.

Cannot close both Clarendon and Virginia Square

Would be a burden to not have Cleveland Park open.

Many of those stations serve tourists and are crucial for making sure theres less traffic and tourists driving within the city.

East Falls Church is miles away from other stations, closing this station leaves no practical options for commuters.

It will force me to take the bus from Arlington to the area of the Mall.

I live by the Grosvenor station and work downtown.

Would shuttlebus service still be provided?

| Proposal to close 22 Metrorail stations |
|---|
| Absolutely unacceptable |
| To commute to work I use either Clarendon or Virginia Square metro station. Having both of these close would make it quite difficult for me to use metro. The Court House and Ballston stations are not close enough to my office to make this a viable option for me. |
| Closing some low-volume stations makes sense. However, it would be bad to close BOTH Virginia Square and Clarendon, two stations next to each other. Instead close Virginia Square, keep Clarendon (and Ballston) open, and close Courthouse, with Rosslyn, of course, staying open. FYI: my normal station is Virginia Square, but I could also use Clarendon without real inconvenience. |
| This will only work if the government doesnt open back to in person. |
| Federal Triangle is my metro stop for my commute. |
| College Park is a MARC transfer point. |
| This would be a significant burden on my ability to get to work. If the Grosvenor-Strathmore station was closed, it would be difficult for me to get to work and I would likely feel the need to move to a different apartment. All of this would be very disruptive to my life. |
| Closing the these stations would be game changers. Many people would look at other options. Purchasing cars, uber, moving to another city. |
| Closing the Smithsonian station will not only hamper tourism it will make it difficult or even impossible for volunteers to access Smithsonian museums at the National Mall. Please do not shut the Smithsonian station. |
| Ive been in the DC Metro area for 8 years now. In that time I have relied on Eisenhower Ave, College Park, Fed Triangle, Van Dorn St, Clarendon, and Virginia Square to get to a from work, and moved next to East Falls Church mid-pandemic looking forward to utilizing it once things opened back up. I feel most of the stations that would see increased traffic if these closures went through are not equipped to handle the volume caused by folks having to drive to the station, or would just increase road traffic by trying to drive to work in the District. We need all our public transit options that we have come to rely on. |
| It is difficult to know what my ridership will be like in Jan 2022. I am currently a federal employee with the ability to telework full time. We have not received a timeline for when we will return to work, but I expect a return to work will occur when children return to school and significant portions of the population are vaccinated. I used the Federal Triangle station everyday prior to COVID and would hope to use it regularly once federal workers return to work. |
| would like Archives to remain open to be near federal buildings like FBI. i feel less physically safe at chinatown station |
| Makes no sense at all, particularly for Grosvenor-Strathmore. Expanded parking garage just completed, etc., and a plan to add Strathmore Square to this area. This used to be one of the busiest stations on the Red Line. What happened (beyond covid) to change that? The garage and parking lot were filled by 9:00 am on weekdays. |
| To suggest that East Falls Church or Clarendon are low ridership is laughable. I can understand closing Virginia Square (I line I used to use daily) with Clarendon and Ballston available. To shut down Clarendon AND Virginia Square would make no sense. |
| I rely on the College Park station for my daily commute. The station and places connected to it via shuttle are not walking distance from other metro stops. |
| This is a useful neighborhood station especially if driving by car is not as possible |
| I use Grosvenor-Strathmore daily for the commute. |
| I live in Cleveland Park. The stations on either side are too far away to reasonably walk. We would have to switch to Metrobus service. |
| I moved to this house in part due to proximity to Grosvenor-Strathmore for commuting. If I have a longer bus ride and trains every 30 minutes as proposed I will not be able to use metro for commuting |
| It's unfair to close Silver Line stations that haven't even opened. Northern Virginia residents have paid tolls and taxes to help pay for those stations. We deserve to be able to use them. |
| I am commuting from the Grosvenor-Strathmore metro station and significantly relies on its service. |
| No grosvenor-strathmore |
| The Orange and Silver Line trains are at full capacity during normal times. Closing half the stations on the Orange line is a ludicrous proposal. Closing East Falls Church forces all of those riders to Ballston or West Falls Church with very major impact on parking availability. On a different note, Arlington National Cemetery is a low volume stop because it is not a commuter stop, it is an important means of access for the public to experience a profoundly meaningful landmark... |
| Pre-pandemic, I used the Mt Vernon Square all the time. It is close to many offices, including mine. |
| Simply cannot close stations that people rely so heavily on, especially those without personal vehicles that would have to figure out transportation to a further metro stop. |

Proposal to close 22 Metrorail stations

Not only would this remove Metrorail as a viable transportation option, but ending service to these stations could put Metrorail at risk of permanently losing some riders, as they move away from stations and give up on Metrorail.

i use public transport only, do not own a car, and regularly access many of those stations.

Clarendon and VA Square in particular need to stay open and are critical to the neighborhood surrounding. I'm sure this is true of many of these stations

They need to be opened. What is the purpose of having the system without stopping the stations?

i live near van dorn st station. thats the station thats the closest for me, and i will be negatively impacted by its closure.

I use several of these stations on a regular basis so this does not work.

We rely on East Falls Church Metro for medical appointments and work

I mostly ride from East Falls Church to Federal Triangle and back. These proposed closures would significantly increase my trip time, assuming transfers via bus for first and final leg of the journey.

This would be absolutely terrible if you closed Grosvenor strathmore metro station. I literally moved to the apartments nearby so I could walk to and take the metro daily. This would be terrible and really bad for me and fellow riders. There is a whole community of riders that moved here to walk to the metro. I could not think of anything worse that could happen than this station closing, and I am a longtime rider and supporter. This would be a slap in the face to me as someone who has been riding for years and would be very unfair.

I live near East Falls Church which is mostly surrounded by residences. Lots of us chose this area because it is close to metro. The metro station is an anchor to our community and a major draw to living here. If the station closes it will devastate our community and leave a big empty splotch in the middle of our neighborhood. Other communities have healthy retail areas, but we do not.

I live within walking distance of Grosvenor Strathmore and this would significantly affect my commute.

Ridiculous. Before the pandemic I would ride the metro every day, often during non peak hours. Please reconsider this short-sighted proposal.

Oppose closing McLean station. I use it to get to work at Tysons.

In the case of Loudoun (and I'm assuming similar other scenarios), the issue is less about availability of nearby stations than it is about amenities at those stations -- specifically, for suburban areas that are not a reasonable walking distance apart from each other, parking availability. If twice as many people in Jan 2022 will use an alternate station, will there be twice as much parking available? Get there earlier doesn't solve the problem for people who can't arrive earlier -- where will they park when all the spaces are filled in the alternate locations? Will shuttles be provided from parking at other locations; and how will that impact the length (time) and cost of the commute? Closing stations when an alternate station is nearby is a plan best reserved for the city where the solution is a simple walk, bus ride, or cab/drop-off ride to an alternate location. Where parking is a huge factor for your riders, that solution is not feasible (and you're potentially likely to lose more suburban riders than you retain through this method).

A lot of those are downtown - this will be awful for workers (blue collar and restaurant / service especially). And when the tourists come back (2022 for sure) - how will they get to the Mall??

This would directly impact my ability to use the Metro closing both the closest metro to Mr and impacting where I need to travel when inside DC.

How is the Smithsonian considered a low-rider stop? Compared to successful metro area subway systems, DC already has too much space between stations- very few are walkable between one station and another. This is bad for commuters, neighborhoods that are already underserved, and people with accessibility needs.

Seems like a great way for to teach people to not to use metro ever again. People have signed long term leases or bought housing based on Metro access and now you are going to randomly close that station? Seems like you are going to harm the customer and harm your own business all at the same time.

The whole point of the Metro is that it goes to lots of places. Cutting stations is too drastic of a measure.

I am within walking distance of east falls church metro station and I do not have a car. The metro is my main way to get to work.

seems unlikely to save large amounts of money given that closed stations will still have to be maintained and monitored, and especially at above ground stations may propose a safety and security hazard.

I want the Grovesnor- Strathmore station to stay open. The Strathmore Arts Center is here and needs the metro access

I live across the street from the Grosvenor-Strathmore station and take metro every chance I get, except for covid related schedule changes.

This would be the worst option for me. I live where I do in part to be close to East Falls Church station. This would make my commute substantially longer. PLEASE don't close stations. Ridership will increase after vaccinations.

I rely on Grosvenor-Strathmore for transport to Washington D.C.

I live and work around the Cleveland Park area, if you're trying to get to the zoo or Adams Morgan it's the best one to take.

Proposal to close 22 Metrorail stations

Closing Clarendon & McLean increases work commute time. McLean stop is utilized by many employees of CapitalOne and streets between Tysons Corners and McLean stops are not very pedestrian friendly.

Of all of the considered proposals, this is the most ridiculous. You are affectively illuminating just about every orange and silver line station, which dramatically affects every single person who decided to live in Northern Virginia with access to a metro station. I strongly suggest that these closures are reconsidered with perhaps every other station being closed instead of every single station being closed. With the expansion of the Mason campus in Arlington, closing the one station that is directly next to campus will dramatically affects all the students staff and faculty who work there. Mason students already have difficulties getting to and from all three of our campuses, so eliminating our Mason station in Arlington does not make sense and negatively affects our Mason students. Closing the Clarendon station does not make sense either. If Roslyn and Ballston are the only two stations that are running in Arlington that's a huge difference in terms of distance to and from places within the Arlington region with metro access. Clarendon is a very very popular station especially in non-pandemic times and if we anticipate ridership to increase come January 2022 less people end up taking the metro and more people end up Ubering. And I think with these closures, no one will ever take the metro again, which seems like the opposite reaction with this proposal. We have also waited years and years for the metro to come out to Dulles airport. All the work that has gone into expanding the metro to the airport over the last few years will basically become null and void because none of the residents in the northern Virginia area would really be able to access the metro station.

Close medical center instead of grovesnor as commuters can't park at medical center but can park at grovesnor. The white flint parking lot will get filled up very fast if grovesnor commuters have to park at white flint.

Some of these metro stations are in busy areas, like clarendon, which would make travel inconvenient. Arlington cemetery is also in the middle of nowhere and can only be accessed by metro if not personal vehicles. Maybe this question could be broken down for each station so that people can weigh in on individual stations.

I would want the Grosvenor-Strathmore station to remain open. There are many apartments in the area that rely on the station.

This brief description partially contradicts previous questions. For example, if Metro plans to limit Red Line service to Grosvenor-Silver Spring, how could it close Grosvenor-Strathmore?

Grosvenor cannot close!!! Especially not during rush hour! That will be really bad for commuters in Potomac!!!

Again, the closing of Grosvenor station would impact many of us dependent on this metro. We moved to Grosvenor apartments because of the metro service. Don't know what we would do if service was stopped. This station should remain in operation!!!

Closing stations is not a good option because it is highly disruptive to the community.

Closure of Grosvenor-Steathmore will absolutely destroy my home base business.

This is a horrible idea. Some of these stations, such as Grosvenor Strathmore have significant high density housing built up around them and the metro station close by is a big draw. I am not sure the roads will be able to cope with the increase of cars needed to get to metro stations if Grosvenor is closed.

I normally use the Smithsonian station daily. I would deeply miss that one, even if I could make it work with the use of LEenfant.

I often utilize the college park metro station. There is no other station within walking distance you can use.

I would have no way in to work. I don't have a car and bought my house because it was close to a metro. I can't afford Uber every day and I would have no ability to work due to transportation. Buses are unreliable and would take over 2 hours to get to work

I specifically picked my residence base on proximity to the metro station as I use it often! Also, many of the proposed closing are at places that are going to start opening again at the same time they plan to close the stations! This would great impact Myer and many others all across the DMV!

See previous comment.

No, the Reston Town Center station would be incredibly valuable to me; the Mclean, Clarendon, and Greensboro stations are also extremely important.

Myself and many others work at the NIH and rely on the Grosvenor-Strathmore station to commute to and from work. With this station closed, many of us would instead wind up driving to the NIH campus, where parking is very competitive. It would not make sense for us to travel up to the White Flint station, either, since wed be heading south immediately afterward. Please reconsider this, this would drastically affect many NIH workers.

I ride the train out of the Cheverly metro for work. This change would seriously impact my life. We bought our house based on its closeness to the metro station.

See my comment on Grosvenor-Strathmore above.

I live 1/2 mile from the East Falls Church Metro station and this closure would prohibit me from using the Metro system. There are no other stations nearby so this option is not acceptable.

We need this station. It's a park an ride station, it services many apartments. My wife and I, always take Grosvenor Strathmore everywhere.

Proposal to close 22 Metrorail stations

No, Judiciary Square and Mt. Vernon Sq are my closest metros, I use them the most and the extra travel time to other stations would not be ideal.

One of the stations is Vienna-Fairfax which is the station GMU students can reach by bus. This is very important for the students who live on campus and have no other way of getting into DC. Please do not close it.

All of the stations in DC and Rosslyn, Arlington Cemetery and Huntington, and Reston Town Center are critical to my work in the tourism industry. I would have to give up my job and would be unemployed.

I use Archives and Smithsonian frequently, plus they are important for tourism which is a major part of the local economy.

I often use the Clarendon and Virginia Square to run errands after work.

This proposal would be very inconvenient for everyone attending and working at George Mason in Arlington. The walk to Ballston is too far. Please dont close both Virginia Square and Clarendon. This makes no sense.

The Virginia Square MEtro is a key station for me I live across the street. I need access to be able to go to work in DC-- i am a clinician and need to see patients as i have been seeing throughout the pandemic This would cause a hardship for me

East Falls Church would be particularly damaging. This station is NOT near others (3+ miles from Ballston and several miles from West Falls Church), is a transfer point, and has regular ridership. Many people in that area have no car or its prohibitively expensive to drive/park. Please keep this station open! Smithsonian also should stay open, for tourists as well as commuters. And Clarendon and VA Square cannot both close--one must stay open, Courthouse to Ballston is too long a stretch given the MANY Arlington residents without cars who rely on walking-distance metro access. Businesses and restaurants in that area would suffer even more than they have if there isnt sufficient metro access.

I need the Silver Line if the Red Line is slow.

Dont provide sub- and ex-urban metro services until vehicle ticket reciprocity is implemented. This proposal is absurd

UNCONSCIONABLE to close Arlington Cemetery. Dont care how few people may use by comparison to the rest of the system. People come from all over to pay respects to that sacred place. Many are older and/or disabled vets. Metro access is critical. Metro will face major backlash trying to close that spot and -- if you do -- I suspect you will ultimately be forced to reverse that plan and re-open it. Skip the bruising fight and just do the right thing: keep it open no matter the ridership numbers. Also, closing Clarendon? Right in the middle of those restaurants and bars? I often get on at that spot - its far from underused. Makes zero sense. Smithsonian too? No tourist access there? What is Metro thinking??

I plan to regularly use Clarendon and Virginia Square stations to commute to restaurants, grocery stores, and a library-- I may even move to one of these areas in a few months and would need access to each stop to commute to and from work, which is slated to return onsite in July 2021. Please do not reduce service in these areas.

I purposely bought my house to be within walking distance of a Metro station. Closing the College Park station would force me to drive to another station and would decrease the value of my home.

THIS IS CRAZY. ARLINGTON has long had a reduce or get rid of cars agenda. These stations were built at high cost to enable suburban residents to easily get downtown without needing to drive and park downtown (saving money, travel time, and pollution)--so why on earth would they be closed. FORCE ARLINGTON to pay more for metro since its so anti-car.

I use Metro to commute to work at one of the stations listed above. The closure of this station would make it difficult for me to commute to my job.

I live in the building across from the Grosvenor Strathmore station and need this station to stay open. Its how Im able to get in and out of the city for work and other activities. This station is essential to my everyday life and routine. Closing this station would be detrimental to my everyday life.

The pandemic recovery is upon us and people will be going back to work and tourists will come back before you know it. Running less times and stretching out train times a year from now discounts the idea that ridership levels will indeed return. Closing Arlington and Smithsonian make no sense at all! Cutting off access to established tourist stations is a mistake.

I do use some of these stations from time to time

Having stations nearby helps when other stations close on weekends for repairs.

Must have Red Line - Grosvenor Station service. It is NOT NEAR other stations and I recently MOVED just to be closer to Grosvenor Red Line station.

Visually impaired. walk to east falls church. cant walk to west falls church or ballston. this plan would force us to become metro access users.

Need Grosvenor-Strathmore open for chorus rehearsals

I purposely bought my home by Morgan Boulevard station to take metro rail to work. I would have never purchased a house where it is headed not been for metro rail being there. Closing Morgan Boulevard would completely defeat that home purchase. Please keep it open.

I use Van Dorn station often during the week. Pzrking is often full. Its seems to be an important station.

| |
|---|
| Proposal to close 22 Metrorail stations |
| Absolutely do not close down Grosvenor Strathmore. I, and many of my neighbors, rely on it and have invested in properties around it. |
| I am a student at George Mason University's Arlington Campus. I would not be able to access the campus via metro if both Virginia Square and Clarendon Metros are closed. |
| I use Mt Vernon Sq on a daily basis, it would make my commute exhaustingly long and difficult. |
| Grosvenor/Strathmore is highly used station in normal times. When Pandemic is under control, ridership will be back to normal. This station has great parking and is sought after. It should not be closed |
| I live less than a mile from Grosvenor station. That was a significant factor for me when I bought my house, because it is very convenient to be able to walk to Metro. It is about 2 miles to the NIH station, which is OK sometimes, but would not be a comfortable walk home at late night. |
| DO NOT CLOSE GROSVENOR METRO. This is the only reason that I bought my condo where I did so that I can walk to Metro!!!! |
| Van Dorn is not near anything, are you kidding me? Also, the Cemetery station is there bc there is insufficient parking for such a major "attraction" same with Smithsonian (which also helps a crowding at L'Enfant and others) and Clarendon. Walking from Eisenhower to either King or Huntington is impossible for someone with disabilities. It takes me 25 minutes bt Eisenhower and Huntington and I do not have a mobility disability. You're proposing closing stations that would make life far more difficult for those with mobility disabilities. |
| this would dramatically increase my commute time because the nearest metro station to where I live is closed |
| No absolutely not. Don't close stations like east falls hutch or west falls church, already only station around. Absolutely needed!!!! Close stations where you can find easy alternative near by station or in the city it's not too far. Many ppl are dependent on East falls church, which is the only station available around that area |
| I expect to get back to using the Clarendon stop daily and for Nationals games and getting downtown in general. I walk to the metro. Getting to another line would be more hassle than it is worth and I would simply drive. |
| All ideas have government agencies and facilities- reduce your internal bloat |
| Grosvenor-Strathmore is essential for our family. |
| Many people that live in the Grosvenor Park area still depend on the Grosvenor-Strathmore station to go to work as well as people that would use the station car garage. |
| The reason this would not work for me is that I live three blocks from the East Falls Church Metro and commute to the McLean station. Thus, this would prevent me from using the metro for my commute. I would certainly prefer if both of these stations stay open. Closing stations is likely to discourage the people who used to ride the metro to or from those stations. This seems unwise. It also is likely to discourage new residents from forming the habit/preference to use the metro. One of the stations, Arlington Cemetery, seems feasible to close. If you notch the low ridership criteria way down, then it is feasible to close a couple of stations or maybe 3-4. However, each station closed after that creates more inconvenience and gives the impression of giving up. Also, what is the timetable for RE-OPENING stations under this proposal? 2024? 2026? Without a date in mind, it also gives the impression of death throes for the system. |
| Does not allow for those with limited mobility to have access to sites situated closer to proposed station closings |
| eliminates multiple stations in one area and difficult to traverse to remaining open stations without further information on bus service |
| Grosvenor-Strathmore is the station I use most often as it is closest to my home. If this station closed, I would not have any reason to use metro at all and it would be extremely inconvenient. Please do not close this station. |
| We leave from EAST Falls Church and arrive at Smithsonian each day for work. Both ends of our commute would be impacted. |
| I use grovesnor station and I do not think there would be enough parking at white flint for everyone to switch to that stop only. During non-COVID times both stations always seemed very busy! |
| Minor inconvenience |
| These should not be permanent closures. Tourists will be back at Smithsonian. It seems very shortsighted to close Eisenhower given development in that area |
| This would be catastrophic to my commute plans for 2022. I am buying property specifically to be near one of the affected rail stations, and would no longer be able to commute using WMATA at all if this were enacted. |
| good idea, dude |
| It is discriminatory against those who depend on and planned housing, work and school decisions around these stations |
| This option decreases the walkability of several neighborhood locations and the feasibility of living without a car. It also increases demand on parking at Metro locations that remain open and again likely contributes to a ridership death spiral. |
| my station impacted above, would be sad if it closed. |

Proposal to close 22 Metrorail stations

This would be highly disruptive and inconvenient for many government employees and their families, especially those at NIH

This is the most shameless of the cuts to Metros operation. These stations have thousands of people who need to get to them, and are not by any means close to other stations: its over 20 minutes by bicycle between East Falls Church and Ballston. They cover essential parts of the city and its suburbs, and cannot be closed under any circumstance. Closing them would decrease ridership and thus create a disincentive to invest in Metrorail, and would overcrowd buses, roads, and bicycle lanes.

Could close certain hours, but not totally.

Grosvenor is within walking distance of my home. It is not feasible to ask me to walk to Medical Center or White Flint. Those stations are not close to Grosvenor at all. Plus, there's no parking at Medical Center and very little at White Flint. I would have to move in order to commute to work and I cannot do that.

Many people depend on the Grosvenor Strathmore metro stop, closing this stop would affect many citizens of the area

Do Not Close Any Stations- how does closing the stations increase METRO ridership??? - It wont.

I live a few blocks from the Clarendon station. Walking to Ballston or Courthouse to catch the Metro would make my commute harder, especially in bad weather.

My work commute will be drastically not possible since I depend on the rail to get to work. Also this will drive down the number of people shopping at nearby stores close to these stations. So local businesses may suffer.

Clarendon is a major destination within Arlington for dining and retail. It would push people into cars and worsen traffic, parking, and business in the area. Virginia Square draws people from residential areas, particularly to the south of the station, for whom Ballston and Clarendon are just enough farther from their homes to make the difference between taking public transportation and driving. I also use Virginia Square station whenever we have guests, because its much easier to pick people up at than Ballston. Ballston is very difficult to pick up/drop off at because of the bus congestion and restricted car access.

If the East Falls Church station were closed, there is no easy, efficient way to get to other stations. If Smithsonian and Federal Center SW were closed, it would make getting to the Mall and the museums impossible for people who cannot walk great distances. Closing 22 stations would significantly reduce the usefulness and usage of the entire Metro system.

Needed for work

It would impact my ability to work everyday.

I take the metro from EFC so dont want to see this station closed. There is no other stations nearby that could be accessed by public transport.

I use metro a lot from East Falls Church in all directions

Please keep Grosvenor-Strathmore open. When Strathmore Entertainment Center opens, many people will need that station in order to attend events. It is also the closest station to people in the surrounding area.

Several employers and universities have made it clear they will be pushing for in person participation as early as this fall. Closing some of these stations would place great stress on metrobus and any rail replacement bus service put in place.

Reasonable change

Just to be clear, these stations are on the closing list IF they have low ridership, or statistics have already confirmed these generally have low ridership? College Park is especially busy during the school year. And from my experience, with Morgan Blvd closed, either Largo or Addison would be extremely overcrowded. And Addison is sketchy as is.

I moved to an area near the Mount Vernon Square station so I could use the Metro to get to work at Navy Yard. You will ruin my life and that of many others if you close any stations in the DC city area. Maybe you close some out in Maryland or Virginia, but keep the Metro running and stopping throughout DC!

I need some of these stations

I use many of these stations regularly (when there is not a pandemic happening)

Not ideal. I would have to walk a long way to area that with closed station

This is a painful cut, but so long as these are the only stops closed then it is not too disruptive.

Do you dumb asses understand sunk costs. Anyone proffering this as a suggestion should be fired immediately. Metro is clearly a ship of fools.

Our household would be forced to permanently commute by car. There is also redevelopment planned near Cheverly. It is important during the economic recovery from the pandemic to not take away transportation. We need to encourage transportation and new job creation. If new jobs can be created near a metro station do not discourage that opportunity to flourish by taking away the transportation.

It's totally absurd that you're considering closing stations on a line that hasn't even opened yet. Not to mention the thousands of people who chose homes based on proximity to metro stops. The difference between a 5 minute and 20+ minute walk is truly significant when you think about an individual commute

I live close to Clarendon. I have no cars. The reason why I chose to live there is that I want to use public transportation, and I dont think Clarendon has low ridership.

Proposal to close 22 Metrorail stations

Vastly prefer Clarendon station remain open. Other stations are a considerable walk and would add quite a bit of extra time to access.

Some of the downtown DC stations might be OK to close, as they are literally only blocks away from other stations, but stations like Grosvenor-Strathmore are not functionally replaceable with other stations--it would be incredibly dangerous to walk from Grosvenor station to NIH or White Flint

Will make my commute more difficult/time consuming

If my station is not available and another station that is available is not close by to me, I will opt out of using Metro.

Why not close West Falls Church, which is not a transfer point?

Im a regular user of the Clarendon and E. Falls Church stations.

Please do not close Grosvenor-Strathmore! Many people who live here walk to the metro to commute to work. It also has one of the better parking situations.

No!!!!!!!!!!!!!!!!!!!!!! Please keep Grosvenor-Strathmore open!

I would go to White Flint; which could work, but it is a long walk.

I ride from/to East Falls Church. West Falls Church is the next closest but it's farther and opposite direction. Might try ridesharing or bus lines instead if EFC closes.

This would create complex last mile problems

I use the Cleveland Park station often when going out downtown.

I work at the Eisenhower Metro Stop and took the metro everyday before the pandemic. Once COVID restrictions are lifted at work, I would like to continue my metro ridership.

Clarendon is not near any other station and has more ridership than Virginia Square or Court House. This is a metro-focus neighborhood and closing this stop would lead to negative economic effects for the entire orange/silver line since Clarendon is the social and economic hub of the Roslyn-Ballston line. Moreover, there is continuing high rise residential development occurring in Clarendon with more metro-focused commuters who will be shut out. Very bad idea. Maybe staggering every other train to stop at Clarendon can be a possibility; otherwise, this makes no sense since its not at the end of a line or a strictly tourist-centric stop.

This would be terrible. The closures would make it impossible for many people to walk to an available station.

Though some of these stations are close to others, they are often on different lines and not necessarily easy to get between the lines. However, I do think this would be workable. Would metro be thoughtful about ensuring that the stations were closed in a way that did not introduce blight into the area with an abandoned station? How will the city be thoughtful of businesses who are positioned near the metro stations where metro stations are going away? Etc.

Why are you still moving forward with opening the second phase of the silver line when you're proposing such severe services cuts? What deems "low ridership"?

It will be so inconvenient to commute. If the closest station I need a car to go to another metro station.

Grosvenor is a key metro station with parking to help people in Rockville get downtown.

These stations arent all close to one another.

I live at the Grosvenor-Strathmore station so this station closure would be devastating to my relationship with the Metro. I would likely never use the system and it would make getting downtown difficult.

It is critical that people from throughout the DMV area have easy access to the city--the infrequent timing of each train to and from the suburbs is already inconvenient. Please try to keep as many of these stations open as possible, as it increases the ease of commuting.

Closing some of these would work better for me than others. Asking the survey question to include all of these stations in one question leads me to say no overall. Sure, close Virginia Square. Its close to Ballston and Clarendon. But then dont close Clarendon. East Falls Church isnt really near another station so it doesnt make much sense to close that one.

In January 2022 the most companies will go back to the normal (in person schedule). Closing metro station will have massive impact on her commute

closing both Va Square and Clarendon leaves a big gap. Maybe close one or the other?

Please keep Grosvenor station open. Has parking for commuters and is confident for the North Bethesda ridership.

Closing Virginia Square and Clarendon would impose a huge burden on residents who live near these stops. And low ridership cannot be an issue at these, as I have personal experience to the contrary. These stops are highly used under normal circumstances. Closing them would force people to drive to other metros, which defeats the purpose of reducing traffic and pollution.

Proposal to close 22 Metrorail stations

Closing the College Park station is very short-sighted. the state and MTA are making an investment to tie the silver line to the green line at college park, and there is transit-oriented development underway at the College Park station. closing this station would severely impact the viability of the housing under construction and would cause huge increases in automobile use in the Silver Spring- Greenbelt-College Park-Riverdale-Hyattsville corridor. i understand the temporary closure of the CP station, but when the students return to campus (and they must and will), without a viable metro station they will drive uber traffic in the area through the roof, along with congestion and pollution. it will be a self-fulfilling prophecy for those who say mass transit doesnt work. Dont do it!

I access East Falls Church Metro and as a elderly person that still works in DC it is important to have easily accessible station at EFC.

I typically get on at Cleveland Park and get off at Judiciary Square each work day (pre-pandemic), so this would significantly increase my commute time.

I could make this work for me, though it would of course be less convenient in some situations.

This is an airport line, needs to stop at all stations

Im worried about station crowding if busy stations like Clarendon are closed. Crowding would dissuade me from using Metro.

No silver line? So it would just be express to Ashburn then?

I am generally totally against closing any of listed stations Except Arlington Cemetery, which is little used in the non tourest winter season.

This one is just nuts.

Federal Triangle, Smithsonian and Clarendon need to stay open

Absolutely not. We bought in the area serviced by the East Falls Church station specifically to be able to use the Metro. This would totally disrupt our travel/commute opportunities. There is no other nearby station--West Falls Church station is not within walking distance, especially for those of us with limited mobility! At some point what is even the rationale for continuing a Metro service if you are going to close so many stations?

Closing stations would create longer boarding and lines in the remainder that stay open

I am elderly. I use both Cleveland Park, Clarendon and Smithsonian stations and would have trouble walking the distance to the next closest station.

Would probably mean if stop using metro as my means of transportation for anything beyond commuting to work

It would work as long as buses also serve them.

This could work if bikeshare corrals and and more scooters were implemented at the affected stations, otherwise this will reduce ridership

No way. This is so harmful to riders. Especially those who are elderly or disabled. We should have more points of access, not fewer.

I depend on Van Dorn station every day.

Use McLean for work.

Closing Clarendon??? Theres like 15 bars there and a slew of young-20-somethings that all commute into work, why would you close clarendon? So many of the other stations are so well traveled and populated Im confused why theyre on the list

A major appeal to living in the area is the convenience of the metro, this would significantly diminish and eliminate much of the appeal. This would create major issues for myself, my family and numerous families in the area. A move like this would make our family consider moving out of the area and potentially the state of VA

Cant take METRO if both Judiciary Square and Federal Center SW is closed.

Why are you closing stations so close to each other? For example, wouldnt it make more sense to close Court House and Virginia Square and keep Clarendon that is between the two? It makes a lot of sense to close down Arlington Cemetery since no housing or businesses are really around there. It doesnt make sense to close stations in more populated areas such as Clarendon, Virginia Square, Mt Vernon. Why are you cutting off locations? East Falls Church is the only station in that area.

Many of these stations are not near other stations.

Grosvenor Strathmore is one of the most traveled stations. There is no parking at Medical Center and the next nearest station is farther away from DC. People with children who commute into DC are already leaving work early to be able to get to their children in time. Now you would be forcing people to leave even earlier to be able to get to their kids.

If these stations are closed. I will be less likely to use metro overall.

Cleveland Park is my station and the short distance makes a huge difference due to disability. Closing all of the stations would Rob metro of its value.

Closure of the Cheverly metro station would impose significant hardship on our family. We currently live just a few minutes from the station and use it every day to travel to and from work in downtown DC. We moved to the neighborhood last year in large part because of its easy access to the orange line and would be extremely disappointed to see our station closed.

Absolutely NOT. East Falls Church must stay open. No no no,

| |
|---|
| Proposal to close 22 Metrorail stations |
| Please keep all stations in downtown dc open, especially archives (where I get off for work), federal triangle, mt Vernon square, smithsonian |
| I live one block from the Clarendon station. It is a big reason for living where I do. Walking down the hill to Court House would be manageable in spring and fall, but not so much in hot summer months or cold winter ones. I would likely end up driving to the City, contributing to traffic and pollution. |
| Clarendon, Mclean, and Federal Center SW will need ridership once in office commuting returns |
| I do a lot of gig work in clarendon. With the restaurant and music scene about to return to normal, the clarendon station should remain open. |
| Heavily rely on Grosvenor station to remain open in order to get to work. |
| Closing BOTH Clarendon and Virginia Square places a huge burden on riders to get to Ballston or Court House. There are no bus connections so riders might have to drive to those stations, increasing kiss and ride traffic in very congested areas. |
| Why expand new lines while cutting services on those lines? Better to reduce number of trains than close stations. Keep East Falls Church open. |
| I use the Cleveland Park Metro fairly frequently. The Clarendon Metro station is my only way of shopping in the Clarendon area. The Strathmore Station is my only means of getting to concerts and exhibits at the Strathmore arts complex. |
| Im near Grosvenor-Strathmore, which is not a low ridership station. The parking garage on the station is always packed and there are so many apartment buildings and residents depending on the station. Especially during rush hours, this station has many passengers on and off. |
| If we want people to use public transportation we need to make it accessible and convenient. |
| I mean, again, making Metro accessible is what makes more people ride it. So closing stations means I have to walk further to another station on one end of my trip..and makes me less likely to ride in the first place. While I know the budget is crunched, maintaining as much accessibility as possible is key, I think. |
| This is a bitter pill -- but I would take it. One reprieve, though: Keep the Smithsonian Station open. Why? I think it would be easier for tourists to get to the museums and other attractions that way. . |
| McLean is the first stop on the silver line after Reston-Whiele that has parking available. Intermediary stops, e.g., Greensboro or Spring Hill, seem to have not as many riders as other stops AND there is no parking available there, which makes them less accessible/important to a wider ridership. |
| This will greatly impact home values in these areas; this might be a way to get additional funding from some areas, as the difference in tax value for closing a station might be MORE than the funding of the station. |
| This is an appalling idea. Im genuinely shocked this is even under consideration. |
| I hope that the bus service along these lines (such as the 38B) would stay the same or increase slightly in frequency. |
| Please keep Clarendon open as the station has Trader Joe's, restaurants and other shops nearby. Court House can be closed instead. |
| East Falls Church is necessary for me |
| When the Univ of Maryland is in session, the College Park station is vital to commuting students. It would be necessary to spend a lot on shuttle service from nearby stations, and ridership would drop significantly. |
| We use Grosvenor to get downtown. |
| I dont understand why you would close Judiciary Square. It is the closest station to the courts and Gallery Place is often way too busy and full. Judiciary Place allows for people to avoid the overcrowding in Gallery Place. Not to mention that Gallery Place always has a lot of police activity and is less safe early in the day and late at night. When I work overtime, I feel safer walking to Judiciary than going to Gallery Place. |
| Very important to keep Grosvenor-Strathmore open. It provides essential service to very large area of Bethesda/Potomac and also to Strathmore Concert Hall and programs/activities at the Strathmore Mansion.. |
| This is unfair to homeowners! This will negatively impact home values and rental potential to the fair tax-paying real estate owners of the city. At least go to like a local vs express train like NYC has. |
| Horrible idea. |
| Archives, Arlington Cemetery, Federal Center SW, and Federal Triangle are major stations for visitors. Van Dorn St is one of the few stations in Alexandria near apartment complexes. This limits equity among riders. |
| Use archives for work regularly. |
| This says nothing about bus to light rail plans. For huge parts of PG, there are not alternative bus lines to the 2 stations. |

Proposal to close 22 Metrorail stations

Closing Federal Triangle would create significant impacts for federal employees, more specifically mandatory in-person staff. Federal Triangle services the headquarters of USAID, CBP, and a number of commerce based organizations. Closing of the Federal Triangle station would result in an increased traffic in the area and usage of the parking deck, which prior to COVID would fill up before 9AM. Closing Clarendon would result in significant impacts to the business and real estate in the area. Many apartment complexes in the area charge higher rent due to their proximity to an active metro station, and many restaurants rely on the increased foot traffic. McLean does not need to be closed. Since the pandemic, significant growth has occurred in the area. Visible from the metro station itself, riders can see two high-rises that recently went up, and proximity to an active metro station is a significant crux of many business plans in the area.

Closing stations impacts neighborhoods and workers. This should be the absolute last thing considered.

PLEASE do not close Cleveland Park station. It would be devastating for the businesses in the area and create a hardship for residents, especially the large number of senior citizens who live near the station. You would be destroying their way of life. Do you expect them to walk in the cold all the way to Woodley? Do you expect people living on fixed incomes to pay for taxis to travel to a metro station that they've been walking to, in some cases, for decades? Cleveland Park is a major contributor to the city budget because of high property tax valuations. Stripping metro service from the area - while still imposing high taxes would be incredibly unfair.

This would change my entire living situation. I must travel to College Park everyday. Metro allows me to live in DC while commuting to College Park for government funded research. Additionally, College Park station is important for students at the University of Maryland. Most rely on the metro to travel to and from DC, including to jobs and internships.

This is very inconvenient. I live near Virginia Square. Although I am near Ballston, the Virginia Square station is closest and feels safest for my travels. I work a job where I am commuting at odd hours, and having a station close by is essential for me.

Clarendon and East Falls Church would make things difficult

Several of these are college-local stations that currently have low ridership due to the pandemic and students being virtual. Closing them is foolish, particularly when they're in suburbs and nearby is not actually nearby to people who do not own a car or way to get from, say, College Park to Greenbelt or PG Plaza. Stations like Archives and Judiciary Square could feasibly close as there are multiple other exit options within short walking distance of each other.

I use Clarendon as a back up metro stop when I need to do shopping.

I would miss Smithsonian and Archives. Closing one would be inconvenient, but both would make access to National Gallery a pain.

Many people in my neighborhood take East Falls Church metro to work everyday. Most of us work off metro stations in DC, Arlington, Alexandria and this would be a major inconvenience.

However, this plan is preferable to early closing and longer times between trains

I live right next to the Grosvenor-Strathmore station and have some mobility concerns. I don't know if I can get to a nearby station when I need to go into the city for school/work.

Keep Cleveland Park. Woodley Park is very crowded at rush hour and more housing is being planned.

Too drastic a cutback on stations which are used by many riders

No, I use many of these stations frequently and also work at Federal Triangle. My church is at Clarendon.

This seems like a huge number of closures, especially if it would be permanent

This could work if it was scheduled for rush hour and noon rush hour

Closure includes 2 adjacent stations between Courthouse and Ballston. Closing one may be acceptable, but closing both creates a huge problem for a very large population. Arlington County has specifically planned development for decades along the Metro corridor. There is also a university and FDIC located at Virginia Square. Closing both Smithsonian and Federal Triangle affects festivals, demonstrations and other sponsored events in the vicinity of the Mall.

We use the College Park Station several times a week. Once the U Md students are back and federal workers return it will be essential to commuters in our neighborhood. It will also be a transfer point for the Purple Line.

Why are you continuing to open the Silver line if you don't have enough money to run the current stations that are open

Clarendon station is critical for residents, especially the Residences at Station Square, and local businesses. The closure would negatively impact property values, quality of life and revenue for businesses.

This is my metro station! I would not have a way to commute to work!!

I am a senior and this involves a lot of walking. Two of the stations I use most would be closed. Not acceptable.

Proposal to close 22 Metrorail stations

We moved to near East Falls Church specifically in order to be close to a Metro station so that we would not have to drive. West Falls Church and Ballston are too far away to walk, and taking a bus adds too much extra time. We would have to abandon Metro completely and drive to work. We would probably stop going into DC for shopping, dining, and entertainment, due to the hassle of driving and parking in the district.

It is concerning that both Clarendon and Virginia Square are being considered for closure. While it would be disruptive for either station to close, having them both closed would cause residents between Clarendon & Virginia square to walk over a mile to the nearest metro, especially residents who live further from Wilson and Clarendon Blvd where there are no bus lines. Closure of the Clarendon metro at night could also significantly affect the safety of drivers, given the nightlife in Clarendon on the weekend. There is already a lot of hectic traffic in the area on the weekend and I would be afraid of the potential impact of driving under the influence of the metro were closed later at night

No. Please check out how the metros work in Paris and Moscow. You need to be safe, consistent and frequent.

Please do not close any stations in downtown DC

The main reason I purchased my home near Garrett A Morgan Blvd was because of the metro.

College Park is a vital station. The parking situation alone makes it an ideal place to hop on the metro. I understand that it is close to Greenbelt Stn, but accessing the parking at Greenbelt is a headache. So while I support closing some stations with low ridership I don't think College Park should close. The suggested closures downtown make sense.

most of these stations are essential. I'll comment on Virginia Square since it is the station that allows George Mason students and faculty to use both campuses. I frequently travel to Virginia Square for work and it would be a hardship. Finally, Mason will soon begin a huge campus addition on this campus that will have people moving back and forth throughout the day.

Will use Grosvenor/Strathmore station frequently

Closing Clarendon would be a hardship for restaurants, shopping, etc. Better close Virginia Square instead since it is very close to both Clarendon & Ballston. So it seems to me, but Metrorail has the numbers re which stations are underutilized, so go with that. Of course, any numbers from 2020 are totally suspect and unreliable because many folks were able to work from home. This will surely change in 2022, perhaps going back to normal times.

Closing Grosvenor station is an enormous mistake, especially on the heels of completed construction on the parking deck. Close down White Flint before closing down Grosvenor. I traveled from both stations regularly in 2016 and there was always less traffic using the WF station. It's also disingenuous to say Grosvenor is a station with low ridership when it was closed the majority of 2020. Of course it had low ridership--it was closed!

Lots of businesses including restaurants at Cleveland Park and many people live in large condo buildings near Grosvenor.

Again, that reduces the viability of the system.

Why close Grosvenor-Strathmore after entering into a development agreement to build housing on the site which would support the Metro? Or are the closures temporary?

This would work best. If a station has low ridership it should be skipped. Also, should look at the long term as to even keeping the stations open in the future.

Va square and Clarendon are two stations in a row where ppl and businesses depend on metro. Closing other stations as well seems a bit short sighted- think after COVID and ppl are commuting again! We bought our house because of proximity to metro.

Why have a Metro system then? Accessibility is the nature of a transit system.

So many people work at Judiciary Square--what an insult to the thousands of dedicated public servants who rely on that station. And closing Smithsonian will be terrible for tourists and residents alike. What an embarrassment for a world capital to cut off access to the museums.

I live right by the Cleveland Park metro stop. It was a strong motivating factor in choosing where I live.

I live at Grosvenor. I wouldn't be able to metro downtown for anything.

This would not impact my use. I do not use those stations.

Literally, you have listed every single station I used with any regularity before covid. Smithsonian? Are you morons? College Park? There are federal buildings right there, not to mention an enormous University. Metro is run by idiots if you think it's a good idea to close these stations.

I have to go to college park

Closing stations especially Smithsonian only hurt the truly low use stations can temporarily close but the harder metro is to access the worst recovering funding will be.

Metrorail already has so few stations. This is ridiculous. Cutting service will just lead to fewer people taking metro. It's a self-fulfilling prophecy. You cannot cut to profitability. Ask the airlines.

If you're going to dinner in Cleveland Park, you would have to walk quite a distance from Tenley or Woodley Park. Small children and older adults in our party could not do that.

Grosvenor-Strathmore is a very important stop and one which is used very often not just by me and my family but also for lots of other connections for guests and visitors.

Proposal to close 22 Metrorail stations

I think this is a good way to reduce costs!

They have construction and classes closed during crisis

I think closing College Park would be difficult for many people who work there and go to school there, but ultimately it depends on the status of the Purple Line, which I believe will also run through there. But I don't think closing College Park is a good idea! Also, I think you need to pick one or two of these three stations to close: Federal Center SW, Federal Triangle and Mount Vernon Square. Closing all three of those will create tons of traffic in a very cramped area around the expressway entrance and the Southwest waterfront areas, respectively. Be it Ubers/taxis, buses or personal cars, I feel like one of those metro stations needs to stay open to service those areas.

Grosvenor has a large parking garage that many people in the area utilize. I use this station every day as do many people in the area. Having to park at Bethesda is cost prohibitive and having to take the bus to get to the metro is time prohibitive and also logistically not an option for many.

Maybe if Measure spent west on marketing and more and actually service writers in the service industry people they wouldn't have this issue. Instead of shutting down stations that are vital to downtown places and places where tourism usually goes to such as Smithsonian, maybe we should consider lowering the salaries of the top employee so therefore we can pay for and or getting rid of the ridiculously 64 size member board that makes the decisions for metro

I use the Federal Triangle metro and the Cleveland Park metro. Once work resumes as usual, many federal employees will use the Federal Triangle metro.. closing this metro could reduce ridership as fed employees look at other options.

Closing the College Park station would be a tremendous blow to students, faculty, and staff at the University of Maryland who rely on WMATA for easy access to Washington DC. This proposed cut would also ultimately negatively impact lower-income staff at UMD who rely on the metro for transportation to their jobs at the University

How is anyone supposed to visit and not have to walk multiple miles if these stations close? This would be horribly impactful and detrimental to people who cannot walk such distances. You should absolutely NOT close stations.

Reston Town Center is the commuters best way of getting to Dulles airport at high traffic times. To shut down this station will cause issues for the many people who take the shuttle from Reston to Dulles, which also avoids the significant traffic on 66 which you face if you get off earlier in the route.

Stop being corrupt assholes, if other municipalities in Europe can develop more complex and efficient transportation systems, for far less cost, than so should you, but everyone knows you won't, all of WMATA executives wouldn't be able to afford their vacation homes, or the Lexus lease.

The trains at East Falls Church, Judiciary Square, and Virginia Square are often packed during commuting hours. If these stations must be closed, suggest closing them in the middle of the day rather than peak commuting periods.

East Falls Church makes no sense. It has two lines going through it and people will return to work as they get vaccinated. The location is not "near" another station. West Falls Church is not within walking distance. This is a huge residential neighborhood and people during normal times use this station a lot because both Silver and Orange run through it.

Hardship will be caused by closure of stations due to difficulty accessing other stations which are not within easy walking distance. Better to reduce train frequency or operating hours at night.

The McLean/Tysons Corner area is not the most friendly to pedestrians or public transit users, especially around the Tysons Corner Center area. Closing metro stations near that area (McLean, Greensboro) will only exacerbate the existing issues for pedestrians and public transit users. For example, pedestrians often need to cross busy and dangerous streets - removing the Greensboro station in particular would double my required walking distance and require me to cross many more busy intersections. The sky bridge through Greensboro station is especially convenient for pedestrians attempting to cross the dangerous highway.

Im not even going to parse this one. Very stupid.

I ride Orange, Silver and Blue lines often - sometimes Yellow line I live a block away from one of those stations in Virginia. I would prefer reduced hours of service at certain stations over closing the station.

I cannot comprehend how this would make any sense to close Metro stations that are "close" to each other as people live in housing that may be ONLY close to that particular metro you're thinking of closing and to then have to take a bus to another metro stop would be an extremely poor waste of time, causing that rider to seek alternate transportation. It doesn't make sense to me to not have the metro stop at each stop especially on the orange and blue lines in Arlington when you're literally passing the stations as you go by. Please do NOT do this.

Close is relative. Also, the ability to park must be considered.

grosvenor-strathmore station within walking/biking distance of huge community; this station services strathmore concert hall; property values connected to proximity of grosvenor station. Some of the other stations proposed for closing would be a huge loss including College Park, Smithsonian.

Proposal to close 22 Metrorail stations

This is a drastic measure and I would cull some of the proposed stations from the list, but I think this is a more viable option that extended headways.

Closing Clarendon and VA square. So it's either courthouse or ballston. Doesn't work well

I walk to this station, as do most local residents I know. Impacts housing values, requires an additional form of transportation to go backwards to closest station. Not acceptable.

Cleveland Park station is used by members of Adas Israel Congregation; many are seniors or handicapped--they would be able to walk from Woodley Park or Van Ness.

I use Grosvenor-Strathmore so this is not acceptable.

We will have reached a point with more nightlife and dining. We will need more service.

I would rather have fewer trains than fewer stations.

It is imperative that we continue to operate the Van Dorn Metro Station. It is my sole source of affordable transportation.

There only reason Smithsonian has low ridership is because the museums are closed. If they other stops are near employment and or tourist centers closing them as ridership increases 2 years after COVID could present a problem, especially as spring and summer come around

I need the East Falls Church station to get to work!!!

This would result in a dramatic increase in the carbon footprint i and others create. Metro does not have adequate parking to eliminate to mitigate the need to drive to work. My and others opportunities to support and ride the metro are eliminated.

Is this Fallout 3?

Have you forgotten about disabled people for whom them metro is essential. This would make it much more difficult for them to access. And to close the Arlington Cemetery station is disgraceful!!! Local residents and tourists alike visit their loved ones there. Dont deny them access.

This proposal seems very politically motivated not to mention completely outrageous. East Falls Church is multiple miles from any other station in either direction, for example.

Why not just kill the entire system? Seems like you are trying. Shut down work on new silver line expansion and on purple line and put the money into existing and needed lines. Get some sense you morons.

In 2022, my husband and I will be commuting from College Park to Chinatown during rush hours Monday thru Fridays for work that requires us to keep to a schedule in order to keep out jobs. Also, we have a child who requires being picked up from daycare at a specific time in order for us not to be charged extra. Our places of work will not provide us with parking (whether it would be free or an extra expense). Before the pandemic, it was difficult to get a train from Chinatown to College Park during the evening rush hour. We need the metro to run more frequently during rush hour in order to keep our jobs, and this change will impact our livelihood (jobs and finances).

I rely on service at East Falls Church 5 days a week for commuting to and from work--That is why we bought at this metro stop. To keep our neighborhoods viable and our city green, we need to have service at East Falls Church. It is too far to walk from EFalls Church to Ballston or W Falls Church.I work at the Eisenhower Avenue metro stop so your proposal is a double whammy--but I could always walk from King Street and would if you closed Eisenhower Avenue.

This is an insane proposal and should never be considered. Not only would this disproportionately affect communities of color, but it completely hampers service for working class people who live in more affordable areas in the region. Scrap this proposal entirely. Shame on you for even considering it.

Please do not close down Clarendon or McLean. (In the case of McLean, Im sure Capital One will sponsor you.)

East Falls Church is a vital commuter hub with lots of pedestrian and bike access from nearby neighborhoods. The nearest alternative station West Falls Church would require people to drive 15 minutes by car (bad for the environment vs. walking/biking to closer East Falls Church) and pay to park. Facing this choice, most people would then just drive to work anyway, rather than drive west AWAY from the city to West Falls Church, park, wait twice as long for a train (because Orange line only instead of Orange + Silver at EFC) and take a train back east.

You are proposing to close three stations on the silver line from phase two that are not open yet. Planned Communities near those stations and other Loudoun residents are anticipating the completion of the silver line. Suggest Maybe open only the farthest out silver line station in Loudoun so residents have at least one option.

We use Cleveland park station often

This would only increase rush hour congestion at the remaining stations, not to mention decrease accessibility for passengers

I utilize the Van Dorn location and going to alternative stations is extremely time consuming and makes it easier to just drive all the way into DC

Please do NOT close Clarendon

We might be moving, if so Loudoun Gateway would be a huge factor in that decision. Once museums re-open, Smithsonian will be needed on Saturdays.

Again not acceptable, all stations are there for a reason and to discuss closing stations that havent even officially opened yet after billions of dollars have been invested in the line.

My friend lives at Grosvenor and doesn't have a car. This would be awful for her!

Proposal to close 22 Metrorail stations

We don't want closures of metro stations.. how would that be convenient for us that use metro every day twice between work and home?

Grosvenor-Strathmore is far from other stations and besides as an important concert venue it is important to keep it going

Morgan Blvd. services all events occurring at fedex fieldCollege Park services the university of Maryland college population Clarendon services an area where there is high foot traffic and a night life. Taking out the metro stop that provides a service that SAFELY transports individuals under the influence would only increase the headaches and traffic of ubers tryin to pick ppl up and increase the possibility of someone getting into a vehicle under the influenceVirginia Square services the college population associated with GMU fed triangle and smithsonian stops are crucial to ppl working in DC. You are talking about altering the lifestyle of ppl for the sake of saving money.2 things: Close down stations removed from the cityCOVID will not last forever and if you shut these stations down, you will have to re-open them or areas like Arlington will suffer tremendously

This is not sufficient for the increasing ridership demands in 2022 once the pandemic ends, more offices open up again and people who have been teleworking remotely for 2020 and 2021 due to COVID go back into the office. Additionally, once events open back up to the public with fans/attendance, ridership will increase and the demand for metro will be back to normal levels again, especially during peak hours.

Please do not close Any Red Line stations!

Grosvenor is a very popular station and those living in the area don't have options (e.g. buses) that would get us to one of the nearby stations. Those without a car accessible would be out of luck.

I work at Capital One and do need McLean station monday - friday.

College Park - what should students and service workers do?

Some of the stations on the list must be busier than others. Perhaps those in denser urban areas can remain open.

Need Federal Triangle, Archives and Smithsonian stations

I am a student at umd and this is a bad idea because hogan is not going to let the purple line ever get finished

The description of being near other stations is a relative concept. None of the stations mentioned are within a reasonable walking distance of each other. As such, closing any single station will cause that stations riders to elect private transportation, private vehicles. The nearest stations to either side of Grosvenor-Strathmore are each over a mile from Grosvenor-Strathmore, thus not walkable in any timely or practical manner.

Depends on where I am going, but in most cases it would not impact my commute.

This proposal seems particularly myopic and harmful to local communities

Assuming places reopen, such as convention center and U of Maryland, this seems shortsighted

Really just screw you guys for thinking of this. This is just terrible for the riders that rely on this service.

Absolutely not! I have no car and rely on the Clarendon/Virginia Square stops to commute and grocery shop.

My family and I all use VA Square metro.

Many of these stations are not really near other stations or, even they are, can not be traveled between in a safe manner. Furthermore, many businesses and homes values are directly tied to proximity to these WORKING metro stations. Changes in things like hours of service are to be expected, but it is an UNreasonable thing to suddenly close a metro station in a major citys transportation system. Not to mention, what would happen to the spaces where these stations sit? Would the closures be permanent and the stations deolished and land reused? Or are they going to sit there unusured? Horrible idea.

This would be atrocious. This is not a viable solution whatsoever. I'm shocked this would even be viewed as a possible answer honestly.

Closing this station would cut off the many people who live in Garrett Park, Garrett Park Estates and White Flint Park. It would greatly increase traffic along Strathmore Avenue- which is the only way in and out of these neighborhoods. It would be a traffic bottleneck nightmare for the residents and students who attend the schools in this area. Additionally many new homes/apts were built here advertising their proximity to the metro. Seems very unfair to people who moved here with the expectation of access to public transportation.

even though the stations are near other stations, this would still deter people from using metro because they might need to get to a specific station (near where they live, for bus transfer, etc). proximity doesnt really help much.

This is a terrible idea. It would make it significantly more difficult to use metro at all.

I am closest to VA Square but could easily walk to the Ballston Station instead of needed. So this would not be ideal but I could make it work.

Cleveland Park is a critical station. We will never have revitalization of parts of our city if Metro closes down stations like this. Cleveland park is at the heart of the red line and serves workers and families, is near houses of worship, and a recently renovated library. What message are we sending when we eliminate stations from our already small system.

Proposal to close 22 Metrorail stations

The presence of these low ridership stations is crucial for my everyday commute. I live within walking distance to Grosvenor-Strathmore, and I know many people who reside in my residential community who depend on the metro station for their everyday commute. The closing of stations such as Grosvenor-Strathmore would be extremely disruptive to my daily life. I believe this proposal to close metro stations would severely underutilize the Metrorail service, and decrease the usage of the Metrorail networks in D.C..

Most of the stations I currently use will be affected such as East Falls Church, Virginia Square, Clarendon, Arlington Cemetery, and Smithsonian.

Close is a relative term for some of these stations. If something would require to travel to another station but it's then a 15-20 minute walk to get to the original station you wanted, this plan would make using the metro not feasible as a reliable form of transportation and would drop ridership even lower as people find alternative commute strategies

These are all heavily used stations that are definitely going to continue to have high ridership once we return from COVID

I think low ridership needs to be redefined or flexible, such as on weekends only.

Yikes!

Clarendon is my metro stop. It is also a critical stop for one of Arlington's most important neighborhoods for bars and restaurants. Virginia Square is an alternative stop for our neighborhood so closing both would be disastrous. In addition, Virginia Square is important for the GMU campus which is expanding, as well as a dense neighborhood of apartments and businesses.

Pre-COVID, many of these Stations were already crowded on a daily basis. Closing these Stations pushes people toward other Stations, which are already crowded. By January 2022, ridership will like be back to or very close to pre-pandemic levels.

NO. Make metro convenient. Dont force people into cars if they have a time crunch

This would be the end of the Metro as we know it. It would harm commuters that chose to live where they do as a result of being conveniently located by a Metro stop and would negatively impact property rents and sales prices that could also potentially reduce the tax rolls. [Penny wise and pound foolish]

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

It seems foolish to select stations for closure based on their ridership while all stations are open. More consideration should be given to expected changes in behavior should certain stations close. Using Clarendon and Virginia Square as an example, these stations are consecutive on the Orange Line. Wouldnt it be more logical to close Courthouse and Virginia Square, as it would create shorter, more walkable gaps between stations, as opposed to closing both Clarendon and Virginia Square, which creates a significant gap between Courthouse and Ballston? This would leave residents in the Clarendon and Virginia Square neighborhoods less likely to consider Metro for their commute. Yes, those neighborhoods are lighter on offices than Rosslyn/Courthouse/Ballston, but heavier on residents who presumably commute to offices near other stations. Both neighborhoods are also undergoing quick redevelopment to increase density, with multiple large apartment buildings and a hotel slated to be built adjacent to the Clarendon station in the next three years and the expansion of the GMU campus in Virginia Square. Of course, this assumes that station closure choices are truly based on ridership, and not because, say, the Courthouse station serves the Arlington County government, whose support (and money) you need to continue operating.

If trips on the Red line would be faster by not stopping - all for it

Grosvenor and Judiciary Square are the stations I use the most

No. This proposal does not work for me, particularly when viewed from the perspective of a Clarendon resident. Closing these stations would mean that there would be a 1.6-mile gap (or about a 33-minute walk) between the nearest metro stations in the Courthouse-Ballston corridor " which is one of the areas in the metro area with the most bars and restaurants as well as residents who would want to go into DC! This gap means that many residents " including myself " would opt to drive or take Ubers when we would've previously taken the metro to get somewhere. A 1.6-mile gap like that is infeasible when you consider how many businesses are near this area, particularly the Clarendon metro stop.

Will this push even more people to drive? Walking to the next nearest station is not feasible for many people many of whom picked their residence based on proximity to one of the Metro stations on this list. Closing Smithsonian would be VERY inconvenient for me and tourists because there is no nearby parking. Why consider closing stations that have not even opened yet and you do not know the volume. Wait to see. These are in high commute areas.

Grosvenor-Strathmore is an important station, given its close location to the Strathmore. I advocate for keeping the station open.

I personally use Courthouse station but you close Clarendon station, so many people will instead use Courthouse station that it may be impossible to get on trains. Very few people use Arlington cemetery so that is one in Arlington you should close. Priority should be given to stations that are used most during commuting hours. The silver line never should have been opened before all the repairs needed system-wide were completed!

Judiciary Square is very convenient for my travel and I'd prefer it stay open.

Proposal to close 22 Metrorail stations

Three major exceptions: Van Dorn (its not close to any other station); Grosvenor-Strathmore, and College Park where U-Md. is.

I work at Judiciary Sq. Please dont do this, this is my daily commute.

What?! We need to be able to travel to all these places!

This is by far the worst idea of the entire proposal. As compared to slowing service, which would merely inconvenience peoples schedules, closing stations risks disenfranchising entire populations of residents who live in condos, apartments and homes near the metro, including most of all in Clarendon and Courthouse, and effectively require a commute on already clogged roads in close-in Virginia to get to a metro stop. Given how packed platforms often were pre-pandemic, this would put thousands more cars on the roads in close-in Virginia alone. I am not sure why anyone would drive to and try to park in Rosslyn to get to DC as opposed to simply driving the whole way in. In addition to commuters, persons visiting restaurants and nightspots will need to use the roads in the evening and increase traffic and decrease road safety. Honestly, whatever consultant or employee thought up this idea as a workable option should be fired on the spot since they clearly understand nothing about the benefits of public transportation.

No stations should be shut down. What about those who have physical disabilities and rely on those specific stations to get to and from work/home/food/etc.?

Closing the Arlington stations and the Smithsonian station would mean I would have to find an alternate means of travel. I would not ride the metro at all.

Seems like it would be tough for people with disabilities or who are elderly.

We live in one of the most affluent regions in the country, and serve as a hub to the seat of our nation's government. People have been drawn here from all over in part because of the public transportation system. Students, federal employees, retirees, businesspeople, tourists â€” everyone relies on the metro system to make DC accessible in an affordable way. People buy houses and sign leases on apartments in reliance on the presence of a trusted station. This proposal is a betrayal of the community.

My spouse and I work off the Clarendon stop, it would be very unfortunate to no longer have the Clarendon metro available

No station closures!

I would miss Virginia Square and East Falls Church.

Absolutely unacceptable to leave those in Fairlington with no viable method of public transportation!!!!

We use Grosvenor-Strathmore ALL the time! It is also located at the Strathmore Auditorium for shows and concerts - and many people use the metro to get there - and park there! Not enough parking at the Rockville station (or close enough).

Do not close Clarendon

I need transit to Reston Town Center and Innovation Center as well as McLean and Greensboro.

This might work, given that some of these stops are walkable from other stops.

How can you include stations not yet opened? How do you know if ridership will be low?

Please keep Virginia Square open.

Clarendon and Virginia Square are contiguous stations. Would make mor sense to close courthouse and Virginia square to keep walking distances between stations mor equal. East Falls Church is a transfer point for orange and silver lines. Closing transfer stations is a bad idea.

Terrible idea and would decrease ridership even more. Who wants to board a sinking ship?

Agree with these stations except for Smithsonian station.

Should I rely on Uber instead of Metro?

I would take reduced services across stations before accepting complete closures of stations.

Closing Van Dorn station, in conjunction with the route elimination of the 8Z bus line, would leave a large segment of west Alexandria without any realistic option for public transit to and from the pentagon.

I LIVE BY COLLEGE PARK METRO, without access to the metro, I would have to move. you are cutting off many college students from internships and jobs. Once covid calms down, ridership in CP will be up quite a bit given that THOUSANDS of students would be returning to campus.

Why are you closing so many downtown? Many of these are stations used by tourists. By 2022 there will be more tourists.

please do not do this !!! I use the Metrorail Station at Virginia Square regularly -- for work, for doctors appointments, to join friends for social gathering and to attend educational events at the Smithsonian and Capitol Hill. I purchased my condo BECAUSE it was across from Virginia Square Metrorail station.

Are you considering tourist AT ALL? My guests stay outside city mainly and take metro to smithsonian, archives etc. please reconsider! Also Clarendon is a major shipping hub and restaurants for those of leaving the city who don't want to drive and drink.

This is absurd. Many of these are important station for residents and tourists. Metro needs to stay open after the pandemic subsides.

Proposal to close 22 Metrorail stations

Have to transfer between red yellow and orange linez

Worst Plan. I use College Park and Cheverly frequently. Also would have a disastrous effect on the University of Maryland for faculty, students, and staff who live in DC and other areas serviced by College Park Station.

There is a vocal community advocating for Grosvenor-Strathmore to stay open. As a nearby resident I disagree on the need to keep it open. It is probably one of the stations on the Red Line where most frequent users are also car owners. They can temporarily drive to Twinbrook and park there. Again not convenient but a very reasonable inconvenience comparable to what people at Twinbrook, Rockville, Shady Grove, Glenmont, etc. would face with a return to the turn back schedule. I really hope privileged well-off white people dont win what they want in this case and make others suffer when Metro has to find cuts somewhere

Closing these station would cause a hardship for many people who rely on these stations operating.

Absolutely not!!! This is totally unfair. Do sometimes people work remotely? Yes. All of us? No! We need these stations open. Some service places where we have medical care and having these stations closed is unfair and a complete inconvenience.

I use the Virginia Square metro since that's where I live. If it was no longer available, I would probably drive / Uber more often, but not necessarily always.

East Falls Church is an essential metro station that benefits from dual lines for additional service frequency and is extremely convenient from the W&OD trail.

The ridership to and from the Grosvenor station has significantly declined because people have been working at home. As you well know, it is a heavily utilized stop during normal times. How would you like people to commute? Are you so foolish as to suggest people get back in their cars?

Closing all except Cleveland Park would be fine for me.

I worry about accessibility. Folks with disabilities or other issues who want to use the Metro would have to work that much harder to get to the Metro. I dont like this plan.

This is the worst idea. What about all of the money the metro has poured into these stations? So that would just go to waste? What about all of the people who live or work at these stations? Is there a goal of increasing ridership? Because this would just lead to the metro being put into a more financially difficult position.

East Falls Church is my primary station and not proximate to other stations. It is not possible to drive and park to Ballston and bus service between East Falls Church and Ballston adds at least 30 minutes of commuting in what would otherwise be a few minutes on the train. Parking is insufficient at West Falls Church to accommodate the increase of East Falls Church passengers, and it is illogical for most commuters to have to go west before heading eastbound for work. Toll road and HOV restrictions on I-66 and I-495 further complicate this for passengers from this neighborhood.

Again, by closing stations, you are going to increase traffic and these changes impact those who are disadvantaged!!!

Arlington Cemetery station could be closed. Does anyone ever go there?

These stations are not close to other stations, especially the ones in Virginia, so it wouldn't be easy to get to the next station.

FIRST and foremost, I take issue with pending opening of the Silver Line Phase II. Does that mean it may NOT open? Ridiculous! I also question the closure of stations that arent even in service yet. How are you gauging what stations to close on the silver line to Ashburn when nobody has even ridden on the line yet? Again, ridiculous. I think this is all a knee jerk reaction on the part of METRO! Mast Transit is going to be a big part of the recovery. How can DC recover if METRO closes doors...I thought the slogan was METRO OPENS doors. Please keep your mission in mind and not go for the knee jerk reaction. Quite honestly, METRO needs to convince riders that the system is safe. To do that, METRO must enforce mask guide lines and have more patrols to cover people that want to break the rules or make trouble on the system. I have reported several issues with METRO in this area.

Closing these stations would make me stop using Metro completely.

I use the Metrorail explicitly to get to work at Tenleytown. When the station was closed at the start of CO-VID. When I got off work at 6, I wouldnt get home until 7:50p due to how long the 46 can take to pass. I may end up moving if I had to deal with this everyday.

I need to take the train from East Falls Church. It is critical to me that this station remain open. I think cutting back on the available stations will reduce the number of people who use metro. The effect may be permanent if they find other modes of transport and decide not to come back when the stations reopen. I believe this is the worst option on the table and will be the most difficult on riders.

Limited to what I can comment on with first-hand knowledge: I would oppose the closing of East Falls Church station. It is very likely many people currently working from home in NoVA will be returning to the office by January 2022, given ongoing vaccination efforts and the likely reopening of schools in the fall. EFC is NOT located particularly close to EITHER Ballston or WFC stations (both of which are definitely driving distance away with LIMITED parking options near the stations). Closing EFC would cause parking issues near Ballston and WFC and overcrowding at those stations, particularly if the plan to keep trains 15-30 min apart (even at rush hour) is also put into place. Closing EFC for the long-run is simply NOT a viable option, with the prospect of offices opening back up.

Proposal to close 22 Metrorail stations

| |
|---|
| I am a GMU student that lives in DC and commute to school in Virginia. I am present at both campus locations, in Arlington and Fairfax and rely solely on metro to get to campus. |
| I walk to East Falls Church and use that station regularly. It would not work for me to drive to another station |
| The other close station is Medical Center. No parking there. Very inconvenient if you want to park & go downtown or to Strathmore |
| This cuts a metro station nearest my office and makes my commute longer. Disruptions or discontinuations of service will make me not want to use metro at all. Stop the death spiral. |
| Based on where I live, clarendon is a fairly busy and central station that isn't as close to other stations as it would seem especially if virginia square were to be closed |
| Strathmore is a major hub and service a number of townhouse and apartments as well as the Strathmore music center! I feel very strongly about this!! |
| It'd be tough for the DC community to lose so many Metro stops. |
| Judiciary Sq provides access to courts. That would interfere with public access and access to justice. Also critical for federal workers. Grosvenor is important to students, workers and access to the arts. College Park is critical for student commuting to Univ of Maryland. |
| We should not close any station that is in downtown DC. These are critical to get people to work, as downtown DC is where most jobs are. Thus, I am against closing Federal Center SW, Federal Triangle, Judiciary Sq, Mt. Vernon, and Smithsonian. These stations should remain open. |
| I walk now to E. Falls Church and I suspect many others do too. Closing will mean driving to Ballston, which somewhat defeats the purpose of using public transportation. Plus the walk is so much further to the station. It surprises me that this is one of the lesser used stations, since the parking lot has always been filled. Maybe it will be less used, with the new norm. Where will people get off to go to the Smithsonian if Judiciary Square, Smithsonian and Federal Triangle and Archives are closed? Seems at least a few should be kept open. I don't use the other stations. |
| These are unacceptable cuts to service. Implementing these cuts will force me to seek alternative transportation options. |
| What an absurd solution! |
| I commute daily from East Falls Church - this is the most convenient station and has a lot of demands. West Falls Church, while also close by, only runs on the orange line. |
| Medical Center is not a good alternative for Grosvenor-Strathmore due to lack of parking. With the demolition of the White Flint Mall, it would be better to keep G-S open (greater population density) and close the White Flint station |
| This is a poorly phrased question. I hope that the low ridership numbers aren't based on data during the pandemic. What is near mean? For example, the closest stations to East Falls Church on the Orange Line are Ballston and West Falls Church, which are 2.5 miles in each direction. I wouldn't consider that to be near if I were walking. Smithsonian is heavily used by visitors to the National Mall. |
| Closing down two stations in Alexandria is not acceptable. We need to be able to get to that side of Alexandria through rail. |
| I would like to believe that I would be working from the office by January 2022. I am an Orange line rider that would be getting on at Virginia Square and getting off at Federal Triangle. I use both of these stations due to the usual crush of people at Ballston and Metro Center. I can only imagine what the eventual crowds would do to congestion at these stations. It would be as if the train has broken down everyday in particular with reduced frequency. The platforms would be totally overwhelmed. |
| I regularly use several of these stops, especially the further out ones, which does not have other alternatives. The downtown options are important for commuting. |
| I rely on the Grosvenor station |
| So many stations would close I couldn't even use alternates! |
| Closing Virginia Square station would lower real estate value. Other functioning stations would become overcrowded, sowing more risk of Covid and crime. |
| Especially with the eventual population surge around White Flint/Rockville and in general on Rockville Pike, Grosvenor-Strathmore Station will be needed more than ever to handle the influx of riders expected. |
| This would make it difficult to get around the city. |
| I live near Grosvenor-Strathmore and would not say this station should be included as a station located near other stations. The closest other station is White Flint and is located 1.7 miles away. |
| Please keep the Clarendon, Virginia Square, and Eisenhower Avenue stations open. We rent temporary furnished apartments in multiple buildings within a short walk from these locations. If the stations close, we will have a much harder time renting apartments in these areas. |
| Disasterous1111111111111111 |
| Fine will all stations on the list, except Cleveland Park |
| I work at the Pentagon and occasionally rely on the metro to reach Arlington Cemetery for burial of Service members. |

Proposal to close 22 Metrorail stations

While there are stations near by to some of these, the vast majority of riders would just avoid metro all together if some of these stations closed, including but not limited to Archives, Arlington Cemetery, Clarendon, Mt. Vernon Sq, Smithsonian, Virginia Square, and McLean.

ADDITIONAL MID-DAY WEEK DAY SERVICE REDUCTIONS AND MID-DAY WEEKEND SERVICE REDUCTIONS MUST BE PLANNED AT THIS TIME.

Leave stations open closer to tourist sites. Leave stations open where theres larger amount of high-rise/apartment/condo/hotel or dense residential. Consolidate around stations with more robust rider support i.e. parking garages, access to major road network, transit hub for follow-on travel like bus service

This reduces access to major areas of the city I would travel to for fun as things start to reopen. This would greatly harm the cultural and entertainment industries around these stops.

I need Grosvenor strathmore station to remain open, the other stations do not work.

I commute to multiple of those stops for work/pleasure.

Grosvenor strathmore is key in the area that it's in right next to strathmore hall and the biggest concentration of population near a station on that side of redline. White flint is not used as much as grosvenor and twin brook.

By shutting down these stations you remove the walkability factor for the commute of most of our employees including myself. Transportation costs will sky rocket

The Grosvenor and Smithsonian stations are vital to our population.

Grosvenor-Strathmore is near White Flint, but it is larger and more accessible than White Flint, including for those who park and ride. Please do not close the Grosvenor station!

This would extend my commute significantly as my starting and end point are both on this list. I would end up finding another means to get to work as this option would take far to long to be worth it.

I live near East Falls Church. its a longer ride to take the bus to Ballston. Im handicapped and its harder to find a handicapped seat at Ballston than it is at East Falls Church.

We just moved to Arlington specifically because of the metro access (East falls church). My wife and I both use metro to get to work daily and I am expected to report back to work onsite downtown on April 1.

Close Va Square NOT both Va Square and Clarendon.

The density of the orange line stations is a huge boon to our area. Closing Clarendon and Virginia square for example would be awful.

I live near Eisenhower Station, and even though King St is near, the walk takes long enough that I would barely use the metro, especially when its very cold or hot or bad weather in general.

East Falls Church is an essential transfer point to buses and between silver/orange lines. Ridership there will be up again as soon as folks are vaccinated, you can be sure. Also it was just renovated so to close it is a waste of that investment! Please do not close EFC station!

my ride is from Grosvenor - Strathmore to Judiciary Square. The GS station serves all the high-rises of Grosvenor PL - thousands of residents. If GS is closed, White Flint is closest and thats a LONG walk (uphill, really, and nearly 1 mile) without a car!!! ItPlease do all you can to keep all stations open.

How are these stations considered to have low ridership.

I live next to Clarendon metro, and am disabled veteran. I depend on proximity of metro to work at Government agency.

I moved to my apt based in metro location. If stations are closed then I have to consider moving or not to ride metro at all. If I choose not to take metro then metro has lost a customer. I'm sure others will follow suit. Also, by closing metro stations the surrounding property values may decrease and they will anger many residents.

I have been commuting on metro every day for over 20 years from East Falls Church. The EFC station was crowded every weekday pre-pandemic. To close EFC will take away a key commuter lifeline for Arlington residents.

Would be better to have A stops and B stops like they used to have on the CTA in Chicago.

We need to keep all stations open because people need to have reliable and convenient stations. The busses at closed stations is not a reliable alternative. We cannot close stations like these because people rely on them. With all the vaccine efforts it's not reasonable to assume ridership will be nearly as low at these stations next year.

It would be better to decrease frequency of trains, as proposed in the first couple questions, rather than to close stations altogether.

EFC station is essential to our neighborhood and to keeping I-66 from becoming incredibly expensive and crowded. Maybe not during the pandemic but this is starting in fy22, so it will become a big cost and expense. It is much too far from where we live to use WFC or Ballston, and will make commuting times prohibitive. parking at Ballston is too expensive.

This affects my commute to work

Closing the College Park Metro Station is a huge mistake. That is the one freely accessible station to the students of University of Maryland, many of whom have internships and jobs here in DC. Closing this station will greatly limit the accessibility of DC to those students.

| |
|---|
| Proposal to close 22 Metrorail stations |
| PLEASE DO NOT SHUT DOWN STATIONS! PLEASE FIX THE ELEVATORS AT EVERY STATION! |
| I live near east falls church and walk to that station so I can commute to work. If my station were to be closed, I would need to get to Clarendon, which could also be closed, or west falls church. This adds time and cost to my travel and would not make metro a feasible commuting option for me. Add to this how my house would drop in value as a result of this and I would strongly object to the closures. If anything, newly built metro stations that do not have any dedicated ridership should be cut first. |
| Most stations named above are one I use during travel |
| EFC station alternatives not easily accessible on foot |
| Absolutely not! No closures at all. Neighborhoods count on those stations and have already been inconvenienced by construction. The stations exist; use them! Passenger counts will not increase with fewer opportunities to hop on and off the Metro. |
| None of these plans are good, but this one is the best one. You cant make Metro a non-commuter mode of transportation! |
| Live walking distance to the station. |
| We bought close to Grosvenor-Strathmore Metro because we prefer to take the Metro than drive. In addition, at some point one or both of us will be unable to drive and Metro will provide a needed freedom. We planned for this before retiring. |
| My office is located off of the Greensboro station. If this was closed, the next station is over a mile a way. Would shuttles be provided? Would this be a permanent change? |
| I take the Grosvenor-strathmore station train every day to and from the office. |
| Cleveland Park is essential for everyone on the Red line. |
| Cuts off district workers from accessible stations which would increase cars on road and also cuts off students from entering the district, limiting their education |
| But only because I live closest to Ballston. Again, it's ridiculous to close silver line stations after we just spent a ton of money building them, and for that matter closing east falls church after spending money rehabing that one. |
| I use VA sq and Mclean. If you close those stations I would stop using metro all together. |
| I live near Va Square & use that stop allthe time. Also use Clarendon & East Falls Church. |
| I live right next to the Eisenhower station. Using Huntington is not possible because there is no direct pedestrian link between the two stations. Furthermore, there is significant new construction immediately across the street from the Eisenhower metro station, including a Wegmans store, that would definitely increase ridership and use of that station. |
| This is a ridiculous proposal. Closing stations is the fastest way to lose any current and future MetroRail riders as quickly as possible, as MetroRail will be viewed as an unreliable transportation option and riders will utilize private motor vehicles. As a Virginia tax payer for over 37 years, this decision will undercut years of local and State taxes that have resulted in MetroRail stations being built and maintained. |
| By 2022, the recovery will be underway, including in ridership. |
| Grosvner station is an important stop to have in place do to the parking and continued development of apartments and residential. Also the art center there continues to grow and have events. |
| Grosvenor-Strathmore station is critical to get to and from school. |
| Hopefully ridership will bounce back - College Park and Cleveland Park are used by our family. Perhaps these stations could be closed on Sundays. |
| Grosvenor is really not near any other station for the density it serves. Medical Center is not an option nor Bethesda due to traffic and lack of parking. Twinbrook is the opposite way adding many minutes for commute |
| You cant close my metro station!! How would I get around? I specifically bought property to be near a metro, paying more money. This is unacceptable and will cripple the city. How is anyone making middle-low income supposed to operate if they cant commute to work or have to take extra steps to get to work that double commute time. Please think of the working class and how hard it is already and do not add to the hardship by taking away metro lines, making it harder to get to work. |
| This seems very short-sighted as government workers and other employees return to the office. |
| Nope. Why dont you close the whole system if youre going to start doing this dumb stuff. No one is going to want to use it anymore if it is unreliable or unavailable. |
| This just won't work for anyone i mean cmon |
| You say you would close stations that are near other stations.... But, by closing Clarendon AND Virginia Square that would mean nothing between Courthouse and Ballston. Thats a long walk for someone who lives closer to Clarendon. This is my station and honestly Id just drive to where I needed to go, especially if the weather was bad. |
| Closing certain stations will almost certainly be detrimental to the surrounding businesses. |
| Need Grosvenor-Strathmore to stay open |

Proposal to close 22 Metrorail stations

I use several of those stations regularly for my commute and to run errands as I do not have a car.

This would adversely affect thousands of people - and especially Strathmore Concert Hall - the metro is needed as part of a concerted plan to aid in the economic recovery of the whole area. The whole development plan of Montgomery County relies on people using the Metro. All that development that has already taken place (e.g. Pike and Rose) and plans in the works - including a plan in Grosvenor/strathmore itself would be very adversely affected

Dont close both Clarendon and Va. Sq. Keep Clarendon open. Too far between Courthouse and Ballston

Some of these make sense, but closing both Virginia Sq and Clarendon would be detrimental to the community that lives there to commute into DC, especially in 2022 when we might be returning to in-person work to some degree. It's clear the Reston closure is dependent on silver line phase II, but if that is not operational then obviously closing Reston as it is a last-stop station is illogical.

Clarendon and Va Square are next to each other, which would force those riders to either Ballston and Roslyn. Neither of those stations can accommodate increased ridership, especially if train frequency is decreased. Furthermore, some of the most densely populated areas are spread between Ballston and Clarendon, with many more multi-unit High rises in the works, thus furthering the importance of more localized stations to serve those expected increased in riders.

I live at the Grosvenor-Strathmore station. I moved to my apartment specifically because of the metro station. If Grosvenor-Metro closes, I am not going to drive to a different metro station, Im just going to start driving into the city to get to work. I assume most of the people around me would do the same given that nearly everyone here owns a car. As a result, this would end up reducing Metro fares even more. I think this proposal makes much more sense within the District where metro stations are closer together and the pedestrian walking system is easier. But closing suburban stations will be counterproductive.

This will be huge. We bought an apartment in Clarendon for easy access to work, shopping, etc. And we do not own a car. This is really disastrous. Given the popularity of Clarendon and surrounding areas why would we do this? And destroy livelihoods.

You would single handily disrupt transit for over half of the federal employee workforce with these closures. This, frankly, is very stupid and not thought out.

OMG what happened to servicing all persons?

I am elderly and purchased a condo within a walking distance I could manage. If Metro closes the station 2 blocks from me, I will be forced to use cabs, not Metro.

I have no other means of transportation for commute other than metro. Strongly oppose closing the Clarendon metro.

This seems crazy to me. The system only works if you have enough stations.

The Silver line future line should be open.

Grosvenor Station is within walking distance for me. Since I am 73 years old, I would have to take the 46 bus to Medical Center in order to keep my doctor appointments at GW Hospital in Foggy Bottom. BIG PROBLEM

I live within walking distance of East Falls Church. I use it often pre-COVID to get to the classes I teach at GWU and the Corcoran. I am an adjunct. I cannot afford the very high parking costs in DC also street parking is also difficult in most places one cant park until after 6:30 pm. The classes I teach start earlier than that.

How in the world would the Yellow Line end at Mt Vernon Square if you close the station?!?!?

Keep Smithsonian and Arlington Cemetery stations open for access to monuments.

Closing the Clarendon metro station is a non-starter. This station is a hub for the area, including as a major transit option for Trader Joe's. It would also place an undue burden on residents in the area who will depend on this station for daily commuting once we are able to work in person again. No, this will not work.

These are not near enough other stations and these closings would increase my walking time to the point where it wouldnt make sense to take metro. I appreciate there are no good answers without a budget, but the way to increase ridership is to make metro more convenient, not less.

I frequent some of those stops when I ride the train.

I live at Clarendon and use to live at Courthouse. I rely on the Clarendon station as do those that use the Courthouse station. Courthouse is further than just the surface street walk (its deep and winds around). Also Courthouse is already a packed platform during normal rush hour, and there will be no room for the Clarendon riders. Clarendon also has a commercial and retail presence that relies on the station as well. I assume things will be picking up and returning to normal at the end of 2021 so metro will be needed in 2022 by many more people.

There are apartment buildings with low income individuals that depends on East Falls Church metro station. Please reconsider the closure of East Falls Church metro station.

I use the Van Dorn St station due to its proximity to where I live in Alexandria. Franconia-Springfield is not in a good location for many people, such as myself.

Memorial Bridge and the circle in the Arlington side will become a traffic nightmare if you shut down that metro station. Fewer stops means the metro serves fewer people, and is less useful for transit.

Proposal to close 22 Metrorail stations

Cleveland Park is my home station. It is about a half mile from my kids school backtracking toward my home, which is already a half mile from my house putting my morning walk to school and metro at 1.1 miles. Walking up to Van Ness from the school would be about 1.6 miles round trip and Woodley Park is a FAR and hilly walk. You would virtually be cutting off Cleveland Park. A mile is really more than the extent of most peoples walking time, particularly when you are now going to cut the station closest to my office too (Federal Triangle) so you would add to my walk on that end as well. Why not cut Woodley Park? Because of the zoo? Thats a weekend only operation and the population of commuters in Woodley Park is small. Less people get on at Woodley Park on my morning commute than either Dupont or Cleveland Park. I used to live in Kalorama and walking to Dupont was super easy.

The only reason why there is very low ridership bite is the pandemic. Once that is over, ridership will invest again. I am a regular user of metro.the change would more than double my walk to the next station

All times for all stations should be the same. Keep riders from being confused.

Grosvenor-Strathmore is my home station, and is the only station within reasonable distance of my home that has a Metro parking facility. If you close that station, there will be no stations serving Bethesda that have reasonably priced parking. This would change the economics of my commute.

White Flint and Medical Center have far lower ridership when commuting starts up again. Medical Center has no parking. Why would they stay open instead of Grosvenor-Strathmore?

By 2022 these stations may be used more often since people will be traveling more often and more freely.

There is a convenience factor in deciding to ride Metro. While the proposed station closings would not have a direct impact on me personally, it could further limit ridership. Would hate to see the cost of the buildings housing these stops be wasted, especially on the Silver Line.

Smithsonian is a key stop and one of the few that reaches the Smithsonian. If you close Judiciary Square and Federal Triangle that leaves very few options for getting to monuments. Bad idea.

Closing both Virginia square and Clarendon would change my walk from 15 minutes to 30 - those are the two stations I can access by foot. Closing one of them would be viable, I don't care which one!!

Prior to the pandemic, metro was my method of transportation to work and into DC on the weekends. By closing tehse stations it would be more difficult to use the metro. and make me seek alternative methods of getting into work that would increase my commute time by 30 minutes each way.

As an employee of the University of Maryland who regularly takes students on fieldtrips via the CP Metro station, this would provide a huge hinder to our programming and would probably mean that we would look for other transportation (renting cars) in order to get downtown. This is a low year because there are little to no students in College Park, but we are planning to reopen fully in person in the Fall!

Grosvenor-Strathmore is a very important station with parking - it would be terribleIf this station closed.

Of course there is low ridership. The museums have been closed, trips on Metro, which was the only way to visit the tourist destinations would not be available at several important stops for that.

Use all the orange and silver line stops

Although there may be low ridership, many people solely depend on the metro to get around and given that the country has entered a recession. Closing these stations causes further restrictions and difficulties for people to be able to get around (i.e. get to work to be able to live). Thus, closing these stations would not be of help. Especially considering that many people who live close to some of these stations such as College Park and Grosvenor-Strathmore are next to large apartment complexes where not everyone owns cars and relies 100% on public transportation. As a result, I do not think that these stations should be closed down.

The two metro stations in walking distance of me are Clarendon and Virginia Square. Bus + metro makes for a commute that is unacceptably long. I would drive or find another job in Virginia. I would also just stop using metro altogether.

Absolutely ridiculous. If WMATA is forced to do this, Metro service and general ridership will die.

I travel to and from work using redlines grosvenor station

I purchased my home close to the Grosvenor-Strathmore station due to the need for transportation. I use the metro transportation for work, entertainment, and to get to my doctors offices.

I travel often to Virginia and DC using the metro. I also park my car by Grosvenor station to take the metro. After covid, life will slowly go back to normal and we need the trains.

Grosvenor-Strathmore is needed to get patrons to and from Strathmore Hall as well as local commuters to and from work and other activities in DC. In normal times this station was always well used and the garage completely full.

Proposal to close 22 Metrorail stations

My metro station is Cleveland park and it would be a huge problem for me and my neighbors for this station to close. While I have not used the metro over the past year due to the COVID-19 pandemic, I plan to return to my previous usage shortly now that I am vaccinated. Public transportation is my preferred mode of transportation for environmental reasons. I would also like to point out that the Cleveland park station is a preferred station for people with disabilities due to its layout. In terms of the other stations, while it would not personally affect me, I am against it because it would limit accessibility to public transportation. We need more accessâ€”not less. Please do not close the Cleveland Park station or other stations.

I think the point of the metro is to make it easier for people to travel. For example sometimes when I miss my stop and dont have time to wait for the next train, I can get off at Judiciary Square and still walk to work.

Reducing service anywhere hurts riders everywhere. You have just thrown every disabled person to the wolves. You want riders? IMPROVE your service, dont destroy it.

This is the worst possible idea with how bad traffic will become once more people return to work, buses add to that congestion and commute times will suffer. Going to a road-centric form of transportation is the wrong move and I'd support paying higher taxes to make sure metro can not only adequately cover its existing footprint but expand service and make it even more accessible to people.

I park at the Grosvenor metro and many commuters walk to this station from their homes. I think you need to consider how much money you may lose.

PLEASE NOOOO. This would limit commuter travel from MD SIGNIFICANTLY. I really depend on the Grosvenor station to get to work at the College Park station. I have no other way to get to work aside from Uber. Please please do not go with this option.

There are plenty, if not hundreds of students that need the Cleveland stop to commute to school so eliminating that stop would make getting to school extremely hard for lots of people.

This seems like a terrible idea. It isn't as if the stations will disappear. They will still need to be maintained. What a waste of money.

Please keep our station at Grosvenor-Strathmore

It takes 20 min for me to get to Grosvenor. If its closed, its too far to simply switch to a nearby station. If the train will pass through Grosvenor anyway, why not stop. If its the cost of staffing and cleaning the station, looked at NYCs unstaffed stations as an option. The worat that happens unstaffed, is people pass through an access gate for free if the pay gate doesnt work. Thats better than losing all the customers at that station.

Although I think Grovesnor should remain open and so should Smithsonian for the tourists.

This has to be a joke. You understand this would hurt disabled people, right?

Why not shut down these services now, and save the money for more critical things?

This is non-sense! There is no other metro station a walkable distance from Grosvenor. It is almost 40-50 minutes to reach another station by foot alongside rush big street with cars! There are huge housing complexes around the metro station Grosvenor with people relying on metro to reach to work (hospitals, medical center) and to get a grocery etc. Not everybody can afford to have car and has to stay in these â€œcheaperâ€ housing complexes for affordable living, taking the only way how to commute to work is very sad.

I use several of these downtown stations, and worry about the impact on ridership if stations are closed in residential areas.

Please keep Grosvenor station open. It is vital to the community

Grosvenor is the best station and immensely convenient so I don't have to add to traffic traveling to other stations.

I live right at Grosvenor.

Closures of those stations will make others overcrowded

Sometimes I need to travel to these stations, especially the ones on the red line. Many of my errands take place at these stations.

Closing Virginia Square would have a modest impact on me as I use it occasionally. I rarely use any of the other stations.

Most all my neighbors purchased homes by the East Falls Metro station because it was within walking distance of the station. If you close the station, Ill never use the metro. It will also detrimentally affect our property values which will depress property tax revenues which will eventually decrease Metro funding from local governments.

East Falls Church is not walking distance from any other station and is one of the few with a parking lot!

Use one of these stations

Many of these stations are near federal and other office buildings. Once federal employees return to the office, the closure of these stations will strongly discourage the employees from returning to Metro. The closure of some of these stations would also negatively impact tourism.

Closing the Grosvenor-Strathmore station would be devastating to both the patrons of the Strathmore Music and Arts Center and the residents of the very large Grosvenor and Parkside (and other) condominiums that rely on the station to get to and from work.

Proposal to close 22 Metrorail stations

When DC returns to normal after the pandemic, these stations would not be able to support the influx of travelers. I also live walking distance from one of these stops. I do not have the ability to travel to these other stops that are close. This is COMPLETELY unacceptable and would eliminate my ability to get to work. This CANNOT happen to all of these stations.

I live at Courthouse and walk to Clarendon. If buses AND metrorail are cut, I would have to walk 30 minutes to get to Ballston.

Walking that far in inclement weather (or when too hot or cold) would be a hardship. I would need to buy a car and would cease riding Metro.

This would be dependent upon the status of COVID-19 and or mandated restrictions and if businesses have resumed to normal operations during this timeframe.

The college park metro station is incredibly important to the umd community. Countless students, faculty, and staff rely on the metro to make it to campus everyday. Additionally, without access to the metro station within walking distance to campus, many students would be stranded in college park.

I guess this might work. I dont use any of those with much frequency but would be a major hassle when I want to.

This stop is heavily used! And you just spent how much money on renovating, including bike lockers? Ridiculous. Closing this station would be a REALLY BAD DECISION.

I ride the metro daily from grosvenor strathmore to judiciary square and back. Plus, I park at grosvenor strathmore. If you close that station, I dont know where I would park and catch the train from.

Closing the Strathmore/Grosvenor station, Judiciary, etc would be devastating. Not only for venues like Strathmore hall but also businesses and residents

Additional housing currently under construction or planned on Blue/Silver/Orange Lines in Arlington will increase population density and demand for MetroRail service. Arlington is reducing required parking spaces in these new multifamily residences so many will not have cars.

It would be helpful not to close Clarendon and Virginia Square since I actually would use these two stops. This is so i could catch a bus to get me home as quickly as possible. I am hoping these two stops are not closed in January 2022.

This proposal would be counter-productive, further turning away local populations from Metro as transportation of choice. That is, those highly-relevant, local, populations would look to transportation alternatives other than Metro, if this proposal were to be enacted. If this proposal were enacted, Metro would be further marginalizing itself from its potential riders.

... if they are near other stations. I dont know how Metro is defining near. My closest station is East Falls Church, a 15 minute walk from my residence. Any other station would take at least two hours to walk to, and there is no easily available bus transportation to a different station.

I live near East Falls Church, the two nearest stations are Ballston and West Falls Church, both at least 3 miles away. This would effectively prevent me and many others from using Metro. Stations should not be closed. What savings are gained except the salary of a station attendant. Stations should not be closed except possibly the Smithsonian station since the Mall can be accessed from both Federal Triangle and LEnfant Plaza.

I need Grosvenor Strathmore open!!!

It definitely wouldnt work to close multiple stations that are near each other because that creates too wide of a distance when most riders are walking to the Metro stations (for example, closing both Clarendon and Virginia Square). Closing just one could work though.

Please do not close my Grosvenor-Strathmore stop. This would have a negative impact on my work commute, family, and countless other things. My mother travels to visit me but does not have a very reliable car, and given her age, she also needs to be able to walk easily from my apartment building to the metro and having to walk more than 15 minutes would be very difficult for her. It would also impact the Strathmore and people who are not able to drive there.

Closing both the Clarendon & Virginia Square stations would place a hardship on those people utilizing those stations. This area is now highly populated. Students who attend George Mason would be impacted. The Clarendon merchants would be significantly impacted.

East Falls Church is our local station.

Absolutely not- Grosvenor-Strathmore is a staple for riders at the local high schools commuting from other parts of the region, all of the people that live near there and anyone who goes into the city from outside the beltway. It would crush the condo prices in the surrounding neighborhoods and hurt the local economy. I HIGHLY disagree with the proposed change.

We are in walking distance from East Fall Church

Grosvenor is my station of choice that I use regularly

I would need to take a bus to the closest station and then get on the metro, or changes from a bus to another bus. There woudl be no straight through journey for me and this would add considerable more time to my commute, from approx 15-20 minutes each way to an hour or more each way.

Proposal to close 22 Metrorail stations

This will not work for me! I commute on metro to DC from Reston, and bought specifically in Reston Town Center to be able to walk to the metro when it opens. Huge development occurred (and is occurring) within a half mile of RTC station. So many people can walk to RTC metro station from home or work. Closing RTC station will hamper transit-oriented development that is the key to metros long-term success.

These stations are ones that commuters and other travelers rely on year round. Many of these stations are not near others (for example, Clarendon station is a 20 minute walk from Courthouse). This policy makes Metro far less acceptable to individuals who struggle to walk long distances (the disabled, the elderly, etc.).

I live in Clarendon so closing this station as well as the Virginia Square station would mean that I now have to make the 20-25 minute walk to either the Ballston or Courthouse station. The other alternative is driving which only adds more commuters to the roads creating further delays.

I work near Archives Navy memorial, so I need that station. I also need Clarendon station.

EFC serves 2 lines (orange and silver) so it would affect a lot of people. EFC has a bus hub that I use too.

Closing stations would be counter-productive, reducing ridership even more. The pandemic WILL END - hang in there - or see the collapse of the system. The Clarendon Station is especially important to me! PLEASE.

I would argue in favor of keeping open stations in northern Virginia, especially Clarendon and Virginia Square as much of the real estate development along this corridor was dependent upon a functioning metro line. Many people living in apartments along this corridor don't have cars and/or these buildings have less parking b/c the developer assumed there would be a metro line. I would also argue in favor of keep tourist destinations like Arlington Cemetery and Smithsonian open as traffic to these destinations should resume once covid-19 is behind us.

I personally regularly go to Grosvenor-Strathmore and Clarendon to see family/friends. Otherwise, the rest works.

I use Grosvenor station for DMV leisure travel often, primarily because I can park there, whereas that option is not available at Medical Center, the other station near me.

If people are vaccinated and offices are open downtown ridership will increase. I love by courthouse Metro and it was overcrowded pre-pandemic. By closing both Clarendon and Va Square, AND making trains come in 40 min intervals, it will effectively render METRO useless and people will find alternative options like biking or driving. Instead of making these drastic cuts, please work with them governments of the DMV and the federal government to develop a plan that can scale once offices re-open.

These metro stops are close to my home and I use them to commute to work

No indication on how long this would last. Not to mention some of these aren't actually near any other stations, like Van Dore Street. A couple of stations wouldn't be a big deal if there is extra shuttle service between the stations (like Tysons Corner -> McLean), but some of these aren't sustainable.

I bought a home in walking distance to Grosvenor metro to ease my commute. I don't know if I'll take metro if I can't use my nearby station.

East Falls Church is vital to me

Affects my needs.

Why are many of these stops next to each other?

I use Grosvenor. This will lead to even more people using alternative services, and will negate the current incentive for development at Grosvenor station.

I depend on the Cleveland Park station to get around the city.

If Van Dorn is closed either run buses from Landmark Center to the Pentagon or shuttle to King Street

I live a block away from the Virginia Square station. Closing it and Clarendon means I would have to either walk to Ballston and catch the train there - on sidewalks that aren't always shoveled or safe. That would add another 15 minutes onto my hour-long commute.

We are walkable to the East Falls Church station and rely on it to get into DC. Please don't shut down our metro station!

Many of the stations identified only have low ridership because of the pandemic. As soon as the region begins to return to normal operation, many of these stations will once again become vital for individuals to get around the region. Unless Metro is only proposing a temporary closure, this is a terrible idea. Is Metro actively trying to further decrease ridership through service reductions?

Don't close Clarendon. Need to get to food (Trader Joe's and Whole foods)

I use Grosvenor-Strathmore as my station, people who come to visit do the same. Do not agree w/ that station closing.

DO NOT CLOSE Grosvenor-Strathmore. We need it!

These stations are vital to those passengers that do not have other transportation available to them.

I use Grosvenor metro to ride into work and live nearby. Without then I would have to drive into work and never use Metro again forever.

Proposal to close 22 Metrorail stations

As a regular rider to Virginia Square - pre-pandemic - to work at George Mason University - this would be crippling for my commute. It is already difficult to get there, and this would make it almost prohibitive in terms of time.

I rely on these stations for my regular commute. What is the definition of near? For example, East Falls Church contains a major bus terminal and is 3 miles (!) from another station on the Silver Line.

The worst thing you can do is close these stations. They were opened not just for transit but as economic drivers as well. It would be outrageous to pull these out of service now, especially as they're already constructed and as Federal money is on the horizon.

Definitely against closing VA Sq, Fed Triangle, Archives, Smithsonian and Arlington Cemetery.. Reasons are I work as a volunteer at the Archives and the stops in that area are most convenient, particularly in bad weather. Arl Cem and Smithsonian should never be closed because of the effects on DC visitors.

I reside between two Metro stations in Arlington: Courthouse and Clarendon. Though Courthouse is closer to me, I would still like the option of choosing Clarendon station.

We need Cleveland park and Smithsonian and Judiciary Square!

I used to live in Falls Church and would still walk 12 minutes to reach East Falls Church to take Metro to Tysons Corner. I dont think there was low ridership ever and this is pre-covid. I have now moved near Tysons and right next to Greensboro (5-7 mins walk) and take the metro to work. What are my alternatives? Buses? There are times when buses do not even show up or are late. This is a big concern during snow days or rainy days. Metro was reliable for daily commuters. Finally, there is no easy way for me to reach Capital One from Tysons. Since Tysons does not have a walking path, taking a metro from Greensboro to McLean was only my way. What alternatives would you recommend?

McLean and EFC should remain open

Although ridership is low, there are several people who still rely on these stations and although there maybe stations near, they are not necessarily close enough to walk and will create more of an inconvenience as most of us moved near metro stations for the convenience.

Deboarding at other nearby stations would be tricky as they are quite far apart. Even worse at night for single females. Please consider your riders.

Too many proposed closures. How can you close College Park? How would students, teachers, employees, etc. get to UMD? Closing Virginia Square and Clarendon doesnt sense since they are next to each other. Closing Virginia Square only makes sense. Closing Smithsonian and Federal Triangle doesnt make sense. Tourists would have to use LEnfant Plaza and Metro Center, creating too much overcrowding.

Closing Innovation Center, Loudoun Gateway and Reston Town Center would look terrible on your side. Why would you waste so much money building them in the first place if they were on the chopping block even before they open?

As long as they are fairly spread out (between racial groups) I guess it would be ok. Would bus service act as a shuttle?

Grosvenor strathmore is essential

Clarendon and Virginia square in particular would not be good stations to shut down. Many people have residences and businesses there and these stations are critical to the economy of Arlington.

Closing metro lines means that automobile traffic would increase in DC; this is unconscionable as the only good thing that has come from the pandemic is less air pollution and more breathable air for residents, especially those of us who exercise outdoors.

How can you close stations that arent even open yet over low ridership?! Where is the logic there?? Also, youre creating a self-fulfilling prophecy here if these stations were to ever reopen. Your decisions will have effects on real estate around this public infrastructure. Not to mention a WASTE OF BILLIONS!! This is public infrastructure paid for in large part by tax dollars and public funding. How can you disenfranchise so many communities by closing out these assets of public transportation?! This is so short-sighted and asinine... how is this an option for you??

It makes no sense to me to close the College Park station when that is a major hub for college students. I think you may be looking at stations with low numbers since March 2020, which was about when the pandemic started, and that college students have been doing more online classes than in-person classes. I think your reasoning for choosing these particular stations is very flawed. I personally use the Archives, Cleveland Park, College Park, Judiciary Square, and Smithsonian stops a lot, but I have not used Metrorail at all yet during the pandemic.

GROSVENOR STRATHMORE IS MY STOP ITS MY ONLY FORM OF TRANSPORTATION DRINK MY PISS

See previous remarks on housing cluster around metro stations. This undermines that

I live in Clarendon and used the Clarendon metro stop every workday, until the pandemic closed my workplace and compelled me to work from home. I also used Metro to get to Reagan National, Union Station and Tysons Corner. I always saw plenty of other people on the platform, so Im curious how you define low ridership. I dont think Clarendon suffered from low ridership before March, 2020.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Grosvenor Strathmore is busier than White Flint, Twinbrook and Rockville |
| Please keep Grosvenor-Strathmore open. A lot of multi-family housing is clustered around the station and there is a large parking garage that makes the station convenient for surrounding neighborhoods. |
| No! This is closing two consecutive stations in my neighborhood! Keep Virginia Square! |
| Some of those are the most popular metro stops. Clarendon is a place where tons of 20-year-olds go-to drink and having an accessible metro right there is an amazing way to provide safe transportation and reducing the risk of drunk driving. While some of the lines may be less popular the Clarendon and Grosvenor Strathmore are incredibly useful to the professionals that live right next to it. That is literally why people will pay more to live next to the metro. |
| This proposal would close several high usage Metro stations and significantly and adversely impact commuters and the overall economic viability of the region. Clarendon Metro station is a crucial stop for our community and many of the others are regularly used too. We oppose this senseless and random selection of stations for closing. |
| We live at Grosvenor Metro, and this would be devastating for us, as we purchased this home with access to the metro in mind. |
| Please do not close Grosvenor-Strathmore station, it would be very hard to commute if you do. |
| â€œNearâ€ is n't quite right. â€œNextâ€ is accurate but no Metro station is within convenient walking distance. Mt Vernon station isn't â€œnearâ€ â€œChinatownâ€" that's a long walk. |
| I moved to Reston town center specifically for the metro station. People who move to an area with a metro station expect it to be open. I live in a more expensive area for the metro so I can use it! Once it opens of course...which has been delayed over and over again |
| These are stations where many people still work and need. I work at this Greensboro Station so that means I would have to walk over a mile from Tysons Corner. This is unacceptable. This is a thriving area and more businesses are being opened. People will not be able to get to work. |
| Are you insane? This would only serve to drive people away from using metro and they would not come back. I know cost cutting is necessary but when you make it so inconvenient people will just give up and find another option. Trying to win them back after what will likely be a lengthy disruption will be an enormous task. |
| This is low service and will doom metro to obsolescence. Find funding - dont cut service. |
| NO NO NO!!!!!! DONT YOU DARE CLOSE EISENHOWER AVENUE STATION!!!!!!!!!!!! I NEED that station open. Thats where my JOB is!!!!!!!! I dont own a car, cant afford a car, and dont drive. I NEED that stop!!! |
| This would be the most catastrophic of all proposed options, funneling riders to the other stations creating significant overcrowding (and if the pandemic isnt over by then, a guarantee that people will never want to ride the train again). Furthermore, if a reduced schedule is implemented, theres no way a station like Courthouse can handle the volume of riders that would migrate to that station instead of having Clarendon as an option - overcrowding on trains was already an issue pre-pandemic during rush hour. Even with the potential with more people working from home post-pandemic, closing stations would permanently put WMATA in a death spiral for doomed ridership in the future. |
| Id leave College Park open unless the University of Maryland is willing to expand their transit to the public |
| Several of the stations proposed for closure do not have easily walkable paths between them. For example, if McLean Station were closed, forcing riders to disembark at the Tysons Corner Station, there are no clear paths or sidewalks back the McLean station, due to the highway onramps and ongoing construction between the two stations, acting as barriers for working pedestrians. In a similar manner, if Reston Town Center station were closed, forcing riders to disembark at either Wiehle Station or Worldgate, there simply are no direct roads with connecting sidewalks or walkways all the way between them through Reston and Herndon--and given the concentration of office, residential, and retail through that entire corridor, walking or bus connections to the Reston Town Center area will extend commutes by up to one hour, forcing riders to consider non-metro alternatives. |
| East Falls Church station is not near any other stations in terms of users time. The entirety of my neighborhood is minutes walk from the EFC station. It would take at least an hour to walk to the West Falls Church station, longer to Ballston. No bus route comes into our neighborhood so that is not even an option. Not having the EFC station would substantially increase residents commuting time. The East Falls Church station may seem near other stations only if you are measuring the distance the train travels between stations, not the riders time getting to the station. |
| This would be painful but I think its somewhat reasonable. Keep Cleveland park open, though! |
| Grosvenor-Strathmore is my station. The area is becoming more populated and needs access to this stop. We also use Cleveland Park, Federal Triangle, Judiciary Square and Smithsonian often. |
| Closing stations should be avoided at all costs. The economy is already fragile, avoid such a drastic change to the community. Automate to reduce staffing at stations, looks for cost savings in salary and benefits, raise fares with commitment to not close stations for next 7 years. |
| Definitely not - as we purchased our TH for the convenience of Strathmore Metro stop! |

Proposal to close 22 Metrorail stations

East Falls Church Station is about .4 mile from my residence and I always walk. I would have to drive to West Falls Church Station (1.7 miles from my residence). This would impact the environment more and reduce my exercise and being outdoors. It would also impact the economic viability of small businesses in our area as parking is very limited. It will also make it more difficult for our out of town friends to visit us and many of the key sites that make Washington attractive

This plan wont affect me, but I could see it being detrimental to those who chose to live near these stations to have reliable transportation who would end up losing metro access. This is especially detrimental to those with disabilities that limit their ability to walk to the next closest station.

Please do not close Cleveland Park!!! It is widely used not only for residents but for tourists as well to travel to the zoo. The other stations do not apply to me.

What about all the people going to shows at Strathmore? There is no way to walk there from the other stations.

I rely on the metro just like many other people to get to my job, it would be a huge inconvenience if the metro were to close down especially since I live pretty far from my job rely on EFC metro and a primary reason for purchasing our home!

Keep functioning the Grosvenor-Strathmore station, please.

I purchased my hone because it was a walk to Metro. Closing this station is outrageous

Living in East Falls Church and commuting to DC for work there will be no other option to be able to get to work. This would be a hugh impact on commuting into DC for work.

We should be looking for ways to make public transportation more, not less, accessible.

Making a decision to close 22 stations is incomprehensible. As travel on the metro get closer to "normal" by January 2022 I cannot even imagine this many stations being closed. This would severely limit travel for people, especially those like me without a car.

What is the definition of near other stops? I know that the distance between the Van Ness and Admo metro stops (so, skipping Cleveland Park) is about 45 minutes to an hour for me on foot. That is not a reasonable distance to try to navigate for people who need to work or commute to work in those areas.

DO NOT CLOSE ANY STATIONS!!!

To close locations such as Morgan Blvd, McLean, Chevrerly etc is extremely punitive to the community's that rely on metro to travel in and around the DMV area. One of the reasons why I live in my community is bc metro is within walking distance. By removing that option not only will it impact the economic growth in my area but then it places yet another economic burden on a lot of us - now we will have to pay for parking, pay to take a bus, etc. we already pay a higher amount to ride the metro. Don't add another layer of financial burden on us.

Grosvenor-Strathmore is a commuter station with a very large parking garage. There are no alternatives to that much parking capacity. You would be killing metro as an option for people who live in inner Montgomery county. If you want to be a dc or Virginia focused transit agency, seeking funding for them. You will see lots of political opposition to metro funding from Maryland from the communities that are most politically connected in the state.

I just bought a house near Innovation center - it would really suck if the metro decided to just close the line. People have waited an extra 3 years for the Reston town center, innovation, and Loudon stations and have planned their lives around them. You would hurt home prices, jobs, and commutability for tens of thousands of people. This is a HORRIBLE idea and not just for this area but all of the others. This is the worst of them all. And people need the metro to get to certain areas of work in city. By doing this you're adding 20-30 minutes extra to people's commute times.

These stations arent all close to others. If you live in walking distance to Grosvenor or college park, you probably cant walk to any others stations. This is a ridiculous plan.

Which station is college park near?? West Hyattsville is far from walkable. I think closing stations would cause more distrust in the system and customer confusion than necessary- the list is long and sporadic

East falls church is my station. Ridership would increase if the parking were increased. During inclement weather I drive to West Falls Church where there is sufficient parking because the lot fills up quickly at east Falls.

No. Bhushan is stupid. East Falls Church provides access for a certain area of the Abington area. The issue here is that the government us closed. By Jan 2022 things should be back to normal. You need proper funding. Is NY or Boston doing this. Becsude its absurd that our nations capitol metro is so backwards and poorly funded. I used metro in 1977. Its unfortunate its been run into the ground by poor vision, leadership and not good management.

Do not even think about closing ANY of the Rosslyn - Ballston corridor metro stations! They are essential for keeping the vibrancy and livability of the neighborhoods the stations are in! Also, Eisenhower station in Alexandria must keep on operating due to a significant number of new apartment complexes opening in the near future in the station vicinity!

While this would not significantly impact my person travel, I would worry about the College Park closure given the fact that the metro is the main form of transport for students and faculty in and out of the city. Although there are stations close the the university by car, even the College Park station is somewhat far away for those who are walking/biking.

This has some possibilities.

Proposal to close 22 Metrorail stations

My wife and I just purchased a new home in the Tyson's / McLean area, walking distance to the McLean Metro Station. This metro station was a PRIMARY driver in our purchase decision and explicitly listed as a key asset in the pre-purchase valuation we were provided. Currently I use the metro to get to and from work and my wife will do the same beginning this summer. Additionally, we have watched as Fairfax county has torn down innumerable trees in our neighborhood in order to create a more convenient path for neighborhood residents to get to this metro station. Closing the McLean Station would mean a loss of commute options for both myself and my wife, a depreciation in our home value, and the irreversible loss of trees caused by the county in the name of a metro Station that (under this plan) would cease to exist before the trail is even completed. Please do not close the McLean metro Station when we are so close to the end of the pandemic and when so much development is under way around it that can drive new ridership in the very near future. Thanks, a very concerned resident.

I rely on public transport to see friends and to do my work. This will force me to take expensive taxis, adding even more cars onto our roads. This will increase the risk of accidents, and it will increase pollution, which means you are increasing the risk to public health with this decision. You are also making the climate crisis even worse. I thought we were meant to be building back better or was that just a nice phrase that had a catchy ring to it? uos comments

Archives, Arlington Cemetery, Cheverly, College Park, Cleveland Park, Federal Center SW, Federal Triangle, Judiciary Square, Mt Vernon Sq, and Smithsonian are some of the most important train stations and I can not imagine the harsh impact on this areas economics and lifestyle. As a student from DC going to University of Maryland, the College Park station helped me get home to school and back and taking that away during a time where students are not on campus as much, so they of course cant use the train, is unfair. Wait for students to come back and its possible the train station will have higher rates of usership. The other stations are also extremely impact, especially Mt Vernon Sq, Archives, and Smithsonian, they should stay open. There must be another way to save money.

Grovesnor is a perfect location for driving and parking close to many of us in suburban MC. There is no easy parking closer in to the district. Further away you run into traffic on the pike.

This is a non-starter. Raise fares before closing stations. This plan would also have an extremely negative effect on local small businesses. Havent we had enough of that due to the pandemic?

I ride from the Grosvenor-strathmore station in order to get to work. It is my only transportation option as I am not allowed to park near my job. I get off at the medical center stop so finding another station to ride on would not work as it would be a longer commute.

East Falls Church is crucial to my commuting needs. It is a hub of the areas larger transportation needs with a newly renovated platform and bike storage options that encourage more environmentally friendly transportation. It is a feather in Metros cap. To loose service at EFC would severely impact my daily commute and I think would hurt the larger carbon neutral vision for the survival of us all. on a larger scale, closing stations would likely lead to a greater decrease in ridership. Stated otherwise, access and convenience is crucial to increased ridership and commuter/customer satisfaction. closing stations seems to run counter to Metros need to increase ridership.

Absolutely no. I would have to drive to Strathmore for concerts. Im certain you will hear from Strathmore Hall management about this option.

Half of these will be back to jam-packed once the COVID threat has passed. Unbelievable that you would even consider some of them.

I take the metro to go to GMU campus in Arlington VA for my night class and would not be able to go.

is this a joke

I will need the Van Dorn stop to get to/from work. We are expected to return full time to the office soon.

The East Falls Church metro should remain open given that it serves multiple communities from three jurisdictions (Arlington Co, Fairfax Co and Falls Church City), including the Seven Corners/Eastern Fairfax County community, Falls Church City, and Arlington Countys Westover, Highland Park, Madison Manor, and East Falls Church communities, among others.

I use several of these stations regularly - especially Clarendon and East Falls Church.

My husband uses the Grosvenor Metro station every day to travel to and from work. This station is walkable from our home. Its closure would be a big negative to our daily lives. There are a number of homes within walking distance to this metro with people who depend on the metro for work. Traffic on Rockville Pike would inevitably be increased if this station closed. I realize ridership is likely very low right now given COVID but hopefully with the vaccine rollout underway, people will start to return to metro use.

WMATA may as well close up shop altogether with this plan.

The more questions I read the more I think: Who is considering these proposals? Are you trying to kill transit in DC?

Grosvenor/Strathmore is my station. I can walk there from my house. As I have gotten older, I no longer drive much and I would really miss this access. You just enlarged the parking garage there! I feel the parking garage at White Flint is more isolated and less safe.

Do not close Clarendon or Virginia Square I use these stops to commute to work. Also Federal Triangle is where my work is. It would add an hour to my commute!

Proposal to close 22 Metrorail stations

We purchased a house near the EF metro station We expect to take the Silver line to Dullas airport.Closing the station would limit me trips into DC.

I dont love this idea but it seems like the best in a bunch of bad options. But isnt G-S key because of all the parking places? And maybe some of the others too?

I live walking distance to Strathmore and rely on it for work. Only if free shuttles are made available from Strathmore to the NIH would this be feasible and affordable for me.

With the exception of Arlington National Cemetery, I think this is doable. As tourists return, I think not having Arlington as a station would be detrimental to ridership.

Crazy! This could decrease ridership from other stops since trains will no longer stop at these stations. Cascading impact. Plus, offices will be returning to work around this time. How is this a good idea?

I use the Archives station everyday

I walk from my house to Grosvenor and board Red Line to commute to work; White Flint is 3 mile walk vs 1 mile for Grosvenor.

I bought a house to be walking distance from EFC metro. I do not have a car. Please keep EFC open. In addition, I work by Federal Triangle, so please keep Federal Triangle open.

There is not enough parking at nearby metros to accommodate this change, and the remaining stops can not handle the # of people that will have to now use those stops.this is not fixing a situation at all- its making a situation worse.

I specifically moved to Alexandria last month to be near Van Dorn station. My community offers a shuttle to the Metro during rush hour, which I planned to use to avoid driving to Springfield and paying for parking. I oppose this plan because it will lengthen my commute and my expenses.

We live within a block of the Grosvenor-Strathmore Station and use it regularly. Should it close, we would not likely be willing to take a bus to the nearest stations nor would we want to drive to the White Flint station and park there in order to ride the METRO.

Seriously, what are you thinking about closing the Smithsonian stop!!!! DC thrives on tourism. And, hopefully, by 2022, tourism will be back up.

What a shame to waste so much money that went into building those stations in the first place. Closed Metro stations would be unsightly. We need all Metro stations open to aid in populations shifts in coming years.

The Smithsonian stop is critical for getting tourists and family members with disabilities to federal sites.The Judiciary Square stop is closest to the courthouse and DC services, closing that creates further barriers for citizens needing to work, serve, and access these services.

I regularly use several of these stations. Though they may have lower ridership, closing them will only worsen the overcrowding at other stations during rush hour.

This is absurd, so many areas around the metro stations will be affected. This is a terrible idea. Way too many people would be hurt by this change

need more open stations

There are multiple stations listed that I have utilized during my commute, and as we transition back to the office, these closures would be a negative impact.

I value having the Virginia Square station near my home and don't want to travel further.

I need Federal Triangle to get to work. Closing this stop is untenable and seems like a political bargaining chip on WMATA's part, not a valid budgetary choice. Clarendon is also the most convenient stop for me.

Grosvenor-Strathmore is a crucial link to people in my area which is Grosvenor Park, with 6 buildings in my area, each with 348 apartments each and over 1200 residents in each!!! Many commute daily, esp. to Medical Center and NIH and into DC. This would force people to drive or move.

I absolutely need East Falls Church stop open

Yes, but I would hate to see Smithsonian stop closed if things open back up in DC for tourists.

I use the Grosvenor-Strathmore station all of the time and its proximity is one of the reasons I chose to buy a home in the vicinity. Closing this station would hugely inconvenience me and cause me and my family members to use Metro far less often.

You all are insane if you think it is a good idea to shut Arlington National Cemetery access. Just the optics of it is horrible. Same for Smithsonian etc. citizen access to their institutions is critical- especially those that may have no other opportunity. Tourists take the metro because driving in DC is a nightmare.

Absolutely not. I use Grosvenor for several reasons. 1) the commute is shorter for me than going to Wheaton. 2) Wheaton station is very unsafe ans WMATA has done nothing to improve the safety. I have been assaulted there. The lights are often broken, the stairway in the parking garage smells of excrement and urine and the parking garage itself is also unsafe. I rarely see metro police and the garage is very dark. Maybe if that changed I would use it but since years of complaints have done nothing I go to the safer outside station. To have to make this kind of choice about my safety would push me over the edge and I would end up driving instead.

East falls church is a critical transportation hub for several reasons. It is the last transfer station westbound between Orange and silver lines, a key exchange point for buses, and a extremely popular with bicycle riders. In fact a new bicycle storage facility was just completed along with other significant station improvements. Ridership will increase over the next several years as traffic returns to highways. Dont throw away the capital investments made based on temporary loss of ridership.

Proposal to close 22 Metrorail stations

I have moved to Clarendon because of the close walking distance to the Clarendon Metro. To close this station would make it extremely hard for me and my family to make it to work on time. We are a one car family.

Should not consider closing 2 stations that are next to each other, ie Clarendon and Va Square, or Fed Triangle and Smithsonian. (Also, as tourists return to DC, the idea of Smithsonian as a low ridership station is ludicrous)

Closing Archives and Judiciary Sq is foolish. Both stations service those who have business at the courthouse, and for those with mobility impairments, this would make things incredibly difficult. Clarendon and Virginia Sq are directly next to each other; where do you expect people to walk to in order to use the metro? Also, closing the stations on the orange and silver lines is beyond ridiculous. Those stations are very far apart, and visiting that area is already a pain even with the convenience of metro.

If East Falls Church closes, there would be not be enough Metro parking for people across a large, highly populated area making it very hard to use Metro. Closing stations as close to each other as VA Square and Clarendon significantly decreases service a large area that is densely populated with many office workers. When Covid subsides the ridership will increase substantially.

I live near Grosvenor. The bus takes too long to get to the metro. pre-COVID - The parking is a challenge, particularly after the morning rush. More parking would increase the use of the Grosvenor metro station

Another dreadful idea. What is the point of Metro if you cannot go where you need to go. Dont cut service altogether. Consider adding express trains if you want to vary stations.

This would dramatically reduce the utility of the system and is unacceptable. As a daily rider from Archives, this would have an extreme impact on my commute.

There are no near stations from College Park. How would students get to the University if they live in DC or Virginia?

Work and home lives have been built around access to metro. Grosvenor-Strathmore essential for access to much of residential area.

I moved to my house especially because it was close to east falls church station. I paid a premium for this location because of the distance to the metro for me to be able to go to work in DC and still be able to be back to help my children with their extracurricular activities. If the metro close this station and I will have to add an extra set of minutes to comitÃ from a farther station , I wont be on time to pick my kids up at the bus stop. So, either I will have to quit my job or higher extra help for those hours. This is not fair with my family. YOU CANNOT CLOSE THE EAST FALLS CHURCH STATION

I take the Silver Line to Metro Center to catch an Amtrak train at Union Station.

Virginia Square is the stop closest to my house. If you closed that--and Clarendon--it would be a significant inconvenience. I also use Federal Triangle and Smithsonian from time to time. I dont care if you close Arlington Cemetery--the locals never use it.

Closing Grosvenor-Strathmore will have a huge impact on the commute for many people living in the area. It seriously will affect im many ways. Many people bought their houses around this metro station. Please, reconsider!! We need Grosvenor-Strathmore station open in 2022!!

That would be a terrible decision. We use the Clarendon Station for employees and clients to get from the airport to the office.

We need as much infrastructure as possible. We need to make metro as accessible as possible. Closing stations makes travel impossible for some people.

Not ideal, but workable.

College Park is one of my primary Metro stations - not having it available would severely impact my usage of Metro services.

Several of these stations dont have reliable bus connections at needed times. Closing the station would effectively cut off these communities entirely.

If there are shuttles that can take those who need to get to destinations that those stops would typically take them to. .

Arlington looks like we lose all out Metro stops.

Greensboro will be used for commute

No! As I live across the street from the Grosvenor station.

That is terrible. I use Cleveland Park Station every day, and I would not walk to the adjacent stations, which are not that near. You would lose me as a rider.

I get off at federal triangle every morning and leave from federal triangle every evening. I pay for the extra stop through metro center because I don't feel safe going to that station.

Why remove both Clarendon and Virginia Square? Why not just Va Square. Clarendon would be popular esp. for going to restaurants.

As someone who is disabled, this would make getting around difficult. Did anyone consider the impact any of this would have on people with physical disabilities?

This presumes current Covid conditions. This would not be acceptable if ridership returned to pre-3/20 levels.

Closing the Cleveland Park station is simply ludicrous!

Clarendon station provides access to work locations in that area. Closing it would necessitate disembarking at either Courthouse or Virginia Square stations, adding at least 15 minutes of travel time in each direction for all trips.

Proposal to close 22 Metrorail stations

The Cleveland park metro stop being closed would negatively affect me, as it is the stop closest to my home.

Included on the list are the two stations closest to the DC and Federal Courts. Both of these need to remain open to support the number of jurors who have to report to the courts for service to the community. Parking nearby is not provided by the courts, so Metro is our best of getting there.

Metro is my only means of transportation. As I struggle to walk having to get to either Courthouse or Virginia Sq would not be feasible

Some of these would not affect me but some would drive me nuts. Walking is hard for me because of my arthritis and so the walk to and from Metro is already a challenge. I am not sure how I could compensate when the walk is further.

Many communities made investment and infrastructure improvements based on metro locations. The communities relied on the metro and cannot turn back the clock in these investments.

My family relies heavily on the Grosvenor Strathmore metro stop to get to work (both my husband and myself). This would be devastating for our community if this metro station were to close.

I work at the Clarendon metro and primarily take public transit to work. Traveling to a farther stop and then taking the bus would add a significant amount of time to my commute. Also, if the metro station were closed, my employer would consider relocating from Clarendon.

Is Metro trying to get more cars on the road?

This fully eliminates my ability to commute via metro, which was ultimately the reason I chose to live in Arlington.

This would seriously impact my commute into Washington DC from Arlington. Furthermore, closing 3 Orange Line stations in Arlington would seriously affect the quality of life in that corridor, reducing the walkability of those neighborhoods with regards to walking to Metro to travel into DC.

This is the worst idea of all of them

If the stations close, it means I would have to get in my car to get to an open station and pay for parking in order to take public transportation. Once I am in my car, I will simply drive all the way to work.

The closure of these stations - before Silver Line has even opened has the opposite effect of incentivizing ridership, will harm the economy and businesses who have planned their location, building expansion around the opening of all Silver Line trains out to Loudoun. Most important, the effect on low-income workers further exacerbates auto-dependency and will limit bus transit connections and the ability of people to seek other work.

If you close VA Square I would walk to Clarendon. It would, however, lower property values in the entire VA Square area, and depress businesses that depend on that metro traffic. When I look at this long list of potential station closings I am so disappointed to think that Washington DC's subway system will be viewed as a failure, and be riddled with old shut-down stations. What a shameful stain on our city that we cannot even run a mass transit system.

I live a five-minute walk from the Grosvenor Metro and do not have a car for commuting to work. I rely on being able to walk to the Metro to ride the train to and from work. I would have to investigate which bus options could get me to another Metro station, as it would be over a mile walk.

I live at Grosvenor station, so of all the proposals a permanent closure of a station is the absolute least desirable option. Perhaps keeping the stations open during rush hour with reduced service in between should be considered, even if the reduction is significant.

There is not adequate parking at stations nearby Grosvenor-Strathmore.

This would have a HUGE impact on tourists hoping to access our museums and Arlington Cemetery. We urge visitors to take Metro and not clog the streets cluelessly trying to find their way, to say nothing of overwhelming parking facilities. And the effect on those commuting to work would be devastating.

I bought my condo because it is near one of these stations

Closing East Falls Church and Judiciary Square would adversely affect me and my family

Cleveland Park is a central stop.

This could cause extreme congestion in and around the stations that are left, especially in North Arlington. Moreover, many home purchasing decisions are made with the thought of the convenience to the metro station

The College Park Metro station serves the University extensively and with the parking changes on campus, the university is strongly encouraging faculty, staff, and students to use public transit. With the CP Metro walking distance on reasonable sidewalks from campus AND served by the shuttle buses, it works reasonably well. The FDA foods will also possibly have issues with people unable to get to work. Once the museums re-open, not having the Smithsonian stop will be very confusing for people not familiar with the area around the mall. I strongly suspect that the other stations are going to run into some of the same issues once we are reopening more. Compound the fact that some people won't use Metro at all if they lose the stop they use.

Proposal to close 22 Metrorail stations

This is the worst option, by far.

My office is in McLean and I would be unable to commute if the McLean station was closed. This would hugely affect my daily life and likely mean I would need to find a new job. Also as a volunteer at the US Botanic Garden on Saturdays, it would be a detriment to have Federal Center SW closed. The additional travel time required would affect my ability to spend time volunteering.

This would be a major economic blow to close stations that already exist in major urban centers with surrounding business

Well if you want everyone to take to their cars and not come back to the metro this plan would accomplish this. Smiths onion, Clarendon, and Reston are favorite tourist stations, and locals use these stations when they want to come into town. Certainly, reducing frequency is a much better notion than taking so many stations off line.. The only stations in this list I am sure you could kill are Eisenhower, Arlington Cemetery, and Van Dorn. Smithsonian should never appear on a closure list. Tourists will return and nobody is going to walk around trying to find their way to the mall.

Many of these locations are CRITICAL to office commuter ship. McLean, Greensboro, East Falls Church, and more are highly residential or corporate office hubs. While many companies are working remote now, they should resume office work post-COVID and this would create a serious problem to those commuting to work in the future. The tysons corner area around Greensboro and McLean are major corporate hubs, removing these locations would create a major income divide in those who can pay exorbitant parking prices just to get to work.

I live in Herndon and have been anticipating the opening of the Innovation Station which is directly behind my apartment building. I do work at GW Hospital and the metro is my life blood. I was looking forward to walking out my door to the metro rather than driving to Wiehle-Reston. My grandfather is buried at ANC and my family and I are grateful for the metro stop there. Closing this station would be disheartening to my parents and extended family

East falls church is heavily used, and as ridership increases, which I anticipate will be up for next year of 2022, I think east falls church should remain open.

I had chosen where to live partially based on metro access. Others who had done the same but live near one of the listed stations could be highly negatively affected by this proposal.

I live at Grosvenor. While other stations are somewhat close they are not safe to walk to with traffic patterns. A foot-path (which is safe) should be constructed.

My regular station would be closed

Not only do I rely on the Clarendon metro for transportation, as I do not own a car, but my home's value would decrease dramatically if this station were to close.

We (and may others) bought our home relying on the knowledge that it is close to a Metro station (Grosvenor, in our case). Closing that station is tantamount to taking value from our home. you cant set up a transit system and encourage people to build or buy or rent near Metro and then pull the rug out from under them. Besides adding inconvenience and reducing our homes value, it breaches an implied (or even express) covenant of trust that Metro has with the community.

I think this is a smart move that is very reasonable considering the proximity of all of these stations to other stations.

This is a tremendous inconvenience for people who use public transportation.

Again... Youre creating such an increase in my commute time I would not take the metro. You would loose all of my fare which is commuting 5 days per week on the metro. Youre closing my station nearest to my residence. Absolutely unacceptable service

Please dont close the Grosvenor-Strathmore Station.

Do not close the stations on blue, orange. Silver lines!

I take music classes at Strathmore, and attend concerts there. Walking from another station would not be feasible.

I think the stations within DC should remain open or have limited weekend hours or open on weekends only.

I prefer Mt. Vernon to Gallery Place, but could make the switch if necessary

College Park station important to keep open as it is well used in normal times being home of University of Maryland. It would provide a hardship for many people if closed. Archives is important due to its proximity to museums on the mall.

Metro should not close existing metro stations! The investment in infrastructure is already there. Stop expansion. Decrease bus service to push people toward metro use.

Grosvenor-Strathmore is essential. It has its own parking structure. For that reason alone it is uniquely situated for commuters. The station is essential.

Closing low ridership might look good, but Cleveland Park serves Movie and restaurant area as well as residential area. Is it really low ridership post pandemic? Some of the others may well be very quiet during late pm hours/

Proposal to close 22 Metrorail stations

Morgan Blvd station is one of the top reasons for the purchase of my home and my main/only mode of transportation to/from work. Closing would be devastating. With the additional homes being built directly across from the station, along with a new hospital and shopping center less than a mile away, (not to mention FedEx events), ridership is sure to increase

Need Clarendon open.

Federal Triangle is where my worksite is. When I return to work, not being able to have access to Federal Triangle will be a problem. Cause the next closest station is a considerable distance. I anticipate that ridership to this station will increase with federal employees returning to worksites at Federal Triangle. Same for Van Dorn Street. If you close Van Dorn Street and Eisenhower station, there is no easy way for West End Alexandrians to use metro. If you close stations, then I think more discussion and collaboration is needed between Metro rail and Metro bus and DASH bus that services Alexandria to accommodate for the closures.

This closes the only station near me (East Falls Church), which I use daily for commuting in normal times.

Closing the Clarendon Metro would be a disaster. There is an entire business community, including retail and service, that is built around this station. There are also residential neighborhoods that rely on it. I took the metro every day from this station pre-pandemic and would plan to return to daily metro from Clarendon as soon as my work place (near Capitol Hill) reopens permanently. Closing Clarendon and Virginia Sq would leave an enormous area of Arlington - between Courthouse and Ballston -- without sufficient metro access. This is unacceptable in a business and population center with the density of the Clarendon corridor.

I am currently able to walk to Grosvenor and commute. This would severely impact me.

This is not at all acceptable. I access daily both the Grosvenor Strathmore and Archive metro stop for work transportation into the city. I specifically moved into the Bethesda/Grosvenor community due to the proximity of Metro. I cannot access easily and there is no functioning car parking (which I would have to do) at White Flint or the downtown Bethesda metro stop, which is already overtaxed, over constructioned and candidly a dirty mess. In addition, I work in the hotel industry and having Metro access to Arlington Cemetery, and Smithsonian are necessary for tourism.

Thlosing these stations would require using taxis or other modes to attend meetings and work functions through out the day. It would make using the metro at all infeasible for work (cost of Uber and taxi during the work day would offset savings of taking metro in lieu of driving). This is particularly relevant for downtown stations, such as Judiciary Pl, Fed Triangle, Federal Center, and Smithsonian.

If college park closes I would just stop using Metro entirely! This would also have a huge impact on the University of Maryland.

I would consider keeping Arlington Cemetery stop open, as it is not close to any others.

I would not close archives and mt Vernon square to supply more access to downtown and people who may work near the convention center.

Please don't close grosvenor!

Clarendon is my home station and would make my commute more difficult

How do I get to the Smithsonian, etc. if you close the station?

this will drive people away from metro and its a mistake to do so

I use Clarendon to go to work in downtown DC, and this would prevent me from using it 4-5 round trips per week, and on average once per week to go to a concert or sporting event.

Before the pandemic, my main mode of transportation to work and back was the metro and once thing become safe I am hoping to use the metro again, which would include January 2022. I get on at Vienna-Fairfax/GMU and exit Clarendon for work. This would be extremely inconvenient for me. I would rather have less frequent trains (but still have trains during regular commuting hours) service these stations than have these stations close down.

I commute into DC regularly with my office closest to Federal Center SW. While Lenfant Plaza is nearby, it would be far less convenient to lose the closer stop. Additionally, I move around the city for work and do heavily use some of the other stops on this list. Closing a list of this length ought to be a last resort or last resorts.

Do not close grovesnor station

I would be concerned about closing so many stops near the Mall, for tourists.

I stay close to college park some ppl use this station to commute in to Dc students and travel ppl from the marc

I only use the Clarendon Metro since that is closest walking distance to my house. The other stations are too far to walk and for me to feel safe at night. I ask that Clarendon Metro be kept open.

How do you expect someone who lives in Cheverly to walk to another metro station? Dont you understand, many of us who live near a metro station dont own cars. Thats the point of paying more to live near Metro.

Proposal to close 22 Metrorail stations

Im surprised by the list. I expect Reston Town Center to get more ridership than Wiehle once it opens. Interesting that three brand new (and unopened) stations are targeted. Why were these even built? I am good with the others.

I use and need the Grosvenor-Strathmore station. Please do not close it.

I do not have a car. I use these stations often, and if they were closed I would have to talk too far to get to my destination, which is often shopping. I could not purchase and transport items if I had to walk such distances! I have no car.

The stations listed are not near other stations outside the district hubs. The comparison of nearness downtown is a few well-connected city blocks, for stations located further out in Maryland it is not so straightforward to make it to these alternate locations (poor sidewalk connectivity for walking, no replacement of parking lots for driving).

PLEASE NO! As senior citizens, like many others our age, we purchased our home near the Strathmore station to be close to transportation. Closing Strathmore would not only affect our property values, it would impact our lives!

This is absolutely no. Closing these stations will have huge impact to our city. We will lose a lot of folks in the urban city development area.

I do use some of these stations, and closing them would be very inconvenient.

This plan would not work for me. I would no longer have any reason to ride metro. My commute is from Clarendon to East Falls Church, both stations would be closed in this proposed plan. I would need to either purchase a car or find some alternative method of commuting to work.

This would significantly impact my ability to depart to a destination and return home. Many 10101 residents use the metro and would be impacted similarly.

Not a good plan. Many of those stations are not that close to another, and station closures on this scale will make it harder for a post covid recovery to happen in those areas. Also, ridiculous to plan closing the new silver line stations before they've even opened.

I use Grosvenor-Strathmore to go to work and also to go to Strathmore Center.

As long as it is communicated well.

After the COVID vaccine is more common, many employees (particularly Federal employees) will begin commuting to work again via metro rail.

Need Cleveland park -Arlington cemetery- judiciary de and grosvenor.

East Falls Church station is accessible by bus from neighborhoods north of that station and provides commuting option for those of us without cars. Ridership calculations for these cuts should not be based on 2020 or early 2021 ridership due to pandemic. McLean Station is so new and construction around the station is surging. Closing the McLean station would be shortsighted.

My local mattress station is not on this list. But all of the people who plan their lives, commute, residences at work locations around the above metro station will either have to depend on personal vehicles, returning us to worse-than-pre-pandemic Emissions levels, or they will have to leave their jobs or their homes.

If your goal is to make people stop using metro it might work. It would devastate business communities (eg Cleveland Park). And obviously Grovesnor Strathmore has the parking garage unlike other purported closer stations.

Stations in the city may make sense (Archives, Federal Triangle, etc) but not in the suburbs! Clarendon, East Falls Church, McLean, Virginia Square closures would be extremely inconvenient and reduce ridership - people would opt for other modes of transportation, including myself

Why close Clarendon instead of Virginia Square, which is very very close to Ballston?

One of the big reasons I chose to live where I do in Arlington is due to metro accessibility. Moves like this could tank housing prices and push the region back to cars, which I think would be devastating from an environmental and quality of life perspective.

Yes, some of these stations may be close to others but they still may not be as accessible. Is there a plan to have a presence for Smithsonian on the metro? Or UMD? A more targeted survey of the communities in which these stops are currently would probably help in gauging just how important these stops are, or not. What is the cost of closing a metro station? Surely it would cost Metro something, and wouldn't those funds be better used to promote ridership some other way?

Although one thinks these stations are close ... in fact, they are not. Many of us who rely on the Metro do so because it is hard to walk/drive etc. Longer walks to a station were not planned for and would necessitate moving.

I could make it work. But closing Cleveland Park station would have a negative impact on the struggling business community there, and likely cause overcrowding at Woodley Park station when the zoo is busy.

This is outrageous. Not only are major communities of people relying on the current layout of metro locations but some homeowners have strategically purchased their homes around metro locations. This is not only negligent and preposterous but a show that the county, city, and federal governments don't know how to come together and save the very system that has improved the concept of transportation forever.

Proposal to close 22 Metrorail stations

East Falls Church and West Falls Church metro stations are not close to each other and absolutely critical to have both options for the silver and orange lines running through such a heavily trafficked area. Parking is already an issue and this would result in significant overcrowding. Personally, I'd stop using metro all together.

This is not a solution. People will have to drive further to get to a train station. Parking is already very expensive and very limited. You will drive users away.

I use the Archives, Smithsonian and East Falls Church stations. Sometimes Federal Triangle and Clarendon

Define "near." Stations were placed in their locations for a reason, and those reasons haven't gone away even though ridership may be down.

Would this save that much money? Staffing is limited at stations anyway but better to have one person on at a station at a time but keep them open. Closing Grosvenor system means I switch from metro to Uber

College Park is my only metro stop

Most of the stations near my beginning and end points would be closed.

This does not affect me personally but seems like a high number of station closures. Consider closing some of these stations earlier while leaving other open.

No way would this work. My most commonly used stations are East Falls Church, Clarendon, and Archives. Maybe closing stations in the city would be easier, but I cannot walk from East Falls Church to West Falls Church, nor would I want to.

would prefer this does not happen but it makes sense if low ridership continues

I work at the Capital One headquarters in a McLean and use the metro to get around. I would need the McLean station open.

I live at Virginia Square, work at Courthouse and do not own a car. I also sometimes attend church services near Eastern Market so having either the Virginia Square or Clarendon stations open so I can get to work and into the city is important to me.

Maybe keep them open during rush hours - so 2-3 hrs in am and 2-3 hours in pm?

I live in Cleveland Park and work at a hospital. If I need to get to work, and I won't be able to use public transportation if you close this station. Please don't close Cleveland Park, also, sometimes the H2 and H4 don't go down the Porter hill due to snow.

EFC is transfer station to Orange/Silver lines.

Cleveland Park metro station is used frequently and would significantly diminish quality of life for residents who live in Cleveland Park and Woodley Park. First, it removes one important transportation option for residents that rely on metro and live in neighborhood; second, it would reduce options for visitors to Zoo who take the metro. It would force all visitors to Zoo to use Woodley Park metro which would reduce foot traffic of zoo visitors to CP on weekends, depriving local businesses retail customers, and overrun Woodley Park during the spring, summer, and fall when visitors to Zoo are at their peak. Really a bad idea.

There are reasons why people have chosen to live where they do, and while another station may be close, I may make a choice to drive instead of utilize the metro and if that's the case, I may move all together instead of paying a premium to live where I do.

Please keep Grosvenor-Strathmore open, it's such an important asset for people who don't use cars in this area. Also it will be such a big stretch to walk to the closest metro stop, for example White Flint or medical center. This area needs a metro !!! Thanks

EFC is not near other stations as far as walking to another station to ride. It would not be possible to walk to WFC or Ballston from EFC. I would be forced to drive or be driven. How does this help with climate change and greenhouse gas emission?

Metros accessibility outside of DC is already a joke. Eliminating stations is only going to lower ridership even more.

Absolutely not! I also think it will be counterproductive for recruiting metro ridership. Those stations "particularly the new ones" are features of the system. Closing Greensboro is an extra bad idea!

I live and work on the Orange/Silver line (currently from the Courthouse station to Federal Center SW). My primary reasons for taking the metro are to commute to/from work. I am a federal worker and have been working 100% remotely during the pandemic. My agency currently does not have information on when we will go back to the office, and I don't know of any federal agency that has made plans for the workforce to go back to the office (outside of those that have been open for continuity of government purposes). I also don't know of many private companies who have made decisions yet on when people will go back to the office. If we are not back to the office next year, this proposed cut is fine. If we do all go back to the office next year, this cut will make the commute more difficult for people (crowded trains, not as much flexibility in timing, increased traffic on the roadways, etc). It is less convenient for me to get off at L'Enfant Plaza instead of Federal Center SW to walk to my building, and I would foresee Courthouse being very crowded if the two stations directly west (Clarendon and Virginia Square) are closed.

Clarendon and Virginia Square are consecutive stations and would put an undue burden on those that use Virginia Square and/or Clarendon frequently once we get back to normal. We are nearing the point when we get back to normal and we need these stations to get to work.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Closing Van Dorn and Eisenhower eliminates commute options for all residents between King St and Franconia |
| This is a short sighted proposal - it is cutting service, making it a less attractive option, which will drive more riders away. They should open all stations 24/7. Metro should make it attractive and convenient to use, not the opposite. |
| Grover not Is major station with Parking and serves theater |
| How can you say there's low ridership in stations not yet opened? |
| I commute to work via Grosvenor-Strathmore station. |
| This would be devastating for my neighborhood and my personal lifestyle and career |
| Are you serious close all these stations and good bye metro for example i take pre schoolers to, the. Use us using a itsonian they can't walk to a station further away. |
| I think the lack of access will decrease ridership even more |
| Arlington Cemetery is a significant tourist center with a limited parking garage. How will the tourist get there. This is Station that could have limited hours. Virginia Square is close to other Stations like Clarendon, but if Clarendon is closed the next Station is a long distance to Ballston or Courthouse. East Falls is NOT close to another Station. |
| as above |
| Many of these closures are in high density areas. |
| after the stations close then what are you gonna take away next |
| The Grosvenor Strathmore Station is adjacent to my residence and I rely on it for travel to downtown Washington, DC, to Arlington Cemetery, and to National Airport. Also I rely on it for travel to Shady Grove from which I take a taxi to places north of Shady Grove, when needed. Closure of the Grosvenor-Strathmore Station is definitely NOT ACCEPTABLE. |
| Losing either VaSq or Clarendon would be very bad We paid a premium to be close to the Metro to use on a regular basis. |
| I live walking distance to EFC - just under a mile. I would need to drive or take a bus to another station if EFC was closed which would significantly increase my travel time. I also believe the low ridership numbers are EXTREMELY misleading. I have not commuted to work in almost a year and not has most of my neighborhood. EFC has a significant number of people who walk to it vs other stations that already are primarily driven to (e.g. WFC). Also, someone who is less than a mile from VA Square is likely less than a mile from either Clarendon or Ballston. It may not be as close but it's still walkable. |
| Metro should consider reduced service to low-use stations. For example, every other orange line train could bypass Va. Square. This reduced service could shorten ride duration and reduce costs. |
| I live close to Va Square |
| While the Smithsonian station better works for my work situation, I can use an alternate station. |
| All these stations are built and many people have arranged housing, etc near to these stops so that Metro can be used for work, health care and entertainment activities. Especially for work related ridership -- Need at least some rush hour service. Also need weekend service to facilitate attendance at events along Metro lines. People should not be motivated to drive rather than take Metro. |
| Service at Grosvenor station is essential to my work, kids school, and property value. |
| Please close either Judiciary Square or Archives, not both of those at the same time. |
| Stations should not be closed completely. I have purchased a home based on public transportation availability. You can decrease stops to these stations. You can decrease services. You can increase prices. But the stations should stay open. |
| The metros main purpose is serving commuters to this plan is the exact opposite |
| I live directly across Eisenhower Station and need it open. Closing this will also hurt the many apartment complexes in this area, as this was the main reason I chose my current residence. The high rents with no convenient metro will drive people to move. Its not realistic or convenient to walk to King street from this location. |
| I use the College Park and Grosvesnor Strathmore metro stations to commute. I live at one station, my boyfriend lives by the other. |
| It is crucial for me to efficiently commute between Washington DC and College Park. I need either of the green or yellow lines to continue stopping at the College Park station. Hyattsville and Greenbelt are very far from my workplace and transferring via their metro stations will significantly prolong my already long commute. |
| I live at grosvenor and work at Judiciary. Closing these stations would be very inconvenient for me. |
| This would significantly affect me. I live right off of the Clarendon stop so that I have easy access to this metro stop. Completely closing metro stops is NOT a good option as a budget cut. Other cuts should be made instead of closing metro stops. People affected by a metro stop closure will then need to find other means to get to a different stop which causes many other issues (like where to park to access other stops). |

Proposal to close 22 Metrorail stations

It closes two stations necessary for me to get to work

Keep Arlington Cemetery open. Get NPS/DoD funding support if needed. Always keep the furthest out stations open.

Many residents walk to the station and commute East to DC, and west to Fairfax and Tysons.

Groves or is very necessary!

Please do not delay phase 2 again. Please share travel times from proposed 2 stations (at typical operating levels with a normal budget). People are trying to identify housing in those areas right now but can't travel potential commute times because there is no communication from WMATA.

This plan would cement the death spiral of Metro just as the world reopens. Closing stations cuts off your paying customers completely. Other options could be worked around. This is by far the worst option.

Considering "express service" to skip these stations may be more practical, but many of these communities have too far a distance to travel to get to their next closest stations.

Daily commute depends on Grosvenor station. Closing the station would make commute to and from College Park unworkable in a reasonable time.

I use Archives to get to work.

If Grosvenor station closes I would have to walk to Medical Center or take a bus to Bethesda. This would not be convenient and I would likely not take Metro anymore.

The Arlington/Virginia closures would not be helpful. This shows that WMATA doesn't keep those in mind who do not have cars and who may not be able to call car services all the time. In addition, it would be unreasonable to cut off the Virginia Square line because of its proximity to the George Mason University Arlington campus. Students have already been affected by COVID-19, and they don't need to be further affected by what would be very impactful transportation cuts. Even though WMATA's revenue has been significantly lower due to COVID-19, it would be more beneficial for riders in the future if train arrivals took a little longer as opposed to closing all the above stations.

how do you manage tourism at Arlington cemetery without the station? IF you close Virginia square the adjacent stations will become even more overcrowded at peak times.

Please, please, please do not close East Falls Church metro station. My husband and I depend on the line to commute to jobs in the city and will continue to do so as the pandemic wanes, and our kids use it to go to the city for social and educational events. We moved to our home specifically because it was within walking distance of East Falls Church so we could commute to our jobs. The next nearest station would require us to drive, park, and then use metro -- which would significantly add to the time and cost of our commute. Driving is not a good option and is not environmentally friendly, and tolls and parking in the city are cost-prohibitive. The nearest highway is 1-66, which charges exorbitant and prohibitive tolls, and city parking is \$26 a day, which is out of reach on a regular basis. PLEASE, I BEG YOU, DO NOT CLOSE EAST FALLS CHURCH METRO.

I moved next to the Groves or metro stop to commute to DC, so closing it would not work

Part of the reason that I brought my property is because we are at the Grosvenor Strathmore station. It would be a very large inconvenience not to have this.

Need Clarendon open

I don't think that Arlington Cemetery has a close metro station that is within walking distance - unlike courthouse and Clarendon. Also Smithsonian metro station is really conveniently located - it makes it easier to enjoy the mall/cultural life without additional concerns.

I frequent the Grosvenor-Strathmore station for commuting to work and leisure during the weekends. It is likely that life will be closer to normality in Jan 2022 due to the vaccine availability. This means people will start commuting again and going out more. Closing the station would completely isolate this area of town from DC.

Many of these stations just went through renovations, or were recently built in just the last several years. Not to mention, many people rely on these stations because they can be walked to, because they don't offer parking, or it's limited. How are riders supposed to get to the metro if they can't walk, and can't park?

As one of the closed stations is within hundreds of feet of where I live and the next closes station would be about a half mile one way I would prefer not to walk a half mile to a from my commute, especially if there is a station I can see from my window.

I am particularly concerned regarding the Arlington Cemetery and Federal Center SW proposed closures as these are used by tourists to access the cemetery and the Capitol areas.

All of these stations are incredibly important to residents nearby - convenient access to public transportation is vitally important in a large metropolitan city. This will have huge impact on area residents. PLEASE choose a different option!!

Clearly no consideration for businesses built around these stations, people with disabilities or elderly. The federal govt moved multiple agencies to Eisenhower specifically citing access to metro and you want to eliminate this stop? Close federal triangle with all the feds who work near there? close smithsonian where the tourists go? These are not realistic proposals.

Again, designed to justify rate hikes by proposing levels of servicing not tolerable.

Proposal to close 22 Metrorail stations

College Park station is an important hub because of the University of Maryland and government offices located within walking distance. Plus, its the only station that services the surrounding neighborhood. Lastly, it is also a MARC station for trains coming from Baltimore. If the Purple Line construction continues and there will be a stop at College Park, then the idea of closing the College Park station may work.

Grosvenor is my usual station; having to drive to White Flint and then ride from White Flint past Grosvenor would make the total trip over an hour long. Also, what about those of us who have guaranteed parking spaces at Grosvenor and have been paying \$65/month for the last year even though not using the Metro? Would we be guaranteed parking spaces at White Flint? If not, this is very unfair to the persons who have, and have been paying for, these spaces, since whether or not riders get to keep their guaranteed parking slots is wholly dependent on which stations are closed.

Some of these stations e.g. East Falls Church, are not near other stations so the proposal is misleading.

Many of those stops are important locations with essential commerce.

These stations have low ridership now. They will not in 2022 when people are working in person and depend on Metro to work and entertain. It is ridiculous to have spent the money and time closing many of these stations for improvements only to turn around and close them now. I am also curious how you can even know if unopened stations will have low ridership, but destroying the car limited possibilities of Arlington is my greater concern.

Completely unacceptable to close Grosvenir-Strathmore station with 2 high schools that use this stop. Covid has severely contributed to low ridership. Many of these students from Holy across and Georgetown prep use these stations which helps working parents. Please keep this station open for the good to the community!

I live right by Grosvenor-Strathmore station, and plan to regularly park and ride from there. It would be highly disruptive to my life if that station closed.

No stations should be closed regardless of ridership levels. Station closures will most adversely affect those who are less privileged - women, riders of color, riders of lower income - who cannot afford to easily drive/add extra commute time to another station.

I oppose station closures.

I frequently use the Archives Metro -- It is on the Green/Yellow line, and is where my sons school is.

While my home station is Virginia Square, I would be happy to walk to Ballston so long as I know that the train frequency will not leave me standing for more than a few minutes at rush hour.

I use the mclean metro to get to work. There is no other metro that is easily walkable. How much extra money does it cost to keep a station open? A lot of less used stations only have a handful of employees anyway.

Wholesale closings of Metro stations will inevitably decrease demand for rail service at a time when we need to increase reliance on it.

Doesnt take into account people with limited mobility - physical or otherwise.

East Falls has parking which is an option for those who cannot walk to a metro. Housing going up in McLean and Reston TC billed as metro accessible.

For some stations, yes, for others, no. Im not sure what purpose is served grouping all of these stations together. Surely, some have more useful ridership than others?

Do not close Clarendon. Very convenient to restaurants, Trader Joe's, and Whole Foods

Concerned this proposal is only driven by COVID numbers. Closing so many landmark stations would greatly impact the practicality of visiting.

Many of these stations are in low-income neighborhoods and would impact low-income ridership/access

Closing this many stations at once, including major stations, cannot be done. You have no data to justify closing all these stations at once pending increased ridership after the pandemic. By closing these stations, you will likely eliminate many people's metro ridership totally. I will not drive to a metro station that is farther from my residence to ride the metro. Please do not close these Arlington stations!

Stations are meant to be used by customers, not sit empty. Area residents have paid for these stations and should have the use of them.

Traffic is sure to increase at downtown stations as vaccination rates rise and those stations will be needed. Is there sufficient parking at Arlington National Cemetery to support mourners and tourists if the metro station closes?

Most of the stations I use are on this list. They are not near other stations if you have limited mobility, or even if you are carrying something heavy or have small children with you. This would more than double my daily commute time.

I ride grosvenor and judiciary

Many of these stations, especially Arlington Cemetery are vital to visitors who come to their nations capital.

The closing of the Grosvenor Strathmore station is not a good idea. I am a senior citizen and no longer drive. I purposely moved to be near the Grosvenor-Strathmore Metro Station. The closing of this station would require a bus ride to either White Flint or Medical Center. This will add additional time and cost.

Proposal to close 22 Metrorail stations

These are all needed, this is supposed to offer a public service, trying to close all these stations is just insane and a 3rd world country move, this is Washington DC we are talking about

Existing stations should remain open to encourage ridership and avoid overcrowding. Cleveland Park, for instance, is in the heart of a busy residential and dining area. Having to walk or bus from Woodley Park or Van Ness is inconvenient. I imagine this would also have negative impact on home values in these areas, where a real benefit is walk-ability to transit. Decisions should not be made based on low ridership during the pandemic, when people have not been going to work, or out for social reasons.

Don't close a single station unless you plan to give back a commensurate capital budget appropriation for infrastructure for the whole system, eliminate a proportional number of jobs and reduce pensions and benefits by a percentage that equals service reductions. Let's cut WMATA's bloated and inefficient staff footprint, fine the entity and fire all of its management for Silver Line deployment failures. Really, start resigning en masse.

Why close Grosvenor if there is a parking lot? For those who rely on buses to metro, the commute will be much extended, especially if cuts in bus service and times between trains.

Grosvenor is essential to my commute to work.

I do not currently use any of these stations on a regular basis but these changes may impact where I seek to find housing in the future.

These stations proposed for closure are closest to my places of work.

I specifically rely on the use of the East Falls Church Station. Please do not close that station.

This is maybe the worst proposal of all. I live in Clarendon and I work in McLean. Eliminating these stations would make it nearly impossible to take the metro to go anywhere. It would likely triple the time it takes to get to the metro from my house (especially since VA square would be the second closest station to me). It would also pretty much eliminate the ability for me to take the metro to work. There are so so many young professionals in the Arlington area. I think youd see a mass exodus if this plan were to occur. It would have very damaging consequences on the Arlington area.

I dont typically use any of the above mentioned stations, however it seems that ending service to these would lead to even less ridership rather than more passengers at nearby stations. With funding shortfalls, perhaps the Sliver Line Phase II should postpone its pending opening as a cost saving measure instead of opening and then not servicing these stations.

Grosvenor-Strathmore is on the list...but some of the trains start/end at this station. Not good.

We specifically moved to the housing complex near Van Dorn and sold our car so that we could be at a close proximity to the metro. At this time our workplace is not allowing us to be at the office but that WILL change as soon as COVID vaccines become available to us. The proposed closure for 2022 will have a HUGE and NEGATIVE impact on our livelihood. We cant afford to move to the areas that are closer to work and rely on the metro as our sole source of transportation to work. Please consider other means than the proposed closure. We reside next to the Van Dorn Eisenhower Metro.

It seems weird to close the end of the yellow line.

This would have a crippling effect on communities that have developed in a dense and urban manner over the years in reliance on Metro access. With all due respect, it is a stupid idea.

Closing suburban train stations is a bad move. I live by herndon metro and would frequent reston town center and the Loudon gateway metro is next to my gym!!!! This is the worst idea especially when you are trying to gain ridership! I would frequent use these routes and stations

It might be acceptable to close some stations within DV as they are within walking distance from each other. Outlying stations like Grosvenor Strathmore need to stay open to ensure adequate access.

Definitely do not close Grosvenor-Strathmore. Low ridership is due to the pandemic, plus the new apartments being built at the station will further increase ridership.

I would not use metro at all if East Falls Church Station was closed. I would buy a car and drive to DC. I currently BIKE to East Falls Church metro daily to commute into DC. I would not bike backwards in dangerous traffic to West Falls Church which only has one line, nor would i bike into the dangerous urban area of Ballston on my bike for safety and because it is way too far for me to bike, particularly the half of the year when Im biking in rain or snow or cold or burning heat. So I would stop using metro completely. I dont see how it is considered that East Falls Church is close to another metro station when there are hundreds if not thousands of homes directly around EFC and we all use that station exclusively. Not to mention that WFC has only one line (orange) while we have two at EFC. This is completely crazy idea, please leave it aside. Oh, by the way, our bike trail has been closed for the past YEAR + as we get a new route to THIS STATION and our station has been closed for refurbishment. So the idea of closing it is seriously insane. Please put it aside.

Grosser Strathmore is walking distance to my home and the MAIN reason I bought my home here!

The region needs a fully functioning METRO to bring back the economy!

Proposal to close 22 Metrorail stations

Just because other stations are near other stations does not mean that they are easily, safely, or conveniently accessible for people who would need to walk even further to reach the nearest open station, especially for people with movement disabilities. Additionally, this may promote further use of cars creating more traffic, pollution, and danger for pedestrians trying to walk even further to the nearest open station.

Downtown station closures seem more manageable because walking more in a well-populated, well-lit city area is an option but not as much in places like college park or cheverly

It is not acceptable to close these stations when so many people have relied on them for years. Again, this is the primary public transit system in a major city and needs to service as many people as possible.

Too many sites are being closed. Why were they built in the first place if they are not useful?

I use the Grosvenor-Strathmore station everyday. I am in walking distance to the station. I work in D.C. and I get off at Metro Station. My roundtrip commute from Grosvenor-Strathmore to Metro Center, Monday through Friday is a HUGE help

Find ways to increase operations! Extend the lines, build the Purple Line...

I live walking distance from Grosvenor-Strathmore metro station, as many other neighbors do since this an area with plenty of buildings. We purchased here because of the metro station close by. When people get vaccinated ridership will start picking up. PLEASE do not close this station!!!

People NEED to take the Metro to the Convention Center, especially those working there and attending from out of town! The inhabitants of Cheverly, the towns in VA etc would be penalized. And many people use the Silver Line to Dulles Airport, and have to get out at Reston -- plus there are many workers who need to commute to Reston!

But stations should be open in extreme weather (hot and cold) when nobody wants to walk 45m to next open station; during/after snow when streets are crowded and buses may not be able to maintain schedules or even complete routes, and more people would want to avoid driving; in periods of extended heavy rain (also to avoid driving or long walk to next station).

If cutting orange line metro corridor, it makes more sense to close Virginia Square and Courthouse to keep Ballston, Clarendon and Roslyn based on distance, walkability and art 41 bus route.

Clarendon metro is my most used station. Closure of this station would mean I would significantly reduce my use the metro

I dont often use these stops, but it would be unfortunate if so many stops closed.

Strathmore needed for fiders to theater, and access from north Bethesda to Reagan Airport

No, Government spent billions of dollars putting this infrastructure in place, now you propose to abandon it because it is not convenient! In the meantime, we will spend more billions paving over more land and increasing emissions by building FREE toll highways!

Strongly opposed to this proposal.

Lots of money was invested to expand/repair the silver and orange lines. The proposed closing of the above metro stops would alienate a large customer base. This is not feasible given how many people live in the suburbs who depend on metro for their daily commute.

This change will require longer time in traffic to get to a metro station. This change will increase my commute time.

This makes no sense given the large numbers of passengers that are projected to be riding the metro in 2022. Over half of these stations have immense numbers of riders in non pandemic times.

I use metro to get to the Smithsonian. The two stops near Smithsonian are archives and smithsonian. Please do not close both stops

I use Cleveland Park station a fair amounts. What about the tourists using Smithsonian?

Metro shouldnt close any stations. A lot of these stations are important stops for tourist attractions. Why would you close them? Shame on you Metro!

This proposal is far too draconian, making MetroRail travel extremely difficult.

Closing essential metro stops will continue a decrease in revenue spiral that the metro already finds itself in. It will render the public transit system even less relevant and useful to the average commuter and will increase congestion on the roads. It will not relieve the metro of its budget struggles but rather further exacerbate the problem. We need metro transit to be affordable and so enticing as a commuting option that commuters find it not only feasible to use metro but more sensible than using a car. Metro should make their system so efficient that commuters find the idea of driving a car in ridiculous by comparison.

only if frequencies are not also reduced.

Do not close clarendon, college park, grovesnor, jud sq or Smithsonian. A lot of my commutes are at these stations. Esp clarendon, Jud sq Or Smithsonian. These are main arteries for MD to DC and Va for me and would make it difficult. Even to drive in, parking and traffic are horrendous. Metro helps reduce this burden and provides timely and efficient transport

Proposal to close 22 Metrorail stations

As a frequent user of Grosvenor-Strathmore and College Park (given 2 different commuting patterns depending on work) I would be using these stations on a daily basis in Jan 2022

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport. At 0.6 miles, Greensboro is the closest station to me; however, Spring Hill and Tysons Corner are only an additional 1/10 mile, so the schedule proposed here should not be a major inconvenience for me.

Closing both Clarendon and Virginia Square stations is an absolutely terrible idea! Our house is located in between those two stations. If they both close, I will no longer be able to use metro. Walking to Ballston or Courthouse is too far. Why on earth would you choose to close two stations next to each other? Really not an intelligent proposal. Also, Clarendon is a lively hub for restaurants and bars. Why would you close that station, inviting more people to drive and try to find parking in, or take an uber to an already congested area?

I use the East Falls Church and Clarendon metro stops to go to and from work. The walk to other near stations is an additional 15-20 minutes walking. I am 62 years old.

This would make me a non-commuter. I work in walking distance from Reston Town Center, as do another 1500 folks at the US Geological Survey. We are anxiously awaiting that stop opening. I currently live near Courthouse, and am planning to move west on the Metro line - areas I am considering are Greensboro, Virginia Square, and East Falls Church, so I hope you make a decision before I sign a lease. I disagree that East Falls Church is close to another station - there is not one in walking distance to my knowledge.

Like many people, I cannot walk more than a half mile, especially in inclement weather or 90 degree heat.

One of these stations is the station I utilize when commuting to work (greensboro), and again, I anticipate I will be back in the office at least part time by January 2022. Its bad enough I have to pay nearly 6 dollars a way to get to work. And this doesnt take into account the potential mess this would cause downtown.

This closes almost all the stations I would need to use on the metro. This would make commuting on the Metro impossible for me and my family.

If Grosvenor-Strathmore station is closed, my family can no longer live here in this area and we'll have to move as I'll have no way to get them to their Deaf school and me to my job in DC since I don't drive. It would also be an issue for my husband who works at NIH.

It would be extremely inconvenient to close Grosvenor Strathmore, and render parking at the adjacent stations nightmarish--as well as the effect of making it much harder for people to reach Strathmore Concert Hall by Metro. Closing Judiciary Square would close the best Metro stop for the area of the Mall near the National Gallery (an important destination for me).

Proceed with caution considering your riders with disabilities. Longer travel from station to destination inconveniences all, but could be detrimental to your special needs populations.

We chose where to live based on where the metro station is located (and paid a premium for it). We are within walking distance of East Falls Church metro.

I live near Clarendon, and Metro is how I commute to work. I also am glad that the subway is there for access to the restaurants and bars - the last thing the neighborhood needs is more people trying to drive there, and worse, park there.

I often walk to the grosvenor station. I can't walk to medical center or white flint and there simply is not enough parking at those stations to accommodate riders from grosvenor

Absolutely NOT! Closer of the above station would mean a threat to a hard working people who use metro. Please DO NOT CLOSE the above stations !!

AWFUL!!!!!! I would never ride Metro again if the Grosvenor-Strathmore station is closed. There is NO other "close-by" metro station to me. This closure means I would be paying through taxes for a Metro system that I cannot use. Very stupid idea, unless you want to ensure that a lot more people never use Metro. Metro would become irrelevant to thousands of suburban residents, and I would encourage Maryland to decrease funding spent on Metro.

The Grosvenor-Strathmore closing would be a terrible idea. DURING THE PANDEMIC SUSPENSION I HAVE HAD TO USE MY SAVINGS TO GET TO WORK AND RETURN. I DID IT WITH THE FULL EXPECTATION THAT ONCE THERE WAS SOME RETURN TO NORMALCY THE STATION WOULD BE OPEN

I moved to the Grosvenor Park complex specifically because it is convenient to the Grosvenor-Strathmore Metro. If the station closes, I can't really use Metrorail; i.e., living close to a Metro station doesn't really do me any good.

My home station is Grosvenor. I can't ride if Grosvenor is closed. This would be a disaster for me.

I often used to take metro with tourist groups I worked with and used many of those stations. I anticipate doing that post-pandemic again

There is no other walkable station near East Falls Church.

What is the point of having Metro if it is not in your neighborhood and you have to drive to park? I would probably drive the entire trip and not use Metro. Why would you close a station (East Falls Church) that you just spent a lot of money upgrading. If you close East Falls Church, I will not use Metro at all.

Why not just shut the whole system down?

Closing stations before we even know their ridership is stupid. Its also really frustrating as I have many friends who have paid a premium to live near the reston town center metro and now I cannot even use metro to get there to see them

Proposal to close 22 Metrorail stations

| |
|--|
| We use the Cleveland Park stop a lot - especially my teenage son. He goes to the the synagogue located near that stop, many times per week. It would be irresponsible to close the VERY BUSY Cleveland Park station. |
| I live closest to East Falls Church so that stop closing would really affect me. |
| I live near and use Greensboro and paying high dollar rent for the convenience of this station. |
| So many major destinations, for residents and tourists. Hard to believe. |
| This list includes the Metro stop where I work, McLean. Although I am not currently working there, I planned to take the metro every day. This would disrupt my plans. Additionally, the list includes metro stops in NOVA, where I plan to live and this would severely limit my options |
| I live near cheverly station, so that mean, i will have to pay for an uber to the next station; which i find inconvenient. |
| Expecting people to use either Ballston or Rosslyn only to get to Clarendon or VA Square areas is a big stretch. Closing both of those stations will impact employee commutes to vital business areas and result in loss of jobs and closing of businesses. |
| Some of these specific stations are crucial to my travel and I have no way to getting between now closed stations |
| EFC station has parking. Any station with parking should remain open. |
| Outrageous. Worst idea in the survey so far. Live in the city without a car and it would add a one mile walk to any Metro trip I take. |
| Certain stations on this list would definitely be an inconvenience. Also, on the map it said Smithsonian as proposed closed station. I think Smithsonian is an important station to keep open once the museums open back up. |
| most problematic is closing both Virginia Square and Clarendon. I could get to Ballston for outbound trips, but getting to and using Courthouse is problematic. Theres a LONG walk from the elevator to the metro platform. No good way for me to get directly to Courthouse. Close Virginia Square, keep Clarendon. Mt Vernon Sq is also problematic. If I cant get on there, I have to go to Gallery Place and that metro station is too big and complicated. Its too long to IEnfant Plaza. |
| Our main stop is West Falls Church. If East Falls Church stop is closed, more people will need to park at the WFC stop. The mayor/town council of Falls Church City have had conversations about the under utilized parking garage at WFC. Since they seem to operate in a vacuum I would not be surprised if the EFC stop is closed at the same time that parking at WFC is reduced by half. |
| This would be devastating for this region thats already struggling with restaurants closures and, apartments unable to full units |
| Many of these stations are near major tourist attractions (such as archives) and serve to lessen commuter congestion to major downtown areas. The stops in the suburbs are vital for commuters to the city as well. This again will only further hurt metro's ridership numbers, hurt tourism and hurt the local economy. These proposed changes are unacceptable and not livable in our city. |
| UMD- College Park expects to return to a more dense residential model beginning Fall 2021. Students have jobs and internships in DC for which they use metro. Other students will commute to campus using public transportation. Many faculty and staff use public transportation to get to work. Reduce the frequency, maybe. Close the station? Please do not! |
| I rely on Metro for transportation. I recently bought a home near Grosvenor Strathmore DELIBERATELY. |
| Not sure what this data is based on; it seems unreliable to me. Plenty of tourists and workers get off at the Smithsonian Station including me. The Mall is a big attraction in DC so many visitors take the Metro to the Smithsonian station. Also the College Park station brings UMD students, faculty, and employees to and from areas across the DMV. |
| This is an awful proposal and would make the service near-useless. This cuts down dramatically of the accessibility of the system. Are you trying to run the wmata system into the ground until the whole thing is shut down? And what a disproportionate impact on the ridership. How much money can shutting down a station save vs. the number of people who will be pushed to buy a car because of this change? |
| Grosvenor is an important station with lots of parking. if a station on the Red line has to close, White Flint would seem a likely choice. |
| I use East Fall Church, Clarendon and Ballston regularly. High retail traffic and apartment and condo locations which rely heavily on metro transportation. |
| Id have to walk 1+ mile just to get groceries if this happens. |
| This makes absolutely no sense. Clarendon and Virginia Square shutting down means only 3 stops will be in Arlington, which is an extremely dense area of ridership. Instead of using the existing stations, people will uber or drive instead of using Metro, and therefore Metro will lose even more money. Closing Clarendon, East Falls Church, Federal Triangle, McLean, Virginia Square, Smithsonian are extremely bad ideas. |
| This would be devastating and cause a lot of transportation issues for myself and many people I know. |
| Ridership will return as virus declines â€” don't punish jurisdictions with selective closings. |
| Too many stations that serve as alternates for my commute would be closed, leaving me with no alternate stations in the event of delays, closures or other disruptions |

Proposal to close 22 Metrorail stations

I would keep Grosvenor-and close either White Flint or Twinbrook. Grosvenor is vital to the area. White Flint only services primarily Metro employees. With the vaccine coming out, Fed Ctr SW, Mt Vernon SQ, and the Smithsonian will be much more used than they are currently. I plan to be using the Smithsonian station much more this year -- from the Grosvenor station

I have ridden the Orange Line for close to 25 years, first at Ballston and now at Virginia Square. I dont believe Metro should be closing any stations along the Orange Line in Arlington given the amount of density that continues to grow in the area, especially Virginia Square and Clarendon. Large new high rises are being built near Virginia Square. Once the pandemic passes ridership will definitely increase. Closing the stations along the Orange and Silver Lines will push people into their cars. I guarantee you that I will drive to work if the Virginia Square Station is closed. You will certainly lose significant ridership by closing the Clarendon and Virginia Square stations - people in Clarendon and Virginia Square are not going to walk to Courthouse or Ballston. It just wont happen. Your proposed closures defeat the D.C.-VA-MD regional plan to keep people out of their cars and on public transit.

I need these locations to get to where I'm going

Huge cost savings but parking and traffic will increase dramatically. Parking at stations, and traffic into the city.

Grosvenor-Strathmore is a critical station for area artists and music appreciators. I would make similar arguments in favor of keeping Archives or Smithsonian, Cleveland Park, Virginia Square or Clarendon, College Park, and potentially other stations open for the sake of folks frequenting those locations for work, school, culture, or commerce -- persons with disabilities in particular.

I used mt Vernon all the time since I live near. I never walk to gallery place if I have to transfer.

I live near the East Falls Church Metro and would likely not use Metro at all if the station closed. Going to another nearby station would be inconvenient enough that I would just drive. I mostly take the metro within Va, going to other Arlington stations and out to Reston. I also anticipate taking the train to new silver line stations once they open.

This proposal is incredibly short-sighted. These stations are important commuter locations, and will be increasingly needed as pre-pandemic movement around the region resumes. Closing these stations will further divert ridership away from Metro, and doom the already sinking ship of the system. Metro must offer more appealing options to entice additional riders, and work alongside other local transit authorities to incentivize public transit usage, rather than cut offerings and make the system wholly unusable.

Mt Vernon Sq? Clarendon? Are you kidding me?

You risk overcrowding the neighboring stations and drastically altering the commutes of many.

I don't use these stations.

Many of these stations are not near other stations! Many people live within walking distance of Grosvenor-Strathmore but would have no option for another station. Are they supposed to drive up to Shady Grove? That is the nearest station with any parking. Shady Grove parking lots already routinely fill up. Tens of thousands of employees use some of the other stations listed every day, Federal Triangle is always very busy on a normal day. You cant use COVID ridership numbers to make decisions about 2022 when we will all be forced back into the city.

Those metro stations arent that close to other stations if you dont have a car. In particular the Clarendon and Cleveland Park metros are important for people without cars.

Sometimes I use the Clarendon metro

My position is that access to national museums and Arlington Cemetery must be readily accessible by Metro for everyone.

Please do not close the Clarendon station, I rely on this to get to and from work. I already change from bus to rail at Ballston and would like to be able to take the train to Clarendon without needing to switch to another bus or walk home alone at night after work. Please keep Clarendon open!

Fine for me for work and my commute but I know it would impact others

Virginia Square and Clarendon metros are crucial to the surrounding areas and even more so when people are going to work.

For visitors to city Arlington and smithsonian were key stops.

This is the worst idea ever. Whoever developed this idea should be fired. Our lives in Reston Town Center have been turned upside down to build a station and now you won't open our station? HOW DARE YOU stop making us pawns. We dealt with the construction noise and debris and have been forced to pay for neighborhood parking for 4 years in advance, you're late and this is hurting my property value while inconveniencing my commute. I hate you!!!

College Park has bike facilities that Greenbelt does not for multi-modal travelers.

What about patrons coming to concerts at Strathmore Music Center? What about all the money that went into expanding parking at the Grosvenor-Strathmore parking garage? What about the fact that the parking at the White Flint Station is quite a walk from the trains?

I am a senior citizen who will use the metro often once the pandemic subsides. A hike to another metro stop will make that very difficult.

Proposal to close 22 Metrorail stations

More stations means more riders, period. Closure of stops will only lead to further decreases in ridership over the long term and a greater reliance on personal vehicles. It would be shortsighted to close any stops. The point of improving metrorail is to make it MORE accessible to MORE people.

Terrible idea. Grosvenor-Strathmore is in the heart of a major residential area. Metro is projecting further residential units with FourSquare right on top of the station. Medical Center is not walkable -- there are no sidewalks to cross I-495 / I-270 and connect; you must walk in the road on MD 355. White Flint is likely to become inaccessible with rebuilding of what was White Flint Mall and the rebuilding of the SW corner of Nicholson / Rockville Pike. You're simply cutting off thousands of people. No, bridge buses DO NOT WORK -- the idea that people will take multiple modes of transit is ridiculous. You might be able to close some of the downtown stations, but G-S is not located near another station and you would cut off many riders (voters). Terrible idea.

I have a student that relies heavily on Archives station to go to school daily. I also have a condo that I rent out that is walking distance to Grosvenor metro. If this station is removed, the value of the condo would be reduced significantly. PLEASE DON'T DO THIS!

It seems premature to target stations to close in 2022 using 2020 usage. If we reopen fully in 2022 we will need at least some of those stations. Def use Smithsonian Judiciary Square Cleveland Park and Grosvenor Strathmore

Closing both Clarendon and the Virginia Square stations would be devastating. My husband and I are nearly 70, do not drive, and depend on the Metro for medical appointments, access to hospitals (e.g. GWU a Foggy Bottom), access to the airports, shopping and visiting all the wonderful places in the DC area. The Metro is a key reason why we purchased our home here in 2007 with the intention of "living in place" for the remainder of our lives. And closure of these stations would decimate the real estate value for homeowners of all ages.

Please don't close Grosvenor or Federal Center SW. I use both for my normal commute

Please keep Archives open. There are 4 large residential buildings in this area and Archives is our gateway to the metro. Please!

The transfer between bus & rail should be considered for any closures. Even a nearby station may not be able to make a bus/rail transfer in time. Especially with the trains running only every 30 minutes, this will lead to many more people missing the train or bus and having to wait for 30+ minutes.

I assume life will be back to normal activities in 2022 so ridership will return at these stations

Smithsonian, Cheverly, East Falls Church, and Clarendon are common stops and more convenient.

I use several of these stations, and the increased walking distance to near stations would be extremely difficult to work with.

This could help improve timing, but be sure there are busses, bikes, and good sidewalks for people to get where they are going.

I use metro by walking to the Grosvenor station. If it were close, I would completely stop using metro.

Clarendon is a must-have station for my family's needs. The proximity of the Clarendon station is one reason we moved to Clarendon. The next stop (Virginia Square) should not be closed because that means 2 stations in a row will be closed. Therefore, the distance from Courthouse to Ballston will require alternative transportation. The walk is short from Rosslyn to Courthouse, but very LONG from Courthouse to Ballston so this is unfair. Also, the residential neighborhoods around Clarendon are densely populated, and where there are many residents, the need for Metro is obvious. Moreover, since there are so many residents, there are also many businesses (shopping, professional services, entertainment, restaurants) and without Metro, it will be harder for the staff who work in these places to get to work. Less Metro service = more cars, more pollution, more global warming, more wasted resources on parking enforcement and more traffic accidents. Keep Clarendon and Orange Line stations open - this is an important reason why people moved here!

See previous question. A disaster of epic proportion. Simply adding more cars on the road and cutting off access to DC.

This proposal is completely contradictory to your other proposals regarding the red line. Closing Grosvenor and all the parking it has would be a huge loss to metro as people would not drive to other stations but would drive instead. Myself included.

Some of those stations (Arlington Cemetery, Federal Triangle, Archives, Smithsonian, East Falls Church) are used by commuters already in the system to transfer to another line ahead of the transfer point. Closing these stations will cause mass congestion in other stations. Might be the worse at Lenfant Plaza transferring to or from the Green Line and Metro Center transferring from Red to Silver/Blue/Orange. East Falls Church may be used to transfer to or from Orange to Silver.

Are you crazy? Closing these stations would increase traffic thereby causing people to drive more, increasing greenhouse gases. Don't you care about global warming and the environment? The air quality in the DMV area has increased dramatically due to fewer people in cars. Very bad idea.

Reduced service frequency far better than eliminating many riders access to the system

Can affect many that have their jobs around these areas.

But unfortunate

Closing both Clarendon and Virginia Square stations would leave a huge gap for this high density population area. Suggest closing one but not the other.

Proposal to close 22 Metrorail stations

I believe closing this many stations will not help improve usability of Metro, in particular I believe Arlington Cemetery and Smithsonian would significantly impact Metro use.

I rely on the Cleveland Park station

Total closures would create severe handicaps for nearby residents, would disrupt property values and planning, and be an inefficient waste of installed infrastructure.

I use the Cleveland Park Station a lot.... my bank is in that neighborhood. Yes, it is about a 15 minute walk from where I live, but not a good idea in the cold or the extreme heat of the summer. Not to mention what closing the station would do to all the businesses there. A VERY BAD IDEA!!!!

This is a really bad idea. You will never have the budget to reopen the closed stations. This will devalue lots of property. This will force more people to drive to get to a metro station, increasing traffic and decreasing the value of the metro. This would probably be the beginning of the end of the metro. DO NOT DO THIS!

This is a terrible idea. Many of us live within walking distance to Grosvenor because we want to use Metro. Also, when Strathmore Hall has events with a large influx of visitors more vehicle traffic would make it a mess.

Closing stations is NOT the answer. It would be a great inconvenience for the elderly.

Grosvenor is the station closest to my home and I used it frequently (before COVID). Medical center is not a good substitute because of lack of parking and overcrowding.

Many of these stations are not near another station as stated above. The difference in distance between my home and Van Dorn Metro compared with my home and another station is several miles and with traffic 15 to 20 minutes. Having more stations allows for people to live near them without living congested on top of one another, and to easily commute from VA to DC.

As an Orange or silver line rider going from Ballston to Farragut West, this would work for me in terms of travel, but I would be concerned about crowding at stations. Closing this station would mean that mean that Ballston would be the only metro Station from mid-Fairfax County to Courthouse. However, since there would be limited ways to get to Ballston, overall ridership may fall severely.

Removes access to metro for me

One of the reasons I live where I do is because its walking distance to metro (Grosvenor-Strathmore). Additionally, there are plans to build residential and commercial areas around that metro station - between that, and Strathmore, closing this station could negatively impact business in the area.

I do not agree with closing the Clarendon station. My wife and I use the metro every day for work and for getting around the city for meetings, as well as for social. This would have many negative impacts both on us personally and for our work environment, but also for the area as well.

It would make commute to D.C. difficult.

My preferred Metro station is East Falls Church and Smithsonian is the metro stop I use to get to work.

My work is relocating right next to federal triangle. I expect ridership to this station to increase and if it closed I would probably switch to bus service to DC, rather than metro (from Snnapolis)

We use East Falls Church quite often and this metro was a factor in our home buying decision. Also, would not want to backtrack to Ballston to get on the silver line. Especially once it opens all the way to IAD

My commute may be changing by then to Bethesda-Grosvenor Strathmore.

This plan would have a serious impact on me. I live near East Falls Church and work at Federal Center SW. I know from the time before the COVID-19 pandemic that both stations are very busy during rush hour. Funneling all Metro Riders through West Falls Church under a normal ridership time would result in serious overcrowding. I could see keeping these stations open only during the week. It wouldnt be ideal, but would be a better solution than closing them completely.

You have to be kidding.

i could probably live with this.

I don't understand the desire to close EFC. That is the first transfer point for the Orange and Silver lines. In the morning and evenings, the "Orange Crush" is already a problem (Ballston to Rosslyn) with dangerous overcrowding on both the platforms and trains occurring. Why would you take a step that exacerbates the problem? How is EFC such a low-use station, as your construction projects made the station difficult to access? That wasn't due to rider demand. And, the metro station access from the west is so bad, especially for one who is handicapped.

However, I dont think Cleveland Park is a low ridership station, based on previous experience. Also, it is a highly residential area--I am sure residents, who chose their living arrangements based on public transportation would not appreciate their station being closed.

I live near Virginia Square, but I can also walk to Ballston. I wouldnt like to see Virginia Square closed, but I could live with it if Ballston didnt get dangerously crowded.

Proposal to close 22 Metrorail stations

This is very problematic for riders that rely on the metro to get to service jobs in falls church, Arlington,McLean etc. Shutting down these stations is not a viable option as it hurts the working class who have already been adversely impacted by this pandemic as it is. Cutting riders off from public transportation at these stations should not be an option for WMATA to save money!

Im commuting to GMU-Arlington from courthouse with life-threatening medical history, and visiting Georgetown frequently. Both disconnection of clarendon and GMU-virginia square metro/38B and 4B buses significantly block my mobility and force me to buy a car to drive. I strongly urge to keep 38B bus line at least...

Madness. The entire plan would do so much harm in the long run and force more and more people into cars who might have chosen public transportation. Climate change will then surely hasten.

I walk to the Grosvenor station. Please do NOT close it. Dont you see all the condos and apartment buildings around the station? This too will possibly bring down the value of my condo if Grosvenor is closed. Please do NOT close this station.

Clarendon must remain open. Too much night life & apts. Close Court House & VA Square. People can walk from Rosslyn, Clarendon & Ballston.

