

WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY

# PERFORMANCE REPORT

Q2/FY2021

July – December 2020

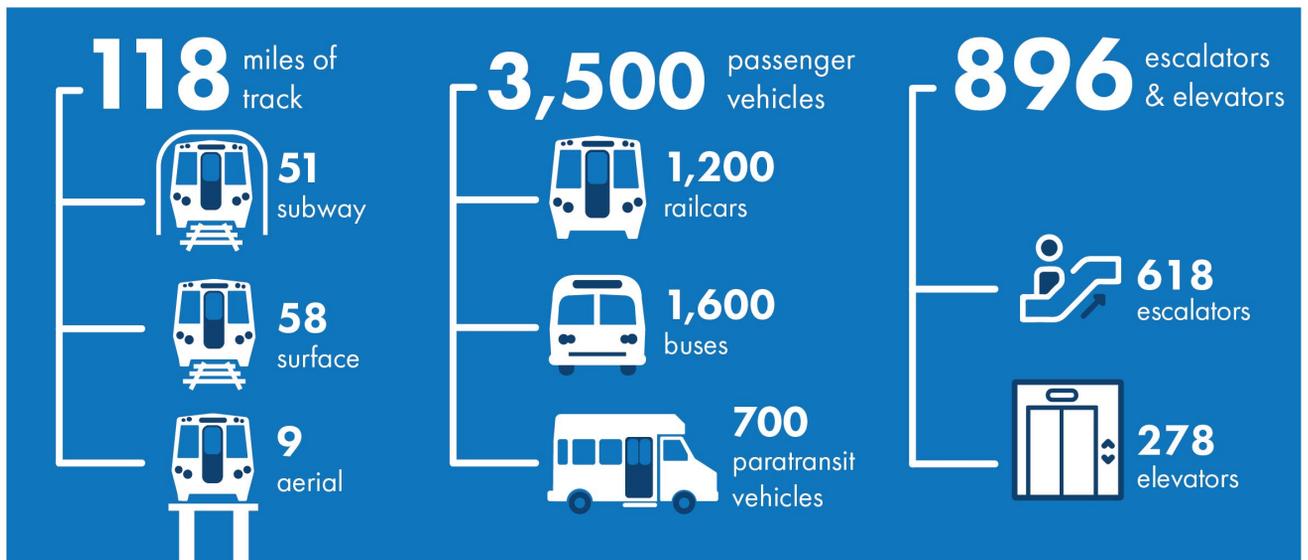

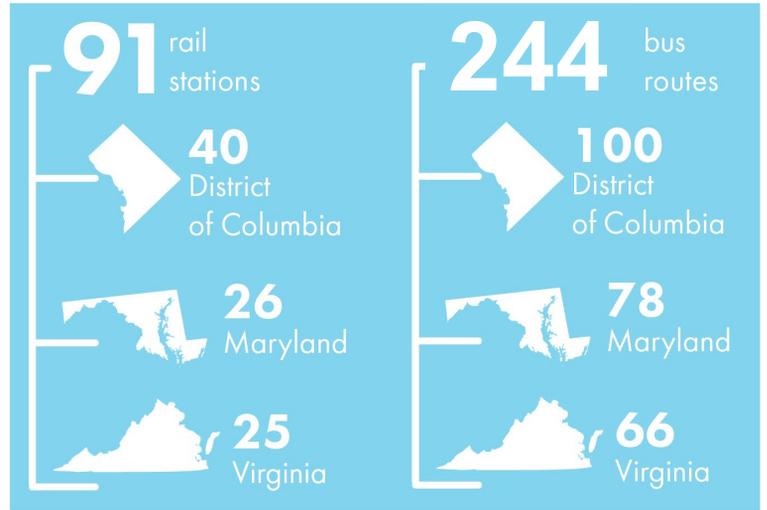

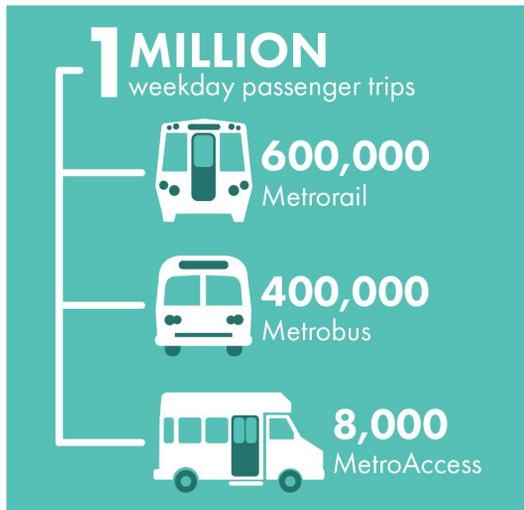

Published  
February 5, 2021

# ABOUT METRO<sup>1</sup>

The Washington Metropolitan Area Transit Authority (Metro) is one of the largest transit organizations in the United States. Formed in 1967 under an interstate compact among the District of Columbia, the State of Maryland, and the Commonwealth of Virginia, the Metro service area is approximately 1,500 square miles, with a population of approximately four million people. Metro provides three core transit functions: Metrorail, Metrobus, and MetroAccess paratransit. Prior to the pandemic, average weekday passenger trips combined on all three modes totaled approximately one million.

<sup>1</sup>As of March 1, 2020. The Covid-19 pandemic has impacted these statistics.

# HOW TO READ THIS REPORT

The Q2 FY2021 Metro Performance Report highlights Metro's performance on a suite of key performance indicators (KPIs) that evaluate how well the agency is delivering its mission to provide safe, equitable, reliable and cost-effective public transit and meeting the standards the Board has set for safety and service. These KPIs follow industry standard and align to the safety performance measures established in the Federal Transit Administration's National Public Transportation Safety Plan. The report compares performance for the period of July 2020 – December 2020 to the targets that Metro set for the fiscal year. Colored indicators throughout the report show the status against target. Targets that are counts (e.g., number of Part I crimes, number of customer injuries) have been pro-rated to reflect expected values for six months of the fiscal year. During the first half of FY2021, Metro met or exceeded target for 18 out of 20 measures, including: 10 out of 11 safety and security measures, and eight out of nine quality service measures. Metro did not meet target for red signal overruns, a rail safety measure, and fell just below its target for Metrobus on-time performance.

## Safety & Security

### 10 out of 11 measures met or target in the first half of the fiscal year

- Part I Crime
- Metrorail Customer Injury Rate
- Metrobus Customer Injury Rate
- MetroAccess Customer Injury Rate
- Rail System Employee Injury Rate
- Bus Employee Injury Rate
- NTD Bus Collision Rate
- Rail Collisions
- Derailments
- Fire Incidents

## Quality Service

### 8 out of 9 measures met target in the first half of the fiscal year

- MyTripTime
- MetroAccess On-Time Pick-up Performance
- Rail Fleet Reliability
- Bus Fleet Reliability
- MetroAccess Fleet Reliability
- Elevator Availability
- Escalator Availability
- Available Track

# RIDERSHIP

The total ridership of 37.4 million through the second quarter of FY21 is 7.8% above the forecast of 34.7 million but 76% below the same time in FY20.

In a departure from historic trends, Metrobus ridership continues to exceed Metrorail ridership, with about twice as many Metrobus customers compared to Metrorail customers.

Metro's **Ridership Data Portal** provides ridership data since 2010, including during the pandemic. Engage with the data through interactive dashboards using the Data Viewers ([Rail](#), [Bus](#), [Parking](#)).

## Legend

● Met or above target | ● Near target | ● Target not met | ● No target | ↑↓ Desired direction

# SAFETY + SECURITY TARGETS

Each fiscal year, Metro establishes performance targets for KPIs. These measures and targets are an important way for Metro to track progress through the year, and ultimately reflect how effectively Metro is delivering its mission to provide safe, equitable, reliable and cost-effective public transit.

For FY21, Metro established the following mode-level safety performance targets as part of Metro's Agency Safety Plan (ASP):

Mode	Fatality Rate*	Fatality Count	Injury Rate*	Injury Count	Safety Event Rate*	Safety Event Count
Rail	0	0	38.06	324	11.05	95
Bus	0	0	95.73	359	69.32	260
MetroAccess	0	0	24.22	54	7.78	18

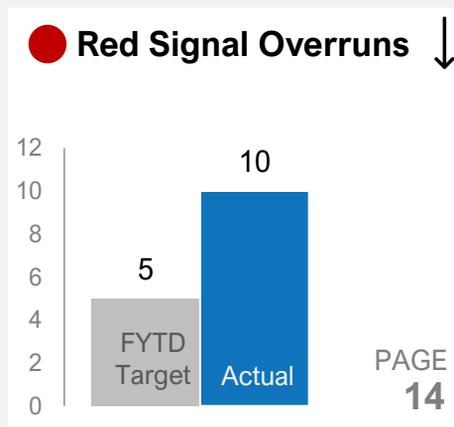

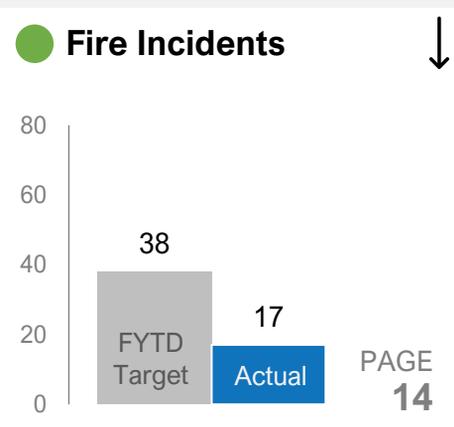

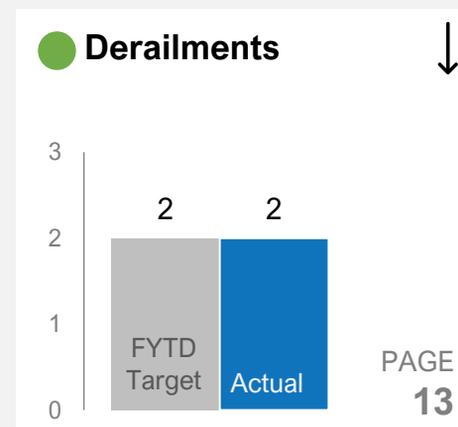

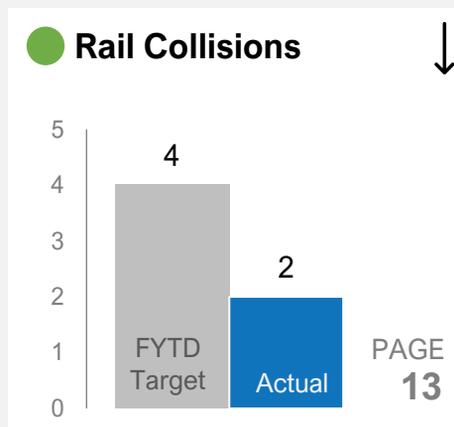

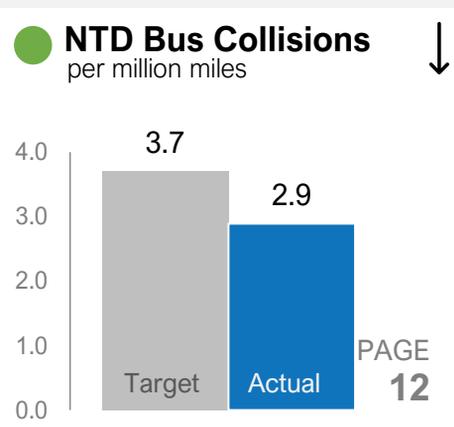

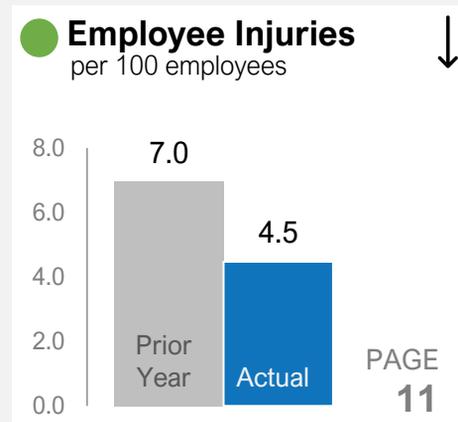

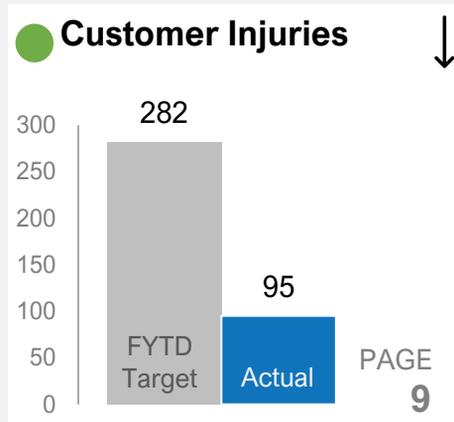

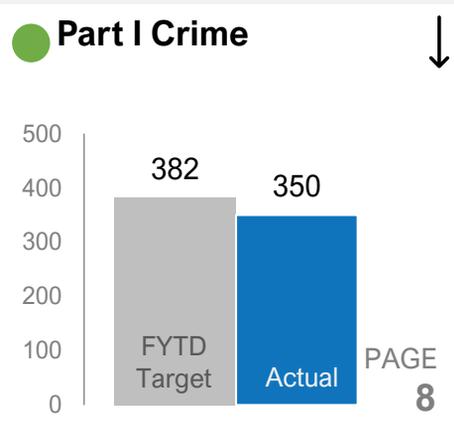

\*per 10 million Vehicle Revenue Miles (VRM)

For internal management and public reporting, Metro developed a suite of measures and targets that feed into the mode-level, summary KPIs above. For safety performance measures related to employee injuries and reportable safety events, the approach is to continuously improve relative to prior years' performance levels. This follows FTA guidance to set realistic targets, emphasizes the importance of building a safety culture, motivates staff to improve, and moves the agency along a glidepath to zero safety events. In this report, the annual targets listed below for customer injuries, rail collisions, derailments, fire incidents, and red signal overruns have been pro-rated to reflect the first six months of the fiscal year and are labeled "FYTD target."

Measure	FY21 target	Methodology
Part I Crime   # of crimes	<b>840</b> or ↓	Achieve FY2020 rate by end of year
Rail Customer Injuries   # of injuries	<b>177</b> or ↓	Achieve FY2020 rate by end of year
Bus Customer Injuries   # of injuries	<b>154</b> or ↓	Achieve FY2020 rate by end of year
MetroAccess Customer Injuries   # of injuries	<b>35</b> or ↓	Achieve FY2020 rate by end of year
Rail System Employee Injuries   # per 100 employees	<b>3.5</b> or ↓	5% improvement from 3-year average
Bus Employee Injuries   # per 100 employees	<b>11.2</b> or ↓	5% improvement from 3-year average
NTD Bus Collision Rate   # per million miles	<b>3.7</b> or ↓	7.5% improvement from 3-year average
Rail Collisions   # of collisions	<b>7</b> or ↓	Improve relative to FY2020
Derailments   # of incidents	<b>4</b> or ↓	Improve relative to FY2020
Fire Incidents   # of incidents	<b>66</b> or ↓	Improve relative to FY2020
Red Signal Overruns   # of incidents	<b>11</b> or ↓	Improve relative to FY2020

# SAFETY & SECURITY

The following highlights Metro's system-wide safety performance through the first half of FY21.

## Legend

● Met or above target | 
 ● Near target | 
 ● Target not met | 
 ● No target | 
 ↑↓ Desired direction

**During the first half of FY21, Metro had 350 Part I crimes, about 58 crimes per month, meeting target of no more than 382 crimes.**

Metro had 55 percent fewer crimes in the first half of FY21 compared to the same period in FY20. However, when scaled to ridership, the Part I crime rate increased 88 percent compared to the same period last fiscal year, with 9.4 crimes per million trips in FY21 compared to 5.0 in FY20. While the number of crimes is down, ridership is down even more (76 percent drop). Two-thirds of crimes occurred on Metrorail. While Metro police have not substantially changed their policing policies and practices due to the pandemic, between lower ridership related to Covid-19 and fare decriminalization, enforcement is down approximately 77 percent (arrests are down 56 percent and citations/summons are down 84 percent).

## What crimes occurred?

FYTD Target ≤ 382

### Crimes Against Property – 79%

Metro averaged 46 crimes against property per month across the system, which include Theft, Motor Vehicle Theft, Arson, Robbery, and Burglary. This is a 61 percent decrease from the same period last fiscal year.

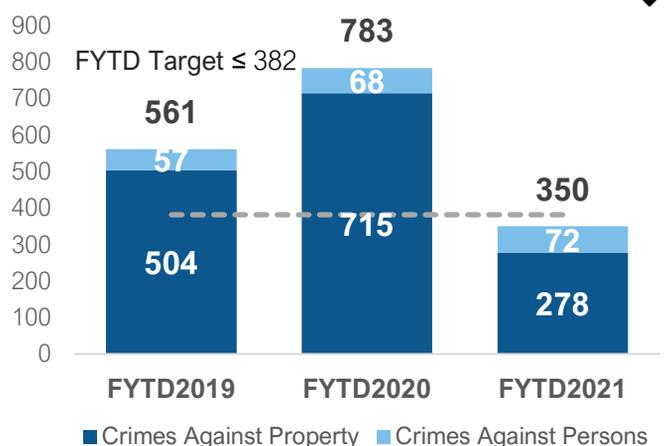

### Crimes Against Persons – 21%

Metro averaged 12 crimes against persons per month across the system, which include Aggravated Assault, Homicide, and Rape. This is a slight increase from last fiscal year and in line with the experience in other jurisdictions in the region.

## Key actions to improve performance

- ▶ Enhance safety features to reduce all types of crimes across the system.
  - Install public safety radio systems
  - Improve station lighting
- ▶ Daily Security Observation Response Team (SORT) details deployed for increased visibility to deter crimes against persons and properties in rail stations.

## 3-Year Performance Trend

# CUSTOMER INJURIES

## Metrorail Customer Injuries | 32 injuries

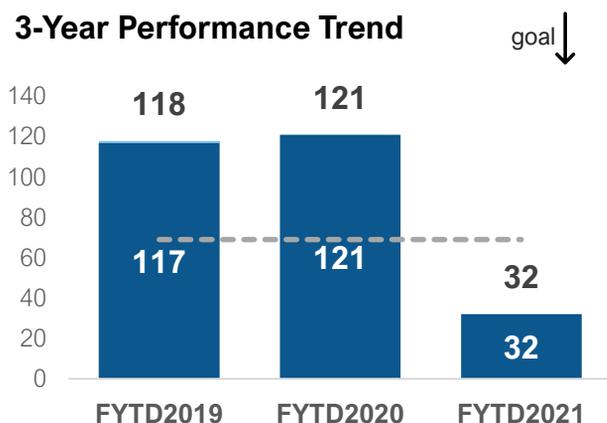

-- FYTD Target ≤ 69

Non-Preventable  
Preventable

Metrorail experienced 32 customer injuries during the first half of FY21, meeting target. These 32 injuries result in a rate of 2.5 injuries per million passengers.

Slips, trips and falls account for 84 percent of all injuries this fiscal year. Most injuries occurred on station platforms or when customers fell onto the roadway. Twelve customers were injured on escalators and five customers were injured onboard trains. The most common factors for injuries are customer inattention/distraction, boarding/alighting, train motion (e.g. quick stops), and wet surfaces.

### 3-Year Performance Trend

### Key actions to sustain performance

- ▶ Continue station modernization improvements to reduce hazards that result in slip/trip/fall and train door injuries.

## Metrobus Customer Injuries | 57 injuries

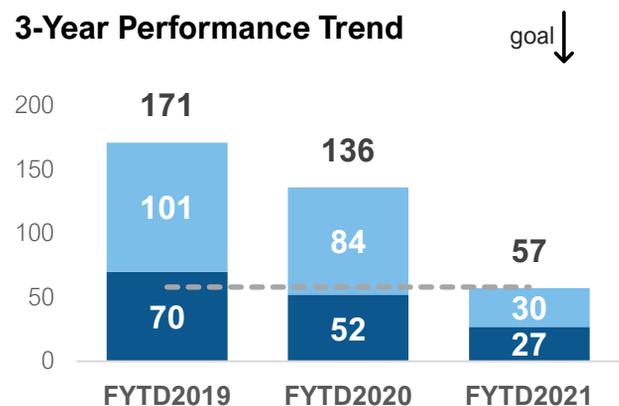

-- FYTD Target ≤ 58

Non-Preventable  
Preventable

Metrobus experienced 57 customer injuries during the first half of FY21, meeting target. These 57 injuries result in a rate of 2.3 per million passengers.

The top two types of injuries this fiscal year are slips, trips and falls (32 injuries) and collisions (15 injuries). There were about half as many of these injury types this fiscal year compared to FY20. Injuries most frequently occur when the bus is in motion (e.g., during hard braking events) and when customers are boarding or alighting vehicles.