East Falls Church is within walking distance for me. I will use it again when there is somewhere to go.

I live in an area where the closest station is on the Red Line at Cleveland Park. Closure of the station would force me to find alternative methods of travel, resulting in a loss of ridership for the Metro. Additionally, the listed stations are some that during tourist seasons have stops nearest to the main attractions like the National Mall. Tourists typically dont try to use the buses so this would only further harm the Metro

One of the reasons I moved here is so I would be in walking distance of a metro stop. Grosvenor is a crucial stop. What about the Music center it serves?

Many of these stations are not that close to other stations (e.g., College Park), and are major routes to get people from the suburbs into the city for work, shopping, school, etc. This will result in much higher levels of car traffic in a city that does not have parking space. And many of the stations that are proposed for closure that ARE close to other stations are not on the same lines, requiring people to go out of their way to transfer, or walk markedly further

Arlington Cemetery should remain open. A national shrine should not be bypassed

Grosvenor Strathmore is the station I most use. I also use the attached garage to park when I go to Strathmore Hall for concerts. My friends in DC come to Strathmore by Metro and park in the garage. This station is very important. If it is gone, I may no longer be using Metro at all.

I have been commuting to work for over seven years via metro. As a person with no automobile and limited income, it is essential that I manage my finances very carefully to keep my transportation costs affordable. Forcing me to commute to a different station would put an additional burden on me financially as well as significantly increase my travel time to and from work.

Seriously? Clarendon is in the heart of the entertainment district.

Eliminating two Arlington stations in a row between Rosslyn and Ballston?? This leaves us without a station in walking distance to the heavily populated Clarendon, Lyon Park, Lyon Village neighborhoods. Even in good weather for those up for a long walk, the closest, Courthouse, involves hills and therefore is an uphill climb in both directions. This would cut my use of metro by 80-90%. Thousands of us live and/or work in these neighborhoods in part due to the close metro access. Eliminating Clarendon (and VA Square) metro stations is not the answer.

No!!! These stations are critical to the local economy and providing affordable and accessible transportation for people of all ages. Please do not limit our options by closing these stations! This is horrifying and will significantly and negatively impact people with jobs or school dependent upon local metro stations access and it limits future property value or local neighborhoods who will die due to closed stations! This is terrible!

I ride the metro to McLean to Capital One and will be traveling even more frequently with the new facilities built on the Capital One campus. groceries and many other things would be impossible to use without a car if I cant take the nearby metro station.

Some of these make sense because other stations are walkable distances away or have parking lots so people can drive. Others are too far away from other stations and busing can add too much time.

There are many multistoried condominium buildings near Grosvenor-Strathmore metro station. Many people here rely on the metro as the only way of transportation. Closing this station would seriously harm many people.

For people with mobility differences and for safety (women at night for instance) closing stations and decreasing availability of a station nearer to home could be detrimental .

Smithsonian is the closest station to the monuments on the mall and the only reasonably walkable one. Arlington Cemetery has very little parking available making the metro essential for visiting or volunteering at the cemetery. College Park is the only station accessible on foot to students and faculty on UMDs campus.

Proposal to close 22 Metrorail stations

So we are going to complete the Silver Line and then close new stations for low ridership? Please help the public understand that. Additionally, define near other stations with respect to Arlington Cemetery and Van Dorn (and probably others). They are nowhere near any other stations.

College Park was the nearest station to me when i was commuting, definitely would make things harder for me if it closed

Archives, Arlington Cemetery, Clarendon, College Park, East Falls Church, Federal Center SW, Federal Triangle, Smithsonian, Van Dorn St., Virginia Square are all stops I and numerous other people used frequently before the pandemic. I understand how these stops are not being utilized to their full potential right now, but it would definitely be an inconvenience for work, students, and leisure if these stops were closed.

These are stations we often use when entertaining in DC!

ANC As a tour guide, I often meet or leave guests at Arlington Cemetery. Metro is critical to my transportation needs. As for tourists, metro is essential to many in order to access cemetery. Eisenhower The Carlyle/Eisenhower neighborhood is growing...Residential, commercial, etc. Closing this station would inhibit further growth and investment. Smithsonian How will visitors access Mall, museums, memorials if no metro.

East Falls Church and McLean are high needs stations for my commute.

Van Dorn needs to stay open at least during rush hour for workers.

I use Van Dorn station extensively and another station would not work.

I live near one of the stations that would close and would strongly discourage this approach. While I am mobile and active, for those who aren't it would be a hardship to get between Ballston and Courthouse (if Clarendon and VA Square are closed). Closing stations will likely drive down ridership further, creating a perpetuating cycle of low ridership.

Particularly Clarendon and Virginia Square--these stations are often fairly empty, and the platforms are so narrow so they are sometimes dangerous. Virginia Square is essentially a backup station and is so close to Ballston. Close them. Reston on the other hand should be left open as more businesses move out West.

Closing of the College Park metro station would preclude me from using metro in the future. This is the only station that actually serves me. I can walk to this station. If I were to have to driving to PG Plaza or to Greenbelt in order to access metro, I would simply opt out of using metro and instead drive the rest of the way to my intended destination. This would be a huge blow.

This seems insane. Cannot believe that this is being considered as an option. Once people return to work, you will be forcing more car ridership. Think about the impact to peoples commutes, cars on the road, environment, and climate. Also, why is a station like East Falls Church being considered when it is an intersection point for orange and silver.

I feel like a few of those could be closed, but not all of them

1. Closing the Arlington Cemetery stop is just disrespectful. That is potentially cutting off someones only way to get there to visit their late loved ones. 2. I work at GMU in Arlington and use the Virginia Square station daily, as do many of our students, staff, and faculty. Closing this station would make commuting to work and classes infinitely more difficult.

I use Clarendon and Smithsonian

No, please do not close Grosvenor Strathmore station!

The Grosvenor-Strathmore station serves many communities because of the available parking. Close White Flint or any other station that has no parking. I would not be able to use metro if there wasn't parking available.

The whole point of living or working near a metro station is to decrease dependence on car travel. Why would you close stations? A better plan might be to close stations or entrances on weekends or late at night as is done on other cities. Please be specific about what you mean by closing stations.

Although Virginia Square is my station, I would strongly oppose closure of the Clarendon station even more. Many businesses in the area would be badly affected. Also, if I am commuting to DC again in 2022, I would much rather walk toward DC to catch the train from Clarendon (assuming Va Square is closed) than away from DC to take the train from Ballston.

I would probably move to a lower priced area outside DC metro if metro is reduced to the point that its not useful to me.

Closing these stations would make metro more or less unusable for me and I probably would stop riding the metro entirely if this happened and just buy a car.

No!!! Less frequent trains and fewer open stations will cause overcrowding at stations that remain open and will only hurt metro revenue in the long run

Dont think you should close both Clarendon AND Virginia Square. Arlington has developed around these stations and people who live near them are depending on them to get around without a car.

By concentrating all riders to a few stations you increase the risk of dangerous platform overcrowding, especially during rush hour and events. For example, by closing Archives and Federal Triangle, you are increasing use of Gallery Place, which has a major chokepoint when transferring between lines. By directing all traffic to this station rather than mainly transferring riders, you are increasing the likelihood of regular platform overcrowding and risk of injury.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Grosvenor is a critical station for me |
| I will need to find alternative transportation if Grosvenor closes. More broadly, extensive investments have been made relying on this station and closure would have significant adverse economic consequences. |
| No. Terrible idea. |
| This is far too many stations to close. Northern Virginia seems particularly badly impacted with these proposed changes. |
| Terrible idea for the Silver Line passengers waiting for new service! |
| Many of the stations mentioned here are very important to me since I look to the metro as the primary means of getting there. Several communities in that area also depend on the metro to get to where they need to go. Limiting stations will make the metro even less desirable as a means of transport |
| This will affect tourism in DC greatly. Not only will tourists be funneled into a few stations near the Mall, greatly impacting those who use these stations for commuting and other business, but the area around the National Zoo will be affected the same way. |
| I live at Grosvenor Strathmore, which is currently proposing a new complex for the station, this just seems like a stupid question, how can you anticipate the new levels of parking needed at the stations that are still open? When you sold off your lot at Grosvenor Strathmore which during no pandemic was one of the busiest stations on the red line, hence why every train ended there. If you are going to close a station on the Red Line it should be NIH, because it is the most skipped station when the trains are delayed. |
| I often use Grovenor/Strathmore station to get to work. |
| closing close together station works an extreme hardship on those of us who have difficulty walking. I use Archives and Virginia Square because they are closer to the places I want to go than are Gallery Place and Ballston. |
| This would be a hardship for me. I walk to the Grosvenor metro station to get into DC for work and visit friends. |
| No, especially for the Grosvenor-Strathmore station. |
| Closing of the Grosvenor-Strathmore station would impact a large number of individuals that commute from the adjoining neighborhoods. Other metro stations are not within walking distance, and from my experience is it not a lightly utilized station. |
| Absolutely not! This is the worst idea of all the proposals. Metro will create massive bottlenecks for commuters, which will drive more away from using metro, which will only continue this death spiral. Massive cuts to service will also unfairly benefit those lucky enough to live close to an active station, leaving the rest of us to commute to "nearby" stations that will be full by 7am. |
| I use the Clarendon station, and occasionally Virginia Square. |
| I wouldnt mind more walking, within reason |
| I chose my living arrangement years ago near the Clarendon metro station because I dont have a car/drive in connection with my significant disabled veteran status. I have to be able to walk to everything including metro to work. Please dont cut Clarendon. Thank you |
| I use Metro to get to DC for events and meeting friends. I rely on the Orange and Silver lines to get to the Smithsonian to volunteer. That works well. Driving to and trying to park in DC is difficult and not environmentally good. East Falls Church is very convenient for me, I can walk. I would have to drive to West Falls Church, then find and pay for parking. I also used EFC when I worked in DC.. |
| I live at Reston Town Center and was looking forward to being able to walk to the station. |
| Closing stations along with reduced rail service AND elimination of bus lines with so much harm to those who are low-income and transit dependent. It also puts wmata employees such as myself in a hard place since there are many of us who don't own personal vehicles and we cannot afford to use rideshares on a daily basis. |
| Traveling to the Arlington/NoVa area would be hindered a lot from the closures at Clarendon, East Falls Church, and Virginia Square. And, this would especially adversely affect the thousands of people living near those spots dependent on metro to commute to DC. East Falls Church because it is the last stop before the silver line split. And Clarendon because it leaves too big of a gap between Courthouse and Ballston. |
| My children rely on the college park and Cleveland park stations to get to and from their high schools |
| I live in Virginia Square and I work outside the McLean stop. This would mean I wouldnt use the Metro to go to work. |
| I live next to the Clarendon station. I would rather have reduced service at all stations than to close any stations. Closing those stations would force my commuting time to significantly increase to get to another station. Due to that increase I'd be much more likely to not use metro at all, further reducing its revenue. |
| I live 1/2 mile from East Falls Church. My shuttle may not go to the other stations. This would cause expense and time to get to other stations. If others and I decide to use alternate means of transportation, you won't gain revenue. |

Proposal to close 22 Metrorail stations

If Virginia Square and Clarendon Stations are closed, the Metro system would cease to be useful to me, and I would no longer use.

Have you folks lost your mind? These stations are the hubs for commerce and tourism. Closing these stations will close down wmata all together. No, the group that came up with these stations as being candidates for closure are simply ignorant. No, hell no

Most of these are fine except McLean and Federal Center. McCLean is close to Tysons Corner, but only by car or taking an additional bus. That part of the Silver Line is already plenty spread out as it is and lots of people use it to go to the Capitol One building. Federal Center is close to LEfant but I work inbetween 4th and S Capitol St and walking that far everyday would be particularly inconvenient.

If my closest station closes. It doesn't make sense both time wise and financially to drive to another station to ride Metro. I will drive to work. Even with parking and insurance, this is cheaper than riding metro in rush hour

The Cleveland Park Metro Station is essential to the neighborhood here. I see hoards of walkers to the Metro each morning, and again from the station in the evening. many home and apartments dwellers depend on the Metro stop at Cleveland Park. Ridership during the Pandemic is NOT indicative of the usual number of riders.

Absolutely NOT! Both parents are Government employees and work downtown and at the Pentagon. We depend 100% on the East Falls Church Metro station. To close it would be a huge mistake! Prior to the pandemic, The platform was full with riders. There is no way that I am going to travel to another Metro station, pay for parking etc. Way to inconvenient, which means that we will drive, create more traffic etc. Besides, Metro just dumped a ton of \$ into the East Falls Church station between the platform overhaul and the bicycle cage. This is a ridiculous idea!

Grosvenor has excellent public parking and is near a lot of high density residential housing which would then require those individuals to use automobiles with its negative impact on air quality and traffic congestion. Also near Strathmore Hall and would prevent people from using the Metro system to attend events at that location.

University of Maryland students without cars rely on the college park metro stop. I was one! Closing that would be a great burden. Tourists rely on the Arlington and Smithsonian stops. People have made their homes based on access to the Grosvenor station. This is way too many stops to close. Closing stops bc there aren't enough wealthy able bodied adults making them super busy is a terrible thing to do to public transportation.

Pre Covid times. East Falls Church is a very busy station. It provides access to the orange and silver lines. Many people have bought homes in the area because of the proximity to East Falls Church metro. This metro stop also provides the closest station for many living in the 7 Corners area of Falls Church.

Greensboro station is one of the few stations near my residence along with many apartment complexes. If this station were taken away the walk to the next station is pretty far especially in inclement weather. The walk would also not be feasible for those that use the metro for tasks such as getting groceries. It would also be too far of a walk for many who suffer from physical disabilities or the elderly. Near other stations is a very relative term and is not a great representation of what makes a feasible walking distance for many.

East Falls Church is in a walking distance from my home, no other station is. I do not drive.

This would only work if you increase bus service to get to the non closed stations. One mile plus is to much to walk

Closing 2 out of the 5 stops on the Rosslyn-Ballston corridor is ridiculous. That would leave over a mile and half between Courthouse and Ballston that is not covered by a metro stop, which would lead to more crowding on already crowded trains, pre-pandemic. Additionally, closing East Falls Church and McLean would create a huge gap between Ballston and Tysons Corner that would inconvenience many in that area. Why you would choose to close two stations that are consecutive is beyond me, but is a bad idea and a slap in the face to riders - particularly since many have made life choices and plans based on the opening of the silver line. Closing a station that opened so recently is also ridiculous. I mean if all of the above stations are closed, what would even be left of the silver line? The closing of the above stations would disproportionately be felt in Virginia as well.

We have ten years to drastically reduce emissions or our planet with be absolutely screwed. Please do not make things worse by cutting service and putting cars on the road. If anything we should be adding stations, not closing them! Why would we want Virginia workers to commute into DC on the highway instead of using public transit? No one wants to choke on smog or sit in traffic.

East Falls Church is key transfer point.

We are senior citizens and depend on the Virginia Square metro station, using it for transportation to medical appointments close to DC metro stops as well as for our access to any DC museums and activities. Closing this station would greatly impinge on our already limited freedom of movement. Please consider the needs of our aging and/or handicapped riders.

I think station closure is a very bad idea. That said, if some stations absolutely had to close, I would make the list much smaller and more targeted. (So, for example, closing Virginia Square might be OK, but do not close either Clarendon or E. Falls Church. Generally, do not close the closer-in, more urban stations.

This does not work - I frequently use clarendon and virginia square metro stations and chose to live in the area due to close proximity to metro

That station will not go closed because people needed to get off of any destination without making confused or taking too long anywhere.

Proposal to close 22 Metrorail stations

I anticipate using college park

I am opposed wholeheartedly against closing any Metro stops especially the Eisenhower Ave Metro stop. Although, COVID-19 may have changed ridership in the past year, I do not find this to be a viable path way forward and serves not benefit to allow the area to continue to grow. We should be applauding and encouraging ridership rather than decreasing stops, unless you do a hybrid approach and study to analyze the affect on the public. Do not close Metro stops where residences are located, nor popular tourist locations.

I need Eisenhower Metro station to be running. This is my mode of transportation to and from work.

I have used most of these stations many times and do not support hamstringing the network and potentially causing crowding or declining ridership by closing them.

While I'm not personally affected by this, this would severely inconvenience A LOT of people

The stations we use most frequently would remain open

I specifically got my house 2 blocks from the Clarendon metro station to get to my work just off Smithsonian stop. I don't have a car and this is my only mode of transport.

At least three of these stations are essential to my commute and social activities. Grosvenor, East Falls Church, and College Park.

I live in the Calvert Hills neighborhood and use the Metro for work and pleasure. I am able to walk to the metro, and it was one of the main factors we considered when purchasing our home. This access is vital to me for work, but its also something that links this community to DC. This proposal would have a substantially negative effect on my life as well as my property value.

Would you close them permanently or just during weekends/holidays?

This is absolutely not acceptable. The people who use these stations would be unfairly impacted. Those who have purchased homes near the stations will watch their property values drop significantly. Ridership will come back. This s not a viable option.

No I work right next to Clarendon Station and have projects at a few of these other stations

Silver line extension stations need to be opened. Metro is losing credibility and relevance in fairfax-Loudon counties and will loose political and fiscal support from a vocal and articulate electorate if they don't deliver on prior service promises

I live within walking distance of the Grosvenor-Strathmore station, and used the system many times before the virus shut things down. I would likely not use Metro to a great degree if my local station is closed.

With the COVID vaccine roll-out anticipated by Fall of 2021, WMATA should be anticipating that federal offices in DC should go back to more of a normal work week & commuting by 2022. Closing stations near federal offices will further disincentivize workers to return back to work full time, further exacerbating Metro budget shortfalls. This would impact stations such as Archives, Federal Center SW, Federal Triangle, Judiciary Square, & Federal Triangle.

Would last how long?? Also consider: closing the stations for a month on/off, or for "one quarter of pain"

Absolutely not. How would I get to any of the museums since I usually go to Federal Triangle and Smithsonian? How are you helping workers who commute via those stations?

You simply cannot close the Grosvenor-Strathmore station. Before Covid you could not get a parking space there if you arrived after 7:30 am, that's how popular and critical a lifeline it is. This is the most outrageous, ridiculous thing I've ever heard of.

What are you thinking? Closing the Smithsonian stop? Ridiculous! How do you think people get to the mall? Also Cleveland park is a super busy stop!

I live near within walking distance of Grosvenor-Strathmore. It is *my* Metro station. If it closes, I probably wont use Metro at all. And youre getting rid of Silver Line stations before theyve even opened??? If you dont get suburbanites to use Metro, how are you ever going to keep it funded long-term???

This would be terrible particularly for tourism and traversing to work especially with cuts to the metro bus lines.

How will people get around with so many stops closed. Clarendon specifically!!

Grosvenor has parking unlike the next station on the Red Line - Medical Center. White Flint, the next station on the Red Line in the other direction, has parking but would be completely inadequate if former Grosvenor station users were forced to go there to get on the system.

I cannot stress enough the need to keep all stations open. As mentioned, I live near Grosvenor-Strathmore and have relied on this train for years. I cannot afford a car and the trains have allowed me the freedoms to access all major parts of the DMV area. Please do not close the stations. Ridership will increase once vaccination rates are high and we approach herd immunity

I regularly rely on a number of these stations. I commute from EFC daily, and there is not another reasonable route to my work that would not add significant time or expense to my commute. I use stations like Archives/ Smithsonian/ Federal Triangle and Clarendon weekly as well.

I'm surprised to see Clarendon on this list. My impression is it's quite busy. If you shut Virginia Square and Clarendon you're leaving people with a long walk

Proposal to close 22 Metrorail stations

I commute daily between Grosvenor Strathmore and Smithsonian stations. For work. The proposed closures would cause me to no longer use the metro system during the week as well as the weekend. Using one of the other adjacent stations would significantly add to my commute time and stress. I currently purchase a monthly metro pass and pay the daily parking fee.

Closure of many of the identified stations at locations that are seeing burgeoning new residential development only further dissuades people from using METRO, and thus reducing revenue stream. Also closing consecutive stations such as Clarendon and Virginia Square will drive people using those stations to Courthouse or Ballston. They will look to other alternatives (e.g. a car, scooter, etc.). This is the least acceptable of the alternatives provided.

There are too many stops slated for closure that are near either major areas of employment or major areas for non-DC residents who have no other way to commute to DC.

We need stations

I live only a few minutes walk from East Falls Church, so that is the station I use whenever I take the metro. There are no other stations even close to walking distance.

Seriously? None of these stations are close to other stations in terms of people who use public transportation. You're forcing people to drive or take taxis or Uber, which is also encouraging more driving. Clarendon was built around that metro station. You're going backwards when climate change requires going forwards. You can't solve a budget problem by decreasing your revenue base. You can't solve a budget problem by killing off local businesses. What you need is more money now, I get it, and that's going to be very hard to get, but it's hard to see an alternative. Destroying the system won't help. It might be that some of these stations are underutilized, but some of them are quite busy and central to the business and work life of those who moved nearby because these stations were there. This isn't a serious proposal, it's surrender.

Closing the metro stations will not work. We purchased a place specifically because it was walking distance to the East Falls Church Metro. Closing that station will severely affect our commute and lifestyle in general.

Apparently those who say the essential stations are near others do not use the system nor walk much.

Except that I would really miss the Smithsonian station and given all the tourists that come to DC to see the Smithsonian, I think it would be best to keep it open.

Will further erode metros functionality as a public transport service.

PLEASE do not close Clarendon Station

I think it is critical to leave all stations open, especially since the money has been spent to build them. Many old people live in the high rise apartments near Grosvenor-Strathmore and a number are completely dependent on Metro for transportation. We can adjust to time changes but loss of our Metro-stop altogether would have a huge impact. Believe me, you don't want us all back on the roads!

I am not in favor of this proposal.. Period. You are clearly punishing federal workers and also discouraging tourism (seriously you want to close the Smithsonian stop?). This is a dramatic step in light of the prospect of reopening and potential tourism in the area and really only should be a last resort.

How close to each other are these stations? Are you considering that this could/would lead to further drops in ridership because the remaining open stations are too far from commuters? What, if anything, would Metro do to offset these closures?

East Falls Church station is the only one within walking distance of my house. Bishop O'Connell High School's students only have this station as an option to get to school. This is also the only station near by that has parking available. Given the upgrades to EFC it doesn't make sense to close the station. Ballston is not convenient for commuting to the Pentagon because by the time I get a bus there I'm almost at work and wouldn't need the metro. WFC station is going backwards for anyone who lives near EFC. Also EFC is the easy transfer point going out the silver line and when it eventually gets to Dulles it will be the best way for Arlington residents to get to the airport.

ABSOLUTELY NOT! What's the point of having these stations close to home if they are closed? Go figure out how to raise funds. Low ridership is due to the pandemic. You have NO DATA on the new stations where populations are exploding. This is not being climate sensitive to force everyone back onto their cars.

Please do not close Grosvenor-Strathmore or College Park!

Closing Grosvenor-Strathmore would be catastrophic for organizations, like the National Philharmonic, that perform at the Strathmore.

While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options be available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes.

Proposal to close 22 Metrorail stations

| |
|---|
| Grosvenor-Strathmore is an essential transportation hub with expanded Metro parking capacity on the way. I imagine ridership will increase substantially to accommodate other closures. |
| Absolutely unacceptable. How are people supposed to get to these nearby stations? These are not nearby at all and parking there is already a major problem. Of course during COVID, things are different, but that is an aberration and should not affect long-term planning. |
| Do not close Grosvenor Strathmore station. I don't understand why this station is considered low traffic. It is one of the highly used station and a terminal point just like Silver Spring station. It must be a mistake. |
| Cleveland Park and Virginia Square Station need to be open |
| This would work for me because I would not drive to the Metro. But for those who do drive, the burden on the existing parking facilities would be considerable. And what about the investment in improving/enlarging the Grosvenor/Strathmore parking facility? Would Metro just eat that cost? |
| That seems like a big capacity challenge |
| Several Seniors in the family and mobility issues have made the Grosvenor-Strathmore Stn. wonderful. Closure would be a terrible blow to all residents in these Grosvenor buildings |
| Losing grosvenor would dramatically impact my commute and likely result in stopping my regular use of metro. |
| If you close Clarendon, that would be very inconvenient. |
| Many of these stations (Archives, Smithsonian, Judiciary Square) are near the National Mall and can be additional egress routes when the Mall is crowded. The College Park station is near a major university in the area and would affect people who rely on the metro to get the campus. |
| The stations I primarily use are Clarendon, Virginia Square, East Falls Church, Archives, Federal Triangle, Smithsonian, Navy Yard, and Judiciary Square. All of these except Navy Yard are being considered for closure. This will make it extremely difficult to park in Arlington to take the metro, and will make it harder to get to my destinations once I am on the metro. I will be much more likely to drive. Closing the three Virginia stations would make it unlikely that my daughters would take the metro, as they walk to get to the metro from within those neighborhoods. |
| After living in Herndon for 5 years and eagerly awaiting opening of metro, don't waste the money by never opening the stations!! This is so short sighted and you need to be planning for the additions and expansions, not removing already constructed stations. |
| Closing both Clarendon and Virginia Square makes it so metro is not a reasonable option for my commute. I used to go to Federal Triangle but am okay walking from metro center. |
| How can you close the College Park station if it is the only mainline connection to the new Purple Line? If you do this, the Greenbelt station will be overcrowded with people from the UMD area and anywhere else that uses Purple. |
| This question is unfair, because it never defines the basis of low ridership. Many of these areas, such as Virginia Square and Clarendon, have growing residential populations based on new construction underway within walking distance of the station. Also, at Virginia Square, more daytime demand is anticipated with the expansion of GMUs new campus to support the expansion of Amazon. |
| This is fair given there is a very close metro station around the corner of each of the ones listed above. |
| Many people depend on those stations to get to work or get into and out of DC |
| You need to take College Park off this list. UMD Students!!!! And Smithsonian also needs to be taken off this list. Visitors to our nations capital!!!! |
| Taking away service to the College Park station just hurts students and staff at UMD. Shuttle UM has a route specifically for metro commuters who rely on that station to get to and from campus. Furthermore, it cuts off students access to DC for work, internships, and entertainment. Otherwise, the nearest station to UMD is PG Plaza, and the only UMD shuttle that could get students there is the Hyattsville route, which doesnt run during the weekend and only operates once an hour until 9pm Monday through Friday. |
| Metrorail Proposal 5 probably would not work for me given my expected travel needs in January 2022. This is a long list of proposed station closures. E.g. Closing Clarendon and Virginia Square leaves a gap between Ballston and Courthouse. Reston Town Center Silver Line hasnt opened yet but would then close... I would want to see this proposal in the form of a map to visually see the proposed impact of service and connectivity. |
| Many of these are not near other stations. People rely on these and it doesn't make sense to close them. |
| I dont use any of these stations to get to and from work, but without them I would be less likely to use Metro for non-work travel. |
| Closing Grosvenor-Strathmore is not possible, it would then mean service every 30 minutes for the rest of the line. 2022 should see the return of people commuting to work if you have to wait 30 minutes for a train it will put cars back on the road since nobody will wait that long for a train. |
| This would be devastating to work commute. Would require lots of extra time to get anywhere and would only reduce metro service even more. No point to wait on metro and walking to where you want to go. When an uber would take a few minutes vs potential hour on metro to get anywhere. |

Proposal to close 22 Metrorail stations

How would Arlington Cemetery accommodate parking for visitors? I am strongly opposed to closing Arlington Cemetery and Clarendon metro stations.

We use the Metro that is just blocks from our home. That is one of the reasons we moved where we did. Closing two consecutive stations like Clarendon and Virginia Square is not feasible for those relying on the Metro and a short walk to the station.

All these metro stops are in very convenient areas.

One of the above metro stations is the only station walking distance from my residence providing access to the DC area. Parking in nearby metro stations is limited and driving would increase my carbon footprint to enter the city. Biking to the closest station is not a safe option. Single passenger car traffic entering and leaving DC would increase significantly.

Not at all - the Grosvenor-Strathmore station is right outside my apartment, and closing it down will disrupt not only my commute, but also my wives.

The Virginia Square station is an essential connection for our rapidly growing and thriving neighborhood. Its important not just for residents to commute into D.C., but those coming into Virginia Square for work and for school. If you close the station, then youll hamstring the growth of the neighborhood and the development of northern Virginia.

If you want to close stations, how about the ones next to each other like McPhearson Square and Farragut West? There are others I'm sure that are only a couple of blocks away from each other, which are in business areas and not residential ones. On the other hand there are swaths of residential areas between Courthouse and Ballston that will lose their metro access, or people living at Grosvenor who don't have any other ways of getting around.

If it helps speed things up at other stations.

Most - if not all - stations listed should experience growing ridership as the year progresses. If they are closed, the stations somewhat close will experience higher volume, and chances of congested volume, over the course of this year and beyond.

Closing Clarendon would be a huge mistake and a serious burden for thousands of riders. Clarendon has a lot of ridership in normal times and is central to many businesses, Drs offices, 2 grocery stores, schools, etc.

Multiple stations that I use on a regular basis would be closed under this proposal, including the stations closest to my home and closest to my office.

Consider closing White Flint instead of Grosvenor-Strathmore. .

Given that cities will re open after Covid has passed, the need for these stations will come back. This causes problems if these stations are shut down. For example Eisenhower metro station accommodates people traveling to NSF. When employees come back there will be a HUGE need for this station. I don't believe this proposal is the right plan.

It seems you want to shut down the system rather than operate it

Over a thousand new apartments were constructed within walking distance of the Clarendon metro since commuting numbers plummeted to the pandemic, and more new apartments are planned. So ridership will greatly increase at the Clarendon metro by this Summer.

Depends when you close them.

I live in the Grosvenor area and it is my primary station!

It's a terrible idea to close any stations!!

I usually do not use these stations

Arlington Cemetery as the least used station could be closed as it is the one that could be satisfied by bus service. Closing others would defeat the purpose of Metro-rail. T

This sounds like the death knell of the metro, at least for us. We depend on east falls church metro and would start using our car again when we're back online re Covid (should be soon!).

Also seems almost dangerous to close stations down like clarendon where young people go and drink.

Grosvenor- Strathmore is essential for my work commute and lifestyle. Please keep this station open

My travel needs are unlikely to be affected by these closures.

If Strathmore Music Center is able to re-open, this absolutely does not work for me.

Please consider all other proposals before resorting to closing stations! Not only will it affect access, but property values and local businesses will also suffer.

A few of these may be closed but not so many. This is way too many stations to close if you want Metro to recover in the coming years.

Reston, Herndon and Loudon County need the Phase II stations to open given the repeated delays.

This is just wrong. I dont know how other subway systems around the world operate without having to close stations to save money, but Metro has to find a way to keep these stations open. Smithsonian CLOSED? This cannot be a serious consideration. The overcrowding at other stations in the vicinity would be a nightmare, especially during tourist season and high profile events.

Grosvenor-Strathmore is the last station before Bethesda and DC with a decent size parking in a highly build living density unlike White Flint, which is largely office/commercial.

Proposal to close 22 Metrorail stations

When visitors come i take them to Arlington National Cemetery. This is so convenient. I like the Clarendon stop as there are great bars restaurants and shopping.

I will be commuting downtown every day, and Grosvenor-Strathmore is the only station that I can walk to. Also, the stations on either side (White Flint and Medical Center) do not have parking. The parking lot is desperately needed at Grosvenor to accommodate all of the commuters coming from this area.

My station closing would make it harder to get to work, adding a half hour to my already too-long trip if I had to catch a bus to get to a neighboring station. I think the result is that I would have to start driving to work, and metro would reduce its ridership even further if others are in a similar position to myself.

I take College Park to get to and from work. I know that students rely on this station too, and probably more so as the pandemic eases.

I do not personally use any of these stations regularly, but please consider the communities that might be directly affected and ensure that accessible alternatives, such as expanded bus routes, are available.

I know people at Virginia square, Clarendon and Cleveland park who I visit via metro

Many of these stations are used by tourists so where are they supposed to go now? Stations will be overcrowded. It will also make commuting difficult especially during the hot summer months and rainy weather. Why can't the closures be limited to closing early or limited hours on weekends? They shouldn't happen at all since many of these stations are vital and will have a negative effect on those who rely on them for commuting and other purposes.

I don't use these stations, but there are a lot of people who do.

There are a lot of professionals who live near the Virginia Square metro who live there based on the convenience for transportation. We pay higher rents for that luxury too. Closing the Virginia Square metro is inconvenient for those who work. This applies to several other stops.

I walk to the metro and closing these stations would almost double the on-foot travel distance that I would have to cover.

Clarendon is my closest station. Next closest is Virginia Square. Both would be closed.

Closing stations will negatively spiral the budget issues.

I need Cleveland Park. And I know my neighbors require rail access too.

Please do not close Grovesnor-Strathmore for the following reasons. (1) It is not close to any other stations. (2) People depend on that to go to concert at Stathmore Hall and other places. (3) It serves an area with high population density. For example, there are lots of high-rises near the metro station. Many people rely on the metro to commute to work.

I have no plans to go to any of those locations. I note, however, that the proposal of closing so many stations, including those not yet built, does demonstrate that WMATA is poorly managed. It is also quite frankly unclear to me how this would save money, as WMATA does little to staff or clean its open stations.

I depend on the Grovesnor-Strathmore station for my commute and frequently use it to get into the city. It would be devastating to the community to lose the station as it's a lifeline for many of us. Please, reconsider!

Not only would this close the station I use to commute it also would close many of the stations that I arrive to during the work day (to visit other offices or businesses) this would cripple the options for commuters and would effectively make metro useless. This would drive ridership further down.

Prefer to have Clarendon kept open

I take metro from West Falls Church station to Farragut West station. Even if East Falls Church metro closes, it shouldn't impact my commute. That's how I understand this proposal.

Would eliminate Metro use from East Falls Church to points west for shopping and East for entertainment. These trips allow us to travel from Tysons for shopping to DC for dining and entertainment, eliminating them would eliminate as much as \$10,000 from local economies.

I generally use Virginia Square. Ballston is only a block further though requires crossing a busy intersection with no traffic signals. I'm concerned with some of the handicapped people I've seen who use the Virginia Square station.

The three stations that will have the most impact to me but also to the National Mall traffic will be Archives, Federal Triangle, and Smithsonian. Closing these would push traffic to L'Enfant, which is already nightmarish during normal times despite the multiple entrances. Smithsonian is also a landmark station for tourists. Clarendon may not get enough traffic but thats the closest station to many major retail/restaurants. Having to haul your groceries from Whole Foods to Court House cant be desirable for many.

I moved to Clarendon because of metro access. I havent ridden Metrorail since March 2020, but intend to resume regular ridership in Fall 2021 when most people are vaccinated. I STRONGLY oppose closing BOTH Clarendon and Virginia Square. I understand that Virginia Square is close to Ballston, but Clarendon is much further from Ballston or Rosslyn. If both Clarendon and Virginia Square were closed then I wouldnt ever ride metro. I also dont see the value in closing Arlington Cemetary as that is such a tourist destination.

This would add at least 30 minutes to my commute in each direction as my home and work metro station are both on this list. At that point it would be faster to drive.

I don;t use those particular station much if at all. This wouldnlt impact me.

Proposal to close 22 Metrorail stations

| |
|---|
| Unacceptable level of service. In addition to eliminating my station would eliminate major tourist destinations of Smithsonian, Federal Triangle, Federal Center SW, and Arlington Cemetery, among others. Access also needs to be provided for Federal employees. |
| I rely on Cleveland Park station. Just because there are other nearby stations doesnt mean it makes sense for people to have to use those other trains. What is the definition of nearby? Is there a certain distance thats qualifying? |
| Closing Clarendon would not work for my schedule |
| I currently use some of these stations. Instead of closing them, perhaps some stations could be skipped on some routes |
| I understand closing a few smaller stations but its going to crowd the other stations. |
| I work very near the Greensboro stop. |
| If the pandemic ends and offices reopen, Silver Line stations around Tysons (Greensboro, McLean etc) will be heavily used, as it was before pandemic. And if close these stations will significantly worsen the traffic since those people used to ride metro has to drive. |
| I work in a Federal Emergency Operation Center 24/7 I will need to get to work on time |
| Cleveland Park is the closest station to Cathedral Heights which is still a 20 minute walk away. |
| What station is college park near? This would markedly underserve the University of Maryland community. |
| Grovesnor-Strathmore is a massive station, in which Metro just built another massive parking garage. Closing this station would be terrible for the community. |
| I use the Grosvenor-Strathmore station on days when I need to drive and park. My other nearest metro, Medical Center, doesnt offer parking. Please keep Grosvenor open. |
| The Grosvenor-Strathmore station is very important to the large number of people who live in adjoining Grosvenor properties and along Tuckerman lane. This is a fairly highly-populated area and once government agencies fully open will again provide a very convenient means of transportation for them. |
| Why? Rules and unpredictability will hurt business. If there is a station, it should be open for all operating hours |
| Federal Triangle and Archives are the 2 closest stations to my workplace. Walking from Metro Center and from Gallery Place would add time and distance to my commute, especially bad during inclement weather. |
| A lot of people relocated to homes along the new Silver Line - some secure in the Metro pledge to open stations west of Wiehle-Reston. Entire apartment buildings and condos have gone up along the Tysons corridor and now you say youll close McLean and Greensboro? This is beyond ridiculous. Furthermore, if you close EFC, how will anyone west of there transfer to the silver line to go west to Tysons, which is apparently all that will be left? Absolutely the dumbest idea of the lot. Furthermore, visitors to DC count on Metro to help them avoid the cost and hassle of a rental car. Closing Smithsonian??? Arlington Cemetery? Our areas top destinations need Metro access. |
| These station closures combined with certain bus route eliminations would strand riders and make it nearly impossible to get around. |
| I go to so many of these stations, and when you can claim they are near other stations, you are discriminating against people with mobility problems. The whole point is that metro stops are offered at many locations so folks do not have to walk so far. To take these stops away would be to close off these communities from those who cannot drive. |
| I think it is shortsighted to be making these decisions at this time. The pandemic has changed everyones schedules but hopefully not for the long term. If my station, which is on the proposed list, is closed I will not travel to a less convenient station. If metro isnt convenient, I wont use it. |
| Some of these metro stations are widely used during "normal" times. I would not make this decision to close stations prior to 2022. |
| i cant fathom how youd say that clarendon has low ridership. theres a constant stream of people every rush hour. clarendon is walkable from my house. if you close it my walk will be 1.5 miles to courthouse. thats absurd. thats going to screw thousands of people who own and rent in the area surrounding clarendon. arlington was BUILT on having ALL these metro stations. its ridiculous to close them out of the blue. it would be like closing 66 or the beltway after a hundred thousand homes have been built around those commuting patterns. |
| I use Ballston, but I think this would affect me as more people would be coming in from other areas of Arlington to use Ballston. |
| The closing of these stations would affect the commute for a great number of people in the DMV. I live in Clarendon and used this station every day to commute into the city prior to the pandemic. I would use it again regularly |
| How does even save money? You're just turning more people away and making WMATA obsolete. Forcing people to find something other than PUBLIC transit. Public meaning people can actually use it... |
| My wife's sole location for transit into DC is East Falls Church metro. This is a very active transit hub under nine COVID conditions. Use of cars to commute in this area is financial infeasible because of outrageous pricing on 66. Not to mention ridiculously high parking costs in DC. |

Proposal to close 22 Metrorail stations

Soy usuaria de las estaciones de Mclean ya que resido cerca y de East Falls Church ya que trabajo cerca. Me afectaria negativamente el cierre, no cuento con vehiculo y el metro es mi unico transporte.

First of all, determining what stations have low ridership after a year of pandemic, and anytime in the near future, is ridiculous. Second of all, having a few not-so-busy stations instead of packing everyone into one busy station is a good thing. Third of all, do you want this city to be accessible or not? Nearby is a completely arbitrary measurement, especially in areas where its impossible to walk safely between stations, like on the Virginia end of the Silver Line. Once again, cutting service instead of expanding it is not what we should be working toward.

People attending concerts at Strathmore would suffer and have problems in getting to and from the concert hall at Strathmore.

If the stations are already there, seems like operational savings would be minimal compared to cost to build and open. Many of these stations are important civic centers and particularly in the Roslynn Balston corridor have seen incredible MDU housing developments come on line during the COVID Pandemic. I dont think you can accurately predict what the post pandemic ride levels will be in 2023 (will take a year to get out of pandemic mindset in best case). For me personally, Clarendon is one of the stations I can walk to and it would dramatically decrease metro usefulness and likely force me to drive more than I would otherwise.

I will be commuting daily to College Park and regularly use the Archives station for work as well. This would have a truly devastating impact on my life. I honestly dont know how I could get to work without the College Park station in particular, and I know many colleagues are equally concerned.

I use these to go to work!

Grosvenor station is critical for me.

East Falls Church station is not even near any other metro station that's why it shouldn't close at all! East Falls Church, Clarendon, and Smithsonian are very important stations for my commute and hence shouldn't close.

How would this work? W/ busing to the closed stations from the nearby stations? Is that why the proposal only includes stations w/ other station nearby? How does closing the station and busing save any money over just keeping the station open?

I walk to the East Falls Church metro every day. My home value is at least \$100,000 higher because of walkability to the metro. Entire neighborhoods will lose millions in property values if they lose proximity to metro stations. These closures would dramatically increase crowding and danger on platforms during rush hours. Perhaps they could close fom 10am- 4pm during the week. Study ridership patterns and create options to maximize ridership, not turn people away from metro.

As senior citizens , docents at the downtown museums and frequent users of the Orange line to go and come back from downtown DC or to connect with other lines , closing the VA Sq station would be a huge inconvenience. We rely on public transportation as a way to avoid using our car and bought our house 10 years ago because it is only a few blocks from the VA Square station. Absolutely an unacceptable proposal for my husband and I .

On a normal day it takes me one hour to get to work. If the metro close to my house (Mclean) is closed, I would need to take a bus to Tysons, thereby adding to the commute time.

Need these important stops

There are many retail stores, restaurants, and other service providers in the Clarendon area that would all suffer if the Clarendon metro was permanently closed. It would also be very difficult for people who want to use these services or live in the area. Additionally, closing both Virginia Square and Clarendon makes it a stretch for people to get through the orange line corridor.

If museums open which they most likely will in the next three months ridership will greatly increase. Also college park should continue to have service. It services lots of federal buildings that will most likely open in the next few months.

This proposal would negatively impact the neighborhoods surrounding the closed stations. If we are back to normal in 2022, this will also impact tourism as many of these stops are for attractions.

Ive depend on the Grosvenor-Strathmore station on a regular basis, and losing access to this location would affect my life negatively. This is my first choice of transportation to the Washington, DC and to the Maryland suburbs. The walk to the Grosvenor station enables me and others to access jobs, doctors appointments, and social activities and I respectfully request that the Grosvenor-Strathmore Metro Station remain open.

We need East Falls Church station to stay open for commuting to work.

I work in the Tysons area and have McLean as my stop. Tysons is not walkable. At. All. The Tysons Corner metro is not a suitable substitute for McLean. Similarly in Arlington, Clarendon or VA Sq should be open and Court House should close. Ballston - Courthouse is a pretty long tract with many residents and metro commuters who should expect to be using the system by January. Alternatively operate express trains with less stops while still maintaining service to some stations.

Grovensor- Strathmore stop is in a residential community, and allows commuters to get right off ear there home, plus it has a bus depot.

Proposal to close 22 Metrorail stations

Isn't Grovesner-Strathmore a higher density station than its nearer station?

No, stations are not close

This will not impact my work commute, which is most important. However Clarendon is a lifestyle hub that I use frequently. I recognize it is within walking distance of Courthouse, but Clarendon has a Trader Joes and a Whole Foods and people grocery shopping without cars rely on the Metro. Courthouse has important government buildings, but it will be easier for people there to walk to Clarendon than for people getting groceries in Clarendon to get to Courthouse. Clarendon also has way more businesses and restaurants than Courthouse. I would rather you closed Courthouse (I live in Rosslyn). Cleveland Park also seems like an odd closure given the number of restaurants and businesses that have located directly by the Metro. Judiciary Sq and Smithsonian are also the easiest ways to get to the National Mall via the red line and blue line respectively, and several important DC government buildings and the US Department of Labor are at Judiciary Square.

This would be awful. This kind of service cut would force me into a car. It just takes too much time to get to a nearby rail station via bus. For others, who don't have cars and are pressed for time (e.g., need to pick up kids at school or daycare), they would be severely adversely impacted if their commutes were extended by station closure.

College park is a very useful stop for UoM students and people in the Surrounding areas. This is really not a good idea!

No no no!!! The whole point of Metro is to provide convenient access to the District. This is a huge list of stations, some of which I use very frequently.

Nope. Just nope. Plus it looks like metro wants to discourage tourists from riding based on even thinking about closing Smithsonian and Arlington Cemetery.

Clarendon is a major residential, retail, office, and restaurant location on the Orange Line, perhaps the most popular location. Also a higher education institution is served by this metro stop as well as multiple churches and preschools. Closing this station could possibly result in more intoxicated persons driving as the area is a hotspot for bars.

No! No! No! Grosvenor is the stop closest to my house and it is totally inconvenient to use another stop. I actually purchased my house in large part because of the proximity to the Grosvenor station. If the station closes not only would it be inconvenient for me to take Metro to work, it would also vastly decrease the value of my property. It is a HUGE selling feature to live in a neighborhood that is within easy walking distance to a metro station. I would view it almost like a governmental taking if the Grosvenor metro station were shut down.

I cannot believe East Falls Church Metro station has low ridership.

East Falls Church is a pretty critical station as it is a transfer stop for the Silver/Orange line. This is the stop I most frequently use so it would be a major inconvenience - I guess Ballston is supposed to be the option?

[Sigh] I can go back to walking to the Van Ness station every day, I guess. But it sucks.

This includes the station near my house and my workplace making metro useless for my commute.

Arlington Cemetery and Smithsonian should be open on weekends and holidays to promote local tourism. You will destroy property values of homes, apartments and the like built within convenient walking distance to certain proposed closed stations.

I use Cleveland Park, Clarendon and Virginia Square.

Judiciary Sq, Smithsonian and Mt Vernon Sq and Federal Triangle needed for seniors

We need Grosvenor-Strathmore to stay open.

Many of these stations have been leading the way on transit-oriented development and their closure would be a significant setback to future TOD.

I use several of these stations and would be less likely to use metro if these stations were closed (Virginia Square, Clarendon, Federal Triangle, Federal Center SW, and Smithsonian)

I have a special needs daughter who relies on the Grosvenor station.

The Clarendon Station is a major destination.

Why close Strathmore when it is adjacent The Music Center at Strathmore? I think you need to see how ridership plays out when theaters, restaurants, museums, and other businesses are opened back after the pandemic. You seem to want to cut your ridership down to commuters only.

I am baffled by the inclusion of EFC on this list given the ridership I've seen there historically. It's also a major transfer station between the rail and buses. Not a clear case I can see economically.

George Mason University plans to have 75% of classes back on its campuses as of Fall 2021, and increased occupancy in Spring 2022. If both Virginia Square and Clarendon stations closed, that would be a hardship for Mason students.

I will be starting a new job in 2022 and so am unsure if this will be fine or incredibly problematic. I do have concerns about closure of some of the further outside DC stations, as parking availability for commuters at those stations is already a problem.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Montgomery County has new development planned that is predicated on the Grosvenor-Strathmore metro entrance in operation. Closing this station would be a disaster. |
| Need Grosvenor open for travel and parking |
| Please do not close Grosvenor-Strathmore |
| I have friends who live in Reston that I see often, and I was looking forward to the Reston Town Center station. The other station closures do not affect me much, but I would generally prefer increased time waiting for a train at some stations to fewer locations available at all. |
| Please do not close these train station. We rely on metro services and you planning all these station will cause extreme inconvenience and we will have to spend a tremendous amount of money on uber. |
| I moved from DC to Reston a few years ago. Our choice to move to Reston Town Center was in part because of walkable metro when the Silver Line expansion was completed. Pre pandemic drove or took the bus to Whiele. I can walk to the new Reston station. |
| Grosvenor is the easiest station from the beltway to get on the metro into dc. Closing this would create an incredible strain on rockville pike and the beltway for people having to go even further than they already do to commute into DC. There is no good parking options at NIH and getting to Bethesda adds at least 20 min drive considering the construction there. And further up the line youre just adding further traffic on the beltway trying to head up the road. |
| Not ideal but could work with it. |
| This is a terrible idea! |
| Although there are other nearby stations, they are not within reasonable commuting walking distance for individuals commuting to work. Healthcare workers at Medical Center typically need to commute early, arriving by 6:30am. This would be especially difficult in the winter. |
| This is the most infuriating and concerning of the proposals. I am going to be living in DC and commuting to the University of Maryland, College Park. I do not have a car and I cannot afford one. I am a PhD student and a teaching assistant for the university, so I will be using the College Park station on a weekly, if not daily basis. My livelihood is predicated upon there being a station open in College Park from which I will take the UMD shuttle to campus. The distance from other shuttles would also lengthen my commute and be an undue burden. My ability to be a contributing member of both communities is dependent on having access to the College Park station. |
| Grosvenor station is not near another station. It is 2.5 miles from Medical Center and 3.6 miles from white flint. That is too much of a walk for most people! |
| Living across the street from a metro station is very convenient to commute to the DC area without having to drive to the metro station or drive into DC or another metro station. It is also why I chose the apartment location I did. |
| We need those stations. We need the parking. Housing built near some stations. Some stations near work places. Metro would be too crowded and people have to walk farther. R I dership will pick up in 2021 and 2022. Of course ridership in down now for stations near Federal buildings and Smithsonian and monuments. |
| Clarendon and Virginia Square are our most walkable stations and have had a lot of traffic when I have ridden it, particularly at rush hour times. As between the two, Clarendon is the busiest so if you had to close one, Virginia Square would be the one to close. You should also think of the future in making your decisions. Lots of potential riders will be living in the new Apts and condos being built in the metro corridor hear and many residents don't have cars. You will lose many potential riders and more Apts will not be built if Metro access is cut off. |
| huge inconvenience closing existing stations. Many of which dictate which apartment I would choose such as Va Sq and Clarendon |
| Might not work for many people. I would note that tourists would have less access to some sites. |
| One of the reasons why my husband and I bought this specific home was because it is a walkable distance from the Mclean metro station. My husband, as with many other Mclean residents, rely on this station to get into DC. Also, there is a lot of construction going on here, like https://www.fairfaxcounty.gov/tysons/scotts-run-north-rz-2011-pr-009 , https://www.fairfaxcounty.gov/tysons/highland-district-rz-2014-pr-021 , https://www.fairfaxcounty.gov/tysons/scotts-run-station-south-rz-2011-pr-010011 , that I imagine would bring a lot of traffic and people to the area. It would be a shame to take away a way for people to easily get to Mclean. The Tysons Corner metro is nearby but Tysons Corner Mall is very adamant about not allowing people to use their parking for the metro. Also Tysons is not like DC, in that its not easily walkable from station to station. |
| We often use Grosvenor-Strathmore station. This would be very bad for those who attend Strathmore Hall events. |
| The stations outside of DC lack sufficient road and parking infrastructure to make this viable as ridership increases. |
| Are you really going to cut service to UMD and/or Strathmore Arts Center? Much too severe! |
| I live near Cleveland Park. I moved to my house to be near metro. I have challenges walking so making me walk to Van Ness does not seem ideal. I could take the bus but those will be crowded with folks like me who do not want (or cannot) walk. |
| I'm walkable to East Falls Church, not W falls Church or Ballston |

Proposal to close 22 Metrorail stations

Closing stations with major parking garages like Grosvenor seems like a bad idea. Stations that are near each other in the city are probably fine to reduce.

Plan is not acceptable and would impact my commute significantly as my place of work is directly adjacent to Clarendon at 3101 Wilson Blvd. Transfer to a bus adds additional time to commute which already includes a bus transfer to West Falls Church Metro Station.

I am suspicious of the impact of this on folks with low incomes. Many of these do not have a walkable alternative. It would also nuke property values.

Please don't close Grosvenor-strathmore as is a really important station. Not only for the people who live around but also for the people who come to Strathmore from other locations in the DMV.

I use the Smithsonian stop a lot when the museums are open and walking is more difficult for me than it used to be. While I don't use the Arlington Cemetery station, I think it would be a shame to close it when it's so important for tourists, particularly military tourists.

The whole purpose of the metro stations is for convenience of transit. This idea completely contradicts the purpose of a public transit system by further inconveniencing commuters/riders and disincentivizing its use. People will stop using metro entirely if we have to use bus transfers all the time due to closed stations everywhere.

While this would not directly effect my normal commute, I do think it should be taken into account how it would effect the disabled and others who would have difficulty getting where they need to be with certain stops closed, especially those who live near these closed stops. Including during inclement weather.

East falls church is a well used station. As is Smithsonian.

I am a Senior and would find it very hard to get to Metro if Cleveland Park station is closed

Clarendon and Virginia Square have a vibrant restaurant scene and this would impact businesses in the area (and my visiting them) very unlikely. Similarly the Smithsonian is an important metro station for cultural reasons and its closure would impact me

Yikes, we were thinking about moving to Mt. Vernon Sq. Maybe not, if there won't be reliable metro access.

As the region struggles to re-open and life starts to return to normal, and the demand for the subway grows from workers and tourists alike, closing the metro stops in DC will adversely affect ridership, and Metro does not have the parking capacity or bus routes to support the increased demand at the other stations outside of DC. In addition, closure of Cleveland Park adversely affects access to the zoo (especially a level, wide sidewalk for strollers and wheelchairs); closure of Judiciary Square will adversely affect the operation of the courts and the hundreds of jurors who need to travel there; closure of Arlington Cemetery is a disservice to all of us who have family members buried there; closure of Grosvenor Strathmore reduces access to the arts; and so on. ALL of those stations were put there for a reason.

If the East Falls Church station was closed, I would not opt to drive to another station. I would drive to work. So, this would result in lost ridership and revenue, making the deficit worse.

With Strathmore Music Center serviced by Grosvenor Strathmore and recent investment in parking garage, etc., would make more sense to consider White Flint or Twinbrook for closure.

Closing the College Park station would significantly reduce my use of the Metro. Also, current usage at the UMD is likely highly influenced by COVID.

would leave handicapped riders stranded and leave regular riders with no safe options for the distance between station and destination

Close 22 Station while you spending huge amounts of money on new escalators doesn't make any sense. Furthermore, you are not spending on energy efficient escalators which is just wasteful. You need to get your priorities straight. You close 22 stations will cause congestion and ultimately reduce ridership. You need to cut from within not penalize riders or you will never get them back on metro. You aren't enforcing mask requirements, I have seen many people without masks. I have seen many people jump the turnstiles, resulting in loss revenue. You need more metro police on duty. You need to reduce your overhead. You are making repairs to the silver line which is only a few years old. These repairs should be taken care and paid for by the crappy contractors hired to do the work. What are you thinking???

What's the point of having Metro if half the stations aren't serviced? What would Metro do with all that current infrastructure? How are you supposed to get to Arlington Cemetery?

I live at Grosvenor and do not drive so depend on metro

I live at Clarendon metro and this would be a horrible detriment to the neighborhood. The success of the Ballston-VASquare-Clarendon-Courthouse-Rosslyn corridor is due to the orange line servicing this region. It is a major positive to living in the area being in walking distance to mass transportation like the Metro. This would have a negative effect on residents, commercial properties, and residential rental spaces.

Closing EFC station would totally change my commute, adding bus transfer or requiring a car.

I have submitted testimony against the proposed closure of the Grosvenor-Strathmore station. This would be detrimental to the partnership WMATA and Strathmore have built, to the potential of jointly developed Strathmore Square, and to the residents of the arts-infused community we have created.

Proposal to close 22 Metrorail stations

Grovesnor is a centrally places stop on 355 near homes and private schools that kids commute to... Also, it has ample parking not available at the stations surrounding it Critical to the Kensington/North Bethesda area.

Though the stations are close, the walk, particularly in inclement weather, is prohibitively long. Not everyone can afford to take a cab after taking the subway.

Getting from Silver Spring to DC and to Bethesda would work for me. However, I am an advocate of the Strathmore Square preliminary plan, already approved by the Montgomery County Planning Board. It envisions residences for 1400 households (15% moderately priced units). We are in very desperate need of more housing in Montgomery County (real estate prices keep rising given the increased demand). This project is to break ground in the next couple of years, but if Grosvenor-Strathmore is closed, I fear that the critical final funding may not materialize and thus a huge housing boost will be lost.

I would think by 2022 ridership will be back up almost to where it was prior to the onset of Covid 19. A lot will change in the next 10 months and I don't think it's prudent to make these changes until it's definitely necessary. Perhaps you can put this on the table for the future, but still amass the necessary information.

East Falls Church is my metro and where I park; Judiciary Square is my work exit. The Metro would no longer be viable for me.

This would impact my ability to get to work and may change whether I drive to work instead of take metro

No, I chose to live in the Parc Meridan at Eisenhower Parkway solely because of its proximity to the Eisenhower Station. Please do not close it. I am a Disabled wheelchair user and need that station to remain open.

THIS WOULD AFFECT OUR ENTIRE COMMUNITY RIDERSHIP AND LIFE OF LIVING.

East Falls church has had low ridership because it was CLOSED FOR CONSTRUCTION! Additionally, it is the break off point for the silver line so it should remain open as a look to the future when we can get to Dulles from Arlington. Many future Amazon employees will look to live in Arlington because of schools and quality of life - they will want to ride in from home to work. Arlington stations should remain OPEN!

Reduces convenience but seems reasonable especially for the downtown stations.

I feel some of these closings may be needed but not all of the above. Clarendon I feel is a needed stop because of so many restaurants and businesses located here.

At least if silver line runs between Reston and east falls church would be helpful. I solely rely on silver line.

This would decrease the convenience of the metro, I would definitely use the metro less without these stations.

We use the Strathmore/Grosvenor most frequently and also Smithsonian.

Clearly, no one has calculated how saturated are these areas and commute to the DC and beyond, you would know what eliminating public transport from the areas that. so far still provide decent education and affordable housing will throw big parts of the population further down the poverty line increasing the gap between the rich and the poor (which already was quite noticeable). How does this support federal employees and the contractors commuting to their jobs? Health workers and other essential workers reaching hospitals, teachers getting to schools, etc? Do we realize how bad is the economic situation for these jobs (and even worse ones that have barely any income), to restrict their movement via already overpriced metro services? How does anyone imagine this will diffuse traffic or not create further shift in how this drives housing inequities ?

Instead of closing stations why not have local and express service like other large cities do. Express service would bypass the less traveled stations. The local would stop at all and run at different times.

Certain stations like Virginia Square are very close (walkable) to another station, and should be closed. However, other stations like East Falls Church are miles from the next station and not walkable. Instead of closing these stations, is it possible to look at other proposals to increase ridership from those stations? For example, If East Fall Church had more parking available would the park and ride increase ridership? Could these stations be opened just during rush hour to help people use Metro for their daily commute, or for special events, but then closed the rest of the time? Could these stations be fully unmanned, so automated purchases only, to help MWATA save expenses, but still provide riders the convenience?

I work at Federal Triangle and am planning to use that station again when I return to the office. I live at Ballston and closing Virginia Square, East Falls Church, and Clarendon could make our station exceptionally crowded. Closing all these stations would have a huge negative impact on the system, particularly the loss of the more centrally located stations. This is the worst of the proposals and I hope Metro will avoid it.

Sometimes I have work and college park is the best stop for me. Instead of having to get off at pg and then taking the bus that I hope is running to make it on time. This could add another hour to my commute

As long as you keep open Ashburn station. We need options for parking at this end of silver line. Keep airport station open too.

I wouldn't be pleased if I lived in Leesburg.

I walk to East Falls Church to commute to work!

Proposal to close 22 Metrorail stations

We need to keep Grosvenor-Strathmore open!!!!

This is outrageous that metro is planning to close Grosvenor-Strathmore Metro because of low ridership within the last year due to the pandemic. Things are starting to open up again, people are getting vaccinated. I use the metro to get to work everyday. I use the metro to go to DC on days off. I live in an apartment by the metro because I frequently use the metro. Taking away the metro defeats the purpose of the property that were built for commuters who take public transit in the area.

East Falls Church is not walking distance to other stations like many of the others on this list. While Virginia Square riders can walk a few more blocks to Ballston, EFC riders do not have an alternative option that does not require a car.

Several of these stations serve major and growing residential areas. Would be terrible to shut them down. Especially bad - Clarendon, College Park, McLean, Reston Town Center. Overall this plan undermines years of regional planning. If implemented at any level, time limits must be placed on how long the closures would be and regularly reconsidered..

This is too drastic. Perhaps close certain stations on weekends, etc.

I would not recommend closing Grosvenor. This would greatly impact me. That is the station I use for commuting to work in DC. If you need to close a line on the red line I think closing White Flint makes more sense.

Cleaveland park is an easier walk to and from the zoo. It is not upHill

East Falls Church should remain open due to train changing between orange and silver. Smithsonian should be open. Tourist rider traffic should return after pandemic. Same for Arlington Cemetery.

Nonono! This would be very bad for me as I use East Falls Church to go to DC, to go to GMU campus at Virginia Square and when I visit the museums in DC (I go to Smithsonian station) Please, please do not close any of these stations!

It would be madness to close stations which are changing points for multiple lines, such as E. Falls Church. It would destroy the systems utility!

Thousands of people and DC Tour Guides will again visit Arlington Cemetery

Closing stations introduces confusion and takes away from the public transit mission to serve people where they live. This introduces a burden on commuters and people who rely solely on metrorail and metrobus for transportation (i.e., do not have a car).

My family uses Grosvenor-Strathmore to get to work, school and everywhere else. The closure would severely restrict our ability to get to and from work, pick up the kids and every other aspect of our lives. It is not just about finding other modes of transportation which would be inconvenient but also the added time. Keeping adequate hours at work and still getting to picking up the kids will be impossible.

Near other stations, in a system with such long interstations, is a stretch for many of these, and expresses a seriously car-oriented mindset. For those who choose, or by necessity, to live without depending on a car, closing the only Metro station for a mile in either direction will seriously impact ones mobility.

Even though I only ride occasionally, these closures would represent a major disruption.

Closing either Clarendon OR Virginia Square might work, but not both, the gap between Courthouse and Ballston is too far.

Inconvenience!!! If I cannot take metro, I will take the Marc train and NEVER come back to metro.

A lot of government employees use the rail to commute to work. Closing Federal Triangle and Judiciary Square will inconvenience a lot of workers.

I do not stop at any of these stations.

As I stated in a prior section, I believe businesses in Clarendon would suffer with no Metro service.

Grosvenor-Strathmore Should not be closed. This provides transportation to many locals heading into DC.

Closing stations is absolutely not acceptable

Must keep Federal Triangle, not smart to remove the downtown DC ones, would request better Bus service to Arlington Cemetery

I use the Clarendon metro station every day to get to work. It was a very crowded station prior to Covid and will likely return to that once people return to the office. Courthouse is a significant walk. Virginia Square is slightly closer but is not realistic for a woman commuting with a small child. If Clarendon were to close I would not be realistically be able to use public transportation.

This is absolutely unacceptable. I am elderly and live within walking distance of East Falls church. I moved here 3 years ago to be close to a Metro Station. I cannot walk to Ballston. Also, for everyone near this station, our property values will go down if you close this station. In the next year people will be going back to jobs in DC. They need Metro. Closing East Falls Church is a terrible idea.

Judiciary Square is a key metro station for my work needs; Clarendon is regularly used as it is near my residence.

Proposal to close 22 Metrorail stations

This is monumentally wrong. This system has too few stops as it is. There is very little parking, the trains take too long and the entire system doesn't meet public needs. This is NO time to make the system even worse. You might as well shutdown entirely.

This would be catastrophic and will result in me never riding Metro again, after 21 years of riding the red line. It will no longer be more convenient than driving to work or teleworking. Youve already invested in the infrastructure, now you propose to not use it?! It cant be that expensive to keep a station running.

The viability of using nearby stations is highly dependent on the weather. In heavy rain, snow, or the oppressive heat of august, walking to the next station is often not viable...

As we open up after the pandemic, this would further reduce ridership on Metro and make Metros problems worse.

My office is directly connected to the Clarendon Metro and really makes a difference in my commute. I would be forced to take a train only part of the way (to Rosslyn, Court House or Ballston) and walk/bike/scooter the rest of the way. At that point, I would stop using Metro altogether and opt to work at home full time. There would be no purpose for me to take a train most of the way; I need to go the full distance and Ballston or Court House to Clarendon is a very long walk, especially in 30 degree winds.

The action of closing Grosvenor-Strathmore would force me to move. I dont have a personal car and depend on public transportation for all my travel needs.

I rely on the Grosvenor-Strathmore station to get to work.

The VA Square and Clarendon Stations are close together. Close one, but not both. While The VA Square station is better for me (senior citizen) I suspect the Clarendon Station would be better to keep open.

I bought my house last year because it's close to Grosvenor-Stratore metro, since after that, my commute time to work has reduce from 2 hours (one way) to 1.5 hours. Closing the metro station will increase my commute time again and I've spent all my money to buy the house, and it caused the waste of money.

Many of these stations are at popular tourist destinations. As riders bail due to wait times, tourist traffic will be more important. Our guests ALWAYS wanted to ride the Metro to the sites like Arlington Cemetery, Smithsonian and Museums.

Metro is the only way I can get to work in downtown DC. Once my employer allows me to return to the office, I will and will take metro. Cutting back hours would be more preferable than shutting down the station. EFC station was recently upgraded and is a key aspect of our community travel. I am concerned about how this would impact my ability to maintain my employment. It is unclear if this is a permanent or temporary proposal and if temporary for how long.

This proposal would greatly reduce ridership because people would not be able to use the station closest to them, and would take their cars all of the way to work. This would also hurt the environment due to increased cars on the road.

Closing any station is ridiculous!!! You might as well just shut down the entire system!

Grosvenor has lots of parking which is needed

Keep Cheverly and College Park stations open. It maybe very difficult to get parking at the New Carrollton Metro once the Purple Line opens. Commuters may want to drive and park at Cheverly and ride the train into DC.Regarding College Park Metro, that station is critical to connecting with Red, Green and Yellow lines. This is a vital transportation option for UMD students.

Museums and businesses are suffering this will make more of a burden on them.

It makes sense to adjust the times that certain stations are open, due to ridership. Closing stations all together will waste funds already spent on improved infrastructure (garages, etc) and result in long term decline of ridership. People seek to live and work near metro. If that is permanently stopped, they will drive. Nobody wants to ride to the next nearest station, then have to take another step to reach their destination. Theyll just stop using metro altogether.

The low ridership is likely due to the pandemic and work-from-home mandates for many. What happens when employers open back up and employees go back to work in the office?

Is the option to re-open the stations once ridership increases available? If so Id agree to this.

I understand closing stations that are close together like Clarendon and Virginia Square but places Arlington cemetery that are harder to get to would be better to keep that open especially so that families can visit their loved ones at the cemetery

Closing the newly planned silver line phase would cause substantial problems in travel in 2022. Due to the covid pandemic, many of us have relocated to areas like Ashburn, Loudoun county with hopes that the silver line was almost complete and by 2021 it would be up and running which would save a considerable amount of time for families with kids who might need to be in time to pick from daycare etc, please do not close these lines. Also I am sure a lot of time and money would have already been invested in such efforts. Its only a matter of time when the workforce gets back to travel you might actually see a lot of rides from these areas.

I could understand closing Virginia Square (although Its my closest station) but NOT Clarendon or East Falls Church, given the distance between Courthouse and Ballston, and Ballston and West Falls Church. Closing Smithsonian seems unreasonable too, since it looks as though LEnfant Plaza would offer the only access to museums on the Mall.

Proposal to close 22 Metrorail stations

Grosvenor-Strathmore station is totally necessary since it provides car parking and access to those who work in downtown DC/ Bethesda/Silver Spring/Maryland University

I live in college Park. This will totally ruin my commute and I would have to find either a new place to live or work

I am near Grosvenor -Strathmore (1.2 mi) , so it is my station. I walk or bike there and back sometimes. Strathmore music facility was designed with Metro access in mind, and considerable development is happening in this area, designed with access to Grosvenor-Strathmore Station. If it is absolutely necessary to close for a short period to shore up finances, maybe that would make sense, but given all the developmental planning, and the booming development in this area, it seems very unfortunate timing.

I live next to the Clarendon metro and starting in March 2021, will start commuting to work via metro. I will utilize the Clarendon metro station most days of the week. Not only that, but there are businesses close to the metro that have been struggling because of low ridership of the metro. As workers start going back to office buildings in 2021 and 2022, the Clarendon metro station and adjacent businesses will start to recover and be used/visited more often. Closing the Clarendon metro station will not only hurt ridership because the other stations wont be convenient for travelers, but local businesses will struggle and possibly fail. That doesnt have to happen if the Clarendon metro station stays open.

I just moved last month to a place for its convenience - it is 0.5 mile walk from East Falls Church metro. This will definitely disrupt my daily travel plans when my office reopens.

Closure of most of the DC stations listed will result in longer walking times. Closing Eisenhower Ave station is different- you can't walk from King St or Huntington to get there - there are major office complexes there - no Metro access will greatly increase traffic congestion in that area. Keep Eisenhower open if station closures are the plan

This will make my commute via Metro unworkable, and Ill get in a car instead, ending 30+ years of daily ridership during the week. I rode Metro every weekday from EFC to various stations in DC for work, and I expect to do so again as soon as my team returns to the office. Now youre talking closing my station, so Ill have to go to Ballston. But in another proposal, youre killing the 2A, so I have no way to get there. The combination means Ill never ride Metro again.

That defeats the purpose of the metro lines. Customers want easy access to areas, not restricted access.

If a nearby station doesnt have working elevators you would need to allow access to the elevators you would need to open the closed stations..for instance if Van ness elevator us closed I would use Cleveland parks.

This plan does seem to hobble VA more than MD, which doesnt seem equitable. Especially most of the orange/silver line between Rosslyn and Ballston would be closed, then again as you move into the suburbs. I dont live on those lines so it works for me, but again, I think life in those areas would be significantly hobbled with all those stations closed.

Getting to work would take even longer during weekday rush hours and rush hour travel times are already too long. Driving would become more of an option which would crowd the roads further.

This will work if the Tysons Metro Station get a train every 15 mins

McLean station is essential for my needs

Did you use usage from the past year for your decisions? Closing the downtown stations near the Mall is a huge mistake. When Covid lifts, this is a primary use of Metro in off hours. Also, closing stations that in areas that rely on Metro for commuting is ill-advised. We need to find a way to get increased revenue. In my area - East Falls Church is a huge commuter location. The lot has been closed for a long time, but closing that, Va Square, and Clarendon would be disastrous to Arlington.

Absolutely not!

Limit stations would decrease ridership and ease of use for the metro

Im a single mom of teenagers who lives in a condo near the Cleveland Park station--closing that station would have a tremendous impact on our lives, as well as the ability of my 83-year-old dad to visit us from Friendship Heights.

You are closing some of the most used metro stations. Your ridership will significantly decrease further if you close these stations. This seems like a hasty fix given the fact that people will begin going to work once the vaccine is more widely disseminated.

The metro station in Cheverly is the reason that I purchased a home in Cheverly. This metro station is critically important to my work and leisure travel. It reduces dependence on private vehicles and enables access to DC that is otherwise not available to my family due to my income.

Again just concerned about over crowding on trains

My job is close to Cleveland Park Station and then I leave from Grosvenor Strathmore. I rely on the metrorail to get around and commute to work. This is unfair especially during a pandemic when ppl may not have extra money to pay for ubers or have their own car

Locals use McLean a lot to drop off, but we would just go to Tysons. The expansion of the Silver line being put on hold hurts. My store caters to teens (Traveling Players Studio for theatre training). The teens being able to hop on the metro from anywhere in DC has increased our enrollment. Parents love not driving. Kids love being independent. The mall loves that the kids linger after rehearsal and shop or eat.

Proposal to close 22 Metrorail stations

Closing Clarendon and Virginia Square makes it extremely hard to get to that area. Additionally, closing other stations like Federal Center, Federal Triangle, and Smithsonian would negatively impact the city and cause disruptions for people who work in the areas and also to tourism which will likely be starting to pick back up at this time.

As a DC tour guide for student groups to DC, the closure of the Arlington Cemetery station would cause extreme hardship for meeting tour groups there. Arlington Cemetery is included on every student tour to DC. At a minimum, the station should be open during tour season from March-October. Similar issues with the closure of Federal Triangle and Smithsonian stops.

Would Grosvenor station closer negatively impact Strathmore Arts center? Also, there are many condo and apartment residences within walking distance of Grosvenor.

College Park is a critical metro station for University of Maryland students seeking internships in DC. Additionally closing Mt Vernon Square will underserve the local community. Shaw/Howard is convenient for many millennials and Gallery Pl/Chinatown is good for tourists, but Mt Vernon Sq serves a community of DC residents, rather than transient visitors.

I usually travel to Foggy Bottom, DuPont Circle, Rhode Island Ave, Brookland and Silver Spring and sometimes Navy Yard.

My daily commute does not involve those stations, so I should not be affected. These closures would affect trips into DC for social and sporting events, but work-arounds could be made of just walking a few more blocks.

Fed triangle is a major hub for people who work downtown. Why would you close Fed Triangle?

Why close Grosvenor when all this money was just poured into extending their parking garage? Additionally, when things start to reopen Grosvenor is a major commuting station for the surrounding area due to its parking availability and location. I understand White Flint and Twinbrook are "nearby" but it seems to make more sense closing one of those stations (with less parking) than a commuter station such as Grosvenor that services Kensington, Garret Park, and other surrounding towns.

Worst plan so far

College Park is essential for students to be able to have their internships and jobs. Cleveland Park is a major use station for people going downtown and up to Bethesda and is highly trafficked. Federal Center SW serves both the U.S. Department of Education and the U.S. Health and Human Services agencies - thousands of people work there and need that station. If you close Judiciary square, how will older people and people with disabilities manage as jurors, defendants or plaintiffs to get to court? Is there another station within easy walking distance to Arlington Cemetery that disabled vets could manage - probably not.

NO!!! This is a terrible idea. We rely on Grovesnor-Strathmore. If it closes, the parking garage at White Flint will fill up early. The result would be to effectively deny us access to Metro.

Losing access to Mclean would mean having to drive to work or try to find another stop on the silver line that has parking. Another option would be East Falls church but that is also on the list. Closing stations will just lead to more congestion at other stops so I don't see the point of closing all of these.

Absolutely not. This limits the accessibility of the metro system. This will cause the bus system to be overwhelmed and more people will drive individual cars (if they have the means to even own a car) instead of taking the metro. This causes injustice for people that rely on the metro. In some of the proposed locations, there is no alternative metro stop. More cars on the road will also result in more GHG emissions.

Is it really that much of a savings to close a station? Why not consider simply having stations unattended? Is a station manager really needed? They sure don't seem to do anything helpful...

Some service either bus or rail must be maintained for these location.

Grosvenor station serves a lot of people in my community. Should not be closed.

I need Grosvenor-Strathmore to be open to get to work.

This change would cause great disruption to employees like myself that need access to the redline from Grosvenor-Strathmore. There are also many people with disabilities that live in the apartments/condos near Grosvenor Station whose physical access to transportation would be greatly limited if they were forced to use another station.

I could deal with it, although I use Federal Triangle for commuting. How about having some stations close earlier than others. For example, Federal Triangle is mainly a commuting station, and Arlington Cemetery closes early. Perhaps some stations should just close earlier than others.

Grosvenor/Strathmore has significant use during normal times and is valued because of parking available. There is no parking at Medical Center. Getting to another station w/ parking during normal times would mean driving further during rush hour, decreasing convenience and/or going a fair distance in the opposite direction to travel into the city. This would decrease convenience and make mass transit less attractive for people in this area. We should be encouraging mass transit and make it more convenient. Please make temporary decisions for a temporary crisis.

Proposal to close 22 Metrorail stations

Closing both Virginia Square and Clarendon would be very inconvenient for me; need to keep one open, preferably Clarendon; having two stations next to each other closed seems wrong; close just one of them and due to the predominance of businesses and dwellings in Clarendon, would recommend keeping that open vice Virginia Square. DO NOT Close two adjacent stations on any line, close the one with less ridership of any two and take into consideration density of housing, entertainment venues and other business within close proximity of the station. Virginia Square is much closer to Ballston then Clarendon is to Courthouse, keep Clarendon open.

This would negatively impact surrounding property values, people with disabilities and public safety for those walking home after dark. Not to mention all of these empty metro stations would be a creepy eyesore.

Clarendon stop is adjacent to many restaurants and shops which would've adversely affected if it is closed. Walking from the courthouse station to those venues would be a deterrent for many people.

The Smithsonian station should not be closed because that is a frequently used station for both tourists and locals going to the National Mall. I frequently use the Smithsonian station on the weekends. If tourists cannot easily travel around the city, the tourism industry will be negatively impacted.

This doesnt work for me because McLean is closest to my work, and closing the station would make the metro almost useless to me.

I believe such a proposal can cause certain Metro stations to become overcrowded.

East Falls Church is the station where the Silver line comes into the Orange line. This station needs to remain open. Ridership at this station would likely increase if one or more Arlington stations were closed

Clarendon and Virginia square are close to each other and should not be closed at the same time. Perhaps Clarendon should be closed and Virginia Square should be open for a variety of reasons. Clarendon is mostly business related, and folks who hang around there are mostly restaurant patrons. They are NOT regular commuters. However, the area in Virginia Square is mostly condo owners and renters, and therefore, they need a steady source of transportation. It is true that these condos and apartments have parking, but they are also mostly permanent residents who need public transportation, unlike restaurant goers.

For the orange/silver/blue lines, skipping federal triangle and Smithsonian creates a huge gap in service. Once January 2022 hits, tourism would have returned and folks would be going back to work. These are very important stations for that aspect. Also, my favorite Mexican restaurant is in Cleveland park, and I'd appreciate not having to walk too far after a few margaritas

I currently walk or bike to Grosvenor strathmore. I would have to drive to other stations and I don't have a car. I moved near the metro for exactly that reason.

Federal Center SW is my stop for work

It defeats the purpose of the metro being convenient if stations are closed. It also seems foolish to choose successive stations such as clarendon and Virginia square. Im surprised clarendon has low ridership since its in the midst of retail and restaurants. And how can you consider closing Arlington cemetery when thats the only way to get there by public transportation?

Arlington Cemetery and the Smithsonian stops should never be shut down.

Must have college park station. The next station is too far away to make it in a reasonable time. Many college students, including myself, do not have a car, which would make it very difficult to travel to DC. There is no easy way that college students would be able to get into DC without the use of the metro

Need clarendon metro for work! Will move out of state if closed!

EFC is a vital commuter hub and should not be closed

The fact that Smithsonian is included on this list is a pretty clear sign that this was poorly thought out. This makes Metro already not a robust enough system for a city this size fundamentally useless.

My family lives in a walking distance to the Grosvenor station. My children, who are of high school/college age rely on the Metrorail system exclusively for their transportation needs. My mother-in-law, an active senior citizen, does not own a car and relies on Metrorail exclusively for her commute.

We need all of these stations. Closing them down impacts hundreds of people who cannot get to work or to go to places of entertainment such as restaurants, theaters, large venues, etc. This does not help anyone. For all of the reasons mentioned earlier, closing any Metro station has enormous, negative impact on our population . PLEASE do not harm our citizens as well as the environment by closing stations instead of keeping the open and adding Metro stops to places that do not have them.

I would probably wind up driving.

The silver line stations should not be closed, including the new phase 2 stations that are pending.

People who will be using metro to get to Strathmore concerts and the 2000 condo/apartments here in Grosvenor Park will have a major transportation hub taken away. People who have purchased their units based on this station may have no other options open to them.

Proposal to close 22 Metrorail stations

Archives is the ONLY my family tolerates your inept, corrupt, inefficient system. With the money we will save not using your system anymore, we ought to just buy everyone a moped.

Grosvenor seems important as it is rather distant from Bethesda or NIH.

This will ensure that I would cease to use metro and I expect several co-workers, friends and colleagues would also switch to driving in. In addition, I think this decision would undermine and reverse efforts to encourage development around stations intended to support numerous policy goals including expanding affordable housing, reducing urban sprawl and reducing carbon emissions by encouraging use of mass transit.

This negatively impacts the disable community in those areas, forcing them to use a further stop. It also negatively impacts community value. Residents move to areas with metro access, if their area no longer has metro access or increasingly limited access, they will move elsewhere.

This will negatively affect tourism, those dependant on Metro, and goal to increase ridership. Should be trying to increase ridership at these stations, not cut it off. Will destroy Metro

I think youre going to see DC opening back up by January 2022 so its pretty short sighted to close some of these stations, like Smithsonian, when tourists would presumably start coming back to the museums. While these specific station closures wont impact my commuting route directly, they will encourage more people to drive cars into the city. More cars brings more danger for pedestrians/bikers, more air pollution, and goes against the main goal of having a public transit infrastructure in the first place. We need more people to use public transit. Closing stations is going to keep revenue down because people wont see a need to use the service.

I used to go from Ballston to Clarendon grocery shopping.

This is a terribly sad and frightening forecast for our Nations Capital, very grim. And of course, where will we park. I suspect developers will buy the land and build up yet more insanely overpriced apartments and stores. Bringing more residents in, putting more and more cars on the street all for the profit of Arlington County. Disgraceful!

Some of those stations I never use but some of those stations i use frequently

I frequently use the Virginia Square Metro I live one block away from it. I also use the Clarendon stop for the shopping and restaurants. I work near the Eisenhower Ave Stop that would be devastating to me to not have the ability to use the metro in those three locations. Please do not close those stops.

I'm not sure how Federal Center SW has low ridership when there are numerous federal agencies there that use the station daily.

I live at one of these stations as do tens of thousands of other residents. I can understand not wanting to staff stations if they are less crowded but I cannot understand any reason to actually prevent access to the station. The New York City subway system has hundreds of stations that do not require any staff member, it should not be difficult to keep it open and just maybe clean it once a week on weekends. This would also just further crowd buses since you would be requiring people to commute to a different station. You simply cannot both cut service and cut open stations and cut available buses and expect things to work at all.

I live across the Grosvenor-Strathmore station and closing it would be terrible for us.

As noted, I can adjust my travel to meet metros need during this crisis time. I appreciate that there are not funds to support as many trains servicing as many stations. We all need to adjust - i love metro and want it to continue even if at reduced service.

Towns and counties have built vibrant communities around the metro stops listed above. It makes the DC metro region feel borderless and has been a success story for mixing living, entertainment and work. We love the metro and use it as much as we can. Closing the metros listed above will make it virtually impossible for us to take the metro - because it wouldnt be cost effective or time efficient.

These lines have been busy and will be again. Arlington has reduced parking excessively and now proposes removing alternative transport. Outrageous! Property taxes will need to be reduced SIGNIFICANTLY. Home values will drop along with tax revenue. Arlington has shown extremely poor judgment in its spending priorities.

Many of us use Cheverly metro station for work. As more vaccinations are given there will be more riders you must hold on.

Clarendon and Virginia Square closing means that people would have to either go to Ballston or Courthouse which are about 2 miles apart. Clarendon station is absolutely pivotal to the community.

Closing stations will only fuel the death spiral of low ridership

Grosvenor-Strathmore is a hub station drawing riders from close-by and further away Montgomery County neighborhoods.

My station is East Falls Church. Walking to Ballston is too far for me.

NO!!! Grosvenor-Strathmore is not, repeat NOT! close to another station! Going to school, going to work!! Traveling safely and serving the community! We need this station!!!

every owner in my condo building works in DC and totally relies on Metro for their daily commutes.It would be terrible to have to instead drive into the city - since there is no reliable bus serviceavailable.

As a resident near the Grosvenor-Strathmore metro station I utilize the metro daily to go into work and depend on it for all transportations

Proposal to close 22 Metrorail stations

absolutely crazy idea. Many of above mentioned station are very popular - Smithsonian??? Cleveland park??? Federal Center SW???Thia ias against all common sense

This would be absolutely devastating. I moved to my East Falls Church neighborhood because of walkability to metro -- as a New Yorker who values walking and public transportation, it was very hard to get my head around NOT living in the center of DC, but the nearby metro station is what has kept me ok with it. In Jan 2020 I vowed to use the metro more, and would be mostly taking it from East Falls Church to Virginia Square --both listed as potential stations to be closed! When I go to DC for work, it is usually by metro to the Smithsonian museums or to Kennedy Center. East Falls Church, Virginia Square, and Clarendon are vital stops on this important line. Before COVID, I know many DC folk take the metro to Arlington Arts Center to see exhibitions - not having the Virginia Square metro would be so damaging to a vital contemporary art center in the DC area. Before COVID, in the 7 years we have lived here, we have had regular visitors from out of state, and they all would use the metro regularly from East Falls Church into DC. This would be a devastating loss for us.

Grosvenor-Strathmore station is the only station near my home. I would no longer be able to utilize the Metro if this station was eliminated. The next closest station, White Flint, is more than a 30 minute walk from Grosvenor-Strathmore and it is not feasible to add an hour roundtrip to my travel time.

Absolutely not a feasible option. This HURTS many many people, employees, and businesses that rely on metro for accessibility to work and businesses. It also hurts real estate values for people who own homes and apartments within walking distance of the metro station. First priority should be keeping these stations open. This plan would reduce ridership considerably. Metro appears to be trying to discourage people from riding rather than encouraging ridership. Metro is shooting itself in the foot.

Grosvenor is a metro station that serves several apartment buildings and not just single family homes. It also serves nearby areas from where people can drive or bike to the metro station. Closing this station would also be detrimental to the business districts around the area as it provides a great connection with residential areas and people without cars can use it to go shopping as well.

Alternate stops to Strathmore would be too far to walk from my current residence

Grosvenor has parking; parking options at Medical Center are severely constrained. Close White Flint - Twinbrook is nearby.

Grosvenor is my local. Can walk to it or quick bus ride or car ride. Reason I rented here for 10 years and just bought my condo. Closing station worst scenario for me and residents. For our work-life balance, safety, quality of life, resale values and rent values.

I purposely bought my home to be within walking distance of a Metro station. Neither Ballston nor WFC stations are walking distance. I also use Virginia Square and Clarendon as destinations. This proposal closes too many stops on the Orange Line. Also, if closed, when would these stations reopen?

Federal Triangle, Smithsonian and others in central Washington are vital stations for government commuters, very important to keep open

I am extremely against closing Clarendon, East Falls, Church, Federal Center SW, Federal Triangle, Mt. Vernon Square (for convention center). Smithsonian (really - this is a major tourist station), and Virginia Square. I use all of these stations and having them closed would make the metro far less useful.

I need to get on the train at the Grosvenor metro. Also, what about people going to the Strathmore?

This is the WORST idea. Closing these stations would reduce the access to metro, availability to parking, increase commuting times and drive down overall ridership. Increase rates during the commuting hours of you must!

Nearby stations are not near enough to provide replacement service for elderly, disabled and other customers where a long walk and/or bus service is not feasible

This would add noticeable time to my train commute, because I would either have to go backwards up the line to get to Greenbelt or more than double my bike route to get all the way to PG Plaza.

This would absolutely not work for me. I work at the National Science Foundation. A FEDERAL AGENCY! Closing a stop that drops me off right in front of my office would be the worst thing you could do. You should not close the other stations either. Just because a station has low ridership doesnt mean someone doesnt use it.

Do not close Grosvenor!!!!

Grosvenor-Strathmore Has over ten different apartments complexes around the station. I know that during this pandemic it hasn't been used as much but once every is back to normal and people start going to work at their offices again then how else are they going to get there? They have to walk or drive to the nearest station which is also "closing" then look for the next nearest which is twenty minutes away. NO THANK YOU PLEASE KEEP THIS STATION

Although during COVID I have not been using the Metro to commute, my work schedule will entail commuting starting fall 2021. I am a heavy metro user during normal times and moved near the Clarendon metro specifically for this reason. I believe that the increased revenues through increased ridership will be seen in upcoming months (from others, not just myself) so that closing a station at such a central location as Clarendon would not be warranted. I STRONGLY oppose this proposal.

Some stations could be closed if they did not have the ridership sufficient pre-pandemic but a rule of thumb for all good public transit is to allow for easy access to it within half a mile of any given destination. Be it through bus or rail

Proposal to close 22 Metrorail stations

Spending tons of money on a new line to Dulles, taking way longer to complete it than it should (still not finished. And now we are permanently closing the brand new stations before they even open. What a complete waste of taxpayer dollars

This includes key stops that I use in, out and around DC

I hate this plan, although ridership may be low, lots of people require it, particularly in the east side of DC near College Park. Please do not go forward with this proposal

East Falls Church metro is vital! Pre-pandemic, I've used EFC every working day, an on weekends as well. CLOSING EFC WOULD BE ABSOLUTELY UNACCEPTABLE !!!

I think it would be fine to close some of that really are other stations- Virginia square is a good example. But my closest stop is EFC and there are no other stops nearby- why would that stop be on this list? Plus it is a hub for silver and orange lines. If a stop like this was removed it would put huge pressure on Ballston which is already typically too busy (pre COVID). I think closing some of these stops permanently makes sense anyway, others not at all. Maybe some could be closed temporarily - is that the idea?

We need more and more accessible public transportation for all, as an anti-poverty and anti-climate change measure.

As someone who doesn't have a car, closing these stations would seriously increase my commute time and require me to walk further in the wrong direction to a different station that would likely be way more packed because of the closure of the other surrounding stations.

I'll move out of the DC area if this is done. It would kill Kensington. That station does not have low ridership once people go back to work.

I live in Grosvenor Park and it would be very inconvenient

East Falls Church is the only station I can walk to, or easily take only one bus. Please do not close it

Closing down stations coupled with cuts in bus routes means more walking for your customers. When you make your customers walk so much, what is public transportation good for?

Closing Arlington Cemetery and Virginia Square make sense but closing Clarendon would be a hassle. Trader Joes is too far from Courthouse Station

Foolish to close Clarendon (restaurants, nightlife, lots of apts and condos), Smithsonian (tourists), Federal Triangle (lots of commuters).

How low is ridership in these areas? Would you be offering other transportation for people who live here? What constitutes as near other stations?

I live next to Innovation Center Metro - and moved here because of the convenience of getting into DC. to see friends and do activities. WMATA needs to get the Silver Line open. and operating - even if service is limited. I have to think the impact of leaving the station ready, but not used, will still cost money when Metro's funding issue starts to get better. Finish the Silver Line - get it open! This has taken too long to build, it just needs to get opened - come Hell or high water!

You've got to be kidding. WMATA has invested a gazillion dollars in fabrication of a new bike cage at East Falls Church. The distance between Ballston and East Falls Church is one of the longest segments. It's still further to West Falls Church which, relative to the neighborhoods served by East Falls Church, is in boon docks. You have extensive parking at East Falls Church. You have created a robust bus transfer system at East Falls Church for both ART and MetroBus. Close Virginia Square. Leave open Clarendon -- it's a combination of retail, apartment, neighborhood residential, and evening dining and drinking service. Virginia Square is a nothing burger by comparison. Anyone who resides near Virginia Square easily can walk to Clarendon or Ballston. Virginia Square has no real bus service. I ride Metro from East Falls Church to Clarendon to shop and dine. I've never gotten off at Virginia Square. This is nonsensical.

Many of these locations rely on having a Metro station nearby to sustain the businesses as there is not ample parking available for customers to drive to the location.

You can't be serious.

It makes sense to close stations where you could easily walk from an open one to one that is closed. But it defeats the purpose of having Metro stations in some places if you'd have to take the Metrorail then take a bus to a particular closed station. If shuttles were provided at regular intervals, that may work.

College park station is needed and every other metro is a far distance away. I use this metro and to use the next closest would force me to walk an extra hour each way.

Cheverly & college park are not near any other stations, particularly not within walking distance!

I need Grosvenor-Strathmore station because no other station is close enough.

So many of these stations (EFC and Smithsonian to name a couple) are well used and serve as hubs. Closing down these stations would be extremely short sighted and inconvenient. Many of us have deliberately bought homes near these stations so that we can take the metro to work and for recreation.

Me nuevo en Virginia y no me conviene que cierren estaciones en esta parte

East Falls Church is not within walking distance of any other station, it is also a transfer station

This could reduce ridership even further

Proposal to close 22 Metrorail stations

I moved to my current place of living due to proximity to the Grosvenor-Strathmore metro station. If this station closes, the closest station to me will be over 1.5 miles away. A commute I personally could make walking, but I would be along a very busy road and during many months would have to walk in the dark, which could be dangerous. Additionally, others living near me have disabilities that would not allow them to make the commute to another metro station, severely limiting their mobility and quality of life.

We are retired and depend on the metro to get us into and out of the city. It would be a financial burden to find other transportation given our fixed income.

Closing both College Park and Grosvenor-Strathmore would mean I would never ride metro again and would greatly impact both my personal life and my professional life. It would also greatly impact the ability of the people who work in my condo building to perform their jobs. This would effectively make the Metro pointless and absolutely ruin life in and around DC. This is completely unacceptable. College Park is the only reasonable stop to use for the University of Maryland, and Grosvenor-Strathmore is the only stop nearby that is within walking distance of MANY high-occupancy residences and the only one with reasonable parking anywhere nearby.

What a travesty!

I think more information must be shared with the public on the selection of these stations for closure. While I would not be personally affected, it is concerning that this could further limit transportation access among those who have no other options but to ride the Metro. Closure of some of these high-destination tourist sites also seems counter-intuitive if there is interest in re-gaining revenue as travel increases with access to the vaccine.

I used several of these stations frequently before the pandemic and intend to once again when the pandemic is over. Closing them would massively curtail my usage of the metro.

I moved to my current location to be in walking distance to McLean Metro station. With that station closed I would be unable to use Metro at all.

Virginia Square is the station I used to get to my job in downtown DC every week day before the pandemic. I also used Clarendon periodically.

Keep Grosvenor Strathmore open.

Some downtown stations might be closed because of their proximity to others, but suburban stations are not close at all. Gosvenor-Strathmore -- in the heart of a residential area where Metro is actually leasing its land for construction of more residential units -- is not close to anything; its at least a mile to either White Flint or Medical Center. A bridge bus is not an option - multi-modal DOES NOT WORK. People will not take multiple units to reach a destination -- theyll sooner drive. Cleveland Park is a commercial center surrounded by residential and Van Ness and Woodley Park are significant hikes. DO NOT DO THIS -- YOU'LL LOSE RIDERS PERMANENTLY.

Possible if augmented with a frequent convenient shuttle from the closed station to nearby station.

I live at Grosvenor Strathmore and utilize the metro regularly to travel to work (parking at work is limited due to having a metro stop.) Closing the station would also cause a huge decline in property values.

Closing both Virginia Square and Clarendon would have a significant negative impact on the orange line going into DC in the morning. There is already overcrowding at Ballston and Courthouse in normal times - closing CLARENDON would cause a lot of problems for riders on the Orange line.

This would make the subway too inconvenient. I would drive instead.

this is a ridiculously bad proposal. it would devastate the whole system.

If stations have to close, keep open ones like college park and cleveland park and Smithsonian. College park has many students. Cleveland park has amenities and Smithsonian is iconic.

Grosvenor-Strathmore will be busy again once the pandemic closures end. It has a bigger parking lot, so many metro riders drive there. Smithsonian stop needs to be maintained for public access to the museums & events, including field trips for schools and other organizations!!

Me and many of my colleagues take metro from grosvenor strathmore station to medical center and this is one of the very frequent route taken by the people living in the area. It is basic necessity for people like me who dont own vehicle or know driving.

If your going to close this many stations that I use I think the whole metro system should be shut down as a bad idea and a waste of money and I intend to communicate that to my local, state and federal representatives.

Closure of the Virginia Square and Clarendon stations would significantly disrupt access to key locations in the Arlington I-66 corridor neighborhoods, leading to additional traffic congestions and overloading service demands at the Ballston and Courthouse stations.

I live in East Falls Church. This proposal could adversely impact our home values. If I have to drive to Ballston to pick up Metro to get into DC, I likely wont use Metro. In the past I was a very active Metro rider. I will support the transportation system again if the East Falls Church station remains.

Closure of East Falls Church station coupled with the proposed modification of bus route 28A (reducing service on E. Broad Street) further limits my access to METRO services.

I do not make stops there frequently

Proposal to close 22 Metrorail stations

I use the East Falls Church metro station every time I commute into the city for work or anything else for that matter. I would likely have to consider moving if the station was closed, or my commute would be extended drastically in time. For people like me who walk to the metro, having other stations nearby isn't really applicable the other closest stations are 2.5 miles away, which is not feasible to walk to.

This is beyond unacceptable. Such a change would be devastating for the local economy here in Clarendon, and would deprive me of not one, but both of the metro stations within walking distance of where I live. This proximity to the Clarendon and Virginia Square stations is one of the reasons why I chose to move here recently (despite the incredibly high property taxes), as did many of my neighbors, and I am alarmed that this is even being considered as a possibility. And as someone who will still need to take the metro to work there is no way this plan could conceivably work.

Clarendon is co-located with my place of business and closing it would add 30 mins (potentially in weather) to my commute. You have no idea the ridership on the new silver line Ph2 stations until you open them... Building them, and then not using them, is non-sensical.

I live in Arlington and having access to the metro stations in Arlington is important to my travel needs

I use Strathmore Station! Plus it has a big parking lot so it is very convenient. Do NOT close Strathmore-Grosvenor!

You would close stations that haven't even opened yet? Closing stations that have other stations near them will cause those stations that remain open to become flooded with parking and people wanting to be dropped off and picked up. Closing some of the stations would be okay, but this is too many too close to each other.

Why not automate some stations and keep them open without staff?

I frequently utilize the stations at East Falls Church, Federal Triangle, Van Dorn St, and McLean. It would be a huge disservice to have them close.

College Park is convenient to get downtown from Northern Prince Georges County. Construction at the station is probably also contributing to low ridership

I will have to walk 2 miles each way to get to the nearest station with my baby

Cleveland Park is my nearest station - this will be inconvenient by increasing my travel time and expenses if I have to take Metrobus to a train station. Also bad for our economy because it will be bad for tourists - Arlington? Smithsonian? Really?

You are going to close silver line stations that were just recently built? College Park, you mean one of the areas largest university stops? I went there and Metro was one of the main reasons so I could get to DC or Baltimore via one of the stations. I live near Grovesnor now and do you know how many people use the metro when things are non covid times and normal? I think shutting down most of these stations would be a bad idea.

I live where I live because of metro access for work. There IS NO nearby location to stations like College Park. So many downtown stations are not on this list yet convenient to other stations. You make it this will actually STOP me from using metro that I use now. Foggy Bottom, McPherson, Farragut West and Farragut North are all so close, but didn't see them on the list?? Or Capitol Hill, Eastern Market and Potomac are near enough. Much more so than College Park is to other stations...

I live at Virginia Square. If you close this station and Clarendon, I will need to go to Ballston. No huge deal, but think how much more crowded Ballston will become. You will get extra riders from E. Falls Church, plus literally hundreds of new residents from ongoing apartment houses being constructed in VA Square and Ballston area. Perhaps some of the residents in new Clarendon buildings now going up as well. Plus, you plan to eliminate buses also!

Grosvenor-Strathmore has extensive parking while the others on the red line do not except for Shady Grove. Also this station is the most convenient for those who reside in Potomac and other areas in the western part of Montgomery County.

I live next to one of these metro stations, and will take the train for two daily commutes - one to work (and back) and one to night school (and back) - post-COVID (nominally January 2022 or earlier). Instead, the closest metro stop to me (outside of the one that I live right next to) is a 10-minute walk away. The reason I chose my current apartment is because of its proximity to the metro given the frequency that I'll be riding it post-COVID.

Many of these stations are on busy neighborhoods (residential and business). Eliminating will have an impact on the value the metro service provides and reduce the ridership on metro.

Expecting by January 2022 we will have museums available again - having so many stations closed near the National Mall seems like it would be a barrier not only to me, but also to any tourists, as that is a major part of a trip to DC. A modification of this would NOT be ideal, but might be a reasonable worst-case solution.

If these stations are close together, it would make sense to close them.

Don't close stations. A lot of people, including myself, depend on metro and don't have cars. These are heavily used stations, and I go to Smithsonian, Clarendon, etc., often.

I understand that *temporary* closures of stations might be necessary. But there's a huge amount of infrastructure and nearby land development that will be completely wasted if stations close permanently. The longer a station remains closed, the bigger the disincentive to ridership. It's a vicious cycle, and not a sustainable strategy for WAMTA.

Proposal to close 22 Metrorail stations

Clarendon? Cleveland Park? East Falls Church? Smithsonian? Judiciary? Fed Triangle? WHOA. Good luck. Arent these some backbone, inner-ring stations ?? So w/out Cleveland Park I go to Woodley or Van Ness? What abt Smithsonian if you cancel Fed Triangle too?

Smithsonian seems like an important station to keep open.

I and thousands of other commuters would be greatly and negatively affected. Many people have bought or rented to be near these stations for the convenience of commuting and for access to other parts of the metropolitan area and closing would be a catastrophic betrayal of the transportation system promised and promoted and improved over the last 40 years. This is particularly a hardship on stations serving promarily residential areas that have been built specifically to be near Metro access.

College Park is integral to commuters to reach the UMD campus.

How on earth can you claim Grosvenor-Strathmore had low ridership pre-Covid? It was always busy.

The Grosvenor-Strathmore station is within walking distance of our home as well as with many others in our immediate area. Closing this station would result in much lower ridership since the other nearby stations are not convenient. The whole neighborhoods were designed and built around the metro station. Now you want to take it from us.

I live close to grosvenor-startmore and really on walk distance to metro to get to work

I think some of those in general in dont need to exist, mostly the ones in the city that are <15m walk away from another stop, but College Park or East Falls Church the next closest isnt in walking distance or even close to it.

Closing stations will impact both businesses and residents located near those locations. Businesses would get fewer customers. This plan could even impact property values for homes and condos that can currently boast that the nearby Metro station is an amenity.

From Clarendon I have more bus options home than from Courthouse or Ballston. I would prefer Clarendon stay open.

I volunteer regularly at Smithsonian Museums (when open). Closure of Federal Triangle and Smithsonian stops will make it difficult to reach there. I am sure it will effect tourism too.

There are extensive plans for new additional residential housing planned for Grosvenor/Strathmore and near White Flint. Closing Grosvenor/Strathmore would negatively impact local traffic, commuting downtown, housing values, access to Strathmore Concert Hall etc.It conflicts with long standing Montgomery County smart growth plans for denser development near Metro stations.

Arlington Cemetery will need to remain open. This is the closet metro stop to the the main front entrance to enter the cemetery for security checks, attendance, and an important entrance for visitors and family members to gather information to navigate the cemetery (that spans over 600 acres). Not all family members and visitors drive their POVs, take tour buses, and/or taxis/Ubbers to the cemetery. Highly recommend any propose to this be discussed with not only the public, but with Arlington National Cemetery, the National Park Service, and the Department of the Army (who oversees/manages the cemetery).

Some of these stations are necessary when closures happen downtown. Do you have the option to quickly reopen them (15 min) if theres an accident on a line or a protest, etc.?

If you close both Clarendon and Virginia Square, you will force tons of people to Ballston and Courthouse. Courthouse is not a big station. There are so many people living in this specific area in order to take the train to work, I think it would be crazy in the mornings.

It would be a disaster to close these stations, particularly GROSVENOR!

Closing College Park Station would devastate the local and student community.

Your definition of close seems questionable. If all of these stations are closed, the distance between stations will materially increase. This may itself make use of metro inconvenient and drive ridership down. Also, closing stations seems wasteful, especially since some have just been built

One of the stations is near my office and I, employees and visitors (1,000+ daily) must have accessible metro line service. This plan will potentially damage the federal workforce.

Grosvenor is a great station, convenient and good parking. No station close by with such easy access.

Devastating impact. With Clarendon and Virginia Square closed, Courthouse Station would be completely overrun, with dangerous overcrowding, and often unusable. This might have worked during Covid, but not when things are more normal. Ever been on the Courthouse platform at 8 am on a weekday? People often have to wait for several trains to board. With less frequent trains, oh my God. People will be injured or worse.

Think of people with handicaps - the distance is so much greater when one is on crutches or a wheelchair. And Arlington? Thats the main way to get even close to the entrance without driving.

Purchased property with sole purpose of being able to take metro to work and into the city. Closure of my station is not an option.

Please keep grosvenor station

While this might work for my specific travel needs, long term faith in the system would take a hit if parts of the Silver line extension was closed right after they opened and station closures generally feel like a slippery slope.

| |
|---|
| Proposal to close 22 Metrorail stations |
| Need Grosvenor-Strathmore to commute to work |
| This is stupid. Colleges will open and stations will need the riders by 2022. You have a 1960s designed railway system and you are making it harder to use. Penny wise pound foolish. You will kill Metro with these proposals. |
| You talk about originating trains at Grosvenor and making it an endpoint for 15-minute frequencies, yet are saying you will close the station. They seem to be at odds with another. Keep Grosvenor open no matter what! Friends of White Flint does not speak for everyone. |
| WMATA should consider leaving College Park station open to serve students, faculty, staff, and guests of the University of Maryland at College Park. |
| It is far better to make trains come less often than to close a station altogether. Also, it does not make sense to close a station like Clarendon, in a growth area with increased business and high-rises being built + walkable surroundings. |
| My business is on the Silver Line, specifically the Greensboro Station metro stop, which is walking distance. Prior to the pandemic, we had an influx of visitors to our building, many of whom would use Metro. We actually encouraged folks to use Metro as its much easier to navigate than driving in the area due to construction. The entire Boro area has been built up with part of the appeal being its so close to a metro station. Closing the McLean and Greensboro stations decreases the walkability of the Tysons Corner area. |
| Why would you strand people who have to work at restaurants in those areas and make their trip longer. I know multiple people who use several of those stations regularly, including myself. |
| This would eliminate many of the stations that I travel to and from on a recurring basis. |
| This would significantly affect my ability to use public transportation. I would need to use some other method, other than the METRO system, to commute to work and get into DC. |
| East Falls Church is an essential hub. This station offers a connection to the Silver Line that would eventually go to Dulles Airport. Although there are air travel restrictions, this is an alternate route from Washington DC and Virginia. Otherwise we have to rely on other transportation means ie Taxi, limited chartered bus service. If using a private vehicle the cost parking is next to ridiculous. Lets not forget the I-66 toll rates if you were headed to or from DC. |
| You mention closing such high volume operating stations such as the Federal Triangle, Smithsonian and future stations with unknown ridership such as Loudoun Gateway and partially known ridership for Reston Town Center. The plan does not see to make sense. |
| Clarendon is a hugely important metro stop and supports so many shops and businesses, as well as many of us commuters. I know many folks in East falls church who commute in regularly as well. These are very important stops. Charge more if you must, but don't close the metro stops!! |
| This would absolutely not work for me. I would have no way of getting to work, and I find it unacceptable that metro would close so many stations in a highly populated corridor of Arlington. |
| Closing all the listed stations will have a tremendous impact on tourism for the DC economy when the city reopens after covid. For instance, ridership is probably down at Arlington Cemetery due to the cemetery covid closure and should take into account historical averages for the stations and not just 2020 ridership numbers. |
| Daily transit on the yellow from Eisenhower into DC for work is expected to resume shortly, lack of a stop at Eisenhower would force me to drive |
| Due to the pandemic, there has been a decrease in the amount of people visiting and going to work. Once the majority of people have become vaccinated, DC will see an increase of tourists and citizens returning to work. Taking away some of these stations will affect tourists and people returning to work and will increase car traffic |
| I use Grosvenor Strathmore station every day. The nearest station is one mile away. Thats too far. |
| I live at Grosvenor-Strathmore, and many NIH employees live there as well. I would have to buy a car, and would no longer use metro for any travel whatsoever. |
| Closing the East Falls Church Station renders the 3A Bus line unable to get Virginia commuters into DC. |
| This is a ridiculous, embarrassing proposal. Run service at your stations. |
| Considering The pop density and lack of parking (Arlington has actively been trying to wean its community off of a car diet) between Courthouse and Ballston, it doesn't make sense to close both Clarendon and Virginia Square. East Falls Church has already established parking for commuters further afield. Closing that station would be a major inconvenience for thousands and might further discourage people to use public transportation. |
| I normally take train from Twinbrook, but there are time when I need to take train from Grosvenor |
| Metro stops where there is now or potential transit-oriented development should NOT be closed. Such development will generate future riders and stimulate local economic development. Grosvenor-Strathmore should not be closed, among others. |
| Closing Clarendon and Va Sq would leave people walking 2 miles between Courthouse and Ballston, that is unacceptable. Also Clarendon has the only metro accessible grocery store on the corridor. If these stations were to close I would move, not only out of Arlington but possibly the whole region. |
| Grosvenor Strathmore is my stop. I will not be able to get to another stop to get the train. That will be very very inconvenient and a hardship |

| |
|---|
| Proposal to close 22 Metrorail stations |
| Cleveland park is essential to me as I often travel north to Bethesda AND south to downtown |
| It would be much harder for me to use Metro for my commute if the East Falls Church Station closes. |
| Clarendon and Virginia square are the closest stops to a major elementary school in Arlington. This would cut off parent access to schools for functions, emergencies, and volunteering. Additionally with the elimination of 38B this further isolated the school and neighborhood. |
| Some (not all) of those stations might be closed during off-hours or weekends, but not between 7am-9pm weekdays. |
| I would be concerned about getting to Strathmore for concerts if there were no Metro service. Can stops on concert nights be scheduled? |
| I live in one of these stations . I need the train to get home in Grosvenor. |
| Most of these subway stations are either the main departure points or the destinations of Federal employees and workers that support the Federal government. Most of these people do not own personal vehicles so they completely depend on nearby subway stations for their work commute. These closures would significantly accelerate climate change as CO2 emissions surge from the sudden increase of daily automobile traffic in the Beltway. |
| This is the proposal I disagree with the most. Closing of these metro stations would have a huge impact on peoples ability to get to their job, and the property values around the closed station. Increasing the time between trains is definitely preferable to closing stations. |
| This is the most outrageous proposal metro has ever proposed. You just spent millions of dollars renovating East Falls Church station. This would force me to stop taking metro. I strongly oppose any closure of East Falls Church. This would also reduce property values which would also reduce support for metro. Stupid proposal that sounds more designed to try and get more government subsidies. Shameful. |
| I agree that stations in DC that are close to others should be closed. Eisenhower station is essential. If Eisenhower station were closed, I would likely stop taking metro altogether. Once offices and nearby shopping centers open, the station will return to higher ridership. |
| This is a disaster.. Im not in for this operation. |
| I rely on the Grosvenor-Strathmore Metro stop for visiting my children, going to the doctor, and when things open up attending ballgames, theater, socializing at restaurants, arts and cultural events. |
| All of these have unique situations, but to just choose one: Federal Triangle is one of the busiest stations for federal workers. With the Federal governments plan to consolidate many of its campuses to federal triangle in the next couple of years, this plan would basically disrupt that plan and make it extremely hard for federal workers to get to their places of duty. |
| Arlington Cemetery closure would affecting people needing to go into the District. working class, students seniors, medical appointments and more... ..with the changing of trains. |
| Closing stations should not even be part of a discussion. Each station may be near another station, but not always close enough. Specifically I am concerned about the closing of College Park; while Greenbelt is close, the area between the campus and Greenbelt already has an unreasonable amount of traffic. Adding buses (specifically Shuttle UM buses) would make it worse. |
| What would happen to these closed stations? They would presumably still exist. I dont use the Clarendon station but is the low ridership for it (among others) mostly due to COVID-19 or was that the case before? Clarendon, at least when I pass through both in the morning and in the afternoon, has many people and that neighborhood has a lot of commercial property, bars, restaurants, etc. So, keeping it open will also bring in revenue to Metro. Same goes for Mt. Vernon and Virginia Square, in my many years of experience. |
| This makes no sense, when covid goes we need to be back to work and without these stations people will beed to drive and that itself will have huge environmental and traffic impact on the area |
| Should suggest in the event that these stations close the recommended plan for riders who rely on those stations should be |
| It works except closing Smithsonian b/c a lot tourists use that stop |
| This is a problem for older riders and anyone with small children or physical disabilities. |
| Makes sense if the distance between stations is less than 1 mile and can walk. |
| As a single woman, walking alone after dark, which comes early in the winter, raises safety concerns if I have to go farther. Cleveland Park is my home station. |
| In early 2022 my office will be near 12th and D St SW. Closing of Smithsonian station would significantly impact me getting to work and make me reconsider using metro. |
| No me afectarÁ-a porque uso Bethesda a farragut north o alguna estaci3n en washington dc |
| Requesting for Innovation Center, Loudoun Gateway, and Reston Town Center to remain open. |
| This plan is a terrible idea. It would mean I would no longer use Metro since the station that is walking distance from my residence would be closed. |

Proposal to close 22 Metrorail stations

Grosvenor-Strathmore Station should stay open. It provides service into DC for citizens in surrounding neighborhoods as well as brings people out to North Bethesda area for work, shop, going to Strathmore Hall for events, or to go to school.

Closing SL Phase II stations after just constructing the extension seems like terrible optics. Closing downtown stations like MVC, Judiciary and Archives defeats the purpose of having a rapid transit rail system downtown

Painful, but doable - I would particularly miss the Smithsonian station that I use often.

There isn't a good alternative to Van Dorn. The only train station with Metro commuter parking on the Blue line in VA is outside the beltway. Eliminating Van Dorn renders public transportation inaccessible/impractical for a significant part of Alexandria. The city of Alexandria is more than Old Town.

Grosvenor Metro has very high ridership and isn't close to other stations. Most of these stations are necessary and not near other stations. Some of those in DC are within 2 blocks of another metro, but most are not. There are accessibility issues too. This is a ridiculous proposal and insulting to people who need to use those stations. It is a major metro area and suburbs that need trains because traffic is awful.

Why bother to have a Metro at all based on the above plan?

A station doesn't need to always be busy to be needed. I don't see a benefit of closing these stops.

Archives is my station for work, as well as frequent stops of mine: Clarendon, Eisenhower Ave, and Smithsonian. I believe that more people are using stations such as Archives, as the vaccines are rolling out. Life is on the cusp of returning to semi-normativity - this is ridiculous that you all want to close these stations. Not only that, I think it is unfair for those who are disabled, and under-privileged to make them extend to further stations because they are closer to each other. This is ableist.

This is insane. Why did metro build silver line and add all these new stations if the plan is to close existing stations? I hate this proposal

Only reason we aren't using Metro (EFC) frequently is we work from home right now but that WILL change once vaccines are prevalent and will need Metro again. We are only close to EFC and would have a longer drive/very long bus ride to another station and we choose to have only 1 vehicle. Once vaccines are prevalent we will NEED EFC Metro

First, on what basis is low ridership calculated? East Falls Church has been closed, or open limited hours, for long time, which could make it look as though people are not using it. Secondly, being close to another station does not mean it's close enough to avoid greater use of cars, buses, time, etc. IE, Metro is supposed to facilitate transportation and reduced use of fossil fuels.

For Grosvenor Strathmore, there is no other station nearby.

How the hell are you going to propose closing stations that haven't even opened yet on the Silver Line!? This proposal is pathetic and undermines the very reason we have metro service. If we don't use the whole network, there is no reason to have it. This proposal would be the worst option to consider and a failure of thorough thought from WMATA.

NO with a capital N!! As I commented earlier, I moved to Parkside to be near Metro! Please don't close stations!!

Closing these stations permanently would cause a severe hardship. In particular, please do not close Clarendon, Virginia Square, and East Falls Church because doing so would impact the businesses and individuals living in these areas. Again, is there a way to work out a shifts or schedules so that perhaps you run less trains or on alternative days, instead of simply closing all of these lines. Closing the Clarendon line alone would cause a hardship upon the largest Child Development Center in Arlington County. Over half of its employees use this line daily for work. If you closed VA Square as well, it would mean a much longer commute for these individuals and many others. Thank you for your consideration.

Cleveland and College park

I do not think that any stations should be closed. This is a terrible idea.

Wherever there is a venue specifically sited at a Metro station, that station must remain open.

Although I could likely make a commute or trip into DC via metro work with these stations closed, you will overpack the metro and cause long lines and very crowded stations at those that are still open....which is probably not a good idea following the covid pandemic. I had issues with overcrowding on the metro and people being too close to me before the pandemic....imagine how people's anxiety will be after the pandemic. I think by closing certain stations (such as Federal Triangle), you will inadvertently lead to overcrowding and make people less comfortable riding the metro with prolonged covid fears.

This is absurd.

With the high ridership and central location of Grosvenor-Strathmore, this would be devastating as passengers would be left stranded.

I do not depend on Metrorail to get to work. I am commenting as an occasional rider.

College Park Station needs to remain open for commuting needs.

It wouldn't be great, but I could potentially work with it

Proposal to close 22 Metrorail stations

Most people who live in our neighborhood who take the metro walk to the metro station, including myself. The other stations are not close enough to walk to -the metro bus is not as convenient, if having to take it to another station. There has been quite an increase in development in and around Grosvenor Metro station for the big benefit of being accessible to the metro.

Keep Clarendon

This is really the best option so far. Not only will it minimize impact for anyone not directly benefitting from those low use stations, it will actually make the system as a whole more valuable to the high use stations as commute times decrease which could help revenue recover more quickly as it become comparable with highway commuting. I estimate 2-3 minutes per station bypassed.

Grosvenor-Strathmore station is my home station for my commute. That stations closing, and that of its parking garage, would add a significant amount of time to my commute as I would need to drive farther out on the Red Line to park, or add an additional, time consuming bus ride to get to any other Red Line station. Further, station closures of any kind are a short-sighted solution that would inconvenience many riders at both ends of their respective commutes.

Metro should not be closing stations, period. And it is certainly not the case that these stations are "close" to other stations.

I live less than 1 block from the Clarendon Metro for a reason. The next closest metro would then be Virginia Square (which is also on the closure list). Closing these would be completely unacceptable. I would not feel safe walking to the Courthouse metro (opposite direction of Va Square) due to the homeless shelter nearby.

This would be a great hardship for me, as both my current home Metro stop and my work stop are proposed to close. I am a daily commuter to and from DC (to Maryland).

I live walking distance to the Grosvenor-Strathmore station. In addition to no longer being able to walk to a Metro station, the property value of houses within walking distance will go down.

Horrible. The trains and parking garages are already overcrowded. This will make the situation worse once everyone returns to working in offices if everyone is forced to converge on the nearest station that cannot accommodate the riders and their cars in the parking garages. Is Grosvenor, including that large parking garage, just going to sit idle? Ridiculous.

NO!!! I cannot commute without using these stations.

I live by Grosvenor-Strathmore and walk to the metro station to go to work. I rely on metro every day.

I use multiple stations listed in my daily or weekly life. Closing Judiciary Square & Archives leaves me no way to get to work once we transition back to in-office work. Closing Clarendon & East Falls Church lowers my access to medical offices, which I still need to get to even during the pandemic. Closing Arlington Cemetery & Smithsonian drastically lowers access to historic and outdoor locales (lower risk places to walk around while pandemic continues, healthy and interesting places to explore during any time). This is the proposal I'd least want to see. It would drastically impact many peoples abilities to get around in a largely commuting city (many people don't even own a car), limit access to historic public outdoor spaces when walking outdoors is an especially valuable activity for health & mental health, and change the appeal of living in or near DC overall. No thanks!

This would be a disaster for me. I would have no way to get to work. The garage is at Grosvenor Strathmore, not White Flint. I suggest that you consider closing White Flint instead of Grosvenor Strathmore station. If Grosvenor can remain open, people can park there for the Metro.

I live in Falls Church and one of the reasons I moved to my apartment is due to the proximity to the metro. I would still pay if the fare increased and would be okay if the frequency of trains decreased given the low ridership. Both those options would be much better than closure.

I work in Clarendon and access to that station is important to me and my staff. That station is one of the main reasons people choose to live and work in the Clarendon neighborhood. I'm sure ridership will resume post-pandemic.

Many of these are not remotely close to another station. Closing college park would leave people in that area 3 - 5 miles away from the nearest stop.

Ridership has been low due to the pandemic. Once people are vaccinated and offices are open, trains will be full again. We bought our house in part to have a Metro stop within walking distance. Closing Grosvenor Metro will negatively impact real estate values. There has been a lot of housing construction near the Grosvenor Metro. I'm sure people who are buying condos next to the Metro are doing so to be near Metro.

Important to keep Grosvenor station open -- fantastic new TOD housing planned there -- bad precedent to close this station.

This is crazy. I regularly use at least half of those stations to get to medical appointments, business meetings, and local businesses. Are you trying to make metro completely useless?

What additional mobility services will be initiated to support these closures? Are these temporary or permanent closures? Specifically, Arlington Cemetery will cause an uproar. The metro provides the most direct access for the public and isn't walkable from Rosslyn or Pentagon. This closure seems unreasonable and should be replaced with express or reduced service. Additionally what methods of transport will WMATA provide to get patrons to the closed station areas, specifically outside the district? The walkability from West Falls Church or Ballston to East Falls Church is not pedestrian friendly in either direction.

Proposal to close 22 Metrorail stations

I use the East Falls Church Metro and if this gets closed...I wouldn't be able to get to work on time. Please keep East Falls Church Open

I get the concept, but this list seems too long.

Virginia Square has over 5 large condo buildings that need access to the metro. While ridership is down NOW in 1/2022, all may be back to work. This is the same for Clarendon which is a booming area! Also, Federal Center SW is near many government agencies and when reopened station is needed. Same with Smithsonian. The number of condos near a station must be considered!

My elderly parents live within walking distance of Virginia Square. Walking to another station would not be feasible for them and this loss of access would significantly diminish their quality of life. There are many retirees living in this area of Arlington who will be adversely affected by the closure of stations there.

Closing Grosvenor Strathmore would be devastating. It would ruin my career and make me unable to get basics like food and medicine.

Some stations are not near each other and can be dangerous to walk to other stations due traffic or poorly lit areas. It would be dangerous to close so many stations.

Clarendon is my station. Its one mile to Ballston. Im still young enough for it to be doable but I dont like it. Your train schedules become more important than ever (usually they are very accurate).

I live next to the Grosvenor-Strathmore station- and use this stop frequently. Its a significant benefit to our large condo community. Closure of this station will have significant negative impact on property values, and as a new owner here that would be incredibly frustrating. Please consider alternatives to this closure, it will impact a very large community of people. In addition to the property value impact, we are not within walking distance of nearby stations as we live adjacent to major highways with sidewalks in only one direction.

People who commute from these stations rely on Metro and would have no alternative. For example, Clarendon and Virginia Square are located next to each other, and if they are closed, the surrounding stations would be too far away to walk to. Other stations like Smithsonian and Federal Triangle are important for tourism purposes.

I live within walking distance of Grosvenor-Strathmore, and would either move or stop using Metro Rail if the station is closed.

how is loweridership defined? between when and when? pre pandemic? post pandemic? How much lower does ridership have to be to qualify as one of these low ridership stations? Will bus service increase to pick up the slack? What will happen to the closed stations? How much does it cost to keep a station open compared to the ridership levels? there are many questions surrounding this

These stations I use on Orange line are always busy in Arlington when I need them. Blue line Arlington Cemetery -people take that to see and honor dead heroes - many relatives; this is a very callous and stupid idea . .

It is absurd to close Clarendon and Virginia Square on the orange line. These continue to be growing areas. Many riders are working remotely now. Closing these 2 stations will guarantee that these area DRIVE to DC - how is that forward looking on mass transportation. ALL stops on orange line MUST remain open.

Absolutely not! How can you say that Arlington Cemetery is near another station???? Did you even review the number of visitors ANC has each year? Smithsonian??? What about the millions of tourist who rely on that station? Also, Archives- it is in the middle of one of the biggest tourist areas- including sporting venues. What is METRO thinking????

This is an absolutely misinformed and wrong idea. In a few months expectation is that we will start moving back to normal activity. Thats when people need the service and of course thats when you can start collect fares. With these closures you are just depriving metro from collecting a good portion of its revenues just when metro needs it most. Horrible idea!!

My mother uses the Judiciary Sq station for work and I used it for an internship and it's necessary for federal workers

iWork at my Vernon sq and judiciary sq

This proposal would eliminate any incentive that currently exists to use the metro for commuting. Decreased service to a station can be mitigated with careful planning. Eliminating stations would depress ridership, as too much time would be added to a commute. Many would result to driving instead. We made the biggest decision of our life, to purchase a house, based on proximity to a station. Closing that station would engender animosity that WMATA likely would be unable to overcome in the future.

No. Some of these stations I take often.

I voted for our state to increase funding to Metro and yet the thought that Metro would still close a large number of stations is very disheartening. Sad to see this happening after having commuted to DC for five years. I would be ok with reduced hours but not all the station closures.

I live near the Cleveland Park station and it would be very inconvenient.

I live around Grosvenor-Strathmore station and I need to take the train to work in DC. Without this train service it would cause me great inconvenience and much longer commuting as I would need to walk almost two miles each way to the next station, which would be White Flint.

There are several stations on the list that are NOT close to other open stations, and would make some of my trips impossible. I would singularly oppose closing: Van Dorn; Grosvenor; Cleveland Park; Fed Ctr SW; Smithsonian; Clarendon! Many of these stations have significant Residential Development built uniquely for close access to Metro!!!!

Proposal to close 22 Metrorail stations

I live near Clarendon and Virginia Square. This arrangement will severely reduce my use of the system as a whole having to bus or bikeshare to the nearest station.

Clarendon is the nightlife heart of Arlington, and businesses would suffer if the Clarendon station is closed.

There's nothing close to Smithsonian Metro station or Grosvenor-Strathmore Metro station!

I am especially affected by Grosvenor-Strathmore. This area has many apartment buildings and the Strathmore concert venue. Its regularly impossible to get parking there - and you say it has low ridership? A very strange definition of low ridership!

Closing this station would be a major inconvenience. I am currently able to walk to this station. I would now need to incur increased additional expenses to go to the next station. I bought my house to be within walking distance of this station!! My tax paying dollars built this station! Keep it open!! This is not right to close this station.

The impact of these closures is significant, while these stations are close to others, the walk/ride to them is significant, and it would just create a lot of people on the road trying to navigate to the other lines, which would become overburdened and full of riders who may then be pushed to a later train.

Clarendon and Virginia Square are on my commuting line and would make me consider more convenient methods of transport

I sometimes use the Clarendon Station. Because of the pandemic, I am not now using Metro (and have not ridden in the past year). I have received the first of two shots and expect to resume normal activities after the second shot (and waiting period), which should be in early April. I expect that many other riders will return and expect the same service we were used to pre-pandemic.

I travel specifically through a number of these stations, particularly East Falls Church, and plan to use Loudoun Gateway as soon as it opens which I thought would be wayyyyy sooner!

Although I personally don't currently live or work near any of the stations listed, most of my work colleagues do. My family and I were also considering moving towards one of the stations listed as a possible closure, and this would definitely stop us from doing so. This will have a massive negative impact on property values, rental occupancy and lease rates, the viability of businesses locating in these neighborhoods, and the general livability of the area.

College Park would be a serious loss, even if the Purple line ever opens

This would make it untenable for me to continue living in College Park, where rent is more affordable, and working in DC, where all the jobs are. Having to add 30 min to drive to the next closest station during a high-traffic commute time and then park (added to a commute that is already 45 min + 15 min walking) and adding \$5 a day, 5 days a week every week for parking to my annual budget will present a potentially prohibitive hardship. The UMD students will also be unable to conveniently access all of the DC resources that make their college experience so enriching. Ridership will resume after the pandemic and closing important stations adds undue hardship to what will already be a difficult transition back to business as usual. Ridership statistics from during the pandemic (when a certain percentage of people can work from home) cannot be used to close metro stations - these do not represent future usage and needs

As I return to work I would be using the Clarendon station which is the closest to my office.

This would NOT work for me. I hope to buy a home near College Park in 2021, and commute to White Flint and into the city. If these stations are closed, it severely limits the places where I could buy a home.

Closing stations should not be an option for metro. Funds allocated to the purple line should be redistributed to existing metro lines.

How would this affect crowd conditions at nearby stations? Would there be buses from the closed station to nearby ones, or from nearby ones to that one, even if its closed?

Absolutely not. The inclusion of this question makes it seem like this whole survey is just to drum up drama and get VA to pay more to metro. Anyways, you list two stations that are next to each other. Also this proposes my work stop be closed. This will absolutely force me to drive.

This would Severely impact me. I work at Clarendon. When we are allowed to go back to the office, this plan would provide no way to get there. In addition, the next closest station (Virginia Square) would also be closed. This would require a 15 min walk to the court house station. This would also increase crowds at the remaining stops, which pre-covid were already crowded during rush hour. This plan would require me to buy a car or find a way to work from home in the future, which is not a sustainable option.

This would significantly impact a regular commute and expectations are that by fall 2021 many will be commuting again to the office (in my case downtown). Also Arlington Cemetery station closure would be a blow to tourism.

I don't use those stations on a regular basis, however I used Reston Town Center as I was working there at some point and I know other people get to work and take train to Reston frequently. I use Archives, Clarendon, College Park, Grosvenor-Strathmore occasionally.

Closing BOTH Clarendon and Virginia Square makes the GMU Arlington Campus pretty inaccessible.

At some point very soon, tourism will return. This doesn't seem to recognize that at all.

Proposal to close 22 Metrorail stations

My brother in law relies on metro train from grosvenor to get to work. He is autistic and metro is one of the few modes of transportation that allows him to safely get to and from work. It also allows him to be self sufficient.

Create express trains that skip these stations during rush hour rather than close the stations.

All stations are important to someone

Would result in lower ridership!

This would close both of my commuting stations. Also extremely concerned about both Clarendon and Virginia Square being on the list as these are contiguous stations. Also concerned closing Clarendon would increase drunk dining potential considering number of restaurants and bars in the area (again assuming relatively back to normal)

Grosvenor-Strathmore is essential for North Bethesda community. There are a lot of high rises and high occupancy apartment complexes within walking distance and residents relying on Grosvenor-Strathmore station for their work commute to DC and Bethesda

We just moved into our new house in Yarrow BECAUSE it was so close to College Park. PLEASE do not close this station. With increased vaccinations, we will be able to report to work again as well as fly out of Baltimore. We NEED this station to remain open

The savings gained by closing these stations cannot be comparable to the inconvenience inflicted upon the general ridership of Metro.

This plan would disenfranchise customers with disabilities who rely on accessible transportation in their neighborhoods. Housing decisions for disabled people are often made by considering proximity to accessible transportation. This plan would force customers with disabilities to traverse often inaccessible or unsafe streets and sidewalks, often in inclement weather to access an accessible station. Wheelchair users cannot simply call an Uber or hail a cab to reach the next station as these vehicles are often not equipped with wheelchair ramps. The plan is also problematic for homeowners who will be left paying mortgages on properties whose value has plummeted because they are no longer located near public transportation. This option is simply unacceptable.

I depend on the Clarendon stop to get home.

Closing Grosvenor-Strathmore would be devastating for me personally, and for the Strathmore Performing Arts Center.

PLEASE DO NOT CLOSE

This works for me personally, but would hugely impact other DMV residents who may have chosen to live near these stations specifically to have access to Metro

Grosvenor-Strathmore makes riding the metro work due to limitations in walking distance.

I catch the Green line from Suitland Station to Archives. Closing the Archives station would strongly affect my commute. When the station was closed earlier last year it was very hard to work to/from the Gallery Place station.

Possibly if the trains are running frequently

These are some stops I have used.

I have used College Park station for over 20 years. Greenbelt station has too many conflicts with parking. If the parking is free this would work. Otherwise Metro needs to lift parking restrictions at Greenbelt and not overcharge because of nearby distance train station. The station is near but the parking situation is funky and cumbersome.

I believe that Clarendon, Federal Triangle, and Smithsonian in particular are essential stops, integral to the local community, and cannot under any circumstances be closed.

Clarendon Station is vital to residents and businesses in the area. Closing it would be economically devastating.

East Falls Church serves the neighborhood I live in and is walkable from my house. It would be a MAJOR problem if this station were closed completely! At some point, COVID will be more controlled, people will be vaccinated, and be back on the Metro. And--Metro just spent big bucks over a period of several years to provide a state-of-the-art bike rack facility and also just re-did the platform. A large swath of people would be negatively impacted if East Falls Church were to close. Their options would be to 1) drive to Ballston and try to find parking; 2) drive to East Falls Church and try to find parking. NOPE, closing East Falls Church is not a good idea. And--speaking of the others: why close Smithsonian or Federal Triangle? These are hot spots for tourists. If you close all the stops listed above, why not just close Metro completely, shut the door and go home? NOT a good idea!!!!

Grosvenor is my main station. I purchased a property near this station because the access to the Metro. Closing this station will not work for me.

I need Grosvenor Station to be open

Judiciary square needed as Courts are there. Grosvenor Strathmore needed to get to and from Grosvenor apts and condos as well as Strathmore theater.

I live at Grosvenor Strathmore and the metro is how i commute to work.

I ride from Grosvenor

Need access for my job

Proposal to close 22 Metrorail stations

While I dont use these stations very often, I do occasionally use them. Without these stations I would have to walk further to/from my destination. This could really impact with physical disabilities.

I think this makes sense if it was a temporary plan but once people start going back to the office, this would not work because based in my experience, there are so many riders from these stations - especially east falls church and McLean.

Rarely do I stop at Morgan Blvd station.

I am a Federal employee, my building is located at Federal Triangle the station before is Smithsonian. I get on from home at Morgan Boulevard. So you are making my commute worse on both ends. Not good! How am I supposed to get to and from work.

Near is relative While some of these might be workable, others create long walks (e.g. Ballston-Courthouse) or are in areas not really walkable. Not to mention the damage to communities built up around easy access to Metro (e.g. Clarendon, Virginia Square). Some of the these stations are almost brand-new too. Really what are we saving here, the stations still exist and must be maintained, a (relatively) small operating savings on the station staff?

Remove Reston Town Center from list and you got it. Thats a major mall and shopping station area. With restaurants and hotels too. One thing I hate about MetroRail is no express service skipping bs stations no one uses during rush hour. This takes it to the extreme but I like. I've never had a need to use the vast majority of those. Except the one I mentioned to remove

For many people, the only reasonable way to access Metrorail is by using one of these stations. If people are required to take a car, bus, or shuttle to another Metrorail station, significant time will be added to trips and arrival times will be unreliable.

Keep Clarendon station open. If there are plans to close both Clarendon AND Virginia Square, it would be better to keep Clarendon open since there are a lot of young professionals and older adults that rely on using these in-between stops due to the location of their apartment or home.

I plan to utilize Metro more beginning in 2021

We live in Cleveland Park and paid a premium for its access to public transport so that as we age we could use public transport and give up our car. This proposal will both hurt our property values and those of the shops and restaurants there. It also will make it more difficult for us to go to the Smithsonian, or to visit the restaurants in Chevy Chase.

Closing stations will make it harder for the system to ever recover when this crisis ends. People will have developed alternate transportation arrangements and not return to metro.

How can you have the yellow line end at MT. Vernon if it wont be open?

I rely very heavily on the Grosvenor-Strathmore station to get to my workplace in DC. The station is a reasonable 17-minute walk from my house. The White Flint station is farther away, and is harder to get to. Closing Grosvenor-Strathmore would pose a hardship for me. Please do not close it!

Hell no

Not sure how you think Grosvenor-Strathmore is the one to close! Its the only one around with close parking and is surrounded by schools, housing and Strathmore Hall that RELY ON the metro for transportation. And now exactly would tourists get to Arlington Cemetery??? this is the only stop that allows you to access the cemetery directly... this is all VERY SHORT-SIGHTED! And youll confuse tourists even more by closing Smithsonian! How would you propose people get around these closed stations? Shuttles?

As you well know, the transit system is vital to the economy of the DMV. The DMV in many parts of the city operates with employees required 24 hours a day. i.e. Shipping, loading platforms, hospitality, healthcare, Housekeeping staff within healthcare such as hospitals. Most of these employees can not afford the daily costs of Uber/Lyft from the affordable housing areas into the city. We also need to be prepared for the return of ridership. The best way to cut costs without harming employment, especially to that of low income riders/workers is just to reduce the frequency of the trains. The transit system as a whole should remain a 7 day a week operating system.

A lot of federal employees use these stations frequently: Federal Center SW, Federal Triangle, Judiciary Sq, Mt Vernon Sq, Smithsonian, Van Dorn St, Virginia Square. Closing them means more traffic and there is already limited parking in the city during the day. Getting to meetings would require a lot more time and expense.

Well, if you close the Smithsonian station, you basically kill any chance of encouraging tourism or allowing the broader region to enjoy the various public treasures (museums etc.) along the Smithsonian. This seems unusually draconian and counterproductive. Not to mention Smithsonian is also a heavily used station by many employees who work in the Southwest federal district who didnt commute in via L'Enfant Plaza.

What does "near" other stations mean? Arlington Cemetery isn't near another station in any practical sense. If you want or need to take the Metro to the Cemetery, that station is your only option.

people need access to metro stations

We pay a premium for housing near one of these metro stations. This proposal is unconscionable.

Proposal to close 22 Metrorail stations

I use the east Falls Church station to commute to work, so closing it would not work for me. Also I believe the low ridership at East Falls Church over the last year is due to the fact that the station was closed for refurbishment in addition to the Covid impact.

As a resident of the Grosvenor neighborhood, closing the stations noted above, particularly the Grosvenor-Strathmore Station, would increase and adversely alter my daily work commute into downtown DC. I and many others in the area heavily rely on the convenient accessibility of the Grosvenor-Strathmore Station in order to commute throughout the region.

Life will return to normal in 2022. Pre-covid, Grosvenor-Strathmore station parking lot was filled by 10am. Same with White Flint. That demonstrates significant riders from our area. Closing G-S will leave no alternative but to find a way other than metro to work. White flint metro parking will fill up too early and will be too crowded. This option does not take into account rider needs or experience.

I don't use any of these stations, however, a large percentage of my coworkers do, and they will be forced to find alternate means of transportation.

Eliminating the Cleveland Park Station would be a problem for me.

Metro is basing the future needs on the past.

I would keep Smithsonian open, particularly if Federal Triangle is closed.

I really and sincerely hope that they DO NOT shut the Bethesda station down as I go there in order to get to work everyday. I hope BETHESDA station stays open and fully operational.

I bought my residence because of the proximity to the metro station, which is in this list of stations to be closed. I don't have a car so this would be a significant impact to me, not only because of the hours that I work but also for things like grocery shopping.

Closing stations is a terrible idea and would particularly burden anyone with mobility challenges who needs to access the areas around these stations. Metro clearly needs emergency federal funding. Any one of these suggestions would result in a death spiral for Metro when it is the critical piece holding our mobility infrastructure in place.

It's limited options. The thing about DC metro is, even if the stops are nearby, having more stops to choose from makes transportation easier. If this proposal means metro can stay open until midnight or 2am though, I may be okay with this.

The Grosvenor-Strathmore metro station is critical to the surrounding community. It currently gets ridership from multiple townhouse, single family homes, and apartment complexes in the surrounding area which are all well populated. It also supports the new Pike and Rose development on Rockville Pike and ensures that the newly developed area remains a vital community. There are also many seniors that live in some of these developments and the metro ensures that they have access to public transportation to go to critical medical appointments while at the same time making sure they stay connected to their communities. The Grosvenor-Strathmore metro station needs to remain open to support the community.

Please don't consider closing East Falls Church so necessary for commuting to people within a 2-mile walking radius of the station. There is no other station within walking distance.

Totally unacceptable - how could closure decisions be based on pandemic ridership levels? Stations closures should be completely avoided.

Again, this plan ultimately hurts DC financially and by extension Metro financially, and also contributes to the vicious cycle of people using metro less because it's inconvenient, which then in turn leaves to even more decreased ridership and revenues.

Particularly for Mt. Vernon Square, Archives, Smithsonian, and Cleveland Park, this change would severely impact tourists' ability to get around the city and see key sights such as the Zoo, the convention center, and the Mall. It would also strain capacity at neighboring stations (Chinatown is already extremely crowded, Woodley and other nearby stations are extremely crowded during the week). And it hurts residents' ability to get around the city, particularly if they are less mobile, disabled, elderly, or have young children and are unable to walk over a mile to a Metro station - many folks live close to stations on purpose, and closing them would make their lives very difficult.

Will depend on the individual station as some are closer to other stations. For example, there's a big gap between Woodley Park and Cabiness such that closing Cleveland Park would be detrimental to getting there as well as usage of the system.

This would severely impact the Orange Line and Arlington.

Closing East Falls Church would not work. For someone without a car, it is not near other stations.

This would kill my commute. I would have to stop using Metro.

The train stations would be crowded

Proposal to close 22 Metrorail stations

I moved from West Alexandria, where my walk to Van Dorn was too far, to live beside Eisenhower Ave Metro station. The King Street Metro is a farther distance to my home than Van Dorn was. To consider closing down these stations for any reason is harmful to communities, particularly ones of color, and should NOT BE CONSIDERED as a solution. WMATA trains are how those of us within the DMV live in this city. We rely on its service and if stations are to be permanently closed or inaccessible, there will be a mass exodus of would-be riders from this area. I am considering moving to another state should Eisenhower Ave be closed down in 2022. Im sure thousands of other riders will have similar plans. Hike fares if need be. But do not cut further service or delete stations from the Metro map altogether. That would be very harmful to this community and ultimately produce further inequities for the people of the Washington Metropolitan Area.

These will be the most needed stops when the pandemic eases, and will bring the highest uptick in revenue when people return to work

People buy houses and condos with the expectation that there is a metro station X distance away. This would hurt property values a LOT. Make some express trains that dont stop at low ridership stations if NEED BE, but dont just close stations!

I would lose the station closest to my home and one with reliable parking â€” Grosvenor. It's a popular station in non-pandemic times as first station with parking on way out of DC on Red Line to Shady Grove. Also, several high rise residential buildings are in easy walking distance to station.

Might as well just close the metro.

I use the stations.

This is an interesting proposal. For cost savings, I think it does make sense to close some stations that are very close to others, especially in downtown DC. However, closing Cleveland Park station seems like a major inconvenience for people who live there. The station is not that close to Woodley Park, for example.

Part of my job requires me to use the Archives station on a routine basis, so this proposal would negatively impact me.

I am ok with these stations closing except for Smithsonian, as that is a quick and easy stop to get to for museums and National mall. Consider opening it only on weekends, or during heavy tourist season

Please keep the Eisenhower Ave station!! We live a mile from the Eisenhower Ave station and that is what my husband takes to work everyday as does most of our neighborhood. It would have a big factor in our transportation costs between parking prices and gas as we wouldnt be able to make drop off and pick up work at another station when factoring in my job and our kids schedules.

It doesnt seem to me that the savings you get from closing those stations would justify the inconvenience to the ridership. I dont see a lot of personnel at the smaller stations. I can walk to Grosvenor to get to DC If I need to drive to Bethesda and then try to park, I might as well drive the rest of the way to DC.

There many riders who use the Clarendon and Virginia Square metro stations, these are residential areas!

Grosvenor-Strathmore has high ridership during rush hour. The garage is usually full.

I support temporarily closing a limited number of stations with low ridership but think that ridership should be reassessed again in the fall before determining which stations would close in Jan 2022.

East Falls Church stop is a few streets away from my home. It is the closest and most convenient stop, by closing this stop many would have to drive to another stop and park to use the metro, defeating the purpose of Arlingtons Green initiative. East Falls Church station was heavily utilized before the pandemic and will be a higher user stop again. The next closest stops are West Falls Church and Ballston, both further distance than closer in stops and not walkable from the neighborhoods that East Falls Church Metro serves.

Grosvenor-Strathmore is within walking distance of my apartment, which is of great importance as I do not drive and the driver in our household is frequently unable to transport me. Without a station which i can access on foot at any time my mobility would be drastically curtailed - my budget would also take yet another hit as I would have to take buses or cabs to reach another station. NOT a good idea.

it would be preferable if the low-ridership stations werent closed permanently but perhaps worked on restricted schedules instead i.e. closed on weekends or at 9 p.m., etc.

Any station that offers parking, such as Grosvenor-Strathmore, should remain open.

The Eisenhower ave station is critical to my daily activities and there are tons of apartment buildings coming up around the station. With COVID slowing down, I'd predict there will be an increase in ridership at the Eisenhower Ave station in 2022 and it should not be closed.

Who evens run the budget? Is it a circus full of clowns?

If you close Grosvenor Strathmore it would make it so difficult for me to get anywhere. I am physically disabled and so having transit centers within a short walkable distance is very important to me. Even if the actual transportation is less regular, it is incredibly important for me to have the center nearby

Grosvenor-Strathmore is not near any other station. The distance from Grosvenor-Strathmore to White Flint is too long for a rider to reasonably be expected to walk, and the White Flint parking facility is too small to handle the overflow of cars that would result. Metro would have to run a bus from the Grosvenor-Strathmore parking area to White Flint.

Proposal to close 22 Metrorail stations

Closing Clarendon and Virginia Square would be a disaster

I dont think its a good idea to close the East Falls Church station and potentially Clarendon station. The ridership is low at the East Falls Church station because it was under construction.

This plan seems ridiculous. Presumably the low ridership is due to an ongoing pandemic and the temporary closure of some businesses along with lower tourism rates. You are targeting areas with limited parking and that require Metro use, particularly in Northern Virginia. like Clarendon, Virginia Square, etc. Closing the Smithsonian station seems incredibly short-sighted. This will have a tremendously negative impact on Metro. When you are trying to increase ridership, why would you ever close stations like this? Im curious about whether this is legitimately a plan or whether it is to force a hand for outside funding.

Grosvenor Strathmore is a very important station. The close station (white flint and medical center) are very far!!! We would to walk a lot to get the metro.Grosvenor Strathmore can not be closed!!!

If this proposal were to be enacted, I would likely stop almost all travel on Metro.

This is an enormously poor option, both for me personally and as a general concept. One of the entire points of mass transit is to provide affordable transportation for all, thus forcing riders to drive to another metro station defeats the entire purpose of the system. Personally, this change would severely limit my use of the metro, as the closure of my local station would make driving an easier option (if I would have to drive to the next station, I might as well drive to many of my potential destinations). However, for people without alternative means for transport, this would be tantamount to denying them access to transport, and a complete abdication of WMATA's mandate.

I would probably use some of these stations (Virginia Square) if I start commuting by then.

People are going to be back at work after they get vaccinated. It is pointless to reduce trains, working hours and close down stations. The demand for ridership is going to be back. Not everyone can work from home forever.

It would significantly impact the transit to and from work for me and my wife. We live near the College Park station. Especially my wife who doesnt drive. She may have to quit her current job or we might have to move elsewhere.

Permanently close the Clarendon Metro station? That sounds crazy to me. This is a high-use Metro station during non-COVID times. It's Arlington's center for restaurants and bars, and there is limited parking in the area. Metro is essential in Clarendon! Closing the Clarendon or Virginia Square stations would hurt area restaurants and bars, and would be a huge negative hit to the mixed-use development that has been so successful for Arlington's transportation and development strategy. It would cause increased traffic, slow economic development, and reduce quality of life. Please don't do such a foolhardy thing as to close these stations in high-density Arlington!

Why would you build a line to Dulles when you cant manage and maintain the system you currently have? The previous question asked about yellow line stopping at Mt. Vernon Square, but youd also consider closing the station? I assume no options for people who normally board at these stations? Do you publish ridership levels at each station? How much does each station cost to maintain? Publish the data. I am surprised by Smithsonian closure.

Some of these make sense, but College Park and Smithsonian, seem illogical. Both of those serve populations that rely on transit. College Park for students and Smithsonian for tourists, both seem to be heavy mass transit users.

The VA stations dont affect me, but the Grovesnor station is an interesting one to put on the chopping block given that it has significant parking capabilities and can easily turn trains around in the tunnel. I would reconsider that one.

Closing down these stations will only put more stress on the metro stations that are still in operation and on the buses. Ive been on too many commutes where we cant fit everyone as is on the bus- but if more are on buses because their station is closed, that will be even worse.

Not opening stations on the silver line without proof of actual ridership number since the stations haven't been opened is unacceptable. East Falls Church also has seen increased ridership. You ought to consider lines skipping certain stations (silver line should skip most Arlington stops)

near others stations how? If a person doesnt own a car and bought a condo near Van Form station, for example, can the really walk more than a mile down pedestrian-hostile streets to get to Franconia-Springfield or King St? Not a chance! Theyd abandon metro permanently.

Some of these suburban stations such as Cheverly cannot close because they arent as close to other stations such as Archives. Further more, if you close Archives, Judiciary Square and Federal Triangle, youd be pushing people to walk out further. Maybe just one of those stations can remain open.

Closing East Falls Church and orange line stations like Clarendon and Virginia Square would severely impact riders and cause major delays and parking challenges. Please keep the East Falls Church station open.

My tenants use many of these stations and if these are closed they will be forced to move away and my family will lose money we rely on.

Proposal to close 22 Metrorail stations

We are closest to East Falls Church. We have to use West Falls Church or Ballston, both of which are almost twice as far away. WFC is served only by the Orange Line, so trains are half as frequent as at EFC. Ballston is in a more urban setting; driving there would aggravate traffic.

Near should mean walkable within 10 minutes or would probably never use metro again. There are lots of interesting things to see and explore at a lot of these stations, it would be a shame to lose this accessibility to the DC area.

Many of these stations would hugely impact commuting workers. Additionally, this would be a horrible plan for tourists going to Arlington cemetery or visiting the mall. For people from out of town it is hard to navigate. Having these stops make everything easier. Also, "near" another station does not help this with people with disabilities! Any change like that can hugely restrain their possibility to get around and being able to meet daily necessities. And being "near" a station doesn't mean they are accessible by certain bus routes!!!

College Park Station is helpful to faster service to IKEA and Laurel, MD from Hyattsville, MD.

Eisenhower is my a few hundred yards from my residence.

ABSOLUTELY WILL NOT WORK. Pre-pandemic, Grosvenor lots were filled to capacity. I can't speak for other stations, but closing Grosvenor will increase traffic congestion in Rockville and there won't be parking in other lots. These proposals do not support the commuters Metro supposedly serves.

I am an essential employee who has to show up in person to my job and live close to the East Falls Church metro. I also work near Federal Triangle. Where am I supposed to go to get on the train? West Falls Church or Ballston? How am I supposed to get there? Park? Bus? Then when I get to DC, I have to walk over 1 mile to get to work. By closing these stations, you are ensuring that I will never ride the metro because it would be faster and more efficient to drive to work than to go through the hassle to get to a much farther away metro by bus or car and then walk a mile to get to work.

The only station I would miss is Clarendon. I would also be concerned about traffic and pedestrian safety in Clarendon on weekend nights if everyone out at bars was forced to call ride share services. It already a very congested area on busy nights.

I rely on Grosvenor Station. I'm retired and take metro for Dr appts, sporting and cultural events. I don't drive downtown. No parking at NIH Medical Ctr. Would exacerbate parking congestion at White Flint.

I use a number of those stations frequently And when the pandemic is over, will need to again!

Grosvenor-Strathmore serves a large community of people who work in DC. Closing this metro stop would have a significant impact on people traveling to and from work, leaving them with few public transportation options, and significantly impact the property values of the Grosvenor community.

Please don't close Clarendon!

Need Clarendon and Van Dorn St. Stations

I just moved to Hyattsville and, thankfully, Prince Georges Plaza is not on this list. However, the College Park station should be left open to accommodate UMD students when they return to class. Also, my previous Metro Station East Falls Church is on this list. This is crazy. Pre-pandemic, it was a super busy station. Also, it is nowhere near any other Metro stations. Ballston and West Falls Church are very far away.

Being able to easily get to and from various places makes the metro useful. Limiting destinations and making it harder to get around means the metro would no longer be a viable option for me.

No do not close stations. We have a large push for public transportation and people are trying to use but you are forcing people to choose to kill the planet. At some point the choice is time to travel, and the environment. Our bus was taken away causing me to drive or take an extra hour one way. I drive to metro and take it. This is a ridiculous idea to close stations.

I picked my apartment because it is close to the metro. This would make my commute more difficult each day when we are back to work. In general I think closing stops is bad. I know the budget deficit is an issue and we didn't see covid coming, but pre-pandemic it seemed like people wanted more stations and access. Obviously this will be difficult, but I would rather have to wait a bit longer for the metro than have to walk an extra .7 miles to catch it. .7 miles in the rain or the hot summer is not fun.

I live in Cleveland Park and work near Smithsonian. Closing these stations will prevent me from using Metro to get to work (which my employer pays for), so I will likely try to continue teleworking. If I have to go into the office, it will be very inconvenient for me to do so. I purchased my condo because of its proximity to a Metro station and the ease of my commute, so this proposal would significantly impact my commute to work and my ability to access the city. Closing these stations is not a good way to improve local ridership next year, and is not a good way to make DC accessible to visitors. Most DC-area residents with any flexibility in their work location will choose to take another form of transport or work from home instead.

This is unacceptable. I live between Virginia Square and Clarendon. If you could amend this proposal to exclude those two stations then this would be fine.

Proposal to close 22 Metrorail stations

Federal triangle is because there are so many federal buildings in the area - EPA, Customs, Commerce, etc. Also many use metro to go to the National Theater. Metro needs to see how many people get on and off at these stations - Federal Triangle is heavily used

Please do not close Grosvenor-Strathmore. This is a very popular station with many buses going there and lots of parking spaces for commuters. When the pandemic is over this station will be crowded again. I live near this station and it is very convenient for me to commute from there to DC. If you need to close one station then close Twinbrook or White Flint which are less used.

I walk to Grosvenor-Strathmore station as part of my regular commute. Should this plan be put into place, I'd have to drive to another station, as it would be too far to walk to. This would cost me more money per trip since I'd have to pay for parking and would be very inconvenient for me.

This is an extremely poorly thought out proposal. My home station is College Park, and so it would be very inconvenient for me personally and others in that neighborhood (when the station was closed for a period of time in 2019, the PG plaza station (my next closest option) had barely enough parking. But more importantly, it does not seem well thought out at all to propose closing College Park, given the university's proximity, the MARC station stop that is there, as well as the planned Purple line connection. I am also surprised to see that both the Archives and Smithsonian stations are on this list for potential closure--I believe these are the primary stations that people use to access the National Mall.

I bought my house walking distance to College Park metro station.

This would not work, as I purchased a condo at the Grosvenor Strathmore station, so I could walk to the train station and not drive to work, as I work in Southeast, D.C. Additionally, there are five condo and apartment bldgs. located at the Grosvenor metro station. This metro station provides transportation to thousands of professionals who work in D.C. Parking is limited for employees who work in D.C.

Must strive to control costs. Strive for a balanced budget.

We use the Clarendon metro stop

I don't use these stations, but I can see closures causing crowding in the nearby stations that remain open. It would make social distancing more difficult.

Eisenhower is a vital station to residents in this community. We moved here specifically because of metro station

Access to these stations is critical for a significant portion of riders who use them for daily commutes, and closing these stations would drastically reduce ridership across the whole system.

McLean is the only station on the Silver Line that has parking other than Vienna!!!! I would not be able to commute to work ever! And East Falls Church is the next best option because buses actually go there from other places!

I live a block from the Virginia Metro rail station. I would not walk to Ballston station (the next available location based on the list above) to take metro rail but would instead use Uber, Lyft or drive my own car.

You are closing two stations in Arlington along the Orange and Silver line that are next to each other. How does that work for residents that live there. Both Virginia Square and Clarendon have government and doctors offices as well as restaurants and other retail businesses. Arlington has moved to limiting parking spaces in new buildings encouraging public transportation.

Given the distance between Courthouse and Ballston it would be good to keep Clarendon open. McLean and Reston are essential for back to office commuters.

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

LEnfant could serve as a substitute for Smithsonian but it would be inconvenient.

Virginia Square and Clarendon stations are along all the high rises whose owners and renters moved to these places because of the Metro's service, many do not even have cars and will resume taking the Metro again when their offices are open again in Northern Virginia, D.C. and Maryland

I live in an apartment building directly next to Grosvenor-Strathmore. I would not want to pay for parking at a nearby station when I can easily walk to Grosvenor-Strathmore.

This proposed option is drastic, and my concern is if implemented, not only would I find it horrible but others would also find it so and ridership would never recover.

I think that closing VA Square is more feasible than both it and Clarendon (and there was a lot of demolition for the Clarendon station in the 1950s, seems like a waste.) How will visitors reach ANC? From Rosslyn? I think that one museum stop should remain open, Smithsonian over Federal Triangle otherwise there are too many tourists pouring out of one location in summer.

This would be a last-mile failure that would encourage people to drive to their destinations.

Some of the stations mentioned here are dependent on the expansion of Silver Line. The ridership on some of these stations would increase substantially and closing these stations would be inconvenient!

Proposal to close 22 Metrorail stations

I could see closing VA Square since Clarendon and Ballston are a short walk away but shutting down East Falls Church would be a mistake. Lots of daily commuters and the traffic in the surrounding area would be hard pressed to absorb the influx. Worst of the proposals as presented here.

Plz don't close Grosvenor-Strathmore

Clarendon does NOT have low ridership. It is a crucial line in northern Arlington. By closing VA Square and Clarendon, it would leave thousands of people between Ballston and Courthouse with no metro line nearby, and would encourage crowding in the other stations. The other two metro stations cannot handle the ridership of four stations. Take out VA Square if you must, but do not take out Clarendon.

You guys just want to make life more difficult for working class people don't you? Absolutely not

This would not work for me as I live next to Clarendon metro and walk there.

Please do not close stations. This would effectively make Metrorail useless for me and my family as we live near one of the stations proposed to be closed. I think this approach would be misguided because it would drastically reduce ridership at a time when the economy is recovering and is most in need of reliable transportation.

Federal Center SW is the closest station to my office. I also frequently use many other stations in this list.

My work location is between the Clarendon and Virginia Square stations. Why would you close two stations next to each other? Would I take the metro to Courthouse and walk all the way to my Fairfax Drive office or take the Metro to Ballston and then walk back to the office? The Virg Sq station may be a bit more quiet, as that area is more residential, but Clarendon is a busy office and residential area. It makes no sense to close that station. Also, if you close all these stations on the Orange Line, you need to keep the 38B bus that travels along this corridor. I saw that 38B is on the chopping block too. If Clarendon and Virginia Sq stations are closed, commuters from DC would need to use the 38B bus to get to the Clarendon and Virginia Square areas.

If you're going to close stations during FY22, you should use this time to work with the three jurisdictions on closing some stations permanently and adding stations at high traffic areas in the form of a light rail such as Route 1 (Ft. Belvoir, Woodbridge, Quantico), Route 66, Route 7, etc. Let Maryland and Northern Virginia take control of the stations through the MARC and VRE and have them revamp them into a light rail system that connects with at least one station in DC.

Please do not close Grosvenor-Strathmore, Cleveland Park, or Smithsonian

Several of these stations are not near other stations, like College Park. This just seems like a terrible idea. Metro should instead be thinking of ways it can cut labor costs in open stations.

Opposed to station closures as they would create disruption. Many alternatives are not within walking distance so would only be practical in areas where stations are close together such as downtown DC.

Prior to COVID-19, Grosvenor-Strathmore was always a crowded station during morning and evening commutes. Many apartment communities are situated purposefully in immediate walking distance to the metro to account for Metro commuting

There are some *MAJOR* ridership on most - if not all - of these stations. Entire living communities have been developed around some of these stations, to say nothing of office complexes. Closing these stations will be the death knell of many communities and commercial enterprises, to say nothing of the hardship it will create on people living/working in the vicinities.

I cannot afford to walk to West Falls Church from the East Falls Church metro. I do not have a car and rely on that station to go to work, school, and get groceries.

You are closing many stations which were the focal point of development. While I think you could close either VA Sq or Clarendon, closing both will impact Mason students, closing Smithsonian will impact tourism and makes zero sense and makes getting downtown hard.. closing Eisenhower impacts a major residential/work corridor.

What a waste of billions of dollars of public investment! Why bother to have built the stations when they are to be closed indefinitely. Also, on a personal level, I travel to Cleveland Park from Shady Grove to visit friends and eat out.

Maybe close them after rush hour

This would be a disaster for me. My work commute is Virginia Square to Smithsonian. So, this would mean that I cannot get to work, once the office opens up.

During typical times, many of these stations have full garages and very high numbers of ridership. Closing them will push other stations to run out of parking and will further reduce your ridership, as metro will no longer be considered a consistent option, for some.

Stop doing this. Literally, none of these proposals will be helpful to anyone living and/or working in DC, including tourists.

Metro's ridership projections for 2022 are too low, but keeping stations closed will only discourage people from returning to Metro. The marginal cost of operating additional stations cannot be nearly as large as the additional revenue generated by ensuring that already-built stations remain accessible to encourage people who return to work to come back to Metro as well.

Proposal to close 22 Metrorail stations

Grosvenor-Strathmore is not that close to other stations, and it is a major commuter station. Plus, patrons of the Music Center at Strathmore rely on Metro.

This is a terrible plan! Low ridership means nothing to me. I am 100% ridership. Closing down Grosvenor means I will not be able to work or travel home. You are supposed to provide a service. This proposal is contrary to providing a service to the community. If you cannot run the system, then sell it to someone who can.

I rely on the Grosvenor station

I live in Cleveland Park, and I use Metro a lot. This will force us back into our cars. And, Smithsonian? Really. Are tourists going away permanently? And Federal Center, SW? How many people work in that area? And, closing 3 Silver Line stations before they've even opened? How do you know what ridership might become?

I work at the national Science Foundation that was explicitly located next to the Eisenhower Ave station to allow the employees to use Metro. Closing it will affect all its employees. In addition closing the Virginia Square station will affect me personally as this is the station that I take to go to work. I use metro to go to my doctors office as well. This station has handicap access that many of my neighbors in wheel chairs depend on to get to work and elsewhere

East Falls Church is my metro, and it is NOT near other stations. I would have to buy a car and couldn't ride metro at all. I also probably wouldn't return to riding metro in the future, as I already have the car... I do NOT want to do that.

It would be unfortunate to stop service in areas that are currently low on ridership. There are still customers who need that service.

This would distort ridership for many neighborhoods and cause increases to other stations, making it harder for access to specific communities. This would alienate many from metro access causing increased car usage and would have negative impacts on the environment and economy to allow for more movement of people throughout the region. Terrible idea.

East falls church is my station. I bought a house specifically to be close to the metro. If you close 22 stations you will lose a lot of ridership permanently.

This would inconvenience riders, further decreasing ridership

Yes to most of the closures, but not Clarendon and East Falls Church, which are heavily used by commuters in addition to Ballston. Keep Smithsonian open too.

Closing Grosvenor-Strathmore would greatly inconvenience a large population of older riders living in nearby condos. Many of these seniors, especially those in Parkside Condominium are living alone in apartments they have occupied for 20-30+ years. Many are 70-80+ in age. During this time, these apartments have appreciated to values in the \$250K-\$330K range. This is low cost housing in a high cost area. These seniors are depending on income from sale of this property for the funds necessary to move to assisted living in the near future; Closing the Grosvenor-Strathmore station would devalue their property and imperil their future. This property devaluation will be a life-changing tragedy for these people, not simply an economic loss as it will be experienced in the expensive housing nearby.

I am in walking distance of the Grosvenor-Strathmore station. I do not have a car. To could not get to my apt. without the metro. Would there be bus service to Grosvenor?

Need Clarendon or Virginia Square open---both would leave too large of a gap between Courthouse and Ballston. Many restaurants, shops, and groceries are serviced near here.

I personally work near East Falls Church station. Many people need these station to get home, work, etc.

Ridership for Grosvenor-Strathmore will soar as soon as The Strathmore Music Center and Roundhouse Theatre are open. This will happen soon! Furthermore, this metro station is vital for all of us in the many neighborhoods nearby

So where did all the funding that was already used for the Silver Line Phase II went?

I regularly get on at Cleveland Park. If Cleveland Park Station is closed, I will be forced to walk to another station that is in the opposite direction of where I need to go.

The advantage of a metro system is to reduce vehicle usage and to help the environment and reduce the impact on the climate. By having more stations people can walk to the stations and not have to drive. For example, I can walk to the East Falls Church metro, and I, my family, and neighbors walk there every time we use the metro including for commuting. To get to any other station, the closest being two miles from our house, we would have to drive. Often parking is an issue at the other station and driving adds time, as driving to the next station takes longer than walking to our close East Falls Church station. Driving and parking at another metro stop also adds costs - including money for gas, wear and tear on the car, money for parking itself and reduced health from less walking. In addition it would increase traffic and the extra driving would impact the environment. There are a lot of other costs to be considered if metro stations are closed. Please keep all the metro stations open to help make communities walkable and also help the environment.

My apartment offers a shuttle to the East Falls Church station. I need that shuttle. West Falls Church is too far away. I use the Clarendon station regularly for evening commitments. It is closest to my destination.

I bought a house walking distance to East Falls Church because I did not have a car. I would feel stranded. It's especially baffling to put EFC on the list when it's the closest-in station with parking AND the junction of the Orange and Silver lines.

I would not be directly impacted but if you close Arlington cemetery station how will most tourists visit??

| Proposal to close 22 Metrorail stations |
|--|
| WoW |
| Under no circumstances should Metro close any stations. I absolutely depend on the availability of East Falls Church station. |
| These station closures, specifically Grosvenor-Strathmore, would prevent me from using public transportation (White Flint and Medical Center are too far to walk and the using the bus to commute is not time effective, or cost effective). |
| I walk to Grosvenor-Strathmore to get to work in the morning. This is completely unacceptable. Would negatively impact home values for people who purchased homes within walking distance of metro. Would negatively impact Strathmores ability to attract visitors. Would lead to massive traffic influx in the DMV area, which is already horrendous. |
| Grosvenor-Strathmore is my home metro station and is a large part of why I selected my current place of residence. Before the COVID-19 pandemic I rode Metro on a daily basis and used it for my daily work commutes, as well as to go shopping and visiting relatives and friends. From my experience, this station sees a ton of utilization during the work week and is conveniently located for the many people who live in the multiple developments nearby or otherwise drive to the station to utilize metro for the rest of their daily commute. Closing this station will have a negative effect not only on Metros numbers, but also on the area surrounding as it loses an important resource. If Grosvenor-Strathmore is closed, I will no longer use Metro at all--if I have to drive to another station, I will simply drive the entire way. |
| It is essential that College Park remain open for me to ride Metro. I also need the following stations to be open: Smithsonian, Archives, and Federal Triangle. I am disabled and can't walk the distances required if they |
| This plan encourages me to use my car. |
| I am not sure if some of the listed stations have low ridership and are closer to another metro station. Closing Clarendon station? Mount Vernon? It makes no sense. |
| I use the Eisenhower Station, located immediately next to the apartment complex where I live, to travel on the Yellow Line to the Pentagon Station, where I then transfer to the Blue Line and travel to the Rosslyn Station where I work. |
| Van Dorn? Are you kidding? Once the pandemic is over that'll be one of the busiest in the system. |
| I live near Mt Vernon Sq and physically cannot walk to any other station, this plan again makes actually using metro almost impossible and is extremely ableist |
| For those working sites areas Federal Center SW, Federal Triangle, Eisenhower Avenue open |
| Many of the listed stations are not sufficiently close to other stations so as to be considered adequate substitutes. |
| This is the worst proposal of all. Do you all understand how many of these stations are so essential to commuting and travel? Archives is a perfect medium point between Chinatown and the National Mall. Clarendon goes without saying. This is preposterous. |
| Clarendon Station is essential for me to commute. Closing Clarendon Station would be an enormous disruption to the economic well-being of the area. |
| The Cleveland Park metro stop is crucial to my Metro needs. The other stations near by are not an adequate substitute. The CP metro is also the most convenient one to the Zoo, and if anything, metro should make that clearer to riders rather than closing the station down. |
| EMPHATIC NO! I don't even know where to begin to tell you what a foolish idea this is. You want walkable communities? How far apart do you think stations should be? When I lived in New York City, a walkable neighborhood was considered 4 blocks in each direction of your home. If you walk around Manhattan, you will see that grocery stores/bodegas, pharmacies, dry cleaners, etc. are almost uniformly 8 blocks apart, serving different walking communities. I have a degree in Architecture with urban planning background, and I can tell you that you are cutting the legs out of your transit system. |
| Having to travel from a metro station further from work would add time to my commute and, due to health issues, would also not always be feasible. |
| Would these be temporary closures, or permanent?? |
| The closure of both VA Square and Clarendon leaves riders in the Fairfax corridor with a choice between Ballston and Courthouse. These stations are ~2 miles apart for people who explicitly chose living arrangements to be close to the metro line. |
| This closing does not effect me, however appropriate alternative transportation needs should be considered for those whom it does impact (additional bus service or a bus transfer service) and the station distance is too great to walk. |
| Eisenhower Ave station is a huge convenience for residents of the area. I personally use Eisenhower station very often and can access within a few minutes walk. Getting to the next closest station would be an additional 20 min to commute |
| Particularly Archives, Federal Triangle and Smithsonian as I do business around these stations. Perhaps reduced hours, but not closures. |
| This will work if shuttle busses were provided and I can see an impact to people visiting DC once the COVID restrictions are lifted. |
| Some of the stations listed are actually far enough from other stations and not in walkable areas to be very inconvenient and any proposal that relies on the silver line opening is a bad proposal. |

Proposal to close 22 Metrorail stations

I commute to work everyday from the East Falls Church Metro to Metro Center.

Your definition of near other stations is questionable. East Falls Church is a good drive from the nearby stations, and (I cannot stress enough) some of us dont have cars or simply cant drive.

This would mean that I will no longer be able to use the metro to commute to and from work.

I use Greensboro station, so my travel needs wont be met if this station closes down. Im ok with closure of new silver line station that havent opened yet

We moved to our home specifically because of location of metro access and ease of commute into DC

This would add significantly more time to my commute and increase my driving probably in traffic given both stations I typically start and arrive at would be closed under this proposal. I take metro to decrease my commute time and the pollution associated with vehicular traffic. I also planned to bike to the metro and this would make that impossible given the busy streets I would have to bike on. These closures would cause a significant impact on my commute and may lead me to no longer use metro at all.

Exception: Probably OK to close Arlington Cemetery. We need to prioritize residents over tourists. This option gives up on the idea of Metro as being useful for commuters. If you have to close some of them, close the ones in the downtown core and prioritize keeping open the ones further out where people commute. Otherwise youre driving people back into their cars to get to work.

Given the high volume of housing around metro stations, closing stations has an impact on home values and other economic factors. Furthermore, the question is not phrased giving any context, such as whether bus routes will be increased to meet demand.

This one is possibly the worst of them all. Not only will you be screwing people over, but you will force them to drive more vehicles on the road, which will cause Co2 emissions to drastically rise, further proving that the leadership of WMATA does not care.

How will riders with limited mobility be expected to get to alternate stations

Closing the College Park station is unacceptable, and not just because its my home station. First of all, its NOT near other stations - there are no other stations within convenient walking distance. Second, its planned to be a major transfer point between Metrorail and the Purple Line, so how is that supposed to work?

I appreciate the many stations that make it easier to get around the city.

Just before the pandemic, Id planned to use the Clarendon station daily to get to a new workplace, but I am driving during the pandemic to avoid crowds and physical contact. As the pandemic conditions improve, I would like to eventually use the metro again. Having to add an additional 15 to 20 minute walk from the Courthouse stop, on top of an already long metro ride from Wheaton, would make metro far less practical in my circumstances.

This does not seem like a good list of stations to close because of their proximity to key neighborhoods where people live and landmarks. Closing these stations also increases the number of riders and congestion at other stations. In addition, it forces people to increase their carbon footprints and use automobiles to get to their destinations.

Less than full service for metro is unacceptable.

I believe this will cause ridership to decline further, thereby reducing revenue and negating savings of the station closures. I further believe this will cause long-lasting changes in commuting habits away from metrorail as convenience decreases, and remaining stations become crowded.

It would work for me but I dont think the survey is going to tourists. If you close Arlington Cemetery and both Smithsonian and Federal Triangle, wont it create a lot more vehicular traffic where we dont want it?

Absolutely unacceptable. We use Grosvenor metro every day to commute to work as do many other people. With the continued metro rate increases and emphasis on reducing traffic congestion this plan makes no sense while raising undue hardship on people who live in this area as well as reducing their commuting options and property values. Many people also take the metro to the Strathmore theater from DC and elsewhere, and those who live here use it to visit DC.

Closing down the Cleveland Park station would pose great difficulties for me.

Having both Virginia Sq and Clarendon stops would cripple the George Mason Arlington Campus that has classes each night til 10pm. A large number of people commute by Metro to these stations to access the Arlington Campus as well as the general public for events. The University is in the process of planning and building a major new building to expand campus to support the Amazon initiative. With limited parking, the University relies on thousands each day using Metro.

Some of these stations are essential to those who live near there. Closing a stop like Judiciary square that is so close to Gallery Place makes sense to me - but closing Cleveland Park, Clarendon, Mt Vernon Sq, Arlington Cem sound unnecessary and inconvenient.

This is hard to answer because my stations arent closing. But I think its probably not a good solution to your problem and will cause issues.

these are all grouped, and I would think that each proximity be looked at as separate.

Proposal to close 22 Metrorail stations

I live by the Grosvenor-Strathmore station and use it often to commute. Not having this metro station would complicate many peoples commutes and travel, including my own. Additionally, I once lived by the College Park station and also used it very often. I know the College Park metro station is crucial for the residents of College Park, including the many students that travel to DC for internships and to explore the city. I think closing these stations would be a huge loss for the many people who rely on them to get in the city and back home.

I need Grosvenor-strathmore station to be open. It's nice and safe station to do park&ride!!

I care for an adult daughter with disabilities, including mobility impairment. This is a really bad idea.

Whete would green to yellow line transfer take place if Mt Vernon closed. Too many central DC stations to be closed

When do you propose shutting down all stations to be replaced by self driving vehicles.

This would means I would have to take a bus or other type of transportation to another station adding more time on my commute. NO

I use BOTH College Park and Cleveland Park stations regularly. Again, travel time increased substantially to the point where use of metro no longer plausible.

So all the construction done on Silver Line stops was a waste of money? No, you cant make this decision without giving the stops an opportunity to operate while were not in the middle of a pandemic. Thats absurd.

federal center SW is my stop to get to work. This is the closest stop I use to walk to my office building.

Closing some of the downtown stations would make some sense (they truly are on top of each other), but not as you go further out from the center.

Archives, Federal Triangle, Arlington Cemetery, Smithsonian, etc. are meant to be easy access for tourists as well. Arlington Cemetery also does not have any close metro stations.

I would never be able to ride Metro if Clarendon and Virginia Square stations were closed.

Other stations are too far away from Grosvenor.

I live near Grosvenor-Strathmore and use this station. Please don't close Grosvenor-Strathmore! Also I frequent the Mclean and Clarendon stations.

I attend synagogue in Cleveland Park and have a toddler. Not being able to get off at that stop would make our ability to get to synagogue much more difficult, as the stroller not only makes walking more difficult, but we are much more weather-sensitive.

This plan would greatly impact people who have limited means of transportation. For instance, closing the Grosvenor-Strathmore station would mean having to travel to the White Flint or Medical Center stations, which are too far to walk to.

I dont mind the overall idea of closing certain stations with low ridership, but some of the ones listed dont strike me as low ridership. Grosvenor-Strathmore?? Smithsonian?? I would be supportive of this if Metro provided the data to back it up.

Im basing this answer on the assumption that COVID is no longer an issue and tourism has returned to the DC area. Some of the stations in that list are closer to my I tended destination, and also a nice way to avoid major tourist crowds. Some of those closures I have no opinion on (e.g. some of the stations in VA), but others concern me...

I use the Strathmore-Grosvenor metro station and it is very close to my home. I would hate for that Strathmore station to close, and many people depend on the metro to enjoy the Strathmore music hall productions, so it would be a big mistake to close this station.

At least 33% of those stations listed are important access points for my commutes around the DMV area. They would also close access to important commerce hubs that really arent accessible by other stations (for example, Cleveland Park)

I live in Cleveland Park and need access to the metro. Many of us moved to this neighborhood for close access. While ridership may have been down due the pandemic, the vaccine rollout should see us returning more to pre-pandemic patterns by late summer, so to prematurely close these Metro stations before the world returns to more normal traffic patterns is not a smart move and could have a disastrous effect on our city's traffic.

I use the Cleveland Park station daily. Before the pandemic, Cleveland Park station was used regularly by daily commuters.

Metros convenience is key to its use. Im 70 years old and if Im carrying things, the weather is bad or its late, Im not going to walk to or from Woodley Park or Van Ness because Cleveland Park is closed. Adding a mile+ walk to or from Metro will substantially increase trip time and decrease the likelihood I ever resume using Metro post-pandemic.

As a non driver living in Arlington, I depend on metro to get me to grocery stores, doctor/dental appointments, etc. Closing Va Square and Clarendon is outrageous and sheer stupidity as all my doctors/dentists/store are near those metro stations. Closing Arlington Cemetery is ridiculous. NOT EVERYONE DRIVES OR CAN AFFORD UBER.

Questions: Are these changes to be considered temporary or permanent? If life post-Covid-19 returns to closer to normal, will Metro and Metrobuses resume a more normal schedule?

Proposal to close 22 Metrorail stations

I live right at the Grosvenor-Strathmore metro, and its one reason that I moved here. Before the pandemic, I almost always chose taking the metro to get to meetings, work, doctors appointments, plays, and everything else I attended downtown. If I have to get in my car and then have the hassle of finding parking to ride from another station, I might very well opt out of metro altogether and drive or hire an Uber or taxi. Many of my neighbors also rely on this station to have access to work. Pre-pandemic, trains at Grosvenor-Strathmore were always crowded at rush hour and often at other times as well. This would be a serious blow to our neighborhood and the people who live and commute here.

Having certain stationsâ€”especially stations in VAâ€”closed completely would make travel time longer, less walkable and potentially less safe.

N/A

This would be acceptable for a short period of time until ridership increases revenue. However, this is likely to create crowding at the remaining stations, particularly when tourists converge with rush hour workers. Also, I noticed that several stations in a row are listed here (ex. Clarendon and Virginia Square and Smithsonian and Federal Triangle): how far would people walk to the closest next stop (ie would tourists go to the Smithsonian from metro center?)

Its unfair to say there is low ridership at Grosvenor-Strathmore when weve been under COVID restrictions for a year, and this station was closed for a portion of that COVID restriction. My husband and I moved to this neighborhood specifically because of the metro at Grosvenor-Strathmore. We use it daily for work, and on weekends for shopping in the area and into DC. Closing this station would be a hardship for us and would likely result in our relocating to another area.

CLosing the clarendon station would ruin my life. Big no no!

I live by east falls church and use it when there isnt a pandemic! Currently, I am mostly home. But once things go back to normal, I will need access to the east falls church metro!!

Between Clarendon and VA Square, would make sense to close VA Square given distances between metro. It doesn't make sense to close both as it's roughly 2 miles between Courthouse and Ballston.

While COVID may make ridership low, I cant imagine that in the height of summer or Cherry Blossoms in a normal year that closing Arlington Cemetery AND Smithsonian are practical. This seems VERY short-sighted.

NO. Stations should never be closed. Frequencies ok, but to close stations is to effect access to travel, to work, will disproportionately affect low income and BIPOC communities, and drive housing prices down. It could ruin communities that people moved to specifically because there was metro access. Once built, it doesnt make sense to close stations. NO. This would ruin yhe DMV area. We might as well not call it a metro area anymore.

If the extension of the Silver Line occurs, it would not be prudent to close those stations shortly thereafter.

Federal Triangle serves several government buildings. I could live with less trains, but a completely closed station means a much longer walk when Im carrying something heavy or during inclement weather. ONCE THE PANDEMIC IS OVER, we will all BE BACK! Please plan for a return to normal operations.

Many of these stations are in busy areas and provide an important service to the community.

Closure of the selected stations would be detrimental to both residents who commute into DC as well as businesses along the orange line - particularly Clarendon shops. Please do not close these stations.

Decisions for 2022 cannot be based on ridership during the pandemic. Im also not sure how closing a station that a train would need to go through anyway is saving much other than creating hassle for a lot of people to walk further to and from a station.

No, and it would decrease property values for the nearby homes, potentially devastating the tax revenue from real estate taxes that benefit our schools. Closing any of these stations would be an enormous mistake.

How much do you actually save with this? You still have to maintain security and upkeep at the stations to prevent vandalism and other crime. Why would you close stations that serve colleges and other schools??

Need the Strathmore Grosvenor station to stay open. It serves a huge community. It will be a shame to close it after waiting fof it to happen for such a ling time.

Absolutely not. This would double my commute. Completely unacceptable

Closing stations used by tourists and federal workers is a terrible idea. As for us, we bought our home to be near Metro. My husband is disabled. If Cleveland Park closes, he will not be able to use Metro. This proposal is appalling and makes us both frightened and angry. Also-what about access to Dulles?

I am a current health sciences student that relies on the metro for morning, daytime and evening hours to get to and from school and various clinical rotation sites in the DC metro area. Having the metro close these stations in Arlington not only directly impedes my ability to access essential medical educational activities, but also daily activities outside of work as the closest metro stop to me is Virginia Square.

In the winter, walking an extra half-mile to a different stop makes a big difference.

Proposal to close 22 Metrorail stations

As a single person in the District without a car, this plan would greatly reduce my social life. For a long time, I have depended on my friend living in McClean to pick me up at the Greensboro METRO stop to take me to social events that are primarily located in Virginia Without this station, it would be too cumbersome for her to meet me at any other station. I would have to forgo many of my social activities..

I use several of those stops

All stations should stay open.

Federal Center SW is home to HHS and all of their agencies, who are currently working in person and would be negatively affected by this. Grosvenor needs to stay open, what is the alternative? It is the main location people park at from Bethesda. Cleveland Park is a major stop. Arlington Cemetery seems like a bad idea to close.

Seems pretty draconian. Do you plan to improve MetroBus service between the closed stations and those remaining open. Given the timing of the TOD going on at Grosvenor, closing that stop would appear to be a bad idea, making it difficult to fund the project. Savings realized by these closures would not be that great. Some of them liking only have 2 staff.

Nope. Go back to your mission. This is just not acceptable.

This would basically ensure I never use metro

I live in walking distance to Grosvenor Strathmore and need to use it to commute to/from work (Foggy Bottom) 5 days per week.

Clarendon and Virginia Square must remain open.

I might be more inclined to consider an option like this if I knew more information about when these stations would be reopening and what additional costs would be incurred when eventually we reopened them.

I work at the Univ. Maryland College Park. It is absurd to close the College Park Metro Station, as so many people are using it--staff, students, and visitors are using this station. It would send a very bad signal of how the Flag Ship University of the State of Maryland is being treated.

I purposely chose my current job because of its vicinity to one of these stations.

This is THE WORST of all bad ideas anyone can come up with!!!! This will affect so many people who chose where to live and/ or work based on proximity to those metro stations. This will affect not only travel schedules but entire livelihoods of many people. This will hurt a lot of people on many levels, this will be very unfair and dangerous. We will protest!!!!!!!!!!!! COVID will be over, and Strathmore Music Hall will be open. How would they operate? It will deprive so many people of an important cultural venue!

Grosvenor station is a much more convenient station than Bethesda, Medical Center or White Flint because of parking.

We moved to this area to be in walking distance of Grosvenor metro as did many other people. Also several new developments were encouraged based on proximity to metro.. This will also badly affect property values and tax revenue. It is not possible for me at my age to safely walk to other stations. I do not believe the cost savings of closing the Grosvenor metro are remotely believable and will challenge the accounting if this goes forward. This is an outrageous proposal that seems intended as a scare tactic.

In particular, I tend to drive and park in unzoned parking streets within 10 minutes walk of Clarendon. None of the other Arlington proposed closures has street parking even that close. Clarendon is my one crucial Metro stop.

Perhaps change some to rush hour only coverage.

ARE YOU FUCKING SERIOUS? Are you TRYING to kill Metro ridership entirely?

The closure of bot Clarendon and Virginia Square would require me to walk at almost a mile to an open station. The closure of one would be acceptable.

Grosvenor-strathmore should be kept open Strathmore Concert Hall attracts lots of metro users

Arlington Cemetery is a popular stop for tourists and a long walk from any other station. Archives is the most frequent stop we use when we head to DC.

These metro stops may be close to other metro stops but not feasible to walk to in some locations.

Smithsonian and Judiciary are key for me.