### 3-Year Performance Trend

### Key actions to sustain performance

- ▶ Continue investigation of bus stop incidents to identify causal factors that result in customer injury.
- ▶ To reduce boarding and alighting injuries, Field Supervisor personnel are focusing safety observations at bus stops to monitor the bus approach angle and alignment of the rear door with the curb – a change from the pre-pandemic bus berthing procedure.
- ▶ Identification of intersections that are hot spots for collisions for heightened observation by Field Supervisors.

# CUSTOMER INJURIES

## MetroAccess Customer Injuries | 6 injuries

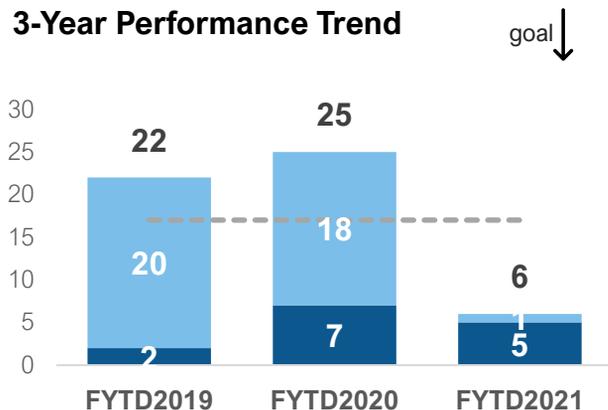

--- FYTD Target  $\leq 17$

Non-Preventable  
Preventable

MetroAccess experienced six customer injuries resulting in a rate of 1.2 per 100,000 passenger trips during the first half of FY21, meeting target.

There were five preventable injuries and one non-preventable injury. The injuries were due to collisions (2) and slips, trips and falls (4). Slips, trips, and falls have seen the biggest reductions relative to FY20.

### 3-Year Performance Trend

### Key actions to sustain performance

- ▶ Updated DriveCam units, adding live and continuous audio and video recording capability. This enhances root cause analysis and enables timely behavioral coaching for vehicle operators.
- ▶ Conduct annual Operator Wheelchair Recertification to reinforce current securement best practices.

# EMPLOYEE INJURY RATE

## Rail System Employee Injury Rate | 2.8 per 100 employees

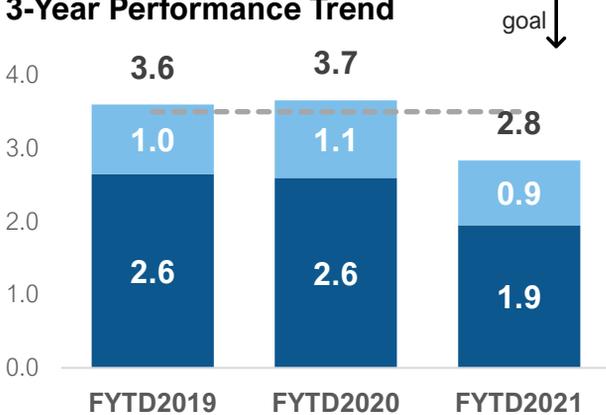

-- Target ≤ 3.5

Non-Preventable  
Preventable

During the first half of FY21, rail system personnel experienced an injury rate of 2.8 injuries per 100 employees, which outperformed the target rate of 3.5 injuries per 100 employees.

Seventy-six rail system personnel were injured during the first quarter. The most common injury types were slips, trips, and falls, struck by or against an object, and assaults/stress. Rail Transportation staff, including operators and station managers, account for the majority of injuries. Injuries among maintenance staff are mostly ergonomic-related (e.g., when lifting or lowering materials).

### 3-Year Performance Trend

### Key actions to sustain performance

- ▶ Encourage Safety Observations and use data to identify and proactively address unsafe behaviors.

## Bus Employee Injury Rate | 8.6 per 100 employees

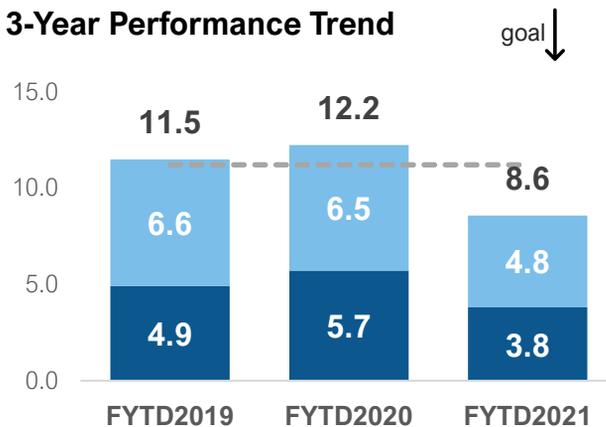

-- Target ≤ 11.2

Non-Preventable  
Preventable

Metrobus had an employee injury rate of 8.6 injuries per 100 employees during the first half of FY21, meeting target of 11.2 injuries per 100 employees.

Through Q2 124 bus personnel were injured. The top injury types were collision-related (44), slips, trips, and falls (21), and assault/stress (17). Compared to FY20, collision-related injuries decreased by six percent and slips, trips and falls fell by 19 percent.

### 3-Year Performance Trend

### Key actions to improve performance

- ▶ Conduct safety observations and develop safety campaigns targeting specific injury types and known risky behaviors.

# BUS COLLISION RATE

● **NTD Bus Collision Rate | 2.9** per million miles

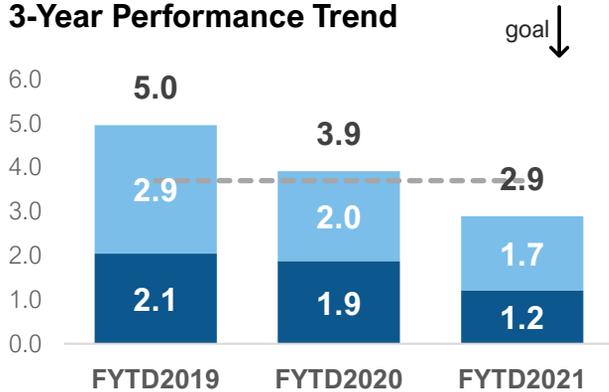

-- Target  $\leq 3.7$

■ Non-Preventable  
■ Preventable

**Metrobus experienced a serious collision rate of 2.9 per million miles during the first half of FY21, meeting target and a 26% improvement from the same time last fiscal year.**

There were 47 serious collisions that resulted in over 40 customers being transported away from the scene during the first half of the fiscal year. Overall serious collisions are about six percent of all bus collisions. Less traffic resulting from the pandemic has contributed to improvements in the collision rate.

## 3-Year Performance Trend

## Key actions to improve performance

- ▶ With the initial pilot now concluded, Bus Services is working now to advance procurement of collision avoidance technologies, such as Blind Spot Warnings and object detection, to decrease the number of bus collisions.
- ▶ Evaluate the bus operator training program to improve driving techniques for new and existing operators and use of existing forward-facing cameras to coach operators who have been involved in collisions.

Note: Metrobus tracks and reports serious collisions to the National Transit Database (NTD). A serious collision is one resulting in customer or employee injuries requiring immediate medical attention away from the scene, towaway of any vehicles involved, or combined property damage greater than \$25,000. This is a subset of all collisions, representing about six percent.

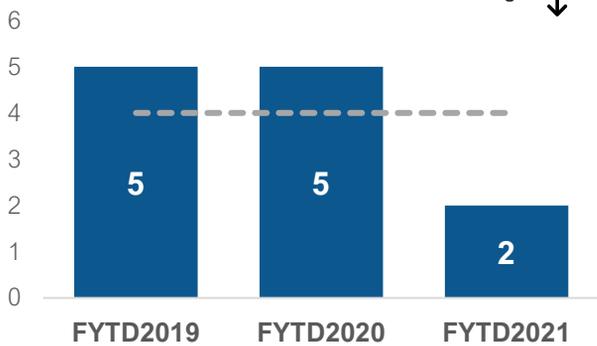

## Rail Collisions | 2 collisions

-- FYTD Target ≤ 4

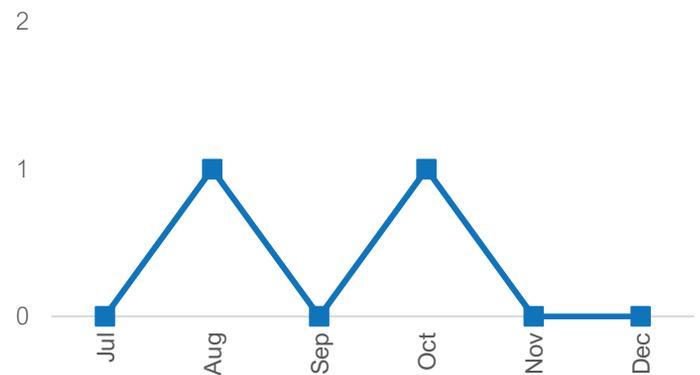

**Metrorail had two National Transit Database (NTD) reportable rail collisions during the first half of FY21, better than target and a decrease of three collisions from FY20.**

Both collisions involved the unintentional coupling of trains in a yard. Neither resulted in any injuries or major damages to the vehicles involved. Investigations have identified the following causal factors, which staff are working to address: failure to follow procedures, improper railcar storage (e.g., stored too close), and attempting to uncouple while on a downgrade portion of the track.

### 3-Year Performance Trend

### FY2021 Trend

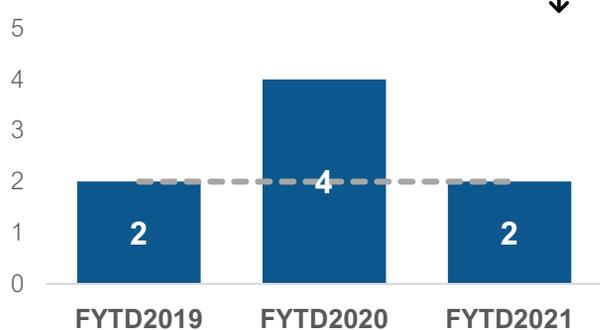

## Derailments | 2 incidents

-- FYTD Target ≤ 2

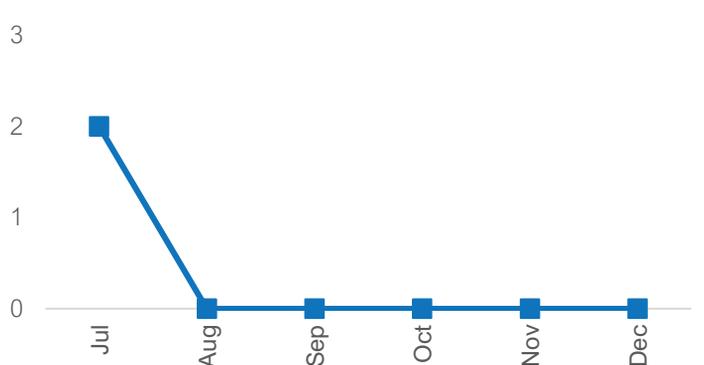

**There were two derailments in the first half of FY21, a decrease of two incidents from the same period last fiscal year.**

Both incidents occurred in July with one involving a train on the mainline – the first mainline train derailment with customers aboard since January 2018 – and the other involving a roadway maintenance machine in a yard. The mainline train derailment event occurred following a red signal overrun and resulted in no injuries and minor damages. The other derailment that occurred involved a flat car being pushed by a prime mover in the yard, when the front trucks of the flat car left the rail. This event resulted in no injuries or damages.

### 3-Year Performance Trend

### FY2021 Trend

# RAIL INCIDENTS

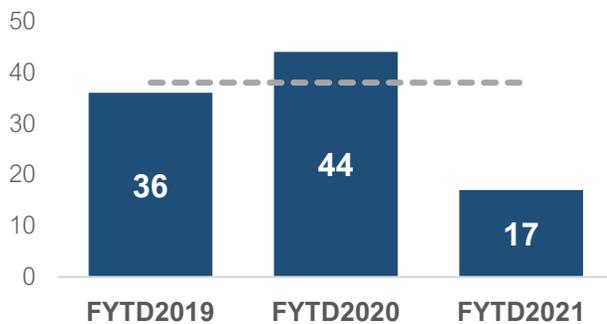

## Fire Incidents | 17 incidents

-- FYTD Target ≤ 38

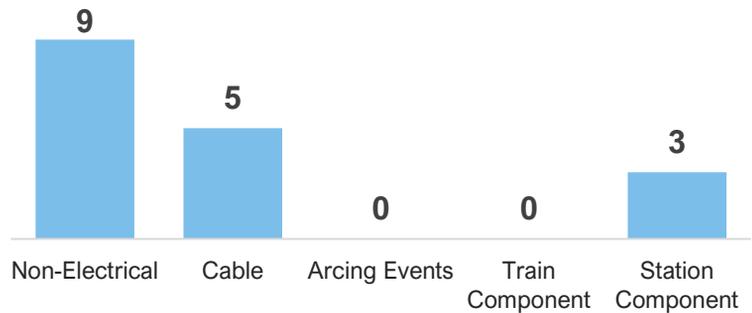

There were 17 NTD-reportable fires during the first half of FY21, better than target and a decrease of 27 compared to the same period last fiscal year.

Of the 17 fires, five involved arcing insulators or grounded track components, nine were non-electrical (e.g., debris-related), and three were related to station/facility equipment. When compared to the first half of FY20, non-electrical fires decreased 61 percent and insulator fires decreased 67 percent, including no insulator fires since September 2020. The stark decrease in non-electrical fires is likely related to decreased ridership associated with the pandemic, with fewer debris fires in stations and parking lots caused by normal combustible material (e.g., trash cans). Metro continues to conduct trackbed and drain cleaning and install new, thermoplastic insulators to reduce arcing events.

### 3-Year Performance Trend

### FYTD21 by Type

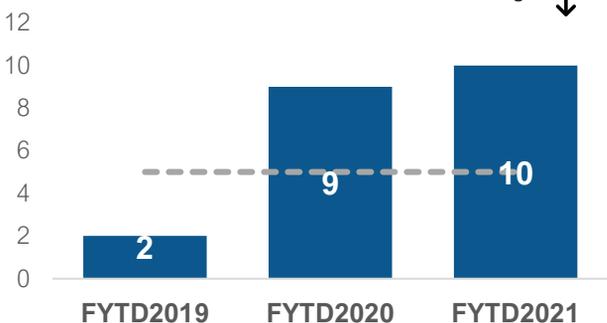

## Red Signal Overruns | 10 incidents

-- FYTD Target ≤ 5

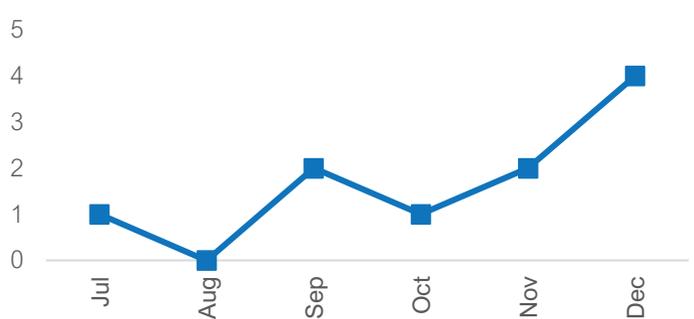

Metrorail vehicles overran a red signal 10 times during the first half of FY21, missing target and an increase of one compared to the same period last fiscal year.

Six events were in the yard, while four were on the mainline. All mainline events occurred at slow speeds (<15 miles per hour) as trains were leaving or entering stations and involved operators that had less than one year of experience. No passengers were injured. Three did not result in any damage to Metro equipment while one resulted in a derailment – the first in 18 months. Human factors were the main causal factors, including failed compliance with published policy and procedures and unfamiliarity with the track environment. In response, training simulators will be used to combat complacency, additional engineering solutions are being researched, a system-wide survey of signals will be completed, and a campaign to call-out signals will be piloted.

### 3-Year Performance Trend

### FY2021 Trend

# QUALITY SERVICE TARGETS

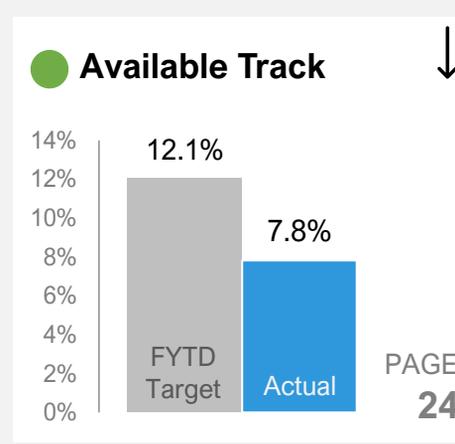

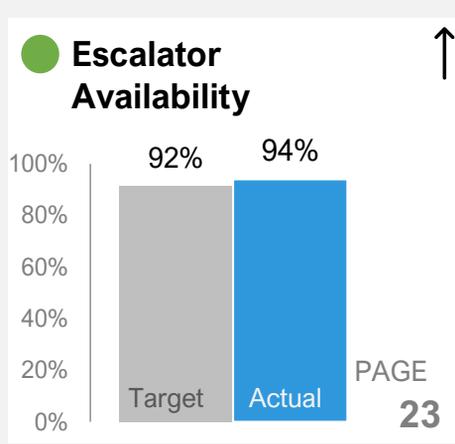

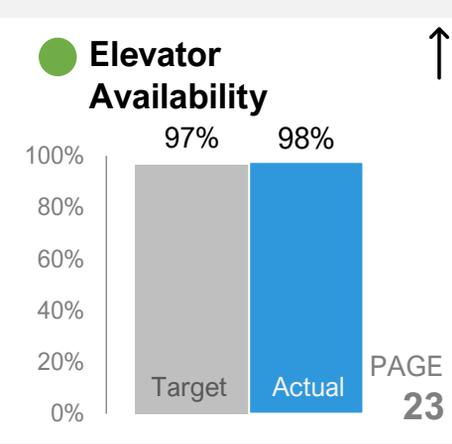

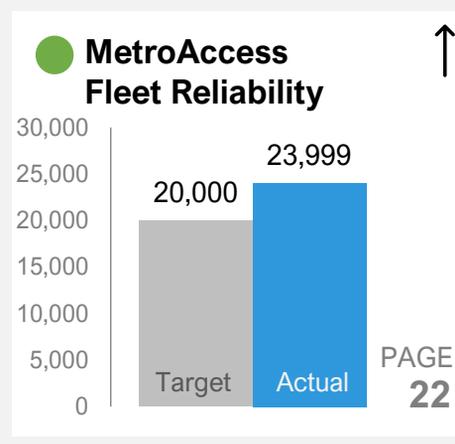

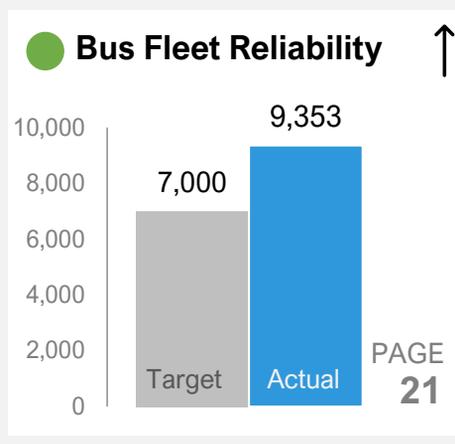

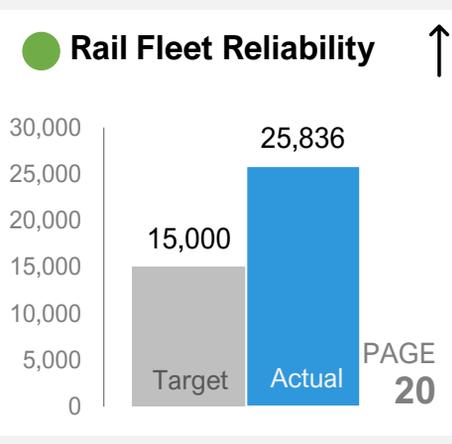

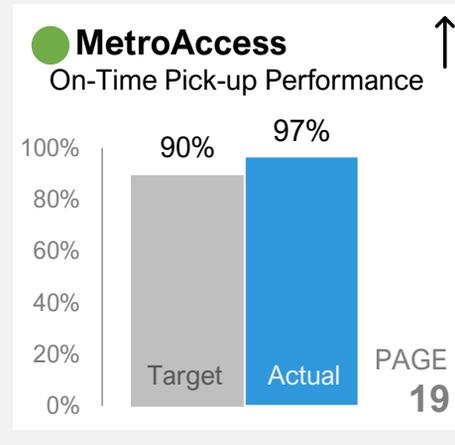

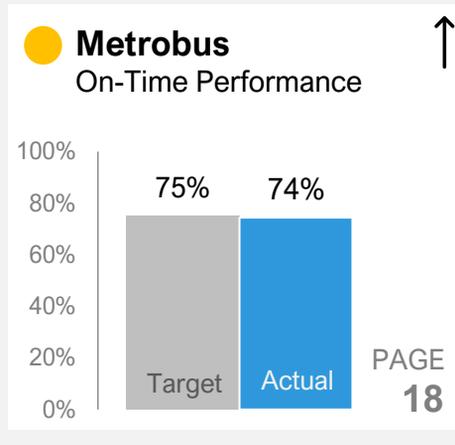

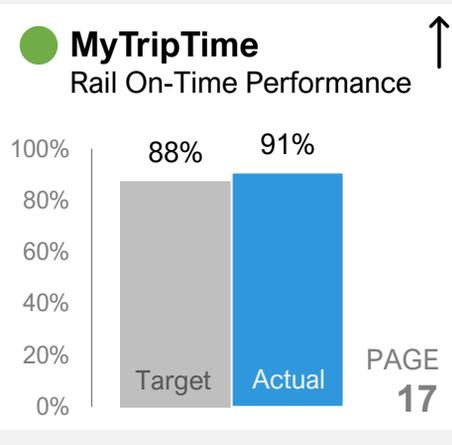

Each fiscal year, Metro establishes performance targets for KPIs. These measures and targets are an important way for Metro to track progress through the year, and ultimately reflect how effectively Metro is delivering its mission to provide safe, equitable, reliable and cost-effective public transit.