Please take a closer look at each station to identify which segments of the population are relying on those stations despite their low ridership. Equity should be a primary focus. I am personally affected by the proposal to close the East Falls Church station. I commute by bike from home to the metro station using the W&OD/Custis Trail. This station is heavily used by bike commuters using the trail, which presumably is why WMATA recently constructed a new Bike & Ride facility there. Since this usage by a specific community or transportation mode differs from other stations proposed to be closed, I strongly encourage WMATA to consider removing East Falls Church from the list of FY 22 station closures.

Not so great for getting downtown, e.g for museums on Mall.

My job is one block from Clarendon station

Proposal to close 22 Metrorail stations

Closing both Clarendon and Virginia Square would be a big mistake. Of the two, I would suggest keeping Clarendon open and closing Virginia Square. Virginia Square is admittedly close to Ballston so people can use the Ballston metro instead. Clarendon, however, is still a half mile away from both Courthouse and Ballston. It would be highly inconvenient to close the Clarendon metro and force everyone to either Courthouse or Ballston. The stores, restaurants, and bars would also appreciate the foot traffic from the Clarendon metro.

Clarendon and arlington cemetery are near other stations by about a 10-12 minute hilly walk. Those stations also have unique features (Clarendon has shops and grocery stores that the other stations next to it do not have) and Arlington supports tourist travel. I don't use the other stations regularly/If ever, but it is hard enough to get around this city on public transportation.

WHHHHHHHHHHAAAAAAAAAAT

I would be irate if Clarendon closed. Closures should be an absolute last resort. I cant even believe you would entertain closing so many of these given the money to build and the neighborhoods that rely on the Metro stations. I know its not an easy task, but I hope you explore every state and federal funding source, and I think most of us would pay more to keep the station open.

These are not near other stations..... there is significant distances between for example Grosvenor and NIH and Twinbrook. Due to security there is NO parking at NIH. The other issue is access - Grosvenor is building a retirement home and has built condos and development around the metro to allow ease of transport without crowding Rockville Pike. Similar issue for Northern Virginia eg E Falls Church (road traffic is so dense in No VA as it is this will put more pressure on bridges and roads and it is not a GREEN environmental solution)

Im an NIH postbac who has no car. So I bike to work most days. But to get anywhere else I need the Metro.

I live near McLean. If you close any, focus on the ones not open yet.

I use smithsonian. Lenfant is not really a closer option if you work on 12-14th St.

Shutting stations, would cut of my commute connections. Unused stations would go into disrepair quickly.

I live at the Cleveland Park Station, something that makes commuting very easy. Closing the station would mean that in addition to the 45 minutes each way in wait time at the station there will now also be 30 minutes of walking in the elements - heat, rain, snow - meaning that the true cost of these changes in time with my family and added child care would be 2.5 hours. I can barely afford food as it is, 2.5 additional hours of child care each day (12.5 a week, FIFTY A MONTH!) would be impossible. I am going to have to leave this area completely if these changes occur. Without the benefits of public transit systems living in DC and paying this areas taxes to receive no service is just not an option.

East Falls Church (the station I would use to board metrorail) is a transfer point for the orange/silver, and is not all that close to other stations. I can walk to EFC, but cannot walk to any other metro station. As such, if EFC closed, I would no longer consider metro to be a viable option for my commute and would stop riding. If metro is trying to encourage increased ridership, closing stations (including highly used stations like Clarendon) would seem to defeat the goal.

I park at Strathmore to go downtown for periodic theater/ballet performances.

I commute to Federal Center multiple times per month even during the pandemic. During inclement weather, having to walk to Cap South or LEnfant would be a huge inconvenience.

I need to work after 9pm at the NIH campus amd other locations, and therefore would not be able to get home if stations vlose at 9pm.

That's a terrible proposal. My family needs train services at Grosvenor! We depend Metro to commute to Washington DC!

Is this temporary? These are some pretty major stations that would be closing right when work comes back to in person. I would rather more of the other proposals go through just to avoid this one. If this is a temporary closure for a few months or reduced service then maybe that would be different. I am adamantly against the closure of stations - especially when remote work will be phased out for most people.

I commute to the McLean station for work and walking from the Tyson's station to my workplace is, as far as I am aware, impossible. The distance is not so much the problem as the fact that Tyson's is an exceedingly pedestrian unfriendly area, with its 12 lane roads and its 2000 ft superblocks.

Cutting service at the College Park station would mean that I and tens and thousands of UMD students and staff no longer have access to D.C. We fought hard to keep our colleges bus service to the College Park station specifically so that we could have access to this metro stop. Its the only walkable stop from campus and the bulk of student housing (neither West Hyattville or Greenbelt are walkable). Not to mention that many students who live at UMD work and intern in D.C., and vice versa. Cutting any station is unfair to the people that use it, and cutting the College Park station would make it a less desirable school, given that part of UMDs appeal is access to educational, recreational and employment opportunities in D.C., enabled by this metro station.

Proposal to close 22 Metrorail stations

When these station closures are considered in concert with proposed bus line cancellations, I am left with no public transit commuting option (unless I walk 2 miles). While I have strategically avoided the bus in the last year due to the inconsistent, unreliable, and slow service, I would still need it as a back-up option. With the plan as it is, I would no longer be able to use public transit (so Metro would lose my business, and I suspect the business of many other commuters in Arlington County).

No. I work at Judiciary Square and many people live or work near the stations you are considering closing. It's not uncommon to have sudden, dangerous weather come on and increasing the amount of time people have to walk when those weather events happen. Also, it means people may have to walk more at night after taking the metro, which is sometimes dangerous and scary for many women, people of color, members of the LGBT community. It is also an access issue for disabled people. Not only is it inconvenient, it is a potential threat to safety.

How do you determine low ridership? Clarendon has high ridership in normal times. Do not close Clarendon.

McLean is the one by the mall, right? And how would people get to Arlington Cemetery in the summer? I understand in the winter. And that looks like a lot of locations in DC.

I work right off of the McLean stop. The walkability of the Tysons area is abysmal and there is no direct walking route from the Tysons Corner stop to the offices off of the McLean stop.

To close two Arlington stations - after we paid to build those stations and actually use them - is crazy!

In general this appears to make sense, but in some suburban areas it seems like it might not be easy to get between stations if you currently live near a station that would be closed.

This is pretty bad, but barely passable.

I bought my property based on its proximity to Grosvenor. Not only would it be inconvenient to not have the station available, it would adversely affect my property value.

The more stations that are closed, the LESS people will use metro, and we want them to use it MORE. Make metro better and keep all the stations open to promote more customers. If Grosvenor Strathmore is closed, I would never use metro. Even running at a slower schedule is a deterrent.

This doesn't affect my personal travel plans in 2022, but I still voted no on this proposal because it's so bad. I used to attend the University of Maryland in College Park and work in Washington, DC. If this proposal had been passed when I was working in college, I would have faced a commute of roughly 1.5 hours (each way!). That would be untenable. Metro should be ashamed by this proposal.

If there is a return to normal ridership in 2022, this would be incredibly detrimental to all of these proposed station neighborhoods which rely on Metro to commute downtown. PLEASE DO NOT CLOSE THE CHEVERLY STATION. This is our access / lifeline to downtown businesses. Many of us work downtown and depend on Metro rail access to get to our jobs. The buses don't run often enough or direct routes to allow for the same access as rail. We depend on the train for work commutes, shopping, and supporting the DC economy. It's essential to our neighborhood and would negatively impact all of the residents here. Thank you.

Public transit stations should be open allowing for dependable and reliable service.

Appssolutely not!! The reason why I purchased my home in Falls Church was because of its proximity to the East Falls Church metro. Not only would it make our commutes difficult forcing us to drive, But it would negatively affect the value of our homes But it would negatively affect the value of our homes!

I normally travel to Judiciary Square on my daily commute. I have knee issues that will make walking significantly longer distances from Gallery Place or IEnfant Plaza difficult.

Virginia Square is my stop. But I can walk to Ballston, of course. Why on earth close down Smithsonian????

Absolutely NOT!! Clarendon and Virginia Square stations are essential stations to keep open. Keeping them open helps reduce overcrowding in the Arlington and moderate traffic flow (both walking traffic and metro/bus traffic). Closing Arlington Cemetery station would be a good idea though. People rarely ever get off/on at that stop.

I live in the Virginia Square neighborhood of Virginia and trying to get to the Ballston metro would cause large changes to commuting times. There is a big distance between Clarendon and Court House, so would hope that at least Clarendon would be open.

If trains run less often, people may start using nearby stations instead of the closest to lessen crowding on the platform. I would suggest waiting on this closing if the trains run less often. See how the new schedule works first.

I often use the Cleveland Park station on my commute home. Plus in the summer when the zoo is open there are a lot of pedestrian traffic at Woodley Park already, so adding more commuters to this station would make it terribly busy.

No. I live near the Virginia Square station. Ballston Metro station is not as close as the VS station. Ballston station was already packed and useless during rush hour. I can't imagine who thought you should close Virginia Square or even Archives (which is used by tourists a lot!). Clarendon? Are you crazy! That's the main hub in a vibrant community.

While this plan would work for me personally, the proposed reductions could result in dangerous platform crowding of remaining stations and reduce viability and convenience of Metro as an option. More people would be more likely to abandon Metro instead of using it, creating a downward spiral of revenue and ridership and driving up incentives for cars, creating all kinds of cascading problems for the city. Metro is so important!

Proposal to close 22 Metrorail stations

I am a senior with no car and rely on Metro and Montgomery County Ride-On busses for transportation. Would not like to have the Grosvenor-Strathmore station closed, as I live within walking distance of this station.

This plan does not serve low income people who depend on public transportation. It sound like the Metro Board is more interested in helping private parking contractors. Its also bad environmental policy.

These stations are merely underused because of the pandemic. When we open again they will be vital to reestablishing vibrancy in your neighborhoods and ridership

I guess I could go to Greenbelt.

If the efficiency of the system is degraded, ridership will fall and never rebound. People will decide it is not a viable means of transportation. Curious, what is NYC doing?

The station nearest my work is next to Federal Triangle. However, if he alternatives are closing the station or running trains every half hour, which is probably completely unworkable, Id have to pick closing the station.

PLEASE PLEASE PLEASE do not close the Grosvenor-Strathmore Metro. My fiance and I chose an apartment near it because he has an eye disease and I have debilitating anxiety and do not drive. It would be devastating for us to lose our station. Not to mention all of the people that live at the station, park at the station & will be living here with all the development they want to do here in the next 10 years.

East Falls Church handles both Orange and Silver lines, and attracts a number of bicycle and pedestrian users. With increasing population expected nearby (e.g. the Broad and Washington project in Falls Church with 339 new apartments), EFC will see steadily increasing passenger counts. A brand new bicycle storage facility has recently been completed at EFC (after multi years delay), which should attract more bicycle using passengers.

You are proposing to close all of the metro stations on the Washington Mall, which tourists and families rely on. Cleveland Park is a neighborhood that relies on the metro station.

I love the Grosvenor-Strathmore stop. Please dont do this. :(

Some of these are not as close to other stations as you think they are. Others are still crucial, even if theyre near another station - like Judiciary Square, which is currently operating as a COVID-19 testing location. Closing down that station is antithetical to public health goals.

What is the plan for getting around a closed station? Would there be shuttle buses? If so, what is the savings in closing the stations. Negative impact to riders.

Grosvenor-Strathmore is my primary station. The Red Line plan already has trains continuing past Grosvenor-Strathmore only every half hour. Does that mean that trains every 15 minutes would be only from Medical Center, where there is very limited parking?

Many people, including myself, rely on these stations and need them to get to work. Closing these stations would result in job reduction around the stations, cause over crowding at other stations, and may force people to move who need to live near stations

Please remove Grosvenor from that list as lots of people rely on this station which has been used as a lay over station for many years due to its strategic location

If you close all 22 proposed stations, this will impact 10,539 elderly people, 23,273 Black, 750 Native American, 9,695 Latinx, and 13,526 Asian residents, and 1,576 Affordable Housing Units. Metro-rail:If you close the Mt. Vernon Square stop, that will stop access to 766 Affordable Housing Units, affecting both low-income and disabled residents. To note, 24% of residents in AHU identify as disabled.If you close the Federal Center SW stop, it will affect a very low income area (\$63,779) at 50% of Median Household Income.If you close the Morgan Boulevard stop, it will affect a low income area with 92% of its residents identifying as Black and 13% as disabled. To note, the most recent census survey shows that 8.5% of DMV residents identified as disabled and under the age of 65.If you close the Cleveland Park stop, this will affect an area with 9%, which is higher than the DMV average.In addition, I regularly use the Mt. Vernon stop for grocery shopping, Smithsonian for visitng our museums.

It does not make s nose to close both Clarendon and Virginia square. Virginia square is walkable to Ballston, Clarendon is not as walkable distance wise and should remain open no matter what given the density of people living nearby. It also makes no sense to close Arlington Cemetery and create more traffic problems for tourists. Reston town center and East Falls Church are important destinations for federal commuters and must remain open. Smithsonian and Federal Triangle and Federal SW are also critical hubs for tourists and federal workers alike and are too far from other stations to make metro rail commuting worthwhile. We will end up with way more vehicles on the road.

Specifically oppose closure of Eisenhower Ave and Van Dorn St stations given development in recent years around these stations to promote public transportation versus additional cars on the roads. Also oppose closure of Smithsonian station as that is a primary access point to visiting significant attractions and events in Washington, DC both for local residents and tourists. Youre just asking for more people to drive - ugh!

No closures, please!

The Arlington neighborhoods around Clarendon and Virginia square are some of the most densely populated with regular commuters to and from DC. Closure of these stations would drive crowds to Ballston and Rosslyn which are already two of the busiest Arlington stations.

What was the point of spending money to build these stations if they are to be closed?

Proposal to close 22 Metrorail stations

Federal Triangle? REALLY?! Do you know how many govt workers get off at that stop? YOU will loose DOUBLE what you are loosing now if govt employees start going back to work- even part time- and CANT GET THERE!!!!

I use many if not all of those stations and I find the closures unacceptable for a public transportation resource. Once again you are forcing people to use personal automobiles or just stop using certain retail establishments frequented via riders dear those stations.

One of the reasons We bought our home was to be close (walkable) to Grosvenor station.

Please KEEP the Clarendon station open. DO NOT CLOSE CLARENDON STATION.

These closures will undermine the purpose of the Metro and discourage ridership.

Reston town center is my line. Its not even open yet!

I would want Mt Vernon Sq to stay open

I live between the VA Square and Clarendon stations. Closing these two stations would mean that a metro station is no longer within a reasonable walking distance of my home. My home is not located on a block that has residential parking restrictions so I do not have a neighborhood parking sticker; consequently, I would have to pay for parking in order to use Metro.

Many of these I could probably live without though could potentially be quite inconvenient especially a station like Cleveland park which is not really connected to much else. It's hard to imagine now but I could probably get used to not having so many downtown stops. Not sure how much it would impact me.

please consider the needs of older and disabled persons as well as service workers who need to travel to/from these stations. will buses take up the slack?

The stations I use most often are Archives, Federal Triangle and the Smithsonian. Outside of the pandemic those stations are heavily used

I absolutely need Cleveland Park. I often use Archives, Federal Triangle, Judiciary Square, Smithsonian, and Grosvenor-Strathmore. Please, please please do not close these stations!!!

Grossvenor/Strathmore is within walking distance of my hime, therefore reducing carbon print.

Clarendon and Virginia Square are part of an urban village plan - high density living without the need for a car - you can walk to groceries and take the metro to work. Closing the metro would strand the population that has been intentionally built up in a way that is environmentally responsible. Virginia Square hasnt yet been built up to the same extent as Clarendon, so I suppose future plans could be scrapped (which I say even though its closer to me), but to close Clarendon would be quite a nasty blow to an entire community built up specifically because of its proximity to metro.

We depend on the train to get to work as well as socializing in DC. It is one of the main transportation means for our condos, just under 1000 units.

No. Grosvenor Strathmore is an essential stop for commuters, musicians, and the Strathmore Mansion business.

This would cause a serious problem for me since I live in next to one of the stations you plan to close (Eisenhower Ave). I do not have a car and the Metro is the only way I get to work and run errands. I understand the concern given the current COVID-19 pandemic but I would caution against closing down metro stations at this time. Especially since there are signs of returning to normalcy by Fall 2021 if not sooner. In any event, I do not agree with this proposal and it should not be a consideration.

Thats a lot of stations?!?! At least keep the ones that are in DC, and make bus routes to replace those VA/MD ones. Many tech companies are outside of Greensboro and the metro access is one of the main reasons they still attract talent to commute from DC. Closing that one would be detrimental to Virginia businesses.

Better to reduce operations overall than terminate some peoples access to Metro service, which is the connector for all people in the area.

This would be inconvenient as I currently use the Virginia Square station. Additionally, I am in the process of moving and do not have a car, therefore I have been planning new housing around proximity to a metro line and changes to what stations would be open would be a significant impact

I use the College Park Metro from time to time. It is within walking distance of my house. It is one thing to limit stops at this Metro station, another thing to close it all together. This is a very poor decision and should be taken out of the proposals considered.

Cerrar las estaciones de los metros no soluciona nada. Se crearia mas congestion en las otras estaciones y tb los usuarios empezarian a buscar otras alternativas para movilizarse. Todos se afectarian y el metro tendria que cerrar

None of these are my metro station but I would be livid if I had moved to an area with one of these stations and the station shut down

Grosvenor-Strathmore is a very popular station in this area. I would strongly oppose closing of this station. White Flint will not have the capacity to handle ridership if we see a return to more normal economic activity in January. The risk you are taking is a further decline in ridership as people seek alternative transportation options, further threatening your revenues and increasing traffic on our roads.

Proposal to close 22 Metrorail stations

I regularly use both Archives and Federal Triangle stations and I know a lot of other Metro customers use them too. Some of these stations are that close to another station (McLean, Greensboro). Also, if you eliminate both Clarendon and Virginia Square, then you have to use either Ballston or Rosslyn- theres nothing in between and that is a very long distance for no Metro station. Ridiculous.

I frequently use Cheverly, Greensboro, and Smithsonian stations, This is completely unacceptable!

Dont close Grosvenor! I use it. Many people nearby walk to the Grosvenor metro. If it closed ppl would have to drive to another metro station or they might not take metro. If metro is too inconvenient, ppl like me will not use it and will drive cars downtown.

Closing the Smithsonian station is a definite NO. The museums have been closed for a long period; hence the low ridership. Closing both the Clarendon and VA Square stations is a definite NO. As a senior I use both stations; my neighbors, friends, and I havent been riding due to COVID. All of us will use Metrorail once its safe and activities are open again. Only close one of the stations, either Clarendon or VA Square. NOT BOTH!

I live at Virginia Square and agree that it isnt a priority to keep open. Its hard to provide feedback without the ridership data to justify it. Otherwise were all just speculating on the need for specific stations to open/close and advocating for our own specific needs.Im surprised East Falls Church is on the list, but West Falls Church isnt. Maybe eliminate the Orange Line and do an express shuttle service to Ballston?

Removing Greensboro will have a dramatic impact as there are many commercial and residential buildings (including Booz Allen Hamilton and Booz Allen Hamilton World HQ, Cvent HQ, SAIC, Lumen Apartment Homes, the brand new and MASSIVE development The Boro (which includes Whole Foods, Icon Movie Theater, Rise Apartments, Verse Luxury Apartments, and more) and others) located around this station. While Spring Hill and Tysons Corner Stations are roughly a mile from Greensboro, neither are remotely walkable given theyre bordering Virginia State Route 7 and VA-123 (both not walkable nor safe).

I agree on this if consideration would allow Arlington Cemetary would stay open for limited hours so that families of soldiers can pay their respects as well as attend the annual memorial and Veterans Day activities

If you expect the silver line stations to be of low ridership, why did you build them to begin with? did you not think about that when planned the projects? What are the benefits to us (not for you) behind bothering to build them ?

We walk to the East Falls Church metro to go to the museums and often get off at Virginia Square where my son lives. We love the retail and restaurants in our neighborhood and this closing would really hurt them (after managing to survive during the pandemic!!).

hard to get around

We moved to East Falls Church to be within walking distance of its Metro Station. Its closure as well as Claredon and Virginia Sq. would negatively affect property values and the quality of life. Other cost savings measures such as reduced train frequency and operating hours are tolerable, but station closures are extreme.

Overall look at the hours of low use and adjust based on that but not close a station completely.Metro will lose more than it gains..Closing stations that residents and people that work have become dependent upon will impact housing, increase traffic as people turn to using cars.Federal Center SW has several government locations. So perhaps restrict/reduce weekend and weeknight travel but keep Mon-Friday on a regular basis The same with Clarendon, Virginia Square - a lot of business depend on the metro. Arlington promotes a car-free diet - this will essentially force more traffic on the roads. The Smithsonian???? anytime Ive been at that stop- it is extremely crowded.

I use the Clarendon station and this plan does not work for me

Bad idea to close East Falls Church station. This neighborhood is not only experiencing rampant new development, but is also home to many federal workers, who, I assume, will be reporting back to work once the pandemic is under control. This plan will not work for my husband who normally has to commute to Suitland via Metro.

WTF NO

Sorry to be frank, but are you kidding me? This would kick off a death spiral of lower ridership and lower service as metro becomes less convenient for a whole lot of riders.

I live near Grosvenor Strathmore station. There are many developments in and around the train station. I felt that was why trains used to start at this station. More homes are being built, the county is overcrowded now and you are cutting back? I understand that 30 story apartment buildings are being planned right at Grosvenor. The garage has just been enlarged too. It just makes no sense whatsoever.

The closure of East Falls Church Metro will be extremely Inconvenient for our daily commute needs and also for our guests and visitors at our residence.

While it would work for me, Im worried about accessibility for people who depend on those stations

The Metro system is a system. I use many of the stations proposed for closure. I would stop relying on Metro with such a plan to close so many stations.

College Park is not near another station

If you close the stations I use, why would I even bother to come back?

Proposal to close 22 Metrorail stations

while i dont use these stops on a daily basis, i do ride the red and orange lines everyday. it would impact businesses that located near these metro stops to take advantage of the proximity to transit as well as the property values of land adjacent to these stations

I almost exclusively use the East Falls Church metro. The proximity to my apartment complex is one of the appeals for both my living location and my use of the metro. Removal of East Falls Church would severely limit my metro use overall because it would no longer be convenient to arrive in the city by train. Less so, but still of note is the ease with which the Smithsonian allows me to take visitors into the city and begin in a central location for DC tours. Id be disappointed if this one closed as well.

Stops are necessary, just run fewer trains.

Cleveland Park and Smithsonian are critical to reaching the zoo and National Mall. I'd hate to see them close. I personally would want to see East Falls Church remain open, as that has been a reliable kiss & ride stop to and from work previously.

EFC is huge commuter station as in-office working picks up.closing both EFC and VA Sq puts huge demands on Ballston which already lacks sufficient nearby parking

Clarendon and Virginia Square closing is rough and I use Grosvenor as well.

Dont be short-sighted. As people get vaccinated, covid caseloads will drop and riders who are not currently riding the metro will need it again. The present ridership rates are only temporary.

I go to the museum

This is the worst of the proposals and would be disastrous. Do not close stations.

I am moving out to East Falls Church, right next to the East Falls church metro stop. And my office in Tysons is right next to the Greensboro stop. Both of these stops are on the proposed closure list. this would great hurt my ability to commute to work and home. the next nearest stop with access to the silver line to my apartment is Ballston. I would now have to commute away from work just to catch a train to head into Tysons only to get off at a stop that isnt even near my office in Tysons. this would easily add 30 - 45 minutes to the commute. on top of all this The closing of East Falls Church is idiotic. It is the first stop that merges between the orang and silver line and acts as a major junction in the are. If anything you should reconsider closing the East Falls Church stop. it would be a major detriment to your daily riders and commuters.

Grosvenor-Strathmore is heavily used outside of pandemic restrictions. There are parking issues most days due to the volume. As Covid-19 restrictions lift, there is no reason to believe that ridership wont increase again. Especially since this neighborhood (my neighborhood) is largely comprised of middle career business and military people who have the ability to leave cars at home and prefer to take metro to and from work. The other nearby stations are already overcrowded and have unreliable bus service. Grosvenor-Strathmore is also the only stop that is walking distance to Rock Creek Park.

Please don't do this. I rely on Eisenhower Station every day. I don't own a car and have a physical disability that would make it unreasonably difficult for me to walk to another station every day. What may seem close on a map is not close for a person on foot with a disability who specifically choose to live close to Eisenhower metro for this reason.

Recommend removing Cleveland Park from list of proposed closures.

I commute from the Grovesnor Strathmore station and would like it to remain open. Also, people get off the train at Cleveland Park and walk downhill to the Zoo rather than uphill from Woodley Park. It would seem that many people who are visitors to D.C. would use the Smithsonian stop since its on the Mall.

I use Greensboro and McLean metro. Even though Tysons metro is in between, it does not have a kiss-and-ride area or any good drop-off/pick-up location. Bus drivers get angry when cars use the bus stop area for that, so thats why I dont particularly like Tysons metro. Greensboro and McLean are easier to get to and access in that regards. Greensboro and McLean are near many office buildings and new apartment/condos, so once people start going back into the office, its likely the ridership would increase.

Reducing access to public transportation further marginalizes the communities that have been most impacted by the pandemic. Try closing Dupont Circle and telling people they can Uber to the closest Metro instead and see how far your proposal gets.

Federal Triangle needs to be Open UNLESS the Federal Government Closes those buildings in the area

Why close both Clarendon and Virginia Square? Two major grocery stores are in Clarendon, along with other stores I visit weekly when not in pandemic, but walking back to Ballston with groceries or books is not doable, and walking down to Courthouse isnt much better to go back to Ballston. I didnt like it before, permanently it would SUCK.

This is a terrible idea. Near other stations is an exaggeration for some of these stations.

Our closest and more used station is East Falls Church served by both Orange and Silver lines. Our nearest alternative was West Falls Church which we used during working hours as parking extremely limited at East Falls Church in those hours. East Falls Church is way more flexible for us.

Grosvenor-Strathmore is a critical stop due to the parking. I purchased my house largely due to my ability to use this station to get in and out of the city. That this remains open is of critical importance to me!

Grosvenor

Proposal to close 22 Metrorail stations

NOT Clarendon

I accept that running metro can be challenging during the pandemic but CLOSING METRO STATION IS DEFINITELY NOT AN OPTION. You can reduce frequency as well as running hours of the trains which is quite understandable for the current circumstances but why close stations? It sounds so absurd. Public transportation is quite limited and if you will close the metro stations then how are people going to benefit from it? Nearness of one station to another does not justify the fact that some of the metro stations needs to be shut down. Instead of trying to make it more available for the public you are taking away whatever we have. This is wrong. I strongly oppose it. Please reconsider before you implement anything.

Cleveland Park station should stay open

One of the major selling points in my decision to move to Reston included the use of the "soon to be opened" metro station. My commute is more laborious right now. Additionally, I travel to other destinations listed above. Closing these stations will negatively impact a great deal more than inconvenienced riders; the housing market will drastically change and the the deserted metro station sites will more than likely become crime-ridden areas.

This is unacceptable. I recently started a new full-time job near the East Falls Church station. It is not within walking distance of any other station. Also, please provide more information: Would these closures be permanent, or temporary?

Moved here because of proximity of Grosvenor. No longer drive.

I think some of these stations are really important. How does this affect people with disabilities trying to get to another station? The VA lines are why I moved to this area- I don't have a car, now I'll need to rethink a lot about my life and make massive changes.

Some of the stations listed are in the middle of high traffic areas. Closing then will lose Metro money and push riders to find other means transportation.

I inadvertently responded to this before. However, this would cause back up at the surrounding stations and all the proposed closures would not be tourism friendly. Specifically Archives, Smithsonian and Arlington Cemetery. ESP Arlington Cemetery because how should people get there. Get off at Rosslyn and walk? That is very long once you factor in getting to say the tomb of the unknown soldier and it isn't the safest walk. I would rethink that or be ready to have the station open during peak tourist times.

What is considered near other stations? Will metro buses or other options be made available for those with mobility needs? For example, if you remove Cleveland Park, there is at least 1 mile and a few steep hills between Van Ness and Woodley Park. Additionally, would this be a permanent closer or temporary? If temporary, how often would this be reviewed?

One of VA square and clarendon can close (preferably VA square), but not both. Students at college park rely on the college park station to explore the city and go home to visit friends/family. Greensboro services large companies such as Booz Allen and KPMG. Ridership should be fairly stable post-pandemic. I also don't think closing federal triangle and fed center SW would be a good idea

I work in tourism in DC. Closure of Arlington Cemetery, Federal Triangle Archives and Smithsonian will hurt tourism as we start to rebound.. ANC closure especially bad for tourist guides. Consider opening an hour before and hour after cemetery hours.

If innovation and Reston close - no stations nearby

Please do not close College Park- need to have a way to get to UMD.

I need Reston town center Clarendon, and Federal Triangle

The stations may seem close to you, but they're far apart as far as I'm concerned. I don't understand how this would save much money (station managers salaries, I guess) and be a great inconvenience to customers.

G-strathmore is a getting on point for people traveling to dc or Bethesda- and who wants to drive down to Bethesda- it's already too congested!! This station is in walking distance for many! ! Why not white flint!!!

NO, NO, NO, NO, NO !! Please do not close Grosvenor-Strathmore. And what you also need to realize is if you close that station it will be very difficult (sometimes impossible) to use other stations because of limited, overcrowded PARKING. PLEASE NOTE: I know Metro is basing their budget decisions and this survey on low ridership -- HOWEVER, once more people are vaccinated, the ridership will INCREASE. I am retired, and have MANY friends like myself who used Metro frequently to go to activities, programs, and exhibits in DC. We have not been on Metro since last March because we are at the highest risk for COVID -- but WE WILL RETURN, especially because we don't like to drive to and park in DC. There are hundreds (thousands?) of us here in Montgomery County who would be very unhappy if the Grosvenor-Strathmore Metro station closed.

I am within walking distance to the College Park Station and it is my primary mode of transportation to the District of Columbia.

A number of these stations are close to Federal agencies such as Federal Triangle, Federal Center, and places of interest such as Arlington Cemetery and the Smithsonian. Why would you discontinue service?

Proposal to close 22 Metrorail stations

Too many cuts in Arlington will further diminish ridership

Some of those are key Arlington and DC stops. People purposely live where they do bc it's by those stops. People might move out of the area bc of that closure (myself included) and then all the apartment buildings and businesses around there will lose out.

My work office is on McLean station.

I use several of the stops suggested to close. It would limit mobility and ways to get around the city

The McLean metro station is only near other stations if you've never tried to walk between them. It takes at least an hour on foot to get between Tysons and McLean. I would be unable to commute to work under this plan. The remaining closures would also be inconvenient.

Closing Grosvenor-Strathmore would lead to the loss of my full-time job. I have limited mobility and could not use alternate travel methods on a daily basis. Grosvenor-Strathmore remaining open is crucial to the survival of myself and my family.

Arlington Cemetery, Federal Triangle, and Smithsonian should remain open in 2022. Things will begin to open up more and ridership to these destinations will increase along so

This would be terribly inconvenient. I would probably not use metro if this option were implemented. I'm not sure I'd return to metro a year later after changing my behavior for a year because my station was voluntarily shuttered. This idea would also have enormous impact on the local housing market and for shops near metro. This idea seems particularly bad.

Need Arlington cemetery for tour groups. It's a very busy station during tourist season. Need Grosvenor-Strathmore because of the music center. Need the Smithsonian for that end of the mall. It's across the street from the Ripley Center which hosts many activities.

It's important to keep the Grosvenor-Strathmore to service the nearby neighborhoods. This is not the time to cut services as county gear toward people using public transportation as a traffic relief plan.

This proposal would definitely make my commute much worse. I travel to and from Grosvenor station and Federal Center SW station. I really oppose this plan.

Oppose closing East Falls Church, Virginia Square and Smithsonian. In normal times, these are heavily used stations.

I will just stop using metro and move to MARC or carpool.

People buy homes and rent homes to be near a station. They usually pay more because of it. Now you would do away with the station and they would still be paying more without the station.

There was a time where I needed to get to and from College Park from Chinatown for evening classes, so this would have been incredibly inconvenient if this were the schedule 2-4 years ago. However, that isn't the case for me now.

The silver line expansion is needed because of jobs in Ashburn, Sterling, Reston. I live in Clarendon, if it was closed, most of us wouldn't use Metro.

My neighbors and I live within walking distance of College Park Metro. Many of us have ridden it in the past and I'm afraid it would affect home values for it to close. Many of the students don't have cars and would like to keep the ability to go downtown. It would be a shame to live so close to D.C but never go downtown because of inconvenience.

Closing these stops while trains still run on them is ridiculous and not logical. It is even a waste of money that people may prefer to drive directly. Old people and students will suffer.

Prior to the pandemic, I commuted via metrorail for more than 20 years, but closing East Falls Church would ensure I never return to metrorail. It is one thing to close a station where another is a few blocks away, but the East Falls Church station is not near any other station. The closest station (Ballston) is more than 3 miles away and does not have parking.

I live in Clarendon and prior to COVID I would ride the metro to and from work 4-5 days a week for work. I also typically ride the metro for personal use, such as to go into DC on the weekends. If the Clarendon station is closed, I would not use a different station. Instead I would likely turn to ride shares (uber, lyft, etc) or simply use my own vehicle.

These stations are central to large amounts of housing and businesses, particularly in Arlington.

I use Grosvenor-Strathmore to get to and from work. Closing this station would have me have to use another station causing a delay when getting to work on time.

No. Closing the Clarendon and several other stations in DC would mean that metro is not a viable option for me. This is a very bad idea and very short-sighted. It would make Metro very inconvenient and not issuable. Please don't do this.

This absolutely does not work!! There is a HUGE community at Grosvenor Park that uses Grosvenor-Strathmore Station Metro regularly to/from work and at other times.

No, they should just shorten times and have it open at rush hours.

Some stations are fine but others are problematic, especially all the ones that are terminal stations

Grosvenor-strathmore is a fundamental station for many employees who work in D.C since most of them leave their cars at the parking lot next to the station and go into the metro to avoid traffic and get to their destination

Proposal to close 22 Metrorail stations

Residents of EFC rely heavily upon this station's operation. Closure due to recent platform construction coupled with decreased ridership is but a temporary set-back. Commuters will need reliable transportation as restrictions are lifted and work/travel resumes. Eliminating EFC station would be devastating to this quadrant of Arlington Co.

East Falls Church is a neighborhood station. Many people walk. It also would affect home values in the neighborhood. It is also where the Silver Line meets the Orange line. Many times the Orange Line trains are full from Vienna. I think taking this site off is ill advised.

I use Grosvenor-Strathmore all the time.

No, this does not work for me. I live in Virginia Square and work near the McLean stop. This would mean that I would not use WMATA to travel to and from work.

I rely on many of these stations to enable meetings during and after the work day, in both DC and Arlington.

Especially for the stations farther outside the city (like Grosvenor Strathmore) where there's not buses in the area that can take you into town readily this would be devastating. If Grosvenor station closed I would have to walk 30 min to medical center and then depending on other compounding cost cutting measures hope that I got there in time for a train and didn't have to wait 30 more min for one. In fact, usually those trains (pre pandemic) are PACKED from the stations above Grosvenor and if they were too full end up waiting an hour after having walked 30 min. That would be insane. Do NOT shut down Grosvenor.

Closed indefinitely? That seems extreme, but this may be reasonable as necessary due to the pandemic.

I would have to drive my car more often.

This would work initially if there would be a promise that they would reopen as ridership increased. The two main stations I use are Eisenhower and Federal Center SW, so I would be impacted at both ends. I could handle the hassle of losing my stations for a time but not permanently. In regards to Arlington Cemetery, what other stations are near that one that people would be able to use to get there?

High rise residential buildings continue to add potential customers to the Rosslyn Ballston corridor. This fact and With Amazon and others adding to No. Virginia. Population it will hurt the economy

Greensboro is my stop for work...PLEASE dont close! And reston is my home stop!

This would cut off way to much transportation in Arlington. We need these stations to stay open to keep more cars off the road. This is one of the biggest perks to being in the DMV and being able to take advantage of METRO. Please keep these stations open!

This is an extremely terrible idea, this is an obvious poison pill like this? You want to destroy the property values and business in these areas?

I do not regularly use any of these stations

This is not possible. Do not even consider this. Even if not having property on this stations do not want to see post apocalypses abandoned stations. There are people with disabilities living on these stations and paying extra taxes to be able use metro.

I live in walking distance of the East Metro and my family uses it regularly.

People work at Tysons

Closing a stop like Grosvenor-Strathmore, which has a parking garage, would be a horrible idea starting 2022. Right now it's fine, but by 2022 commuters will need that garage. Also, you can't close that stop if all stops north will only have trains every 30min and not 15min.

Those station are critical to my commute

This would make the system much less usable. Many of these stations are not simply an easy walk to the next closest one, and such a reduction would likely make it no longer feasible or reasonable to use the system to get to many destinations. To put it bluntly, this would be the most ridiculous proposal of all.

Closing one or the other of Clarendon or Virginia Square is fine, but closing both leaves a significant distance between stations. I am surprised to learn that Clarendon is low ridership - at pre-pandemic rush hour the platform became quite crowded at times.

Recommend closing Virginia Square before closing Clarendon as Clarendon drives a lot of business to the downtown shopping strip. Also recommend NOT closing McLean as it is the only stop available to the many commuters in the Tysons area. Sure, there is Tysons Corner up the road but there is no safe way to get from that stop to the businesses in McLean (such as Capital One)

Several of these stations are within city limits and would have a tremendously negative impact on parts of our city. There would be almost two miles between metro stops in some cases (Cleveland Park, for example). It would strangle local businesses, and deny thousands of residents access to the Metro for commuting purposes. This, in turn, would result in greater need for many more busses or the use of cars. The environmental impact alone would defeat the purpose. Perhaps some of the stations out farther could be considered, but Cleveland Park?

Federal Triangle? Smithsonian? That is insane!

Proposal to close 22 Metrorail stations

we live in Tysons. We have been assessed for over 7 years now a special property tax on top of the Fairfax county tax because of the new metro station at GREENSBORO . The Fairfax count board estimated that we are to profit from having a metro station next to us. (and by the way nobody else). If you want to close it you will have to remove the tax and reimburse us for the past years where we contributed to this station being built. No one other jurisdiction had to pay , not Mclean , not Reston....

I frequent most of these stations, save for the unopened ones. I do not think closing ANY stations should be on the table because it will hinder the ability of people to go back to work and increase ridership, thereby increasing revenue for Metro to catch-up. If you close stations you will hinder your recovery.

This is ridiculous. Compare these proposals to that of other major city. If you want to encourage use of public transit to reduce impact of climate change, then you need to make transit more accessible, not less.

Why are you shortchanging Grosvenor? How would concerts at Strathmore be served? Huge developments with high density have been approved and built based on the Grosvenor METRO station!!! The traffic would be unbearable gridlock.

This would severely disadvantage people of color, people of alternative sexual orientation, and a vast diaspora of the down-trodden.

East Falls church is too critical with the having both orange and silver lines - if you have to close one station I. falls Church, make ie West Falls Church. Reston Town Center should not be closed - it I'm will be the station closest to the highest density of residences and offices in Reston.

I live in Clarendon

This is penny-wise and pound foolish. Closing many of these stations will not necessarily result in people changing to another station. Out of frustration, many will likely abandon the use of Metro altogether. Rather than improving Metros fiscal situation, it might accelerate further losses. I would be willing to pay more for fares or even vote for a tax referendum to support Metro.

I rely on Mt Vernon Sq station to get to work.

Closing multiple stations downtown and close to the museums, National Mall, and other points of interest where parking is extremely limited is shortsighted. Keep stations open to allow for economic recovery and the return of DC's tourism industry post pandemic.

If closures really are necessary, the following stations are less essential (okay to close): Arlington Cemetery, Federal Center SW, McLean. Please do NOT close the following stations: Archives, Clarendon, East Falls Church, Federal Triangle, Judiciary Sq, Smithsonian! Trim Metros crazy-expensive expenditures elsewhere; talk to your employees about what can be economized.

Yes, this is similar to the list closed at the beginning of the pandemic. I work near the Judiciary metro, but its not an issue to walk to/from Gallery Place or Union Station instead.

Please do not shut down metro lines and please open phase 2. I've been waiting years for phase 2 so I can take metro right to work. I waiting patiently during last summer when the entire line was shut down to speed up opening. Now you are considering not even opening it. You are ruining your relationship with riders and it is making metro more more unreliable. The more phase 2 just sits there doing nothing, the more it will be abandoned with no up keep. I'm sure if you delay due to funding, you will keep delaying phase 2 due to more issues. Be respectful to your customers. If you open phase 2 and close down innovation center or keep phase 2 closed, and cut trains to every 30 min. I will be forced to find more reliable means to get to work and stop using metro entirely.

As an Arlington resident, this would make it exceedingly difficult for me to get around.

More people are working from home right now due to covid 19, but commuting will increase with additional vaccinations and the reopening of schools. Grosvenor-Strathmore is typically a busy commuting location.

Not only will this drastically change the property value of current homes. It will also impeded every aspect of NOVA residents lives. Increase traffic. Maybe wait until after the WFH is over and reevaluate what is defined as low trafficked stations. Closing clerondon station will also drastically decrease night life traffics to our area and increase drunk driving as it is already very hard to get a ride share home in the evenings from the area.

This is incredibly shortsighted. Especially areas such as College Park with the proximity to UMD need metrorail service. Students would be much less likely to take metro if they had to work hard to go to another further station just to take metrorail. College Park of course has had low ridership recently, but thats because of UMDs Camus closure last Spring and the current severely limited number of on campus residents. Thens of thousands of students, potential metrorail customers, will come back next Fall 2021 so College Park really shouldnt be closed. Closing any of these station would also help change peoples commuting patterns in ways that may lead to long term reduction of their use of metrorail.

Though many of these stations are near others, unless you have a car it would be extremely difficult to get to your actual destination or the next closest metro stop. Some of these areas have few other public transportation options and the metro benefits those who are low income and cannot afford a car. The metro is a public service and isn't required to be profitable to operate at the capacity at which people need it.

Just because a station is near another one doesn't mean it's convenient; in many cases this would add a significant walking time and I would reconsider using metro at all

| |
|---|
| Proposal to close 22 Metrorail stations |
| Grosvenor-Strathmore must remain open. |
| As businesses reopen, I see these stations getting busier. This is a bad decision to make. |
| Ok-ish for my personal commute but completely makes dc a non mass transit city, and almost completely car reliant |
| I need Cleveland Park and Federal Triangle to commute to work. |
| Metro has become effing crazy stupid and is just trying to needlessly scare people. Stations that must stay open include: Clarendon, Cleveland Park, College Park, Federal Center, Federal Triangle , Judiciary Square, Smithsonian. |
| I frequently use judiciary square and archives stations |
| I occasionally park at Grosvenor-Strathmore and take the train into town, especially in the evening. If that station closes, I'm not aware of any feasible alternative for me (a 72 year old woman). |
| Those are stops I use many communities e it's on those lines |
| Unacceptable. For instance, closing Grosvenor-Strathmore would cut down on attendance to the Strathmore music venue. I'm sure other businesses i.e. restaurants, concert halls, on the other stations mentioned would suffer financially also. Please reconsider closing any station completely. This would be very shortsighted approach. |
| Last mile travel matters - people won't use metro if it is not close to their destination. |
| Parking at Grosvenor was once at a premium,. Parking is now being increased. WHY, if it would be closed? There are plans to increase residential housing in the near future. Once closed, it will not open even if there were increased need. Counties are being encouraged to increase the density around transportation. If the station is closed, where will travelers go? to the cars. |
| Pls don't cut service to Shady Grove AND Grosvenor. Their parking is needed. If you close Smithsonian, you will have many more pedestrians trying to cross Constitution to get to the Smithsonian. It will be unsafe and cause traffic jams. |
| I could see some of these options, but adding Grosvenor to this list is, frankly, asinine. Metro just added parking to the Grosvenor station commuter lot, and closing the station would not only lose revenue from the parking option, it would cause a ripple effect throughout the system, as other local stations do not have the required parking to pick up the slack. White Flint, Twinbrook, Medical Center, Bethesda—these are not options for metro patrons who drive to the station for their commute into the city. Not to mention the large commuter population living in the area, which you would essentially cut off from their transportation option. Grosvenor is a bad call for this option. |
| Cut off access points to the Strathmore, Smithsonian, and the zoo at Cleveland Park? Many of the others listed are also cultural sites. This shows where our values lie. |
| First and foremost, I live next to Eisenhower station and would be greatly effected by the closing of the station. While King St. is fairly close, it is hazardous getting from my apartment to King St. Additionally, I hope that you do not close both VA Square and Clarendon. I agree that one of those stops could be closed (VA Square), but closing both would create a substantial distance between Ballston and Courthouse. Additionally, closing Clarendon would once again have an effect on drunk driving as it is a big bar destination. |
| This would not work. My husband and I live close to the Cleveland Park metro stop and since we do not own a car, we deeply depend on it. The nearest other metro stops are Van-Ness and Adams Morgan and they are not "close" by any means. They are a significant walk from the Cleveland Park station adding over 25 mins to our transport anywhere. Please don't shut down stations. |
| I use Archives, Eisenhower Ave, Federal Center SW, and Mt Vernon Square stations regularly, and Smithsonian on a near-daily basis during my normal commute. This would make it impossible to use Metrorail for my regular commute. |
| I live at East Falls Church. I am a daily metro rider. If that station is closed, I would no longer be able to commute to work in the city. |
| I depend on the Grosvenor-Strathmore stop for my commute to work and for getting to and from activities downtown. Thousands of people who live in surrounding apartments and homes do as well. Closing the station would be shortsighted and detrimental to those who live in this area. Please don't do it. |
| As noted earlier the local governments have not instituted land use policies to make these stations viable. The subway needs ridership and within a certain distance from the subway station users will look for alternative forms of transportation. There is also the issue of the pandemic and a move toward working from home. More and more people and businesses find that working from home is a viable option and in many cases a superior option. Times are changing |
| How do you define near other stations? This proposal could have a significant negative impact to neighborhoods served by the stations proposed for closure. |
| This works for me only because I live between a proposed station to close and a station that will remain open. |
| I use this metro everyday. There are areas where I live that are continuing to grow and the low ridership may be something of the past, but once we reopen and have people back in the office, the metrics will be completely different. |
| I live in College Park. It makes no sense for me to take Metro if I have to drive to another station. |

Proposal to close 22 Metrorail stations

If most red line trains will end their route at Grosvenor, how can you close the grosvenor station? That means they'll be stopping at medical center, which is not accessible for most people due to parking. It makes no sense to eliminate grosvenor.

Three of these closures would very negatively impact me! Clarendon is my home station, so my property value and getting to work impacted (this is why we paid so much for property here!). Smithsonian is work and huge federal buildings with many workers that once they go back to in person will need this station. Reston is where I do physical therapy and the only facility I'm area with Medx equipmentâ€”I have no idea how I would get there without that station. Why not do these closure and reduced schedule now (and save budget) when ridership is low Not when people god back to work, that makes no sense.

Closing two stations next to each other would make it difficult for senior citizens who rely on public transport, as for example Clarandon and Virginia square

NO. I work near the Mount Vernon Square station and MUST commute to work via metro because I medically cannot drive. This would make it impossible for me to get to work. Please just pair more modest service adjustments with some sort of fre increase or etc. Some people not only can't afford cars some people cannot and will not ever be able to drive even if we could afford cars; and many of us chose to live and work in the DC area specifically because the metro system makes it a feasible place (rare in the US) for those with medical or disability related inability to drive.

How did you arrive at these #s? I cant imagine that Arl Cem would be a place that youd want to cut service. Clarendon is the hub of nightlife and jobs. College Park hosts a very large university. East Falls Church is a feeder from 66. Federal Triangle has a HUGE office JUST ABOVE Metro. Smithsonian is a significant tourist stop. Virginia Square helps to offset the crowding at Ballston, which will only be worse as a huge apt building is being built. How did you arrive at this list?

This is also a ridiculous proposal, but if it took away the need for 30 minute headways, I would be ok with it.

I get off at Judiciary Sq. station.

I take ART Bus to EFC and then Orange Line to Dunn Loring. Closing EFC will not work.

If these stations are closed I would not be able to use the metro for my commute when I return to my office. I would have to find an alternative mode of transportation.

Closing these stations is not a good idea at all. Long term changes due to a pandemic should not curtail access to public transportation. Eisenhower station is important for many commuters and near Federal and other employers. There is significant demand in that area due to housing developments and points of interest. College Park station is used by many commuters and college students. Falls Church station is used by many commuters in Northern VA and DC and is a city with limited public transportation options. It houses the DHA HQ and other significant employers. Closing Smithsonian and other stations which are key points of interest would hurt the city as things get back to normal. These planned cuts overall are a terrible idea.

This is the stupidest suggestion of all! Half these stations were just built! WMATA needs to cut worker pay to balance the budget - stop taking it out of the hides of blue collar workers...

Would need at least Virginia Square or Clarendon open if you must close one of them.

There is literally not a walking route connecting McLean to Tysons. This is not functional.

There are many communities by Innovation Center compared to Herndon station. Commuter would greatly benefit with having Innovation Center open, specially those who commute to Washington DC. Additionally, new communities are been built around Innovation Center and will open in the upcoming months.

My two stations are VA Square and Clatendon. If I have to go to Courthouse, that is too far to walk and Id have to pay to park. The point of metro is to keep us out of our cars--if I have to pay to park, Ill drive to work in DC and pay to park there.

Closing both the Clarendon and Virginia Square stations does not make sense. Especially in the summer, people are not going to want to walk from courthouse to Clarendon and will likely just take a ride share instead. Clarendon should remain open. While I understand Federal center SW is in close proximity to LEnfant Plaza, it would just make LEnfant Plaza more crowded. If I had to choose, I would prefer to keep Clarendon open as Clarendon to courthouse metro is almost a mile, while LEnfant to Federal Center is roughly 2-3 blocks.

There are alternate stations a short walk away that I could use.

All of the stations I use for work and daily errands are on this list. Not having access to them, especially in the heat of summer and cold of winter, would essentially defeat the purpose of me using the metro.

There are thousands upon thousands of home values that will be adversely impacted by this and the domino affect from joblessness to depressed residential areas are unforgivable and poor management planning. Shame on the board and their lack and foresight in planningand mitigating.

I purchased my home primarily due to its proximity within walking distance to the East Falls Church Metro station. I use Metro to regularly travel in DC and also to get to/from Reagan Airport. Closing the EFC station would seriously impact my ability to use Metro, and would also likely negatively impact my homes value.

Proposal to close 22 Metrorail stations

some of these stations may make sense but if all were closed, this would defeat the value of using metro. why use it if I cant find a stop within reasonable walking distance? also, several proposed closures would be awful for tourism.

EFC may be near other stations in terms of fly-over mileage, but it is not near to other stations in terms of the user/traveler accessibility. It would take us at least an hour to walk to the WFC metro station, and longer to walk to the EFC station. Regarding any question of driving to other stations, isnt it the goal with public transportation to limit cars on the road? In addition, platforms are crowded at the EFC metro station during rush hour....the station is well used by many walkers and bikers! Moreover, it was recently updated (with significant investment, Id imagine).

I live in Reston and travel to DC every week. This plan is going backwards I don't see how this would accompany the community's effected by this form of transportation. This will degrade the community and also become very pointless in some cases.

Closing this many stations, particularly those close to the National Mall, is a ridiculous idea. What about all of the federal employees that rely on the Federal Triangle, Judiciary Square, Archives, and Smithsonian stations to get to work? Not to mention the proposal says that those stations will be closed if there are nearby stations, but those ARE the nearby stations to those stations, which leaves no other efficient option.

Grosvenor/Strathmore is important for the Concert Hall. Please dont close the station as the concerts are an important cultural event, and the loss of them would be a very sad thing for the area.

none of these are the stations I use. I use Wiehle-Reston and Farragut West.

I see that my station would be one of the ones closed - I am not sure how much farther I would have to walk to get to the next station. Also, do the platforms have the capacity for the rush? I moved specifically to be within walking distance to a station. I do not have a car.

I live near Clarendon so this proposed change would negatively affect getting to and from work and home late in the evenings.

absolutely not. there is a ton of new development coming to eisenhower area and closing that metro would make it more car congested.

Woodley Park and Van Ness are not reasonable alternatives to Cleveland Park.

what is happening here? Why would you do this? make metro less convenient for people who need to get to their jobs...i get that covid has caused low ridership but people will come back once things are open again.

As a employee of the military hospital located at medical center. I utilize the parking lot at grovner station and take the train from there

Although this would probably meet my needs, this reduction in service should be avoided if at all possible. Metro is a critical component to equitable economic growth region wide and cuts in service would disproportionately affect low-income workers. Metro is a public good and should not be run like a business. Although I understand if no further subsidy comes from Congress cuts might be necessary, please keep fighting.

Too many stations closed. If you want to do some variation on this, be more selective and not so many.Smithsonian is used a lot by people going to the lectures of the Smithsonian Institution. If closed, its too far for my husband to walk if we have to go to another station.

These are the areas that I frequently used for work and social activities. Closing these stations will make my life impossible .

I use Archives, VA Square, and East Falls Church for regular, recurring reasons. Closing those would be a significant inconvenience.

Please do NOT close Van Dorn St

Grosvenor-Strathmore is critical for me. Must be open or I will be driving to and from work and on weekends. This is a very bad idea. The housing population at Grosvenor-Strathmore is huge and still growing (development still occurring), and I dont know what stop you think is close. None are walkable or bike able due to car traffic up and down the Pike.

This plan would be Ill advised. There is considerable ridership from Grosvenor strathmore station, closing it would be a considerable mistake.

You're going to close the station inside the convention center?! Really?

Predictability is my largest concern, so having a schedule I can depend on is best. I also use a tracking app (i.e. DC Metro) so can plan accordingly.

Development and housing patterns has occurred around these stations and that would have a huge impact.

Because you are planning to cut certain bus lines and also close stations it will be hard to get to some places

This would be very incovenient for me, parking is hard at Medical Center stop

East Falls Church is the closest metro stop to me, and closing that station down not only removes my transportation for work. Closing East Falls Church also lowers my neighborhoods property values (including my home) and harms my communitys local retail businesses. Metrorail must keep East Falls Church open if this community is to have any chance to recover the economic losses and other challenges suffered during COVID-19.

Proposal to close 22 Metrorail stations

I am responsible for TDM at my school and were working to prevent people from driving to campus (in fact, its mandated by our BZA agreement). We have a number of families who rely on Metro to get to school when its in person who rely particularly on the stops in more residential areas.

Public transportation is my only available means of transportation as it is for many people in this area. The closure of stations, especially so many of them will negatively affect those who do not have other methods of transport and again disproportionately affecting lower income residents. Buses dont come often enough and ride-sharing isnt accessible for everyone. This would significantly affect travel time for people who need to find alternative routes.

Metro cant be serious in proposing fed triangle & Smithsonian & fed center SW. Three in a row? Really? And so many in North Arlington. Metro just spent gobs of money & closed east falls church for renovations, that station is not close to others. EastFallsChurch is in the middle of our residential area and is in walking distance to many, including myself.

The Smithsonian cannot have low ridership in a normal year. The Strathmore Arts Center would weep if you cut them off. You cut service to these and you will guarantee lower revenue next year.

Im already over a mile away from the nearest station, Clarendon. Closing that station would mean the end of my riding Metro at all.

As a College Park resident, and hopeful to start taking METRO more frequently in 2022 after vaccination program is (fingers crossed) successful, closing College Park would be a disaster. Also, College Park is home to the largest university in the entire region and closing it would seriously reduce awareness of public transit by young people, and further hasten METROs declining ridership over time. College Park is seeing incredible amounts of development, particularly in the direct vicinity of the METRO station. There is ongoing construction at the College Park METRO that will bring in thousands of new young riders. Closing College Park METRO is a horrible idea and will only further damage METRO in the long term. ADDITIONALLY, the Purple Line is being built in MD which could link up to College Park and provide greater ridership in the coming years... Please do not close College Park Metro. For the good of everyone in the area and for the good of METRO, which will ultimately suffer as a result...

This is critical to people living near those stations. If it adds more than 15 additional minutes to transit, then some food for thought. I see some stations are not as close to residences than others. But it is critical to analyze the impact on people needing to get safely to and from home. Or to/from entertainment late at night. Safe is critical.

East Falls Church serves North Arlington and half of Falls Church City once the pandemic is over and we are all back to work we need to have Metro back to get to work daily

, this makes travelers who life close to these stations but new cars, spend lots more money, people also work close to these stations, how are they suppose to get to their work?

There is a dense population that lives in Cleveland Park, many of them seniors, and everyone uses the metro (except during COVID). Moreover, there are many businesses that count on metro riders to bring customers. The closest metro stations are probably a thirty-minute walk North or South on Connecticut Avenue, and many people, whether or not seniors, either cannot walk that far because of physical limitations, or cannot walk that far if they are going shopping and are bringing back groceries or other heavy bags. Closing the Cleveland Park metro would be a disaster for thousands of people coming and going to this area.

This would be an extreme hardship for me as it would close three of the four stations that I use most frequently. I live downtown and I do not own a car. Metrorail and metrobus is my primary form of transportation.

What does low ridership mean? When will the low ridership evaluation be made? Due to the pandemic, ridership is down everywhere. If the pandemic is subsiding and people are now using the Metro for work and leisure activities ridership should improve. Making the decision on a date too early before the post-pandemic changes take place will be very detrimental for those people who ride to work every day.

Although this would not directly impact my normal usage, it severely impacts my community (College Park) where many businesses were built based on their Metro access. College Park is not close enough to Greenbelt for that to be a suitable replacement for many people who commute to these businesses. I vehemently oppose this plan.

This mindset is what took WMATA into its last spiral of declining ridership. When service is poor, unpredictable, infrequent, or inaccessible (as would be the case with fewer stations in operation), people will find alternative means of transportation. If you close stations now and re-open years in the future, previous riders will have already found a different way to get around, and may not come back. Closing stations that the areas residents have already paid for in taxes is irresponsible and goes against the aim of providing sustainable, car-free transportation options for DMV residents and visitors.

Federal center SW goes to HHS and Capital. Once people go back to work in person this station should not be closed

I live in Clarendon, but may be moving prior to Jan 22. Not sure where I'm moving to, but I use the metro to get to work.

With this plan, Id either have to bus or ride share, in addition to metro, in order to use this. Puts an undo burden on commuters who are older or handicapped. Discriminated against many in the population. Arlington has been known as a highly-rated community for using public transportation. Lets keep this lifestyle and reputation.

Closure of the Virginia Square stop would further contribute to me using the Metro less, but I understand the motivation and need for the move.

This is too many in areas that are heavily used (CLARENDON???, Cleveland Park, SMITHSONIAN???, FEDERAL TRIANGLE???, Judiciary Square, Arlington Cemetery). You cant close all of those listed above. Some, yes, but youre suggesting closing sequential, not staggered, stations.

Proposal to close 22 Metrorail stations

I use College Park station and it would be difficult to get to work on time if the trains on the red line are slower and then the CP station is closed.

This isn't an equitable solution for people who can't easily access a station that is further away. This is also a huge change that would impact a lot of people who rely on the metro for their sole transportation. This would not be a sustainable financial or environmental proposition, it will disproportionately impact BIPOC, disabled people, elderly people, and low-income communities

Closing East Falls Church would significantly add to my already long commute to work. If this happens, I'd drive instead of ride the metro.

Please no. Many DC stations are already incredibly far apart for the most part as compared with a robust system like in NYC. Entering my walk or bus transfer time will depress my likelihood of traveling to certain destinations or my ability to feel safe and comfortable walking home at night.

I am a senior and bought my condo near Clarendon metro so that I could easily ride the metro. I pay extremely high property taxes for that convenience and am extremely upset at the thought of losing it permanently. It is not acceptable!!! Why not raise the rates, why not close them now temporarily until everyone starts using the metro again. Ballston & Courthouse metros will be so crowded that I would feel very unsafe and would think that would be a problem for everyone. Not sure how you could think this would be a good idea for a permanent closure. Surely, this would have been a much wiser decision to close temporarily while we are at home and much of the work force is working from home. In 2022, I am assuming the work force will be back to working from offices and museums and theaters will once again be open. This is not a good decision; please reassess the options. A temporary increase in fares could be a start, close them now and reopen by end of summer. The 2022 plan to close is not a good or acceptable plan.

Clarendon is the station servicing my office and also where my wife begins her Metro commute from there into downtown DC.

This is an absurd idea to close stations forcing people to travel further to use the rail system.

Closing the stations will make it challenging for parking and extend commuting time.

That would severely disrupt my commute and will make it impossible to use metro.

Although my station at Ballston will stay open I have concerns with three stations near me closing potentially that my station will get too crowded and I will not be able to get on a train, especially if they are spaced apart during rush hour.. I am legally blind and cannot drive so my only option is public transportation.

Grosvenor-Strathmore metro station is vital to the livelihood of North Bethesda and Garrett Park communities. Without the Grosvenor metro station I will no longer be able to commute or work in Washington, DC.

My family and I rely on at least 5 of those stations to commute.

My employer is two blocks away from the Clarendon Metro, The next closest station is Virginia Square. These closures would make public transportation much less attractive for commuting to work via it as I currently do and probably cause me to switch to getting to work via a personal vehicle.

I think it's hard to say that all of those stations could close, but closing some of them temporarily might actually be fine. I don't think ALL of them are good closure options. I will say that I think it is lunacy to expand services to new stations -- I've been excited about the extension of the Silver Line, but if we were talking about cutting down Metro service to 3rd tier metropolitan area levels and closing the Smithsonian station (which was probably used by millions of passengers a year pre-COVID), then why would we add on new stations?

East Falls Church should be open. The East Falls Church station serves for residential areas. We bought the house because it is walking distance to the East Falls. Pre COVID I was using metro everyday to work. I will use (no alternative I have!!!!) metro again when the office opens. Please do not close East Falls Church. Metro is my lifeline.

This won't impact me, but I think that you're going to disrupt a lot of people's lives in Grosvenor and other neighborhoods built around the Metro station.

I live adjacent to the Va Square station. But I can walk a bit to Ballston or Clarendon, so I am ok with the closure.

I'm over 80, and currently able to walk to Ballston from my Clarendon home. Not sure how long that will last, so eventually this would mean a big change. That said, the pandemic has kept me off Metro for months, and I get by with other options. The biggest impact is likely to be on the value of my home being reduced. There will be a LOT of pain in Arlington.

What is close? Are you joking? College Park is 5 miles drive from the nearest station! Really? If you close stations close then in DC. Why don't you close USt? Or DuPont? Again who is coming up with these ideas!

I've been getting on and off Metro, for 19 years at East Falls Church. My daily commute is EFC to McPherson Square. My condo is less than 1/2 mile from the EFC Metro station. I would have to drive my car to West Falls Church, if they close EFC. I would suggest, IF EFC is closed, and people like me have to drive to West Falls Church, then I think parking at West Falls Church should be waived. Thanks!

The closure of these stations would push me off Metro for evening and weekend riding because it would become too inconvenient and time-consuming to ride Metro at those times.

Those stations aren't even near other stations. You can't expect people to walk to another station when it's snowing or when the temperature is over 90F

I would completely stop using the metro

This makes no sense without a regular shuttle service, it will drive people off the rails and into cars. Need to have reliable and regular service to all stations, all the time.

Proposal to close 22 Metrorail stations

I would ride from Innovation Center to Greensboro. Closing either of those stations means I would instead have to drive to work as there are no reasonable alternative stations. The Tysons Corner area is not walkable between stations.

I frequently use a number of the downtown stations slated for closure (Archives, Federal Center SW, Federal Triangle, and Smithsonian) to get to where I'm going.

You still have to maintain the empty space, are you really saving that much by leaving it underutilized. Also, during bad weather when most workers ride, proximity to destination matters.

While I typically would use Smithsonian or Federal Triangle stations as the end point in my commute, I would not be that upset about having to walk a few more blocks to get to and from work.

Wait, I thought the yellow line might run to Mt. Vernon Square? It will have a negative effect on Clarendon business district. Tourists use the Smithsonian Stop. Will have a negative effect on businesses in Cleveland Park too. You need to think this through better.

East Falls Church Metro Station does NOT have lower ridership. I'm not sure why it is being compared with these other stations. I know first-hand that it is a busy station. I chose my apartment building based on the location near East Falls Church Metro Station. In Falls Church, at rush hour, the time it would take to travel to go to another metro station would be detrimental to my commute. I think people are looking at it being close by in terms of physical location and not in terms of realistic ability to be able to go to that metro station or in terms of minutes of travel during traffic-filled rush hour. Please do not consider closing the East Falls Church Metro Station. There are a number of apartment complexes around Washington Blvd with lower income communities who would be greatly impacted by this change. This would be cruel. Also, please do not close the Arlington Cemetery metro station - I don't know why it is on this list. It is not close to another metro station. I have accidentally gotten on the blue line instead of the yellow and the Arlington Cemetery gives people a chance to switch over to head north and switch to yellow at next station. If you remove it, people will have to wait even longer to make that change. And then people who want to visit the cemetery will have to drive there? Where will they all park? What are people from out of town and not familiar with roads to do if they want to visit the cemetery? T

Using alternative stations would be inconvenient, even if supported by bus service. Extensive new apartments to be built adjacent to Grosvenor-Strathmore station with the idea that these residents would use Metrorail. Forcing them to find alternatives would impose severe hardship on the Grosvenor-Strathmore neighborhood by adding to the already-crowded conditions on the roads.

My office is by College Park, and my coworkers would not be able to access the building if we did not have reliable metro service. Additionally, the College Park area is seeing a huge increase in development right by the Metro, so current low ridership totals may not be relevant to what ridership will be in the foreseeable future. College Park is also a hub for both MARC and Purple Line trains, so closing that station would have knockout effects on the whole system. Several of these stations, especially those at the end of one line, don't have another station that's close for those without cars. College Park is a 45 minute walk away from the closest metro. Closures make more sense for stations in the heart of downtown blocks from other stations (Federal Center SW closures make sense to me).

East Falls Church lets NOVA people change trains or at least get out close enough to access reasonable bus/taxi fares to home or to DC.

I work at the McLean Station, and getting from the Tysons center would add 10-20 minutes each way.

Please do not close the Cleveland Park Station. I use this station often to get into town. It will help to kill the Cleveland Park commercial district. Please do not close the Grosvenor-Strathmore site. You will kill that entertainment venue. Seniors like me enjoy taking the metro to performances there.

I use many of the stations on the Orange line to go around the city and it is very convenient so. Given the vaccine rollout expected to cover large proportion of population within this year (2021), by early 2022 things are expected to return to normalcy and ridership on Metrorail should resume. Cutting down stations at the time when travel needs resume will only further reduce ridership in a vicious feedback loop, which would not have a positive bearing on Metro balance sheet over the medium term.

McLean metro station serves my family and thousands of other residents in Tysons East and surrounding McLean and Falls Church neighborhoods, and closing of this station would be tremendous loss. No other station serves these areas. Also, ridership will dramatically INCREASE as soon as the very near term explosive real estate development is completed around the McLean metro station.

I rent my apartment specifically because of its proximity to one of these stations.

I'm sure anyone visiting Arlington Cemetery would love to walk to the nearest station, wherever that is. Same with the Smithsonian. And here's the laughable part: you're proposing closing stations that aren't even open yet.

Think of the future! We intend to age in place in our neighborhood of Tilden Woods between Old Georgetown and Montrose Roads in Greater Farmland. We need the Grosvenor - Strathmore station with its parking for ready access to Bethesda, Chevy Chase and downtown. We don't even have a convenient Ride-On service here.

Proposal to close 22 Metrorail stations

Clarendon is not a short walk from another station, and there are a lot of stores, businesses, and restaurants in that area. Parking is limited, so I want the metro to be an option if I can't or don't want to walk for any reason (weather, after dark, time constraint, etc). The name of the Smithsonian metro stop is important. It clearly marks a huge tourist location, and people will know it is located on the National Mall. I think at least one stop around the middle of the National Mall should remain open so that people can access the museums and surrounding landmarks easily. When the pandemic is over, I'd like to be able to take the metro into the city to go to a museum and not immediately walk several blocks.

Reducing service and closing stations will increase single occupancy transportation in the region.

Closure of Metro stations is not the answer. Currently you have an overwhelming number of people teleworking, who pre-COVID would be taking the Metro. Prematurely closing Metro stations before knowing how ridership may increase is a faulty approach.

Close either Clarendon or Virginia Square (preferably Virginia Square); not both. Ridership is down now, but it should increase after herd immunity.

This proposal would kill many many businesses that depend on METRO for customers. It would cause a serious drop in ridership due to the businesses closing and customers forced to go other places which may not be close to a METRO stop. It will also cause a major drop in property values in communities that developed around METRO stops. Clarendon is a prime example which also has a major building connected to it with workers needing METRO to get to work!

This is just plain absurd, I also live next to Virginia Square station so this would add 7 or 8 minutes to every trip. Also, some of these stations are very popular (Clarendon, College Park, Smithsonian, Archives).

I think once the pandemic is over and people return to work, this plan would be very disruptive to commuters. Several of the stations I use are on this list, as are others that are needed by tourists (e.g., Smithsonian, Arlington Cemetery).

I rely on the Grosvenor-Strathmore station for my transportation. I don't have a car and don't live in an area where stores/businesses are within a walkable distance. Closing stations would severely limit my ability to get around.

Holy cow. NOOOOOO. This is one of the few stations with parking AND it would be terrible for the Strathmore Arts center.

Most of those are stops that I rarely, if ever, utilize

As I mentioned before sooner or later we get back to normal, so the ridership will increase significantly. My proposal is to reduce the number of trains but leave most of the stations (22) open specially at Clarendon.

I hate to see any stations close for residents who depend upon them for safe commuting from work to home. However, if I had to choose, I understand some of these. I don't understand how you can close East Falls Church being that it is the hub to the silver line and a heavily used station in normal times. I don't think Grosvenor should close either because of the large amount of residential neighborhoods there that depend on it to commute.

Absolutely not. I live at one of these stations and have secured housing near a station on purpose. This would be incredibly burdensome for my work commute and life in general.

First, you made a huge mistake by extending the Silver Line to Loudon County. Total waste of money. Second, if you close the East Falls Church station, how do residents in that area get on the Silver Line. You would have to either go to Balston, no parking, or drive to West Falls Church, get the subway back to East Falls Church, then board the Silver Line. Dumb idea. Third, tourists are not going to walk from a further metro stop to go to Arlington Cemetery. That stop is the perfect stop for tourists or area people to visit Arlington. Fourth, are you crazy about shutting down the Smithsonian stop. Always a busy time for tourists and area people to go to the Mall and the Smithsonian buildings. That stop brings you directly onto the Mall. No hassle of trying to cross a street. Fifth, Why build Silver Line stops, then immediately close them. Some great wisdom in that venture. Metro was supposed to help people avoid driving. This just increases that demand to drive. We have an excellent system to transport us to the various destinations in and around Washington DC. The subway was built as a convenience for travel, not an inconvenience.

This reduces the urban subway part of Metrorail to a glorified suburban commuter rail system *everywhere* - its pointless and myopic. Who is advising these things? This is a surefire way to make Metrorail fail - and we can't afford to have it fail. There is zero creativity in this thinking.

When commuting I often use many of these stops, especially Clarendon. If the metro won't be available then I may move out of the area as the Courthouse and Ballston stops are quite far and this is how I get to work.

Eliminating three core/consecutive DC stops at a time when ridership is likely to return would not only pose severe mobility disruption, but impinge future development revenue.

No, during non-COVID times, I use Metro at least once a week to travel to and from Grosvenor-Strathmore Station for rehearsals and performances.

Closing Grosvenor would be devastating to my family's commuting and home value. It would require us to relocate.

It will NOT help customers who live in the areas near the stations Metro wants to close. It will take money away from the system and affect people who work in those areas.

Keep them open and provide more funding to improve service. This will lead to ridership increasing.

The major reason for Strathmore Square development project is its proximity to the Grosvenor Strathmore station.

Proposal to close 22 Metrorail stations

Grosvenor and Judiciary are essential to me. I walk to and from Grosvenor and I go to Judiciary for work.

This would cause parking problems at West Falls Church

Closing the Cleveland Park station would kill the neighborhood business strip entirely. It would make it impossible for my family to get to work and school. We would move out of the city if our neighborhood lost this station. You would kill the entire neighborhood. Eliminating the Smithsonian stop would kill tourism and significantly decrease tourist and tax dollars to the city. YOU MUST FIND THE FUNDING TO NOT CLOSE STATIONS. Entire communities rely on them.

The next closest station to Virginia Square (Ballston) would be too far away for an 80 year old.

The newly renovated parking garage at Grovesnor could attract more riders and become a central riding hub. Closing Grosvenor does not make sense.

This is astonishingly complicated - especially for the Smithsonian which brings millions of dollars in revenue to the city through tourism and local visits; bad move altogether. Further, many of the other stations in Maryland on the red line don't have the infrastructure to sustain drop offs - or parking to absorb the overflow from Grosvenor. There are thousands of people here who use that station. This would be extremely detrimental to real estate holdings as well around this station; there are thousands of apartments that have been built based on the premise the Metro station is here. It seems to me these decisions are being made prior to any experience that we will have after society re-opens and are unfounded without the provision of service expectations we've come to know from Metro. This will carve a deep economic wedge in recovery for the entire area.

I get off at Clarendon Station. In my experience, there are always plenty of people who get on & off this station. Please keep it open.

I live in Cleveland Park but am willing to walk to Van Ness because I understand the budget cuts.

This is not a good option. I like being able to take the metro to Arlington Cemetery (and not have to drive), or to Smithsonian, etc. One of the things that makes metro so convenient is having all the metro stations available. Not a good idea.

Living near East Falls Church metro is a huge benefit for us and our guests during non-pandemic times. Ease of access to DC and eventually Dulles is very important to us and our neighbors. Lack of proximity and parking at other "nearby" stations basically eliminate that option for us. It will be very upsetting to see the EFC station closed, especially since it was recently closed for a length of time for renovation! Why did Metro waste money on renovating a station that would potentially close??

Access to the Smithsonian museums along the mall is a major benefit for tourists....who often use the metro. I don't think Smithsonian station should close and here to see Mt. Vernon Square close as well. As students go back to U of Maryland I think it's important to keep College Park open (tho I have no idea of actual ridership).

Need to travel those stations

This is the worst idea of all with the exception of a few stations such as Arlington Cemetery. People need reasonable walkability to stations especially people with mobility impairments. People have organized their lives around these stations including giving up owning cars when they live near stations.

We purchased our condominium directly across from the Virginia Square metro stop BECAUSE of the metro access, because I am a wheelchair user. I need that station to stay open. Closing it AND Clarendon would be a disaster for me. To go into DC I'd need to wheel all the way to Courthouse.

I commute using the East Falls Church metro and used to use Van Dorn St metro. Closing the East Falls Church metro would throw a wrench in my commute, but I would be able to get by. If I still lived in Van Dorn though, the closure of the Van Dorn St metro would likely cause me to move.

This proposal is, frankly, insane. Never mind my personal travel needs... If we ever have tourists in this town again, they need to be able to get around and enter/exit at all the downtown stations listed. (I feel less strongly about the VA silver line ones)

Closing the Clarendon station wouldn't make any sense. There is significant construction of new residential high rise buildings all around the station that could potentially lead to new ridership. It is also an area with a significant number of bars, restaurants and retail shops that would be impacted by shutting down the station. The distance from the Clarendon to the Courthouse stations is not that short. Of the Arlington stations on the Orange/Silver lines, Only Virginia Square makes sense to be closed as it is quite close to the Ballston station. The GMU law school and planned Arlington tech campus are only a few blocks away from Clarendon station.

Closing these stops would make it significantly harder to get to where I would be trying to go. Specifically East Falls Church as the branch between orange and silver would cause significant challenges.

Definitely use Grosvenor station a lot as well others listed here in survey. Would not be able to travel anymore and it would be impossible for me to get to work if Grosvenor is closed as white flint is too long a walk

This plan will make a lot of people very late getting around the metro area.

I live within walking distance of East Falls Church metro, and during normal non-COVID commuting I would walk to that station daily. If that were closed, and McLean and Virginia Square stations as well, by only option to commute would be Ballston, requiring either a bus ride (assuming the bus route continues to exist), or to drive and park which is neither realistic nor economical.

Proposal to close 22 Metrorail stations

This list includes several stations that we were using on a fairly regular basis before the pandemic. If these stations were closed, we may opt to not use Metro at all and use other transportation options as opposed to going to an alternative station.

I currently walk to the East Falls Church Station, a half a mile away, in less than 10 minutes. That brief walk to the train was the major factor in purchasing my home 15 years ago. Walking to West Falls Church Station, 2.3 miles away, would take around 45 minutes each way. The stop on the other side is Ballston, 3.1 miles away. That would be an hour walk as I would not want to take a bus during Co-vid. EFC is where the Silver Line comes into the Orange Line, so people are transferring on the platforms there. That should make for higher ridership than stations with only the orange line, for example. Please do not close East Falls Church! Thanks for listening.

Grosvenor is the closest station to where I work...I dont know how I would get to work.

Please do not close the station. I cannot commute.

By far the best plan!

Closing the proposed Silver Line stations (some of which havent even opened?!) would cause a massive traffic and parking crunch at Wiehle-Reston and other functioning stations. These stations may have relatively low ridership by commuter standards, but the roads are already packed and would have trouble absorbing additional traffic. Which, as I recall, is why these stations are supposed to be opened in the first place. Moreover, how can you say that Innovation Center/Loudoun/Reston Town Center have low ridership if theyre barely operational?

Highly inconvenient. East Falls Church is also not near other stations

It would destroy my commute and it would impact my home's value.

I would be unable to use Metro if Clarendon is closed. It would be very limiting if Virginia Sq, Grosvenor-Strathmore, Smithsonian were closed.

I need Mt. Vernon Square, Smithsonian, and Judiciary Square to remain open.

I, and thousands of people currently walk to or park at the Grosvenor Strathmore station. There are many very large apartment buildings here and metro would lose revenue from riders who would have otherwise paid to park at Grosvenor Strathmore. It would make more sense to close White Flint or Medical Center, which do not have parking lots. Also commuters do not tend to board at Medical Center, which is primarily used by employees at NIH and the Naval hospital. These employees and patrons could very easily be bused from Grosvenor or could walk from Bethesda station. It is not possible to walk from Grosvenor to medical Center because of the distance and lack of a sidewalk on Rockville Pike over the beltway.

This will mean there are now places that are inaccessible without a car.

Depends on the hours of closure. In central DC, evening closures would work. But Strathmore nights of performances would not. College Park and Howard and AU should not close. We dont want student cars crowding the city.

Please do not close any stations. I would see that as a last resort

This is greatly debilitating as NoVA returns to work. Commuting by car is already unreasonable price wise and traffic and this will just add to the mess and the lack of parking at several stations.

Mt. Vernon Square sounds like a hard one to close since its a transfer station. Not sure this is practical.

A lot of these stops are ones I use on a regular basis

Walking distance to Grosvenor with so many concentrated apartments right there.

I believe that temporary closing stations so cut costs is effective and should be done as needed but I think more time should be taken to consider which ones. Federal Triangle, Smithsonian, Clarendon, and Arlington National Seminary are all crucial for economic success for the area. They not only provide services for locals but are also greatly used by visitors.

Need to use Grosvenor metro

This plan is disasterous for those of use who have to get to work. Close is relative. East Falls Church for example, is not close walking distance to either Ballston or West Falls Church. This plan effectively ends Metro use by thousands of people, and is founded upon low ridership in a pandemic. There wont be low ridership in 2022 if, as expected, vaccines are widely administered.

My station is on this list. If it closes, I doubt I'd take metro at all until it opens again.

Considering that the elderly may be the first to safely travel again it seems problematic that metro would make it harder for them to do so.

Proposal to close 22 Metrorail stations

I anticipate needing to travel into work some days of the week in 2022 and live near the Clarendon metro station, so this would greatly impact my commuting options, as well as likely overcrowd the Courthouse station. There also seems to be a disproportionate impact on stations close to federal jobs (Federal Triangle, Federal Center SW, Smithsonian, Judiciary Square). Are you consulting agencies near these stations on their plans for re-opening in 2022? If most workplaces, including the federal government, re-open en masse in 2022, some stations like Metro Center will face significant crowding conditions.

Keep Clarendon

The stations have low ridership because of the pandemic. Ridership will return once the pandemic is dealt with. Clarendon or Virginia Square are the stations I use. Others are not in walking distance.

You cannot close stations that are next to each other! The distance between the remaining stations are too great to walk on a normal basis. I would switch to driving if this becomes policy/operation. If Metro cannot provide better service, it will need to return the tax payer money it received from the COVID Relief bills and some from the dedicated jurisdictions.

Cleveland Park would be inconvenient for me as I go there sometimes. If the economy reopens surely it would be a terrible idea to close the Smithsonian station!! What about all the people visiting museums?

Why are one of Crystal City or Pentagon City not included in this (note: my regular boarding station is Crystal City, but cmon, this is ridiculous -- if people are expected to walk from East Falls Church to West Falls Church, I can certainly walk to Pentagon City, which is half that distance).

With the exception of Grosvenor-Strathmore, I almost never go to any of the stations you are proposing to close.

I park at these Arlington stations. Why did you waste so much taxpayer money to build and refurbish these stations only to close them? Waste!!!!

I live within walking distance from Grosvenor-Strathmore train station and this would not work for me or my family in Garrett Park!

East Falls Church is NOT near any other station, is a key transfer hub to bus lines, and draws a lot of pedestrian customers from surrounding neighborhoods. The Smithsonian Station is only getting low ridership b/c used the museums closed due to COVID. once the museums reopen, this station will get more traffic. None of the Silver Line stations past EFC are walkable to each other, so closing them increases risk to pedestrians.

Cutting off stops from suburbs severely limits commuters. The stop further out should not be closed. Those like mt Vernon and judiciary do make sense given how easy of a walk.

This will reconsider our decision to buy a place in Arlington if Clarendon and Virginia Square close, especially Clarendon since there are lots of things going on there.

Agree with most stations except Van dorn. Franconia and King Street are the closests stations to Van Dorn...

If service had to be cut, closing stations near others seems like one of the better solutions

How are you proposing closure on unopened metro stations in silver line? You do not have the ridership data to close those metro stations. If this list of stops is reworked then I am fine with closing some of the metro stations to meet budget

Closing East Falls Church if we are expected back into the office would destroy my familys commute. We would need this station open. Closing Clarendon too would have a negative impact on Arlington residents. I agree that closing VA square would be ok as it is still walkable to Ballston. Reducing service to the listed stations would be better than closing them altogether

I very strongly oppose closing the East Falls Church station in 2022. I will depend on the East Falls Church station for transportation to and from work. Closing that station would force me to drive to and from DC during rush hour every weekday. Also, my spouse and I work different hours and both depend on the East Falls Church station, so my family would need to purchase a second car if that station closed.

My aunt lives off the Cheverly stop and I would not be able to visit her. I dont drive and shes not able to come get me.

I do not see the point of closing these stations; trains would be passing through them anyway. That would make low ridership even lower.

Please do not close those stations - some people cannot walk long distances and rely on metro to get to/from work, school, appointments. Closing some stations is a security hazard as people are exposed to longer distances on the street late at night or at any time of the day. this is ridiculous. Its obvious that whoever is planning this destructive plan has no idea of the hardship it will pose on travelers; they probably dont care since they have company cars to circulate AND have most probably never ridden the metro as the commoners.

Absolutely not a good idea. People have moved into homes near these stations so they can travel to work on Metro. These plans are so premature because ridership will increase soon with pandemic winding down and more people with vaccines. Please delay these decisions.

Grosvenor Metro services communities from Potomoc, Kensington, Garrett park and is walking distance to Georgetown Prep and Holy Cross School which students use the metro. In addition Strathmore Ave is one of the few East-West roads that is already bumper to bumper during rush hours.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Closing Clarendon and Virginia Square would be a hardship for me. Clarendon or Virginia Square would be better for me. Preferably Closing Clarendon. |
| I frequent several of these stations and I live in Arlington. As an Arlington resident I don't think closing Arlington Cemetery would work well. Not for Arlington residents and infrastructure, not for visitors to our Capital and surrounding and not for the Department of Army. |
| The surrounding neighborhoods at Grosvenor and Strathmore metro use this station heavily. As the vaccines and less cases covid the passenger will use the metro to go back to work. It is very important this does not close as it will effect the traffic that is already congested. |
| I need Grosvenor Strathmore to be open. |
| This proposal would make my travel more difficult |
| The walking distances are too far between either Ballston, Virginia Square, Clarendon and Courthouse/Rosslyn for this to be an acceptable solution. |
| THIS IS RIDICULOUS |
| This proposal would destroy much of the real estate value in the orange line corridor. It would be catastrophic to the property values and the neighborhoods there. Especially the idea of closing the Clarendon Station is absurd. In addition, closing the Smithsonian station would greatly increase congestion in that area and greatly decrease the accessibility of our nations museums, and closing Federal Triangle and Mt Vernon Square would likewise cut off access for orange/silver line dwellers to main attractions. Closing the Reston Town Center station before it opens would be a huge waste of taxpayer funds that were intended to reduce the need for car/toll based trips. |
| Most of these would work, but a few would not: College Park should stay open for student use, Smithsonian should stay open for tourist use, Grosvenor-Strathmore is the transition point for Red line trains and so bus routes connecting people from further north on the beltway stop here for transitioning to rail. I'd also like Virginia Square to stay open, but that's for personal reasons. Though it doesn't feel like it's in walking distance of the other stations near it. |
| No, this would not work for me. If metro closes my stop--Grosvenor--I will have to sell my house and move. I cannot walk easily to another metro station. The next closest station, White Flint, is 1.5 miles from my house. I do not have a car. It is not feasible for me to walk three miles round trip every day to use the metro. There are buses that I could take, but by the time I wait for a bus, and then wait for the metro--which might only be running every 30 minutes--I would waste an enormous amount of time getting anywhere. Simple things like going to the grocery store or the pharmacy would turn into four-hour errands. This just won't work for me. Commuting to work (I work in DC) would become impossible. There is no way this could work for me. |
| We bought our house specifically because it is walking distance to the Grosvenor station. There are many houses, condos, and apartments at Grosvenor where people live for the ease of using the Grosvenor metro. We when go back to work in an office, my husband will use the Grosvenor metro daily to his office in DC. People use Grosvenor to attend events at Strathmore music center which is attached to the parking lot. It is one thing to say you are not starting and stopping trains just at Grosvenor anymore (although that was a big selling point to live where we do), but closing the station all together would cause some real issues for us commuting to DC. The next station up the line, Medical Center, has no parking, so we would have to deal with traffic, and add 20 to our commute, just to get to the Bethesda Station and find parking, or travel in the wrong direction to White Flint, which also would add 15 minutes driving time and not sure that either White Flint or Bethesda parking can handle the increase of car that need to drive there. |
| I TRAVEL ON MULTIPLE OF THESE LINES AS DO MY COLLEAGUES/FRIENDS |
| DO NOT Close Grosvenor-Strathmore. It is the first station on the north side of the beltway. Closing it will cause a MASSIVE TRAFFIC JAM between the beltway and Medical Center (which has a terrible kiss and ride area). Traffic at Grosvenor-Strathmore will be the fastest to pick up after people are vaccinated as it has a large number of apartments within short walking distance, and is the logical place for drop off and pickup at all hours when the system is open. The traffic is far enough away from Rockville Pike to not burden the Pike with dangerous cross-traffic (which would definitely happen at Medical Center). It is NOT REASONABLE for people to have to walk across the beltway to Medical Center. It's almost a 1.5 mile walk up to the White Flint Station. DO NOT close Grosvenor-Strathmore. In the past when I've travelled the red line, about 80% of the traffic on the train gets off at Grosvenor-Strathmore, with very few people continuing on. This is clearly the WRONG STATION TO CLOSE for any period after June 2021. |
| Clarendon is a crucial station |
| Cleveland park is right in front of the library. many of us use it to go to that library. this would be terrible. |
| Too many stations downtown near places I visit are proposed to be shut down. |
| I think Smithsonian is essential. Tourists jam that station. |
| You just closed the EFC station to work on it! Now you want to close it??? Total waste of money! Also, property values will be lower if houses are no longer walking distance to Metro. I completely object to ANY stations being closed. We need them all! Otherwise, traffic will become even worse than it already is, especially inside the Beltway. |
| Grosvenor-Strathmore is all the time full Of passengers.It means that other stations will be overcrowded without parking. It is incredibly terrible. Time to get to work will increased. We get house close to metro to use it !!!! |

Proposal to close 22 Metrorail stations

Being a very senior citizen who uses the Cleveland Park Metro stop often, I would be very much displaced by its closing. Van Ness stop is almost a mile away as well as uphill. Would it not make sense to count ridership when the pandemic is over and folks are back in offices? Also now that the city has been given the go ahead to build up in Cleveland Park there will be more riders in the future. Please do not close the Cleveland Park station!

If you reduced the train times, that is going to make travel from the Ballston Station very crowded. Also, as a USDA employee, I use the Smithsonian metro station. Eliminating this station would substantially impact my commute.

Pre CV-19, the Grosvenor Station was always busy at peak travel hours. Some days the parking deck was full by 0800 hours.

MY AUTISTIC SON WORKS AT NIH. HE CANNOT DRIVE A CAR. HE NEEDS METRO TO GET TO AND FROM WORK, SO HE NEEDS HIS METRO STATION TO BE OPEN.

Would like to keep Archives, Smithsonian and Judiciary due to my mobility issues.

East Falls Church is not near enough to another station to justify closing.

Closing College Park is very difficult for us and others at the Univ of MD! Obviously, usage is low during the COVID pandemic, since the university could allow heavy use of online, remote work and study. But when the pandemic eases in Fall 2021 - or certainly by Jan 2022, utilization of Metro to and from College Park will significantly increase. And closing so MANY stations would, in my opinion, cause many to abandon Metro because it would not get us where we need to go (or close enough). This seems to be the worst option of all that are proposed.

This would guarantee that I switch my company commuting benefit to reimbursement of my ride share expenses, rather than to my metro card.

This implementation puts an undue burden on riders with mobility or transportation issues and encourages even more hits to ridership because at some point it is easier to just get in your car. Also implies layoffs because how does closing stations save money? Likely by layoff of employees. Just about every single Metro employee is a person of color according to my observance. This implementation disproportionately harms people of color through both ridership inconvenience and job loss

You need to consider people with mobility issues.

Grovesnor strathmore is a hub for montgomery county, and the recent investment in parking infrastructure will contribute additional parking income to metro as soon as covid eases, likely by sept 2021. I live nearby and plan to resume my commute as soon as June 2021, though i understand ridership has been down during covid. Please maintain service from this station. Smithsonian is a hub for tourism on the mall, where metro already has minimal coverage; removing this station would create crowding bottlenecks that decrease ridership during major events on the mall which in the past generated substantial revenue. reducing tourism infrastructure in DC will reduce our citys ability to recover our economy in 2022 and future years.

This includes a lot of stations used by tourists. It doesnt seem feasible.

ABSOLUTELY NOT. If Grosvenor closes Im not riding Metro anymore. Im not commuting outbound to White Flint just to catch an inbound train, and vice versa. And the parking situation at both stations is awful enough as it is. Why on earth would Metro build a big new garage at Grosvenor, and the county plan a big new development there, and then close the station? I dont know what pandemic ridership numbers are -- Im sure awful -- but theyre not going to stay there. When vaccines are available the world is coming back. In addition, there must be decent ridership at Grosvenor, given the longstanding practice of having all trains reach there, a practice reflected in the first two proposals here. If its so low why is it in the every train category, while White Flint is only every other train? And no, getting to Medical Center to get on from here (the Grosvenor neighborhood) is not practical. Theres no parking there. Im not riding a bus to Medical Center when I can walk to Grosvenor.

I can understand temporarily closing some stations until things get back to normal but closing this many stations with no plan to reopen them doesnt make any sense to me. People rely on public transportation in the DC area for so many things.

I bought a house near East Falls Church station so that I would have access ti Metro. Closing the East Falls Church station deprives me if that service and will reduce the value of my property. Further, it will complicate rides on the Silver line. And WMATA will never recoup the \$20,000 per space cost of the bicycle storage facility if it closes this station.

If potential customer is fit and weather is good, the walk from nearest station staying open is no problem. However, older or injured, or otherwise handicapped people will not be using metrorail if their destination is closest to one of the proposed stations for closing.

We have many elder residents living in this neighborhood who are dependent on Grosvenor-Strathmore station on the daily basis. Closing this station will be a huge problem for them.

The closures of Cleveland Park and East Falls Church would not be acceptable as I use these stations infrequently but on occasion.

This is probably the worst idea of all 5 proposals.

Without ascertaining the ridership in Silver Line Phase II, how could you close those stations. Other stations are Okay but the new stations in Silver Line Phase II needs to be experimented for at least one year

| Proposal to close 22 Metrorail stations |
|---|
| Strongly opposed to this option. |
| Why not reduce stops at these stations except at peak ridership times? |
| I regularly use a number of these stations. My jobs (tours) start often at Archives, Arlington Cemetery, Federal Center, Federal Triangle, etc. |
| I don't use these stations often so it works for me. It'd somewhat inconvenient to lose Smithsonian. |
| What about buses connecting at these stations? You don't seem to care about people who don't have cars and have to depend on buses for their transportation needs... |
| This is the worst plan. How are people supposed to get vaccinated or get to work if stations shut down. I know the metro is hurting, but this seems irresponsible. |
| I make weekly trips to McLean with a need to access the bus bay at that station. The nearby bus routes for the other stations do not meet my needs. Again closing stations places a burden on residents and inequitably affects their mobility within the city. It will cause them to spend more money either via ride shares, taxis, or other means of transportation rather than having a public transportation option which is a responsibility of the city government. |
| Arlington Cemetery needs its own stop. Grosvenor Strathmore is a very busy station in normal times and additional parking needed to White Flint. This is my station. Federal Triangle is an important station and should stay open. |
| My house is within the walking distance of Innovation Center which I have been waiting for the stop to be open since summer 2020. I work in Downtown DC which I would need to take Metro Silverline trains to DC for work once Covid is over. |
| That's a lot of stations, and closing them would be the death knell of Metro. These stations mostly have low ridership because COVID-19 dramatically increased teleworking and led to the long but ultimately temporary closures of major DC attractions. Metro should be making plans on ways to *increase* ridership once things are normal again, not gut the system so no one wants to use it at all. |
| East Falls Church is very convenient to me especially now that it also includes the silver line. I can walk to the station which is important to me. Parking at other stations is a hassle and if I am already in my car I will probably not take metro at all which is too bad because I always liked metro. It doesn't make sense to close East Falls Church because you just spent a lot of money to upgrade the station and add the silver line. |
| Closing Grosvenor-Strathmore means I drive to another station and pay for parking or take a bus to and from another station adding more than 1/2 hour to each trip. It's more convenient and cheaper to drive at that point than to use metro at all. |
| Has an analysis been done on the demographics of people going to these low ridership stations? A station like Arlington Cemetery you can probably close with minor inconvenience to most people, but if the lower ridership station is still being frequented by riders who do not have access to a car that station either should not close or should provide a free shuttle service. |
| How can you close Grosvenor when you are saying you are running trains there more often. This station is very popular and has great parking. Don't close it. |
| I'm near E. Falls Church. I'd opt to use my car. I can't easily walk from another station to my home by taking any other station. Late at night, I'd not want to take the bus from Rosslyn or Ballston. Keep E. Falls Church Metro Station OPEN!!!!!! |
| Assuming I am able to return to DC and work in-person by then, I often have meetings around Archives, Judiciary Square, the Smithsonian, and more. This measure would increase costs and burdens for riders like me. |
| Again bad for seniors. would increase travel time and walking distances to and from destinations. To even out ridership, offer discounted fares from low use stations. Closing Grosvenor would be a real hardship for us as we are both in our mid seventies. |
| It is critical that we increase opportunities for public transportation rather than decrease them. Particularly removing suburban stations is harmful to communities of color and workers who live outside the city to make cost of living more affordable. |
| Discriminating against riders with lower mobility capabilities is not an acceptable solution. |
| Orange line access to E falls church indispensable for work and school. |
| I regularly travel to several of these stations. I can make this plan work, but I don't want to. I am very lucky that I am able bodied and can walk to another station... even if that means miles. I know that those in wheelchairs can take a shuttle, but the shuttles do not come every 5 minutes... these people have to wait, and it isn't fair to them. Arlington Cemetery is necessary for tourism and definitely shouldn't be closed. My doctor is in East Falls Church. My kids doctor is in Virginia Square. I take my children to Smithsonian station almost every weekend. Ahhh!!! Maybe I will have to move away from DC if this happens. For real. |
| Folks including myself live near Clarendon and Virginia Square stations so we can walk (25 minutes) to get to one of those stations. We don't drive and park and there's no parking available. Clarendon is always jammed packed at rush hours. Maybe reducing number of trains but not closing these two please! |

Proposal to close 22 Metrorail stations

I can walk to Woodley. I do think Smithsonian station is important for tourists or DMV residents visiting museums - not everyone can walk from Metro Center to Smithsonian museums.

Holy shit. You call yourselves a transit agency?

These stations service people who rely on the metro to get to and from work daily. You are not only impacting their budget by forcing them to fund another way to get to work (ie. car), you are causing further damage to our environment (more people driving cars), causing an increase in the horrific traffic around our city, and decreasing property values of every family that lives near these metro stations. This is a terrible idea - it is hypocritical to be building new stations, fixing and repairing many of the stations listed above only to then close them. I'd also like to mention the overwhelming harm you would be doing to families of a lower socio-economic status by deciding that these stations are no longer needed.

It is expected that Smithsonian museums will re-open by 2022. Closing this station would have a negative impact on the thousands of people who use the Metro to get to the National Mall. Closing Cheverly and College Park negatively affects people in Prince Georges County, many of whom are very dependent on public transit to get to work, medical appointments, shopping, etc. In particular, closing College Park seems very wrong given the proximity of the station to the University of Maryland.

Closing both Clarendon and VA Square would leave functioning stations in Arlington more than 2 miles apart in an area designed to make heavy use of public transit instead of driving. Closing both stations would also seriously undermine the viability of commerce in the Clarendon corridor.

We moved a few months ago to be near a Metro station (Grosvenor). It was literally the deciding factor when choosing between apartments. Furthermore, the other metro station is too far to walk. With the closure of the Grosvenor station, we will likely move again. Please do not close this station down!

Closing Virginia Square and Clarendon will further decrease metro revenue. Virginia Square and Clarendon are surrounded by apartment buildings, restaurants and is adjacent to the GMU law campus. It is heavily used because there is a need. Metro users who use Virginia Square will not walk to go to other stops, they will instead use Uber to get to their intended destination.

This extreme proposal will surely cause the demise of metro.

Grosvenor-Strathmore services a huge community of daily commuters to the NIH and Walter Reeve Medical hospital, helping move thousands of people every day. With curtailed metro access the traffic congestion and environmental impact would be monumental. It also provides easy access to Strathmore cultural center which has very reduced parking offerings.

Grosvenor has parking. Closing it would be foolish.

I would not shut down the McLean station as there are no close stations that a user could use especially if Greensboro is shutting down too.

As long as the Blue line is operating I'm OK. If future location renovation or upgrades take place, which shut down or limit services, then this plan doesn't work for me. How long would it take to activate the Yellow line if the blue line has limited or no services?

Closing these stations would waste costs already sunk in expensive infrastructure that is relatively cheap to operate and could be operating even more efficiently (with additional CCTV and other automation). This also would further diminish ridership. Better to increase fares to more fully meet the cost of operations per rider, differentiated by such stations which are located in generally higher-income areas.

I know a lot of people (including me) who use College Park, so in my case, this doesn't work, but during concert season wouldn't it be problematic to close Grosvenor-Strathmore as well? I use Smithsonian often - especially for work when I host student or out of town professional groups.

I use both Clarendon and East Falls Church stations. This plan would make it impossible for me or my family to use Metro at all, i.e., it'll be easier to use Uber or Lyft. This is way too drastic considering the stations are there-- already built and trains are just passing through them?? Awful plan. Please don't close these stations.

This change would make commuting around the region much more difficult.

East Falls Church is one of the most used stations in my neighborhood for getting to Dulles airport. It is also the station I use for getting into DC and for getting to Virginia Square and Clarendon to visit my children. The pandemic is the reason ridership is down. As pandemic restrictions are lifted then ridership will increase again. Please do not close East Falls Church station.

CLOSING THE CLEVELAND PARK STATION WOULD BE DEVASTATING TO THE BUSINESSES IN THE AREA. MANY OF THESE BUSINESSES ARE SMALL BUSINESSES AND RELY/DEPEND ON THE METRO STATION FOR CUSTOMERS. I FREQUENTLY GET OFF AT THE CLEVELAND PARK STATION TO PATRONIZE THE SMALL BUSINESSES THERE.....IMPORTANT PUBLIC SERVICES SUCH AS THE CLEVELAND PARK LIBRARY AND THE CLEVELAND PARK POST OFFICE ARE LOCATED RIGHT NEAR THE CLEVELAND PARK METRO STATION....VITAL FOR THE COMMUNITY TO ACCESS.

Evaluating station usage during pandemic is not an accurate way to predict the post pandemic needs. Closing all the stations will deter even more people from using metro. I work in Virginia Square. This proposal will directly effect me

Proposal to close 22 Metrorail stations

| |
|---|
| East Falls Church Station is the closest to my house, easily accessible by bus, and very convenient to use on weekends. I would use it on weekdays if there were more parking available. |
| The Smithsonian station is really not near enough stations to close it - that one should stay open. It is also important to consider the effect of closures on disabled riders who will have greater difficulty in reaching their destinations if so many stations close - and the cost of providing additional van service to them as a result of stations closing. |
| I moved recently to be near the Grosvenor metro. I can walk there. At night I can park there. Buses going to Medical Center wouldn't be there if the station is closed. Buses don't run at night anyway.. Since I don't want to drive at night anymore I would have to take taxis, which cut into my very low income. I would have to quit my night job at Kennedy Center, which cuts into my income more. There are several high rise apartments around here with, no doubt, people in the same situation. How would people get to Strathmore? |
| How can you close Mt. Vernon Sq when the yellow is supposed to travel from Huntington to Mt. Vernon Sq? Will the Red line not travel from Grosvenor-Strathmore to Silver Springs? Are these closures temporary closures? |
| This would not affect my expected needs for the Metro too badly in a direct way, but I wonder about increased crowding at the other stations. |
| I am a tour guide scheduled to meet groups at Arlington Cemetery, the Smithsonian for nearby museums and the Mall, including the World War II, Jefferson and Lincoln Memorials, Federal Triangle for the Mall and nearby museums, and the Convention Center. I would be unable to use Metrorail at all. |
| Many of us now have made three fundamental life changes over the past couple years. These life changes essentially allow WMATA to go forward with the proposed service reductions for the following reasons and because of the following life changes:1.) We moved from far out suburbs such as Springfield to Arlington so that we could be walking distance from high traffic Metrorail stations such as Courthouse and Rosslyn.2.) Our income is derived from SSDI partly because we are incapable of getting the good jobs barely remaining after our occupations were outsourced, automated, or otherwise eliminated altogether.3.) We now reside in Section 8 apartments which are walking distance from the aforementioned high traffic subway stations. |
| This proposal directly impacts my commute at both ends (Virginia-Square GMU, Clarendon, & Federal Triangle). Closing two stations in a row means a further walk to Ballston and having federal triangle closed means taking metro center. Many federal employees use federal triangle & if most are vaccinated there's a high probability that their workers will return to the office similar to pre-pandemic, which would leave a high number of commuters without the option. |
| Grosvenor is vital for our commute to work. It is less than a mile walk from home and takes us straight to medical center |
| I live a block from the metro on Eisenhower Avenue; one of the primary reasons I moved into this building was to have a metro station close to me. I would really be sad to see the station closed. Also, I frequently use the Archives, Smithsonian, and Cleveland Park stations. As far as Federal Triangle goes (and probably others you want to close), there are so many people who work over that and I'm sure that would affect their commutes. And Arlington Cemetery--so many tourists use that station and their access to the Cemetery would be much more limited. I get that funding is difficult right now, but one of the reasons I love the DC area so much is because I rarely drive my car and I can rely on the metro; closing all these stations is going to make it more difficult to travel around and there will be more car traffic, which we do not need. |
| I am a regular patron of the Grosvenor-Strathmore station. I prefer to commute by train as opposed to the bus because of concerns with social distancing. The metro Bus service would need to be more frequent, especially during rush hour times, to ensure proper social distancing on Metro buses. |
| A government worker not having access to federal triangle would be an extreme inconvenience. I'm sure ridership had been down due the pandemic, and people working from home. But I recommend waiting to see what happens after then pandemic for these stations. |
| This proposal makes sense if there is low ridership. |
| I live by East Falls Church and work at Federal Triangle. We bought our house because of its proximity to the metro, and as a result, paid a premium for the house. Plus, if I have to take a bus to another station in the morning and then in the evening, there will not be sufficient time for me to work a full day and get to my daughters school to pick her up. |
| My husband is buried at ANC, and I do visit every weekend. That would stop. |
| Closing Metro stations puts added pressure on rush hour traffic into and out of DC and in the Virginia suburbs. Putting more cars on the road will have negative environmental impacts and adversely affect highway and pedestrian safety. Moreover, closing stations reduces commuting options for people who do not have automobiles, potentially reducing their employment options. Further, the fact that Metro is considering closing Silver Line stations BEFORE THEY HAVE OPENED is stunning "what was the point of Silver Line construction if these stations are deemed to be underserved and, thus, unnecessary? The fact that this is even under consideration calls into question Metro's long-term planning and indeed its competence for all facets of Metro operations. |
| This is really difficult to say because it depends on what cultural affairs I will be going to. I understand why you are picking these stations, but I fear that once you close the station, it will never open again. Once things open up, I would expect that Smithsonian would be busy with tourists, especially if people are not traveling overseas for awhile. |
| I need to use orange and silver lines from East Falls church to those area all the times. |

Proposal to close 22 Metrorail stations

This plan mostly makes sense, but it seems like a bad idea to close two consecutive stations (like Clarendon & Virginia Square) or stations that are not within walking distance of another station (like Loudoun Gateway or Reston Town Center).

It seems that this proposal hits Virginia especially hard - lack of equity between DC/MD/VA here.

This is a bad idea. You don't build ridership by limiting access to your service. Also, was the point of building new silver line stations if you're never going to use them? Also, what is your definition of close? I can understand stops that are blocks away from others in the central business district. But Grosvenor-Strathmore is close to what? The answer, there, is nothing. The station is close to absolutely nothing.

We currently use Grosvenor metro to go to DC on a regular basis. We currently park in the Grosvenor parking garage for Strathmore Music Center concerts (so hopefully the garage and parking lot will remain open if you do close the metro station).

I live 5 minutes walking distance from metro now. I have no car, I have kids to drop off at school. Closing my station East Falls Church would really impact my commute, make it longer, affect work schedule. As a mother and woman, working full time and caring for my family is already difficult. This would make my life more stressful.

No no no. Access is necessary for those car free. Not an option.

This is a REALLY bad idea for those of us with walking limitations. I remember when I was on crutches trying to get from Bethesda to Archives with so many out of service elevators that I had to give up and use automobile. And if I had to walk to a more distant station I would just give up, look for alternative.

This is not an equitable way to provide a transit system. It would cause transit deserts and would impact the people who rely on transit the most.

Closing Arlington National Cemetery stop is an affront to the military who have given their lives for our country! Families and those wanted to honor the dead arrive by Metro. Closing the station would be a sin.

Closing this many stations--especially several that service downtown areas seems like a horrible idea to me. First, you want people to be able to visit the mall/museums and other downtown locations without having to drive. That's good for the economy, the environment, and our quality of life. We don't want DC to be one huge parking lot. But moreover, there's serious equity and accessibility issues here. I'm only one of thousands of local residents (not to mention visitors) with mobility issues. If lots of stations close, I can't take metro for many things since it means twice as much walking to get where I'm going and I have a very limited number of steps per day that my body can handle. So I (and thousands of others) become homebound and don't contribute to the local economy as much because it's really hard for me to get anywhere. Seems like another way to drive ridership down further, and ultimately bankrupt the system...

Much too severe. Much infrastructure has been built around Metro stations, with future growth being planned. This would severely damage the area's economy. This option would likely lead to businesses closing or leaving the DC area.

Please remove Grosvenor-Strathmore and Smithsonian from the list.

How does the Yellow line only run to Mt. Vernon Sq. if that station is closed? What are your mass transit options for those who travel between these stations? How are college students - College Park; Virginia Sq; etc. supposed to get to campus if Metro is not running to the stations within walking distance? Smithsonian! Really? You do know the tourists will be back.

Open Clarendon

As a retiree, I chose to purchase a condo close to the Virginia Square Metro station in 2020 so that I wouldn't have to drive. If that station is closed, I won't be able to get around as I had planned, particularly if the next nearest station, Clarendon, is also closed. Closing two stations in a row makes no sense. Please don't shutter both of these stations.

The closure of both Virginia Square and Clarendon would be devastating. This plan would severely threaten the post-COVID economic recovery of the Clarendon commercial district, which relies on Metro accessibility to bring bar, restaurant, and shopping patrons. While ridership may have been low during the COVID crisis, as commerce reopens, Metrorail service will be critical for the survival of struggling businesses in the Clarendon area. Additionally, this plan would leave residents in the Clarendon and Virginia Square neighborhoods without realistic transit options just when they are likely to be returning to offices. This will surely increase traffic and burden already-scarce parking. Families such as mine would be forced to buy additional vehicles and secure parking. This would be a financial burden and undo much of the progress toward car-free lifestyle options Arlington County has made in recent years.

Before COVID-19, I would ride metro 4 or more days a week, both for commuting to work and for personal trips. This proposal would close stations near both my home and my work. If this change were implemented, I would NOT switch to using more distantly located stations. Instead, I would switch to using other forms of transportation, likely either my own car or a ride share service such as Uber or Lyft. I expect many other metro riders would make a similar choice, and my prediction is this proposal would lead to an even larger decrease in ridership and loss of revenue for Metro. Yet your proposal also involves keeping the Silver line in operation, so you would still be bearing those costs. So if this proposal were implemented, you would likely lose revenue while still keeping much of your operational expense. This proposal doesn't make any sense.

Proposal to close 22 Metrorail stations

I would need to travel to Greensboro for work. This proposal would make it really difficult for me to get to work everyday

I rarely use any of the stations named: only Smithsonian and Federal Triangle a couple of times a year. If pandemic precautions continue into 2022, as is likely, I am not likely to be taking these trips on Metro or by other means.

Some of these might work, like Archives, but not all of them. E.g., since Clarendon and Virginia Square are adjacent, closing both would leave a huge gap between Courthouse and Ballston.

This is outrageous. Clarendon Station is in the middle of an enormous commercial and residential center that relies on Metro accessibility for workers, business, and daily commutes. The same is true for Virginia Square, Reston Town Center, and Mt. Vernon Square. Federal Triangle and Judiciary Square are essential for the federal government. Also... How close does a station need to be to be near other stations. Most of these stations are a minimum half mile away from each other. Do you expect people want to walk that far or farther after taking a Metro train? Why bother taking Metro at all?

This change reduces the utility of metro rail in Downtown DC. I would be likely to use other modes of transportation.

Anticipating better rider use after Covid is in herd mentality. Too many condo, townhouses & apartments purposely built near metro's would be affected, thus negatively affecting those neighborhoods. Perhaps shorten hours, but keep business hrs.

Unless there is improved parking at some of the sites or shuttle service between the stations at no cost to the riders- I would not take Metro with longer waits and limited parking. Some of the closures are interesting - in that you are leaving residential areas without trains but federal government areas with stations.

Lower ridership does not mean these stations are redundant. Near other stations is a relative phrase. Trying walking the distances in good and inclement weather.

I can walk to Strathmore Grosvenor easily. White Flint is possible but not as close.

My elderly mother uses the Grosvenor Strathmore metro. She can walk there. It would be more difficult to get to the next closest Metro by walking. Buses don't pick up often enough as another way of getting to a different station.

I depend on Grosvenor-Strathmore metro station which is walking distance from my home. Other stations are not within practical walking distance, which means driving and parking. Grosvenor was busy before things shut down, and it will be again when things open up. People in my neighborhood may choose to drive to work if they can't just walk to the station.

I commute to and from Federal Center SW.

Grosvenor is our primary use metro station

Archives / Federal Triangle stations are not very close to other stations on the green line. These are going to severely impact riders with accessibility issues who can't walk long distances.

Closing these stations would have a long-term detrimental impact to Metrorails overall recovery, and on peoples livelihoods.

HELL NO. When this pandemic dies down the ridership will bounce back to at least 50% pre-pandemic capacity, and people who rely on Grosvenor Strathmore to commute will be screwed. Unless you plan on building an equivalent public parking garage and overhaul the traffic and bus routes at Medical Center to accommodate riders who would normally park and ride at Grosvenor, this makes no goddamn sense. Also, if you close other stations you better make SURE you have shuttles or other bus service that can bring people to those areas easily. What shuttles go to Arlington Natl cemetery, or Clarendon, for example? When this pandemic dies down these areas with high pre-pandemic traffic will pick back up, and then you'll have to readjust again anyway! This is COMPLETELY SHORTSIGHTED.

I need to travel to Clarendon Station for my job.

Closing these metros would have a significant impact on the ability of many to utilize metro. The closure of Clarendon would be most detrimental followed by Virginia Square. The closure of Clarendon would make metro virtually unusable for me and for many who rely on this station daily & for access to social events & good grocery options.

College Park station is an essential stop for students and employees of the University of Maryland. The University is expected to be reopened by fall 2021, so this would make it impossible for many students to get to class and for many workers to get to their jobs.

This is beyond stupid if you're trying to increase ridership. Making it less convenient won't make you more money and you'll still have to upkeep closed stations.

I moved to my specific location because the Grosvenor-Strathmore was in walking distance. This was the sole purpose of my decision.

Having close access to the Cleveland Park station is one of the reasons I live in Cleveland Park. I use the Metro from there for theater, medical appointments, shopping, other events. I'm 76 and getting older. I'm in pretty good shape now, but who knows in the future? And there are a good deal of people I see here who use the CP stop. Closing it at certain clear minimal use times, maybe, but I'd need more information.

Proposal to close 22 Metrorail stations

Do you really want to deal with the congestion and bad publicity closing these stations would bring? Do you really want Chinatown metro to hold everyone from Archives and Mt. Vernon? Do you really think closing Arlington Cemetery will gain you any fans? I'm assuming this is just a threat to get funding cause otherwise it's completely heartless.

Reduce number of cars and have trains running on an hour baisi.

I use a lot of these stations. One is very close to my home and another is very close to my work. This would be a huge inconvenience for me and I would probably stop using the metro.

The capital of the worlds most powerful country can provide service at ALL of its stations that it spent HUGE SUMS to build. The tracks and stations are the most expensive part of the system and you waste them by cutting service, which then perpetuates people's opinion that they can't rely on metro- which then reduces ridership furthe

I have colleagues who commute from the silver line. This makes their commute horrific. Dont do this!

If you close VA Square, Clarendon should not be closed. VA Square station is always lower ridership, but therere many residents will use Metro rail once the businesses are opens.

Cleveland Park is the station i use to travel north to work in MD, and it's the station that feels safer to walk home from in the dark because it's better lit and closer than either Woodley Park or Van Ness. The Van Ness station would require a nearly 1.5 mile walk. The Woodley station would be more manageable than Van Ness, but would still add 15-20 more minutes to my commute.

Two of these stations are my actual home and work stations therefore this would make my commute twice or more the usual time or more since there are only buses to get to the next train station and they are very far apart

You cant close both Clarendon and Virginia Square. They are next to each other.. Virginia Square is close enough to Ballston that you can close it without too much problem. Closing Clarendon would mean a much longer walk for me. Its .9 miles to Clarendon station for me. While Courthouse, the next closest station is 1.2 miles and down and up two very large hills. That would make it impossible to take on a warm day or late at night and would force us to drive. Virginia Square is 1 mile from us, but Ballston is 1.6 miles, too far to walk. Assuming only 80% of commuters go back to Metro, you would have too many people crowding the platforms at Ballston and Courthouse with longer train waits than the platform could accommodate. Before covid, the platforms were packed and I often had to wait for the 3rd train before I could get on. Sometimes they were so crowded, and if trains were delayed, I left and went back home to get a cab or get my husband to drive me to work in the District.

Closing Clarendon station would have a huge negative impact on our property value and hurt all the businesses and commuters that live here.

Grosvenor-Strathmore is the FIRST above ground station after exiting the District. It is a commuter haven as many can drive in from farther destinations, find ample parking and easily cross into downtown DC. It is also instrumental in helping keep Strathmore Hall accessible. Children utilize the Music Hall for classes and can easily walk from the metro safely. There are multiple communities built around the accessibility of Grosvenor-Strathmore. As someone who has to commute to DC for work it would cause many major problems being I dont have a car and walk to the metro for work. Frankly this would deter me from utilizing the metro at all and many would probably feel the same therefore further driving down ridership.

I do not like the idea of College Park station being closed because it gives me access to College Park itself from Greenbelt. But I could live with this closure.

To be workable and equitable additional study should be done to ensure that just because a stop is low-use at a given time of day it isnt still used disproportionately by underserved populations.

This is ridiculous, people have been asking for MORE stations not less. If anything this will make metro usage even lower.

Why have the metro if youre going to close all these stations. It reduces accessibility and it impacts communities without other means of transportation the most.

This would be terrible for people in College Park, greatly increase traffic in our city as people would need to drive to a different Metro station, and probably lead to more people just driving instead of taking Metro. People coming to College Park for the University would likely just drive, making our traffic congestion miserable.

I think this is a terrible idea since people bought homes, rented apartments, and took jobs with the assumption that they could use these stations for their commutes. I, personally, would not be affected by those particular station closures.

As a student of George Mason University at Arlington, I have to regularly use the Virginia Square station for my commute to campus.

This is the worst possible proposal - many, many people live near these stations and rely on Metro to commute to work. A reduced frequency of operation is manageable, we can plan our schedules to accommodate that - but to shut stations down entirely would leave many people with literally no means of transport to work. This is an absolutely unacceptable proposal.

Clarendon and Virgina Square are right next to each other! Can't you guys read a map??? Close one if you must, but not both. In any case, it's clear that you are just doing your best to kill businesses in Arlington!

Proposal to close 22 Metrorail stations

I have lived in a neighborhood close to the Grosvenor-Strathmore station for nearly thirty (30) years. I have grown more dependent on using Metro, even after I retired from my job in DC. (I commuted daily on Metro to downtown DC for years.) My husband and I gave up a second car because of our proximity to Metro and our increased use. We often selected events to attend solely on their proximity to other Metro stations. We often took Metro to visit friends, even in Virginia and parts of Maryland outside Montgomery County. Given our Senior Status, we are very concerned that our station (Grosvenor-Strathmore) would close.

I need frequent rides at Grosvenor-Strathmore

This would depend on bus service to alternate stations - would bus service accommodate removal of stations to allow riders to access the alternate station without undue hardship?

I think closing stations is the worst possible option. I live on the Grosvenor Strathmore stop and moved here specifically for that reason. I rely on the metro because I don't have a car. The nearest stop is at least a 25 min walk away. Not only that, I frequently use Cleveland Park, East Falls Church, Judiciary Sq, and Smithsonian stops - in the event of inclement weather, it is certainly better to wait longer times than have to walk 20-30 min in the rain just to have any kind of access to public transit. This proposal would DRASTICALLY reduce mobility and accessibility and would honestly probably lead to me never using the metro at all. I'd just have to buy a car instead (which would be a SIGNIFICANTLY larger financial burden). I'm a transplant, moved 2 years ago - truly, one of my favorite things about this city and where I live is how easy and affordable it is to get anywhere in the area. Please don't take that away from us.

I live in the Grosvenor Park communities near the Grosvenor/Strathmore station, and use the Grosvenor/Strathmore metro station daily. If Grosvenor/Strathmore station is closed, I would not be able to ride metro to work anymore.

These are not stations I frequent.

I would essentially give up on metro under this scenario and go exclusively to teleworking and/or driving. When you think about inclement weather too, these station closures would be an absolute non-starter and mean the end of my consistent use of public transportation in the DC metro area.

Closing Arlington Cemetery would have to be a huge blow to tourism in the region. In addition, Van Dorn and Mt. Vernon Sq in particular are not that close to other stops. Closing these would have large negative impacts on the people who moved to those areas for easy access to Metrorail.

Keep Grosvenor station Open

Grosvenor was certainly not a low rider station pre-pandemic, and its ridership will increase if metro only runs every 30 minutes north of there. I can't speak to the other stations.

The flexibility of multiple stations in close proximity, especially in the downtown area, eases ridership. It is often more efficient to walk a few blocks to a station on a particular line than to wait for multiple trains due to transfers. Metro should consider subsidizing other modes of transportation (scooters, bikes, etc.) or increasing bus service to minimize the negative impact of closing these stations.

I live in Clarendon and have spinal injuries, therefore I need Clarendon to remain operational

We live within walking distance of East Falls Church station. We are waiting to get vaccinations and trying to hardly go anywhere until we do. We are looking forward to having a somewhat normal life again and not having East Falls Church Metro will not be normal -- and will mean we will not go into DC nearly as much. There is not enough parking at any other metro station nearby!! Why would you close Smithsonian??? That has to be one of the main stops to getting back to normal!

Phase II stations are near tech centers with a workforce that demographically prefers/depends on mass transit. People like myself moved to the area solely because of the conveniences afforded by these stations in the near future. Shutting down these stations will be a significant deterrent to current and future residents and will stifle one of the fastest growing communities on the Metrorail system. This is a particularly shortsighted plan since it will affect fare revenue for the system as well as tax revenue for the area.

This is a huge problem -- and would not work for me at all

If Grosvenor station is closed, I would drive downtown instead of using Metro. I only board/disembark at Grosvenor/Strathmore.

Elimination of this many stations is completely foolish when one considers the amount of money it cost to construct the stations themselves. Metro being a bit short-sighted through the pandemic as within a year or so, ridership will rise and revenues also.

Clarendon and Federal Triangle have a lot of users. Van Dorn has a lot of users who need access to Metro from buses.

No no no!!! This is horrible. It affects real estate and adds more problems to commuting for people living in those areas. Do not close the stations. Cut the number of trains but keep it open.

I moved to Clarendon recently and one of the main attractions was the metro being so near to offices businesses stores and my home, I will now be another car on the already busy traffic in the areas.

I disagree with the assessment that Van Dorn Station is near other stations.

East Falls Church is my metro station pre and post covid.

Proposal to close 22 Metrorail stations

I work in College Park very close to the station and, by January 2022, I will return to depending on it for daily transportation to work.

Dont use any of those stations currently.

I live within walking distance from Grosvenor Metro and have used numerous stations mentioned in downtown Washington, as well as in Virginia for various activities, mentioned previously as well as shopping. Also, living near a Metro station is an advantage when it comes to the value of my condo. The ridership has plummeted during covid but what happens when life returns to a near normal situation?

NOT Grosvenor-Strathmore, where you would be inconveniencing thousands of patrons who come to Strathmore Center for the Arts via Metro, not to mention the commuters who live nearby or on bus routes to Montgomery Mall and the Rock Spring Office Park

This is an economic metric that does not work if you are wanting to attract ridership. You cannot close stations, deprive people of services, increase rates, and still expect to make more money. You need to do everything you can to boost ridership. The stains still run through the same stations. Not stopping for a few seconds and collecting more revenue cannot be justified in any type of economic model.

This would be a severe problem for so many DMV residents. For myself, I would be unable to travel to work or social events if this were to happen. By January 2022, there is a strong chance that much of life will return to normal, including work/office openings. Not having accessible transportation options for a majority of residents will lead to increased costs for people on ride-sharing etc. this means that people have less disposable income to spend and support local businesses which will hurt the local economy. Additionally, it will lead to increased road congestion which has negative environmental impacts. Finally, it would also make the area much less appealing to individuals; one of DCs biggest draws is that it is well-connected by public transport. Many young people especially will look to move to areas that can provide similar amenities to DC as well as public transport options. The DC Metro should do all it can to continue operating the metro at full capacity and avoid closures.

I dont know that I could support this particular decision, especially if it meant closing stations that had just been improved and/or are very close to high-traffic destinations, i.e. Arlington Cemetery, Smithsonian. Also, Van Dorn Station--an improved station--is just far enough from Franconia-Springfield and King Street-Old Town to be inconvenient.

I live in Arlington and use the metro every week to go to East Falls Church for groceries at Eden Center. It is essential for my weekly needs.

This will impact the value of our homes and also significantly make it more difficult to get to work.

Grosvenor-Strathmore is the station I use and walk to. Closing it would make my commute downtown much worse and severely damage my property values. In addition, I use many of the other metro stations, so their closure would have an adverse effect on me as well. I think station closure is, by far, the worst idea I have seen.

East FC connects me to the Silver line, and I would have to take WFC to Ballston to transfer, which again would require extra time, in addition to significantly adding time to my work commute. And this would likely make parking at WFC less available since the people that park now at EFC would go to WFC, filling up fast. And eliminating Clarendon station would be a public safety concern given the number of young people that drink on the weekends and we do not want them driving or having to walk further at night while intoxicated to a different metro station.

Grosvenor-Strathmore is a major park and ride and Im shocked that its considered to be low ridership. White Flint has always had far lower numbers than Grosvenor-Strathmore. This makes me wonder if WMATA is being genuine in their proposed plans or if youre deliberately being provocative to create buzz and secure funding.

I live right near Grosvenor Station and it is why I bought my condo 15 years ago not only for the convenience but the value of my condo. The value dropped after I bought it, and closing the station would devastate the value not to mention the people that come to work for my building and those of us who go to work. This would cause overcrowding in other station parking lots and on the trains. Covid is on a decline faster than expected but your plans have not changed. They should change now that we will be returning to normal sooner than expected.

This plan would not personally affect me now but would have affected me in the past and also would negatively impact tourists and a number of folks who work in tourism. Judiciary Square serves not only the courthouses and the Police Memorial but also serves as an alternative to Gallery Place when there are events at the Arena. College Park does not have any stations that are close enough for riders who do not have cars. Smithsonian and Archives both serve as useful gateways to the Mall for tourists as well as locals who are headed there for work or recreation.

Closing stations will cause less ridership

Van Dorn Street is not that close to another station by walking distance, and one that is kind of nearby (Eisenhower Ave) would also be closed under this scenario, which makes absolutely no sense.

Need transport from EFC

it is a long walk from Virginia Square and Courthouse, given my office is at clarendon

Proposal to close 22 Metrorail stations

These are stations I use on a regular basis. But it strikes me that closing so many stations would make Metro less useful in general and therefore would tend to make it less used, leading to a downward spiral. I understand the need to cut costs because of covid-related ridership declines, so I'd feel better about this if it was framed as a temporary measure while Covid is still affecting ridership.

This is based on a misconceived notion. You're leaving everything open in the downtown core (destination stations for inbound commuters) but then closing a whole bunch of source stations. If you close East Falls Church, I won't ride Metro. Right now, I'm working from home, but before the pandemic, I walked or took a short bus ride to EFC every day with my daughter, who I drop off at Rosslyn for daycare. This plan makes that impossible because Ballston is not walking distance. EFC has low ridership right now because so many people near it can telecommute due to the nature of the area's population. But if you close it, you're losing me, and that's 4 daily train boardings - EFC to Rosslyn for daycare dropoff, Rosslyn to Foggy Bottom (work), Foggy Bottom to Rosslyn (daycare pickup), Rosslyn to EFC (home). We literally bought our house and chose our daycare location around access to Metrorail. Closing EFC would result in me being extremely peeved, to the point of raising a major stink with elected officials. We also are former residents near Virginia Square. You can't close both that and Clarendon. That's ridiculous. That's a high-density residential area, and Ballston and Court House are nearly two miles apart. You'd be putting huge pressure on bus routes along Lee Highway (e.g., 3Y, ART 55) and whatever service you haven't eliminated on Pershing Drive. Again, you'd be driving a ton of people away and making them really, really mad.

This would work but only in the short term given the tourists that depend on the availability of mass transit to several of these locations.

This would personally work for me (slightly annoying that I'd have to walk to Clarendon, but I'd live) but it seems absolutely insane.

East Falls Church, Grosvenor Strathmore, College Park, and Clarendon are important neighborhood stations; Smithsonian and other downtown stations are important for tourist traffic and revenue. If these are removed, then more car traffic will be pushed onto the DMV roadways. The highway infrastructure is not built to support such an exponential increase.

My closest station (Clarendon) is already a 20-25 minute walk from my house. The next closest two, Virginia Square and Court House, are 30% farther, and the extra walk would absolutely prevent me from using Metro. I would drive and deal with parking before walking that much farther.

Closing these stations is unacceptable.

Would impact job

Closing Smithsonian is a bad idea for many reasons, including being a central stop on the mall of tourists but also being central to many government agencies. Smithsonian is a MAJOR thoroughfare and should NOT be closed!!!! Most other stations in the list could possibly be closed without causing too many problems because there are other stations nearby, but Smithsonian should definitely not be closed. College Park would be the next most important to keep open to facilitate students and since there are already few stops out into Maryland and Maryland needs more stops.

I walk a lot so this might work. Certainly a better way to cut costs than by reducing frequency and hours.

East Falls Church is/was used to connect to Silver Line. West Falls Church not an equivalent option, and Ballston is too busy for effective transfer to/from Silver. Federal Triangle and Federal Center SW are in the middle of a high commuter use area. Closing them for ??? which stations? Closing Smithsonian seems just cruel to out-of-town visitors, and more self-destructive than beneficial to overall METRO use.

Absolutely NOT!! This is the plan of an imbecile who wants to eliminate ridership. Fire whoever came up with this one

My station is Grosvenor-Strathmore how do I suppose to travel to my work at the NIH? How do I suppose to travel to DC? I hope that everyone who depends on Metrorail answers the question with the same feedback: Big headache, and inconvenience for all of us who depend on public transportation.

This is a lot of stations. There might be a need to temporarily close some of these stations until ridership returns, or maybe forever. But, once normal activities return, a lot of these stations may increase their ridership, and stopping the service will again make people look elsewhere for transport options, which will likely be a long-term issue for Metro.

The definition of "close" matters a lot here. In the city where it's pedestrian friendly it will have less impact. In outlying areas or non pedestrian friendly areas (cheverly for example) it will really hurt

Closing stations will create chaos and severe backlogs during rush hour. It will also create huge crowds and hazards at the open stations, especially since most of those were not created to handle major crowds. Closing stations is robbing Peter to pay Paul -- it is not a real solution, especially during rush hour.

East Falls Church is easy ingress and egress for automobile traffic as well as having a brand-new, secure bike parking structure that I would like to utilize. If this station is closed, my next option is West Falls Church, which creates a longer commute. I have not tried a bike locker there (not sure if my bikes would fit) and I will not leave my bike locked and unprotected (from weather and parts stolen, etc.).

Proposal to close 22 Metrorail stations

Closing Grosvenor makes no sense with the proposal to make train arrive only every 30 minutes above Grosvenor. It also makes no sense in terms of the newer dense housing that has been built and proposed near this station. Quite frankly, one reason I bought my house was to be within walking distance of a Metro station and closing Grosvenor would not only force me to use private transportation more but also negatively affect my property value.

Don't Close these Stations especially Grosvenor/Strathmore riders depend on this station that lives in the Grosvenor area.

Closing metro lines within the Ballston to Rosslyn corridor would be extremely detrimental. This would force ppl to have to uber or drive in the surrounding areas that all rely on multiple metro lines, especially with how populated the northern Arlington area is becoming with all the new apartment buildings going up.

Major development has occurred and is planned around the Grosvenor Strathmore station, and people rely on the parking.. it would be grossly unfair to take that away now.

Change would add additional time to my commute. If Federal Triangle station closes, I would have to get off at Metro Center and it would add additional 5-10 minutes to my commute. Why not have the proposed stations only open during a.m. and p.m. rush hours?

this short term thinking would be very damaging long term... we need more better and affordable for all public transit options not fewer (think of the planet! think of people of lesser means!)... think!

I would be extremely unhappy with this change to service. I frequently travel to the College Park, Mt Vernon Sq, Judiciary Sq, Arlington Cemetery, and Clarendon stations and would likely opt to not take the metro to destinations near these stations rather than walk to my destinations from other stations.

Please do not close Eisenhower Ave.

This absolutely would not work for me - I use the Grosvenor-Strathmore station very, very often as a working senior. ALSO, I travel to the Virginia Square station from the Grosvenor-Strathmore station on Metro for work requirements. Closing those stations would be devastating for me personally. I use an older car to park at the Grosvenor-Strathmore station, and as a working senior would have a very, very difficult time using another station. I am also partially disabled and closing the Grosvenor-Strathmore station would likely result in me having to leave the work force which I cannot afford to do. Please DO NOT CLOSE that station. Also, please keep the Virginia Square station OPEN. Thank you.

Our station is Grosvenor-Strathmore. Our entire families use metro to go to work, take our child to school, shopping, going to doctors appointment, etc. If the station is shut down, we will have no way of transportation other than Uber, which is super expensive. Metro is essential to our day to day life. Please do not close this station up. There are 5,000 riders at our station each day before the Covid. How can all these people go to work if this station is shut down?

I work near Judiciary Sq. station. I won't be able to get to work.

These stations should stay open with no booth attendant. Almost all of these stations have only one booth, which if not occupied, will still save money. Additionally, if these stations are closed, then thousands would stop using Metro simply because of the confusion of closed stations, making commuters fearful of using the system and finding out their station is closed. Please, please, please keep these stations open. Even though some, especially Smithsonian, are used by tourists, the sheer fact that they are open, and are options, brings more people into the system. Open stations keep open the fare revenue. Close them, and the number of people on the Metro will sharply drop and they won't come back.

No. This is horrible. Mt Vernon square's metro station is a 15 minute walk from Gallery Place or Shaw/HU. Don't cut off accessibility to a metro station in a highly residential area.

We depend on Metro service to go to work: from East Falls Church Station to DC and Md.

This would be bad for residents and especially business in these areas. As people get vaccinated and go out more, we will need these stations to stay open.

Green / Orange / Red line closures will negatively affect my travel.

Closing stations is a terrible idea. There has been development due to station locations. People have chosen where to live based on stations. Closing stations is basically telling people that they should never rely on Metro. It is telling people that Metro doesn't matter. Metro and its stations matter.

For those of use with small children close is very relative. Closing Clarendon station means an extra half mile of walking beyond the roughly mile we already walk. As an adult this isn't too bad, but for 3 and 4 year olds is considerable.

Of all proposed plans, this is the most damaging to city unity and important equity access issues to public transportation. I am in no way in favor of the permanent closing of any stations.

I can walk to East Falls Church in a timely manner. Several others are near where I go. Make cuts elsewhere.

As soon as I am called back into work my travel needs will be exactly as they were in January 2020.

My origin and destination stations are both on this list. Closing a station like Grosvenor, which has a significant amount of parking (the next station down the line, Medical Center,, has no parking) is ridiculous. If metro wants to move itself toward fast irrelevancy, making it less accessible and less convenient for its customers by closing stations will do exactly that.

What does closing a station save metro in terms of dollars?

Proposal to close 22 Metrorail stations

This is absolutely unacceptable. Grosvenor strathmore is a major commuting hub and is one of the only with a reasonable garage. How are we supposed to get back to work in person if you close down the only available options?

I don't regularly use the listed stations but closing huge parts of the system would make it vastly less usable and sustainable.

Closing both the Virginia square and Clarendon metro doesn't make sense. You can walk to Ballston from Virginia Square, but to walk from Clarendon to Ballston or Rosslyn is outrageous. The buses would not be able to safely accommodate the number of travelers in 2022. Even if ridership is low - to close both the smithsonian and federal triangle post vaccines is a bad idea. L'enfant can't be the only option for those who want to go to the mall.

I chose to live in my community, Grosvenor based on access to the metro, as I am sure others have done. Closing the metro would be a huge inconvenience to me and my family, forcing us to travel by car to get to work and other places. We use it to go downtown, to the airport, to the Smithsonian, to other red line stops.

The bus from capitol heights to morgan blvd takes 50 minutes but the train only takes 5-7 minutes. If Morgan blvd is closed it would add too much time to get to ritchie marketplace.

This proposal makes no sense. Once tourism starts back up many of these will see increased ridership. I think it is unconscionable that Metro would end services to Arlington Cemetery.

Archives is my work station...suppose I could walk from LEnfant plaza, but that is about as long a walk from Mt Vernon which is also mentioned. Judy Sq is closing too...but then waiting for a red line train to get there (possible 15 minutes) would be just as long as walking. Oh, damned SARS-CoV-2. Be gone, vile virus. How would you decide when to re-open? It seems if you close the stations, people will drive, and then they will never re-open...

This is by far the worst option. Several of the listed stations are not near enough to another station to make the alternative viable. Absolutely do not do this option. All stations should remain open. Many people with disabilities and other needs depend on these stations for home or work.

I use Grosvenor-strathmore because my ride on bus goes there and there is also adequate parking

I live right at Grosvenor-Strathmore and having the train right there was a major factor in my decision to live there. Also it is one of a few stations that have ample parking. There is also residential development starting which would add more residents right at the station

This is unworkable. These were very busy stations and can be again. The proposed closures will further drive down ridership. This DC administration will be remembered for killing the Metro.

This plan does not work at all. Reason we live here was due to proximity of Grosvenor Metro allows us to walk to the metro keeping more vehicles off the roads. This is the same message heard from neighbors. In addition, new plans for the apartments/condos and the expanded garage underway at Grosvenor would kill any opportunities for the property at Metro in the current development taking place.

Without service to Van Dorn, Metro is no longer an option for me.

Why lose Smithsonian??? It's the most Mall-convenient station. And Clarendon is the most central Arlington food, bar, and retail station.

What a great way to further decrease use of the Metro. What other station is near Grosvenor-Strathmore? New buildings are no longer required to have sufficient parking spaces for multi-car residents. How do we get to the next stations? Really? You think you will maintain any ridership if people have to take buses to get to the next station?

Cleveland Park is MUCH too important for travel to the National Zoo. I know Woodley Park is the designated zoo station but it is cruel to make families with kids and strollers hike up the hill. Also Grosvenor is the closest station with parking to NIH which makes it VERY important

These stations are not all close to others. More importantly, this plan, reducing easy access, would only further decrease ridership.

Though it seems Woodley Park and the Zoo should be closed, and Cleveland Park left open. The zoo is actually closer to (certainly an easier walk) from Cleveland Park. Those that use Woodley Park would be able to walk to Cleveland Park or DuPont Circle.

I work directly across from the Fed Triangle station. I ride the VRE train to LEnfant and when the weather is bad (ice, snow, rain, very cold), I ride the orange/blue lines to Federal Triangle. Per the first proposal, a metro would come every 12-15 minutes because it's a double line (i.e., orange and blue). That is fine. But if I have to ride to either Metro Center or Smithsonian, it would be too far of a walk and that would defeat the purpose of taking the Metro to avoid the bad rain, ice, etc.

We use the metro station at Grosvenor-Strathmore to go to work and to return home

The distance between the courthouse metro and the Ballston metro is uphill and would be a barrier for any differently abled individuals who are not able to walk uphill for long periods of time. If you need to shut a station it would make more sense to pick either Clarendon or Virginia square but not both.

It is not easy to get from Grosvenor-Strathmore to another metro station, as it is not walking distance to either White Flint or Medical Center, if you live right at it.

Please don't do this. I get off at many of these stations, including Eisenhower to visit a friend, Fed Center, Fed Triangle, MVS, Smithsonian to visit places in downtown DC, VA Square to visit County library. And yes - I have used - and will use - Metro during Covid-time. It feels quite safe to me.

Proposal to close 22 Metrorail stations

I have a disability and am unable to walk long distances. I work at the IRS on Constitution Avenue NW which is directly across the street from Federal Triangle station so if that station is closed it would greatly effect me.

I would ask whether these stations would have an expected re-open date. If not, this is not a favorable plan especially for individuals with disabilities. Closing these stations in busy areas would require further walking and this could make it impossible to move around the city.

Arlington Cemetery should remain open as it is a common tourist attraction. McLean is walking distance from many companies including Capital One. Clarendon has a lot of bars and local restaurants which was a common destination pre-pandemic. It would be a shame to see this shut down. College Park should remain open as it is close to the UMD campus.

I personally use many of the stations that are planned to be closed. The surrounding stations that are "near" others are not close enough for riders to simply use a different station and walk. Many of the stations I use are in close proximity to many of the business people use. Closing Virginia Square and Clarendon are two stops next to each other which would be even less ideal for riders

My take is that if ridership is low then if there are buses that can take customers to these locations or at least close by maybe a shuttle can take customers??

There are times that I use Eat Falls Church, Clarendon, and Virginia Square depending upon where I am going that buses wouldnt help.

I live near the College Park station. There is not enough parking at the Prince Georges Plaza to handle any overflow from College Park, and I do not feel safe parking at Greenbelt in the evenings.

I live by the Grosvenor-Metro station on purpose, to facilitate Metro access and use. Closing that station would make living in this area no longer possible or attractive to me.

More insanity. .

The Grosvenor-Strathmore stop should remain open for a myriad of reasons. My top 2 would be because it supports the Strathmore Arts Center and a substantial number of multi-unit dwellings have been built within walking distance of this stop. The area was designed so that people could live in the area and not use a car because of the availability of Metro. Once things return to a semblance of normality Rockville Pike can't handle the extra traffic caused by this closure.

I live within walking distance of grosvenor-strathmore and depend on this station

I always use the East Falls Church station because all others are too far from my house.

As a senior citizen I depend on the metro at Grosvenor-Strathmore. I would be willing to pay full fare instead of the reduced rate if that would help keep the station open. I think the low ridership is a result of the Covid-19. Rush hour trains were always full. During the day it seems feasible to cut back on service.

It would be very hard for me to get to work and I think it would negatively affect businesses and tourists.

McLean is my commute to work - that station is directly in front of Capital Ones MASSIVE development. Keeping that station open will encourage folks traveling across the DMV to take metro there for the journey. Dont close that station, please!

Although I sometimes use Grosvenor-Strathmore, I wouldn't mind it closing, but Strathmore Center for the Arts would suffer. Closing Smithsonian stop in 2022 is stupid. I am sure it is little used during Covid, but once museums are open and more people go back to work, Smithsonian will once again be busy. Closing Federal Triangle as well makes it difficult for tourists to visit attractions at the west end of the National Mall.

This change would not effect me but other people could encounter longer commute times and packed train cars.

While I am closest to the planned Ashburn station, my concern with these stations is the subsequent impact of volume on the remaining Silver line stations in this area. The stations have yet to open and it's not yet clear whether ridership predictions will be accurate. Nor is it clear whether the stations have been built to handle the additional ridership if the nearby stations were not going to open. Additionally, part of the draw of the Silver Line is access to Reston Town Center for dining and shopping options.

I commute from Grosvnor-Strathmore station.

Dont close Eisenhower Ave! We have a lot of new apartments being built and people moving in around here who use the metro. try other things like fixing the iPhone passes.

Its ok to close either Virginia Square or Clarendon but not both, especially since you also plan to eliminate the 38B.

Closing these stations would mean loss of transportation options for essential workers who have no means of owning a car or paying for ride-sharing service. This policy is anti-poor and only reflects that the WMATA does not care about the greater population who dont own cars and need a reliable mode of transportation.

No. Closing metro stations are horrible idea. Do not close them. It is bad for real estate, it bad to commute. People who near by those stations would need to find ways how to commute to other stations. This plan makes no sense to me. It is so

Why would Grosvenor-Strathmore close with the upgrade in the parking garage taking place? This is the closest station with parking in the area. What is the ridership percentage at White Flint and Twinbrook?

Proposal to close 22 Metrorail stations

Please do not close Grosvenor-Strathmore station since many residents depend on Metro services for their daily jobs. In addition, Strathmore music center is closeby and is convenient for music lovers to attend events.

I use East Falls Church Metro to commute to and from work. Not having this station would significantly alter my ability to get to work. The likelihood is that if this station is closed, I would have to use a personal vehicle to get to work.

If its a temporary closure fine but once ridership picks up youll have to reopen these stations, other stations will become over crowded. You also have handicapped people who use all these stations where a bus or metro access may not be suitable.

On a personal level, I just bought a house within walking distance of Innovation Center, so no, that wouldnt work for me. You should consider that several of the Phase 2 stations are planning Town Centers around them, which would increase ridership in the long term. For the more urban stations (e.g., Archives, Clarendon, Cleveland Park, Federal Center SW, etc) the next metro stations are close enough to walk to and/or there is easy bus access to get to them, so while inconvenient, it would not be as impactful to close. For the more sub-urban stations (e.g., E. Falls Church, McLean, Innovation, etc), bus transit is not strong, so more people would have to drive, and since theyre already in their cars....your risk of losing riders is high. For Arlington Cemetery, its already closed after 7pm. There isnt enough parking for the visitor traffic; this station should not close permanently. Lastly, Ill just point out what a huge embarrassment it will be for WMATA to close brand new stations--talk about a lack of planning. As a longtime user of the Dulles Toll Road (267), Id want tolls to go down in exchange.

Grosvenor-Strathmore should remain open. It has a huge commuter ridership during non-COVID-19 times and that ridership will be back soon - and certainly by January 2022. In addition, why would you close a College Park Metro stop and deprive undergraduate and graduate student commuters of any ability to take Metro to get to their classes. Others will weigh in about these other proposed closures, but I do not support a closure policy at all.

I get on at East Falls Church.

East Falls Church is a densely populated area with residents who rely on the pedestrian-friendly neighborhood and easy access to public transportation. Since moving to this area 5 years ago, I have relied on the East Falls Church station to reduce the use of my personal vehicle in an attempt to improve traffic congestion and the environmental impact of single-passenger vehicles. This neighborhood has made significant efforts (at great expense!) to increase public transportation use - pedestrian/bike trail improvements, bike share, bike lanes, etc. Closing the East Falls Church station would negate these efforts. Please keep this station open!

Grosvenor is our main station! That would directly impact us! We use other stations like Cleveland Park and Smithsonian too. And many tourists rely on the Smithsonian station! Why would that be closed? Makes no sense! And Grosvenor Station is at the Strathmore Concert Hall - also makes no sense to close it!

Clarendon, Virginia square and east falls church should not be closed, with vaccinations individuals will return to work. Once the majority of the population is vaccinated, tourism in dc will return to precovid levels. Archives, Arlington cemetery, federal triangle and smithsonian should not be closed.

I live within walking distance of the College Park station and count on it to get around the Metro area and downtown DC, since I dont have a car. I am fortunate that I dont count on the station to get to work on a daily basis, since I usually work from home, but once the pandemic is under control I will use it several times a month both for work and recreation.

i only live where i live because it is walkable to grosvenor strathmore. if you close this station, especially after all of the garage construction...that would be really shitty. It would be a shitty solution for my commute, as I would have to drive farther out, arrive earlier to pray for a chance of parking, to be treated like cattle once again on the train. probably add an hour to commute. i cant believe that you are considering closing grosvenor...there are so many people that walk to the metro. we cannot help it that a pandemic has put our health and lives at risk, and you try to punish us by removing our transportation to work, JUST because our work place is trying to keep us safe and allow for remote work.

Depending on the line you are on, Archive, Federal Center SW, Federal Triangle are necessary entry/exit points for Federal Workers. If the pandemic restrictions are lifted by January 2022, then travel on the metro will increase again. It would have been understandable to close these stations during the pandemic, not after. Once the museums open again, Smithsonian station will be popular for tourism.

Closing of the Strathmore station would have a significant detrimental effect on the Strathmore Music Center and Mansion as well as the residential areas that have grown to depend on the service. Considerable new development is planned surrounding the station that would be heavily impacted by the stations closure.

Proposal to close 22 Metrorail stations

How will tourists and residents get to Arlington Cemetery to visit once covid is under control if you close Arlington Cemetery. Clarendon is a very busy station with all the shops and restaurants and people commuting from the apartment and homes in the area. If you close Smithsonian/other metro close to Washington DC attractions - how will visitors without cars and residents who like to visit the Smithsonian get to the museums. RE: Virginia Square and Clarendon - if you have to close one - close Virginia Square - as that is very close to Ballston. However, do not make permanent decisions based on covid ridership numbers. Things will get better in time. If you have to do something temporary in the short term to save money - fine, but do not make any permanent decisions. If you make more people drive (who have cars - I do not have a car), that is also worse for the environment. You have to balance your plans - things will improve again once more and more people have the vaccine. I've heard from a number of neighbours that their offices are talking about working at the office from March. This is likely to increase as time goes on. Please don't penalise those who need the metro to get to and from work, among other things.

Might as well close the entire system. Having so few stations is a horrendous idea that will kill off METRO. Requirement to walk much further combined with additional safety concerns would cause my family to choose auto travel nearly always.

I live at Grosvenor, and would travel to Smithsonian often when museums open. How would I get there? There's no parking!!! That's why we have Metro!!! Would I need to drive to a Metro station??? And park where?? How long a walk from wherever station to Smithsonian??

This is ridiculous many people choose to live near one of those stations to utilize the metro as a means of transportation. Also people who are unable to walk to the next station from their home will then either need to drive to work or the next station or take the metrobus.. Oh wait you are cutting that service as well by 50 in 2022. So not only will the waits be longer but time needed to get on a train will be increased. This punishes people who do not have a car

While these stops may have lower ridership numbers, closing them would be a large inconvenience for the riders. It would create an additional challenge of having to stop at a nearby Metro station and separately arranging transportation to the original stop.

While it would sadden me to lose so many stations, I understand the need for closures of metros that have other stations very close by. I am however concerned about a permanent closure of these stations. Additionally, I would ask that the station be used in some safe citizen focused way during the closure. Perhaps, they could be used by local homeless shelters, art groups, buskers, or food vendors. Or any other enterprise that meets the needs of that particular community.

Many of these stations (especially Clarendon) are positioned close to restaurants and bars that may be allowed to resume more regular operations as more people are vaccinated and the risk of covid declines. Shutting stations that service popular nightlife and dining neighborhoods like Clarendon will slow the recovery of these businesses and, perhaps more importantly, leave metro poorly positioned to capitalize on the increased ridership that will accompany the economic recovery resulting from the end of the pandemic.

I am visually impaired and can walk to Grosvenor but can not walk to "nearby" stations safely or conveniently

Absolutely NOT.

Instead of closing these stations, I hope a compromise can be found, including adjusting schedules--e.g., make some stops less frequently

And then what? Take a bus between stations? This overruns the mere existence of the metro rail system. If you are adding more traffic to the streets, more buses, more gas emissions. ASK for more money from each State and Federal Government - otherwise all this investment in metro system would have been in vain !!!

This plan does not affect me personally but I would assume anyone trying to get to work at these stations is going to be majorly inconvenienced!

College Park is not a low ridership station, nor are many of these other stations. We want more stations, not less. Again, the lockdown can't last forever if we want a future here in DC. It's time to demand better of our spineless politicians, not destroy commerce and public transit.

Major govt buildings are right off archive station. Bad idea to shut down any stop

Smithsonian is the only metro on the mall, hard when tourism returns

I do not commute to these stations.

This is an incredible proposal. Why even have a transit system if it's not in any way convenient? Further, the absurdity of Metro opening 3 new stations and immediately closing them after Virginia residents paid to construct them is too much to take.

You might as well shut down the whole system, in terms of getting riders back on those trains. What people need from mass transit is convenience (as well as reliability, safety, and economy). This does the opposite. Your planned changes will not bring riders back to METRO, it will have the opposite effect and further debilitate the system.

Grosvenor is a very important stop because of the parking. If it was closed, would WMATA allow parking and run buses to close stations?

That's too many closed stations. Metro needs to come up with a better plan. Otherwise we are going to have to quit jobs due to lack of transportation. These days since the pandemic we are already losing employment.

I usually use the a few of those stations. I think in 2022 many things will go back to normal, like going to school at the Arlington GMU campus.

Proposal to close 22 Metrorail stations

NO. I work and live at two of these stops! I like in Cleveland Park and I work at Federal Center SW (half time) and Federal Triangle (Half time). I also have friends that live in Mt Vernon and McLean! How could you close Smithsonian!? Thats how people get to the mall!!! Its not near any other station.

Grosvenor-Strathmore closure would have a negative impact on those wishing to attend concerts at Strathmore Performing Arts Center as well as residents of people who live in the apartment buildings nearby. As a senior citizen, closing the Smithsonian stations would make it difficult to visit some of the museums on the mall.

Must have access to College Park and National Archives

I frequently use the Van Dorn Metro to commute for work.

Given the fact that the station Grosvenor heavily populated with condominium around the station, there are many citizen to rely on the metro instead of driving to work. If the Grosvenor station closes, the residents who normally walk to the station come up with the plan to travel to the nearest stations, either by car or by public transportation that are not readily available, that will end up reducing the ridership further down. It is absolutely inconvenient for residents live in condominiums around the station. The residents around the Grosvenor station are most likely favored the fact of convenience and availability of access to Metro to live around, but if the changes to be made, then they will lose access to daily commute to work. Please consider leave Grosvenor station open.

Unless the ridership is at an absolute 0 closing the stations is ineffective. It creates greater difficulties especially for those who have no means to get to the "nearby" stations. As someone who used to rely on the Van Dorn station but has since relocated, I know for a fact that especially during non-pandemic times, that station is constantly in use to either transfer to other lines or to get to their employment. It is especially used by service members and vets getting to the pentagon. Again, it is a moot point to shut down stations in any capacity. By shutting down stations you are leaving people without transportation, without the means to get to another station, and decreasing your own revenue from those riders who would have been getting on at those stations.

I don't agree with directing all metro traffic toward specific stations. Those stations allow flexibility for commuters and travelers in my opinion

How does Metro know what will happen on stations that are not opened yet!? Again, Metro backwards process and I have been here a long time to see what that accomplish, nothing! Think outside the box

Grosvenor-Strathmore serves unique role in serving adjacent cultural site (Strathmore Hall) as well as 3 schools within close walking distance & planned residential growth as well as a very mixed residential community. It also provides needed parking! Ridership significantly down during recent pandemic but certain to increase as pandemic controlled.

Are you kidding??? Our station, Grovesnor-Strathmore not only provides much needed metro parking but is central to a rapidly growing, high-density hub of neighborhoods. It is also a key transportation hub for those wishing to visit Strathmore Hall for concerts and other activities. Drop off and pick up access at Grovesnor-Strathmore is by far more accessible and better designed than White Flint which essentially exists directly to the main roads--vs a dedicated pick up and drop off area. There are high density development plans under way that would further increase density--and ridership--in the immediate vicinity of the station. The bottom line is that the Grovesnor-Strathmore station is a key transportation hub to all the immediate neighborhoods, including Kensington and many others that do not have nearby metro access.

We need Van Dorn St metro station, there are no other metro closer to Van Dorn (VD) Station nor other line in VD metro. if you close this station, it will be very inconvenience for people to go to work to DC from Alexandria. Instead of closing VD station, would you please considering reducing Orange or Silver lines. The come very often and are duplicate most of the stops, only a few extended stations (after East Falls Church and Stadium-Armory) that are different, maybe just run a few trains that back and forth from these 2 stations to go to Wiehle-Reston and New Carrollton. Blue lines passengers already suffered enough, longer wait and so packed before pandemic. We are human too and need to go to work like other people. Thanks for your considerations.

As my closest walkable station to home is Grosvenor-Strathmore, this would be not at all acceptable as it would require having to use my car or find some bus route just to get to a metro station for both work and leisure.

This is a horrible idea.

In inclement weather I wouldn't be able to walk to my destination.

Definitely would negatively impact our entire family. Two travel daily from East Falls Church to Smithsonian. Another person in our family is a dependent disabled person with Attendant care. The disabled person uses the East Falls Church Metro-trains to get to and from services. But more importantly, the Personal care Attendants (utilize East Falls Church Metro to get to their workplace). Because Attendants do not have a car, they would forced to find another job, consequently leaving the disabled individual without Attendant care.

How would visitors get to Arlington Cemetery? Are they supposed to walk from Rosslyn? Or Pentagon? Very stupid to close Smithsonian which services all the museums on the National Mall.

Proposal to close 22 Metrorail stations

I cant speak about the other stations but closing College Park? Absolutely catastrophic. Not only do people who commute to the University of Maryland as students or employees use this station to connect with shuttle buses it is also the only station anywhere near the main National Archives bldg. It is already a nightmare commute for staff because Metro has already cut one of the two busses that serves the National Archives. Note that the National Archives College Park site holds most of the records so in addition to staff who commute via public transport, they also get a large number of researchers, many of whom are international who schedule extended research visits. I can confidently state that one of the reasons College Park has low ridership is because Metro service (including the C8 bus) was so abysmal pre-COVID, that any National Archives staff that could either transfer to another site or agency in a better location or buy a car did so. If service was dependable, more people would use it but again for those people that cant afford a car or dont drive for whatever reason, and/or cant transfer, and this is absolutely catastrophic. Seriously, WTF?

We rely heavily on the East Falls Church Metro station, which Metro just spent a good deal of time and money to renovate, and which we and our neighbors can walk to--keeping our cars entirely off the roads.

Close Grosvenor-Strathmore??? Seriously? Thats still one of these busiest stations on that part of the line. No way is that going to work with the large concentration of people heading back to the office in 2022. Youre going to end with a total mess at White Flint.

I am in the Va Square community and the entire Ballston to Rosslyn corridor is part of this walkable community. Not having metro to go to Clarendon for grocery shopping would be a huge inconvenience. Plus I have medical issues which preclude me others to get around easily.

The Grosvenor-Strathmore stop should definitely not be closed in any case. Reducing frequency of trains or operating hours is one thing, Outright closing is another. And again this seems rather dramatic and extremely pre-mature.

Sounds like a ploy to get more funding. Why would stations giving access to tourist sights near tourist sights and venues be closed? Good way to lose more revenue

No stations close to the Penn corridor should close. There are several agencies just outside of Federal Triangle and Archives specifically. Also, Morgan BLVD is great overflow for riders who arrive in between being really early and qualifying to park in the permitted spaces after 10:00 am. The Largo parking garages fill quickly and I have often needed to drive to Morgan BLVD for a space, even further to Addison Road when Morgan gets filled. I would like Morgan BLVD to stay open especially as several condos, townhomes and new housing developments are steps from Morgan. I would imagine pushback from developers as being across the street from public transportation has to be helping their sales. Finally, Morgan is within walking distance to Washingtons Football Stadium.

My family depends on using the Grosvenor Metro station to get to work downtown DC and downtown Rockville. We bought our house because it is a short walk to the station.

I bought my home near the Cleveland Park Metro. Dwindling businesses have driven down the value of my home. Proximity to Metro is one of the best things about being here. If I had to walk a mile or more to another station, I will not do this regularly. Stations will get too crowded and weather will not cooperate. Please do not punish those of us who choose Metro over private vehicles.

One of these stops is where I currently live and another is where I currently work. I already walk 15 minutes to the metro and another 10 minutes to my work after riding the metro. So I am now supposed to walk further to another metro station when there is one that works perfectly fine in my area? Why make this inconvenience for several people who live in neighborhoods right next to the metro stop that's slated to close? This would more than double my commute time. This is unacceptable.

This is a bad option. I use the Greensboro Metro station to get to work! If this location closed, it would drastically impact my commute, as the next closest station is at least a 20 minute walk away. This is so so impractical, and I would say in my experience there are many commuters who rely on this station to get to work as well. I probably would stop taking the Metro if this station was closed. Additionally, I also use the virginia square metro to get to work, as that is right by my apartment. I use the clarendon metro often to get groceries. I use the Mt. Vernon square metro when visiting friends who live in Mt Vernon Square. I would use the Reston Town Center stop to get to the town center / to visit friends in reston. This option does NOT work!!!!

This would be a personal disaster if Clarendon and Va Sq are closed as I have no car and am 76 yrs old. Both stations have grocery stores next to them,, Va Sq has Geo. Mason U. where I take classes and Clarendon has all the shopping places that Ballston where i live does not. I moved here 20 years ago because of METRO which I have ridden since it opened in 1976. Again I have no car. I used to live at Dupont Circle and rode metro from there as well. Clarendon is one mile from Ballston station and three-quarters from Courthouse. If I had to walk it would be 2 miles for the first and and one and one-half miles from the latter going both ways. The bus is no good as one has to wait outside in the weather rather than underground on Metro. I had a horrible time getting food during the pandemic when both stations were closed. It caused me heart trouble from worry. PLEASE DO NOT close those two stations -- Clarendon and Va Square. It would ruin my life and no kidding about that.

Grosvenor-Strathmore Station should NEVER CLOSE !!! At the Grosvenor-Strathmore Station Stop Strathmore Art and Music Center is located, plus extensive high rise building, low rise dwellings, townhouses and Rock Creek Park area for busy weekdays and weekend public use.

It is bias and unsafe, especially in the evenings.

Proposal to close 22 Metrorail stations

The College Park station is very important for serving the University of Maryland and giving faculty, staff, and students easy access to campus. Additionally, the connection to the Purple Line at the College Park station will be pointless if the College Park station is closed. The other nearby stations are not walking distance from campus, and more students, faculty, and staff would need to drive or pay additional travel money to get cabs to the next closest station. This could increase traffic congestion in the area or further decrease ridership. Additionally this station is important for funneling traffic for sporting events at the University of Maryland. Also Mt Vernon Sq is very important for access to the convention center for staff and convention attendees. Conferences might be hesitant to book the space if the metro station is closed.

This would be a disaster for our community! Plus, it is the only station serving the arts and Music Center at Strathmore, a hub of community activity and a densely-populated area that the Metro station encouraged. Don't close this station, and assure it remains open for some period after scheduled events conclude in concert/activity evenings.

Not a good idea to close both Clarendon and Virginia Square. We often use V S when attending programs at the Smithsonian—good parking nearby. Clarendon a lively night spot; we've met visitors who have taken Metro from D C so we could dine together. Arlington praised in past for planning to have so many convenient Metro stops. We also are frequent users of both Federal Triangle and Smithsonian.

I am very opposed to this plan. All of my regular metro stations are on this list (stations at both ends of my commute to work each day), and this plan would make it very difficult for me to get to work (or would significantly increase my commute time). Parking is not an option for me.

You are closing stations that bring tourists to our city, like Archives, Fed Center SW, and SMITHSONIAN!?!.

Grosvenor-Strathmore is my station. Quite a substantial number of people here use this train to go to work in DC, to travel to airports and train stations. There are building projects that have been built and are underway that are using the close proximity of this station to entice people to live in this area. Keep Grosvenor-Strathmore open.

How does one define near other stations? Arlington Cemetery is at least a mile away from Rosslyn. Virginia Square is close to Ballston; however, if both Clarendon and Virginia Square are closed, that would create a huge void in between Court House and Ballston. That could be a serious issue for the north Arlington community. East Falls Church isn't close by pedestrian means to either Ballston or West Falls Church, so that is entirely befuddling. This seems like the least desirable option amongst the proposals I've read so far with wide ranging negative impacts if implemented.

This is an enormous number of stations, and would drastically impact my & many other people's ability to have metro train service be a reasonable transportation option. This will decrease ridership both among those who have access to a car and among those who don't and need it most. In trying to save money, you'll be making a system so inconvenient to use that ridership will be limited to those with no other option- my trip from home into DC is often frankly faster and arguably cheaper if I drive instead of ride

This is a horrible idea which would seriously impact myself, my family and a large percentage of commuters in Northern Virginia. This would result in extremely crowded stations that are not closed, dangerous conditions on platforms, significant inconvenience for frequent riders, and loss in property values for those near the shuttered stations (to note, the last concern would not impact me as I am not that close to a station to impact my property values). The D.C. Metro is not like N.Y. with many stops, so this plan would further degrade the system, and likely significantly delay a post pandemic recovery. I would most likely decide to stop using Metro ever to commute if the closest station to me is closed, and highly suspect others will make the same decision, resulting in other commuting problems for the entire D.C. area. I would not pay the price Metro is currently charging to be left miles from my residence. This is option is extremely short sighted and will result in a change in transit habits that will take years of not a decades to recover from if the stations are ever re-opened.

With little parking downtown it has been nice to take The train near to the destination point. With these closures there will be more walking for these with disabilities and elderly

I am a regular commuter from one of these stations and being forced to another station would result in too much congestion at the receiving station, and add another 30+ minutes each way. My commute could go from approx 1 hour to 1.5 hours each way, and my home is only 7 miles from my place of business. I would likely switch back to driving to work adding to the already increased congestion on the roads from the years of necessary work on the the metro system.

I live close to Grosvenor-Strathmore metro station. If it were closed, the closest metro stations (Medical Center and White Flint) will definitely need me to drive there, and find a parking, pay for a parking fee. We bought our condo because there is a Grosvenor-Strathmore metro station! I am expected to go back to work by fall 2021.

I frequently use the Cleveland Park station. This plan would close a lot of the stations near the National Mall that would bring in ridership from tourists, I think they should stay open.

Proposal to close 22 Metrorail stations

It is surprising that Archives is considered a low ridership station. Comparing it to stations like Gallery Place Chinatown with its attachment to the Verizon Center is an unfair comparison. Judiciary Square is a nearby station to the Archives. Again, I think it might suffer with comparisons with its tourist dominated neighbors. Closing Archives and Judiciary Square, Federal Triangle and Smithsonian would leave a large area bordered by Union Station, Gallery Place and LEnfant plaza with no metro rail service. The National Mall, the adjacent museums and government office buildings would be bereft of Metro access. It affects tourists, locals, and commuters (it makes people less interested in using metro and may drive them to MARC (Union Station) and VRE (LEnfant plaza) when in the past they may have solely used Metro, or used the commuter rail in combination with Metro. A compromise would be to open these stations for rush hour. I think the combination of closing these station would decrease ridership by more than the amount represented by these stations. It is unclear what station College Park is near. The increased development in College Park, the university, and new employment locations such as the new FDA headquarters means that people heading to those locations are not going to metro to Hyattsville or Greenbelt to access College Park.

What's the data and equity impact this will have on black and poor communities? How has metro address the lack of infrastructure improvements at black brown communities station and bus routes while spending money to build/invest new "affluent" and white communities west of the river? Why are these cut not coming out of capital expenditures for new stations?

I rely on the East Falls Church station and there are not stations near this stop that I can get to. You would need to increase the 2A route to get to Ballston as it is definitely not walkable to get to Ballston from EFC. I think you could close either Virginia Square or Clarendon but not both since there are nearby stops.

Are you seriously proposing to close stations that havent even opened yet? And, lets be clear, the insistence that there exists another station close enough is tantamount to telling disabled people that they dont matter at all. How much further do you want working people to have to walk, after theyve already worked their entire day? This is a tax on poor peoples time, when they have the least of it to give.

If WMATA cannot contemplate future operations without wholesale closure of stations, they might as well give up and outsource planning to another entity. At best, this is a scare tactic designed to shape future negotiations with Federal/State/City/Locality governments, Unions, Ridership, etc. At worst, it reveals a detachment from reality and severe deficiencies at the highest levels of leadership. Why spend so many millions of dollars on new stations to close them before opening? How many more stations get closed when new dedicated funding sources prove not to be enough for WMATAs appetite? Ridiculous.

I speak specifically to any plan to close Grosvenor-Strathmore. I cant imagine this would be seriously considered given that just across the street is a campus of five high-rise apartment/condo buildings (one of which my wife and I call home), another large campus of smaller apartment buildings, three areas of newly developed \$1 million plus townhouses. I know for certain that the reason residents pay top dollar to live here is because of easy access to the metro, including a special entry that allows access for pedestrians (and there are crowds of them most mornings) under Rt. 355. The metro also accommodates people attending concerts and other programs at the Strathmore Performing Arts Complex, an endeavor that will need every bit of help in surviving post-covid. Certainly any closing would have to be weighted against the tremendous disruption and financial loss it would otherwise cause.

Closing stations means closing opportunities for those who rely on public transportation. I personally use Judiciary Square, College Park, East Falls Church, and Clarendon stops to get shopping done and see friends and family.

I would find it disappointing not to have access to many of these stations and again would make using Metro difficult for myself and tourists.

This is a lot of stations, and closing these stations would impact my travel. It would hurt businesses near these stations, cause overcrowding at other stations, and require people to walk further which is difficult for older and very young populations (or those who accompany them). While ridership may appear to be low at these stations, many are smaller, so that is to be expected. I feel safer using smaller stations. I also think that our experience with the pandemic will change how people feel about being so close to each other. Crowding into LEnfant Plaza instead of Federal Center SW does not appeal to me at all.

Would you want to have to walk blocks out of your way to get to the nearest station? Oh wait, one only has to drive there or catch a bus, right? Adding to travel time. What about when incimate weather strikes? Again none in management uses metro do they? Must be nice.

Customers work or live near the stations that would close.

Closing Clarendon is an interesting concept. This is a bustling area for the restaurant and young adult scene. Since these cuts are targeted for 2022 one would assume that the restauraunt and bars will be at full capacity. Has anyone looked at the feasibility of how this will affect the local businesses? Same with some if the other closures. Tourism and many government and other businesses will require folks to be back in the office full time. Closing Smithsonian/ mcclean / falls church / etc will greatly impact the traffic on the roads.

If you close stations will you replace the Maps, Guides, etc. That could be quite a cost to consider.

I live near Grosvenor-Strathmore station and would like for it to remain open

Proposal to close 22 Metrorail stations

Just No-

This is a ridiculous proposal. You might as well close the entire Metro because what purpose will it serve?

There are times I need to get off at Federal Center and walk to my office in the morning or evening because of either train issues or you have the Capital South closed for cleaning. I need to be able to get back to L'Enfant Plaza.

This would be horrible and assumes that ridership will not return. We use the Archives and Cleveland Park extensively. Smithsonian is also used by tourists. I think this will force people to drive and there is inadequate parking. This is the worst proposal so far.

Probably fine to close a few of the downtown stations, but the ones in the suburbs aren't that close to the other open stations. I live a half mile from the Clarendon station (where I usually do my grocery shopping) and three-quarter mile to the Virginia Square metro. It is 1.2 miles to both Courthouse and Ballston, doubling my travel time. On a nice day, not a big deal, but in shitty weather...

Closing Grosvenor strathmore would be a disaster. This area is full of workers who do not use cars to go to work.

I sometimes go to college park, so this would not be great for me. I could live with it if I had to though.

We need more, not fewer stations. This would make public transit even less accessible!

I work downtown and use Metro to get to my office and to travel to other offices for meetings, etc. I use several of the stations you have listed mainly because the bigger stations (Metro Center, L'Enfant Plaza, etc.) are so crowded. If you close the smaller stations, it will lead to even worse crowding at the bigger stations making them less safe.

NO! I use the McLean stop, along with thousands of C1 employees every single day when not working from home, and anticipate doing so again post-COVID. This would make my commute hellish.

We use (precocious) Clarendon for shopping; also use Smithsonian which seems busy for those going to the Mall, same with Arlington Cemetery. It seems a shame to close those stations.

This is not okay. All these stations exist for a reason - to provide accessibility for people who live or work in these areas. A public transportation system is supposed to serve the public. Please don't close any metro stations or bus stops.

These changes will discourage Metrorail customers from returning. It will make the commute more complex and increasingly multi-modal, which would put more pressure on other Metro options, such as the bus system. The buses could not transport at the same volume as train cars. It will also be more difficult for people with mobility issues who don't utilize Metro Access to use Metrorail. Before the pandemic, I rode Metrorail every day, primarily for commuting. Closing these stations would double the length of the commute and double the cost of my commute. The cost alone would put it on par with parking at my destination and driving would be a quarter of the time. In that situation, I don't see any reason why I would use Metro to get to work. In general, don't make it harder to access Metrorail. That should be the last possible option if you want to increase ridership.

I use the East Falls Church station regularly. Closing that station will create great inconvenience for commuters such as myself who live in that area.

Certain of those stations serve large commuter populations, why would you make their commutes that much more aggravating??

No this would NOT work at all. Grosvenor is the station I would start from / return to in most cases, whether heading to DC or heading to Shady Grove. Suspending service at Grosvenor seems to be a very unwise decision, especially given the presence of the Strathmore Concert and Arts Center that (pre- and will be post-pandemic), the high density of multi-story, and townhouse residences in the immediate vicinity, and the new housing being built there now and also planned in the near future - all within easy walking distance of the Grosvenor Station. Closing the Grosvenor station would disproportionately disfavor persons and families who have chosen to live close to Metro. Perhaps consider another idea to have every other train stop at Grosvenor / White Flint (alternating) - if service continues to Shady Grove with one train going all the way to Shady Grove and the next train stopping at Grosvenor, the next train going all the way to Shady Grove, and the next train turning around at White Flint (if switches there permit). If there were not service at Grosvenor it is very unlikely that I would use Metro.

I need McLean station, unless you are going to subsidize move of private shuttles like Mitre shuttle to other stations. East Falls Church is a major transfer point between metrorail and buses and should remain open for that reason. Also, aren't Arlington Cemetery and Smithsonian major tourist stations that are worth keeping open at least during summers for tourist income? Remaining stations are the right choices for closure, if necessary.

As a bicycle/rail user the Reston Town Center, Innovation Center, E Falls Church, are close to significant bike infrastructure. These stations provide logical efficient ways to bike to DC from the Virginia suburbs. To remove these station from the system is a great disservice to a whole class of users.

I use some of these stations for special events such as the Walk for Epilepsy. Also, Judiciary Square is the station that I may need to go to when called for Jury Duty.

Proposal to close 22 Metrorail stations

Arlington Cemetery should stay open no matter the volume of use. It tells visitors and tourists there is a way to get there besides driving and the DMV supports travel other than cars and no other stop will get you there. East Falls Church is a commuting and visitor stop for riders to DC who are not in walking distance to a Metro stop. The idea is to get cars off the road. As soon as things open up it will be used again.

On a regular basis I need to go to Federal Triangle in the evenings and a station closure would be a big disruption to my normal travel plans. There aren't many bus options in that area.

Clarendon is the closest stop to my home -- and the one I use the most. I can't believe that you are proposing the closure of BOTH Clarendon and Virginia Square. This would be an imposition on a lot more people than just me -- businesses in Clarendon, students at GMU Arlington

I live near the Clarendon station and these closures would greatly affect me enormously. Once I am able to go back to work, I will need to commute along the Silver line from Clarendon to Spring Hill, and the closure would greatly increase my commute. Additionally, as Clarendon station and Clarendon proper is an important economic zone, the closure would be disastrous for local businesses, restaurants, and entertainment venues. I think the Clarendon closure would be a terrible move by WMATA, especially if the alternative to get to McLean is by bus, because the 66 corridor is horrible during commuting hours.

If they close these stations I won't be able to get to work in time

White Flint is much further away from our house and uphill. For someone who is almost 80 years old this would be a serious burden.

There are several apartment communities near and behind Grosvenor-Strathmore Station. There are also commuters that come to that station and take the metro to Walter Reed and NIH. Closing that station would significantly impact people who commute to work nearby and who chose to live in that area for that reason and who commute into DC also. It is very convenient and great to have it there. I would pay more to ride the metro if that were to keep this station and others from being closed.

That's not near. You are also suggesting this for the stations with the new bike parking. Why? I signed up for the EFC bike park and it is going to be part of my multi-modal commute starting this spring. Also, how are visitors supposed to get to Arlington Cemetery?

This is a terrible idea for people with mobility issues. So the plan is to just have ghost stations downtown?

How do they plan to assist the people who DO use these stations? And is this permanent? If so, what is the plan for the stations?

You cannot close Clarendon and East Falls Church. After COVID vaccination, we're all expected to go back to work. Losing those stations will cripple the workforce.

Why take Metro at all into Arlington if you can only get to Ft Myer Drive.

I live 2 blocks from the Clarendon metro station and rely on it heavily getting to and from work in downtown DC. While my travel and metro use is currently limited due to COVID-19, I expect to use it much more again once restrictions are lifted. When I purchased my home in 2009, being in close proximity to the Clarendon metro station was a major factor in my decision.

My family depends on Grosvenor Station, and the substitute stations are far too distant to be considered near for our travel purposes. I would suspect that many households would switch to private vehicle and/or move away rather than take buses to other stations, and those alternatives involve unpleasant costs, too. I believe it is worth confirming why ridership is currently low - there are a lot of federal- and related professionals that live in high-density buildings near Grosvenor Station (my wife and myself included) who will begin taking Metro when there are fewer barriers to safe work (e.g., once we are vaccinated).

I don't use any of these regularly.

Transferring would be the only option if these stations were to close.

I live one half mile from East Falls Church and was hoping to resume my daily commute to and from Foggy Bottom when our building reopens for regular operations. Don't have parking in the city nor regular access to a car for commuting. The Metro (and the ability to walk there) was one of the joys of my daily routine -- and key to my getting to work. Ballston and West Falls Church are quite a distance from each other and from my home.

This would be a disaster. We are both 79 years old, do not drive and have difficulty walking long distances. . We live near the Cleveland Park Station. We could not walk to the Van Ness Station or the Zoo Station. We would be TRAPPED if the Cleveland Park Station closed.

Terrible idea

Maybe reduce service sometimes at stations like Arlington Cemetery or Judiciary Square - say, close that station at 6 or 7 pm - since these serve places that keep shorter hours and there's little nightlife. But to close so many orange/silver line stations would be a self-inflicted wound, since not only have people chosen to live there BECAUSE of Metro, but you'd also be impacting issues like disability access to transit, and it would be hard for the system to earn back riders' trust.

People are handicapped or can't walk to other stations and need to be able to access the closest station, and even if the ridership is low now, it should increase again soon. I mean federal employees work right there, closing those would be ridiculous.

Proposal to close 22 Metrorail stations

These stations are mandatory do to the fact that they are residential stops. They need to be left as is with running times being reasonable for ppl to use. Once pandemic is over the usage will start to creep back up, but if they are still packing it in like sardines ppl will shy away from using. You would be hurting urself by lowering ur usage even lower than it is now because once pandemic is over ppl will still be a lot more aware of there surrounding and situations

Several of my work headquarters are located at this locations. Smithsonian is also the easiest stop for enjoying the sites

Shutting down the Clarendon metro will hurt more residents than saving a couple bucks! Clarendon is filled with professionals that use the metro to commute!!! It would be completely out of the way and too far to walk to another metro and it would be illogical to Uber to another metro station. DO NOT GET RID OF THE CLARENDON METRO! There will be ALOT of disgruntled residents!!!

If one station is close enough to another that a person by foot or wheelchair can reach the still open one without a car or bike, sure. If the idea is to encourage more cars to pile in more to one station, maybe. But it still reads as another signal to riders to have negative thoughts about metrorail. Discouraging ridership doesnt seem like a good idea.

My wife frequently takes the children and used most of the metro stations so she doesn't have to walk farther to her destination with 3 kids in tow and a large stroller

Red, blue and green line stations need to remain open. Closing a stop near any sort of shopping or recreational area would be very hard on the nearby businesses.

Some of the stops list above are fine ie Arlington Cemetery, East Falls Church, Archives. Cheverly, College Park etc would be cut off without stops. Believe that post pandemic, business will surge + those who need those stops for jobs, school, getting home, would be stuck using unaffordable Uber.

I can walk to certain stations but I can't to others. I would have to drive to another station or to my destination. Obviously I would drive to my destination. If I'm vaccinated I would be taking Metro a lot more.

I would be in favor of closing arlington cemetery but otherwise other stations are needed for those who cant walk to other stations because of health issues.. Plus if we start going back to work and school those stations will pick up.

If you close the Cleveland Park Metro, youre cutting off a lot of access to the CP library, which was only recently renovated and hosts many community events from all over the city due to its meeting and entertainment areas. Many people who participate in events Ive arranged have to come by way of Metro.

I depend on public transportation to go to work and for my personal interests, the hours that I have to work and personal interests should not have to revolve around metro, you have an obligation to the public to serve the public. The post office has not stopped delivering mail, the fire dept does not stop coming to emergencies. I moved to the Grosvenor area because of the metro being right there, am i supposed to see my home and move ?

I would have no problem with Silver Line Phase 2 stations closes (except for Dulles) as they are mostly car-dependent anyways.

These are a lot of stations to close. McLean in particular affects me and a lot of other riders. There is no safe pedestrian route from Tysons station to McLean station. Also, there is no parking at the Tysons station but their is a private transit lot next to the McLean metro station. There will be no way to park at McLean and get to Tysons station. Some other stations make sense to close like Van Dorn St, and Eisenhower Ave. There are a lot of other parking options, and buses along Eisenhower avenue so riders can park at Springfield, Huntington or take the bus to Kings St.

I was going to rent an apartment near Grosvenor/ Strathmore. Based on the possibility of that Metro closing, I declined to sign the lease.

As someone who frequently used the College Park and Smithsonian metro stations, this would completely disrupt the ability for thousands of people to commute or gain easy access to DCs resources. The availability of these metro stations to people on the outskirts of DC allow them to have just as much opportunity as the people right next to larger, more popular stations.

This proposal would result in more people being packed into fewer Metrorail stations at rush hour and give people fewer options for accessing public transit. Further, it will make public transit a less convenient and potentially less reliable option. I like being able to choose between Tenleytown (a shorter walk but longer train ride from where I live) and Cleveland Park (a longer walk but shorter train ride) to get to work, depending on the weather and my energy. This proposal, like the others so far, will likely decrease ridership even further and cause further declines in revenue as a result.

While I understand these stations are close to other stations, the whole point of public transportation is that I can walk to my metro station not Uber which defeats the purpose. If you close Clarendon and VA Square I would have to walk over 20 minutes to Ballston- MU in which case I could have chosen to live somewhere else but I wanted to be metro accessible for both school and work.

ABSOLUTELY NOTNO WAYTHIS IS DISTURBINGThe reason for metro is accessible public transportation- try walking anywhere near Tysons Corner- its literally a 30 minute walk.Cleveland Park? You have got to be kidding! What about tourists who visit Arlington National Cemetery?Smithsonian!! what on earth are you thinking? People will eventually return to work, unless MATA knows something no one else does about the end of civilization.

Proposal to close 22 Metrorail stations

Closing stations will cause lower ridership. Wasteful use of budget should be reviewed before cutting stations. Would these stations reopen once ridership increases? What is the cost of maintaining those stations when they are closed? This is caused by poor management.

This would be absolutely terrible!!! It should not need to be explained just how devastating this would be to millions of people and businesses. I and many millions of other riders use these stations every day to get to work and to our recreation destinations. Some of these trips I could replace with Uber or other transit options, but many of these trips I simply would not make if the station nearby closed. If Metro closed these stations, ridership will never return, businesses downtown will suffer, and the city will never recover!

I pay high taxes because I'm close to the metro. Are taxes going to be lower on my property if Grosvenor stop closes all together?

Cleveland Park is the stop closest to me. This is how I get to my job in Maryland every day. This would be very inconvenient to me and make my commute much more difficult

Federal Triangle should NOT be closed. I am disable and its a short 2 min walk to work. There are over a few thousand who use Federal triangle who work in near by locations. Ronald Regan Building to include- IRS, FBI, Clinton, Post Office, US Customs, EPA, D.O.J, American History etc. and a few others. FEDERAL TRIANGLE SHOULD NOT BE CLOSED!

Closing the East Falls Church station would most likely prevent my family of four from regularly using Metro. We moved where we do to be close to that station and there are no other Metro stations within miles of that stop. Please please cut back service hours there or at other stations but do not eliminate the station.

Closing any stations on the Orange line, especially in high-density north Arlington would result in increased crowding, delays, and potentially higher rates of disease transmission - or still lower ridership to avoid the aforementioned.

This is not really acceptable, as many of these areas, Specifically on the Silver line are not reasonable walking areas to get in between stations. For Example from Tysons corner station to Greensboro, there is not a straightforward or safe way to walk between the stations, so anyone who was previously serviced by greensboro would be unduly affected. Also many people have opted to move out near the Silver Line Phase II stops specifically due to the upcoming metro access. If anything maybe a better solution is Express and limited lines that would bring more people to city center quickly while having less frequent multi stop lines to service the smaller stations, much like express line buses. Just a thought.

I can't walk that far too the next nearest metro stops and bus routes wouldn't get me sufficiently close. Closing the metros nearest federal buildings and high-traffic National monuments/museums and will lead to lower tourism, more private vehicles on congested streets, even less parking and more pollution.

East Falls church metro seems like a very useful metro station for people outside DMV area working in DC. It will discouraged the use of public transportation.

Closing both Virginia Square and Clarendon would be troublesome. Keep one or the other, but probably keep Clarendon open.

I am only familiar with the stations in Washington, DC, so I am not sure how the closing of stations would affect the other areas of the DMV.

Mothball silver and purple lines, which are inop or not showing extensive ridership, until such time as the economy returns to normal. Do not impact existing network stations.

Are you talking about permanently closing these stations? That is madness...especially the Smithsonian, Archives, Cemetery, Federal Triangle stops. These are all heavily used by tourists who WILL be coming back to DC in the coming months. Temporarily shutting down until workers and tourists return, ok. But permanent closures would create so much more car traffic in DC. Arent we trying to minimize car traffic?Again- I am a tour guide. I know how important these stops are, especially the ones I mentioned above. As far as the Arlington stops go- closing both Virginia Square and Clarendon makes no sense. One of them- ok, but both? The Rosslyn and Ballston stations are so difficult to get to as is, this would exacerbate the problem.

With so many people being vaccinated we likely are reaching herd immunity in two months. You are not considering the rise in ridership once covid subsides and people go back to work. Furthermore, please do not close the Grosvenor Strathmore station as that is the main way people attend concerts at Strathmore. Property values will also plummet at the locations which are clustered around and across from many of these metro centers.

My most convenient station is Grovenor-Strathmore. It also has the most parking. Medical Center is close, but has no parking. the station can also be used to get to performances without using a car. Smithsonian is the most convenient way to get to the Mall and the museums and is always crowded with tourists.

Nearness to other stations doesnt mean much if its still too far for me to get to places that would have been closer. I will go shopping less, then. I will necessarily buy less weighty items.

I would like Grosvenor-Strathmore to stay open.

I dont have a car and use the metro for all of my travel. Virginia Square is near my home and I use it almost everyday. I use Clarendon and East Falls Church frequently. I use Arlington Cemetery 3 to 5 times a year to visit my parents grave.

Proposal to close 22 Metrorail stations

Looking at that list, I'm not convinced every station identified there is correctly described as "near" another station. If walking is your primary method of access to college park, there is not another station within walking distance. You would be relegated to a bus, or forced to buy a car. I don't know if I'm fully opposed to this proposal in concept, but I disagree with this assessment within the proposal. Also does this actually save that much money? Will there be shuttle service from closed stations to opened stations? Is that cheaper? I'd need to know much more before I could ok this one.

If these are permanent closures, this is the wrong move to make. It seems to me like you'd just be cutting off potential revenue from people who would use those stations and would end up driving to work, as some of these stations, while relatively close to each other, may be far enough apart that closing them would be enough to entirely disincentivize people to want to use the metro at all. I also can't find another place to put this comment, so I want to put this here. First of all, I recognize the difficult situation you all find yourselves in, and I appreciate the work that you are all putting in to keep this essential service running. With that said, please, please, PLEASE, **PLEASE** do not delay the Silver Line Phase II opening again. Last year, I moved from a place that I loved specifically to be near one of the new Silver Line stations. I was told that the station would open in summer 2020. Then it was fall 2020. Then it was spring 2021. Now it's summer 2021, but I dread the day when I look at the news and it's been delayed yet again. I get the situation. I get that there is a pandemic going on, and that you've seen ridership drop to unbelievably low levels. However, I am here, and I specifically want to give you my money, using infrastructure you have already built, and yet I am unable to do so because the Phase II expansion is consistently getting delayed. Moreover, I am paying a premium tax on a service I cannot use, and I believe you'd be frustrated by that fact, too. I - like many others in this area - will more than likely be going back to work sometime in the summer. We will need the metro. We want to be able to use the metro. Many of us moved to where we are specifically to have access to a metro station. And when the day comes when we have to commute back to DC, we want to be able to use it. I can deal with cutting the service hours. I can deal with the trains running only every 30 minutes. But I would like to be able to get to the point where I can even grumble about those :) So I ask you all, please do not delay the opening of Silver Line Phase II again. Please open it in July, so that we can help pay you back for the investment you've already made in our area.

Not sure how that saves money? If the train is going through those stations, what are the costs of stopping? Is it such a great savings that justifies skipping those stations? Bottom line, having reliable and frequent public transport would lead to people using the system more if they feel they can depend on it. But when metrorail keeps trying to cut services, people stop trusting the service. We need to be more like NY, Boston, London and Paris in our metro service and public transport. After all, DC is such a small city and even the greater metro area is relatively small when compared with other places. So not sure why securing regular, frequent and reliable service is so hard.

This is absurd. My home station is Grosvenor Strathmore and it is always busy on the platform during rush hour. My work is at Clarendon. I do not have a car and would have no way to get to work without the metro.

I live next to Grosvenor Station. This station has a shortcut to the bus stop Ride on 46 Montgomery College. We always ride at this bus. There is also a tunnel that leads to the other side of the street, and if it closes, people would have to cross at the intersection which would be more dangerous and time consuming.

I don't use those stations often but I know many people who do. also closing stations before they open is insane. arlington cemetery is useless though, only used by tourists. close that one.

Taking away Convenience is a slippery slope. From out of the void you create, people will find better alternatives and other companies will provide provide niche offerings that are better. You are wrong in thinking that Metro is irreplaceable--this is what the taxi industry thought as it kept raising fares, giving rise to car sharing and then Uber/Lyft. If you keep raising fares while reducing services, Metro will fail and it will be abrupt.

I walk about a mile, one way, to Grosvenor-Strathmore

Prepandemic I relied heavily on daily trips to Clarendon. I live in DC and work in Clarendon. After the cessation of the pandemic, I expect to resume my daily commute to and from Clarendon. Please don't close that station.

These cuts would cripple the Orange and Silver Lines.

Please keep Eisenhower Metro Station open. Even though King Street Metro is not too far, Eisenhower is convenient if the weather is terrible or if you must take Metro at night. Also there are many businesses close to Eisenhower Metro Station that would be affected.

Basing station closures on an anomalous year is misguided. It will lead to chaos when people return to commuting soon, as well as drive down property values for homes located near the now closed stations. Also, Arlington Cemetery is not walkable from other stations.

These ideas seem crazy. Less open stations, less trains, and more people crowded into smaller areas... How can social distancing be maintained? As things begin to open back up, we need more trains and stations not less.

I live walking/biking distance from College Park MD and it is our main metro station for commuting and going into the city on weekends. Closing College Park Metro Station would severely impact our lives, likely forcing us to commute by car to work.

Proposal to close 22 Metrorail stations

This would ruin the point of the metro. Having so many stations closed would make it very difficult for many people. Less people would use the metro

Grosvenor metro station is walking distance to our home and we use the metro frequently. The proximity of metro was an important reason for buying our home here. Most of our neighbors feel the same way. Also the Strathmore Music center is here and people who come to concerts on metro would not be able to get here on public transportation. That would likely have a deleterious effect on attendance at concerts and on the Strathmore music centers financial stability. Our quality of life and property values would be seriously affected by the closure of Grosvenor metro station.

EFC is the only station I can walk to.

Stations with parking spaces such as the Van Dorn St station allow commuters to take the metro by cutting the time to get to the station. Closing those stations might force commuters to find other means of transportation altogether leading to a further decline in revenue from fares and parking fees.

I volunteer at the Smithsonian, and use the Federal Triangle stop. If not, I would use the Smithsonian stop. But you propose closing both. How do visitors get to the Smithsonian?

NO! PLEASE NO! PLEASE PLEASE PLEASE DONT SHUT DOWN CLEVELAND PARK METRO!! I have difficulty understanding the reasoning behind this suggestion. If you close down Cleveland Park metro station, the whole neighborhood will lose. The shops are already struggling. The apartment buildings rely on public transportation. Another consideration is to limit personal vehicle use. The whole world is trying to take measures to limit the usage of private vehicles and encourage public transportation. There is really no other metro station in a realistic walking distance to Cleveland Park. If Cleveland Park metro station is closed, we will have to purchase vehicles, really bad for the environment. Also, please remember the post station and the public library. Please need metro to access these essential public services. Thank you for considering this ask. PLEASE DONT CLOSE CLEVELAND PARK METRO STATION.

Closing Grosvenor-Strathmore would place an undue burden on my family. Going to the next closest station would require a significant adjustment in our daily routine and make it that much harder for us to get to work on time. It would be helpful if Metro could comment on the possibility of reopening the stations when ridership picks back up after the COVID crisis abates.

Again, making the system more inconvenient would only disincentivize people from returning to the system.

I use the Orange line most. This proposal would shut several stations in a row (ie, Va Square & Clarendon) rather than every other station. Ballston to Courthouse is a long gap. Also Smithsonian is a major stop for most tourists - is the only reason it's showing low ridership is because of the drop in tourism due to the pandemic + people working from home?

East Falls Church Station is my boarding and exit station for almost all my Metrorail travel. I live west of Vienna Station but drive to East Falls Church and board and exit there because it is served by both the Orange and Silver lines, nearly doubling the number of trains I can ride into and out of the city. I do not object to closing stations to reduce operating costs but I would very much prefer that East Falls Church not be one of those closed.

I am surprised that the EFC metro station is considered to have low ridership. That certainly does not comport with what I've experienced during morning and afternoon rush hours. I'm unclear how closing these stations - that metro obviously did research before opening the station and since its inception - would benefit the ridership population. It's actually quite clear that these are purely one-sided cost-cutting measures that don't take the needs of the consumers into account.

So how would closing half your stations after the pandemic is over help you gain riders??? Again the time to close stations to save money was last year!

It is hard to imagine that the Clarendon Metro Station experiences low usage given the extensive growth that the area around the station has experienced over the years. I would also note that development in the area is on-going. Closing both Clarendon and Virginia Square will only compound a bad decision since it will leave an even larger, densely-populated region unserved. I strongly disagree with this proposal.

Grosvenor Strathmore should be open when there are performances at Strathmore.

Absolutely No! Again, ridership is important, there are college campuses and a large population of millennials, Gen X residents in this area commuting to school, work, to shop, dine out and exercise. Inclusive of pet owners, people rent to live & thrive on city living. Don't take away the metro stops, this results in decrease in condo & apt renting forcing people to move towards suburbs.

It wouldn't work the greatest for me because I work in the Waterfront/Federal Center/Capitol South area and typically take Metro to get to meetings on Capitol Hill/Federal Center area. Closing Federal Center, Federal Triangle, Archives, and Judiciary Sq stations potentially increases my travel time and travel costs greatly; travel for meetings and training. With the new normal possibly beginning this fall, closing these stations will hurt Metro's bottom line and once riders start taking other modes of transportation/use of technology (substituting meeting more in person), Metro will not get these customers back.

Proposal to close 22 Metrorail stations

I work at College Park and expect to be working in person by September 2021, if not earlier. When College Park station was closed temporarily a few years ago, it increased my commute time by ~30% or more. If cost savings are required through this mechanism, I would recommend closing the station temporarily now, while many classes are online, and then opening it back up in the summer or fall once we're back in person.

Grosvenor-Strathmore is hardly a station with low ridership. With the increased congestion on Rockville Pike, we use the metro to get to Rockville Town center, Downtown DC, or the airports...even on non-rush hour times. All of the areas new development is being built with fewer parking spots, etc. due to the proximity to Metro Service, all of those people would now have to drive somewhere to catch the metro rather than walk to it. How does this proposal help sustainability, climate change, and all those other big picture things? When cities worldwide are trying to reduce car trips, we are closing a public transportation option?

Closing the Clarendon & Virginia Square stations would devastate my commute as well as my spouse's commute. We rely on these lines & have already been told of our return to a commuting life will be in the fall of this year. It will also punish, unnecessarily, we fear our property value. There should not be a permanent closure of any DMV Metro stops. This would make this area as provincial and congested as old rust belt mid-west metro areas. Why would this decision be on the table? Who will be able to actually work in the district? It will be way too burdensome.

DC needs a robust public transportation system that operates like any other major metropolitan area. This is a NO GROWTH mentality and wrong for the region.

I use Clarendon regularly and closing it would severely hamper my commute to and from work.

I almost always start and end at Cleveland Park; and often use Smithsonian; occasionally I use Judiciary Square.

East Falls Church is two miles from the nearest station. In what world is that near? This proposal basically takes the Eden Center off the metro.

This plan makes no sense. You would be shutting down much of metro, pushing potential riders into cars or ride shares. DC needs MORE public transportation options, not reduced options. Once metro loses riders, it will be very difficult to get them to return to metro. Why do all the upgrades to stations (such as East Falls Church, which draws many riders from Annandale and Alexandria, in addition to much of West Arlington, if you are only going to close the station. Same for other stations. Ridership on the Silver line will increase once the Dulles station is finished, and closing this station would be particularly counterproductive since many bus routes would take people the EF Church to go to Dulles airport.

Do not close Cleveland Park. This station is integral for zoo traffic and also is a preferred entrance for the ADA affected. Additionally, the thousands of people that live in the neighborhood rely on this station to commute downtown and to Virginia and Maryland. Closing this metro would be devastating to the residents, and you will absolutely have ridership increase once the COVID vaccine rollout is complete.

Any reduction in service threatens to drive ridership down, creating a downward spiral for Metro. Also, how does someone get to jury duty or early voting without Judiciary Square? How do tourists get to The Mall without Smithsonian? Reduction in service also impacts those who cannot afford other modes of transportation.

You are closing the two closest stations to me. Clarendon and Virginia Square. I would probably have to get a car of my own for commuting.

DC metro stations are spread out as it is. Closing additional stations will further diminish the incentive of taking the metro rather than driving.

Need East Falls Church.

Absolutely terrible. College Park station is needed by UMD students without cars, and Grosvenor is definitely needed. There is a large population served by the Grosvenor station (people who live nearby) and it makes access to the concert hall available without driving). We're trying to cut down on driving, remember?

I question metro's use of low ridership. EFC and Clarendon both seem to have a substantial number of riders. Lower perhaps than other stations but substantial still. Forcing these riders to go farther to other stations would likely put more cars on the road when riders decide to simply drive to their destination.

Too far between stations. Inconvenient for many people.

Bus schedules aligning with the metro schedule will be important - if the bus is running right to get us to the rail within 5 minutes then it should be workable - if we have to get the bus, ride a short distance, and then wait 20 minutes or more for a rail, this would be frustrating - so please if you close the metro stations - do what you need to do - make every effort to fix the bus schedules so we can get to the rail at a reasonable time

I would have to try making a trip on Metro to see the difference.

I rent an apartment at Grosvenor-Strathmore and will rely on Metro to get to and from work in DC each day once my office returns to normal (non-telework) operations. I don't drive and chose this apartment solely due to its proximity to Grosvenor-Strathmore Metro Station. I would have to move to another apartment near a Metro station if this one closed.

Keep Clarendon Metro station open. Many people live, work, and shop along this corridor specifically BECAUSE of Metro service. Keeping Clarendon open would also help Metro and businesses around Arlington thrive after the pandemic. If temporary closures are needed it would make more sense to close Virginia Square as at least it is walkable to both Ballston and Clarendon. Keep Metro a reliable system "Don't close a station in a business district and busy pedestrian area like Clarendon! Thanks.

Proposal to close 22 Metrorail stations

It's critical that Judiciary Square remain open - it's very difficult to park or get dropped off at a specific time, and most people attending a hearing, jury duty, etc are unfamiliar with the trip.

I take every day to work

We purchased a house intentionally close to East Falls Church metro. When the pandemic is over, two adults will be using the East Falls Church metro on weekdays to and from work.

YOU ARE NOT MEASURING RIDERSHIP CORRECTLY. CLOSURE OF STRATHMORE WOULD BE A DISASTER!

Clarendon, Cleveland Park, and Reston Town Center are stations that I use. Keep them open. Others can be closed.

I live closest to Eisenhower, so although it would be inconvenient having to walk to King Street, it seems reasonable if there must be closures. I would not recommend closing Arlington cemetery and Smithsonian due to tourist significance though.

These stations are vital to the community they serve. Closing them is discrimination for the citizens who live and rely on the stations. They made decisions on where to live and work based on the use of the stations. Also,, tourists will be ill affected with any proposed cut backs.

I use Archives multiple times a day. I would prefer it not being closed.

I will just drive or Uber if there isn't a station close to my destination.

This is not acceptable. Find other places to cut.

A big reason I moved to Cheverly in 1987 was because Cheverly had the metro station. I have depended on the Cheverly Metro station for all these years: going to work, medical appointments, dining, socializing. Could the station be kept open if it was managed remotely (to save money)? PLEASE do not close this station.

The Clarendon station is extremely accessible to me. I use the station everyday going to and from work. It makes my commute to DC for work very easy and less stressful. It also saves me time and money in which I am allowed to put more into my bills. Closing the Clarendon station would create an additional bill for me and will add stress to my work commute. I ask that you please reconsider closing this station.

Close either Clarendon OR Virginia Square. Not both. There is quite a distance between Courthouse and Ballston with thousands of apartments, homes and businesses in between. I don't see how this would work at rush hour especially if trains are 30 minutes apart. It would be a disaster. These closures also seem to be far worse for Virginia stations than Maryland stations.

This would hurt my children's ability to go to school! Please avoid this option!

why would you close stations at tourist destinations? Wouldn't ridership go up once tourism comes back?

Just because they have low ridership does not mean that they aren't needed. This is the Nations Capitol - we shouldn't be closing ANY stations.

There is a lot of new construction surrounding Grosvenor and White Flint. Platforms and Trains get crowded. There is not enough parking at the existing metro stops already. (Pre-COVID of course)

East Fall Church is a relatively busy station, major bus hub, distant from other stations, and the initial transfer station for the Silver and Orange lines. Not sure how it made this list.

I do not regularly use the listed stations. If I needed to I would use Ride Share, rent a car, or take the closest station and use the bus.

This does not affect my particular work commute but would be terrible for social/leisure/tourism/downtown activities. Archives, Smithsonian, Federal Triangle, Federal Center Southwest and other stations are important for these purposes.

Closing Grosvenor would be a true hardship as many in this area many people live in walking distance of the station and do not own cars. My sister is blind and can go nowhere on her own without Grosvenor Metro. The area near Grosvenor is well suited for a stop bc it is within walking distance of so many Metro users and is near the Beltway so others can drive to the stop.

I guess I would adjust. But those adjustments have impacts. Having used Metro as a primary source for commuting for 20 years, this plan would often force me to adjust plans in ways that steered me away from some neighborhoods. I can only imagine the economic impact on those areas wouldn't be good. This would also close the metro stop by my office (Eisenhower Ave), which would lengthen my already long (80-90 minutes) commute.

This would seriously impact my commute time. I already take a bus from home to the train, if the closest station closes my commute will likely change from 1hr+ to close to 2 hours., which is not acceptable.

If you close the two stations closest to my house and the one where I work, I will drive to work

Most of the stations I don't go to. In the case of the Downtown stations, I gave good mobility and could walk the extra distances required without too much difficulty. Obviously that is not the case for many people.

Proposal to close 22 Metrorail stations

There is a huge contingent of pentagon workers on these stops. Once the DoD goes back to normal operating schedule this would severely impact where people can live and commute to DoD installations.

While inconvenient to someone who uses these stations on a daily basis there are alternatives nearby. I already walk almost a mile to my station so a little longer walk at the other end wouldnt concern me too much.

I work in Virginia Square, so immediately closing Clarendon and VA Square stops would seriously affect me. Several of these spots probably depend on levels of reopening, like Federal Triangle and Smithsonian I have definitely seen be very busy with tourists and such when people can go to museums. I think closing all of these at once would be too severe. Also, for East Falls Church, there would be a massive gap of accessibility for NoVa. And then Ballston would be the new split for Orange and Silver? On top of the extra crowds from removing Clarendon and Virginia Square? That would be too much.

No! Closing Grosvenor-Strathmore is unacceptable! I understand during this pandemic ridership is down, but this is a temporary situation. Grosvenor-Strathmore is located next to several neighborhoods and condominium complexes. It is a primary means of getting patrons to the Strathmore venue. I live next to the metro bridge and hear every train go by. The idea that I would put up with that yet not be able to enjoy the services of my local station would be an aggravating insult. It would significantly damage property values as many residents rely on that strain to get to work and local areas!

Reducing train service is not acceptable. Does the Metro Board even ride the Metro? This proposal is not worth considering for the Nations Capital.

I live off the Wiehle-Reston and work at Virginia Square. Metro would become essentially useless to me if this occurred. This is illogical and would have made more sense during the initial COVID-19 closures but now (by 2022) would literally cut people off from their jobs and communities. This would be to extreme detriment of us returning to normal. This would also take away from DC revenue as people in the Northern Virginia area would just stop going into DC.

you are closing my station, East Falls Church. And while you can easily walk to Virginia Square from Ballston or walk from Courthouse to Clarendon, you cannot easily walk to another station from east Falls church. While one can take the 2A to Ballston it doesnt run that frequently and takes a REALLY long time to get there because of traffic and # of stops.

Not enough access to the mall and Smithsonian. Not enough affordable parking at Ballston

How could you close all of these esp the smithsonian? We won't be in quarantine for ever. I recommend careful consideration of use and population access. Downtown cleaning crews are not going to have viable alternatives. That said I haven't been to some of these stations ever.

I moved to Cheverly for the proximity to Metro. We depend on Metro transport us all over DMV area. The Metro is a jewel to the Cheverly Community and Prince Georges county.

The entire point of living where I do is the ability to access the metro. If Grosvenor-Strathmore metro station closed, I would not be able to get to work, and likely would end up never using metro and never going into DC. Also, many residents of my apartment complex by Grosvenor-strathmore station are elderly or disabled and rely on the metro for most (if not all) of their transportation. Closing this station would cut them off from their ability to go anywhere. On top of that, outside of the pandemic, when Strathmore hall is running in-person programming again, both visitors, and staff and artists regularly use the metro to commute to Strathmore Hall, and this would severely limit who could attend shows or work there.

Please do not close Eisenhower Ave.

If my office reopens in 2022 my preferred stations would be impacted by your plan.

The only one that I see that may be negatively impacted is Judiciary Square which is the one I use after the basketball games to get ahead of the overcrowding at Gallery Place.

Again, I would use uber. It does not seem a good idea to limit transportation to tourist especially at the Smithsonian, Archives, and Arlington Cemetery. Again, what will metro do if our travel turns normal.

Falls Church and adjoining portions of Arlington have come to depend on the East Falls Church station. Those who use the station will have poor choices if the station is closed. The Silver and Orange lines diverge at East Falls Church, so departing from West Falls Church or McLean would mean longer waits for trains. Going to Ballston would mean joining heavy inbound traffic on I-66 or U.S. 50. Either option would require many people who currently walk, bike, take shuttles, or use the Kiss & Ride to instead pay for parking (and increase crowding in garages). Recent renovations at East Falls Church have made it more accessible and functional; as a taxpayer, moreover, I am not happy about paying for those improvements only to abandon the station. The soon-to-be-passed COVID-19 relief bill did not include \$30.5 billion for public transportation systems, which should make such drastic measures unnecessary, but even in the absence of this relief I would strongly oppose closing the East Falls Church station.

The current number of stations make Metro convenient and accessible - a reason to ride. Closing stations does the opposite.

I use grosvenor-strathmore to commute to and from work as well as into Bethesda and other stops for grocery shopping etc. It is a critical stop for arts, entertainment, and commuters. There are many new businesses and homes being built in the area that would overwhelm other stops especially at rush-hour.

Proposal to close 22 Metrorail stations

Grosvenor is not close to other station. One cannot walk from grosvenor to medical center, there is not walkways or sidewalks as it's above 270/495 . Why not close twinbrook instead?

I use the Grosvenor station daily.

I use Greensboro for my commute and closer would add further delays and overcrowding at the other open stations.

This is an extremely bad idea. Its a vicious cycle. You would strand many people who rely on Metro, and you would lose the riders who use it regularly but can choose other options. You will lose riders who live near the closed stations and those who want to go to those stations. And it will give the impression that Metto is a poor option, since you cant get where you need to go. Knowing so many stations are closed, people wont even consider Metto. They might just assume they cant get where theyre going, so you lose customers who arent even directly affected. Why use Metro if you cant get where youre going?

Please give me your definition of close because the northern Virginia ones are not close to one another unless you have a helicopter

This would be a disaster for the system and ridership. Grosvenor -- substantial new residential and mixed development is going up there, which would leave substantial ridership with no practical Metrorail access. Smithsonian is also an important stop for locals and tourists alike accessing the citys Mall and Museums. Cleveland Park is also highly developed around that station.

Ridiculous. You just spent hug amounts of money at the East Falls Church renovating the stop, parking, and putting a bike area, etc. Why would you spend all that money to just close it down!!!! Before Covid I parked there everyday and plan to so again once we are able to return to work. Looking at your list - it looks like you are closing half the Metro system.

This has got to be one of the worst proposal I have ever seen. Im sure the various educational institutions around the region like GMU would love this one. Are you really intent on making what has become a world class metropolitan area into a one-horse parochial south city.

This seems to be idiotic at best. The suggestion here is to have no realistic metro stop for the mall.

Closing the Cleveland Park Metro would cause a lot of problems. Because of existing limited parking and plans to change the roadscape with even fewer places to park -- this area will be for walkers and people taking mass transit. Community businesses are already suffering -- if foot traffic would be limited from people coming in from other neighborhoods because there would be no Cleveland Park station -- it would shutter already compromised businesses. Plus there are a lot of people using this station -- if we were forced to use only Van Ness the trains would be too busy.

I rely on the EFC metro station. It also seems misguided to close Reston so soon after it first opened!

REGARDING THE GROSVENOR-STRATHMORE STATION: POTENTIAL CLOSING OF GROSVENOR-STRATHMORE METRO STATION This proposal is absurd for many reasons: 1. The presence of the Music Center at Strathmore. 2. The fact that METRO SOLD the outdoor parking lot for a huge development that will include apartment & commercial development. The Development will cause a HUGE INCREASE in local traffic. Part of the granting of the Development by the COUNTY PLANNING COMMISSION was the presence of the G-S Metro Station. 3. If METRO IS SERIOUS ABOUT THIS, I WILL PETITION THE COUNTY COUNCIL TO CANCEL ALL PROPOSED DEVELOPMENT AT THIS SITE! IM NOT KIDDING!!! GET REAL FOLKS!!! Gary W. London, MD 10404 Strathmore Park Court suite 204 North Bethesda, MD 20852

No way this will work for me. Metro is a life saver. I take metro to work and return home. I take it at Grosvenor Metro and there are thousands of people in this area that take the metro at Grosvenor. It would be terrible to close it. Please do not close. I need the metro badly.

My office is located 2 blocks from the Clarendon metro so this closure would be untenable for me post-pandemic. Cleveland Park is also a station central to many homes and businesses and closing it would pose many problems.

Clarendon station is close to my office with in one block. This would add to my daily travel!

Is inconceivable how you would close Clarendon, Smithsonian, or Virginia Square GMU. The proposed plan forces people back into their cars.

I rely on many of these stations to get around my neighborhood (Clarendon, Virginia Square, East Falls Church) and others to get to family (Reston Town Center, McLean) or friends and sites around DC (Smithsonian, Federal Center SW). Beyond my individual needs, these stations are critical to making DC an accessible and affordable place to live. Without metro access, folks who live and work near these stations will be forced to add significant time to their commutes (for example, its a 20 minute walk from Clarendon to Courthouse, one way) a significant barrier for people operating on tight time schedules or persons with disabilities for whom long walks may be inaccessible. DC metro already has fewer stations than other large US city subway systems, and making the system even more inaccessible by closing stations is simply unacceptable. In addition to the community ramifications, closing these stations will contribute to greater greenhouse gas emissions in our area as individuals who could have taken metro choose instead to drive into the city, especially as many metro stations further out from the city do not have adequate parking.

Moved to be near Eisenhower Station. King Street is too far to walk to, especially at night.

Proposal to close 22 Metrorail stations

How will Arlington cemetery visitors get to site without metro? How will students commuting to UMD get there without College Park Station. I just bought a house in Herndon because of access to metro. Have you considered instead of closing these stations to just limit the times they are stopped at/open?

I walk to one of the stops in question so forcing me to use a nearby station would not work for me.

How does the plan to close mt Vernon square relate to terminating the yellow line there? Would the yellow line go one stop further or terminate early? The yellow line needs to go at least to Ft. Totten.

East falls church is a 2 mile walk from West Falls church - that is not a viable option for those of us without cars who rely on metro.

Grosvenor is a 25-minute walk to White Flint, and it would be a 25-minute walk to Medical Center if the pedestrian road didnt disappear. You think thousands of morning commuters are going to fit on Ride On Bus 45, when it only comes every 15 minutes (at best) during rush hour? Do any of you actually even take the Metro? Where do you come up with these toilet-drain ideas?

Many neighborhood stations (Cheverly, Greenbelt. and those in Northern VA) serve office, retail, and government employees traveling at different times of day. College Park serves thousands of students, faculty, and visitors to the campus year round and is more than 4 miles from stations in Hyattsville or Greenbelt. When classes and activities resume in August of 2021, a fully operational Metro station will be critical for equitable and sustainable travel.

I use the College Park station and would have trouble getting to Greenbelt. I also use Grosvenor-Strathmore, though in that case it is not too difficult to get to Medical Center.

I personally dont see any benefit in closing any station along the metro line since the trains would have to ride across that station regardless. Furthermore, distances between two stations are often wide and not easily walkable. Specifically, in regards to Grosvenor-Strathmore, since that is an exchange station, I see its closure possibly creating more problems than solutions.

Impacts to me personally would be minimal. The only station her I frequent is Smithsonian, but if other nearby yellow line stations are open there could be workable alternatives.

I mean at this point, with the proposed 9pm cut off and service line cuts, and then closing a bunch of stations -- why have a metro service at all? It feels like were just knee-capping it to death.

The whole point of a public service is to do things that arent entirely profitable. Closing stations now also means less development and investment in those areas later. The Metro is an economic fertilizer that shouldnt be removed from anywhere.

Having to reach a close by station increases commuting time and traffic. People will have to add a bus to their commuting or switch to car. Often people choose to leave close to a metro station to facilitate their commuting and because they dont have a car. Closing station also impact on property values of the neighborhood. This is a very disruptive plan.

Closing the East Falls Church and Virginia Square Stations would result in a hardship for our household. We would no longer be able to use Metro.

Metro is a transportation system not a get-people-to-work delivery system. Get real.

While these stops do have stations nearby, that doesnt always mean that its easy or practical to get off at one stop and simply walk to your destination. Especially in Tysons, the only routes are often heavy traffic areas or littered with construction which can make them unsafe during the day and even more treacherous when its dark outside.

Unclear what the impacts would be

Its disappointing to have fully functional stations that cant operate due to budget cuts, but because these stations are all pretty close to others I guess the damage could be worse.

What If is the world goes back to normal.. Then this station are close

ABSOLUTELY NOT!!!

I and many people live near Grosvenor-Strathmore and use it. After pandemic, people need train to commute and closure make large impact on our life.

I use Greensboro. This is a new station that is severely impacted by COVID closures. When those businesses come back, ridership will improve and we will be stuck sitting in enormous traffic jams again, thus defeating the entire purpose of building the Silver Line in the first place. It is also bad for attracting talent to the area. Accessibility to metro had an immediate positive impact on attracting talent to our business. The reverse will happen if we lose access to public transportation. My company has experienced this in other parts of the country where we moved away from a public transportation hub. There are a lot of jobs in the area, we are having trouble filling them already, removing a public transportation option will just make it more difficult.

It will work for me because the stations I most frequently use aren't affected. But I take issue with this framing; it's deceptive to combine justifications for closing stations. Closing stations because there are other stations nearby (like in the downtown core) is an inconvenience which can be overcome. But closing stations that have low ridership, but don't have another nearby station, is very different. It penalizes neighborhoods without lots of development near stations and makes it very difficult for people living there to commute.

Use of Metro would be much more inconvenient if stations in the suburbs are closes. In particular, it would be bad to close stations that have adjacent parking. Such as Grosvenor-Strathmore. If stations with parking are closed, would people then travel to/from Metro stations? I am against closing the Grosvenor-Strathmore station.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Clarendon???? East Falls Church??? Wow--please dont!!! |
| The closing of the Grosvenor-Strathmore station, in particular, would make things extremely hard for me and would make Strathmore inaccessible to some people. |
| Do you not close Grosvenor |
| While managing the Metro budget is understandable, I am fully opposed to closing stations. Grosvenor-Strathmore is a key station and does receive a good amount of foot traffic, as well as a key metro station in Maryland as it offers an accessible for work commuters, as well as families as this location has parking. |
| As a regular commuter from Grosvenor-Strathmore to Metro Center in pre-pandemic times, the cars would fill up from Grosvenor to Bethesda and every next station would require people to remain standing up. There are no metro garages in the stations surrounding Grosvenor-Strathmore, so shutting down this station is the worst possible option for commuters who need to drive to the metro. |
| I depend on East Falls Church station. Ballston and West Falls Church are inconvenient to where I live. When I resume commuting to work in DC I would likely drive my car or bicycle to work rather than taking the time to bike or take the bus to Ballston. |
| i ride this station |
| In the introduction you talked about closing stations that are close to another or have an easy replacement yet most of the proposed closures are quite far from another station and have very limited bus alternatives leaving people to drive. My commute involves two if not three of the proposed stations. I get on at East Falls church and commute to College Park with a transfer at Mt Vernon Square. Closure of these stations would force me to drive to work because my Metro commute would increase from an hour to probably two hours. College Park station is very far from other Metro stations. It serves the University population. There are very few adjacent bus routes and those that are there wind through the neighborhoods. East Falls Church is another station that does not have a good network of buses that could replace its service. |
| College Park Metro Station should remain open due to its proximity to the University of Maryland. |
| Too many nearby residents living in building developments around Grosvenor Metro rely on the station for daily commuting needs. The deleterious effects to surrounding property values is a secondary concern yet notable. |
| I get off at several stops often |
| Not all metro stations listed are near enough to other metro stations. For example EAST FALLS CHURCH closure would severely inhibit our ability to use public transportation and there is no good bus alternative in our neighborhood. |
| I think it makes sense to close the stops in the city, like Mt Vernon Square and Federal Triangle (and we dont need Farragut North AND Dupont Circle). However I think closing stations like College Park is a bad idea. I would not like us to close a station that serves our flagship public university. |
| I routinely use the Clarendon, Cleveland Park, Federal Center SW, Judiciary Sq, Mt. Vernon Sq, and Smithsonian stops. I would very much feel the loss of these stations. |
| Some of these stations are not really all that near other stations, and closing the College Park stop would be a real problem for students at the University of Maryland. Given the purple line development, which is supposed to link up to at least one of those stops, this seems extremely shortsighted. When you consider the impact on disabled riders, especially when broken elevators often require riders to get off at the wrong stops and travel farther to get to their destination, this could make the metro unusable. |
| I dont know how close these stations are to other stations that are more commonly used. I understand the need to streamline this on some level but it needs to be really thoroughly examined about the impact of these closures. |
| This discriminates against people, particularly the elderly, who can not afford to have a car and drive and who depend on a bus system that is deteriorating due to longer waiting times and more crowded conditions. This would be a severe handicap for me. |
| I have always used the College Park station, when it has been open. Surely the station will not have low ridership once the University of Maryland fully reopens. College Park is nearest to my home. The station was always well-managed. As a handicapped person, I valued the ability to use the garage--even if I could not always get a handicapped spot. The garage, after all, is well lighted. Under this plan, the trains will go past the stop nearest to me, adding more commuting time and cost; and then I will have to drive back in the direction from which I just came. The Greenbelt station is also well managed; but the parking lot does present difficulty for someone with mobility issues or, in summer and winter, with heart and lung problems. There are not enough handicapped spots; and when it is dark, the long walk to the outer edges of the lot can be a bit difficult. I often use the Archives station and would regret to see it closed. I found it helpful when there were elevator issues at LEnfant Plaza to get off at Archives and take some other form of transportation. If one is trying to get somewhere at a specific time, the shuttle bus option for elevator problems is not really adequate, as much as this accommodation is appreciated. I would use the Archives station to go to the Archives, the National Gallery, and the closer Smithsonian Museums. This proposal seems to assume that tourism will not return for a long time. |
| Not sure why you think East Falls Church is a low use station, but any reduction in service locations and service frequency would create a death spiral for Metro train service. |

Proposal to close 22 Metrorail stations

These stops are vital for university students (VA Square), capital region workers, and tourists. By closing these stops WMATA is also discriminating against those who cannot drive due to disabilities, who cannot afford a car, those who have long commute times if they were to drive, and those who take the metro to lessen their carbon footprint. By closing these stops, WMATA is heavily contributing to climate change, ignoring the disabled, and worsening the already horrible capital beltway. Ask Congress, VA, MD, and DC for more money, and stop mismanaging WMATA. Compared to other cities' public transportation, WMATA has become a joke. Especially if WMATA closes these vital stations. If WMATA needs better managing and operating, which it does, recruit Transportation graduate students from GMU's Schar School of Policy and Government. They will make WMATA respectable again.

Some people literally decide where to live because its close to a metro station, such as near Grosvenor--its all apartments and condos in that area and its a trek to Medical Center/White Flint without a car and theres no parking at these stations. This would negatively affect many communities.

Cheverly needs to stay open. The large parking lot is critical for me to park at safely when I need to take the train late and then drive home from there. Archives needs to stay open as it's an alternative to Gallery Place when there is overcrowding because of events at Verizon Center.

Smithsonian, Virginia Square, and Judiciary square are important to my getting to work, attending court, and taking my visitors on tours. The impact to my routines and needs would be incalculable.

This is the last terrible proposal so far, but will result in more overcrowding of adjacent stations and have negative knock-on effects on bus transit.

Closure of Clarendon, Virginia square, Reston town center, East Falls Church would add to the traffic congestion on I-66 and route 50. This is unacceptable.

I think it's ludicrous to be planning station closures when we don't know what the ridership will be at the time. Before Covid, would you have shut down Archives? Tourism relies heavily on Arlington Cemetery. What is saved by closing the station? Maybe consider scaling back on station managers or have one station manager that roves back and forth. I'm not at all impressed with station managers. Most I've talked to had a major attitude and zero customer service skills or desire to look at their jobs as customer is who I serve.

Again, I take the Eisenhower Metro and bus service is never reliable to get to another station in a decent amount of time. I, along with other fellow riders, bought condos near Eisenhower for the convenience of the metro. You will end up with over-packed stations and a lot of impatient, frustrated and angry passengers. What happens when all of this collides with the tourist season? Those stations will still be needed and it is not fair for WMATA to punish those of us who live in the suburbs and rely on metro.

This will exceedingly impact my travel plan to work/personal errands etc

Absolutely not. Expanded service is needed not less. Please do not close these stations. People need to get to and from these places.

Don't like it, really limits flexibly & will encourage more ride share cars on the roads.

I live in Grosvenor Park II, and the metro station at Grosvenor-Strathmore was one of the reasons I bought my apartment.

I certainly understand curtailing service but for the life of me I dont understand closing stations. Despite the pandemic, people are going to work and need public transportation. Plus, in light of a new prioritization of climate change (thank goodness) why would we be closing stations? Frankly, we need to stop building highways and keep our subway system open, even with curtailed service. It is absolutely crazy to talk about closing Metro stations.

This proposal will have a devastating impact on people who use these stations. I'm one of them. It will force those impacted to commute by cars adding to traffic congestion and increasing pollution.

rather than close stations can Metro find ways to increase ridership? closing these stations will definitely impact a lot of people not only for work but recreational reasons; and impact housing attractiveness nearby; can Metro collaborate with area attractions/restaurants/retailers to give incentives/discounts to get more riders go there? Metrorail is about improving peoples lives, providing options for riders, contributing to a healthier environment...

East Falls Church is critical for commuters and Silver line riders.

Dense housing and development was expressly designed and built to follow Metro lines. Closing the stations that serve these residences seems a very poor idea. Also, bike lockers at these stations service the people who live just beyond walking distance to metro and would no longer bring riders to commuting location. This plan would put way more cars on the road, and leave carless people stranded. I use Clarendon, Virginia Square, Judiciary Sq, Mt. Vernon Sq, Archives and Smithsonian every week if not every day, and would be very inconvenienced by this. Eisenhower avenue and East Falls Church are also used with some frequency.

My stop is McLean and I travel there from the East Falls Church station which would leave my commute without metro rail access whatsoever.

Cleveland Park Metro Station is central to the neighborhood. D.C. Public Library, restaurant, and other employees who work in Cleveland Park depend on it to get to work; neighborhood residents who work elsewhere rely upon it to get to their jobs. It is especially important to keep late night hours at Cleveland Park to sustain local restaurants--both their employees and many of their diners need to take Metro to get home.

I need Mt. Vernon Sq. stop, or I'd just opt to bike to work(off the green line) as the Chinatown station is a lot farther away.

Proposal to close 22 Metrorail stations

Archives - the gateway station for most access to the National Mall. Essential for tourism and residents. Arlington Cemetery - essential for tourism, National holiday events Clarendon - used by young commuters with no personal transportation Cleveland Park - used by residents with no personal transportation. Federal Center SW - the only station close to the Capitol - essential for constituents and tourist to reach their elected officials Federal Triangle - used by commuters and tourists Smithsonian - the only station giving access to the west side of the Mall - necessary for residents and tourists

Wow...permanently close 3 stations on the silver line? After it took years to develop and construct? If WMATA has to close stations, why did you ever build them in the first place?? Rather than close these stations, you should sell them off to a private transit company in the hopes they'll be able to buy the rail system from WMATA and actually run it successfully.

Clarendon, East Falls Church, and Archives should all remain open because the walking distances and terrain (hills, traffic patterns) often restrict pedestrian access to adjacent stations.

I ride from and to East Falls Church each day.

East falls church station is critical and not close to other stations.

Judiciary square is necessary for those on jury duty or accessing the courts. Federal Center is my closest station so it would directly impact me and others living in my building and neighboring buildings. This station is also very busy during rush hour times given the people who live near it and those who work at NAS and other federal government offices located nearby. There are also hotels nearby and tourists use that station. The stations listed in the suburbs would, again, lead to more people driving into the city to work and a significant loss of revenue for metro, which seems contradictory to what we should be trying to do which is improve service to increase ridership.

I want to speak specifically to the College Park closure - that stop and transfer hub is essential to the student, employee, and residential community around the University of Maryland, particularly with continuing development of the Purple Line and Rte 1 economic development. PG Plaza and Greenbelt are not suitable alternatives, given the dearth of last mile options in the area and infrastructure development required to make it happen. The college park metro is walkable to campus and has a straightforward accessible route with only one major road crossing at Rte. 1. It is less than a half mile from a multi-use path that connects to Lakeland, Berwyn, and Lake Artemesia to the north, and Hyattsville and Riverdale to the south. PG Plaza is further away, requires navigating the crossing at 410 or Queens Chapel, and does not have safe bike or pedestrian facilities to the UMD campus, Riverdale, or the Hyattsville Arts District. Capital Bikeshare at PG Plaza cannot be used in College Park. Greenbelt is not walkable to any of those destinations I have listed above. Removing this stop would be a huge blow to campus commuters, and residents like myself who want to see the Route 1 corridor blossom into a diverse hub of economic and cultural development.

I depend upon the metro to get to Grosvenor-Strathmore and there is no convenient way get there from another station quickly.

I take Orange and/or Silver Lines every day from East Falls Church Station for work. East Falls Church metro station is the reason why we moved close to this station. If you close this station we will have to move elsewhere, which would be a way bigger problem for us. PLEASE DO NOT CLOSE THE EAST FALLS CHURCH METRO STATION. PLEASE AT LEAST ONE LINE -- ORANGE OR SILVER -- OPEN AT THIS STATION. Thank you.

We would very much like for Grosvenor-Strathmore station to NOT close. Prior to Covid, numerous residents, as well as, non-residents in the Grosvenor community would utilize the Metrorail, so much so that parking during rush hour was very difficult to find.

Mt. Vernon Sq. should remain open

Prior to the pandemic, I frequently made use of the metro stops at East Falls Church, Virginia Square, and Clarendon. I also frequently commuted to Judiciary Square and went to events at Strathmore. If you were to shut down the stations at both Clarendon and Virginia Square, it greatly reduces access to the Arlington campus of George Mason University and many businesses around Clarendon.

I think this would work for stations that are relatively close to other stations. E.g. Cleveland Park is roughly equidistant between Van Ness and Woolley Park. People who rely on stations that are not walkable from others would be at a loss.

I use some of these stops as my primary location to visit often. This proposal makes metro useless for DC metro.

This would not work for me at all. I am a federal employee commuting daily from North Bethesda to College Park. I cannot get to work from PG Plaza or Greenbelt stations, I need to use the College Park Metro station daily!

Clarendon needs to stay OPEN; other approaches MUST be implemented

The Eisenhower Ave metro station is an important metro station for those living near it. Closing the Eisenhower Ave metro station would cause severe damages to workers and residents in this area, such as the people who work in our grocery stores and hospitals, support city government services, public safety, healthcare, eldercare, childcare, who rely on the metro heavily. The closing would have devastating effects on the city.

Proposal to close 22 Metrorail stations

This works for me, but VA Square is a popular station for outings at night and closing VA Square might not be good for business on the line. Clarendon has a lot of apartments so maybe close at 8pm instead of permanently. Mclean is just getting started with a Wegmans and a Capital One center also has new apartments and I fear this might be an issue to customers who live at Mclean.

I do not regularly travel to/from these stations but think loudon gateway should be reconsidered for is proximity to dulles

This is a recipe for collapsing the system. You make it hard to use, you waste a bunch of fixed capital, you make it impossible to get places, and you guarantee no one will use it. People will literally move to other metropolitan areas. This is foolishness.

Please do not close EFC metro. I need this to get to work every day!

Van Dorn is my closest station and I plan to use it regularly in the future. Several of those stops are in the heart of DC, close to work and tourist attractions that I also regularly used before covid hit.

I think this is a far better option than shortening hours and train frequency

Grosvenor-Strathmore and Im sure all of the metro riders for the above metro stops feel the same about proposal #5. What is the game plan for reopening? This is THE ONLY way for most people to get to and from work. As return to work propositions are being made, what is the plan to reopen all of the metro stops above? I cant just tell my leadership that I cant make it to work because the metro isnt running from my house any more. More elaboration is needed here.

I work at the University of Maryland, and closing the College Park Station will affect my ability to get to campus. You would need to ensure other ways for University students and staff to be able to get to campus in a timely fashion. Also, the University is currently planning to have campus open as close to normal as possible next academic year.

If Grosvenor-Strathmore is closed, the Metro Board needs its collective head examined. The Grosvenor-Strathmore station serves a densely settled area, with more high-rise buildings scheduled for construction in the near future. The adjoining Metro parking lot was recently expanded, at great cost. The Grosvenor-Strathmore station also adjoins the Beltway, which makes it a great drop-off spot when traveling on the Beltway with passengers who need to go downtown, thereby easing traffic on Conn. Ave. and Wisc. Ave.. I would be willing to testify on this subject and could so very effectively.

Grosvenor-Strathmore is the station I use and it would be a huge inconvenience to me if it were not available. There is not sufficient parking at White Flint, Twinbrook or Bethesda to use them.

Closures may generate more options for ride-sharing services for commuters needing to travel to the next closest station.

I am 71 years old and female. I do not own a car. I live 2 blocks from the Cleveland Park Metro station. Please do not close this station since it is the way in which I am able to access the system. I can walk to Van Ness or Woodley Park during the daylight hours. However, it is not safe for me to walk to my home from those stations after dark.

Stations should be open if there is poor weather to protect riders from getting sick due to prolonged time outdoors.

Theres low ridership because people are working from home currently. It will not be that way in January 2022. Your GM should have changed the way things are done during the pandemic, not afterwards. If you close down 22 stations, some in the middle of the city or some to the biggest tourists spots, youre going to lose even more revenue. Seriously, you want to close the Smithsonian stop the year tourists return to DC?

For people who have difficulty walking, this isnt a good solution.

not only do i and my neighbors use the Grosvenor -Strathmore station, but my son has used it on his visits to me after flying to DC. i have neighbors who rely on it for work trips and there are new high-rise residential buildings in various states of development, located adjacent to the Grosvenor -Strathmore station BECAUSE of the availability of Metro. Closing the Grosvenor-Strathmore station would put all this work related traffic on the street. This level of density would never have been approved had it not been for Metro. Many people access the Strathmore Music Hall via Metro , and some may not be able to attend with Metro access.

Stations should not be closed at all

This is the second worst option. Again, why bother having a rail system at all if you cant get anywhere on it?

we need these stops

i typically use archives, mt. vernon sq and eisenhower ave. Several of these run in the VA suburbs and considering that were paying rush hour prices and an upcharge every time we cross the dc city line....it seems counterintuitive to shut these stations. Also...low ridership might be linked to the fact that there has been significant track work that has discouraged regular ridership. I know on my part for the last 5 years the yellow and blue lines have had SIGNIFICANT delays every day that forced me to make other arrangements to get to work. Instead of shutting these stations down, be more mindful of the impact of your actions and dont punish VA riders for events outside of their control.

I regularly use Grovenor-Strathmore and am surprise that it has a low ridership based upon the number of fellow passenger I see in the station. I seriously question the ridership statistic and wonder if they are distorted by Covid-19 pandemic which should no longer be a factor effecting ridership in 2022

Proposal to close 22 Metrorail stations

At least Cleveland Park is very important for me

Judiciary Square - Close to the Court House (Really??) Arlington Cemetery - Close to working and tourist attraction and getting to VA, Morgan Boulevard, serves PG County Southern area, Smithsonian (Is downtown Washington going to close also???) Archives is sometimes used for emergency on the yellow/green line. How will this effect riders using the Greenline going to Southern PG County area.

Clarendon and East Falls Church should definitely be open on weekdays (I know this from friends, and my HQ is in Clarendon). Reston Town Center should stay open because business travel has a lot of potential there, and it could sneak up very quickly. Loudoun Gateway is the only station that could have closures (or maybe a delayed opening?) without an adverse impact on development or traffic. There is not much around it yet.

It is an outrageously bad idea to close EFC. I moved to my present neighborhood so that I could walk to EFC station, and have used EFC for daily commutes for 30 years. Many people have made their housing decisions based on proximity to Metro. EFC is a long distance from both adjacent stations, not near, and traveling to one of those stations to get on Metro would not be an option because of time and expense. Rather, these riders would be lost to cars. Closing any stations is a bad idea. There are likely ways to reduce operating expenses at the stations, but closing stations would kill Metro.

As for many others in this area, East Falls Church station is how I get into work. My commute time will double with a closure.

This closes off access to the University of Maryland and Federal government facilities and tourist attractions such as the Smithsonian museums and the National Archives. This would hurt tourism to the area, which is an economic driver, just as visitors would start to return to the region.

Federal Center SW, Cleveland Park & Clarendon are three that I will use regularly once things open up. We need to decrease the amount of cars and traffic coming into and choking streets throughout the city, not increase auto use!! The metrorail system is THE efficient way for people without cars, (including suburban people who leave cars at home) to get around. The post pandemic world needs to be a collective world, not every man/woman for himself/herself.

I walk to the Metro station, and the next closest station will be a good walking distance away.

Is this a joke? Am I being punkd?

My husband commutes from Clarendon to East Falls Church. I commute from Clarendon to Brookland. We recently bought a home near the Clarendon station because we do not own a car and rely on metro rail for all our commuting needs. Closing Clarendon and East Falls Church would result in us NEVER using metrorail and likely turning to a car to get us places, which will result in greater traffic in an already congested city. I wonder how many other families would be in the same position as us? I think closing these stations will have serious economic and environmental impacts that we will be dealing with for years to come.

We are the people who are waiting for the business reopening after one year lock down. The metro stations were not closed during the entire pandemic time, but is planned to be closed while reopening business. This will be a world class joke!

The solution to making metro more used is to make it more convenient, not less. Adding 10-15 walks in addition to longer train wait times is completely the wrong approach.

I am a resident of Reston, and am looking forward to using the Reston Town Center station for ease of access to other parts of NoVa. Please reconsider the closure of RTC station.

The two stations on this list that Should remain open are Arlington Cemetery and Smithsonian. Why? Tourists !These two stations are the best way for tourist to visit museums and the famed burial site for American heroes.

This is probably fine, so long as shuttle buses are provided, as is usually the case when stations are closed.

Need Grosvenor-Strathmore open!

This would mean no access for me to DC govt. services, museums, etc.

I use some of these stations regularly. This would make my commute very long.

The closing for the metro stations downtown would significantly impact my use of the metro. I often take the metro to and from meetings at Federal Center SW, Federal Triangle, and Judiciary Square. If these stations were closed, I would not use the metro and instead take a cab/car. Also closing Mt Vernon square is extremely short sighted as the convention center traffic will be confused and use other methods of travel cutting that revenue stream. 2022 will be a much more normal year when the pandemic is under control.

I use the orange line to get to work near the Virginia Square Station.

This plan would close both of the stations I use to commute to work. Many of the stations listed are not near other stations, include multiple stations in sequence, and do not normally have low ridership. Closing stations seems likely to be counterproductive and will further depress ridership.

Please do not close Grosvenor-Strathmore! Not only does it serve the surrounding neighborhoods, but it also services malls and senior living centers that were built specifically for their access to Metro. Closing it would also cut off Metro access to the Strathmore Performance Center, a cultural centerpiece of the Bethesda area.

Proposal to close 22 Metrorail stations

Closing metro stations at Archives, Clarendon, Virginia Square and East Falls Church would cause me EXTREME DIFFICULTY in my daily transportation needs. Particularly since I DONT OWN A CAR. This change would be near DISASTER for me !!!!1!

This is ridiculous. Closing stations GUARANTEES low ridership. Circular proposal.

How can Metro close stations located close to UMD. Are not there plans to bring students and employees back in the fall?

Regardless of ridership, metro stations are important to the public. In particular, certain stations are in business district locations - examples: Clarendon, Virginia Square. As the pandemic subsides, business will increase, and demand for metro ridership should increase, substantiating the need for these stations. without them, traffic will increase, putting a burden on the surrounding neighborhoods

We have relied on the Grosvenor Metro Station for 35 years, as we live within walking distance. Its service has met our needs as well as those of friends from other neighborhoods, who prefer it to White Flint. Also, wasnt the Strathmore Music Center built where it is because its accessible by Metro?

Limiting the service areas within the dmv defeats the purpose of having the metro. All the stations s should remain open

These stations will be in demand once people get vaccinated and the offices reopen. My husband is a regular commuter of Metro from Grosvenor-Strathmore.

This is very sad. We hope things will open by jan 22, so, especially VA Square and Pentagon. We pay a lot of money to rent near these metro stops. Please reconsider keeping VA square open!

These are some of the stations I use most frequently. I would be unable to visit Arlington Cemetary. College students rely on the college park station.

I see no problem here, since I do not travel to Morgan Blvd. As for Greensboro, that would mean I would have to walk to and from Spring Hill, which is inconvenient, especially at night.

East Falls Church is a major user when things are deemed safe. Of course, it hasnt been open for over a year because of Expensive and important upgrades. As a commuting entity, it is Not close to other stops, as pedestrians and drop-offs can attest. Closing it now makes no sense to me. The improved site should at least be tested for a year to give ridership a real chance to rethink their schedules with the station in mind. How can you justify all those repairs, which would be a shocking waste of money if you close it?

I rarely go to any of those stations, so this proposal would be okay with me.

I use Cleveland Park Station every day to commute to work.

Consistent reliable service is not compatible with closing stations. Stations must be open to build ridership; building ridership should be the short-term goal to reach the long term goal of more riders at each and every station. We invested in those stations, they should be used! If runtime is the issue, a better alternative is to ADD express trains.

My home station (the one I use most frequently) is East Falls Church, so I dont want to see it closed, especially since it has been closed a lot in recent times for renovations. Archives, Federal Center SW, Smithsonian are additional stops that should not be closed, given my expected travel needs. I use a cane, and I just cant work around these changes. With all due respect, this is nuts.

The Clarendon station is one I use frequently for my dentist, bank and stores/restaurants. So I am totally opposed to closing that one.

Which station is Gros-Strath near? Medical Center is only for those employees, Rockville has no parking. Residences are being built at G-S, where would they go? Strathmore events would suffer. It makes no sense at all to close G-S!

This wont work for me!!! I am at Grosvenor-Strathmore and rely on Metro to get me to and from work when I am able to return to the office. Driving up to White Flint...that creates a parking problem since there will be even more riders going to that station if the G-S stop closes.

This list is too broad. I can imagine closing Arlington earlier because of the cemetery hours, but others, such as Smithsonian, Federal Triangle, Clarendon, Cleveland park, etc are near vibrant neighborhoods that are active all day long and rely on Metro. Furthermore, most of the "stations that would stay open would become dangerously crowded. I have often ridden to a nearby station to avoid the crush at a station where narrow platforms and too few benches made waiting uncomfortable.

Please do NOT close these stations. I understand the situation that metro is in, but closing these stations will have ripple effects on the region for years. Some people have purchased homes near metro stations specifically because they do not want to rely on or have a car. If you close these stations, people will change their patterns, likely permanently. This is bad for our environment, bad for peoples mental and physical well-being, and will take years or decades to reverse. The DMV is working to become a more environmentally, less car dependent place to live. Please do not set the entire region back by closing stations that people rely on for work and leisure transportation. In addition, many of these stations are in places where lower wage workers cannot afford to live. These people use metro to come to work in these areas. Closing metro stations increases pollution, traffic, and inequalities. I live near East Falls Church and rode my bicycle to the station before the pandemic. I am looking forward to using the new bike parking structure. Projects like this improve the quality of life in the DMV. Closing the stations will reverse years of progress. Although these stations may seem close to other stations, in practice, there are not easy or fast ways to get between the stations. People will just stop using metro if stations are too inconvenient and far apart.

Proposal to close 22 Metrorail stations

| |
|---|
| The system will collapse under the excessive dearth of unavailable options. And how will at least some of those commuters park when stations with garages already have parking issues? |
| The closing of Clarendon and East Falls Church would cause major difficulty for my metro travel needs. |
| Leave open Clarendon. |
| This makes riding the metro so confusing and frustrating for commuters. Please leave these stations open... |
| Clarendon is important in my travel plans |
| I frequently use many of these stations to get to and from work (meeting or leaving my tour groups), to get my groups to various sites of interest (saving a motor coach from having to transport us), and just getting to places I need to access on days off (e.g., banks, grocery stores, other local errands). |
| Removing the Federal Center SW Federal Triangle Smithsonian and Judiciary Sq stops limits access to the mall and during peak tourism times will swamp capacity at gallery place, metro center and lenfant making it impossible for actual residents to board a train in a timely manner. |
| Closing stations will certainly impose hardship on many commuters who may decide to drive all the way to their destination if they have to drive to a more distant metro station. It will reduce ridership without substantially reducing cost since the trains will still have to travel through the closed stations |
| Again no. You can't base these decisions on the past year. |
| I need to be able to know that I can rely on all rail stations being open to access the region. |
| Cleveland Park is my closest station. If bus service is cut a proposed, closing such stations would pose a major inconvenience. |
| The whole point of having a station (even ones close to other stations) is that ridership will see the station as a viable alternative to driving and see it as a convenience. It is hard during the pandemic to envision this, but the economic impact of having the station when ridership is high is huge. Shutting them down due to proximity is short-sighted. |
| Not all of these stations are that near other stations. Im healthy, but not everyone could easily walk from Woodley Park to Cleveland Park, for example. Same with Grosvenor--not very near the next station. Also, we hope to have tourists back, and Smithsonian is an important stop. |
| You have many seniors and folks that have given up their vehicles because living close to Grosvenor-Stratmore metro provides their transportation around the beltway. |
| I use Grosvenor- Strathmore almost daily |
| I rely on the train for transportation including to/from work which is near the Federal Center SW the station that I use since I do not own a car. When moving to DC a few years ago, one of my priorities was finding a walkable area where I could walk to train station that had a train that would take me directly (no transfer) to the train station near work with a commute time under 1 hour. I moved from a city that had a better, 24 hour public transportation system where I went car-less and loved not having a car. If these changes including closing train stations are implemented, I will be forced to buy a car thus contributing to the gridlock traffic in DC area as well as increase in cost and commute time to me. I would also most likely move further out from DC area as there would be no value in staying in Arlington area where the train stations would be closed. |
| If Federal Triangle AND Federal Center SW AND the Smithsonian stations are closed, how will tourists and residents access the west and southwest areas of the Mall via METRO? |
| We use Clarendon and Cleveland Park stops at times and rarely Grosvenor as well |
| Less stations mean larger crowds together. I think it would depend on social distancing protocols. If things are better by 2022, but ridership is still very low, then maybe consider temporarily closing some of these. |
| I can only speak for the College Park station, but that station is extremely important for the University of Maryland student body. For many students, its the only, or at least the most convenient by far, way to get to and from D.C. for internships and other activities. I think closing that station would have a huge impact on the university if there is no suitable alternative. |
| You cant close Mt. Vernon Square if you are terminating the Yellow line there, though. |
| I believe all current stations should remain open, as ridership will go up as people begin to return to working in the office. |
| I now walk from home to metro station at VA SQ & Clarendon. This proposal will require my walking about a mile to reach either Ballston or Courthouse. |
| I live near the Rosslyn station and often take the Metro to the Clarendon station, which often saves me around 15 minutes of transportation time. I also use some of these other stops, albeit less frequently. Cutting down on the availability of stops would greatly reduce the utility of Metro for me. |
| Use Grosvenor-Strathmore station to attend school |
| This option is not ideal, but I would rather have trains running later than 9PM and more frequently than every 30 minutes. |

Proposal to close 22 Metrorail stations

This is a terrible proposal. I live at one of the suggested stations in Maryland and do not drive or own a car. I moved to this location just to be close to a Metro station. The buses do not come all days. Without train service, I would be cut off from everything. Please, please, please think of people who do not have an alternative option (yes, even those who live or work near "suburban stations"), put yourself in their shoes, and consider what it would be like to suddenly lose access to your only method of regular transportation.

might as well close the whole system

These are not among the stations where we most often board, but they are among our destination stops. Again, I suspect that overall Metrorail ridership will decline, deepening the system's budget challenges, requiring more road and parking space, and increasing the contribution of our regional transportation to global climate change.

I live near Cleveland Park station. The uphill climb to Cleveland Park from Woodley Park would be a serious inconvenience. And Van Ness station is still a pretty far walk. I also think the businesses at Cleveland Park would suffer, leading to closures -- making food shopping and local dining difficult.

The value of a public transportation system in an urban environment cant be measured simply by numbers using any given station. It should be measured, rather, in its entirety of service, if it is to be at all useful as an alternative to cars, thus more environmentally friendly.

This will directly impact me and my neighborhood. I live in Grosvenor and we do not have any other station within walking distance. This will not only impact commuting times since we will need to take a bus and then the metro to commute downtown but also the community that has grown around the station (and of course house values and the new development that is undergoing for which they cut a good chunk of the forest... we will be left with no forest and empty townhouses). It will also impact the Strathmore theatre as well. Moreover, an empty station in the suburbs has a good chance of becoming an unsafe area, affecting again all the families that live in the more than 10 building complexes around the station. I also want to point out that this area is pretty isolated from commercial areas and the metro plays a fundamental role in connecting us (for example, besides the proximity, there is no direct bus to get to Bethesda downtown).

Clarendon and East Falls Church metro stations are the one I use and it would be hard for me to get home if those will be closed.

Would definitely increase commute time but it might be feasible.

We moved to our current residence because of our proximity to Grosvenor-Strathmore station. As a seniors it provides a vital link for me to the rest of the Metro area. I am an active volunteer with several cultural, educational and service organizations--that would be impossible without the Metro. Please dont take our Metro station away!

Yes, this is a great idea and would save costs until membership improves.

Arlington Cemetery IS NOT NEAR another station. Its already far enough hike now for older/disabled/kids to walk from that station to the cemetery. This is not a good idea for city thats a tourist destination once the COVID lockdowns end.

East Falls Church is the closest station for many families - and in walking distance - in the Westover/Seven Corners area. If by 2022 events and nightlife return to DC, this will significantly hurt our community. Has WMATA considered every other stop if some are walking distance?

We use the Cleveland park station to access the library. we use the Smithsonian station to get to the mall. College park is not near another station by foot.

My office was directly connected to the Clarendon metro station; it would have been really inconvenient to add a 15 minute walk from Court House to my already 45 minute commute.

It would be terrible to close Smithsonian - the station is an easy spot for tourists to recognize and ussr as a starting/end point for their metro adventures. It seems like a bad idea to close the VA Square and College Park stops because they are near higher ed campuses and students depend on easy transit.to get to/from campus, especially to get to evening classes after work. Cleveland Park and Clarendon have commercial corridors and residences that are super cool convenient b/c of Metro - without trains it will be more difficult to get there. The downtown stations suggested for closure make sense; its an easy, accessible walk to the nearest next station.

I dont think this is the optimal option as it would affect many residents near these stations.

Are you nuts!??? Might as well just shut down the whole Metro! If all of those stations were closed, or even most of them, I would never ride Metro again. Most of those are places I have taken Metro to many, many times.

The following stations should remain open: East Falls Church (where I reside), Cleveland park (where I go to the movies, my doctors office, the DC Library), Smithsonian,(to visit museums on the mall) and Judiciary Square (which is where the DC Courts and Municipal Center are located). The other stations are not relevant to me.

I would encourage metro not to close consecutive (adjacent) stations. Especially for disabled riders, this would present a hardship.

How can you close Smithsonian for tourists? Closing G-S will defeat Baltimore Symphony and other cultural events. Cleveland Park merchants depend on Metro foot traffic. Virginia Square is Arlington Library. Judiciary Sq is access to DC government offices. Federal Triangle is alternative to Smithsonian for museums.

by jan 2022, i hope to be employed again, and would likely need to use one or more of these stations. this is too many stations to close - nearly 25%!!! This will disproportionately affect low income people of color and essential workers.

Proposal to close 22 Metrorail stations

I use the Grosvenor-Strathmore Station and am 74 years old and live within a short walk of the station. Even for a younger person walking to the near by stations is not a real option as they are not near by. I am sure that there are many other people in this same situation with this and a number of other stations as well. When the station was closed early in the pandemic it infuriated me to see trains rumble through the closed station without stopping. With vaccinations happening and hopes that things will start going back to normal, closing stations will be a big hinderance to that. Closing stations is a very bad idea and will permanently cost Metrorail a lot of riders.

Given this particular list, this is unacceptable. Once COVID allows for return to normal, a complete study should be down.

This would seriously impact my use of Metro. And why would you close two adjacent stations? For example, both Clarendon and VA Square? And youd also be loosing not only residents but tourists if you close Smithsonian, Arlington Cemetery, etc. What do you expect the public to do? Talk about a black mark on Metro....

It is totally unacceptable to even consider closing the Grosvenor- Strathmore station. These is high population density there, along with the Strathmore Arts Center.

Several stations I use most are on that list! Would also be a disaster for tourists.

This is a TERRIBLE idea! Many of these stations are essential! There is relatively little parking or expensive parking at stations such as Judiciary Square and Federal Triangle. College students will be returning and they will need the College Park station. And the Grosvenor-Strathmore station is needed for the residents of the area as well as the Strathmore venue. And closing the Smithsonian station? The stations are really not that close to the Smithsonian and it would discourage people from going downtown. I am also concerned about those individuals with disabilities being forced to travel further than they do now to enjoy the same benefits that are available now.

Closing these stations would make metro useless! These stations are essential to traveling throughout the DC area nearly impossible, both for getting around downtown and commuting in and out of the city. This plan would also definitely hurt tourism because so many of the proposed stations are around highly visited areas (such as Smithsonian, Arlington Cemetery, etc).

Closing metro stations next to the museums would make it very hard to get to them.

HELL No. I live in Cleveland Park. Our neighborhood is a thriving area and close to the Zoo. Do you really think ALL the traffic to the Zoo will easily go through the Woodley Park Station? What about the Cleveland Park population that depends on the CP Metro stop to get to work, downtown, and other areas of DC to spend our money? I pay a LOT of money in rent to be not only in CP but near CP Metro. Is my rent going to drop when mass transit goes away and I have no access? I dont think so. I cannot tell you how angry I am about this proposal.

The tourists wont like this, but as a regular commuter I am unaffected.

Why even bother to keep the metro in operation with this many stations closed, my station is Clarendon so if its closed I will never use the metro.

Apparently, the planners dont know what they are talking about. Closing Clarendon AND Virginia Square stations. Recommend the planners get to an appointment in these areas without these stations. Parking is inadequate. And, good luck taking a bus

I live within walking distance of Grovesnor-Strathmore station, but a longer distance from other stations. For a senior citizen such as myself, the walk to other stations is a bit too far - especially at night. If you close Grovesnor-Strathmore, I would likely stop using Metro altogether. I also want to point out that the Grovesnor-Strathmore station is very close to Strathmore Music Center and The Mansion. Some people rely on Metro to attend events at those two venues. Once again, I view this proposal as being self-defeating and counter-productive.

Time changes are a much more reasonable and appropriate proposal than closing stations. People can adjust their schedules to the train schedule. If some peoples train stations close, they may not have a way to get to another station or it may add a significant cost burden to them. Many people choose where they live according to their train station, so I encourage you in the strongest manner to change train schedules and not close stations.

Try to keep all stations open but limit the trains stopping at those locations as frequently. Again think of those riders who rely on your trains for transportation in those locations right now, if you close they have no other means of travel. Closing cant be the only option to cut costs. Im sure there are bright personnel in your offices that can think of cost cutting measures to get riders where we need to go and still keep the metro operational. Riders depend on you, dont let us down.

Ridiculous! Of course ridership was down during the pandemic. These stations are still needed by those of us who depend on Metro.

I do not regularly access any of these stations, but it would limit my flexibility and ability to explore new areas.

This is ridiculous taking into consideration all the money invested in these stations to operate and adjacent territories. Grosvenor Strathmore parking was recently extended to be a bigger parking lot. White flint can not accommodate everyone parking wise, there is no additional parking to be found anywhere close by, and the distance from white flint to Grosvenor is not walkable. Closing stations is not an option to be considered, people will give up on it and move to Uber or Driving to work especially after this pandemic ends office parkings will be more accessible.

I live near Cleveland Park. What am I to do son any evening walk??? I am over 70! Would you send your elderly parent out at night to walk home ??????

Proposal to close 22 Metrorail stations

I can walk to Grosvenor/Strathmore Station and use it often to go into Bethesda and into DC. Many people in this area work in Bethesda and can take the metro to work. Also Strathmore Hall is with in easy walking distance of the station. It is used by many of their patrons and by students who attend classes there.

I currently live in between the Eisenhower Ave and Van Dorn St Metro stations. Either close Eisenhower Ave or close Van Dorn St or ask DASH to run buses more frequently to mitigate this issue. I would not like for both to close.

This is unconscionable. Instead of adding public transportation options you are reducing them?

I take Metro from Grosvenor to Medical Center. I work at Walter Reed, and they require 2/3 of employees to use public transportation, they do not issue enough parking places for cars, per a DMV initiative to reduce personal cars and encourage public transportation. its better for the environment!

Grovesnor station needs to still open for the commuters who lives there and need to travel.

Obviously not ideal, but i would use Lyft, Uber, taxis, buses/shuttles, walking and maybe even bicycle share program as workarounds as necessary. Unfortunately many people cannot afford anything except buses, and maybe barely that, and bus schedules are often not very accommodating. and if metro is contemplating cutting bus schedules and entire routes that would complicate things.

Attending DC sites on the Mall and nearby area would be greatly limited

If rider numbers return to normal by Jan 2022, then this would lead to massive overcrowding at the other stations near me during weekday rush hours.

You MUST keep Grosvenor-Strathmore open for me to use the system and keep my neighborhood viable. Keeping stations open is critical. Frequency is far less important. If stations are closed, then travelers must necessarily switch to cars or busses which may leave out many people and slow down overall travel times.

Like thousands of others, I live within walking distance of Grosvenor-Strathmore metro station and commute to downtown DC during the week. Other stations are not within walking distance. It is not credible that closing the station in January 2022 would save any money. More likely it would cost money as commuters abandon metro entirely. It would also have an adverse effect on local businesses whose workers rely on metro to get to work.

East Falls Church serves as Metro Center for Orange/Silverline exchange and Metro access to Tysons Corner businesses and very large shopping Mall, Metro just spent \$\$\$\$ upgrading this station; Clarendon is a hub for business and entertainment in North Arlington; Smithsonian is the MAJOR station for residents and visitors-you cant be serious closing this Station; Virginia Square serves George Mason University; Federal Triangle is central to downtown WDC, White House, National Theater; Archives is a major center to Archives, Smithsonian Museums, John Hopkins U.,and downtown WDC; Virginia Orange lines feed into Washington Nationals stadium, , Verizon Center--major sports venues for the entire area. Closing Northern Virginia stations will directly affect housing prices as Arlington County has always focused building around its Metro stations. I live in East Falls Church and would not be able touse Metro for work or any evening, weekend events.

Closing stations that have just been upgraded seems like a waste; closing stations would affect real estate prices in the neighborhoods where they are located; ridership should rebound after pandemic; closing stations will increase private car use and thus increase pollution in metro area; closing stations will further affect businesses and bring a decline in tourist visitors to the area.

Handicap people especially not served if have to use station at even more distance from destination.

With the closing of stations, the value of property surrounding the area will decrease and people will not move into those areas leading to people leaving the areas. Closures will also cause people to have longer commutes to work.

Closing stations would ensure that people stop taking metro which would further impact metro's revenue.

If they are near other stations... Where would I walk to, especially e.g., instead of Strathmore or Reston? I frequently use the Metro at night, and I dont relish walking to or from stations that are aa distance from my closest stop. Especially in January!

It depends on how near is defined. If more than a short walk, then it isnt near enough. Riders shouldnt be forced to add an addition bus ride because the transfer times really add up.

The issue here is not the proposed closure of stations. WMATA needs to analyze actual usage of stations - not politically-motivated usage. Pre-COVID, the western side of the Silver and Orange lines were areas of significant growth for ridership and parking; yet these stations are marked for closure. According to 2016 data, excluding the newly-opened Silver Line expansion stations, the system has 86 stations. Only 5 of the 19 designated for closure rank in the bottom quartile of ridership. WMATA should consider conducting a legitimate analysis to determine what financial measures are needed for reform. It is fiscally irresponsible to close profitable stations while ignoring those with low ridership.

Half these Metro stations identified are NOT near other stations, as you purport

I live 15 seconds from one of these metro stops, this would increase my commute by 10-15 minutes and would make me less likely to take metro.Also, closing both Clarendon and VA square means youre essentially closing two adjacent stops. This would make those in between those spots increase their commute time by 20-30 minutes if by foot.

Proposal to close 22 Metrorail stations

I go to many of these stations often. For example, I would not be available to people unable to drive. Many people living in Reston would start clogging up busy roads if the station closed. They would not drive to other stations to take metro.

My husband and I live close to the Grosvenor-Strathmore Metro station. My husband uses the Grosvenor-Strathmore station to commute to his job in Washington, DC five days a week. He walks to the Grosvenor-Strathmore Metro station and thus does not require a parking space for his car, so Metro doesn't have to provide additional parking areas there. I use the Grosvenor-Strathmore Metrorail when I need to go to Washington, DC. If my husband and I were forced to drive to Washington, DC, as you know parking in DC is very difficult. Also, if all the people who currently use the Grosvenor-Strathmore Metrorail station drove into DC, it would cause congestion on the roads as well as pollution (especially on weekdays when people are commuting to work.) It is not a good idea to close the Grosvenor-Strathmore Metrorail station.

My station is Grosvenor-Strathmore. This would be problematic since both adjacent stations do not have parking.

Based on the wording of this proposal, would ALL of these stations be closed or only a selection of these? If the answer is that ALL would be closed, my answer would be a firm NO. For example, Clarendon and Virginia Square stations in Arlington are in the midst of educational and commercial districts that serve a growing population that prefers not to use cars. I would recommend that some of these stations that have low post-rush hour activity be closed early and the rest remain open until system closure.

I would not close Clarendon station while also closing Virginia Square. This is a high traffic area - Clarendon in particular - with a number of businesses immediately in that area that people need to be able to access. Ballston to Clarendon is a long walk, unless Metro adds more reliable bus service along Clarendon/Wilson to serve customers needs.

I fail to understand how Grosvenor-Strathmore can be said to have low ridership. Pre-pandemic there were about 2,750 parking spaces at the station -- all of which typically were taken on a weekday by 9:00am by persons taking the Metro from this station. Then there were the many, many riders who arrived at the station via a WMATA or MoCo RideOn Bus. Still other riders walked to the station from the numerous high-rises in the area. And still more were dropped off at the Kiss and Ride. HOW CAN YOU IGNORE THESE DOCUMENTED FACTS??? It appears that your data scientists have concluded that areas further north, because they have a higher population density due to the prevalence of condos and apartments, have more Metro riders and thus the stations further north, such as White Flint and Twinbrook, are the stations that should be kept open. BUT WHERE IS YOUR DATA? How do you know that persons living in these facilities actually took Metro, and to an extent that surpassed the at least 3,000 persons (by car, bus, foot, or drop off) who took the train at Grosvenor? The White Flint and Twinbrook residents may work at home, may work up to 270, may work at Tysons, etc. -- all of which would mean that they would NOT be taking Metro. And where are the 2700 persons who parked at Grosvenor going to park? Can White Flint and Twinbrook take care of these parking needs? Many of the people driving these cars live to the west of Grosvenor, and have no access to public transportation. And will there even be public transportation to get to White Flint and Twinbrook? Will the buses be rerouted? Then there are questions of additional costs -- time, gas, mileage, etc. And of course, safety. Twinbrook has had incidences and White Flint is a ways from its garage, a safety incident waiting to occur. And I gather that the Strathmore Musical Hall is of no importance to WMATA.

There is no parking at White Flint or Medical Center. Thus, I would not be able to use Metro for transportation.

In normal times, Grosvenor-Strathmore is used by many

East Falls Church is a splitter station for two lines. Keep it open.

I use orange and silver lines frequently, and experienced the closure of stations last spring at start of pandemic. The Clarendon and VA Square stations are consecutive on orange/silver line. The Courthouse and Ballston stations, on either side of the two, are not close- would require shuttle buses.

With the Purple Line under construction and opening relatively soon, it makes absolutely no sense to close College Park Station. It also makes no sense to close central business district stations like Archives, Federal Center, Federal Triangle, Judiciary Square, Mt Vernon Square, Smithsonian because they serve major destinations for workers, visitors, families, and students.

I can't speak to every station, but as a Cleveland Park resident, pre-pandemic, I relied on the Cleveland to commute to and from work. The neighborhood's median age is higher than other parts of the city, meaning that there are likely older residents for whom walking to Van Ness (or Woodley Park, which is a hike for anyone) would be a real hardship.

I am in need of this service as my workplace is in DC downtown. Without this, this neighborhood would suffer economically too.

As I have said before, outright closing entire stations is a lunatic thing to even consider. People have planned their lives around these stations, you can't just yank them away after the fact. Not to mention the hell congestion this would create. Not letting people get off at the Smithsonian stop, are you kidding me??? Just pack as many lost, noisy tourists on there for as long as you can, why don't you. All of these proposals are designed to create a public transportation experience so miserable, people will stop using your product altogether, a baffling business decision. This obsession we have in this country with letting much needed infrastructure rot to save money and then not understanding why nothing works and no one wants to pay to use it is really something else. We need competent people in government, which means every single person involved in creating these proposals should frankly resign.

Proposal to close 22 Metrorail stations

As i mentioned, this will take away access to entirely too many people and places. We're talking about the main ways people access downtown dc from the suburbs of MD and VA. We're also talking about access the opposite way " because many of us do need to go to MD and VA to even get groceries from our stores that have food items from our backgrounds. (There isn't a single indian grocery store in DC proper " I've had to travel out to arlington or college park in order to get basic spices, green chili's, foods). Again, this is going to disproportionately harm communities of color/low income communities because of gentrification over the last twenty years. This cuts out accessibility for so many " those living in MD /VA and in downtown DC/chinatown. I can't imagine this would benefit anyone " only harm them. Post-pandemic ridership will increase significantly as people feel comfortable traveling around DC. They'll also be compelled to explore places they hadn't previously explored, like cities right outside DC proper, such as silver spring, college park, falls church, reston " all of which need local community support in the same way local DC-based mom and pop shops/restaurants do. This exploration will extend well into 2023 as covid anxiety decreases " likely into the next decade, as many historians predict a new "roaring 20s" underway post-pandemic. Cutting these stations, again and most importantly loses jobs for our communities, again disproportionately harming Black and brown communities in the DMV. Please keep these stations up and running

Another dumb idea that would adversely impact the economies in those areas and would more negatively impact ridership and increase traffic congestion in those corridors.

Closing stations will discourage me from using the metro to go to those places. It will also discourage people who live near those places from using the metro. Ridership may well increase once the pandemic is over. The very fact that metro is not crowded now means it's actually quite safe, especially for people wearing masks and especially for people who have already had the vaccine. Ridership will likely increase once COVID is not a consideration, but that won't happen If we limit the stations and reduce it's convenient for people

I live by the Judiciary Square station, it is a convenient station in a safe area near downtown. This would be a major inconvenience.

I live at Grosvenor and specifically because of the access to a Metro Station

Cleveland Park is the most convenient station for zoo goers despite the name of the Woodley Park station. Living over a mile from both Tenleytown and Cleveland Park stations, it is limiting to options depending what other errands need to be accomplished on the same trips.

This is just a terrible proposal. What impacts would this have on people with disabilities? It also doesn't feel like WMATA has thought through the optics of closing stations for a regional recovery.

I think closing stations is a bad, short-sighted solution. DC, and other major American metropolises, need more metro access not less. I am ok with proposals that create local and express lines (some stations skipped according to demand) in a similar way to NYC. But closing stations completely will result in more DC residents driving to work in an already traffic burdened city. I HATE this proposal.

This does not work for me because1) I will be using College Park station as my home station once the region reopens, and2) forcing everyone who did use College Park to converge on Greenbelt would be likely to generate parking lot overcrowding issues.

Please keep Clarendon Station open. I have been riding to and from this station from last 9-10 years. I am pretty sure the ridership to this station will increase considerably after Covid is under control. Please do not close this station. This will help keep my job.

Shutting some of these makes metrorail irrelevant " the beauty of the system is the many stations it has. Being able to boast convenient reach all over our region is critically important

These stations would close entirely forever? Seems drastic.

I do not own a car to protect the environment and fight climate change. Grosvenor-Strathmore is the station where I get on and off the metro. To get more people to use public transportation, which will be required to fight climate change, this proposal is not an option.

Clarendon is serviced by many bus routes.

I live near one of these stations (EFC) and, pre-COVID, used it twice daily. My alternative stations (Ballston and WFC) are NOT close " and once I'm in my car to drive to either station, I'm going to stay in my car to go downtown. Similarly, closing EFC means I will no longer use Metro to get to Dulles or Reagan National. Transportation planners have some way to predict user loss when you impose a inter-modal change " for me, it will mean you will lose me as a Metro customer completely and forever.

This is the worst proposal of them all so far, how is even this an option? Might as well close all of wmata and give ownership over to someone with a real idea to better our service please. I think whoever came up with this proposal should be fired on the spot (hope they somehow read this too).I live close to metro stations so that I have safe, reliable, but most importantly, prompt access to transportation across the DMV. If trains are reduced to ever 15 or even 30 mins, that severely impacts my ability to get to my job on-time. Ontop of that, it will create more over crowded trains during rush hour and deny some of us access to needed seats on the train due to our conditions. Reducing frequency of trains will only drive away customers all together, not actual solve any problems at all

Proposal to close 22 Metrorail stations

If Metro reduces or eliminates service at the Grosvenor Metro Station, I will no longer be able to walk to the Metro and will have to drive to my destination. I dont plan to drive to another station, park, and take the Metro anywhere. I stopped riding the Metro to my Doctors office every week during the pandemic because nobody was enforcing mask rules, making it dangerous. I drive there now.

RE: Grosvenor-Strathmore --absolutely not! We rely on metro to get us downtown for meetings, rehearsals, concerts, and other events. Also, this would definitely create a hardship for events at Strathmore Hall which is just across from the station. Many people take metro to concerts at Strathmore and would no longer be able to get there unless they drove. Financially, closing Strathmore station would hurt both Metro and the arts. Students also use the Strathmore station to get to Georgetown Prep and Holy Cross (especially Holy Cross) for school.

As Ive already stated, Grosvenor is not near any other stations and closing the Grosvenor Metro station would force thousands of people to drive. It is a terrible idea and would create extreme hardship. Even if some people could get to another station, the overcrowding of the limited trains available would endanger peoples health and make taking the train a risky and dangerous option.

I think it is important to keep the Smithsonian station open. Many visitors may have accessibility needs and getting off at a further station would hinder their ability to get to the museums.

We live closest to Grosvenor-Strathmore and I take a Metrobus from my street directly there every work day.

Closing Smithsonian, Federal triangle and Archives simultaneously would deny local people and tourists the opportunity to visit museums on National mall. The Grosvenor station is one of only few stations with significant parking capacity. That attract riders from Bethesda, Potomac and Kensington area.

I use these stations!

I seldom use these stations, but I object to closing stations that affect others. I am not a NIMBY person.

I dont like it, but yes, I can adapt.

I strongly disagree with this proposal. I live within walking distance of the Greensboro station - this proposal would make my commute not just less convenient, but impossible - it closes the station near my place of work, not to mention my church, etc. Overall, this proposal will cut out certain areas/communities from access to public transportation. If this were enacted, I would cease using the metro entirely until it was changed.

Why would you close stations like Reston Town center that is far closer to shopping and businesses than the Whiele-Reston station? That makes no sense to me. If the proposal includes language that will reopen these station once ridership is up, I would like that

I live right at Virginia Square, am a Senior, and prefer it not be closed. It is a high density area as per the Arlington County Plan. The station is surrounded by many large apartment and condominium buildings, plus the neighborhood of Ashton heights.

I am in my 70s and live near Virginia Square so I can use Metro. Closing that station would create significant difficulty accessing Metro.

I am active duty military assigned to the White House and signed a 3 year lease for an apartment by the Van Dorn metro stop because, due to my pay grade, I cant afford to live near my place of work and am not senior enough for a parking pass. The military reimburses my metro cost but wont reimburse parking so my only option is to walk to the metro. Metros and buses are poorly coordinated and each additional change over I would have to make if the Van Dorn station closed would cost me 10-15 minutes each way. Last week it took me 4 buses and 2 lines to get to work due to the station adding 120 minutes to my commute each day.

College Park station is a lifeline for the University of Maryland, College Park students to get into DC for various activities. Allows for DC internships/work for upperclassmen. It adds to the desirability of UMCP as a college as well for in/out-of-state students (DC is only a metro ride away!). Unsure, but Smithsonian pre-pandemic felt like a very high-traffic station for tourists. Pandemic is temporary--afterwards I do not think closing that would be good for DC travel.

The pandemic will be over by 2022, so this idea is awful. Keep every station open.

I use Clarendon, Cleveland park, fed center sw, fed triangle, my Vernon, smithsonian

I am appalled at this proposal. Many of the places I need or want to go are on these stops. My grocery store, my church, my library and many of my entertainment venues are on these stops. Virginia Square is my main destination. We certainly need Smithsonian in the heart of downtown. Federal employees will be coming back to the office and will need these stops.

Essentially curtailing activities in those locations that are desired to attend.

I will be traveling to and from some of these station

Proposal to close 22 Metrorail stations

Near is a relative term. I do not consider a mile to be near, and I suspect that older people and those who cant easily walk a mile would find it extremely disruptive to lose the option of taking Metro to their nearest grocery store or post office or whatever. I cant speak to all such metro stations, but know that the temporary closure of the Cleveland Park station has been very disruptive to a number of my friends and neighbors.

why end service on the Yellow at Mt Vernon Sq if you plan to close the station in 1/22

Excuse my French but this the most ass backwards idea I have seen in this survey!! This is horrible and makes this country look so backwards compared to other developed countries. This is the nations capital region for crying out loud!! We are suppose to be the most powerful country in the world and we cant afford to fund the transit system around the US Capital region?!? Get funds from Congress!! Sell land around Metro stations and build TOD. That will encourage people to ride as it will be close by. It isnt rocket science!!

I would have to drive or walk much further (after getting off metro) in order to get to meetings on time or visit with friends.

East Falls Church is my home station. I can walk to it. I would not be interested in driving to another Metro Station on the Orange line. I might as well stay in my car and keep driving to my destination.

Certain stations such as Eisenhower Avenue have a very low usage, so do not see closing this one as being a problem. However, there are some others such as Arlington Cemetery which would be needed at least during the day, because it is difficult to approach by bus, and visitor from out of town would be heavily dependent on the trains.

These are the very people that need public service. You are keeping only those stations that serve the rich.

McLean is such an important station with IT center in VA and it need to open. Once the COVID-19 shut down order is lifted, business will open as normal. McLean will be very busy

East Falls Church is the transfer point to the Silver Line. On the Orange Line, there would only be stops in Arlington at Rosslyn, Courthouse and Ballston. I can see closing Virginia Square but not Clarendon.

I often use the Strathmore station as well. Again, is the low ridership during COVID? I understand budget issues, but can METRO please develop a quick recovery plan to reopen stations as ridership increases. If you pare down Metro services, hours, and stations too much, it will push people away from even considering using Metro. But those who have no other option but to use Metro (generally the less economically stable population) and it will be penalized and it will only cost them more time/effort.

I walk to Grosvenor-Strathmore - - - and there is parking for rainy days. No parking at White Flint

I travel from Courthouse to local stations in Arlington to shop, run errands, and meet friends, and this change would prohibit me from doing so.

I need to use Grosvenor-Strathmore and College Park a lot when things are back to normal.

I agree with any plan that will keep open Grosvenor=Strathmore Metro Station.

No. Waste millions to save thousands,?? Are you out of your collective minds?

As long as the closures are TEMPORARY. Hopefully by January ridership will be nearer to pre pandemic levels making the changes unnecessary.Why would Silver Line Phase II stations be closed before there has been any data collected on ridership?

Reducing access is OK if it happens to everyone. Eliminating access for large numbers of people is unacceptable.

ok now but when Strathmore Center reopens, this is not a good option for the Grosvenor/Strathmore station. It actually isnt good for those who are dependent on the use of the metro and dont have alternative transportation means. Please dont leave us having to walk from Rockville or Bethesda Medical in inclement weather

My two most-used metro stations are Grosvenor and College Park. Grosvenor is my home metro station and a key reason why my family moved to this location in the first place. If Grosvenor closes, my father, mother and I would all have to figure out alternate means of transportation to work once the pandemic lessens, which would be near-impossible considering both my parents go to DC for work and we don't have enough cars for all of us to drive. My father would have to take the bus to White Flint station simply to take the metro when a big reason why we moved to this area is that he could walk to the metro. For the past 10 years he has been a loyal rider at Grosvenor and only stopped in recent months because of the pandemic â€” he absolutely will return to riding within the next few months once he gets a vaccine and his work reopens!! Additionally, I understand that College Park station is not very busy at the moment, but it's extremely busy during the school year (when there is not a pandemic!!). It does not make sense for WMATA to close these stations in January's 2022, as I can assure you, ridership will increase steadily over this year (2021). Please don't close these stations.

Dont close College Park.

Yes, the current pandemic may have decreased the travelers for now, but once the pandemic is under control and/or eradicated, usage will reflect the continued need. I live closer to the Reston Town Center stop. If this one is closed, and the additional domino effect of closures near me, it would eliminate the ease and convenience of being able to find a station nearest me. I would have to nearly drive into the DC area before being able to ride the metro, which defeats the purpose of the metro need. It would burden neighboring stations with overcrowding. I believe the proposal is basically a punishment for those that used it prior to the pandemic.

This proposal makes Metro an impossibility.

Proposal to close 22 Metrorail stations

So many of these stations are downtown and would effect all the federal workers. This would also mess with tourism.

This would impact the ability of too many people to get to doctors appointments, get into the city, and lower the desirability of many neighborhoods

Many of these stations are super convenient and help keep other stations from overrunning. For example, Gallery Place station is already a mess and overrun with rude and loud people. You want to close Mt Vernon Square and Archives? So, everyone has to walk to an already awful Gallery Place metro? I literally walk farther to Archives when Im in the area to AVOID the unsafe station. Also, there isnt a station close to Arlington Cemetery. That makes zero sense.

This is absolutely unworkable for me - under this proposed plan, both my home station and my work station would be closed, and this would result in several difficulties for my commute. Furthermore, this plan would close several of the closest stations to major historic, tourist, and commercial attractions, as well as stations which serve university students and federal workers, two significant groups in the DMV area. This would be likely to hinder the regions economic recovery in the coming years - preventing UMD-College Park students from traveling easily to the Capitol, preventing federal workers from easily accessing the Archives and Federal Center stations, making it more difficult for visitors of all kinds to reach the Smithsonian museums and the Mall. Not to mention making it incredibly difficult to visit Arlington Cemetery, one of the sacred sites of the nation. This proposed plan is an extreme dereliction of WMATAs duty to provide services.

Grosvenor-Strathmore is an essential station with a major parking garage. Many of the other stations are essential to the commuting public and service business access.

I love at Grosvenor Garden Alyssa for many many years. I need metro open near my home

The Eisenhower Ave station is crucial to the my residential location and necessary for the growth and development of the Carlyle Business Improvement District.

Closing ones downtown (Federals, etc) makes no sense. Closing Clarendon and VA Square together is bad, keep Clarendon.

Again, this hurts the people that have no options

Could makes sense if they stations could be reopened with additional ridership.

I am speechless that this is even an consideration!

I often use Grosvenor. And How could you close it if you don't go to Shady Grove every 15 minutes? Also There won't be enough parking at stations further north if you close Grosvenor. Parking has already been challenging with Grosvenor, a busy station, open

Assuming bus service will providea work around.

As someone who uses the Cleveland Park metro station, this would be less convenient for me, and I worry about the effects on the community, but I could walk to Tenleytown " although it would add time to my commute.

No. We moved here specifically to be close to the metro station. Closing this station would be severely, negatively impactful on our lives.

Do not close the stations in downtown DC.

We live near East Falls Church, and if it were closed wed likely drive to a destination. Crowding at fewer stations at rush hour would seem to be a serious potential problem, requiring some way to limit the number of passengers. Is Metrorail assessing that closing stations would reduce total passengers, or is it assuming that most would walk, drive, or bus to other stations? Would Metro increase its buses to and between stations to offset the closures?

Why build these stations if you plan to close them! I would keep them open and if necessary have alternating express trains skip them - but I prefer full service above all else

This change would cut off many people who live outside of DC but work within the District, from their jobs. Riders will not go to another station. They will find another way to get into the city outside of Metrorail. Even if there is a station in the area, it may not be close enough for riders to get to, especially if they do not have a car or have the ability to pay for parking at the Metrorail station. This change would not be good and would cut off many people from the Metrorail system.

We use the Clarendon metro station to shop at Market Common shops and Trader Joes.

I use several of those stations regularly and could not easily afford the extra time to walk or take the bus from another station.

The Grosvenor-Strathmore station is essential for me.

Those who take the metro regularly largely do so for employment purposes and rely on the metro without access to other forms of transportation. Many of us do not have cars, and bus transportation would double or triple our commute times. While some of these stations further out in Maryland and Virginia could be more reasonable to close, because their patrons typically own cars or have other ways to get to nearby stations. But, those of us who have made the city our home and need to travel to locations outside of the city would be stranded. Personally, closing the College Park station in particular would be devastating to the University of Maryland community, as a significant portion of the student, faculty, and staff population live in DC and Virginia, and would not be able to get to work without the College Park metro station. I also worry about closing both Clarendon and Virginia Square, as these two stations serve many who consider DC to be their neighborhood, as well. The city would suffer economically without easy access for those living in nearby Virginia neighborhoods.

Proposal to close 22 Metrorail stations

My job is right next to Clarendon station if I had to get off at the closest one(court house) and walk I would be late

No! The metro is confusing enough for locals, let alone outsiders, when all the stations are open - stations may be close together but they arent all on the same lines and so re-routing yourself of others around closures like this would make for some seriously confusing directions. And for me personally, pandemic or no, this would effect me significantly because its a really long walk for me to visit my grandparents grave in Arlington when I can get on the metro at College Park and off at Arlington Cemetery - closing both those stations would make it impossible to do. Furthermore, College Park station only has low ridership until the college opens up again which is scheduled for the fall. This decision just seems very illogical. It seems like it would cause very high stress for relatively low savings.

If closures went through, because of my location I would probably switch to driving in rather than metro.

I will be greatly personally affected by this as well as many of my friends and family. I am strongly against this proposal.A strong community has formed in the Grosvenor Strathmore area thanks in great part due to the access afforded by the metro station. Pre pandemic I relied on it daily for my commute and pending an improvement to the situation I was fully planning on resuming. The park nearby allowed for daily exercise in addition to greatly improve my heath. Many of my neighbors in the Grosvenor Tower Apartment building feel the same way. This is the route we use for our trips to DC. This is the route we use to connect to Amtrak for long distance vacations. This is the route we use to welcome guests coming from out of town and out of state. I implore upon the committee to consider any other option before the closing of stations which will have devastating and irreversible effects to the area. Our development is booming with new properties under construction which will be put in great jeopardy if a strong selling point is removed. A local treasure, Grosvenor Market, would suffer great setbacks with foot access greatly diminished. Reduced train intervals would be acceptable. If necessary every other train or even more bypassing Grosvenor Station would be acceptable too. Just please consider leaving access alive.

As a Blind person, I have NO transportation alternative.

Grovesnor-Strathmore is a walkable Metro stop for several large neighborhoods, including housing built around it to take advantage of its proximity. Closing the station would completely negate the smart city goals of building this housing or choosing to live in the nearby neighborhoods in the first place.

When Grosvenor Station is closed I do not ride metro. My choose of housing was based primarily on proximity to this station. Once I get to NIH there is no point to getting on metro, I can walk from there to Bethesda, and have at times due to metro's unreliability ie escalator outages or other occasions when the the station was by-passed.

I frequently use 2-3 of these stations, one of which I live very close to and rely on for most Metro travel.

Please do not close the College Park metro station

The opening of the stations cost the taxpayers hundreds of millions of dollars. The shortsightedness of throwing that entire investment into the trashcan as a response do decreased ridership during the pandemic cannot be overstated. In fact, to contemplate it is moronic. In the case of the Grosvenor Station, there are huge apartment complexes that use that station normally. Obviously during the pandemic, most of those people are working from home instead of commuting. That will change once the pandemic recedes. That is true throughout the metro service area. To close those stations would be to force tens of thousands of additional cars onto already clogged roadways. It would also have the effect of devaluing the properties of those live in those areas. Metro needs to put its best efforts into obtaining additional DOD stopgap instead of throwing billions of dollars worth of investment down the drain to solve a temporary problem.Reducing the usability of the metro system will only cause even lower ridership levels as the system becomes an impractical solution to transportation needs.

I need to take train to College Park. If that station is closed I will have to go to either Greenbelt or PG Plaza which will add significant time to my commute. I also imagine that once the University is fully in person again, the ridership needs for this station will increase again as faculty and staff will be returning to campus. Currently we are working from home.

I dont use these stations frequently.

Closing stations places a severe hardship on the elderly whose sole means of transportation are the stations being closed. Closing stations would also eliminate the gains made to reduce use of cars on roadways by workers who are apt to return to their cars rather than walk farther to get a train and put up with overcrowded and unsafe platforms every day. This is not a good option.

I often take the red line from DuPont Circle to Cleveland Park to meet friends for dinner. Many restaurants and other retial businesses there, including movie theater. Closing this station will cause a major lost of business for these operations.

If you make it difficult if not impossible to use Metro to get around the city, fewer and fewer people will use it, and revenue will plummet even more.

If the closures are temporary, then youve gotta do what youve gotta do. But if the closures are PERMANENT, thats a whole different story. I cant speak to every station, but why on earth would you close College Park, especially after classes are back in session? Students living on campus often dont have a transportation option from one of the nearby stations (i.e. Greenbelt or P.G. Plaza), and youre going to lose them all to Uber and Lyft if you do this.

Proposal to close 22 Metrorail stations

People need Metro. Simply closing these stations would be extremely harmful to workers, the communities around the Metro stations, families, and Metro employees themselves. I am appalled at the number of stations proposed to close.

The orange line train stops are very important to me: Clarendon, EFC, Virginia Square.

Absolutely not, once we start going back into offices many of these stations will be essential again. Grosvenor, for example, is vital to the Strathmore venue, and helping relieve already terrible traffic on Wisconsin Ave and it serves many commuter neighborhoods where people desire to be able to walk to metro. Also, why would you close Arlington Cemetery, which is a tourist draw and has barely any parking? If you close them, you again drive people to using more cars, you make metro harder to use and less reliable, and you are creating a negative feedback loop that also contributes to climate issues and practical matters like declining property values. Right now being close to metro is a plus!

So, you would close Mt Vernon Sq and then... what, terminate Yellow Line trains at Gallery Place? So its essentially a Virginia commuter train at that point?

If you close Cleveland Park, it will result in crowding at van ness or woodley park, as so many people ride in cleveland park pre-pandemic and will do so again as things get better. It will result in lines, and missed trains for many people. Again do not punish riders. Work with congress! Washington DC cannot have the worst metro system in the world and this is what it looks like u want to do. Work out a deal and keep metro running as before, maybe close it at 9pm but keep the rest the same! CEO of metro could take a pay cut and thus same metro! There is always a way, not at the expense of ordinary people who rely on metro, and chose to live near metro in order to commute to work. Now u want to close one way they use to get around. So many elderly people who use it too. Please do not close Cleveland Park or other stations that riders rely on heavily!

Yes this plan works because it shuts down stations that are not being utilized as much which is a waste of operating expenses. Decreases to train intervals are not the problem. The problem is having stations and extended service hours to 11PM in effect which is a waste of money. The smartest plan would be to decrease operational hours to 9PM and close all rail stations that are not being used by essential workers.

I rely on East Falls Church Metro station to get to work. We purposely bought our house 1/2 mile from the station so as to use it for commuting.

I work in Arlington and live in DC. I would be negatively impacted if these stations were to close.

I would like to know what you are considering as metro stops nearby. Grovesnor, for example, is almost 2 miles from White Flint station and over 2 from Medical Center, the 2 closest stations. These are not distances that anyone can reasonably walk in a regular manner, especially as part of their commute. Regardless of bus access between stations, the removal of all of these would be crippling to communities that live in the areas around the rail stations being closed. College Park is another good example: most riders near that stop are college students without access to any other form of transit, other than the UMD shuttle, which doesnt have the same radius or frequency as Metrorail. If that station were closed, literally thousands of people would be cut off from accessing jobs, medical care, and leisure activities in the rest of the region, especially in DC proper.

I would be able to cope with this change but I would regret losing Cleveland Ave and Federal Center SW.

I do not use those stations

I live close to the East Falls metro station - this station is ALWAYS full during the weekdays, and riders have NO other option for a nearby station that would not require using a car to access. The whole point of the metro rail system is to promote alternative forms of cleaner transport. The DMV cannot afford to have more cars on the streets with its already congested roadways and terrible traffic conditions. Shutting down stations should NOT be an option. There must be more promotion of metro use.

I strongly believe that the housing markets surrounding many of these stations would be significantly impacted if the nearest metro station were to shut down.

Why not time these closures. Maybe after 9pm. Trains would go to other stations faster and you could stay open longer. Maybe not all of those stations. I would not recommend closing Grosvenor-Strathmore because you have people attending events at the Strathmore via Rail.

This would be catastrophic for me. I live near the Cleveland Park station, do not have a car, and cannot walk to/from another nearby station. Some of the other stations are ones I use for various activities, e.g., Archives, Grosvenor, Judiciary Square (where the courts are and people will again arrive for jury duty every day), Mt. Vernon Sq, Smithsonian (closing this station with its proximity to so many museums, etc. seems bizarre to me), and some of the VA stations.

Closing stops does not help anything. Metro rail will become irrelevant because many people will take to their cars and forget it exists. Everyone is talking about adopting environmentally friendly actions and metrorail is closing services???? It is a horrible admission of failure. Metro can raise more revenues by inducing more people to USE THE SERVICES, not by CLOSING DOWN THE SERVICES, guaranteeing no train breakdowns, no delays, more trains, that is what will bring patrons back to metro rail.

I live in SW and frequently use the Federal Center SW station when I need to catch the Blue/Orange/Silver, so this would NOT work for me at all.

I do not understand how you can even consider closing stations at Strathmore, or Smithosonian -- and Im sure many of these other stations are also egregious. We have a world class music performance facility in Montgomery County that would not have Metro access. Tourists would be robbed of the ability to enter and exit metro at a familiar stations for Smithsonian and Arlington Cemetery.

This is crazy! Why have metro stations if they dont serve the public.

Proposal to close 22 Metrorail stations

This would make many errands much harder, and the added inconvenience could reduce ridership further. Many riders like myself prefer to walk from a station to their destination, and this increases walk time significantly. I would urge careful and long consideration before choosing to close any stations. I have witnessed the frustration of workers getting off a shift to discover Eisenhower station closed, and their unfamiliarity with the area and how to get to another station or which bus might take them where they need to go. Anyone seriously considering this option needs to get out of their cubicles, out of their cars, and start walking the paths needed if a station is closed.

e. You have low ridership because of COVID-19, so your outcome measures are an invalid number to base any closure decisions upon. When the pandemic makes things functional again, essentially you are punishing these riders who chose to be safe and stay home and forcing them into financial straits just to get to work. Riders probably bought and rented homes in those areas because of their proximity to the stations. This could potentially impact location and property values. Frankly, I think you are stupid to make a decision now based on an act of god and emergency health care situation, where staying home and not riding the metro is the best course of action. Making decisions based on low ridership right now is beyond idiotic, because its punishing people who are being good neighbors and not wishing to get anyone killed by staying home and in a sense rewarding those who are acting reckless going out in public, and potentially not being safe at home and wearing masks. I think you need to wait and determine the best course of action when riders are actually vaccinated and would be more willing to ride the metro again. Making the determination prematurely based on arbitrary and mythical numbers at this time is beyond stupid. The Archives, Clarendon, Cleveland Park, College Park, East Falls Church, Eisenhower Ave, Federal Center SW, Federal Triangle, Greensboro, , Judiciary Sq, Mt Vernon Sq, Smithsonian stations are all locations that have their heavy workforce essentially working from home at this time. Why would you base closures on numbers today where you know usually have high rider numbers? Why penalize employers who chose to keep their employees safe by encouraging remote work?

But I suggest to keep Mt. Vernon Sq. open.

This is a horrible plan!!! May as well shut down the entire system and well just build more highways and toll roads and get more cars back on the roads. Development of housing is increasing around many metro stations, including Grosvenor-Strathmore, which over time should increase Metros ridership. Housing values and rents are impacted. This idea will have a big negative imoact on the entire region.

Some stations such as Smithsonian, Eisenhower, Cleveland Park, and Clarendon would take some adjustments to adapt to, others are less important to me, although Im sure another rider would have a different perception.

If you close these stations, you might as well close the entire rail system. This is insulting. This is not acceptable, suitable, or feasible to riders as tourists.

This is the worst option! I frequently use several of those stations mentioned above. Not having those stations would make me seek other transportation options.

This is the worst idea yet. I work at the GMU Arlington campus and take the metro in and then walk to campus. Both Virginia Square and Clarendon are within reasonable walking distances. However, I have medical issues that make walking long distances every day that I go to work not tenable. If you do end up closing those two metro stations, then Ill definitely have to drive in.

If you close both Eisenhower avenue and Van Dorn there are no longer open Metro stations near me. It is false that this plan takes into consideration proximity of stations.

Closing the East Falls Church metro station would be detrimental to the many people who live in the area. The closest station is too far away to walk to and adding a bus component to get to the closest stop would significantly add to daily commute to thousands of people. In addition, there is limited or no parking at the nearest stations, so driving and parking at the nearest station wouldnt work, and even if it did, it would add an additional expense to riders. Many people moved to the area of the East Falls Church Metro station specifically because of the proximity to the East Fall Church Metro and taking that station out of operation would frustrate that purpose and intent of many people. It would also hamper the development and growth of the community surrounding the East Falls Church Metro station, as less people would move to the area without that station being in operation.

so metro receives money from VA and MD; spends all this money and inconvenience to travelers while stations are built to NOW close them down? that is the only thing you can figure out? Arlington Cemetery is used during the day by visitors but not the end of the world as they can take cabs or Uber/Lyft BUT the rest of them? What a waste of taxpayer dollars in building the infrastructure and then seeing it go to waste. Seems Metro has some accountability in building maybe too many stations and then being able to support them and now people are used to have access to them and you want to take them away. Will you have buses serving these sites?

Many people work at the businesses near the Eisenhower stations and live in the apartments and condos nearby. Three new buildings are scheduled for completion this year, with hundreds more offices and apartments. Closing Eisenhower Ave station would leave these people stranded

How can you close stations for low ridership that are not yet open?

ARE YOU KIDDING ME> LOW RIDERSHIP AT SMITHSONIAN> WHAT ABOUT THE TOURISTS!!!! Most of the stations that you mentioned are ones that I use in the MD DC area when COVID wasnt around.

Proposal to close 22 Metrorail stations

Forget expanding the silver line. Use the funds to keeps stations open. I use those stations to get to work. I can't walk a mile to work on top of changing trains. I'll be late everyday and will get fired. Absolutely not!

Ballston is already a heavily crowded station in normal times. If BOTH Virginia Square and Clarendon are closed, it could become a nightmare if ridership returns to anything close to normal levels. If closures must happen, please close EITHER Virginia Square or Clarendon.

Stations near government buildings should remain open. Arlington Cemetery should remain open until 6pm so family can visit relatives there. Smithsonian Station should be open during summer tourist season.

Absolutely not!!!! This will limit travel ability and make it difficult to even get to an operating metro station. East falls church is a vital transfer stop! Do NOT GET RID OF THESE

I live by Ballston - I fear that I would not be able to board a train at Ballston due the closing of EFC and VA Square and the Silver Line ending at Ballston

This would impair the travel of disabled people as well as people who dont have the time/nor money to get off of one station, get on a bus and hope to make it to work on time.

Not acceptable. Well have to stop paying metro and create private shuttle services.

Van Dorn Street is the closest metro station to my home. I often use King Street, but I like having an alternative.

Closing Clarendon, Archives, Arlington Cemetery, Federal Triangle, Smithsonian, Virginia Square??? These are HORRIBLE ideas! I do not buy for a moment that these stations have low ridership. So many Clarendon residents alone work in the District. I live in Arlington and use all of these stations regularly -- but when the tourists and business travelers return to DC, they will use these stations! I have listed the stations that stood out to me but know that I have used others on this list and I am against closing ANY of them. Closing these stations will have huge negative environmental and congestion effects on the region and should be avoided at all costs.

Please see previous responses. Closing all these stations render the Metro useless.

This would be extremely hard on nearby businesses. It would also be hard on those who cant walk far. For example, Cleveland Park is not THAT close to Friendship Heights or Woodley Park if you are not able to walk/bike well or if you have small children in tow.

My company chose its location due to the proximity to a Metro station (Clarendon). Adding a bus (unreliable and, Im sure, further reduced service) would add an unacceptable length to my, already two hour commute. I would have to find other employment.

Personally, Mclean is the closest station to where I work. The second closest being East Falls Church. If both stations were to close, I wont have a way to get to work

While this does not apply to me, this entire survey reads as if we are working to almost make the Metro obsolete. DMV should be working to increase ridership rather than decreasing options for it. We need to focus on decreasing the use of cars in the city and focus on public transit/bikes/pedestrian friendly. I am strongly opposed to decreasing the use and access of the Metrorail which serves as a means of transportation for a lot of the city including myself. Most of us in the city do not have cars and encouraging the purchase and use of cars in an already congested city seems to not be an effective strategy from a infrastructure and sustainability perspective.

Grosvenor-Strathmore is NOT a low ridership station. It boasts one of the larger parking structures on the red line... and the lot was often FULL before the pandemic. I would always have to drive to the upper deck to park... and even then I would be concerned about finding a spot.

Grosvenor-Strathmore Is a major hub for travel and you have stated it would be a hub point for more frequent trains. It is also the closest point to Bethesda with a Metro garage. If you must close a station why not Twinbrook? Riders can go to Rockville or White Flint, both with parking. Ultimately METRO should find a way to keep all stations operational, especially during rush hour. BAD PLAN!

I need the College Park station, I cannot walk two miles to Greenbelt or three to Prince George Mall. This is the worst plan. Why build the purple line through College Park if there will be no station here?

Grosvenor-Strathmore is an important station for those straddling the Rockville-Bethesda area. Shutting down College Park will be disastrous for UMD students who commute to school.

I live near the Huntington Metro Station and theres really no good way to walk over to the restaurants or Hoffman movie theater near the Eisenhower station, so Id have to drive. I dont go over there all that often so it wouldnt be a very big deal. For the people that live near Eisenhower though, theyd have to walk up to King Street/Old Town I guess. Not a very short walk and again, theres no good way to walk to the Huntington Station from there.

Would there be shuttles to get people to open stations???

I agree that some of these stations could close given the proximity to others (Im thinking Judiciary Sq. and Mt. Vernon Sq.), however those outside of DC are a different kind and I cannot comment on those.

Proposal to close 22 Metrorail stations

Of the stations above that have adjoining parking lots, those lots are all FULL every weekday, clearly indicating those are NOT with low ridership. And where would those people then park, when nearby station lots are already full? They would be forced to drive to work, again contrary to one the cardinal reasons the Metro was created. Not to mention the inconvenience to thousands of Metro riders who can currently walk to their station. More driving!

The Judiciary Square Metro is how many people get to the federal courthouse. Cutting service to this station would cause many people to miss court appearances.

I am especially opposed to closing metrorail station at Clarendon both because I want to use that station, and just as importantly because of the effect that would have in increasing street traffic and congestion due to unavailability of Metro at this key part of the Metro orange line corridor. This would also directly conflict with Arlington County policy and planning documents that underscore the importance of preserving Clarendon as a commercially vital and attractive Urban Village, including by encouraging pedestrian access and promoting greater use of public transportation as well as by discouraging car ownership, use, and vehicular commuting. This will result in significant vehicular congestion that would negatively affect streetscape, increase pollution and damage the commercial vitality of Clarendon, and would put excessive strain on very limited parking availability, which will also negatively impact surrounding neighborhoods.

Closing Grosvenor-Strathmore station would not be a good idea because a very large number of passengers from Grosvenor apartments (five huge buildings) and areas on the other side of the station having a number of huge apartment complexes use this station. They are office-goers and business owners/employees in Washington DC. If this station is closed it would cause huge loss of steady revenue to Metro.

I live in College Park, 3 blocks from the station. I depend on the metro to commute to/from DC every day, and a lot of days on the weekends. If the station closes, I will just start to drive my car to work every day, which is one less rider for you altogether. If I have to take a bus to a different metro station, and you are running trains every 30 minutes, by the time I get onto the train to start heading into work, I could already be at my office by driving.

There are many high rises in the Grosvenor Metro area currently, and more in the development stages. Ridership from the Grosvenor Station includes more than people going to work - it includes retirees and stay-at-home spouses who need to go to DC for doctor appointments, school, appointments with professionals such as lawyers, accountants, etc. , visits with family.

Grosvenor has parking. Close White Flint

McLean is my closest station, bus lines that went to other metro stations were rerouted to McLean. I will stop taking public transportation if I need to take more than one bus to get on metro, or if the total trip time is more than 1 hour.

The only worry I have is Arlington National Cemetery is so important to so many people, and so many people visit it for loved ones, but do not live in our area. I don't think we should make it difficult for people to get there for this purpose.

The * stations could remain unopened until ridership increases. As people have not yet come to rely on them, this would not take away a service. Smithsonian and Arlington Cemetery could close earlier as tourists often finish their need for those by 6 p.m. and locals could use the other options downtown. Closing Clarendon and VA Square would harm businesses in that area. In addition, a number of older people live in the VA Square neighborhood and it would be more difficult for them to walk from Ballston to their homes. I am not familiar with Greensboro or Grosvenor usage.

What station do you think it's close to me if you closed Grosvenor? I and other neighbors walk to the metro

No, closing these stations will not work for my expected travel needs in January 2022. In particular, closing stations I regularly use -- Judiciary Sq, Mt Vernon Sq, Smithsonian, Archives, and East Falls Church would be seriously problematic.

I commute from Clarendon to Judiciary Square, so this proposal would affect both ends of my commute, double my commute time, and incentivize me to work at home as much as possible. The metro is a huge factor in why we live here and we pay more in rent for the convenience. The next nearest metro is not close, and it might end up being simpler and more time efficient to take alternative transportation. Why walk 15 minutes, metro 15 minutes, and walk 15 minutes when I can take a car for only 15 minutes door-to-door?

This would cut out people in the suburbs who do not have cars and rely on the metro for transportation.

This is an idea that assumes the pandemic will continue and no one will be vaccinated. These spots you're proposing are nearest to jobs and homes and metrobus does not have direct services at their nearby stations to get people to where they need to by these spots. Nor could metrobus support out if they did. This is a terrible solution.

Only consider station closures for stations that are less than a 15 minute walk from another station. For example Ballston/Virginia Square and Clarendon/Court House are easy substitutes. McLean and Tysons Corner are not easy substitutes and the I-495/VA-123 interchange is not a safe walk. Also, there is no walkable substitute for Arlington Cemetery. However, this station can be ethically closed if the Cemetery is closed to the public.

Proposal to close 22 Metrorail stations

Please be very careful about your decision as to which, if any, metrostops will be closed. Municipalities have reduced their parking requirements for new developments (actually going back many years) because of the developers citing metro stops nearby. There is inadequate public parking availability near some of these stops so you need to study this - if you havent already. I would not close the Smithsonian stop. Isnt it the closest to some of the memorials (such as Lincoln)? Big option for tourists and the handicapped. Also, please consider keeping open those stops that are used by people who attend rallies and other big events in DC. Ive been to a rally or two and had to wait 20 minutes just to get out of the station at my destination because of the number of people. I consider the stations used by folks during big events as important overflow areas - especially since car traffic is sometimes not allowed and there arent enough places to park anyway.

I commute everyday from Old town to college park. So closing that station would be inconvenient. Also, there are several students at UMD who use that station. Metro might be losing money during breaks and weekends when students use those services

These stations were built for a reason and many of these areas are transit oriented development sites which need to have Metro service. Some cost savings could be realized for those stations which serve tourist attractions or federal agencies by modifying the hours and days to match station use.

This would close most of downtown! I live near Cleveland Park and work near Federal Triangle. Plus, Archives stop is the only convenient way to get to the federal buildings downtown.

This would absolutely destroy my neighborhood., my familys commute, and all my neighbors work schedules. This is a non-starter. Why build a world system and then literally destroy it. We would consider leaving the region if the Metro system closes stations.

Thanks for spending billions to extend the metro to nowheresville VA AND THEN SHUT DOWN HALF THE STATIONS. Metro is a disgrace to taxpayers who continually fund this project and get less and less service in return. Youre cutting off service to tourists (who already have no idea where theyre going and now have even more confusion with downtown station closures) as well as all the convention people who pump tremendous amounts of money into the economy and yet you expect to remain profitable. Youre not even going to be relevant anymore and frankly your poor service is going to cause all of these outsiders to go somewhere else.

Security concerns for a long ride (skipping many stops especially Orange lines.) Needs more transit officers presence on the train?

Arent some of these stations next to each other? Eliminating VA Square AND Clarendon would leave a major gap between Ballston and Courthouse. Timing is curious with affordable and additional housing currently under construction in the VA Square area (on Washington Blvd). Ballston stop will be overwhelmed. How do you eliminate College Park for students especially those using their commuter school? Maybe low ridership but strategic.

Im not sure offhand which downtown stations are near theaters I would attend.

I am a 67-year-old without a car. I work at Federal Triangle and have business and errands at Cleveland Park, Clarendon, East Falls Church, Federal Center SW, Grosvenor, Judiciary Square, Mount Vernon Square, Smithsonian, Van Dorn St., and Virginia Square. I am not in a position to walk from other stations, and do not have time to wait for increasingly infrequent bus service -- when that is available.

I use grosvenor station 6 days a week!!!!

I could probably do a work around, but many in these neighborhoods will have quite a walk to the next Metro station. I do believe that a few could be temporarily closed, but 22 is too many.

A number of the stations listed here are stations that I used fairly regularly before the pandemic, and that I would expect to use again once the pandemic is over. This move will discourage me from going to a number of restaurants that I used to regularly go to.

This is absolutely the worst idea of the lot as it would make the system almost inaccessible to people in these areas. Metro provides the only way for many of these individuals to get from their home to work.

I regularly went between Greenbelt and College Park for social events, closing that station would be disastrous for me.

i rely on Grosvenor station. Wheaton or medical center would be a significant increase in my commuting time and lead me to switch away from metro.

Absolutely not! People will take the metro much less.

Of these stations that Ive traveled regularly, theres at least a mile walk to the next station. This long distance would hurt ridership because of the inconvenience and would negatively impact disabled riders that cannot physically move that far outside the station to get to their destination. Specifically, Clarendon is an extremely busy business and residential district. I, along with several hundred of my co-workers, commute to this stop to our office building.

This will hurt businesses and neighborhoods and takes away the advantage of living in DC and metropolitan.

It be sad to see Arlington Cemetery station close due to a lot of ppl go there to visit the cemetery my sons military so we do go often to pay our respects to those that have fallen

Maybe some - but not all of these

Proposal to close 22 Metrorail stations

We rely on metro to get into the city and paid a premium for our house because it was close to the metro. Don't close the station! Find other alternatives, like eliminating waste!

Some stations that stand out to me in this list as making absolutely no sense to close are My Vernon Sq (the convention center which draws/will draw many people soon enough), Smithsonian (where most tourists go in this city) and Judiciary Square (the courthouse which many people, many of whom are of limited means, have to be able to get to easily).

Closing stations would impact a lot of people negatively. For me, college park is important for many students at American University to get to class, including myself

Will this cause a longer walk to get to those points of destination? Will buses get us to those points?

I rely on the Grosvenor-Strathmore station for my daily commuting needs as do many others whom I know. We may not be taking the train now but we plan to use the station as soon as we get our vaccines later in 2021. This would cause the greatest inconvenience of all the proposals and the worst overcrowding. Please do not do this.

Rely on grosvenor metro for daily commute

This would absolutely not work for me, as it would effectively cut my access to using the metro. For 4 years, up until covid, I depended on the metro at least 4 times a week as my transportation. I dont own a car. Grosvenor-Strathmore station has been my lifeline... my means of staying independent... with Judiciary Sq. being a common destination. To close the Grosvenor-Strathmore station would be devastating.

This is an absurd proposal! Many of these stations, particularly those in Virginia, are not near other stations. I used to rely on East Falls Church station everyday for work before moving into Washington. I would not have been able to walk to West Falls Church station from my then-home. This proposal will make Metrorail unusable for many, many people, further harming the Metro finances.

Closing of the East Falls Church station would keep keep from using the Metro.

If all these stations close, I would opt to use private personal transportation, increasing automobile traffic to/from and within Washington DC

i moved here -- to be near the Virginia Square Metro station; i do not drive; this metro station is my primary source of transportation; as an alternative--rotate days of no service among the close/nearby, low-ridership stations; this would allow riders to plan and to still get around from place to place; i assume all the low-ridership stations have some peak time usage--use this data to better coordinate when u can skip a station on alternate trains or some type of modified schedule;

My station is Cleveland Park and closing it would stop my ability to commute and/or go to other places in the city. I would effectively no longer use WAMTA. I would seriously consider asking my office to make me full-time remote work, and if so, I would sell my place move back to Wilmington/Philly where my family lives and the cost of living is lower. Moreover, please consider that as an externality to Cleveland Park's metro closure, it would further hamper a struggling Cleveland Park business district. Such a closure would probably be the final nail in the business district's coffin.

I live within walking distance of the Grosvenor-Strathmore station and use the metro for work and travel. If the station closes, I will be forced to take my vehicle to work, or drive to DC for appointments or meetings. So will a lot of others, and that will create an influx of new drivers on the road, especially during rush hour. It will lower the allure -- the desirability -- of this area. The overall quality of life will be worse.

This is why the rail was created to provide rider with places, where the buses dont go and to make it convenience if you dont want to drive to certain places/areas. Closing these station will put a strange on most rider and not to mention the city is going to be flooded with people trying to drive to work.

To close both Virginia Square and Clarendon would adversely impact our ability to use the Metro. It would also impact the businesses that are between Court House and Ballston. In addition, once the museums and other facilities reopen downtown and tourists return, closing the Smithsonian station would be problematic.

Closing both Virginia Square AND Clarendon would have a serious impact on my commute to GMU Arlington,

The only station that can be closed -- and only after day hours -- is Arlington Cemetery. Closing all other listed is simply outrageous.

Pls keep open Clarendon, Virginia Square, Fed Triangle

I rely on my local station- Cleveland Park- to get around, as does my partner to get to work. I have fatigue issues, and it is hard for me to walk up hill to Van Ness, or down a ways to Woodley Park. For the cost of having someone in the toll-booth vs in a connector van for people with disabilities, you could transport far more people, and not hurt local business or property values.

Metro is already getting called out for not being accessible enough--how is closing stations going to improve that, especially if youre ALSO reducing Metrobus by 50%?! How are those without a car, including the elderly, those with disabilities, those with children, those carrying groceries or other items--how exactly does Metro expect them to navigate this city? By cab ride? By rideshare? On a scooter? On a bike? Oh, just walk a mile or so to the next station? Give me a break. Its easy to make these decisions on paper and not fully comprehend their impact on real people in the DMV. Try walking w/crutches between Metro stations when bus service is cut--and add in some rain, because you know, it NEVER rains in DC--and see how eager you are to cut service and close stations.

Proposal to close 22 Metrorail stations

East Falls Church Metro station has commuter parking lot; nearby alternative stations (e.g. Ballston) do not have parking lots. Also pre-pandemic, Ballston Metro station was overcrowded during rush hours.

Closing Smithsonian station will significantly take away from Washington as a tourist destination. It should not be closed. Service at East Falls Church and Virginia Square needs to remain to meet expected increases due to residential and commercial development that has started. How will eliminating service at new stations on the Silver line weaken to cost recovery of developing the Silver line? We are still paying on bonds used to pay for the Silver line, and not opening the additional stations will only reduce the return on investment.

We use East Falls church and with cuts already in service in Falls Church this would be a further blow and make reliance on metro increasingly difficult

While I can agree with closing some subset of these stations (e.g. Arlington Cemetery, Clarendon, Eisenhower, Federal Triangle, Judiciary Sq; maybe one or two more) I think it is a TERRIBLE idea to deprive any location of easy to Metro. You will not retain or regain ridership with lesser access to the system.

Its hard to believe that Grosvenor-Strathmore has low ridership when the garage is full by 8:30 on weekdays, and the rush hour trains always go as far as Grosvenor before turning around. Grosvenor-Strathmore has a lot of new building near-by that is driven by proximity to metro. Property values would plummet in 2 recent EYA properties specifically built here because they are walking distance to metro, .as well as in the older condo and townhouse developments near-by. If you need to increase funding, improve your service and the riders will be back.

Definition of "close" to another station is very relative. Grosvenor-Strathmore is not a walking distance to the closest metro station that it should be considered for closure.

Cutbacks would hardly matter. However, it is essential that service cutbacks be accompanied by commensurate reductions in staffing and facilities. Freed up funds should be returned to local governments who have a demonstrated ability to do transit better than WMATA.

Please dont close East Falls Church. It is not only important for me, but for others who transfer between orange and silver.

Again, are you trying to destroy the metro? This proposal is so terrible. Not only would you shutter newly built Silver Line stations (what a waste of millions of dollars), but you would be leaving people like me who don't have cars out in the cold. Did Uber write this proposal? Because this seems like a proposal intended to make sure no one takes Metro.

Given the volume of condos in and around grosvenor park, if things get close to normal (?!), I see working people needing the grosvenor station. Most people would never want to drive downtown for work.

Closing both Clarendon and Virginia Square would cause some problems as they are next to each other.

Your proposal includes shuttering stations near major tourist attractions. You've also targeted busy commuter stations. Your proposal is not rationale, as you will lose a large portion of your riders.

Interstation access between the existing and nearly completed stations in Tysons corner and Reston with the other stations to the west are critical infrastructure for the support of the enormous economic engines of these two regions.

Eisenhower, East Falls Church (Transfer station), Van Dorn and Mclean should remain open.

I live by Grosvenor, if no other method is given to get in to DC this would greatly inconvenience me.

Terrible idea! There are many reasons why we need College Park to stay a station: it is a Marc station as well as metro, not all Marc trains stop at Riverdale, plus, that station is two or more miles away, high school and college students use the station to get to and from work, internships, events. All the stations should be maintained in order to promote green development, fewer cars on the road. Many developments are proceeding in College Park that are based around the metro. Archives is a valuable station for workers and tourists alike. Please keep all stations open. In Paris, France, there is a metro station every few blocks and navigating the whole city is possible. Lets plan for a future like that, not the opposite. Yes, more funding is needed to move us towards expanding public transit, not diminishing it and forcing folks back to cars. We also use arlington cemetry station as we have family buried there and sometimes visit after work (we take metro to work). These smaller stations need to be promoted. I didnt even realize Cheverly has a station, though I live in PG county! But stations prop up property values, provide cultural interest, and economic returns with tourist and worker use.

I commute to work to the Clarendon station (pre-covid/post-covid); my sister uses the Federal Center as do her employees and others who work in the area including federal employees. The Smithsonian may have low use sometimes but when tourism is high all of those stations are necessary

this would really increase the problem of parking especially in the District.

Proposal to close 22 Metrorail stations

Another terrible proposal! I am a power wheelchair user and cannot drive. I have no family to help me get around town. Metrorail is my ONLY means to get to my full-time federal government job and my weekly disability-related medical appointments. Any cuts in Metrorail service greatly impacts my life in a very adverse way. Telework has not been a good option for me because I am much better disability accommodated at my office than anywhere else. When a station's Metrorail elevator is out of service, my first course of action is to go to another station with a working elevator. The fewer stations that are open means I have fewer options. In addition, I work at a place where a number of other power wheelchair users work. Judiciary Square Station is the closest station to my work site. If Judiciary Square Station is closed, I have to hope that the Street, Green and Yellow Line platform elevators are all working at Gallery Place in order to access the Red Line platform to get on a train headed to Shady Grove. If it is inconvenient and time consuming. Also,, having to go to Gallery Place Station after work would cut into my work time as I would have to allow extra time to return home and plan for the event of an elevator outage. Please Don't Close Stations!

As a resident near Van Dorn Street station, of course I oppose this. But Van Dorn has a large parking lot, which makes it an important station to keep open, especially if bus lines are proposed to be cut. Beyond that, Metro just closed Van Dorn and other stations in Alexandria for months to upgrade those platforms. We expect them to be available for a long time to come in exchange for that summer of inconvenience. They serve a large number of people in Northern Virginia and should remain open.

This would hurt commuters and negatively impact traffic during rush hour as people will have to drive in and out of the city. This is also negatively impact the environment and gas emissions.

Unsure of these changes because I don't know if neighboring stations that are closed to Vermont Ave will impact my commute.

I've used these metro stations many times. They are important for certain needs in the local economy, such as tourism and using metro to travel to/from dining and entertainment. These stations also service communities that depend on the metro.

Absolutely crazy. I can't believe these are serious proposals. Many of these are MAJOR stations for tourists (e.g., Archives, Cleveland Park for Zoo visitors). College Park is the station that connects to our flagship University campus, connects to the MARC and the future Purple Line, is depended on by residents of local communities (many of whom moved here in part because of the Metro connection), and is increasingly used by tourists staying in CP and visiting DC. Closing these stations is a terrific idea only if the goal is to destroy the economy of the DC metropolitan area and severely harm our flagship University. If this is NOT the goal, this is clearly the very worst of all the proposals presented. I am truly stunned that anyone has even proposed this.

Closing College Park Station seriously affects University of Maryland commuter students and those who work at the University who rely on public transport. Ridership may be low now because of the Pandemic, but will be needed again once we get to the "other side" of this Pandemic.

Closes station that has parking near me.

I think makes sense for some stations but I think Clarendon should definitely stay open

I recently moved near Cleveland Park due to proximity to a metro station. That was a major life decision and expense. It would SIGNIFICANTLY increase the time in my commute. I know that those who own property around any of the closing stations would be upset to see their property value go down. It would also hurt the small businesses in the area, since fewer people would come to the establishments that give the areas their character. In the case of Cleveland Park, I know there are plans to build some high-density housing in the area. How are all of these new residents going to get anywhere without a subway stop. Public transit must be funded for cities to be livable. The proposed changes to the metro would make DC an eminently less livable city.

That is the station that my spouse and I use to get to work. There is not a walkable alternative to get to another metro rail station. Also, bus coverage doesn't work for us.

I see that any stations close to Northern VA, are most popular area especially when parking is limited. Not a good idea to close regardless temporary or permanent. This plan will definitely create hardship for commuters & residents (congested traffic).

I use one of those stations. Making it harder or longer for me to commute will mean that I am increasingly likely to find an alternative way to travel.

Grosvenor-Strathmore now has low ridership since the BSO and the National Philharmonic are not performing at Strathmore. By 2022, both organizations should be performing at Strathmore and ridership should be back to the pre-pandemic levels. If you close Grosvenor-Strathmore, the BSO and the National Philharmonic will lose my and many other persons attending the performances. The Federal Triangle and Smithsonian stations are the main Metro stations that the Smithsonian visitors use. Closing them is very bad publicity for Metro. The Mt Vernon Square is the station for the Convention Center. Why close it, when the convention Center should be open by January 2022

The Grosvenor-Strathmore station is essential for the Strathmore and the surrounding residential and shopping areas, including local business. Closing this station would definitely not work and would be a significant detriment to the metro and the area. The Smithsonian station should similarly be preserved as low ridership is likely due to the temporary closure of the museums.

Proposal to close 22 Metrorail stations

My commute would not be directly affected by these closures. However, closing two adjacent stations (Virginia Sq. and Clarendon) on the Orange/Silver line corridor in Arlington is unwise. Recommend keeping Clarendon Station open.

It is not practical for residents within walking distance of those stations to commute to other stations -- using the bus will add significant time to their commutes and driving would add time and costs and increase pollution. The only reason many residents moved to some of these areas was to be close to a Metro station. This would force use of vehicles not just for work, but also weekend and other outings. I would also argue that these stations are not comparable. It is easier to disembark at another stop in downtown DC and walk a few blocks (particularly for tourists going to Smithsonian, for example). While it is not trivial for commuters to find the next station on the 267 corridor, or in MD or other VA suburbs. If this proposal is considered, I do not believe a blanket decision to close stations with low (which is not defined in the proposal) ridership without looking at other factors such as distance and ease of commute to the nearest station.

This plan would absolutely NOT work for me as it would close my neighborhood station, East Falls Church. Also, why on earth would you consider closing the Smithsonian station?

I can see the closings of Archines, Cemetery, Clarendon (I'd prefer Virginia Square myself; but someone important must live there and have you by the short hairs on that one); Cleveland Park, Fed Ctr SW, Smithsonian Fed Triangle, Judiciary Sq. All the others are too far away from other stations, and you think they have low ridership, but they won't once everyone has their vaccine.

The only reason why their were low ridership was because y'all closed them in the beginning of March cause of covid. Before covid those stations had plenty of ridership during the week day and weekends cause people were doing to work. Those jobs will not be closed forever what then

I would like to see either Clarendon or Virginia Square remain open. East Falls Church and Reston Town Center would be of lesser importance, but possibly useful for my optional commuting purposes.

Closing many of the intermittently walkable stops inside the city of DC is understandable. The availability of Ubers, Buses, scooters, and bikes is far greater in these densely populated areas and would therefore have a lesser impact on general mobility. The same cannot be said about stops outside of the boundaries of DC. Stops leading North, South, and West are the reason many professionals are able to live in Northern Virginia/Maryland while working in the city. Those metro stops are some of the only ways to get into the city. This is also an adjustment that could be acceptable if the frequency was decreased instead of completely closing a stop.

Clarendon should stay open

I live between Cleveland Park and Woodley park.

Would these stations be revisited before closing as some stations like Eisenhower are opening up new retail? I know some stations would close that are low ridership and close to other stations; maybe able-bodied people can walk to the next station but not those who have difficulty with walking. It would also cause issue and longer travel times as I would have to get off rail, figure out what bus to take then get back on rail.

Clarendon it is one of the most popular and busy metro stations. They are couple more as well that I know but Clarendon definitely need to be out of this list.

Closing East Falls Church is an outrageous idea. It is nowhere near any other station and would cause very significant hardship!! Also, it would lead to a significant decline in property value. It is unconscionable that Metro is even considering closing many of these stations which will eventually lead to a further decline in ridership and revenue. This is the capital city of the US and deserves better !!!

College Park station supports a university system. Most people cannot drive to the campus.

Grosvenor-Strathmore serves a community of approximately 4000 apartments/condominiums and hundreds of townhomes/single family homes in addition to the Strathmore Arts Center and the Georgetown Preparatory School. If Grosvenor-Strathmore is closed, it will put all the people who live or work in this area in a very difficult situation for their transportation needs and will dramatically increase the pressure for service from Metrobus.

The convenience of Virginia Square is a real plus for me, because I use a walker. Do you believe that Metro has enough data on what ridership is estimated to be post-pandemic? Shouldn't you delay these decisions at least until you see early stats for ridership when most people have been vaccinated?

I am disabled, so closing any metro stations makes it more difficult for me to get around or to get where I need to go easily.

Some of these stations closing would be more painful than others, such as Cleveland Park, College Park, and Clarendon/Virginia Square (closing one would work but both would be tough), but the majority can be mitigated.

Federal Triangle and Grosvenor are important metro stations to my commute. Closing them would be worse than waiting for a train every 15 minutes.

The Grosvenor station is key for our regions commuters once Covid is more under control which is clear by how quickly the parking lot fills along with the large numbers of riders who walk, bike, bus and get dropped off at Kiss&Ride, lots of Taxis/Ubers/Etc. I personally know I plan to be commuting to my job downtown by Jan 2022 and expect my son to be commuting to school by Metro by then,

Proposal to close 22 Metrorail stations

This is a death-spiral plan. If McLean is closed, even fewer commuters will use public transit, leading to even lower revenue. Meanwhile apartment buildings are going up across the street from the McLean station. Please do not close it.

It is ridiculous to close the three brand new stations before they have even opened yet. That makes the silver line extension project quite a waste of money.

Judiciary Square is the metro station I use to get to work so I want it to stay open. Its also near the police station which I have also found comforting. Additionally, they have also been working on the station for months! Why put so much money into a station that could close?? I need all of these stations to stay open. I solely rely on public transit!

While not affecting my usual travels, some of these closures seem really problematic for DC visitors trying to Arlington Cemetery, the Smithsonian Zoo, the Smithsonian Museums.

Pre-pandemic, I regularly used Clarendon, East Falls Church, Federal Center SW, Federal Triangle, Smithsonian, and Van Dorn St Metros, not for commuting, but for pleasure! ESPECIALLY East Falls Church and Smithsonian! PLEASE DO NOT SHUT THESE DOWN. People will come back to these locations after the pandemic subsides, even if they continue to work from home!

NO!! NEVER!! PEOPLE NEED A WAY TO GET TO THE STRATHMORE MUSIC CENTER AND RESTAURANTS AND MUSEUMS!!!

These are all the metro stations that people actually LIVE near or within walking distance. This totally removes the incentive from living in or near DC. Why don't we just move further out where it's cheaper or just move to Baltimore or Philly? Also, the Cleveland Park metro is in a very thriving community of people who commute downtown. Please do not do this.

I walk to the grosvenor-strathmore metro station every day for work. Closing down the station would not be good for me.

That would keep me from using metro which is my preferred transportation method.

Smithsonian is the MOST used station for tour guides leaving their groups at the end of the day, particularly after a walking tour of the Memorial at night!!! We are dropped off there at 10 PM, allowing tour buses to turn right onto 12th St., which takes them to the 14th St. bridge and either their hotel in Arlington or 395 for their journey home. It would be a disaster to lose that station! We also often use that station at the start of tours because it is walking distance from the museums and some of the Memorials. Please do NOT take this station away!!!! I saw Arlington Cemetery on there, too. Next to the Memorials and the US Capitol and Union Station, this is one of tour guides' most heavily used stations, since we give walking tours of the Cemetery. Moreover, parking at the Cemetery is expensive and often closes before the end of our tour day. Losing Clarendon and East Falls Church would be hard on me, as well. Since I usually start early in the morning or end late at night, I feel confident with the well-lighted parking garage I use that's directly across from the Clarendon Station. Likewise, East Falls Church has a public lot used by many commuters. I prefer not to park around Ballston late at night. Clarendon is a busy neighborhood, full of young people visiting the restaurants and bars. I feel better knowing that they are hopping onto Metro at the end of their evenings rather than driving "so that is another reason not to close the station there.

Stations in the proximity of high rise apartments Stations such as Virginia Square serve apartment dwellers who depend on public transportation exclusively.

Two of these stations "Archives and College Park" are important public access points to National Archives research facilities. Closing these stations will create barriers for people who need to visit these facilities to access vital government records.

At least, East Falls Church and Eisenhower Ave needed to be open. For example, the National Science Foundation which is a federal agency encourages its employees to take public transportation and it is at Eisenhower Ave.

This is absolutely the worst proposal, that extra travel distance that would be required is the exact type of thing that will factor into people's decision making when deciding to use the metro (AND GIVE YOU MONEY) vs. taking an Uber instead. This would just be more of a windfall for ridership and revenue. Terrible idea

It is a bad idea to close stations the stations mentioned because these stations impact on people getting around.. People cannot go to work, if their station is closed. People cannot go anywhere if the stations close earlier. Metro officials should ride the metro system because they can see the whole problem. People use the metro system to get around.

The Grosvenor Station has the prime location for access to housing and businesses in the Bethesda, Kensington, North Bethesda and Rockville area. It serves all age groups who travel within the suburbs and throughout DC. Closing this station would impact the lives of hundreds of thousands of people and put commercial enterprises out of business. Please do not close the Grosvenor Station. No nearby station is as convenient and none has such good parking and easy access. Strathmore Music Center depends on this station to transport concert goers; schools depend on this station to transport students. It is the center of life in this area; access to this metro station keeps property values competitive. It would be a disaster to close this station. Allow life to return to normal in 2022.

Many of these are essential: Clarendon, Arlington Cemetery, Federal Triangle, Smithsonian, East Falls Church

I live next to the Grosvenor-Strathmore station, and we would lose a lot of the advantage of living here if the station was shut down. Furthermore, the station lobby is a shortcut to the 46 Montgomery College bus station, and if the station is closed, people will have to walk a whole block to reach the nearest 46 stop, making it harder for Montgomery College students to get to class on time. Also, there is an escalator and tunnel in the station lobby which leads across the street. If this were removed, pedestrians needing to cross the street in order to reach Grosvenor Market or the apartments across from us would have to cross at Rockville Pike, which is more dangerous and time-consuming.

Proposal to close 22 Metrorail stations

I live near Grosvenor-Strathmore and will be commuting every day again by January 2022. This proposal would force me to abandon Metro use entirely and, more globally, it would permanently reduce Metro ridership across the board. In addition, Metro just received a large federal stimulus. Closing stations after that would mean acting in extremely bad faith.

Please DoNot close these stations, especially Archive, Arlington Cemetery (in the summer so many tourists visited Arlington Cemetery how can you close this station) Grosvenor-Strathmore people using metro train to see the performances at strathmore.

I use Clarendon the most. Plus with more stations shutting down, will this put more pressure parking near other stations?

Thats several of the stations I use regularly

I use the College Park metro, because the parking lot in the Greenbelt metro station often fills up by 9 am. Unless more parking is added at Greenbelt, I don't see how this would work. Closing College Park would also adversely affect the university of Maryland as well. The Archives station is close to a number of museums on the north side of the Mall. Closing that station when the museums would be (hopefully!) opening back up, would affect people's ability to visit.

This is a far better plan than running trains every 15 or 30 minutes. You could combine this plan with the proposal to close metro stations at 9 pm and save money that way. Its only an extra 5 - 10 minutes to walk from Metro Center to the Fed Triangle area, a bit longer if walking from LEnfant.

How dare you even CONSIDER closing this number of stations and still call yourself a mass transit system? Closing Arlington Cemetery in particular is a slap in the face to the nations war dead and their loved ones -- not to mention that I frequent that area and see jampacked trains full of tourists EVERY SUMMER who dont know how to get to Arlington otherwise and have been encouraged by the DC/MD/VA tourist promotions to stay near a Metro station so they dont have to drive to the cemetery. Do you think they wont come back to visit the HONORED WAR DEAD post-pandemic? Are any of you veterans or military-connected? Are you ALL that unpatriotic, or is this just a cynical greedy ploy on your part to extract concessions? How about you cut top managements salaries first? Why should the Metro head make over \$400,000 a year and stations be closed and riders be penalized to support his lifestyle?

I currently bus to Pentagon and Van Dorn St./Eisenhower are my alternative metro stations. It would be hard for me to find another location to get to if the bus isnt working.

Distance to Metro stops is a major consideration when looking at apartment buildings

I get on at Gro-Stra and to go to another station would require that I take another form of transportation. When it was closed in 2020 it was a matter of major stress.

My work place is right outside of McLean station, which would leave a long walk (over an hour) from the last open metro in West Falls Church

We bought a home in Lyon Village specifically to be walking distance from Clarendon metro as my wife is a daily commuter into DC. Long term closure of Clarendon metro would significantly affect my wife's commute once she returns to non-remote working. I also planned to use the metro from Clarendon to Reston TC for my daily commute once the Reston metro opens. Closure of these stations could also negatively affect our property value, which is a significant concern. It would be difficult for metro to assess ridership if stations close, as potential riders would no longer be able to use once pandemic restrictions abate. Would much prefer other budget reduction methods (reduction in train frequency, earlier closures).

Eisenhower is in a key location and was a contributing factor for the majority of residents moving into the area. Without a car Eisenhower is the closest station within walking distance for people of my age to commute to/from work safely and comfortably. Smithsonian is critical as it is located at the hub of 24th and Independence where thousands work. Of course ridership has been low the past year due to the pandemic. Federal buildings are closed and people are forced to work from home during this time. A bulk of the metro's revenue comes from Federal transit benefits paid to WMATA for federal employees. Once employees are cleared to return to work in person, these two stations will resume normal traffic. PLEASE do not close!

Clearly anyone who thinks the Orange Line stations suffer from light ridership has not tried to board a train during rush hour. The plan calls for potentially closing 3 of 5 stations on the Orange line in Arlington. Why should Virginia (and my tax dollars) continue to fund Metro after cuts to service of this magnitude.

Grosvenor-Strathmore could be a real issue for me, and many riders I know. Keep in mind that pre-pandemic low ridership was HEAVILY due to the construction that Metro was doing on the parking garage/lots. It made a lot of people have to rearrange their commutes, but that was never a long-term desire. We want to rely on Grosvenor in the future.

Closing stations is a terrible idea. People have bought homes and/or set up businesses near these stations with the expectation of nearby service. Transit-dense neighborhoods are vital for keeping traffic and pollution down. And there would be serious crowding at the stations that would pick up the slack.

Some of these are transfer points which were already crowded; closing those would only increase crowding

These are all metro stops that I use, and closing these would prevent me from being able to travel between home and work.

I use these stations (Archives, Judiciary) exactly because they are less frequently used than say, Chinatown or LEnfant. I also think abandoning expensive infrastructure is not a good long term investment.

However, Metro should ensure reasonable levels of bus service, shuttles, etc would still be available to access these areas.

| |
|--|
| Proposal to close 22 Metrorail stations |
| shutting or by passing Smithsonian is post COVID openings |
| Is it possible to keep Clarendon open during normal business hours, i.e., 7 am to 5 pm on weekdays? As more and more people start taking vaccines ridership should increase. Our office still uses Clarendon to get into DC since our work is with government. |
| I have to travel to Clarendon for work that cannot be done remotely. |
| In the past, I used Archives station ALL the time when I am traveling home in the evening because it so close to those activities. I also oppose the closing of these stations in particular: Judiciary Square, Clarendon, Virginia Square, Smithsonian Mt. Vernon Square, Arlington Cemetery, and Federal Center SW. I think the closure of the downtown metro stations would be a hard blow to the Smithsonian and other downtown museums recovery. Both the Virginia Square and Clarendon stations take people to the heart of North Arlington and could local businesses very head. Both locations do not have an abundance of parking. |
| Wont work. I use these stations to go to my accupuncturist, events at the National Archives, Smithsonian, and College Park. Also, how will I visit my sweetheart if you close the station near his house? |
| Albeit the station closures do not affect me, I do not believe the Silver Line Phase II extension stations should be closed given that the number of riders is not known yet. That seems unfair given riders need to be given time to use the stations and commute to either home or work from those stations. |
| It is a vital station servicing people live in the surrounding areas, Kensington, N. Bethesda, Rockville and Potomac and for folks attending Strathmore events. |
| I pass through most of these stations but I do have friends that live at Mt. Vernon Sq and would be very disappointed if that station closed! Mass transit is for the public good and all people should have access to public transit, closing stations would deny them that opportunity. |
| Please do not close Grosvenor. |
| The stops along the orange / silver line in northern Virginia (Rosslyn, Court House, Clarendon, Ballston) are relatively close together, but housing is incredibly dense and the economic development around each stop is booming. The condos, restaurants, shops, grocery stores, and other businesses around the Clarendon metro stop would have a significant negative impact if the metro stop were permanently closed because they would be much less convenient to the metro. Further, given the residential density of the area, closing the Clarendon metro stop would make the Court House metro stop significantly more crowded. Prior to the pandemic, both stops were already incredibly crowded during the weeks and on the weekends, particularly when there were events downtown like a Nationals game. That closure would most significantly impact my daily commute, but there are several other proposed station closures that seem shortsighted. Living on the orange / silver line for the past decade, Ive been waiting for the metro to connect to Dulles Airport for a very long time. The convenience of traveling via metro to Reston Town Center would be great -- Im not sure why all these stops would be closed after the years of delays in building / extending the silver line. Closing the metro stops at Smithsonian and Arlington Cemetery would certainly impact tourists who travel to the city, and would increase the amount of car and bus traffic in the areas. The other closures downtown would make commutes more difficult (particularly Archives, Federal Triangle, and Federal Center SW). Overall, it seems shortsighted to propose closing all of these stops without fully understanding the impact the pandemic will have on long-term ridership. Continued cuts to service force riders to find alternative means of transit, and creates a negative feedback loops where ridership continues to decline. If these stations are all closed and the others become un-usably crowded, ridership will decrease as commuters find alterative means of transportation -- which means more crowded streets and bike paths. |
| If implemented, consider publishing suggested bus routes to reach the closed stations from an open station, and to reach an open station from the closed stations. This would benefit people who live close to one of the closed stations. |
| Closing all of these is draconian. Many are no where near other stations. |
| I actually live nearest Ballston Station, but closing two consecutive stations on the same line, or just one in a situation where there is a long distance between stations, is a BAD IDEA! Just too much distance between stations for those who live in between. And would force more people to drive to stations who may otherwise walk, being counterproductive to the purpose of the Metro. |
| I use many of those stations. Assuming tourists come back to DC in 2022, no stations are really "close" to Arlington Cemetery or the mall |
| I dont support this because I rely on some of these stations like College Park, Archives, and etc. please reconsider |
| If there is alternative bus transportation to get to the other stations then yes. If not, then I would have to find alternate, non-Metro, transportation. I could work around it if this a necessary change; however, reliable communication about when the stations are closed would be needed. |
| wow I dont own a car working this postion I need train/bus service until I make enough to buy a ride |
| Not all of these stations seem to be close to others. I consider close to be under a mile, which is a distance most people could walk if needed. East Falls Church, for instance, is almost 3 miles walk from Ballston and from West Falls Church. Closing stations might be ok if bus transfers were waived to and from the closed stations. It would also be important to evaluate how many disabled people use these stations and would be adversely affected by their closure. |

Proposal to close 22 Metrorail stations

Not only is this a bad idea, but some of these aren't even "close" to each other! I regularly use East Falls Church to visit my parents, and there is no station that gets you anywhere close to there without a massive detour via bus.

We live between Clarendon and Virginia Square. It is a 2 1/2 mile walk to Court House and 2 mile walk to Balston! Dont close both Clarendon and Virginia Square. Number 1 reason we moved to Cherrydale was for the easy subway ride to work and into town! Property levels will also plummet. Everyone will drive who can and create terrible traffic, add to climate change and those who dont have cars, or are old or handicapped wont be able to take Metro! This is TERRIBLE.

It would be much safer for college students to leave this station open since many of them do not have a car and need the metro to get around. It would not be good for them to have to walk instead of get off at their stop, especially at night.

Beginning probably this fall and almost certainly by January 2022, I will use Clarendon Metro every workday, as will countless others who resume regular work commutes. I strongly recommend that Clarendon Metro remain open. If budget trade-offs are essential, I suggest reducing staff at the station (to zero if necessary), reducing the length or frequency of trains, (slightly) reducing hours of operation, or issuing public debt to bridge the temporary budget gap. DO NOT CLOSE Clarendon station. Clarendon is a large, dense neighborhood with a population of businesses and residents that depend on the Metro for transportation and accessibility. Without a station, home values could decline and businesses could suffer, leading to less revenue from taxes, less riders (because many Clarendon residents, like me, live here because the Metro is so convenient and will not use Metro if it is far away--this defeats the purpose of saving time), which in turn leads to less for Metro--creating a vicious cycle of decline. KEEP CLARENDON OPEN in 2022. Generally, closing Metro stations is a very bad idea. I dont know the dollar cost-savings gained from closing a station, but I cant imagine it is significant and outweighs the benefit of accessibility--the very reason we have a Metro. Once the pandemic is under control, Metro likely will regain ridership. I cant overstate how strongly I feel that we should explore ways other than closing stations to make Metro work.

Please do not close Van Dorn. That would be very short-sighted. That part of Alexandria is very dense, and only about to get denser as they relocate a hospital to there (Inova Alexandria hospital campus is moving to Landmark Mall, which is served by Van Dorn metro station). DO NOT CLOSE DOWN VAN DORN. If you need to, close down the Arlington National Cemetery metro station, as no one really uses that one.

Are... are you talking about closing stations that dont even EXIST yet? What on earth is wrong with you?

The next closest metro to Cleveland Park is quite a long walk.

This is also a terrible idea. People use these stations all the time. How could you take away Claredon, McLean, Smithsonian, Archives, Federal Triangle? What are you thinking? these are VERY important stations!

Keep archives open and mt. Vernon square

Keep Grosvenor-Strathmore Judiciary Square College Park Smithsonian Federal Center SW Federal Tringale Cleveland Park open please and thank you

Need Reston Town Center to remain open

There are a lot of people , including myself, in our neighbourhood who do not like to drive in DC and use the Grosvenor station extensively .

The plan to close Grosvenor metro is absurd considering that the county allowed developers to build up around this station so thousands would have easy access to transportation.. This area has countless condo, apartment and townhouse complexes that rely on Metro. It is not reasonable to commute to White Flint or Medical Center because there is no adequate, reliable parking at these stations! The most upsetting is that the county intentionally over-developed Grosvenor because the Metro stop is there!

I use Judiciary Square on a daily basis - both exits - and plan to for the foreseeable future (years). My daughters daycare and my workplace are nearby and it is not feasible for me to use another station. (The other stations are too crowded for a stroller, and the logistics/elevator use/longer travel distance from another station is much harder). Many of my colleagues use Judiciary Square, and although most of us are teleworking fully right now the plan is to cease maximum telework this summer and return to some degree of normal. I would imagine many other businesses and agencies in the area would do the same. I would expect ridership to be much higher by January 2022.

Their are all of people that take the Clarendon Station I am one of those people I have to be at work by 11pm the station I get off is Clarendon because its very close to my job getting off at the Court House Station would be so inconvenient and a little scary because it would be dark.

When the weather is nice, I can walk to East Falls Church station. Otherwise, Im a block from a bus stop. Having to get to a different station means that the entire journey becomes less viable. On those days when I need to commute into Washington, not having easy access to the station means that the journey becomes much more time-consuming -- possibly too much so.

This is ridiculous. What is the proposal to get between the closed stations? I have a potential to take a future position near Clarendon, but closing the station would make that decision questionable.

I walk to East Falls Church and there is not another nearby station.

Proposal to close 22 Metrorail stations

Closing these stations will dramatically reduce ridership and thereby reduce revenue. It makes no sense to restrict so many potential riders from using the nearest station. Often, these individuals have chosen to live where they live because it is convenient to reliable public transportation. Real Estate values will drop when public transportation is no longer convenient.

Will be moving again in a few months and trying to stay in this area. I think closing stations in VA would NOT be good for a lot of people. When I was in government, they were always moving people from VA to DC and vice versa, causing more crowded trains and people on the road. People should be able to work where they live, especially these days!

I live on Morgan boulevard Station. Not only is it our way to Six Flags America, its our only way into the city to enjoy the Smithsonian Museums. Not to mention there are so many people who live out here and work in DC. My mom rides from Morgan Boulevard station to work at Union Station everyday. This would effect so many peoples way into the city and also the way to Sic Flags America. It honestly doesnt make sense to close Morgan Boulevard at all.

Closing Metro stations would be a catastrophe for the neighborhoods around those stations that depend on those stations for connection to the rest of the area. I live in the Grosvenor Park I Condominium. The closure of the Grosvenor Strathmore Metro Station would devastate our community. Please do not close the Grosvenor Strathmore Metro Station. Our entire community here is built on the premise that we can walk to a Metro Station. Like many of our neighbors, we bought our condominium unit here to support public transportation and help the environment by living close to a Metro station so that we could easily use public transportation and reduce our contribution to global warming, etc. If this station closes, we would have to drive much more, hurting the environment and exacerbating the significant traffic problems of this area. Closure of the College Park Metro Station is also a terrible idea. My daughter is scheduled to begin as a First Year Student at the University of Maryland in College Park in 9/2021. Now, she can take the Metro to school from home. If Metro closes the Grosvenor Strathmore and / or the College Park stations, she loses an important transportation option to get to and from school.

Grosvenor station is my every day station stops

Clarendon is a major destination for shopping and food. If the 38B bus is also cancelled, one must walk from either Ballston or up hill from Rosslyn. ART busses only cover a portion of the route and they too may have cutbacks.

This plan would put a significantly higher number of cars on the road and I don't think there are any metros walkable from grosvenor-Strathmore, so I don't understand what the definition of "close" is here

I would close Virginia Square which is rather close to Ballston but NOT Clarendon which serves an area with many destinations.

It has never made sense to continue to build new stations and new lines, when the system cant take care of all the riders, tracks, and lines it already has..

Guts silver line.

The Grosvenor-Strathmore station is within walking distance of our home as well as with many others in our immediate area. Closing this station would result in much lower ridership since the other nearby stations are not convenient

This would not work for me, especially since a major reason that we recently bought a house in a certain location was its proximity to the East Falls Church metro for commuting (and like others in that neighborhood, we paid a significant premium for that location). It also seems like this proposal could cause longer term problems for Metro ridership by effectively closing off the option of commuting/traveling by Metro for large swaths of the DC area. Once people in these areas realize they will not have any Metro access for at least a year, they may feel like they have to buy cars, and once they have cars, they might not go back to the Metro (even though we have already invested in building all of these Metro stations).

I need access to Greenbelt Station to get the G14 to get to my psychiatrist and therapist and registered dietician. Metro is my main form of transportation due to not having my license due to my disabilities. Morgan Blvd I use to get to volunteering and my moms work when I have to meet her. Archives is where all the museums and major spots that I go to when I go to DC. College Park I would need to get to the University of Maryland College Park where I volunteer and attend events on campus.

I would be inclined to say no for the stations near Metro Center and yes for those stations in VA and MD.

I use Van Dorn St station, and it would be a hardship if it were closed.

Clarendon has a high concentration of restaurants and stores that would be hurt if the station were closed. It would also increase demand for parking, which can already be challenging. More people will likely try to park in the surrounding neighborhood. Virginia Square may be relatively near Ballston, but that area is changing rapidly and closing Virginia Square would hurt further growth. It would also cause similar problems with parking. Closing either one would likely have a negative impact on residential and commercial property values.

I work near the Clarendon station. The nearest stations between Clarendon would be Court House Station and Virginia Square. I think it would be appropriate to close Court House station and leave Clarendon Station open especially if you are going to also close down Virginia Square. That is a very steep hike up that hill to get to Clarendon if you were to keep Court House station open and close down Clarendon station.

Proposal to close 22 Metrorail stations

Closing Grosvenor-Strathmore would be devastating to our neighborhood where many people commute to DC, NIH and Walter Reed for work, and use Metro to get to DC for fun. Also, as a senior citizen, I no longer drive and would be stranded without Metro (e.g., unable to travel to my Pilates class and friends in DC. True, the pandemic has incurred financial hardships on Metro. Join the club!!! This is not the time to consider closing our Metro station. Metro should be advocating for mass transit, not denying it for many tax-paying citizens.

How can you expect that the new silver line stations would have low ridership without any ridership statistics?

Living in Arlington and working in Virginia, I use all those stations in Virginia to travel to work/meeting/gym.

Some of these stations aren't near other stations by any reasonable definition of near.

This is absolutely not acceptable!!!! live in the Parkside community across the street from Grosvenor Metro station. I live in this area because of the proximity to the Metro station. This is a *highly* populated area right near the DC border. Closing this station would cut off thousands (possibly tens of thousands) of people from downtown DC. (I also question why this station would be closed at the height of a major development project of this station on collaboration with MetroRail). The Strathmore arts center is also located at this stop. Shutting down this station will have a direct impact on the fiscal health and stability of the Center AND those companies that rent space there such as Levine School of Music, and City Dance. The arts sector has already suffered disproportionately as a result of the pandemic. Closing this station would further cripple Strathmore and other arts orgs in their ability to recover and survive. Please DO NOT close the Grosvenor Metro station

The Grosvenor station cannot be closed. Although it is near to two other metro stations it will not be feasible. There is no parking at the medical center station and the White Flint parking is already over capacity. Grosvenor serves a large community of people and it will be a disaster. Also, the Strathmore center for the arts is a one of a kind and among the few art centers in that area. Students take classes during the week, elderly people attend concerts there. They use the Grosvenor station and metro as their way to access the arts center.

Several of these stations are the stations closest to churches/day care/affordable housing/grocery store (Clarendon), courthouses/federal government buildings (Judiciary Square, Archives, and Eisenhower Ave. for example). Mt. Vernon and Smithsonian are also the stops for many frequently visited locations once people are back outside after the pandemic.

Grosvenor-Strathmore Station should not be closed.

I would really encourage keeping East Falls Church open - I rely on that hub for getting to the Eden Center mall for grocery needs (I travel from DC to get there). It is far harder to get there for the next Metro, West Falls Church. I would also like to see Cleveland Park remain open as there are many amenities there and it's a far walk uphill from Adams Morgan. I live at the Mt Vernon Sq Metro but since Gallery Place would still remain open, I am ok with that one either closing or shuttering.

Please keep Grosvenor-Strathmore and Arlington Cemetery open. With parking so limited at both places and a relative short walk to the Cemetery and Strathmore, closing these stations will increase traffic and lower the attendance at both places. Usage of Metro for social events should pick up.

No stations should be closed. You will be limiting who will ride Metro and ridership numbers then will continue to decrease. This will lead to more stations closing.

I commute from East Falls Church to Federal Triangle and back every work day. If these stations are closed I will be forced to drive to DC

No, it will not work for me. I live in Virginia Square. I need Virginia Square to be open.

I'm completely against closing Mt Vernon Square, the access to the Convention Center. Why have a METRO at all? And College Park? If both of those close I would probably drive to work.

this seems like an excessive amount of stations closing- would want to see ridership numbers, distance from nearest open stations etc.

Some of these closures seem to have a lesser impact, but others, not so much. I'm not sure how this would affect my travel, but my first thought is that it would make it harder.

Residence is located within walking distance of station that would be affected if closed. Decision to remain in area is dependent upon station remaining open.

Closing Clarendon, the heart of Arlington's SoCal scene, would be absurd. If that takes place, then plans for a western entrance for Court House Station or, at a minimum, fast elevators at Court House should be advanced.

Proposal to close 22 Metrorail stations

I am a government civilian employee - and live at Grosvenor. I walk to the Strathmore-Grosvenor station 3-4 times a week, five times a week next year. If the station is closed it would have a MAJOR IMPACT on my commute and my continued support of WMATA! We moved here for the easy commute and the community aspects of Montgomery County and Bethesda... If the station is closed, I would have to drive to White Flint, park at White Flint, take the metro to Virginia (Red, then Yellow) and PAST MY APARTMENT on the way down! Not to mention the increased carbon footprint metro would be creating... my cost would double.... I would have to seriously look at my continued use of metro for my commute.... This would be a serious impact and a break with the social contract that I as a rider, have maintained with supporting metro for over 10 years of solid metro commuting! I would have an impact on the apartments, townhouses, houses and other owners and renters who move to Grosvenor for the life-style and affordable commuting... again... a case of Cutting off your nose, to spite your face! Ridership is down, but we are in a PANDEMIC... to close Strathmore-Grosvenor would put people at risk to more exposure due to a reduced availability on commuting options! If WMATA feels that way... then its time to vote in people on our metro-wide governing boards/councils/state representatives - to change the current WMATA Board....

Metros only path back to solvency is to get ridership back on the upward track. How do you plan to do that when you make using the system so hard that people just give up. Once you shut it down, you will never be able to bring it back to life.

As a longtime resident of Arlington who moved to my near the East Falls Church metro station, a two decade long daily Metrorail commuter, and heavy user of Metrorail to access cultural sites (e.g., Smithsonian, US Capital, libraries, theaters, Arlington Cemetery), restaurants, shopping centers, airport/rail station, sports arenas, health and fitness, and entertainment venues (e.g., movie theaters), EFC station closure would present a severe hardship to me, my wife, and two children and result in a shift to a personal vehicle for my travel, increasing traffic congestion and the release of climate change gases. I strongly urge Metro to carefully consider the impact of closing this station as well as other stations as doing so would permanently reduce Metrorail ridership, reduce fares and likely usher in a downward cycle of ridership undermining local / federal financial support.

I am a frequent visitor to the museums and monuments along the mall. Closing the Smithsonian station would be a major inconvenience.

This would result in more crowded platforms at the nearby stations, which would exacerbate the problems associated with overcrowding. I travel north from Woodley Park at ~7 AM. It might be more crowded at that stop. It should be fine though because its currently not at all crowded.

If low ridership continues then I could see that option, if not then not clear if this plan involves random closures with little notice. Many of those are key locations.

In the strongest manner possible, I oppose closure of the Grosvenor-Strathmore station. I am a federal employee and rely on dependable public transportation and do not own a car. I have taken the bus to work also but do not anymore unless there is no other option because it is routinely not on time or does not come at all. In addition, the bus line that provided a direct route to my employment was cut. Even though it takes longer, I take the Metro to work every day because it is much more reliably on time. Furthermore, one of the main reasons I purchased my condo is because it is in walking distance of the Grosvenor-Strathmore Metro Station. There are numerous housing complexes and residences built around this station and this station gets high use so it is incomprehensible that the Grosvenor-Strathmore Metro Station would even be considered to be closed. In addition, a primary purpose for public transport is to reduce the number of cars on the roads and to reduce use of fossil fuels. Closure of this central station will put many more cars on the road causing more traffic and burning more fossil fuels. This is in direct opposition of President Bidens policies to stop climate change. PLEASE CONSIDER OTHER OPTIONS AND DO NOT CLOSE THE GROSVENOR-STRATHMORE METRO STATION.

This proposal needs to include the stations that riders would be redirected to (which stations are they close to?).

Metro closures will be a death sentence to some neighborhoods and that should be considered. Cleveland Park is now 1/2 dead. Regarding Strathmore, I am opposed to closures and perhaps there is compromise here with weekend access... Thursday to Sunday 4- 11. Elders will be shut out if you close. Ask Strathmore what is needed, you may kill this gem with closures.

East Falls Church is my primary station. West Falls Church is an additional 1/2 mile away, and the walking route is less direct and more residential. If metro seems unsafe though, whether due to budge cuts/crumbling infrastructure, the virus, or increased criminal activity as a result of low ridership, then I might not ride it anymore anyway. I previously used it regularly for both for work and recreation.

Why would you close all of the stations near the national mall and the federal agencies? That sounds stupid

The closure of the Clarendon and Virginia Square Metro stations leaves a 1.6 mile gap in the Rosslyn/Ballston Corridor. Like me, few of the ca 9,000 people who use the two stations will be willing to walk to the Ballston or Courthouse Metro stations. I use Virginia Square but would be willing to walk to Clarendon if it remained open. Rather than close both stations, WMATA would be well advised to put more effort into promoting service at both stations by using a well thought-out Transportation Demand Management strategy for each station.

I use Mt Vernon Square station everyday

Too many closures

Proposal to close 22 Metrorail stations

Closing the Grosvenor-Strathmore Metro Station would present significant problems for me. I moved to this neighborhood (within a five-minute walk of the Grosvenor-Strathmore station) ten years ago in large part BECAUSE there was a metro station within walking distance. The Grosvenor-Strathmore station is the only way I can get downtown; its the only way certain friends and family can visit me; and if that station goes away I worry about property values lowering in this area too. I can understand if you need to reduce the frequency of service. Even a train once an hour would be workable, especially if the frequency of rail service picks up again once post-pandemic ridership increases. I understand you need to balance your budget and reduce service. But please dont close the Grosvenor-Strathmore station completely.

Im opposed to this proposal because I think that these closures will increase wait/travel times, will increase crowding at open stations, and will make metro inaccessible to those with mobility difficulties. Im especially opposed to the east falls church and judiciary square closures. East falls church is still a fairly walkable area but has no other metro stations within walking distance. Judiciary square provides access to both the DC courthouses and to one judiciary square, both of which should be kept accessible to government workers and the public.

Those are areas with populations that rely on the metro and the independently owned business around those stations have stores and restaurants that rely on the foot traffic from those stations. They are barely surviving the changes due to the horrific Covid 19.

If this proposal would go into effect I think it would be beneficial to update the metro system maps to reflect this change for the duration of the closures (assuming and hoping that these proposals would be temporary solutions)

Closing Grosvenor-Strathmore would definitely be a problem for me for my work and other commute!. Once the Strathmore Concert Hall opens up again, closing this station will be very limiting. In terms of tourism and family members visiting their loved ones, closing Arlington Cemetary would be a problem. I cant imagine closing Smithsonian. It has always been a highly traveled station and will be again. Closing this access to the worlds tourism would be short cited.

I recently bought a propriety near Reston Town Center and an important decision factor was the upcoming opening of the RTC station. Hopefully, additional federal relief funding that have just been approved by Congress will make this proposal moot.

Many of these stations are by offices where many DC and VA people work at such as McLean and Reston Town Center and Jusiciary Square. This would hinder people's ability to get to work and they would have to rely on other modes of transportation such as getting a car to go to work.

Some of these stations are low ridership because the places people go (like Smithsonian) are closed for COVID. This should change in 2022.

Closing both Clarendon and Virginia Square would leave a huge gap in service after Courthouse. With all of the new construction that has gone on in Arlington this seems counterproductive. Perhaps the developers should kick in more revenue when they seek approval for buildings more and marketing what great transit connections exist that no longer will exist!

Again, this system was designed for the inhabitants of a major metropolitan city. You are proposing closing stations were many essential workers are employed...fed government offices, courts, museums, convention site. Getting to stations that you deem higher ridership maybe be a hardship for those citizens that need access to Metro in their neighborhood and places of business and work.

Cleveland Park has a lot of local businesses that people do commute to from Van Ness and Woodley Park. It is also the most convenient metro stop to the Zoo -- vs uphill from Woodley Park.

Other than Arlington, I think all stations should be treated equally. The point of taking the metro is to quickly get where you are going. If I am going to face the hassle of having to walk a few blocks at the end of my ride, especially in cold or bad weather, than Im not gong to take the metro.. Im sure this is even more so for elderly or handicapped individuals: it really screws them.

Regarding Archives, Arlington Cemetery, Federal Triangle, Judiciary Square, Mt Vernon Square, and Smithsonian, the proposal would have a detrimental effect on the quality and availability of public transportation within the district. These stations in particular are important for tourism, sporting events, and cultural/civic events within the district. These closures would have a large negative impact on the quality of life and the economy of the district.

I commute every work day from Clarendon. Courthouse is too far to walk. I also use the Clarendon station heavily on weekends. The bus system does not help with my commuting needs.

I strongly disagree with the Grosvenor-Strathmore Station closure.

I would have to take a bus, from the Grosvenor Metro station, to reach a nearby station, since neither Medical Center nor White Flint have parking available. Since this would take more time, I would only do this for longer trips downtown. For shorter trips, as far as Tenleytown, I would drive.Why do you want to close a station with a parking garage?

With these stations closed, there is no life-line transportation for residents living in proximity to these stations. Closing the Federal Center and Federal Triangle impact both the federal employees but also anyone who needs to access the court system and impacts businesses that depend on people who work and dine in that area.

Proposal to close 22 Metrorail stations

Many of these stations are VERY important for residents and, especially, workers and patrons in the area. In particular, please do not close the following stations: Archives, Clarendon, Cleveland Park, College Park, East Falls Church, Eisenhower Ave, Federal Center SW, Federal Triangle, Judiciary Sq, Smithsonian, Van Dorn St, Virginia Square.

There is current large scale development of at least five apartment buildings in Clarendon. Parking formulas for these buildings were reduced to less than one per unit based on the availability of convenient nearby Metro stations. With the lack of public parking in the orange line Arlington corridor, the local economy depends on metro to deliver customers to nighttime entertainment venues. This would hurt Arlingtons economy. The nearest stations to Clarendon would be at least a mile a way.

I live in Cleveland Park and rely heavily on that station. I would have to walk farther (and uphill) to another station, which at my age (79) is not so easy. I also rely heavily on the Cleveland Park commercial area, businesses that would be severely threatened by closure of their metro station. Closing the Cleveland Park station would be devastating for the entire neighborhood.

Grosvenor is too valuable as a park and ride plus local residential stop. Its different in its use from Medical Center and Bethesda. Twinbrook is more sensible to drop.

Closing these stations will tremendously impact communities that live near them and restrict the ability for people to get to their jobs. I would much prefer to have less frequent trains going through these stations than to close entire stations entirely. It will also bottle neck up the other stations once we resume traveling to work. The red line is already so crowded, it will be impossible to park and get on a train from the remaining stations.

I typically use Archives on a daily basis but am fine changing that. I use Clarendon & Pentagon most often but could switch to Courthouse or Ballston

I rely on East Falls Church for all my metro travel, both for work and fun.

No! For a couple reasons. First, I and a lot of others use the Grosvenor station every day for work. This would add driving time (further north) plus a longer train ride to my commute. It seems to me that it makes more sense to close a station further north and have people drive further south, in the directing they are commuting. Driving from Grosvenor into downtown Bethesda in the morning is not a viable alternative given traffic. Second, such a closure would be potentially devastating to the Strathmore arts center.

Many elderly people live in this area and are dependent on Cleveland Park. Many gave up cars as they rely on metro. I personally rely on Metro for all my appointments, going to theatre, getting to friends.

I live close to Grosvenor station and would need that service once the pandemic is behind us. Closeness to the Grosvenor Metro is a major factor in purchasing/renting in this area.

Closing it would have a big impact on real estate sales and property values.

1. Grosvenor-Strathmore is not close to any other station that would not be impacted by other suggested cuts. As someone who relies on transit to get to Grosvenor-Strathmore, service to a station that is not within walking distance of my destination is not the same as having a nearby station. 2. College Park - This would disproportionately impact students and low-income LatinX residents in that area. These are individuals who are the most dependent on reliable public transit as they often dont have the wherewithall to access other reliable means of transportation. 3. Smithsonian - Cutting service to the Smithsonian station would severely exacerbate the congestion to its adjacent stations, especially when there are larger influxes of tourists.

Bad idea! Judiciary Sq closure would cut off access to my business with the courts located there. Closing Grosvenor cuts off access to Strathmore Music Center to many people. The elimination of the Consitution and Pennsylvania Avenues stops inhibit travel to the Mall and and Federal buildings. Again, bad idea!!

Absolutely not. This plan is already ineffective by proposing Archives and Federal Triangle. As a government employee who can use either of those stations to get to my building, what other station would be an alternative? No way you would suggest Metro Center which is on the red line, opposite of the green line that I use, additionally, that is a much farther walk with steep inclines. For those who are physically handicapped, that poses a huge challenge. There are several government buildings that utilize both those stations, so youre talking about thousands of employees.

By 2022 people should be commuting to work again and going places like museums and the Zoo and Arlington Cemetery, as well as university, so it makes no sense to close these particular stations down. They would make this system unusable and weaker.

The closure of the stations mentioned would be a mistake, since fluctuations in ridership are inevitable. To close these stations is a short-sighted solution to slagging revenues for WMATA.

As a physically challenged female college park station is closest to me. I do not drive so going to another station would be problematic

closing eisenhower and van dorn would cut off metro access to the entire west end of the city of alexandria, which is an equity issue. I suggest completly delaying opening of phase 2 of the silver line - no one is using those stations now, and the region can wait another year or more for new stations, whereas existing communities need the ones we have. There is no reasonable substitute for the Van Dorn and Eisenhower stations, especially van dorn.

These cuts will put Metrorail out of reach of a number of people. The closing of College Park with the huge University of Maryland campus so close is a bad decision

Proposal to close 22 Metrorail stations

Arlington Cemetery - this is an important and historic place!! How can you even think of closing this station!!! How will people be able to get there? Grosvenor-Strathmore - this is a major hub because it has a parking lot!!! Have you been there during normal times? The trains get half full in Shady Grove and when it arrives in Grosvenor there are more than enough people to fill the trains during peak hours. This station also served the Stratmore Center and is used by people attending concerts and events in Stratmore. Mass access to cultural center such as Stratmore and SMITHSONIAN MUST happen. Forget the Silver Line and the Purple Line.

Are these temporary or permanent closures? Why close tourist sites in a tourist city?

I cant use the metro if I cant get to it. Closing these stations will do major harm to accessibility and I wont be able to use it anymore.

We live near Grosvenor-Strathmore station and plan to use it to take metro several days per week (to go to work and also to do recreational outings in DC with our children) once lockdown eases and things open up. So please don't close our metro station! Metro access is part of what makes our neighborhood a great place to live. We are looking forward to being able to ride on metro again for work and recreation post-Covid, and it would be a pity if that weren't possible due to station closures.

All the stations at the mall are shut down.

Transferring from bus to train and train to bus when returning is time-consuming and cumbersome., especially for a senior citizen.

I dont agree that all of these stations are considered low ridership, and think there should be additional review before closing. I primarily use East Falls Church for work commutes, and during rush hour this station is packed, and every work day the lot is full. And the new bike storage, trail updates and bike bridge over Rt 29 will make it even easier to bike to the station. Perhaps only have trains stop there during rush hour periods, and not mid day. Smithsonian station? Really? Its the heart of the Mall area. Some of these stations should maybe be considered for closure, but perhaps some of them just need to be considered for limited service hours.

Sometimes I travel from the Greenbelt Station to the College Park station. I live near the Greenbelt station, but some of the MARC trains on the Camden line stop only at the College Park Station, and not at the Greenbelt Station.

Why not close Court House instead of Clarendon?

Aside from the Clarendon/VA Square area being a very popular shopping and dining location, it is also a substantial business and residential area. For our educational foundation I manage the Smartrip program for 18 employees. Also before Covid, 100s of out of town travelers, annually relied on the Clarendon metro stop to attend our educational foundation. These guests also shop and dine in this area adding to the financial health of a multitude of businesses. With the roll out of Covid vaccines more and more people are going into the multitude of offices, restaurants and shopping in the Clarendon and VA Square areas and ridership will no doubt increase as we approach the spring/summer months in 2021, not to mention 2022. I urge a careful consideration of these realities before closing these and other much needed stops throughout the DC metro area. Thank you!

Archives is next to Basis school.

Strongly, strongly, strongly opposed to these closures, they would significantly decrease the value, function, and accessibility of metro. If we need to increase the metro budget or do something else to keep these open, fine. We cannot let the pandemic demolish our public transportation system (on top of the many other harms it has caused).

Absolutely unacceptable for me and I know many others. I only purchased a home year before pandemic, within walking distance of Van Dorn specifically for using that station. In addition, Ive witnessed several other new apartments & condos either completed or under construction during the pandemic. Im sure many of them will be riders also. The nearest station besides Van Dorn would then be Huntington, which is NOT walkable. There is wayyyyyyy too much new development going on now & existing multi tenant buildings within the Van Dorn Corridor, to close Van Dorn Station. I propose WMATA ask the specific cities in which these stations reside, for possibly offsetting your expenses by providing deeper tax breaks & other savings & incentives.

I rent in one of the MANY buildings surrounding the Grosvenor-Strathmore station. Having ridden the Red Line for years, I know that Grosvenor-Strathmore does NOT have low ridership. White Flint, one side of Grosvenor, has a small fraction of ridership, and even Medical Center, on the other side of Grosvenor, probably also has fewer riders.

Im on the Orange Line, since the stations in the Rosslyn-Ballston corridor are close together, closing Clarendon & Virginia Square is ok since well have Courthouse & Ballston.

I need to take Metro from Grosvenor-Strathmore on a daily basis. It is too far to walk to either Medical Center or White Flint and there isnt any parking at those stations. This plan would not work for me.

This would be extremely difficult for me. Before the pandemic, I commuted morning and evening from East Falls Church to DC, and after my office reopens (which will happen in time), I will be expected to cease teleworking and physically go into the office. Driving is not an option for me, because that would entail buying a car. Also, East Falls Church is not near other stations; it is certainly not within walking distance of another station, especially when carrying a brief case, etc.

I get on and off Clarendon along with my coworkers to get to work which I transfer to a bus to work for the Government.

Proposal to close 22 Metrorail stations

I do not support closing the Grosvenor-Strathmore station as this station is vital to the densely populated Kensington and North Bethesda neighborhoods and I personally depend on this station for access into Washington, DC. I do not agree that the Grosvenor-Strathmore station is near another station, there are certainly other stations on the red line that are closer to each other (i.e. White Flint/Twinbrook and Bethesda/Medical Center).

Do not close down the Grosvenor-Strathmore station. Thank you.

Please, please, please, DO NOT CLOSE THE EAST FALLS CHURCH STATION. When people will return to their offices this station will become fully requested. This station should remain operated as there are 2 lines over there: silver and orange ones. You would better consider closing the West Falls Church station, which has only orange line. So between these 2 station, the East Falls Church is more convenient for people who leave in Falls Church City. So, PLEASE DO NOT CLOSE THE EAST FALLS CHURCH STATION. THANK YOU!!!

My wife commutes from Wiehle to Smithsonian, and we expected the new Silver Line stations to shorten her travel time to a station. Closing Smithsonian would at minimum add 10 minutes to her commute each way, each day. Closing the new silver line stations would at present keep her travelling around 15 minutes to Wiehle (+parking) instead of the ~5 minutes of biking travel time to another Silver Line station. This coupled with the proposal to limit trains to every 30 minutes mean that her commute could be increased (from current, not counting the new silver line) by as much as 119 minutes per day. (minimum of 20 minutes, though) Her travel time is currently 15 minutes to the station + ~5 minutes for parking and travel to the station + between 1 and 15 minutes for a train, around 40 or so minutes to Smithsonian, and around 5 minutes to work. That's a range of around 1:00 hour to 1:15, each way, each day. Closing the station and limiting the trains to 30 minutes would balloon that to 1:10 (if everything worked perfectly) to 1:40 each way, each day. She could have an over 3-hour commute some days to go 40 miles there and back on mass public transit. That is absurd

I was surprised to see East Falls Church station on here. There isn't a station close by, and it's a major bus hub, and has kiss and ride. I used to regularly use it, however with COVID-19 that has changed. Depending on how federal agencies and other businesses decide to staff, ie some federal agencies anticipate moving into Phase 2 etc... there may be more demand these stations than there is at present. For example I have only recently started using courthouse again because my agency changed staffing policies--now I am using metro several times a week.

I have been restricted driving due to disability, but I can still walk. It is possible these station closures are forgetting riders who cannot walk certain distances. If I want to go to Arlington Cemetery, I would have to walk from Rosslyn. My parents and my brother are at Arlington. Also, to close Virginia Square because it is close to Ballston is unworkable. Earlier, I saw Metro employees directing persons to Virginia Square from Ballston due to a covid closure. That is half a mile and would not work for many of us. East Falls Church is also a hub for some bus lines which cannot be accessed at any other stop.