The table below lists the performance targets established by Metro for FY21. Given the uncertainty surrounding the operating budget and service levels this fiscal year, targets for measures of service quality were generally kept at FY20 levels. For bus on-time performance, which was a new measure in FY20 and did not have a target, the FY21 target was set at the average performance achieved from July–August 2020. Fleet reliability measures are a nexus between service quality, asset condition, and safety. For rail and bus fleet reliability, Metro aims to continuously improve performance.

	Measure	FY21 target	Methodology
	MyTripTime   % of customers on-time	<b>88%</b> or ↑	Hold steady at FY2020 rate
	Bus On-Time Performance   % of buses on-time	<b>75%</b> or ↑	Hold steady at Q1 FY2021 rate
	MetroAccess On-Time Performance   % of vans on-time	<b>90%</b> or ↑	Hold steady at FY2020 rate
	Rail Fleet Reliability   mean distance between failure	<b>15,000</b> or ↑	7% improvement from 3-year average
	Bus Fleet Reliability   mean distance between failure	<b>7,000</b> or ↑	1% improvement from 3-year average
	MetroAccess Fleet Reliability   mean distance between failure	<b>20,000</b> or ↑	Hold steady at FY2020 rate
	Elevator Availability   % available	<b>97%</b> or ↑	Hold steady at FY2020 rate
	Escalator Availability   % available	<b>92%</b> or ↑	Hold steady at FY2020 rate
	Available Track   % unavailable	<b>7.9%</b> or ↓	Impact of Planned Track Work
	Rail Crowding   % passenger time in crowded conditions	N/A	No target
	Bus Crowding   % stops encountered by full bus	N/A	No target
	Rail Customer Satisfaction	N/A	No target
	Bus Customer Satisfaction	N/A	No target

# QUALITY SERVICE

The following highlights Metro's system-wide service quality performance through the first half of FY21.

## Legend

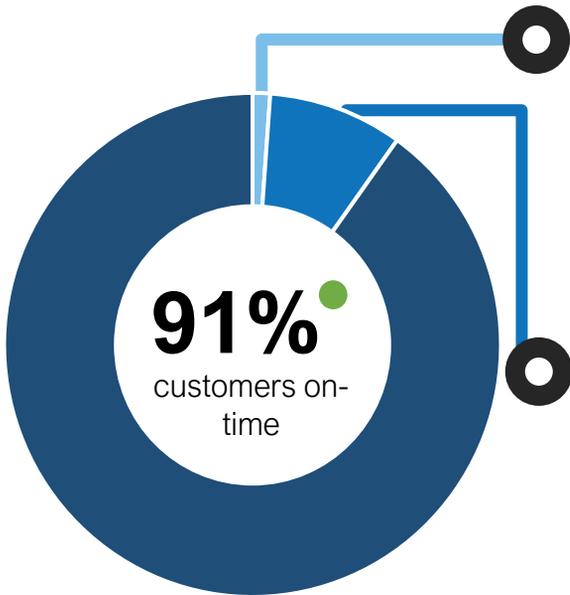

● Met or above target | ● Near target | ● Target not met | ● No target | ↑↓ Desired direction

**In the first half of FY21, Metrorail customers completed 91% of their trips on-time, exceeding the target of 88%.**

Rail on-time performance (OTP) has consistently surpassed the target through all six months this fiscal year.

## What caused customers to not be on-time?

Target ≥ 88% on-time

### Planned Delays

- ▶ **Planned track work** lowered OTP by approximately 1.2 percentage points.
- ▶ Planned track had the biggest impact during the first quarter, when summer track work projects closed all stations west of Ballston on Orange and Silver lines, and mini-surge works closed three to five stations at a time for maintenance and upgrades.

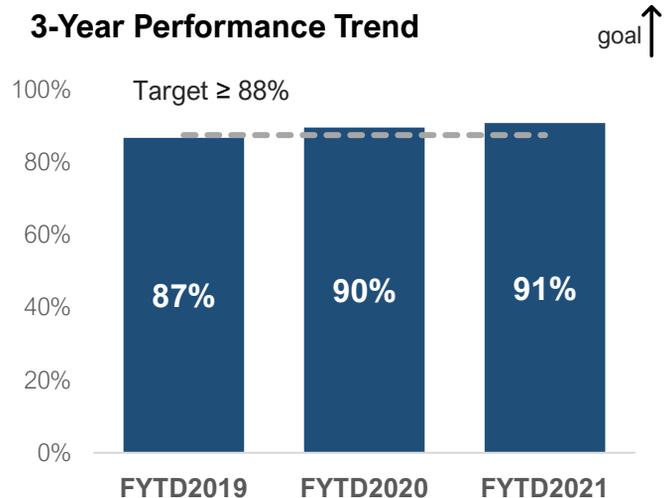

### Unplanned Delays

- ▶ **Unplanned delays** lowered OTP by about 8.0 percentage points.
- ▶ **Railcars** accounted for 34 percent of unplanned delays, a four percent decrease relative to the same time period in FY20 thanks to continued improvements in railcar reliability.
- ▶ **Police activity and other customer-related incidents** accounted for 35 percent of delays with customer-related incidents (including sick passengers) increasing by six percent while police activity incidents remained unchanged.
- ▶ **Infrastructure failures, operations and others** accounted for 31 percent of delays.

## Key actions to sustain performance

- ▶ Continue to monitor schedule adherence and share successful strategies and lessons learned to strengthen operational planning and scheduling.
- ▶ Continue to make critical repairs to rail infrastructure, ensuring it remains in a state of good repair.
- ▶ Continue railcar maintenance, rehab and replacement program, including plan to replace the oldest 2000- and 3000- series railcars when they reach the end of their useful life.

## 3-Year Performance Trend

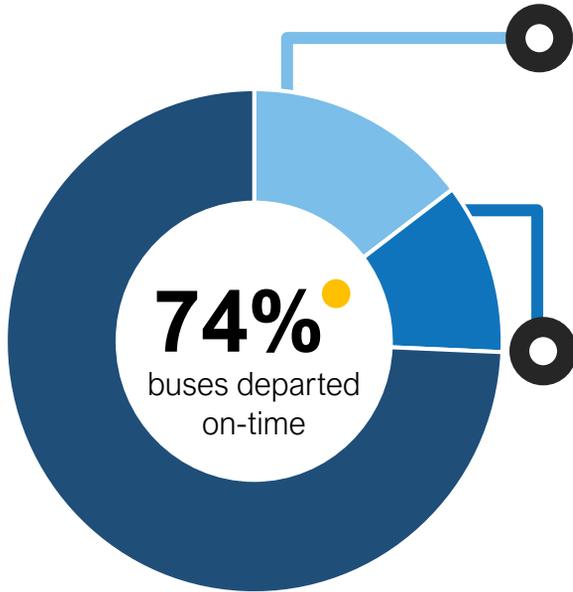

In the first half of FY21, 74% of buses were on-time, just shy of the target of 75%. Buses serving customers along Metro’s six high-frequency routes were 60% on-time while 76% of buses serving other routes were on-time.

Overall reliability was impacted by buses running early as a result of less traffic. Early departures from key bus stops more than doubled compared to the same time last year while late departures decreased.

## What caused buses to not be on-time?

Target ≥ 75% on-time

**Early Departures** were the main reason buses were not on-time, lowering OTP by 15 percentage points.

- ▶ Overall early departures increased eight percentage points compared to the same time last year.
- ▶ Buses depart terminals on-time (early terminal departures accounted for two percent of early departures), but start running early throughout the route due to less traffic.

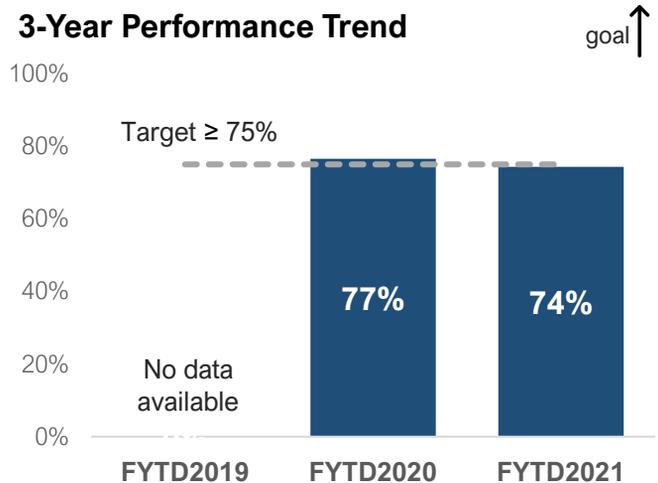

**Late Departures** lowered OTP by 11 percentage points.

- ▶ **Late terminal departures**, occurring primarily during the midday and PM peak service periods, accounted for 13 percent of lateness. These were often a result of the bus arriving late from the previous trip.
- ▶ **Late mid-route departures** were the main reason buses were not on-time, accounting for 73 percent of lateness, driven by service delivery challenges due to police and public activity, collisions and other issues.
- ▶ **Late terminal arrivals** accounted for the remaining 15 percent of lateness driven by late mid-route departures during the midday and PM peak service periods impacting on-time terminal arrivals.

## Key actions to improve performance

- ▶ Implement a new schedule in mid-March 2021 that is adjusted to reflect reduced traffic levels.
- ▶ Continuing to advance the Bus Transformation Project, including partnering with DDOT to launch new car-free lanes, speeding up buses in the District of Columbia.