This plan would be very challenging for people in the affected neighborhoods. It would send a signal that the region is in decline.

I think closing both Mt Vernon and Judiciary Square, for example, is too much because those are pretty far apart even though Chinatown is in the middle. People do need these stops.

I disagree with closing Clarendon station - there is still a lot of activity in the area. Portions of the walk from Ballston are not pedestrian-friendly and the trip from Court House station is over a mile. Busses are still operating at limited ridership capacity and Metro riders who need to take the bus from one station to the next risk additional exposure to others by switching modes. Closing stations increases the overall burden to the people who use them on a daily basis (essential and service workers), and will add time to their commutes.

I work at the University of Maryland and while I am currently telecommuting, we expect to begin returning to campus for the fall semester. Closing College Park station would be devastating to the UMD community, including students, faculty and staff. Having been a federal contractor prior to my employment at UMD, I utilized many of the other stations to travel to federal work sites. Closing these stations at the beginning of 2022, when many employers hope to have segued to AT LEAST hybrid on site work schedules, would be devastating to local businesses, and federal agencies. Many of these also access popular tourist sites, and could therefore cripple economic recovery efforts. Choosing to close these sites in 2022 because of reduced ridership now seems extremely shortsighted and asinine.

I live in Mount Vernon Square, so no, this does not work for me at all. Plus, ridership will probably increase once conventions come back. Keep all downtown stations open.

Closing Clarendon would mean a lot of extra walking for me and I have some mobility issues. Since it's a very busy area - including businesses who wouldn't want to lose the traffic, and you already plan to close Virginia Square, I suggest keeping Clarendon open. There's a lot of distance between Courthouse and Ballston.

While delaying opening of new stations is reasonable, closures should be a very last resort. By 2022, Covid restrictions will likely be lifted. Stations like Clarendon serve areas with many restaurants and an active nightlife. Stations like McLean and Judiciary Square serve businesses that have largely been teleworking during Covid but will likely have more on-site presence in 2022. Revived tourism will bring riders to Arlington Cemetery, Smithsonian, etc. There is also, in many of these cases, quite significant distance between to the next nearest station; for example, someone near E.Falls Church would have a walk of approx. 2.5 miles to either W.Falls Church or Ballston, which is not practical for commuting. Under this plan, Metro will lose riders, likely permanently.

Proposal to close 22 Metrorail stations

This list of stations sounds ok with the exception of Van Dorn St, because of the amount of parking available there. The nearest stations are King St-Old Town (no parking) and Franconia-Springfield. Would F-Ss lots actually be able to handle the overflow of those coming from Van Dorn St?

In particular, closing Arlington Cemetery, College Park, Federal Center SW, Federal Triangle, Grosvenor -Strathmore, Judiciary Square, Mt. Vernon Square, and Smithsonian would be very problematic for me and millions of other riders. College Park is very important to those who study and work at U of Maryland. Arlington Cemetery and the Smithsonian are extremely important to the DC areas tourism industry and Arlington, in particular, is very important to many families who go to Arlington for funerals and to visit family graves. Closing Federal Center SW, Federal Triangle, and Judiciary Square are important to the DC Govt. and federal workforce and to all who need to visit offices and businesses located in those areas. Grosvenor-Strathmore, Mt. Vernon Square, and Cleveland Park tend to have a lot of folks -- pre-pandemic -- who use the metro and its their only means of transportation.

What if I need to get off at those stops. Have to get off early and take a bus, which I would have to wait for a longer time to get to my final destination

Closing suburban stations may result in further decline in ridership as passengers would choose alternative transportation means as opposed to using alternative stations. In addition, the impact of the foreseen Silver Line connection to Dulles Airport should be taken into account, as intuitively, one would expect a structural increase in ridership as a result.

I live somewhat closer to Cleveland Park than Van Ness so this is not a huge impact to me. I do like being able to cross Connecticut Ave through the Cleveland Park mezzanine but I couldnt do that when the station was closed last year. It would be nice if the stairways to the mezzanine stayed open and the fence was at the top of the escalators down to the fare gates allowing foot traffic to cross Connecticut this way.

It would be hard to get to the nearby stops without a car.

Without the parking provided by the East Falls Church metro, there will not a major issue. The closes station is far away. Street parking will not be an option. I would think the revenue from parking at East Falls Church would help. I definitely do not like this option. I assume this would only be temporary, like for a year

The metro stop closest to my home and work are both on this list.

Totally closing stations should NEVER be an option. Prior to the pandemic most people I spoke to complained about the reliability of the metro. Actions of this nature will only reinforce this narrative. World Class service should NEVER include total closure of stations unless the real aim is to ultimately incrementally close down the metro completely. This idea is totally unacceptable!!

My family lives a few minutes away from Grosvenor-Strathmore metro station, and we take the metro often. My wife is a teacher and she goes to work via metro every day. Even during the pandemic, since she is an essential worker, she is still walks to Grosvenor-Strathmore every day to take the metro and go to work.

McLean is the station I use to commute to DC. I suggest closing Tysons Corner station instead.

Even if there is lower ridership at these stations, they are essential for me and other people to get around. Losing these stations would make the city less accessible, and increase the cost of getting to certain places. Especially the stations that are further out, such as Reston Town Center when it is open, and College Park. The ones that are further out from the center will be even harder to get to and more expensive via Ride Sharing apps. The stations in the center of the city is much more understandable, such as Mt Vernon Sq or Smithsonian, as a bus, bike, or walk from another station would be easily done to accommodate. But the stations further out are necessary to provide access.

Clarendon and McLean are 2 of the main stations I use, and with VA Square also closing there arent stops exceptionally close to either. Closing all these stations essentially ruins the accessibility offered by the metro and I dont see how closing all fo them doesnt shoot WMATA in the foot in the long term. If the point of this proposal is to phase out WMATA from existence and threaten a huge benefit of DV, then I think this part of the plan is perfect. If not, I see it pushing more and more people away from WMATA towards other means (why take the metro when I could uber and actually get to where I want to go? Why metro to work when I can just drive since they arent stopping anywhere near my office anymore?). Also, at minimum, these stations need to be selected based on pre-covid numbers as the station usage must have changed wildly with covid. Stations people used for commuting (like McLean) arent going to have as much use with everyone working from home, but they will in 2022 when people are most likely returning to the office.

Clarendon is a popular shopping /dining area for young professionals limiting ease of access to neighborhood will hurt more than help. Mt Vernon Sq is a transfer hub. It already takes an average of an hour ride with just one transfer, transferring trains two or more times for a single ride and then on top of that run trains every half hour, will elongate the trips even more. This will cause even more rider frustration. The main goal is to try and increase ridership not decrease it.

I do not regularly use any of these stations, so this plan would be okay for me. However, given the billions of dollars that the region spent to build the Metro, the fact that this is even being considered is both absurd and horrifying.

Yo use el trene para ir a mi doctor de espalda y voy 3 a 4 dias por semana hasta East Falls Church porque no tengo carro para que me lleven. Al fin me encuentre un camino donde yo pudo ir a mi doctor y no me cuesta mucho llegar alli y esta serca del estacion, y yo vivo en DC.

Proposal to close 22 Metrorail stations

No, this would not work for me. Im moving to Clarendon very soon and one of the big appeals of the area is the metro station. Many young people are moving there as well.

I expect work schedule to go back to pre pandemic by summer or latest fall of 2021

East falls church is my main station

Its not just the additional walking time, its the locations I would have to walk through. Its a personal gripe, but I would lose 4 of the stations I regularly use. If Im being perfectly honest about myself, Ill probably drive my car - and hello, climate change.

East Falls Church metro station services a huge number of riders every day. As mentioned earlier, even running trains every 4 minutes does not fully serve the number of riders currently using the EFC station at rush hour. EFC serves local communities as well as those living in Fairfax and even Loudon. I know this because I see the long line of cars from other jurisdictions parked in 2 hours spaces that are not policed. Closing the EFC metro station effectively would cut off access to downtown for a huge number of riders. The parking downtown is wholly inadequate to service new customers who would not be able to take the metro. While EFC riders might find some way to get to Ballston, there is absolutely no way for Ballston station to handle all of the influx from EFC. Closing EFC would cause very serious commuting problems and further erode customer attitude about the Metro system. Not to mention significantly harm property values around this large station. Reduced property value reduces property taxes. And. Creates extremely angry and frustrated taxpayers and homeowners.

This would be a significant issue.

When you use the term near just what does that mean? Near is relative, I am not familiar with the location of many of these stations however, if ridership is low, then decrease the number of trains or hours of operation during low ridership times, but do not close the stations altogether. What will you then do with the Metro attendants and others whom service these stations? Will they be given other locations from which to work so as not to lose hours or will they simply have to accept a cut in their pay? This is NOT good for the economy. Enough people have already lost wages due to the pandemic. Please reconsider closing stations, there MUST be a better way! Metro opened these stations initially, I presume because after much research, you determined there was a need, so lets re-think this.

While 2020-21 are very unusual years, it is expected that with the vaccine rollout to the general public, offices will resume. East Falls Church is a very important station that services all of N. Arlington commuters. Rushing into a decision to close due to low ridership during 2020 is not only a short sight decision but also a based on wrong data. 2020 cannot be compared to a regular year when most of the commuters remain at home due to COVID impacts.

My job is at Virginia Square. and my commute would be negatively impacted.

Cheverly needs to remain open. Can have trains every 30 minutes or 15 minutes. There are workers that depend on public transportation in this community. Do Not Close.

reducing service in January 2022 based on Pandemic numbers is not a good plan. Clarify if these are pre or during pandemic low ridership numbers. Propose stations with low ridership numbers, pre-pandemic. Hard to image nobody was riding at Smithsonian before the pandemic.

Closing any of the stations will reduce ridership and increase driving thereby increasing traffic, commute times, necessitate more parking and generally degrade the environment.

East falls is the perfect station, easy to access, has parking lot, this would be awful to have it closed

Open during week and closed weekend if in short walking distance to others.

I ride from McPherson to McLean on weekdays. There is no way to safely get from Tysons Corner (the next stop after McLean) to my office at the McLean metro station

This would unfairly disadvantage those with homes or businesses near affected stations. In some cases, our residence or work locations were chosen based on proximity to stations. Removing access might significantly affect property or rental values in affected locations. Its unclear it would help: I assume affected stations would still need some maintenance. Parking at alternative locations and traffic might be adversely affected

With the university in College Park plus all the new apartments that have and still are being built the station is needed, Route 1 already has way too much traffic, closing the station is only going to add more traffic.

I work at a school right next to Cleveland Park. I and many of my colleagues rely on the Cleveland Park metro station for work.

Archives, Judiciary Square, Smithsonian and College Park seem to be too busy after the vaccination has increased ridership.

What do you mean low ridership ?? AT times I cannot even get a train at Grosvenor in the morning because it is too full!!

I often use the McLean, College Park, Judiciary Square, and other stations. Closing of these stations would make metro a non-option for me. It would not go to where I need to go.

As soon as the pandemic is over, we will have to open all metro stations. There is no need to have to close Metrorail station for 2022 because the pandemic quit be over sooner than January 1 so just to let you know

The walk home from Woodley Park is more isolated and therefore less safe after dark. Cleveland Park is closer to my home and has more businesses along the route and therefore seems safer.

Proposal to close 22 Metrorail stations

Large amounts of money have already been spent on constructing the stations, and purchasing the trains and other equipment. In comparison to those costs, the savings from eliminating use of these stations seems insignificant. And discontinuing the use of stations and equipment is a recipe for broken window syndrome, detracting from the reputability of the entire Metrorail system.

Closing stations with parking available is not a good choice (i.e. Van Dorn). Makes more sense to close King Street which has no parking.

This would be a very shortsighted move, undermining trust in the entire system, and damaging the locations that would be closed in many ways, including business success, visitation and livability for residents. With such low staffing at individual stations, it is hard to understand how these closures would save much money anyway.

I live closest to the planned Innovation Center station on the Silver Line Phase II. If that station were to be closed my ridership of metro would decrease significantly in the future and I would likely choose metro alternatives (work from home, etc.) since I had been planning on the convenience of that station opening to continue using metro frequently in the future. If I used metro at all to get into DC it would likely only be very rarely. Additionally, I think considering stations that have not even opened yet to have low ridership is a poor choice on WMATAs part. I would at least hope that metro could open the station first and gather real ridership data before making such a decision that impacts customers. I would hope WMATA could amend this proposal to only include stations with actual ridership data to justify the decision making process. I worry that you risk alienating customers by not doing so.

I think the DC Kids Ride Free program should be more closely monitored to be used only for school, to and from.

Closing the stations on this list would impact thousands of commuters in the surrounding DC area. Before the pandemic, I traveled daily to DC from the Virginia Square metro station. I am fortunate to have a job where I have been able to work remotely over the past year as I am sure many others have as well. Closing these stations in January 2022 would be highly disruptive and would add to significant traffic congestion in the DC area once people return to work in person. When I moved to this area in the mid-90s one of the great advantages was the robust metro system. Millions have been spent in expanding metro out further into Fairfax and Loudon county and millions more have been spent on development around those planned stations.

I transfer from several of these mentioned stations and use them frequently to visit family, friends, for work and for professional development. For example: My cousins live in McLean and I take metro rail to visit them every Friday or on weekends since I do not own a car - so I will not be able to see my family - I have professional development classes after museum hours at the Smithsonian - for which I need to get off at the Smithsonian metro stop - I would not be able to attend my classes - I go for my walks to the mall - and ride the rail to Federal Triangle - I will not be able to go for my walks - I work near the Clarendon/Courthouse/Ballston metro area - I would not be able to get to work - I will be jobless. This is a scary proposal.

This would not work for me along with many apartment buildings in the Eisenhower Ave area. We went without the metro for 3+ months last summer and now you want to take it away again? This is ridiculous and unacceptable.

This plan would devastate people's mobility in the suburbs who depend on Metro to get around. Given there is low ridership due to pandemic, but me and my friends and neighbors want to ride/commute via train to work when people are vaccinated against Covid. After vaccination, you will see train ridership increase significantly even though people telecommute now. Within few months, people like myself want to work from office and for that we do need reliable train service. Most importantly, most tourists visit DC because it has reliable train services. No trains mean no tourists and no tourists means no revenue for DC area. If you must cut cost due to pandemic, reduce the train service hours and frequency until some time period.

It is incomprehensible to me to close stations that serve not only residents and also visitors, e.g.: Judiciary Sq and Smithsonian that serve the East and West sides of the National Mall, Cleveland Park that serves the Smithsonian-National Zoo (although it is not sign posted as such, as it should be!), and Arlington Cemetery. It also appears that Metro stations serving cultural interests, like those mentioned above and Grosvenor-Strathmore, have been targeted for closure. Culture is important for peoples overall well being, which is a lesson learned during this COVID-19 pandemic. Lets keep it accessible to people of all income levels by keeping these stations open!

May discourage some ridership, but seems like a reasonable cost-cutting measure.

No!!!! Grosvenor park is a heavily commuted station when companies are on business!! Ive been taking the metro to go to work since 2014, and this metro gets PACKED daily pre-Covid. It is so popular because it's the metro closest to DC that still has a parking lot, in addition to so many communities within walking/biking distance. A temporary closing in 2021 would be an understandable solution, but certainly not permanent!!! They are in the process of building a huge high-rise + shops community connected to Grosvenor metro. The metro would benefit greatly from this!! We cannot deny the impact of COVID, but this is not a good measurement of ridership. Of course it is low in these areas right now because 95% of its average ridership has no need to travel into dc since our offices have remained closed since March 2020. Of Covid has taught us anything, it is that computers cannot replace the benefits of being physically together. A 5-day weekly commute may no longer be necessary/required, but we will 100% see hybrid solutions that require staff to come in at least 2-3 times a week. For that reason, increasing train frequency makes sense, but NOT closing it permanently!!!! Please do not consider this.

Proposal to close 22 Metrorail stations

The closest station to where I live is the Silver line's Innovation Center station which I have been waiting for it to open for more than a year so that I can take it to/from work. Please do not close it!

I thought that closing stations last Spring was a foolish thing to do at the time and I think that closing stations when the region is trying to pull itself out of the hole created by the pandemic would be a disaster. The original closing taught people who use those stations that Metrorail would not be available for them and must have permanently driven away some former users. Closing them again would only re-enforce that lesson. I live within walking distance of the Grosvenor-Strathmore station and, because I was isolating at home and everything that I regularly used Metrorail for was closed, I suffered only a minor inconvenience. Once things reopen and people are vaccinated so that normal life can attempt to resume, closing stations is a terrible idea. The station infrastructure exists and should be used. The marginal cost of keeping a station open while trains are already running through it should be rather nominal. The closings last year were based on rider numbers that had fallen off a cliff because offices, schools, stores, restaurants and just about everything else had either closed completely or were operating on life support. How can the region come back from the hole that it is in if stations are closed? Closing stations is essentially admitting that the Washington metro area is in terminal decline. People have based decisions about where they will work and/or live based on stations being open. I know that some development plans near the Grosvenor-Strathmore Station are based on the station and make economic sense only if the station is open and functioning. DONT CLOSE STATIONS!

Is there a way to allow for travelers to exit the trains at these stops but not get on at these stops? What actually happens when the station is officially closed. Does the entrance get sealed off and removed and the space above repurposed for gathering spaces/park space.

I use cheverly and college park metro often enough that it would not work with my schedule.

Grosvenor Strathmore is an important stop and many people use it not just for trains but also as a central bus location.

The Grosvenor-Strathmore metro station is an important infrastructure serving the community of residents at Grosvenor Park and the people working there as well. Over the years, people in the community have come to count on it for transportation and limit their dependence on cars. Closing the station would adversely impact people's quality of life. This decision should not be taken by solely considering the ridership under the extraordinary circumstances of this pandemic, but by also considering the impact on the future quality of life of those who don't want to depend on fossil burning means of transportation. Please, take into account those who walk, and bike to Grosvenor metro, and by doing so keep less vehicles on the roads and help reducing pollution.

Though this proposal would create inconvenience for me, I could live with it. West Falls Church (WFC) is my station on interest. What will happen to parking at WFC? Would the available parking prove sufficient for the likely increased number of riders? This proposal remains silent on higher fares and increased fees for parking. Perhaps, your survey highlights these two variables later.

I live near Grosvenor-Strathmore and cannot walk to another station. The other station closures would not affect me but I would no longer use metro at all. If this plan were adopted I would probably spend NO MONEY on metro per year

I rely on Metro bus as well as rail since I dont have a car. I live in College Park and the current bus routes that access the College Park Metro are okay but it is very difficult to get to the Greenbelt station. i wont be able to get to stores or medical appointments easily.

I use the Virginia Square metro to go to work and back. I am a senior and Metro is the best option for me Monday to Fridays.

This proposal severely affects our family. The Eisenhower station and the metro is our primary source of travel around the city. My family uses this station daily for our commutes to and from work, and frequently on the weekends when we visit the national sites of DC, dine out in Crystal City, or shopping in Pentagon City. Additionally, prior to COVID closures we used the Archives, Arlington, Smithsonian, and Van Dorn stations. With my current lung health problems, these proposals would require a longer walk to the nearest metro station or national sites; ultimately meaning I'd have to change my method of travel from the metro to an automobile. Moreover, we have intentions to resume visits to the city for dining and sporting events once COVID restrictions are lifted. These proposed changes would affect our decisions to make these trips.

CLOSING MCLEAN STATION WOULD BE HUGELY DISRUPTIVE TO ALL OF CAPITAL ONE. We do not have the parking to accommodate thousands of additional drivers every day. This station is highly used by Capital One employees, and now that there is a Wegmans and a community center, and soon a hotel, this would have huge implications for the broader community as well.

I think that will make commuting more difficult for a number of workers but I wont be impacted.

I personally work in Cleveland Park as a teacher. 100% of the staff and a large percentage of the families at my school need the Cleveland Park stop to stay open. I recognize there are stations near by, but the young students cannot make the mile trek to school every day.

Proposal to close 22 Metrorail stations

This is a horrible idea! Grosvenor-Strathmore, Federal Triangle and College Park are two stations that are essential to a lot of people. Reston Town Center is one that hasn't been given a chance to grow in the long term, that area will face a lot of growth in the next few years and metro will be a key pillar for that. Smithsonian should also not close permanently, there are a vast amount of people who work at museums and tourism depends a lot on this station.

This would be devastating to me because I rely on the Clarendon metro to get around and it would eliminate my primary mode of transportation.

Many if these stations exist around high-traffic, retail area. If the stations were to close then the workers as well as the patrons would be unable to easily continue work. These stores have reopened at great personal risk to employees, but remain open to serve the needs of the public which wouldn't be possible in the case of many employees, who were driven back to work due to financial necessity, without public transportation.

College Park is essential for me. Without it, my metro use will fall to zero. You are proposing cutbacks to service in response to covid-9 to take effect after the covid pandemic will probably be over.

Not all of the stations should be close, if for any station's that are close to a business or a public event for the community that how can a resident support this/these event to serve the community? College park is close by a college/campus, so a resident won't be able to eat out a restaurant or a art exhibit or attend a community out door event?

With more telework and competition from transportation modes like Uber, Metrorail will not recover ridership any time soon. Also, the cost of living and doing business in Metro corridors is becoming excessive and residents and businesses are moving away.

More service, not less.

Grosvenor-Strathmore, metro station is very important for the people who live nearby: there are seven (7) big high-rise residential buildings (about 400 units in each), and a number of smaller (4-5-story) residential buildings, and many people live in this place because they use metro and, specifically, the Grosvenor-Strathmore station, for everyday commute. Moreover, there is a Strathmore Music Center right at the Grosvenor-Strathmore metro station, that make the Music Center easily accessible for metro riders.

Why live in a city if you can't access it easily? I need at least two of the closed metro stops on a daily basis. The proposed closings are not acceptable for my commuting purposes. Two of the stations that I need to use on a daily basis would be closed for an extended period of time which is not acceptable.

College Park station is the closest station to my place of employment. Closing that station would mean an additional bus trip and the lag time that involves.

Some of the stations I use to travel to certain places. Like East Falls Church, Greensboro, Clarendon and possibly Reston Town Center.

This would not be a good plan. My station would be closed (Grosvenor), which means I could not take metro at all. There are no other stations in walking distance. This may be different for other metro stations (e.g. Mt. Vernon).

Grosvenor-Strathmore is one of the most heavily used stations. The trains are always packed to standing-room only capacity during rush hours, and closing the station would be very unwise. Most of the riders are daily commuters. There are few or no parking spaces available as it is. Once the expanded development plans for additional new housing being built at the Grosvenor-Strathmore Metro station (on premises), is completed, this proposal seems completely counter-intuitive. Why would anyone rent an apartment at a Metro station if the train service isn't convenient and running regularly at 15-minute intervals until 11:00pm, particularly if they are in the service industry?

Arlington Cemetery and Smithsonian need to remain open. These are frequent stops for visitors and the only stations I ever use on weekends. The whole point in having rail service is to have conveniently located stations to minimize travel time and walking distance. Smithsonian is the closest station for visiting the cherry blossoms/Tidal Basin, Jefferson Memorial, Bureau of Printing and Engraving, Holocaust Memorial and the Washington Monument. The outdoor destinations are among the few things you can actually still do during the pandemic. (A walk around the Tidal Basin is always pleasant, but not if you have to walk from another station.) Also, if activities resume at the convention center by Jan. 2022, shutting the Mt. Vernon Square station down would be nonsensical. This proposal definitely falls in the category of killing the patient in order to cure the patient.

College Park serves the many adult/grad students commuting to UMD- other stations will be too far. I did this commute myself for years and the train service was vital to get to and from evening classes efficiently and safely.

there are times when the trains are running behind that people on the silver line need to use East falls church to get to the silver line. This would be a disaster.

I expect my West Falls Church station to be much more crowded during rush hour with influx of East Falls Church riders coming to my station. Would full trains start turning away passengers?

I live closest to Mt Vernon square. It would be inconvenient to walk 15 min then wait possibly 15-30min to travel to a final destination (where I may have more walking to do). Similarly, if I am coming home, I would have to factor in a 12-15min, so I would likely not choose Metro if I, for example, were carrying anything.

Metro should canvass how many healthcare and frontline workers use those stations. More than ridership numbers, the issue is do those low ridership numbers cover high-valued workers?

Proposal to close 22 Metrorail stations

Wow! Clarendon is probably the Orange line station I've used most often in the past 25 years of living here., followed by East Falls Church. And the Seven Corners intersection long range plan that followed lots of study and community input has a ring road built that lets buses and other transit easily get to Easy Falls Church. And the closures would seem to adversely impact Arlington. But if these stations have low ridership, do people in the area really care about mass transit?? And should others (e.g., federal tax payers, homeowners with high property taxes already who don't use Metro) pay for these shortfalls?

No, definitely do not close College Park Station. This would hamper those trying to connect to the multiple red line stops, defeat the purpose of dollars spent planning and constructing the station, and impact the businesses, UMD and surrounding businesses, and neighborhoods. Finally, residents in College Park and surrounding communities would experience a negative impact on our property values. Access to College Park helps the growing number of commuting and resident UMD students, faculty, and workers in the College Park area. For the past 15+ years living in College Park, our family has seen dynamic, positive growth and development in this area. For example, in college Park, our communities have been spared many home foreclosures during the last economic housing crisis due to a high number of residents who didnt have underwater mortgages.

What kind of public transportation will there be for riders now using East Falls Church, Virginia Square and Clarendon, especially East Church, where there is parking? For those who live on the Orange and Silver lines, the closing of the Smithsonian Station will be the end of uncomplicated metro rail travel for out of town riders to the museums.

We can walk to the Grosvenor/Strathmore station, as can many thousands of the residents of Grosvenor Park, Parkwood, Garret Park, The Wildwood and Lone Oak areas, and the communities along Tuckerman Lane. With Grosvenor/Strathmore closed all would have to park at White Flint or Twinbrook. I have no idea whether that is even a feasible alternative. Or Metro would have to run buses from Grosvenor - not necessarily a cheaper alternative and certainly something that would add to everyones commuting time.

Unthinkable to walk from one steroid to the closest one or add a ride on trip and make my trip longer and more expensive.

I depend exclusively on the East Falls Church metro station. Closure of this station would have devastating consequences on my family, especially as covid-restrictions lift and we try to get back to work in an already financially struggling household. More generally, the proposed station closures seem to primarily (and disproportionately) affect Northern VA stations and thereby have a disproportionately negative effect on this community. Additionally, the seemingly objective measure (distance between stations) as a grounds for shuttering "nearby stations," is subjectively applied. The distance between stations in Northern VA is significantly greater than those within DC (most of which in DC are not on the proposed closure list). The significantly greater distances between the stations in NOVA that are proposed to close and those that remain open renders the alternative remaining stations unrealistic options - station accessibility within walking distance is no longer an option in any reasonable amount of time for commuting purposes. The remaining stations are therefore not viable alternatives in practice, despite the theoretical option to access remaining stations. One of metro's purpose is to provide access to transportation to those that do not have means to rely on a car. And at a time where the pandemic has devastated the economy, stuttering stations as we struggle to recover will likely have a significantly negative impact of reviving the local economy. An additional consideration is one that causes significant concern - with the proposed closures, ridership will further drop as commuters seek more efficient means of transportation. This will likely render the services obsolete except for recreational use, and may ultimately lead to permanent closure of these stations.

These closings look so drastic that Im beginning to suspect a Washington Monument strategy: propose outrageously drastic cuts so that people recoil and give you all the subsidies you want. Still, in hindsight, Metro overexpanded. Because ridership that will never return to what it was before, Metro needs to downsize.

We live several blocks from Virginia Square. We and our neighbors used that station every weekday before the covid lockdown. We would expect to be able to use Metrorail again when we can return to work. If you close stations as described, we would have to hike to Ballston or Courthouse 5 days/week, which is too far to make Metro a reasonable choice for daily transporation.

As someone who is visually impaired and very dependent on Metro, closing the station nearest to me for at least a year would be a disaster. I already experienced this in 2020 when the Cleveland Park station was closed. While Metro cites nearby stations as the reason to close a station, believing that walking a mile or so to the next nearest station is not a problem, those close by stations might as well be on the moon for the visually impaired and others with disabilities. For example, I would lose access to full service grocery stores, and would have to forgo weekly allergy injections and physical therapy (I had to give these up when Cleveland Park was closed last year). Metro needs to be forthcoming about how long they truly intend to keep these stations closed. Being isolated for a year would be extremely difficult; any longer than that and I would have to move to a place with more reliable public transportation..

I am not familiar with all of these stations but any station in the suburbs or closer to suburbs heavily rely on the metro station. For example Grosvenor Strathmore has a lot of apartments and houses in the near vicinity of the metro station. Same goes for east falls church, I believe good amount of commuters live on or around these stations. Perhaps Arlington Cemetery or stations such as judiciary square (my office building is closer to judiciary square but only 2 more blocks from gallery place or union station) could be closed.

You do know that there is a steep incline between Woody Park and Cleveland Park, right? And that for older folks this would be difficult.Why do we continue to build stations so far out? Why cant the Dulles stations be on a light rail that connects with the system? Why are we allowing these stations far-out to cripple the system?

Proposal to close 22 Metrorail stations

I regularly use Grosvenor, Judiciary Square, and the Smithsonian stations.

This proposal appears to be intentionally provocative rather than a serious proposal to reorganize public transportation in Washington. Many if not all of these stations provide essential service to the local community. Closing them would constitute an irresponsible waste of the resources that have been invested in developing the metro system.

Closing stations is a non-starter! Please don't do this! Many people have made decisions on where to live based on their proximity to a metro station. Companies have made investment decisions based on proximity to a given metro stop. The elderly and physically challenged have done the same. Workers - where possible - have chosen to accept a job because of nearby metro access. Reduce the number of trains or increase the time between trains if you must, but for heavens sake, don't close any stations! Ridership will improve as the country gets past this pandemic.

As an Assistant Property Manager for a 505 unit high rise community adjacent to Eisenhower Metro Station, our concern is keeping Eisenhower Metro Station (Yellow Line) open. This concern has been voiced by many of our current and future residents who are under the impression our management company can influence WMATA in doing so. Despite the impacts of COVID-19, many of our residents are still commuting via Metro into The District. With the National Science Foundation and US Patent and Trade Office as our neighbors, you would be forcing more individuals to drive in an area with already increased traffic congestion. Its significant to the vitality of our ever-growing Eisenhower neighborhood to keep Eisenhower Metro Station open.

College park metro is the only major easy access from UMD to Washington DC. It'll hinder a lot of access from UMD to DC such as internships, jobs, or just even traveling from DC to UMD.

This is outrageous! These station closures would result in an awful public transit system that not only doesnt serve area residents, but visitors as well. Are people supposed to walk from Dupont Circle to Metro Center or from Capital South to Metro Center, just to name a few examples. In my case you would close both the station near my home (Grosvenor-Strathmore), which I can walk to, and the station where I worked (Federal Triangle). Also, when was your ridership survey taken? Did you happen to notice that there has been a pandemic raging for the past year, when many worked from home? Dp you expect this situation to continue into perpetuity??? Obviously it wont, and Metro ridership will go back up.

Leave open archives

Close is a relative term that impacts only those that are able-bodied and could travel the distances between the stations on foot or (if lucky enough to be available - by bus). Most of these are not close in my definition - a few blocks, e.g.: Farragut North to Farragut West.Arlington Cemetery - should remain open as there is no other alternative to reach this station above ground (bus). Clarendon - should remain open because it is near the only Trader Joes in Arlington, which is very busy. It is also a main restaurant/bar area. Smithsonian - Please dont do this to the tourists. Its their main stop for the Mall.

I use Grosvenor-Strathmore. There is no parking at Medical Center. Im concerned that White Flint would not have adequate parking after Grosvenor-Strathmore was closed.

I think the Smithsonian station is needed since it is near museums and federal building. There is low ridership now at the Smithsonian station because no one has been able to get out and about because of the pandemic so there are no tourist. Also, most federal workers are still working from home. I think ridership will pick up at that station once things are fairly back to order.

Unless WMATA plans to partner in a significant way with micromobility companies, this would dramatically reduce population connections across the entire metro area and moreover would severely reduce the opportunity for the Metro to start rebuilding its fare base once the COVID pandemic ends.

This would limit my travel to Washington, DC on public transportation due to the increased time necessary to transfer from the Ride-On Bus to Medical Center Metro, for example. I would simply be avoiding the city (its establishments and amenities) by driving North on Rockville Pike to comparable establishments. I would strictly limit any travel to Washington, DC unless absolutely necessary for work and then I would likely be driving to Washington by car. The United States needs to prioritize expenditures to ensure continued and expanded operations on Metro in its Capitol City as does France and the United Kingdom.

I have been teleworking because of Covid, but once I return to work I will use the Cleveland Park Station to get to work. Also, the Cleveland Park station should remain open because it is near the Cleveland Park Library, which is used by people who live throughout the city..

Proposal to close 22 Metrorail stations

This would be a huge mistake! I mean closing down stops like Grosvenor, Cleveland Park, East Falls Church, Eisenhower Ave, Van Dorn, Virginia Sq and Clarendon would be absolutely crazy because there are so many apartments, houses, businesses and retirement communities nearby. This would be very bad for seniors and people with disabilities, are handicapped, lower body injuries or anything that can hinder their ability to walk to other stops nearby. College Park is insane too because that's the closest stop to the UMD and college students need that stop if they want to get around. Also, stops like Arlington Cemetery, Federal Triangle, Smithsonian, Federal Center, Archives, Judiciary Sq and Mt. Vernon Sq would be unacceptable because the tourists that come back later in the year are going to need those stops. Mt. Vernon sq is completely unreasonable because that's where Walter E. Washington Convention Center is. Morgan Blvd would be reckless to close down too because that is the closest stop to FedEx Field and spectators eventually are going to be back allowed in the stands and people need that to get to/from football games! Hopefully these thoughts are in your minds

I think for some of these, that makes sense. But I don't know how feasible it is for other stations

I use the Clarendon station to get to work

I use the Clarendon station regularly. I expect to use it more once vaccination is more widespread and more places reopen, as I expect to happen before the end of 2021.

I frequently use Clarendon, Cleveland Park, Mt. Vernon Sq., Virginia Square, and am/was excited that the Silver Line Phase II represents expansion of the system

Currently relying on Clarendon stop in AM commute, I could use Virginia Square instead if necessary, but closing both would cause me to miss earlier arrival trains on Orange Line, delaying me at least 20-30 minutes in commute to DCA, and as it is, I'm already having to ride into city and switching to Yellow line at L'Enfant Plaza in order to reach airport on weekdays due to Arlington Cemetery Maintenance for next 3 months

Many of these stops are not near other stations. I do not own a car. How would I get from a station like College Park to the next station, West Hyattsville, which is THREE MILES AWAY? It is a 1 hour walk between the stations.

This is a horrible decision, ruins the entire purpose of the metro system, and renders Metro unusable. I'll have to purchase a car for myself, which is not a good use of money and would be terrible for the environment. These stations should be closed today, and reopened this summer when the pandemic slows down and people return to in-person work.

Please consider leaving Greensboro open. The corridor of Route 7 between Spring Hill and Greensboro is going through major expansion and there is no safe pedestrian walkway along this road so it would be safe and helpful to have both stations operational.

I live at the Parc Meridian which is right across from Eisenhower station!

Grosvenor is the only station I would embark from because there is no parking at NIH/Medical Center and extra drive and train time plus parking cost to embark from White Flint makes the commute time unacceptable compared to driving. Previous proposals that reduce train frequency at White Flint would also be unacceptable if Grosvenor station was closed. I can't take a bus to metro, too many blocks to walk to the bus, have to carry things, especially in poor weather.

Don't close Smithsonian please. It's the closest to the museums.

Several listed stations serve as alternative stations for planned/scheduled or unplanned/emergency closures!

Archives, East Falls Church, Mt. Vernon Sq, and Van Dorn St. are important commuter hubs with no decent walking routes to nearby stations. Would you be providing bus shuttles to these closed stations? Would there be *any* connections to these stations?

Would use Virginia Square or Clarendon daily for work commute

IT WOULD BE A LONG WAY FOR ME TO WALK IF SMITHSONIAN, VIRGINIA SQUARE, FEDERAL CENTER SW WERE CLOSED. I USE ALL OF THESE STATIONS FREQUENTLY.. I NO LONGER HAVE A CAR.

Keep them all open and be willing to accept limited usage at these stops.

I really can't comprehend how stupid this is. So, in order to recover from the economic setback of the pandemic, Metro's proposal is to cut off college students that want to go downtown, and limit tourists from reaching the museums? Why are you closing stations after the pandemic???

I have no idea what you're thinking with this proposal. Most of these stations are nowhere near another station.

My daughter uses the Metro between Shady Grove and Grovesnor to attend a nearby high school. This would cause significant issues to multiple nearby schools.

My two closest metro stations are Clarendon and Virginia Square, a location that I chose specifically for its proximity to Metro. These areas are home to many, many professionals who pay a premium for living close to a metro station. It is not feasible for me to get to the next closest metro station in order to continue utilizing metro for my commute to work if these stations are closed. I, along with many others, would have to find alternative, non-Metro methods of commuting. I imagine that many along any of the proposed closing metro stations would feel similarly. Also, the small businesses (restaurants and bars) in the Clarendon area will definitely take a hit if the metro station is closed, OR it would increase vehicle traffic (and potentially drunk drivers) in an already congested area. I also imagine that this would force many people to move or leave areas with closing metro stations to live closer to areas with open metro stations, further increasing rent premiums around open metro stations.

| |
|--|
| Proposal to close 22 Metrorail stations |
| Please dont close Clarendon or VA Square! |
| Unsure what the |
| With MetroBus lines not running, Van Dorn is an invaluable station to both Alexandria City and Fairfax County, particularly for those with a Pentagon commute. The additional travel to other stations may be small in mileage but it is a significant amount of time overall. |
| This would immediately ruin housing prices. We are closing on a house next month and one of the reasons we picked it was its proximity to a metro station. Do not close metro stations! We have way too few already compared to any other major metro system around the US/World. |
| We chose to live within walking distance of Metro and made the commitment to the city and the neighborhood, in 1993. We consistently choose Metro over auto, except during this COVID outbreak. Now that I have been vaccinated, I am back on Metro. It is my understanding that DC and the Greater Washington area applaud the idea of older residents aging in place rather than being pushed out. I am indeed now an older resident and would not be able to make the walk to a more distant station, especially on a work-day. |
| Stations are NOT that close to each other,. Final destinations from many of these stations currently involve further actions, i.e. bus or walking.. closing them may make things more difficult. If/when pandemic ends, tourists use Smithsonian , Archives, Federal Triangle, Arlington Cemetery. |
| The parking at the nearest stations is inadequate. |
| I live in walking distance to Grosvenor/Strathmore & use Judiciary Sq. & College Park stations often. |
| Clarendon and Smithsonian are important to me. |
| Clarendon is very central so getting to clarendon shops by either Courthouse or Ballston wouldnt be the most ideal. |
| The next closest metro is too far for me easily reach. |
| Grosvenor-Strathmore is my preferred location for a number of reasons and it would be inconvenient to have to use another station |
| No stations should be closed., but if station closures are necessary then the closures should be rolling closures so that all these stations are not closed at the same time. All stations that have parking outside and garage parking should not be closed because these garages and outside parking allow people to park and ride. Parking and riding gets cars off the road which was the initial thought when building the metro. College Park is only closed now because of purple line construction, so if purple line construction is still ongoing in January 2022 then it should remain closed until the purple line is up an running. |
| The distance between courthouse to ballston is quite far for someone walking. Will bus service be available? It also seems wasteful to close EFC since it has a parking lot for commuters to drive in and park. |
| half of those are nowhere near other stations |
| I understand some stations need to be closed, due to the pandemic and low ridership. Understandable, but also sympathetic of the employees that work for Metro to have their hours cut or cut off entirely, due to any Metro station closures. |
| I say no. However I understand because I see so many people not paying. How can you keep them all open. Meanwhile, I need to get some good walking shoes bro meet this proposal. It already created issues when metro took away bus stops that were close. Which was awful. The distance between stops are terrible in some routes. |
| Speeds up the death spiral for metro. |
| I think this plan would not be very helpful to tourists who come to visit DC, and it would likely devastate many businesses around those stations. |
| As I stated in response to Proposal #1, I really dont want WMATA to have to cut Metro service on any of the lines, but THIS IS THE WORST OF THE PROPOSALS SO FAR. |
| Holy hell this is bad. That is so many stations. And your definition of near another metro station is interesting. This will GRAVELY impact area home property values. My nearest stop is Clarendon and the next nearest is NOT near me. It would completely remove my ability to take Metro. I get that this last year has been hard on the Metro system as people worked from home but these proposals are massive overcorrections. If you did this AND limited how often trains arrived at stations I just dont know what happens. |
| I could get home because I live near Fort Toton but my Dad lives in Grover-Strathmore so I could not see him.I |
| Grosvenor-Strathmore is essential to me, my family and some of my friends. |
| Although you are not closing the two stations I use for my commute I think it is short sighted to close the Smithsonian station once tourist return, the college park station once students return and others. |
| You would be closing both of the metro stops I use. In the morning I depart from East Falls Church metro and arrive at Federal Triangle. I walk to EFC so another station is not close by. I would have to drive to another station which would clog up the roads and create an additional expense for me. |
| These closures are totally unacceptable. We depend on being able to walk to our closest Metro station -Clarendon - in order to go downtown or elsewhere in NOVA. This will affect the businesses in our area, the restaurants and shops; it will decrease our house values. This is going backwards, not forward. PLEASE re-think this; make the case to Congress! |

| |
|--|
| Proposal to close 22 Metrorail stations |
| but keep Federal Center open |
| Your closure proposal GUTS the Metro system and the closure of many stations will render Metro useless for many many people who depend on it as their primary means of transportation. It is also going to seriously diminish property values in the vicinity of any closed stations. People buy here and rent here at Grosvenor because of the easy access to Metro. Raise the fares if necessary. |
| Cleveland Park station is an essential station on the red line - the distance between Woodley Park and Van Ness is just too far to not have a reasonable intermediate stop. Myself and many other people live close to this station and depend on it for quick access to the rest of the city. Closing Cleveland Park creates a plethora of issues for people who live in this area, especially when the CT Ave busses don't run frequently enough to compensate for losing metro access. |
| While there are other options, we have used Arlington Cemetery as a point for walking to work instead of Foggy Bottom, and for tourism when visitors come to town. |
| I live within walking distance of Grosvenor Strathmore and it is the reason I purchased this house. I do not have a car and closing this station would negatively impact my decision to continue using metro |
| Please don't close Clarendon, or Smithsonian!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! |
| I do not agree at all closing Grosvenor-Strathmore Station. That is the station nearest to me. I'm 72 years old. It will be tremendously inconvenient as I do not like to drive far. |
| Why would the stations above be closed when people are getting the COVID vaccine? Wouldn't businesses start reopening and people starting to traveling? I was passing by all those unopened new stations and wondering when they will open? A lot of electricity wasted on train stations not in use. |
| I am sorry, I understand the issue but once I have to start going back to the office I will NEED access to the Metro and do not have a car. I live near East Falls Church and it would be very difficult for me to get to another station without having to leave a lot earlier in the morning. Additionally there are many places on the list that I go to and need the metro to get to (like Clarendon, Judiciary Square, Federal Triangle and Smithsonian). |
| McLean will be a critical station for the new capital one world headquarters complex still being built. How can you close it when we are just starting to recover and thousands will eventually be working there? It was built specifically for the new HQ complex. One of my sons works at the new Wegmans there and uses metro bus 23, and also uses the metro to and from Tysons via McLean station. |
| Grosvenor Strathmore is used by so many commuters on the red line as it is the first station with parking. Please do not close or change the status at this station. |
| I use the Virginia silver/orange line, closing Virginia Square makes sense since it's so close to Ballston, closing Clarendon however would create a 2 mile wide service gap between courthouse and Ballston. Closing Smithsonian station would also cut down on visits to the Smithsonian museums - maybe rather than closing the Smithsonian station service hours there could be curtailed to align with the Smithsonian museums operating hours? |
| This proposal is probably the most objectionable, problematic, and inconsistent with metros published/stated organizational goals. First, what data underlie the selection of these specific stations? Have such data been robustly analyzed, validated, subject to sufficient rigor and reproducibility, and communicated to the public? Second, given the disruption in traffic and commuter flow that the closure of stations would represent (not to mention additional loss of public confidence and the reputational risk to metro itself), this proposal should be viewed as the last possible course of action to rectify fiscal challenges, taken only in instances wherein EVERY OTHER COURSE OF ACTION HAS BEEN ATTEMPTED AND DULY FAILED. As a concrete example, the closure of Grosvenor-Strathmore would negatively impact thousands of employees at both the NIH and Walter Reed Medical Centers, front-line personnel who not only constitute part of the national response strategy for the provision of care during the COVID-19 pandemic, but who are/were also directly responsible for the very research and science that led to the successful development of the very COVID-19 vaccines (e.g., Pfizer, Moderna) that are now saving the lives of citizens across the DMV areas and the United States. Closure of this station would displace thousands of these critical and dedicated employees, whose expertise will continue to be counted upon to develop effective responses to the additional strains of coronavirus currently being discovered and for which public vaccine boosters may become necessary in January 2022 and beyond. It is unlikely that the metro board intends to slap these critical front-line personnel in the face, but the closure of Grosvenor-Strathmore would be interpreted as such, given that it would constitute the functional equivalent of this action if implemented. This is just one example of the reactivity of this specific proposal. The proposal does not appear well thought out nor grounded in (or driven by) data or careful analysis and consideration. Given its implications for metro and its stakeholders, this proposal should be used only as an absolute last resort. |
| I and people in my area were eager to see the silver line open up, but now it looks like it'll be gone as quick as it arrives! More seriously though, Virginia Square is central to my university (GMU), I and other students use it to reach the second campus from the first, but now it'll be gone? Without it there's no reason to take metro at all. |
| This would impact both ends of my commute making taking Metro impractical for me. |
| I infrequently use the metro due to COVID however, I will be using the Clarendon metro every work day. It would inconvenience myself and fellow neighbors to close down this station. |

Proposal to close 22 Metrorail stations

This would be a terrible decision. As just one example, I currently live within a 15 minute walk from Clarendon Metro. I could drive to VA Square, but would need to be dropped off, or park there for the day. If both stations close, I would have to drive to Ballston, Courthouse, or Rosslyn and park there for the day. The inconvenience, combined with the cost of parking and the cost of riding metro, would likely mean that I would seek a parking spot downtown. In addition, parking at the remaining open stations would become much harder to secure and would likely lead to prices that are similar to DC garages. Finally, our teenage kids use the metro and this would no longer be a viable option for them. Shame on Metro for even considering these options.

It will make it harder for our kids to take metro to get to us. Wow, Reston just opened.

Seems like these decisions are being highlighted due to the impact of COVID 19. Making rash decisions are not wise. This pandemic will not last forever, consider reducing the salary of Board Members and upper management instead of eliminating much needed service.

NO! Absolutely NOT. College Park is my MetroRail lifeblood for using the entire system. It is my entry and endpoint on the many days when I use the Metro system. Use of the Green Line at College Park is an absolute fixture in my MetroRail travels. Similarly, Archives is frequently my destination after getting on the Metro at College Park. Without College Park and Archives, my use of, and enthusiasm for, the Metro would decrease substantially.

Not really, especially in the remote suburbs...not everyone can get the bus.

Reston Town Center closure is plain dumb and I dont use this stop

Terrible proposal. Many of these are at federal facilities and tourist destinations. A few are in neighborhoods that are on the cusp economically and will collapse without service. Tourists need to walk downhill to the zoo from Cleveland Park (and downhill after to Woodley!). Raise more money through value capture and increased federal contribution. Make surrounding counties pitch in. Ddot is trying to reduce car volumes in DC -- cutting Metro service at the same time will harm residents, commuters, businesses, workers, tourists -- everyone above and below ground

I use the Cleveland Park station. Also seems odd to close the metro at the convention center. This would impact out town conference goers and event planners considering having events at the convention center.

This would not work for me, due to the visual impairments that limit from walking too far and not able to use the stations that are closed to home, hospitals and groceries.

This kind of defeats the entire purpose of having a metro line, doesnt it?

How would people who use one of these stations get to an open station if theyre not easily walkable? If I walk to McLean how am I getting to Tysons? Will there be shuttle buses?

Theres no parking at Tysons so I cant drive.

I use East Falls Church and Clarendon frequently.

I cannot imagine Grosvenor-Strathmore station closing, it is right next to the concert hall, and near so many neighborhoods, and there is the tunnel underneath Rockville Pike for people to get into the station from the other side. This would increase traffic, with more people driving, and would be very inconvenient. If the metro has to close at (pm, and there are fewer trains to keep a station like this open, then that is important.

I would not be directly affected by this b/c my station is Braddock road. But it doesnt seem right to close this many stations around the system. Folks buy homes b/c of the close proximity to metro stations. I did, when I bought my house - I can walk to the station. 100% why I purchased my home. I am not alone in this.

Students will be adversely affected if they attend George Mason University Law School (near Clarendon Metro) or the University of Maryland (near College Park Metro). Moreover, patrons of the Arlington County Central Public Library (near Virginia Square Metro) and the DC Public Library. (near Cleveland Park Metro)

Impact on people with disabilities and the elderly would be detrimental. Additionally, I question the determination process of what stations would be closed. For example, Arlington Cemetery station is not closed to = in walking distance to any other station. What numbers were used to determine low ridership?

Some of the stops on this list make absolutely no sense. How is stopping service to a local university (College Park) beneficial for students/faculty/staff? And stopping service to Arlington National Cemetery is outrageous! How could Metro even consider limiting access to a location dedicated to honoring our nations fallen heroes? Its disgraceful that this is even an option.

As a legally blind person, how would I get to another station if Grosvenor Station is closed? Will there be free shuttles?

Closing a few stations in non-walkable areas where most people drive or come by bus, when they could just drive elsewhere or the bus connects elsewhere, that is not great but as a necessary measure could work for a bit. It could also work downtown where a lot of stations are close together, and many serve the un-dense mall. But this is just too many stations. Make some stations unmanned to reduce costs. And if you do close stations, you better be running through them at full speed to reduce trip times and save driver costs; dont be rolling through at 10 mph!

Proposal to close 22 Metrorail stations

Closing stations at night in close promity to other stations is less likely to cause riders to enter and exit at the less convenient station to their destination and more likely to eliminate those riders altogether. They will more likely opt for a more convenient mode.

Arlington Cemetery isnt near another station. We must be welcoming to visitors who also use the system.

Cleveland Park and Grosvenor-Strathmore stops are vital and need to stay open!

There are too many factors that may change between now and then.

WHy not close white flint instead of Grosvenor? Also, seems short-sighted to close the new silver line stations.

I commute to College Park. Its more than a 2-mile walk to/from my workplace from/to PG Plaza. And I already take MARC to Metro, and transfer Metro trains. I would end up driving rather than taking Metro.

Do not close any stations. This does not reduce operating costs, it only reduces revenue generating capabilities. You want to reduce overhead then run fewer trains. Also considere eliminating overtime. Also get rid of your useless unions that are bleeding you dry. Reduce wages across the board. Eliminate or reduce bloated pension plans.

I dont know what you think the meaning of the word near is, but it apparently doesnt mean the same thing to you that it does to me.

How do base this low ridership. You need to do a better research.

I am concerned with closing College Park off due to its proximity to the University of MD. I have taken that train to sporting events in College Park several times and will no longer be able to afford to do it if metro stops service there.

We moved to our condo for our last home because it was only 2 blocks from Va Square Metro - so very many of our activities (both evening and day) would be curtailed without Va Square, as would visits from friends and family. If you closed both Clarendon and Va Square, we would be cut out of many, many activities and pleasures. See previous answers for our activities as seniors. We really want to continue an active life, depending on Metro,without night driving and the difficulties of getting parking anywhere in the Washington area. Taking the Metro is preferable for the climate also. The planet does not need more cars on the street.

These stations are necessary for those who may be unable to get to the next closest station. For example, College Park (though not particularly close to the UMD Campus) is 3 miles from PGP and 5 miles to Greenbelt. Im sure you are aware of this. How does that make sense?

what is even the point of opening the new stations if youll be closing them? all of the stations listed in the suburbs, while close to other stations, dont work if the parking isnt large enough to cover the fact that Id have to drive to West Falls Church and park my car because I can no longer walk to East Falls Church.

I board metro from College Park and my destination is Archives vis versa to get to my place of employment by 6am. This plan would not work for me due to other stations are far from the county in which I reside and I would have to drive further out to another metro parking area to aboard another station that is operating. Which also may be a problem if station between are closed as well. This plan puts those who do still use metro in limbo.

We are elderly and use East Falls Church station for doctor visits in DC. We also use Metrorail to go to Union Station (Amtrak), Reagan National Airport and Dulles International Airport from the East Falls Church station. We also use Metrorail to go to Arena Stage, the Kennedy Center and the Smithsonian museums. East Falls Church station has a parking lot, which the other Arlington stations do not have. Additionally, the station was just renovated. We, as elderly people, avoid driving at night.

There are many low-income housing complexes near both the Reston Town Center and Innovation Center stations. These residents are precisely the cohort whose transportation challenges need to be met for EQUITY to begin to become a reality.

Cleaveland Park is a main station for me --and by 2022 it will be The main station for me so that certainly doesnt work

In winter and during night time i do not prefer walking as it is not safe to do with my kids.

If the near stations are within a 20-30 minute walk, Im for it

East fall church is the fist/last station for orange and silver lines. It's important to keep it open. Also because it has parking so if other stations are closed, people can drive to East Falls Church and then take the metro.

I typically utilize the Grosvenor-Strathmore Station as I require parking for the car I use to access Metro. Parking is available at this station while it is not at The NIH-NavyMedical

This is a great big NO for the College Park metro! There is a world class university located at this stop! You cannot close this metro station!!!! This will decrease ridership even more! People who would likely take metro to get into the District from College Park will instead drive into DC, not drive to the closest open station and park. Once you are in your car, it's easier to just drive directly to your destination, not drive to another metro and park. The beauty of the college park metro is that it is located in the middle of a residential neighborhood and the community is able to easily walk to the metro stop from their home. Closing this station would be a HUGE DETRIMENT to the College Park community!

Proposal to close 22 Metrorail stations

This would be HORRIFIC. not only would it close the metro station by my house (East Falls Church) but ti would also close the metro station by my office (Greensboro) and we are heading back to the office soon. this is a TERRIBLE idea. Also, thats bullshit that East Falls church is considered near another metro stop. the closest is Ballston and thats NOT walkable. this is INSANE.

Grosvenor-Strathmore must remain open for my travel purposes. Maybe, you should not open the Silver Line if you cannot afford to maintain services to existing stations.

This would be very disruptive, it would significantly affect my commute

I am a retiree who volunteers weekly at the Archives, I take the Metro to the large AMC cinema at Eisenhower, I regularly attend lectures during the day and in the evening at the Smithsonian, I bank at my credit unions Clarendon branch, I take lifelong learning classes at GMU at Virginia Square, etc. The distance between stations is sometimes quite far, or worse, difficult to navigate safely. Closing any of the proposed stations would severely affect my ability to get around by Metro to the places that enrich my life.

This a terrible idea. The purpose of public transportation is give people access to it. If I have to take a taxi or the bus (assuming they are still running) to the subway station, why use the subway at all. Besides, the train still will pass thru these closed stations to get to the open ones. How much \$\$ Metro saves on closing a station Low ridership doesnt mean no ridership.

I chose to live where I do because of walking distance to East Falls Church metro. With closure of that station, it completely impacts my commute and my home value.

I use Metro when I have jury duty or go to the museums so losing Federal Triangle and Judiciary Square would be unfortunate and inconvenient.

Smithsonian station is not near any other stations. There are lots of federal workers and tourists who cant walk long distances.

I enjoy a shorter commute. During the shutdown of stations in the early days of the pandemic, my commute from LEnfant to Foggy Bottom was ten minutes or less, so Im fine with this. Once again, there are those who work in these areas in non-telework situations.

I use Mt Vernon Square station a lot, so closing the station is a major inconvenience for me.

As a last resort.

Closing Virginia Square and Clarendon is a mistake as those stations are right next to one another and service university students and the community. Additionally, closing Archives, Federal Center SW, Federal Triangle, Judiciary Square, and Smithsonian limits the number of metro stops, and thus access, to the mall. This will impact access to the Capitol Building Complex, for tourists and employees, as well as contribute to a traffic buildup at Union Station and Capitol South.

I am familiar with the Orange/Silver line the best, and I agree on a lot of these stations. I hardly ever see people get off or on, and they are so close to other stations. Sometimes as short as a 15min walk away. This would be the easiest way to cut costs until more funding can be obtained.

Closing low ridership stations is preferred over reducing frequency of train arrival.

Oh, so were going to waste money opening the Silver Line Phase II for six months, only to close it for a year? That wont send mixed signals to the taxpayers in Loudon County...

Please don't close stations. This will only make it harder for people to use metro, and it probably wouldn't reduce delays much. The more you cut service, the fewer people will ride, and the more service cuts you will have to make. Don't make permanent decisions based on a temporary situation.

A mile is not "near" Within the District, the difference between a 4-block walk and a mile might be the straw that breaks the camel's back for commuters. In Maryland, these distances are great. College Park also offers a parking garage and a safe bicycle lockup cage. Besides, the Purple Line, connecting New Carrollton in PG County, to Bethesda), will serve College Park whenever it is finished). A useful transit system with plenty of stops will grow ridership. Closing stations will discourage ridership.

I bought my home in walking distance to Grosvenor so that I can use the station to commute into DC.

This will severely jeopardize my sons ability to find a job. He has a disability which prevents him from driving and walking long distances, and we bought a house specifically within a walking (10 min.) distance to metro (the Grosvenor-Strathmore station) to increase his chances to have a job for which he is studying so hard and have more chances to socialize which is a lifechanging opportunity for him. Without a realistic access to metro, he will be confined to our neighborhood, continue staying at home, with very serious long-term negative consequences.

No, this plan would not work for me because Im an essential-healthcare worker at an area hospital. Unfortunately, our shifts end at 11:30pm, which conflicts with your 11pm closure. This is also a problem for retail workers. If ridership is down, maybe you should consider extending your hours to Midnight to accommodate the needs of late night essential workers whod rather pay more to ride metro than an over-priced Uber/Lyft/cab. However, I feel the closure of those stations shouldnt impact late-night essential-healthcare workers. My issue is hours of operation.

Proposal to close 22 Metrorail stations

This strikes me as an awful idea. First, property values are based partially on proximity to metro stations, and it's certain to anger a number of people if suddenly the value of their residence drops. Second, the stations on this list with which I'm most familiar (Clarendon, East Falls Church, Virginia Square) don't have what I would consider another convenient station nearby. This applies to East Falls Church especially. I used to rely on that station to get to work, and my commute would've been about doubled if it was closed. Closing two adjacent stations (Clarendon and Virginia Square) would mean that Court House and Ballston would become "œadjacent." These stations are in the heart of Arlington. In a city of over 200,000 people, it's ridiculous to have adjacent stations in its central hub over 30 minutes away on foot.

No, Judiciary Square is the stop for the Labor Department, MPD Headquarters, and the courts.

This would drastically impact my ability to commute to the city working on hotels

I think that it is a bad idea to close stations (with the exception of the Arlington Cemetery station) because the amount of the net cost savings from closing stations (after taking into account the likely loss of ridership from customers who will stop using Metro instead of switching to a more distant station) is relatively low compared to other rail cost-savings strategies. The net cost savings from closing stations does not justify the damage that would result to the communities around these stations from the lack of convenient access to Metrorail and the damage that could result to Metrorail ridership over the long term due to customers becoming accustomed to using non-transit modes during the period of closure of their local station. I think that WMATA should not close stations, but find other operating budget cost savings, if necessary. If feasible, perhaps instituting short turns on the Blue, Silver, or Orange lines could save money while continuing to provide similar overall service because of the overlap between the Blue, Silver, and to some extent Orange line stations in DC and Maryland and the availability of the transfer option between the Blue and Yellow lines.

The East Falls Church station is where the ART bus 55 terminates. I have often used this connection. I also frequently use the Archives-Navy Memorial Station. Closure would mean longer walks for me going to work.

east falls church is a commuting hub of our neighborhood. There is no parking for the alternative station at Ballston

Closing stations is begging for more ridership loss! The principle of public transportation is to make it so convenient that it makes other modes less palatable! If you force people to walk long distances to reach their destinations from the metro station, they'll either just not ride the metro or at best hesitate to ride it. As a business owner and physician, I went through great lengths and risked smaller margins of income to make my medical practice more accessible to my patients. I don't have the luxury of moving my practice location so easily because I own my space (not rent it). Some of my patients don't possess cars due to financial or medical circumstances and choose my practice due to its proximity to metro. This proposal blatantly discriminates against low-income people. Hardly a good idea. Closing the stations will also drastically change the value of the properties surrounding the stations, causing financial hardship to owners like me. I would have NEVER imagined us making such a backwards step as to close a station in a highly populated and mixed use area.

This seems like a major problem for those living near those stations. The closest station to any of those stations is not close enough to walk to or to. If you live close to Grosvenor for example, the next stations would be Medical Center or White Flint. Neither of those seems to have a good parking option and would force people to either take a bus, pay for a ride or be prepared for a very long walk on a street that may not have sidewalk.

This would impede access to the city and surrounding areas for so many riders, and it would make accessing public spaces like the Mall even more difficult.

closing 22 stations with more than half of them in the District of Columbia where WMATA additionally limit bus service as well is inconceivable when the majority of DC residents have not been considered or counted during the COVID 19 period. Transportation is crucial to DC residents for survival, work and play.

Out of 22 proposal station closures. I can only strongly recommend one: Judiciary Square; reasoning being, even though it is a beautiful location, justices don't work on the weekends. In addition, WMATA, would be warranted in considering the days of the week, as well as timing in all their future management proposals.

The expanse of Metro Lines is a useful and attractive asset for the entire DC-Maryland-Virginia Greater Area. Removing or closing stations is absolutely the wrong move. There must be lobbying of Congressional, State, County for funding. What about raising tickets a moderate amount?

It seems like Metro is closing down a lot of Virginia stations. Not sure why But East Falls Church is a hub for Orange and Silver line - it's how I would get to the Tysons area. And my parents are buried at Arlington Cemetery. I find closing that one particularly disturbing. People travel from all over the country to visit their loved ones there. Why make it harder? And am not sure what pending opening of silver line phase II means? Will it be reopened?

metro would no longer be convenient for me

Proposal to close 22 Metrorail stations

So the hell with the tourists, those who volunteer to go to Arlington Cemetery or who go as tourists, those who go for burials. The heck with those who get off at Cleveland park for the zoo. Overcrowd Woodley and Van ness---and wait until escalators out for months as always happens. Incredible to close stops that jurors use to go to DC courts on both yellow and red lines--or to DOJ or Francis Perkins DOL credit union. Youve blocked access to that entire area! For those who dont drive this is insane. So DC will pay more for those who have to seek reimbursement for travel by jurors. Smithsonian is always flooded in peak times. Stop being stupid This proposal also acts like we dont go to Virginia to see friends who live there. I cant say how BAD this idea is from the get-go. This idea insane and i and friends here will be furious with DC if this occurs or any of the prior proposals and work to vote each of you out. Clear theres been financial mismanagement before the pandemic and investigations needed and accountability. again, this is the capitol of the COUNTRY. There has to be a working modern mass transit system. This is an embarrassment to see such proposals.

Have you ever seen the Federal Triangle at 5PM on a Tuesday? Its a madhouse ... because Navy Memorial is also a madhouse.

My proposal here is to offer express metro services, like the Rideon lines offered in corridor 355 ROCKVILLE PIKE

We already have a years-long problem with elevator closures, and that has proven to be a major inconvenience for your disabled ridership. Taking a replacement bus to get to the correct station is frustrating, confusing to newcomers, and time-consuming. Closing the stations above extends this inconvenience to abled people as well. This experience is not what I want for my friends who do not need elevators! Furthermore, if an elevator outage occurs at one of the nearby stations, disabled people are out of luck too. Closing this many stations will inevitably lose the riders trust in Metrorail and lose more ridership than the money it saves. It is an EXCEPTIONALLY bad idea and the worst proposal you have made so far.HOWEVER, running 50% of trains as express trains that skip some or all of these stations on their line--trains CLEARLY LABELED as express trains so that people know what to expect--is a reasonable compromise.

Greensboro is preferred over Springhill. Smithsonian is convenient for tourists. Phase 2 silver line stations should be opened to assess need of community.

I use some of those stations

Regarding College Park closure - stations this far up are not particularly close to each other and WMATA should not be closing a station with the easiest access to a major university. Regarding Judiciary Sq closure - strongly oppose closing this station as it makes it more difficult for individuals to arrive at court or to access DC government resources, this will also be detrimental for DC government staff who work in this area.

I use the McLean stop to commute to work every single day. If it were closed it would be incredibly inconvenient because Id need to find a ride from the next station to my workplace. Furthermore, I commonly get on/off at the Clarendon and Reston Town Center stops. Closing these would force people to become reliant on other methods of transportation and also make the northern Virginia area less desirable to live in.

Federal Triangle, Smithsonian, and Judiciary are used by many people to access the museums on the Mall. Im sure ridership has fallen as may people are working from home, but tourism will come back soon. You may close all of them if the insurrectionists return. The main Arlington Public Library is at the Virginia Sq-GMU stop. That is the only branch open for pick up right now. They will also have many programs when the shut-down is lifted. Many people live in the V Sq-GMU and Clarendon areas. Ballston-MU to Courthouse is a long way to walk for older folks, moms with kids, or for anyone to walk in the winter cold/rain, summer heat or at night.Would shuttles or buses be running to Arlington Cemetary?

Closing most of these stations is idiotic. Closing all of them is reckless, lazy, and disrespectful of riders AS WELL AS areas these stations service. E.g., Arlington Cemetary is not adequately accessible by other metro stations.

Closing the Clarendon Station would be a serious blow to the business and residential communities that have been built up around the metro. Courthouse and Balston Stations are too far to use easily and would not be a replacement. I depend on the Clarendon Metro stop. My employees depend on it. There is an entire business community of stores, restaurants and businesses that have been built up around the Clarendon station. Closing it would have both immediate and long-term consequences, and significantly damage business ability to rely on infrastructure commitments in their planning. I worry it would result in a shift to car-based business and residential decisions, undermining Metros long-term viability.

This is a TERRIBLE plan. Millions and millions of dollars were spent building Metro and these stations .. they need to remain in use. I live within walking distance of the Grosvenor Metro station and frequently take red line train. I would be very upset if it were to shut down !!

How would you close mt Vernon if that was the yellow destination? These closures make accessibility harder again for people who rely on these places the most.

Keeping stations open could encourage ridership and potentially reduce reliance on vehicles.

You will be closing the 2 statins are use Clarendon and Grosvenor. Not a good idea.

I think it would be a complete disaster for the Metrorail System if many opt these stations were closed. People need access to systems even if some have low ridership.

Closing Grosvenor-Strathmore only leaves White Flint as the only viable option nearby with parking which likely would be overwhelmed with the number of others also needing parking.

Proposal to close 22 Metrorail stations

College Park station is equidistant to my home as PG Plaza, so this would not be a major impact to me.

This combined with reduced/eliminated bus routes (how can anyone consider each of these proposals separate - what you do to bus routes impacts connecting to metro), makes my commute impossible. You are eliminating the metro station closest to my house, as well as changing the bus route to the Pentagon (impossible to tell exactly how the bus route is impacted since you only included the map and not the explanation sheet for the 8Z bus). I could take the bus to King Street, but that adds significant time to my commute.

Closing these stations would turn the roads into parking lots. Some of those stations are used heavily by federal workers. The other stations would be so packed that nobody would be able to get on the train.

Closing any of these stations would be detrimental to the tourism industry of the Washington Metropolitan area. Parking is expensive and limited. Ridership would definitely be severely reduced because tourists will not visit.

If the station near my home were to be closed, that would negatively impact my property value and my small business.

Many people - especially in Clarendon and East Falls Church (from my personal experience) - need to walk or bike to the metro station in the first place, not Park & Ride. For stations where Park & Ride isn't available, you can't expect walkers/bikers to go farther out to the next stop.

This plan would have minimal impact on me, but it would have consequences that should be considered. First- (as much as I hate the tourists) tourists rely on the Smithsonian station. There is every reason to believe that tourists will return in Spring 2022, so closure of Smithsonian by that time would be ill-advised. Additionally, losing the parking at Grosvenor may be tough and would push people to drive to stations further out in order to get parking, which is already scarce. Finally, Metro would need to operate buses from these stations to open stations for people who previously relied on them and do not have a car to get to the nearby station, so I do not know how much of a cost savings it would be on net.

I live near Mt Vernon Sq, and it's dangerous for me to commute using the Shaw/Chinatown stations at night getting to and from

There are so many problems with this proposal, I don't know where to start. Virginia Square-GMU and Clarendon are not as close to other nearby stations as you seem to believe, and closing these stations would significantly hamper residents of Arlington who live in these areas. Not everyone has the luxury of driving into work, and even if they do have a car, many folks would rather take Metrorail into the city for work than add another car to the traffic nightmare that is DC on a typical rush-hour commute. Shuttering stations at high volume locations, including Arlington Cemetery, Archives, and Smithsonian, would undoubtedly make it less accessible for travelers to visit our region's most popular attractions. This would, in turn, decrease economic growth in the DC metro area and provide less passengers for Metrorail to receive revenue from. Instead of closing any stations, WMATA should be looking at other options that will sustain revenue streams without cutting service to valued riders.

As a business owner in Clarendon I depend on foot traffic to come to my location. Additionally my staff depends on the availability of the Metro near their workplace.

vital need to get around by metro

Closing any stations is equally as bad as reducing the operating hours. Not only would this result in out of the way trips for many riders, but it will likely lead to overcrowding at the nearby stations unnecessarily. In farther out stations, this would be a bigger problem for parking. This and closing earlier are the two worst options thus far.

This would be extremely bad for me. PLEASE do not do this. I can see some DC stations where the metro stations are a block or two from one another. But that isn't the case in the suburbs. I live in the condos near Grosvenor. I can't even imagine what will happen to the property values here as the metro is one of the top selling points.

Closing the Van Dorn Station would prove a significant hardship given the high density of people living on the West End of Alexandria. Alternative states offer insufficient parking, and bus schedule in Alexandria is not dependable.

Since I live and work by the red line's White Flint station. I can only speak to that station. The elimination of the White Flint service will have an incredibly negative impact on thousands of residents and employees who rely on that station's service on a daily basis. I realize Covid has impacted Metro's service and revenue. Though, the wholesale elimination of service to so many stations speaks volumes to the quality of the management of the system over time. Also, the non-dedicated, politically piecemeal funding mechanism for the system from the start. Minimum foresight, Minimum capital reserves. I have traveled to Europe and used a number of subway systems in different countries. Their cleanliness, upkeep and efficiency of service puts our nation's capital's system to shame.

I use the Green Line exclusively to get to work and school in College Park. I have no other mode of transportation, only Metrorail and Metrobus. It would be disastrous for many of us going to UMD, if the College Park station were closed. Also, in my case, the F6 Metrobus is on the shopping block. Without the F6 and Metrorail station open at College Park, it would be IMPOSSIBLE for me to get to work. I don't have a car and cannot afford Rideshare on a regular basis. Please consider also that many students do not have vehicles and lots of people use Metrorail to attend events at UMD.

My family compute use these Stations.

Proposal to close 22 Metrorail stations

First, you are RIDICULOUS to base any decisions on current usage. Hold off! Second, I will mention only three know well. Grosvenor-Strathmore is critical to the surrounding neighborhoods. When I was in a walking cast, managing access to Medical Center was nightmarish -- awkward and scary - but I could get dropped off much closer to the station at Grosvenor (and, BTW, you ought to issue temporary passes to people with such injuries, so they could pull into the bus circle off Rockville Pike -- it would greatly reduce the walk/ hobble to the train platform) Third - and this has happened in the past, and it is bandied about in the neighborhood - if we are someday barred from access at Medical Center -- which is perched between two security-sensitive campuses -- the neighborhood (which really includes a lot of people from further up the line, who choose Grosvenor because of parking) would be forced to Bethesda (minimal parking, already overbooked) White Flint or Forest Glen -- ditto to them. Or simply back into cars. Smithsonian --+ youre joking, right? One of two Metro stations nearly every tourist and most metroDC residents are guaranteed to know and use? Archives/Federal Triangle/Judiciary Square? Really? Do you hate federal employees ?

I am 70 years old and I need Mt. Vernon Square open to get senior meal at Saints Paradise Cafeteria 601-A M Street NW between noon to 4pm. Plus, my medical condition will allow me to walk 1 mile to the next station.

Virginia Square is the closest metro station to where I live, so I would prefer it to remain open! Also, it strikes me that some of these stations (Federal Triangle, Judiciary Square) are very popular commuter destinations. While they're not in heavy use now because of the pandemic, once the pandemic is over and offices reopen, those stations will once again be needed. Similarly, other stations mentioned (Smithsonian, Arlington Cemetery) are important tourist destinations. Again, while tourism is down now, it will eventually come back after the pandemic. It may make sense to suspend service to these stations temporarily, but they shouldn't be closed permanently. It seems likely that, after the pandemic, they'll be in high demand once again.

Absolutely brutal. Destroys everything. Going and returning from the Zoo (this will kill the Zoo at the same time); from going and returning from bus stations in Bethesda and downtown DC; from going and returning to conventions and festivals of all kinds downtown; from going north to festivals in Rockville and Gaithersburg; will destroy the Smithsonian's National Folklife Festival on the Mall--a national treasure; our national museums; theatres of all kinds downtown; and life in general in the DMV. Would be tragic--none of them should be closed. Trains are already in disrepair requiring delays and shuttles sometimes which puts at jeopardy trying to get to Union Station or National Airport on time. This would kill traveling outside the DMV to other states when it's unaffordable to take a taxi or Uber to those stations. Would destroy many people's quality of life, including mine. Tragic. The only solution to the whole problem is to raise subway fares. I would most definitely be willing to pay higher fares than to lose these stations, particularly my own which is so close to where I live, Grosvenor-Strathmore, which was, and is, the whole point of Smart Growth and reducing cars on the road; overcrowding of schools (not to mention Global Warming and suffering from dirty air, especially when one has asthma like me).

Please do not close East Falls Church station, that is my primary station

I live near VA Square which would cause me issues when commuting

I work in Cleveland Park. Having to walk from Woodley Park would add another 20-30 minutes to my commute which is already 45 minutes.

Regularly use either Virginia Square or Clarendon station as start or end point. Ballston and Court House stations are too far apart, and too far a hike from my residence as well as many other Arlingtonians. This will force many of us who have used Metro for years to abandon Metro.

My elderly mom lives in Cleveland Park and I help her every day of the week with food, doctor's appointment (we do not own a car) and all primary needs. This proposal is unrealistic.

For tourist purposes, closing the Arlington Cemetery stop is not appropriate, especially in allowing access for those wanting to visit those buried there. Closing Grosvenor is a ridiculous idea - it is an incredibly popular station, has lots of parking - it's the first station outside of the beltway. Regardless, IF needed, I would suggest closing stops temporarily. Ridership could very well increase dramatically in 2022 and beyond, so having the ability to re-open stations would be wise.

I am saying a qualified yes, but I do not use all of those stations, and I think the pedestrian experience of all of those areas needs to be examined before that decision is made long-term.

I live near the Clarendon metro and rely on the metro, even during the COVID-19 pandemic, for my all my transportation needs.

In particular - McLean station. Please do not close this, that is the station my company is closest to

Don't close stations in BIPOC communities.

I normally board at the East Falls Church station to DC for work. Ballston or West Falls Church are not close enough, and if EFC closes it will make driving to work more efficient than taking the metro.

Proposal to close 22 Metrorail stations

I actually couldn't believe what I read. If you reduce service to 30% level, you are only going to earn 30% or revenues after people return to work. The roads will be clogged, and Metro will be sitting on hundreds of millions of dollars of capital investment that would be shuttered. This would become a permanent fixture, which would lead people to leave mass transit altogether. There is no strategy to these proposals but reducing costs to save a budget. These actions will be set off a spiral to the bottom which will completely close the system. Thousands of people will be affected, where will they go?

This wouldn't affect my work commute but what a shame.

Judiciary Square should remain open

I frequently use Clarendon, Virginia Square, and East Falls Church stations when commuting and for recreation. My metrorail use would decline significantly if these changes were implemented. Furthermore, I'd like to note how ridiculous the proposal to close stations that haven't opened yet is. How do you know what the ridership will be at Innovation Center, Loudoun Gateway, or Reston Town Center. The RTC station in particular seems like it will be an important part of the Silver Line Phase II and it seems misguided to give up on it before service begins.

Yes, so long as the L2 continues to operate reliably in order to get to Cleveland Park.

This proposal almost seems like a Straw Man intended to scare the public and their government representatives, because it is so clearly wrong-headed. (1) The Washington area gets huge revenue from tourism, and yet this proposal closes most of the stations most-used by tourists (besides the airport stations): Archives, Federal Triangle, and Smithsonian for The Mall and nearby attractions, and Arlington Cemetery. (2) This proposal also closes stations closely related to federal government offices, also a key aspect of DC, obviously, like Federal Triangle, Federal Center SW, and Judiciary Square. Basically almost every station I go to from my home in close-in McLean or my office in Falls Church City (if I were even to use Metro, with the proposed closure of EFC station) would be closed. This is lunacy. (3) East Falls Church station is serviced by a network of local buses and has many people, like me, who walk there. Closing a station that is located within easy driving distance of downtown DC and Tysons will inevitably result in many more cars on the road. Unlike, say, Cleveland Park or Virginia Square, walking to another Metrorail station will not be feasible for most people who use East Falls Church. (4) Finally, closing most of the key stations on the outer portion of the Silver Line is exactly the opposite of what WAMATA should be doing to reduce passenger-car trips and associated air pollution and congestion. Not to mention the fact that I and hundreds of thousands of others have paid much higher fees to use the Rte. 267 toll road in recent years to fund the expansion of Metrorail to these stations, which would now not function as promised. Of course, there can be no legitimate claim to closing three Silver Line stations because of low ridership when the stations are not even open yet.

The capacity to travel to a variety of locations by public transit is required to allow us to live here without car dependency.

Closure of the Smithsonian station would adversely impact my family's use of metro to visit all the museums in downtown DC! It would force many to have to drive and find parking in downtown DC and thus curtail visits to the museums.

This is outrageous. We suffered through metro mismanagement and shutdowns already. DC of all places should figure this out given our economy's tendency to better weather economic swings. I live where I live (across the street from Virginia Square metro) so I can quickly and easily get to my job easily in the morning and come home at night without further travel and without a wait. All the businesses and schools and churches around here are geared towards this population -- Rosslyn to Ballston on the Orange line. Virginia Square is a busy station in close proximity to key businesses and employers like the FDIC. People bought houses, took jobs, and sent their kids to certain schools relying on being within walking distance of the Virginia Square and Clarendon metro. There's an implied social contract here -- in Arlington of all places. We've paid more for our condos and higher taxes for it. We've paid for schools and parks and infrastructure to build a community. We've had enough stress with COVID. Essentially forcing people to drive to work in DC, entertainment and sports, restaurants, shopping, doctors, the airport, etc. is bad for the environment, bad for DC residents (where I work and play) and PARTICULARLY FOR THE ELDERLY who settled here, and bad for the health and wealth of the metro area. For in demand Northern Virginia/Arlington public transportation at Virginia Square and Clarendon to be eliminated when we are back at work would be devastating to Northern Virginias and the city's economy and residents wellbeing.

I frequently use the yellow line to get to Mt. Vernon Square. Are these proposals temporary because of the Pandemic or will these stations reopen after Pandemic restrictions have ceased?

Judiciary Square is a key area and removes traffic from Chinatown/Gallery Place.

This would cause a traffic and pedestrian mess around the stations that remain open

The closure of the Grosvenor-Strathmore station would add additional time to my commute. The nearest station would require using a bus to get me to either Medical Center or White Flint depending on the travel needs. I am 100% dependent on public transportation, as I do not drive due to medical reasons. I use Metro for all my daily needs: work, grocery shopping, medical appointments, and pre-COVID time: religious services, visiting friends, community events, and other activities.

Need these stops for travel to work as well as delivering medication to relatives.

Proposal to close 22 Metrorail stations

I am expecting that metro riders will return to metro once vaccines are received and employers begin asking their staff to return to work. i think that by Jan 2022, we will be back to normal, and the closed stations will increase overcrowding on metro. I would not continue to ride metro if overcrowding occurred.

My closest station is Courthouse, but I do occasionally use Clarendon station due to its proximity to local stores

Absolutely not acceptable. Neighborhoods will die not a good service to your customers as you are making our commute even longer. Reduce the hours of operations but not permanent closure. Not These are dense areas in Clarendon and VA Square. It will create major crowds at ballston and courthouse that are already packed at rush hours. Social distancing will be impossible. Horrible idea not considering your customer health Not a good service as it will only make us late at work on an a daily basis ,Change the way you monitor your station. Or have the station open at least during rush hours.

Absolutely not! Why not close every station if you intend to chop the system off at the knees? If revenue is a concern why close the summers most popular stop? Why cut off most of Arlington? People need these stations to commute!

This proposal would be tremendously burdensome for me and my family. We are a single car family with two full time jobs and a young daughter. We moved to our current home specifically because of its proximity to one of the stations proposed for closure. Please do not close these stations.

This is a horrible plan. Closing stations means that people like me who are dependent on Metro cannot get to appointments or even have access to the Smithsonian museums. I use several of these stations such as Cleveland Park for my dental care. Metro is discriminating against people who rely on Metro by cutting out entire stations.

Again, I use metro for all types of trips. I explicitly chose to live within walking distance of the metro so that I dont need to depend on a car for my transport needs. This would be devastating to me and thousands of others in the region. Please look for alternative solutions!!!!

Please dont close East Falls Church metro station! Please consider proposal 1 to cut cost instead of closing stations.

I believe, it is time for the Metropolitan Washington Council of Governments (Washington, DC; Maryland, and Virginia) to uniformly engaged the United States Government concerning more formal and permanent federal funding for Metro Bus and Metro Rail, as the majority of its ridership is Federal Workers. Eventually, the Governments and business will figure their business and operating requirements in the COVID-19 Global Pandemic New World order. With vaccinations treatments and opportunities becoming more available, more businesses can start returning and more people and finally have opportunities to go back to work.

Just because they are "near" other stations, doesn't mean it's accessible. You may be asking kids or less able-bodied people to potentially add 10-20 more minutes of walking to another station,

Grosvenor is not near any other station

This would not improve ridership and would inconvenience those who use these stations.

These are critical high volume stations, this plan will inconvenience lots of people. This is not acceptable

Is significant walking distance for older riders.

I work as a Tour Guide and we rely on many of the core stations. Arlington would mean more driving on the roads for buses to pick us up or drop us off rather than starting or finishing a Arlington. Also we often transport groups to or from Arlington Cemetery via Metro.

While some station closures may make sense like Virginia Square or future stations--stations located in Wards 7 and 8, as well as in Prince Georges county should not be closed. Closures to stations in these areas that are primarily black would significantly decrease access and would be inequitable. Closing a station like McLean would significantly increase car traffic and harm the environment. The impacts of closing all the proposed stations would be severe and would force the business commuter and leisurely traveler to seek more costly and harmful alternatives.

Not ideal for tourists (including local tourists) to have all stops close to the Mall closed (Smithsonian, Archives, Federal Center). 2020 ridership is not an indication of how ridership will increase again in 2022.

Both stations I use to go to and from work would be closed.

This would eliminate my ability to commute via Metro. My two stations are East Falls Church and Greensboro. Other close stations arent close enough to be viable.

I am likely to go back to the office soon, and this could make it difficult to get to work.

Archives is my metro stop and Grovesnor is the one that Wilmer Eye patients need to get off at to take the bus to Wilmer

Parking resources at Grosvenor-Strathmore, and shared access for symphony, are valuable to retain. Neighborhood is heavily populated with metro riders

The two metro stations I have used the most are East Falls Church and McLean metro. McLean is a newly opened station which indeed has low ridership, and which would be reasonable to close. However, East Falls Church is an absolutely essential metro station. The 2A bus visits East Falls Church, but if East Falls Church were closed, 2A riders would have to sit out the ride all the way to Ballston or Dunn Loring. This would significantly lengthen travel time for 2A riders.

Proposal to close 22 Metrorail stations

EFC is served by both Silver and Orange lines, and has a number of bus connections.

The company I work for is AvalonBay Communities, Inc. I work out of its headquarters in Ballston. AvalonBay already has some employees back in the office in Ballston and they plan to bring more and more of its employees back to working in the office as things with the pandemic improve in 2021. I am one of the individuals that is back to working in the office. I do not own a vehicle and I rely on the metro to travel to work. If the metro stops near my home and office were to shut down, it would impact my situation significantly. Not to mention the incredibly negative financial impact it would have on the value of my home and all other property owners and business owners near the closing metro stops.

If these would be temporary closures, for the sake of saving money until metro regains riders, perhaps it is a good idea to consider. However it isn't clear if Metro is taking measures to save money now, during the pandemic when ridership is low instead of focusing on cuts when God-willing, the pandemic will be over. Also, I can't comment on the proximity of all of these stations to others, but Grosvenor isn't within a reasonable walking distance to any other station. In the other hand, the distance between Bethesda station and Medical center is walkable and pedestrian-friendly. Low ridership stations could represent lower income neighborhoods and shutting those stations down disproportionately will harm those communities even more post-pandemic. Metro should consider the potential for social justice issues like that when considering shutdown stations.

How would WMATA address the needs of people with limited mobility? Would there be shuttles in between?

The advantage of a metro system is to reduce vehicle usage and to help the environment and reduce the impact on the climate. By having more stations people can walk to the stations and not have to drive. For example, I can walk to the East Falls Church metro, and I, my family, and neighbors walk there every time we use the metro including for commuting. To get to any other station, the closest being two miles from our house, we would have to drive. Often parking is an issue at the other station and driving adds time, as driving to the next station takes longer than walking to our close East Falls Church station. Driving and parking at another metro stop also adds costs - including money for gas, wear and tear on the car, money for parking itself and reduced health from less walking. In addition it would increase traffic and the extra driving would impact the environment. There are a lot of other costs to be considered if metro stations are closed. Please keep all the metro stations open to help make communities walkable and also help the environment.

I could work around all of these closures with my travel patterns to work in D.C. Im surprised that Smithsonian is a low ridership station, though.

Absolutely not. This is an absolute non-starter. Disastrous.

Grosvenor-Strathmore does not have near stations

I use quite a few of these stations, and these draconian cuts are deeply unfortunate.

Not sure, only if there are low ridership.

I use some of these Station , for work and home

These train stations are very important in making sure that certain locations and experiences are accessible to everyone

I think closing stations that trains have to run through anyway is unacceptable. In particular, many of the proposed stations that would be closed are in critical downtown areas or along the Mall, which is already hard to access. I do not see enough value in the closure of station and feel this would only drive more customers away from using Metro, further driving down revenue.

I work at George Mason University and both the Clarendon and Virginia Square metro are the closest metro stations. The next closest is a mile away. This will not work for me or the hundreds of students who rely on metro to get to the university

I know we may seem close to other stations, but in practical terms, this adds 25 minutes each way. There is no parking at Grosvenor, and while there is at White Flint, there are or might be fewer trains passing by there. We moved here knowing that we were close to a Metro, and it allowed us to depend on public transit for our commutes. I realize that times are hard and the jurisdictions have been chary with contributions. I think this is a terrible mistake in terms of public investment in the regions future. With climate change at our throats, Im completely puzzled why public transit isnt a huge priority. I imagine Im preaching to the converted. But the short course is that for us this would be devastating.

This plan has the potential to make planning sightseeing with visiting friends difficult if they want to use Metrorail to get around.

If you shut down my local station College Park , I just will not use metro moving forward. Greenbelt is inconvenient because it takes almost 15min to walk from the parking lot to the train platform.

Some of these would probably be ok but others may be problematic - Im not sure yet. Please make sure that you do not close stations in lower income areas of the cities. Many people who live and work near these stations are dependent upon public transportation.

Cutting some of those wouldnt impact my decision to take metro to their area (judiciary sq, archives, mt Vernon sq) but others would be devastating and I would stop using metro to travel there (Cleveland park, college Park).

We need the Grosvenor-Strathmore station to stay open to commute to work

Proposal to close 22 Metrorail stations

Virginia Square and Clarendon are right next to one another. Close one but not both.

Closure of many of these stations would prevent me from making many of my personal and professional appointments, including necessary medical appointments. While I could adjust my schedules to a revised Metrorail time schedule, I could not adjust to station closures that would prevent me from getting where I need to go.,

Without Federal Center SW, the distance between stations is a really long walk. Also, how will tourists get to Arlington Cemetery?

The Grosvenor/Strathmore Station is extremely useful to the communities living near this station. The coming of Grosvenor/Strathmore would have big economic and social impact on this communities, including property value, educational activities (through Strathmore School of Music and Concert Hall), plus the important activity of the Grosvenor Mini Market.

I frequently use 7 of these stations to get to work, or work functions. They are all necessary, again to ensure that I am not late (depending on delays within the system, whether it is faster to transfer to bus, another line, or walk, or a combination), and their proximity to other stations should be irrelevant. Yes, Federal Triangle and Judiciary Square may be within 6 blocks of each other, however their service to other lines that require transfer (and potential delays and 15 minute headways) makes each necessary to use due to metros frequent and unrelenting service disruptions.

You are closing two adjacent stations which I use: Virginia Square and Clarendon. I'm a senior so would have to walk at least a mile in either direction. Or.....wait for a bus in inclement weather. Clarendon businesses need the trains to encourage more customers. It would be a terrible problem for them.

Walking even short distances for someone my age can be difficult, especially during inclement weather, at night, or when carrying groceries or luggage. Even worse would be walking in an unfamiliar neighborhood.

This is another BAD proposal because it affects customers who MUST use these stations to get home, get to an appointment, shop or work. The worst impact would be on seniors because it would force them to travel longer distances. For example, Metrobus does NOT have service at Morgan Blvd. If this station were to be closed, they would be forced to exit at either Addison Road-Seat Pleasant or Largo Town Center. In addition, The Bus (PG County) has only one route that connects Morgan Blvd & Largo Town Center and no route connecting Morgan Blvd & Addison Road. This is a TERRIBLE proposal because it puts customers LAST and makes travel MORE difficult!

I utilize both the Smithsonian and Federal Triangle stations to get to work. Archives also is used. The closest station would be Lenfant which given occasional pain would make things difficult.

I understand why you would like to close certain stations because of personnel costs but this would put a real crimp in my transportation. I have no car and Metro is my only form of transportation.

I would really oppose the closing of the Grosvenor station especially, as it has Strathmore Center there and a large parking garage, which is the closest garage to downtown. That doesn't make much sense to me. Also, the surrounding neighborhoods have a large number of people that walk and drive to the Grosvenor station.

Please keep the Grosvenor-Strathmore station open. It's surrounded by lots of condos and townhouses. People can just walk to the station instead of having to drive and park the car at the station. The Strathmore Performance Center was built at that location, because of its proximity to the Grosvenor-Strathmore station. People from all directions can come to attend concerts and see the performance can take the Metro, then just walk over to the Strathmore Center through the walkway.

I specifically moved to the area I live to be next to metro. Closing the Eisenhower station will severely impact my mobility. I work in DC and would not know how I would get to work. I

This would have a strong negative impact on Revenue, and would further reduce growth as riders on the newly built silver line will not begin to adopt the service. Further, this would be controversial as northern VA residents have paid substantial tax assessments to build the system and then would be denied the use of it.

I think Clarendon station should remain open

I think it's definitely possible to eliminate some of the downtown stops where there are other stations within a few blocks, but the ones that are further out will leave whole towns and neighborhoods in Maryland and Virginia totally unmoored from the system.

Close Clarendon and Virginia Square stations puts all of the Orange Line commuters having to use either Ballston or Rosslyn. Where does one park and how does one get to the metro station. Clarendon is a vibrant area with lots of restaurants and stores -- built around the Metro! Same for Virginia Square. Closing them is so short-sighted. What happens to all the businesses around them that rely on Metro users??

No, because I live by Largo Town Center station and come through both ways Everyday Going and coming and going to work this way this got to change.

keep Cleveland park open

Absolutely no! Closing stations is the worst possible option and will turn droves of people away from Metro forever. If you want to kill Metro, this is how to do it.

This cuts off a significant portion of the line. What station is near EFC? Nothing!

Proposal to close 22 Metrorail stations

I rely on the Cleveland park metro to get around the city. I've been too nervous to use Metro during the pandemic, but once I receive the vaccine I will return to using metro and will need it to get to work once the office reopens this summer.

As I lived in Clarendon, I am *strongly* opposed to you closing it AND Virginia Square GMU. I am sure that you are basing this on numbers BUT this plan would screw over everyone from Courthouse all the way to Ballston. It just doesnt make sense to me. I mean, give us something in the middle. Clarendon has a thriving nightlife and is actually midpoint between Rosslyn and Ballston. Courthouse is close enough to Rosslyn to walk. Why would you not close Courthouse over Clarendon? I genuinely do not understand this. If you *need* to keep Courthouse, then we need Virginia Square to fill that middle gap. Personally, I would recommend closing Courthouse and Virginia Square but keeping Clarendon OR closing only Clarendon but giving us Courthouse and Virginia Square. From my time living in Alexandria, I do not support the closure of Eisenhower. That is a rather big stretch of metro line that would leave a large swathe of people without access or heavily reliant on buses. Beyond that, I support the closure of the following stations: - Archives: It is downtown and there are lots of other station options nearby. - Arlington Cemetery: When I took the train from my old place in Alexandria, I was happy when we skipped Arlington National Cemetery. I assume that people would need to walk there from Rosslyn now? I think this is do-able or bus options. Regardless, the population going there is not the regular commuters and would be smaller. - Van Dorn: Again, based on when I lived in Old Town, I think it is close enough to King Street that you can close it. - Federal Center SW: LEnfant is right there. - Mt. Vernon Square: Not ideal but it is close enough to Chinatown. - Smithsonian: Again, not ideal but LEnfant is right there. - Federal Triangle: I hate the big gap that the closure of these two stations creates but Metro Center is right there. - Judiciary Square: Chinatown is right there. I have no experience with and cannot speak to the closure of the following stations: - Cheverly - Cleveland Park - College Park - East Falls Church - Greensboro - Grosvenor-Strathmore - McLean - Morgan Boulevard - Innovation Center - Loudoun Gateway - Reston Town Center

Some of these stops are important for tourists - such as the Arlington Cemetery and Smithsonian stops. Also, I live in Arlington and could see closing one of the stops on the Orange line, but I think that Virginia Square makes more sense than Clarendon. Again, people use the Metro to go out at night as an alternative to driving (especially if they are planning on drinking). Since there are restaurants and bars in Clarendon why would you close that station?

What the fuck does NEAR mean in this context, you are requiring cars in order to use Metro, this plan is a disaster!!

I live at 14th & N NW. One of my most common Metro trips is taking the yellow/green lines from Mt Vernon Sq to Anacostia Parkrun on weekends. Its currently about a 15-minute walk to the station, which is about as long of a walk as is reasonable to make this trip. Having to go to Gallery Place would turn that into a 25-minute walk to the station, or a 10-minute walk to McPherson Sq plus who knows how long of a wait to transfer. I would just stop going.

Metro should consider having the College Park station open because of the UMD students who may be starting in-person classes. Students rely on the Green Line to commute to DC or back home from college.

I live in Arlington - closing Clarendon, Virginia Square and East Falls Church would overload the Ballston & Rosslyn stations beyond capacity. This would created dangerous overcrowding and be inconvenient for those living near the other stations as well. Closing Smithsonian station doesnt make any sense at all assuming tourists (and residents!) will be returning to the Mall once the pandemic is over. While there may be stations you can close due to low ridership, it doesnt look like any of the ones you listed would fall into that category. There wouldnt be much of a Metro system left with so many closures. However, if you ran trains to the remaining stations every few minutes to offset the closures it might work, but you would lose so much ridership by closing the existing stations that I dont see how even more frequent trains could balance it out.

I live between the Ballston and VA Square stations. The closure would not affect me directly, but I feel like the closing of both Clarendon and Virginia Square (two consecutive stops) may stop people in the area from being able to walk to a metro station in order to get on the train.

Keep Van DORN st open. There are many condos in the proximity that have riders who use metro- which decreases car traffic.

I regularly use the Green Line to get to my workplace at the University of Maryland, College Park. There are not suitable options for commuting there should the College Park Station close. Many students and employees at the university as well as residents of College Park use this station regularly.

Both my children metro to school and when we work in person, my husband and I metro - that's four riders back and forth everyday and we live in Arlington and take the East Falls Church metro. I see about 20 other kids getting off from my sons school, Gonzaga. And I see kids take the metro to East Falls Church so they can walk to and attend Bushop O'Connell Hugh school - this would be most disruptive to kids who come from all over to get to school

Do not close/shut down any metro station even if there is low ridership-- to compinsate increase fare prices on subway or bus & have shorter trans on subway lines or have subway trains skip stations that have low ridership-- like having a subway train only service a station with low ridership less frequently having trains blow by certain stations but only service those stations with every 2nd 3rd or 4th train, but have it be at predictable intervals. There are essential workers & other elderly & school children who use WMATA to go to & from-- as their primary mode of transportation.

Proposal to close 22 Metrorail stations

Closing Grosvenor-Strathmore is unacceptable! Pre-COVID, your data shows that Grosvenor-Strathmore has more ridership than White Flint and Twinbrook -- and neither of these stations are being considered. I live 10 minutes walking to Grosvenor and would have to move if this station closed. I have chosen where I live due to its proximity to the Grosvenor metro stop. Additionally, closing this metro station would have a devastating impact on home values in the area. It would be VERY disruptive for me to get to work on time. Taking an additional metrobus to get to another red line metro station would add extra time to my commute that I simply do not have. Additionally, the Grosvenor-Strathmore stop is a commuter hub. Its an easy exit off of 495 with plentiful parking for people driving in from outside the area. I was one of those commuters when I live in Howard County. Simply put, Grosvenor-Strathmore is one of the most critical metro stops and should NOT be on the list of possible stations to close now or in the future. One more important point: we need the Grosvenor metro to service the Strathmore! Please dont kill the arts!

If the plan is to start Yellow line service at Mt. Vernon Square to Huntington, then Mt. Vernon Square station cannot be closed.

The following stations should not be closed unless significant improvements are made to the metrobus/local bus systems to provide similar service to these areas and provide access to nearby stations: Cheverly (little alternative service nearby), Clarendon (close Courthouse instead due to frequent & overlapping bus routes in area between Courthouse and Rosslyn), College Park (key destination due to UMD), East Falls Church (will be left with no alternatives due to proposed Metrobus changes eliminating 2A route and reduced frequency during pandemic. Need fast alternatives to service Arlington areas between EFC-Ballston, Clarendon, Courthouse, and Rosslyn, as well as Dunn Loring/Tysons - for example similar service like ART-55 bus serving Wilson Blvd to points East from EFC), McLean (would need alternative/increased frequency and routes to Tysons, EFC and Ballston), Van Dorn (serves as a hub for local bus routes, would cut off service for large portions of Alexandria. Alternatively extend bus routes frequently to Eisenhower Ave and keep Eisenhower Ave open.). Innovation Center, Loudoun Gateway and Reston Town Center (No new Silver Line stations should be closed. These stations will not be profitable longterm if they are not opened with the rest of the Silver Line extension. Arlington Cemetery should be serviced using local Metrobus/Art Transit bus route between Ballston - Clarendon - Rosslyn - Pentagon - Crystal City. All Blue Line service should be changed to Yellow Line Service as it is currently (Feb/Mar 2021) serving two branches between Franconia - Mt. Vernon Sq. and Huntington - Greenbelt at minimum every 20 minutes per branch. All other stops have frequent/direct service nearby (under pre-covid bus routes) and can be closed if absolutely necessary. Existing Metrobus routes between these stations and adjacent stations should have adjusted frequencies between stations (Ex. between Cleveland Park and VanNess/Woodley Park or Grosvenor and Medical Center).

That depends on whether there will still be bus service to the closed stations,

This would be an economic hit to the areas that have popped up or are continuing to grow around those stations. McLean is a good example. There's an arena being planned for there and new office buildings are still going up

As soon as people go back to work again, these stations serve a very dense working population and they will need these stations.

I hope to commute to my job during rush hour in AM and PM at Federal Center SW from EFC every M-F during the week once the pandemic is over. I need EFC open please

Seems like a pretty damn bad idea

There are MANY older people and people with families in the Cleveland Park area that depend on our Metro station because we don't have cars and our small children or older folks cannot walk miles to the next metro stop. The station is our lifeline to jobs, medical appointments, shops, school, and work. We moved to this neighborhood because of the Metro station! I don't know what my family would do if the station closed. We would MUCH rather have more crowded trains or shorter station hours than close a station. Please don't close our station!

I will no longer be able to get to work if this happens.

Cleveland Park is my home station. My family has been long-time Metro users for 27 years. Closing this station would be a major disruption to our lives.

East Falls Church should not be closed because there are essential workers who rely on the stations transportation, including Metrobus service, who get to and from work everyday given no alternatives when eliminating Metrobus Route 2A.

Federal Triangle is used by numerous federal employees when the pandemic is not happening. Because everyone is teleworking ridership is down, but once unlimited telework is over, this station will be fully in use again.

Noooooooo please no! I live at Grosvenor-Strathmore, it is my only access to reliable public transportation. Please dont close it! It is essential for me and many others. Many of us who use the metro are low income and/or do not have a car. Closing these stations and limiting the number of trains/arrivals/departures and enforcing an earlier close time for this public service would be devastating!! It would really make life so much more difficult than it already is :(please dont do this...

If we can pay for tax breaks for billionaires, we can afford to pay extra to keep our mass transit running!

This could work if there are bus routes that service the same areas.

Proposal to close 22 Metrorail stations

Occasionally, I might need to ride to some of these stations. Perhaps, a longer wait time between the trains might be a solution than to outright close them. Also, more folks might be returning to work and other activities outside of their homes before January in 2022.

That Metro is even considering closing both Eisenhower Ave and Van Dorn St shows me that Metro management is not even considering the communities it would be affecting. I get that certain measures need to be taken given the budget situation, but look for cuts somewhere else. Seriously. Residents in the West End of Alexandria, like myself, would be left high and dry and in dire straits transportation-wise should these closures happen. I moved to my particular neighborhood because of the easy access to the Van Dorn St Metro and two rush-hour buses into DC, but those bus line have been discontinued and now you want to close Van Dorn, too? For Gods sake, get a clue about the damage you would do to people.

My station is East Falls Church. Others are not as convenient although I guess I could take a bus to Ballston.

Many of these stations are not near other stations. I work in DC tourism and I worry ending the Smithsonian line would frustrate tourists new to town who dont know they can take another line to get to the Smithsonian.

I live in Pentagon City but work in Reston. The opening of Silver Line Phase II would reduce my commute time, and Im planning to move to Reston or Herndon later this year to take advantage of those new stations. I depend on Metro for all transportation, so closing the Reston Town Center station will limit my options for where to live - Id have to live further away (Spring Hill, etc.) or seek out more expensive transport options and stop using Metro.

A terrible proposal with regard to Grosvenor-Strathmore. I am in my 80s, do not have a car, am active and self-sufficient, live within walking distance of the Grosvenor station, and Metro is my lifeline. Without the Grosvenor-Strathmore station, I would feel almost as shut in as if the pandemic had returned

East Falls church is the closest metro stop to the city off of the orange line that offers parking and is large bus depot for the neighboring communities. As the last stop before the orange/silver line split, this would impact many riders in the falls church, Arlington area who would then need to travel to less convenient stations. The easy access to 66 make this metro station essential to commuters. Clarendon is also a large destination for night life and closing this stop would be unfortunate for those who rely on metro for a sober transportation home. Arlington cemetery is a large tourist destination and many visitors rely on east access to our national parks.

This is insane. These are all centrally located stations that serve neighborhoods that would not be able to access metro without them. Not to mention Smithsonian and Arlington cemetery-how are people supposed to get to these places? If you're trying to bankrupt metro and put more cars on the roads you're doing a fine job

How can closing East Falls Church even be considered an option? It is so busy. It is an important reason I bought my home where it is. This would significantly impact me, for the negative!

At least half of above mentioned stations are very frequented. It is a shame that one of the biggest metropolitan metrorail systems in the US is in such dire financial situation! And it is going to happen right in the heart of the Nations Capital, Washington DC and its suburbs.

I need my station open, Grosvenor-Strathmore.

This would severely impact me, as my most frequently used stations are Clarendon and McLean as part of my daily commute. I will not be able to get to work if these stations are closed.

If you will close stations... then you need to open lots of parking spaces... as people will be forced to drive to another station instead of using the one they usually do.. So, unless you plan on doubling/3x available parking at the stations that will remain open to account for the influx of cars... this will only serve to make the metro less convenient... which will translate in less use and less funds, as people will not feel like driving to a station to leave their cars... instead of just driving to their place of employment or where ever they are going...

If this was implemented I'd probably stop riding Metro completely, because my home station would be closed. I'd find other means of transit (bike or Lyft)

Dont use those stations to get to work or to get home.

Cleveland Park is the closest station from my house, I would have to take a bus to get to metro. These station closures would curtail peoples use of metro transit and diminish ridership thus aggravating the current budget problems

The Cleveland Park metro is vital to access businesses in that area since there is such limited parking.

Not opposed to closing certain stations that are very close to others, but this list is too big.

Arlington Cemetray is not near other stations! You cant really walk there from Pentagon or Rosslyn. Foggy Bottom would be a hike as well.

These dont affect me. But for Mcleans/Tysons the stations may be close but there is no way to walk between them.

Closing Cleveland pk is not optimal but I can make it work.

Proposal to close 22 Metrorail stations

Absolutely NOT!! This would be an impossible situation for anyone using public transportation exclusively. After encouraging people to give up their cars, this would severely limit a persons ability to get around in a reasonable timeframe to many places.

The stations listed are the ones I use to get to my house, work, and university. This is not a good idea

After a bus and train, I will be forced to walk to the Mall from Metro Center. NOT GOOD, especially in rain and winter weather.

This is not okay, people moved near metro stations to get to work and around the town easier. Elongating a large portion of stations would be very harmful.

but that is a lot of stations some of which i do sometimes use

The expected high traffic tourist area stations such as Smithsonian, Arlington Cemetery should remain open during spring and summer for increased ridership and the impact to tourism.

I prefer to use the College Park station

This would gut the system and be disastrous for the rail system. Disastrous.

Not at all since I use East Falls Church

The Clarendon station is located in an important business hub, and the McLean station is surrounded by lots of offices. Closing them will make Arlington residents life much more difficult and employees working in the McLean area very inconvenient. Especially in the McLean area, we should encourage public transportation given the high volume of traffic during rush hours. Not only more driving wastes time but also hurts the environment. Please carefully consider your decisions.

This is extortionate even in Metros history of extorting riders by threatening to cripple the system. I am sure that veterans and their families will love to hear that Metro is threatening to close Arlington Cemetery station even as the county has given over land to expand Arlington Cemetery itself to accommodate more and more honored war dead. Im sure the DC tourism quarter and the battered hospitality industry will love to hear that Metro is threatening to close Smithsonian, which is teeming with tourists in normal times and will be again at some point. Im sure the DC sports franchises will love to hear that you intend to close Metro at 9 PM -- and shake them down to keep the system open for their fans. Pre-pandemic, I saw large groups of young men and teenage boys brazenly jump the fare gates at Pentagon City FIVE DAYS A WEEK, TWICE A DAY. If Metro really cared about budget, it would crack down on fare evasion (especially since the crime at Pentagon City Mall shot up immediately once fare evasion began being ignored by Metro) and crack down on the abuses of free fares by DC Public School students. Instead, youre extorting riders with this proposal based on a falsely manipulated data collection during the pandemic. I work with data for a living and I know when data are being manipulated.

They are just opening developments bc of metro. East Falls Church is also the stop I use. If you take away more stops there will be less riders and thus cause a downturn in profit some of the closed stations will affect my travel. In addition I believe that closing stations will likely result in a death spiral with ridership dropping.

Specifically Greensboro as there is a series of U.S government offices located there

Same reasons written before. And East Falls Church closing is an awful idea as a connecting line.

Since my office is at College Park, I would no longer be able to use public transit effectively to get there.

I use the Metro daily for work, Hockey Games, Baseball games, anytime I want to go to DC and not worry about parking or getting home safely after a night out. I use it all the time for visitors from out of town to go to museums and monuments. I also use it to go to Tyson's, Reston, DCA. Not to mention, I have lived a block from the Clarendon Metro for 9.5 years and have no plans of leaving the area unless the Metro closes. If it does, I will sell my home and move out of Arlington Co. to be near a Metro station with more funding to not ruin my commute.

This proposal wouldnt be the wises long term because when lockdown ends more people may be willing to ride at these stations thus increasing revenue.

I use EFC metro everyday during rush hour!

I rarely use these metro stops

Archives and Judiciary square are where all of my coworkers get off. We will be regular riders again well before Jan 22

This is terrible! Closing stations will be disasterous and strand people. We live between Clarendon and Virginia Square. Closing both of these will mean both neighboring metros are too far away.

Station closures should not just be based on proximity to other stations. Many stations on the list are in dense communities (e.g., Clarendon, Mt. Vernon Square, Eisenhower, Reston Town Center). Instead of closing the entire station, consider closing one or more entrances to save on staffing costs. Replacing stations in less transit-dependent communities with bus shuttles may be a better alternative.

I regularly use the Cleveland Park station. Relying on Woodley instead would make my commute significantly longer, and pre-COVID, Woodley already was an intensely-crowded station.

Proposal to close 22 Metrorail stations

We live by EFC; don't close it!

Any of these Station we all need for whatever the ridership is to get were we are going.

Clarendon is a major evening destination, especially on the weekends. Closing the station would impact the local economy.

McLean metro stop is essential. Capital One office would not be able to function properly without that metro stop, considering the shortage of parking spots already as well.

I think Smithsonian should be excluded from the closures. You will discourage the visitors. They already enforce the paying meters at the national mall. Closing metro will add more stress and discourage the out of state visitors not to visit the national mall and Smithsonian.

People are very dependent on the Grosvenor/Strathmore metro station to get to and from work and to get around especially those who do not own a car. Closing this station and many others would be detrimental to riders who depend on public transportation to get to work, run errands, and get around the city. Many people either cannot afford a car or are unable to drive. While I understand that the pandemic has been especially hard on Metro, it will cause even more undue hardship on riders in a variety of communities. I strongly urge Metro to keep ALL stations open. Additionally, as the pandemic gets under control, more people get vaccinate, and offices/businesses begin to reopen, even more riders will be even more dependent on public transportation. Please do not close Metro. It is a faster and more direct way to get around.

do not recommend closing stations which affect those who need it most

This is a very large number of stations to propose to close and really takes away a substantial I normally use other stations, but if I had a late meeting at the Cleveland Park library or at the Main Public Library downtown, were going out to dinner or to visit friends in areas of these stations, not to mention if I were working near one of the listed stations. the walk to the next nearest stop is not insignificant. This proposal would this would be tremendously problematic. Im sure you realized when this was announced that this would be a damaging and truly draconian proposal that would significantly hurt the utility of the Metro system and the ridership for the short and long term.

As if we haven't been financially drained enough from COVID, you want to crush my property value too? Unacceptable. There has to be another way.

Are the decisions about which stations to close, based on pre-pandemic ridership numbers?

I use the metro stop at Grosvenor-Strathmore and do not want to see it close. there is not sufficient parking to accommodate the closure at either Bethesda or White Flint metro stops.

The closest metro station to me is EFC and I can walk which is about .75 mile. The McLean and East Falls Church train stations are needed. Both are within a miles walking distance from residents who depend on the train. The 2A doesnt start until 530 am when most of us need it at 5am on Lee Highway. The current 28A bus wont get me to West Falls Church by 5am because you eliminated the 4am bus to Tysons. We need the trains in McLean and EFC open during rush hour times please. An alternative proposal, consider the following please:1. M-F from 5am-9am and from 5pm-closing: McLean, East Falls Church, Eisenhower Avenue stations should remain open.2. S-S from 10am-closing: McLean, East Falls Church; Keep Eisenhower closed S-S.3. East Falls Church Metro to West Falls Church Metro is 3 miles - further than Clarendon to Courthouse Metro which is .8 miles and an easy walk after the 38B bus is taken away. There are many passengers who are riding the rails early in the morning and upon returning home from work. When I arrive the EFC metro at 505am, I can catch the first OR line to LEnfant Plaza then change to King Street to other transportation options for work and there are passengers on the platform as well as a lot of passengers on the train at that hour. Eisenhower Avenue metro is also important and has restaurants, coffee shops, pax being dropped off by bus or vehicle and easier to get onboard. The National Science Foundation and other Carlyle organizations are in that area. I suspect passengers will start coming to work and wanting to use the metro station. 4. By keeping these stations open during morning and afternoon rush hours, will allow reduce overcrowding at Tysons Station, West Falls Church and King Street. If this is in response to the Covid-19, we should also comply at train stations too especially during rush hour schedules. I see more passengers at these train stations 5. By keeping McLean open, it helps with Capital One employees, the new arts and performance center opening up, residents within a half mile of the station as well as construction workers and employees at companies within a 10 minute walk to the station. It is too far for them to walk to Tysons plus by your eliminating the 23T bus, passengers cannot get to Tysons. What a shame to think we are giving up our vehicles to rely on public transportation only to have to drive 2 miles to get to Tysons and to eliminate buses that are important to us like the 23T.6. Please consider these stations to be open during rush hour times in the morning and afternoon until closing. 7. Please also consider extended the time to 10pm so those who are working can get home via bus and metro.You all dont know how important it is for low income passengers who need to rely on public transportation. I am making 12K less after Covid-19 and spent \$1500 in taxi fares when Metro wasnt around, which is one months rent.

Smithsonian is clearly a heavily used station during non-Covid times, makes no sense to close it. Also doesnt make sense to close both Clarendon and VA Square as they are next to each other; pick one, not both.

Proposal to close 22 Metrorail stations

Absolutely impossible for me to close Grosvenor-Strathmore station as I live nearby and use it every day. The proximity of Grosvenor station was one of the top priorities for me for choosing to live in Grosvenor Park III building where I bought an apartment. I don't have a car and using the metro is essential for me. I am also against closing Smithsonian station as I use it to get to my work (Holocaust museum). Again, when we will return to normality, Smithsonian station will see thousands of tourists coming to see museums on the National Mall.

My doctor's office is at Cleveland Park and Smithsonian is a major stop.

I assume that by January 2022 most people will be back in the office so not servicing all of the stations would be very annoying. I also worry about riders with disabilities and individuals with children. Another concern is what happens if something goes wrong at one of the stations that is left open? Normally the other stations close by can help for situations like fire/flooding/etc but that won't be an option if they are closed.

Depending on how you are covering the other stations, it could work, e.g., with buses.

I live in Cleveland Park and having the station open is critical for me to get to work.

These are still locations that people live near. Do you plan on increasing frequency or adding bus routes to these areas?

Metro has received federal monies, and not sure why such draconian cuts are still being planned! Clarendon is a major commercial hub in Arlington, and seems crazy to close.

This sounds like absolute disaster to me for this being a liveable city with adequate mass transit and would cause workers as residents to leave DC lowering the tax base, create huge hardship for businesses and vendors, causing many to close, have an undue impact on essential workers the poor and elderly, create over crowding on trains harmful and dangerous to public health. And lower home values.

I work at Federal Triangle. This is my stop...

I need Grosvenor Strathmore. Bethesda is not at a walkable distance and the roads are not pedestrian friendly. Rockville is always ways away.

I always use Judiciary Square when I have jury duty and I always use Mt. Vernon Square when going to the convention center. These stations are critical.

I could not get around without service to College Park, Federal Center SW, Grosvenor-Strathmore, Mt. Vernon Sq/Convention Center, or Smithsonian. Also, if you close Mt. Vernon Sq., where would the Yellow line stop (previous question)?

The EFC station is NOT close to other stations (WFC or Ballston)...a rider cannot simply walk to the next station. The station is also in a residential area that depends on public transportation, especially the Metro.

Closing the Cleveland Park Station would inconvenience travelers going eastward making connections to the Mt. Pleasant neighborhood. This is a walkable distance from the Cleveland Park Station.

Need Smithsonian, Arlington Cemetery, Grosvenor-Strathmore.

I do not regularly use any of these stops. However, I would worry about overcrowding on remaining stations in some cases. I get off at Faragut North and it's already dangerously overcrowded in the morning rush hour.

My office is at Clarendon so this plan does not work for me. I commute to work every morning and afternoon via the metro so this station needs to remain open. If you close down stations you are going to further reduce ridership because you are removing the convenience of the metro.

This would be incredibly inconvenient. Many of these stations are besides grocery stores, offices, and other key assets in the community that benefit from the flexibility of a strong Metrorail service.

I need them

The east falls church and McLean stations are important as main access points for public transit in those areas - which are areas with enormous development including housing that will add to demand for public transit.

This is awful. People are going to give up on metro if it's not useful. Work on getting more federal funding rather than draconian cuts like this. Were there any proposals to close half of the Beltway or 66 when traffic was down for a few months at the beginning of the pandemic? Of course not. This is ridiculous.

This is a truly horrible idea, and will destroy any remaining rider base. Honestly just shut the whole thing down if this is the plan.

I had already begun driving more because the parking situation at Wiehle Reston was getting so bad and the bus that goes by my home wasn't able to stick to a reliable schedule during rush hour with no dedicated bus lanes around the metro station. Closing so many Silver line stations might have even more people driving into Reston to use the Wiehle garage which was the problem before the pandemic.

Proposal to close 22 Metrorail stations

I board Metro at East Falls Church, which is within walking distance of my home. If it is closed, I would have to take a bus to Ballston and board there. I did this during SafeTrack a few years back and it added a significant amount of time to my commute, given that the bus was fighting rush hour traffic. If we put more people into cars--which will happen if Metrorail is no longer convenient--then bus rides like this will take even longer, which may result in even more people in cars.

Keep Grosvenor

This would make commuting, getting around the city, and traveling so much harder. In addition, trains would likely be too full to make up for this reduced capacity.

Some folks might have to be somewhere that requires for them to get off at a certain station as well as save a lot of time and stress of walking as well as relying on Metro bus

I do not own a car and walk to Metro. I depend on Cleveland Park metro and would not be able to walk to further away stations. This pandemic will end and ridership will resume.

My office office is near archives and federal triangle

Works for me personally, but I think it would be terrible to lose Metro stops at Arlington and Smithsonian. And how could you close both Federal Center SW AND Federal Triangle?

Perhaps Im mistaken, but arent they both kind of serving the same area? What would be the alternate?

Why is this even being considered? How was the group that suggested this not laughed out of the room? You just spent 2.7 Billion on a silver line and you want to close its first standalone station, its third, and its fifth? Clarendon and East Falls Church as low ridership stations? Really? Is this counting the pandemic or normal ridership? Raise taxes and invest in WMATA, all of these budget cutting options are both lousy and lazy.

East Falls Church is a growing area with a lot of high-density housing being built and a redevelopment plan underway. Losing this station would damage the sustainability of this growth, increase already bad traffic congestion, and worsen the growing air pollution in the area. We need East Falls hurt h to stay open.

Keep all stations open. When people have vaccines and coronavirus is under control, ridership will increase.

Before retirement I commuted to and from VA Square as it was less crowded than Ballston and cheaper than commuting from Ballston and walking time from my house was almost the same. The last several years I worked my wife would drop me off and pick me up at VA Square and it was a lot easier to do than at Ballston.

It's workable, but I wish we could look at opening more stations to make it easier for people to avoid driving.

Even if a station is near, a person who is not very mobile, or with health issues/handicap will have issues going longer distances. Clarendon is a station near a shopping center with a bookstore, two food store, etc. Having to catch a car service to the shopping center because the station is closed is not going to work for a lot of people.

I will need to go into office everyday which is at Greensboro station, silver line.

I work at Mclean station. Even if Tysons is a nearby stop, there is no easy way to walk from Tysons to Mclean station.

Closing almost a quarter of the metrorail stations would severely cripple the city and its essential employees

Clarendon and Virginia Square stations are vital for me to use to see my family and access points and stores in Arlington

What other station is near the East Falls Church station? I understand closing Virginia Square due to its proximity to Ballston station, but why close Clarendon? There is not another station in Clarendon, a busy professional community and a vibrant nighttime spot.

I work near the Smithsonian stop and live on Van Dorn street

This has already happened through the first sweep of the pandemic. I just adjusted my trip out.

Closing this many stations, would impact the reason to take Metro. In the case of Grosvenor-Strathmore, the parking capacity was increased just last year. If this station is closed, riders would be steered to stations with more limited parking options.

Terrible idea. Would cripple my commute.

it does not make sense to close two adjacent stations. ridership will decrease further if the metro stations are not within walking distance

Cannot close college park or archives.

This will create incentives for people to drive downtown instead of taking Metro.

Part of the appeal of the Grosvenor Metro station is that I can park there. Please do not close this station for any reason. (The parking is always full because people use this station (aside from during this difficult time).

I would have no way of getting to work if this happened. College park/Greenbelt line is vital.

If you closed both Clarendon and Virginia Square, Metro would be almost useless to us as these are the stations within walking distance for us. I would much rather wait longer for a train than to have no station at all within reasonable walking distance.

NSF, federal agency of 2K, is at Eisenhower.

Proposal to close 22 Metrorail stations

We chose a home close to the Virginia Square Metro station specifically because it was a very easy walk away. We reasonably expected it to remain open. Many people in our condo (Monroe at Virginia Square) are Baby Boomers with decreasing mobility. At least two use electric wheelchairs or scooters. Ballston (or Clarendon, if it stays open) make for an easy 15-minute walk for fully ambulatory people, especially in nice weather, but that constitutes a significant inconvenience in bad weather, or for disabled residents, compared to Virginia Square, less than one block away. Closing Virginia Square and/or Clarendon would also decrease our property value.

I work near Archives and Federal Triangle, so please do not close them. I have to walk over 20 minutes just to get on the train...I do not want to walk for 20 more minutes from Gallery Place/China Town once I get off the train. The reason you all have less ridership is COVID as well as the government calling everyone who wears a MAGA hat a terrorist and trying to fire them for going downtown, while BLM owns an entire street on one side of the White House, and Freedom Plaza on the east side as well. Please just tell the government to stop insisting people stay at home and punishing them for expressing their political views, and you will have more riders.

This is unthinkable! I see thousands of people riding from Grosvenor every morning! Find other ways to cut expenses! Look at the lights in and arrows the station that are on during the day light! Look at the escalators that are running nonstop even when nobody is riding them! Setup photo elements that switch on escalators when a customer approaches (check how it works in the city of Vienna, Austria, Europe), please do the same with all the lights. You will have major cuts in electricity expenses.

Most of these sites are critical to my metro use. They would make the metro basically unusable lot me and would also adversely impact tourism. I often put my guests or use these stops to visit DC locations, attend events on the Mall, go to Congress, etc. This is the worst of the suggested solutions.

There is parking available at the Grosvenor-Strathmore station, which the White Flint station and Medical Center do not have. That is a major problem for all those who live in the Kensington/Bethesda neighborhoods.

This would make using Metro very inconvenient for me since I live between Clarendon and Virginia Square station, and I would use Metro less if I had to get to a station that is farther away.

Do not close Grovenor-Strathmore

Closing McLean would make it impossible for me to commute to work.

I take College Park metro regularly and occasionally, I use the Cheverly stop as its near my mechanic, so I can drop my car and get into work, still.

I use Mt. Vernon Square, Smithsonian, Federal Center SW, and Federal Triangle fairly often; hard No to closing these.

You would have to look at how would those riders get to the other closer station. Are you providing shuttle service? Will it cost them ore to get there? Will they have to leave that much earlier to get to their destination? How will this impact riders getting back home at night? Especially during the winter months when these is less daylight and more inclement weather. You need to specifically need to find a way to ask this question to those people in these areas. Do a public service announcement on social media.

Some stops could be ok, such as the nearby Arlington stops (i.e. Ballston/Virginia Sq), but that is because those are easily walkable in between. East Falls Church is not walkable to any other nearby stations, and so the last mile isnt within reason if commuters are forced to use one of the neighboring stops. Density of stops is the key consideration here, if there isnt another easy option to walk to then it should not be considered.

Closing Grosvenor-STrathmore doesnt make sense to me. It has good parking and appears well used when I have to travel there. Why is White Flint not on this list? The other stations seem less impactful overall.

The plan works based on my travel needs. Yet I think certain of these stations are essential for what they serve: Mt Vernon for the convention center. Smithsonian for museums and Mall for the tourists. Arlington Cemetary for tourists. Strathmore for the arts center attendees. Id close VA Square and leave Clarendo as it is a more active robust area with shopping and stores. I wonder if closing College Park would impact the students and student life.

If you close both Virginia Square and Clarendon that leaves a very wide stretch to walk between and Ballston and Court House will become very crowded. ALso, Clarendon is close to shops and restaurants. Only closing Virginia Square, which is close to Ballston, would have less impact.

You're not improving and in some cases worsening cars usage. If this curtailment is too be attempted, you have incentivize lower car usage. I think this idea is VERY short sighted. You will further the loss of customers.

I use Virginia Square metro for my work commute. Its much more user-friendly for car pick up and drop off than the Ballston station, and since my husband drops me off at VA Square and picks me up there daily, this would really be a big inconvenience for us.

Clarendon and Virginia Square are used by my family and neighbors and the stations have always been crowded during pre-Covid times.Smithsonian & federal trianagl, and Judiciary square are very helpful subway stops for federal offices & tourists alike.

Disproportionate impact on low-income, student, communities of color

The Silver line stops must remain open

Proposal to close 22 Metrorail stations

This completely limits my transportation. As a female in Clarendon, eliminating this stop would require me to move as walking a mile to the next nearest stop is a major safety concern at night. This area specifically has a lot of restaurants and shops, so eliminating the station may also negatively affect the many businesses.

Grosvenor is my station - walking distance from my home. Would hate to see it close.

I use the Clarendon Metro Stop every single day, so this would be a huge burden on my (as well as most of my colleagues) commute.

I use the Virginia square the most

My family depends on the train from Grosvenor-Strathmore.

Absolutely terrible for me. I commute from EFC to SMITHSONIAN for work.

Metro is the best option for me at Van adorn. Duke st is over stressed with traffic during rush hour. This would have knock on effects for traffic, transit times, etc.

I would need access to Grovesnor Strathmore.

I live near Clarendon so I'd be very upset to see that station close. And how could you close the Smithsonian station?! I would think your ridership would drop even lower if you closed all those stations and made it more difficult for people to access the metro rail system and to get where they need to go. That makes no sense. Please do NOT close any stations!

Keep Eisenhower

My station is Virginia square. I currently walk to that station. I am not within comfortable walking distance to another station.

I think this plan would be reasonable in the district, where it is relatively easy to walk from one station to a neighboring one. In the suburbs, it is much more difficult to travel between stations via car, bus, bike, or foot.

Closure of Grosvenor-Strathmore would affect not only me but also the Strathmore Arts complex - Music Center, Mansion, etc. - which is a key cultural institution in Montgomery County and a significant contributor to the economy of the County.

Closing the East Falls Church Metro Station will raise several questions about equity and access within the subway system, especially if a string of stations between Falls Church and Arlington with the greatest distances between them are shutdown while access to more affluent neighborhoods and dominant populations remain open.

Grosvenor strathmore is the only convenient location with sufficient parking on certain work days.

I walk to the metro and it would be an inconvenience to have to ride a bus to another station.

Beyond a nightmare.

We are in Cheverly. This would mean we would need to backtrack to New Carrollton

Ridiculous. Many of these stations provide essential transportation to people who live near them. People absolutely depend on them to get to work.

Cheverly is my metro station and I depend on it to commute across town. Closing down this station would be unacceptable for me.

At what point upon the return to offices would a decision be made to reopen the stations? I work above the Smithsonian station- how long into increased ridership would we have to wait for it to reopen?

Rely on Cheverly station for work. Strongly opposed.

what's close to arlington cemetery

No. I use Archives frequently, and Federal Triangle is my backup when Archives isn't convenient (because of its bus hub as well as the metro option). This also sounds like it would be a terrible problem for people visiting the area, as it closes all but 1 of the stations serving the Mall. I frequently host out-of-town friends/family who want to be tourists here, and Metro is their primary form of transit (over buses) and I expect to be doing so by January 2022 again.

It's critical that University of Maryland college park be connected to metro. Greenbelt is not suitably close for students/faculty/staff.

I spent 22 years renting apartments in Arlington and my biggest sale was you can leave your car at home

Please don't close the cheverly station! We just bought a house here specifically because it was still metro accessible and that is how we commute to work.

What happens to the empty closed stations? Are they closed forever or until metro gets more money?

I depend on being able to ride Metro and this proposed closure impacts the station by my house - Cheverly. Please do not close that station which is a central reason why so many people live in the area. It is not convenient or easily accessible for anyone without a car to get to another Metro station. This proposal also impacts the Smithsonian station which is critical for visiting museums and cultural institutions.

Living near Cheverly was one of the main reasons we moved here, it would mean moving out of metro ridership area.

Proposal to close 22 Metrorail stations

This is my least favorite of all the proposals. Not only do I rely on several of these stations, including Clarendon, Mt Vernon, Smithsonian, and Cleveland Park, this is also cutting peoples easy access to Arlington Cemetery (which is a national thing) and easy access to the Mall through Smithsonian. Yes these places are near other stations but theyre also important for most of my social life and would also impact my professional commutes for work and grad school.

Do not close cheverly. Entire community depends on it. New Amazon fulfillment operation will be located by this metro. This is a mistake. We take metro everyday. The metro is walkable from the neighborhood. Other options not walkable. Do not close cheverly

Do not close Cheverly

There are thousands of cheverly residents who depend on that cheverly station to commute to work. If that Station closes then people like myself who have depended on metro in the past as a way to walk and ride metro to work will now have to drive. There is no walkable station in cheverly other than the cheverly stop.

Closing stations is DEVASTATING to any community and every effort should be made to avoid this terrible decision. It would entirely alter the landscape of communities even if you consider them to be "close" to another station. The Cheverly station is easily walkable from my community. The Landover station is not despite being close as the crow flies. Please do NOT close stations.

I moved to Cheverly for the metro. If you close the Cheverly metro, I may consider moving away.

I live here

Please do not close the Cheverly station!!

Keep Cheverly open. Very important for this diverse, low income community that depends on public transportation.

I can walk to Cheverly station, which was a huge factor in our buying where we did and not having a second car. We want to be environmentally friendly, and we could not be if Cheverly closed.

Not a good fix

I hope to be back in the office for 2022 and I live in cheverly because it is walking distance to the metro this would make staying here difficult. Many people take the metro and would be very inconvenient. This station is important for the community.

The Cheverly station should remain open

The Cheverly metro station is very important to not only our family's daily commute but also to our entire town. The closure of Cheverly metro station would effect our home value's and the quality of life to do many in our town that moved to this town largely because of the convenience of the metro stations. Please Do Not close Cheverly metro station!

This would be a disaster for the way my family has set up our daily life. I use the Cheverly metro almost every day. The other stations are not accessible for my family. Please, please budget to keep the Cheverly metro open.

Cheverly Station is crucial to the health and welfare of the community.

Closing the Cheverly station would greatly impact my schedule and the time and cost of my commute.

Cheverly is a convenient station with parking

Cheverly is a large residential community and needs the metro for all of its residence and in the surrounding neighborhoods.

Forcing people into cars to get to another metro station seems to defeat the purpose of public transportation.

No. Cheverly is not walkable to another station. My house value would decrease. I would have to move!

I live closer to the Cheverly station, but the Landover station has cheaper parking so I usually drive there anyway

An entire community in Cheverly relies on that station as a way into and out of DC, so this closure would absolutely stop hundreds of residents from using metrorail, likely at all. There is no other station in walking distance of Cheverly (the closest two stations are about an hour walk from Cheverly station), so this plan would leave many residents without cars with no option to make it to work, school, or other commitments. Additionally, closing this station (and many of the others proposed) would disproportionately affect people of color. Cheverly is a majority-Black neighborhood and shutting down our metro station is an inequitable policy.

Cheverly station is essential to my daily commute and losing the ability to utilize this station would severely impact my daily commute into DC because I live in Cheverly and work in DC. And you are leaving out Prince Georges County

There is a large segment of the commuting population that will be left with no public transportation at a time when driving can be a burden and an additional expense. Metros failure to maintain the trains at those metro stops shows there needs to be change in leadership, since it appears current leadership is inept at making logical decisions with customers best interests in mind.

My neighbors and I depend on service to Cheverly to get to/from work

Proposal to close 22 Metrorail stations

I depend on Cheverly station, so this proposal would be a non-starter for me.

Cheverly station is extremely important to me. I take it every day and without it I could not get to and from work.

I live in Cheverly and rely on the station. Many people use it in non-pandemic times, as is evidenced by the largely-full parking lot on most days.

I live in Cheverly and while I understand the financial hardships Metro has endured, my main fear is that the station would be closed permanently. Could we have a tentative reopening date?

The Cheverly Metro Station is the one that I use, and I need to walk to/from that station. If that station is closed, there is no station that is reasonably close by that is safe to walk to/from. This would cause a MAJOR problem for me.

I need so many of these stations for my basic work and home needs. Federal triangle is my work metro stop and several other stops mentioned are located near shopping centers I cannot access without the metro. These closures would be devastating.

Closing Metro stations -- particularly some of the ones named above -- would be devastating for many people and neighborhoods in the area. By January 2022, I anticipate using Metro daily to commute to and from work. The closure of the named Metro stations (particularly Cheverly Metro) would make that not feasible and I would instead have to commute by car. This would significantly reduce my chances of ever taking Metro.

I use Cheverly metro and I chose where I lived with Metro access. Without it, I have no way of getting to work using public transportation.

I would not be able to access the Cheverly station and the next nearest station is in a high crime area. The Cheverly station receives patrol services from both Metro police and the Cheverly Police Department.

Im not sure of the parking or bus transportation available to nearby stations with the potential closure of the Cheverly station. I also have a question about whether these closures would be permanent or if they are temporary. If they are temporary then I would be interested to know about the potential closure durations.

I live in Cheverly where a good portion of the residents work in DC and depend on being able to walk to Metro. Closest stations to Cheverly Metro are not within walking distance.

No, the Cheverly metro station is an easy way for Cheverly residents to avoid the high traffic beltway/50 route and is going to be essential as more people return to work in DC in the coming summer/fall

Closing the Cheverly metro station in particular would cut a vital Prince Georges County community from the metrorail. Many of us moved here instead of MoCo or NoVa because the metro station meant we didnt have to get in our cars. This is not a community that can afford to pay parking in the city or take rideshares on the regular.

Closing Cheverly impacts the residents who can walk to the station, people who drive to the station as it is closer to their homes, and future development of the PG hospital site. A Metro station is needed to draw development to that old hospital site.

Closing the Cheverly station would negatively impact my commute. Other nearby stations do not meet the needs of our neighborhood.

Cheverly Metrorail station must not be closed. Closing is short-sighted, given that in the near future the Amazon Craftsman distribution sites will open with the need for its employees to use the Metro. There will also be 1000-2000 new residents of a new development on the hospital site. There is also no other reasonable public transportation for the current residents of Cheverly and environs. That will only put more cars on roads already choked with traffic.

Those of us in Cheverly would lose one of the primary reasons for people to live in Cheverly. During normal times, the Cheverly station is the preferred station in our area because the security available at the Cheverly station is preferable to that of the adjacent stations.

I rely heavily on the Cheverly Metro rail station which is walking distance from my house.

I moved to Cheverly because of the metro. I use it everyday. Closing the Cheverly Metro would be detrimental and inconvenient to myself and many others in my community.

Near other stations isnt relevant outside of DC. The distance between Cheverly and Landover is substantial.

Metro should be encouraging ridership for environmental as well as regional economic improvements. These closures are short sighted.

Big mistake to close these stations., which serve many many folks who dont have cars to drive to other stations on the same line. Taking buses to go to stations will prolong commuting times excessively.

Please don't do this. (Cheverly station rider)

The Cheverly station is a critical lifeline to my neighborhood!

I NEED METRO. I don't have car. I just bought home in Cheverly to purpose near metro for work. DO NOT CLOSE CHEVERLY STATION. I don't want to spend money on Lyft/Uber instead taking metro to work. I beg you to not close Cheverly Metro.

closing stations is not a good solution. near other stations is relative. the Cheverly Station may be near other stations, but those other stations are not accessible by walking, or by any other means than by Metrorail, or other mode of transport, avoiding which is the whole reason for taking Metrorail.

| |
|--|
| Proposal to close 22 Metrorail stations |
| I use the Cheverly station at a daily basis. |
| I would be ok with closing my station (Cheverly) if it means the station reopening in the future. I could make do with traveling further to a different station, but not forever. There is no language here that guarantees these stations continued existence. |
| I use the Cheverly metro station and metro parking. Closing the station would be a hardship. |
| See my bullet points above re. Cheverly |
| Im strongly opposed closing Cheverly station, It is not like Clarendon or Judiciary Sq. Where there are other very close metro stations in walking distance. This would hurt an entire community in PG county, many of whom use the metro to commute to work (and especially as offices open back up). |
| People should be able to travel to the stations close to where they live. Perhaps if the Metro were more reliable, ridership would increase. |
| We rely on having a station we can walk to |
| I use the Cheverly Metro Station and closing this station would be a big hardship on our family. This is the way I travel into work from my home in Cheverly. This station needs to stay open!! |
| One of these stations proposed to close is the station that I would take to commute to work and into the city. One of the reasons that I moved to this area was because of the metro access I had into the city. |
| Cant go to work |
| By January ridership will likely be back up post-COVID. Closing stations entirely is short-sighted. |
| The majority of Cheverly residents move there because of the proximity of single family homes to the metro station. Many have one car and the metro commuter walks or bikes to the station. |
| Most of the time |
| I bought a home in Cheverly to commute to work daily. This would greatly interfere not only with my work life but my family life as well. It would take me longer to commute to another station and thus leaving less time with my family. |
| By January 2022, ridership in Cheverly should be back up. The land around the Hospital in Cheverly will be redeveloped and should increase ridership. Many people in Cheverly count on Metro for transportation and many in the apartments in Cheverly dont have convenient alternatives to Metro. |
| I rely on the Metro for work |
| Run more trains. |
| Cheverly is recollecting significant development and closing stations would impact business relocation plans. Further the metro location in Cheverly is the ordinary reason we bought a house here. Landover is not an acceptable substitute as it is not accessible without a car. |
| Do not close the Cheverly station |
| Please keep many of these stations. I do use them and despite the lack of ridership, closing the stations would impede a lot of people from traveling in the city and possibly create more car and traffic-related issues. I also live close to Cheverly station, and its critical for me and many members in this community to have the metro station open. |
| I use Cheverly station, so this would be terrible. I would likely stop using Metro altogether and drive into work (or move). Right now, my commute is 45-55 min whether I drive or use Cheverly metro. So in terms of commuting time, it makes no sense to drive to another station, because this would add 15-20 minutes to my commute over driving into work. Would be better just to drive. |
| This would be a nightmare for commuters from Cheverly. It would prohibit foot and bicycle traffic to the station, force more commuters into cars for longer trips, and over-tax the parking facilities at near stations. In other words, it would undo many of the beneficial effects that Metro was intended to provide. |
| I just moved to Cheverly and my fiance and I are counting on the Cheverly metro to be able to commute to our jobs. |
| Two of the stations listed are my departure/arrival stations for work (Cheverly and federal triangle). No idea how I would get to work without these stations. We bought a home in Cheverly due in large part to metro accessibility. I dont know what I would do if these stations closed. This is by far the largest problem with the proposed changes. |
| My family and I need to have the Cheverly station stay open. Before Covid, the parking lot at Cheverly Station was jammed packed almost every day. When things return to normal thousands of drivers will need this station to be open. |
| I ride from Cheverly station this will impact me tremendously. |
| Keep Cheverly station open. |

Proposal to close 22 Metrorail stations

This is a terrible idea for Cheverly residents, and I am one of them. There are many people who walk or bike to the station. There are so many people who move to this town for an affordable single family home that is near a metro station. Please, please do not close the Cheverly station!!

I walk to Cheverly station. Access to other stations means getting in my car, at which point I'd stop using mass transit.

Closing stations should not be an option. It has such huge impacts on access and home values. Please combine other options to address shortfalls.

I live in Cheverly and need to take the train there. I have issues with walking and the walk to the train in Landover is too far. My Metro rides would end. As would any events at the Arlington Arts Center and the Smithsonian. I can no longer walk from L'Enfant Plaza to the Ripley Center if it opens up by then.

I use the Cheverly station.

I think closing Smithsonian might be a mistake for 2022 because things will be back to normal and tourists will want to use that stop. All the others are fine.

This is unacceptable. There is not adequate public transportation from College Park station to any other station. This would either require a significant increase in my commuting time—impacting my ability to pick my daughter up from daycare—or require me to drive to work, skipping metro entirely.

College Park is our primary station and is walkable/bikeable. Adding the expense of driving and parking at a different station makes the total expense not feasible.

Academic, professional, and essential workers use College Park station. As we come out of the pandemic Summer and Fall 2021, it would be idiotic and truly tragic to close down the College Park station.

This is just crazy.

I frequent 2 of the stations listed. Federal Center SW (which is a station located near several federal agencies) and Morgan Blvd.

I just purchased a house at the College Park Metro—this one of the last affordable areas that are in walking distance from metro. I moved here so that I could still commute to my job in downtown DC. This would make me reconsider working in DC. Other former DC residents also moved to this neighborhood during the pandemic.

College Park services the University of Maryland and it needs to remain open to assist with already congested traffic flow on US 1.

Significantly reduces the convenience of the system overall -- predict it will drive riders away in droves.

College Park is my station for commuting to work.

Absolutely wrong to shut down entire stations. It basically makes whole areas of the region unreachable and disconnected from the metroplex. This is by far the worst of all the proposals. What's the point in having a system if it's entirely shuttered like this?

I greatly depend on College Park station, there are not other stations close enough.

The College Park station isn't near another station in terms of convenience. Its closing would require a rider to drive to Greenbelt. If the train is going to continue on to Greenbelt, why does it save money to bypass College Park? The CP Station serves the University of Maryland which is striving toward world class status. I believe it is essential for an important, flagship campus to have convenient (walkable!) access to a Metro station...in a world-class city like D.C. To require riders to drive to a station instead of being able to walk goes against all environmental efforts that our community is striving toward. Thank you!

Totally unacceptable. Many of us in the Cheverly community work in DC and walk to the station. This also is a community comprised of traditionally underserved populations. College Park is also a station that provides service to those who do not own cars. What are you thinking? Stop catering to rich commuters stopping service to communities who actually rely on the metro because they don't own cars. Ridership of course went down to certain stations in 2020 because the government had most folks working from home. This will change in the next years - Don't close stations like Federal Center SW, Federal Triangle Judiciary Square and Smithsonian.

College Park is University of Maryland. Lots of people depend on this line to get to work/study.

Keep all stations open.

No, I work at USDA. That is my stop. Ridership will go back up in 2022 when the Pandemic is over.

The city of DC will directly be hurt by shutting down metro stations that are in Maryland since most of DC's workforce resides outside of the city. The parking situation in DC is already atrocious, so taking away public transportation would be idiotic.

The College Park Metro station is ESSENTIAL for people at the University of Maryland including my wife and me.

I use College Park station.

Absolutely not. This is an incredibly awful idea. This will impact my life SUBSTANTIALLY.

I live within walking distance of the College Park metro.

Proposal to close 22 Metrorail stations

I work at the University of Maryland and use the metro to commute every day during the work week. I do not drive, and metro is my only option for commuting from Washington, DC to College Park. The closure of the College Park metro would significantly impact my ability to travel to and from College Park. Once I have the vaccine, I plan to begin riding metro again for my commute, which will likely occur before January 2022.

Disabled household members would not be able to get to work. Bussing to another station would increase their commute time by 30-60 minutes. Unacceptable, especially in inclement weather. Further, Cheverly will likely experience a population increase with the development of the site of the old Prince Georges Hospital. More people, less service. What do you think?

Seems like it would cause ridership to decrease. Imagine keeping a stop could be made inexpensive.

Regarding College Park - I think this would a significant mistake given proximity to the largest public university in Maryland. The metro attracts students, the growing business community and attracting high quality teachers who want to be easily connected to public transportation.

college park is a popular site near the U of Maryland

Closing the College Park station would eliminate my use of Metro. The growth of the neighborhood around the College Park station has been driven recently by the presence of Metro. There are now multiple, major, student housing buildings that are located within a walk (or University of Maryland shuttle bus ride) of the College Park station. When students are back on campus, as one expects by 2022, they need and will use Metro. And there are several more additional, large, high-density, residential buildings under construction that are designed to be Metro friendly. One such building is going up right next to the College Park station. The two Metro stations that are near College Park are actually quite inconvenient to reach. They both would require the use of a vehicle to reach. Free, frequent, reliable shuttle buses from College Park to Greenbelt and Prince Georges Plaza stations would be an option if College Park were to be closed; BUT the shuttle bus option would probably cut traffic significantly; AND the buses could easily cost as much as just keeping the station open.

Very strongly oppose closing the College Park station if U. Maryland opens fully.

College Park closure would be a mistake. Ridership is down due to the PANDEMIC with seniors and students unable to ride public transportation.

I am a college park resident that requires daily commute via metro into D.C. It is imperative for my economic livelihood that the station remain open.

I live in College Park and moved here for proximity to metro for commuting to work. Plus students will be back for in person learning in fall 2021.

College Park Metro station is needed, especially in non-covid times. Our community has a University campus with over 50,000 students just blocks away from the station, with no other station in walking distance. In addition to these students, thousands of jobs are based at the University and in the surrounding area. There has been a dramatic slow down of use because of covid, but this will not continue.

Prior to COVID I used College Park station daily M-F and typically once on weekends. Cutting service here would ensure that I, along with thousands of local residents and tens of thousands of UMD students, would never take another trip on Metro again. There will eventually be a purple line stop at College Park- why would Metro Rail want to close a station that could see an upswing in ridership from commuters connecting to the yellow/green line from the purple line?

I purposely bought a house within 5 minutes walking distance of the College Park metro. The easy access to the College Park metro was one of the only reasons that I purchased this home. I would be stranded without easy access to the metro. I am a working professional and a number of other working professionals in the neighborhoods around the College Park metro rely on metro to get to and from their jobs. In addition, students and staff at UMD rely on metro. The university and the city are counting on continued access to metro -- there is new development being built right now next to the metro.

Please do not close the College Park station, which is in my neighborhood and which I'll be using often post-pandemic. The station gives riders access to the MARC Camden line and will allow people to transfer to and from the Purple Line. It's used by students and staff at the University of Maryland who will be back on campus in 2022. It's used by federal employees at USDA and FDA offices in the area. The College Park station is not close to the Greenbelt station, nor to the PG Plaza station. Please keep the College Park station open.

closing college park would be detrimental without the purple line operating. many workers depend on this stop. removing it is a terrible idea, why is it even being proposed?

Do not close stations. College Park and Mount Vernon Square especially need to stay open. I use both of those stations every day between home and work.

I am opposed to closing College Park given its proximity to the University of Maryland

Closing any stations should be a last resort. Many riders in Virginia depend on the stations to get to D.C. for many purposes.

This absolutely would not work and is a ridiculous proposal.

I rely on the CHEVERLY station and use it each weekday to commute. I do not have another way to get to work

Greensboro is very convenient, not sure I would ride if it closed

Proposal to close 22 Metrorail stations

Currently able to walk to Cheverly Metro station in 10 minutes. There are numerous persons who live and work in the area who depend on this station for their transportation. Bus service is not an option to another station, especially if you live south of route 50. Everyone doesn't have a car they could use to get to another station. It would also add quite a bit of time for people to travel to their destination if going into the District and/or Virginia.

Looking at the proposed closures, almost all of them are in Northern VA. That does not seem at all right.

I really need College Park station to remain open please!

I use College Park as my home base - please do not close it

The metro should service all stations.

It is imperative that College Park remain open. Given the number of University of Maryland students and faculty that use this station. In addition, there is a new development off of River Road where additional businesses and high end town homes are being built right next to College Park. This would definitely not be wise to eliminate this station. There are many government employees that live in College Park and this would greatly impact their commute.

College park station is essential for the community. Especially students with no other means of transportation

Given the likelihood of returning to normal during the latter part of 2021, my expectation of physically returning to work, travel and leisure activities would be in full force at the beginning of 2022. I was a very active user of Greensboro Station prior to the pandemic. Used for business travel during the week, on weekends, I'd travel to DC for all manner of activities, not the least of which were organized runs such as the Marine Corps Marathon, the Credit Union Cherry Blossom 10-Miler and the the US Army 10-miler. Greensboro Station is extremely convenient to many who work in the immediate area. I live in close proximity to Greensboro Station, Tysons & Capital One/McLean. Metro is in a unique position to profit from the ridiculous vertical growth presently happening all over this area. Save for the pandemic, I have been a Metro rider and supporter since its inception. I continue to have the Metro Owners Manual that was an insert in the Washington Post when the Red Line was all there was: Dupont to Rhode Island Ave. I used it then to get from American University to Greenbelt. I have proudly relied upon and will continue to use both Metrorail and Metrobus. I will be inconvenienced, irritated and hurt should Greensboro be closed.

The College Park Metro station is a critical component of the College Park and University of Maryland communities. It is also an evolving transit hub, serving MARC and the future Purple Line.

I would hate to see the College Park station closed post-pandemic. It supports the University and many neighborhoods (Including new and developing housing).

I rely on College Park to get to work.

Greensboro has many residents that live near that station who use it to commute into DC and the area around is a busy business and leisure place with all the new businesses being built. It needs to stay opened.

Why don't you just close the whole metro system? No pain at all. Everyone will use their private cars. Traffic will be a bit pain. There will be no appeal to take public transportation.

I live in Cheverly and commute to work using the metro. I work at Minnesota Avenue, we moved intentionally to Cheverly in order for me to be on the same line as work.

I am legally blind and use many of these stations for work, doctors, entertainment. PLEASE do not close Metro stations. There must be another solution.

I live walking distance to the College Park metro station, and commute into downtown DC for my job. Closing this station would impose impossibly high costs on me and my family, and I strongly oppose this proposal. It is one thing if you were closing stations downtown where another station is a 10 minute walk away - but in the suburbs the stations are rather far apart. For example this would extend my commute to get to the metro from roughly 5 mins walking to 40 mins walking to reach the nearest available station. College Park metro was already closed earlier this year - which is understandable during the pandemic amid low ridership. But a proposal to decide to close the station for an entire year - irrespective of other data, e.g. opening of UMD campus, achieving herd immunity, etc. seems deeply irresponsible. I cannot speak for other metro stations - but would note that closing both archives and mt. vernon sq. would make a large swath of downtown inaccessible to travelers on the green line except through Chinatown.

I live in College Park. It doesn't make sense to close the station closer to the University of Maryland. There is a lot of development in town and plans to enhance the area around the university. Closing the station that will offer the influx of people that will visit the university due to these big changes doesn't make sense. The board should review the development plans in more detail.

College park services many students and faculty outside of this pandemic! Do not judge low ridership on this past year and the months going forward. In addition, a huge condo development is under construction within walking distance of the metro station. At least wait till people move in to make any decision. Do NOT close College park, Please!!!!

Proposal to close 22 Metrorail stations

I would be directly affected, since I live near one of these Metro Station. (Cheverly). In previous years, I can remember not being able to find a parking spot after 8:30 am. This would in turn cause more traffic into major job centers such as DC. It would also be hampered by the lack of parking that appears to be dwindling due to DC sprawling development in every inch of the city. No one wants to be hot, sweaty and dirty riding a bike to work that might take up to 2 hours. Plus, most people move to neighborhoods to have Metro, so they will have options to take to get to work, to take in cultural events, or entertainment. So closing these stations may end of meaning the death of the overall Metrorail, but it will become a bunch of useless tunnels.

Once I return to working in my office (in July 2021) I will use the Cheverly metro station daily. I do not want it to close.

the Cheverly station serves a wider industrial area than the town of Cheverly and its closing would impact workers who use that station to get to and from work. Difficult for those without cars, and would add to air pollution of those having to drive to and from work if they had a car. Though I no longer commute (retired), I know lots of people do commute, and I would want to use this station for other visits to central DC. - museums, Union Station, etc.

I am a cheverly resident who still uses the Cheverly metro. This metro is essential to the community that surrounds the station. Low ridership is a product of higher metro fees and parking lot fees. NY operates their rail system 24 hours and still manages to keep riders costs lower that the DMV area. I dont believe we should take away the option of transportation in these areas because it would make it harder for residents to get to work. Instead of closing stations, consider lowering costs and creating better service in metro in general. The metro service has not improved at all. There is always construction, slow trains and elevator outages. At a point, I became so frustrated with the rail system that I began to take uber instead because the metro service lacks proper service.

I live near the College Park station and plan to utilize it frequently when DC reopens. Closing that station would make it difficult to get into and out of the city based on where I live.

Please keep Cheverly open! Also frequently use Fed Ctr SW and Reston

Need Greensboro station

Closing Cheverly Station and the proposed cuts to the bus routes on Cheverly Ave would ruin my commute to work. I rely on these buses and the cheverly station. Getting to other stations is not an option without a car, which many cannot afford. Please keep the Cheverly Station open.

I live in College Park and require this metro to get to and from work. I bought a home in this area because of this metro system

The plan closes stations next to each other, the gap between metro center and lenfant is large as is the gap between ballston and courthouse.

I bike to College Park metro and would not feel safe biking to Prince George's Plaza or Hyattsville metro.

Please keep Cheverly Station open. Its the only way I can get to work in a reasonable timeframe.

Closing of Archives, Smithsonian, Cleveland Park, College Park, and Cheverly would all impact me directly. As an educator who takes students on field trips, I am particularly worried about the closures of Smithsonian and Archives. These stations are important not only for local students to have access to the National Mall, but they also contribute to the ease of navigability of our city for tourists. This is important for our continued economic recovery.

Absolutely not viable for College Park. Would kill development that he's begun and will continue.

Speaking specifically to College Park, my home station, this is a terrible and short-sighted idea - but I suspect that to be the case for most of these other proposed closures as well. Obviously ridership is down in these stations due to the pandemic - and for College Park, due to many classes at the University of Maryland being virtual. Undoubtedly ridership will pick up again once vaccines have been widely administered, offices and schools re-open, etc. Yes, the comfort with virtual work may lead folks (including myself) to commute 2-3 days a week rather than 5, but closing entire stations would simply cause folks to give up on Metro entirely, and perhaps never come back - which is bad for traffic congestion, bad for the environment, and bad for society period.

Please do not close Cheverly station!! Many in the neighborhood depend on it.

Cheverly station may be a less used station by the numbers compared to others, but many Cheverly residents walk to the metro compared to other suburban stations. Closing the station would negatively impact home values and make the town a less desirable place to live.

I chose Cheverly *because* it has a Metro station. Eliminating service to the station is hugely detrimental to the community.

College Park station serves the University of Maryland community which expects to be back to pre-covid activity levels.

Commuting to DC for work every day - closing Cheverly metro station would lengthen my commute

I live in Cheverly and commuted to Reston, VA twice a week pre-Covid. I used to bike from Wiehle-Reston-East to my office in Reston Town Center. Not having a Metro station at Cheverly or at Reston Tow Center would mean ridesharing (with my folding bike) to another station, then biking again on the other side. As I dont drive, this would make things incredibly complicated for me to show my face at the office.

Proposal to close 22 Metrorail stations

I understand closing low-ridership stations downtown (where the stations are close together) and at Arlington Cemetery (where there are no residential areas,) but the suburban stations are often final destinations for lower-income populations or commuters who would be gravely impacted by closing them, including Cheverly.

I am most concerned about the Cheverly station. The fact that I live within walking distance of the Cheverly station is an attraction in the success of my small business hosting visitors in my home through Airbnb. Closure of the Cheverly station will have a seriously detrimental impact on my business.

Pre pandemic I commuted from college park to Farragut north everyday. I will be expected to do that again as soon as I'm vaccinated. I bought my current house because of its proximity to metro for my commute. Please don't close th college park station

I use the college park station every day. No secure storage for my bicycle at the other stations.

That is drastic . Too many stations would be closed .

College Park is the metro station that we use.

College Park stop must remain open! It's a major university!

Are you nuts?

This is the way I would travel to many places in DC for social events. Closing the station would force me to drive to DC and deal with parking which is just untenable because of time constraints.

Need College Park station to stay open. Especially as a hub when the purple line opens.

So UMD, the FDA, NOAA, and PG County do not count as riders for Metro any longer? You would cut off the ability of patients to access medical care in DC medical facilities and clinics from these areas? Shut down the ability of citizens in these areas to access DMV sports, dining and entertainment venues? RISK LOSING THE \$\$\$ THAT SUBSIDIZES METRO FROM THE STATE OF MARYLAND -- IF YOU DONT SERVE OUR COMMUNITIES ANY LONGER, WHY SHOULD OUR MD TAX DOLLARS BE USED TO PROP UP METRO!!!!

Greenbelt station serves the university of Maryland, as well as having a huge increase in housing at this stop, planned because of transportation availability. A rider forced to go to another station would be required to drive to that station, as there are no close by stations.

Although some of these stations have stations that are close for cars, this plan would work if you only closed stations that are close for pedestrians. Thus you might possibly get away with closing Cleveland Park or Judiciary Square. But College Park? You should resign your positions rather than close College Park. [Also, I didnt know we had stations called Greensboro or Morgan Boulevard. Youre not trying to trick us to see if we have read this, are you?]

I walk to College Park station and there are no other stations within walking distance.

The Purple Line is going to the College Park Metro Station. That makes no sense to close that station. Also, the development in the area continues to grow with more apartment complexes being built now.

I live in College Park and depend on the College Park Metro Station, as do thousands of University of Maryland staff in students. If people disembark at the nearest station (Prince Georges Plaza or Greenbelt) they will either overwhelm buses or drive to campus, creating gridlock and more pollution on the surrounding roads. Remember, as more people get vaccinated, more people will be working and studying on campus. University of Maryland is now preparing for a more normal fall semester come August 2021. It needs the College Park Metro station.

How can you possibly consider closing the College Park station: a stop with the state university in our town? AND at the same time, talk about discontinuing the 86 bus up and down the Route 1 corridor? Im also deeply troubled about other station closures (Archives and Smithsonian specifically), but I live in College Park and that concerns me the most. How are we supposed to get downtown? Drive????

If Cheverly station is closed, all residents who take Metro would have to drive to other stations, where parking is already severely limited. Cheverly parking is often difficult already (during normal times) because it is a heavily used commuter station. I think it is a mistake to label Cheverly as low ridership based on my experience as a commuter.

This would prevent most of my expected travel.

My son will be riding the metro from the college park station multiple times per week into DC. Also, many UMD students ride the metro from the college park station.

Closing College Park would be a terrible idea. Students depend on that train.

College Park is the life line for PG county and the UMD community.

College park is UMD's station and this would be detrimental to students. Please do not close college park station.

Id prefer College Park to stay open if possible

Proposal to close 22 Metrorail stations

Closing College Park would negatively impact an area that is growing and becoming more congested under the Route 1 Sector Plan. UMD development, major federal agencies located very close to the station would all be impacted in a way that made it harder for them to recruit staff; I suggest working with all to seek support as an alternative to closing that station. Similarly, the Reston Town Center station has seen significant development adjacent. Furthermore, isn't the College Park station a Purple Line station? I understand short term financial challenges; and these two stations are in *relatively* affluent suburbs/areas and it would not be as impactful as closing stations closer in. Assuming closure is temporary, please make sure other transportation is available; e.g. some Fairfax county buses from Wiehle (e.g. to Reston) are on limited, not full day schedules. I live near, and walk to, College Park station - so it's my bias not to close that. A long term closure would hurt the city economically in my view, but this is probably true everywhere. I'd rather see a bond initiative to support Metro.

I live in College Park and use the station regularly. I am much more likely to use Metro if there are more stations open. For example, I would use Metro to go from my house to a doctor's appointment in Virginia Square if that station were open. Or, I would go to Smithsonian via metro if that station were open. The more stations that close, the less likely I am to use the system.

I will be bummed if College Park closes. If anything, I hope the closures are temporary!

Again, I live right next to the College Park metro, so if that station is closed, then I would have no reason to use the Metro again. It also would be strange to drop service to the station closest to the largest university in the area, and which will soon have a Purple Line stop nearby as well.

We purchased a home in walking distance to the Cheverly station to reduce overall commuting costs. We commute across DC to VA daily and driving is not an option since our family only has one car.

We are more likely to use Metro later in the day and in the evening. Closing suburban stations would simply end our use of Metro. It completely undermines the idea of using this expensive system to reduce traffic and help employees get to and from work. A disaster.

When in-person classes resume at University of Maryland in fall 2021, having the College Park Metro station open will be critical for commuting students, faculty, and staff. As a faculty member who also lives in Riverdale Park Station, I use the metro to get downtown for evening events on a regular basis.

Closing college park station would pose a significant threat to my travel and well-being as I would no longer have a metro within walking distance. Proximity to metro was a key factor in my decision to move where I currently live and I do not own a car. I would ask to please consider alternatives to closing stations like college park.

Why don't you just stop paying the VIPs so much. This is one of the most expensive systems in the country...good Lord!

How can you even consider closing College Park? Professors, researchers, and students all use it to commute to the University, FDA, and other businesses. New housing complexes are being built and units sold or rented specifically for use of Metro commuters. I can walk to the College Park station, I can not walk to other stations. Traffic on US1 is a mess. Closing the College Park station would be a huge burden to those of us that live or work or go to school there. How can you even consider closing so many stations in our nation's capital.

Complete closing is a short sighted solution. The Smithsonian station is a primary portal for the tens of millions of tourists and museum-going participants to the National Mall. Other stations could have modified services (less frequent stops along populated corridors, etc.). If the planning assumption around station spacing is to provide a quarter mile walkability radius, why would you close two adjacent/consecutive stations (such as Virginia Square AND Clarendon)? To function (and recover) after COVID, it will be critical not to extend the required walking distances any more than one closed station per series. That would break the pattern (interrupted but not disappeared forever) of ridership that will be difficult to recover.

Addressing Arlington cemetery: of course ridership is down there, the cemetery has been closed to the public. This station is already only open during cemetery hours so why cut service here? There is no other public transportation access. As for other concerns: Cutting service to Clarendon and Virginia square cuts off most of north Arlington from having easy metro access, which is why people live in these sections. There is a large distance between Courthouse and Ballston and this seems unreasonable. It will greatly affect Arlington's housing and commerce. Also, East Falls Church and McLean are two of the few stations on the silver line with public parking access. Last thought- looks like this selection of cuts eliminates all nearby metro access from the National Mall.

As already stated, for trips to/from DC, we almost exclusively use MetroRail and as it may also tie to short MetroBus rides. We deliberately bought our home in a community that is in walking distance to the College Park Metro Station and have enjoyed going to the airport via MetroRail. Furthermore, we own rental property with renters who do not own a vehicle and rely heavily on public transportation (and to a lesser extent other services like Uber). On top of that, by January 2022 it is expected that the University of MD will be once again heavily enrolled with in-person learning, and the local student population will need MetroRail at College Park Station!

Clarendon is a major commercial hub in Northern Virginia and many restaurants and retail depend on the Metro traffic.

Proposal to close 22 Metrorail stations

Keep East Falls Church. And, I would not close the end-line stations. Would WMATA offer bus service if these are closed (I think not because that also has a cost)? VERY CLEAR signage would be needed including bus routes.

College park and riverdale park are growing communities with an allure of easy access to DC. This measure would impact my quality of life horribly, and would force me to possibly have to leave my job. Plus, and I cannot stress this enough, Covid is not forever. Turning Metro in an unreliable, unavailable service, accomplishes the opposite of what you're supposed to be doing: it destroys the reliance riders have in the service you provide. You'd lose customers forever. Because once people find a new alternative and routine, you'll remain irrelevant, and will have to spend twice as much in marketing to regain customers. Just ride this storm out. Were nearly there!

Clarendon station is the closest, and most convenient station to where I work. This is unacceptable. Both closing Clarendon station and closing the system at 9pm.

College Park serves the University of Maryland campus and is essential for my usage, and the usage of many students, faculty and staff associated with the University.

Please keep service to College Park and Greenbelt.

On what are you basing your low ridership statistics? Basing it on COVID numbers it is not a true assessment of need. College Park station is a key location but with the closure of the University you would have essentially no riders during the last year. There is no other nearby station to College Park and cutting service to College Park and the University of Maryland is irresponsible. By contrast - Archives is a couple blocks from two other stations and would have less of an impact.

The College Park station is a key connection to the University of Maryland.

I rely on the college park metro station to get into DC for work. If this closed I would have to find another form of reliable transportation. This is the case for many students at and around UMD.

The college park metro is the primary way students at UMD have access to DC. Shutting down that station would cut off student opportunities.

This would ruin my commute. I chose where I lived based on being able to use the metro to get to College Park.

While the University of Maryland is not currently open at 100% capacity, it will be and the College Park Station is necessary when things are back to normal. Students, employees, visitors flying into Reagan National etc.. all use the College Park Metro. The reason for low ridership across the board is due to Covid-19 and things will not be this way forever. Please do not close the College Park station, aside from being close to UMD, it is close to the FDA and many other new businesses developed on Paint Branch Parkway.

Yes, I got UMD so the college park would affect me.

Please don't close the College Park station!! This is really important for faculty, staff, students, and locals. Lots of faculty and staff use the station for commuting, and students need that safe way of getting home from DC events. There are also lots of locals who rely on low-cost public transportation. It may not be the most used station, but it's a really important one!

OMG NO, this would be a disaster.

DO NOT CLOSE COLLEGE PARK PLEASE. I'm begging you students rely on the college park metro station to get to DC for class projects, DC events, etc. During the pandemic we have been encouraged not to travel and campus is at 40 percent capacity so this is why ridership may currently be low, but when we go back it will return to normal. Many of my classes have required museum visits and this has greatly enriched my experience. Being so close to DC and not having public transport to it is harmful to low income students who can't pay for things like Uber, and also many of us get internships and jobs in DC while at college and transport would be much more difficult. Being so close to the capital has also been amazing to go to events like the cherry blossom festival and visit the beautiful attractions in DC. I probably visited DC over 10 times just in the one in person semester I got before the pandemic began. Please do not close college park metro.

This would make it harder to reach areas of the National Mall with small children and elderly relatives by increasing walking distances. It would also sever a connection to the University of Maryland, which would weaken the links between the student population there and DC. Attraction to DC could be a major magnet for these students, both during their college years but more importantly when looking for work afterwards. Why sabotage this potential economic benefit to the city? And doesn't the connection between the green/yellow lines and the planned purple line station require the College Park station? Closing this station seems like it undermines the viability of an important and expensive project.

Makes commuting massively more inconvenient and Metro less appealing to use - especially bad for everyone I know who uses the College Park station. I think this is totally shooting yourselves in the foot.

College Park for students

For many UMD students without cars, the college park metro stop is quite literally the only affordable way to get to the city. Taking away this stop would cut thousands of people off from DC.

The next closest metro station in college park besides college park is too far away for most students.

Proposal to close 22 Metrorail stations

I use the College Park station to get in and out of DC, and I know other students who use it to access internships (pre-COVID) as well as everything else DC has to offer. Access to DC is a major draw of the school, and closing the College Park station would make it too difficult for many students to travel to DC.

Many UMD students rely on the College Park metro station for transportation into DC. In regards to the statement that there are other stations nearby, as a disabled individual, making it to the nearest metro station is hard enough. Now you are asking me to travel even further.

College park is an important station used frequently.

College Park station needs to stay open. Metro is pretty much the only source of transportation for most of us students, and without it we wouldnt be able to go to internships and jobs and to see family and such. This station is absolutely vital. Please do not close it.

Keep Archives, Grosvenor, Clarendon, Judiciary Sq, Mt Vernon Sq, and College Park open. They arent sufficiently close to other stations. And Smithsonian? Are you all out of your minds?

Im a frequent user of station College Park, that would mean that Ill have to move closer to the city or to buy a car.All these proposed cuts are so saddening.

College Park is the main station I use. If shut down this would dramatically reduce my access to DC and arlington.

Federal Center SW and Greensboro should be open. There are lots of office buildings and workers including me around there. There are also lots of businesses and residents around Greensboro that would benefit using the station.

Don't close the College Park station. I need it to travel between DC and UMD.

I depend on the college park metro station as a means of transport into the DC area.

that might be fine for some of the in-town stations where people dont normally park, but parking is already a problem at New Carrollton and Greenbelt.

The College Park station is one of the only ways UMD students can actually get transportation. Closing it severely limits our options

The College Park stop is the only stop college students attending UMD at College Park can take to get into the city or to possible job/internship locations. Please do not close this station.

I MOVED TO TYSONS TO BE CLOSE TO THE NEW METRO STATIONS - GREENSBORO STATION IS WITHIN WALKING DISTANCE OF MY HOME. BOTH THE SPRING HILL AND TYSONS STATIONS ARE MUCH FARTHER AWAY AND WITHOUT ONSITE PARKING. THIS IS A RIDICULOUS IDEA. THE TOD GOING ON IN DOWNTOWN TYSONS IS PART OF A PARTNERSHIP WITH METRO. KEEP YOUR PROMISES!!!

Since I attend UMD the college park stop is very important for any trips my friends and I want to take on weekends. I would use it a lot after covid is less bad as I already have gone many times

I currently live two blocks from College Park station. Im willing to walk to get to another station, but your definition of near would require me to walk at least 2 miles and that does not consider the ease or safety of the walk. Pre-covid, I used the College Park station almost daily; even during covid Ive used the station quite often to get to medical appointments downtown. I wont even mention that College Park is the station near the UofMD and will be a major connector to the Purple Line ...

I live in Cheverly. This is one of the reasons I chose to purchase here.

Cheverly is necessary this station is the one I use daily.

Closing stations is the exact opposite of what you should be doing. Yes, COVID has hit many areas, but what about reopenings? What will you do then with surges in business openings and increase in travel? It does not make sense at all to do, especially in such a high-demand city such as Washington

Please don't close College Park!! That station is very convenient for me to go to DC, and that goes for other UMD students as well, and would be even more applicable after the pandemic.

Riders shouldn't be punished for Metros decline when there hasn't been a change in leadership

I live in cheverly and closing the station would impact my travel.

this would be less accessible to DC residents

Im not sure how Metro defines near other stations or whether bus service will be provided as a substitute. Would this be a year-round closure? Did Metro factor in the impact of tourists, students returning to campus, access to businesses or new development near certain stations, and/or the cost already invested in the construction of pending stations?

I cant comprehend how you could close all of these stations.

In non-pandemic times, I use the metro to the Archives, Arlington Cemetery, College Park, and Federal Triangle often

Students need college park

Proposal to close 22 Metrorail stations

I work at the University of Maryland - how should the staff and students get to College Park? There is really no other nearby metro station with convenient bus service to College Park, especially on weekends. Smithsonian is the most convenient metro station for leisure activities around the National Mall.

As a student and researcher at a major academic institution this would greatly limit the capacity to which the University of Maryland can contribute to and achieve its mission to serve the state and regional community. Further, with major development planned with 1000+ beds coming in 2021-22 in college Park. The metro is a critical component to the development and traffic management of the area.

I travel throughout the city and suburbs. This is an unacceptable plan.

Dont cut service to college park. Access to the university and the purple line are critical to the people of Maryland and the District

The pandemic is a once in a lifetime (hopefully) event, It flies again common sense to think that we will continue in our current, near martial law status. Please will need to get to work in the future.

While I completely understand the budget constraints, I think it would be a mistake to close stations outside the city. It will only serve to increase vehicle traffic. If you are going to close stations, I would suggest doing them downtown where there are walkable options between stations.

I am mainly concerned about the College Park station - It depends on whether the purple line stop at UMD will be open or not. Not really sure how you would get from the outbound green line to the purple line stop on the UMD campus if you close the College Park metro stop?

Again will severely cripple travel

worst option

I live in College Park and use the CP station every day during non-pandemic times. Also, CP is not near other stations.

I live in Cheverly and the Cheverly train station is the only way I can get around to do ANYTHING. It's how i get to work, get to school, and more. Please do not shut it down i am begging. I will have no way to work or school because I can walk to the train station. I cannot walk from cheverly to landover.

Metro stations are already too far and few between. This would only intensify that issue.

Are you leaving any stations open? Given how small the metro rail is to begin with it seems like you all really cutting a lot of service. What will people do?

This involves almost every downtown station.

Smithsonian? Really? I know it serves a lot of workers, but it really serves the people going to the museums on the Mall. Tourists are NOT going to be able to navigate from L'Enfant Plaza station to the Mall. Bet me! And you all are considering closing Federal Triangle, too? Close one or the other- not both. (I can walk to the Mall from my apartment. This does not affect me personally.)

Metro service to the College Park Station is critical for the University of Maryland. The university has a large campus population and holds very large events that benefit the local community and the state. Eliminating service would be detrimental.

DO NOT SHUT DOWN COLLEGE PARK PLEASE! How are we supposed to get to the city? Are you really expecting to have all college kids to have cars? I dont and I use the metro. So please leave it! Thank you

This would be the worst for my household... we would no longer be able to take metro into the city and it would destroy our property value

People that work in this neighborhood depend on Metro to get to/from work and the university. Closing the station will negatively impact our home values as well.

This would negatively impact me and a lot of other people like me. While the stations above may be close to other stations, they are not suitable alternatives. For example, I can take either Greensboro or Spring Hill stations to go to and work and back. However, on my way back home (usually later in the evening when it's dark), Greensboro is a better and safer option because the road back home is not as deserted and offers more protection from assault. It is also a lot friendlier on people with mobility issues as the path from Spring Hill is up a very steep hill.

Too much walking. I need to start to drive.

Please don't close McLean and Greensboro, lots of people depend on these stations to get home and get to work

Please do not remove Greensboro station! The ridership is very high, as I have observed almost everyday when I waited for the metro. Large populated condos (the Rise, the Boro, etc) have brought hundreds, if not thousands, of new residents, next to this station, they will rely heavily on having a metro station within walking distance. Plus, all the business buildings right next to the station, such as KPMG, Booz Allen and Hamilton, rely heavily on the Greensboro station for their employees to arrive. This is extremely NOT environment friendly, to push all residents in these high-rise condos, and all employees in nearby high-rise commercial offices, towards private cars driving. Please don't do that to the environment!

The Greensboro station is very helpful for our daily travel.

Proposal to close 22 Metrorail stations

Greensboro station is highly used especially with the new construction in the area. I use Greensboro and would like it to remain open.

These need to stay open.

Greensboro is near both retail and residential closing it would be inconvenience for residents who live in the area. The only reason you dont pick Springhill station is because of Walmart pressure.

The Greensboro station is essential to the area I live and work. If it is closed it will drastically affect the new businesses in the Boro, which have already been devastated by the pandemic. The Tysons area needs to have all its stations open in order to survive economically.

Closing metro station due to low ridership does not make any sense. What about those people who happens to use those stations on regular basis? What happens to them? Please reconsider on closing these metro stations

I am getting to the point where I can no longer drive. So, I purchased a condo at the Rotonda, near the Greensboro stop, specifically so that I could take the metro to and from town as well as to go to Dulles airport for international travel.

Closing Clarendon, Virginia Square, and East Falls Church pretty much eliminates all access to Metro in Arlington between Court House and Ballston and from there to West Falls Church --- in other words, most of Arlington County where many people commute by Metro.

Why on earth would you close a train to a major university?!!! People from the university area go into DC to spend money!

HELL NO! If WMATA leadership can tell they'll be in dire financial straits, please reach out to the Mayor and Council of Cheverly, at: Mayor@Cheverly-Md.gov and Cmward4@Cheverly-Md.gov You'll find that as a town we're fairly adept at mobilizing and petitioning. Please reach out to our town government; the sooner the better.

Greensboro Station serves quite a lot of residents and businesses nearby. Perhaps it is better, in terms of the number of passengers, to keep Greensboro Station open than Spring Hill Station.

I regularly rely on certain stations on this list, including Mt. Vernon Square.

I would have no way of using the metro

I depend on the van dorn station

I would be open to this plan if Cleveland park station was left open

aunque haya cantidad baja, no se puede perjudicar a esos pasajeros, son personas y ciudadanos con necesidades de transporte igual

Please keep Vienna metro station open!

Absolutely not. Cheverly riders which include our Ward and Citizens from the other side of the bridge. This can be hundreds of people as has indicate by direct inquiries to Cheverly residents we(our association and town officials) have surveyed. These people walk across the bridge that traverses route 50 and is a walk/bike path to the Metro. Without the Metro, vehicle traffic and pollution would increase 3 fold endangering the health of the entire town and community.

These stations are not THAT close together. This could cause massive crowding at garages and make things even more difficult for disabled folks who se the train.

This idea is almost as dumb as option 1

I strongly disagree with this and I do not think the stations should be closed. Multiple stations with proposed closures are near other stations with proposed closures, including servicing the same lines, which makes it much harder to take Metrorail for people on those lines or near those areas. Federal Triangle, Federal Center SW, and Smithsonian stations are all on the list of proposed closures, but they are all in similar areas of DC and serve the same lines. That would mean removing almost all service for those lines in that area of DC, which is a high traffic area for federal employees, DC residents, and tourists. It also would close many stations on those lines in areas where many federal employees have to commute each day at rush hour, and would make Rush Hour service very problematic. I think it is a very bad idea. Additionally, closing stations in Maryland and Virginia does not leave many options for commuters in those areas. If the proposed reasoning for station closure is that other stations are nearby, this is NOT accessible for people in Maryland and Virginia where the next station is more than just a few blocks away.

As businesses open back up, especially with Amazon hiring more employees in Norther VA, many depend on these stations to be open to commute to work.

As an occasional rider who attends sporting events via MetroRail, this is unlikely to have a direct impact on me. However, the fact that I am an occasional Metro rider should make my opinion hold little to no weight.

this is absolutely insane and ridiculous.

yall should keep these stations open

I use Mt Vernon square every day! So do many other people

I work in a Federal building and need access to Archives and Federal Triangle

Proposal to close 22 Metrorail stations

Its better than extending time between trains. But those around these stations may see issue but not if theres another station not too far from the closed one.

This could work. If the other stations are within walking distance and especially if there is a bus route to another station, this might be inconvenient but manageable for people. Plus it seems like it would be a flexible enough plan that if it made sense to reopen a station, you could.

This would be ok but not ideal as it would mean other stations would be far busier. I regularly use stations like Archives and would have to walk quite far to get to my destination from nearby stations without transferring.

These metro stations are near my job and yall shouldnt close these metro stations at all

I have Drs appointments at a couple of these stations. Closing them would take longer to get there

Not sure about this but please keep in mind those who depend on metro to get to and from work at these stations. Maybe a free shuttle from these locations to an active line.

I live closer to the Cheverly Station, than Landover Station or Addison Rd Station.. A Very inconvenience.

No me gustar^A-a que cerraran la estaci³ⁿ de east fall church ya que est^A me queda cerca para la l^A-nea plateada que utiliz^A para el trabajo.

| |
|---|
| Nooo! |
|---|

Near another station is subjective. For example, you rule out convenience and the need of your riders. For example if I live closer to the Cleveland Park Metro then Woodley Park and you close my station, it means Im looking at potentially getting off at Van Ness or Woodley Park and trying now to catch a bus. What if I am impaired and cant walk long distances?I understand the desire for closing stations, but I have concerns with it when it comes to safety and accessibility.

I'm definitely not entirely against this, but buses will definitely have to accommodate for the slack for people try to get to work, go home, errands etc... possibly every 20 - 25

| |
|------------------------|
| Keep all stations open |
|------------------------|

Although I believe ridership will pick up by then.

My nearest metro stop is Cleveland park and I rely on the metro to get to work

This seems like a terrible idea. Most people would then be forced to get off the train and either catch a bus or walk to the station they need, adding significant transit time.

No!! I use all Judiciary square, federal triangle, Clarendon and many more! Due to my work!!

I would think you would want to keep Smithsonian and Mt Vernon Square stations open. What happens to those of us who live in NoVa and take buses? You have already eliminated the 8Z and 8W which took me to the Pentagon. By closing Van Dorn and Eisenhower Stations, you are further reducing bus options. This needs to be thought about very carefully. The goal for the Biden Administration is to increase mobility options not reduce them.

People take Mt Vernon square a lot why would you close it?

This would be devastating for many people that rely on Metro for getting to work on time.

The proposed stations are not close enough to other stations to mitigate the extreme strain it would cause on riders.

A lot of these stations are still very useful (speaking from personal experiences) because they are usually the only station accessible for those in smaller areas outside of dc that are still in the DMV and while they may not be used often, theyre still essential for many peoples means of transportation

This will cause more crowding and congestion at other stations.

Some of those stations connect me to other trains and or buses

All of these are must have stations for people who work near these stations or live near them in order to access a ride to work

There are some stations which are busy on weekday or weekends reduction of hours is better depending on the locations.

Those can close at 9pm seeing that few passengers travel from these area some of the areas are very lonely at nights, honestly!

Can't accurately predict what stops I may need to reach that far in advance.

Metro is vital for people without cars and a few of those stations in VA and MD are not THAT close to other stations to close them down in my opinion

Make a lot more sense. if the station is low on ridership. close it use the space for something else

| | | | | |
|----------------|--|--|--|--|
| Same as before | | | | |
|----------------|--|--|--|--|

Clarendon, East Falls Church, and Mt Vernon Sq should stay open. We may need to use those stops to transfer trains

I live in beltsville, MD and the two closest stations to me are Greenbelt and College Park. In my neighborhood the buses run every hour. If I miss the bus to Greenbelt, I can catch the one to College Park. Eliminating the College park station would decrease my ability to get to work and get to other places outside of my city.