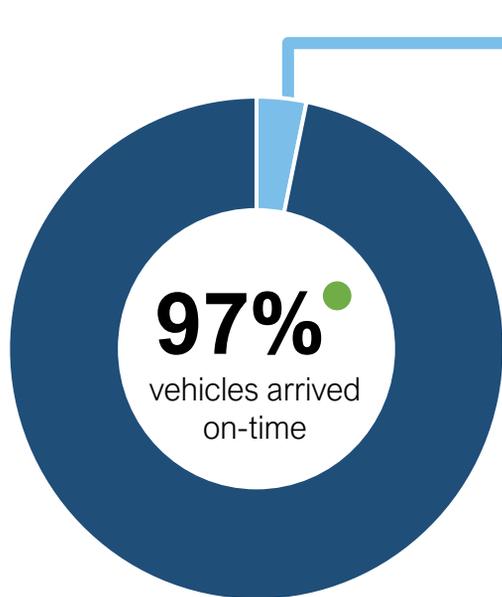

## 3-Year Performance Trend

Through the second quarter of FY21, 97% of MetroAccess trips were on-time, exceeding the target of 90%.

## What caused vehicles to not be on-time?

Target  $\geq$  90% on-time

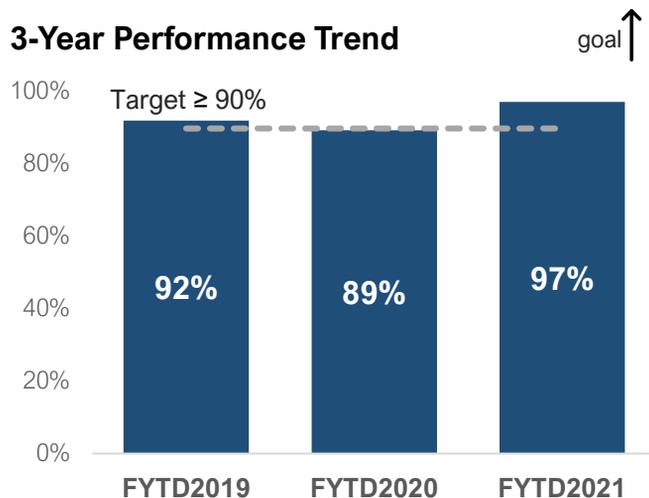

### Operations Related Delays

- ▶ Less traffic, reduced ridership, and the elimination of shared rides (where delays can cascade across customer trips) have led to strong on-time performance.

## Key actions to sustain performance

- ▶ Continue improving the accuracy of length-of-trip estimates by basing them on the fixed-route equivalent.
- ▶ Continue to dynamically adjust the system's scheduling parameters and leverage available taxi and alternative resources when trips are projected late throughout the day.
- ▶ Pursue a new, cutting-edge scheduling and dispatch system.

## 3-Year Performance Trend

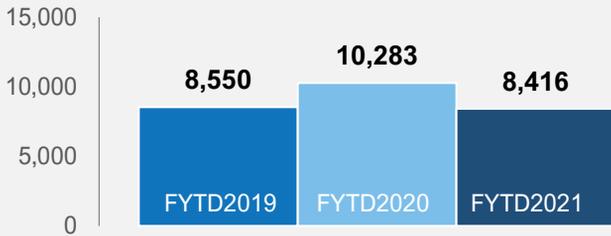

**Rail Fleet Reliability | 25,836** miles between failure  
 --Target ≥ 15,000

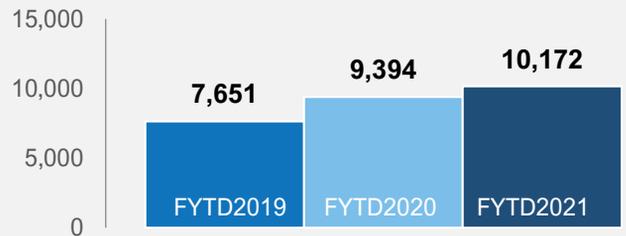

**Throughout the first half of FY21, railcar performance continued to trend upward and hit record levels, driven by strong performance in the 7000-series fleet.**

Railcar performance improved 44 percent compared to the same period in FY20. Metrorail averaged only eight failures per day in FY21, compared to 9.4 in FY20 and 16.9 in FY19. Strong railcar performance also contributed to strong customer on-time performance results—and smoother rides for customers. In late November following a train separation safety incident, Metro removed all 6000-series cars from service in order to fully investigate and understand the underlying factors and root causes. The removal of this fleet has not had an impact on fleet reliability or customer on-time performance.

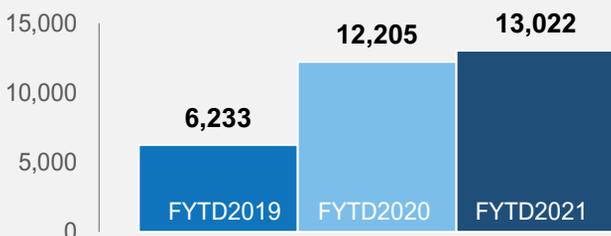

**2000-series | 0.3% of miles traveled**

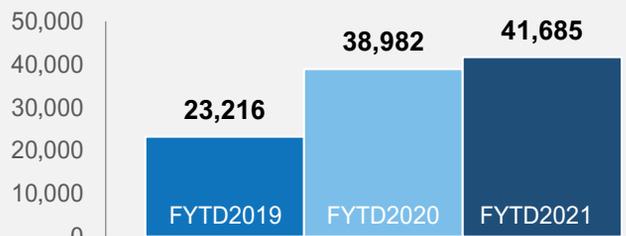

**3000-series | 14% of miles traveled**

**6000-series | 7% of miles traveled**

**7000-series | 78% of miles traveled**

**Key actions to sustain performance**

- ▶ Complete full investigation of 6000-series safety incidents and address root causes and underlying factors.
- ▶ Continue using reliability analysis and frequent inspections to ensure engineers prioritize problems causing the largest impacts.
- ▶ Continue the Scheduled Maintenance Program, which has helped improve performance of the 6000-series cars, and plan for the replacement of the 2000 and 3000 series as they turn 40 and near the end of their useful life.

**3-Year Performance Trend**

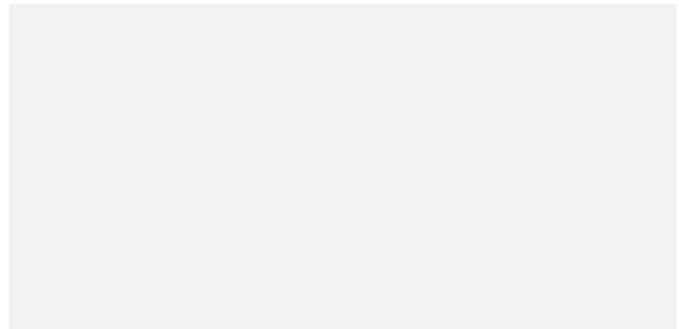

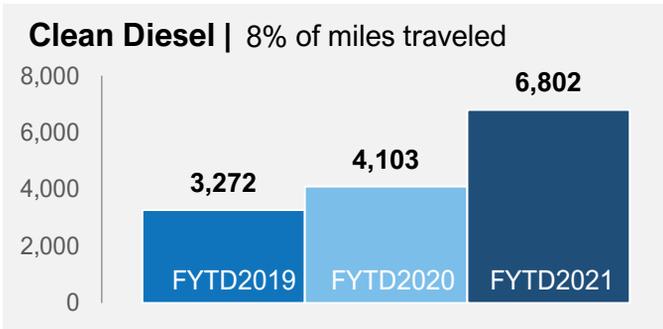

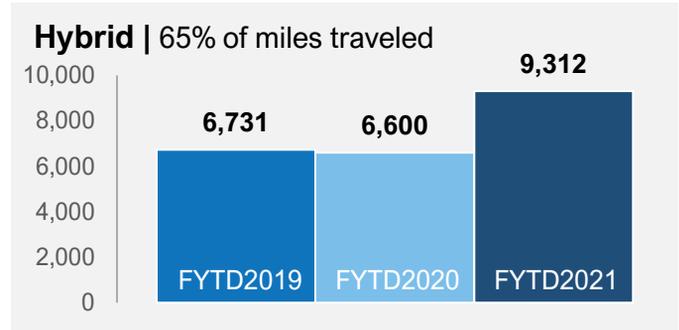

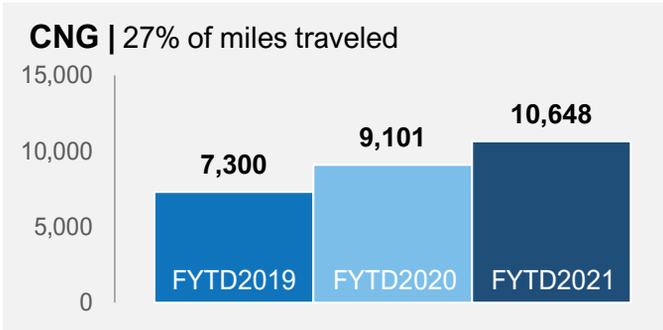

**Bus Fleet Reliability | 9,348** miles between failure  
 --Target ≥ 7,000

**Bus fleet performance reached record levels since Metro began measuring it in 2003, exceeding 9,300 miles between failures in the first half of FY21—better than the target of 7,000 and a 38% improvement compared to the same period last fiscal year thanks to improvements across all sub-fleets.**

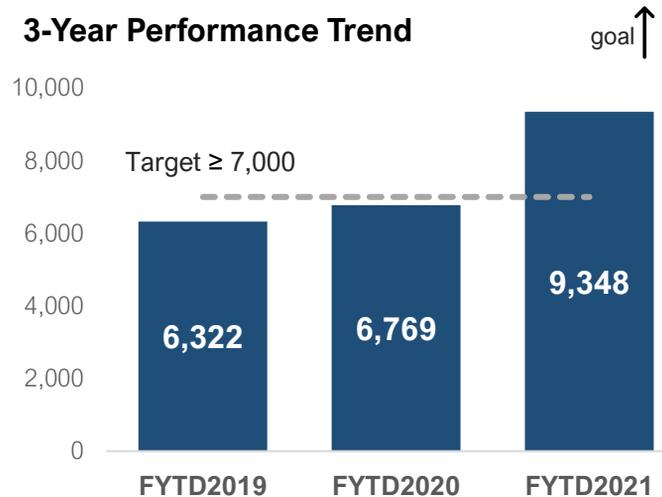

The compressed natural gas (CNG) fleet improved 17 percent compared to the same period last year, traveling just under 10,700 miles between failure while the hybrid fleet improved 41 percent, traveling about 9,300 miles between failure.

**Key actions to sustain performance**

- ▶ Increase collaboration between maintenance and transportation departments to reduce service interruptions through We Move the Region training program.
- ▶ Improve failure reporting in Metro’s asset management system to allow for more in-depth trend analysis.
- ▶ Conduct internal quality audits of preventive maintenance programs and service lane activities to identify areas of improvement.
- ▶ In FY21, continue annual program to replace 100 of the oldest, least reliable buses.

**3-Year Performance Trend**

**MetroAccess Fleet Reliability | 23,999** miles between failure  
--Target ≥ 20,000

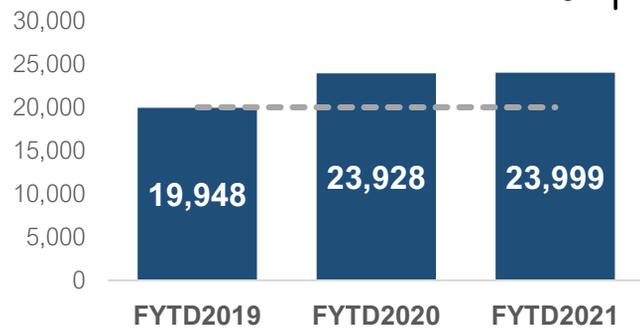

**Through the second quarter of FY21, the mean distance between failure is 23,999 miles, exceeding the target of 20,000 miles.**

The MetroAccess fleet traveled an average of 23,928 miles between failures through Q2 in FY20, sustaining above target performance year-over-year.

### Key actions to sustain performance

- ▶ MetroAccess has procured 177 sedans to replace aging Ford Transit vans, and will roll them out into revenue service in Q3 and Q4 of FY21.
- ▶ Staff continues to focus on key initiatives to improve fleet reliability and good state of repair, to include preventive maintenance inspections and quarterly fleet audits.

### 3-Year Performance Trend

## ● Elevator Availability | 98% available

-- Target ≥ 97%

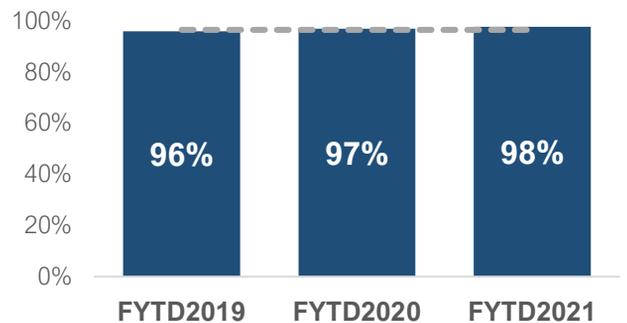

**In the first half of FY21 elevators were available for use 98% of the time, meeting target and improving by one percentage point compared to the same period in FY20.**

At any given time across Q1 and Q2, about 2 percent of elevators were out service, equivalent to about five or six elevators out of the total 275+ units across the system. About 60 percent of these outages were due to planned maintenance or capital work, with the rest due to system failures. Elevators went out of service less often during the first half of FY21 as compared to the same period in FY20, partially due to reliability improvements, but also resulting from significantly lower usage during the pandemic.

### Key actions to sustain performance

- ▶ Continue current elevator renewal/replacement contract (89 out of 100 completed at the end of Q2).
- ▶ Collaborate with engineers to identify 100 more units in need of replacement for the next contract.
- ▶ Establish water remediation program to address failures related to water infiltration in elevator shafts.

### 3-Year Performance Trend

## ● Escalator Availability | 94% available

-- Target ≥ 92%

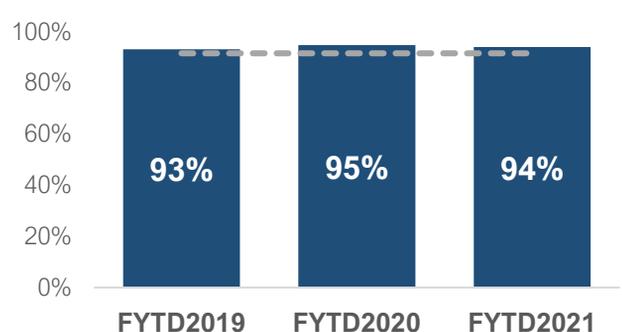

**In the first half of FY21 escalators were available for use 94% of the time, exceeding target but ending one percentage point less than the same period in FY20.**

At any given time, about six percent of escalators were out of service, equivalent to roughly 37 of the 600+ units across the system. Similar to elevator, about 60 percent of escalator outages were planned (including maintenance or capital work), with the rest resulting from unplanned unit outages. These outages occurred less frequently in Q1/Q2 than the same period in FY20; however, average repair times were higher due to the strain on workforce availability resulting from the pandemic.

### Key actions to sustain performance

- ▶ Installed new KONE Transit escalator at training lab, enhancing training for mechanics.
- ▶ Tested for and hired new apprentice class, which began in January 2021.
- ▶ Ramping up contract to rehabilitate 89 Westinghouse escalators, with the first four scheduled for completion by the end of the fiscal year.

### 3-Year Performance Trend

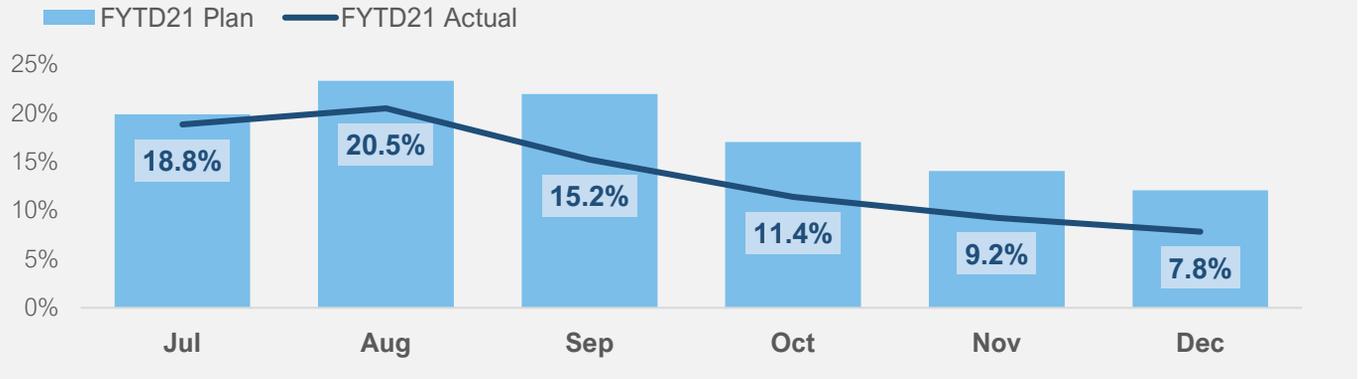

**7.8%** under performance restriction  
 -- FYTD Target  $\leq$  12.1%

**In the first half of FY2021, 7.8% of track was under performance restriction, 4.3% below the FY21 year-to-date projection.**

## Cumulative guideway restrictions % | FY21 vs Target

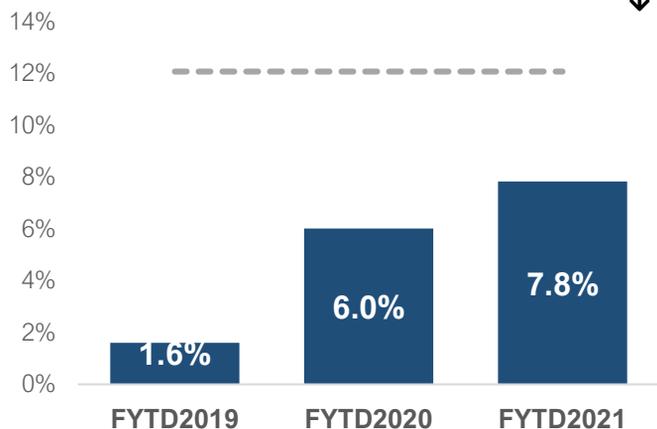

By December, Metro was performing better than projected, with an average of 7.8 percent of track “restricted” through the first six months of the year. Based on plans set at the end of last fiscal year, Metro expected significantly more guideway – 12.1 percent on average – to be restricted during this period. Performance was better than anticipated due to fewer condition-related restrictions, early completion of capital projects, and adjustment of plans – particularly related to the stalled Purple Line construction. Metro is on track to meet its annual target of no more than 7.9 percent of track under performance restriction on average.

Guideway restrictions include planned track work and unplanned condition-related speed restrictions. Planned work is the main reason guideway was unavailable. For the first six months in FY21, only 0.2 percent percent of track was restricted due to condition, well below the average of 0.6 percent in FY20. The remaining 7.6 percent was due to planned summer capital programs, including the shutdown of all Orange and Silver line stations west of Ballston, and short, localized shutdowns on a rolling basis.

### Key actions to sustain performance

- ▶ Continue preventive maintenance and capital programs to keep unplanned restrictions low.
- ▶ Install heat tape at up to four more stations before fall, eliminating the need for speed restrictions in these areas.

### 3-Year Performance Trend

## Metrorail Crowding | 0.3% of passenger travel time with >23 passengers per car

**Metrorail service levels during the first half of FY2021 have successfully supported social distancing during the pandemic; only 0.3% of passenger travel time was in crowded conditions (> 23 passenger per car).**

Metrorail crowding peaked in July at 0.8 percent and declined to 0.2 percent in August as Metro added more trains and extended hours as part of the Covid-19 Recovery Plan beginning August 16th. Rail crowding levels have remained near 0.1 percent or below since. The jump in crowding in November is related to a first amendment protest on November 14th, when ridership briefly exceeded Metro's capacity guidelines.

### FY2021 Trend

## Metrobus Crowding | 4.3% of bus stops encountered with > 20 passengers on the bus

**During the first half of FY2021, 4% of bus stops were encountered by a bus with more than 20 passengers onboard. While a standard size 40' bus has seats available for 40 passengers, to support social distancing, Metro deems any bus occupied at 50% or greater capacity as being full.**

Crowding on buses has decreased from peak levels in July thanks to the mid-August schedule change that added bus service to the busiest lines. To continue to minimize crowding, Metrobus has empowered operators to skip stops or only stopping to allow alighting if the bus becomes too crowded. Additionally, in December Metro introduced real-time crowding information available on transit apps so that Metrobus customers can see how full a bus is before it arrives.