Im thinking of the riders that live near these stations, it will not only be inconvenient, they would be stranded.

even though those stations are nice if the stations are like a 3 minute walk from each other than close one because there's no need for two or three in the exact same area

| |
|--|
| Proposal to close 22 Metrorail stations |
| It's so close to target and shopping! |
| Negligence |
| PLEASE do not close the College Park station. The only reason no one is in College Park right now is because classes are online. Fall 2021 classes are being held in person. There are fewer bus routes that go to Greenbelt so this would make it extremely hard to commute in and out of College Park |
| I might need to get off at one of these stations, |
| If this is the only way for metro to keep operating, fine. But seems excessive. |
| Again this action would be detrimental to the working poor. WMATA must find a way to get more information from those this decision would severely affect. Flyers in the selected stations, with various options for the affected riders to have an input. |
| Me parece bien |
| Why close transfer hubs like EFC? It's ridiculous to close VA Square or Clarendon because if normal life begins to resume by the time this plan could be enacted, you leave students from two local universities from commuting to school via metro. Also it's ridiculous to close stations you would presumably have just opened- if that's the case then why open the new stations at all!? |
| No porque en el caso mio yo uso mucho el metro viajo mucho a Clarendon |
| PERO siempre y cuando la distancia no sea demasiado, recuerden qu   hay personas con discapacidad y mayores. |
| Only the Smithsonian station exits concerns me. Next year my guests & I will frequently these sites. Dozens of friends & associates postponed 20 & 21 trips to Washington. |
| Smithsonian and College Park ridership is only low due to COVID closings, which are in the process of being lifted. Very shortsighted idea with negative impact to major institutions |
| Archives??!! Smithsonian??? Federal Center SW???! No way- there are too many people who already are returning to visiting the museums and monuments. This is a terrible proposal. Please don't. Consider carefully. Again, there are individuals and families who rely heavily or solely upon metro to get to these places. |
| Please keep East Falls Church & and Van Dorn Street open, those two are my go to commute station either from my house or my colleagues |
| No suelo usar ninguna de esas estaciones pero probablemente otras personas si saldr  an afectadas |
| People who lives by Morgan station use the train to get to work to it would make it difficult for them |
| Again, the past so years have hurt many citizens economically. People would like to return to work and the possibility of that occuring will be decreased if these stations are closed down. It would be best for metro to work towards many offices reopening than contributing to those who will no longer be able to work due to inability to provide cost effective transportation to work. |
| Not going to workBecause I always take the silver and blue to Morgan Boulevard |
| Van Dorn St is the only Metro available in west side alexandria. The east side has multiple ways to ride but those who live on this side would need to take 30+ minute bus rides just to get to the metro. |
| From personal experience, I see plenty of customers going through college park. With the pandemic almost over and schools get back to in person learning, that station would be essential |
| This proposal would block my abilities to reach destinations I've been accustomed to reaching by Metro. |
| I dont need any of those stations |
| U |
| I work around those areas. |
| This might work in DC, but this would NOT work in Virginia where the distance between stations are greater and people rely on metro as their sole transportation solution. Arlington Cemetery, however should be closed indefinitely. |
| This plan would be impacted by changes to, for example, Montgomery County RideOn bus service. Still not clear what if any changes will happen in bus service. |
| I don't often use these stations. |
| I rarely use these stations |
| East Falls Church is the metro/bus hub for residents residing in Falls Church, Annandale, and Seven Corners. To force those residents to spend an additional 20-30 minutes + an additional bus transfer to reach Ballston or West Falls Church is short sided. If I still lived in Falls Church, these changes would have meant that I spend 1.5 hours (including wait times) at the very least commuting to Metro Center. |
| I work in Clarendon and Metrorail is primary means of getting there. Lyft is far too expensive. |

| |
|--|
| Proposal to close 22 Metrorail stations |
| Getting rid of courthouse makes more sense than getting rid of clarendon |
| Mt. Vernon stinks but it's not the worst |
| While closing these stations do not affect me closing Federal center SW, Federal Triangle, judiciary Square will affect thousands of Federal and district government employees. Furthermore the closing of all of these stations will significantly add to vehicle traffic in the area WMATA services. |
| This is a horrible idea, do not close any stations period. People depend on them for travel. |
| Will be difficult especially as they've built up a lot of things around Eisenhower and other stations. Also, at night walking to a different station can be dangerous if you're a woman or alone |
| I use none of those stops on a regular basis |
| This feels crazy but I could make it work. You would be closing so many stations that are either ones I use to get to/from work or that tourists use. If you did this, great care (care that I've literally never seen taken by WMATA) would need to be placed on the customer experience. I'm thinking about maps and communication with riders and probably with businesses and museums. A real effort (that would likely take \$ and talent that I imagine you don't have in-house based on my 10 years of being a daily rider) to be clear so people aren't going to stations that are closed. |
| I dont use any of the stops listen...some of those stations are for tourists |
| University of Maryland employees rely on College Park station, which is also a major bus hub. |
| Closing stations should never be a cost cutting act. |
| I can't imagine only having Courthouse and Ballston open. The whole inbetween would be left out. Also closing brand new stations in Virginia? |
| This is abhorrent to even consider closing stations, including one which you are rebuilding the platforms at as we speak |
| Because one of my workplaces are within the radius of the ones proposed to close. If that happens, it will be damaging to your service and the convenience of travel from that station. |
| Grosvenor-Strathmore essentially is a satellite Walter Reed campus for housing |
| When conferences reopen after the pandemic, Mount Vernon square is really important to the commute to the conference center. I've been to some conventions and work events there and the metro makes it so much easier to get to. Also please don't close the Smithsonian stop. I want to go back again when the pandemic ends. |
| I don't understand closing Mt Vernon Sq. It's far from Shaw and China Town and services a large neighborhood. |
| Still would have to have free shuttles to get back to the closed stations. Which means still free ridership somewhere. |
| So many stations are closed that I would stop riding Metrorail |
| Some people get off later than 9pm |
| Doesn't affect me. |
| They could close at certain hours, but not permanently close |
| Our primary station is Courthouse, and we could work around the planned closures. |
| I plan on boarding the Metro from the Reston Town Center stop frequently once it opens. I'd rather cut my commute time down by boarding there, rather than Wiehle Reston East. |
| I travel to some of these stations, so therefore this would not work for me. |
| Yeah I'll make \$1 million every day why is your y'all close and all the stations for |
| We need access to all these train stations |
| This is horrid! (1) Arlington Cemetery is the easiest way for me to reach my husbands grave. The Smithsonian is where all our museums are and during non-Covid times often crowded. Its a long walk from Woodley Park to Cleveland Park, etc..... |
| clarendon, fed cent, fed tri, and mt vernon are essential. smithsonian would cause more crowds during tourist season |
| I still need to use College Park station to get to work. |
| Some of these are near government building also tourist attractions |
| Ppl still use the station it's cold outside right now and in the middle of a pandemic yes people aren't using them right now |
| East Falls Church is my primary station. West Falls Church is *not* nearby. It adds an additional 20 minutes to my commute to go there. If thats the case, I wont use metro at all. |
| Some station closures seem foolish. For example: Smithsonian. |
| Absolutely not. Fire labor and replace with technology or self driving before cutting and closing stations |

| |
|--|
| Proposal to close 22 Metrorail stations |
| I would have to walk further to catch a train therefor changing my whole morning routine |
| Metro want our money but train always late |
| With my current employment status and location, this would work. |
| Would be Inconvient but not that big of an effect on day to day travel |
| This is the main source of transportation around the city 7 days a week. |
| These stations are not all equally invaluable. Several listed stations hosta living arrangements for working professionals utilizing the metro regularly. Closing stations (such as Clarendon) would absolutely cause more harm than good. Those individuals would more than likely discover alternative means of transportation indefinitely. This would guarantee a loss of many regular users equaling a loss on comparative revenue. |
| Do not travel to these stations |
| What determines "low ridership"? |
| I would think Clarendon would stay open. |
| I dont think Ill be using Metro to commute in January 2022, but even if I do, the station I work closest to is Federal Triangle. When I commuted by Metro (in the before times), I would occasionally walk to Metro Center anyway, either just to get more of a walk in or because I needed the red line. |
| None of these stations would impact me. |
| Would there be some sort of periodic shuttle from the open station to the closed one in order to compensate? |
| Please consider giving bus routes to cover the proposed stations. |
| It's close to another stop |
| Depending on whether fly out of Dulles. Having the Silver Line stations closed will be problematic. |
| Because I cant see how Judiciary Square or Virginia Square could ever have low ridership, unless they close the courts and George Mason University. |
| People with disabilities may not have the time or the capability to navigate the line changes needed to get to their workplace or other daily activities. Closing stations would make running errands a more arduous task. |
| My work needs dont require me to travel to any of these stations, however, i think Metro is making these suggestions based on 2020 trends, which isnt accurate at all. |
| I dont see a problem with that, if the other stations are within a quarter to half mile. |
| Not all of these stops are ideal to close - Arlington Cemetery, Clarendon, east falls church, smithsonian. Also if Clarendon and virginia square are closed this means there are no stops from Courthouse to Ballston. Not ideal for those living in that area. East falls church is not close to Ballston or west falls church. Closing Arlington Cemetery and smithsonian is a horrible idea, tourism will suffer. Closing Clarendon and East falls church is a horrible idea for everyday commuters. Do not close these |
| I WORK NEAR A CLOSING STATION. I ALSO HAVE FAMILY WHO LIVE NEAR AND TRAVEL TO AND FRO A CLOSING STATION AND HAVE NO OTHER MEANS OF TRANSPORTATION. |
| Would work except for closing Mt. Vernon Square |
| Again, Public transportation is the only means of getting around. How will this help? I sometimes have to use some of these stations when during outreach for school and if the stations are closed, how can I get there? Ride share is becoming very expensive. |
| You'd close both my home stop AND my work stop. I cannot afford a car so I would have literally no practical way to get to work with all of these closures. You're making this an incredibly hostile city for those of us who want to still live and work here. This plan would force me to move elsewhere to make commuting somewhat possible. This is outrageous. Talk to the NYC MTA and maybe get a few pointers on how to run a decent public transportation system because this one is basically already and soon to be USELESS. |
| Absolutely not - both on a professional and personally need |
| So many of these offer access to the best parts of the DMV. |
| This plan would close both my departure and arrival stations, and increase my commute by up to 30 minutes. While stations downtown are close enough to walk between if necessary, as during the pandemic closures of 2020, the suburban stations are much more difficult to travel between. I would likely seriously consider finding and adopting an alternative method of commuting if metro adopted this plan. |
| I commute from East Falls Church to McLean, in which case I would need to buy a car!!! Not preferred |

Proposal to close 22 Metrorail stations

You must be joking. If you close my station (East Falls Church) I would literally never ride the metro. There is nowhere I can reasonably walk to from here; the next closest metro is literally miles away. I could understand closing a couple of the downtown stations because there are so many close together, but to close the stations in the suburbs that people depend on to get to work is just outrageous.

East falls church should be removed as it is a transfer station. Stations that are transfer point should not be closed.

Unfair to close Van Dorn. Ridership was artificially suppressed by the service interruptions for maintenance (especially the station overhaul) and has not had time to rebound we have not been able to count on you, so some have found other options.. Also, there is no close station WITH PARKING. Old Town is not comparable. Braddock Road is way closer to Old Town, so close Braddock Road instead. Finally, there is a ton of multifamily housing coming on line here in the next few years... Ridership here has a bright future.

Significantly reduced access to/from VA and DC stations, including one I use regularly.

I frequently use the clarendon station.

you need to communicate what defines low ridership

If the stations that are closed are walking distance from other stations, yes this is a suitable option. But if the purpose of closures is to cut budget/save budget, opening of phase 2 silver line should be delayed until the metro is running at its pre-covid capacity. Metro should prioritize its existing stations before opening others

Do not close smithsonian

I often use the orange/silver line stops in Virginia. While they are "close" to other stops if I cannot take the train all the way I will not use the train.

For us living in suburbs metrorail is the only way to connect to DC. We are so looking forward to this station opening soon but now it's going to be closed?!

I don't have a car and I use the metro almost everyday to do anything. I don't have other options.

But service to Arlington Cemetery is important to tourism.

What about tourists? Keep the stations open.

Need Clarendon

Regularly use Clarendon

I travel extensively on the Orange/Silver lines and eliminating the Clarendon station would not only be inconvenient for me, but would also negatively impact the area small businesses.

All stations should stay open

This plan would leave to overcrowding in stations that remain open

I use Archives so this would impact me, however I could use Chinatown or Lenfant and walk to work. It would be frustrating and increase my commute times, however of all the options presented I would rather walk a little more than sit at a station waiting for a half hour on a train.,

How would we get to the other lines if they are close by? Would there be a shuttle provided or would we have to figure out our own way to get there to travel using the metrorail?

I ride the Green line to College Park on weekends to visit family

Providing shuttles to the closed stops could be helpful

Closing both Clarendon and Virginia Square will cause a huge gap between the stations. East Falls Church is NOT close to another station.

This would be terrible and probably add 30 min to my already long daily commute.

Many of these stations are vital to workers and businesses. If you close these stations the neighborhoods will suffer. And the Metro will seem less essential to the community further lowering ridership. Lower CEO salaries and board member dividends to recoup operating costs.

Travel

East Falls Church does NOT have low ridership. West Falls Church is not close to East Falls. I would need to buy a car if East Falls Church closes.

Both stations on my commute are on this route. If these go into effect I cannot commute to work. Station closures would be the absolute worst thing to come of this budget issue. This would affect peoples lives the most, do not do it.

Under used stations can close on the weekends

I dont use those stops and I believe most of them have other nearby stations that would be open.

Absolutely unacceptable. The stations cost millions to build and they're going to sit fallow? It will cost millions more to rehabilitate the shuttered stations if and when they are eventually reopened. Very short sighted!

I live at Greensboro station and work at federal triangle . I need to keep my job and get to work. I use metro everyday to commute

| |
|---|
| Proposal to close 22 Metrorail stations |
| As I would have to get to work in DC |
| Closing Archives would make it very inconvenient for FBI HQ employees who use Metro |
| Depends on the station. Clarendon station is heavily trafficked and one that I use frequently. Virginia square is close enough to Ballston that I think it could be closed. The smithsonian stop provides good accessibility to the National mall and is a valuable station. Grovesnor-strathmore is a station that I frequent as I have family in suburban Bethesda, and they rely on this station (which they walk to) to commute to their DC jobs. |
| virginia square is my home station and I use the smithsonian station a lot |
| I use these some of the above forwork |
| Isn't East Falls church, the Service to Dulles airport. I thought Congress just gave Metrorail substantial funding. I think all of these cuts are unacceptable for the DMV ridership |
| Since stations with low ridership do not justify the expenses, it would be best to close these stations. |
| Over what period of time have these stations been observed to have low ridership? |
| Why don't you cut salaries and benefits rather than service? |
| I use those stations frequently in non-COVID times! |
| The absolute worst solution possible. We bought a home in McLean specifically to be within easy walking distance of the McLean metro station so a car wouldn't be necessary. Absolute worst solution imaginable. |
| My daily commute to work is to Archives. Don't mess my shhhhht up |
| I take the u6 and u5 bus to work. Please do not eliminate Minnesota station orange line and the u5 or u6 bus |
| Your solutions should be reduce administrative staff, stop buy \$60,000 dollar police patrol vehicles and all non essential purchases |
| The issue comes with delays and trying to make other trains work if jumping between lines to get to/from work. |
| It would make my trip from New Carrollton the pentagon quicker. |
| While Im still hesitant, this makes the most sense. But only certain stations should have to close, and certainly not all of those listed above. |
| Not at all!! Please keep all orange and silver lines open!!!! |
| I am between Clarendon and Virginia Square. There is no other station nearby. At least one station has to remain open. |
| Archives is where I live and my primary station |
| Cheverly seems like a safer station at night compared to Deanwood |
| These stations wouldn't affect my route. |
| I use McLean Station every weekday to get to and from work. Tysons is not convenient at all. |
| I moved to the Ballston-VA Square-Clarendon-Courthouse corridor because of easy access to metro - BECAUSE you have 4 stops here. Closing stops would add a lengthy walk to and from the metro station, and would totally overcrowd the station during rush hour. |
| sure for me, but what about other people living near them? That would expose more women to the dangers of walking longer distances at night |
| People come from all over different regions of Washington DC, Maryland and Virginia so if you take and close these mentioned stations above then you are the ones who will go out of business and revue monies taking away the use of these stations will be a negative negotiable situation... again most rely on public transportation most by means of the Metro Subway making the right connections to get where we may need to go |
| This may not be the best idea. Although, I can see the reasoning behind it. Im torn as you all may be as well. |
| This would be extremely inconvenient for so many people and businesses who choose their location based on metro stations. We should not have to move our apartment and business locations so we can be closer to a station when many of us have already moved to be closer to one of the metros that you are proposing to close. This would be one of the worst ideas that the metro has ever brought forward and it will be detrimental to the people who live in the community but also people who want to travel here. |
| I know y'all playin with this one. Y'all ain't finna close these! |
| Metro should be about access. What is near when you have a disability that makes walking difficult but dont have a car. East Falls Church is not walking distance to other stations. Clarendon is a mile from Rosslyn or Court House. Whole neighborhoods have been built around the access to metro. |
| It would hurt for tourists who want to come to the museums but while they are closed it makes sense. |
| I work near the Smithsonian, plus I would like to visit Arlington |
| My job is at one of the stops and I'd have to walk longer |

| |
|---|
| Proposal to close 22 Metrorail stations |
| Work in Greensboro, tysons station is difficult to walk to Greensboro |
| Several of these stations are ones i happen to go to very often |
| Same as prior scenarios. |
| NO. This closes my station at my place of work and home. I would no longer utilize metro for my commute at all. |
| I work downtown. Closing the stations located downtown dc would cause a huge inconvenience |
| Does not apply to me because I do not ride to any of these stations. |
| Closing Cleveland Park will harm the businesses in that area. Cleveland Park is in the middle of a hill so you have to walk uphill to get there or walk uphill to get home from there. |
| Strathmore Music Center would be an destination Id use - wouldnt want to lose that station |
| These stops closing wouldnt be an issue since I dont travel using them. |
| No, I opposed the closure of certain stations especially the Smithsonian station, which is my workplace if Smithsonian is reopened to the public and employees. |
| Very wasteful. |
| This is unacceptable. the college park station is near the Univ. of MD and 3 Federal office buildings. I regularly rely on it. Anyone going into DC needs to be let off near the buildings they actually need to go to. If you close stations the metro will cease to be convenient and you will be making it useless to individuals who are handicapped or mobility impaired. The reason the metro in Paris works well is because there are lots of stations. If you close stations then people will be forced to drive, traffic and pollution will rise, and so will commute times. |
| No. I use East Falls Church, Clarendon, Archives, Mt. Vernon Square, Smithsonian. |
| I live between the VA Square and Claredon stations. This would require me to walk to either Ballston or courthouse. This would add additional time to my commute making it more difficult to take the metro as opposed to driving. |
| Every time you shut down a station you make my trip longer and less convenient. |
| Would prefer if Archives station could remain open. |
| Again, I am fortunate enough to work around this myself but I am left with questions such as: how will tourist get to Arlington Cemetery? the Smithsonian? Jurors to the Courthouses? Residents to their suburban homes (without using cars to inadequate parking)? And on and on... |
| Would cut off access to the city for a lot of people - would lead to long walk for a lot of people to the next metro stop (if they can even walk that far!) |
| I dont commute to most of those stations. |
| Closing metro stations are horrible and would disadvantage sooo many people. It's vile Maryland would even consider closing so many stations. |
| I think it's premature and fiscally unwise to open or consider opening stations for low ridership when they're not even open yet, it is statistically unverifiable data other than polls. It will also reduce front end costs by halting or slowing work scheduled for phase II. |
| I wont be able to get to work and the low ridership may have a lot to do with the past safety issues and closed stations. |
| Yo he usado tren para desplazarme en Arlington cementery, clarendon, east falls church, McLean etc y siempre estan llenos no se porque de la propuesta de querer cerarlos por falta de personas , no es la percepcion que tengo siempre he visto muchas personas en la horas pico. |
| Federal Triangle, Judiciary Square, Federal Center are all in the heart of downtown where many people work. And the Smithsonian is right in the heart of the tourist area. |
| Not College Park... :(would you be willing and able to provide shuttle oncall shuttle, as needed? |
| Judiciary square is my stop. Need red line to get to work. |
| Low ridership could be temporary. |
| Given that the Silver Line is an important commuter route, I think all Silver line stations should remain open at least on weekdays or during peak work travel time (in the morning and in the evening). |
| I use the stations in downtown DC frequently. As a person over 80 years old, forcing me to walk further to my destinations would mean I would lower my Metro usage. |
| DC is a tourist attraction and we therefore must protect access to our unique attractions like Smithsonian, Arlington cemetery and the strathmore. Prefer that you close courthouse instead of Clarendon |
| I don't frequent those stations. |
| This is ridiculous. All of those stations are so important for travelers, specifically the ones outside of metro dc. Would not utilize metro if those stop options weren't available |

Proposal to close 22 Metrorail stations

| |
|---|
| I use the McLean metro station every day to get to work because I have no car. I would only be able to make this work if the Fairfax Connector 721 bus route went to the Tysons corner metro during rush hours instead of only during off peak hours. I also anticipate using the Greensboro metro stop to shop at TJ Max more when I get the chance. |
| A lot of these make sense. Smithsonian? Absolutely. Virginia Square? Lose it, its less than a ten minute walk to Ballston. But some of these are NOT near other stations. East Falls Church particularly stands out to me--its at least a 45 minute walk to another station (you could take the 2A, of course, but BusETA has not been displaying times for the 2A for two weeks now...and you did away with metro-to-bus transfers...). It also seems like a real shame to close Arlington Cemetery. What a blow to visitors--veterans coming from all over the country who need an affordable way to visit the cemetery. And its truly absurd to say AC is near other stops--look at the map! |
| We are not worried about walking places so it would take some planning but is probably doable. Would be difficult possibly with crowding during tourist season getting in and out if only existing gates are used. Might want to add entrance and exit gates for swiping and more staff for questions. |
| Oof! This will make traveling on the Metro a nightmare. I can't imagine how busy Metro Center, Federal Triangle, and L'Enfant are going to be. |
| Once stations close it will be hard to reopen again. I am not in favor of this |
| I live very close to Clarendon and the Courthouse station is very far, particularly if I have luggage with me. |
| I commute to the Mclean station |
| I use Clarendon often |
| None |
| The metro stations within the District can easily be reached through taxis or buses, but for outliers (like Clarendon), there would be no easy way to get there. I could probably live with this, but it would be inconvenient. |
| Please consider that just because a station has low ridership now during the pandemic, they may have drastically different looking numbers in spring of 2022. Please study the numbers both before and during the pandemic in making the decision to close a station. College park for instance would have much higher numbers when UMD opens their campus completely, which may be January/Spring 2022 |
| How can I take advantage of visiting the Smithsonian Museums and the National Mall |
| I decided to move to my current home specifically for the convenience of the college park metro. If service were to be discontinued at college park I would stop using metro and consider moving. |
| I work close to Cleveland park. There is a school near by and many students use this station. The closing would be very disturbing. |
| Should keep either federal triangle or archives open to reduce congestion at metro center. |
| We do not use Metrorail. |
| Other than Clarendon, I almost never use these stations. Close Ballston or Courthouse instead of Clarendon. Theres 2-3 grocery stores serviced by Clarendon. Thats what people need access to/from, not anything at those other 2 stations. |
| I get off at Mt. Vernon Square fairly regularly, so this would be pretty annoying. |
| The end lines should remain open for longer hours. This would allow for use by long off hour commuters |
| I typically dont use those stops either. |
| After years of waiting for the Silver line extension into Loudoun County, I can't believe that y'all are putting the stations on the chop block before they have ever opened. They are no where near other stations - they're probably the most remote - so it must be the low ridership. I wonder why! |
| I disagree with closing stations. Unless you have plans in place to pay for bus fares of individuals who rely on public transport and would be dropped off further from their destination, this plan seems like another potential deterrent for metro rail riders. |
| Closing stations after a year of a pandemic, citing low ridership, is a bit foolish. It seems likely there is a lot lower ridership in the past year for good reason, and when the city is open regularly again, that would change. |
| I gotten used to walking the rest of the way to work anyway |
| No comment. |
| A number of those stops do not have a close metro stop nearby. If metro stops are closed, riders would find an alternative way to get to those stops such as Uber or Lyft. Metro would be losing riders by doing this. |
| Mt Vernon Sq Station is the closest station to my employment and is preferred to remain the same in 2022. I could imagine that the low ridership at the Mt Vernon Sq Station is the effect of the Pandemic |

Proposal to close 22 Metrorail stations

The downtown DC stops like Archives, Federal Triangle could work. The Virginia stops I think are problematic. Arlington Cemetery is not near another station on foot and would involve several high travelled roads.

Closing these stations would not affect my travel.

You should not close Clarendon or Reston Town Center. Those places are packed with economic activity and hordes of people get on and off at those stations. Closing them would hurt the economically-disadvantaged that rely on the jobs located in those areas, and those with cars would just drive, worsening our air quality. Is McLean the main one for Tyson's Corner Center? If so, that one should not be closed for the same reasons.

I understand that many of those stations have low ridership but some of those are very convenient to residential areas and events. Maybe the operating hours would vary upon peak hours of ridership.

My station is McLean and it would add an additional 20 minutes per day to mine and my wife's commute. It would be more convenient to drive in and pay for parking

I work at McLean Station. It is very far to walk from other station

How are you proposing to help transport those residents that these stations service to connect to other stations.

College Park is used by me often, but all other stations are never frequented by myself

Two of these are my primary stops for work travel.

I occasionally use East Falls Church station for access to my church and it would be terribly inconvenient if that was taken away

This will cut down on tourism. It's a terrible thought.

As soon as we move back to the office (which will hopefully happen in the next couple of months) I will be going to the Smithsonian stop Mon-Fri. Not to mention closing of places like Archives and Arlington Cemetery (not to mention Smithsonian) could affect tourist driven travel which will hopefully start picking back up.

I use the Grosvenor-Strathmore Metro Station daily.

I prefer catch 3a bus as shorter bus ride to work and I easily get car sick If East falls ch closed I'd be forced to take the 1 Alften, like yesterday I missed 1A so rather than waiting 30 minutes I walked to East falls ch station I would lose this ability if East falls ch station closed and ballston is very far I work at 6565 Arlington Blvd

They may close but is that indefinitely or temporarily? People aren't going to many of those spots such as Smithsonian because everything is closed.

With COVID-19 possibly not being as bad by the end of this year I am hoping that DC will be more open for travel and tourism again. By closing Smithsonian you are limiting their exposure to this. My stop is also at Judiciary and I do not feel comfortable walking to Chinatown/gallery place or Union station

I would need to move apartments if Cleveland park closed and I strongly believe the local businesses and large apartment complexes would suffer. Also, once the synagogue opens again many more people will be using the Cleveland park metro. Please reconsider.

There are not good alternative routes to travel to and from these areas without metro

I live near Cleveland Park station, one of the locations they propose cutting.

As long as you ensure Metro bus transport would support such a change which may include increased runs to accommodate workers during peak hours.

I have no problem with this

some of these stations I use sometimes so not an immediate impact but sounds like it would be quite limiting

The McLean station is located by the Capital One Center campus where many employees will travel once the COVID-19 work restrictions have been lifted.

I work at the McLean metro station and frequently use the East Falls Church station so this would add a lot of time to my commute.

Good idea! some of these stations are unnecessary.

I don't use those stops and rarely see people get off there

It would not work because all your parking garages are at stations that causes me to have a longer commute time. Taking a Bus.... the Ride-On line has turned out to be VERY UNRELIABLE. BUSES NEVER TURN UP or to early or late. Been very very disappointed about that.

How dare you close a station like Grosvenor! My sister bought her apartment there and got rid of her car because of access to the station. Never close any station with adjacent residential units. That was a selling point for Montgomery County to get people moving here, so let the county help with the cost. People won't telecommute forever!

Is Reston town center even freaking open yet???

I am looking for an apartment outside of the city and this would greatly limit my options

Don't use these stations

My station is Eisenhower Ave. Closing this station would require me to walk 1.5 miles to access the next closest station. I am an essential worker and have to go to work daily.

| |
|--|
| Proposal to close 22 Metrorail stations |
| why close these stations?? this doesnt seem like a useful budget cut. |
| When you close a station, does that really save enough money to be worthwhile? |
| I mainly utilize the green line. |
| This plan is absolutely unacceptable to me. I use the metro exclusively for my transportation needs and closing my station would severely impact me commuting to work. |
| College Park is essential for UMD students who dont tend to have cars. |
| I could live with these closures. |
| This would create numerous barriers for those with physical disabilities. |
| I go to my Vernon station everyday to get to and from work |
| I work at the Archives stop. How am I supposed to get to work if you close this stop? |
| Federal Triangle, Van Dorn St and Virginia are crucial stops, as I imagine Reston Town Center would become as well when it becomes operational. |
| I live in Silver Spring and work at the University of Maryland. This would be a huge inconvenience for me. |
| Smithsonian is a major hub to reach the mall and museums. while closed at the moment, the nation is hopeful for their reopen as soon as possible. |
| Strongly opposed to the idea of closing these stations, especially the College Park station. UMD students rely on the metro to take advantage of the DC area, I had an internship in DC in the summer of 2019 as many other interns did. Metro was essential to get to work. I know that despite the fact that other stations would be open, UMD students would not Uber or drive to these stations to take the metro, theyd simply drive into DC and cut out the middle man (in this case, Metro). By closing the College Park station, world would travel fast at UMD that it is not worth taking the train into DC and Metro would lose a customer base forever |
| McLean is my closest station and the nearest other stations don't have parking. |
| Total agree with this but perhaps some of these closures make more sense as seasonal closures? For ex, only tourists go to Arlington and very few go when it's cold!But yeah - close as per ridership but keep stations maintained & viable for quick reopening as necessary. |
| Dumb. Closing Smithsonian may seem like a good idea right now, but it won't be when the tourists start to flood in. |
| By closing Smithsonian, you will make it hard for visitors to get to the national mall. All the other station can close or don't need full scale station managers. |
| Office is in that station area |
| Dont understand why Silver Line isnt put on hold until a more suitable time. |
| I live close to station |
| Cutting service when the pandemic is ending and people will be returning to work makes no sence. |
| I don't use those stations often |
| I could see closing some stations for specific times (I.e. Arlington cemetery during the week), but you still have travelers that use all of these locations and it would make it much harder to get around the DMV if stations are closed. Limiting the college students from UMD from traveling into DC to spend money downtown and help the economy would be a mistake. |
| Grovesnor strathmore is incredibly important to me. I don't have a car and work for the military. My work is in navy yard. It takes me 40 min to get to work currently. If the grovesnor strathmore station is closed it will add an hour on to my commute daily |
| The closest station from my place is college park |
| I analogize this to what Starbucks did, by closing many stores. Some downsizing might be acceptable. |
| I would hesitate to close Judiciary Square with Archives closing and courts reopening. Perhaps Morgan Boulevard could be opened for travel to Fed Ex field on Sundays during the football season. Otherwise, these seem like the optimal list of stops to eliminate if that is a definite decision. |
| This would decrease travel options for meetings I have to attend around DC. |
| Yes, definitely close these stations - just make sure to update Google Maps so we can plan accordingly when traveling. |
| Eisenhower is the closest metro station to my residence. Commuting to King Street or Huntington would greatly impact my daily trips to my place of employment as an essential worker. Moreover, the Carlyle neighborhood is seeing a great expansion. A metro should service these new residents. |
| It is more dangerous for me to get to the Silver Springs station than the Greensboro station. There are new developments being built right now that will likely increase ridership to/from the Greensboro station. If riders need to take a bus to get to the station they are unlikely to use Metro at all. |
| PLEASE do not close these stations. They are many people's only way to get to work. Ridership will improve post-vaccine. |

| |
|--|
| Proposal to close 22 Metrorail stations |
| Some of these stops dont have great or truly close by alternatives. |
| Absolutely not in favor of closing Grosvenor station in particular they are thousands of people that live and depend on that station because it is within walking distance of a lot of housing in the area also it accommodates such a large number of people being able to park instead of driving into the city. I consider Grosvenor station to be a vital station to stay open. This would significantly impact my ability to get downtown. Driving to another station and trying to find parking would be a nightmare |
| People still get off this stations and live in those areas. |
| I agree in closing non essential stations |
| Again tourism and public transportation. I think ridership will improve again post pandemic |
| By 2022, I hope to be visiting Arlington Cemetery more frequently and there is limited other options other than ride sharing |
| It depends on my situation, but I would prefer station closures are kept to a minimum |
| Many of those serve tourists and leisure travel who put actual cash in your coffers. PLUS where are the parking lots at the stations nearby...as perception of crime has gone up in the region (and likely personal crime has gone up), people will likely want to drive to the alternate station - where are you going to put them and how are you going to board people when you have no line management at the Metro doors. (visit BART in San Francisco or the metro in Singapore or other places - you either need expansive platforms or some sort of way to POLITELY send people into and out of the trains) - you very much lack that basic thing. |
| I use this stations to either transfer or get to work since one of this station is close to my job |
| These station closures are outrageous and a slimy scare tactic. These massive cuts only lower the budget by 3% which is an absolute joke. You need to fix your bloated opex and stop punishing the riders and constituents who find the massive opex and instead try to run a system that is efficient and safe. Metro is neither of those despite robbing tax payers of billions. Shameful. |
| Close em! |
| I commute to my office every day. The proposed closure would be inconvenient because the station is within walking distance to our home. I do not drive and my wife and I are a single car household.I'm a new resident to Alexandria who moved to this area from Maryland. One of the reasons why my wife and I chose our home is the proximity to Van Dorn Station. Eisenhower Ave station is 3 miles (a 1 hour walk) from our home. It is not within safe walking distance. It is my understanding that there is even a threat of closure of Van Dorn St station. This will be a disruption to our schedule and our lives. |
| This is not good |
| Judiciary Sq is my work stop, going to Gallery Place is not the end of the world but starts adding to time to my usual commute. |
| I commute to Loudoun County for work. The train may be a viable option for me with the opening of Silver Line Phase II. |
| This stations are used majority by government workers, who now telework, understandable. |
| This makes negotiating the city without a car much more difficult. This proposal is terrible |
| This would drastically reduce my mobility since I don't have a car. Also so bad for the environment |
| Closing of these stations do not affect where I get on and off. |
| There will be a new Wegmans super market at Eisenhower, along with new apartments. Closing this station would be a mistake. |
| I plan to use many of those stations regularly, like Clarendon, Judiciary Square, Smithsonian, and College Park. |
| I need to use Federal Center SW for work |
| Would not be able to get to work at all. |
| What are the implications for the bus routes? If the bus routes directly linked to those stations are discontinued then that restricts the travel for people who need those routes. |
| I go to College Park 4-5 times per week 12 months of the year. |
| Clarendon metro stop has been frequently used by me and having to take the metro to neighboring location especially at night is not appealing. |
| What would happen we tourist come back to the city? You would be shutting down all those stops. More loss in revenue. |
| I commute to Federal Triangle. This proposal means I would be stuck on the train longer with more people and then have to walk further to get to work. This will also negatively impact all the small businesses located outside these stations. I also think closing two of the major tourist metro stops (Arlington and Smithsonian) will be terrible for Metros ability to continue to generate revenue. |
| Closing Cleveland park station will crowd already crowded Woodley park station |
| I will rely on using the McLean stop for my work, and will need that stop to continue staying open for my commutes during the week. |

Proposal to close 22 Metrorail stations

This would close the two closest stations to my home and the two closest stations to my work.

Why did you build these stations to begin with? This reduces your personnel costs because you won't have any staff at these stations but you cannot let them go into ruin. Are you going to provide regular bus connection service to things like Arlington cemetery for tourists. What about walking to the zoo from Cleveland park? I think that walk is easier in the heat than walking from Woodley Park in the heat. Connecting buses? I know you put Zoo in the name of Woodley park, but did you think about walking up hill in the heat?

All these station closures are based on the current Covid ridership levels. As more people are vaccinated, ridership will increase on Metro. These budget decisions should be reviewed in September.

You're shutting down some key metro stops and areas that the bus doesn't always frequent or get you there on time

Preferable to time changes!

I wouldn't close any of these stations except on the weekends. Except for these: College Park (need this game day and for students), Eisenhower Ave (feeds the small mall there), and Morgan Blvd which needs the Metro to feed the stores nearby. All others usually fairly empty on weekends because the govt is closed then.

Closing these stations would make my way from work and to home so much harder

That's way too confusing. Arlington cemetery makes sense. Parking is can be bad enough. This would hurt metro and put in a death spiral. Stop put those stupid wasteful stickers on the ground. The bumpy tile created a huge expensive constant repair on the outdoor stations. Now I believe all outdoor stations need to be covered.

This doesn't make sense. How much does it cost to close a station? How much does it cost to operate a station?

Whereas this does not affect my daily commute, I think some of the closures proposed (such as Smithsonian) will significantly affect tourism once things start opening up.

Maybe these stations can be closed on the weekends only

Please do not close East Falls Church or Van Dorn. My bus routes take me to those stations

Some of the stations are close to landmarks. It would be hard to get there

Closing stations downtown that are less than .75 from one another where you have to walk a few city blocks could make sense. Such as Archives or Federal Triangle makes sense. The other ones do not

wow surprised about Reston Town Center being considered.

Closing any stations is an absolutely awful idea. I use Cleveland park station and this would render metro effectively useless. Also, why would construction at Potomac yards and other improvement programs be allowed to continue if other stations would be required to close. That makes no sense.

Cleveland park is pretty essential for me

Some of these are important employment and/or recreation destinations. Clarendon, Cleveland Park, College Park, Smithsonian, Reston Town Center.

I would within a walking distance of Mt Vernon

doesn't work, you're basing this on ridership now. what happens when everyone goes back to work or a relatively normal schedule. Also no stop at Arlington limits anyone wanting to visit

Porque la línea amarilla terminará en Mt Vernon Sq entonces cómo haré para salir y tomar el bus desde allí?

I live right near Mt. Vernon and want that station to remain open

I will need Grosvenor-Strathmore station to go to my office once the pandemic is over. I cannot afford a car and biking to my office will take 45 minutes to complete, which took too long considering my busy schedule.

I think closing so many stations would hurt Metro. Remaining stations are not all that close by.

While none of these are primary stations of me, it seems shortsighted to close stations outside the District core.

There are more Travellers than before, the services should be increased not decreased. Also public transportation helps in promoting a Green economy

East falls church is quite far from any other station. Would add more than a mile walk to my commute in an area with limited other public transport

| Proposal to close 22 Metrorail stations (Spanish) | Translation |
|---|---|
| Yo dependo de la estaci3n en Greensboro para poder ir a trabajar. Me mude a esta area solamente por la presencia de esa estaci3n de metro. | I depend on the station in Greensboro to be able to get to work. I moved to this area solely due to the presence of this metro station. |
| Es imperativo quela estaci3n deGrosvenor Strathmore siga abierta todos los dÃ-as! | It is imperative that the Grosvenor-Strathmore station remain open every day! |
| Necesito trenes en Grosvenor. Como voy a ir a mi trabajo en DC | I need trains in Grosvenor. How am I going to get to my job in DC |
| Nada conveniente, y no entiendo el razonamiento de cerrar Grosvenor dada la gran cantidad de personas que utilizan la estaci3n. | Not convenient at all, and I don't understand the reasoning for closing Grosvenor given the large number of people who use the station. |
| Can affect many that have their jobs around these areas. | Can affect many that have their jobs around these areas. |
| Soy usuaria de las estaciones de Mclean ya que resido cerca y de East Falls Church ya que trabajo cerca. Me afectaria negativamente el cierre, no cuento con vehiculo y el metro es mi unico transporte. | I am use the McLean station since I live nearby and East Falls Church since I work nearby. The closure would affect me negatively, I don't have a vehicle and the metro is my only mode of transportation. |
| Me muevo en Virginia y no me conviene que cierren estaciones en esta parte | I travel in Virginia and closing stations in that area is not good for me |
| No me afectarÃ-a porque uso Bethesda a farragut north o alguna estaci3n en washington dc | It wouldn't affect me because I use Bethesda to Farragut North or stations in Washington DC |
| Cerrar las estaciones de los metros no soluciona nada. Se crearia mas congestion en las otras estaciones y tb los usuarios empezarian a buscar otras alternativas para movilizarse. Todos se afectarian y el metro tendria que cerrar | Closing the metro stations doesn't solve anything. It would create more congestion in other stations and also users would start looking for other alternatives to get around. Everyone would be impacted and the metro would have to close |
| Yo use el tren para if a mi doctor de espalda y voy 3 a 4 dias por semana hasta East Falls Church porque no tengo carro para que me lleven. Al fin me encuentre un camino donde yo pudo ir a mi doctor y no me cuesta mucho llegar alli y esta serca del estacion, y yo vivo en DC. | I use the train to go to my back doctor and I go 3 to 4 days a week to East Falls Church, because I don't have a car to take me. I finally found a way where I can go to my doctor and it doesn't cost me much to get there and it's near the station, and I live in DC. |
| aunque haya cantidad baja, no se puede perjudicar a esos pasajeros, son personas y ciudadanos con necesidades de transporte igual | Even if there's a low number, you can't harm those passengers, they're people and citizens with the same transportation needs |
| No me gustarÃ-a que cerraran la estaci3n de east fall church ya que estÃ me queda cerca para la IÃ-nea plateada que utilizÃ³ para el trabajo. | I don't want them to close the East Falls Church station since it's close to the silver line I use for work. |
| Me parece bien | Seems good to me |
| No porque en el caso mio yo uso mucho el metro viajo mucho a Clarendon | No because in my case I use the metro a lot, I travel to Clarendon a lot |
| PERO siempre y cuando la distancia no sea demasiado, recuerden quÃ© hay personas con discapacidad y mayores. | BUT as long as the distance isn't too far, remember there are people with disabilities and older people. |
| No suelo usar ninguna de esas estaciones pero probablemente otras personas si saldrÃ-an afectadas | I don't usually use any of those stations, but other people would probably be impacted |
| Yo he usado tren para desplazarme en Arlington cementery, clarendon, east falls church, McLean etc y siempre estan llenos no se porque de la propuesta de querer cerarlos por falta de personas , no es la percepcion que tengo siempre he visto muchas personas en la horas pico. | I've used the train to get to Arlington Cemetery, Clarendon, East Falls Church, McLean, etc. and they're always full. I don't know why they're proposing to close it due to lack of people, that's not my perception. I've always seen a lot of people during peak hours. |
| Porque la IÃ-nea amarilla terminarÃ-a en Mt Vernon Sq entonces cÃ³mo harÃ-a para salir y tomar el bus desde allÃ-? | Because the yellow line would end at Mt Vernon Sq, so how would we get off and take the bus from there? |

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| It will work for me as soon as trans will come on schedule and will not be any delays |
| More trains please |
| 30 minutes is waaaaaaaaaaaaaaaaaaaaaaaaay too infrequent |
| Need more regular trains |
| Already over crowded during peak hours. |
| woefully inadequate |
| Opening the Silver line as soon as possible is key to the regions economic recovery. |
| More frequent trains on orange/silver |
| I live at Cleveland Park. If that stop is closed I cannot take metro and will end up driving. |
| Metro should not cut service |
| Wont be enough room on the train |
| Trains should be more frequent |
| eliminating all bus service from Trinidad (D4, D8) will cause me to not use WMATA at all, zero |
| Need more trains to allow for flexibility in getting to work |
| This would not be frequent enough for me on weekdays. |
| I need to commute to work one train every 30 minutes will NOT be sufficient |
| Trains are already too crowded |
| HATE waiting for trains. |
| Impossible to schedule commute with 30 minute gap between trains. |
| It is too long between trains during rush hour on the silver line. |
| Totally unacceptable |
| Dont reduce metrorail service frequencies. Increase them, actually |
| Need more stops open with shorter wait time |
| Dont make any changes, keep it the way its been |
| Trains will be too full and too difficult to get on at my current station if there is only one train every 12-15 min |
| This would be horrendous during the morning commute. |
| Arriving every 30 minutes is way too sparse and would lead to severe overcrowding in a time we aren't even sure COVID will be gone yet. In addition I transfer train lines. I would definitely be late for work if I had to transfer and trains only arrive every 30 minutes |
| Would be very difficult to time commute correctly |
| the timing is great for everyone to get where they are going |
| not frequent enough |
| I want the same as current. |
| Get funding from government. This should not be run like a profit generating source. Transportation adds value and watering down the schedules will further cause rider attrition and let republicans sabotage government and then claim it doesn't work post sabotage. Metro service is important and is significantly more effective than cars in the DMV. This plan would kill public transportation to further ensure other transportation like cars and ride sharing gain larger profits. |
| Need more frequent trains |
| Need more frequent trains to and from Arlington |
| Trains would not be running frequently enough to get me from point a to b in a timely manner |
| this would negatively impact my commute to work |
| If everyone is back to work this would be insane |
| I want the same flexibility I have always had with the metro - i.e., trains running every few minutes during business hours |
| Is this a joke? Why would we be competing to have one of the worst metro rail stations in the Nations capital |
| This makes me less likely to want to ever metro |

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Trains should come every 3-5 minutes |
| Based on my experience riding the metro during rush hour traffic, slower train service post-COVID would make it significantly harder to commute using the metro |
| stupid idiotic idea |
| it doesnt make sense to me to not provide more trains at rush hour |
| Need rush hour service |
| By Jan 22, we will back in the office so this headtime will produce unacceptable crowds |
| I need the Cleveland Park metro to remain for my commute. Without it, I will leave DC. |
| Regular service through all train lines, especially red line from Shady Grove to Glenmont. |
| not ideal, but workable |
| By January of 2022, many people would be commuting into the office as they did previously. This schedule is not going to accommodate. |
| 30mins is far too long to wait. |
| This would drastically impact my commute and I would not be able to use metro if this happened. |
| This would be awful to the point where I wouldnt even bother using the metro |
| 30 min gaps are too long. Will drastically reduce ridership and revenue. |
| This would make commuting on metro much more difficult. I feel that there needs to be higher frequency during rush hour periods. |
| Prefer more trains during rush hour, and the distinct weekend/weekday schedules. |
| This is not workable in rush hour when space is already at a premium. |
| Getting to work would become extremely difficult |
| Concerned about lack of service on end of redline- wheaton |
| Terrible. Greatly reduces services needed for the commute. |
| More trains needed |
| This would seriously impact my commute. |
| Don't close strathmore!!! |
| Once the world reopens, this will make the trains ridiculously crowded and potentially dangerous with pushing. |
| Depends on crowds and reliability of timing |
| Monstrous. Inconceivable. |
| There will be 0 social distancing if trains come less frequently. It is already packed when they come every 3-5 minutes during rush hour. I will not use the metro if this is the case. |
| This would add significant commuting time |
| We would need the metro to run every 15 minutes to commute effectively to work from EFC |
| I expect to be working in the office then (rather than work from home) and every 30 min during rush hour is not sufficient. |
| Trains would be far too full during rush hour |
| Metro needs to reduce labor costs. The ATU is driving up costs. Metro should be about serving the public, not a jobs program for union members. |
| I use Grovesnor-Starthmore to commute to work; I cannot get to work without it. This would put me in a pickle to continue my livelihood. |
| This is insane, just shut the whole system down why don't you?!?!? |
| This would dramatically impact my ability to get to work. |
| would mean delays for me, but tolerable. |
| Do not reduce service for these lines |
| 30 minutes is too long, 15 is decent. |
| I work downtown in the dc courts and can't plan based on 30 minute intervals either way |
| 30 minute intervals would make commuting on time to work very challenging. Additionally of ridership were to increase, overloaded trains would be a problem. If you had to wait for the next train you could be waiting an hour to get to where you need. |
| every 12-15 minutes would be very difficult during rush hour |
| This would make my commute 10 minutes longer, which might prompt me to bike rather than Metro. |

Proposal to operate Metrorail service every 30 minutes

Trains are too infrequent; need more trains available and sooner, especially during peak periods

people will not use train services if the trains dont come frequently enough. Need rush servicing during the work day

Lots of government employees rely on all routes affected. Leave all routes open.

That is unrealistic for rush hour occupancy.

This would be completely untenable once people begin commuting to work again on the red line to downtown - 15 minutes is way too long

This absolutely would not work in Virginia.

Run more trains.

The problem is some of us are dependent on one line.

How in the world will anyone be able to get to work with that much lag time between trains? This will create more crushing than is even typical during normal rush hour and a dangerous environment for riders.

I rely on the metro to take too and from work. If the trains are decreasing in arrival time, the trains will be packed with riders and it might take longer to get too and from.

Time between trains is too long during rush hour

I would like the metro service to run as it was (different on weekdays versus weekends)

Need more frequent trains on orange and silver lines

How can you consider cutting service just when folks will need metro again? Fire staff in your fancy new headquarters, dont cut service.

This wont work for me as I use the Metro for work and am dependent on appointments.

Once we go back to work regularly, which likely will be in late 2021 or early 2022 this is going to cause catastrophic delays.

need trains more often at vienna

I like this because it doesnt eliminate any stations.

We rely on regular metro service at east falls church for commuting to work and for our childcare provider's commute.

That can add an hour+ to my commute when things go back to normal. No thanks

Given expected return to office post-vaccine, this proposal would strongly disincentivize my use of metro.

If the pandemic situation improves, this will not work. If most people continue to work remotely, then this would work. It would be important to know exactly when trains are scheduled to arrive.

This is not frequent enough

I still think more trains during rush hour would be necessary.

This would make commuting very difficult.

Id prefer trains more frequently than every 15 mins

That would significantly reduce the utility of metro for commuting.

i would like be forced to drive for work if this went into effect

Those of us who are working from home do not necessarily know when well be returning to our respective offices.

In rush hour this could be disastrous if ridrship comes back to anywhere near pre-pandemic levels. Orange line trains were filling at Vienna after about 7:20 AM last I knew.

Too long an interval between trains

Too infrequent, would add time to my commute via bus/trail combination.

Not frequent enough

It works if it is expected that there will be reduced volume of people. Otherwise rush hour at 30 , or even 15, minute intervals will be a nightmare

Find another solution Paul. This won't work. You are making metro a Third World transit system.

12-15 minutes is a very long time to wait for trains at peak transit stations, including Rosslyn

Please do not close Grosvenor-Strathmore Station!

30 mins is too long between trips.

The Orange and Silver trains during normal rush hours are already extremely full. If they were only every 30 minutes then basically no one in Arlington would be able to get on a train by the time a train actually got to an Arlington station it would be overflowing.

It wouldnt be ideal, but itd be workable.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Need more service during rush hour |
| I'd drive if that happened. |
| Not frequent enough"will have too much crowding |
| Trains need to run more frequently on weekdays. |
| On a work schedule having to wait 30 minutes for a train could be detrimental. |
| I would likely be teleworking full time. If I did go into the office, I would not ride metro if trains were 30 min apart |
| Once everyone goes back into the office, at least a few days a week, this would be a disaster. Crowding in platforms, delays and even worse traffic. It would also be detrimental to entertainment and sports (Wiz/Caps, Nationals, etc.). |
| That is not a frequent enough schedule to reliably get to work |
| This is a great option is pandemic conditions dont change. If were no longer in a pandemic, Id expect service to return to pre-pandemic levels. |
| This would mean more wait times and crowded trains which is not ideal |
| But I do not use metro to commute |
| This proposal would be a complete disaster. It would also guarantee that every single train is absolutely packed with people who are all inches from one another, just a short time after a pandemic. |
| Not enough rush hour trains |
| Is this as crazy as it sounds? |
| Need more trains during rush hour |
| Too infrequent. |
| As vaccines increase, more people will go back to the office and this is not enough train service in order to accommodate for those who need it, especially in a time where we are social distancing. This will lead to very crowded trains which will be bad for public health and might ultimately decline your ridership anyway if people do not feel safe on the metro. |
| At thirty minutes apart, trains would be useless to commute to/from work. |
| This would not only make trains more crowded, increasing covid transmission, but it would make my commute much longer and more complicated, to the point where I may have to move in order to reduce my reliance on metro |
| This is way too long between trains |
| Trains need to be more frequent during peak commuting hours |
| Every 12-15 minutes or every 30 minutes is terribly infrequent. |
| Unclear if offices will reopen by then. If yes, this is not workable. |
| Why are you cutting service at the time when we might be getting back to normal? People will switch away from mass transit and you will be in a death spiral |
| This is too little 30 minutes. every 12 minutes works |
| Trains are way too infrequent for commuters. Trains would be full during rush hour |
| Trains were already incredibly crowded during rush hour times. I don't know how people could be expected to get to work on time if they can't get on a train because it's full and have to wait 30 minutes to try again |
| This could cause serious delays if i miss a train. 4-5 trains an hour is too few. |
| Waiting 30 minutes if you miss a train could be disastrous for commutes. |
| Id rather have trains running than stations closed |
| 30 minute wait during rush hour for a train severely impacts workers who rely on metro to get to and from work. |
| Red line on rush hour once every 15 mins seems absurd |
| Trains do not run frequently enough, especially during rush hour |
| This would not work (30 minute apart trains) for rush hour mornings and afternoons). |
| Even though inconvenient, I would be able to adjust my work hours to accommodate the train schedule of every 30 min. |
| I will not use Metro at all if this happens. I need to transfer and it will take me far too long to get anywhere. At that point, Ill buy a car and never use Metro |
| This doesn't seem good for rush hour |
| I don't understand why Metro decided it would be a good idea to close everything down just as things start to open back up. |

Proposal to operate Metrorail service every 30 minutes

Would be workable if the trains are on a pre-determined timetable that is both shared and adhered to

Trains will be overcrowded and theres no way any of us will be able to get to work on time or safely

Trains arriving only every 12-15 mins is not sufficient

15 minutes between trains is really long. 10 is more reasonable.

30 minute intervals for a train to arrive is too long of a wait

Ridiculous! Do not suspend stations. Post pandemic people need a way to get back to work.

More trains, more service!

With such infrequent service I dont know that I would be able to fit on the train by the time it reaches my station.

Trains too infrequent and will be overcrowded

Train frequency should be doubled during rush hours on weekdays

This schedule might work in non peak hours, but there absolutely needs to be more frequent service during peak commuter hours. The trains would be too crowded otherwise

this means non shared services will run every 24-30 minutes, which is worthless as you can never stay on schedule as is, so planning is impossible. Id stick to driving as cheaper and quicker

I would need more trains at rush hours during the week.

The clarendon metro station is integral to people getting to and from their jobs. Delaying trains and or closing stations would be disastrous

I think trains should run more often during rush hour.

30 minutes is very infrequent when people begin commuting again

I would be nervous about the trains running a bit ahead of schedule - if so, that would cause me to be 30 min late to work, which is a huge gap.

If you were implementing this during COVID it would make more sense - who knows what life is going to be like in a year

So much for providing reliable transportation for those who dont have cars or drivers licenses.

Not frequent enough

I like that this doesnt take out any stops along the route

Need trains coming more frequently during rush hour

This would be terrible. I am still working from home now but expect to be using the metro again by January 2022.

In January 2022, most people will be back at work. No rush hour trains would be an absolutely nightmare.

Depends on how the Post-Covid ridership resumes and when.

Public transportation is critical - no way this would serve the needs of individuals who dont have individual cars or who need to otherwise take public transportation.

Pre-pandemic, the ridership on the Orange line was heavy during rush hour with cars full to capacity. I cant imagine what would happen if trains only arrived once every 30 minutes. How could I count on Metro getting me to work on time?

Need more trains during rush hour

15 to 20 minutes is tolerable. 30 minutes is not. Why ride Metro then?

Trains would be far too crowded, I think more people will be returning to the office than working from home by then.

Weekday service should be more often than weekend service

I have to do a line transfer. This could add an extra 30-45 minutes to my trip, depending on timing. I would not be willing to take the metro under those conditions.

this doesnt serve the needs of those workers (and students) living in the DMV who rely on Metro for their commute and transit needs!

Would be tougher to plan commute trains

30 minutes between trains is a long time to wait. Also too long for outdoor stations especially in the cold weather.

Trains every 30 minutes encourages people to use metro as a last option.

This seems like a solid and fair plan.

Terrible idea, especially during commuting hours.

That's so infrequent bro

Too few trains!

Given that some level of the workforce will be returning to offices post-COVID, this would create crowding and difficulties commuting.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Service every 30 minutes is too infrequent for commuters who rely on your service to get to work on time. |
| Its particularly outrageous to continue to charge peak extra high prices for non-premium service. im not sure how youre doing that with a straight face now |
| The proposed gaps between trains are too long. Carriages will be crowded. |
| Need more frequent during rush hour |
| This would drastically impact ability to move around the city for work, make meetings/appointments on time, and likely cause crowded trains. |
| This would make commutintng to and from work significantly less flexible and more difficult, and trains would be significantly more crowded than they already were pre pandemic. This is simply put: stupid. |
| I anticipate that I will be back to commuting in JANUARY 2022. That is too long between trains, and will be too crowded based on pre-pandemic levels |
| Need increased frequency during rush hour periods |
| Having multiple options every 5-7 minutes is most effective for my work travel. |
| I plan to get back on the metro when I return to the office and I will need the red line. |
| PLEASE DO NOT CHANGE ANYTHING ANYTHING TO GROSVENOR METRO STATION |
| 12-15 minute trains would mean they will be so crowded and people might not be able to still get on because the trains would be too packed. |
| I moved to my apt in Clarendon because it was next to the metro. This was literally the main reason I moved to the area. |
| Advertise more, increase metro frequency |
| This would lead to serious overcrowding and then a decline in ridership |
| 15-30 minutes between trains, especially during rush hour, is too long of a time. I imagine each train would be overcrowded as well. |
| I would need to have 100% confidence that i knew when the train was coming to my station and that i could get on it if one only came every 30 minutes. If i miss a train or the train is too crowded, I cannot wait 30 minutes for another one or i will be late to work. |
| Please leave open the Court House and Clarendon metro stops |
| Tough but doable. Probably hurts more people than me. |
| Trains need to run more often, especially during rush hour. |
| 30 min headways will result in no one riding the train - this is dumb. |
| Fewer trains would make commuting via metro unrealistic. Trains were already packed to bursting at rush hour. |
| That simply isn't often enough... if you miss your train for whatever reason, there's a 0% chance you'll make it to your destination on time |
| Not frequent enough |
| This severely limits access to the city for students and essential workers especially from areas of lower socioeconomic status. |
| 15 minutes is a good time |
| More frequent trains would be necessary to ensure a tolerable commute. |
| Too long to get a train during rush hour. |
| I assume rush hour M-Th will look similar to what it did and I cannot wait an additional 30 minutes if a train is too full. I would just drive instead. |
| This will make travel both prohibitively expensive and incredibly slow. 12-30 minutes between trains in ridiculous! |
| Too infrequent |
| Trains arriving every 30 minutes in the nations capital is absurd. The trains will be overcrowded especially when tourists return. |
| Rush hour trains will be impossibly crowded, and trains will be full by the 3rd or 4th station. |
| Closing of grosvenor station will greatly affect my coworkers ability to get to work as a DC commuter. |
| PLEASE DON'T CLOSE THE EAAST FALLS CHURCH METRO!!! |
| My office in DC plans to reopen late summer, early fall. I cannot imagine trying to commute on a system where there is only one train every 30 minutes and I do not own a car and am too far to walk to my office. |
| Not riding metro through underground stations until air quality issues are addressed. |
| I would rather trains every 15 minutes during rush hour times and the weekends and mid-day have longer times between trains. |
| Trains should be more frequent especially with all of the delays and with the amount of people on the trains. |
| During rush hour this would lead to already packed trains becoming even more jammed and unsafe |

Proposal to operate Metrorail service every 30 minutes

When we return to work and commuting, I'd need a more reliable and frequent train schedule.

I live outside that area and typically take the glenmont redline to and from work

Trains on this schedule are not frequent enough - this is unacceptable for living in a metro area.

Trains need to operate more frequently

The frequency of trains is much too low

Trains must run more frequently than every 30 minutes for people to even be able to get on the train during busy times. As it is, during rush hour trains that run every 5 minutes are packed

Need trains more frequently

Sounds like either a lot of crowded trains or a lot more people driving

How about making ALL riders PAY

Im retired, so flexible. If I was working it would be a disaster.

You may as well shut the system down. This is unusable and a RPOFF if you have to pay peak fares.

Rush hour trains need to be more frequent. The trains will be too crowded and it adds too much time to commute to have to wait 15 minutes for each train.

It would depend on the Covid-19 pandemic.

During am rush hour this is not enough

The blue, silver, and green line have predominately black essential workers, they need to get to work every day! this is unfair

I will almost certainly continue to telework regularly. Driving from my home to my office normally takes 45 minutes. If I have to wait 30 minutes for a train, Im better off, time wise, driving on the days I have to go into the office.

We need more frequent trains every day of the week.

Twinbrook through Shady Grove are EXTREMELY congested during the work week. Running trains every 30 minutes will not work and cause overcrowding at the Grosvenor station.

trains will probably be very crowded; somehow even more so than they already were pre COVID

Trains arriving every 15 minutes is a terrible idea during rush hour. This will put the metro out of business.

Why would this start in January 2022 when ridership will likely be higher than it is now? This should start now and then become more frequent in 2022. This will result in extremely crowded trains once work resumes normally. My office is expecting full staff to return January 2022.

If trains only come every half hour, you are going to have even fewer riders

Metro should have more frequent service during rush hours

More frequent in rush hour!!

This would make metro cars too crowded during rush hour, and not timely enough to be an effective means of transit

No one would use the metro at that frequency during rush hour

This will make the morning commute very slow and crowded. It will make people stop using metro for commuting.

This is not frequent enough for rush hours. the trains will be too crowded.

Worried about work day traffic when back to normal

Would prefer a different schedule for weekday vs weekend

Too infrequent

Not frequent enough.

Not frequent enough during rush hour

12-15 minutes will lead to overcrowded trains and long waits on the platform

Spacing service times as ridership is reduced is appropriate.

More people expected back in the office in January 2022. Would worsen rush hour.

30 minutes is excessive. Would these be 8 car trains? 6 car trains every 30 minutes would be packed.

This would make rush hours HORRIBLE. Waiting too long for trains, being very crowded when you are on a train, or waiting 30 minutes for a train and then potentially theres no room for you on it!

Proposal to operate Metrorail service every 30 minutes

I think we can expect ridership to increase and we should operate more frequently so that people don't have to cram into fewer trains.

I am a teacher, and many of our students and staff rely on consistent Metro service to get to school. By spacing out trains to arrive every 30 minutes, it could force more students and staff to crowd on train cars, which increases COVID exposure, and would also further limit the ability of our students to get to school on time.

We bought property in Clarendon because the metro is here. It is needed for commuting and general access to the DC area. METRO needs to find the funding to continue as it has been a fixture in this area since the 70s.

I exclusively use EFC to commute into Foggy Bottom M-F.

Post-covid, trains should continue to operate more frequently during rush hour.

Return to office work is still TBD, but 15 minute intervals may be problematic.

Waiting 15 min for a train during rush hour wont work for commuters

Big difference between rush hour service and other times. Can bigger reductions be taken during non peak?

When we are all back to work, this frequency would not be acceptable.

Plan to return to pre-Covid commuting schedule

Lol

This would make it impossible to commute by metro and I would likely not ride at all.

Trains arriving every 30 minutes are not frequent enough. I would look for alternate ways to get downtown instead of using metro at all.

Continue to differentiate weekend hours and keep rush hour schedules. By this point hopefully more people will be vaccinated and using Metro more regularly.

It would be challenging to get in trains during rush hour service

Trains would come too infrequently

This is not satisfactory for commuters. Those of us boarding the orange line in Virginia suffer from very crowded trains - standing room only during rush - or we cant board at all. This is not acceptable.

It would make travel during rush hour very difficult given the long time between trains.

i live in dc area because of metro,without metro running until 11pmor midnight i cannot get home from work. its not a city,we need busese from dc to va

This would definitely be an inconvenience, but it would be manageable.

It would substantially lengthen my commute to have this schedule on weekdays.

This is not sustainable when so many Northern Virginia commuters rely on Metro - especially to get through Rosslyn - as their way into downtown DC. Please do not cut service to the blue, yellow, orange, and silver lines.

Could trains run every 20 minutes?

Depends on ridership - if I have to wait for 2/3 trains to get on one then it's a problem

Not frequent enough

Service has to be adjusted to reflect higher demand for rush hours, your highest ridership period and greatest revenue period.

This would induce me to buy a car and no longer use WMATA at all for any commuting or travel needs.

Expected to need rush hour and more timely commute during weekdays by January 2022

There needs to be higher train traffic during peak hours.

As commuting returns to normal, this would make boarding trains an extreme difficulty as large amounts of passengers would congregate on platforms and each car would fill up quickly, which would also pose a public health hazard.

You should run the trains every 5 minutes because some people like me HAVE TO GET TO WORK

30 minutes is too long to wait

That makes metro an impossible option for commuting to work

With people going back into offices, cutting service makes no sense. Wait times can not be 30 minutes each day. Thats just not going to work and will make Metro almost useless.

I am daily commuter with a chronic disease. The wait would be too long the trains would be too busy to every find seating.

this would be horrible for rush hour in the morning before work and right after work (8-30a slots and 5-530p slots).

This would only work for me if it includes late night service.

Only having trains run every 30 minutes would be a massive inconvenience and more than likely cause too many riders to pile up in the metro stations between trains.

Proposal to operate Metrorail service every 30 minutes

That's entirely too long to wait for a train

If the trains were consistently on time at these intervals, I think it would work. Concern potentially about volume and rushing the trains during rush hour service on weekdays.

It seems like the trains would get super crowded

Insufficient frequency

This wont work for any commuter in the DC-metro area that relies on metro.

Trains will be packed like sardines during rush hour and it will make commutes even more miserable and terrible.

People will be more willing to ride metrorail by January given vaccination rates in our areas, which means that if we do not have increased service at rush hour there will be overcrowding. That overcrowding may then deter people from using the system out of fear or frustration, which reduces use again.

The no difference between rush hour and non-rush hour would be a huge mistake. Rush hour by far gets the largest amount of usage.

Life hasnt gone back to normal just yet, so I dont know if that is going to work or not.

Not enough service. Would take to long to get places. Would consider driving instead.

I need to know how different this is from the current schedule

This is a horrific cut in service.

Rush hour should have more trains.

This would cause very crowded trains and make me feel unsafe. This would not work at all during rush hour and I would be more likely to drive instead of using Metro.

With this type of cut not sure why you would even continue to operate.

Do not get rid of Clarendon metro stop and continue to have trains every 12-15 mins at this stop in particular.

Please do not close the Grovesnor-Strathmore metro station. Our family relies on this metro station and there are plans for significant development (residential and business) in that area and many more people will rely on this station the near the future.

Every 30 minutes is tough, it provides no flexibility or alternative for change

Rush hour (pre-Covid) was already insanely packed cars. MUST have more frequent service between 6-10am; 3-7pm.

I would switch to driving

This would create overcrowding on trains

This proposal does not make any sense to me - why wouldnt Metro continue to stagger trains that reflect the anticipated ridership, meaning that trains run most frequently during rush hours on weekdays. Weekend trains could be more sparse

Having to wait up to 30 minutes for a train completely negates any time saved as compared to other transportation methods.

The headway is too long and would mean too long of waiting times for trains

Too much time in between for travel in 2022. Not a viable length between trains.

This would work for our needs

Way too long of a wait between trains. 30 minutes means that a commute becomes unreasonable if the prior train just left. LEAVE IT HOW IT WAS PRECOVID--WE ARE ALMOST DONE WITH COVID

Work back at the office would mean higher densities of people, and would cause a huge backup and delay.

I may start commuting from Arlington to downtown dc again

15 or 30 minutes is not frequent enough for daily travel

I expect the numbers of people commuting to work will necessitate more frequent trains, especially during rush hour.

Trains that far spaced out would not carry the amount of passengers that it would need to

Please do not close the Grosvenor Metro station it is so important to my family

Limiting times is fine, do not close any orange or silver stops!

Do not turn metro into a commuter rail.

Need more frequently

Need trains at least every 10 minutes during rush hour

Aligning my schedule around new train times or less service would work for me, closing the station would be very difficult for me to get to work.

I would prefer less time waiting between trains to get to work

Proposal to operate Metrorail service every 30 minutes

I am retired

Need more frequent trains Monday-Friday

This would be a nightmare for getting to work and back. There's no way this would be feasible, even with the possibility of more people working from home in 2022. DMV residents still depend on public transportation too much for this plan to be anything but a disaster. Yikes.

I can only take the Silver line to work (Greensboro station) from Ballston, if the train only comes every 30 minutes during rush hour I could easily miss a train and end up late to work.

That's completely unworkable during rush hour in a post-pandemic world.

Please increase the frequency of trains during rush hour

This is going to cause major chaos in the metro stations. People are going to have to wait longer in between trains, therefore causing more people to be on the trains.

Too long for Wheaton headways

Rush hour trains will be needed as federal workers as getting vaccinated

I believe work schedules will be more normal by this time, meaning more people commuting. 30 minutes is far too infrequent if this is the case.

Not frequent enough at White Flint

Not practical. When driving to a station 30 mins between trains is unacceptable. Over 6 mins between trains is acceptable. Also trains would be over crowded and not allow everyone on. And you're supposed to wait 30 mins for a new train?? No.

Mostly only commuters use this

As people return to work this change will cause overcrowding on trains and an inability to get to work on time.

Not often enough at rush hours

I like this proposal because it doesn't include station closures, which ensures the broadest possible access to public transportation for all. Many Metro riders don't have cars.

This would no longer be a reliable system. It would be embarrassing for a major city.

This is far too little service given the ongoing recovery

Difficult to commute from East Falls Church to Tysons with trains only every 30 mins.

That would make rush hour getting to/from work miserable

Rush hour travel frequency is important to me for getting to my job in College Park.

If there is no advantage in timing between rush hour and regular hours I would expect the fees to be the same regardless of time of day as well.

There is no way I would wait 30 minutes after work to get on an extremely crowded train that I may not make it on.

If I need to wait 30 minutes for a metro, twice a day, I will just drive. DONT DO IT

More people will be traveling in January 2022 than now post-pandemic. It will be too crowded

Please don't cut off the stations past Silver Spring!!!!

This is laughably too few trains! On weekdays, commuters need more frequent service.

30 minutes seems long. 15 would be better.

Rush hour trains would be too infrequent

Keep it the same

I could not take metro to work if I had to wait 15 minutes for a train. And the trains would be too crowded so it would not be safe.

Infrequent trains at East Falls Church is FAR preferable to eliminating the station entirely.

Trains every thirty minutes would be terrible, especially during rush hour.

This is far too infrequent on week days. By January 2022, I feel confident I'll be back to the office.

I need trains to arrive more frequently during the week.

Why would rush hour which is the bulk of the metro riders not have rush hour times?? If I miss one train I would have to wait 15 minutes for the next train?!

30 minute intervals are much too spaced out to be useful for commuting. This would ONLY work if it became like real rail (Amtrak) where trains kept to a PUBLISHED SCHEDULE, which Metro never does.

Service too infrequent

Not having a difference between weekday and weekend service is inconvenient.

Trains during rush hour at Grovesnor get overcrowded

Proposal to operate Metrorail service every 30 minutes

This would work if the metro rail followed a defined timetable, more like a regional rail service. If I could count on when to expect there to be a train, I could adjust to it as needed.

I think this gap is way too high if anything a 10 minute window would be fine because I see how many people actually use it for work. Right now the ridership is down only because offices have been closes

30 minutes wait if I just miss a train makes my Orange Line commute unworkable.

30 minutes is a lot. Ive been riding Metro almost 24 years through SafeTrack and everything else. However, you cant have those interval times both ends of the day for every day.

I think there should be more frequent trains for stations with multiple lines.

I would be less likely to take metro because I would only be able to take silver to/from work and 30 minutes is a long time to wait.

Waiting too long for trains would decrease my desire to use metro

I am still commuting to and from work every day on Metro, with no option to work from home. Trains every 30 minutes will not work on Yellow/Blue lines from Arlington to DC. The trains are much fuller with people now with closure of the Blue line.

Missing one train can completely derail your day, especially if you need to make a connection and you miss the next one. All of a sudden youre running 20-30 minutes behind.

agree

Need trains more frequently during rush hour

This would lead to severe overcrowding during peak hours.

Frequency of more than 15 minutes would be much better, 15 is a bare minimum.

I believe there need to be more trains during rush hour, otherwise there will be overcrowding on trains, especially at Metro Center and other large exchanges

Weekdays need more regular service especially for those whose offices plan on returning more regularly in person

I rely on the metro to get to work and this would make it almost impossible to do that

This would be horrendous for my commute!!!

I expect to need to use metro to get to work every day. Pre-pandemic, the trains were so crowded that I had to wait for the next one. Having to wait 30 minutes would make me late to work.

Rush Hour is a very busy time and the change could result in over-crowded trains which could lead to off-loading. Given the proposal above, the trains would have to provide max capacity for riders who rely on WMATA trains, like myself, to commute.

Weekday especially Monday- Thursday would need to be soonee

I need the silver line only so that would be huge gaps in service

Need to have a different schedule between rush hour and non-rush hour.

I use metrorail primarily for commuting - every 30 minutes is too infrequent to be reliable transportation.

Hopefully we'll be back at work and would need a reliable and quick service to and from DC

this will cause significant commute delays, especially during rush hour periods once in-office work begins again.

If my office is open I would like more trains during rush hour

This would be fine until more people begin to return to work and a rush hour would return

This is just stupid

Trains could easily become crowded if ridership returns to normal

Too long of a waiting period between trains for weekday commuting, even with lower numbers.

I could accept reduced service if you do not charge rush hour fees. It is not fair to charge additional during rush hour when additional trains are not provided.

Trains need to arrive more frequently during rush hour periods

One train every 30 minutes is not enough to make taking the Metro worth it!

Trains every 30 minutes is too infrequent for me to rely on Metro, especially if Metro won't follow a published schedule. I would just find alternate means of transportation.

This will cause trains to be overcrowded. Orange line in VA is already crammed

This is not frequent enough.

Consider 20 minutes versus 30

Rush hour trains would be overcrowded and not have enough room for commuting passengers with these time intervals between trains.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| This could be workable if the arrival/departure times were provided to riders and were adhered to. I would also expect the rush hour premium fare to be rescinded if extra trains were not provided during rush hour. |
| Too long to wait. |
| This will be horrible once people stop teleworking. This would be a nightmare to get to work |
| We need to have rush hour service on all lines. |
| If there are large gaps, people need to know the times or have an ability to track trains. |
| Unsure if I would return into office, right now the plan is to return to normal in September 2021 in that case it would not work. |
| Those times are too far apart and will lead to overcrowded trains once Covid is past. |
| This is not frequent enough |
| We need the twenty two stations that are going to be closed open because that could be inconvenience to some people who use them especially government workers, COME ON FEDERAL TRIANGLE AND FEDERAL CENTER SW ARE IMPORTANT BECAUSE THEY ARE NEAR FEDERAL BUILDINGS. Also I think that the 6/12/15 minute service currently on Red and 12/20 minute service on the B/O/S/G/Y lines are acceptable and should stay. 30 minutes could be problematic for people who need to get the work quick. |
| This would be unworkable for commuting purposes from Virginia into the District during rush hour, and would prevent me from choosing to use Metro on weekends due to inconvenience. |
| I will be returning to work and that is not many times or trains. We will be traveling more after vaccine roll out. |
| I live in MD suburbs. If I miss a train and have to wait 30 minutes, I could be in DC in that amount of time. Id consider driving or rideshare instead to save time. |
| 30 mins isnt frequent enough during the work week |
| need trains more frequently during weekdays |
| 30 minutes is awfully far apart |
| This would potentially present increased travel time for our employees using Metro service. |
| Too long to wait for a train before/after work. Would likely drive instead. |
| Get rid of pensions, unions, and decrease salaries in order to balance the budget. Metro works never appear to be working that hard and most are low-skill levels. You are paying WAY TOO much for these employees. |
| A single, standard schedule seems reasonable. As long as the trains can keep to the timetable, it should work. |
| Rush hour will be a nightmare at stations along the red line like Metro Center and Gallery Place, assuming that people are back in the office. |
| Regular and frequent train service is essential if a goal is to make Metro ridership preferable to driving. Convenience, convenience, convenience. |
| 30 minutes is an unrealistic amount of time between trains. It would make it nearly impossible to reliably get to scheduled appointments or work in a predictable and reasonable timeframe |
| 30 minutes is too long to wait and would result in large crowds boarding at the same time. |
| Cuts in service will be a detriment to the community. PLEASE RECONSIDER! |
| This leaves out Shady Grove, Rockville, Twinbrook and White Flint. So many people commute from those stations. |
| Shady Grove is a huge commuter station for the 270 corridor and right off 200. Every 30 minutes would cause huge back ups for commuters trying to get to work |
| I used metro to get to and from work during rush hour. At this time, I dont know what my workplace will look like in Jan 2022. We are remote through Sept 2021. |
| This will be very detrimental for morning and evening work commutes. |
| Trains would not be frequent enough and will be severely overcrowded. |
| I am concerned that this would create unsafe crowding on platforms and trains. |
| this greatly extends commuting times if changing trains or taking heavily trafficked trains during rush hour - following the pandemic the last thing you should be doing is cramming more people into a train when they are already uncomfortably full |
| 12-15 min is a long wait between trains. People would opt for other transportation options and Metro would lose even more money. Other cities/ countryes have very reliable service with trains ever yfew minutes! |
| Thirty minutes in between trains is too long. I might as well take thr Marc. |
| Needed: more frequent trains |

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Maintains some level of service at all stations |
| this will cause an unbearable crush of people in stations and trains during morning and afternoon rush hour, and on weekends during events |
| Too Far apart for commuting |
| This is too infrequent for weekday service during working hours, if we presume a world where people are generally working as normal in 2022. How can our nations capitol offer such infrequent mass transit? |
| These headways are too long. |
| I would want more frequent trains at the Grosvenor stop at rush hour. |
| WMATA needs to completely fail and be rebuilt from the ground up. The current leadership and administration must go before any changes are even contemplated. SHAME on each and every one of you. YOU ARE THE PROBLEM. |
| The trains on the Blue Orange and Silver lines should run more frequently during rush hour. |
| THIS IS IS NOT OFTEN ENOUGH FOR PEOPLE LEAVING WORK OR ARRIVING TO WORK. |
| This would/could add a considerable amount of time to my commute and would force me not to use metro |
| This could work, if there is a strict adherence to schedule, so it's possible to plan when to leave home/work to catch a train, but it seems dependent on continued low passenger volume. If passenger counts return to a substantial percentage of normal (~>50%) trains will be overwhelmed and this won't work |
| ThÃ© Pandemic is not going to last forever, we do need prÃ©-pandÃ©mic schedule back |
| Need more frequent service at stations with more than one line to meet anticipated work needs. |
| This would be ok if there were published schedules that were consistently met. |
| I use this all the time. It makes life for my neighbors and myself so convenient. |
| I do not like this plan |
| More frequent service needed on the Blue and Silver lines due to work commute |
| I would have to stop using metro for my commute under this scenario because unless I timed it perfectly, my commute could be two hours long each way. |
| 30 minutes is a long time to wait |
| Rush hour trains need to arrive more frequently |
| I rely on short headways to get to work quickly and avoid crowding on the train. |
| 30 minutes between trains during peak travel times is not feasible. If I missed a train, I would not wait that long to catch another and would pursue another transport option instead. |
| I generally don't use the red line |
| Every 30 minutes would be horrible for commuting. |
| Very inconvenient |
| Two trains an hour hardly qualifies as mass transit, especially given Metros historic inability to meet reliability targets. |
| Rush hour crowding from Western Silver/Orange Line would make catching a train impossible. |
| Metro should be making a status quo projection and a COVID recorded projection. If we are in status quo, less ridership; if the vaccines have worked, we will need the same level of train service as pre-COVID. |
| No Metro must return to the prepandemic schedule |
| A 12-15 minute arrival interval is certainly better than 30, but I don't see how there will be anywhere near enough trains for the people who will need them, especially during peak times, by January 2022 when things should be getting back to normal. So many of us are government employees who WILL need to metro back into work; we won't be able to continue teleworking at the levels we are now. |
| By January 2022 I expect to starting working on-site again unlike the current COVID situation. |
| should have more frequent trains during rush hour |
| Rush hour needs will be greater |
| I prefer the current schedule |
| By 2022 commuting patterns are likely to be back to normal, so this is premature. |
| No Problem |

Proposal to operate Metrorail service every 30 minutes

Trains traveling so infrequently during rush hours would incentivize me to just drive rather than timing my movements along with the train schedules. I moved to Reston specifically because of proximity to the Metro.

As long as I can be guaranteed to get a place on the train that comes.

reducing intervals is far better than eliminating service at stations. You would weaken the network and that would be destructive to many.

This would have a disastrous impact on my life

I am expecting a full return to work by the time January 2022 comes. I would expect others to be in similar situations. While I understand the need for the metro authority to make these decisions I would be hesitant to accept that there are no other options outside of affecting commute when we return to a new normal.

Trains would be so crowded by the time they arrive at my stop that I wont be able to board.

Please do not close the East Falls Church Metro station

Every 30 minutes is not frequently enough during rush hour (consider how jam-packed those trains would be). What about every 15 minutes from 7 am to 8:30 am and 4:00 to 5:30 pm - which will likely not meet everyones needs of course but provide twice as many trains for three hours a day.

Red line trains during rush hour on 15 minute headways? Are you on drugs?

That basically makes the service unusable, especially considering we will hopefully be going back to work by then.

Doesnt make sense to cut service on weekdays when that is when it will be used most. Maybe this plan for Fri-Mon and then higher operating schedule from Tues-Th?

Not frequent enough

That is a ridiculous interarrival time of trains on the general lines. It makes metro high risk for being late to work.

Too infrequent

Missing the train would make me late to work. With schedules already unreliable, that is not acceptable for me.

Assuming that more people are working in offices in 2022, having trains run every 30 minutes would make it difficult for everyone to get on the metro and would greatly inconvenience workers.

If the pandemic is over, we will all be back at work. This is ridiculous

Need more frequent service

Every 30min is very inconvenient

I get on at Dupont and ride to White Flint. The additional wait time is ridiculous. I might as well drive to work.

If more offices resume work in downtown DC in 2022 there will be VERY crowded cars during rush hour and that is a big concern.

That would force me to drive

Rush hour trains should come more frequently

This is terrible. We need federally funded public transportation in DC!

I need more frequent train service

This change would preclude me from reliably getting to work on time

This does not work for those commuting. 30 minutes between trains is too long. I can drive into town faster than that.

The headways are much too long. At most, trains should arrive every 10 minutes.

The trains should run more frequently

Every 10 mins on the red line and 20 minutes on other lines is fair. Longer than that is not bearable.

Personally I change from the yellow to green line to get to work, with potentially up to a 30-minute wait at L'enfant waiting for another train. This would make an already hourlong commute by metro even longer and I would certainly look for other options.

Situation depends upon remote work

30 minutes is way too long between trains. It would render metro virtually useless, especially given that metro is rarely on schedule as it is.

The significant time delay between trains would impose additional costs on me. I could make every ten minutes work but 12-15 is excessive, particularly during the work week.

If you miss your train, having to wait 12-15 minutes is an incredibly long time, considering the trains are often delayed anyway. Plus, this will make the trains much more crowded.

this will hinder getting to work quickly, however if it is limiting train time or cutting a stations, limit the train times.

if i had to wait 30 minutes i would not use metro

As someone that will need to commute to DC, not having trains more often is a concern.

Proposal to operate Metrorail service every 30 minutes

It would make me not take the metro to work.

During morning and evening rush, service every 15 minutes is too infrequent that cant handle surges in dc during work week

This is literal trash by 2022 people will likely be commuting daily again

30 minutes seems excessive to wait between trains. I would suggest 20 maximum.

If the times are predictable, people can work their commuting around these constraints. The key is predictable and consistent.

More frequent trains during rush hour is important - dropping this is unacceptable.

Every 30 minutes makes it hard to use this for work travel.

Its not ideal but is workable.

30 minutes is too lengthy between trains

Clarendon is a critical station due to nightlife and urban residency.

Need more train

Stop increasing wait times between trains. That is not going to help you get more people back on board.

Serious delays during rush hour when we're all back into the office.

With the many changes to the community this would be imperative to offer regular metro service.

This is ridiculous and riders will not be able to rely on Metro for their commutes in this scenario.

This would be the DEATH SPIRAL of Metro. It was unreliable before, this would make it USELESS. You can WALK across a quarter of DC in the 30 minutes between trains. WHY would anyone ever take metro again. If for budget reasons you have to go to 30 minute intervals, just SHUT DOWN THE SYSTEM. Its not funded for what it needs to be used for.

Whether this works depends on whether trains will become overcrowded as a result. I can bear waiting an extra 5-10 minutes, but if I cant board a train for 20-30 minutes, this wont work.

Metro is crowded as it is, this would make it worse

I have to change trains and this could significantly lengthen my commute.

Rush hour was already madness on silver/orange pre-pandemic. Once WFH ends it will be back to that. Total madness to make weekday and weekend pace the same. Weekdays rush hour should be prioritized!

I will be commuting into work again and do not have a car. I depend on this station

The trains will be too crowded. Many people wont be able to catch a train when they need to. Ill stay home.

This makes metro less rapid transit and more lite rail.

Would prefer more frequent train service, but prefer this to closing stations

Too far apart, leading to busier trains and crowded p,atforms.

need more regular trains to get to work ontime: this proposal discriminates against working poor and in not equitable.

I like this option because it guarantees service to all locations

This proposal will only encourage people with cars to drive more.

This would cause severe overcrowding.

Trains would be too crowded to make this a desirable means of transport. Any break-down of a train would mean there would be an hour between trains which is too long.

30 minutes between trains is too long

I live 2 stops beyond Grosvenor-Strathmore. Trains are already full enough to just barely allow social distancing on that stretch without making them run every 30 minutes.

I work from home (even during non-pandemic times) - I doubt this schedule would work for many I know. Im happy to pay higher taxes to fund keeping metro routes as is.

When I return to taking metro, this proposal raises concerns about crowding.

Grosvenor station is an important part of ridership. While it may be challenging now, once the pandemic eases, people will continue to ride the metro. Our area has so many people that don't have cars and use the metro to move around. Closing the station will be detrimental to the whole area

I think the rush hour non-rush hour is very important, so I wish that were not going away.

Morning and evening needs more trains for more social distancing.

You will continue to see reduced ridership if you lessen service - its going to drive people to their cars who have that option

Proposal to operate Metrorail service every 30 minutes

I commute EVERY DAY on Metro- this has not changed at all due to pandemic. Some of us do not work from home.

So you miss a train and have to wait 29 min? Whats the point? May as well Uber instead.

Rush hour train frequency should be prioritized with trains running more frequently during the week from 7am-9am and 5pm to 7pm

I ride at rush hour and will not ride If trains are this far apart. I moved to where I live for metro access (red line) and rode it daily before the pandemic, but will not use metro if it runs this infrequently.

Having to wait 30 minutes for a train is too long

This is a terrible idea. It will be impossible to social distance as trains will be more crowded. And how will people get to work on time?

Too infrequent

This infrequency would make my commute and many others extremely impractical and would also make trains crowded in a post pandemic time where that will make myself and others uncomfortable and discourage ridership further

The metro would get very crowded during rush hour.

overcrowded trains when more people return to norma would leave those of us with no alternative ways to get to work with very difficult commutes

This seems sensible until ridership increases to the level that the trains would be too crowded at this rate.

This type of schedule is difficult to manage. The trains would need to be more timely and reliable. It would be more difficult to take the trains without planning. It could reduce ridership even more.

Trains need to be more frequent than 15 min

We need improved public transit and need to get more cars off the road.

Trains will be too full at rush hour.

This would not work with the Districts return to work plans. How exactly, when employers are requiring employees to be back in the office in 2022, supposed to commute during rush hour with this?

I would stop using metro to commute if that was the case. The amount of people on the line would be ridiculous and I could just drive. You would lose all of my business, period.

Need to differentiate between rush hour and not rush hour

We will eventually go back to our offices stop this madness

In 2022, everyone will be using public transportation again. The roads will be crowded and the train availability will not serve the mass transit needs

It would render metro as not sustainable way to get to/from work. I would instead be forced to drive to the office.

Old plan will work better for me.

Having to get to work is important. Having to wait that long means I'd have to get an earlier start.

30 min is too far apart especially during peak hours

I use the metro to get from Arlington to Bethesda, MD where I work at Walter Reed hospital. Changing the frequency of trains on the red line will extend my commute even further than it is now (+1hr)

30 minutes between trains is too long

Dont need the same in weekends

I rely on the metro to get to work. The train was already horrible pre-pandemic. This will do nothing but make it more crowded and make people late for work. You can't even work on the metro as there's no service.

Fucking insane proposal. Absolutely idiotic proposal with the only possible purpose being an attempt to destroy metro as a working subway

These wait times are way too long. Any disruption in service means that 30 minutes extends to 40+ minutes and 12-15 means waiting 20-30. I get that some cuts need to be made, but these are not possible wait times with regards to a major metropolitan public service.

Rush hour trains need to arrive closer together

Trains should arrive more frequently than every 15 minutes during rush hour so that people can get to work on time. At least every 7 minutes.

Not ideal, but workable

Trains will be crowded if this were to happen

This isn't enough service to depend on as a rider. Currently metro is my first choice for transportation but I feel it may become secondary / last resort

There is too much time between the arrival of trains and there has to be a difference between rush hour and no rush hour.

Proposal to operate Metrorail service every 30 minutes

With the amount that is being charged this would be unacceptable in a world class city as well, it's embarrassing.

More frequent trains please

Anything to keep the lines running!

In terms of commuting to work in 2022, this would be incredibly inconvenient for me and others

Once commuting Starts again, it would be impossible for me to live where I currently do

Too infrequent, would require much better real-time metro arrival tracking online

If you want to torpedo ridership, then by all means run trains every 30 minutes. Imagine rush hour like this - are you going to run 20 car trains to collect all the people desperate to get in to work? No. And everyone will stop riding. This is a ridiculous idea.

I plan to be back in the office every day by Jan 2022. Waiting 15 minutes between trains is a long time during commute hours.

This would make it more likely I would commute by car.

I dont use Metro at all, too many stops in my commute.

Trains would be even more congested, bringing concerns of spreading viruses.

Impossible at rush hour / for commuting

This would likely prove insufficient during rush hours.

Having more frequent trains during busy times is necessary.

This station is vitally important to me for commuting needs. Things will have normalized by January 2022 and this station will be needed to be open.

30 minutes is too long to wait for commuter trains during the week

There would be too much volumeâ€” I would t be able to get the boys to daycare then wait for two trains to get downtown.

This would 100% defer me from taking metro

Too infrequent

15 minute intervals on the Red Line would work for me, presuming they are reliable â€” ie, 15 doesn't turn into 25.

need more frequent trains at rush hour on all lines.

30 minutes is a long time to wait for a train

Not ideal but its most important to keep existing stations open.

Red line will be overcrowded into DC in AM and out in PM, more than it already is. Not safe.

I will rely on this Metro stop when I am forced to go back to the office.

15 minutes between trains all day every day is not good

Its fine until ridership expands again.

This is terrible how can this possibly handle the commuting traffic that is present on the dc metro system.

The trains are already over crowded during rush hour and by January 2022 when most of the workforce has returned to the office there will be many times where people end up waiting 30 minutes for a train because the first that arrives is too crowded. Happened when trains were coming every 5 minutes and will surely happen everyday under new schedule

Seems excessive on weekends

Trains every 7 on Red line - I use it to commute daily from NOMA to friendship heights

Thirty minutes between trains is too long during rush hour.

This would not be a sustainable option for daily commuting needs - if you miss a train you would be up to half an hour late for work.

It would be tougher but I live at the end of the line so it isnt that difficult to get on for me.

Feels like trains would be too packed at rush hour.

If telework is not available then trains will be packed at the 30 min mark.

30 min is too long between trains. 15 min is max I would wait for a train.

There needs to be more frequent service at peak times

Trains need to travel more often

Proposal to operate Metrorail service every 30 minutes

Trains every 30 minutes would be almost impossible to make work in terms of getting to work on time. If I'm running late, need to recharge my card, etc. and miss one train I'm suddenly WAY behind schedule

I live in shady grove area and ride metro in for work, conferences, 30 min is a huge gap

The reduced service would only work under lower ridership pandemic conditions. Otherwise, this is not enough train service to support ridership during rush hour.

I stopped using Metro often once the cuts started happening, so I would continue to use it less.

We need more frequency at Grosvenor stop on the red line.

The Grosvenor station is critical to my plans to get to DC for work and social events.

Reducing the frequency of metro rail would hinder my commute, and also it would make me use the metro less

Try not to close any stations. I live at Grosvenor and I know it has low ridership but it would be hard to get into work without it.

closure of Grosvenor would have a devastating effect on the traveling community. WE do not want more traffic on the highways

30 minutes is too infrequent to rely on. Will not encourage ridership return.

Every 15 minutes is not frequent enough for me to get to work on time

Would make commuting on trains near impossible

I already struggle with their not being enough room on the metros during rush hour, and I expect that this would make that situation infinitely worse.

If it's too long between trains it will only lead to a further decline in ridership.

Should be more frequent during rush hour

During week day rush hour needs trains need to move much faster.

15 minutes is a long time to wait, particularly on the ride to work

This proposal would make commuting by rail impossible. I will just drive to work.

Predictability is more important than frequency. With an actual, known schedule, we can make it work.

Frequency needs to be higher

This will lead to dangerously overcrowded rush hour platforms. And will take too long to get to work if I miss a train.

Might as well shut it down as run 30 min headways.

If this was the 1970s maybe people would find this acceptable, but not only is it not acceptable - it is embarrassing for the nations capital to even consider such rigid way of operating.

Too long of a wait btw trains

Work week needs more frequent trains

A lot of us take the Silver line to work at Mclean. If I miss a train, I'd have to wait 30 minutes for the next one and be incredibly late for work. It'd also be crowded. One silver line train every 30 minutes wouldn't really be enough for getting to work.

I rely on the train to get me downtown after I drop my kids off at school. I need frequent trains in order to be on time. I also need to metro home in order to pick up my children on time. If I miss a train by 30 seconds, I will have to wait 30 minutes for the next train which will result me in being late to pick up my children

Connecting trains would make transit more difficult adding additional planning. It would result in delays to work or events.

Switching to a 30 minute cycle on trains will make me consider other options (driving primarily) and I believe would cripple our region - by January 2022, with hopefully the majority of the population vaccinated and back at work, we need more, not less, Metro.

Cut staff not service. Most Metro workers should be fired

Longer wait times between the trains would be something I could easily accommodate for my commute.

Post pandemic the trains would be too full. The stations would be dangerously full at rush hour

It sounds like a good plan as no stations are closing and hours seem to be the same. Only thing is what about like for sporting events/concerts in dc.

Would prefer less time between trains during rush hour for stations with multiple lines.

Waiting 30 minutes is extremely inconvenient. However, if there were a reliable app telling me exactly when a train would arrive, it wouldn't be as big of a deal. Given this, riders have to guess too much to meet a schedule

Lack of frequent and timely service will result in my abandoning use of Metro for my commute, resulting in my driving to work instead

Terrible idea. Metro needs to cater to commuter schedules.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| When pandemic is over I plan to use metro and the delays would be very challenging |
| Weekday ridership is for commuting to work. Weekend is for different purposes. Making the schedules the same makes no sense whatsoever. I cannot see how this could save money. |
| Changing line would make the commute unbearable |
| I'll be going back to work in person once the pandemic ends and a 30 minute gap between trains is a major pain and not something I would expect from a major metro system in a large city. I thought metro trains had too long of a gap between the pandemic and I think 30 minutes is absurd. Assuming that most of the federal government goes back to in person, 30 minutes between trains during rush hour will be terrible due to crowding. |
| I would rather drive if the trains do not run often enough. |
| That's way too long between trains |
| I expect to be working in person again in January 2022 and traveling to work most days via metro. This would work while we are still in full-fledged pandemic, but not when the pandemic is over. |
| talk about making my commute worse....it took 30 minutes on a good day before COVID and trains were very crowded. Now you want fewer trains after a pandemic - why would I want to spend longer on my trip and be stuck in a crowded car? I'd probably drive instead. |
| This would be completely detrimental and would make it so that trains are more crowded which is the exact opposite of what metro should be doing when things get back to normal. It's truly appalling to me that this is even a consideration |
| 30 minutes between trains is too long. |
| Presumably, by that time COVID ridership reductions will have ceased. Cutting service right when ridership should recover will force more riders away from Metro. Additionally, overcrowding of trains would potentially cause smaller outbreaks of COVID among vulnerable and un-vaccinated groups, again driving more riders to other options. |
| I use metro and this will impact me and family members. |
| as the federal government reconstitutes you may need to increase trains to every 20 minutes. |
| I would not use the metro to commute for work if trains only arrive every 30 minutes. |
| running every 30 minutes is a horrible idea during rush hour traffic. There is no way I would be able to rely on the trains in this proposed timing |
| 10-15 minutes is not at all reliable, if you want people to solely take the Metro, especially during Rush Hour |
| better than the alternatives |
| During normal times I rely on regular trains during rush hour (ie every 5 min.) otherwise they are too crowded and I am late for work. |
| Would need more frequent arrivals in line with current options |
| Reduced frequency when more people are going to be able to start riding the train is a terrible idea. As people get vaccinated, more and more people like myself will be returning to using the metro. These plans are very shortsighted. |
| By January 2022, I plan to be back at work on a daily basis. I need the metro to run frequently at rush hour. |
| takes longer to drive to the next station and find a parking location etc traffic is already heavy Now I can walk to this station that has been there forever |
| The red line during rush hour is a brutal experience. When offices open back up, it would take forever to get a train at 15-minute intervals. |
| The Red Line trains will be packed. Covid will not cease existing. Trains should run more often, specially during rush hour periods. |
| Every 30 minutes is highly inefficient |
| 30 minutes is entirely too long of a wait. I need to take Silver line from Eastern Market to Greensboro, so I would be waiting up to 45 minutes between trains. |
| Much better than closing Metro completely |
| I expect to have returned to commuting by then, and that length of time between trains will be problematic at rush hour. |
| I like consistent service on weekdays and weekends. Trains should be more frequent. 10 minute intervals would be ideal. |
| This would crowd trains to unmanageable levels. The trains were already overcrowded pre pandemic. |
| Bad for rush hour. |
| That is a long time to wait for trains during the week. |
| I see no issue with reducing weekend service to accommodate more trains during the week. Better yet stop the riders who jump the faregate so you're collecting from everyone |
| Metro needs to ensure that working commuters can have an idea on the train schedules. |

Proposal to operate Metrorail service every 30 minutes

How would this be congruent for a workforce that relies on this to commute?

Post-covid ridership is hard to predict, but this sounds like a recipe for very crowded trains and long wait times.

Commuting needs have not disappeared and this frequency would lead to congestion on trains, which poses health risks if the COVID-19 pandemic persists (or becomes endemic), and would pose significant inconvenience.

The Nations Capitol needs more consistent frequent service.

I expect to be back in the office by then. Those frequencies are inadequate.

This would make it impossible for my husband, an essential worker, to get to his job in time daily

Especially given delays, 30 minute intervals are too spread apart to make getting places on time convenient. Would probably push me to driving or taking a rideshare instead

Not enough trains for my commute.

Weekend late night service is very important to me.

That's way too infrequent. Those rush hour trains will be absolutely packed and virtually unusable.

Living on the Silver and Orange lines makes my situation better than others. I can imagine that this would be very tough for some users.

Every 30 minutes will lead to overcrowded trains during rush hour.

Overcrowding at peak times may be an issue.

Need trains more frequently

Will need more frequent trains for work and pleasure

The train cars would be too packed for commuters, people would not be able to fit, and less frequent trains would make many people late to work.

Trains arriving every 30 minutes is too infrequent. At the very least, I think trains should arrive every 15 minutes, but trains arriving in less time would be better.

Consistently arriving every 30 minutes is key here, especially during rush hour time with 8 car trains.

30 minutes between trains seems excessive and a deterrent for me to use Metrorail.

Pre-pandemic, it was not uncommon for trains on the Orange/Silver lines to be full during the morning commuting period.

30 minutes between cars! That would not work for most commuters

Every 30 min service on weekdays would be unacceptable and lead to severe congestion.

Every 30 minutes is not close to enough for the red line.

I commute regularly via the metro and these timetables would drastically extend my commuting times

One thing about being at a close in station in VA is that trains often can arrive full. Not sure if the capacity will be there with fewer trains.

I am very concerned about waiting 30 minutes in between trains. In particular, as the public is vaccinated and begins to return to work, we will need to maintain physical distance. 30 minutes between trains will not make that possible.

I think once people get back to work the trains will be too crowded.

It is not ideal, but I could live with it

Peak midweek commute times are important to me to go to-from work, therefore trains only arriving every 15 minutes versus the previous every couple of minutes would be a notable inconvenience.

Limiting service to every 30 minutes would dramatically reduce the accessibility of the dc metro system

This would bankrupt the metro system

I use the metro to travel to and from work five days a week. If I know I can count on the trains to arrive every 15 minutes I could adjust my commute to make it work.

It isn't frequent enough. This could result in over-crowded trains, facilitating the spread of COVID-19. Hopefully we are all vaccinated by then, but there is a chance we may not be.

Trains every 30 minutes is not a sustainable or reliable form of commuting to and from work

DO NOT REMOVE THE CURRENT TRANSPORTATION OPTIONS IN THE PALISADES. It is already a transportation desert with no metro. Many students, including myself, rely on the D6 and M4 to get to and from school. Please do not cut funding in Ward 3.

For me yes, but I don't use metro for work travel so this would make it difficult for others.

If federal employees are ordered back to work in late 2021 or early 2022, the trains will be way overcrowded.

I'm on the orange line and waiting 39 mins for a train during rush hours won't work

I commute into my job downtown from this metro station and if I just miss a train I can wait a very long time for the next train.

Proposal to operate Metrorail service every 30 minutes

Yes, this would work for me AS LONG AS there is reliable info on the arrival times of trains AND reliable trains

It is very important to have service that allows trains to arrive every 10-15 minutes at the end of the yellow line, which would not apply here. Thank you.

15 mins is more reasonable, especially with delays that are inevitable.

The time is a bit long. I could make it work but just a bit problematic

This would make returning to work very difficult

So you have a thousand people standing on platforms waiting for trains already full? Brilliant idea.

I dont know what my travel needs in 2022 will be

Why are you cutting service in 9 months as opposed to now? Well be back to work in 2022.

I take Grosvenor Strathmore metro station everyday to work. Please keep it open. I can accept lower or reduced service at non work hours for the station but please have it functional otherwise during work hours.

Increasing the times between trains will reduce the number of people who ride metro which will further exacerbate budget issues. Metro service already isnt great and if you make it worse/less convenient, more people will drive or take ride shares.

My transit to work means that I need high frequency trains, otherwise I risk being late and being fired

Need frequency of trains, not 15-30 minutes apart due to commuting

This is unacceptable. Stop mismanaging funds.

Georgetown Prep students and at least four apartment complexes near by

This would make travel by me or my children impossible!

This would work fine but I think certain days can have shorter metro hours, which can reduce costs.

It dramatically slows all access I have to the city and to work.

Makes Metro more or less unusable with such long wait times during rush hour

Trains should be arriving every 5-10 minutes. 15 minutes is useless. At that speed, many could just drive.

Existing service already results in severe overcrowding; I frequently have to let 2 trains pass before I can board. This solution is untenable.

I commute from Vienna to Metro Center daily. This would cause undue hardship on my commuting time

Its terrible. But I could probably check real time arrivals to time my departure and try to avoid wasting a lot of time waiting on the platform. I would only ever use Metro for commuting to work. Never on weekends if this change were made.

I live in Westover neighborhood and use EFC Metro to commute to DC. Going to Rosslyn would mean long car rides on Washington Blvd., already congested and will get worse with opening of new Reed School.

This would be a nightmare in rush hour. People would be piled on platforms and unable to fit into the next train. If you miss your train you would be super late to work.

Would stop riding metro under this service level.

During rush hour trains should be more frequent

If trains could run on a set, pre-determined time schedule as other cities, it would help riders plan and the time between trains would have less impact. If you knew for certain the train was coming through every 15 minutes, you could plan ahead to be there at that specific time.

This proposal is unclear. Are you saying rush hour trains would arrive every 30 minutes, or no changes to rush hour, and rush hour would be like pre pandemic? Because every 30 minutes renders the system unusable.

When I travel at rush hour it will take me longer to commute. I would end up driving

Would be fine.

More trains during rush hour. Space out trains more during non rush.

I would suggest shorter headways during rush hour with rush hour shortened to say 4:30 to 6:30 pm in evenings and 7 - 9 am in mornings.

I am strongly opposed to any and all cuts in Metro service. Tell the DC, Maryland, and Virginia governments that this voter and taxpayer supports full funding of WMATA, and that I dont care if they have to raise my taxes for it.

It appears that there have no plans for return of federal employees and/or contractors working in the DC area

More frequent trains always provide for faster service and less guessing as to when I will arrive but I understand the need for this option

In 2022, people will be back in their offices. You will need to be ready for rush hour demand. A few trains per hour will not work.

Proposal to operate Metrorail service every 30 minutes

This would lead to major challenges for large numbers of commuters to Washington DC for work. It will be impossible to get on trains because they will be so full.

Waiting 15 minutes for a transfer will dramatically increase the amount of time it takes to get around DC

would be very inconvenient to get to work as my station is only serviced by one line (Silver, Greensboro station), but manageable if necessary

This would add roughly 30 minutes to my commute time daily. I continue to use the Red Line 4-5/week and depart from Twinbrook. I would consider switching to driving into work if these changes were implemented.

Assuming things are normalizing in late 2021 and early 2022, this would be bad news for those who start to return to work. Not just bad news - a disaster.

So long as parking is available at Grosvenor-Strathmore

This would significantly increase my commuting time

I work for the federal government- this plan doesn't allow us to ckme back- our bosses are not going to make us come back when metro is only running every 30 mins

I might be back in the office by then and might not work for my schedule

This is not frequent enough service for weekdays, especially because of the service issues that make an already long schedule even longer between trains.

Such infrequent service makes metro unusable if you need to get to work on time.

I go from white flint and cant imagine waiting 30 minutes for a train.

This plan would work fine in January 2021 and during a continued work from home / COVID-driven world. Hopefully by 2022 we are past that.

I'm going back to office environment in September 2021

Commuters who use metro to get to work need the trains to run more often, this would significantly affect metros usefulness.

People are going to need it to commute...

Would need to know that trains will arrive or leave at specific times on the dot and have that information heavily publicized (online tools must be accurate)

Trains must run more frequently given the volume of travel once people go back to work. It would be impossible to travel anywhere on time and be extremely detrimental to physical and mental health to feel stranded and squished when everyone waiting has to get on one train. It is also detrimental to people with child care needs who have a necessity to travel faster and with more ease

At the Rosslyn stop I need to take the blue line and can only take the blue line to Crystal City. Waiting 30 minutes for a train would drastically increase my commute time

I take the Orange Line from Virginia during rush hour, and if trains only arrived every 30 minutes, it would be impossible to get on a train, and I usually get on at Dunn Loring, only the second stop.

Too long between trains

This is an awful idea. All the trains would be packed

I live past Silver Spring station. will some trains not go past there?

This is way too infrequent and would cause major crowding

Not that bad! People can plan ahead and get there at the right time

My company has not announced return to work plans beyond June 2021

If I were able to take metro (post Covid) I would need at least 4 trains/hour to make connections

At that point Metro becomes a regional rail line, but even those in other big cities run more frequently than every 30 minutes, at least during peak periods. The trains would be incredibly crowded and unreliable for those at closer in stations. At that point why maintain a fixed-rail system that runs so infrequently.

This would not work at all for using the metro to commute to work

Every 30 minutes at rush hours does not make sense at all.

Id start driving to work with such low frequency.

You can have less trains running, YOU CAN NOT CLOSE STATIONS!

I would rather slow down service than cut stations.

Trains are already packed every 5-8 min during rush hour- this would cause longer wait times and further reduce metro ridership because we won't take the risk of having to wait an hour or more for a train if they're full.

Ig the federal govt has employees returning to the office this would make commute unbearably longer and crowded.

When I need to get somewhere waiting for 30 minutes between trains, which would probably be packed during rush hours, is too long!

Not enough trains during rush hour.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| this would make the metro non-functional for my commute |
| This would make commuting very difficult - my main metro usage in 2022 will be work commuting. |
| Every 30 minutes would put a huge logistic problem in my commutes for work once travel to the city resumes |
| When we all return to the office, this doesnt seem like nearly enough to fit everyone in rush hour. |
| This will add appropriately 120 hours a year to my commute. No thanks. |
| As long as there are no station closures, I can make this work for my purposes. |
| Trains would be too crowded - need no more than 8-10 mins between |
| This would make me more likely to use alternative transportation. |
| Trains every |
| With such limited service, there is little advantage for using metro. This will cause ridership to further decline. Waiting 30minutes for a train is unacceptable. |
| this would make the metro basically unusable |
| While the volume of riders may be down, the need for shorter intervals during traditionally deemed commuting hours does not diminish. During that time, thirty minute increments are too far apart. |
| Trains this infrequent make metro too slow and more people will drive, increasing road congestion and pollution. |
| Way too extreme of a cutback! From every 2-3 minutes to every 30? That is impossible to plan around and if you cant fit on a train you have to wait another 30 mins? |
| Gets too crowded in rush hours. |
| Federal government will open again metro will be an absolute nightmare no one will be able to get on a train. |
| More trains please |
| 20 minute intervals needed |
| This makes Metro effectively unusable |
| This really does not provide the flexibility needed from public transportation and I'm afraid will discourage even more folks from riding. I would like to see other measures implemented before this one (aka this as an ultimate last resort). |
| 15 minutes is quite a long time between trains, but I happen to live very close to a station, so I could conceivably plan my arrival at the correct times assuming the trains are on schedule. |
| I use the metro everyday I need to be able to commute to work and get there on time. |
| This will increase commute times. |
| Closing these stations will only hamper Metro and negatively affect the people that live in the neighborhood of College Park. I dont see the upside for Metro by doing this. |
| Need more trains than one every 15 minutes. |
| Obviously this reduced level of service is far from ideal. However, it is far preferable than closing many stations, particularly East Falls Church, altogether |
| This would make it impossible for my husband and I to commute to and from work via METRO rail. |
| If I get to my station and I have waited for the train during rush hour and the train is full then I am screwed and stuck waiting another 30 mins for the next train. This would not meet my needs. |
| Fewer trains means more crowding which means a greater chance for transmitting contagious diseases such as COVID-19. While everyone is hopeful this will not be as great an issue in 2022, the thought of a packed train may drive riders away which will cause a death spiral for metro and necessitate further budget cuts. |
| This sounds like it would help with the commuter traffic and usability, would very much appreciate the frequent train times. |
| more trains during peak times |
| Cut bus service not metro times |
| This would dramatically impair my ability to rely on and use public transportation on a daily basis, including for transporting my daughter to school and for getting and to and from my office in Metro Center. I would be forced to drive daily. |
| less metros coming in could make over crowding on metro |
| Metro should be heavily subsidized by the federal government because most if its riders are federal employees or federal contractors |
| A necessary step that I do not like |

Proposal to operate Metrorail service every 30 minutes

I commute to the office every day on the red line. Trains coming every 15 minutes is too infrequent. If this happens, I will consider buying a car. Please remove peak hours fares if there are not additional trains during peak hours.

Trains will be too packed with people at 30 minute intervals, especially during rush hour times even with COVID-19 travel levels

Rush hour arrivals must be more frequent to cover increased demand.

Trains would be jammed at rush hour. Need more frequency.

My current 24-36 minute commute on the blue line would expand to up to nearly an hour. This adds unacceptable variability to and from work.

I just need accurate reflection of what the schedule will be. Then I can be prepared. If I miss the train, the idea of waiting for additional 30 minutes will be an issue for returning to work on time.

Frequency is not suitable for a reliable service and will lead to crowded metro cars.

Trains would be absolutely jammed during rush hour if there were only 2 trains per hour at certain stations which would affect all other stations down stream... sounds like a miserable experience

Grosvenor Strahtmore should have the same frequency as all other stations

What was frequency in 2019? 5-10 minutes? In 2019, the frequency was ideal. Once in a while, you would wait 10-15 minutes, but usually, you got a train within 5 minutes.

Office will reopen in late 2021; having transit to my office in 2022 that is covid-safe is crucial to my job in Tysons Corner

If trains only come every 30 minutes ridership will plummet and doom the metro

How do you expect people to use metro to commute to work at all with these times -- cars would be packed and everyone would be late to work.

If metro wants people to return to metro, service must be reliable. Packed trains will not make people feel safe and trains running every 12-15 minutes is not reliable.

If it was 15 minutes at set times, e.g. 2, 1:15, 1:30, 1:45, that could work but not if it is random.

Rarely use Metro on weekends, and dont mind some waits when I do

Would need more frequent on orange line during weekday. Less on weekends.

Rush hour trains need to be more frequent.

Not frequent enough. Trains will be packed to capacity.

It would be important to know when trains are scheduled and to stick to that schedule.

Im not a Metrorail commuter. Those who are (like my husband) will hate this because it will mean longer commuting times and more crowded trains.

People are going to be back to work. Trains will become over crowded and cause platform crowding which will become a safety hazard at stations.

This would suck for restaurant workers and after ball games if sports are allowed back.

If this is a proposed decrease in frequency of trains during the work week, this would make planning my commute more difficult

As vaccines are more widespread, more people are going to be working in person and trains during rush hour are going to be more crowded. Also, I assume if the service provided is going to be off-peak service, then the fare will remain at the off peak rate regardless of the time. I would not pay for a reduction in service

Rush hour is still applicable to my travel plans for work. Trains should come on a quicker time table

As i will be back in office then. This will impact commuting and cause delays to work potentially.

More frequent trains (i.e. 15 minutes) during rush hour periods and then drop back to every 30 minutes for non rush hour

I believe the rush hour schedule needs more frequent trains than this.

Having no difference between rush and non-rush, weekend and non-weekend makes no sense to me.

Trains and platforms would be to crowded. Cluster!

Metro is essential to get to and from work

Need more frequent service on weekdays.

20 minutes would be better than 30

All lines should have more frequent trains- at most 20 minutes

I commute by bus and train, and if my bus was running late and then I missed the train and had to wait 30 more minutes, this would severely impact my ability to commute to work.

if this is the best solution, I will take it, but I need to ride metro and part at grosvenor every day, I am so worried that is at risk of closing.

Too infrequent for work days

It would be acceptable on the red line for every ten minutes.

Proposal to operate Metrorail service every 30 minutes

This is too infrequent, especially if the train will pull into a station for the same amount of time it currently does, about one minute. If trains will run this infrequently, can they wait in the station 30 seconds-1 min longer to make sure people get on?

30 min is too long to wait for a train

Would make it almost useless for a daily work commute.

More frequent rush hour service

As a student who works on a class schedule and then job schedule, I need the metro to function as efficiently and quickly as before. Longer wait times and less trains puts me in danger of missing class and meetings and work

The pandemic shut down will not last forever. Cutting back on trains during rush hour will lead to overpacked trains- this can increase the danger to women riding alone.

Given that many of us are expecting to be back at a normal work schedule by next January, this proposal falls well short of what I would need/expect.

I use the

having more frequent trains is preferred, but if this is what Metro needs to do to stay afloat, please do it

This would make traveling by Metro far less convenient, because if you missed a train by a second you'd be late for your appointments. It would convert a subway system into a commuter rail system, producing a downward spiral in ridership and revenue.

Predictably is the biggest issue. People can work around less trains (30 min windows are not unreasonable).

This is far too infrequent trains

30 minutes is far too long during peak commuter hours it will deter people from taking the metro

Increased rail service during the day allows for more social distancing (fewer people in each train car) and also more flexibility when riding two or more Metro lines with a transfer. Total transit time with at least one transfer to another Metro line (e.g., Red to Yellow) would increase too significantly given this proposal.

Service would be too infrequent. Too much waiting time on platforms. Pre-pandemic rush-hour service of one train every 2-3 minutes through downtown was great.

This would make life significantly more difficult as it would potentially mean arriving to work late if a train happens to be early/late/anything other than perfectly scheduled, which we know is impossible.

Need more service during rush hour.

Not nearly enough trains. This would obviously lead to more crowded trains, which is not great in a world that will still be dealing with COVID

Ridiculous! These wait times are far too long.

How would this impact the fare pricing? Would it all be non rush hour pricing?

By Jan 2022, most office workers will have returned. This will not meet demand.

Need more trains during rush hour

I plan to be back in the office again, and service that infrequent would make it difficult to get to and from work on time

My brother and I rely on this service to get to work everyday. Unlike others, we have been heading to the office to do essential work. It is unconscionable to close any station or reduce service that impacts even a small population.

Way too long between trains.

This level of infrequency essentially renders this mode of transportation useless. I currently use the train everyday to commute but would stop if this level of service becomes the standard.

During rush hour should trains come more often

I am a blue line customer so this is basically the equivalent of what I have. If however blue line that is currently at 12 to 15 minutes increases to 30 min then no it doesn't work

Trains should arrive more frequently during rush hours on weekdays. Less frequently on weekends

Not enough trains

As long as NO stations are closed. That would be so detrimental.

If it was the same every single day and reliable this would work.

these trains would not arrive frequently enough to enable me to keep a flexible schedule during my working hours. Additionally, it seems this would result in extremely crowded trains.

This plan would work for me only if it includes the yellow line trains going to Fort Totten.

Proposal to operate Metrorail service every 30 minutes

During rush hour during non pandemic times, trains are packed and sometimes you have to wait for another train. Not having frequent trains will disincentivize people from using metro. It would be much better to either shorten the hours that are rush hour or have a slightly longer time between trains than what rush hour used to be, but doing away with it entirely is not a good option.

During rush hour... that is definitely not feasible. Especially if there is an accident, etc. that closes a station or line. There were times pre-pandemic during rush hour with trains coming every 2-3 minutes and it was difficult to get on.

Trains will arrive to infrequently during rush hours to accommodate riders post-covid. It is already crowded as it is; this will exacerbate those issues.

Trains every 8 min could work

not enough time and trains will be crowded

That's not often enough and would discourage people from using public transit. We should be lessening the time between trains.

With many people likely returning to work by Jan. 2022, having 30 minute gaps during RUSH HOUR would be a complete disaster.

I'll be back to commuting into downtown DC by next January, as will many other Maryland residents. Pre-covid the trains were already packed, this plan would be terrible for everyone returning to regular commuting. Please reconsider!

More trains during rush hour and special events - baseball, concerts

Rush hour trains need to be more frequent during rush hour. There's no way a Red Line train would be able to adequately serve rush hour demand with that schedule.

I use the orange/silver lines to commute to DC from East Falls Church. Although I have been working from home, I expect to be back in the office in the coming months. I would support returning to rush hour service frequency.

there should be more service at rush hour

This would be fine as long as accurate train arrival times were posted on the metro app and website

This is hardly ideal, but if this were the only money-saving measure metro had to take, I could live with it.

If one train is too crowded, there's no chance you'll get on the next one

differentiating between rush and non-rush hour wait times is very important to me. please increase frequency of trains during rush hour.

This significantly hampers people that live beyond Silver Spring and would undoubtedly cause me to be late to work

You need more trains at rush hour or commuters will find another way to commute.

Its not great, but I can live with 15 minute intervals if I have to.

I don't ride Metro anymore

Too much time between trains. 20 minutes should be the maximum.

While the frequencies are inconvenience, I understand the need to do so.

I intend to resume commuting to in person work in late 2021/2022. I would need trains more frequent than every 30 minutes, especially during tourist season.

This would make commuting downtown for work burdensome. I live on the red line. My office is located by the Gallery Place station and I intend to return to the office when it reopens. If the proposed schedule is adopted it would influence me to consider a full-time remote schedule.

This would be fine if the trains don't become overly crowded during rush hour.

This will lead to extremely crowded trains during rush hour. And add to vehicular traffic.

By Jan 2022 I need the train to get to work! I would give up weekend service for more reliable weekday service.

Every 30 minutes is not adequate

Trains should run more frequently during rush hour mornings and evenings.

This is a terrible idea--trains will be very crowded during rush hour to the point that people will not be able to board...and then what? they will have to wait a half hour for the next train? I commute on metro but this sort of a plan would force me to take uber or ride my bike.

Frequency=freedom. One train every 30 minutes is absurd.

This has the potential to elongate my commute substantially. I would likely switch to a new job in which I would not have to rely on Metro for my commute.

Please offer more frequent trains during the morning rush hour.

Instead of running 8 car trains, why not switch to 4 or 5 cars and have shorter intervals?

Proposal to operate Metrorail service every 30 minutes

30 minute headways between trains is simply too long and I would find a different means of transportation. If missing a train would mean that my commute immediately increases by 30 minutes, not including any other possible delays, is simply too much of a gamble to take.

Rush hour is different.

This will impact me greatly, on dropping my children off and being able to make it to work on time. Please consider keeping the 12 min wait time

every 15 mins. during peak commuting time is a drastic slowdown from previous service that routinely resulted in very crowded trains

need faster service on red line

Silver and Orange lines are horribly congested when trains are running only minutes apart. A 12-15 minute schedule during rush hour would mean packed stations like Clarendon this would be disastrous.

Trains 30 minutes apart will not encourage me to ride the metro. People will return to transit when they are vaccinated but not if the trains arent there.

I am currently working remotely, but my employer expects employees to be working in person again beginning in September 2021. I commute to work using Metro and a 30-minute wait for the train would be unacceptable.

I will not wait 30min for a train. I will find an alternative way to get to work or telework

With everyone going back to work trains will be overcrowded, unsafe, and potentially dangerous

If I am commuting like I did before the pandemic, having trains come every 30 minutes would greatly increase my travel time to work. I have to ride two lines (orange and then red) to get to work and this might make it impossible to take the metro. If I just miss two trains, I would add an hour to my commute just waiting.

To get people to ride trains, you need to run trains. Having such long headways will just drive more people away from metro.

No, please run more trains, more reliably. This is a third-world proposal

Please increase the amount of arrivals--itd pack out trains and interfere with commutes substantially.

The wait times are really long and could be unacceptable.

During rush hour, trains should be more frequent, or else they will be too full

Acceptable level of service

If I am commuting into DC, this service is not frequent enough

Will lead to major rush hour congestion, making metro untenably crowded for commuters

Reduced week day service would mean even more over crowded trains once things return to normal.

More frequency

That would make commuting near impossible!

If there is no service, then we will drive and clog up the highways. Why not impose a Metro fee on developers?

riding subways that arrive every 3-5 minutes on weekdays that are PACKED --I cant imagine a world in which this would make any sense

What about days with baseball, basketball or hockey games, or on July 4 or other big holidays?

During rush hour, there needs to be an increased number of trains.

If there is a sudden surge of users due to a return to normalcy (post-pandemic), would this not create the potential for overcrowding? Especially during rush hour periods?

The trains need to come more frequently than this

I use these stations daily,

There are fewer people riding during 2020-21 because of the pandemic, but as people are vaccinated, ridership will increase back to pre-pandemic times. Cutting hours and frequency does not make sense.

By January 2022 many people will be back to commuting and trains will be overcrowded if this is how frequently they will be coming

I fear it will be too crowded with the reduced frequency of trains

You are the metro for the capital of the United States. The most powerful nation in the world. The possibility of a metro that does not aid workers in getting to their offices (which will be happening by 2022) and tourists to sites is utterly inconceivable and embarrassing.

Commuting with a train only 15 minutes will make it very hard to get to work on time. Trains will be packed and hard to get on during rush hour.

It seems reasonable

Would make it to work late

I plan to use the Metrorail regularly and this adjustment would negatively impact my ability to do so.

Proposal to operate Metrorail service every 30 minutes

Rush hour is a real thing. Even after the pandemic, once more people are vaccinated, there will be a crush at those times. Metro should have different capacity to respond to it.

Service too infrequent.

Too infrequent for commuting and for visitors

This adds nearly an hour of time to each trip, no matter how short, and not including the travel time, because riders have to plan to WAIT. This is unworkable for nearly everyone.

These trains would not run frequently enough for my needs.

Many of us who depended upon Metro for our work commutes have had alternate schedules. It is still not known if we will return full-time or remain part-time in person. I appreciate Metro planning in advance, but I cannot say what my employer will want to do in January 2022.

Trains should arrive more frequently. If it takes that long then riders might as well take another service such as Lyft or Uber.

It would affect the time I would have to leave work in order to catch the VRE on the way home and arrive on time in the morning.

Not frequent enough. I commute with my kid and I can't have her out in the cold or heat that long.

Are you kidding? 15 minutes is the difference for between arriving on time and being 30 minutes late to work.

Although not ideal, trains arriving every 12-15 minutes would work for a temporary period.

This is especially damaging for communities along the green line that has been impacted by recent development from Navy Yard to Shaw. What is needed is more trains not fewer.

Thats too much time between trains

30 minutes between trains, especially during rush hour is too long

8-10 minutes would be better

30 minutes is a long time to wait for a train and will cause overcrowding on the platforms and trains and lead to a decline in ridership, so that it becomes a Catch 22 situation where the decrease in ridership then leads to even fewer funds available!

I feel that one train every 30 minutes will be woefully insufficient during peak times. The assumption is that most people will be commuting again once vaccinations are complete

There should be increased service during rush hour / peak times, especially since peak fares are higher than non-peak fares, meaning Metro could get higher revenues from those extra trains.

I would be less inclined to use the metro if I knew there would be significant wait times, especially for longer distance rides.

People don't have a clue what their January 2022 travel needs are just yet

There are more people traveling during rush hour, hence the name.

If in person work is to resume prior to 2022, this would be inconvenient timing

if the ART bus arrivals were aligned with the train arrivals, that would be ok for me in Arlington. however, this could significantly add to delays in getting to work if the bus is slightly late in getting to the train station and i must wait 30 min to get the next train

It depends on how late or early the trains would run.

Waiting for up to 15 minutes is a nonstarter, I'd have to drive

Not ideal by any means, but better than no service!

I would prefer longer gaps than closing the metro stations.

People need a reliable way to get to work

Not practical for commuters

Too much time between trains. Trains will be FAR too crowded. I take a bus and can't plan when I will arrive at the station. Missing the train might mean a 15 minute wait.

Level of service is too infrequent to be useful.

During pre-pandemic days, I would routinely have to let overcrowded red line trains pass during rush hour before I could squeeze on one. Im concerned that even with lower ridership, 15 minute headways would lead to extreme crowding. If I cant be guaranteed a spot on a train coming in 15 minutes, when I need to be at work by 9, theres no point riding the metro.

This impacts my work schedule.

this sounds horrible for trying to get to work on time and a recipe for insanely crowded rush hour trains- already crowded when there are more trains running! would rather have slower weekend service than changes to rush hour service

I ride three lines (orange, blue, yellow) to work so I would be concerned about how much longer my commute would be

Given the tradeoff with budget cuts, frequency appears to be a less painful way to make those cuts.

Proposal to operate Metrorail service every 30 minutes

30 minutes between trains seems excessive.

Given we are still in a global pandemic, train every 30 minutes would only serve to increase crowding on trains which is already significant in rush hour when train run every 8-10 mins. Its irresponsible from a public health standpoint and just bad for commuters, city visitors etc - an embarrassment for the nations capital for it to be such a nightmare to take the train. If this policy is adopted, I like many others will simply elect to permanently work from home.

Morning and evening rush hour commute could become more congested and cause people to be late for work if they only have 1 train per 30 min window to get on.

I have no plans to ride Metro. Driving is easy as of now and safer to ride alone in my car

I tend to take metro mostly on weekends / evenings, so this wouldnt drastically change my ridership, but would make it less likely for me to use Metro if the timing is sufficiently delayed (esp with track work, etc.)

Too long to wait in between trains to get to work on time.

Rush hour service should remain as is, otherwise we are handicapping people who rely on public transit to get to their job sites

I anticipate that with vaccines the situation will change drastically from 2020 and rush hour will again be a thing that requires more frequent trains. This is not the time to cut public transportation.

That train frequency is atrocious and will cause me to be late every day I have to work.

As a recent transplant from Philadelphia, I can say that one of my favorite things about the DC metro is the frequency with which trains arrive at the station. I would very much like to see this continue moving forward!

Would work on weekends but not during the work week for commuting. Suggest 15 min. intervals during the work week rush hour and 30 min. intervals otherwise.

I would like more frequent times.

This will lead to overcrowding (which is already a problem), especially during rush hour. Even if the Covid situation improves this is a public health issue and will also cause me significant commuting delays

This is next to useless in terms of actually getting around the city unless trains are incredibly punctual. Otherwise we will all be waiting endlessly and never getting to work, etc.

If I need to work in downtown DC, this could cause an issue.

We need to induce demand by making train routes more frequent and reliable!

Thirty minute headways would be too long for my commute, and certainly too long to make short trips during workday lunch breaks or on weekends.

Its called rush hour for a reason, there is a rush of people who need rides. You will cause even lower ridership if no one can get on a train for 30 minutes or an hour during rush hour, your best chance for rides when we return to work in 2022.

This means I would have to wait at the Navy Yard station for 30 minutes if I missed a train by just a few seconds.

Increases travel time in a significant way

Why not a set 30 minute expanse between trains but more during rush hour

During rush hour trains needs to run every 5 minutes to ensure social distancing

This would depend on the times of opening and closing every day. Metro running until 1 AM would be great, Metro closing at 10 PM would not work.

Would prefer a difference between weekday and weekend as well as rush and non-rush hour.

I'm not sure what you mean by trains will arrive every 12-15 minutes when there are multiple lines. Will there be a train every 4-5 minutes (each from a different line) or is it one train every 12-15 minutes (meaning I could wait up to 45 minutes for my line to arrive?)

15 minutes between trains is unacceptable

We need the rush hour schedule during the work week. There will be too much crowding on those metro rides if there isn't rush hour service. A train arriving every 15 minutes during a morning commute will be a nightmare

This plan seems designed to discourage use of public transit. It seems baffling that Metro would have just spent a considerable sum expanding its infrastructure (the Silver Line), when it appears to be incapable of operating within its existing footprint.

Who wants to wait 30 minutes for a commuter train? Why wouldn't people choose to take the Marc train?

My office will be re-opening and a 30 min schedule is not sufficient to get me there

This works as long as the trains are consistent. If the schedule is in constant flux and is ~15, give or take 5 minutes, then no, this would not work.

if commuting to the city not satisfactory

Proposal to operate Metrorail service every 30 minutes

I exclusively commute on the East Falls Church Metrostation into downtown prior to COVID. My job does not allow for remote work. Closure of this station would drastically impact my ability to work and live in this area,

I am moving into a new development being built at Shady Grove Station with the assumption that trains would run much more frequently. This will not only affect my daily commute, but may also negatively affect the value of my new home.

30-minute headways is a very long wait.

Trains would be too crowded under covid ridership considerations at say Rosslyn which would ultimately discourage more people from riding the metro = less revenue.

I need more frequent trains than 30 mins. Even 20 mins could be doable

As I live at the Grosvenor Park buildings, cutting service at this station would severely impact my mid day commute.

Its not ideal but could be made to work if passenger amounts dont pick up

Assuming workers are back in offices in 2022, this sounds like a disaster and will create over crowding

Its not ideal, and will probably result in major crowding when people return to their offices, but I can make it work.

This sounds too infrequent. Trains would be overcrowded during rush hours.

Need to be able to get the metro home at 10:30 pm

This depends on whether I can continue working from home in Jan 2022 or if I need to resume my commute to the office

Too much time between trains

there would need to be multiple trains that arrive one after the other at 30 min because during rush hour they are packed coming every few minutes (at least pre Covid). what if there is not enough space and then you have to wait another half hour?

I go to work everyday and waiting for a long period of time is not a good idea. You would lose me as a customer honestly.

All adjustments are understandable

If I plan to get to the station in time for a train and I cannot get on that train because it is too busy, its possible I would have to wait over 30 minutes to get on a train in the first place making me upwards of 45 minutes late to work!

How crowded will the trains be if we were reducing pick up times during rush hour? Are we adding more train cars?

Not enough capacity at rush hour once vaccines widely available and restrictions lifted

At this schedule, all trains should be 8 car trains.

Cutting service, not corporate or union work salaries or time, only hurts your customers

This would result in inconveniences to many commuters and crowded trains.

Why not stop running service or reducing service when basically no one is using it as opposed to this timeframe, when more and more people will need metro service?

This would make commuting by metro impossible. Especially as traffic will be back to normal when these cuts take place.

I am currently 100% telework due to the pandemic. If this changes, I will need to ride metro to/from work 3x/week, so will need better service than this.

A 30 minute wait during rush hour is way too long

This would create problems for getting back and forth from my work and errands around town.

Absolutely not!

Assuming a return to regular ridership, that is not nearly enough trains during the weekly rush hours.

I doubt theres any way I could ever get to work on time if I have to wait 30 mins and not even guarantee I could get on a train.

great idea

Not only would this significantly increase my commuting time, but overcrowding on trains would be a significant issue.

Trains every 30 minutes is too slow. It would cause packed trains and provide no flexibility. They need to run more frequently than that.

Though I am concerned about overcrowding when COVID is over.

trains can go more infrequently if need be, but no stations should be closed. traffic on the metro will pick up again and then there will be an additional cost to re-open the stations in 2 years

If possible, the frequency can be adjusted for high volume times once the pandemic is over and relief efforts are fully underway.

That is too long between trains. It leads to overcrowding.

Every 30 minutes basically makes metro unusable. At that point I would seek other modes of transportation.

Proposal to operate Metrorail service every 30 minutes

This is perfect since I take the Grosvenor-Strathmore station to Rosslyn for work

30 minutes is too long to wait when I am trying to commute, and trains will be extremely crowded and likely impossible to board at those intervals once people return to work.

Such infrequent service would mean I am unlikely to use metro rail

That will be insane for rush hour!! The buses will not coordinate with metro rail, so this could add a half hour to our communities at minimum. Please do not do this.

15 mins on red line, which i would use, can be a long time to wait during rush hour

I travel between Shady Grove and Farragut North and having to wait up to 30 minutes for a train would almost double my commuting time

12-15 min is too long since trains are never on time.

Not enough capacity to handle expected travel at that time. Very short sighted to assume travel rates will remain so low.

Too long of a wait time in between trains

Every 15 minutes instead of 30 for rush hour

In January 2022 I will be back in the office and will need to commute daily from East Falls Church to Foggy Bottom. Many others will be in a similar situation, and trains will be crowded with reduced frequency.

In 2022, we can expect people to be back at work. 30 minute apart trains on weekdays would be unbearable for the weekday commute.

need more frequent weekday rail service

The Government are about to pass a very large budget which will give a lot of money to Metro. Those of us who live in College Park depend in n Metro for work. Just because of Covid, we should not be penalized for diminished ridership. Keep up your good work by maintaining our beloved Metro Station at College Park. Also, there is a Hotel being built right next to College Park Metro, which will make a large addition to ridership. Thank you.

30 minute wait times will make it extremely difficult for people to take the metro to and from work, as every train will be so full there wont be space for people getting on, on later stops.

intervals on weekdays are too long

Waiting up to 30 minutes or more for a train during a weekday is unacceptable for most needs relating to commerce, business, and other aspects of daily work.

This only makes sense in an environment where everyone is still working remotely, which seems unlikely to continue in 2022.

I think this plan could work only with improved reliability/accuracy of tracking apps that enable riders to know when the next train is arriving so they can play their commute accordingly.

It will be absolutely impossible to get to work. Given that pre-pandemic sometimes I couldnt even get on a train during rush hour because it was so crowded, this is absurd.

Consistent 15 min intervals may work as long as trains don't become overcrowded- which is very possible as commuters return during rush hours. Metro should monitor crowding and adjust intervals down if needed.

Trains should arrive more frequently during rush hour.

30 minutes is not frequently enough to make metro useful. I would find another means of transportation rather than build in the possibility of a 30 minute wait if I miss a train. Waiting 30 minutes effectively would double trip time.

That would double my commute (essential worker)

While it is not applicable to my post-pandemic commute, the idea you would slow trains on one of the most popular lines is just simply not practical. People will leave the system in droves, and you will never get back to normal. People need to get to work on time.

This is too much time between trains and will result in long waits and overcrowding

I take the train to get to Foggy Bottom where I work.

It is not ideal nor my preference, but it would be manageable since I am on a line with multiple services (East Falls Church). It would be helpful if the trains arrived on a specific schedule so that people knew what to expect every day and be able to adjust accordingly.

When ridership increased after covid, trains need to run more frequently at Rush hour

I cant imagine that schedule would accommodate all the riders who can be expected after everyone has returned to work

Rush hour would be a nightmare. I would never get a train.

It would be very burdensome during the cold winter months waiting on a platform for 30 minutes. If they installed heater lights it might be okay

Fewer trains would be crowded.

Proposal to operate Metrorail service every 30 minutes

Good lord - the trains are already crowded... every 30 minutes would be an absolute nightmare. I have no idea how I'd get my kids to school and myself to work in a halfway decent amount of time

Less frequent trains mean more crowded cars. We are moving backwards.

30 minutes between trains would significantly lengthen my commute.

Rush hour increased service is necessary given expected crowding during these times

With the number of people traveling back to work, which will be the high numbers again. How can you expect service to work if rush hour is 15 minute waiting periods? Trains will be packed and metro stations and I suspect that's when accidents occur especially with rising tensions.

During rush hour, trains are already very busy. Every 30 minutes would not be enough.

This would mean you couldn't just show up at a station and expect there to be a train, but would need to schedule all trips. That would make metro almost useless.

If metro only runs every 30 minutes, I will shift my commute from Metro to a car permanently

I am assuming many of us will be back in the office at that point. Trains that far apart will be much more crowded.

This will reduce ridership and lower income from fares. It doesn't make sense. It leads to spiraling losses.

I take the orange line and if we are back to normal working conditions I would take the orange line train every weekday, which I am not doing now. In that case, I would be much less likely to use Metro if trains came that infrequently.

Not good for commuting times

This is fine as long as the previous higher frequency schedule resumes once ridership returns to pre-covid levels

I think that during rush hour times, metro trains need to be more frequent to accommodate all patrons riding the train.

The pandemic has changed ridership at an unprecedented rate. It's not fair to close items just people return back to work.

Transit usage depends on ease of getting on when needed, not having to plan for the next train. I also wonder how this will work with connecting trains if you just miss your connection. Travel times could easily become too long to make Metro an option.

Makes a morning commute unmanageable, particularly if there's the chance that you need to wait for the next train if one is full.

I expect to be back in the office in 2022, will need more frequent schedule on the red line

Rush hour trains need to be MUCH more frequent than this! What WMATA is proposing is a complete nightmare scenario for workers who will be returning to a regular office commute.

Trains will be too crowded and not frequent enough to accommodate worker needs.

This plan WILL cause serious overcrowding and delays for hundreds of riders.

Dont reduce rail service frequency

The trains would be so full it would be impossible for those closer to major stops to get on.

This is absolutely untenable. I cannot risk waiting 30 min if I miss a train. It will be unusable.

Instead of this, you need to prioritize trains every 2-5 minutes during rush hour

would make commuting very difficult

Trains really need to be every seven minutes at a maximum.

Seems to few trains for rush hour

if i miss a train this could double my commute time. Not acceptable.

With that amount of time between each train, trains will be overcrowded and most likely will result in some not using Metro because it is not convenient.

This would be much better than closing suburban stations, which would making using metro impossible for people in those areas.

If this approach results in the closure of stations in Clarendon and Virginia Square, I am not supportive. These are high density areas that need to be appropriately services

30 min during rush hour is unacceptable

This would very much disrupt morning and afternoon commutes during weekdays given the number of people (myself and friends and coworkers) that take the metro to our work. Also, I would think trains would be incredibly crowded if they were only coming along every 15-30 minutes.

This would drastically increase our commute

Trains should arrive every 15 minutes. Period.

This would be a long wait to get to work

Trains every 15 min would be just fine during the week. Trains every 20 min on sat,sun and holidays.

Proposal to operate Metrorail service every 30 minutes

I support this since all the trains are still in operation and I can just work my schedule around making sure I know when my train is coming - even if its longer between them.

If people do return back to work halfway through the year, these arrival times would really delay peoples commutes to work.

The headways will be unacceptably long. Trains need to be more frequent.

Once we return to pre-pandemic levels, ridership will increase significantly. While it remains to be seen the speed of the return of riders, drastically reducing the train arrivals will actually drive more users away from the use of the metro system. This will create a snowball effect that will only lead to fewer and fewer riders, as they see Metro as heavily limited option.

Trains would not run frequently enough

yes moved in walking distance to metro , will have to move if stop is not available anymore

That would create too long of a wait between trains, making it impractical to use Metro to get to work.

This must be a joke. Pre-pandemic, trains were already over-crowded during rush hour with schedules running every 5-7 minutes.

people rely on reasonably quick service, 30 minutes in between trains (or more surely due to backups, malfunctions, etc.) is far too long

How long would this schedule be in place? Its fine during times of extremely low ridership, but once vaccines are deployed throughout the adult population and people go back to work in offices, more frequency will be required during rush hours. Fewer trains are better than cutting stations though.

12-15 minutes is a long wait if you have just missed the train.

If ridership returns to normal, the trains will be too crowded during rush hour—red line trains already were difficult to get on in Takoma/Judiciary Square pre-pandemic during rush hour.

This would be extremely inconvenient. It is also unfair that a single line that does not run through Virginia gets considerably more frequent service despite how much Virginia pays into the system

If trains ran on time, this would fine. I would also like trains to hold at each station for a few minutes longer.

Consistency to the schedule is Key as longas trains have sufficient capacity to cover everyone. If this is the change then pricing must reflect reduced non-rush hour servcie as well.

Way too long between train times, people need more consistent trains to get to work on time

When COVID is over this will be a nightmare

30 minutes is a long time to wait for a train. I think this will depress ridership - a downward spiral. Perhaps the only way to make it work is to keep to a very strict timetable, so people know when the next train is expected and can plan their travel accordingly.

Would prefer faster service during rush hour times.

Rush hour service is essential for the DC Metro area to recover from COVID. Cut weekend service.

In this scenario, I would essentially assume metrorail was closed and plan accordingly

It's fine but make them run every ten minutes every day every hour. MAKE people ride the trains rather than take Uber.

Commuting hours would cause overcrowded trains at stations closer to the district of having to wait 30 minutes for a train

I use the Orange Line (Clarendon and Virginia Square) daily to commute to work. Such cuts in train service would severely impair my ability to get to my destinations at Foggy Bottom and Federal Triangle.

This is not ideal but better than no service

At rush hours you need more frequent trains, especially on high use lines like the orange line going from downtown DC to the west.

Trains will be too crowded (post-COVID) with service this limited.

Trains should come every 5 mins at peak commuter hours.

I think it makes sense to have fewer trains during non rush hour times to save money

I take the commuter bus into work, and from there, I take the train. I have to be to work by 6:00, so cutting service or extending the time, wont work for me. Metro needs to run every 5 minutes during rush hour. Please take into consideration that everyone cant work for home, and need to be in the office.

As the general population grows in heard immunity to COVID 19 we will see an uptick in rider. While the numbers may not be as they were pre pandemic, many stations could not support the number of riders then and even a small downtick in ridership would not solve for the issues seen prepandemic with trains arriving less than 10 min apart. Reducing down service even more would make these pre-existing problems even worse.

10 minutes might be more amenable; 15 is too long, especially during rush hour.

Proposal to operate Metrorail service every 30 minutes

If we are back at work in January 2022, the amount of time it takes to wait for a train in this proposal completely defeats the purpose of choosing metro. At that point I might as well use a different mode of transportation

I anticipate being back at work at least part of the time by January, and rely on metro to get there. It would not be feasible to only offer trains every 30 minutes

Much too infrequent

Rush hour trains are already crowded, we need to increase service, not cut it

This severely impacts commuting time.

30 minutes apart is a long time, especially when commuting for business or school purposes. This may be less of an issue for tourism, but delays of this far apart would severely limit flexibility in commuting, which is a high priority for many commuters, and sets trains up to be more crowded which is a public health concern.

Every 30 mins is a long time to wait in-between trains. Especially for a morning or evening commute.

None at this time.

There is too much time in-between trains.

do not do this. This would kill metro. Imagine a transfer between trains running every 30 minutes. Ugh.

This would make commuting to places like McLean and Tysons incredibly difficult since missing the silver line would mean being 30 minutes late to work.

This will result in more people leaving transit as pandemic ends, which has substantial long term ridership consequences for the region.

Not enough frequency. Once enough people get vaccinated trains will be way overcrowded.

This would be impossible to make work with my work schedule, which often requires me to take multiple trips per day. Furthermore, each train would be more full. You can imagine how awful rush hour would be, and we've already had problems.

As a worker that utilizes the metro to get to work, I believe that it would be helpful to continue having a shorter difference in arrival times for trains during rush hour. The 15 min interval, especially on the Red Line, would inconvenience many working travelers, especially front line workers

30 minutes is too long of a wait

This would significantly lengthen and complicate my commute and make me much less likely to ride the metro

I could do 15 min between trains but it would be tough. That would be the absolute max I could handle.

I am visually impaired and cannot drive and having trains running every 30 minutes is not sustainable for someone who heavily relies on metro to get to work and run errands. Keeping trains running more frequently during rush hour is better. I'm fine with it closing at 9pm because I don't go out

Trains would end up being way too crowded during rush hours with 12-15 minute headways

Not enough to get to work on time

Not having more rush hour trains is a disaster. Pre-COVID I was sometimes stuck on trains that I could barely squeeze onto, or I would be in the middle and bodies would shove up against me. Reducing train service further would make metro unreliable and unusable.

Would just cram more people on to trains, delay commutes, and frustrate everyone who relies on Metro

The trains should come much more often!!!!!!

Orange line trains need to arrive at Rosslyn more frequently than 12-15 min intervals

30 minute intervals during peak hours is problematic. Train cars would be packed and unsafe.

15 - 30 minutes is way too long between trains, no matter what day. I would choose to drive instead of using Metro under this schedule.

if you miss a train, you are guaranteed to be late if you have to wait 30 minutes for the next one!

Id be worried at how packed the trains would be during rush hour if they only came every 30 min.

I'm afraid the morning and evening commute when busiest would be heavily delayed.

This is a radical change, especially on a high traffic line like the red line. It needs to be much more frequent. I would rather this schedule be for weekend when its primarily tourists and not commuters that need the service.

Impossible to rely on Metro if the trains are this infrequent. Crowding will be terrible once passengers are mostly vaccinated. This will further drive down ridership and force people to drive, continuing a vicious cycle.

I would hope fares would be lower given the reduction in service.

I transfer stations so the longer time between trains at rush hour could materially extend my commute which is already nearly an hour.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| More trains at rush hour are important to me - it makes the commute workable |
| The trains are too far apart on the weekdays to handle rush hour traffic. Further, I think trains should run later on the weekends than on weekdays. |
| Need more frequent morning rush hour trains - could be shorter than current rush hour period |
| This would cause overcrowding in train cars and considering the global health situation, this is not wise. Also you make no mention of reducing fares during this period. So providing less service, and charging more is unacceptable. |
| 30 minutes between trains means this is no longer a viable commute option for me. |
| By January 2022, it seems likely the federal workforce will be back to in-person work instead of telework. If that is the case, running trains only every 30 minutes will mean the trains are overcrowded and commuters will not be able to rely on metro to get to work. Why dont you cut service NOW, while most people are teleworking rather than in January 2022 when most people will be back to in person work? |
| Rush hours are busy time for riders to use the train, having miss few trains in between cause a long line to board the train at given interval suggested. |
| Spacing trains out this much will make them packed, which will likey continue to be dangerous for health reasons even after the majority of people are vaccinated. Its also just wrong for a major city to offer such poor service |
| Not frequent enough |
| Would depend on how well the schedule aligns with ride on bus schedules |
| 30 minute intervals would result in long wait times and crowded platforms - perhaps dangerously crowded at busy stations where people are waiting all together in close quarters for 29 minutes until the next train comes. |
| 30 minutes is way too long for waits during rush hour. And if it works - ie, if you get folks to plan their day to arrive for, say the 8:45 train, the train will be too packed and then people have to wait a 1/2 hour? Think about the pushing and shoving to get onto a train if you know it will be a 30 minute wait if you dont get on. Makes no sense |
| I think there needs to be different arrival times for rush hours |
| Much busier at rush hour on weekdays. |
| Yet another way to undermine Metros future. |
| This is far from ideal but workable if Metro can commit to providing updated information about arrival times at each station so travelers can plan their trips accordingly. |
| I rely on the silver line for work and trains every 30 minutes, especially during rush hour would no longer provide a feasible way for me to commute to work via public transit |
| We use Grosvenor -Strathmore station and don't have a way to get to other stations |
| I hope you do not close Arlington station and do not discontinue the 7Y bus route. |
| This would eliminate all of the confusion with peak and non-peak, etc. |
| The additional time between trains ensures that all cars will be overcrowded and increase commute times and underserves communities primarily in Virginia. |
| If the multi-line stations, as long as there is a train every 5-10 minutes (regardless of color) that would be helpful. To have them all arrive within a few minutes of each other is unhelpful because then youre more likely to miss getting to your destination on time. At least with a train every 5-10 minutes you can take a different line or something. |
| Trains need to come more often.if they come every 30 minutes they will be full and will make it difficult to get to work. |
| As ridership returns you need to increase service not make it an unusable service for riders and tourists. Get Congress to pay up. |
| This proposal isnt for a real metrorail service - its a failing regional train that no one will take. Say it with me now - death spiral |
| It would limit the flexibility of my commute, making it significantly more stressful in planning my work day |
| This would add half an hour or more to my trips in to DC |
| All trains need to arrive every 10 minutes or 15 max. 30 is way too much of a wait time |
| I rely on the red line to get to work - this would be a disaster |
| I expect to be regularly using Metro again by Jan 2022. During a pre-covid rush hour, the system would completely back up for an hour or more if silver/orange/blue was running every 15-20 minutes |
| I have to metro to get to work at the hospital I work at every week morning and home at night, this would extend my travel time exponentially and potentially make me late to work in the morning and make it much later and darker on my walk home at night. |
| Every half an hour is outrageous! |
| This is a joke! |

Proposal to operate Metrorail service every 30 minutes

If you miss a train you have to wait half an hour. It's better to just drive even if you end up sitting in traffic.

In January 2022, most people will have returned to commuting. This schedule will not work for the amount of people using the metro, including myself daily.

I would no longer be able to feasibly take the metro and arrive to work on time (Silver line only, Metro Center - McLean). Without buying a monthly commuter pass, I would use the metro less outside of my commute for pleasure, probably as little as possible

I rely on WMATA for commuting. Running every 30 minutes makes metro unviable for my commute.

I wouldn't ride metro if I had to wait so long between trains.

Unacceptable proposal. This will lead to overcrowding.

Wait times are too long

Red line trains are packed at rush hour with much shorter times between trains. Longer gaps at these hours will make crowding unbearable and unhealthy. You will lose riders because of this

This sounds foolish. Ridership is up during the work week. Eventually, after vaccinations, people will need to commute to DC and Dulles. Why not run Express schedules as opposed to giving a 30 minute headway?

after the pandemic, I expect to need metro to regularly commute throughout the DC area and make multiple trips throughout the day during the week. it would be okay for Sunday service though

Assuming commuting volume returns to pre-pandemic levels prior to January 2022, I think that this level of frequency would mean very crowded trains.

Rush hour is already a zoo. Once pandemic is over your ridership will go back up dramatically.

While we are unaware of what telework will look like in January 2022, I think it will be important for WMATA to look at what percentage of workers are back in the office come January. If more than 30 or 40% of the workforce is returning to the office, this would be unsustainable in terms of people returning to the metro.

Too infrequent. Id be more comfortable with every 20 minutes

Between telework and moving to a car commute, I will probably only use Metro on weekends, so this is an improvement to weekend service.

30 mins during the week is too long.

Trains often run late or are delayed as it is - the train running every 30 minutes would significantly increase my commute in both directions, and decrease the efficiency of using the Metro for leisure activities. It would make me much more apt to use rideshare services or find other, more convenient options instead.

trains need to come more often than that to allow for reliable commuting.

Wow, I would have to plan ahead of time like I did for VRE.

Rush hour times should have more frequent trains

When the pandemic more-or-less ends and the Silver line phase 2 opens up, I am hoping to switch to a primarily metro-based commute pattern of blue line to Rosslyn and Silver to Reston Town Center. Restricting trains to such wide timings probably makes this plan infeasible since missing one train would risk almost doubling the length of the commute (or adding 30 minutes to waiting...)

Ridiculous. Not nearly enough service to account for the amount of people commuting to and from work.

A train every 30 minutes means trains will be too full in the morning and nobody will be able to get to work on time. Same in the afternoon.

Lack of late weekend service would likely reduce our use of metro on the weekends significantly

That is way too long of a distance between trains arriving. It would easily add 45 min of travel to a trip where you need to switch lines. So many people on the red lines switch to the green at Ft Totten and that would cause a major disruption

This is going to be very difficult for people who rely on metro to get to work.

That would work for me

Reducing the train times will make metro unreliable for me and I will stop using it

I'm sure when ridership goes up these can be changed

By 2022, most work places will be returning back into the office. 30 minute wait time during rush hour will results in overcrowded trains and delays.

There needs to be more trains during rush hours.

I dont ride the rail too often.

We need faster service during rush hour

Proposal to operate Metrorail service every 30 minutes

30 minutes is a huge wait time for routes only serviced by one lane. Just missing a train would set you back an entire half hour which could cause many issues.

These changes would decrease ridership and cause current riders to leave and deter future riders because it is not convenient. The priority should be to try to increase ridership for more revenue and not drive it away (post-pandemic).

Seems like ridership would get more back to normal in 2022. That gap is high for rush hour. Would be ok for not rush hour

This would inevitably lead to massive overcrowding during rush hour. I rely on Metro to get to work

trains every 30 minutes during rush hours is a terrible idea and a way to kill the metro system

This would not be feasible with the number of people who need to ride the train to work. The trains would be too crowded.

This seems unworkable. Too much traffic would back up during rush hour after 30 minutes, especially at our station (East Falls Church). And 30 minutes is a long time to wait if you just miss a train. I think I would end up finding other ways to get around rather than relying on WMATAs Metro. (Metro is the crown jewel of D.C. Please dont destroy it).

Things are sure to get much busier by next January. Can Metro handle the return of workers?

The times would have to be reliable and available on the app schedule.

It would be important to publicize the arrival/departure times.

By January 2022 more people would be back riding the metro. Demand will be higher and trains every 30 min is not enough during peak hours.

This may be workable if the yellow line is extended to greenbelt

Trains arrive every 12-15 minutes on weekend (orange,blue,silver) versus every 20-30 minutes.

I could take either the Silver or Orange line to DC.

Commuting to work would be impossible since trains would be overfilled.

Only if non-peak fares were in effect at all times. If peak fares continued to be in effect with service disruptions you would literally be robbing customers for a service you weren't providing.

This would make my morning commute extremely long and the metro well be packed. Driving wouldnt be a viable option either as it would just increase traffic and decrease parking

It's very difficult to get a seat during rush hour since there are so many more people traveling during that time.

That would make it impossible to get to work on time if you miss your train. The difference in a half hour in getting to work is enormous, plus this lack of trains would cause them to be extremely packed. This is a very concerning once people start to go back into the office.

More frequent rail service is desired

Youre asking us to deal with reduced levels of service, and still pay higher fares during rush hours. I often take Metro to and from mid-day doctor appointments; with this proposal that will not be possible as it will be harder to judge the time required to arrive at the appointment.

Arrive every half hour? This is absolutely ridiculous. Trains should be arriving at least every 10 minutes and during peak at least once every 3 minutes. With half hour trains, no one is going to take the metro. If you accidentally miss one, it throws everything off. At least a 10 minute delay is understandable. Half hour is the difference between making a meeting and missing it in its entirety.

30 min between trains is too long and will cause crowds

There should be more frequent trains during rush hour.

Need to run trains more often

If I just miss the train, 30 minutes is a VERY long time to wait. I would rather drive (which I truly dont want to do) but I could get to my office quicker.

Rush hour should have more frequent train arrivals to accommodate more passengers utilizing service at that time. In January 2020, trains were frequently so crowded that I and many others would need to wait for the next train even as trains arrived relatively frequently.

Need more frequent service during rush hour windows. Can decrease service during other times.

I take the metro to save time. I can walk most places I want to go in less than 45 minutes. With this service Schedule I would choose walking.

Weekday hours need shorter intervals

This would be bad for my commute on the yellow line

Not soon enough on red line

Every 30 minutes is too long between trains.

Proposal to operate Metrorail service every 30 minutes

Its a terrible idea. People depend upon Metro to commute to work in non-COVID times. During rush hour, trains were crowded even operating at a far greater frequency than every 30 minutes. Running every 30 minutes, there would not be space on the trains for all the commuters; lots of commuters would return to our already overcrowded highways. Why have we invested in this infrastructure if we are making it impossible to use????

no by 2022 I hope we will need rush hour trains every 6 minutes again. Id prefer you made cuts now and prepared to ramp up again in 2022. The city needs a functioning transit system. trains every 30 minutes during rush hour is not a functioning city transit system.

I dont usually use the red line train

Would want trains more frequently

I work for the Smithsonian and rely on metro to get to and from work all days of the week. While 30 minutes between trains is not ideal, I can work with it.

It depends on if we are still allowed to telework - if we are, then it shouldnt be an issue. However, if most companies require we go back to office site, it would be extremely difficult to commute with this plan.

I am not commuting now but I may in January 2022. If I am commuting to the office then, I would prefer trains to run more frequently.

I dont know whether Ill be working remotely or not in Jan 2022 - but if Im working in-person in the DC area, this proposed change would make Metrorail unusable for commuting purposes. I would also be less inclined to use Metrorail for other purposes (e.g., navigating the DC area on the weekends)

By January 2022 the coronavirus pandemic will be over and the economy in this area will return to whatever its normal state will be going forward, so Metro should return to normal service.

if travel goes back to prepandemic levels rush hour needs to run every 3 minutes on red line

Need more frequent transport

This would be a weekday commuting nightmare.

No

As long as all stations remain in use, this will work for me.

More trains during rush hour would be ideal

If you miss a train by a few seconds, waiting 30 minutes for the next one is too much of a burden for people who have to be at work by a certain time.

This is not frequent enough. By the time a vaccine is more available, there are going to be more riders. This also will impact those who are low-income the most.

Cutting line service will screw over the DC residents who cannot afford a car. 30 minutes in between trains is ridiculous.

I take the metro to work every day and so does a lot of the Washington DC metro area population. If I missed the one train and had to wait an additional 30 minutes for the next one, I would be terribly late for work and properly lose my job after one or two offenses.

30 minutes is a very long time to wait for someone depending on a train for commuting purposes. If I missed the train by one minute, Id have to wait another 29 minutes for the next train. My entire commute right now is nearly an hour with the current times between trains. This proposal could potentially increase that to an hour and a half - or make it so that metro didnt meet my commuting needs at all.

Less ridership on weekends - at least outside DC

Every 30 minutes would add additional time to the commute and make taking metro not convenient.

The trains would be too far apart. Totally inefficient

my commute would be intolerably long

As I ride only the silver line to get to work, waiting 30 mins just to get on a train could make me really late for work if i didnt time it properly

Ok as long as rush hour travel times between stations remain unchanged.

Asking if it would work isnt helpful. It would work as long as the train gets me to my job, but it would be inconvenient and take more time away from my family.

rush hour? miserable. both in the middle of the city (gallery place / metro center) and getting stuck on the ends of a line. i like the idea of no difference between weekday and weekend trains, but bumping back to every 30 minutes would be difficult. id also hate how cramped those trains would be if they only came every half-hour

This is a very low amount of service and I worry about long connection times both when changing lines and when transferring to or from a bus

Very bad idea

This is too long of a gap between trains during the week.

I should be back in the office in January 2022 and would benefit from having shorter metro arrival intervals

Proposal to operate Metrorail service every 30 minutes

need trains to arrive more often to make travel easier. the reasons i prefer not to use metro is it is too slow

As long as there is space on the rains based on the number of other riders who also think this will work.

That is too long of a train interval to plan travel aroundâ€”one selling point of the DC metro region has been train frequency and that will disappear if this proposal is enacted.

would like trains every 6-8 minutes from 615am-830am and every 10 minutes from 330pm-7pm

30 min is too long

These cuts are devastating and should not even be considered. Metro is an essential service. DO NOT CUT!

30 minutes is way too long between trains

I expect to be commuting again in January of 2022 and it would be unfortunate to have to deal with no rush hour trains and the inherent delays that would cause

Every thirty minutes is insane, even for weekends. I would simply drive, although I strongly prefer using Metro. I could work around every 15 minutes.

It would be pretty inconvenient and would require an accurate system to track metro times in order to plan my commute to and from work, but in theory this could work (though not ideal)

if you run trains on key sectors every 10-15 min you will actually get MORE riders. If not,I will likely not ride at all. As a parent, adding 30 min wait to a 10 min trip makes no sense.... at least run every 10-15 min during rush hours

Delays are too big. Why not every 10 minutes?

If this is implemented, ALL stations need temperature control- AC in the summer and heat in the winter. Likely not worth the financial trade-off. Cant say how many times Ive inadvertently single-tracked the entire Metro by fainting because its too hot/cold.

Spreading out service is better (for me) that closing stations.

I plan on returning to the office later this year. This proposal would be very inconvenient since I will rely on metro once I return to work.

I am not a regular rider so adjusting to the new schedule would not be a burden.

Will require more planning to get to work on time.

I think it would make more sense to have red line trains running every 15 minutes at rush hour times/times that people are often commuting, rather than in certain locations. I live in DC but will still be commuting to work on the red line every day in January 2022.

Every 20 minutes would make more sense as commuters and kids have to be at school or leave at specific times and waiting a whole half hour makes no sense

I would have to drive to work. The potential of an hour wait in my commute changing lines would be a deal breaker.

Doesnt seem to make sense to me intuitively.

Too few trains

this is death-spiral nonsense. dont do this.

Rush hour would be terrible, and with more people coming into the cities this would make it impossible for people to come in and out. Trains should be optimized depending on the time of the day like it did before so trains arent congested and more trains are coming frequently during high trafficked times

Metro service needs to come back to normal when the pandemic subsides, which surely will be by January 2022. I acknowledge thats a year later than most of us thought.

trains will be too crowded and the Grosvenor/Strathmore and Silver Spring stations will be overloaded

Sounds very reasonable

This proposal would almost certainly overwhelm the metro during rush hour post-pandemic where, even with increase telework, companies, federal agencies, and contractors with real estate leases will require employees to be physically in the building and not teleworking.

Need trains on green line more often than every 30 minutes

Trains during rush hour should arrive no longer than every 10 minutes.

This is too long to wait and once the pandemic decline is over, platforms will become unsafely overcrowded during peak hours. Metro should increase efficiency for riders to convince them to come back, not make them wait longer.

30 minutes on a weekday? People need to get to work.

I run a business that depends on non-rush hour Red Line traffic; this would doom my business and how I market it to the greater community.

I have to be to work by 6 am. As it is, there are only 2 trains on the S/O/B lines that get me to the government shuttle bus stop in time. Lengthening the wait would make my commute impossible by Metro.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| This would be crippling for people who rely on metro to commute for work. |
| Don't like having to wait that long between intervals when commuting but it is better than having my station closed |
| 15 min intervals |
| This is better than closing stations entirely. |
| 15 minutes between trains is far too long a wait. |
| Right now, so many people are working from home. You cant make decisions for tomorrow based on todays ridership, because that is going to change - soon, hopefully. |
| If trains will be less frequent, better systems to track trains exact arrival times would be extremely helpful. |
| I think we should update rush hours time and give an extra hour more in the Morning and Nighttime. This would benefit us the people who wake up late and get out of work late to be on time to see family. |
| This is absolutely unacceptable. Rush hour in non pandemic times with trains running at normal every 2-4 minute speeds are packed. How is this going to work? There will be lines around the block. Especially frustrating for someone coming from VA and needing to transfer red line at Metro Center. |
| This does not factor in rush hour needs assuming we get back to normal after the pandemic. |
| A 12 minute wait would be unpleasant but if the train schedules online are accurate planning a trip shouldnt be a burden |
| I believe there should be a rush hour especially in the morning. |
| 15 minutes is too long |
| Seems to be too long between trains. |
| Too long wait time |
| I travel weeknights at 6pm and 9 pm. I cannot wait 12-15 minutes for a train. |
| 30 minute intervals between trains is an abysmal excuse for a transit system. Might as well just shut the whole system down at that point. |
| 30 minute wait times for those who rely on public transportation is just not reasonable. |
| This would not be ideal but would be manageable if the trains stuck to a reliable schedule and transfers at e.g. Gallery Place and Metro Center were taken into account. |
| A train every 30 mins is totally unacceptable. This would make metro unusable for most people. Metro needs to be a strong, integral part of the recovery. |
| This will make commuting to work by metro impossible I would suggest longer waits between trains midday when there is less ridership but a more regular schedule during rush hour when people are commuting. |
| 30 minute frequency of trips will cause overcrowding of cars. Additionally, 30 minutes doesnt account for delays that will likely ensue during track work and due to electrical issues. |
| This is when Metro become unusable |
| Would mean I drive to work. |
| Too I frequent |
| Would need more frequent trains during the rush hours |
| Need more frequent Red Line service |
| I mostly take the red line, so I like that the trains come every 15 minutes rather than every 30. However, it would be vitally important that trains coming every 30 minutes operate on schedule, because its really hard to plan when you have to wait 30 minutes AND the trains are unpredictable. |
| If we are back to working in person, this will be VERY inconvenient. I would likely need to find alternative transportation to and from work. |
| This would significantly lengthen my commute and cause more crowding |
| Plan to get back on the metro once vaccinated. Rush hour on the metro pre-Covid was crazy, with trains only 2-5 minutes apart. If they're spaced 30 mins apart, the metro won't be able to handle the passenger traffic. Additionally closing down metro stations makes it really inconvenient for many of us who've bought homes to be close to the metro. |
| This is ridiculous. Rush hour trains are always full, especially those going into and out of DC. You need more frequencies. |
| Some classes at Mason end at 10 pm. By the time we arrive to the Metro station, we need to wait for the last train around 10:50 PM from Vienna Metro. It would be extremely helpful if there could be more frequent trains during late night hours. |
| This is an unacceptable drop in available services |
| Our platforms are already crowded along the orange line. This would make it IMPOSSIBLE to get on a train. I would never ride metro during the week if trains were only 30 minutes |
| Less frequent trains is much preferred to cutting service hours or closing stations. However if at all possible there should be an increase in frequency for rush hour periods. People would pay a surcharge to know they could get to work on time. |

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Every 7-8 minutes please |
| Long waits at then end of the Orange line make it hard to plan to get downtown on time |
| With everyone going back to work. Trains will be severely over crowded. I'm sure people will still be a bit scared of having so many people in one small space. |
| The intervals seem too long for workday commute times. |
| Its most important to keep trains and buses running, for the people who have to get to and from town and have no other way to do it. This plan would be less convenient for these people than the service available now, but at least they can arrange their time to make it work. |
| Trains not running frequently enough to be practical. Plus, I'd assume that fewer trains mean more overcrowding. |
| Trains arriving every 30 mins could easily be overcrowded. Potentially having to wait for another train means 1 hr on a platform? NO WAY! Id give up on Metro all together at that point. |
| Not enough trains |
| 30 minutes seems like a long time between trains and would mean crowded trains when they arrive.... |
| Assuming we are back to full ridership by then, the trains are already packed when there are more frequent intervals. This will be counter productive as it will cause more traffic issues since every 30 min makes the trains so full that metro would no longer be a reliable means of transportation for daily commuters. |
| This would result in much more crowding, particularly in rush hour trains, which will not allow for proper distancing recommended even during a normal flu season. Additionally, this would extend the length of my commute by double. |
| It is very hard to think about these proposals independent of each other because I do have a preference ranking. So yes this schedule would work if the alternative is to close down the whole metro station. However, I think a better schedule would be to take more frequent trains during the rush hour and instead shorten the train service late at night. For example, maybe close the metro down at 9pm instead of 12am. Thank you. |
| I commute every day- and rush hour is nuts. This policy would increase wait times for rush hour commuters, which would also increase danger to those who have not or cannot receive the coronavirus vaccine by that point. |
| No difference between weekend and week day schedules makes no sense. People need a safe method of transportation on weekend nights. |
| I do not feel like this would completely affect me in any way. |
| There must be some rush hour trains; just shorten the window. For example, instead of morning rush hour lasting 4 hours, just make it from 7 am to 9 am. |
| Trains during rush hour are filled to the brim. Cutting back during rush hour will greatly hurt the population. However, I think changing to the 30-minute schedule outside of rush hour would be fine. |
| This will make it far less likely I will take Metro. |
| It would only work if trains were arriving, orange or silver, not completely full every 30 mins from Ballston in toward DC. If they are full, than it would not work. |
| works for me because I dont commute on a regular schedule. For anyone who does seems sub-functional |
| You should run train more often during rush hour. |
| There are many individuals who rely solely on public transportation and their needs should be considered, plus it also decreases population, etc. |
| If I resume working in person at my office in January 2022, then this plan would be insufficient for me to use the metro to get to work regularly. However, if we are still not working in person, then I would not be using the metro at all in January 2022. |
| The working model is evolving. If everything goes back to normal, the change of schedule will affect us. |
| It can only work if trains arrive on a set schedule. Drivers now seem to race to their break areas. |
| I like trains more frequently during rush hour, to keep to my schedule and to reduce crowding. I would predict more full trains and more waiting on the platform |
| These headways are basically un-workable outside the downtown, and difficult downtown. January 2022 is a good date for nearly all offices to return their workers, so this is a poorly timed move. I would be very disappointed in metro if this were to take place; this is the kind of decision that makes me re-consider using metro or living in this region. |
| Every 30 minutes would not work during peak hours. I would suggest altering it only during those hours if this is the intended schedule. Trains would be overcrowded heavily (they already are) during peak and this would exacerbate it. |
| I would still prefer shorter waits in the most heavy use periods (e.g., Orange line during 6:30-8:30 am say) but think its reasonable to spread out arrival times otherwise. |
| Grosvenor is a busy station with parking. Please keep it open. |

Proposal to operate Metrorail service every 30 minutes

I expect to be working in person and waiting 10-30 minutes for a train will severely affected not only my commute time, but also the time it will take to get to meetings throughout the city. A rush hour and non-rush hour schedule makes much more sense than just making everyone's commute slower.

Having the same schedule every day is okay, but trains need to come more frequently than every 30 minutes.

20 min intervals would be better; and set times for trains to arrive like 20 min b/4 and after the hour

trains arriving every 30 minutes even during rush hour would make commuting a gamble in the mornings especially for those workers who have to be in person.

Trains leaving the Vienna station during the morning rush hour were already packed before COVID. If ridership gets back to pre-pandemic numbers, trains departing every 30 minutes will be standing room only before they even reach the second stop on the line.

If trains are arriving less frequently, each train will be more crowded - therefore less safe. I will ride the Metro more if the trains are less crowded. If they are every 15/30 mins, they will be more packed

I take the metro to and from work and trains coming that infrequently would make my commute extremely difficult and likely result in significant crowding

It makes Metro so unworthy of use due to the inefficiency and hassle that the budget issues would be even worse due to an even greater decline in ridership.

30 minute rush hour trains make the metro unusable for commuting purposes. While Covid may still be impacting my need to commute in Jan 2022 (although unlikely), this would guarantee that I choose to drive rather than use the metro.

By January 2022, I expect to be working on site again, and I suspect many businesses will be reopened.

Please do not close stations! I would rather trains arrive less frequently. The impact to the local economy is already devastating. Please do not make it worse by closing stations and impacting businesses and property values even further!

I imagine that by Jan 22 many more people will be commuting again and a 15-minute interval for red line trains would result in crippling overcrowding. Plus, sometimes I rely on Metro to get me to a meeting at a certain time, and four trains an hour would most likely make me shift to taxis or Ubers.

Buses don't always run in a manner that allows for an every 30 minute train schedule to be efficient.

No, trains not frequent enough on weekdays

When COVID is over, and people need to get to work, Metro is only an option if it is time-competitive with driving. If there is even the potential of a 12-15 minute wait, then there is no way to walk to the metro, wait, take the metro, and walk to your office anywhere near the time needed for driving. You will kill your own service because it will not be competitive.

Hopefully ridership levels return to normal after the pandemic is over.

I already have a long commute as it is, with about a 20 minute WMATA bus ride as well as a 45 minute metro ride. Increasing this time by 15 minutes both ways every day would add an extra 2.5 hours to my commute per week, which would total to 10 hours extra commute time per month. This is time where I could be at work earning an income.

Trains are already crowded at rush hour when they run every 7-12 minutes. With 30 minutes in between trains, I am afraid the amount of people would be too great for me to feel safe, especially after the pandemic.

The metro needs to run more frequently to meet rush hour demands since more people will be returning to work with vaccinations rolling in.

This proposal is crazy for people that use metro for work purposes. There is no city in the world reducing so drastically its metro services. With the high fares and the property taxes that go to WMATA this proposal is simply ridiculous and a sign of its poor management

Fifteen minute intervals seems slow.

More frequent trains needed.

How does this change from pre-pandemic times?

This schedule could work but would depend heavily on ridership numbers. If most people are back to commuting daily to offices, the rush hour trains may be too crowded to accommodate. In that case, reduced trains wouldn't meet my expected travel needs.

Red line service should operate at least every 6-10 minutes. I rely on the grosvenor-Strathmore station to get to work in downtown DC, so in a post-pandemic world, I'll need it when I return to the office. I also use the metro at least 3-4x per week round trip during the pandemic, and I would use it at least 5-6 times per week round trip pre- and post-pandemic. I don't have a car so it's crucial.

One train every 30 minutes is far too infrequent.

I plan to take the Silver Line between East Falls Church and McLean. Service every 30 minutes would make this a terrible option, I would end up buying a car and not taking metro at all.

Trains arriving every 30 minutes would ONLY work IF trains were prompt and on a fixed, published schedule.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Wouldn't work for commuters |
| Please keep the routes and times the same as pre-covid to meet the needs of the community. |
| I no longer work full time proposal would be fine |
| I am nervous about rush-hour trains being extremely packed. Otherwise I would be fine with this during non-rush hours. |
| Depends what rush hour times are considered. Most people start commuting by 6am until 9am and again 3:30pm until 6pm. |
| It would work as long as there is room in the car. |
| I commute on the Yellow Line at rush hour every day, so having only one train every 30 minutes wouldnt work at all: not only because of the delay in waiting for a train, but more importantly because the cars would be filled beyond capacity. |
| Not sufficient for rush hour travel |
| 15 minutes is already too long, Europe and Asia run trains every 3-6 minutes. Why cant the capital on the UNITED STATES handle a faster schedule? This is unacceptable as it is, to make it longer is insane. |
| There must absolutely be more trains during rush hour. By January 2022, many people will likely have returned to their offices, and commuting patterns may return to close to normal. The trains get very crowded even during normal rush hour service. Trains every 15-30 minutes is unacceptable, and will lead to even fewer Metro customers in the long run. |
| If covid is still prevalent, this would lead to crowded trains if the work rush does come back. I would not be comfortable riding on a crowded train given the pandemic. |
| This creates a huge burden on people who have to line up bus schedules as well as switching trains to arrive to work on time as well as move between part time jobs or multiple sites for work |
| I expect to be back at work in some fashion by 2022 and don't think this frequency will allow for adequate social distancing for the expected ridership. |
| Too infrequent for folks to get to school and work on time, and waiting up to 30 minutes will mean more passengers in each carâ€”difficult for social distancing. |
| This would greatly increase my commute time on weekdays. I will be returning to my office once the vaccination plan is completed. |
| Rush hour commuters would not be able to fit on the platform or in the trains if one train came every 30 minutes. There would be constant pile-ups, over-crowding and angry riders. |
| I prefer the convenience of more frequent trips but I understand the need for reduced hours |
| Twice an hour service would be inconvenient during rush hour and potentially make the service unusable |
| I chose to live where I have resided for the past 8 years based on its proximity to the Grosvenor-Statmore metro station. If this station is closed, I will no longer be able to work in DC. It would be devastating to my family and child. |
| This would make my commute to work difficult. Two lines stop at my station (yellow and blue), but only the blue line goes to my office. |
| Depending on crowds and if my office allowed for alternative start times. |
| The trains are full during normal rush hours and thats with trains every 7ish minutes. It will be utter chaos if it was only every 30 minutes. |
| this seems reasonable to me |
| This would disrupt commute during rush hour when trains are packed and you cannot get on any of the cars and have to wait for the next train |
| I take the redline from the Silver Spring station so this would work for me |
| It takes me one hour door to door when I metro. If I miss a train by a few minutes it could add thirty minutes to my commute. I could not do that |
| I would have to drive to work because I can't wait 30 minutes for a train at twinbrook |
| This is not a serious transit schedule for a world capital city. I certainly hope you secure enough funding. |
| this makes metro too unreliable as a form of transport, I would drive instead |
| That is way too long in between trains. It will increase congestion on metro cars and also make commuting with the metro less comfortable/convenient. This would be a MASSIVE mistake, and I likely would not use the metro nearly as much if implemented. |
| To accommodate employees going to back to work, higher frequency should be provided to allow for social distancing. |
| 30 minutes wait for the next train is pretty long time. |
| This works for me. |
| Given the rush hour crowds during normal operations I fear there would be too many people waiting on the train I would need for me to board. |

Proposal to operate Metrorail service every 30 minutes

I understand that Metro is under pressure to make concrete long-term planning. But so much is up in the air. For years, I took the Red Line from Grosvenor Station to Dupont M-F for work. But I haven't taken a single trip in almost a year. But, once I'm vaccinated, I plan to be back on the M-F schedule the very next day. I think January 2022 is too little too late - I think we'll be back to normal by then - it makes no sense to extend to every 30 minutes. I know this is a difficult task but I think the every-30-minutes idea is foolish.

Prefer yellow line to run every 15 minutes

Need to be more frequent during rush hour

Metro is a commuter rail -- once people in the DC metro area are vaccinated and offices open up, ridership will increase. Trains every half hour is not acceptable for people in this area who depend on metro to get to work.

I live near the Shady Grove Metro. As of right now, I am working from home. Once vaccinated, I plan to return to work in person as soon as possible, unless Metro service makes that difficult, i.e. half hour between train times.

Essential workers have limited travel options

What doesn't make sense to me is you would be cutting back services right as things will be going back to normal. By January many will be vaccinated and commuting to the office again. To cut back services right as ridership would be increasing seems counterproductive.

Trains are already jam packed throughout the day normally. Lengthening out train arrival times will just make everything more difficult.

30 minutes is too long to wait

I would say yes if trains came every 15 minutes instead of every 30.

I would not use Metro if I had to wait 15 minutes for a crowded train during rush hour. This would be useless given Metro's poor operating history. Metro should focus on reducing employee pay and benefits include the prior overblown pensions.

This only works if the trains are ON TIME. If it is early, I may miss it and have to wait another 30 minutes to an hour and be late for work.

Please don't close the Grosvenor station.

Not enough trains during rush hour would make service too crowded and slower.

During rush hours, trains every 15 minutes on the Red Line would be grossly inadequate if ridership is anything close to pre-pandemic levels.

I'd rather you increase the pricing than decrease the number of trains available.

More frequent trains when more people ride and when getting to/from station is more difficult (traffic), as well as when schools are operating, is more equitable.

This service is very infrequent! As a result trains will be incredibly crowded.

I work for the Federal government. It depends on whether my agency moves away from max telework... and if the vaccine has been readily available by next January and the pandemic has abated.

It would be extremely important in this case for Google maps to have accurate information about the timing of trains and when they are running on time, early, or late.

This station is essential to everyone's going to and from work

This would work for me because I am retiring in 2021. But it would not have worked well for me when I was commuting daily on the Metro, which I hope many will be doing again before the end of 2021

Having trains come every 10 minutes would be more convenient and efficient for those of us who need to travel to and from essential work

I moved near close to the Morgan Blvd Metro station to be in walking distance to the metro. Closing Morgan Blvd would have a negative impact within the community as we all heavily rely on it. Perhaps reducing expenditures elsewhere would be better.

I would anticipate the trains would fill up quickly if they only run every 15 or 30 minutes. I think whether or not this would work would depend on the number of riders. If the number of riders permanently decreases due to COVID, I think this could work. But my concern is with trains filling up quickly, and riders who physically could not fit onto an already full train having to wait another 30 minutes for the next train.

I'm worried that rush hour trains (pre-pandemic) are already packed under normal conditions. There wouldn't be room to get on trains at this rate unless ridership is way down.

We are going back to full time work by 2022...we need full time service

We previously had to wait through several over packed train cars in order to be able to squeeze into a car during rush hour on the red line. We'd be waiting for hours for a train with this proposal. It's be a complete disaster. Please don't do this one or I will have to drive (and would much rather take metro).

The main problem with this plan is when trains start not sticking to the time tables and then it's very easy to miss a train because it left two minutes early

Proposal to operate Metrorail service every 30 minutes

| |
|---|
| Pre-pandemic, trains and platforms were already dangerously overcrowded during commuting times. Reducing service makes social distancing impossible at a time that I expect to have returned to a more normal commute. Reducing service will drive customers away at a time when you want them to come back. |
| With Virginias bullshit ezpass planes, this would be detrimental to do many people trying to get to work |
| More frequent trains will be needed during rush hour. |
| I live at the end of the line, so it would always be a concern about crowding and waiting 20 minutes if traffic didnt allow me to get to the station on time for a train. At that point, an additional 20 minute wait at each end of the commute means I might as well drive. |
| Thirty minute wait times are a waste of time. This will be a negative impact on met to ride the rails. |
| Waiting longer between trains is preferable to closing some stations |
| service can be less on weekends |
| This would work. This is better than closing Metro stations all together (e.g.m Grosvenor) |
| Good idea. Reducing frequency and therefore the number of trains will reduce costs somewhat. |
| 30 minutes is way too long to wait. That is not a big city transit system. Trains would be unbearably crowded with that schedule. |
| Length of time waiting for a train discourages ridership |
| It means that if Metro is late or early, my wait time would be affected. It also means a more crowded metro and a less likelihood of me using the system. |
| Im concerned about how this plan would meet rush hour needs, where trains pre-pandemic would run every 5-8 minutes and still be standing room only by the time Orange and Silver hit West Falls Church metro. Im okay with an increase in wait time but 30 minutes seems extreme. |
| Every 15 minutes is too long, should be every 5-10 minutes during rush hour. |
| We will be back to work by then, his proposal is how things should run now, not after we're back to work. |
| I want to ride the metro after I am vaccinated but if the schedule is so infrequent it will make my 17 minute commute take much, much longer. That will be very frustrating. This is simply too infrequent. |
| I expect to be working in-person again by January 2022, and this would make my commute unbearable. |
| Is it possible to enact service cuts now, given the lower ridership, and then restore the frequency once ridership returns? Many offices are scheduled to reopen this summer, so metro ridership would be increasing before the cuts are enacted. |
| lots of residents that live near the Grosvenor-Strathmore use the Red Line to get into work. Especially NIH researchers that are important assets to the continuous research for COVID19 and other mutated strains. With some of the researchers having to stay late or work earlier, this will affect the amount of waiting period for everyone at the Grosvenor-Strathmore stop and stops ahead of it on the red line. Before COVID, the metro would be too full and people would either have the squeeze or wait for the next one. |
| this would be challenging, but we could make it work. |
| When workers return to the office, the crowded trains will be even more crowded, and what would be the point in surge pricing if more trains are not run |
| I worry that if I were to miss a train, waiting 30 minutes for the next one would make me late to class |
| reducing frequency of trains will make me not want to ride |
| During rush hour, this would unacceptably delay transportation to work |
| Needs to run more frequently than every 15mins |
| Lines at stations being Grosvenor would be insane. |
| It doesnt affect me, but I cant imagine regular commuters accepting this schedule; feels like its giving up and telling riders to find alternate means. |
| If we knew the times that the trains would arrive, and the trains are on time it would be ok |
| Long headways during rush hour will further limit usability of transit as a commute option further reducing ridership. |
| The hours are fine, as i live on the red line at SG. |
| the timeline would not work especially during rush hour in the am & pm. |
| This is not sufficient. There should be expanded rush hour service not middle of the day service to accommodate all workers. |
| I will be commuting to work in a downtown location from Cleveland Park on and after January 1, 2022. |
| Ideally trains would run more often during rush hour starting in the summer when many will be vaccinated and feel more comfortable riding the metro. By Jan 2022, I feel that many will be commuting at a very similar to rate to that before the pandemic so I wonder if a cut at that time makes sense |

Proposal to operate Metrorail service every 30 minutes

I live at the Grosvenor-Strathmore metro stop and have found that the train is already too full by the time I get on it many days. Having more frequent trains originating at the Grosvenor-Strathmore stop (like used to happen) would be fantastic.

It would help if there was some criteria when trains would be scheduled to run more frequently (e.g., a significant proportion of workers return to commuting)

Its not ideal, but I would prefer a longer wait than to have East Falls Church Station close.

This is going to create over crowding which means not being able to get on a train and having a long wait until the next train. Increasing my commute on metro by 30-60 minutes a day would mean that I drive to work. I take metro because it cuts my commute by 30-60 minutes. If that isnt happening, I will drive.

I believe a majority of folks will be back in the office and taking metro again. Too long a waiting time in between. 5-7 minutes is more reasonable.

Ultimately, this will depend on how often Im working from home after COVID is done and gone. I could probably make it work with just one train every 30 minutes (I primarily need the Silver line), but it would be inconvenient and make the already-crowded trains even more packed.

As more people go back into the office will metro add more trains to accommodate for that?

TEMPORARILY --- until normal ridership resumes

I purchased my property because its walking distance to Garrett A Morgan Blvd

Unless I knew what time the train was coming, this would make wait times too long. If I knew or could look up what time it was coming, I could use it.

Using metro for commuting, means that trains running on most lines would be too full, considering even when trains were coming every 6 minutes pre-pandemic, occasionally the train I was trying to board would be full. this would exacerbate the problem and severely hamper my ability to use metro for transit

Most of the stations I ride through are serviced by multiple lines. I would not be happy with 12-15 minute waits, but they would be acceptable most of the time.

this is the least disruptive to the population

It would not be ideal but because I live within the more frequent routes, I'd be ok with it. However, I do believe there is an equity issue here as the economically disadvantaged areas would have significantly more limited service than more affluent areas. I would assume you can expect lawsuits over that.

Hopefully people will be back in the office starting in 2022, so I think there should still be rush hour scheduling in the morning.

This plan seems reasonable to me, given my travel needs.

You suddenly make the work commute much longer and more complex, discouraging me from taking metro.

Trains should arrive more frequently than every 30 minutes; weekend and night service should be extended to account for those of us that work late/early and rely on Metro to get us to work and home in a reasonable time frame

This would work, unless the trains are full when I go to board.

The more trains that run, the less cars on the street

Once everyone is back to work, trains during rush hours will need to increase

Rush hour increased frequency preferred

30 minutes is too long between all trains all day (i.e., rush hour)

My commute requires transfers -- this would significantly lengthen and complicate my commute. To the point that I might have little choice but to drive (and give up on Metro)

Not able to catch trains at rush hour to get to work on time.

every 30 minutes is not enough

I wouldnt be happy about waiting 30 minutes but I could live with it.

Seems slow

It would be disappointing to wait 30 minutes for a train, but if the schedules are posted and the trains stay on the schedule, I could make it work.

right now, Im temporary telework due to Covid. Once this period ends, it will be extremely challenging to wait 30 minutes for a train if you happen to miss the train, especially during rush hour.

I would rather have a delay in arrival times than shutting Grosvenor completely.

This is not sufficient service during rush hour after regular work schedules resume

Having to wait so long to take metro to work would be a huge headache.

if trains are only coming 30 min apart, that could be the difference between missing an appointment and making it. the pre-planning required would increase dramatically, and it would be more convenient to uber if i had to wait that long - the metro would be pointless.

Proposal to operate Metrorail service every 30 minutes

Would there be more train cars to deal with crowding?

It is workable if trains are long enough. With fewer trains, riders will just need to plan...but if everyone plans on the same window, there could be overcrowding, unsafe conditions.

Assuming that the Green Line stations in MD would have service every 15 minutes since they are served by both Green and Yellow Lines

Running trains only every 15 minutes during rush hour makes no sense. By January 2022, we will be back to the new normal, with workers commuting into the District. You should run additional trains during rush hour times, as compared with other times of the day.

This will add significantly to my morning commute.

The higher availability of metro during rush hour is essential for me to get to and from work in a timely manner.

30 minutes is an absolutely unacceptable amount of time to wait for a train in rush hour. I cant imagine how crowded the trains would be. Why is this proposal even happening? if this is due to ridership numbers decreasing during the pandemic, it is ridiculous to assume that ridership will stay as low as it has been during 2020/early 2021. You should if anything be making the metro more accessible and more reliable in order to attract more ridership and therefore more revenue. Otherwise, you are no longer creating a long term plan to thrive but rather marking the beginning of the death of the DC metro.

15 minutes seems too long to wait. I believe I will be riding the metro every day again by January 2022

Please don't close the Grovesnor-Strathmore metro station! I just moved to the area to be closer my job and I need metro access to get to work.

Stinks

Pre-pandemic, I already couldnt squeeze on in Courthouse. Especially if I had a suitcase going to Regan. I cant imagine how poorly this would work out with fewer trains.

What a terrible idea. A lot of people will be going back to work, this will result in severe overcrowding.

This would completely undermine the ability for the DC metro area to use public transit to get to work. It would result in huge traffic and is not workable.

Simply not enough service during rush hour on the Red Line.

This is better than eliminating stops but not as good as the Metro leadership taking pay cuts.

Not frequent enough service for those who live at the outer stations and commute into/out of DC.

YOU ARE NEVER GOING TO GET RIDERS BACK WITH FREQUENCIES THIS BAD YOU THIEFING IDIOTS

Reduced trains during rush hour will create significant bottlenecks for commuters

Keep Grosvenor open and running regular schedule.

These wait-times are unworkable. You know that. You are attempting to manipulate us with this survey. What you need to do is replace most of your incompetent administrators with fewer, more competent, lower paid people -- which you could easily do -- and put the savings into *transportation* like making the trains run often and on time.

15 min everywhere

This plan would add an additional 30 minutes to already one hour commute!

I really worry about space during rush hour

30 minutes apart seems far too infrequent, especially for commuting to work. It seems the trains would be absolutely packed for peak commute times, even creating the possibility of physical conflict as people push and shove to get on and off.

If vaccination levels reach 60-70% even six months later than currently estimated, by January 2022, your commuting ridership will have increased drastically. Trains on this frequency during the week will be crowded and unsafe - basically meaning that people will not use metro and you'll not be able to dig yourselves out of the operating cost shortfalls!

Commute times will skyrocket and make the Metro an unreliable method of traveling into the city in a timely manner. People will begin looking to alternatives, and ridership could decline further.

With a return to normality hopefully coming in 2022, it makes absolutely no sense to have no adjustments in the metro schedule to account for rush hour or different times of day. Furthermore, having trains arrive every 30 minutes would essentially guarantee that if you missed your train you would be significantly late. All in all these proposals seem totally unacceptable and would most likely result in me rarely using the metro anymore.

I would not commute by metro under this proposal. Other options would be much more reliable.

Rush hour times are the most important

I cant wait on the platform at College Park for more than 20 minutes at a time, especially when coordinating with the University of Maryland metro bus shuttle.

Infrequency of trains makes arrival times too unpredictable

I use the red line to work and also change trains at Gallery. The changes in time will mean less options for me.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| thats way too infrequent for my travel needs |
| During rush hour times there needs to be a train at key stations (ie Rosslyn) every 30 minutes. I anticipate being back in the office by that time and it is my only form of transportation |
| ridiculous to have to wait 30 minutes for trains way too long |
| Given that ridership is likely to increase again as vaccines are more available and more people are being asked to return to work in office buildings, I would be most concerned about the volume of riders on the train if they are only running every 30 minutes. During rush hour in the past, ridership was so high that trains would be full and not accommodate new riders to board despite coming every 20 minutes. I would be able to plan a commute around a train every 30 minutes but would be worried about actual availability to ride. |
| 10 minutes should be the maximum |
| I would be really displeased to have to wait 15-30 minutes for my train during rush hour as opposed to waiting 5-8 minutes like I do now. |
| Very poor service. We need to increase public transportation, not decrease it |
| Its hard to evaluate each item independently as there are always trade offs. If going to a uniform schedule mentioned above would save station closures then Im all for it. If we still have to close stations - not so much. |
| We need to continue to keep as is.... |
| Proposal generally works but Trains should arrive more frequently during rush hours. |
| depends on how much I work from home. does my company move to a hybrid work schedule in which case I commute on metro less and Id be willing to wait more for a train. |
| Use grosvenor station frequently |
| It would work for me in January to March 2022, but once the baseball games start, it would make it impossible to use Metro to get to and from Navy Yard. |
| Trains would be too crowded to get on in Arlington as I expect people to be back in offices in 2022. |
| What would be the operating times? Please include late night riders in your proposals |
| Rush hour Orange line service levels to/from Vienna have already been cut by 50% to accommodate the Silver line. Further cuts are unacceptable. |
| As long as the app provides up to date info and as long as I have access to use metro this works. |
| As long as it is consistent, then most working people can adjust their schedule 15 minutes either way. |
| It would only work for me if the trains actually stuck to the scheduled arrival times (not just frequency) - otherwise too hard to plan. |
| Reducing the number of trains servicing stations when people are going back to the office will result in even more overcrowded trains. At the best of intervals it can take several trains before people can get on and impossible for people with mobility issues. |
| By making service slower at single line stations, it will significantly add to my work travel time by limiting how frequently I can catch my first train on green line to eventually arrive at busy station where there is less of a wait time to switch lines. |
| This would only work if the Cleveland Park station on the Red line stays open. |
| If the train comes every 15 minutes and it is guarantee, it is easy to time the arrival to the station |
| Too infrequent |
| These wait times are way too long and will lead to more people driving. Very impractical. |
| This proposal would work really well for my commuting and other travel needs. |
| This will make weekday/rush hour service unbearable, with crowded trains and packed platforms. It makes no sense. |
| Concerns about rush hour during non pandemic times |
| Trains were already crowded, sometimes overcrowded, regularly pre-pandemic. Once covid has settled down, ridership is most likely set to resume at previous numbers and with trains coming at 15 minute intervals, the trains will most definitely be packed again. |
| There will be many stations that have a train only once every 30 minutes during peak commuting hours -- that is going to lead to dangerous situations on platforms. We cannot assume January 2022 is going to be continued telework and low ridership. |
| I am worried that it would negatively impact lots of commuters as they would not get on and then be late |
| This is a disgrace for those that use the metro to go to work. What a load of shit. I hope you guys get taken over by the feds because fuck this plan. 30 min wait times during rush hour. Who do you think you guys are? |
| Quite restrictive, particularly for rush hour traffic. |

Proposal to operate Metrorail service every 30 minutes

One of the best parts of metro is being able to catch a train frequently. If I had to time my trips based on catching a train every 30 min I would try to find other ways to travel instead I think it would be a shame but understandable if ridership levels remain very low. The frequency would be too low for me to rely on it for commuting from Virginia to DC daily, and I would probably be driving as a result unfortunately.

The infrequency of service would make metro nearly unusable for reliable transit on the red line.

The frequency of trains should match the demand for trains, i.e., more trains during rush hour, fewer trains during non-rush hour

The whole language above is confusing. Need to rewrite it for clarity. But no - that is way too slow.

The trains would be too infrequent and overly crowded.

This would be fine most of the time, but terrible during commuting/rush hour times. Would be helpful to be able to look up arrival times online before going to the metro.

this is insane and insufficient to needs

Please dont reduce service. I need to connect to get to work and the delay would make it impossible for me to use metro to get there. I would rather you double the fares than reduce service.

Would increase commute time by 50%

No difference in arrival times in rush hour vs. non rush hour sounds like a commuting disaster weekday mornings.

Too long of a wait on weekdays for work

Would extend commute significantly and crowding would be unbearable

Would it be possible for a compromise during rush hour (every 7-10 minutes instead of every 2-4 minutes during rush hour pre-COVID).

Please do NOT close Grosvenor-Strathmore, which serves a lot of people in local apartment buildings outside COVID.

30 minutes between trains is a lot. I would probably opt to drive instead.

That is far too infrequent. The reason people take the metro is for convenience. If I have to wait 30 minutes for the next train, I may as well just drive.

WMATA should convene a meeting with the areas biggest employer personnel departments to get a sense how they intend to move forward. Also, if the employment posture changed will trains be overcrowded due to the cuts or will more train cars be added to accommodate

Trains need to come a lot more frequently than every 30 minutes.

Would train capacity (number of cars) offset possible crowding? ie more consistent use of 8-car trains.

This is reasonable

This will be a disaster during rush hour

By January 2022, I would imagine demand will be back up. So this would not seem to be wise.

As someone commuting from VA to Twinbrook MD, this would drastically affect my travel times and my work performance.

Pre-pandemic commuting was difficult during rush hours. For example, I would have to wait for several trains to pass through Rosslyn in the evening due to trains being full. The orange and silver line trains heading to East Falls Church were often times filled to maximum capacity.

I would need to know what time the metro would arrive - like an Amtrak-type schedule.

Would prefer more frequent trips

If trains are only coming every 15 minutes then they need to be 8 car trains.

I bought to be close to this metro station. My home value will drop significantly

As someone who does not own a vehicle, this would make getting around the city difficult, and getting to and from work on time extremely difficult.

Reverting back to the turnback system at G-S and SS stations when there is still very high demand at stations past these two is unfair to riders, provides a disservice, and will accelerate a neverending cycle of lower ridership. This is insanity.

Reducing transit frequency (and reliability) reduces demand, which leads WMATA to further reduce transit --- its a death spiral. Accessible, frequent, and reliable transit sells itself.

this will meet my needs.

Personally, yes, but would be disastrous for DC businesses.

Proposal to operate Metrorail service every 30 minutes

When not telecommuting, I depend on METro as a disabled individual who needs public transportation to get to work. Less trains would result in more crowding and likely delays as people try to smash onto already crowded trains. Why would you cut service during rush hour? How would you expect to get riders to come back. You are all seriously inept at what you do. Shame on the Metro Board for even thinking that a delay in service is the way to go about this. Why dont you get some competent individual to do some proper budgeting and financial audits and fix the cluster this agency has become.

Not great, but a reasonable compromise.

Would like rush hour service to remain

This seems to be a lot fewer trains than I used to and would plan to take again

So granted I am on the red line's 15 minute service zone and so 15 minute headways are not too terrible, however, 30 minutes would be dreadful to wait otherwise

I can't wait for up to 45 minutes to get on the train I need

30 minute time difference between trains would make me avoid taking the metro.

Its bad.

I live in Crystal City and appreciate the trains arriving more quickly than 12-15 minutes during rush hour. It helps avoid crowding and I know I will get to work on time

Keep the peak-hour schedule at every 8 to 10 minutes

Given what Ive seen on weekends and other low-frequency times, I doubt Metros ability to stick to the schedule and space the trains out well.

Spacing trains 12-15 minutes apart is rather inconvenient for travel times

This would be a drastic cut to service and would discourage a return to ridership, at a time when the city and the country need to transition to relying on public transit more, not less, to reduce climate emissions.

Why make changes after the pandemic ends? Shouldnt you return to a more normal schedule?

Twice hourly service on a connected network is not workable; with transfers, could require 2 separate 29 minute waits which makes longer trips unrealistic and would force people into cars/hiring Ubers/etc.

By January 2022, the pandemic will be largely over, and thousands of people will once again have to take the Red Line to downtown to go to work. In the past, the red line trains would arrive every several minutes and they were still packed. How do you expect these people to be able to get back to work when everything reopens, and likely before January 2022?

During rush hour - I worry this could lead to additional delays for my commute

need rush hour service especially, but also weekend evening

Too many commuters depend on that station

I have the option of driving (15 minutes today, 25 minutes pre-pandemic) or Metro (1/2 hour door to door pre-pandemic). If trains are spaced out every 1/2 hour, I will opt to drive rather than add 20 minutes to my commute each way.

trains should run every 15 minutes

I still need reliable trains that come often so I can make on time to things

I would not be able to commute by metro with these leadtimes.

This would likely double my commute, as I would have no arrive at the station well ahead of time to ensure I did not miss a train, and then wait for a significantly longer period of time at the station where I transfer.

Trains should run every few minutes.

Trains need to be a lot more frequent (especially at rush hour) to work for commuters.

Once bars and restaurants reopen by 2022, this would be deeply inconvenient for weekend closure times and ability to use the metro effectively as transport on Friday and Saturday nights

do not close grovenor

Very hard if you are running a little late to work then you will be very late if you miss the train

It would make it difficult to get to doctors appointments.

I rely heavily on the rush hour service times

Proposal to operate Metrorail service every 30 minutes

The new schedule would have to be very clear, so as to accommodate commuters needs. Less trains would also mean more people on each train, which (if COVID is still around) would impact my decision to take the train.

By Jan 2022, trains would need to arrive more frequently during weekday rush hour in order for me to consider taking metro.

12-15 minutes is still a significant increase in wait time.

would make commuting very difficult - not worth all the extra time to get to work

Not enough service at rush times just when hopefully ridership will increase. Will lead to crowded and more unsafe cars. Ridiculous proposal.

30 minutes between trains is too long and would cause overcrowding

For me to ride the metro, I need more frequent service.

I would need more frequency. Especially if my commute is long

Metro closes too early on weekdays as it is, closing early on the weekends makes Metro virtually unusable.

It should be modified for evenings and weekends

I take the silver line to commute. I need more frequent silver line trains than every 30 min

This would absolutely not be feasible for my planned return to working downtown.

Trains need to be more frequent than every 30 minutes during rush hours.

As a young woman, I am worried about my safety on the metro as I would be standing on the platform for much longer than I was during my commute prior to COVID. Before this, I would wait a maximum 5-7 minutes on the platform before getting on a train. I tried taking the metro in the fall, and I found I was very uncomfortable standing alone for that period of time with limited security. In addition during the winter months, it is hard to want to stand outside for 15-20 minutes to wait for a train.

Service every 30 minutes is not frequent enough for people to rely on Metro.

Reduced frequency on red line at those stations would eliminate convenience of riding

I've started to come back to the office and ride Metro 4 days per week. If trains depart every 30 minutes, I'll stop riding Metro.

Increased frequency during rush hour times is imperative with platform congestion.

not frequent enough

During rush hour in non-COVID times trains can be crowded and I wait for a new one sometimes. All of us cramming onto one that comes every 30 min is unrealistic.

postpandemic will return ridership to pre-pandemic levels - every 15 minutes will not be sufficient in rush hour

Ok as long as there is enough space on the trains

Need more frequent trains during weekend rush hours. They should really be more frequent at other times as ell.

This might work while people telework due to covid, but if you have to commute to DC, this would greatly lengthen people's commute times.

With this change peak pricing should also be reduced. I also believe this change would lead to over packed cars as the trains, pre covid, already were over full and not running frequently.

With potential social distancing measures post covid that will make getting on a train almost impossible during rush hour.

Need more rapid trains to make commuting feasible

Trains would probably be way too crowded during rush hour once most people are working more normal schedules after covid has reduced

I live at west falls church. Since it is orange line only, this would limit the number of trains that pass through. However, I imagine I will move to work more remotely and travel only to visit clients (versus going to an office in Rosslyn everyday). This would be fine for me given advanced planning.

If Metro expects riders to return for commuting purposes, a train every 30 minutes is much too long of a wait. Many, including me, would opt to drive.

That is a lot less. After living in NYC for a bit - trains every 5-10 minutes is excessive. Can we setting for trains every 20minutes during commute hours and 30minutes during all other times & days

Alexandria yellow line will be too slow for those needing to get in the city. Closing Eisenhower Ave only leaves Braddock road and Huntington open in Alexandria. People who live in such a populated city are now only left with two options and a 30 min train wait isn't feasible for working people in the city. Would like to keep the 12-15 min option if Alexandria stations close.

Need more frequent trains running on blue line to service northern virginia

THIS IS HORRIBLE. Every 30 minutes for commuter rail is horrible.

It might be nightmareish

Proposal to operate Metrorail service every 30 minutes

Maybe. I guess it depends on how high ridership is. Under normal circumstances trains with that much time in between would be crowded, but I imagine with ridership down, this type of interval wouldnt lend to the same amount of crowding.

This would significantly impact my commute during rush hour time

This is absolutely ridiculous given that ridership will increase once people return to the office after covid vaccinations. Trains will be more crowded, longer delays, etc. absolutely unacceptable

With service this infrequent, I would likely use other forms of transportation.

in non rush hour, increase wait periods to 20 minutes. Drop to lower service during weekends, especially Sundays.

Trains will be too crowded at rush hour. Difficulties caused if you miss a train.

For those of us commuting to work in the District, the timing between trains is far too long.

Do not cut level of service.

there was already overcrowding when trains came more frequently; trains every 30 minutes during rush hour would exacerbate the problem.

Every 30 minutes for trains is completely unacceptable. Trains, prepandemic, were crowded at rush hour if trains were further than 5 minutes apart

Not frequently enough especially during rush hour

30 minute wait would make daily commuting via metro pretty much unbearable.

The trains would not come often enough. 30 minutes is a really long time to wait for a train.

My workplace is near Farragut North and red line trains at typical commuting periods pre-pandemic are packed when theyre running every 3-5 minutes. Expanding that time periods to every fifteen minutes would make commuting home almost impossible.

My station has Orange and Silver lines, but I can only take the Silver line to work. That means that if I miss a train Id have to wait 30 more minutes for the next one and Id be very late to work

This is not feasible during rush hour.

As someone who does not want to get a car, the Metro is a very useful service for me. Having some of these stations close (particularly on the Silver Line, which you all just built and re-built and invested tons of money in) would be an extreme inconvenience to myself and others in the area. The Metro is the majority of the DMVs transport system; closing many of these stations outside of DC (i.e. in MD and VA) would drive Metrorails usage down considerably. Not to mention, this area is also expanding exponentially every day -- where is the problem of revenue and why is there a problem there? That is the question you have to ask yourselves.

Is this a real proposal? Might as well shut down the metro altogether.

The only way this would work is if I had a good sense of when the arrival times would be for trains so that I could plan around that like I can with a bus schedule. Otherwise, it could add a tremendous amount of time to my commute.

Rush hour trains were already too crowded ore-Covid.

There is only so much room on the metros-- if the cars are full during rush hour that would put many passengers 30 minutes behind or encourage people to overstuff the rail cars, creating potential hazardous environments.

In addition, I would like to see the Yellow Line going to Huntington to have more 10 minutes intervals.

Would prefer every 12-15 minutes. Would be less apt to go back to riding the metro if it were that far apart.

This would lead to overcrowding and potentially create a covid super spreader as we return to work.

This will not work for me because there will be no service from the McLean rail station. For me and others who live in McLean, the McLean rail station is the only nearby rail station -- of the four Tysons rail stations -- that has a nearby parking lot. Since there is no bus service for vast parts of McLean, without a nearby parking lot, those of us who live in McLean and the surrounding areas will have no other reasonable option than to drive. This will put more cars on the roads. It is also foolish, given that the McLean station has the second highest ridership of the four Tysons stations and directly services Cap One and its performing arts center. I strongly urge you to find the funds (purportedly \$900K) to keep it open.

Few people are riding so our tax dollars should not be wasted. Store the trains until riders return. Do not run empty trains.

Acceptable as long as real-time arrivals at each station are available through various apps.

People would have to plan more carefully so they're sure to get to work on time

Make a larger campaign to solicit funds to keep metro running as regularly scheduled.

There needs to be more frequent trains on weekdays

Proposal to operate Metrorail service every 30 minutes

I am a semi-regular commuter to downtown DC. Having service this infrequently would mean that Metrorail would not be a practical alternative for me.

30 minutes is too long to wait for a train.

I take the train from Shady Grove and I need these trains to be coming faster than every 15 minutes

I will resume riding the train to commute to work. the trains will be overcrowded/full especially during rush hour if they only come every half hour

This would make work commutes very difficult. With that timing I would probably just take my car instead.

This would be difficult but workable, as long as trains run mostly on time. In the event of delays it would be much more problematic, especially for those working in jobs that are less flexible / forgiving on late arrivals -- and thus would be hardest on the most economically vulnerable people who use Metro services.

As a commuter this is not sufficient, experts expect herd immunity to return by fall. Please restore better rush hour service! I expect to be commuting to and from the office by Jan. 2022!

With potential for the workforce to be back in offices by January 2022, trains every 30 minutes would in no way work for commuters. Each train would be packed, and the platforms would be constantly filled with people unable to cram onto the trains. This change would make WMATA the worst-run metro system in the world.

This will increase crowding on trains. Are larger cars/longer trains being considered as part of this proposal?

This would enormously extend my commute and make trains on my commute very crowded

Anything less than full operations is unacceptable.

This will take longer than driving or riding a bicycle. Totally pointless.

I think times should be more frequent during rush hour.

Headways should not be reduced further, that will further drive people away from using Metro. Headways should return to what they were pre-COVID in order to allow for adequate social distancing and reasonable reliability. 30 minute headways are unacceptable.

This would make Metro effectively useless. I would likely stop riding.

When you reduce service to every 30 minutes you lose even more riders. It's too inconvenient to wait so long and people will find alternate transportation.

This would make travel times almost double.

At some point people will be returning to the office and trains before the pandemic were never empty during rush hours. Cutting down trains means more people, more crowding, more diseases spreading....haven't we learned anything from this?? Don't cram people in like sardines

Could have service less frequently on weekends to save on cost

rush hour should have more trains

Rush hour needs to be at least every 7 minutes

Too slow

That is too long a time between trains arriving.

I feel this would result in more crowded trains and increase the likelihood of being late or too early to destination. More frequent trains allow for more flexibility for travel.

Some trains would be too infrequent

These are already super crowded routes. Doubling the time will make for huge backups and decrease ridership, driving down revenues

30 minute arrival and single service stations is unacceptable. You are also going to put more people onto the trains increasing the density and potential for super spreaders. Given this schedule I will drive and put another car on the already congested roads, in turn driving more wear and tear on the streets driving more funds required to maintain and repair roadways. either way, the \$\$ will be the same, it will just be spent in different areas.

If it saves stations then yes--those with access to the incoming train arrival times will just have to take great advantage of it and plan for packed trains.

This is not rush hour service. There's no way this is reliable to get to and from work.

If you arrive a few minutes after the train leaves this adds an unnecessary and burdensome amount of time to our daily commute. Specially given that metro times are already unpredictable and not consistent

Eventually things will go back to normal, as they were before COVID. These operating schedules will not be sufficient in a post-COVID world

I need the Green/Yellow line to run every 15min

The closest stations to me only have one line and 30 minutes is too long between lines

not frequent enough/ will make train cars too crowded. would double my commute

Proposal to operate Metrorail service every 30 minutes

15 minutes is too long, 5-7 would be better

I am retired and can work around the increased times if they are posted and kept to.

That would absolutely not work for weekdays considering that trains coming every 5-7 mins previously were sometimes so full there was no room to board on Orange/Silver trains in stations closer to Rosslyn.

Not enough service frequency - less ridership will come back post-COVID.

Hope to have full service at Grosvenor Station

There should be less time between rush-hour trains, even if that means increasing times between trains on the weekend.

What other national capitol has a metro system that runs trains every 30 minutes. This is insane.

I will be affected since I will be using the White Flint metro station. Waiting for 30 minutes is too much

There will be overcrowding on the green line. I will go back to needing metro service April 2021.

I live on the silver line - that means if I miss a train I would have to wait 36-45 minutes for another one.

Too long of a wait.

That isnt nearly often enough, especially for those of us who live at heavily traveled stations.

These arrival time intervals would not be appropriate for commuting to and from work.

Every 30 mins seems very infrequent and could lead to very crowded trains.

After COVID and when things return to semi-normalcy, a lot of folks I know (me included) will need the Metro to travel from home (in Rockville, MD) to work (in DC). The line was already really crowded even with the trains arriving frequently-- reducing time and number of stops is going to be mayhem.

Please make trains more frequent

Having schedules that are both frequent and with posted arrival times, as some rail systems do, would actually enhance my willingness to use transit.

Eliminating a different rush hour schedule, as proposed, would likely cut substantially into Metro revenues as commuters look for other alternatives

I rely on the train. If needed to leave work for emergency or during non-rush hour time, metro would be not reliable.

Trains should continue to arrive every 8-10 min

By January 2022 I expect to be traveling four days a week to my office via metro. Metro operating every 7-10 minutes during rush hour works for me. Going to every 30 minutes will force me to drive a car.

I am not commuting into DC for work, but I would use the metro on the weekends. Trains leaving every 30 minutes seems reasonable and is also predictable.

That would make trains unbelievably crowded and essentially make commuting impossible. Not to mention, given what weve all gone through in the past year, stuffing into a crowded train is the last thing anyone wants to do for health and safety.

I need two trains to get to work - from Waterfront to Gallery Place; and then on to Dupont Circle. This schedule would make my commute incalculably longer!

Should be more frequent

12-15 minutes per train is too long.

At the station I ride from, Pentagon City, every train was absolutely jam-packed during rush hour pre-COVID. If trains only came every 15 minutes, I foresee a distinct possibility of not being able to get on a train - and then having to wait another 15 minutes would absolutely not work.

The WMATA is known as one of the best transit systems in the country. I was so excited to move here from St. Louis, where the trains only came every 20 minutes at my stop, which was only served by one line. I now live in McLean and am again served by one line, but the trains arrive somewhat more frequently. I have waited in the rain and in freezing temperatures, and especially given that there are no heaters, this makes for a very uncomfortable trip that could be improved with increased frequency. Additionally, this particular stop, although only served by one line, has very high traffic in non-pandemic times due to thousands of Capital One employees commuting to this stop daily.

Such service would greatly expand my commute time.

15mins is too long

This cannot be regarded as providing public transportation service. Better abolish the entire system altogether.

Crowding on the Red Line at rush hour is bad even when trains are close together. 15 minute intervals at rush hour is not workable once we return to the office, which I expect will happen in the fall. On top of that, 15/30 minute headways between trains guarantees that I will virtually never take Metro. I will Uber/Lyft, walk, etc.

I take the red line into DC every day. The commute is already 45mins and I don't like any option that would slow that down

Proposal to operate Metrorail service every 30 minutes

Rush hour needs to have more trains. They are too crowded during normal rush hour times and every 30 minutes/15 minutes for redline would be horrible.

I dont understand why you are at 80 percent now, when nobody is at work, and cuts to 30 percent of pre-pandemic later, when people will be going back to work and demand will rise. I guess this is because you have the money now to run empty trains. Why not save that money and reverse - go at 30 percent now--we are still working from home -- and increase to 60 or 75 percent next year. Then demand will come back up and your budget will recover.

That is too long a gap between trains

Do not restrict train service on red line. Run trains ever 15 minutes on the whole line

Trains already are packed during rush hour. This would make commuting incredibly difficult

It is really hard to know because I dont know when I will be allowed to return in-person to my workplace. I think I could make this work (by planning to arrive at the metro station when a train is due to arrive).

Once people are back at work, trains will be crowded.

Going to 30 mins is quite a job in time. Why would I use it? My commute would be really long.

30 minutes means crowded trains

This would mean more crowded trains and less social distancing

It would be much more helpful to have real time information on what the expectations are from employers in terms of return to office and on what schedule. This is to be preferred as it is easier to change schedules than to reopen stations.

During rush hour this would create very crowded trains, which is not favorable during a pandemic.

A lot of people will be back to commuting by January 2022. The trains will be extremely packed and this will not only prove to be uncomfortable, but unsafe, if trains are coming with less frequency.

We are supposed to have enough vaccines for everyone in 2021 so by January 2022 we will likely be back in the office. That means there will be a huge number of people needing to access metros services and likely more riders will want to be on the trains than can fit, and then they will have to wait 30 minutes to try to get on the next train which is completely ridiculous. You should cut way back on service until jobs start opening and then we need more frequent trains again.

This is too long a wait especially during rush hour. This is truly problematic for those around American university that rely on the redline to commute. Adding issues for students on top of many students who also intern or work downtown is truly problematic

It will be very difficult for me to commute to work

This limits flexibility. If trains only run every 30 minutes, if a rider misses a train, 30 minutea would result in possibly not being able to pick up children from daycare in time.

Unacceptable to have to wait that long if you just miss a train. Crowding would be unimaginable

Sounds like a complete mess for weekday rush hour once more people start commuting again.

Trains arriving every 30 minutes is too far apart

Do not close the Eisenhower Metro stop. We have several apartment buildings being built and ridership will increase once its safe to return to the office.

I rely on red line for commute and after COVID restrictions relax I plan on using it every day to go to work in DC

While not ideal, would be able to make this work if the trains run on time.

I would like trains sooner during rush hour.

Commuting will be difficult with such infrequent trains

Outside of the pandemic and its impact on ridership, rush hour trains on the Orange Line are overcrowded, even with extra service. Running the trains only every 30 minutes would make it more likely that the trains would be overcrowded,,,,, making commute times uncertain.

The issue is when people begin to go into the office which should be by then, every 12-15 minutes per train would make each train insanely crowded on the Orange line at a minimum west of DC. Even every 5 minutes before could be bad by the time it reached Arlington.

One arrival every 30min would be incredibly stressful to plan around... if I miss a train by a minute and need to wait 30min till the next one, my entire day would be thrown off

Not frequent enough, either on weekends or weekdays

Rush hour would be a try nightmare and could, frankly be dangerous. Pre-Covid having trains every 3-5 minutes was not enough. Most of my peers are expecting to return to the office full-time by 2022. This is an absurd proposal.

It would work for me but I do have concerns about people who rely more on metro.

Proposal to operate Metrorail service every 30 minutes

In 2022, depending on the state of the world, most people are probably expecting to be back in the office almost full time by that point. Increasing the amount of time between trains, especially during rush hours, will make trains so crowded and will be very inconvenient

I need the Grosvenor station and all other Red Line stations -- badly!! Grosvenor station is the only station near my apartment

This would greatly increase my commute time

Need more trains during the morning and afternoon commute on weekdays. This would more than double my work commute every day. I don't want to wait more than 5 minutes for a train during the morning and afternoon rush hour. The trains would be too crowded

Ridership should be back to normal in Jan 2022. If you cut times between trains this much, people will be forced to drive instead. The old public transit death-spiral.

Ridership must be considered with All proposals. If ridership is down, then there should be fewer trains, buses.

Seems like a bad idea. There's a rhythm to the daily commute which may well resume soon. Why not be flexible and plan to adopt a more-trains-at-rush-hour plan when conditions warrant?

Need to increase during rush hour or it will be unsafe and too crowded

Hopefully COVID will be over by then and we can get back to our normal lives... this would ruin traffic and typical commutes.

If you reduce hours I will need to resort to other forms of transportation which will only make the budget crisis worse.

This level of service infrequency would have a negative reinforcing effect and further decrease commuter reliance on Metro.

Spacing trains by 30 minutes makes the Metro more of a commuter rail system for suburban visitors than a public transportation system for city residents.

Would this be temporary? Hope ridership will increase again as people get vaccinated and the world opens.

In 2022, I expect to be returning to metro and this is not a functional plan for commuting to work.

My station is a single service station and I commute almost an hour and a half to work every day. Every 30 minutes would increase my commute to a level to which I could not work in the city

That's not even close to frequent enough. The trains are going to be packed!!! Doesn't seem wise in the age of a pandemic.

30 minutes to wait during a work week can be devastating for people that work hourly and miss the train for any reason at all.

15 minute headways on all lines on weekdays; 20 minutes weekends; 30 minutes after 9pm

I use metro to commute 2 stops to and from work. I could drive to my office faster than the proposed wait time between trains and may seriously consider changing my method of transportation if this proposal is implemented.

No. This is awful. People will depend on the Metro. Don't make drastic cuts like this when you don't know what the future will be like. This will be a death spiral for Metro if you proceed.

Too few Red Line stops! Red line is PACKED on weekdays and trains come every 4-6 minutes. There won't even be enough room on the platforms for Red Line riders if trains only come every 15. terrible plan.

Rush hour will be a disaster with people cramming into train cars (post pandemic???) People will resort to driving.

Too rare for rush hour traffic, even with more people likely WFH after the pandemic.

There are plenty of people who live beyond Strathmore and Silver Spring.

4 trains per hour on the Red Line at all times is too infrequent

Not ideal, can't imagine trains only every 15-30 mins during rush hour. Already was crazy crowded and difficult to get onto trains during rush hour when they were arriving every ~5 minutes or less. I think okay to have more spread out non-rush hour but not during rush hour.

Trains arriving every 30 minutes would add significant time to my daily commute, perhaps as much as one hour if I were to narrowly miss a train. This would be burdensome for me and other working parents who have to drop off and pick up children from school and get them to activities.

I will be regularly commuting and need trains to come more regularly in 2022.

Seems like a good compromise considering the situation.

My preference is to continue working from home rather than having my commute time elongated by service cuts.

It would be a hardship to pick up Metro given that I live at Grosvenor. Would have to drive or bus over to White Flint to pick up Metro.

This will work, provided trains have capacity to hold passengers that are waiting on the deck.

If federal workers return to their agencies, this plan will not work for me. If they don't, it will..

Proposal to operate Metrorail service every 30 minutes

It depends on ridership at the time. If trains are too full, and I have to wait another 30 minutes for a train during rush hour, that would be a real problem.

If I need to just ride a couple stops could walk 39 minutes and maybe make it faster than the transit. Doesn't work well for short trips

I think 20 min max wait is the most you could have without losing ridership.

If you cut frequency of trans people will simply stop taking metro

Thats a long time tow ait, and people may choose other forms of transportaiton instead of waiting 15 minutes

This would work PROVIDED the trains arrived on a predictable/reliable schedule at each station.

I depend on the frequency of the orange/silver line trains to commute to work. The public transportation was the main reason I chose to move to/work in DC.

I would bike a lot more, but this would work especially after vaccine roll out. I will not ride metro again until I am fully vaccinated. Then I will ride!

Would prefer some increase for frequency of rush hour trains

30 minute gap times between train arrivals would severely diminish the utility of Metrorail for commutes to and from work.

Rush hour times need increased trains arrivals. Its already overcrowded during non-Covid times.

My office is likely to reopen in person and I won't be able to get to work on time or ride an extremely crowded train to do so

Too few trains will leading to crowding and possible delays. Crowding on platforms at rush hour and possibly even during non-peak times. This will drive riders away.

Expect to go back to work in person by Jan 2022 along with many others and trains will be overcrowded

If trains arrive only every 30 minutes, obviously very important for them to the be the biggest trains they can be (on weekdays) or there will be dangerous overcrowding.

That is simply not enough trains. Metro ridership WILL be much higher at that point. People will be squeezed together and unable to move. It will be so unpleasant and inconvenient it will drive some people to stop taking Metro and make the short-term impacts of the pandemic a permanent problem.

It should be different time of arrival during rush and non rush hours

We should be reopening by January 2022, which means more commuters. Metro would be unridable if there is only one train every 30 minutes, and WMATA would also collect less fare revenue.

The increased time it would take for routine rush hour commutes will make it time and cost effective to switch to private (car) travel instead. This will increase cost, pollution, and traffic and represents a significant step backwards for the region.

Terrible decision. If you want to expand ridership it must be convenient. Waiting for 30 minutes between trains will reduce convenience.

Too infrequent at rush hour

If the train schedule was adhered to this would work. But we all know that cannot always be the case. If there was a train that was a couple minutes early it would be an unacceptable wait to the next one.

The intervals are too long

It feels like more trains should come more frequently during rush hour

I use the East Falls Church station to commute to work near Gallery Place. I can walk to the station. Otherwise I would have to drive to West Falls Church.

30 minutes service is insufficient! we need more trains, not fewer

It would be helpful to have more frequent trains during peak commuter times to help with overcrowding as well as help anticipation of more employees returning to offices with increased vaccine distribution,

This is too infrequent. Imagine missing a train by 30 seconds and then being 30 minutes late for work. More frequent trains are imperative!

I am retired so I can accommodate these changes

This is terrible idea. More trains should run more frequently during peak hours.

Sounds fine.

decreasing service during the times of greatest demand makes no sense. I suppose you could do what weve seen with all the local highways, charge more during times of greatest demand. But not sure how well that would work, since you already do charge a bit more during rush hours. Im saying charge even more.

Need more often

Id need to know the specific timetable to determine if this schedule supports my commuting needs.

Proposal to operate Metrorail service every 30 minutes

This level of infrequent trains would be incredibly difficult for me as well as the vast majority of DC residents who take public transportation. While I realize that due to COVID-19 ridership is significantly down, there are a number of people (myself included) who plan to regularly take the metro as soon as the majority of DC residents are vaccinated and herd immunity sets in.

30 minute wait is too long

How about including an exception for end of line stations since those are often very high trafficked? Such as Shady grove where ppl drive on 270 from the north to utilize.

I live near both VA Square and Clarendon and would be extremely inconvenienced if both stations were closed.

Metro needs to be on time and every 15m.

Obviously this isn't ideal, but if it allows Metro to maintain service at all stations, riders can use the app to know and plan for the next train on a reduced schedule. That's less worse than no Metro service at all at stations we rely on.

This reduction in service would be acceptable to me, but increasing the amount of time between train arrivals will make me less likely to ride Metrorail.

This interval would be completely unacceptable. Picture yourself arriving at a platform just as a train is leaving and then having to wait a full half hour until another train arrives. There are things outside of passenger control like unexpected traffic or delays from busses that could stall getting to the station. This will make A LOT of people late to work. It will also significantly pack the trains since so many more people will arrive at platforms in between train departures. There is no way this 30-minute interval should ever be implemented. My impression - true or not - is you are negotiating in bad faith with no expectation of 30-minute intervals and hope to appear to have offered a concession by dropping it from 30 minutes to 20 or something along those lines.

The extended time between trains almost guarantees over-crowding given the still high number of delays throughout the system.

30 minute wait is prohibitively long. This will really impact how many people will take metro and thats a negative spiral. We need policies that encourage rather than discourage metro ridership to reduce traffic, pollution, ...

I believe 30 minutes is a long time to wait during rush hour. Can it be 15 minutes? 20 minutes? That amount of time seems more manageable than 30 minutes

NP

Trains should run more frequently during weekday rush hour times.

I expect ridership will go up significantly after covid is under control. Need rush hour trains.

Need more frequent trains on red line

If schedule is posted, plans can be made to work within the parameters. For large sporting events (when they return), additional trains would be needed

every 15 minutes is better than every 30

Many riders will be returning to the Metro by next year so every 30 mins would not be adequate during rush hours.

If trains are only coming every 30 minutes, they will definitely be overcrowded (they already were with previous frequency) and less trains will make that worse. Also it would be impossible to rely on the train to get to work if you were likely to miss one and have to wait 30 minutes for the next one.

15 minutes between trains are too much. Maybe 10 minutes could work

Increasing intervals between trains is inconvenient but seems like the least painful way to reduce expenses.

21d buses are the only ones in my area and thr vandorn metro is the only metro stop

Rush hour needs higher frequency on red line.

More frequent trains at stations served by only one line

A 10-12 minute wait was bad enough and why people began to uber in off service hours and weekends. This will only make it worse. No one wants to wait 30 minutes for a train. In some cases you could probably walk somewhere faster than waiting 30 minutes and getting on metro.

Things are going to be very different in 2022. And you need to have a plan if trains are suddenly packed again.

There really need to be more trains during rush hour.

I think its difficult to predict how the metro will be one year from now when the pandemic situation is changing every day. Will they increase service if more people use the train more frequently?

30 minutes is a long time to wait if missed a train

Thirty minutes between trains seems too long.

if this cut back will negate the need for closure of the station then this works. really need the metro.

Proposal to operate Metrorail service every 30 minutes

30 minutes is way too long. If your goal is to get everyone into cars, this will work. Give me a break. You've got nerve presenting this crap to us

Please do not limit service in Maryland stations past silver spring. This would greatly affect my commute.

The no change in rush hour and non rush hour would be a blow to commuters.

It would increase my daily commute 15-30 minutes per day.

Metro would not be a viable option for commuting

As ridership rebounds, this will make rush hour very unpleasant on all lines, but particularly Orange/Silver.

I can more easily adjust to a delay in train schedules than having to go to different locations that do not have parking. If I have to do that I would rather just pay for parking and drive to work and avoid the metro experience completely.

I need the Green Line to get to work. The prospect of being a half hour late to work if Im one minute late to the station is unacceptable.

This would result in overcrowding

I will choose other types of transportation if I have to wait 30 mins for a train during the week.

I will begin commuting to work again in 2022 and will need more frequent trains

My commute requires a transfer and 30 min headways would add a lot of time to my commute

This is fine

I can not imagine having to wait up to 30 min for a metro ride during the work week. I don't have that kind of time and imagine that stations would fill up and you would have to crowd onto a car if you are able to get on at all. God forbid you don't make it on that is 1 hr + you are stuck waiting, praying you get onto the next. This would be a nightmare!

30 minute delays between trains leaving Vienna into DC would be a significant burden for work commutes. Losing weekend metro service hours would make coming into the city for sporting events or concerts much more difficult

This makes commuting harder for essential employees like myself

Trains too infrequent during rush hour times

There are multiple high traffic stations where every train car is pretty full during rush hour, reducing the number of trains further reduces room on these trains.

Im retired so have more flexibility regarding schedules

Service wouldnt be frequent enough under this plan

Half hour increments are too far apart to provide practical service to people. Especially since trains are too inconsistent on times and if your transfer doesnt line up, someone would need to sit for an unnecessary amount of layover

Students and those who work within the city rely on timely trains to get to and from our residence to our work/school. It is also tremendously helpful to have frequent trains to make events in the city, when we have only a short turn-around time between our prior task/event and the next.

The benefit of the metro system is its frequency. Longer span makes it less convenient and more congested, It would push people to drive (not what we want in the area)

This would work because people can plan for every 30 minutes.

Assuming that my work is in-person again by 2022, I would not be able to rely on Metrorail for commuting if trains only arrived every 30min.

30 minute headway does not make any sense for an inner city subway!

Public transportation is already slim as it is, and the buses in the suburbs are very slow. Would not want to have long wait times for trains, especially at outdoor stations during inclement weather.

My two sons are visually impaired and rely on metro for reliable and timely transportation.

this would be MORE workable if the trains were on a predictable schedule.

Making the service less convenient will result in further decrease in ridership, followed by more cuts. If you want to run the Metro system into the ground and abandon it altogether by 2030, go ahead

I only take the metro during rush hours and they are already packed during that time. Decreasing the frequency would not only be inconvenient but it would make crowding even worse during those times. Additionally they are usually so packed during those times that several trains go by before one arrives with room to board. If I cannot fit in the first train it is not feasible to wait 30 minutes and hope that I can board the next one.

I use the metro mainly to commute from east falls church to union station for work, so more frequent trains during rush hours is necessary

This works for me, assuming East Falls Church continues to have orange and silver line trains.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| Not frequent enough for rush hour |
| The green and yellow are very busy. By cutting service down to every 30 minutes, you may see an even sharper decline in riders on these lines but metro wont be a feasible way to get to work. |
| Every 30 mins is inadequate |
| People can use Metro Trip Planner and get info so they can adjust their schedules. Publicize the ease of using it. |
| Decreasing frequency on the Red Line will be a serious problem moving forward as it is anticipated we will be back to work by January 2022. This decreased frequency will cause overcrowding on already crowded lines and delays in getting to work. |
| I am anticipating going back to work once the pandemic is over and this schedule would not allow me to use metro as transportation. |
| I received texts from Metro daily and there is always some issue, escalators broken, flooded stations, trains broken down and police investigations. Metro is not safe no matter what you change |
| During rush hour travel trains often arrive at the station filled to capacity, having to wait thirty minutes for the next train would put relying on metro for travel out of consideration for myself. |
| Hopefully by 2022 I am back in the office and would need to be serviced by regular rush hour trains coming at least every 3-5 minutes at most every 10 |
| Having trains less frequently will cause trains and platforms to be more crowded, which given this public health crisis is not advisable. |
| The trains were already full during rush hour that decreasing the number of trains will make the metro unusable |
| Not having different weekend hours would not affect me, but only running trains every 30 minutes and not having rush hour service would not work for me |
| Every 30 minutes is unacceptable for commuters. |
| Trains would not be frequent enough during rush hour. |
| 12-15 minutes between trains is a long time to wait |
| Commuting during the morning would be impractical and even unbearable with fewer and less frequent trains. More people would drive to work, for sure! |
| Vaccines are being distributed as we speak. If Metro hopes to recover it must maintain service. Things were working well (at least on the Red line which I rode daily). Riders will expect this level of service to be restored. If it is not, riders won't come back. |
| 30 minutes between trains would be incredibly difficult for commuting especially as I expect a return to work by fall of 2021. I use metro as my primary method of transportation to work. |
| I dont understand the question. Does this mean blue arrives, 15 minutes later the orange arrives, then 15 minutes later the silver arrives? So 45 minutes between same colored trains? |
| Although I do not take Metro to work daily now due to COVID-19, I am confident I will be taking Metro to work daily by 2022. I rely on frequent, peak hour service. We cannot have overcrowded trains due to reduced service once more people return to their workplaces and offices. Reducing train frequency will cause a death spiral for Metro. |
| If we are back to normal this lag in this timeframe is problematic for riders |
| Too infrequent |
| This awful plan only prioritizes office workers. Retail, hospitality, and entertainment workers (industries that have been most affected by the pandemic) need a regular, well run and efficient public transit system. This would only further cripple our local community and businesses. |
| Red Line rider: major concern with trains running less frequently is that there would be more riders per car and no ability to social distance. Vaccines rolling out but we dont know how effective they will be. |
| It seems like if there were pre-pandemic numbers of people waiting to get on the trains at rush hour downtown and people were accumulating for 12-15 minutes (instead of 3-4), there would be way more people than could ever fit on one train. This would mean you could be waiting in a station for 30 minutes, extending commutes significantly. |
| Why can't we cut service this year while we are waiting vaccines and then resume normal operations next year when people are back in the office? |
| This should go hand-in-hand with a FLAT FARE by Miles Traveled as opposed to time rush hour based. |
| Not enough service for the Ballston Rosslyn Corridor. |
| This is a dealbreaker for commuting, especially w a line transfer. |
| Closing stations is unacceptable |

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| If trains were on a specific schedule (i.e. 9am, 9:15am, 9:30am, etc) then longer times between trains would be acceptable. Also, if trains are going to be on the same schedule all day, then there should be one fare (get rid of rush-hour fares). |
| I think the biggest issue with this is the frequency of trains arriving. Metro is only worth it if you have trains coming in short, regular intervals. |
| Silly, pandemic will be largely over and ridership will be up. Rush hour frequencies need to be every 5-10 min max. |
| Ill be working in the Washington, DC office five days a week. Metro would be the best alternative for the commute. |
| It will delay my arrival to the office |
| This would make the trains very crowded and impact the ability to get to work on time and safely. |
| As long as the schedule runs according to the expected schedule (on time), people can adjust accordingly. |
| In case the context helps, I typically use Metro on weekends and off-peak hours, so the consistent arrival times work well for me. If I were a 9-5 commuter I would want faster peak service. |
| Wait times that long would discourage a lot of people (including me) from taking Metro |
| Understandably my commute time will depend on my arrival to the metro station but with one train change my commute could add (worst case scenario) 45 mins. If this happened often enough, I would resort to driving to the Pentagon. |
| Trains only every 30 mins to Springfield would be a disaster given how many people commute through there. Especially since these would be people who may otherwise drive, adding to traffic and pollution. |
| Trains should be EXACTLY on time. If a few minutes early some would miss train and have to wait 30 minutes |
| Traffic varies across day. Trains should correspond to changes in numbers of riders |
| More need during the weekday for commuting purposes. Weekday schedule should be more frequent than weekend; and rush hour service should be greater |
| This would extend my travel time significantly. This would greatly hurt this area and the people that rely on Metro.I thought that we were trying to Get Back to Good but this will hurt metro. These changes are making people use metro less and less. This is causing it to spiral in a downward trend. |
| The rail should be a 24 hour transportation service. |
| Need more rush hour service |
| If we are returning to near pre-pandemic commuting by then, the trains will be too packed and if you miss one you'd be forced to wait an extra 30 minutes for the next one. This will cause severe disruption for commuters. |
| This would work for me if Im not required to commute in to DC every day, but would not work if a commute is required. At present, my employer might bring employees back to the office in the fall of this year. |
| Seems like rush hour would need faster turnaround time unless trains were longer. |
| Trains already arrive full during rush hour in inner suburbs. We would never be able to board trains that were already filled at further-out stations. |
| How does this save money |
| trains should run more frequently on weekdays than on weekends and more frequently during AM and PM rush hour |
| My hours are flexible and I rely on metro because I wk in dc and there is no free parking |
| Not sufficient coverage. |
| I after I get the vaccine I will start riding the metro again. I haven't ridden it since the start of the pandemic but I will need to once in person work resumes. |
| That's too long a wait when you've already got a long commute if you're catching metro outside of DC. |
| I would start driving to work |
| I would prefer greater frequency during rush hour. |
| I'm there need to be more trains during peak/rush hour |
| Every 30 minutes for some lines would make travel by metro less attractive. |
| More frequent service on red line during rush hour would be preferred |
| This would be a disaster for my work commute. |
| Trains are already overcrowded on the red line and the other lines proposed. Having trains come less frequently would only make it worse and unsafe. Considering the pandemic, Id rather not ride an overcrowded metro anytime soon. So if you do this, Ill stop riding metro all together. |

Proposal to operate Metrorail service every 30 minutes

Once we reopen, this will result in crazy crowding.

Having regular trains (even if they're not at rush hour times) would work for me going to work every day. I would have to time it more carefully, which is inconvenient, but better than closing stations

Better to have 15 minutes between trains for rush hour

15- 30 minutes is too long of a wait during rush hour! Trains could be too packed to get on, and if you can't board the train, waiting another 15+ minutes is too long.

If you do this I will drive instead of taking the metro.

This sounds like a recipe for massive overcrowding of trains, especially since many people will be vaccinated (and presumably commuting again) by 2022. Also, it would make switching lines a nightmare.

Given that most likely everyone will be vaccinated by January 2022, we need to bring back rush hour schedules.

30 minutes between trains is excessive for a daily commute. There's no margin for error

I would no longer take metro to work unless the weather was too hazardous to bike or walk

The service reductions are draconian, especially in light of the rush hour fares still being charged to riders.

15 minutes is too long between trains during rush hour. It would cause overcrowding and ultimately discourage ridership.

Weekend service is a must for any community that expects to have tourists!

Public transportation will eventually regain wide-scale use as the pandemic ends - limiting ridership to timetables like those described above will limit rush hour income.

This will only scare riders off. Every 30 mins is terrible.

I think there should be more times available during rush hour.

Metro is for commuters, cut back weekends or evenings, keep us on time to work.

Need more frequent trains during rush-hour

15 minute headway's are unacceptable particularly when still charging peak fares.

It's already overcrowded during rush hour where I live (when not a pandemic). This would likely mean having to wait for several full trains to pass before I would even be able to board one. I would be able to walk to DC from Virginia in less time than it would take to take to metro. Not a commute I want to pay for.

Trains should arrive more frequently

You might as well close down the entire metro with these plans because it will make it impossible to use the Metro to get to work for just about everybody. Other stations nearby? You consider a walk a mile for someone physically unable to make the trip nearby?

Every 30 minutes does not work

You're planning to close the station that I use when I go to work. Teleworking now due to COVID, but that's not going to last forever.

As long as Grosvenor is kept open for trains from Grosvenor South as well, of course.

I rely heavily on the metro to get me to a bus transfer. The long wait times could cause me to miss my bus transfer and therefore add an additional 30-45 minutes to my commute.

30 minutes is too long to wait for a train. If it adds that much time on either end, I will not use metro.

This seems unworkable during rush hour. The trains need to run every 3-5 minutes during rush hour, otherwise they'll be overloaded.

Any change would have to be reexamined as commuting increases as we begin to transition post-COVID. 30 minutes between trains makes it less likely that I would be comfortable with the timeline getting to work in a timely fashion.

I prefer this option over closing stations

I don't understand why trains could not be more frequent during rush hour - say every 10 min then every 20 min during the day or something similar.

Trains need to run more frequently once offices are open again.

There would not be enough trains, and they would be even more crowded than they have been until now.

Need increased service during rush hours.

Not ideal but better than closed stations

I've been asked to return to work, and if many others are as well, I can't even begin to imagine how crowded the station would be with a 15 minute wait interval. As well, since I've been riding metro consistently since January 3rd, ridership has picked-up at least at my station (Courthouse) since late February between 7:45 and 8 AM.

I almost never take Metro. I usually bicycle to work.

Proposal to operate Metrorail service every 30 minutes

This is an untenable proposal for rush hour service. Pre-pandemic, I relied on metro for commuting to and from work. I would not be able to use it as a reliable commuting option post-pandemic with this schedule.

Max differential between trains should be 20 min or I would not consider Metro to be a viable option

Keep public transit open!

As long as trains actually are on time, people can plan. Just if people return back to work, you are going to have a world of headache and not enough trains for people.

15 min is OK. 30 min to too long between trains on lines.

With WFH becoming a lot more acceptable, I would be traveling at non-rush hour times and 30 minutes between trains (especially when Metro historically has not been very consistent with posted schedules) is a dealbreaker to use the metro

Completely unreliable for people commuting to/from work.

Although this may be a reasonable baseline proposal, if there the ridership volume is not sufficiently served with this proposal, it should be immediately adjusted to accommodate heavier volumes on the relevant lines.

30 minutes is too long to wait

I work remotely, so there is no need for me to travel to/from the District on a tight schedule.

Cutting service to 30 minutes on every line is unattractive for riders and would force them to seek alternate means of travel.

The metro is not regional rail where you have to plan your departure times. A working metro system should have trains running every 5-10 minutes. Riders should NOT have to plan for 30 min wait times at stations.

Time between trains is too long. And rush hours need more frequent trains

I would switch to driving by car.

Not frequent enough

I have found that if I can predict when the train is going to arrive, the wait time is less of an issue.

The pandemic is not going to last forever, 30 mins between trains is insane. In riding in the past, even 15 mins wait is too long. You need temp fixes till the pandemic is over.

Keep the trains the same as before. Get more federal aid.

This will work until adults go back to work. We live in Clarendon and work in Rosslyn/VA and it would be extremely packed at busy times.

30minutes is too long of time between trains for those who have to still commute to an office. 20mins would be preferable if 15mins is not possible.

This would significantly increase commute time to and from work and would make me consider finding alternative ways to commute

More frequent trains would make commuting more reliable and feasible. 15 minutes on the redline is too spread apart.

Hoping for the best, more traffic can be expected on the rails at this time, and it will not accommodate the need and overload trains during rush hours.

This would severely impact the green line which we rely on to get to work.

A large share of Metro ridership is commuting. This plan does not provide adequate service for traditional peak commuting periods.

My company is going to a more permanent telework with several employees coming in two or three days a week in 2022. On days which I will need to get to the office I will need to ride metro as I do not have a vehicle - orange line near Dunn Loring.

I think ridership will have returned to more-normal levels by then so this plan will lead to very crowded trains!

Assuming that, by January 2022, ridership could return to more normal limits, this would likely prevent Metro from being a usable option for me because the trains would be significantly over-crowded.

If trains run on a consistent schedule, this could work if ridership is permanently reduced. If ridership levels reach their pre-pandemic levels, this would not work.

Devastating for workers who rely on Metro.

I will be retired in Jan, so it will work for me, I guess

I will stop riding metro all together

20 minute minimum

It depends on my agencies telework policy at that time. If it remains full-time telework, then i dont use Metro, but if I go back to work, then every 30 minutes is pretty sparse during the rush hour.

Would this schedule be revisited if and when COVID ends?

Once the pandemic has ended, this would make it nigh impossible for people to use Metro to commute to work or get anywhere else.

Proposal to operate Metrorail service every 30 minutes

Trains running every 30 minutes would create extremely crowded conditions.

It seems like this would lead to significant crowding on trains and platforms, particularly at transfer stations. This has long been an issue during rush hour and assuming there is at least some increase in ridership between now and January 2022, which seems likely with COVID vaccines and offices reopening, this would make it worse.

Only having trains every thirty minutes would make travel times way too long.

During rush hour, service on the Orange line should continue on a higher frequency, not every 30 minutes.

KEEP THE ELEVATED WALKWAY OVER AND CROSSING RT7 LEESBURG PIKE OPEN if metro service ceases at this WMATA station. The elevated walkway is essential to safe pedestrian travel during the day and night for crossing RT7 Leesburg Pike for those who live and or work here.

Extend the run of the trains themselves to later in the evening. There are a good number of people who will need nighttime transportation, and Ubers get expensive very quickly. This will help generate revenue.

I live at Grosvenor and rely on the Redline for work. The more frequent, the better for me!

I am fine with it due to lower ridership but I hope it does not become permanent the system needs a lot of updates. It also needs extra tracks so track work and trains can be more efficient.

30 minutes is not frequent enough

Trains need to run more frequently during the day, especially during rush hour. If they run infrequently, trains will be too crowded.

30 minute intervals between trains is too long. Anything longer than 15 minutes makes Metrorail close to useless.

We are running a business that depends on a more frequent service for employees and customers.

Trains need to run more often during rush hour.

Are you actually kidding? How would trains every 30 minutes help anyone? You wouldn't be able to get on. Did Uber write this survey?

In normal times trains were already overcrowded and hard to get on with extra trains during rush hour.

30 minutes is a long time to wait for a train

15 minutes between Red Line trains is too long. It will make the Metro unreliable for my commute.

Not enough rush hour service for office commute

Trains arriving every 15 or 30 minutes could mean that connection trips between metro lines at metro stops (e.g. at Chinatown) could be long and inconvenient.

Pre pandemic it was 8 minutes and the metro was already packed, increasing it will help what exactly?

30 minutes is a very long time between trains, especially when the arrival and departure times of the trains are not reliable and follow a strict schedule. If there was a strict schedule, like in Japan, then this may work. Otherwise no.

If I use White Flint instead of Grosvenor, it is 30 minute wait? How does that work?

The infrequency of trains would make metro so inconvenient as to be not even worth it.

This would just make it difficult to make it to get anywhere. Also trains would be super crowded and finding a space to exist would be hard.

That's unacceptable, trains should be every few minutes

Need more frequent trains at peak times

As long as train arrivals are published, people should be able to plan 30 mins of waiting though could impact a lot of people's work schedules once we get back to normal

You need more trains at rush hour

This sounds like a nightmare. I think it would be totally impracticable resulting in crowded trains and really long commute times for people needing to change lines.

more frequent trains would be better

I live in Rockville. Service would be too infrequent.

Trains were frequently overcrowded pre-pandemic. As ridership potential ridership increases, the frequencies described above would disincentivize people from returning to public transport.

this service is too limited for my needs as i commute to DC daily and heavily depend on metro.

It depends on trains missing a run.

This would make riding Metro significantly less feasible for commuting to work. I would not be able to meet family obligations in the morning and commute to work on time should this schedule be implemented.

Proposal to operate Metrorail service every 30 minutes

By January 2022 commuting life should be close to normal with perhaps slightly lower volume due to individuals working from home. But that will simply make metro vaguely more comfortable instead of being crammed in.

I may lose my job if this change is implemented

Why not reduce weekend travel and maintain more frequent weekday trains.

More frequent service during rush hour is essential.

An advantage metro has over Marc or driving for work is that the frequency of the service .Ames it convenient to get to the station and know that another train will be along in a few minutes. Losing this advantage may mean I will take a differentiator get to work.

It sounds terrible in so many ways, but depending on how transfers line up, I could make it work.

The train should run every 12-15 minutes during rush hour.

I would need greater frequency on the red line during the week and during rush hours

This proposal would make Metro less appealing relative to ride-share options like Uber and Lyft

In 2019, travel along the red line at peak rush hour was still exceptionally full and reducing the frequency of trains that dramatically would greatly impede commuters ability to get to/from work

The pandemic should be under control by January 2022. Ridership will increase as more employees return to the office. Rush Hour trains are crowded at 5 minute intervals--increasing the intervals to 15-30 minutes will make the trains unusable.

When things get back to normal as they will eventually we will need metro to be as frequent as it was before the pandemic.

With this plan, Metro will have to keep an on time schedule unlike what is currently offered

When my employer sends me back to work I need trains to at least run every 20 mins.

Once this pandemic is over, these longer headways will lead to over crowded trains.

OK

The time would work, but I fear that there would be overcrowding during rush hour. That would mean that if you missed the train, you'd likely be up to 30 minutes later than expected.

Trains would have to all be 8 car trains. Service every 30 minutes is not enough capacity.

Metro must maintain rush hour frequency, or the trains will become dangerously packed.

That's a lot of time between trains, esp. for morning commute.

I understand that this year has been a hit but reducing service, especially to further out regions, only hurts lower income groups and is ridiculous that youd consider it

Trains every 30 minutes would increase commute times exponentially, given the need to change lines.

30 minutes is much too long to wait between trains, especially during the week

That is a long wait between trains if you miss one.

Increased headway is a good compromise to keep more stations open

Train frequency is too low between Grosvenor and Silver Spring

That does not seem sufficient for rush hour times during the week.

Proposed frequency will result in delays and over crowded trains

The below is beyond inconvenient. So many people commute into DC daily from those stops.Trains would arrive every 30 minutes throughout the day, with the following exceptions: On the Red Line, trains would arrive every 15 minutes between Grosvenor-Strathmore and Silver Spring stations.

As a rider on the red line, before covid, there were times the red line trains were so crowded it was hard to get on trains at rush hour. sometimes you would have to wait until the next train, but with 15 minutes between trains, it is possible, that you wont be able to fit on the next train either.

If people are able to resume work and commuting, this will not work for D.C.

This would not be nearly frequent enough as I will be back to commuting next fall, potentially even summer.

Im not sure why these cuts are proposed for January 2022; this period of time is when people will mostly like first start going back to work and feel comfortable to ride again. If anything, service should be cut further or completely through the end of 2021 to reduce community spread and take advantage of this time to make repairs. That way, more people would ride in 2022 because the services would be improved.

Proposal to operate Metrorail service every 30 minutes

The long wait times between trains will be difficult but manageable if the Metro website continues to list train timetables.

The low frequency of train arrivals would be problematic and encourage members of my household to opt for vehicle transport over the metro for daily commuting.

I hopeTo start riding metro again. I miss it

too long of wait times

If my commute does start back up again, this would be really inconvenient and make me less likely to use the metro to go to work.

Keep all stations open

I am from the Washington DC area but currently live near Seoul, South Korea. The subway trains here are always full because they come frequently and are inexpensive. The comparison between service here and in the DC area is already significant, and DC does not fare well. Further cuts will lead to less ridership and even further budget problems. This proposal is not a solution. It is a death spiral.

30 min waits would drastically increase travel time in addition to causing more crowds. I'd have to find another way to get to/from work.

Proposed service times are too infrequent. Especially when it is likely that people start getting the vaccine and are able to start going back to the office.

I have to switch trains twice, this would drastically slow down my daily commute

30 minute wait times at Tysons would drastically affect my commute times.

Trains might not have enough capacity - especially with COVID restrictions, to be effective to my needs.

All of this depends on whether we are back to normal by January 2022. I am assuming we are, so less Metro service than pre-pandemic normal, especially during rush hour is problematic.

I assume I will be commuting to my office in DC from Vienna 2-3 days per week then and would therefore prefer more frequent service during rush hour.

Red Line every 30 minutes from Shady Grove. If any delays, my commute would go from 1 hour to 1 hour 30 minutes. Not reliable enough

Cutting service makes no sense when the economy needs to recover. Cutting executive wages, Making better contract negotiations or putting cosmetic projects on hold is a far better plan.

If we are looking for cost savings, it seems that reducing the frequency of trains during low ridership times is the best plan.

30 minutes is way too long a delay in between trains. If someone misses a train they're then stuck in the station for 30 minutes while trying to see what other options are viable? No thank you.

Once the world reopens this is gonna seriously clog up the trains. Fewer trains means that more people are going to have to squeeze on one train

I depend on frequent silver line trains.

Trains should be more frequent.

Decreasing frequency of trains will make me consider other options for commuting.

My travel needs are more common during the week, with frequency also being more important during that time

By January 2022 things will have reopened. This will not provide enough capacity on the red line.

I specifically moved near a metro station (Wheaton) to NOT have to deal with waits longer than 30 minutes between trains like I had to with MARC. I would not ride Metro if this change occurs.

However, it appears to place a burden on my commuting requiring earlier departure and later return to home - potentially adding 60 minutes to commuting time.

Since Covid 19 has stalled ridership numbers and likely reduced them for the foreseeable future even with post-Covid changes in workplace dynamics - better to plan now and set reasonable expectations

Red line needs every 15 min from Glenmont to shady grove

Too long a wait time!!

30 minutes is a long time to wait for my train. 15 is much more doable. If I have to ride out to the end of the Orange line, I can't just jump on Blue or Silver. I have to take Orange. Getting home 30 minutes later would add so much unnecessary time to my commute.

Include Forest Glen in the more frequent service.

Taking away weekend hours would harm the service industry which needs it the most

Too infrequent for rush hour. Long commute and trains would be packed!!

Proposal to operate Metrorail service every 30 minutes

I commute to work from East Falls Church to Farragut West. The greater interval between trains would likely mean that trains would be extremely full by the time they get to East Falls Church, and there might not be space for riders starting at East Falls Church to board.

This only works for me since I am on the orange/silver line and can get the train in Rosslyn if I must (then orange/silver/and blue works). If I was on a line with service only every 30 minutes, I would not chose metro.

It would be impossible to get to work in a predictable timeframe under this plan. Rush hour trains would be impossible to board at stations close to the center of the system.

Before the pandemic started, some trains were already very crowded during rush hour at the current frequency. Reducing the frequency of trains would exacerbate the problem. Also, if trains are going to come that infrequently, they need to be very reliable and punctual to still be of use to those commuting to work.

More trains more often

The frequency during rush hours on weekdays should be doubled.

Train crowding during rush hour will be a problem

As vaccination continues I expect my weekday use of Metro to increase, but not weekend.

I would prefer more frequent trains during weekday rush hour, as I anticipate to commute into the office by January 2022.

Times and schedules should be fixed and posted for each station so riders can pre-plan arrival to station and wait times, i.e. - 2:30p Red Line Train, 3:00p Orange Line Train, etc. Schedule should be strictly enforced.

Ride from Arlington to DC every day - need at least 15 minute increments

Commuting needs to be faster than 15 minutes between trains to get where I need to go

We will be back at the office and every 30 minutes will be disastrous for commuters.

Ok with having no difference between times / days of the weeks but 30 minutes is a crazy long wait.

Rush hour adjustments are critical to commuters. There needs to be more trains running during this time.

Every 30 minutes would be terrible as I use metro for commuting to work, would massively increase transit time and I'd highly consider driving instead.

For those of us who depend on metro to get to work or appointments every 30 minutes does not seem like enough frequency

This would work for me if the metro was open longer, if that can't happen then this can't work.

I go into the office every day so would prefer trains more often

The government needs to allocate more funds to run the Metro full time, and perhaps reduce rider fees - this is a good investment in reducing cars on the roads, reducing congestion and stress of commuting and cutting down on pollution, green house gases and global warming.

Why would this be implemented in January 2022? Arent we expected to have things somewhat normal by then?

Consider increased frequency solely during morning and evening rush hours on weekdays. 30 minutes between trains during rush hour will lead to jam packed trains and very long commutes, which will further decrease ridership and revenue.

I cant afford to be 60+ minutes late to work, which could happen if I miss my train and my transfer.

I would not take metro when the pandemic is over if it took this long between trains. I would drive every single day even though I live across the street from a metro station.

Although this would work for me, it will put a serious burden on lower wage earners who have limited options for commuting.

Considering everyone will (hopefully) be going back to work by early 2022, this makes no sense! We will need more metro service, not less. I rely on the rush hour service to get to/from work in a reasonable time.

Every 30 minutes is like a third world country. it should be every 15-20 especially during the weekdays. That is if of course that there is some resumption to normal working conditions post covid.

more trains with greater service frequency please

30 min wait during rush hours is unacceptable.

Im concerned how this would affect my transfer at Lenfant plaza. If i have to wait 30 min because the yellow and green line up wrong, this wont work for me.

I rely on metro all day long to get from meeting to meeting. The wait times will really make getting places on time very difficult.

I dont understand the changing of train arrival times. Why not continue with shorter interval arrival times during peak demand (i.e. rush hour) and longer interval arrival times at lower ridership times?

I am an everyday Metro commuter and this would add significant time to my daily commute. It is not tenable.

Proposal to operate Metrorail service every 30 minutes

As long as Grosvenor Strathmore station remains open, yes it would work.

Concern about how crowded trains are at rush hour.

MetroRail on every line but Red would be almost unusable. I would abandon Metro.

This would probably work only when no connections were needed between lines. Waiting up to 30 mins to change trains means going cross town Arlington to Union Station basically not possible in timely way.

Assuming the trains were coming every 7-8 minutes before this would double the amount of people in the trains, which would make the ride less comfortable and potentially less safe. However, if ridership continues to decline this may not be an issue.

The 30 minute interval would be disasterous if there is a break down and it would nearly double trips if I can get on the next train

I work downtown. Would be very hard to get to and from work on time. The trains will be crushingly crowded. This is not tenable in a covid environment.

Rockville and twinbrook are also fairly busy stops at times and many of us in those areas travel closer to DC for work. Also a large population of NIH trainees live around the Rockville/twinbrook stops that do not have cars and rely entirely on the metro to get too and from work,

If I commuted downtown, this would not work for me

I travel and rush hour and not being able to get on a train would make it almost impossible to get to my job on time on a regular basis

its important to have special times for rush hour and weekday travel, when time is of the essence.

This would not be ideal, but doable, and better than closing stations

This would add over an hour commuting time when coupled with station closures.

The trains came every few minutes before covid and it was packed. Once people get vaccines and get back to work, it will be unreasonably crowded and a lot of commuters won't be able to get on a train

This is too infrequent. People will be getting back to work in person in 2022. This is very short sighted.

Would hope for increased service during rush-hour, and reduced service non rush hour and weekends

2022 holds the expectations of life resuming something more normal. This would make rush hours even worse than they were pre-pandemic

If trains are running only every thirty/15 minutes there should be express trains that skip stations.

Rush hour should have more frequent trains and 30 minutes is too long a wait.

Every 30 minutes on the green line is entirely unfair to the neighborhoods east of the red line. Cuts out Petworth, Shaw, U Street, etc

Anything is better than closing Metro rail stations. Please do not close the Grosvenor Metro Station.

Regular times are a plus

Would prefer more frequent arrivals for stations with more than one line (specifically orange+silver line)

not frequent enough trains - would likely cause severe delays in my commute if i missed one train

Every 10-15 minutes works. 30 minutes is too long.

Find the money. Northern Virginia is wealthy enough.

Unacceptable for people commuting to work. Would not work for people who have to work late hours.

I work at GWU nitro has always been my method of transportation. I bought in Clarendon so I could be safe whatever time I was coming home.

This is a reasonable plan, given all the issues presented. I allows for predictability and, hopefully, simplicity in your operations.

Not enough during rush hour

I live in Wheaton. We need more train service here.

I think that there should be more trains arriving during busier hours (rush hour)

This could be difficult during rush hour (if that is a thing then). Seems running trains less frequently before and after rush hour would be better, and surging during rush hour.

That is way too long of a wait for a train at rush hour.

For the one line that is closest to me the increment of both of the lines which travel would be sufficient for the days that I do use metro service; because it's mostly the weekend, I don't think that it would be too much of a negative impact to my travel plans.

It will take an extensive amount of time to get to and from work during rush hour, taking hours of time away from myself and others that can be used to do more productive activities than commuting to work. This will also put more people on the same train, thereby making it harder to social distance considering this pandemic is expected to extend into next year.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| This would severely impact my commute to work. In addition, this would increase the number of riders on the train, which could be problematic if there is still a high number of COVID-19 cases in 2022. |
| I fully expect that by Jan 2022 the federal government, for whom I work, will be back to normal with everyone vaccinated. That means rush hour will be back, and that schedule wont work at all |
| Federal return to work will dictate frequency needs. If most of the federal government has returned to in-person work, this may lead to overcrowded trains |
| As someone who relies on the metro to get to work, this would greatly impact me in rush hour. Trains have never been reliable (even pre pandemic) and this feels like a recipe for being late to work. This would also create massive overcrowding, something I will not be comfortable with for a long time after the pandemic. |
| Assuming workers are expected to be in offices, this frequency level could make it impossible to pick up and drop off my daughter at day care with enough hours in the office. |
| 30 minutes is too long for essential workers. |
| Hopefully by then we can use metro again as before and does not fit my work schedule |
| The benefit of taking metro is the frequency of the trains coming. Changing this would seriously reduce ridership. |
| Things will get back to what used to be normal. Commuters will again go into and out of DC. Trains will need to run more often to accommodate the passenger loads during the work week. Every 30 minutes will cause commuters to arrive late at work or arrive late getting home. |
| This plan makes sense as all of the stations would remain open |
| This is going to inflate peoples commutes adding congestion and disproportionately hurting people in low-income service jobs where being on time is of the essence. |
| Not frequent enough when getting to work |
| That's a long time to wait when commuting for work so this is not ideal. |
| Very dependent on red line in Grosvenor - I have waited too many night - 30 minutes for a train - also the trains are packed on redline - after pandemic - traffic will pick up |
| In pre-pandemic commuting, I often had to wait for at least one train to go by because it was full. Decreasing frequency will increase crowding and make it even more inconvenient when a train is too full to join. |
| this is public transportation and is essential for so many people who need to use the Metro transportation. How could they operate? There has to be an emergency funding. Also, Metro workers are famous for no work, but talk, I have seen that over and over in Union station for many years till March 2020 when I stopped taking Metro. |
| There should be more trains running during rush hour. |
| Early morning volume on the orange and silver lines line would be a problem |
| Im not sure why the same service would be available on weekdays and weekends and would ignore rush hour timing. With a large portion of the workforce returning to the office, rush hour times and weekdays should presumably require increased frequency and services to match the pattern of ridership. |
| I think rush hour would be really crowded. But this would be fine at other hours |
| Since I have to change from one line to another the likelihood that my commute would be extended to an unacceptable level is a concern. Since I can drive in in 22 minutes, if it takes me 50 or so to use Metro, I might go back to driving. |
| Once ridership increases post-pandemic, this level of frequency wont be sufficient to meet my familys computing needs. |
| Ok to have 30 minute intervals on weekends but not weekdays. 15 minute increments too long for red line trains. |
| It is important to have trains arriving at shorter intervals during rush hour |
| By January 2022, a large majority of Americans should be vaccinated causing an increase in people not only back in the office, but also causing an influx of tourists. Rush hour is already hell. This will make it worse. |
| Every 15 minutes wont fulfill the demand. |
| The orange/silver lines trains are typically packed (during non-COVID times) - once offices begin opening up more, there will be overcrowded trains again. Even 12-15 min between trains would be too much. |
| If we ever get back to normal trains would be way too crowded |
| that means I will be spending the same amount of time driving to my location |
| I anticipate relying on the Orange/Silver lines for commuting into the city each weekday. In theory, I could time my arrival at the metro to align with the metro schedule, and would be fine with the times proposed here. However, Im deeply concerned about overcrowding and the potential inability to get on an individual metro car that would essentially already be filled before arriving in Arlington. |

Proposal to operate Metrorail service every 30 minutes

How are we supposed to all get to work on time like this? I wouldn't bother taking Metro on a weekend, the service is too unreliable. That can't extend to the weekdays or the service will end.

Need more regular availability or will choose other options for transit

I work in health care and depend on the metro to get to work on week days and weekends. Its much more planning to get to work on time during the weekends sparse schedule

Regardless of low ridership this is the main reason people does not want to ride Metro. Changes are being made but im still paying the fare.

If I return to working in the office by then, I would need to take metro from Columbia Heights to Silver Spring with a transfer in Fort Totten. With headways of over 12 minutes, missing a train could cause me to be seriously late to work. I would start taking one of the S buses on 16th Street or commuting by bicycle through Rock Creek Park instead of taking Metrorail.

I live near the Glenmont metro, so having a train only every 30 minutes would be very difficult.

30 minutes between trains is far too many especially at the end of the line where a lot of people commute from

I would use the service from Grosvenor-Strathmore to go to DC

A train every 30 minutes will be unmanageable during rush hour once the majority of commuters return to the office in 2022. Additionally, Metrorail will lose even more business if commuters during non-rush hour times have to wait 30 minutes for a train and will likely turn to other forms of transit.

Need more frequent arrivals during rush hour

This idea is atrocious. Find the money, beg for it from Congress, beg for it from the States, raise fares. Dont you dare cut like this.

Will everyone be able to fit in a train during rush hour. Sometimes during rush hour there is no room in the cars. If I couldnt always get in a car and have to wait another 30 minutes I would no longer take metro.

Sometimes (in Washington on the Silver/Blue/Orange line) the trains are back to back. Even during the worst of the pandemic, the trains would be back to back. It needs to be staggered. Also, everyone knows this is woefully inadequate. Metro needs more service than pre-pandemic in a post-vaccine world. There needs to be late night service until 2am, etc. I think metro just needs to work with the Biden administration while it can to make the federal government a funding partner. Public transportation isn't a luxury nor is it a toy like some political parties make it out to be. And metro will NOT be successful by cutting service. I've never known a company to stabilize while shrinking considerably

That isnt very frequent and could lead to lots of crowding as people hopefully return to work.

The Red Line gets very crowded at rush hours (which are quite long) and I often have to wait for a couple of trains before there is room to board. As we all go back to our offices, I think you need more service on the Red Line during rush hours.

No flexibility. Ridiculous.

Plan should stay the same. There are alot of people who live in this area solely to use metro. Some of us are healthcare workers who need to be at work at a certain time no matter the weather conditions.

Increase during rush hour in AM and PM

My schedule is flexible so the long gaps in trains would work for me, but 30 min between trains in cold weather at outdoor stations sounds unacceptable

Why would you do this? Obviously more people use the trains during weekday rush hour, so why would you have the same number of trains then as during off-peak hours? Are you intentionally trying to overcrowd the trains and stations and make people stop using Metro?

Seems reasonable

I'll be back at the office in DC. You were telling me I would have to wait half an hour for a train at Pentagon City? Even 15 minutes is too long of a wait during rush hour, so no this doesn't work for me.

A consistent schedule all week would allow me to plan my own schedule more easily.

I believe trains are needed more frequently

The red line is crowded enough as it is during rush hour, minimizing the number of trains will just drive people to use other forms of transportation, lowering use of the metro further.

Completely insufficient for daily commuters. I would stop riding Metro.

You should not cut the arrival times across the board. 30 minute wait time during rush hour is unacceptable for commuters.

This would be horrible for my commute once we get back to the office.

While this would be fine for my expectations, I think in general this would negatively impact a lot of people who rely on metro rail to get to work

Proposal to operate Metrorail service every 30 minutes

I ride the Green Line from Navy Yard to L'Enfant. There is simply NO WAY one train every 30 minutes would be to accommodate the number of passengers who ride the Green Line, even assuming far less ridership than pre-pandemic levels. People would be waiting for trains for hours.

No because trains would be crowded during rush hour and would mean having to wait for several trains before being able to get in one.

If I missed one train or it was too full for me to feel comfortable on since covid will still be around, I couldn't wait for the next train. I'd be too late for work.

It is very inconvenient to wait that amount of time

Thats not reliable. Thats not mass transit. Thats not a functioning city budget

Assuming we are back to the office post-covid, this would not support rush hour.

Doesnt account for high ridership

This change is worrisome. Major metro systems in the world (NY, Paris, London, etc.) provide high frequency service, more frequent even than what the DC metro currently provides. This is what drives widespread use. A service with trains every 30 minutes presents major challenges to commuters.

Just shut the whole thing down. Metro rail has become a joke, except that its not funny. Service levels like this dont serve anyones needs.

Unless there would be a specific known schedule that would be followed (e.g. the train will show up at this station at 8:00, 8:30, 9:00, etc), I would not use the metro because a 30 minute delay is too long to wait if I can't expect the trains to consistently arrive at the same time each day.

I live near Grosvenor metro station, where a lot of buildings have tenants who work in DC, Bethesda/NIH and Gaithersburgh and take the red line in both directions at rush hour, when more trains/frequency would be needed.

I am a federal government worker and will be taking orange line metro starting at East Falls Church every day as soon as pandemic is over

I need more trains during rush hour, especially with public health guidelines, more trains + busses makes it less crowded and safer for passengers.

This would turn metrorail into a commuter rail. It would completely diminish the utility of the metro as a city subway system. I would end up taking the extra half hour I'd be waiting at the station and just walking to work instead.

As long as we can see expected times online

This would be a very long travel journey as I take the trains regularly as I work all over this city.

Need more during rush hours. Ridiculous to not run more frequent trains.

I commute downtown from Rockville every work day. This change would significantly extend my commute time. I have intellectual disabilities and cannot drive, so Metro is my only way to get to work.

Waiting 30 minutes between trains is too long. Will drive riders away.

This would severely impact my ability to get to work and function in my normal everyday life. It is also unnecessary due to ridership rates increasing as more people get vaccinated over spring summer or 2021

This would result with being unable to social distance on metro, resulting with needing to drive to work.

wouldnt more trains and more frequency provide more opportunity for social distancing . longer wait times and fewer trains often results in cramming

I dont think most people could wait an additional 30 minutes for a train if they are unable to board an overly crowded train car, which I assume will be the case during rush hour with trains running every 30 minutes.

30 minutes between trains sounds like a recipe for trouble. I can see that having trains be separated by such a large duration will help increase ridership but with Covid probably still being a lingering factor in 2022, people may still choose to take other forms of transportation.

15/30 min isnt often enough

Red line should continue to Wheaton with 15 minutes headways, Silver Spring is too soon to turn back.

This makes travel into DC far more difficult. It means once covid is Over trains will be far more packed. Additionally, it'll affect the economy because 1: it'll decrease the desire for people to travel to different parts of the DMV for restaurants, shopping etc and 2: it'll decrease home value near closed metro stations.

That translates to more crowded trains which Im uncomfortable with in covid times. This also wastes my time and encourages me to continue to work from home or find an alternative to metro.

Hoping/assuming that most or all teleworkers are back in office by then, how is that possibly a feasible plan? We would all be queuing up and crowding in the stations during the 30 min. waits. There at least needs to be some form of weekday rush hour service.

I think this is a great plan - this way all the stations can still stay open

Proposal to operate Metrorail service every 30 minutes

I would probably just ride my bike, as trains would be too crowded for my commute.

Too long between trains north of Grosvenor

Metro should be planning to increase service not decrease. This will bring ridership back when vaccines are widely available this summer. Decreasing service will put Metro into a downward spiral.

Hopefully by 2022 the Federal Government will be back to work in their respective buildings and there will be more people riding Metro daily requiring trains to run every 8-10 minutes.

there need to be more trains at rush hour

This sounds ideal, frankly -- If it means we can keep all the stops open, Im more than happy to wait a little longer for my train to arrive (or plan my trip accordingly).

Not terrible, but a maximum 30 minute wait time is pretty bad. God forbid switching trains.

Every half hour would be hard and could increase my commute by an hour each day if I miss a train by a minute

Once people are working back in offices trains could become too crowded and waiting 30 minutes during work days would be difficult

Considering the amount of people that are expected to return to Metro rail once COVID becomes less of a risk as the vaccines become more prevalent, these suggested changes would leave riders stranded and train cars would not be large enough to accommodate the amount of riders each 30 minutes.

While I would prefer more frequent service, I understand that with reduced usage, there will be reduced service. My hope is that when travel is safe again, Metro will increase service to build ridership back to prior levels.

Every 30 minutes is a very long period of time during rush hours!

In the past when I have worked on the weekend the significant change in the frequency of metro trains has added large chunks of time to my commute. Applying that across every day would significantly decrease my ability to be one time to work.

Workable of necessary, but this Durant take into account possible increases in ridership by the end of 2021 as vaccines become more available.

Strong will not be useful if trains come every 30 minutes at many stations: it will further reduce ridership in the long run

I am against not having more trains during rush hour. Once we are past COVID people will go back to riding the train to work. I think having the same service on. The weekend and during the week is ok.

Less trains make sense due to less travelers. But dont close stations.

Glenmont station and Rockville station most commonly used

I worry that once people return to working in a office, service during rush hour will be too crowded and unreliable.

Thats insane. We didnt pay for a commuter rail system. Be an urban rail system, run urban frequencies, more hours of the day and every day of the week.

Would not be able to travel across the city in a reasonable amount of time.

I only take metro as a backup since I drive to work. So less trains is better than closing stations. And we dont know how often folks will be traveling into work when things eventually return to normal.

During rush hours should be more often

30 minute intervals is terrible. When people start commuting to work again the stations are going to be packed after a half-hour of waiting for a train. And the trains will be packed too.

Too long of a wait during rush hour times.

One of the key components of Metros usability is the frequency of service, and 30 minute intervals is simply not workable. This would surely reduce ridership significantly due to the reduction in predictability and efficiency of commuting.

This could cause full trains to skip stops closer to downtown or not have enough room when they do arrive.

Not even during rush hour). With proposed bus cuts in my neighborhood that's making it virtually impossible for efficient commuting

This seems like a very effective way to ensure that transfers add 20-30 minutes to the daily commute. This is an insufficient frequency of trains for transfer stations if I am to keep using Metro to commute.

If this is what is required for Grosvenor-Strathmore to stay open, then I support it. Otherwise, I prefer more frequent trains.

Having trains arriving every 30 minutes would not work well at all for my commute to and from work.

This is a death spiral. Service would be so bad that people would find alternatives to using Metro.

Proposal to operate Metrorail service every 30 minutes

This is not conducive for people who work and have to use the metro. Metro is already delayed and this would only further delay people

30 minutes is just 2 long between trains unless its after 10pm and especially when most of the country will be vaccinated by early fall 2021.

Major stops on orange and silver lines from VA to downtown DC need to remain open.

30 minutes is too far apart

I count on trains arriving more quickly during rush hour. If my commute is 12 minutes and I wait for the train 15 minutes my commute has doubled.

This would significantly increase commute times due to daycare drop off etc.

My family and I depend heavily on the metro to get to work and to get our children to school. These delayed times would be hard as we would need to build in extra time for commuting. We also would no longer be able to get our kids to school if the Grosvenor station closes.

30 minutes is too long to wait for a train.

Rush hour trains will be a nightmare if they are only coming every thirty minutes, when things pick back up the trains will be crowded which is annoying on its own but even with people being vaccinated its going to take some time for me to be willing to get on a crowded train

I am worried about trains being even more crowded during rush hour

Missing a train would result in getting to work late for many people, including myself, not to mention the fallout if/when trains are disabled.

however you are considering closing Grosvenor/Strathmore. This had been a popular station before COVID and many people moved into the nearby area to be close to that station. It will cause a hardship if this station is closed.

I moved to be near a metro during COVID in preparation from commuting back eastward which seems likely to be in 2022.

I would rather see reliable hourly service at my station rather than suffer it's closure.

During commuting times, every 15 minutes will lead to very full trains and longer travel hours when people (me included) have to change lines. I honestly don't understand why the service will be reduced exactly when the post-COVID world is opening up again - instead, reduce it right now until summer since most people work from home anyway.

Trains are already packed during normal rush hour, reducing train frequency will only exacerbate the situation and force more riders to use alternatives means of transportation such as driving.

Even trains arriving every 15 minutes results in particularly low throughput.

This is not at all frequent enough on weekdays.

8 to 12 minutes train service

This proposal would significantly reduce the mobility and access for residents and workers around the region, and all but ensure that WMATA enters a death spiral that will only make it difficult for the areas economy to recover as the pandemic ends. Difficult decisions may need to be made, but cutting service to those levels should be out of the question.

30 minutes is just too long. Please consider a shorter span of intervals.

One of the things that make a good and effective public transport system is the frequency of trains during heavy travel periods (rush hour, etc). This also discriminates against people who get on the train further north than Grosvenor. I recommend trains coming every 5 min. (if not more frequent) at every station in order to make taking public transport more attractive.

This is severely limiting service and puts people without alternative transport options at a disadvantage, especially Black and brown low income communities.

I commute from White Flint and 30 min is not an acceptable wait time. The reason I took metro before the pandemic was it was reliable and fast during rush hour. Waiting on a cold platform for >5 min is not an acceptable way for me to get to work. I would chose to drive.

Increasing the service proposal to be every fifteen minutes would be preferable during workdays at station with one line.

This, or even lower service, would meet ridership today. However, any plans to reduce service need to be calibrated to the number of people willing to ride after vaccines go out. Lets not lose willing riders due to India-packed trains.

Rush hour service should be more frequent.

That is too infrequent, especially during rush hour. I would stop using Metro.

Before the pandemic, Red Line trains going downtown were already standing room only by the time they got to Grosvenor. People will not stand for the schedule you are proposing. Anyone who can drive to work will start doing so.

With in person work resuming, that would result in overcrowding.

The metro is absolutely essential to my way of life and you would be creating a much more of clogged station with people constantly being late to work

Proposal to operate Metrorail service every 30 minutes

I think this would be a bad idea. People are going to start going back to work and having trains come every 30 minutes would be a disaster.

This would make rush hour trains drastically more crowded and have ripple effects across all commuters who rely on Metro to get to work, especially at busy stations such as Pentagon City. Thinking about the days when I've had to wait for at least one train to come and go before one came through with enough space to board all waiting passengers, that would make it impossible to get to work in a timely fashion when trains aren't arriving every few minutes (as opposed to every 12-15 minutes).

Would prefer more frequent service, but could make this work.

Third world country level of service in the nation's capital.

More frequent rush hour service would be critical.

Access for commuters needs to be the primary strategic consideration for Metro.

This doesn't have any information about operating times, ie when the first train and last train would run. It is important for me that trains run late into the night in weekends in order to make them useful.

Trains are already packed during rush (pre-COVID-19) very often having to wait for the next train. This would be exacerbated by increasing wait time between trains.

Rush hour and non rush hour should be different.

I don't use Metro for commuting purposes so timing is not a big factor for me when heading into DC or Arlington/Alexandria.

Seems less scorched earth than the other plans

This could work so long as there is a fixed schedule that a person could then plan for, instead of waiting endlessly.

Maintain rush hour and weekday with more frequent schedule and reduce non rush hour and weekend schedule as necessary

Depends on if work will stay with teleworking full-time, change to half-time, or go full in person.

Service only every 30 minutes would lead to extremely crowded trains. If stations were overcrowded, the wait for the next train would be unacceptable.

But I do not commute via Metro

This is a terrible idea. People go to work and the trains more frequently during the day. Why is the Grovesner - Strathmore route so special that it gets more frequent routes?

This would work if it was well planned and communicate. I'd hate to show up at the end of the line, in the cold, thinking the train will leave in 5 minutes just to find out it left early and now I have to wait 30 minutes. It was regimented and didn't deviate in schedule this could work

The increased frequency of trains during rush hour should be maintained.

30 minute service is too infrequent to be a reasonable transportation choice for the airport or appointments especially if the service is delayed or disrupted

While we see a drop in ridership today, this should not drive decisions post-pandemic, when ridership is expected to rebound. There should be a distinction between rush and non-rush hour service, and any train interval during rush hour beyond 4 minutes is unacceptable.

During normal operating periods, there is usually variance in train departure and arrival time, within a couple of minutes. Missing your train during rush hour that only comes once every 30 minutes would result in being significantly later to work than missing a train that comes every 15 minutes (and still making it on time to work).

Need the interval be shorter, ideally around 5 min

Cutting service like this only serves to disadvantage those who depend on public transportation as their only means to get around. We need to find ways to expand service, not limit it.

It would work, but the frequency reduction would greatly impact my likelihood to opt to use the Metro rather than driving.

Pre-pandemic trains at rush hour were often very packed. Numerous times trains were so packed that there wasn't enough space for people to board the trains and they had to wait for the next one. Reducing the frequency of trains at rush hour would only exacerbate this problem.

This plan may work for except when there are big events like Nats games, events at Capital One arena, events on the mall, etc.

During rush hour, if trains only arrive every 30 minutes, commuters will be significantly inconvenienced and trains will be extremely crowded. This will ultimately deter people from riding the Metro because it may cause significant tardiness for school/work/etc.

This acceptable for a commuter rail, not a subway system.

Trains not frequent enough for essential workers who have to report to work daily.

It would cause me to plan more. Right now, I know I can catch a train within 5 minutes of getting to the station, more or less. With this schedule I would watch the arrival times more closely to ensure I wasn't waiting too long.

It should be at least every 15 minutes on the red line all the way out to Shady Grove, not just from Grosvenor station!

Proposal to operate Metrorail service every 30 minutes

I will likely be commuting back to work by January 2022 and having the trains come so infrequently would be a big problem. Especially since it's unlikely that the train would be exactly on time thus increasing the likelihood id miss it and then have to wait on the platform for 30 minutes.

I would stop using the metro all together if I had to wait 12 min at Rosslyn

Every 30 minutes is ridiculous and would negatively impact how I could travel across the city

hard to plan. like the frequency, is there a plan to permanently close or is this meant for the duration of pandemic. at grovesnor there are plans for major dense development. this planning and approval predicated on metro service. with a tapering of service, new dense development around that station will present major parking and traffic problems.

more frequent trains during weekday rush hour

Way too few once people are vaccinated.

sounds OK for Rosslyn Ballston corridor, but not if I need to get to other parts of DC

There will be so much crowding on trains - especially as they approach downtown that people will be packed like sardines or not able to bird at all.

The red line is key for my work AND my kids to go to school- 15 minutes intervals are LONG wait time during the commute

I take the silver line to work every day pre-pandemic, and with trains running every 30 minutes that could significantly impact my ability to get to work and the space for other passengers on the train

The trains would be jam packed even at 15-minute headways. And based on my experience Metro is unable to keep to a regular schedule anyway, so it would be even worse.

Half an hour between trains would make metro rail as bad as the bus, which is pretty bad.

by Jan the expectation is that we will have reached herd immunity and downtown DC business will be back up and running, so the increased need for metrorail will be back. Every half hour during rush hour is not going to meet the needs of working families depending on the metro to get to and from work.

Trains arriving every 30 minutes is unacceptable for a world class city such as Washington DC. My recommendation is to target the billionaires who live in the DMV to make up for a lack of funds,

Headways are too far apart

I would like to see increased service at rush hour.

So much is uncertain at this point. I like this option because service does not stop

I rely on the Metro to get to work so arrival only every 30 minutes would mean I'd be very late to work if I missed the train I needed.

Trains need to arrive more frequently than this. It will be not be easy and convenient to use the train if this is how they arrive. More trains means more ridership.

30 min. between rides is too far apart. if I missed one train I would be late by the time the next train came.

This plan allows homeowners who have invested thousands of dollars in Metro-accessible housing to continue to access the service they rely upon.

I travel for work during rush hour times and rely on the metro

I dont know how often I will be going into DC to work in January 2022. It depends on what happens with COVID and my agencys operating posture.

It is absolutely imperative that there be more frequent service during rush hours.

Its bad for people who rely on Metro to get to work. Metro is a subway, not a commuter rail--people should not have to wait half an hour for a train. I would be less likely to use Metro

If spacing trains 30 minutes between stops, please consider holding at each station for long periods.

if ridership ever comes back, you are gong to need more chnage at rush hour. otherwise workers will choose another mode of transportation

Im unsure when I will return to the office and rely on metro groverson station as my primary and sole commute option.

If you eliminate rush hour service, you will basically be killing Metro. This is ridiculous.

The Red Line is a major route with NO additional service lines (e.g., not served by multiple lines like Capitol Hill or Southwest). Limiting the time between train arrivals does not make sense given the lack of additional lines along the Red Line.

Half hour wait time would make me extremely unlikely to use Metrorail.

The trains should run at normal frequency. 30 minutes is far too long of an interval to wait. This will surely decrease ridership

Adequate but not optimum adjustment to schedules.

Would make it harder for workers in the restaurant/bar/ entertainment industry to get home On high traffic and late evening days

Not only would this make people late for work if they can arrive on the first train, but if that train is too full, they have wait another 30 minutes? This makes no sense

I purchased my current residences based on the Grosvenor Metro Proximity. This is extremely upsetting

I think once people start going back to work longer wait times would deter people from commuting using the metro if people had other transportation options

Proposal to operate Metrorail service every 30 minutes

30 minute arrivals is to long.Trains will be too crowded.

I am required to go to work throughout this pandemic. Waiting every 30 minutes for trains at the prices I pay is not tenable.

I think having the same schedule is fine but if budgets need to be cut I would rather you make the weekend slower in travel than eliminate a station all together.

If we are back to normal work days in 2022, trains running at such infrequent times would make getting to work at a normal time much more difficult and I would probably not use the Metro.

I would not use Metro and would need to use Uber or Lyft instead.

30 minutos es inaceptable

Not near metro rail. Only bus line.

Terrible during rush hour.

When there is a return to office, this will not provide sufficient capacity during rush hour. I would be very very worried about being able to make it to work on time everyday if this plan is implemented

Why not go for 4 hours between trains to save cash? Maybe one in the morning and one at night?

I ride the Marc train and I am reliant on the trains coming more frequently to the Union Station stop. Pre COVID I would have to take 2-3 trains after I arrive on the plate form because all train cars were full. This would cause a bottle neck on the upstairs platform for the passengers going downtown on the Red Line and we have set work hours and this would make us late.

30 minutes is too long to wait. Could lead to overcrowding on trains and platforms during rush hour, once most people are vaccinated and covid rates lower.

Wait between trains is too long

Ugh. The thought of *just* missing a train and having to wait 30 minutes is soul-crushing.

This is way too little service and would result in more people per car, which, even post-pandemic, doesnt feel wise.

Lots of people will be traveling to Greensboro metro station so please dont close that stop.

Must increase train frequency. Plus will help with overcrowded cars.

Rush hour was already unbearable pre-pandemic. The changes that you are proposing would cripple the system for commuters, especially those that ride during rush hour.

So many people commute to and from the city during rush hour times. When trains don't operate on their normal rush hour schedules, the trains and stations are flooded with people. This will not be safe given the 6 ft rule that people are expected to stand. Metro should continue using the normal rush hour trains. When people start going back to work, the metro will begin to get more crowded.

Rush hour tends to get crowded normally and sometimes trains have to pass by. I worry this will continue to happen if trains run that infrequently. I dont think this is a good idea.

Hard to say for Jan 2022. This does not seem often enough if many are back at work/school.

If we go back to work anything close to full time by 01/22 this would increase my commute dramatically including long periods of time waiting for a train on an outdoor platform

Use of Grosvenor Metro key to getting to job at NIH and Friendship Heights!

It will make Metro less convenient, but is better than closing stations.

Im on the Red Line, and while wed benefit from the extra train every 15 minutes, Im concerned the crowding would lead to service disruptions, as weve seen pre=pandemic.

This is fine because the stops are the same.

By 2022, I am expected to be back in the office and these times arent going to work for my schedule.

This isn't conducive to pre pandemic levels of traveling and being on time to places.

Prefer 12 minutes

Trains arriving at Grosvenor every 15 minutes would be extremely helpful.

By January we are all going to be going back to normal and that includes commuting to work.

I understand the need to reduce trains, but this could really impact commute times, with some people opting to not add the extra time.

It would make it much more difficult to travel across lines. Any delay would mean 30+ minutes of additional time waiting at the station.

Reducing the frequency of trains during rush hour would essentially kill the purpose of public transportation.

Reducing service is agreeable if it puts Metro on the path to financial solvency.

30 minute intervals are too long. I prefer 6-8 minute intervals.

If ridership volume approaches 2019 levels in 2022, every 15 minutes would not be accommodating in either a Soave or timely format and would deter people from using it.

Proposal to operate Metrorail service every 30 minutes

| |
|---|
| The proposed change will make commuting from a significant portion of the city more difficult, especially from the areas at the end of lines which already tend to be less affluent. |
| Not an acceptable lag for rush hour travel. |
| At rush hour, Im not sure this would work on Orange line corridor. If metro became unreliable, I would have to consider other options when we go back to the office later this year. |
| This is an absurd proposal. How can you expect ridership to return to normal if you cut service making it so inconvenient for people to want to use your service |
| Increasing the number of trains during rush hour is critical. Trains on the red line were already packed even with new trains coming every 3-5 minutes. This, of course, was pre-pandemic and assumes that eventually normal rush hour patterns will reemerge. |
| I would have 30 min headways at my nearest station. |
| Trains should come every 5-10 minutes |
| These schedule changes will destroy local businesses especially family owned restaurants that have been nearly decimated by the pandemic. People travel on the Metro to go to restaurants and other businesses that are outside their neighborhoods. This change doesnt serve the people. |
| A more normal rush hour will eventually return and the lack of frequency of train service will literally create platform overcrowding hazards. There is no rationale for a permanent change as described here. |
| When the trains run only every 15 min, they get extremely full at the Grosvenor-Strathmore stop. |
| Once offices are back open, there will not be enough space on trains during rush hour. Specifically the silver line out to tysons/mclean. |
| rush hour would be the biggest problem for me. Assuming that metro cars are full, 12-15 is too long to wait during rush hour |
| 15 minute headway's would lead to impossibly packed cars on the red line and make my commute impossible by train. |
| Too long of a wait between trays specially during rush hour |
| Assuming the world goes back to normal in 2022, not having rush hour service would cause a lot of crowding on platforms and trains making it hard to get to work in a timely manner |
| Needs to be more frequently for rush hour |
| There should be more trains during rush hour periods. |
| Arrival time is too far apart to be able to rely on trains to get to work in a timely manner. |
| Depends on the level of ridership. Fear that trains could be crowded if ridership levels return. |
| consider longer wait times on weekends |
| This appears to be extremely inefficient. |
| Rush hour would be a disaster |
| Trains arrived by every 30 minutes makes it very inefficient to transfer to another line.you could potentially spend an hour just waiting for trains. In DC, you could probably get where you want to go faster by walking. |
| I travel from Grosvenor to King Street for work and this would greatly increase my travel time. I might have to drive instead. |
| 30 minute intervals is TOO long of a time to wait. It affects arts, hospitality, gig, travel, and events sectors. This schedule only takes into account of 9-5 workers, and it's terrible. |
| By that time I expect that myself and many others in the area will be commuting to offices at least some of the week. This seems like a recipe for overcrowded trains and long commute times. |
| This would be a disaster for me because I rely on this metro station to take me to work. It is my only mode of transportation to downtown DC. |
| That seems like a long time between trains. |
| Work days need more frequent arrivals/departures to prevent overcrowding and provide flexibility for those commuting to/from work |
| Needs would change depending on Covid restricted activities changing. |
| WMATA should not reduce any service. |
| A 30 minute spacing does not allow for rush hour commute. |
| Too infrequent if need for transfers during commute, and If missed a train waiting for next one wouldnt be worth it, I would find alternate transportation |
| need more rush hour trains |
| I will be vaccinated and working in person again. |
| This will drive ridership down as trains would be over crowded at key commuting times and not feasible for anyone to reasonably wait 30 min if they are unable to board a crowded train. |
| People will find more reliable alternatives for commuting. |

Proposal to operate Metrorail service every 30 minutes

I believe this will make it so that metro is not a viable option for people to take to work. I think this might be okay during the pandemic while the passengers are more limited but once things go back to normal I do not see this as a feasible option.

I want to do whatever is possible to keep Grosvenor open

Train too crowded. No car.

With the pandemic winding down by that time, I think this is a wrongheaded approach and would discourage workers who will be starting to commute again.

Concern that the same number of people will be waiting or unsafely packed in, given the fewer number of trains available.

I need to take the Silver line from Clarendon to get to work. Would this mean the silver would only come every 24-30 minutes? This would make commuting much more difficult

It might make more sense to have more trains during commuting hours, even if that period of time is shortened.

Waiting for 30 mins for a train is way too long for a metropolitan area like DC. If the service needs to be cut down, something like 20 mins might be more favorable.

If the government goes back to in person work this will not be feasible

Expect that I and others will be using Metro to commute and not during the rest of the day. This makes no sense.

With my job planning on returning to the office, this may pose an issue in January of 2022, as previously during rush hour trains would arrive every 3 minutes. Based on this, it would be quicker to drive into DC versus riding metro.

15 minutes is too long for the red line.

Only being able to go to DC by rail every 30 minutes would hurt those with lower income the most and would hurt tourism. It would inevitably make rise shares cost prohibitive as well.

Post-pandemic, if that is the optimistic case by 2022, would hopefully see a return to higher ridership, but with the proposed service levels, would force people together and eliminate any chance for social distancing. Absent of the opportunity to keep the system somewhat less crowded, I would be hesitant to ride when I move to DC in September 2021.

I expect to be back at work full time in January 2022 and would expect/ pay more for trains more frequently

Every 30 minutes is not a reasonable amount of time to wait on the way to and from work and many of the lines have little overlap (like the blue and yellow lines). If I need to go to LEnfant Plaza from Pentagon City, it is unreasonable to expect me to take the blue line around the city and then switch at Gallery Place (at which point I may have to wait for another 30 minutes).

I live at white flint. If the trains arrive every 30 minutes, I would never use metro. I am fully vaccinated and would start using metro but I would not use it if I have to wait so long.

Weekdays need more service than weekend

Not enough service during rush hour. In fact, there should be more trains during these times to negate overcrowding. It is unlikely COVID will be completely gone by then

This proposal would result in increased levels of crowdedness on lines and would result in decreased desirability of using transit.

I am unsure of how often I will be commuting using Metro into DC. Prior to the pandemic I committed every morning and evening rush hour on metro. I have not used metro since March 2020. I am not sure what out long term work from home posture will be. If I am to commute at all, even once or twice a week, the proposal would be unsatisfactory.

This long of a wait between trains creates extreme crowding on trains that do arrive. As a customer who commuted using the blue line for a long time, the crowding on trains that were spaced even 20 minutes apart was intense and extremely unpleasant for my commute, cannot imagine this on other lines as well.

i would rather drive

Should be every 10 minutes, and expand span of red line to white flint due to increased development over there

During rush hours, it is essential to have frequent trains. Imagine the working parents who earn hourly wages. They may miss the train, and have to wait for 30 minutes before the next one; consequently, it may lead to loss of wages.

Run more trains

30 minutes is a long time to wait for a train served by only one line. 20 minutes would be the most one should have to wait.

The trains will be too packed to ride. You could end up waiting 45 min to get on a train.

30 minutes basically throws your entire day off in any case scenario to be either too late or too early.

Wouldn't this level of service reduction counter people's willingness to ride once things hopefully return to normal in 2022? We'd be able to ride again, but no one will want to purely due to the trains running too infrequently; it won't meet their needs.

Trains would need to run at the same time to ensure arriving to work on time.

This assumes Grosvenor is open.

Proposal to operate Metrorail service every 30 minutes

Large waits makes Metro a much less reliable source of transportation

In 2022 live will be back to normal and I will be back to using metro every day. This would change my 15 min commute to over an hour. And I only live 4 miles from my office. No thanks.

better than closing the proposed stations

Orange line trains would be far too crowded running only every 30 minutes. Likely ridership would be on an upward trajectory by next January....

Why cut service in 2022. Cut service now when ridership is low because of the pandemic

Please for rush hours have trains running every 6-8 minutes.

This station is my transportation for later evening travel. I don't drive at night

Too infrequent

If there are infrequent headways between trains, it becomes too difficult to plan my commute. Frequent trains are important for a hassle-free commute.

Such infrequent service is worthless.

Once the pandemic ends and offices open again, ridership will increase but probably not to levels pre-covid. I suggest increasing frequency of trains during rush hours.

30 minutes is too big of a gap during rush hour, especially if we need to continue any sort of social distancing into 2022 and beyond. The days of crammed cars are over - I would leave a station if the trains were too crowded.

How many hours are there in a day.? This would be a great time-waster.

This seems like it would make all the trains horribly crowded, and I would worry about being able to make it to work on time in the morning of I missed a train

need frequent trains at rush hour

Its pretty ridiculous - trains every 30 minutes at rush hour would lead to unsafe crowding, and would not meet commuters needs

30 minutes is no frequent enough and would make the metro useless

At rush hour, the cars will be packed, more than usual.

Idea is to mainly use public transit for work commute, so reduction during those times is inefficient.

thirty minutes between trains is a long time to wait. Especially if I take the bus to connect to the train.

Consider slightly shorter red line headways during rush hour with somewhat longer (20 minutes) headways in off hours. Do not charge peak fares if there is no peak service

Maintaining 30 minutes throughout the day its acceptable.

I dont ride Metro very often, but having trains arrive at longer intervals would be less convenient for me than the current intervals. I think it would also cause an unsafe degree of crowding during rush hour.

Please do not decrease service. I expect ridershare to increase by January 2022 and this would drastically increase commute times, particularly for those of us who have to transfer between lines.

This would be workday commuting impossible. I would stop riding metro entirely and pay for a parking space.

There would need to be clear notice through an app or website of real-time train arrivals and departures at all stations. This info would need to be accurate at all times.

I am retired and I use Metro to access several parts of DMV but not at regular times.

Hard to say at this point but if this is a plan that would allow for the optimum operation of the metro, we would make it work.

This will likely lengthen commute times, which seems like it would push people towards driving to work.

assuming no more WFH rush hour trains would be too crowded, platforms would be filled with people pushing to get on the next available train

As long as ridership levels are overly high, this will work fine. Problems would mainly occur if ridership levels return to normal yet service levels do not. Also, this is all assuming that trains are not stalled and failing during service.

Important to keep trains running as frequently as possible. Keeping a constant flow of trains during rush hours are particularly important for safety and efficiency.

This didnt say the opening/closing times and that could make a difference, especially for shift workers.

Please delay other lines instead! Thanks!

The trains do not run often enoughâ€”it is NOT ok to space out trains at Rosslyn as described.

I would prefer that trains arrive more frequently, but if arriving less frequently is the only way in which trains will come to the stations I need then I would choose some amount of service albeit infrequent over no service.

Proposal to operate Metrorail service every 30 minutes

Those living at the end of a line would be penalized with only one train option every 30 minutes, while those living closer in would have multiple options - every 12-15 minutes. We already have a long commute.

I and most people I know will be back to work at least several days a week, not to mention the essential workers who have had/will continue to need to go to work every day. No later service on the weekend could force people to get home in less safe or more expensive ways

Sounds good and workable

Depends on how crowded that makes trains. Waiting 15 min, ok. Waiting 45 min because first 2 trains were packed, no.

Too long between trains. People will come back. There will be overcrowding and other issues.

Part of the convenience of riding Metrorail is not having to time train arrivals/departures

Metrorail Service should seek to increase the frequencies, not to decrease already infrequent schedule.

Once covid restrictions are lifted, this is going to create incredible amounts of crowding on the Metro. This does not seem to encourage people to return to using the Metro.

Most people take the Metro for daily commute to work, so there will be more need during the rush hours and on weekdays

This would lead to unmanageable crowding during rush hours

Metro typically exceeds target intervals, so riders being told every 30 minutes until the train they need are likely waiting 40 minutes. Even if it were 20 minutes between trains, many riders would be stuck finding after a long wait that there is no physical space for their body on the train. The overloaded system would be completely unusable for people with disabilities and insufficiently reliable for shift workers.

Rush hour service

Better than the alternatives. People can plan ahead and allow more time. I remember when all we had was bus service.

As someone who often needs to take the blue line between Rosslyn and Pentagon/Crystal City this would make my wait times atrocious and likely make me very late.

30 minutes seems like a long time between train arrivals, especially on weekdays. Maybe they could be more frequent during the times people normally go to and from work.

rush hour needs to have closer arrival times as the Red line in particular is so crowded that having to wait an additional 15 minutes will not allow people to arrive on time. Users will have to plan half hour extra just to ensure they arrive on time. This is difficult for working parents and time frames of getting kids to school.

I would no longer be able to use the metro for commuting and would switch to driving.

Time between trains is too long, should vary by time of day.

Need more trains during rush hour for those commuting to work

A complete disaster. Shut it down instead.

I think 30 minutes is way too long between rides, and this would decrease ridership significantly.

That schedule is far too slow to enable me to commute downtown for work; I would have to drive.

I am on call at all times and need flexible transportation so that I can report as quickly as possible.

Quit cutting the train schedule and start eliminating all of the double and triple managers you have. Its ridiculous the amount of managers Metro has that dont do anything. I know it firsthand

This would pack trains at the outer stations and drive people away from trains and into roads.

This is really an impossible to answer because there isn't a way to know where we will be in regards to a recovery from the pandemic.

I would want to know the suggested arrival and departure times for different stops in order to make an informed decision.

This would serve the captive users (those with no other options), but would probably prevent any resurgence in discretionary use.

Trains do not come often enough for every 30 minutes. I would have an even more difficult time of getting somewhere on time with the metro only occurring every 30 minutes.

It would cause inconvenience but no worse.

This would drastically reduce my metro use, as many trips would take more than 90 minutes if a transfer is required between lines. I would bike or drive instead, and I imagine most people in the metro area wouldnt consider biking at all.

I would strongly prefer more frequent service during peak hours

Good idea, makes planning easier.

I commute on the red line using the Takoma Station and a 15 minute wait for a train is terrible for me.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| The success of this will depend greatly on the number of passengers. At rush hour I can see trains becoming too crowded to allow passengers to board on stations closer to downtown. |
| This would reduce ridership very significantly, especially during rush hour. |
| There is no way I would take Metro if I had to wait 30 minutes for a train and then have an extended wait to make a connection. |
| Every 30 minutes is fine as long as cleaning each car is priority and installing air filters- if you have not already |
| 12-15 minutes is too long of a wait time. My office is expecting to be back in the building by Jan 2022. |
| This would significantly increase travel times, putting a high burden on those who live far from their workplace |
| Waiting 15 minutes between trains would certainly discourage me from using Metrorail. |
| Every 30 minutes defeats the purpose of taking metro. I would just Uber instead. |
| Trains need to come with much smaller intervals during rush hour. They would be Jam packed otherwise. Not to mention all the missed meetings, etc. |
| This would absolutely kill the systems ability to serve rush hour needs, and would thus push thousands of DMV residents back to auto commuting. Terrible idea. |
| Only workable option... closing 22 stations, you might as well close the whole system |
| We need trains more often than 15 minutes. In rush hour. |
| A reduction in frequencies could lead to more crowded trains. Not good as we come down from the pandemic |
| Interval is too long, waiting for 30 mins for the train to arrive is way to long |
| I would prefer that trains arrive more often. |
| I anticipate returning to work from my office by 2022. I park near the Silver Spring station and ride downtown. At 15 minute intervals, I could not rely on metro to get me home from work in time to pick up my child age son from after school care. If implemented, this proposal would likely cause me to drive downtown, instead of taking metro. |
| 12 to 15 minute intervals do not work especially during rush hour. So much time is spent waiting and after a long day and having to rely solely on public transportation this is not appropriate. Now in 2021 things are beginning to open back up and now it begins major service cuts when the most people are returning to work and a sense of normalcy!? Metro must take into consideration their customers daily lives and what metro means to the. If its your only means of transportation. So far, metro has received over 1 billion dollars from the federal government. This absurd that you still even believe there is a reason to cut services drastically.Also, enforcement of COVID-19 precautions must happen. So many people without mask on your trains in closed spaces.In addition recently, Ive been kicked off a green line train 2x now over two weeks due to the train being out of service and then have to wait again for another train. This is ridiculous and unreliable.Get it together Metro. We are watching you closely! |
| Jan 22 is when commuting will be getting back to normal and this plan will completely inconvenience commuters. |
| Rush hour needs more trains. They are already so crowded during rush hour under normal circumstances. More trains will allow more riders and bring you more revenue. |
| I have major concerns with commuting home, when I have a narrow window to pick up my children in Virginia after leaving Foggy Bottom. Often, trains at Foggy Bottom/GWU are filled to the point where I cant board in the 5:00-5:30 window, and missing a train at 5:00 because it is too full will jeopardize my ability to pick up my kids. |
| It would be inconvenient, but it would be doable, given the dire funding circumstances. |
| I use the green abs yellow line to get to work so limiting those would be a HUGE disservice for me. |
| I plan to have to start commuting more regularly into the office, especially in 2022, on the orange-blue-silver line. I imagine a lot more people will also have to do the same. |
| Before the pandemic, I took the MARC to Union Station and the platform was almost overflowing some mornings when there were delays - even felt unsafe sometimes- you need trains coming every 5-10 minutes or so. |
| This proposal is unacceptable. I travel on metro and cannot telework. I also transfer lines. Metro needs to remember that some people have to go to work and many offices are planning to return in person soon. |
| This sounds like a nightmare for commuters, including myself, with irregular hours. |
| as long as rush hour is the same that change will be fine |
| Trains arriving every 30 min during the week would make efficient/timely commuting via metro almost impossible. |
| Rush hour times will be too crowded with service reduced to 30 mins |
| This plan would really hurt those who are providing essential services in DC. Ridership is down but those who ride HAVE to get there and this option dramatically makes our home lives worse by increasing commute times as you wait an extended period for a metro. I'm unable to plan when I get to leave the office, due to government client demands, and would be waiting longer periods in the commute. Please do not change the schedule to this. |

Proposal to operate Metrorail service every 30 minutes

When people want to return to using Metro to commute to work and get into and around DC, this would make it extremely difficult.

I understand the need to cut costs and it makes total sense to limit trains to every 30 minutes. As a rider I would not be pleased to lost an hour of my day waiting for a train if I got there just in time to miss one. UNLESS Metro ran on the hou4 and half-hour so I knew that if I got there at 7:25 there would be a train at 7:30.

Those times are too infrequent to make my long commute reasonable by metro (eastern market to wiehle/reston)

This will mean impossibly packed trains at rush hour. It will only drive people away. A death spiral proposal.

I dont know if I would continue riding Metro if this lasted for longer than a couple of months.

This plan is ridiculous. Commute times will increase to the point where people won't take Metro Trains. This will make rush hour trains too crowded. I would pretty much stop using Metro Trains and just drive.

Have rush hour service 0600-0800 and 1500-1700

Since some people might still work from home, having no difference between rush hour and non-rush hour probably wouldn't make any difference.

Depends on whether I got back to the office or not. If so, then its not ideal, but do-able given I live/work on the red line.

12-15 mins between each train seems really long for DC metropolitan area as so many people rely on trains. Plus, longer intervals between trains means trains could be very crowded.

I take Metro to work (not currently), but I think it would be a good idea to have trains run more during morning and evening rush hour (assuming people are back to work).

Rush hour is a must especially if people start going back into the office downtown. That would be way to many people on a single train to be safe. And would most likely cause ridership to fall to lower levels

I have only ridden metro a few times since March, with those times this winter when the roads were icy. Metro needs to curt service to face money and one day it will go back to normal ridership, or maybe not, but you have to consider the bottom line.

Trains were already packed during rush hour, with less trains running, situation may be significantly worse.

There needs to be more frequency during rush hour. In Jan 2022 I plan to be again using metro for commute.

The schedule, pre pandemic, worked perfectly and will continue to as things return back to normal.

I need to get to work in Hyattsville and to do that I use Metro. I do not have a car and have no other way to get to work. I cannot wait that long between trains for health reasons.

As long as trains are not overcrowded, I can live with this.

I answered yes but this assumes service continues from Huntington.

Pre- Covid the schedule was every 3-4 minutes.

This would be highly inconvenient during weekday rush hour.

More trains will be needed during higher traffic hours

I would support fewer trains and longer waits at stations, but I oppose any cutback in the hours stations are open. People need to get to and from jobs. That is the main purpose of Metro right now. People who just want to have fun in DC can find alternative means for getting to and from, but not so the working poor.

Maybe there could be more frequent service during typical commute times.

I would no longer take metro if trains are 30 mins apart

Having so few trains during rush hour especially at busy stations will result in dangerous overcrowding at platforms and unbearable overcrowding on trains. Not acceptable.

Proposal will not meet customer demand for frequent trains during rush hour. Anticipate overcrowded trains and stations, alienation of customer base, and double commute times.

Headways are too long to ensure reliability of service. I would rather drive a car if thats the case, especially if I have an appointment.

I work in events and often use metro to ride home from work late in the evenings - during the week and on the weekends.

Train intervals should be no more than 10 min during "rush hours" Morning hours and early evening between 4 and 7 pm are crucial for my family

By Jan "22, I expect that many offices, especially federal government, will be back in person. Having reduced service like this would not only make the commute miserable having to wait a half hour if you miss a train, but it would also cause health concerns with likely much more crowded cars.

This will cause severe delays during rush hour, train packing, platform packing, which could impact rider safety - especially coming out of a pandemic.

Unlike station closings, this proposal would be easy to implement and easy to reverse. It sounds like a good way to reduce costs while preserving the system, as ridership recovers after the pandemic.

Ridiculous idea.

Proposal to operate Metrorail service every 30 minutes

I thought notice said Metro at Grosvenor would close!! This is not closed. That would be not be a good idea to close

If the goal is to increase revenue and ridership, when pre-pandemic trains running more frequently were stuffed to the gills and I often had to wait 2-3 trains to get home, or to the office, cutting down to every 30 minutes would drive me to other transportation options. Metro would not be viable.

It is disappointing that Metro has been mis-managed over the years and that we cannot be like other cities that have reliable, constant and cheaper service. That disappointment notwithstanding, the above proposal could work until Metro gets back on its feet.

Im not a critical employee that needs to travel to work daily so while I imagine this adjusted schedule would become arduous for a good percentage of people living further from their places of work, I am not in a position to know for sure.

For the Arlington stations, there are major offices on the orange line, so it will be helpful to have 15 mins frequency not 30 min frequency in the peak times.

Trains not coming faster during rush hour will cause significant delay to getting home and getting to work. It will back up so many commuters schedules

Prefer more trains during rush hour to ensure on time arrival to work. Riders who have to transfer trains could potentially experience significantly longer commutes.

I would end up waiting for a train longer than I am on the train. That doesnt make any sense.

Will the trains actually arrive on a regular schedule? If so, then this plan could work. If things continue as they have in the past, this will not work because 12-15 minutes easily becomes 30 minutes due to completely unreliable service standards.

Please run the full length of the red line, not the turn back.

Slightly more frequently but not by much would be nice. I.e. every 11-14 minutes on blue/orange/silver and every 14 minutes on Red

I generally use the Silver Line.

Major problem with overcrowded trains due to reduced schedule if COVID is not under more control by then.

Need more frequent train access from Rockville

Reducing service hours is better than eliminating service in some locations.

That is too long of a wait for a major metropolitan city.

Needs are different week days vs weekends & the schedule should reflect that.

I would suggest that if ridership recovers that additional service would be considered

It would cause me to not be able to use metro to get to work on time, because one train every 30 mins is NOT going to cut it during ush hour.

The red line 15 min exception makes sense but by that time more employees will be using metro rail again. This will lead to more condensed people on tightly packed trains.

Trains arriving every 30 minutes during the week will take a big toll on the commuting time specially if we dont know exactly when we will arrive at the metro as it all depends on the traffic to get to a metro station. This means having to add at least 1hr every day to my commuting schedule so we could have the chance to arrive on time. During rush hour, I dont think the times should change. The rest of the day its fine if its every 30 minutes.

I think keeping operating times the same during the week and weekend is ok. I would be concerned with the same amount of trains during peak and off-peak hours. That could be an awful experience with crowded trains and long wait times, which could further discourage people from riding the metro.

I live one station past silver spring and would consider termination of my metro use if this were to be changed to reduce so drastically bc of one station distance

I live on the Orange Line and would test it out. In general, either we have a Metro system or we dont. Our entire DMV area has developed counting on Metro. If you take it away, people wont be able to get to work, dr. appts, etc., and well have a lot more cars on the road. This is a nonstarter for many of us, a significant portion of whom dont own cars. Nope. This is the death knell to the economy in the entire DC region. My husband and I are retiring and will move if theres no convenient Metro service to get around the DC area. We will not recommend this area as a place for college graduates, many of whom dont want the expense and hassle of a car.

Given the current vaccine rollout, I anticipate that business travel will return to much higher levels by January 2022. If that happens, the proposal above would create nightmare scenarios around rush hours.

Rush hour would be awful. No room at all, which makes little sense health-wise post - pandemic.

I expect demand to significantly bounce back by January 2022. I use EFC in the morning and I dont think arrival times every 12-15 minutes would be sufficient for the morning rush. I use Farragut West in the evenings and I similarly think that arrivals every 12-15 minutes would be insufficient for the evening rush.

I use the metro for work during the weekday, but I also try to use it on weekends and non-rush hour times as well because parking in DC can be difficult.

Green and yellow are my main way of transportation

I wonder if the measures proposed are temporary or permanent. I worry about the time it would take me to commute to my job. I live in Virginia and work in DC.

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| Trains need to come more frequently especially at rush hour |
| Having trains arrive every 30 minutes will almost double my daily commute time. |
| If the reduced number of trains result in very crowded trains, I may chose to not ride the train |
| For environmental reasons and to reduce traffic congestions, WMATA should make Metro train riding more user-friendly. The best way to do this is to run trains more frequently. The frequency of train arrivals should thus be *increased*, not decreased. European cities encourage their residents to use their mass transit by running more trains. Trains in London, Paris, Berlin, Munich, Rome, Brussels, and Madrid arrive every few minutes. WMATA should do the same for residents of the Washington DC area. |
| Too much time elapses between trains |
| This plan looks very good. People would still have the service hours they need, and the stations they need, but would just have to wait longer between trains. That is very doable. |
| These are unacceptably long headways for a major transit system. |
| This would be fine during non peak hrs but during rush hr/ commute times this would be an issue |
| 15 minutes is a very long time to wait when commuting. May result in people being unsafe to make a train pulling into/out of a station |
| There needs to be more frequent service during rush hour. If not, then stop charging rush hour prices. |
| I would likely drive rather than use metro if waits between trains were so long, which would make getting to work at a set time unpredictable given likely overcrowding on trains and extensive wait times if I happened to just miss the previous train. |
| Trains need to be more frequent during the week and during rush hour. |
| A train every 30 minutes is not nearly often enough. WMATA should be funded to offer at least the same frequency of service as prepandemic levels. |
| That is too much time between trains, trying to get to work and appointments. |
| Don't cancel bus and train routes. We need to help the DMV area cut back on using Lyft and UBER. Somebody from work has a bus route that's canceled every weekend. She's forced to use Lyft to work on weekends,. When nightlife is back to normal, the Metro deserves to be available for club goers. |
| Both my wife and I regularly commute on the orange line from East Falls Church to Clarendon and McPherson Sq. decreasing the number of trains during rush hour would have serious and negative consequences for us and the thousands of other metro riders who make this commute twice a day. |
| 30 minutes between trains is unacceptable. 15 minutes should be the maximum wait time. |
| The red line needs to run more frequently if offices are back to in person. |
| If we are still in a pandemic, the plan could make sense. If we return to working in offices the plan may be inadequate service |
| In pre-pandemic times, there were already not enough trains (or cars per train) during rush hour. It doesnt seem likely that demand will be lower than before once regular daily commuting returns for most folks. |
| I think more delay is ok but 30 minutes feels like too much |
| It works for me because I am not working outside my home but for those that rely on Metro to get to work it might mean the difference between on time and very late. It would also clog the roads because people would drove instead of metroing to get to work on time. Bad idea and would probably mean the end of our metro. |
| Given existing delays, I am hesitant that a schedule for trains arrivnig every 15 min would actually be much longer |
| The crowding on the Orange line (assuming a return to normal passenger traffic) would mean that multiple trains would likely come and go before I would be able to board a train. The crux of the matter is what the passenger load will be in the future. If light, then this is OK. If not, then this doesnt work. |
| Metro is not reliable enough for this large of a gap. One train malfunction, which is COMMON, would make me late by an unacceptable amount. |
| This seems to me to be the best way to reduce costs if necessary as opposed to closing stations, which are hugely important. |
| If the 15 minute interval extended to Rockville metro that would work better for me and anyone needing to attend the court house. |
| Metro has shown an inability to stick to scheduled times, this just isn't realistic. Furthermore, commuters need more frequent trains to account for unexpected changes to their schedules. |
| I am a work commuter and so weekend travel times are not important. Consistency of the schedule is more important than the frequency of the trains. |
| My office will be returning to work by then. |
| I will be commuting again to work and need metro to come more frequently. Later hours on the weekend will also be important again in 2022 |
| If this will keep the metro stations open, especially yellowline from Huntington to Mount Vernon or Greenbelt, then I am in favor of it. |

Proposal to operate Metrorail service every 30 minutes

There needs to be more trains, with shorter waiting times - closer to five minutes between trains. You all should contact the New York metro system and coordinate with them to help make this possible

Every 30 minutes is a very big time slot. In my case, I could walk in 30 minutes to another metro station instead of taking the metro. 30 minutes sounds more like a train service between different cities not between local metro stations. I would really appreciate it if the metro would run more often than every 30 minutes.

Every 30 is not teneable Too far apart

I will no longer use Metro if this happens.

It will be difficult to get to work with 30 min intervals

This makes sense as ridership needs to be reevaluated in the post-COVID era

Wait will be far too long during commuting times

I will need to have greater frequency of service.

This proposal will result in overcrowding and people at certain stations wont ever be able to board during rush hour.

After Covid ends, consider restoring service to current levels. This is a temporary situation.

Creates a significant burden for transferring

Service at Grosvenor-Strathmore has been continual declining since they stopped doing every other train originated there. White Flint and Medical Center ARE NOT reasonable walking distance to the Metro. They are THOUSANDS of residents within walking distance not to mention the new residential developments planned. You close Grosvenor-Strathmore you will kill house values. WMATA needs to do more than continually cut service. Why not close Dupont Circle or Farragut North which are walking distance? Start there will you...

During rush hour arrivals between Grosvenor and Silver Spring should be more frequent, or people like me will opt to drive.

Not sure if the timing is worded correctly but if a person needs a specific line, a 30 minute wait would make the service moot. No one can wait that long on a weekday. No one would use the metro.

Assuming even half of people go back to the office full-time this would get ugly very quickly during rush hour.

While I can plan for this for my work schedule, it is dangerous for any time I have other places to go or work overtime. Not safe to be standing there so long.

With the hope and desire to return to normal commuting (via) metro in the end of 2021/beginning of 2022, more frequent running times for trains makes a commute much easier. Also, if we have fewer trains running, we have more people per car, which I would argue is the last thing we want trying to come out of a pandemic.

Strathmore is a featured stop on the metrorail and losing it would be difficult for musicians, workers and audience members!

Makes sense - less fluctuation . standardized.

Increased frequency during rush hour preferable.

Until pandemic is done Its better to reduce the frequency of trains

Rush hour deserves higher frequency.

Viewing as visitor not commuter. Would be difficult on commuters. Am EFC metro user

We value the rush-hour service to get to and from work, and our Clarendon community businesses benefit from weekend extended-hours service. Our metro station in Clarendon is used heavily by restaurant- and bar-going riders. Thank you.

This plan still works for commuters like me, albeit with a longer wait time coming from Glenmont

I like that service will be the same all days of the week, but service every 30 minutes is way too infrequent. I enjoy being able to use the metro, knowing that I dont have to plan out the minutes of my trip to align with a train coming since trains come frequently. If I had to plan it out, I dont know if I would use metro as much. I like metro and want to use it but I cant spend 30 min waiting.

A higher frequency in rush hour and a lower frequency in non-rush hour would be preferred

Washington, DC is a major American city, and as a result demands at most five minutes between trains at all times.

Given that we should be back in the office as normal by January 2022, with more a more regular rush hour ridership (i.e. extremely crowded), this would not at all work for expected travel needs.

I would much rather pay higher fares than having fewer train options. Better still, the U.S. Congress should increase funding for Metro to maintain the volme and extend of current services, to better integrate DC-area economy across State and district lines.

Proposal to operate Metrorail service every 30 minutes

Train arrival every thirty minutes during rush hour will create an enormous burden on metrorail users, especially in light of closing multiple stations.

Close silver line stations instead of these changes.

Not sure what this means but every 30 mins during rush hour doesnt make sense.

This would be extremely harmful to people of lower socioeconomic status and lead to overcrowding.

Especially on weekends or holidays trains run so sparingly the wait between would be far too long, and with only one line running, that can be an extra half hour for me to get on the right line to get home

Trains will get dangerously packed during rush hour times if there are not more trains running.

This proposal would be accepted if the other proposal is to close the station. I've lived within Grosvenor park for nearly a decade and use the train to access the city for work. Thankfully my station, New York ave is on the red line as well. I think it's important for most residents that live within walking distance to the station to continue to have access to the station. There are many apts and condos that were built ride on top of the station to gain access to the service. Unless there is going to be bus service provided to other stations close by, I think it would be a real disappointment to see this station closed.

Anticipate being back into office for work Jan 2022

It is very inconvenient for commutes and leisure travel for only 30 minute intervals. If you happen to miss a train youre going to be very late to any appointments you had. It also makes it so you potentially have to be 30 minutes early depending on your schedule.

You cant cut service more and expect people to feel safe going back to metro when trains will be overcrowded.

More trains likely needed at rush hour once offices open.

Would not wait 30 mins. Would drive car instead

I take the Green line almost exclusively, and I would prefer trains to arrive more frequently than every 30 minutes.

I could see no difference in arrival times creating some very crowded cars during rush hour periods. The cars were already busy enough - it would be a madhouse with trains only coming every 15-20 mins. I think that maybe a developed queue system could relieve some of the stress associated with crowded trains. If there were a system in place that ensured riders were evenly distributed on trains and that each train was at a reasonable capacity, it may help.

With the 3Y gone, I would rely on taking ART 55 to Rosslyn to get to work. 12-15 minutes is too far apart during the weekday rush hour.

It works for me personally, but seems like a horrible idea. There will be more demand by January 2022 for rush hour.

Given the state of COVID, people need more room to spread out. This would pack them in like sardines. The state of immunizations is going too slow and we need the Metro space.

this would work if this cut to service didn't apply to peak hours

Rush hour outside of the pandemic is already very crowded with regular rush hour train service. If trains are only arriving every 15 minutes, there wont be enough room for people to fit on the trains.

Red line is an important line servicing the suburbs

I will rely on the Grosvenor metro to get to work each day

This is doable will drastically increase commuting times, making people very grumpy and unhappy. (More so than usual). Also this is laughable in comparison to what better developed countries have. Ten minutes should be the standard. With 30 min only at super super late times.

As a regular commuter from Arlington to DC I would be hinder by the greater spacing of trains. This would not only impact regular commuters, it would also force certain groups to use cars or other means of transportation. This is against the goals of our current plans set by both Arlington, DC and Maryland counties.

I am an infrequent rider, so it would be fine.

This plan does not allow for the tight window between federal tours of duty, and those using Metro to catch commuter rail trains, e.g. VRE and MARC. Those trains already have very limited schedules. Missing a train when the next would not arrive for 15 minutes, would mean missing a commuter train, ad potentially disrupting a commute by 45 minutes or more. This is incompatible with those who live in the suburbs and need to pick children up from daycares, which already barely accommodate a full days work in the city plus commute.

Now that I am retired, I generally use Metrorail only for social and sports events

This will only work if the train doesn't depart earlier than the schedule. Knowing when to expect the train to arrive is helpful.

I expect to be commuting into the city by January 2022. For that to be viable train seem to be running every 5 to 7 minutes. Grains only ran every 30 minutes public transportation would no longer be a viable option.

Proposal to operate Metrorail service every 30 minutes

15 minute arrival times are too far spaced out and would ruin a commute if you missed the train or it was too full to enter.

Many people still commute to work via public transportation. With reduced services during rush hours, trains would become even more crowded with potentially no social distancing.

Anticipating a return to work, trains arriving every 15 minutes on the red line would be terribly inconvenient. Likely need more frequency with less crowding.

Timing too infrequent

Please keep the Grosvenor/Strathmore station open. It is critical to our work commute. There are many walkable communities directly next to the station, more than in other locations and residents rely on this method of commuting.

15-30 minutes is not frequent enough

This is ridiculous. Weekends are already hell for trying to use metro, I can't imagine what it would be like after Nats or Caps games if the schedules were like this.

I take the red line and green line to work from Grosvenor. If I make my connection it will be fine but if I just miss it it will be a huge inconvenience to wait an additional 30 min for the next green line train.

Trains will be packed and I won't be able to ride metro to work if it's such few trains

Too few trains

This is too infrequency.

Just missing a train and having to wait a half hour for next one is way too much waiting time. Consider folks are trying to make bus connections, meet rides, arrive on time for an event or having to use a bathroom.

I am concerned about persistent crowding during rush hours.

I expect we will be close to normal in person by then, even if more distanced and with masks. So reducing frequency then is going to cause congestion

It would be horribly crowded at rush hour after the Pandemic when people start using Metro again (we will!!)

Grosvenor-Strathmore is one of the stations slated for closure if additional funding does not arrive, so how would this work?

This is a disincentive to use the yellow line to commute to work

More trains are needed during rush hour. I would cut back on any other time of day as much as needed before cutting back rush hour.

Waits are much too long and worse if you transfer

This would take Metro off the table as a commuting option for me most days. I would drive and pay for parking. Given that's a monthly fee, I would likely stop riding altogether.

At rush hour more trains are needed to deal with crowding and to get people to work on time.

That's ridiculous for people who need to get to work

To commute to work I can only use the Blue line and 30min between trains would greatly hinder commute times.

Cutting back service is going to ruin the metro. If you want people to use it, it needs to be easy to use.

This plan would be very difficult, if not impossible to manage for those of us who commute using Metro. Managing a train schedule with such wide gaps would be difficult enough, but I suspect - as the pandemic eases and more people return to work - crowding would become a major issue, making it impossible to safely commute via Metro in a reasonable time frame.

That will put tremendous burden on the trains. Right now the red line is already full when it reaches Grosvenor-Strathmore every morning at times need to wait to the next train. I am really not clear how reducing the trains will help the issue

What's the cost difference to run trains faster during rush hour and longer during off hours?

Less trains equals more people per train. Even with vaccinations distancing will still be important.

I take the red line for work and need more trains to maintain social distancing.

Having trains arrive at such lengthy intervals would make it hard to rely on this for commuting to/from work each day. It would be fine on weekends and holidays

I cannot imagine this would be a good idea. Trains were packed during rush hours even when they were operating at full capacity.

People cannot get to work on 30min trains

I am not a daily metro user.

Metro cars are already full during rush hour (pre covid and most likely will be post covid), if less trains arrive there will not be enough room to carry all persons.

30 minutes would be a very long time to wait and I am using the stations that only have one line.

I live 20 miles from my destination. I already have a 1-1/2 hour commute one way with a transfer. This change could add 30 to 45 minutes more to my commute, and I'd be riding with tourists in peak months since there's no peak hours anymore.

Proposal to operate Metrorail service every 30 minutes

It would be inconvenient, and it would make my commute longer (I would need to leave earlier if the trains only come every half hour), but I could work around it

Dont know how METRO thinks ridership will return by threatening to cut service. Ridership was down before the pandemic. Cutting service will ensure I use my car forever

Too infrequent peak service

By January 2022, I fully expect to be commuting into the office every single day using the Metrorail service and this proposed plan would significantly lengthen my commute time. This is not a good plan.

Not enough trains. Will take too long to get to work

This would make commuting awful if we're working in offices again.

I would suggest increasing frequency during rush hour or during high volume events. crowded platforms are very dangerous to personal safety from crime violence and health emergencies.

Blue Line trains were already running less frequently and were thus more crowded. Assuming a rebound in ridership, this will make travel on that line virtually impossible.

This makes it very hard for people like myself who live in the Virginia suburbs and depend on Metrorail to travel to work. Especially since the two places I work (Pentagon and Downtown) have limited to no access by car or bus from me.

If mask mandates are enforced so people on the more crowded cars actually wear their masks consistently and properly, this would work. However, while most other riders do wear masks, it is still fairly common to see people without masks or wearing them improperly. With current service levels and number of people on the train, these people are fairly avoidable, but with less service and therefore more crowded trains this would be harder to avoid and more important (as a rider comes in contact with more people and the risk increases).

Im expecting things will be back to normal by January 2022 This would impact greatly. Often at rush hour I cant get in the first train because there are too many people. I have to wait for the next train to come and that is usually just a few minutes later.

Trains need to be no more than 10 mins apart

Trains arriving only every 30 mins would lead to more crowded trains. That isn't what we want as we recover from COVID.

Rush hour traffic needs to same the same as is now. Metro DC is not a back water. Employees need to get to work. Change the schedule as proposed and be prepared for increased auto traffic into metro DC and increased pollution.

Rush hour service is critical. 12-15 minutes between trains is unacceptable. This is the only major world city I have lived in in which I have to wait more than five minutes during rush hour.

Trains would be completely packed because there would be so few of them. During rush hour trains were already packed pre-pandemic. Even if there are fewer riders because more people continue remote working even after it is safe to return, this proposal would lead to super packed trains. Social distancing wouldn't ever exist again.

Reducing train frequency is inconvenient, but could be planned around. This is a better option than closing stations.

Morning and evening time a better frequency of trains will help.

This would increase my travel time to work, and would likely keep me from using metro for my commute.

It's going to be crowded by the time the train gets to silver spring. Wheaton is my station and waiting 30 mins is tough

Every 30 minutes, even during rush hour will cause HUGE congestion on station platforms and in the metro trains. It is likely that most people will be back to their offices by 2022, and I cant see that this proposal will work for commuters.

Keep Clarendon, Virginia Square, and 38B line open.

No less service than every 15 minutes, and commitment by metro to monitor use / ridership and increase frequency as needed to keep crowds low.

I only ride weekends, so this is an improvement.

It is imperative that post pandemic rush hour trains arrive more frequently. Otherwise, fewer people will rely it on it for commuting. In addition, pre pandemic, rush hour trains were already packed.

Having to wait 30 min between trains to commute to work would mean often being late for work if the train is missed by mere minutes.

30 minutes is such a large gap that Id only be able to take Metro when timing doesnt matter. For work, Id have to find other means.

Concerned about waiting 15 minutes for a train during afternoon rush hour only to have it arrive and not be able to get on.

This would eliminate rush hour trains which would be very detrimental.

Proposal to operate Metrorail service every 30 minutes

I would probably be able to have access to more frequently arriving trains but my concern would be how packed the trains would be due to less frequent service. Even if a train arrives in a decent amount of time, I might have to wait for the second or third train to be able to board, so the wait times would actually be even longer.

This plan is bad and unrealistic. I will likely be commuting from my home in Capitol Hill to my office downtown and it would be very difficult for me to use Metro with Orange/Blue/Silver with service that is this infrequent. Rush service should be more often. Pre-pandemic, well over 90% of my Metro usage was commuting during regular commuting hours. Post-pandemic, I will do the same. Service should be more frequent during those times and days of the week.

30 minutes between trains is too long. What about rush hours?

Although I haven't been able to take the metro to my office for a while now, I feel like a 15min wait per train could cause some large crowds. It was already crowded enough with trains coming every 5-7 or so

Agree with everything but sat/Sunday proposal.

This is not frequent enough as I plan to commute to work by Metrorail in January 2022.

I live behind the Grosvenor station I moved purposefully because of the public transportation being easily accessible to my house. I'm disabled and this would cause all sorts of problem for me when I rely on this station for my needs

Infrequent train service would be problematic and would probably make me switch to driving to work. In preCovid times I didn't use MetroRail on the week-end, using driving or UBER due to infrequent trains. During Rush Hour, this would be also impossible due to overcrowded trains.

This would work if metro would provide a schedule and stick to it so you could know precisely what time to arrive at the station and not have to wait too long.

Commute in early Am and add 30-60 minutes of time to commute not including delays does not work.

This makes sense. However, I worry about over crowding in rail cars and stations at a time when people should still be cautious about social distancing

I assume I'll be back in the office by then and this will make my commute horrendous. If I miss the train, a 30 min wait is unacceptable. Even a 15 min wait could be the difference between getting to work early/on time and being late.

Trains already run late on a daily basis when there isn't a pandemic. Long wait times will cause people to miss their connection, either with the bus or VRE.

I need the bus to run every 10 min or so weekdays so I can get to work on time given school and work schedules.

During busy commute hours, the stations would be far too packed!

More ridership will be needed in Jan 2022. Consider rush hour amounts. People will be going back to work and all stations needed

Metrorail has a strong role to play in getting tens of thousands of people to work - and to return to working in the cities it serves. A proposal whereby trains run every 30 minutes without rush hour distinction may have a crippling effect by encouraging employers in downtown areas to no longer have employees return to work, thereby reducing building occupancy, and over time, property values.

For transferring from one line to another it seems like this will take A LOT longer. Even with proper planning, Metro is constantly having delays and issues.

I am on the Orange line and a 12-15 minute arrival may be fine. I say yes, but would prefer not to shift the schedule, particularly if we have reached a sufficient level of vaccination that we are returning to work. My office is considering a return to work by mid-September and I plan to resume taking metro.

Every 15 minutes works if the trains are sufficiently long. People will not want to wait 30 minutes (i.e., for the next train) if a train is too full to board.

This would still help during rush hour

Reduction in service would make travel untenable for. It's ridiculous.

My concern is that by decreasing the frequency during peak/rush hour, it will become more difficult to maintain social distancing.

The amount of over crowding that this would cause would be a nightmare. This is not a service that is worthy of commuters time and money.

Too infrequent for rush hour use.

Reduced service would make commuting via metro less viable.

I expect to be commuting downtown on an almost daily basis. 15 minute intervals will leave the trains hopelessly overcrowded.

When work schedules return to normal post Covid, ridership will increase leaving commuters waiting for long periods with overcrowding.

It seems fine if arrival times are going to be the same in rush hour and non-rush hour

This doesn't work for my commute on the Silver Line and would result in more crowded trains during rush hour.

I am east falls. Because trains come every 12-15 this would work. If trains came every 30, no it would not work.

There does not seem to be a point of running a metro service if it only comes every 30 minutes.

Proposal to operate Metrorail service every 30 minutes

This would be a nightmare. First, it would be less convenient -- I would have to plan my morning and evening commute around catching the train, instead of just showing up at the station at any time. That was always a big advantage of Metro over regional rail. But my biggest concern is that the trains would be packed by the time the train got stops at one or two stations. Anyone who doesn't board at the end of the line would have to wait for multiple trains to go by to be able to board.

I use Ballston. I don't know if that counts as a one line station or two lines...but waits of 15 mins or more will mean a delayed commute and, given the already large number of people at Ballston and the proposed cuts to other neighboring stations, trains will be PACKED. I usually have the option to work from home so I might just continue to do that.

Since Virginia Square has Orange & Silver, assume frequency would be every 12-15 minutes. That would be fine.

What happens if the train arrives full (which would be more likely due to the reduced service?) I couldn't wait another 30 minutes for a train to get to work.

30 minutes is too long of a wait time.

I travel from White Flint to Dupont Circle. I expect that sometime this fall I will be returning to work in the city. The schedule proposed by Metro is unacceptable and would force me to drive. That would increase commuter traffic and substantially raise my travel costs and time.

It was nearly impossible to get on an orange line train at Roslyn pre-pandemic with the more frequent trains. If they were less frequent it would likely be impossible.

I'm not sure if it will work given ridership and capacity limits if trains only run every 30 minutes. Pre-pandemic I used Ballston (Orange and Silver) and during rush hour, trains were still crowded. Fewer trains could lead to even fewer space.

30 minutes is much too long a wait. I'd Uber instead of taking Metro.

I already find the trains too infrequent. The metro is very crowded with current service times during rush hour -- sometimes standing room only. Decreasing the frequency will make it so that there are too many people to fit on the trains and many will have to wait extra half hours for the next train and delay their schedules further. Plus, they may turn to other means of transportation, only causing Metro to lose more revenue.

It is difficult to determine at this point if we will be able to return to work since the virus behavior is unpredictable. However, if herd immunity is achieved and we are not facing the same strict rules in January 2022 I will be going back to work M-F every week. Not having trains running as frequently or potentially losing my station will present significant commute issues for myself and others in my community.

Stop privileging the Red Line. Or just rename the Metro "Transit for Rich Folk."

Train service at this level would be unacceptably slow and overcrowded during rush hour commutes

This proposal would allow me to commute to work in DC daily, and be able to travel on both orange and silver line with family on the weekend.

If trains were not too full to board. If the long lead times meant a train was too full to board then no it would not work.

I live on the Orange/Silver line so am assuming 12-15 min interval.

A lot depends on ridership level.

For those of us who have to take the bus to the metro, and can't determine exactly when we arrive, this is a waste of time, having to wait up to 30 minutes for one train.

Do not remove Grosvenor Strathmore

This would severely impact my ability to commute to work if trains are arriving less frequently. The frequency with which trains arrive during rush hour allows for more people to get on trains and prevent overcrowding that is surely a health risk.

I think having more frequent service during the weekday rush /commute times makes more sense than this plan.

I am concerned that this disproportionately advantages Maryland's wealthy suburbs in the Silver Spring area.

This is a dramatic reduction in service compared to what the Metro has provided previously. While it is clear that the pandemic has produced a huge loss of revenue, it seems that if service is cut to these levels, it will permanently reduce ridership (by adding 30 minutes or more to many commutes), which will guarantee that the Metro's revenue never recovers.

If not boarding at the outside of the system, trains are going to be at capacity & you'll have to wait 30 minutes for another one.

More frequent service is needed.

Yes it would work but very inconvenient

Once Covid is controlled I will go back to using metro regularly and need more frequent service during rush hour

30 minute headways are far too infrequent to make Metrorail a viable form of transit.

What would the plan be when things from the pandemic return to normal? Would service resume?

Yes it would work if WMATA could stick to that time. But realistically there's going to be 5 min delays or more which would be difficult to make it on time to work

You simply cannot peremptorily reduce rush hour service once people return to work until you have evidence that post-pandemic metro rush hour usage has actually declined.

Proposal to operate Metrorail service every 30 minutes

Need more often

During rush hour this would cause massive lines. By 2022 you will see a majority of people return to their offices. The decrease in numbers in DC will not be what you expect in other cities due to the nature of DC work.

When the pandemic is over I plan on returning to the Metro for my daily commute, with 10 rides per week. This proposal would inconvenience that plan, which is the main reason I chose to move to this location for work a few years ago.

Its very inconvenient to have such sporadic service for transport to downtown DC, airport, etc.

No. You will need to maintain a rush hour schedule. If the train is full you will need to wait another 15-30 minutes and show up late for work.

During regular (non-COVID) times, red line trains are so packed even as far out as Brookland/CUA and even when spaced out every 4 minutes that it can take waiting for multiple trains before you can even fit in one. Trains every 15 minutes would introduce too much uncertainty in the time it takes to commute to work, because missing one would mean waiting another 15-30 minutes (or more) until you can get on a train.

That is way too much time in between. If a train is missed it means not only will I be late I'll be incredibly late. Might as well use an alternative service.

Pandemic should be closer to reopening federal government offices - ridership should increase by next year

If ridership increases as the pandemic eases, this will make metro very crowded, to the point of being unable to get on a train.

I depend on the metro to take me to and from work. I would have to leave home earlier and arrive at home later if I have to wait longer for my train to arrive at the station. Also during Rush Hour the platforms will be more crowded than normal and could be unsafe for the people who are waiting for their train.

Trains need to run more frequently, every 8-12 minutes

If I have to go back into the office, this could significantly affect my commute.

I work and live in DC and i rely on Metro Rail service for transportation. During the week i travel on the Green Line to the Orange, Silver and Blue Line Trains. Please reconsider your plans. Thanks

Long waits discourage use, especially for workers and others with definite time commitments.

I think this is a fair way to ensure that all stations receive service. I would hope that more frequent services would resume once ridership is back up. Especially if people miss the metro, then they might have to take an uber or drive to work, in which case were adding to climate change. So this plan is not ideal, but I like that all the stations remain open. I think this is a fairly equitable plan.

For peak rush hour trains need to run more often. Especially when you have to get to a change rail station, that could further delay your transfer to another connection, making your entire commute that much longer. Id rather drive and than wait longer.

Stratify for rush hour

Fine if you keep Clarendon metro stop open

30 mins frequency is far too long

I believe weekday and weekend schedules should differ, and that weekend trains should have extended hours

Delaying the trains is only going to reduce ridership and increase congestion.

The red line is one of the busiest lines this will force people to be late for work

This would not personally affect me much in Jan 2022, but I hope it would only be a temporary measures. Pre-COVID the cars during rush hour were already dangerously over packed. Longer wait times are not a huge issue, but overcrowded cars will only increase disease transmission and other issues.

I rely on metro to commute and every 15 minutes would result in very crowded trains and delayed arrivals.

Need more frequent service for when I use the Metro.

I think you might lose further ridership from commuters during rush hour with trains only arriving only 12 - 15 minutes.

Quince minutos es mucho tiempo. Cada cinco minutos maximo seria mejor.

If I just missed the train, I likely wouldnt wait 30 minutes for another. I would find an alternate way to get where I was going or at least to a station that serves more than one line. Living right next to Phase II of the Silver line, I look forward to a metro option but since Im used to my car. Metro would only be an option if I could count on it.

With them running less frequently, I'm curious if there will be enough space on the train when it arrives. Will you start counting heads and do cut offs to prevent overcrowding?

15 minutes is still a long time to wait

higher volume of people during rush hours so there need to be more trains during this period

Proposal to operate Metrorail service every 30 minutes

If everyone starts to return to the office by 2022, there will be major delays and overcrowding. Not sure you would potentially manage appropriate distancing among travelers.

I believe we'll have more people returning to work by then and that will cause huge amounts of overcrowding.

30 minutes between trains is not enough service for red line customers beyond Grosvenor-Strathmore.

I do not have a car nor do I have space for one. I commute and ride the silver line from Farragut West all the way to Tysons. This would most definitely make my commute over an hour longer than it usually does each way. And what happens if I miss the train? I would have to wait a full 30 minutes for another silver line train to arrive since no other line serves that station on that the silver line.

Not frequent enough to use for transportation for work

The 30 minute intervals are FAR too infrequent and offer extremely limited flexibility if you were to miss one train. Working commuters cannot afford to miss 30 min of work on the off chance they miss their train.

No more than 15 minutes and please still have the same early start time for those of us who use the system to get to the office in DC early in the am.

I live at a station that is the last one no one is getting off at for work headed downtown during rush hour. (the next stop has some people getting on, some getting off). Whenever there are any backups on metro in the past, it was not unusual to wait for 3-5 trains to go by because they were too full to get on. With this schedule, I think I won't ever be able to take metro to work if I have to work normal-ish hours -- I would expect that every train would be full from 7:45-9.

Thirty minutes is a long wait and when trains get full it could be an hour between trains.

This would impact candidates and employees ability to arrive; increase their travel time, to the station that serves my business.

Trains need to run every 8 minutes.

Assuming we actually go to work in person, that isn't enough trains for all of us to actually get on a train during rush hour. I will end up taking the orange line west in order to get a spot going east.

Every half hour during rush hour could make the difference between being late for a work appointment or not. This is simply not a reasonable cadence for a large metropolitan area.

I expect to need the metro rail more during rush hour times as do many others in the foreseeable future. As such, this would hinder my commute and the commute of others. Additionally, if times are not better during rush hour times, there should not be an increased price which I expect there will be when commuters return to work.

Truly not a fan of this, but if it's a way to cut costs without eliminating stations, I'd be for it.

This would have a devastating impact on the ability to move around in the DC area. It's totally irresponsible.

By Jan 2022 if not earlier I expect to be having to travel into and out of DC for work

Trains are too crowded

Every 30 minutes is too long between arrivals. Commuters would be severely affected

This would make DC not-commuter-friendly

I ride from Union Station to Dupont Circle during rush hour and this would be horrific. At Union Station, if the wait between trains is longer than 5 minutes, the platforms overcrowd and become very unsafe - especially if we are still expected to social distance at some capacity in 2022. 15 minute intervals is NOT acceptable during rush hour.

Once the work commute resumes, having trains so infrequently will be problematic, at least during rush hour so I would suggest that this schedule not apply to the M-F rush hour commute.

Red Line service every thirty minutes is simply insufficient and would lead to terrible crowding of trains

Please do not close Clarendon Station

I know how packed my train would be during commutes with those headways. I would stop riding Metro.

Trains should be more frequent on weekdays.

Would the last train of the day happen at the same time? Closing time is most important to me as I am usually coming from a performing arts event in the city.

I live off Navy Yard and even pre-pandemic with trains every 5-7 min, about 90% of the time trains were too full so you'd have to wait for the next one, only to have the station fill again and have to push your way in for a spot. Making trains every 30 minutes, would not only cause a larger buildup of people on the platform, but would also severely impact when individuals would need to leave their home just to get to the office on time. A normal commute of 10 to 15 minutes, would turn into a commute of 45 minutes to an hour. That is unacceptable.

30 minutes is too long of a delay between trains. If anything you'll need more frequent service.

Proposal to operate Metrorail service every 30 minutes

30 minute and 12-15 minute spacing would cause extreme traffic and overcrowding. The frequency of trains should remain. It would also be very inconvenient timing wise and allow for no flexibility for working parents

I use the metro every day and would need more frequent trains

I plan on returning to regular work commute well before January 2022 and I am worried that with this proposed change the trains would be so full it could potentially mean waiting on the platform for upwards of an hour to get on a train.

Need more trains at rush hour for commuters.

I rely on metro to get to work daily as I am a healthcare worker. Especially with COVID and the lack of enforcement of the mask mandate, less trains means more crowded trains.

It is necessary to have trains more frequently during rush hours to handle capacity surge.

This means from Shady Grove to Medical Center will be 30 min and may reach 45 min. In working days and in rush hours, this does not work for me

That's not feasible for getting to work and would further decrease Metro passenger numbers

Before the pandemic, red line trains would get full during peak times if they were more than 5-10 minutes apart. I foresee that happening again, so I think trains would need to run more frequently after the pandemic to accommodate all of the riders.

I live at the end of the Blue line and my household has only one car. We moved here from the west coast, where the frequency of public transit was similar to what is outlined here. It made it impossible to use. reliably for personal or professional transportation needs

I still commute to work. This would be a major inconvenience for my commute especially since I work long hours

Not enough trains to service my daily trips to work. The trains that do come will be so crowded you won't be able to get on. And if downtown in the evening, it will take forever to get back to Arlington.

This sounds like an utter disaster waiting to happen. Based on our current trajectory with the vaccine rollout, I have to think that by January 2022 we will have a marked increase in workers commuting downtown via Metro by January 2022. Trains coming only every 30 minutes during rush hour is unacceptable--cars will be packed to capacity and platforms will be crowded beyond belief. The ridership of this past year due to covid is not reflective of what it will be once the majority of the population is vaccinated and life starts to return to normal.

I plan to be back working in person by Jan 2022. The trains already get very crowded on commuter times and having trains every 30 min would become unbearable. Then if you miss a train by seconds you are now 30 min late to work.

Would a timetable/schedule be provided and adhered to?

I'm retired so adding a few minutes to travel time is no problem

Rush hour trains move more passengers and will allow folks to get to work quickly, whereas non-rush hour allows for a more leisurely commute.

The Grosvenor station and the 46 bus are very important to essential staff and medical workers commuting to Suburban, NIH, and Walter Reed--please do not slow down service at this station!

The expected wait time between trains is too long to make public transit a viable option.

I never ride the metro on the weekends. I only need it for peak hours. I would rather the train come every 8 minutes.

Wait times are one reason we dislike taking metro on weekends

This isn't ideal but at least you can continue to have service at every station.

I don't commute on Metro, so the change would be tolerable for me. However, I think it would be terrible for anyone trying to get to work. Also, I think it only works if there is a RELIABLE way to determine when the next train is actually going to arrive, not just when it's scheduled. A half hour is a really long time to wait.

I would not take the metro if wait times were 30+ minutes. Pre pandemic, trains would often arrive at my station already full without space to board additional passengers when trains were running more frequently. If trains only run every 30 minutes, I could not afford to wait for multiple trains to pass for my opportunity to board. This would push me to stop using the metro for good.

Maybe. 15 minutes is a lot of time to wait during rush hour for a train---both going into downtown for Maryland and coming home. If it's really 15 minutes at all times, from early in the a.m. until late in the evening every day including weekends on the red line that could work. If you cut metro service further people will stop taking it and then move to cars, with dismal impacts on climate change.

Unacceptable. Half metro salaries instead

If commutes return to pre-pandemic levels, then service will be needed to support it.

Proposal to operate Metrorail service every 30 minutes

A thirty minute wait would not fit my work schedule Monday through Friday.

makes planning for travel to work very difficult - as travel routes are made more lengthy, people will continue to flee the service or fail to return to taking Metro

If the changes go through, it would be extremely important to me that the trains run as close to on schedule as possible

I thought there is proposed change in closing grovenor station?

This is such a better plan than closing the EFC metro station! Myself and so many in our neighborhoods depend on this station and its even why I bought my house!

Less on weekends, more on weekdays during work hours

Fortunately the station I use is serviced by multiple lines. I can adjust my travel as necessary.

Easy to plan around and definitely works for our household. Not sure how well it would work for others during non covid rush hour

If the pandemic is over by January 2022, these service cuts would make commuting by metro completely impractical.

As long as it's predictable and there is enough room on the train for everyone, it will work for our family

Public transit options need to operate more frequently than every 30 minutes.

You're only going to lose more riders if the train isn't convenient for getting to work

trains arriving every 30 min is not enough to accommodate the needs. The reason to travel via metro and not bus or drive it is because the metro is fast and we can get the next one without having to wait long. with this change to every 30 min metro becomes worse than bus.

This would make it more difficult for shift workers to get to and from work. Additionally due to the pandemic, fewer trains would mean more crowded trains, increasing covid spread.

I cannot afford to wait 30 or even 15 min for the next train, especially on weekdays

Trains should be more frequent. At least, every 10 minutes.

Every 15 minutes is already extremely infrequent for your busiest line, and trains rarely are running on schedule, making commuting near impossible. Also, having to wait an additional 15 minutes just to make it to the last three stops on the red line is asinine (especially when youre having to sit at Silver Spring station at night waiting for an appropriate train). I have been riding the red line from Wheaton to Farragut North every day during this pandemic as an essential worker. Your service is already far below desirable. Please dont make it harder for hard-working but low-income workers who have to live outside of DC proper.

The changes would make it very difficult (if not impossible) for me to go to work. I do not own a car, so the metro is my main way of transport. Please do not change the schedules.

When I have only one option (e.g., Blue line) to get to my destination and back, the 30 minutes increments result in longer wait times.

These headways would make commuting by metro impossible. Miss one train and you're late for work.

Would need ti know the schedule of when trains would arrive ahead of time vs randomly showing up and risk waiting, need better lighting then and space to wait for trains too

If there are not more trains during rush hour, I don't see how post-Covid commutes would be possible. Way too crowded.

This is unacceptable.

I take the orange or silver like from East Falls Church station to Smithsonian station and back every week day for work. It is very important for my livelihood that this transportation service stay available!

Those seem like incredibly long wait times. No way to plan any sort of commute around them

As pandemic issues start to decrease more people will use metro. During rush hour when trains were backed up for a reason, platforms would get so crowded, people would be backed up all the way up the elevators and the upper level platforms, sometimes even unable to enter the metro station. I cannot imagine how anyone would be able to get to the platform during prime hours with only 4 trains an hour.

This is short sighted, assuming that ridership will remain as today.

This would lead to massive delays in travel time to work, and lead to congested trains, which should be avoided even in a post-pandemic situationâ€”I dont want to be on an overly loaded train car. (I say this as I rode the train once a few weeks ago, and one red line train in the evening was packed and I was incredibly uncomfortable.)

In January of 2022 I expect to return to the office at least 3 days per week. The frequency of trains should be increased during rush hours in order to serve all employees that will be commuting more frequently at that point.

Morning commuter trains need to run every 8 minutes.

rush hour is always busy and we need more trains running with less time in between arrival times during rush hour

Not feasible for rush hour.

Wait time at stations will be too much during rush hour & trains will be overflowing during rush hours

Proposal to operate Metrorail service every 30 minutes

I am less likely to take the metro if it only comes every 15m

One would assume that we will return to our offices by January next year - this would be a complete disaster at rush hour and make metro travel completely infeasible. Stations and trains would be extremely congested.

The frequency of commute would make it impossible to get to/from work in a timely manner.

This proposal would add perhaps 20 minutes each way to my commute via Metro. It makes it difficult for me to continue to use Metro.

Trains arriving every 30 minutes would not work especially during rush hour when they can get packed. If this were to occur and I were unable to get on the train due to there being too many people I would have to wait 30 minutes which is far too long. If you want people to stop using the metro and begin driving everywhere when there already is no parking in the DC metro area then 30 minutes is perfect because nobody in their right mind would want to wait that long for a metro.

In 2022, once things are hopefully closer to normal and more people need to commute quickly to downtown DC, I think the trains will have to run more frequently during rush hours.

Trains every 30 minutes during rush hour will mean trains will be even more crowded than they already are, assuming most people are back to working in the office by next January. There will be huge crowding on the platforms, too, waiting so long between trains, and it will be a mess during the winter.

We use both the White Flint and Grosvenor stations - waiting 30 min for a train would make me choose driving instead.

The expanded weekend hours really make a difference

If trains are not more frequent than this, it virtually negates the usefulness of the metro (as a means to shorten commute rather than going in a car). It takes a long time already to get down onto the track from street level and is difficult to plan this to the minute especially with kids, so one would either have to arrive very early just in case, or risk having to wait a whole 15/30 minutes until the next one. At that point it's just diminishing returns and easier to take a bus or Uber or drive.

Up to 30 minute waits is not acceptable public transit service, particularly on weekends

I believe I would still choose to use Metro over driving under this model. It would be increasingly important that trains arrived when planned because I would be more likely to time my commute to the station according to the trains scheduled arrival times.

This might be better because you know the trains would arrive and could plan your day around it.

Why would one have to wait 30 minutes. That is why your ridership is going down. If someone can Uber and get to their destination in that 30 minutes why take metro?

As of expected office opening in September 2021 at latest, 15 minutes schedule at Grosvenor station is the minimum.

Every 30 minutes would take away the advantage of not driving.

15 min between trains is unacceptable. This is both inconvenient as well as dangerous. People will be struggling to get onto a train that is either too full or they are too far from the door from. Trains should be 5-7 min apart at maximum.

Many of us do need to connect lines, and despite Metro's scheduling, often the connections are missed -- and by having longer gaps to wait in case of a missed connection, it makes using Metro even less attractive for those of us who need to change lines.

If people are back at work, it will be impossible to get on a train in the city. The entire train will be packed in MD or VA making it unusable for DC residents.

This sounds like a least worst bad option, but I would like to see Metro communicate how temporary these cuts are. What are the metrics for return to full service?

Jan 2022 ridership will be vastly different than pandemic ridership. This plan won't work for daily commuters like myself.

Mon-Fri at a redline stop needs to be shorter than 15min, as the stations during rush hour are already overwhelmed and hard to get onto the train.

Greater frequency is required during rush hour. Less frequency means more packing in of riders which is not what we will need, even in January next year.

The headways are too long to make Metro attractive. I will waste too much time waiting for trains during rush hour and non-rush hour periods.

When the pandemic ends and many people return to work, I believe the ridership will go back up.

Time: that is too long to wait between trains. Crowding: I won't use Metro if the number of trains is decreased and people are crowded together due to the increased risk of COVID-19 transmission. Without more frequent trains, the DMV region will avoid Metro.

Trains would be insanely crowded assuming return to close to normal ridership following pandemic. Foolish change.

I ride the metro nearly every day to and from work. This decreased service would make it to the point I can't rely on metro and would likely stop using it.

The frequency would create undue pressure on the riders. It would also create tremendous congestion in the metro compartments/cars.

I love Metro. But at the moment I have no reason to use it as I am not going downtown. When baseball starts I might go downtown occasionally and use metro. But unless I get a consulting job or a permanent job downtown I don't expect to use Metro very often

Proposal to operate Metrorail service every 30 minutes

I am now retired so will not need to ride during rush hour, however before Covid my husband stopped riding metro and started driving because the Orange line was too crowded. You need to have trains more frequently to accommodate those people during commuting times.

For riders who have to switch lines it could potentially introduce an extra half hour to the travel time if they just miss their connecting train. I currently switch lines at metro center commuting from fort totten to ballston. That could make my commute go from 45 minutes to well over an hour.

30 minute train intervals does not meet my commute needs. I also would expect that this service would be inadequate for ridership once it rebounded to pre-COVID numbers.

Work for me but may not work for people that need to commute regularly to work at high volume times.

Without the pandemic, trains were already crowded. In a post-pandemic, commuting world, people will probably want to be less crowded, sharing less air rather than more. Platforms also get packed which becomes dangerous.

This would mean instead of getting to work or class on time I'd either have to be 15-30 minutes early or 15-30 minutes late, the main reason I don't have a car is because of the frequency of the trains. With a schedule like this I'd rather just get a car

Even 15 minutes is far too long - every train will be packed and this will discourage ridership.

Keep D6 running and increase bus frequency. No reduce serve for D2.

I take two trains every single day on my commute to work. To think that I would have to wait up to 42 minutes just for awaiting trains at stations is unacceptable. It would lead me to not utilize the Metro system at all. I think with these changes that you will start a spiral of ever dwindling ridership and more loss of income for the system.

I use Rockville & Shady Grove, every 30 minutes would make me late for work. You're making changes with white collar workers in mind rather than the blue collar ones that rely on the service.

As someone who lives in Navy Yard, what is supposed to become one of the most populous parts of the city and has both the baseball and soccer stadiums, this would not work. For one, trying to squeeze people onto a train can be bad enough during rush hour, but now you want to bring trains through every 30 minutes because there is no other line that operates down here? What about baseball or soccer games? Will that impact frequency at all? If not, metro will continue to lose riders because people will not be able to count on metro getting them to/from sporting events.

I am retired; so do not need more frequent rush hour trains.

I go downtown every weekday and I wish no to wait for so long between trains.

that's not enough trains, y'all

It would depend on how accessible and reliable train arrival information would be on Metro apps so I could time my wait. When there were 15+ minute waits in the past, that information was not reliable so you thought you were arriving, say, 3-5 minutes before the train you needed, but really, the times on the app were just all over the place and totally incorrect. Very frustrating.

Maintaining service between Grosvenor and Silver Spring stations will work fine.

I'll be using the metro to commute for work and am guessing others will too. It would be helpful if they made more frequent stops

Pre-COVID, my commuter train was mostly standing room only, and often over-crowded during baseball season. That is with 8 min between trains. WMATA only went from 6 to 8 min between trains because of getting them through the downtown stations, not because there was reduced ridership. 12 min trains will make rush hour a nightmare

When people go back to working in offices, 30 minutes between trains won't allow for everyone to get on the train.

COVID will be over, but you're proposing a death spiral instead of a ramp-up. This is insanity and you should be ashamed.

Trying to coordinate bus and train schedules would become a nightmare.

The scheduled trains are not frequent enough and will lead to overcrowding.

There's no way I would be able to take the metro to work if the Red Line trains ran that infrequently, I would have to drive. I much prefer taking the Metro, but I need frequent trains to be able to get to work and home on time, since I have to pick up children from daycare.

Although WFH may become the norm, DC will become a popular tourist destination again. With the tourism and people commuting that 15-minute wait seems disastrous

I'm concerned that trains will be super crowded during rush hours

I just tried submitting comments and the surgery said something broke

More frequent day time service is imperative.

Weekend schedules should be reduced.

I'll never use Metro again if it goes to this schedule

Proposal to operate Metrorail service every 30 minutes

I plan to commute from Shady Grove into DC. This would be a disaster.

Wait times too long

I am planning to return to work in person probably during 2021 and do not have any other way to get there but metro. By limiting service times, this will not only impact my work hours but also put me at more risk with more crowded lines if covid remains an issue

This plan would greatly affect my transportation patterns in a negative way. January 22 is when my employer expects that we will be back at full capacity in the office. In other words, this is when metro demand will again be high. To reduce the number of trains, and stations, as demand increases is ridiculous.

If this time increases, I would stop using metro to commute to work which on the aggregate will cause net revenue to fall greater than the reduction of costs

Return to the office even part time means rush hour returns. This schedule would guarantee crowded trains and no chance of maintaining any type of physical distancing.

I am re-entering the office this summer and rely on Metro to get me there. I find your service so invaluable that I am willing to pay a little more for your excellent service, clean trains and safe environment. Please Do not close Grosvenor Metro! I will be relying on it again when I reutrn to work this summer.

I would like to see the metro station near me Grosvenor Station open and working. It is very convenient for me to walk to metro and also to park at the metro. Please keep it opne.

In 2022, when it is expected that most people will be going back to work as normal, the above plan risks dangerously high crowds at platforms. This could encourage pushing and shoving to get into the train if it is only coming every 30 minutes, especially between 7:30-9am when most people have to arrive at their workplace at 9am. People will be getting as close to the front as possible, which means there will be a huge risk that people could fall into the tracks. This also poses a greater risk for crime - when people are in very tight crowds and focused on getting onto their metro in the singular window they have to get to work on time, crime could easily occur (e.g., pickpocketing, sexual touching/assault, etc.) due to the crowds and security not being able to see clearly nor have a clear path if crime is even spotted. In addition, this would ultimately hurt Metros profits (and trust in Metro) in the long-run. More people will turn to alternate methods of transportation for their daily work commute if they know they will be forced to battle their way onto the Metro in order to get to work on time, and will decrease Metros profits even more, paving the way for Metro becoming obsolete, which would be incredibly harmful to people and communities that depend on Metros services. Reducing services at a time when people will start to depend on Metro again will be very harmful in the long run and is not worth the money that will be saved, as it is sure to be lost tenfold. Metro has always been a reliable way to commute around DC, but trains coming only every 30 minutes will ensure a huge loss in riders. If someone is running 5 minutes late and they miss the train and are forced to wait 30 minutes and be late to work/their meeting, or if someone arrived on time but was pushed away by stronger people and didnt get on the already full train and now have to wait, they will remember this, and they will not use metro next time. Prior to this reduced service, metro trains (especially at rush hour) were already likely to be packed to the point that people on the platform could not enter. This will only make it worse.

I will drive instead. This becomes regional rail, not an urban subway system.

If the service is the same at rush hour as at every other time of day, the price for riding should be the same all day. There shouldnt be a higher rush hour rate.

this is hard to evaluate without seeing the pricing

I am not sure that it makes sense to have no difference in hours and arrival times for weekends/weekdays and non-rush hour and rush hour.

We own a business on the Orange line and everyone will be back in the office once vaccinated. We have over 50 employees (and growing) who commute by metro. We need the train to run more frequently during morning and evening rush hour. This business is an office that keeps œbusiness hours.œ

I anticipate we will be returning to work before then. My already 55 minute metro ride cannot become a 1 and 15 minute ride. The redline is the only line that services the MD area. My office will be giving us the option of how many days to come in per week. If my commute is this long, I will reduce my days in to the absolute minimum. Which will be 1 day every 2 weeks.

I rely on the metro to get to work on time to see patients, cutting the frequency makes it significantly more difficult to get to work on time reliably. If service frequency is reduced, I would be forced to drive as it would be a more reliable option.

This would mean trains at peak times would be excessively crowded and uncomfortable, and lead to increased traffic issues throughout the Washington metro area.

once more workers are using metro again, 30 minute headways on weekdays, particularly during traditional rush hour times will be untenable. It won't even be worth trying to use metro because if a train is too crowded you can't afford to wait another 30 minutes for the next train.

The time between trains at rush our will cause overcrowding and many people to be late

30 minute waiting time will deter people from riding the metro

I mean, ok.....

It makes no sense to curtail service at a time when the economy will be recovering from the pandemic.

Proposal to operate Metrorail service every 30 minutes

I live near the end of the yellow line. Normally you cannot see a train heading into DC until a couple of minutes before it arrivesâ€” too close to be able to leave home and walk to the station in time. Normally I only have to wait up to 10 minutes. But if I just miss one, I might have to wait up to 30 minutes under this proposal. It would greatly increase my waiting time and risk of getting to work late.

This is absolutely unacceptable and will dramatically impact those who need public transit the most

service this infrequent would lead to further loss of ridership!

Public transportation changes negatively will impact people who don't have the means to get around in another way

Trains must arrive at least every 10 minutes. I will not use metro if trains arrive every 30 minutes!! That would add 30 minutes to my commute. I would rather take metro than drive, but if you made metro less convenient, I would be forced to drive instead.

If people resume going into the office, trains will be too packed. People will be unable to get on trains and eventually stop riding the metro, thus increasing traffic.

One train every 15 minutes at Rosslyn sounds like the silver line outside the beltway gets a train every 45 minutes. I was miffed enough when waiting ten minutes between trains. At 45 minutes, I'd spend more time on the platform waiting than it would take me to drive into work and be at my desk.

Every 30 minutes is way too long of a wait. I suspect the trains would be overly crowded assuming everyone went back to work in 2022.

I expect to have returned to the office on a full-time basis by January 2022. These proposed times during rush hour are simply unacceptable. These changes would result in many commuters switching permanently to other commuting ways, such as car, and additionally reduced ridership.

Having trains run every 15 minutes is not frequent enough for my needs.

That's way too infrequent. Every 30 minutes would derail my plans and commute, and I'd face ramifications for that at work.

On the OSB lines, trains are never spaced properly which leads to two trains back to back with 30 minutes until the next two trains that are likely back to back as well

I travel on the Red Line between Grosvenor-Strathmore and Silver Spring stations every weekday, so this would not effect me.

I expect to be going into the office by metro during rush hour and trains every 30 minutes will be a nightmare. Based on a decade of metro commuting, there will be overcrowding and I would not be able to get on a train because of it. Metro would not be a realistic commuting option for me if trains came only 30 minutes.

Knowing that likely in 2022 all DC offices will hopefully have reopened, and returning to in person working would occur, having trains running on such a delayed schedule would make me less inclined to ride, knowing my commute would take that much longer to get to the office.

12-15 min trains are way to spaced out; i would not wait for 15 min for a train

By January of 2022 I expect to be vaccinated and going into work downtown via metro for at least 3 days a week. While I live by a station that has service from more than one line, this would drastically increase my commute time.

Rush and non-rush arrival times should appropriately differ.

Rush hour is busier and needs more service

Weekday train times need to be more frequent than in weekends.

By January we will be post covid and ridership back to normal. The proposal would be wholly inadequate. In normal times, even trains every 5 minutes were full at rush hour. The proposal is simply ridiculous.

The frequency of trains remaining the same would not accommodate the influx of people that use the Metrorail during rush hour

This feels like youre abandoning your riders and would make WMATA look like a joke among major transit systems

I primarily use metro to commute to and from work. This schedule would increase my commute time. Especially with (eventual) full trains during rush hour.

The trains are often very crowded during normal rush hours (not during COVID times). If we are back to normal, the platforms will be incredibly crowded and the trains packed. It will be difficult to get on the trains and get to work in time.

30 minutes is to long between trains

At rush hour, the red line will be crushed by passengers. Im working from home now, but expect to be working downtown again in 2022. This change would make my commute worse, or maybe impossible.

If my assumption about ridership is correct, then there should be trains running more frequently on weekday rush hours than the rest of the weekday or on weekends.

I'll be waiting 30 mins just to get a train to work

I am concerned that this 30 minute train arrival schedule would potentially result in dangerous crowding conditions on platforms if people return to using Metro to pre-COVID levels.

Proposal to operate Metrorail service every 30 minutes

During normal ridership which I expect in January (or nearly so) many trains are filled by the time they reach my station when train scheduling is half that -- I will not be willing to wait up to an hour to finally cram onto a train and will stop using metro altogether if that happens

At all stations with more than one line, the frequency should be every 12 minutes, especially at Rosslyn and Metro Center. 15 minutes is too long for that reason.

In order for metro systems to be effective, trains must arrive on a frequency that does not require travel plans. This is well-established throughout the world in nearly every major city where metro rail is successful.

Trains would be too crowded to enter by the time they get to Cleveland Park for rush hour.

look a 30 minute wait during rush hour is just going to drive more people into commuting by car and that is a terrible thing for DC and the environment. Also that much space between trains assures crowded cars which may well frighten riders in the immediate post-pandemic age.

Its not a good idea.

This doesnt make any sense. Why wouldnt rush hour see more trains coming sooner than non-rush hour?

Least offensive choice, but still begins to make other transportation a better choice.

I depend on Metro service to get to and from work; I live and work near different stops on the red line. I do not have a car, nor can I financially afford one. Metro is my only feasible way to get too and from work and into downtown DC, Maryland, and northern Virginia. Lengthening the time of my commute by upwards of 30 minutes per day would be unsustainable due to my busy work schedule.

Trains can be very full at rush hour times, so having the next one not arrive for another 15 mins would make many people very late.

If it was a choice between not having a station or longer wait times. I would definitely prefer longer wait time

Rush hour adjustments are essential for federal employees commuting from outside the district.

this idea would horrifically affect the rush-hour commute come January when things are projected to be much better, and I would imagine that ridership would be approaching normal levels again. I have to change trains from Orange/Silver to Red at Metro Center to get to Union Station for my job, and a 12-15 minute, regularly scheduled wait time would significantly increase my commute time.

Seems like a horrible idea for surge times like rush hour and baseball games where multiple trains go by and you cant even get on.

Higher frequency at rush hours will be needed. Frequency every 30 minutes could work outside rush hours and weekends

I rely on the train to get to work as there is no parking at my place of employment. Changing trains to every half hour would destroy the flexibility that we now have both coming and going from work. Sometimes I stay after business hours getting things done. As a young female it makes me extremely uncomfortable knowing I could have to wait up to 30 minutes alone for a train to get home.

That sounds very limited

30 minutes is too long of an interval in between trains. That can make an enormous difference in my commute to and from work.

Trains that arrive every thirty minutes would increase travel time because of the need to plan out a work schedule.

People could be late to work

It will be too difficult to make the bus connection I take after the train in order to know I can get to work on time consistently.

If workers are back in offices by then this would not be good.

Not bad for a start. Subject to usage. Heavy usage should allow for appropriate increases.

It seems reasonable to a degree, but I would think more frequent trains would be necessary in the morning/evening hours.

I am concerned about the volume once more folks are vaccinated and using the metro. This does not seem to be adequate for that volume of people.

This will negatively impact citizens as we return to normal after the pandemic.

Dont make commuting any harder on us than it is already!!

Would be terrible at rush hour (assuming can go back to work)

It already takes too long to get to work because of inconsistent timing of trains. This would make it worse.

Metro rush hour is already kind of a mess â€œ making timing longer between trains will only make it worse and force people to find better, alternative commute options.

I expect that I'll be back to working in person by January 2022. Having trains that come once every 30 minutes will severely hamper my ability to get to work on time.

Every 15 minutes is not sufficient to handle the commuter traffic on the Red Line during rush hour. Crowding would be intense and dangerous.

Keep the rush hour service for the week and off-peak hours for weekends.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| Ive relied on Metro as a commuter for many years. This would make everything from going to work to running errands significantly difficult. One missed train could set everything back. |
| Increase frequency during rush hours. Reduce frequency on weekends. |
| 30 mins is too much |
| Rush hour trains are already too packed, and people are often left on platforms. This would make that worse. |
| Thirty minute intervals are not enough to ensure everyone will be able to get to work on time |
| Metrorail service should be maximum 10 minutes apart; rush hour service should be less than 12-15 minutes! |
| This would be a better alternative vs. removing this station completely. I rely on this method of transportation daily. |
| Reducing frequencies rather than shutting down existing stations seems reasonable |
| This would making commuting impossible and would force overcrowded platforms during peak hours. |
| Commuters from Wheaton and Glenmont pay more than any other riders in the system and under this proposal will get half the service. |
| If you end up missing a train, it could make you extremely late for work, making public transit not a feasibly option to commute |
| I need to ride @ East Falls Church station. |
| Would be unfortunate to have more infrequent service, however, far preferable to closing stations. Good proposed solution |
| They need to arrive as they did previously such as every 7 minutes or so. If you miss a train, you could be waiting 15-30 minutes to even get on one! Plus, when you have to switch trains that could be another 15-30 minutes. I will have to leave my house hours before work even starts! |
| I have no concept of exactly how or when I will need to begin commuting again. However, if I stay on a limited in-office schedule, this should work. |
| I take a transfer, and I'm concerned about a 10-15 min wait between trains. This could double my commute time |
| Literally only because my office parking is so expensive that I barely have a choice to use metro. However, its clear metro wont miss a chance to provide the worst service possible. I miss London where public transit isnt run by dropouts and other rejects. |
| Service should be more frequent than that |
| This is not viable at all for a service that people rely upon to get to/from work. Metro needs to plan for people returning to their offices. |
| Rush hour need to be as close to the old times |
| I dont understand this- there are the same number of trains at rush hour as the rest rest of the day? What makes It rush hour then? Packed trains? |
| The orange line was packed during rush hour pre Covid so expanding service times will make it impossible to get on a train. |
| The tasks would be too crowded once the pandemic is over. |
| In order to use this service effectively for work, during rush our people need to be moved more frequently - platforms and trains will be dangerously overloaded. |
| I use Silver Line from Reston to Union Station. Most of that is one-line. It would add 30 minutes to my 1.5 hours. 2 hours long! 4 hours a day! Id have to find a new job. |
| This would not be a good plan for people who use metro to commute to work. |
| even every 12-15 minutes seems like the trains will be very crowded, and it will take so long to wait for a second one if the first one is full, I might end up just walking |
| Great idea |
| Waiting 30 minutes for a train to get to work/do errands would seriously impact my schedule and lead me to stop using metro |
| Would there be any changes to length of service? Would after midnight be an option? Otherwise my answer would change. |
| If trains are overcrowded during rush hour running every 30 minutes then METRO should consider running more trains on a tighter schedule than every 30 minutes, i.e. every 12-15 minutes. |
| Ill be retired by then and can (probably) manage to time my trips so I wont have to wait long. (Im assuming trains would arrive at and leave stations EXACTLY according to schedule, so people can plan ahead). But I cant imagine daily commuters having to wait 30 minutes for a train. This sounds like a plan to shed even MORE customers. |
| I need Grosvenor station. It would be really difficult for me to travel without it. |
| Trains were crowded before the pandemic during rush hour, there will not be enough room even for standing never mind those with strollers during rush hour |
| I depend on Grosvenor Metro to get to work and the intervals between arrivals ought to revert to what they were normally once the coronavirus epidemic subsides and we have a return to more normal patterns of metro usage. |
| I feel 30 minutes is too long to wait for a train |
| Trains will be overcrowded during rush hours. |

Proposal to operate Metrorail service every 30 minutes

I take a bus to the metro to get to work. If the bus is at all delayed I'll miss the train and have to wait 30 minutes for the next one, making me late to work. I think 15 minutes between trains (all lines) during the week and 30 minutes between trains on weekends makes much more sense.

This would extend my commute time probably by half an hour. I work long hours as it is and have 2 children under 2 years old. This is the difference between missing and making it home for bedtime.

Orange line in VA was already at capacity (pre-COVID) with vastly more-frequent arrivals. Cant imagine the pushing and shoving that would occur as people in the inner suburbs fight to cram onto trains that were filled at farther-out stations on their way into town.

Commuting for work needs more frequent trains. Rush program is very good for peak times. Weekends need less frequency

Lowering the rate of trains will force us into even more crowded trains, which would be unhealthy and unhelpful.

15 minutes is too long between trains during rush hour. It would cause overcrowding of trains.

Do you really think it's a good idea to upend the idea of metro by making half hour pass between trains? Especially with Uber available?

I expect to be commuting again next year and that time interval is unworkable

If this plan went into effect I would not -- could not -- take metro. I take the redline and would never get on a train if they came so infrequently. It would also add at least 30 minutes (probably more time) to my commute so I would drive.

I am fine with an earlier cutoff time during weekdays to cut down on METRO expenses, but the trains absolutely need to run later on weekends in order to go into DC without a car (trains should stop at midnight to allow people going to concerts, theaters, and restaurants to catch trains home later in the evening. Even a cutoff of 11:30 p.m. downtown would address this issue.

I plan to go back to work after getting vaccinated. Since I need to switch lines on my commute to work, I see my travel time during rush out to be way too long.

We need more frequent service at rush hour

Passengers will still probably not want to be waiting with a crowd of people, which is more likely to happen with infrequent trains. It is possible however that rush times may be different than in the past. Some employers are encouraging people to commute at later times in the mornings and evenings.

Reducing the number of trains during rush hour daily is ludicrous. Pre-covid, trains were always jammed during rush hour.

It is not preferred, but it is better than closure of stations.

I live near the Grosvenor-Strathmore Station. If the line only operated every 30 minutes on the weekend that would be OK too.

I don't understand this but waiting 15 to 30 minutes for a metro is just too long!

I think that would increase cost unnecessarily to run trains during low ridership every 30 minutes, but I think it would also be very beneficial for the people that work late hours and weekends, the metro seems to be structured around the Monday - Friday 9am-5pm employees and for someone that works nights and weekends this change would be nice

During rush hour there need to be shorter times between stations, not just those that service multiple lines.

As a commuter who utilizes metro, have the metro come only every 15 minutes would make taking metro completely impractical.

I commute during the rush hour and it is hard enough to get on train during rush hour anyway: this would create a scenario with masses of upset people trying to get to work on time, and having to wait too long.

Why are you discussing reducing service in a year. By then we should all be properly vaccinated and I would expect to be traveling much more frequently. Using a pandemic to cut future vital services is atrocious.

Because I transfer from red to silver lines, I would need to leave home extremely early to catch the silver line and time it with the red line

It would make it very difficult to manage my unpredictable work schedule without overly burdensome waits for transit and would further increase crowding on trains, which during a pandemic is the last thing we need

Last guidance from most government employers was expect to return to work in 2022. This would be a bad idea if that holds

This is systemically racist and oppressing. The lines that will run more frequently have stations in wealthier areas where there are more white, powerful people living. Everyone else, would be late or outrageously early to their commitments due to waiting 30 min for a train. Especially on the other side of the red line and green line.

My commute into the office in DC is normally 1 hour door-to-door using Metro and walking. With this plan, my commute could easily extend up to 90 minutes or longer, especially if I just miss a Red line train at Forest Glen station and have to wait 30 minutes for the next one.

Often if I miss the train I was planning to take waiting 10-15 minutes during the week does not make me late but 30 would. It would be ok for weekends

Proposal to operate Metrorail service every 30 minutes

| |
|---|
| This seems wasteful and inefficient. The trains are packed during rush hour and less so during non-rush hour. Please run more trains during rush hour and less during less busy periods. |
| While not ideal, I understand this type of adjustment may be necessary and is a reasonable approach to continue much needed service at the Grosvenor-Strathmore Station. |
| I cannot control my schedule well enough to build it around 30 minute headways. Also, I cannot rely on trains to stick to the schedule well enough to commit to the 8 minute journey down to the platform and possibly just miss a train. Finally my station is right before the Roslyn tunnel, and the train could be full. I would just switch to driving. |
| Given the extra wait this would cause fit a train it would make it far too inconvenient to ever use the train. Uber/Lyft would always be faster. More frequent service, particularly at rush hour is necessary. |
| I'm sorry but 30 minutes between trains is simply unacceptable no matter how you slice it. Trains will be too busy for social distancing if we're still in a pandemic-afflicted world where fewer people are going into work; the system will be nigh-unusable if people do start going to work. As someone with a long metro commute that includes changing trains this would make my life absolutely miserable. |
| I would need more frequency of trains at Clarendon |
| At rush hour when trying to get into the office, historically at my stop there would be a lot of people and having to wait another 15 minutes if the train was full, would be a long period of time. Very often not everyone would fit into one train. |
| Although it is nice to have a regular schedule, as things get back to normal there will be crowding during rush hours. Are there plans to implement rush hour schedules, e.g. more frequent trains as the ridership increases? |
| too infrequent. would lead to tremendous crowding once people are commuting again daily |
| Ridership will likely be back up in 2022, not sure to what extent, as people have the opportunity to receive the vaccination. Before the pandemic, I often had difficulty getting onto a train even with only an 8 minute wait. I believe a 30 minute interval will result in severe overcrowding and unsafe behaviors similar to what you see during major events like July 4th. |
| That long of a wait time would make it far less likely that I would use Metro. I would drive instead which will lead to more traffic on the roads but also decrease your revenue. |
| may work for right now, yet next fall once covid is better, may not be enough trains running often enough to handle more commuters |
| When my office reopens, I plan on commuting via metro from EFC to Silver Spring at least twice per week. This change could make the transfer time required at Metro Center unbearable and push me to drive 100% of the time. A similar decision could be made for my husband who will eventually return to traveling via Metro on weekdays from EFC to Union Station. |
| January of 2022 I expect to resume to a normal schedule. Metro service operating at those times would result in significant commuting delays. |
| I think additional trains during rush hour are extremely important. |
| To have trains arrive every 30 minutes on the green line south of L'Enfant Plaza would add considerable time to my daily commute to work in each direction. It would likely result in more time spent waiting on platforms and I would likely opt not to take metro altogether as I could take a rideshare or bike much faster. |
| Prefer more trains during rush hours |
| This plan is so bad that no metro is better. Why spend money on a system that is slower than walking and will easily be beaten out by rideshare companies? |
| I would prefer higher service during rush hours (maybe partial reduction vs going fully to every 30min), and reducing service in non rush hours (eg every 40min instead of every 30min) |
| Preferable to closing stations. The main problem with this proposal is based on metros performance, you wouldnt have much confidence in the arrival times, meaning you could easily miss a train and have to wait 30 minutes often. |
| I live closest to Grosvenor and was going to use it to go to work or go into D.C. |
| Every 12-15 minutes/30 minutes too infrequent for peak/rush hour |
| This works for me because I use metro for traveling for recreation, but it would cause a significant burden to commuters. |
| Time between trains was already too long. Check out Taipei's metro or Moscow's metro for good examples of optimal intervals between trains - closer to 2-4 minutes. |
| I need to switch trains. If first train is delayed or Im running late, I could end up an additional 30 minutes behind |
| The propose schedule means passangerdÅ±s habe to wait long time |
| If the frequency is the same all day, then the fare should be the same all day also. |
| Service should be more frequent (i.e. remain the same as it is now). |
| I commute to work daily and need more frequent trains |

Proposal to operate Metrorail service every 30 minutes

Trains operating like this would make a work commute of 20 minutes turn into an hour or longer if issue with bus of any kind getting to train

30 min interval is way too long

Longer wait times will crowd metro trains at stations the furthest away from the city. By the time the metro cars get to Arlington, they will be crowded and have no space for passengers trying to get on to the metro

This would cause huge overcrowding at peak times and an inefficient system when single trains get delayed. No other major city with an underground transport system has such a big gap between services. Usually they are <5 mins apart to constantly keep people moving and encourage more people to use them for convenience

There need to be more trains at rush hour. They're crowded enough already (or at least were pre-pandemic). This might be OK for a temporary short term solution until more people are commuting downtown, but if service is slow, ridership will decrease, not the other way around.

Run rush hour trains if ppl are back in the office (overall monitor congestion and run more trains if needed)

It's important to have more frequent service at stations with more than one line

Could walk and get places in DC faster. Not helpful

Based off of this example, it is not clear if trains go beyond Grosvenor-Strathmore or if they simply stop there. This would not work for me as I depend on the White Flint station.

This option makes the most sense and provides the least impact to riders.

I would want to make sure that the plan is tested for 2-3 months and then revised should ridership result in overcrowded trains.

I use metro late at night on weekends, weekday schedule ends too soon

Would the trains at 30 minute intervals be scheduled? Would they be 8 car trains? For commuting purposes it would be essential to know 1) when a train was coming; 2) that I could get on it, otherwise I wouldn't be able to plan to make it to work on time every day.

I expect to return to the office in mid-2021. Decreasing train intervals on weekdays could lengthen my commute by 15 or more minutes each way.

as long as the arrival times were reliable, I could adjust my riding schedule

I would suggest every 15 min for the red and yellow line

It depends on how crowded the trains get. I am OK with a train coming every 15 minutes, but if the train arrives and it's so packed I can't get on it, then it's not OK.

Prefer more frequent trains during rush hours

Trains every 15 minutes is absolutely unacceptable. Trains would be packed with riders and uncomfortable if trains ran at such a rate.

Annoying to have to wait longer for trains but something I could live with if meant other services preserved.

Every 30 minutes, particularly at rush hour, is absolutely insane! Even with trains every 3-5 minutes at rush hour (in non-pandemic times) are absolutely packed. Every 30 minutes would be an embarrassment to DC.

The trains are so crowded already. That would be dangerous

If/when I return to working in DC from my home in Falls Church, a 30 minute wait between trains at rush hour would mean a crush of passengers. I would hate that.

Sometimes I take the red line from Grosvenor-Strathmore up to Rockville Station to get to work, if I don't take the bus. That would be much more difficult if trains were running only 30 minutes (so less likely I'd opt for train over Ride On bus).

I don't think the rail is good. I get 90% of my transportation from bus, and 8% from walking. The rail is not a good idea, don't build a DC rail system, but run buses every five minutes instead.

Not having shorter wait times during rush hour would make me less likely to take the metro to work.

This plan would negatively impact anybody who relies on metro to get to work and would increase congestion while people wait 30 mins during rush hour times for a train to arrive. That is a terrible idea during a pandemic, and once the pandemic subsides, is a terrible idea for making metro a functional system capable of attracting back the riders it lost during the pandemic. Rush hours absolutely should not have trains spaced at the same intervals as non-rush hours.

Would this change if people's work schedules pick back up sooner than expected?

Shorten departure times for trains at Shady Grove station. 30 min is way too long abs trains will be too full people living outside city would need to leave far earlier to make train and still arrive to work on time at such long intervals. 9pm is too early to close for shift workers. After 630pm then go to 30 min per train departure.

The trains would be very crowded and it would be very hard to reach my destination in a reasonable time.

It will be a great inconvenience as I would have to wait for 30 min. for another train if I miss one.

Okay to reduce weekday but not to 30-minutes. 20 minutes okay, and then apply the rest of your formula

Proposal to operate Metrorail service every 30 minutes

Accounting for unexpected delays, this would make my commute during rush hour extremely difficult and prompt me to look for other transit options.

This might work during the pandemic, but this would be ludicrous during the work week, especially in years going forward. Trains are already packed to the brim during rush hour as it is, and we are now going to have to think about social distancing. This is the worst possible solution. It will lead to more heavily packed, less safe trains.

My office is planning to go back in person by the end of this summer and would need more frequent trains than every 30 minutes to commute daily on Green line.

I believe that in Jan 2022, we will be back to normal when it comes to commuting to work and given these changes they will drastically impact the commuter experience on metro rail. There will be more crowding on the metro platforms as more passengers wait for the train, which would be hard to social distance and cause harm and impact safety

It seems absurd to have the same time frames for non rush and rush hours or between weekend and non weekend days.

The different weekend hours work for me. Is there enough demand on the weekend to have the same working hours as weekends?

Doesn't make sense to not vary train times based on normal ebb and flow of riders over the day

I feel like the trains are always running late and usually end up coming ~ every 30 mins anyway

Would prefer more frequent times at busy stations, regardless of the line color. 12-15 minutes between lines is a little too long. Also 30 minutes is too long for rush hour regardless of the location.

with trains every 12-15 minutes i don't see how i will be able to get to work in time. during past rush hour traffic (trains every 5-8 minutes) i barely got on a train and when one line was out of service it caused major delays (Rosslyn)

I use the red line to commute to metro center for work. Every 30 min is not acceptable. Trains will become crowded and delayed.

during rush hour add more frequent trains please

This suggested proposal will not work for me, there needs to be a significant difference between rush hour and non-rush hour time periods. Although the pandemic has significantly impacted public transit it is essential to numerous employees during rush hour that the trains continue to come every 5 minutes during rush hour or peak times.

Would like to have a higher frequency during rush hours.

I dont see how this could possibly work during Nationals or Capitals games for example.Would this also include fully 8-Car train service throughout the day?

This is a great way to send Metro into a death spiral and force DMV residents to use private transportation alternatives. If thats the goal, shame on you.

we typically use service not during peak weekday hours (use it for 930a school start and 400 release)

Coverage of each station, even if reduced, is essential. Failure to provide public transit for customers to their workplaces would adversely impact low income workers.

Trains get crowded at rush hour and this will only exacerbate the problem

Rush hour frequency should be higher.

During rush hour there would be far too much buildup of people waiting to board every 30 minutes at stations that service one line.

30 minutes is far too long to wait between trains. If you miss a train, then you are just going to be totally late for work. Additionally, the number of people who would accumulate on the platform in a 30 minute window will definitely overcrowd the trains. This would definitely hurt commuters like myself.

I expect offices to reopen and ridership to be much closer to pre-COVID levels by Jan 2022 so I worry about the capacity of such few trains during rush hours.

This plan would be would disastrous on for not only myself but countless others who count on the reliability of the system to go work. This would negatively impact the economic security of Arlingtonians.

I use Metro to commute on weekdays as do many people, so there should be more frequent service M-F

It might be doable but could turn a 45 min commute to 2 + hours, at which point paying for a taxi may be worth the financial strain, and would further limit Metros income since I can see people who have the financial ability making that choice.

The only way for this to really work would be to accurately provide expected/real-time arrival times in some format (app, website, etc.) so that people can adequately prepare for getting to the metro close to train arrivals and not wasting extra time waiting. Trains would also have to be on time and not stray from these disseminated times

It's easiest to plan travel knowing a fixed schedule and the times are more conducive to a schedule that is not rush hour dependent.

To wait 30 minutes for a train is simply unacceptable. We might as well rip up metro tracks and turn them in bike paths.

If you wanted to save extra money with this plan, you could end service earlier in the evenings

30 minutes between trains would make Metro unusable for much of my use but given that I am on the Orange/Silver lines for much of my usage, 12-15 minutes between trains would work for much of my usage. This is definitely preferable to station closure.

Proposal to operate Metrorail service every 30 minutes

I cant even imagine how crowded the trains and stations will be if you are running trains every 30 min. The long wait time would definitely cause me to look for a different transportation method to and from work as the every 30 min would simply not work for me.

Need srvice on a more frequent basis

Trains should operate where waiting at major junctions (such as metro center) should be minimal time.

Once Montgomery county openS up to stage 3 I will be taking the metro every day

More trains during rush hour (like every 15 minutes) would work a lot better

This would not work for me because I will be unable to make it to work or workout classes in a timely fashion. This will be detrimental to my schedule and ability to travel efficiently because I do not have time to stand at a metro stop for 30 minutes waiting for a metro. This will then require me to resort to ordering Ubers, which will be very costly. This metro schedule change will hinder the capabilities for many lower/middle income residents of the DMV area to travel to and from work, school, etc. This change is elitist and discriminates against people of lower and middle socioeconomic status who cannot afford vehicles or Uber transportation.

It should be 12-15 minute frequencies. Have the Silver go only from Ballston-Ashburn if the expansion opens.

If wmata is charging for rush hour service then wmata needs to provide rush hour service.

The time tables would need to be flawless for this to work. With trains coming every 30 minutes, that train cannot be late or early - it needs to be exactly on time so people can plan.

MOre trains are needed during rush hour to avoid safety issues.

Too long between trains for transfer

Means if I miss the train, another one won't come for 30 minutes. That could cause me to be late to work or my high school aged child to miss dance class or her sports.

During the weekday, having single service line trains only run once every 30 minutes is going to make it difficult to commute via Metro for anyone who has to switch lines.

Why not maximize for rush-hour and weekdays when people are trying to get to work. As I choose between driving or using metrorail for my commute, The idea that I'll likely be waiting 15 minutes we're trying to arrive would probably be the same on the scale for me to drive many days.

As more of the population gets vaccinated and businesses start opening up over the summer and fall, I would expect a larger number of passengers to start commuting in at rush hour. I believe there should be slightly more frequent trains during peak rush hours (e.g. trains every ten minutes)

Keep the normal schedule- let's be honest public transit isn't in business to make money that's why private companies don't do it anymore

While I could change my commuting schedule to fit the new train departure times, I worry about overcrowding. If trains are too full, I may be late to work. I also worry about potentially having to leave really early for work just to ensure I can get on a train or arriving home very late.

Although it would be inconvenient, as long as trains are not too full to have people board then this would still maintain access to the same locations over the same times of day. Capacity is my biggest worry - if a train is overfilled then there is not an option to wait for the next one.

non rush hour could be reduced. service to distant end of line could be reduced but no worse than every 30 min

At least with this plan - you can plan! If cuts have to be made, fewer trains seems a good way to go.

During commute times (specifically in the morning and in the evening), 30 minutes between trains is simply not efficient and would essentially make the metro defunct for so many that relay on it to get them to and from work. If the metro cannot offer trains at the normal intervals it did pre-pandemic, then there will frankly be no point to it existing. We need a way for folks in DC to realistically commute post-pandemic.

I work out in Reston Town Center and plan to utilize the Silver line to commute to work. It would not be effective to have to wait for a half-hour for a train. My commute time would be increased greatly.

We will need higher frequency rush hour seevice

I do not use the metro at rush hour, but I could see how this option is not good for people who do.

Every 30 minutes makes Metro way less usable than its alternatives

This greatly increases the pressure to travel at specific times, already exacerbating tight deadlines, packed trains, and more. This will increase the gaps between those who can â€œpayâ€ for time and those who cannot. If trains run every 30minutes, those who can afford to not use the trains will not, leaving most vulnerable people stuck with a terrible system that does not reflect the needs. If I did not have to ride trains every 30min, I definitely would not. Those of us who live at the end of metro lines, where housing is cheaper, will become more disenfranchised as we will have less access to travel and flexibility. This is the most terrible idea I have seen from metro in all of my years living in the DMV.

These wait times would make it difficult for me to plan my work commute and get around with ease.

I have to transfer from the Red Line to another line. Unless I can time my arrival perfectly, this would add a lot of time to an already 1-hour commute.

Proposal to operate Metrorail service every 30 minutes

My remote work status ends June 2021, and am uncertain if HR would extend it.

I am on the green line. This would cause too much disruption of my rest. I propose trains every 15 minutes to get to a hub like fort totten then every half hour from there so its really 15 minutes to get a green line train then 15 minutes to get a red line train. Have trains go back and forth from single line end to hub and some go the full route to make it every 15 minutes to some train everywhere.

The reduced service would likely make me switch back to driving, once the pandemic is over.

Trains every thirty minutes, or even every 15 minutes, are impractical for commuting, given that we can't predict exactly when that will be. Even if we could predict, it would be a fundamental change in how we use Metro.

I would assume that the proposal would be reevaluated depending on social distancing guidelines and ridership? Fewer trains with more riders during rush hour in particular could be problematic in terms of overcrowding vs. possibly having to miss several trains before being able to board

Not having more trains during rush hour would probably make me late to work and possibly get me fired. Please reconsider.

During rush hour, it would be faster for me to drive if I miss a train and have to wait 15 minutes. The trains may also be too full due to the delays and would further delay my arrival to work. This change would cause me to not use the metro service.

I am worried with how crowded the metro will be once more people return to work with the limited train services.

It's ok if the train continues to stop at Grosvenor/ Strathmore.

This is a long wait period and would significantly impact my decision to take the metro

Im fully reliant on the Metro out of DC and use the silver line for my daily commute. This would make my commute basically unfeasible using Metro with these headways.

As long as rush hour arrival times are not adversely affected, I agree

Yikes, that's brutal. I don't have a car and rely on Metro for transportation. It would be tough to have to wait SO long in between trains.

This doesnt provide enough coverage for the amount of people who will likely be using the metro more regularly come January 2022. It would also force trains to be more crowded and people would likely feel less comfortable with what were all enduring with the pandemic.

A train every 30 minutes is okay, but the trains must be on time.

I need more trains running at Grosvenor metro in order to get to work on time.

Since I assume that by January 2022 we will have returned to normal these limits are being proposed to start at just the wrong time - when ridership will be increasing. I would find it very inconvenient not having longer hours during the weekend as well not having more frequent trains during rush hours.

This seems to assume that nobody will be returning to DC offices. I dont think thats correct. Numbers will be lower, but much higher than today. 30-minute intervals simply removes Metro as a reliable mode of transportation, and certainly rush-hour frequencies need to be higher than off-peak times.

Arrival times should be increased during rush hours. You can adjust due to ridership numbers but rush hours times should be more frequent.

I have tried to commute under a similar proposal and this turns a 45 minute commute into a 1.5-2 hour commute. I am not about to endure a commute like this on a daily basis.

Based on pre-covid experience, morning commutes would be unbearable because people at closer-in stops like Clarendon would be unable to board crowded trains.

More frequent is especially needed rush hour service during weekdays. I would be less likely to take metro at all if service was this infrequent.

It would be better if trains could run slightly more often during rush hour during the week.

I use the Metrorail to commute to work, and if I miss one train, I cannot wait half an hour for the next train without infuriating my boss.

As a Washington, DC tour guide with hopes tours will begin again, this proposed schedule would be a nightmare in order to meet up with groups at various destinations supported by Metro.

I can get to most of the places I need in less than 30 minutes in a car... this makes metro essentially worthless to me.

Even 15 minutes is far too long to wait for a train during peak times.

Concern that ridership will drop if Metrorail is unable to meet a reasonable schedule for some people.

I have been a Red Line customer many years and live near Grosvenor, however, I recently started commuting out of the area where Metro service does not extend. Changes to Metro commuting schedule no longer affect me.

30 minute wait times for a train would cause me to just drive instead of taking metro.

If I resume commuting I think that my station will be too crowded on the platform at with 15 min. Probably 10 min would work

I need more frequent service. I've been paying tolls to build the Silver Line, I expect to be able to use it.

Proposal to operate Metrorail service every 30 minutes

Maybe initially but this will have to be evaluated monthly as ridership increases. Packed standing back to back trains will not be acceptable due to fears associated with COVID and you will lose riders. You will need to build confidence again

Not frequent enough. Trains will be packed when the world reopens. They were packed on the previous schedule. This would discourage me from riding metro; but many do not have another option...

Service should be most frequent during rush hours.

Having to wait 30 minutes for a train would effectively remove Metrorail service as a viable transportation option.

need greater frequency at rush hour

For most events I use Metrorail for, this could be made to work, but would be inconvenient. For friends in my area who need to get to work, this would be a burden.

More frequently please. Also, if cars crowded, increase frequency

I understand the purpose of this proposal due to low ridership but many of us still rely on public transportation. Please find a way to keep the system as is. Thank you.

It is too early to say if it would work for me or not. During quarantine I was not going to the office; however, there are now plans of safely returning to the workspace in the next 6-month period. Dont know what the plans are for WFH for more than a day a week (which was what was being offered before the pandemic). So if I have to commute to work (Bethesda) from home (Van Dorn), the arrival times in the red line would definitely have a negative impact on my commute.

sounds reasonable.

Service every 30 minutes is pretty much useless; I would switch to other modes of travel. My station happens to have multiple lines. I could live with every 12 minutes.

I would have to allot more time everyday for travel which would be inconvenient to say the least but would rather have this option than pure closure.

For me it is much more important to have faster service on weekdays than on weekends. I would prefer cuts to weekend service. If there are service cuts on weekdays, more people will drive, which will exacerbate traffic during rush hours. For this reason, metro service is vital during rush hour for drivers and metro riders alike.

I think having trains arrive every 15 minutes during rush-hour would make trains even more packed and really mess with schedules. Ive always appreciated Metros reliability during rush hour times. I think it would make sense to increase times between trains during non-rush hours, but there should be a decrease in times during rush hours.

Trains would get way too crowded

There needs to be increased service during rush hour. Prior to the pandemic when Metro was my primary mode of commute. I will resume using Metro this year once I am vaccinated. This city needs Metro!

This example does not provide the counterfactual (i.e., the status quo) as a frame of reference or baseline alternative solution, so its difficult to assess whether the alternative proposed above is a significant change to existing policies.

It will make it so that there is less leeway but hopefully will have minimal impact unless capacity is too high which then would impact as it could delay travel.

Commuter rush hour trains were already crowded enough, and this could cause significant work arrival delays if commuters at the end of a line miss a train and have to wait half an hour until the next one

There must be increased trains for rush hour, e.g. every 5 minutes for stations with multiple lines.

While it would work for me, I imagine the trains would be too full, especially during rush hour, to accommodate everyone.

this would totally eliminate Metro as a viable commuting alternative for me....and it is my commuting method

This plan would potentially interfere with getting back to the office on time - assuming that by then we will be working in our regular offices

It is essential under this scenario that times be predictable and accurate, so we can plan accordingly. Otherwise it would be very difficult to use the service.

frequency is too low during rush hours

I dont work a 9-5 gig, but knowing the schedule will be consistent is convenient mentally

Would increase work commute time if not planned properly

If the DMV area were to reopen fully in January 2022 rush-hour would be impossible for people who use the metro. I still think there should be differences between rush-hour and non-rush-hour times when the trains arrive.

Need full service at Grovesnor metro.

Could require up to 90 min commuting time each day with waits of up to 30â€¢@ each station/tranfer point

Cutting service isn't the way to increase revenue.

Proposal to operate Metrorail service every 30 minutes

WMATA is striving to make strategic plans and satisfy multiple stakeholders during the COVID19 pandemic. At best, a difficult job, given obvious uncertainties about future transit needs and commuting. Given current exigencies, the proposed service plan strikes an excellent balance for all involved

As long as the metro still arrive at Grosvenor Strathmore then im good

There needs to be more frequent trains during rush hour

This would be a large inconvenience because I wouldnt just show up and wait for a train. I would time my arrival using electronic tools that show when the next train is coming.

30 minutes is too long to wait on a regular basis

Note that metro is a key public transport element. I am not sure what the demand for Metro rail services will be in January 2022 but with the largescale rollout of vaccines this summer, I trust demand will increase significantly.

On my way home at the end of the work day, I have a very tight transfer to a commuter bus. This length of gap between trains (for me, 15 minutes due to the stations I use) would likely make me consistently miss by bus.

30 minutes is a long time to wait at an outdoor station in the freezing cold/blazing heat if you happen to miss a train.

Im a daily metro and bus commuter who lives in MD. If trains were this infrequent, I would be unable to commute anymore. My commute is already an hour, and i could not have it get more unpredictable or longer.

It would take me over an hour if I miss one train.

Do not close the Grosvenor-Strathmore station.

This is a horrible idea and incredibly inconvenient to all Metro users who require it as their main method of transportation to their jobs and universities.

It's my closest Metro station, and of all the other area stations, it's the easiest to park, and is on my bus Route as well.

As long as there is a way to determine when the next train arrives, this is something that seems to be doable.

Trains are already incredibly packed during rush hour pre pandemic. With vaccinations and the possibly of going back into offices early next year. Platforms may get way to crowded. This is a decent proposal until maybe mid 2022, but I don't see it working once we get back to "new" normal

Late night service, especially on the weekends, is important to me.

This is a direct and negative impact to my ability to arrive to work on time as well as any person appointments I have.

In order for Metro to increase ridership it must decrease wait time between trains.

Probably would work, since my home station shares two lines (Blue and Yellow) and service was spaced and predictable. Would not work if service was only every 30 minutes for both lines combined

This long between rush hour trains could significantly increase the length of my commute, since I rely on a shuttle from my community to the metro station.

30 minutes between trains is much too long for commuters to wait.

This schedule idea is more like a regional rail than a city metro/subway concept. It would work for me, however, with trains 30 minutes apart, it will be very important to depart a station no earlier than a scheduled departure time, almost like Amtrak... we have to know that if we arrive in time for scheduled departure that we wont miss the train. Waiting another 30 minutes because a train left earlier than scheduled is not acceptable under this concept plan.

This schedule of trains is so infrequent that it would be impractical for most workers: anyone with a schedule, childcare dropoff/pickups, connecting to buses etc. Given metros unreliability (trains rarely come when planned), it would be hard to ensure arriving on time.

Union Station is just one stop down - my stop - so does that mean I might have to get off at Silver Spring and wait 15 min for the next train?

These headways are insufficient.

I would regularly take the orange line from the end station to Clarendon, which would be challenging to time with work and Fairfax bus schedules if there are 30 minute headways

Once things open up and more people go back to work in the office, this frequency of trains will not be enough.

With the more frequent trains during rush hours in the past, the trains were still incredibly crowded, reducing trains during rush hours makes no sense and would be dangerous given the pushing and shoving (people stuck in train doors that surprisingly closed ON them) that already occurred with more frequent trains in rush hour.

The pandemic recovery is upon us and people will be going back to work and tourists will come back before you know it. Running less times and stretching out train times a year from now discounts the idea that ridership levels will indeed return.

While obviously it's possible to adjust to any schedule, I personally think that tailoring schedule to the rush hours needs (and vice verse) yields more benefit to both metro and and its riders. Without frequent train departures during rush hour, people will accumulate on platforms, creating unsafe circumstances.

Proposal to operate Metrorail service every 30 minutes

Works for me, but likely does not serve essential in-person workers well.

I am concerned about the decreased frequency of red line trains at the edges and no additional trains during rush hour.

If you have the expected return to ridership- this plan is a disaster. There will be massive crowding on the platforms, and it will not be a viable commuting solution.

Depends upon what hours trains were running.

Changing the time simply mean I have to adjust to the schedule but closing stations is absolutely not acceptable.

May be difficult to accomodate rush hour traffic.

I take Metro almost daily, it would completely make taking metro to my job almost impossible or exhaustingly long

Clarity and accuracy of scheduled arr/dep times would help greatly.

I am retired and for me, having a reliable known schedule is the most useful feature of this proposal.

It may work with my scheduling needs. It would be a little less convenient, but I don't want Metro to do away with service.

The commensurate crowding on platforms needs to be taken into consideration. Ventilation, social distancing, if needed and crime could increase with outsize crowds

I commute into/out of DC in non-pandemic times. I need Metro that actually works during rush hour. If I miss a train by a minute and have to wait 29 more for the next, assuming they're on time and don't bunch up, that's unacceptable during rush hour.

Shady Grove has alot of riders. It would be great if the trains will go to the end of the line rather than stopping and hopping off.

30 minutes is too long to wait

Need higher frequency, 30 mins is outrageous for single arrival station

Waiting 30 min in rush hour would make metro less convenient and more crowded once people return to work.

Waiting for 30 minutes between trains is not good government. Make the trains every 15 minutes

All should be every 15 minutes. Or would every 20 minutes work?

not frequent enough.

This is a preferred cost-cutting measure. Especially, this is preferred if it is done equitably among the potential ridership.

Reducing the frequency of trains during rush hour periods would lead to untenable overcrowding, delays and other challenges that would make it impossible to rely on metro for commuting.

My daughter rides the Metro to and from work each day from East Falls Church Metro. If trains come in 30-minute intervals during rush hour, that could cause her to be late to work or having to wait extra time after work. It would also crowd the cars.

This is confusing&I cannot tell.

I would need more service at rush hour. Would Wheaton Station be on a 30 minute schedule? The schedules would have to be more regular and predictably on time.

At the current rate of vaccinations for COVID-19, the majority of the willing population will be inoculated by sometime late this year. While some employers appear to be embracing the digital transformation with allowing employees to work from home indefinitely, many are not, including much of the federal government. As we trend toward more and more commuters resuming the utilization of WMATA services, a reduced train frequency may very well lead to a situation where capacity is exceeded. Given that I plan to commute by WMATA rail on a single line rail, this will directly impact my ability to reach work.

if too infrequent then i may opt to take another mode of transportation. also concern with overcrowded trains.

Assuming ridership remains at COVID levels, this might be possible, but even with the pre-COVID rush hour schedule, you could see two completely full trains go by before even being able to board the next train at East Falls Church. This approach seems likely to kick off a ridership death spiral.

This would probably work as long as there is no rush hour effect when the incoming trains are too crowded to board (like snowy days in the past).

Once folks are vaccinated and need to go back to work, service will pick up and running every 30 minutes will not work.

It is egregious and unfeasible. Metrorail cannot implement these changes without causing a drastic increase in overcrowding and an overall decrease in mobility to commuters in the DC area. A rapid transit system should have a headway of 3 minutes between trains per line at the very least, and a headway of 30 minutes is completely unacceptable and utterly shameful. Even the current Metrorail headways are pitiful. Metrorail should pressure congress to get a larger operating and capital budget to operate trains at 3-minute intervals in non-rush times and 1,5-minute intervals at rush hour, in order to match up with the worlds premier rapid transit systems and keep the DMV moving.

Dont travel weekends

Proposal to operate Metrorail service every 30 minutes

Every 15 minutes on the red line during rush would lead to more crowded trains, which would make me nervous due to the pandemic. Even after the pandemic is under control, I still wouldn't want to be in such close quarters with others.

With such a long wait time the trains would be full and youd have to wait another long stretch for the next train

I plan to be commuting by metro again by Jan. 2022. My nearest station is Ballston, and a weekday schedule that has trains only every 30 minutes would be disastrous. I think it would deter many people from starting to take metro to work again--ironically driving ridership away at a time when many people will be wanting to use metro again.

The proposal would impact my work schedule and life. Vaccine is going on and people will bank to business soon. Check the increase is ridding every day and it would reflect it.Thanks

post online the train times so we can arrive shortly before a train arrives & not have to wait 30 minutes for a train

We hope with the control of the pandemic and the virus we go back to normal. I am expected at work in DC so I will need to resume using the metro to and from work. I also use the metro to go shopping as I live close to East Falls Church metro and I am an advocate of public transportation and reducing use of cars as possible

Too infrequent. Would buy a car if this happened.

If the metrorail becomes infrequent enough, it would make more sense to take a bus or Uber.

Id rather sacrifice frequency than stations

In non-COVID years, during rush hour, trains are already at capacity with a more frequent schedule. I dont see how 30min trains could possibly accommodate all commuters during peak times.

Especially with the pandemic it is important for people to get to their destinations without more crowding, and keeping socialdistancing

I would rather pay more to take a car service somewhere than wait up to 30 minutes for a train

I am lucky enough to live on red line

This proposal would greatly increase commute times and almost certainly depreciate ridership, making the Metro further spiral downward for service. This negatively and significantly impacts the lives of riders (like myself) who are reliant on metro to get to work by adding time waiting for trains that would otherwise be spent with family.

OMFG!! This is stupid.

In this scenario it is imperative that there are set times and the times are reliable in order for riders to plan their arrival times at stations to catch the train and trains cannot leave the station early even if they arrive a few minutes early.For example if a train is scheduled to leave the station at 6:24 am, it cannot leave the station at 6:20 am. It must wait until 6:24 am.

As the world reruns to normal, this would drive riders away. With those gaps between trains, the cars will be disgustingly and dangerously crowded.

The timing delay between trains is not ideal but it is important to keep stations open and service regular/dependable

We will get over this pandemic in 2022. If I am to use metro it needs to be working in a manner that is feasible. If my commute time increases by half an hour due to wait times, I will opt out of using Metro at all.

Trains should be more frequent at rush hour, and should run later on weekend nights.

I can work with any time schedule, but metro may be packed in the morning when people return to work.

I use the Red Line between downtown and Rockville and I expect, once COVID is under control, having trains arrive every 15 minutes would mean that too many people would be waiting for each train. Potentially meaning a wait time of 30+ minutes if you arent able to get on the first train that arrives due to the crowd.

If it means stations dont close, I would be willing to deal with less frequent train arrivals.

Too much waiting time, especially outdoors in winter months. Hard to time arrival at station to get anticipated train.

Trains every 30 minutes would make a morning commute nearly impossible without leaving my home/arriving at work significantly early or late.

During rush hour times, this would lead to extraordinarily crowded stations and trains -- I have had the experience of not being able to get on trains at rush hour when there are 8 minute head times! Unless trains were reliably running on a published schedule and the connections worked out, this would also lead to me avoiding using Metro when a connection would be necessary (e.g., going from red to yellow line). I mostly avoid metro on weekends because the long head times mean it is an unreliable way to get places ontime -- this would extend that to weekdays and would not meet my needs.

At the very least, more frequent trains need to be implemented for rush hour periods in the morning and evening. This proposal could mean the difference between not being late for work or severely being late for work, which will impact lower income communities who often have hourly shift-based work instead of exempt salary work.

Proposal to operate Metrorail service every 30 minutes

The success of such a proposal depends upon the trains arriving on time according to the new schedule. There still seems to be trouble with this, so planning a trip is only theoretical and often fails.

half-hour arrival times do not suit someone who is commuting to their job downtown. more trains during rush hour are needed especially once normal commuting patterns to the office begin.

If we go back to the office, this will condemn us to driving and clogging the roadways again. Or a permanent work-from-home model given traffic.

There may be times when this would make taking Metro less attractive to me. For example, if I can get somewhere in less than 30 mins driving, I wouldnt want to have to wait 30 minutes for the next train.

This literally makes no sense. To not differentiate between busier times (weekdays vs weekends, rush hour vs rest of the day) seems like a bad idea.

Hate to see the long increase in times between trains, but would favor as a temporary cost-cutting measure.

I am wondering if the schedule can be based on taking counts of passenger use and then base decision on schedule for economical way.

I'm concerned about the long wait times but even more overcrowding. Before the pandemic, the trains were so crowded on the morning, I sometimes would have to wait for one or more to board one. With trains every 15 minutes, the cars would be even more crowded.

This would lead to both crowding in the stations and me having a much longer commute time from U Street to NOMA, especially due to the timing of connections. There is no doubt in my mind that this would lead me to take Ubers, Lyfts, and taxis much more often.

Need more frequency

This would allow me to still get to my desired station for work, but I'd be worried that the trains would be more crowded, as would the station, which might deter me from using Metro.

It's nice

During rush hours this could create dangerous situations on platforms.

Rush hour would make the commute impossible, would not be able to even board the train

I would prefer more frequency

The required transfer, from residence to work putting my schedule would put my work commute too much at risk. I'd have to find another means

Once more working age people are vaccinated, ridership will increase dramatically. Even if people don't go back to work 5 days a week, they will work on site at least part of the week, and they will still start taking metro again, in their personal lives. So I don't think this change in Jan 2022 is necessary. If you're going to change, do it now, while most working age people are still unvaccinated and scared to take metro. Then you can go back to more regular schedules in Jan 2022, once we're all vaccinated!

This could work if employers continue to permit home working and ridership remains significantly down. But not if employers expect a general return to pre-COVID office work
lengthy wait will drive away riders.

I can't gamble with waiting this long for trains.

For someone that usually take two trains, if you miss one is 20 minutes but if you miss your connection another 20 minutes? 40 minutes delay for a ride??

That is not frequently enough, needs to be under 10 minutes. Especially since delays happen so regularly

Commuting during rush hour is likely to be very difficult given pre-pandemic trains were at maximum ridership often during morning and evening commute

The 15 minute wait time will probably increase my daily commute time and in addition the trains will be more crowded, which is probably not a good thing in order to cut down of the transmission of germs.

As more people return to tourism and outings, the likelihood that trains will be overcrowded grows. This is inconvenient and possibly unsafe.

If the region is fully vaccinated, and most workers are back at the office, then this level of service would not be frequent enough during rush hour. In other words, during rush hour, this level of service might not be frequent enough to keep passengers moving to and from the office. In addition, this Proposal would likely discourage customers from returning to Metrorail and would encourage use of personal automobile and/or Lyft/Uber.

Under normal circumstances, trains arriving every few minutes on the red line during the work week are packed. People will return to work in large numbers and this level of service will cause chaos.

It is likely that come January 2022, commuters will have increased again. During rush hour, trains arriving every 30 minutes would be completely inadequate.

Rush hour still exists and people still have work. Most people need rush hour schedule so we can get to work on time

Would not work at all.

30 minutes apart is far too long

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| This is better than not having any service during the evening hours, but could likely increase my commute time if the timing of the metro doesnt line up well with the timing of the shuttle I take to work from the metro since that shuttle only leaves every ~30 minutes. |
| If ridership returns to pre-pandemic levels, this frequency of service on the orange line would make it such that trains would be too crowded to take on additional passengers as the trains pulled into Arlington stations closer to the city--between Ballston and Rosslyn. The proposed frequency would eliminate the option of waiting 2-5 minutes for the next train versus cramming onto the one at the station. Orange Crush+++++. It would send passengers to ride service options, adding to traffic. |
| I commute to and from work via bus and train. This would significantly increase my trip time. |
| The schedule works as long as the train is on time or the app can provide accurate status of coming trains. |
| If we want people to use public transportation we need to make it accessible and convenient. |
| Yes, as long as the timetables were made clear and any changes (delays, etc) were made readily available on an app or something. The key, to me, is being able to time my walk from my house to catch a train within a few minutes, so if it arrives at a station early and then leaves early - thats a problem. Basically, if youre going to run trains every 30 minutes, they can not leave the station early (like an overground train). |
| I know more people will be working from home post-Covid. But I still see a lot of people going to the office either by choice, mandate -- or even a just need to go back to normal. Half-hour arrivals during rush hour will create a backup, I believe. I can live with half-hour arrivals during non rush-hour times. But something faster -- every 15 minutes, maybe? -- during rush hour makes more sense. |
| Once COVID restrictions are lifted, I would expect rush hour demands would return to the same or near the same demands as before COVID. To not have more frequent trains during rush hour as before COVID seems like it could lead to overcrowding. If trains were to arrive only every 30 minutes, then it would difficult for riders unless there was a schedule that was as strictly adhered to as possible, unlike how the metro typically operates re scheduled vs actual arrival/departure times. |
| Yes, until the pandemic ends, at which point more trains are needed especially on the green and blue lines. |
| Weekend service should be brought up to the level of weekday service, not weekday service brought down to this level. This makes the system virtually unusable if a change of trains is required. I will choose to drive instead of taking Metro in 100% of situations if this change is enacted. |
| This would make it almost impossible for me to get to and from work as a disabled person. Utilizing the metro would add hours to my commute. I would have to find another way to get to and from work safely. |
| When I have to wait up to 30 minutes for Metro, it becomes significantly faster to drive. |
| I travel from Silver Spring to NOMA for work and I expect to be going back to the office starting in January 2022. A train every 30 minutes would severely hamper my ability to plan my travel plans and will result in overcrowding in the trains during rush hour. There should be increased trains during rush hour. |
| Rush hour trains will be overcrowded and less people will be interested in taking the metro on nights/weekends which will increase traffic congestion |
| I plan on moving from DC to Richmond, VA. I will take the VRE in. If I miss one train, I have to wait an additional 30 mins for the next train. Because of this, I will need to allot an additional 1 hr into my travel schedule each day I go to work. This really reduces work/life balance.This is also a hindrance of equity among riders. |
| So long as arrival times online are accurate, this could be planned around |
| What does this even mean? Trains would arrive every 30 minutes, except at stations with more than one line, theyd arrive every 12-15 minutes? Which trains? Are you assuming all trains at Rosslyn are interchangeable? When Im going to Franconia, Im interested in frequency of that train. Please explain this more clearly. |
| Running of trains every 30 minutes with the current wait times at the station are impractical. Additionally, Silver line trains already face overcrowding during rush hour traffic. Therefore, fewer trains overall would only exacerbate the problem and make individuals uncomfortable in a post-COVID world. |
| I use the metro during rush hours to get to/from work. The trains are always crowded during these times. I think people will use their cars rather than wait 30 minutes for an extremely crowded train. |
| It seems like this would be a disaster as people start having to go to work in person again. Everyone would be late to work and appointments all the time. Any issues from potential unforeseen delays would be compounded. |
| This is far too slow and would make me just not use Metro at all. It is faster to bike than to wait 15-30 minutes between trains, especially with transfers. Ultimately, this will hurt people who are physically unable to use other forms of transportation as well as those who are not wealthy enough to afford alternatives (particularly in the Green & Yellow line areas). |
| This much time between trains would impact my ability to plan for arriving at work on time. Likewise it will adversely impact my cost for childcare or even cause problems with me finding reliable childcare. |

Proposal to operate Metrorail service every 30 minutes

The metro is not a train service like Amtrak. Is a metro to move people around, and keep people out from driving. Any other country capital Paris, Rome, etc has a better system than ours and older than ours. Why you have never been able to give a good service?

It's unclear how many days I'll have to commute from Arlington to DC. If trains are consistently over-crowded I would find an alternative travel method.

Ridership is different on weekdays and weekends. Consideration should continue to be given to these differences.

This is a wide time gap between trains, and would not work during rush hour when many people are relying on trains. Trains need to arrive every 2 to 3 minutes as previously done, not every 15 minutes! If I miss a train or two because it is packed, I'm late to work!

I think for individuals who regularly commute to work that is not possible to be done remotely, every 30 minutes is not frequent enough

It makes more sense to run more trains during rush hour and less after hours and on weekends

This is not frequent enough. Trains should run more often, particularly during rush hours.

By 2022 we might be going to work? This plan would not work if metro demand was like normal. Trains every 30 minutes would not work to commute. This would basically eliminate metro as an option for me, if I ever need to commute again. So who knows.

Proposal does not seem to take into account what the needs will be, once people return to work, new businesses replace old ones, and the economy improves..

While I'm still working at home due to the pandemic, that's fine. But when I return to work, 15 minutes between trains is a long time.

Fifteen minutes makes a big difference when you are also trying to connect to bus service. This would cause me to miss my connections and prolong my commute

If you had to make a cut, this is better than nothing. When the pandemic is finally over I would be worried during rush hour that it would be crowded.

Every 15 minutes is too infrequent.

30 min between trains is far, far too long regardless of the day of service

We need the metro running constantly because there is a lot of passengers

I don't believe the proposal you're describing (i.e., stations with more than one line) covers GL/YL stations north of Mount Vernon Square. As a D.C. resident who relocated to the Columbia Heights neighborhood so that I would have access to two Metro routes, I feel slighted in Metro's proposal to reduce GL/YL service despite living in the most densely populated neighborhood in D.C., I will have access to one service line at 30-minute intervals. That's totally unacceptable. If I were to take the Metro to my office (near the Dunn Loring Metro station on the OL), I could wait 60 minutes for two trains (in addition to the 40 minutes spent on a train). Ridiculous.

I only use Metro occasionally for commuting so I wouldn't be very impacted by the reduced hours.

The 9 PM closing time is unreasonable.

The timing itself would be ok, but I think this would cause massive crowding as there already wasn't enough space on the existing trains to accommodate the crowds before the pandemic. As someone who (pre-pandemic) took the yellow/green, red, and orange/silver lines to work every day, I already encountered full trains and would have to wait for several to pass in order to get on. This resulted in me being late to work when trying to catch a train at 8am. Also, there should be some kind of accommodation for the extra crowds that appear during tourist season.

30 minutes is a long time. Maybe to increase the time for, 12-15 mins to 17-20 mins

Rush hour trains will become needed after the pandemic. I believe that ridership will go up after everyone has been locked in.

Why would you decrease ridership during rush hour? Why would weekend and weekdays be the same? More people commute during the week for their job and rely on metro. Increasing wait times will not go over well, and will lead to decreased ridership

Train gaps too long. Needs be difference betw rush/non-rush.

Every 30 minutes is too infrequent! It should be like 8 minutes in between trains.

If the metro only ran every 30 minutes, it would make it very difficult to accurately predict when I could get to work.... and if I could get there on time once things open up.

The 30 minute arrivals would not coincide with my work schedule.

With the amount of people who will be vaccinated by January 2022, it's hard to determine what our lives will be like in January 2022. Will more people have returned to office by then? It's hard to predict 10 months away. If more people are going into offices, and then Metro reducing train frequency, then people could be on crowded trains, which poses additional problems.

I have been working from home for 2020 and will be for most if not all of 2021. However, our office will reopen in 2022. If trains arrived on a specific schedule and stuck to that schedule, this would be doable if not desirable for me for work (commuting from Old Town Alexandria to DC). If trains did not arrive on schedule, this would be a catastrophe. It would be incredibly inconvenient for casual use locally. It would likely decrease my ridership to stops within 2-4 of my home stop.

Proposal to operate Metrorail service every 30 minutes

After covid, rush hour would resume. The platforms will be crowded, the cars will be crowded. Waits for trains will be unreasonable. This is shameful and no way to run public transportation.

Metro needs to make sure that as things opens up and services starts to grow that getting places quickly improves.

This is an unacceptably low level of service for our nations capital. People who rely on the services will be forced into longer commutes. It will hit the lowest paid essential workers the most. This proposal is offensive. Having no increase at rush hour makes absolutely no sense. This would force more people to drive, leading to more road deaths and danger to pedestrians and bikers.

Be flexible to change if this plan doesnt work well

This is not convenient. If you miss a train, you would have to wait another 30 minutes, not conducive for wanting to ride train. I think this may force more people to drive, which is not helping the environment. Since this will be an inconvenience for most riders, will trip prices decrease.

It cold outside be careful the plans

When everything returns to normal operations, this will cause immense overcrowding at busy stations. Overcrowding at stations was bad during rush hour, if you run even fewer trains, it will be out of control.

People in Washington DC your lawn and measure to get them places especially people of color in low income people who do not have this wrestling come to use a ride sharing apps and or other means of transportation. This proposal well further delay them and make them have to either travel longer distances or wait longer times to even get to the work and then therefore make them wait and get them in trouble at their place of work

Adding extra trains during rush hour would be good.

Given how crowded trains during rush hour already are, this could make it impossible to board. In addition, for those who take a bus to a metro, if the bus is delayed by even a minute, then we could spend forever waiting for the metro. This is extremely problematic for those that have tight schedules, for childcare pick-up, etc.

30 minutes is ridiculous to wait for a train at any time - especially for commuting or taking trips. That poor standard of service would make it so much harder to go downtown or to other parts of DC/DMV for fun or errands.

Trains arriving and departing with a frequency of more than 10-12 minutes would have a significant negative impact on my commute.

Would this option be re-evaluated if the pandemic affect lessened?

Why does our nations capital have to suffer with sub par public transportation, while the rest of the developed world moves ahead without us?

I use Metro to commute to and from work. If train arrival is delayed, my commute would be more difficult and unreliable. The train would also be extremely full at some stations.

Employees at my work depend on Metro to get there. This will make their commute even longer than it already is. 10 minutes is the longest time to wait for a train.

The timing of trains is why I ride Metro vs drive. The problem with this proposal is that a single train with an issue is going to cause 30 minute delays during rush hour. The number of cars needs to accommodate the significant increases in accumulated passengers at each stop, too.

This could easily force me to buy a car due to work commutes, cutting my use of the metro almost entirely.

I would like more trains, more often during peak hours. The trains are too crowded during rush hour.

This will just make the trains more crowed

This would not work during morning and evening rush hours when train cars are packed!

The red line is not the area with the most need, just the most wealth.

This makes no sense if rush hour comes back

While this plan would work for me given expected exclusive use of red line trains in the downtown corridor, I greatly worry that headways of 30 mins elsewhere in the system will exacerbate ridership declines. Such delay with only serve to drive riders to other transport options (rideshare, private vehicles, etc.). I strongly encourage closing low volume stations over further extending headways.

I'm concerned about ocercrowded trains during the day if they are only running a train every 12-30 minutes

This would make Metro a risky morning method of commuting.

When two or three lines operate on the same track the headways need to space out...for example, at Ballston the arrival of Silver and Orange Line trains should be 15 minutes apart.

I use Grosvenor-Strathmore so as long as that stop is preserved, this works for me.

I would probably take Uber or Lyft if I needed to wail 30 minutes

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| YES - I would rather wait longer for a train than have my station closed. |
| It would be difficult but workable. |
| A year from now ridership will have continued to increase and therefore more frequent trains will be required |
| Need more trains at rush hour |
| Everyone would have access to metro which is what is important |
| By January 2022, commute levels will have increased back to normal and this would lead to nose-to-elbow crowding on trains. Unsafe and unpleasant. |
| Trains every 30 minutes during rush hour makes no sense. |
| We use red line often |
| Its crazy. There is more demand in rush hour. Have more trains in rush hours and fewer in off-hours. Its almost as if you are coming up with purposely STUPID ideas to kill off metro. Please bring in someone competent. |
| In 2022, my husband and I will be commuting from College Park to Chinatown during rush hours Monday thru Fridays for work that requires us to keep to a schedule in order to keep out jobs. Also, we have a child who requires being picked up from daycare at a specific time in order for us not to be charged extra. Our places of work will not provide us with parking (whether it would be free or an extra expense). Before the pandemic, it was difficult to get a train from Chinatown to College Park during the evening rush hour. We need the metro to run more frequently during rush hour in order to keep our jobs, and this change will impact our livelihood (jobs and finances). |
| This would work for me by providing consistency of service for Metro. It would be nice to know that trains arrive at every 15 minute mark (or whatever time it would be for the closest station to me). |
| This would significantly increase my commute time. Its workable, but not preferable (unless the other proposals are significantly worse). |
| Concern about overcrowding of trains during peak times with that low frequency of trains |
| I need the courthouse metro available. I depend on it on a regular basis as I cannot telework and it would be more than difficult to leave from any other metro. I bought a condo specifically to be less than two blocks away from a metro. People who have no concern over getting a paycheck shouldn't be making these decisions for those who are concerned about their next pay check. Disgusting abuse of power...again from those who currently have no worries about their paychecks. Many need Courthouse metro open. Don't close our metro!! |
| We rely on the metro for work and play. If we knew the times of the train, we can plan accordingly . |
| If the idea to continue ridership then a train every 30minutes is not going to work for me personally. I cannot afford to have a train leave early or late or be forced to wait for 30+ minutes for the next train. |
| Trains should arrive at least every 10 min during rush hour |
| 30 minutes is ridiculous for a weekday rush hour. By January life should return to normal...schools open, museums open, and businesses requiring more workers to be in the office by 8am. Increase time frequencies in the am/pm to accommodate rush hour. If you need to do cuts, do 30min during the weekday or later at night. |
| This is all very short sighted, the reason for the drop in ridership is known. Once we are out of the pandemic and people must return to work in the city, without more metro availability the traffic jams will become unbearable. |
| I live in Wheaton, and this would be horrible for my commute. |
| When it is time for us all to get back to offices, if trains run only in every 30 minutes how are we going to get to offices on time? It will be impossible to keep using public transportation. Because the congestion and to escape from it, less people will use the metro eventually it won't help the budget... on the contrary, especially because the pandemic will still not be over, there should be trains running more often... |
| This is not sufficient for the increasing ridership demands in 2022 once the pandemic ends, more offices open up again and people who have been teleworking remotely for 2020 and 2021 due to COVID go back into the office. Additionally, once events open back up to the public with fans/attendance, ridership will increase and the demand for metro will be back to normal levels again, especially during peak hours. |
| I am retired, so this would work for me. It is not a workable solution for workers " especially working parents " who rely on Metro to commute to/from work. |
| Even on the red line with increased service, compared to other station, this would mean such back-up at stations that you could wait hours and not get on a train. |
| It looks like metro is looking to serve white areas more frequently notably excluding service from one line areas thus impacting low income families negatively. |
| Would need more frequent trains on the yellow line in order to get back and forth from work. |
| commuting and arriving places on time would be near impossible |

Proposal to operate Metrorail service every 30 minutes

Enter system at Shady Grove: if trains arrive/leave every 30 minutes then this could be an issue, especially during inclement/cold weather, as often the timing is actually closer to 35 to 40 minutes (or longer, if there is an issue).

My commute from Georgetown to Petworth already takes at least an hour, and that includes depending on Circulator.

I expect to return to an office and regularly commute by January 2022. A 30 minute wait for trains and likely crowding once aboard would be unsustainable. I would drive to work instead.

Up to 30 minute waits on both the morning and evening commute can add up to an hour additional commute time. This is way longer than pre-pandemic. If ridership levels return this will mean trains not being able to let everyone on.

Every 15 minutes between trains on the redline is beyond ridiculous. Chicago, New York, and every city with a major public railway never runs this rarely with these few of train lines.

If trains only come every 30-minutes at rush-hour, it may be very difficult to get on a train. While the number of trains may need to be reduced, there should be a higher frequency at rush hour (morning and evening times), Monday-thru-Friday.

I plan on using transit again as soon as COVID cases have gone way down due to vaccinations. I think by January 2022 we would be using transit a lot again. The large headways and closed stations would make this an unattractive way to get around, and discouraging people from utilizing transit rather than driving.

This would be a challenge for commuting parents because if we miss the train by one minute (or if the train comes but is too full to get on!) then we have to wait 30 mins longer minutes and that's a huge gap given everything that needs to get done after work for families. I'd rather have fewer metro stops open than fewer trains.

If you make people wait over 10 minutes for a train the platforms get over crowded as well as the trains.

This is too big of a gap between trains.

Rush hour trains can be at capacity. Waiting another 30 minutes for the next train is not acceptable as it might also be at capacity.

There needs to be more trains during rush hour - every train is usually packed during rush hour on the orange, silver, and red lines. Without increased arrival times during rush hour, it's going to be overwhelming.

Having trains 15-30 minutes apart at rush hour creates a scenario in which the stations fill up with riders and then try to flood the cars to avoid another long wait and if you miss that train you have to wait 12-30 minutes for another and before you know it, you're an hour late to work. And if you're that unfortunate, the station will flood with riders while you wait for the second train and you might get on or you might not and if you don't you have to wait another 12-30 minutes for another train and now you're an hour and a half late for work. This is an awful idea.

This might work for me, but any delay or service disruption would make it untenable to take Metro to any appointment in off-peak times. I'd have to rely on bus or ride share to get someplace on time. I also wonder if peak/rush hour ridership would make Metro so uncomfortable I'd find other means of transportation.

This will make rush hour on workdays incredibly crowded.

If trains only arrive every 12-15 minutes, even during rush hour, the Stations will become overcrowded and the situation will likely become dangerous. Pre-COVID, numerous Stations were already extremely crowded and people would have to wait for several trains in order to get on a train due to crowding.

Doesn't seem wise to not differentiate between rush hour and non rush hour. BUT do not assume rush hour is 9-5.

The metro is very important for to commute to work every day, without it would be really hard coming to work. I believe the train station in east falls church helps many people travel to work and to other places too.

When we return to our office full time - currently only traveling to the office two days a week - I will be taking the Red line from Shady Grove to Metro Center daily. The situation with Grosvenor Turn around was JUST fixed to ensure Shady Grove riders are getting the service we PAY for - fares are calculated per mile travelled. Do not take away service we have been paying for.

I suspect that decreasing service times like this will also decrease your ridership and consequent funding from metro fare tickets. If metro trains are running every 30 minutes or at best every 12 minutes, that will not be frequent enough for me or many others to get into the city for work meetings, so we will be forced to find other non-metro modes of transportation.

Timing should be based on volume--for example, rush hour needs more trains than mid-afternoon.

I will no longer use my federal subsidy to commute to work if trains arrive that infrequently, I will have no choice but to begin driving to work every day even though I live close to a metro station. That change would double my daily commute time.

Proposal to operate Metrorail service every 30 minutes

I use metro to go to work downtown. This schedule is not flexible enough. Weekend schedule cannot be applied to weekdays. Metro used to be very packed during rush hour and will become worse if trains arrive only every 15 minutes.

Given problems with crowding during rush hour, especially on the red line, decreased service to every fifteen (or thirty minutes for other lines) is not a viable solution. This would only exacerbate problems like off-loading, which I experienced numerous times at Farragut North prior to the pandemic. I do not understand why this is being floated as a potential option--to me it seems clear that this will cause massive problems.

30 minute intervals seem way too long and I'm sure it would cause issues being late to destinations like work.

This could really impact traveling to Dulles airport especially and National to a lesser degree. It also means that further out suburbs where incomes are lower would see the most reduced service and they most need the Metro.

I would need trains to run more frequently than every half hour. I firmly believe metro revenue should not be made up by charging riders but by taxing wealthy DMV residents and corporations that benefit from workers being able to get to work. I cannot wait 30 minutes for a train! That is absurd and would make it harder for me to get to work and to see my friends and family!

Pre-pandemic trains were already quite congested during rush hour and it was sometimes difficult to board a train especially downtown and on the Orange line. Such a reduction of service during rush hour would be a problem for commuters.

People have a need to get to work, and waiting 30 minutes for each train would not work. It would also cause over-crowding when those trains do arrive.

I believe the metro hours in Grosvenor-Strathmore should not be cut! It is very important for those who can not afford a vehicle of their own and are utilize the metro for their transportation. Think about low income workers who work late at night, this puts a significant barrier on them if the metro station closes earlier.

Depends on office openings from pandemic. If folks are returning, every 30 minutes will make commuting times longer. If we miss a train by a hair, then waiting 30 minutes and knowing I could be home to be with my kid sooner if I hadnt would drive me take a shared car service for sure.

Although ridership is low the current train arrival schedule is inconsistent especially with the ongoing improvement projects.

15 minutes is a long time to wait for a train. 30 minutes even longer between Shady Grove and Grosvenor. This would not be acceptable. 10 minute should be the max during rush hour in particular.

Timing trains to arrive every 30 minutes will absolutely destroy any ability the community has to rely on public transportation to get anywhere in a timely manner. This will push more cars onto the road, cause property values of homes near the system to plummet, and severely lower the esteem of the DC metro area as a reliable and safe place of business.

More trains per hour would be necessary.

Platforms in the trees might get buried rush-hour

The trains would have to have exact times if they are only coming every 30 min. - like arriving at 10 past the hour and 40 past the hour - and sticking to it - or people will be missing trains - and giving up on Metro. The Pandemic will be mostly over by 2022 so there may not be need of these cuts.

Please provide consistency and provide transit in Great Falls, Va

Having such long wait times will lead to further declines in ridership. If you need have one kind of service all seven days, keep it at 20 minute arrivals throughout the day, with trains arriving every 8-10 minutes at stations with service from more than one line.

Depends on what time the 30 minute arrivals are. I would not like it if I had to get an earlier train in order to arrive at work on time.

Rush hours may be more back to normal by then.

What is the opening and closing times???Rush hour would be a nightmare! Trains would be way too crowded.

Returns to offices are targeted for Summer/Fall 2021. During rush hour trains could be severely packed by January 2022 if they only run on this sort of schedule. Perhaps you can issue a rush hour specific access card THROUGH QUALIFIED BUSINESSES available only to those individuals who must travel during those times?

I selected yes assuming there would be an increase in the number of cars per train to increase max capacity for each train ride.

just way too infrequent. I know that green line at some points runs every 5-8 minutes. to go from that to 30 seems ridiculous.

This is a stupid proposal. By the time we reach 2022 ridership will probably be close to prepandemic. This would just deter people from coming back.

I use the Metrorail station at Virginia Square regularly - For work, For doctors appointments, to meet friends for social gatherings, and to attend Smithsonian programs.

Metro needs to assume things will get back to normal at some point after mass vaccination

Appears to lengthen the frequency of trains in Prince Georges County while more frequent trains are provided for Montgomery County creating an inequality of services.

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| I stopped riding metro last fall for COVID safety reasons after purchasing a vehicle. I dont know how many in-person days my employer will require by January 2022. Since my commute requires crossing state lines, the proposed changes would be tenable will I only had to use Metro twice a week |
| It's hard enough to not want to pay an Uber but having to wait 30 minutes for a train is ridiculous and unfair due to the prices we pay on Metro |
| With most businesses/offices still working from home and no widespread return to work policy announced, I am unsure if this proposal would fit with my schedule yet. |
| More frequent service is needed during peak weekday rush hours for commuting into DC from NOVA suburbs and returning in the evening. |
| This would only work if you actually keep to your schedules. I have always been a heavy user of the Metro but have never been able to rely on it when I absolutely have to be some place at a specific time. |
| Im concerned that the rush hour service would not be sufficient |
| This would just lead to more ridership decline. |
| Metro trains on Orange and Silver need to arrive more frequently than 12-15 minutes, especially during rush hour. |
| Thats a "hilariously" bad idea. By January 2022, most people will be vaccinated, and its reasonable to assume the region will be resuming in-person work. One train every 30 minutes would make commuting by metro practically impossible. |
| Assuming life will go back to the way things were before the pandemic, I will need to get to work and drop my child off to school. No one likes to be crammed up on a train/bus. |
| IF this proposal was adopted, I would sincerely hope that means there would no longer be rush hours fares. If those continued, with the diminished level of service, that would be fraudulent on the part of METRO. |
| Trips could be excessively long if more than one transfer is needed making this impractical for these uses. |
| This would be acceptable to me as long as East Falls Church metro station remains open. |
| Although it is unclear, it is likely MANY more people currently working from home in the suburbs will be required to return to the office by January 2022. Having the trains come so far apart would cause real delays and overcrowding (leading to break-downs, door failure, emergencies, etc.), especially during rush hour. Rush hour train service should have trains coming more often beginning in 2022. |
| If there was a Schedule it could work, but I cant imagine missing a train by 5 mins and having to wait 25 mins to catch next train. I need to get to work on time. |
| This will make my commute significantly more difficult. |
| Perhaps try to make the 30 minutes a consistent time, for example on the hour and on the half hour for people to plan ahead better |
| Every 30 minutes during weekday rush hour would complicate my commute to and from work and ability to make it on time to certain events. |
| Many work downtown and need the grosvernor station and there are also the private schools, Georgetown Prep and Holy Cross and also the Strathmore Arts center that is accessible via metro. It is a very important station |
| Every 15-30 mins is just too long during rush hour. Many people rely on the metro to get to work (even more once the federal government opens up offices again) and this change would be detrimental to getting to work on time without leaving the house 30 mins to 1 hour earlier than they would. It would encourage people to start driving to work instead, resulting in snarling traffic, which is not something the DMV area would benefit from whatsoever. |
| 30 mins seems like a long time - you can drive pretty far in 30 mins. I wonder if youll lose more customers with that interval. I suspect rush hour will be a lot less rushed, so it might be OK to have rush and non-rush the same; but maybe the interval for rush hour should be a little shorter. |
| These are unacceptable cuts to service. These cuts will lead me to seek alternate transportation options. |
| I would prefer more frequent service. Im retired, so Im not in need of extra service during rush hours. |
| Cutting service to that extent is slitting your own throat. Metro would no longer be a viable way to get to work, especially if you need to transfer between lines. |
| As a Red Line commuter, trains arriving only every 15 minutes on weekdays would not work at all. They would be overcrowded during rush hour and discourage ridership. |
| I commute daily from East Falls Church and the half hour wait time between trains is unacceptable, especially considering the increased demand during rush hours. |
| This would quickly kill off Metrorail ridership, even in our post-pandemic recovery. I would take rideshare/taxi services instead. |
| These changes would significantly extend my commute, assuming that offices will reopen for in-person work. |
| There should be increased rides during the rush hours. |
| 12-15 minute waits is fine if there aren't crowded stations but if people start using it again in mass that'll be really problematic |
| Trains would be way more cramped, especially during rush hour times. Travel times would be way slower |

Proposal to operate Metrorail service every 30 minutes

Arrival every 30 minutes risks overloading the trains, especially as more people return to work and leisure activities. The close contact with crowds would deter me from starting to again use the Metro.

This is too far apart.

My commute is already long; this would have serious impact on time spent commuting and family time

will return to Metro commute

This would make commuting to work via metro significantly more difficult, and would lead to packed trains.

THE FREQUENCY CAN BE REDUCED DURING RUSH HOUR. THE NUMBER OF RAIL CARS PER TRAIN MUST BE ADJUSTED (LOWERED) TO REDUCE EXPENSES. MORE REDUCTIONS MUST BE MADE. STATION EXPENSES MUST BE REDUCED. MORE TRAIN SETS MUST BE STORED AND NOT USED. AS SUCH, MAINTENANCE PERSONNEL MUST BE REDUCED.

While it works for me, every 30 minutes for other trains and lines could be very challenging for other individuals and other locations in the city. Would recommend every 20 minutes considering how many delays and repairs are already on metro rail.

Please keep Grosvenor Strathmore station open

Getting to work would take me DOUBLE the time with trains running every 30 minutes, if I missed my connection my normally 30 minute commute now become potentially 90 minutes if I'm really unlucky.

This is only viable if trains run at scheduled times. And if that's the case, might as well use MARC.

Weekend has to be longer than weekdays.

30 minutes is too long in between train cars coming for single line stops. I would be happier with 20 minute intervals and thrilled with 15.

30 minutes is too long between trains on weekday rush hours.

My position (I am a federal employee) is currently in telework status, so I don't use metro now. However, by May I will likely return to in-person work. By fall 2021, this will likely be full time. By 2022, I expect to use metro with the same daily use as before the pandemic.

This would put more people on each train and cause delays in getting to work.

Decreasing service around the time we return to work makes absolutely no sense but will only ensure WMATA's continued demise, as people going back to work will continue finding alternative methods of transportation that are more flexible.

If ridership returns to some form of normality there would be no space for people at close in stations to board. 10 to 15 mins would be more reasonable.

12-15 minutes apart seems really far.

I take the metro due to health issues I cannot drive. When I am trying to get to work by a certain time, I don't need to be waiting 12-15 minutes for a train. Also, since there will be no rush hour, would the price of riding metro go down

I work for a Government agency. I expect COVID restrictions will not be in place beyond Jan 2022, and telework will be reduced gradually or entirely by then.

When trains are late during rush hour, they fill very quickly and it is impossible to board trains. By limiting arrivals to every 30 mins the train would be extremely packed and committing would be horrible. People will try to board and get in the way of the doors. The conductor will then make everyone get off the train and now you have toooooo many people on the platform and no one will be able to go anywhere. This will be a disaster.

This does not provide reliable and effective service for commuters, a majority of weekday riders pre-pandemic.

The trains need to run more frequently. With so few trains there will be overcrowding. If people get to a station and can not get on the train due to overcrowding it is unreasonable to make them wait 30 mins for the next train. This will cause many people to be late to where they are headed. If you want to increase ridership it needs to be reliable and convenient for people.

The increase in delay and changes to rush hour non rush hour. Makes me concerned that metro would not be a viable and consistent form of transportation. DC is a city that is vibrant due to its transportation system. Crippling the system like this would eventually destroy ridership numbers. Why would more riders turn to metro if you limit services?

One way to make this change slightly more palatable would be if trains strictly adhered to published schedules. For instance, it would be somewhat easier to accept a 15-minute headway if I knew the train was going to be there at 7:30am and planned accordingly.

I worry that decreasing service frequency would deter ridership even more, and possibly limit any ridership increase that might occur as vaccination rates increase and coronavirus infection rates decrease.

Keep the times similar to before the pandemic

Proposal to operate Metrorail service every 30 minutes

| |
|--|
| The elimination of rush hour service during the morning and afternoons will likely cause massive delays and extremely packed trains once the pandemic restrictions are lifted and people being going into work again. The 30 minute interval for non-rush hour times makes sense. |
| The time frame works, I'd hope service would increase as more people went back to work. |
| Think should have less service on weekends rather than weekdays |
| It would be a good idea to assess in 2022 what is needed. Right now, operating on this kind of schedule would be completely fine. However, if things get back to normal ridership during rush hour is way up and more trains will be needed. |
| Waiting up to 30 minutes for metro would be unacceptable for commuting, unless metro would add considerable number of cars to each train and the schedule would be reliable and would be updated through an app so people could time their commute more accurately. |
| It will affect my travel needs to go to work, meetings and family |
| This plan would make it very easy and common for people to be late to work on a daily basis. Rush hour will return, how can you not have more trains during rush hour? People will turn to Ubers and cabs, but what about those who are living paycheck to paycheck? |
| If the virus is still around in 2022, having trains only every 30 minutes would mean they will be more crowded. |
| I think this is a reasonable proposal. It will require more planning but that is doable. |
| This would lead to large amounts of people waiting on metro platforms which could cause trouble for disabled persons |
| This would lead to overcrowding during rush hour. |
| That's fine, as long as train tracking is good and they remain on schedule. It is though ridiculous to keep a peak hour fare surcharge when there is not an increase in service. |
| I will go back to commute to work on the metro silver line start this summer. If next year trains run every 30 minutes I will likely stop using Metro all together. I can't risk missing a train and waiting another 30 minutes for the next train. |
| This will work if - and only if - the trains are scheduled to arrive at each station at exact, known times so passengers can time their arrival at the station to meet the train at the exact time of arrival. If trains are early or late, it would force passengers to wait up to 29 minutes for the next train. |
| I and many others rely on a timely biases of the metro rail to get to work on time. Longer periods of time make for more crowded spaces also. With a pandemic going on this is not okay. |
| After COVID, how will people travel into and within the city if public transportation is severely cut? Cutting public transportation is short-sighted and just wrong. |
| If the interval were 25 minutes instead of 30 it would be better. |
| Many people ride the Grosvenor train to maybe have good standing room or a seat and then get off at Grosvenor to quickly hop on the next Shady Grove train. Waiting 15 minutes doesn't seem fair |
| I would want to have rush hour service still. Having different schedules for weekends and weekdays seems to make sense. |
| Once COVID is over and we return to work, we will need to be able to actually get on a train. Every 30 minutes during rush hour will not work, it will be too crowded and people won't be able to get on the train, leading to over hour waits to catch a single train. Rush hour will go back to normal, and even then you had to wait one or two trains to get on. |
| Service is far too infrequent to time buses, metro trains, and my shuttle to my final destination. |
| When we go back to work, we can't wait 30 minutes for a train. |
| This creates several problems most notably in underserved communities who rely on public transit for small routine activities such as groceries and shopping. This is a discriminatory procedural change at its core. |
| If there was an actual timetable, like we have with buses, this proposal for the trains wouldn't be a problem... if I wanted to take a particular train that had 30-minute arrivals I could just time my own arrival at the station. |
| It will increase commute time to the point that it may be faster for me to use an alternate form of transportation. |
| It would work, but it would be very difficult. It might make me just give up on the metro and drive whenever I need to get places which I hate to do because we need to invest in public transportation to make it better. |
| Rush hours should 100% have more frequent trains. |
| 30 minute wait times for people traveling to and from work makes no sense and is totally inconsiderate of commuters. |
| I used it for travel to work and 30 mins will cause huge disruptions! And it will lead to huge congestions |
| This would lead to the closure of the system due to disuse. |

Proposal to operate Metrorail service every 30 minutes

By January 2022, more people will be back at work than not and commuting levels will be high again. I understand the impact the pandemic is having on Metro right now but it seems extremely short sighted to make such significant changes to future service based on today's issue. A train every 12-15 minutes during rush hour would be packed, assuming commuting levels are anything near what they were in the past.

Pro: Routine schedule would be easy for passengers to follow; Con: Seems less efficient to not have different arrival times between rush hour and non-rush hour periods

I am 73 years old, and depend on the service at Grosvenor station to get to my physician at GW Hospital (Foggy Bottom). Every 15 minutes would be the bare minimum to assure that I could promptly keep my appointments.

Metro should not do this. Ridership will increase once the COVID-19 vaccines are distributed and the pandemic has calmed. Many people, myself included depend on the metro.

Rush hour occurs at different times for different people. Most of us dont do the 9-5 workday.

During rush hour, I will need red line frequency to be at least every 5 minutes in order to make a public transit commute feasible.

Pre-COVID I rode the metro to work, and 6-7 minutes between trains was insufficient given demand. It already was stressful worrying about getting on the train while trying to avoid being crushed by the massive numbers of people also trying to get on. And I would spend the ride uncomfortably pressed up against complete strangers. If COVID Is over, even 7 minutes is too long between trains at rush hour. And even if it is not super-crowded, a 15-minute wait for a train makes a manageable commute very difficult.

We have a toddler. If we have to wait so long for a train we might just drive.

The trains will be too crowded and people will not be able to board in a timely manner making them miss a train and be late for work or appointments.

Once offices reopen and everyday telework ends, there may not be enough capacity without a rush hour schedule. I understand starting out with a schedule like this but there needs to be a way to reevaluate as more people come back to work and metro.

People that ride the metrorail for commuting to work in the morning and back home during the evening find the convenience of more frequent trains and that is why I use the metrorail. I am able to drop my children off at daycare and make the train in a timely matter. However, if trains are more infrequent I will need to find other means of transportation into DC for work.

For Metro to be an attractive commuting option, trains need to be frequent.

Waiting 30 minutes twice a day for a train would be a nightmare. Where would people stand on platforms? COVID will eventually be contained and our offices will need us back, particularly in the federal government where full time telework on a permanent basis is a non-starter. Red line platforms during normal times are already crowded and it is often necessary to wait for a train or two to pass before you can get on one. With children in school, a 30 minute wait on either end because I couldnt get on a crowded train would cause me to miss pick up time. In normal times I ride the red line twice a day, every weekday.

Peak times must be considered. That would mean that us who live in more urban areas would never be able to get in

Trains are SUPER crowded at peak times evew at Rosslyn with 3 lines. It would be extremely chaotic to have even less trains available

Consistency helps to know what the times will be.

It would only work for me because my travel is on the Red Line between the turnback stations. If I were on the outer edges of the Red Line, or on another line limited to 30 minute service, I would find commuting by Metro really challenging.

During rush hour trains need to arrive at least every 7 minutes. As soon as vaccines are administered, ridership will go up for commuting

If more people are using the metro in 2022, this would be unsustainable.

The key to this proposed schedule is being able to modify it if trains reach 100% capacity. You do not want to leave passengers on the platform to wait 30 minutes for the next train.

Seems like a long time between trains , but I'd rather the stations stay open - so I'd say this is viable though less than ideal

There needs to be a more service in the Am for people to get to work and in the evening for people to get home. Over crowded trains are uncomfortable and tend to have more issues in the summer

Metro needs to provide more service if it expects to restore pre-pandemic ridership

This would begin a self-imposed death spiral for Metro. Provide timely service, and they will come. People are eager to be among their fellow humans, and will soon flock back to Metro if service is timely and reliable.

I take metro from white flint station during the week and every half hour between trains is way too long!

That would make getting to and from work more of a hassle. Off hours and the weekends its fine if theres reduced service because then I wont be dealing with trouble at work.

Absolutely atrocious. People rely on the metro to get to work. People who cannot wait 30 minutes or 45 minutes or even longer due to over crowded trains. Guys, the vaccine is coming out. You cant project future ridership on present restrictions when those restrictions are going to ebb. You will devastate low income and essential service workers.

Proposal to operate Metrorail service every 30 minutes

Don't base future projections on covid levels of ridership, it's going to go back to normal in 2022 and ridership demand will go up so it's critically important to keep service as high as possible with minimal disruption

The train should come every 5 minutes. You many people board the platform within that time

Would be better to have trains coming more frequently, as the trains will fill up very quickly during rush hour if theyre only coming every 15-30 minutes

The red line train was very heavily used pre-covid and with things going back to normal, trains coming more than ever 15 mins is something we need.

I am unemployed so cannot fully anticipate my rail needs. The nearest station is two miles from my house so I normally take the bus but that could change.

Please keep station

This would significantly extend my already lengthy commute time as the station that I get on is on the red line but above Grovesnor. I suppose it might work if the schedule is published somewhere so that I could time my arrival well, but I think the trains would be so overcrowded with 30 minutes in between trains that it would be impossible to squeeze on. I think that would be the biggest problem with 30 minute waits in between trains. I believe that service will pick up significantly in 1/22 because people will start going back into the office.

This does not meet my needs since I frequently use Glenmont.

Every 30 minutes is unacceptable given WMATAs revenue.

Trains become crowded quickly from the very first stop (Vienna) even when running trains every 12-15 minutes. Running trains every 30 minutes out of Vienna would make it very difficult for anyone in subsequent stations to have room to get on the train.

15 minute headways would affect my commute and make Metro a less reliable way to get to and from work.

Every 15 minutes is ok

Such infrequent trains will likely make it impossible to rely on Metro to commute to work, particularly given the likelihood that such infrequent trains will inevitably be overcrowded.

Turnbacks make my commute more difficult and almost unmanageable because I am commuting from outside the turnback zone (Twinbrook)

If the trains can run on a consistent schedule, so that I could count on the train arriving at a certain time, this would be all right. But if the trains arrive at seemingly random times each day, as has historically been the case, this would be pretty unpleasant and I would bike to work more often, or buy a car.

If it will take 30 minutes between trains, I just wont use the metro any more. I get the financial crunch is forcing these ideas, but theyre going to result is less ridership which defeats the purpose.

Rush Hour and Weekdays should be prioritized with more frequent service

Griosvnr or to silver spring is what it was in the padt

If this proposal is adopted, Metro would no longer be a viable option for my weekday commute.

When DC returns to normal after the pandemic, rush hour would be terrible and the metro cars would be overly crowded. This would make it impossible to use the metro during rush hour.

15 minute windows for trains is 100% not manageable during regular DC rush hour.

That is a very long time to wait for trains. I expect it will double my commute since I transfer lines twice.

Red line trains would be too crowded.

This would make it harder to actually get to work on time, which wouldnt work.

Before the pandemic, I rode the red line daily from grosvenor / strathmore to judiciary square and back. I expect this to be my commute again by January 2022. The trains were already so crowded that I sometimes had to let one or two pass before I could get on one. If metro reduces the trains to just one every 15 minutes, I fear they will be even more crowded and it will be harder to get on. My schedule is right. I take the metro because it is faster than the Marc train and I need to get my kids to/ from after care and get to work on time. With this proposed schedule, I fear I will not be able to depend on metro to get me where I need to be on time. If that is the case, I will have to find alternative transportation.

UMD will be back in the fall. The Green/Yellow Line will need to be more frequent.

I do not understand why there would be no difference between rush hour and non-rush hour periods. Assuming that ridership increases post-pandemic, albeit not to the same level but nonetheless to substantial levels, there likely would be greater demand during rush hour periods and thus the need for more frequent service.

As long as it applies to all stations, it is a fair proposition.

I take the metro 2 times per day using Strathmore station

In January 2022, many of us will be going back to work and frequency of trains during rush hour will be extremely important. Over-crowding of trains during rush hour always results in having to offload trains or otherwise results in major delays. Those are also reasons people ride Metro less: the trains dont run often enough.

Proposal to operate Metrorail service every 30 minutes

Reducing train frequency would be a challenge as I work off the Twinbrook metro

This would be workable though it would be better to assess frequency for maximal commuter times 7:30-9:00

Obviously if you are 5 minutes late for a train, most people can afford to be a little bit late arriving at work, but to possibly end up being over half an hour late can start being a BIG problem. Additionally, appointments (medical, dental, etc.) during the work day are potentially running into close to a half day off instead of a couple of hours out of the office. I am stressing already at the thought of trains only running every 30 minutes o weekdays.

Not frequent enough

30 minute headways during weekday rush hour is unacceptable and will result in severe overcrowding. Need more frequent trains during rush hour, at least.

This will make my daily commute impossible. On the pre-pandemic rush-hour weekday schedule, I would still sometimes see 1-2 full trains pass before there was a train with enough room for me to get on. By limiting trains to once every 15-30 minutes, it will make overcrowding even worse, and for workers like me who have limited control over our work/commuting hours, it could add hours to my commutes each week, which will make me look for alternative options outside of Metro.

The trains are too infrequent for my commute.

This only works for me because I am at a station with multiple lines.

There should be more trains during rush hour since that is when most people have somewhere to be. The times between trains outlined in this proposal would be fine during non-peak times; however, they need to run more frequently during rush hour.

I use the orange line to commute from Foggy Botton to GMU/Fairfax most days. If it came every 15 minutes, that would be great. But I don't have any other lines that would get me to Fairfax, so every half hour would be hard.

Assuming people are vaccinated this summer, by Jan 2022 downtown offices (USG especially) should be open. Trains every 30 min will result in significant overcrowding. Metro should work with them federal government to coordinate office openings with increasing Metro train times to ensure the system doesn't collapse.

It would be very hard to plan a commute to arrive at a certain time with trains every 30minutes

I take the red line and then need to transfer to yellow. If things don't time right, I might end up waiting 30 minutes to just transfer. My commute pre pandemic door to door was about an hour. If it rises to an hour and a half I may need to drive instead of taking public transit.

Needed in community.

This will incentivize me to not take the metro at all even though I do today to go to/from work. I will drive (and revenue will father further as others make that choice as well), but not everyone can afford a car or parking in the district. This would disproportionately impact those who need the metro the most. I would be happy to pay higher taxes to fund the metro.

Very simply, there are so many delays and incidents throughout the Metro system that it would be impossible to actually have a train every 30 minutes (or 15 min or 12-15 min). There are very few third tracks that can bypass problems. Lower frequency would just provide incentive to people to seek alternative transportation.

Stations would get a lot more crowded, and there would not be enough space for social distancing, assuming were still coping with the pandemic next January. And if were still going to be paying the rush vs. non-rush fare and not get rush hour service, wed be paying for something we arent going to get.

It is impractical to have stations - such as Rosslyn - only have trains arriving every 12-15 minutes. Post pandemic, when riders once again rely on Metro to get to and from work, there will be far too many commuters per car, which in turn will cause even worse crowding, and will likely push potential riders towards alternative modes of transport due to congestion. Unless metro wants to continue to lose ridership, it would behoove the organization to decrease time between trains at crucial metro stops, such as Rosslyn.

Once the pandemic is over, there should STILL be a difference between weekday rush hour and non-rush hour or weekend service. It does not make sense to treat them all the same.

The length of travel could almost double if I took the train to the airport, the Kennedy Center or elsewhere downtown. This would make it exhausting and I would stop taking the train.

Too much time between arrivals-I could deal with every 8-10 minutes but not more than that.

it would be more appropriate to slow down trains during non-rush hour times. The crush of people waiting for a 15 minute train after vaccination will be large and frustrating.

Having the same schedule every day is good, but not at such low frequencies.

Not sure if the longer wait times are feasible for my travel needs to and from work.

That's just crazy

Grosvenor Strathmore is a critical station. I and many others commute to this station for the red line. Pre-pandemic, a delay at Grosvenor would cause cascading problems for many downstream stops because of the number of people boarding at Grosvenor (trains are then filled to capacity for the downstream stops). The greater frequency of arrival at this key station is essential to optimizing efficiency of flow.

Proposal to operate Metrorail service every 30 minutes

This proposal punishes people who live in DC. I'd take a cab/uber/lift before waiting 30 minutes for a train.

This is a drastic reduction and any trips that need a transfer may be better with Uber

Too infrequent. Just drive instead of waiting 30 minutes.

You leave out some critical information here; namely what time the daily service would start and what time it would end. I often use Metrorail service later in the day on weekends. It would be very bad for me if service on weekends ended early.

Will create massive crowding of cars and stations and disincentive ridership in favor of driving. Not a good solution for riders or the environment.

Of all the plans, this one is the most workable, it's better than closing my metro stop.

30 min lead times would make every train packed leaving crowded trains and platforms with people cooling their heels waiting for 30 mins for another chance. This would be terrible for people who need to be anywhere on time.

this would impact my commute since most of my travel is during rush hour; I would need to leave earlier to arrive to my office on time, be at risk for more crowded trains and probably extend my commute time.

This proposal would significantly and adversely impact the commuting options and could create more traffic on congested roads post-pandemic if insufficient Metro train availability during rush hour windows.

Weekday (Business) needs are higher than weekend.

30 minutes is too long to wait at a station serviced by a single line.

Overcrowding on metro trains is a huge concern to me from a safety and comfort standpoint. Ridership should be up again following the COVID 19 pandemic, and planning 2022 off of 2020 and first half of 2021 seems silly

The attraction of living in DMV area is the metro and easy accessibility! I really loved how fast the trains were arriving at rush hour; this would be a huge adjustment for my work schedule.

The length of time between trains during the typical morning and evening rush is too long.

A vibrant metropolitan area needs an efficient, affordable public transit. This type of service is not adequate to keep people moving on metro line and getting them where they need to be. Once the pandemic is over this will doom the metro to transit of least choice. Congress need to pay for this. The states and Dc have failed at recognizing the value.

I need to be at work by 8:00 am. I need the trains and buses to be on rush hour time during rush hour.

While many employers are reconsidering how often employees have to physically return to the office post-pandemic, having trains run so sporadically will not work for riders - there will be significant overcrowding on the few trains that run (this happened all the time pre-pandemic when trains ran less frequently). Furthermore, for those that live longer commutes to work, a missed train by one minute could set the rider back another 30 minutes which will turn people away from Metro altogether. This would put riders with limited financial means (no cars) at a significant disadvantage.

Keeping people out of their cars as the turnbacks are redundant

Pre-COVID, the trains to my local work station on the silver line were jam-packed during rush hour every 15 minutes; going to 30-minute intervals would make them packed even more, if that were possible, or force people to drive...and there isn't sufficient parking at the offices around that station.

Concerned about platform crowding during rush hour.

Trains twice an hour would effectively ruin Metrorail as a commuting option. At least the red line would be a little better but still.... There's no way that would provide reliable, efficient, reasonably convenient transportation that I could depend on. I'm very devoted to public transportation, but at that rate, it would be stupid not to drive.

Better to have more trains and frequency during peak travel.

Sounds ideal

This would make getting to work difficult for commuters who need more frequent trains during peak morning and evening hours. Workers heading to work can't afford to miss a train and have to wait another half hour.

This should be in effect currently, with more frequent train operation anticipated for January 2022 as widespread vaccination is anticipated towards the end of 2021. This current plan feels as though COVID operation is coming into effect way too late, and will harm the ability of more residents to get around when the economy does open next year.

one train every thirty minutes will not meet my needs. what if it is full? I have to wait another 30 minutes for the next full train?

Trains are often full arriving at EFC metro during busy rush hour AM times. A 30 minute period until another train comes, also possibly full would not work for commuters.

Need more frequency

Proposal to operate Metrorail service every 30 minutes

Slowing down the service might reduce ridership even more at a time when we should be looking to increase the use of public transportation.

By January 2022 I anticipate that more offices will have in-person work, thus crowding trains during rush hour.

It all depends on the vaccine rollout and the opening of federal offices. Reductions in metro's schedule won't affect most of it's ridership until federal employees and others are forced to return to work. I would focus on short term cuts and then once revenue starts to increase, add additional trains/buses to the schedule.

I think this is most likely the best option. If you consolidate ridership you're maximizing the amount of revenue per ride, while minimizing the frequency of cost. This also my help with metro delays by leaving enough intervals between trains. The only major risk I see could be parking lot constraints with many people arriving at the same time rather than periodically throughout the morning.

30 minute headways sucks a lot, but there's a good amount of places with multiple line coverage. Not sure if this would help boost more essential bus service

If service changes to every 30 minutes I will stop riding and take my car to work

Waiting up to 30 minutes to catch the train at my local Metrorail stop is simply unacceptable from January-June 2022 when the pandemic will be coming to an end.

At rush hour it should be every 10 min. Slower times 15 ok.

Although the less frequent arrival times would be inconvenient, I would definitely prefer this over cutting/closing some stations or lines.

Too infrequent. Im not waiting 30 minutes (ON AVERAGE) for a train. But as a rider, I know the waits are likely to be much longer. NOT workable, at all.

The trains are too infrequent

Ideally, some research would be conducted to adjust the schedules and time intervals if overcrowding results from the above proposal.

I start from Glenmont or wheaton so this does not work for me maybe every 20 mins instead of 30

I work at home full time now. so I only use the Metro system for appointments and events, not daily commuting. I am also a red line person. What about schedule at Fort Totten? Every 12-15 minutes? Both yellow and green?

I ride the green line and several of my neighbors do as well. My neighborhood has been underrepresented and this would severely make it hard for us to go to work. I find it shameful that the red line is running more frequent, which is home to wealthy people in the DMV.

are you people nuts i mean honestly is this a joke my cat could provide more rail service than this

30 minutes is too long to wait if mu shuttle to the metro gets hung up by a minute or two.

I work in Tysons and though my company is currently in a WFH state, we are expected to return to the office in the fall. If the stations were to drastically reduce service in 2022 with trains only coming every 30 mins, I think there could be very crowded trains in the morning.

This would make rush hour even more difficult than it is now.

I use the metro for going into DC on the weekends. The early closures would be prohibitive.

This plan would permanently discourage metro use for many users even when budgets are flush again.

Long head times on metro rail make it difficult to time transfers to/from bus, which could make my commute unpredictably 30+ minutes longer if I miss a transfer

This is an unacceptable suggestion. The frequency of WMATAs metro rail system has been bad enough during normal weekdays (before the pandemic), worsening this by cutting it further will push more and more people away from using transit in DC. This approach has led to failure in many places over the world: Reduce the service and you will reduce the passengers, because if they cannot count on the system to run when they need it, they will not even use it at times they could because they have switched to other modes instead.

It will make trains more crowded and that may drive folks away, especially with Covid lurking.

This would not work for me at all. I take the Orange to and from work every day. I don't have a car so this would be very inconvenient for me.

This is not an unreasonable change. The important issue is to make sure your website showing train arrivals is accurate.

Riders will be distributed over a smaller number of trains per hour. Therefore trains should have a higher number of cars to avoid overcrowding and riders discomfort.

For me, this level of service would mean that I would use metro even less as it now takes too much time to reach my destinations and it wouldnt be cost effective given the poor timing.

This might work if you were to publish a timetable.

30 minutes is too long

On Red line, people north of Grosvenor (ie Rockville) would be at a commuting disadvantage. However, I am not included since I board at Grosvenor.

Proposal to operate Metrorail service every 30 minutes

Trains should be more frequent and there should be additional frequency during rush hour. Doesnt make any sense to keep things even when you know there is higher demand during certain times. Also doesnt make sense to make future changes based on pandemic ridership when you know the pandemic is temporary. How will we get back up and running if we operate as if pandemic ridership is the new norm in perpetuity?

This does not reflect rush hour realities.

When planned service delays have happened pre-covid, with trains only arriving every 20-30 minutes, the trains were incredibly crowded, to the degree that sometimes the train could not be boarded when it arrived. This could mean waiting an hour for a train. If this service gap is implemented post-covid, Metro will be encouraging individuals to continue to avoid the train through this process, and will result in increased teleworking, driving POVs or using Uber/Lyft.

Depending on the length of the wait for trains to which to transfer at Metro Center or Gallery Place, this might work for us. However, if the travel time, including the transfer waits, to get us to our destination would be too great, we might, reluctantly, choose to drive instead.

I am retired. If I was still working, I would want more frequent trains during rush hours.

That is too much time between trains.

Metro needs to have the flexibility to respond to major. DC events " sports events, protests, fireworks, inaugurations, etc.

It would mean having to wait for up to an hour for room on a train to get to work.

I dont have to commute on the Metro for work so I could schedule my leisure trips around the 15 minutes schedule, as long as the next train reminder is working

Pre-covid, the red line during rush hour was often so full that Id sometimes have to wait for several trains to go by to find a car with room on it. Im very concerned that having no difference in arrival times between rush hour and non-rush hour periods would make commuting even more stressful and crowded than it already was.

No, this would not work. I anticipate ridership will be significantly higher in January now that we are rolling out the vaccine and we are finally making ground on returning to normal. It seems like a bad idea to only have the trains every 30 minutes with potentially a large number of individuals back to using the metro. Imagine the build up at stations waiting for trains that only come every 30 minutes during the morning rush. Additionally every 30 minutes is a long time. Super inconvenient and if youre selling the metro on convenience this aint it. Even with reduced budget, this would not be something I would consider for next year.

Needs to be under 10 minutes

That made my commute very long when they were doing that earlier. I would miss my second train and that would make me miss the bus.

This is not a frequent route for me, but 15min quickly becomes 20-25 or even more with even the slightest of delays between stations compounding on one another, and I'd prefer the plan to be 10min between trains.

I will need bulk of Metro service during weekdays so prefer trains come more frequently during rush hours but definitely want weekend service.

I will not be back in the office in 2022. But I don't want permanent changes based on current low ridership.

If work returns to normal, possibly waiting 30 minutes for a train would not be a practical way of commuting to work. Too much time in the day is lost if you cant make a decent connection. If you have to transfer trains, you could possibly wait an additional 30 minutes at the transfer station as well.

Since the pandemic our family has had to give up our car to save on costs, using bikes or metro to get around. The metro is amazing to ride during winter when it is too cold to ride bikes. A severe cut or delay of services would hinder our commuting around the city as we go to and from work, medical appointments and grocery shopping.

This is acceptable AS LONG AS I could check in advance (e.g., before I head to the Metro station) on the actual timings of trains via Metros web site or app. It would be very frustrating to arrive at a station to find that a train just left and one must now wait 29min and 59 seconds for the next train.

This is not frequent enough, especially given the unpredictable nature of the train schedule up to this point. Not to mention the inevitable delays during rush hour.

As the region recovers from COVID-19, this proposal would cut service just at the time we need most of it. It would result in unacceptably crowded trains, not to mention unacceptable wait times.

I live on the red line in the area that would be directly impacted by this. I dont own a car, so metro is the only way I can go to work, get groceries, visit restaurants and venues, see friends and family. Such a proposal would force me to use other transit besides the metro.

I much prefer more frequent trains though this plan is OK

Please add more trains during rush hour on Yellow line.

The frequency provided is unacceptable I would reduce my use of public transportation.

30 minutes is too long between trains. It should be at least somewhere around 20 minutes

Provided that trains from different lines are timed every 12-15 min.

Proposal to operate Metrorail service every 30 minutes

I am a non-rush-hour rider. Doubt that this would do for anyone who does ride at rush hours.

30 minutes too far apart and trains and stations will be overcrowded.

This would give consistency.

It would help if trains were more frequent during rush hour.

If metro trains arrived by a strict time table like in Tokyo, it would be possible to estimate which train I would need to take in order to get to my destination in time. Otherwise, a ride once every 30 minutes would mean I would have to allocate double the travel time. In order to get to my office, I'd need to allot 1 hour in order to arrive at Union Station on time from Potomac Avenue, rather than the 20 minutes with morning rush travel. If it's going to take me up to an hour to get to Union Station by metro, it would actually be faster to walk.

That's not frequent enough.

Not ideal, but the plan would still work for me.

The system is nearly useless with headways that long. And this impacts low-income essential workers who cannot work from home and may not have any other commuting options.

My travel needs are much less during the weekend.

30 minutes seems like a long time in between considering the other means of getting to the metro station. What if there is a bus delay or you are running late and can't afford to wait another 30 minutes? Uber and Lyft are very expensive.

I think you need rush hour times M-F

Because I use Metro to go into town intermittently, adjusting to whatever schedule would be no problem for me.

That is a terrible idea. The trains would become unusable because of being too crowded and the long wait times.

I take the train from Tysons to Federal Triangle every morning and evening, to and from work. If I missed my trains and had to wait another 30 minutes for the next train, I would be late for work.

Please make sure the online Next Train info is accurate so we can minimize the time we need to spend inside on the platform. I would prefer to wait outside the station until a few minutes before train arrives. That's why the Next Train info on my phone must be accurate.

30 minutes intervals would result in very crowded trains.

This presumes current Covid conditions. This would not be acceptable if ridership returned to pre-3/20 levels.

30 minutes is too long between trains.

Currently my employer doesn't anticipate us being in the office until after September 2021. If we are back in person by January 2022, I would prefer more trains on metro during rush hours (specifically the red line for me)

This would result in trains being increasingly crowded. Not a great look while the Country may still be dealing with a pandemic spread primarily through respiratory droplets.

I think it's wrong to provide preferential treatment to the red line. All lines should operate under the same schedule.

The path out of lockdown must be concluded by fall. By Jan 2022 I'd anticipate 80% of people returning to work spaces.

I assume there would be a terrible backup of people trying to get a train at rush-hour with this plan. But keeping the more frequent arrivals at high traffic points/bottlenecks might keep it from being too burdensome.

When the pandemic is over, there are just too many people during rush hour for these headway times.

Provided the service is sufficiently early in the morning and late at night

8-10 minutes preferred for the orange, blue, and yellow line.

Need more trains at rush hour

Once daily commuting begins again, 30 minutes is too infrequent, especially during weekday rush hours.

With fewer trains, and having to get to the station at a precise time or risk having to wait another half hour, it is likely I would ride metro less.

It seems like ridership would increase by then. Wouldn't trains be packed? Would all trains be 8 car trains?

Trains during rush hour are frequently crowded, so while I believe this would be for me, for others waiting 30 to 45 minutes for a train with space would be unacceptable. I wonder if the decline in ridership would outweigh the cost savings.

Want trains to operate later on weekends

During rush hour, it will be very important to have red line trains at greater frequency than just every 15 minutes. That will result in tremendous crowding.

Proposal to operate Metrorail service every 30 minutes

If the quantity of people who need to make rush hour trains increases over time, which is expected as more people go back to work, the metro system will become unusable for most people. It was previously common that at busy times, trains would be too full to board as they get closer to DC. Such a low frequency of trains would risk making trains too too packed to board.

Rush hour needs to have more frequent trains.

Having trains every 30 minutes will force more commuters to leave the system which is bad for everyone. By January 2022, most people will be back in the office and need the public transit system to get there.

This is bad but workable. I would stop using metro for random, short trips

I commute from NW DC to Mclean, especially including timing bus travel to the silver line station, trains every 30 minutes will increase my commute time incredibly. It would be enough to make me reconsider my current employment.

Actually, if you ran the trains every twenty minutes through Saturday night, and every half hour on Sunday there would be minimal impact.

Using Metro Rail for my commute already results in a total increase in my commute time of 30 minutes per day. This change could double that time if I dont time my arrival at the stations perfectly.

I think rush hour times should be the same as they currently, as in the same frequency of trains as they currently are. As long as one doesnt have to wait for a train 30 min during rush hour it works for me.

Would there be enough space in each train carriage for rush hour?

Trains were already unreasonably crowded when they were running closer to every 5-10 minutes. Especially post-pandemic, Im not looking forward to things being even more packed.

Quicker trains during rush hours - al least in the morning.

I would stop using Metrorail if I had to wait 30 minutes between trains.

Rush hour service would be inadequate. Trains would be too crowded and if one couldn't get on, the wait between trains would be too long and with no guarantee that the next train would have capacity.

12-15 minutes between trains seems like too much time. It is very hard to plan a schedule around that, and missing a train could easily make you very late to your destination. I think a wait time of maximum 10 minutes is ideal.

This would prevent me from ever using the metro. I use the train m-f for work. This change would make my commute 1.5 hours each way. Vs the 1 hour it is right now. This change is unacceptable service.

trains will be too packed, dangerous!

I prefer that no one should wait more than 10 minutes for a train.

Assuming most of us are back in the office then, crowding during rush hours would not make this feasible.

With the return to work in federal buildings downtown (Foggy Bottom), I would like to see more frequent rush hour service for the blue, orange, and silver lines.

I use the Grosvenor Strathmore station for my daily commutes when not in Covid quarantine and working remotely. Trains arriving only every 30 minutes would make commuting much more difficult as trains get full during rush hour. Not only will this add to commuting time but it will require even longer wait times at a station that requires waiting outdoors. This station is conveniently placed for so many people and is the only metro in the area with built in parking. This seems ill advised and will significantly adverse the community and commuters.

Need shorter wait times in rush hour.

concern of crowding in stations during rush hourconcern of having to allow considerable extra time for commute

I commute home from Ballston and the time I leave work is variable. Up to 30 mins is a long time to wait.

It depends. If workplaces are open again as they were pre-Covid, then every 30 minutes would not be sufficient.

I agree with making wait times equal across time of day and day of the week, but I dont agree with 30 minute wait times. That is too long. 15 minutes is acceptable across the board.

Remain the same for weekday commute

I would think it would be crucial to have more frequent service during rush hour

Proposal to operate Metrorail service every 30 minutes

Any thoughts of eliminating metro service is a foolish plan. And I do mean foolish, in strongest sense of the word. It is ill conceived and a reflection of short-term transportation planning that has plagued the DC-Metro area. You are serving many the wealthiest suburbs in commuter unfriendly areas in America. The auto commute gets more expensive and the mass transit options diminish or are eliminated. That is a reflection of poor civic leadership and lack of support for economically disadvantaged communities and disregard for the environment.

While it might accommodate morning and evening commute (with considerable pre-planning) it would not be feasible for getting back and forth across town all day for meetings.

It could work if the buses were synchronized enough with the train schedule but they are typically not (I often see my bus/train leave as I make a connection), Otherwise it is not useful at all.

It would not be ideal. Please consider increasing the frequency of the Yellow and Green lines, because unlike the Blue, Orange, and Silver lines, they don't combine three different lines on the same track for the most popular stations, and they don't have increased frequency like the Red line.

I would increase the amount of trains that run on the weekend a little bit as in maybe instead of running trains every 30 minutes run trains every 20 minutes to supply the needs of people who may need to get around town during the weekends to see friends family or go to events. I would also add more trains on the green/yellow lines between fort totten and lefant plaza to help people who any need to transfer lines from neighborhood or apartment areas onto the blue/orang/silver/red lines to help them get out of DC to get to jobs that may be out of the city.

Its not ideal, but could function as a budget saving method. I used to not plan my timing leaving for the metro, but would have to start doing so with more time between trains.

cutting service will hurt lower income people and exacerbate traffic congestion, please don't

I use metro to commute to work. This is not a reasonable time table for a city transit system.

I rely on Metro to get me to work in DC, and the trains on the Silver and Orange will be cut back too much during rush hour.

I would rather have less frequent trains than the closure of stations

While less convenient, this is not unworkable. However, I have the benefit of living close to DC and near a stop serviced by more than one line. This would likely be prohibitive for those who live near the ends of the metro lines.

I would like to have more frequent service to grovesnor metro

15 minutes is a very long time to wait for trains in the heart of the city, especially for visitors as we start opening up our tourist economy again.

That's 15 to 20 minutes added to travel time

How do you expect people to get to and from work in a timely manner during rush hour? People could lose their jobs due to this change. Do you honestly expect people to continue using Metro and increase ridership if one has to wait 30 minutes for a train? How do you propose to socially distance with these long wait times?

With changes to schedule due to telework, my metro use will decline from 5-6 days a week to just one. I realize that decreased ridership should result in decreased funding and schedules should be changed.

I ride the metro extensively to get to work and for other purposes, through out the day and on weekends. I do not have a car.

At regular usage there are trains for which capacity in the cars is regularly insufficient for the number of riders wishing to enter the train from the platform. Assuming this happens once, that means an individual may well be standing on the platform for close to an hour before boarding a train, and I expect this capacity is an optimistic estimate. Considering the jostling that would likely result based on where the doors open/close I would expect considerable difficulty for regular riders and heightened difficulty for riders with an applicable disability.

I would hope this might only be temporary but am willing to live with it if it eventually strengthens metro.

I am usually not in a hurry, so a little longer ride would not be a big problem.

This plan would work for me. But it seems rush hour trains would become severely overcrowded if the COVID-19 pandemic was resolved by January 2022. This should have been implemented in the summer of 2020, not in January of 2022.

Not ideal

If the volume of riders increases the stations will be packed. During the track work on the orange line they were packed to dangerous levels.

After the COVID vaccine is more common, many employees (particularly Federal employees) will begin commuting to work again via metro rail. 30 minutes between trains does not make the metro a desirable method to commute. Trains will likely be crowded. Also, if I was going to just miss the train, I would skip it all together and Uber to work instead.

Too early to know what 2022 will bring. Hope to be back on metro regularly

This will severely negatively impact rush hour riders commuting for work.

Proposal to operate Metrorail service every 30 minutes

It would mean more packing of trains. Pre-pandemic I regularly had to wait for several red line trains at downtown stations (metro center and verizon ctr) before squeezing into one. This will make people like me give up metro as a commuting option even with the federal employee subsidy. It will just put cars back on the road.

Increasing the time to 30 minutes would cause long wait lines and reduce the space available inside trains for passengers to board. It would cause an inconvenience with arriving to a destination on time (cause delays) so passengers would opt to drive instead

This feels reasonable, and not unlike 35 years ago.

This would push me to consider driving, which I would really prefer not to do.

Less frequent trains seems like it may only lead to more people deciding that other forms of transit are more convenient, thus dropping ridership on metro even further.

Perhaps it would work if there was a specific time table ... so one didnt arrive 5 minutes after the train left and have to wait for 25 minutes to get to work.

Would not be ideal during rush hour., but would be tolerable. Metro would need to hold itself to this minimum level of service, however, and not routinely let 30 minutes become 45 minutes, etc.

So long as the metro rides throughout the late evening I am fine with the metro operating the same times everyday

12-15 min ok during non-peak times but would be crippling during rush hour. Trains were already over-crowded running every 5-7 min.

as it were, pre-pandemic, trains were extremely crowded. Having fewer trains will not solve that issue. Besides, waiting 30 minutes for a train in the winter months with outside temps in low 30s or upper 20s is not healthy. i would go back to driving my personal car, with in turn, would just add to the pollution already existing in the metro district. How about cutting some of those high salaries and looking into more rider friendly solutions.

30 minute intervals between trains are too long be useful. If I have to build in an extra 30 minutes just in case I time the trains wrong, I would probably just stop taking Metro altogether.

Every 30 minutes is a great deal of delay for public transit.

I think Rush Hour service is essential if Metro is going to get on a path back to normal.

Restrictions would cause pile ups during rush hour and close contact with others that may not be comfortable given how recent the current pandemic would be

I am planning being back in the office by then. This would make it less likely for me to use metro and metro bus, and I would drive instead.

This sounds feasible, if changes have to be made.

Thirty minutes is too long rush hour

I still have to go to work physically and do not own a car, but live at Virginia Square and travel to Courthouse, so if trains were every 12-15 minutes, that would be ok. Every 30 minutes would be problematic.

It is hard to predict how much DC will return to pre-COVID levels - ie people working at offices every day. Im guessing it may return to levels like Fridays before the pandemic. Obviously, rush hours would be very tough with fewer trains, but otherwise, this seems reasonable.

Need trains to arrive more frequently like every 10 mins for Orange, Silver and Blue line

trains should arrive 12-15 minutes at all times with a return to rush hour service once work life resumes to normal after pandemic.

It works only BECAUSE my stations are served by 2 lines. Otherwise 30 minutes with full miserable trains will make me drive.

My primary reasons for taking the metro are to commute to/from work. I am a federal worker and have been working 100% remotely during the pandemic. My agency currently does not have information on when we will go back to the office, and I dont know of any federal agency that has made plans for the workforce to go back to the office (outside of those that have been open for continuity of government purposes). I also dont know of many private companies who have made decisions yet on when people will go back to the office. If we are not back to the office next year, this proposed cut is fine. If we do all go back to the office next year, this cut will make the commute more difficult for people (crowded trains, not as much flexibility in timing, increased traffic on the roadways, etc).

The longer wait periods would create more crowded conditions during rush hour, the trains pre-covid were already crowded and uncomfortable during rush hours

Rush hour should be more frquent and possibly when there are sporting events served by metro

Instead of Grosvenor, Rockville station

If I have to wait 30minutes for a train I would never take metro which is shame be cause I,love metro but to add 30 minutes to a trip it would always be quicker to take the car

It only works because I do not currently use the metro for work. When I rode in from north virginia orange, blue, or silver lines, every 12-15 minutes would be a disaster with too many people, having to wait for two or three trains to find one not full to capacity, and would make the commute unbareable in length

Proposal to operate Metrorail service every 30 minutes

Would a schedule be available at each Station with the 30-minute trains and will the train have the capacity to take all those waiting at the 30 minute Stations - even during rush hour traffic? If both answers are yes, then the plan would meet my expected travel plans in 2022.

Firstly how long would such closures (e.g. of Clarendon and Va Square) be likely to continue? If just a few months (until ridership recovered to a level according with viability) then it might be acceptable. But for longer periods there is a serious risk that this would be a false economy. It would reduce the attractiveness of the area to residents, businesses, and visitors, thus increasing office vacancy rates, lowering home values, and discouraging visitor - thereby reducing property, sales and other local taxes. In the longer term 1) the economy of the RB corridor has been built to a significant degree on the back of convenient and rapid metro links to/from DC; b) the current extensive development proposals for Clarendon, and other areas, might become financially unviable if the metro was not available, putting back development by many years; c) the impact of Amazon HQ2 is likely to significantly boost demand for the services of the metro within Arlington, and closures could slow down the construction of the HQ2 complex.

The distance I have to travel to just get to the metro station is an obstacle now you are trying to make the commute even longer.

I have to make a line transfer so I am concerned that the increased time between trains could increase my travel time by more than 50%.

This would result in excessively crowded trains and dangerous crowding on platforms. It is utter nonsense

Would need a good app with real time schedule information

This would increase commuting time to the point that I would not use metro rail.

I understand why but for people trying to get to work, every 30 minutes would cause folks to have to really alter their schedules, should the pandemic increase, which could cause more traffic on the roads.

We live at 10101 Grosvenor Lane. We bought our unit because of the proximity to Grosvenor Lane. We count on the Metro to attend work at Walter Reed, working both day shifts and night shifts. Please do not change this. It will decrease value of our property and increase cost of living.

It doesnt make sense to have all the frequencies the same. Some lines get more crowded on certain days, at certain times. Frequency should be adaptive. During pandemic times, less trains! During peak times, more trains!

Of course this is a terrible option

30 minutes is far too long to wait in-between trains. If its the only option, people will ne forced to wait. Also means more people on the train, which is not appealing or safe.

Rush hour and non-rush hour has different needs. By January of 2022, its likely most of the workforce will be going back. If youre going to cut service to 30% of pre-pandemic levels, now would be the time, while heavy restrictions are still in place. But January of 2022, service should be closer to pre-pandemic levels.

There should be more trains during the week than on the weekend. Ridership will increase once people start going back to work. Cuts should be made now since not many people are riding and should increase when people start going back.

Since there will be no difference in arrival time between rush and no rush; therefore the fair should not change as well

Ensure they are all 8 car trains

There should be more trains during rush hours since this is a residential area where many people walk to the station to take the train into DC, to Tysons, or Fairfax.

Stations get backed up enough as it is and overloaded when trains are 8 minutes apart. By 2022, everyone will be returning to work. I live close to metro for a reason - the quick commute. If you make service cuts like this people will switch to VRE where they will find similar travel times at a cheaper cost of living.

This rate of trains will not sustain rush hour traffic on weekdays and the infrequency of trains will cause additional delays for commuters AND force commuters to cram into trains together, violating health practices learned from the COVID-19 pandemic.

This is not ideal, and would represent a hardship. But having some service is preferable to no service.

Grosvenor-Strathmore sits at the center of multiple apartment complexes and neighborhoods and is closest to my home. But it is also one of the only stops on the redline that is outdoors. Having to wait 30 minutes for a train potentially would not be convenient. I would most likely not take Metro anymore.

arrival time range should be narrower (i.e., 8-10 minutes) due to how many passengers use these lines. it will also help reduce traffic at platforms and on trains or else they will tend to be overpacked with people, which will not be very public health-minded.

when people go back to work this will not be manageable. Prior to covid with the old schedule trains were already over crowded at rush hour..

A lot depends on the pandemic but if people are going back to work by then (which seems likely if vaccines work) then there's no way this will work for dc rush hour transit.

Evening and Night shift workers wouldnt be able to get work if there were extreme changes to the metro operating times.

I can only hope that this plan is temporary while we are still fighting the pandemic.

A 15 min window in rush hour feels chaotic. Perhaps a 8-10min window in rush hour.

Proposal to operate Metrorail service every 30 minutes

I usually take the metro to commute for work. If the trains pass every 15 mins it would be very crowded and delayed.

Im not 100% sure with this, because I believe most employers arent sure of their plans to return to the office past the end of 2021. As my employer has not given guidance I will be unsure, but if my employer decides that I will need to travel to the office/client site and other employers do the same it seems as though trains every 30 minutes or 12-15 at busier stations would lead to very crowded cars.

30 minutes is too long to wait during weekdays and may lead to overcrowding of platforms

this is a joke, right? at rush hour with trains running regularly you can barely get on non-covid and you are proposing every half hour?

This seems reasonable ASSUMING that the trains would not be so packed that there is no room to get on when the trains arrive. In other words, if the service cuts are in line with lower levels of ridership this makes sense, otherwise it does not - with trains arriving only every 15 minutes, people heading to work cannot just wait for the next train or until a train pulls in that has room.

This will likely be insufficient to accommodate rising rush hour rates as vaccinations roll out and return to work commences.

This is harsh for folks who just miss a train and has the potential to create incredible rush hour crowding, which will further hurt ridership and revenue as people find alternatives.

30 minutes headways are unacceptable for an urban transit system. Even for commuter train systems like NJ Transit that do have 30-60 minute headway during certain periods, service is increased for peak travel periods, and reliably follow timetables for predictability. At a minimum, if headways are going to be as long as 30 minutes, there needs to be a published timetable, AND Metro needs to improve its on-time performance to resemble anything like a functioning transportation system.

The morning is a very busy time. Trains arriving every 10-15 minutes is appropriate. With 15 min as the longest interval. High school aged kids use the grosvenor-Strathmore stop for Academy of the Holy Cross and Georgetown Prep. This is huge to working parents. The train times should also be increased in the afternoon end of school times and rush hour.

Trains arriving every 15 minutes on the Red Line during rush hour feels like it would not be manageable. That frequency during non-rush hour times seems perfectly fine to me. And a smaller reduction in frequency even during rush hour seems fine.

Metro should avoid all cuts thanks to the new federal emergency funding of \$30.5 billion nationwide. Any other shortfall should be met by the states of VA, MD, DC and local jurisdictions. Post-pandemic, with increased telecommuting might allow for shift of some peak hour rail and bus service to off peak, evening and weekend which would help workers who dont have 9 to 5 office and help car free and car light households.

Im highly skeptical that this would work, and I imagine it would be worst for the people who would be hardest hit by this change. Recalling my morning commute during rush hour and needing to get between places for meetings quickly throughout the day, I cant imagine this would work for anyone who couldnt drive/park in the city due to access and affordability issues.

we will be back to normal by then. 30 minutes will kill metrorail

My METRO commute (Virginia Square to Union Station) has me changing trains at METRO Center when traveling either to or from home. The wait time has the potential to add 30 minutes to my commute (normally 26 minutes) in each direction. Since the pandemic, I have been riding my bicycle to/from work where the entire commute each way is approximately 26 minutes. METRO would not be viable given the time and uncertainty of arrival.

This absolutely would not work for me. I depend on the metro to get to work.

Headways this long are a massive time waster - I might as well drive, bike, or walk. Doubly so if theres a transfer involved - that can be 40 extra minutes of wasting time in metro stations! In all that wasted time, Id already be at my destination by any other mode.

It would work for me (Im retired), but it is unrealistic for working people needing to use rail service during rush hours -- and by 2022, rush hours WILL return.

As more business reopen downtown, things still need to be safe and more trains will be needed at peak rush hour.

Non rush hour should be every 15 minutes also

Increased frequency during rush hour is essential to avoid overcrowded trains.

For anyone with regular commutes into the city (including gig workers/hourly workers with work on the weekend) this schedule is infeasible. There is no difference in arrival between 1 and multi-line trains. This will cause congestion and (unless you are anticipating full vaccination by January) this is also a public health hazard

There should be more trains at rush hour - both to help people get where they need to go in a timely manner and make sure those needing to travel fit into the cars without excess crowding or being left behind and very late for work.

This is a transit death spiral. More service equals more riders. Its been shown time and time again.

We all should be back in the office by then so that level of service will be woefully inadequate.

Would not work during rush hour

Proposal to operate Metrorail service every 30 minutes

15 minutes is a crazy interval. Rush hour trains are packed as it is with intervals around 5 minutes.

I don't have a standard schedule

In January 2022, I expect to be once again commuting to my office downtown. If Metro is not a reliable option for commuting to work and to home, I will likely switch to driving, which is not my preferred option. Trains at the proposed interval are not sufficient to encourage use.

That's absurd, given all the money in taxes I pay to subsidize Metro. Cut the budget by firing EVERYBODY who devised, developed or endorsed/authorized this plan. All of that staff gone, first.

This plan is not realistic if there is a return to work on offices. Before COVID, trains were often overcrowded, with commutes worsened by delays,

While this would not make it impossible for me to get to work, it would make my commute far more inconvenient. I travel from Rosslyn to Takoma for work, which takes about an hour including walking to/from the Metro stations, my apartment and my place of employment. I feel like this proposal could make my travel times longer. If I just miss a train now, I can count on another one arriving in a few minutes. If I just miss a train under this proposal, I could end up waiting another 10-15 minutes, which would increase my commute time.

This makes using the metro significantly more inconvenient, almost to the point of unusable. It would lead to way more crowding on trains and would create so many situations in which taking the metro would take nearly triple the time of other transportation methods.

This proposal would ensure I no longer ride metrorail as 30 minutes between arrivals does not meet my transit needs.

Those would be shockingly crowded trains.

We specifically moved to the housing complex near Van Dorn and sold our car so that we could be at a close proximity to the metro. The service frequency is critical to our ability to commute to work..At this time our workplace is not allowing us to be at the office but that WILL change as soon as COVID vaccines become available to us. The proposed closure will have a HUGE impact on our livelihood. We can't afford to move to the areas that are closer to work and rely on the metro as our sole source of transportation to work. Please consider other means than the proposed closure. We reside next to the Van Dorn Eisenhower Metro.

Depending upon ridership after mass vaccination and opening I would hope for some changes. Could there be a possibility of shorting rush hour and non-rush hour periods for a time being in hopes that it can still supply distancing if needed.

Increased waiting may make my transit trip too long pushing me to drive instead.

Every 30 minutes is excessive, where I would have to spend twice as long to plan....I would end up taking uber or lyft with a 30 minute frequency. Silver line is adding the extension where I plan to use metro daily

Only if the trains are not crowded due to lower train frequencies.

Not ideal of course, but workable for me. Would require work from metro station at times or other accommodations, and would be ideal to have more accurate mobile solutions to show when trains are arriving so I could plan my trip starting at home better in order to not miss the train that comes less frequently.

This is a schedule which may benefit those only commuting for 9-5 shifts, but for people who use the metro at all hours to get around for shopping, work, and entertainment, this would be a large inconvenience. Especially if use of metro picks up with this service adjustment in place, it could result in overcrowding on the platform and train due to infrequency.

We hope that this plan will be piloted for six months and if ridership shows resumption of 2019 levels in the same period that additional trains could be added back in.

With the gradual re-opening after the pandemic, Metrorail should decrease the time between train arrivals, not increase them! The increased ridership post-pandemic should also alleviate budgetary concerns.

Rush hour trains should be more frequent, like they used to be. This summer when almost all the population would be vaccinated everybody will start using metro again.

It's very important to have more trains at rush hour for many reasons, including safety on crowded platforms.

The Orange Line was often crowded when coming through Northern Virginia during rush hour and I occasionally had to wait for the next train because the current one was full. If there was any chance of that happening and trains came every 30 minutes, then I would find another commuting option.

Would these be 4-, 6- or 8-car trains? Could 4-car trains be run every 20m? That would give better service when things are working well, and would reduce the pain in case a train goes offline. In fact, with 4-car trains the following train could hook up with a disabled train and push it to the end of the line, eliminating need to single-track until bad train is dragged out.

I wouldn't mind waiting for a train if it benefits the system overall

This is too infrequent to the point I would not use metro at all as it would no longer be a reliable and timely mode of transit

I will likely be taking the metro to work everyday by Jan 2022. I live at a stop that has a green and a yellow line and work at a stop with a yellow and blue line, so it would come every 12-15min. That would really hinder the convenience I love about metro. It used to be so convenient that whenever I got to the metro that I would never have to wait more than 5-7min.

Proposal to operate Metrorail service every 30 minutes

That is a very long time to wait for a train especially if we are ever able to start regularly commuting again.

If required to come to the office, this metro schedule change will add 50-60 minutes to my commute.

This would cause extreme crowding during peak times when ridership is back to full capacity.

At 30 minutes between trains most of us would need to find other services to get back and forth from work and other places.

Trains should run every five minutes during morning and evening rush hours.

Currently working from home but plan on using metro once it opens back up. That wait time seems incredibly long!!!

I travel from Greenbelt to NIH at Medical Center for work. I use multiple lines (Green, Yellow when available, and Red). A 30-minute interval between trains not on the heavily used part of the Red Line could be very problematic for me in terms of arriving on time for work. Even a 15-minute interval on the Grosvenor-Silver Spring portion of the Red Line is too long and could lead (along with 30-minutes on the Green/Yellow Lines) to late arrivals at work on a frequent basis.

30 minute headways are unacceptable for Metro to be a relevant transportation option

I use metro very infrequently and (so far) only for travel between home (on Westpark Drive between International Drive and Park Run Drive in Tysons) and the airport, so the schedule proposed here should not be a major inconvenience for me.

I use Wheaton metro and have to get into work by 7:30 in a building on 18th and G

In January 2022, I would anticipate ridership on metro to return to a more pre-covid number and every 30 minutes would be a mess on weekdays.

As a commuter, this is not ideal, especially for the evening commute where the end of my workday is harder to prescribe. I have a bus ride between my office and Metro to contend with, so I assume that would be aligned.

This would require longer trains, or there would be excessive onboard crowding and unsafe crowding on platforms at certain times.

By this time it is likely that I, and many others will be back to working in offices at least some days of the week. 30 minute headways are not conducive to anyone getting around the city at any time, but certainly not if you're looking to get back business hour commuters. It would actively deter people from the system, making the revenue problem worse.

The possibility of a 30-minute wait time when my trips within the district usually take 20 minutes or less would lead me to forego metro use altogether. This would not be acceptable and would cost metrorail a customer. I strongly suspect others would feel the same as me, and this plan would prevent metrorail from ever recovering from its deficit.

Half hour between trains makes it very difficult to plan for commuting, but if better than not being able to get to a station because it has closed.

My kids go to school in DC. Missing one train would make us miss the bus from Union Station and make them late for school. I don't drive, so that's not an option as backup.

It would make sense, both in terms of convenience and crowding, to have trains run somewhat more often than every 30 minutes during peak rush hours.

Riders could feasibly make this proposal work. Consider the second and third order effects of platform congestion and rush hour train congestion. Ridership is likely to increase as the year goes on. The jump from rush hour trains every 8 minutes to 30 minutes is pretty big. Staying at 15 or getting back to 15 minutes per departure is preferred.

During non-pandemic times, the trains are regularly full during rush hour at Rosslyn metro. If one had to wait for multiple trains with this schedule, that's an unacceptable amount of lost time just waiting.

This would be acceptable for stations between East Falls Church and Rosslyn because there would be both Orange and Silver Line service.

Waiting to catch a train simply takes up too much time each day, increasing commuting time. I would mostly likely resort to driving.

works for me as a retiree, but would not work for most working folks.

I mostly use Metro on nights and weekends - this would be great for me and make me more likely to choose to commute by Metro on the weekend.

Every 15 minutes on the Red Line could be frequent enough during rush hour; I just worry the trains may be too crowded if people start going back to work.

30 minutes is too long to wait

I recently moved to Wheaton, with plans to ride starting in Wheaton once we're okay to go back to work. With this plan, I'd like stop taking Metro altogether and drive since it wouldn't eliminate the need for a second car (commuting to Silver Spring) and 30 min is a long wait time when trying to schedule around morning meetings and taking children to school, etc.

Metro overall efficiency seems to be so low that no amount of restructuring is going to save it and of course their non-efficient approach is to close stations and curtail services. Maybe a concentrated effort to streamline management and provide more effective, safe service at lower prices would be a good place to start - and that doesn't mean laying off the maintenance techs and cleaning teams.

Metro is not consistent enough with its arrival and leaving times from station to station for this to work. One day I can make a connection between trains and the next I cannot, waiting 30 minutes for the next one would make me severely late.

I think this is just an inefficient use of resources. If trains currently come faster, why stop providing that same level of service. It will only work to discourage transit ridership

| |
|--|
| Proposal to operate Metrorail service every 30 minutes |
| I will be late and will be penalized |
| The arrival times would be too far between to accommodate my schedule |
| 30 minutes is a long time to wait if you've just missed a train. |
| 30 minutes between trains is just NOT acceptable. If this plan was implemented, it would make more sense for me to buy a car and stop taking public transit altogether. |
| Should vary service at least somewhat based on time of day |
| 30 minutes between trains seems very long if passengers don't time their arrivals at the station well. Waiting on outdoor platforms, especially in cold or wet weather would dissuade me from using Metrorail. |
| trains every 15 minutes is not frequent enough |
| with the longer times between trains, if you have to take two or more trains the trip becomes untenable. |
| I use public transportation to commute to and from work this is an unacceptable time frame to have to wait for a train and would cause major delays and disruption to mine and other people's commutes who rely on this service, especially those who commute in from the suburbs and live near a station with only one line. It would also decimate small businesses along the metro line/near single line stations because of lack of foot traffic and convenient ways to access them. This kind of change will only further complicate metros financial woes because less people will use trains to commute thus causing even more significant drops in ridership because of its lack of promptness and unreliability |
| If demand increases once vaccination is widespread, would the schedule be reassessed to ensure density is controlled? |
| I suspect that riders who travel from the most outlying areas of the Metro system would drive to work or find other ways to commute rather than wait 30 minutes for a train. I would seriously consider other options since I take the train in from Glenmont. |
| Weekend reduction service is reasonable. 15 minutes between trains during weekdays is not workable. By gutting service to this level, public transit will become unworkable for commuters. This will push people to cars and other forms of transit, further dropping ridership. |
| trains need to be available when people need it i.e. rush hour, sporting events, concerts, etc. if they only run every 30 mins. ridership will decrease resulting in less revenue |
| I have to transfer at Rosslyn for my work commute, so I'd love to have a few more blue line trains. I'd hate to be stuck waiting 30 minutes if I just miss it |
| It makes you early, or late, but not on time to work because the trains have no established schedule. For example, do not depart from Vienna at a set time. |
| This is not feasible for most riders, especially when needing to take Metro with little notice. This will severely decrease ridership and is an extremely ridership. Any change greater than the current 7 minutes between trains is unacceptable. |
| As long as it is temporary until regular ridership resumes |
| If trains are only running every 30 minutes, a missed train means I will drive to work, not wait for the next train. If there were to be a posted schedule for each station that would make planning easier for a commute by train. Of course, trains would have to stay on schedule (not depart a station earlier than scheduled) |
| Not thrilled with the changes but I get it. While I do not take METRO to commute to work, I do use METRO for a variety of purposes (going to Amtrak, going to airports, going to sporting events and concerts, going to meet friends, go to museums, etc.). The proposed schedule will make it more difficult for me to plan and execute these commutes, I will work it out. |
| Way way too long between trains. Ridiculous. |
| This will never work. People will have to drive if service is this unreliable. People will have to wait hours to commute during rush hour, and distancing will be nonexistent. |
| I think this plan would work ok for me if there was accurate arrival time information available through an app so I could plan when to arrive at a station to get the train. I do not know yet what my expected travel needs will be in January 2022 so it is hard to know for sure. |
| This reduction in service would likely dissuade casual Metro users from using Metro at all, thus making ridership shortfalls greater, not smaller. Metro must compete with the convenience of ridesharing and taxi service at a time when users will be increasing their movement around the city. |
| You would be kneecapping the public transit in one of the few US cities with halfway decent public transit. |
| I use the red line to commute. This proposal would be very problematic because: 1) rush hour trains would be extremely crowded - they were full as of before the pandemic with that regular schedule! And 2) adding another 10-12 min to my commute if I missed the train would be difficult, as my commute is already 1 hr 40 min each way. But it probably wouldn't be just 10-12 min, as it would be so crowded that people would have to wait for multiple trains. I could see this proposal making people wait an hour to get on a train during rush hour! |

Proposal to operate Metrorail service every 30 minutes

This question horrified me into taking this survey. This would be a nightmare. The entire DC area would grind to a halt. The roads are already overcrowded with many people taking Metrorail to get to work. No one would be able to reliably get to work if trains ran this far apart. I know no one is taking the trains right now due to COVID but they are going to send us all back before 2022. The trains were always packed. I often ended up having to stand for the entire commute. It already takes me an hour and a half to get to work at Union Station from Shady Grove including driving to the station and parking. It would take up to two hours if this schedule were implemented. That is 4 hours of commuting each day. This proposal would destroy peoples lives.

I would not use the train if it only came every 30 minutes. I would just take an uber/lyft instead of walk. If the service is that slow its not worth using.

Would be really unhappy about it and would likely use metro less because of it. Would it work? Maybe.

I need to take the metro to get to work and this could possibly lengthen my already 50 min long commute buy 29 mins :(

If people return to offices in Winter 2022, the lack of differentiation between rush hour and no rush hour times could prove difficult and increase chances of crowding. If things are similar to February 2021 than the changes might not be so consequential.

You would know when trains come. I would use it with this type of scheduling.

This service is insufficient

I believe rush hour request a higher frequency

Trains arriving every 30 minutes is unacceptable. My usage of the metrorail would cease completely.

Consistency is the key as long as we have trains doing the transport. Every 15 is consistent.

I need improved service

This change would affect me and family tremendously. Trains running less frequent will make our family late for work, school, etc.

There are a lot of people on the green line we need 15 min service too

I prefer more frequent service during rush hour

Red line Shady Grove needs trains to be more frequent than 30 minutes. the trains would be filled and packed by the time they would get to Grovesnor.

Id prefer more trains during rush hour and less trains during non rush hour

If the federal government continues to telework, this would be ok. However, if the government resumes working in the office, this will not work.

I can't imagine that with trains arriving every 12-15 minutes during rush hour that this would be safe. there would not be space on the trains and it would be a safety issue. It would also likely decrease ridership as more would look to other forms of transportation.

As a frequent user of both Red and Silver/Orange/Blue line trains, both of these changes would heavily affect my ability to commute. Notably, decreased service in the Red line would lengthen my commutes, and Silver line decreases would severely impact trips I have to make towards Wiehle-Reston.

I care less about headways than being able to reliably get somewhere at a stated time.

Given the circumstances, this is a reasonable proposal.

15 minutes intervals seem reasonable as ridership may not go back to pre-covid levels since many employers/employees may continue with some modified work from home once we have the pandemic under control. This seems like a fair amount of wait time.

Service every 30 minutes is too infrequent on work days and especially during rush hours. We rely on Metro to get to work and missing a train by 1-2 minutes could result in late arrival by half an hour. Also the trains will be too crowded, with potential to spread disease and obscure unlawful/unsuitable behavior.

As a former regular daily commuter to downtown DC this would work

It is safe to expect that everyone will be back to work by January 2020 and that most people will be vaccinated, so ridership should be the same as before. Even 8 min on red line between trains was bad as it became impossible to get into trains after first several stops. With 15-30 min it may be impossible to use it. I am afriad people will just opt to drive.

30 minutes is way too long and it takes up too much time

prefer more frequent rush hr

Its hard to tell right now, because the vaccine can/cannot change things later.

I currently ride the Red Line from Silver Spring a few days a week early morning 6 - 7 am to Metro Center and switch to Foggy Bottom. Given the pandemic it is nerve-wracking to see how crowded the trains are. There is often no way to be 6 feet away from others and still always a few people without masks or not using them correctly. I don't object to the schedule change once there is widespread vaccination but for now wish there could be perhaps 8 or 10 minutes. between trains. 15 seems excessive.

Difficult to arrive in timely way for appointments with 1 30-minute schedule. More frequent arrival times in morning and evenings would help.

Proposal to operate Metrorail service every 30 minutes

If the Metro is to serve as commuter alternative from the DC area, all trains need to be every 20 minutes.

Every 30 minutes is insufficient for rush hour

I dont understand why this would be desirable. Lowering service (especially at rush hour) will disincentivize ridership.

I would likely need to get used to the new schedule. Even so, I am not a commuter; I come some days to shop or sight see.

Every 15 minutes is too long to wait for a train during rush hour.

The current 8 minute schedule allows me some leeway in when I leave home. Taking care of a family in the morning and getting kids out to school does not always fit into a perfectly timed schedule. If the trains are increased to 30 minutes, that flexibility will be entirely lost.

I ride the Orange or Silver line trains from Ballston to Farragut West. This option would result in severe crowding, particularly in the evening rush hour (assuming that ridership comes back to pre-pandemic levels).

It would work as long as there are no station closures between Rosslyn and West Falls Church

Workable pertaining to travel needs.

30 minutes between trains is too long

Upon returning to the office- this would make commuting in to the office in DC very difficult and force some hard decisions

Concerned about travel time from red to green during baseball season.

My commute currently is White Flint -Bethesda. I could practically walk the distance in the same time if I just miss a train!

If we have all returned to in-office work following the COVID-19 pandemic, then I think this plan will result in serious overcrowding of the trains.

The trains already come far too infrequently during non-peak hours. I cannot rely on metro for unplanned travel already and lack of consistency makes time sensitive travel problematic as well. These changes would exacerbate this reality.

this is too much time between trains to be useful

I understand cuts of some type are needed. When you slow down trains on the Blue/Orange/Silver line during rush hour, what will happen to the already overflowing platforms downtown heading westbound, such as at McPherson Square & Farragut North? Without slowing down trains, I've been injured in the large crowd backups that occurred in the past.

The trains could be extraordinarily crowded if they only came every 12-15 minutes.

This train frequency is unacceptable for a rapid transit system.

We need to cover the cost of public transportation through taxes. Why is it not the same as with highways and other road ways? They are not pay as you go, yet public transportation is. Unfair and bad for everyone.

Please do not close the Grosvenor Station. There is a big neighborhood here that use this line. We all work in DC and this station needs to stay open.

Monday - Friday schedules must be different from weekend schedules. M-F trains must come more frequently & run to midnight. Too many people work 2 & 3 jobs.

I hope to be out later when things open and would like to be able to use metro later on weekends.

When DC is in a non-remote work environment, the trains are insanely packed during rush hour. I dont believe the trains are well-equipped for the level of riders per car during rush hour periods under this current time and furthermore, the long wait times do not offer the option to wait for the next train

Need more frequent service on Red Line at White Flint station.

It sounds like rush hour would be too crowded

I think that this will depend on how much rush hour travel increases as the area recovers from the health emergency.

Assuming ridership rebounds, these intervals would mean enormous crowds, which would make me less inclined to ride.

30 mins is too long. Faster to drive or Uber.

The lack of rush hour periods would my already hour plus commute closer to an hour and a half at the very least. This would potentially make driving a better option than metro since the cost of metro is already so high.

It would be better if there was more frequent service during rush hour. Otherwise a commuter that missed one train would wait, connect to another line, wait again and could add at least 30 minutes to their commute assuming no delays.

Rush hour will be too crowded when we get back to regular commuting from the suburbs to downtown in the red lines. Please consider more frequent rush hour trains.

the number of riders during rush hour would force waiting for the subsequent trains since there would be too many people to fit on the trains at this interval. especially for popular stations such as metro center

Proposal to operate Metrorail service every 30 minutes

Why does the red line always get shafted? 15 minutes between trains is unrealistic. It should be 8-10.

I use Metro red line for travel to work. A train every 15 minutes is not sufficient.

People aren't going to want to ride the Metro if it only comes every 15 or 30 minutes. Missing a train may mean not getting to work on time. The trains will be too packed and will add to spreading any illness.

Need rush hour periods to help move lots of people. Most federal agencies will likely have people back in the offices daily.

During peak commute (core 9-5 M-Fr) and DCPS school days the train spacing would be difficult. Modulating for peak demand times seem to make more sense for efficiency.

30 minute headway is far too long. To actually work, the trains must run more frequently

Please keep Strathmore-Grosvenor station OPEN

Train cars would be way too crowded if they only ran every 30 minutes. Every 15 minutes would be a better alternative.

Trains should arrive every 3-5 minutes like in most European cities

Rush hour trains will be even more packed. Commuting for people who need to switch lines will take even longer, forcing more people to commute by car.

Need more frequent train times rush hours am and pm. I can't be late to work...

That is too long to potentially wait for a train if I just miss one. I would consider switching to walking or bus.

When normal, our bus is packed during rush hour. If there are less buses going back and forth, there wouldn't be enough room for riders.

Waiting 30 minutes for a train at a single service stop, especially at night, is too long.

Rush hour would become very crowded in NW DC where a majority of workers and children need the bus to get to and from work and home. It was already crowded before COVID-19

This feels somewhat similar to pre-pandemic service, and while not ideal, would be sufficient for my primary travel needs.

Ridership on the Orange and Blue lines is already at or above capacity in non-pandemic times. To offset the damaging effects of commuting via car, Metro needs to remain a primary commuting option. The addition of the Silver line had negative effects to riders who live on a Blue line and rely on it for commuting into the city.

Seems reasonable as long as customers have accurate visibility into arrival times so that they can plan their travel to the station to work with train arrival.

Metro cars would get too crowded during rush hour

Missing a train adds on 30 minutes of wait time, which is just unacceptable. Having to plan commutes, especially when you utilize busses, so carefully leaves zero time for wiggle room.

The trains should run at Grosvenor station at the same frequency as other popular stops. Many people in apartment next to the metro stop and rely on trains frequently in and out of the station

Is metro planning on using a 6 car train? Under normal circumstances trains are already at full capacity at Grosvenor during rush hour. Having a 15 minutes wait would make the commute even harder and much longer.

Trains are crowded after COVID ends. Reduced schedules would increase crowds.

Having trains arrive every 30 minutes would make metro more or less unusable for me and I probably would stop riding the metro entirely if this happened.

There should be more frequent trains during rush hour to maximize the possibility of social distancing on the trains

Long time to wait between trains.

Rush hour commuting would be dangerously crowded if only running every 30 minutes. Metro platforms would be overcrowded, fed by escalators and people rushing to jam themselves on to the one train that will get them to work on time.

With the longer wait times, efforts to keep the doors open to allow everyone to enter is even more important. .

This is a sure way to kill the downtown and thus the metro itself.

I feel like we would still need a rush hour during commuting hours.

Sounds good as a temporary fix.

Rush hour would be more crowded at stations and on trains with people wondering if they would have to wait another 30 minutes if they missed a train. There would be more running through stations by people trying to catch a train.

Commuting from Grosvenor Strathmore to Downtown DC would not be possible under this plan. In March 2020, I rarely could sit on the metro and sometimes had to miss trains because they were already full at this station at Rush Hour. This would not be possible for me to easily get to work

Proposal to operate Metrorail service every 30 minutes

There must be faster train service during rush hour (every 5 min) - assuming metro commuting picks up to pre-2020 levels.

Regular service is important, riders can adjust to timing changes

Two long intervals even in the rush hour.

This reduction in service is not compatible with the level of congestion experienced during peak travel times on weekdays or weekends.

Every 30 minutes during rush hour is not tenable. Ridership will likely bounce back as more of the population gets vaccinated and business open. Deciding to make a drastic cut based on circumstances today is shortsighted.

Once more people are commuting to work again, trains running that infrequently would be incredibly crowded.

With thoughtful timing for morning commute service on the Orange Line. I dont have a car and based my living arrangement around Metro service so this is critical. Thank you

Could you provide a lot more seating to wait, please?

1. A schedule in which only one Red Line train would arrive at most stations every 12-15 minutes could not possibly accommodate the numbers of commuters and tourists who need public transit to enter, leave, and move around within the city and the larger metro area.2. I dont know what the data are on pre-pandemic usage of METRO on the weekends, but it doesnt seem that METRO needs to run as much on the weekends as it does during the week when there will be greater demand for METRO use.

Not having rush hour (increased) variance makes metro less convenient and a lot more crowded. It already is very crowded during peak rush hour times downtown (pre-covid)

Because my children rely on the metro to get to school, this schedule could mean that they would miss the start of school in the morning. It could result in a normally 45 minute trip being 1:15 mins if they have to wait 30 mins for a train.

If this were the case, I would use other transportation options

I live on Orange/Silver line. It's possible in 2022, I'll continue to telecommute often, but I would still rely on the Metro train. A half-hour wait is extensive especially in difficult weather. It might help if it was precisely on the half hour and if early, waited til the half hour. And more might taxi/Uber though we want more public transportation. This can only be a very temporary situation to make up for the pandemic. We must actually increase Metro.

Being jam packed into a set of wagons every half hour to get to work isn't conducive to a pleasurable ride. Worse, and knowing from past experience with wmata, being late often under such situationsWill force many to find alternatives and stop using wmata totally.

You would need to decide whether Metrorail is a local train service or a metro. If the former, with few stations far apart, you would need more cars to accommodate passengers. You would also palm for parking or adequate bus routes as few riders would be able to walk or bike to the stations. If the later, stations would need to remain as is and schedule more frequent

Metro is supposed to be RAPID TRANSIT! That schedule is not Rapid!

30 minutes is too long between trains, especially for rush hour commuters!

Trains 30 minutes apart during the workweek is not often enough. 15 minutes would be manageable. If trains needs to be 30 min apart, please only run this schedule on the weekends when passengers often have more flexibility with their time.

Post-Covid will see an influx of traffic that could make it more difficult during working hours to get the correct train. It could massively increase travel time for many and create a lot more instability. Especially if some train times dont line up well.

Packed trains, long waits, and recently increased fares will continue to drive metro customers away. To increase ridership metro has to be a better alternative, not the last resort.

These plans should be based on the ridership volume at specific periods of time during the day. Surely volume is not the same throughout the day and on weekends.

Assuming everyone returns to work in 2022, there isnt enough platform room to accommodate the number of passengers that would accumulate during a 30 minute wait. Additionally, from past experience riding metro, even though you say that stations with more than one line would have trains arrive every 12-15 minutes, somehow that never is the case. An orange line train will be immediately followed by a silver line train rather than the silver line train arriving 15 minutes later so that there is always an orange or silver train every 15 minutes. The stated goal in this proposal has eluded Metro in the past so I dont have high hopes that it would suddenly be achieved now.

Whoever thought of this proposal should have been laughed out of the building. This would destroy Metro and make it virtually unusable, hike climate emissions, and cause people to seek jobs elsewhere as they will be unable to commute.

This works only because I live near station with 3 lines. Otherwise I would take bus.

There should be more frequent rush hour trains (not less frequent than about every 6 to 8 minutes).

i will need orange blue and silver lines frequently from virginia square to rosslyn, eastern market, metro center, etc.

The reason is people have to get on the train fast to their destination for jobs in Washington metropolitan area quickly on time and need more service on hours to perform better.

Proposal to operate Metrorail service every 30 minutes

I only use the red line, from Takoma to White Flint and back and would not be interested in waiting that long.

I need trains to run every 3-5 minutes when I return back to work and I need Eisenhower metro station to remain open so that I am able to travel once I return to work

Difficult to know how much I'll be traveling in January 2022. If it's anything close to my routines pre-COVID, this plan would have a significant negative effect on my ability to get around the city in a timely way.

This will drive people away from using metro and lead to even lower revenue

With pandemic and work from home mode for majority of commuters making future plans doesn't make a lot of sense. Shutting/reducing down the service right now makes more sense

If ridership were to resume at pre-pandemic levels, the train(s) that I would need would be full before they even got to my station.

Common commute times (rush hour) need more trains

As a regular commuter I would be very concerned about overcrowding on platforms and trains during rush hour.

Would this schedule change during rush hour?

It's not ideal since many places of work will reopen before then but if there must be a reduction in service, this seems manageable.

Would this be flexible to account for gradual growth in ridership as the year goes on? With vaccines ramping up in 2021 I believe there will be a gradual increase in 2022 of people willing to ride the Metro.

Metro would need to carefully monitor and anticipate changes in ridership to ensure enough cars for the level of traveler- if customers are left behind this will create too much friction.

With ridership so much lower on weekends, why not have reduced service on weekends only? Consider weekend closures of underutilized stations.

The time between trains means that every train will be very crowded, leading to COVID transmission and waits for subsequent trains. The time interval should be 5-10 minutes.

Just this: I love Metrorail and love the Grosvenor Metro Station; it is the best and most beautiful system in the world!

Once the pandemic is over, having trains run that infrequently would make more people decide to drive instead of taking Metro to work.

This would make it really difficult to make bus-to-rail transfers. We know the buses don't always run on time!

If, given the declining rate of Covid infections and the vaccines, we go back to a normal work environment, commuting will return and these changes would be disastrous.

The red line - and especially Grosvenor station is a lifeline. I use it frequently and indeed, I chose to live near the station precisely bc of its wide service area and frequency of trains. I even intend to purchase a home near this station for this purpose

30 minute waits when train arrivals and departures are not reliable are untenable. It would complicate, lengthen, and congest commutes, particularly for people like myself who live on the further reaches of a line.

It works for me because I am retired now, but you will need trains at more frequent intervals at rush hour to prevent dangerous platform overcrowding

I don't ride the red line very often, but I am sure that this would be a huge problem for the ones that do. 2022 is 10 months from now. Things will change, people will start riding the metro again, and I think that the proposed schedule won't work at all.

Depending on timings for transfers, this could add up to an extra 30 minutes to my commute each way

I think it's a bad idea but it doesn't directly affect me.

Every 30 min during rush hour is not acceptable. Trains will overcrowd even more than pre-pandemic levels.

Need rush hour service

Pre pandemic, orange and silver line trains were not staggered, so they came one right after the other. I fear this would be the case under this plan as well, despite what is stated, making the wait 30 minutes.

You're budgeting for a long period of time but you're acting based on a short period of time. With a vaccine here, traffic is likely to start going up during this period. You seem to suggest you're making permanent changes, however. Long-term, rush hour needs more cars. Long-term, more people need to ride Metro as we finally seem to be heading toward doing something about climate change. Short-term thinking got us into this mess. It won't get you out of it.

Closing Metrorail at 9 would render it useless as my commute is long

If I'm going to have to wait that long for trains (e.g. I get to the station and a train just left so now I have 25 minutes before the next one comes) and I have to change trains to get to my destination, you're adding over an hour to my travel time - it'll be better to just drive to where I'm going or if I was thinking of doing something in Washington DC (I live in Maryland) to find a Maryland option instead and forget about going into Washington. Maybe explore entertainment venues in Baltimore.

30 minutes is too long. Will cause further passenger and revenue loss.

| |
|---|
| Proposal to operate Metrorail service every 30 minutes |
| More frequent trains |
| I think managing frequency of service is a far better solution than closing any stations. |
| Given the frustration that riders face when just missing a train, and the prospect of having to wait 30 minutes for a train, I think it would be better to stagger service for rush hour service (12-15 minutes) or simply closing the Metro stop - although I am against several of the proposed closures of Metro stops. |
| Absolutely way too long between trains. Can you imagine someone just missing a train and having to wait 30 minutes for the next one? That would make it impossible for anyone to adequately plan their commute times. |
| This is okay with me because I am retired. If I were still working, it would make using Metro for commuting to and from a job much more difficult. |
| As long as no stations are closed this schedule would work |
| This would adversely affect the thousands of people living outside the Beltway who use the Wheaton and Glenmont stations. It would serve as a barrier to Metro use |
| While I recognize that ridership is down due to COVID-19, public faith in WMATA has been sub-zero for several years now. The Back 2 Good campaign was a clear indication of this. If WMATA is ever going to gain and more importantly maintain public trust again, it must stop looking for ways to cut service and offer MORE options to residents. DC is the most gentrified city in the country and the influx of new residents demands that MORE transportation options are available. If WMATA does not fulfill its role as the public transportation options, you will continue to see ridership decline as more residents buy and use their cars to move around. This damages the environment and increases traffic on the roads. Trains arriving every 30 minutes i.e. TWICE AN HOUR is unconscionable. Not only does this explicitly prevent any social distancing for COVID-19, it sends a clear message that folks looking to move around should pursue other more efficient options. No other major city in the country is running trains on its rail system TWICE AN HOUR. This is the capital of the US and the system is an embarrassment. Trains need to run at least four times an hour and ideally every ten minutes. |
| I would consider an additional train or two just after the first train and before the last. |
| During weekdays rush hours the frequency should be less than 10 mins not 15 mins |
| Seems challenging for rush hour demand |
| When people want to resume weekday commuting as the pandemic winds down, this proposal would seem to discourage it. It would make commuting more difficult and time consuming. |
| There needs to remain a rush hour difference. Trains (pre covid at least) were already jammed at rush hour. Better yo have more trains then. Slowing the schedule at other times seems ok. |
| Many people rely on the Metro to get to work on time. Reducing the number of trains scheduled to arrive would severely impact the ability to get to work on time. |
| I expect to be back at work and this train schedule would make it so that the trains are full during rush hour times. |
| A wait time of 15-30 minutes will extend the length of my commute and force me to look for alternative options, like the bus or ride sharing services. |
| We cant assume that there would be no difference between demand at rush hour and non-rush hour, like this proposal suggests. Historically, that has not been the case. |
| This works for not rush hour, but rush hour needs more trains so they arent too crowded. We dont know yet how safe it will be for crowded trains. Metro will lose riders. |
| I can afford a vehicle but choose not to own one. The proposed 2022 reductions will directly impact me in a negative way. I am someone who lives in Arlington and travels to DC for work. I feel like you are basing this budget off of a pandemic timeline when down the line we aren't going to stay this isolated. |
| Its possible that Metrorail Proposal 1 would work for me given my expected travel needs in January 2022. My concern is the timing of the trains if/when I need to switch Lines. However, it sounds like stations with service from more than one line would require a wait no more than 15 minutes. based on this proposal. |
| 12-15 mins is too long during rush hour. |
| Prioritizing rush hour and weekday work travel keeps more commuters off the roads. Potential for crowding and crime with people gathering up to 30 minutes at a time on platforms seems like a problem. |
| Need more frequent trains! |
| This would drastically effect riders commuting for work. Weekdays and weekends shouldnt be the same.Maybe reduced times during the non-rush hour periods. Weekends service should be different and reduced and separate from weekdays. |
| I dont use the Metro for commuting purposes so I am not sure how that effects those people. I am fine with that schedule. |
| I only use the grosvenor-strathmore metro stop when taking the metro. |
| If work returns to in person this will NOT work for my needs |

Proposal to operate Metrorail service every 30 minutes

Once the world opens up again, Im going to be using the metro station pretty much everyday and the sudden jump in between two trains arriving can be detrimental to my job. I might have to head to a client site or to my home office and 15 minutes between trains means Im opening myself up to getting in trouble at work.

even 15 minutes between trains is too infrequent

If you need to be some place, and the WMATA site or the transit tracking app doesn't work perfectly, then you would be stuck waiting for half an hour (!?!?) before the next train on a work day. For a transportation system that's completely ineffective for transporting people around the area.

Rush hour service would hopefully be necessary in 2022. This seems the fastest among the proposals though.

That's a long time to wait between trains, especially of making connections to other forms of public transport (Metra, airport, etc)

It delays my arrival to and from work. I would prefer to have the old schedule of trains every 8 minutes

If workers return to offices in downtown DC by Jan 2022, some cuts may be necessary based on changes in ridership. This proposal would allow the DC area to continue to be served by Metro during the majority of the day and night.

I will drive or take MARC rather than take Metrorail if service is cut to this extent

As long as times are clearly communicated this would work for me.

The way to make metro convenient for me would be more frequent trains. My commute ride is only 12 minutes. If I have to wait 12+ minutes for a train, you just doubled the ride time. I'd be more likely to jump in an uber or bike share at that point.

Given that many people will continue to work remotely, demand should not be as high as it was previously.

I expect to return to work in the office by January 2022, and will need to commute on 2 lines (Red and Green/Yellow) each day. The reduction in service will make this commute more difficult.

I would expect peak fares to be eliminated

If I were still commuting each day, I'd answer differently

Since Im not likely to take metro much no matter how often it runs since I just dont need to go anywhere it goes on a regular basis, its fine with me, but waiting 30 minutes for a train means that anyone who has another option will use it, including me - I can drive the whole way from my house to just about anywhere in DC in 30 minutes. You might as well just build more parking garages downtown.

weekdays that works fine, not sure of the total riders for the weekend to have the same frequency

I use the red line to commute weekdays and Saturdays. There is no indication when trains start service at each station, which could negatively impact my ability to get to work on time. Likewise, fewer trains could mean significantly more crowded trains, making the commute more hazardous from a COVID-19 perspective, potentially.

This depends on how much of the workforce returns to commuting heavily via Metro. If ridership is back up to anywhere near what it was pre-pandemic, these trains will be packed.

The wait would be too long between trains, if you just missed a train. You would have to leave so early to be assured you could make your meetings.

One train every half hour from Reston is too infrequent once I return to the office later this office. Especially if I have a meeting on Capitol Hill.

It does not make sense to me to run trains at the same frequency during rush hour and outside rush hour unless the workforce is still largely working from home. If they are not, we need more frequent service than every 30 minutes.

Well during Rush hour it could be challenging

I use the Grosvenor Strathmore metro station, and once the pandemic is done, the trains will be packed if they come every 12-15 minutes. I suspect it will be difficult to get on the first or even second train that comes, and the conditions will be extremely uncomfortable due to overcrowding.

Living on the Red Line, this schedule would work, but I cant imagine how crowded it could potentially be, given the number of people who typically took it during rush hour

I work in an office four days a week and rely on Metrorail part of the time. 30 minutes is a long time to wait in between trains, and this schedule would be inconvenient for me.

Once life returns to normal, continue running Metro at pre-pandemic intervals at all stations.

This would be useful only for office commuting.

By January 2022 I anticipate being back in the office. As such, in order to make sure I am able to get to work on time, I would ideally prefer trains to be running more often than every 12-30 minutes.

Too infrequent to be of use if I have to go in the office

Trains arriving every 15 minutes is not sustainable for rush hour. Pre-pandemic, trains were crowded enough and this change would further exacerbate the problem. Additionally, what happens when the trains have problems and there are delays? It would be too overcrowded and at this rate why take metro at all?

Proposal to operate Metrorail service every 30 minutes

As someone who actually will ride metro during this time, 30 minute headway's are unacceptable and would make me seriously consider driving. This would be a problem for me and I would like to not have to drive, but I cannot live with knowing that missing a train means 30 minutes until the next one.

Every 30 minutes is not at all convenient for those who have to commute

30mins is entirely too long to wait for a train during the day Monday-Friday

Not ideal obviously, but workable. I dont use Metro as much anymore, so I could live with it, but I would be incentivized to take other forms of transportation if I knew I may have to wait half an hour for a train.

I find it preposterous that I would have to wait 15 minutes in the best scenario to catch the Metro - so many people per train! Crowded.

15 min frequency is ok with me

I do not ride the Red line.

This would result in severe congestion during rush hour and would negatively impact the commutes of many riders in the suburbs.

Seems like a dependable schedule so trips can be planned and waits are not too long

This would cause a significant delay in people's time tables and will definitely cause crammed carts. I have been taking the metro's redline religiously since 2009. Metro carts were always full, especially during rush hour. If there is metro downtime, which is frequent, how would people go about to manage an added delay/time to their schedules? Metro has to work on being more reliable and cater to the people. Even when there was a decent budget allocation, I experienced delays, sat on dirty chairs, and was exposed to verbal and sexual harassment in broad daylight. We don't deserve this.

I am not sure how Metro will control the rush hour crowd in downtown DC (specifically Stations between McPherson Sq and Rosslyn) if the train comes only every 12-15 minutes even during rush hour. But it is still a better option than not having metro accessibility at all.

This would lead to more crowded platforms and trains, and add to commuter transit times due to longer waits.

It is highly likely with the current pace of vaccination that people will be commuting to and from their workplaces during the week in much higher numbers by next year, if not before.

But if people go back to the office then I think it would leave people stranded

My concern is over crowding at the stations. Some stations can handle crowds (the above-ground stations) but others cannot (not just the downtown stations but especially those with opposite platforms). It can get terribly dangerous during overcrowding situation. I can adjust to the schedule delays but its the crowding that Im more concerned with.

I understand the potential shortfall for FY 2022, but I wouldnt ride Metrorail if I had to wait half an hour between trains. I used to be a regular metro rider before the pandemic, and plan to resume my ridership by Fall 2021 when most people are vaccinated.

Running trains every 12-30 minutes during peak travel times will lead to overcrowding on trains, which increases the likelihood of door malfunctions and offloading, causing further delays.

Every 30 minutes would be a disaster before the pandemic the trains where massively overcrowded on the red line, and if a train was skipped for whatever reason as it sometimes happens it would be a disaster.

Obviously, more frequent service would be preferable. Customer traffic will be increasing with the advent of vaccine herd immunity.

Waiting 30 minutes and then not being able to board an overcrowded train is going to anger a lot of people and ultimately discourage use

Its been hard enough in the past to have huge wait times between trains on the weekend. If that happens during the week and during rush hour, it will make taking the metro the least effective/likely option for commuting.

By 2022 people will be back working on a more regular schedule and the trains would be too crowded and waits would be extremely inconvenient

if I miss a train by a minute I have to wait 30 minutes I will be late to work everyday! nothing more that 15-20 is acceptable

If/when I go back to work in person there isnt a start time for my work. So if I arrive late it would just mean I stay a bit longer on the other end. Works with me.

I work in a Federal Emergency Operation Center I will Need to get to work on Time

Just missing a train and waiting 30 minutes for the next would make riding metro impossible for a commute. People need something much more reliable.

Every 15 minutes is absurd. Assuming regular rush hour traffic come Jan22 and people would be PACKED on trains. Trains should every every 3-4 minutes.

This would be better than closing the station altogether, but it will make platforms more crowded during rush hour as more government agencies open back up.

By then travel will back to normal. There should only be max a 5 min wait fir the next train. Plus, tat will keep the cars from getting to packed/ spreading germs/ aerosols more easily.

I expect to be back at work in-person by January 2022, and train arrivals every 30 minutes would severely impact my commute, especially given that I would expect the fewer trains to be unworkably crowded.

Proposal to operate Metrorail service every 30 minutes

That is an unworkable plan. 30 minutes during a morning or evening commute can make all the difference in being on time or late to obligations whether work or family-related. Even now with 12 minutes between trains, the wait after just missing a departing train is lost time. This will definitely lead to people running on the platforms, more accidents on the platforms and generally rude behavior as riders jostle to get to trains before they depart. Furthermore, this will lead to much crowding, which even after the pandemic has abated, will be dangerous and uncomfortable.

Having trains every 30 minutes would mean I would either be late or show up to the office extremely early, as I would no longer have the flexibility of more frequent trains to get me there in a timely manner.

30 minutes is too long to wait during rush hours and could lead to dangerous overcrowding on many platforms, which may result in liability issues. I for one avoid the metro on weekends because of the long intervals between trains

Ridership will increase once more people have been vaccinated. I would not make a decision about changing the frequency of the service for 2022 at this time.

Aside from convenience, the amount of crowding experienced with delayed departures is not pandemic-friendly, not to mention horrible for older people and patrons with physical disabilities.

we use the metro from clarendon into the city and back, every weekday at rush hour. trains generally used to run every 6-8 minutes, and they were often very crowded, to the point that i'd have to skip a train and wait for the next one. now you want to send half as many trains? i don't understand how you could even propose that.

Doesn't make any sense not to differentiate between times of day, given that Metro was empty during non-rush periods even before the pandemic.

15 minutes leaves the schedule too volatile during rush hour. Your trains aren't on time enough to do it

There shouldn't be an increased fare for rush hour periods if there won't be an increase in train frequency.

I am employed and to discontinue the V-14 to Deanwood and Penn Mar would create a hardship for me and many other riders that use this service weekly.

When I was in Moscow in the 90s their subway trains ran EVERY 3 minutes during non-rush hour and EVERY 1 minute during rush hour. It was fast and everyone took the subway. By cutting the service down to incredibly long wait times fewer people will take the Metro which will put more cars on the road and EXACERBATE the Metro budget problems. Add to the fact that we have MORE people moving into MDUs in the proposed budget cut areas which will further exacerbate the already crowded streets and lower all of our property values. Metro should never TRY to turn a profit - this is an economic development issue much like schools, roads, bridges, etc. We would never charge a toll to drive down the street to get to my house... I hope...

As someone who will commute on the Yellow/Green line in 2022, trains running every 30 minutes would have a devastating effect on my ability to reach my job in a reasonable amount of time.

Trains should be more frequent during rush hours - especially for those with proposed 30 minute wait times.

As long as train times are reasonably reliable, this would allow planning. And trains could be more frequent when demand increases.

Every 30 min is fine during non rush hours, but all stations (maybe even particularly the last station on each line b/c of people driving from even further out & parking) should have more frequent trains during rush hours on week days.

You must accommodate rush hour volumes in your scheduling to avoid unsafe crowding on the platform, shoving, injury, and further abandonment of ridership

The frequency is too low. If we need to change trains and just missed one, we would have to wait another 30 minutes before the next one comes. If we just missed a train at the starting station and missed one at the connecting station, that would mean total waiting time of about 60 minutes.

Would prefer 15 mins apart trains from 7:30 to 9am and 4:30-6pm.

Your schedule doesn't account for issues of catching other trains. You did this during restoration projects and wait times were horrible because you didn't account for making it from one line to another. This would make it horrible if u missed a train by 30 seconds.

This plan will continue to lower metro ridership. Hopefully the pandemic will have ended by 2022, meaning more people going in and out of DC. If these changes were to take place, more people will look for alternatives to metro, potentially leading to increased pollution with more cars on the road.

Train capacity on busy commuter routes I expect to need will likely become incredibly high with 30 minute headways.

I am worried that I won't be able to get to work on time as well as getting home.

Given the higher density closer to beltway higher frequency of trains should be allotted for stations further from the proposed stations

Proposal to operate Metrorail service every 30 minutes

In theory, a lot of people will have returned to in-person work by January 2022. If trains only come every half hour, they will be crowded, and if people can't get on they will have to wait half an hour for the next train. This also means that commute times will be dramatically longer and for people who need to transfer trains to get to work their commutes could be several times longer. Instead you should consider the stations that matter most to commuters and that serve as key transfer points and create express trains that only serve those stations while switching to the half hour system for other stations.

While not optimal this is like commuter rail schedules and, as long as schedules are adhered to, this could be do-able.

The whole purpose of Metro is to get people to work efficiently to cut down on traffic going into the district. #0 minutes between trains is not workable during workdays. Monday to Friday keep trains every 12 minutes (or 6 minutes at stations served by multiple lines) in order to get people to work. Weekends and off hours trains should be no more than 20 minutes or so apart. otherwise you defeat the whole purpose of Metro.

Decisions about need in 2022 after the COVID pandemic has hopefully ended should not be based on ridership during the pandemic. The two could be completely different.

assuming ridership goes back to even close to pre-pandemic levels there is no way that a train arriving every half-hour or even every 15 minutes would work at the stations that I use, Grosvenor. During peak commuter hours it can be so crowded that it would be impossible to get on a train if the number of trains in service was cut so drastically.

Knowing the train regularity is very helpful. I am not a commuter, but I try to use public transit, biking or walking whenever I go shopping, visiting family, etc.

It would add about 20 minutes each way to my commute, but I guess I could live with it.

This will result in either significant congestion on platforms or such long transit times that people will not use metro.

30 minute intervals at White Flint would make Metro a difficult and undesirable option for commuting. Pre-COVID I rode Metro to work for 20 years.

This would best serve residents dependent on Red Line in Ward 4

I need trains more frequently. Also, keep in mind, train conductors often let departing passengers off and then quickly close the doors making it difficult for people to get onto the train during busy periods. If this were to continue on lesser run lines, a lot of people waiting for a train will miss the ability to get on, and then will need to wait another 15-30 minutes. Metro needs to have policies that force conductors to allow more time for onboarding passengers to get onto the train. This was always a problem with the red line pre-Covid, during rush-hour.

This may work for me as an Orange/Silver line user, however, I can see this being a major problem for people outside of the designated segments of the Red and other lines and would likely lead to a surge in private car usage.

I like that all stations would be open and operating with this proposal, though the delays between trains is not attractive. However, if I had to choose between all stations operable and less trains per hour, I would choose less trains per hour (and hope that finding would increase to allow more trains in time).

Weekdays should have more frequent service than weekends. Weekday commuters should be treated as a priority.

Would need greater frequency for distal orange line stations.

I could live with weekend and weekday schedules being the same. However, I am concerned about no rush hour train service increases. With fewer trains running, the volume per train of riders may exceed capacity, resulting in people waiting long periods to commute in the morning to be able to board a train

Rush hour would have too many people on the platforms waiting for trains which may result in accidents.

longer wait times would be inconvenient

This works if pandemic patterns continue. But what about opening the economy with increased vaccination rates? 30 minutes waiting time will turn people off metro permanently.

This could work for me, but ONLY if Metro publishes a timetable for stations (and adheres to it) and synchronizes with busses.

I believe Train service needs to be more frequent. Red training coming every 15 mins is not frequent enough and is causing inconvenience. Train should come every 5-10 min and more frequently during rush hours.

Please keep the strathmore station open completely! Its the most convenient for many commuters right off the beltway!

30 minute headways would mean I'd have to use Uber or another ride sharing service. This would force me to abandon Metro service completely.

Why is Metro planning this change just as ridership would be expected to increase again?

Active duty military need to commute to Walter Reed National Military Medical Center. As healthcare providers, many do not have the option to telework. They are not guaranteed parking at work. Many are being dropped off at work by household members, but many will not have anyone to drop them off once these individuals cease telework.

I am concerned how this would align with bus schedules. I currently have to take a bus to the metro and would not to constantly be waiting half an hour to transfer if they did not align closely, especially if it happened both directions.

It will depend on the number of people who actually return to work and would need this service.

Proposal to operate Metrorail service every 30 minutes

Waiting a maximum of 15 minutes for trains would double my current commute and make ridership less appealing due to crowd size

This would work for me because I am retired. However, if I were traveling during rush hours, the cars and stations might be very crowded.

Metro should plan to support more frequent arrivals as more people are immunized and ridership increases.

What accommodations will be made for crowded trains? Will they all be long trains or do you anticipate a steep decline in ridership?

Trains will be too crowded during rush hour.

Not differentiating btw weekdays when most people need to get to work or other time sensitive appointments (as opposed to weekends) is a misguided and useless idea.

This is basically turning metro into a commuter rail, and much more attention would have to be paid to arrival and departure times and could lead to extended crowding on platforms.

While not convenient, it would work.

How is it Chicago and NYC can operate much longer hours than DC and at a lower cost? DC Metro manager makes a very high salary yet our service is always being cut. DC needs a new manager for Metro

I change lines frequently in my commute and this could potentially lengthen wait times to more than an hour.

Every 15 minutes in rush hour can be a huge problem in the red line.

This would not be effective for my commute. Trains need to run more frequently, and especially during rush hour.

My ability to get to work relies on the metro, and running service in 30 minute intervals would not only lengthen an already long commute, but impact how and when I get to work and home. It would also increase numbers on the trains, and even with the implementation of vaccine distribution, disregards the fact that we're seeing mutations of the virus. It's already difficult enough trying to socially distance on the trains and buses at the moment.

Rush hour need Quicker service while non-rush can come every half hour.

If I miss a train for any reason, it would be unreasonable for me to wait for 30 minutes for the next one. Even a 12-15 minute wait during office commute would be very bad for me -- because of crowding and how every few minutes count during any rush hour commute. It would have a chilling effect on my use of public transport -- that I rely on heavily -- and have a negative effect on my finances as an immigrant woman of color. I love living and travelling in the DC region and did not even own a private vehicle until the pandemic hit. I am proud of my heavy reliance on public transport as it makes me a more conscious citizen leaving a lower carbon footprint. Please reconsider this plan.

I don't take metrorail every day, though, even in normal times.

Trains are too often crowded during rush hour on the Red Line even with extra trains during those times. Even with 8 car trains running every 15 minutes, it's hard to believe demand would be met. However, if this proposal is adopted it should be adopted in keeping with having Metro open from 5 a.m. to 12:30 a.m. so as to serve those who need it most.

I use metro to go to university every day.

The pandemic will either kill us all by January 2022 or it will be over. People will be returning to work, tourists will return to our city. You should be taking proactive steps to plan for this not cutting services. Shame on you for not adapting one year ago to the pandemic states and the feds should be stepping in to help you financially maintain this public service until it passes.

As conditions stabilize during and after covid changes, if we are to expect ridership levels to begin to rise again, then 1 train every 30 minutes would eventually lead to overpacked trains. Also, on certain lines (yellow and green), there were frequent delayed arrivals, so 1 train every 30 minutes could result in an easily derailed schedule. However, the schedules remaining the same all days of the week would be beneficial.

would increase travel time to the point would make travel by metro rail not do-able for work, commercial and personal business, as well as leave people exposed to weather and increased exposure to non-daylight time, and make childcare drop off and pick up not possible

after this pandemic, things will be back to normal. Metro will have to add cars to each train and not to have a rush hour 6 min frequency would impact my commute.

Yes I think this might work but there are so many people living in this area whose daily commute to work is via metro, and I am not sure if having longer intervals between train would lead more people to accumulate at the station at the same time waiting for train.

It will cause considerable congestion on the platforms increasing likely declines in ridership because of increased likelihood of Covid exposure.

Metro doesn't do us any good if trains arrive only every 30 minutes. It will deter people from taking Metro and the trains will be dangerously full.

I believe having weekend scheduling the same as weekday would be very inconvenient

Proposal to operate Metrorail service every 30 minutes

Although not ideal, if reliability was maintained and Metro could consistently provide 30 minute arrival times that allow for riders to plan out their commute. This could work given there is an assumed drop in ridership even after pandemic due to more people working from home from now on. If unable to maintain consistent 30 minute arrival times, which is possible due to single tracking and incidents, its unlikely anyone would wait longer than 30 minutes for a train.

I am less likely to use metro if the trains are less frequent. If the timing was totally reliable, meaning less time waiting on the platform and less risk of missing a train and being 30 minutes late, then I might still ride metro.

Not having a difference in schedule on weekends may affect ridership to Music Center events at Strathmore. Some potential riders might not use Metro if the trains wont coincide easily with performance times.

Rush hour trains are incredibly full. Once covid is under control, they will be incredibly full again. Also, the morning and evening, when time is of the essence and meetings need to be attended and children picked up, missing a train by 10 seconds can be very problematic if the next train isn't for another 15 minutes.

This could be manageable but not if the train cars are jammed and causing people to wait an additional half hour to catch the next one..

Pre-pandemic, trains coming every few minutes were very crowded and would cause backups for long periods of time. If trains only arrived every 30 minutes, this would halt any movement of people through the city and cause massive delays.

Service too slow and probably too crowded and would add about 30 minutes to my round trip. I would instead choose to drive to town to work.

Fine as long as trains do not reach capacity such that passengers cannot get on

No, I would need more trains during peak times (rush hour).

30 minutes between trains is a very long time to wait.

Infrequent trains would be pretty soul crushing, especially if you show up right after a train leaves the station.

For me this plan works well with my schedule as long as all metro stops remain open

I would prefer 10-12 minutes, but 7 minutes which is what I think is the current gap isnt needed.

The pandemic is not forever, however adopting drastic changes will impact the traffic, movement of people and overall hardship 1000000x!

This is not customer friendly especially during business and school days. If Metro would go this route it would cause me to find other alternative transportation since Metro will not be reliable. At current travel times, there are numerous times trains are delayed, pulled from service, broken or there are issues with stations. This will only make those problems that much worse for travelers.

Having the trains run less often is a good idea if it can save money and keep fares lower. Riders can get used to checking times on when the trains come instead of just showing up and expecting a train soon. The only hesitation would be with rush hour. Volume during rush hour would need to be monitored to make sure there is enough room on the trains to fit everyone.

This is very infrequent service, particularly at rush hour. Trains could become extremely crowded. This isnt as bad as the station closures but it is the second-worst option.

It already takes a long time as it is plus add in the delays that always happen it would not work for my schedule

I travel mid-day. Will ride again once COVID is done

It is important to have rush- hour periods.

This is great because I use the metro to get to work and my daughter uses the metro to get to class.

It is impossible to answer this without knowing if the trains would actually have space when they arrived at the station. Pre-COVID, when trains became less frequent (construction, emergencies, delays, etc.), by the time the trains reached stations later in the route, the trains were full and it was not uncommon for passengers to have to wait multiple trains. If the lower frequency would create a similar dynamic in 2022, then having less frequent trains will essentially mean passengers later in the route have no room to get on, effectively making those stations unserved.

As the pandemic slowly gets under control, train crowding will be an issue - before the pandemic, crowding was common, especially during peak times. I would be more in favor of this if I knew a flat rate was charged throughout the day - depends on how much. By cutting service so drastically, Metro may never recover ridership lost during the pandemic. This is for everyone - think of people who have no alternative means of travel.

Depends on additional bus service

Weekday rush hour trains should be more frequent than weekend trains. By January 2022 we will likely be back to working in the office and less at home than we are now and trains on the weekdays need to be frequent to accommodate riders.

I think there should be a difference between rush hour and non-rush hour service.

Proposal to operate Metrorail service every 30 minutes

Train should arrive more frequently than every 30 minutes. At least every 10-15 minutes.

To be a reliable commuter option, metrorail trains need to run no more than 10 minutes apart from 7-9 am and 5-7 pm weekdays, no exceptions

The interval between arrival of 15 minutes for the red line is too long and will not meet the demand during rush hour and will likely result in loss of ridership for the metro.

Trains every thirty minutes would make metro almost unusable for daily commuting.

Frequency is freedom, and is one of the most important metrics for transit to be practical and reliable for a variety of trip types. Making a change like this, especially if it is not accompanied by the imposition of set timetable schedules like with bus routes that run at this frequency, will discourage the ability, the freedom, to use the system spontaneously. Transfers will be nearly impossible, and the public will lose even more of the trust they have in WMATA as a public good which can be trusted when needed--which is often, and for a variety of trips!

It is doubtful that I would be a regular Metro rider in January 2022. But I dont know for sure.

the congestion created at the stations, especially during rush-hour periods will worsen if there will not be an increase on trains during rush hour.

I am retired and no longer ride Metro downtown. I would need to drive to the Grosvenor Garage and park to go to Strathmore.

It would be very difficult to time my commute (from Columbia Heights Station to Ballston Station) if trains are only every 12-15 minutes.

I think it would spend on what the post-Covid workplace looks like. If, as I believe, there are many people who have been working from home during the pandemic who will continue to spend the greater part of their working day at home., there will be less need for "rush hour" schedules.

This does not take into account bus arrival times, and the need for a rush hour support.

This does not make much sense. Understandably ridership is currently down due to Covid but the anticipated needs by January of 2022 should show a significant increase in people taking metro. Weekday rush hour ridership was congested prior to Covid and we anticipate that once we return to the office this will again be the case. If service is significantly less than it was, I will not be able to get back and forth to work using public transportation.

Trains are extremely crowded during a typical workday on my line (orange/silver). Even at the prior regular arrival times, I would often have to let trains pass and wait for another to be able to find room to enter. I would likely never again ride the metro if trains were so infrequent that wait times and crowding increased.

Given my responsibilities in the morning (including getting kids ready for school and transporting them there) and the need to get to work by a specific time, this plan is entirely too inflexible. It will result in me either driving to work (adding more traffic on our roads and more air pollution) or teleworking more. In any case, I will stop using Metro entirely. I have been riding the Red Line for 21 years. This would be a mistake and a net loss for our community and our environment.

This could potentially add an hour my commute times if timed poorly. If a train is too crowded, like they often were during rush hour, this would automatically tack half an hour onto a commute.

Im generally okay with this but it seems confusing. I feel that rush hour schedules should be kept because the more frequent train service would match the more frequent demands of my commute. I usually go to work at 8am and come home around 4pm, so I appreciate the frequency of rush hour availability.

Keeps the trains running consistently and easier to keep up with the schedule

It makes more sense to develop a schedule based on need and volume of travelers

I work in DC and it already took me 1.5 hours to commute. With the change, will take even longer.

I get the impression that 30 minutes, here, 30 there, and IF the trains bunch up like the buses do you would be talking a seriously longer commute time. I would have to weigh the costs in dollars, but as time is money, I would probably decide not to have dead time waiting and would drive or carpool

This would be more preferable than shutting down the EFC Metro.

30 minutes is too long a wait time, especially during the day.

New Carrollton trains running every 30 minutes isnt frequent enough during the weekday.

Every 30 minutes all day is too infrequent. It should especially be closer together during rush hour, people wouldn't fit on the train if it came every 30 minutes.

It would work if I could count on a train to be at the station at every half hour, and that the volume of riders was such that I could be confident that I'd be able to get on any train that arrives.

This would be amazing. With COVID vaccines and workers returning to work and the commute for most people into DC from Vienna station this would be amazing

I take more than one train to get to work and home and this will affect a lot my schedules