### FY2021 Trend

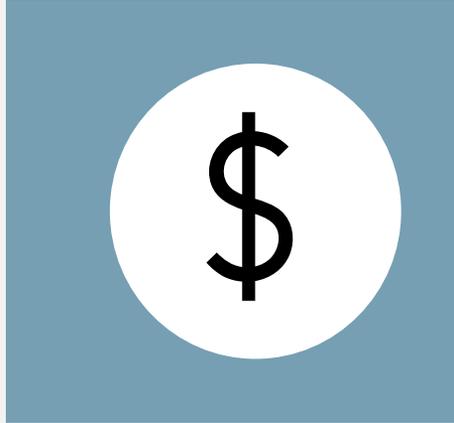

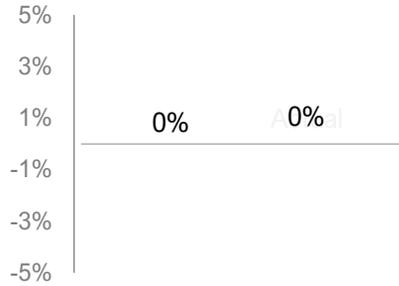

Crowding on bus and rail vehicles is closely monitored by Metro staff. However, staffing levels, fleet size, and the operating budget provide a hard cap on the amount of service that can be provided to meet demand and still enable CDC-guidelines for social distancing. As a result, a specific target for crowding metrics has not been set. Metro's focus remains to stay ahead of demand and provide as much service as is feasible given budget constraints and employee availability. Rail service levels are currently 80 percent of pre-pandemic levels, and staff are delivering 75-85 percent of pre-pandemic bus service.

The following highlights Metro's system-wide financial performance through the second quarter of FY21.

## Operating Financial Performance

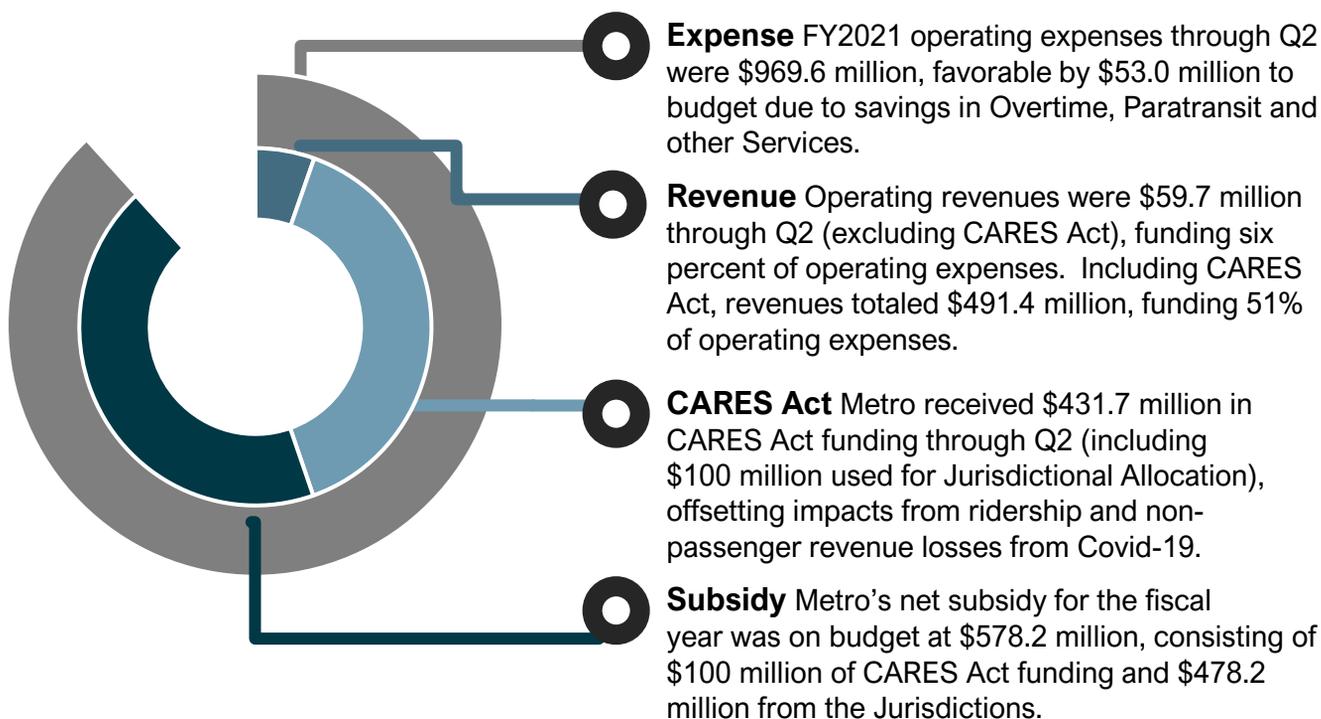

### Legend

● Met or above target | ● Near target | ● Target not met | ● No target | ↑↓ Desired direction

Metro's net subsidy through the second quarter of FY21 was on budget. Operating expenses were \$969.6 million or \$53.0 million less than budget. Operating revenues were \$59.7 million through Q2 (excluding CARES Act), funding six percent of operating expenses. Revenue losses from Covid-19, impacting ridership and non-passenger revenue, were offset by CARES Act funding as well as savings from overtime, paratransit and other services. Metro received CARES Act revenue totaling \$431.7 million, of which \$331.7 million was used to offset decreased revenue and \$100.0 million replaced jurisdictional contributions that were reduced as a result of the pandemic; including CARES revenue, total revenue through Q2 was \$491.4M.

## How did expenses compare to revenues and funding?

FY2020	76%	79%	76%	N/A
FY2021	64%	84%		

\*Due to significant decreases in ridership, Metro was not able to collect enough survey data to reliably measure Customer Satisfaction for Metrorail during the pandemic period to date (March to December 2020). The sample size for Metrobus was larger than Rail's, but smaller than usual; given the higher margin of error, BUS results are directional only.

## RIDERSHIP + SUPPORTING MEASURES

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Ridership</b>	<p>Total Metro ridership</p> <p>Metro rail passenger trips + Metrobus passenger boardings + MetroAccess passenger trips</p>	<p>Ridership is a measure of total service consumed and an indicator of value to the region. Drivers of this indicator include service quality and accessibility.</p> <p>Passenger trips are defined as follows:</p> <ul style="list-style-type: none"> <li>▶ <b>Metro rail</b> reports passenger trips. A passenger trip is counted when a customer enters through a faregate. In an example where a customer transfers between two trains to complete their travel one trip is counted.</li> <li>▶ <b>Metrobus</b> reports passenger boardings. A passenger boarding is counted via the onboard Automatic Passenger Counter (APC) when a customer boards a Metrobus. In an example where a customer transfers between two Metrobuses to complete their travel two trips are counted. Metrobus totals also include shuttles* to accommodate rail station shutdowns and other track work.</li> <li>▶ <b>MetroAccess</b> reports passenger trips. A fare paying passenger traveling from an origin to a destination is counted as one passenger trip.</li> </ul> <p>*Metro does not include bus shuttle passenger trips in its budget or published ridership forecasts.</p>
<b>Vacancy Rate</b>	<p>Percentage of budgeted positions that are vacant</p> <p>(Number of budgeted positions – number of employees in budgeted positions) ÷ number of budgeted positions</p>	<p>This measure indicates how well Metro is managing its human capital strategy to recruit new employees in a timely manner. Factors influencing vacancy rate can include: recruitment activities, training schedules, availability of talent, promotions, retirements, among other factors.</p>

# APPENDIX B | DEFINITIONS

## QUALITY SERVICE

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>MyTripTime</b> <b>Metrorail Customer On-Time Performance</b>	<p>Percentage of customer journeys completed on time</p> <p>Number of journeys completed on time ÷ Total number of journeys</p>	<p>Rail Customer On-Time Performance (OTP) communicates the reliability of rail service, which is a key driver of customer satisfaction. OTP measures the percentage of customers who complete their journey within the maximum amount of time it should take per WMATA service standards. The maximum time is equal to the train run-time + a headway (scheduled train frequency) + several minutes to walk between the fare gates and platform. These standards vary by line, time of day, and day of the week. Actual journey time is calculated from the time a customer taps a SmarTrip® card to enter the system, to the time when the SmarTrip® card is tapped to exit.</p> <p>Factors that can affect OTP include: railcar availability, fare gate availability, elevator and escalator availability, infrastructure conditions, speed restrictions, single-tracking around scheduled track work, railcar delays (e.g., doors), or delays caused by sick passengers.</p>
<b>Metrobus On-Time Performance</b>	<p>Percentage of bus service delivered on-time</p> <p>Schedule-based routes = Number of time points delivered on time based on a window of 2 minutes early and 7 minutes late ÷ Total number of time points delivered</p> <p>Headway-based routes = Number of time points delivered within the scheduled headway + 3 minutes ÷ Total number of time points delivered</p>	<p>Bus on-time performance (OTP) communicates the reliability of bus service, which is a key driver of customer satisfaction and ridership.</p> <ul style="list-style-type: none"> <li>▶ For schedule-based routes, OTP measures adherence to the published route schedule for delivered service.</li> <li>▶ For headway-based routes, OTP measures the adherence to headways, or the time customers wait between buses. Headway-based routes include routes 70, 79, X2, 90, 92, 16Y, and Metroway.</li> </ul> <p>Factors that can affect OTP include: traffic congestion, detours, inclement weather, scheduling, vehicle reliability, operational behavior, or delays caused by passengers.</p>
<b>MetroAccess On-Time Pick-up Performance</b>	<p>Adherence to Schedule</p> <p>Number of vehicle arrivals at the pick-up location within the 30 minute on-time window ÷ Total trips delivered</p>	<p>This indicator illustrates how closely MetroAccess adheres to customer pick-up windows on a system-wide basis. Factors that effect on-time performance are traffic congestion, inclement weather, scheduling, vehicle reliability, and operational behavior. MetroAccess on-time performance is essential to delivering quality service to the customer.</p>

# APPENDIX B | DEFINITIONS

## QUALITY SERVICE

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Rail Fleet Reliability</b>	<p>Mean Distance Between Delays (MDBD)</p> <p>Total railcar revenue miles ÷ Number of failures during revenue service resulting in delays of four or more minutes</p>	<p>The number of miles traveled before a railcar experiences a failure. Some car failures result in inconvenience or discomfort, but do not always result in a delay of service (such as hot cars). Mean Distance Between Delay includes those failures that had an impact on customer on-time performance.</p>
	<p>Mean Distance Between Failure (MDBF)</p> <p>Total railcar revenue miles ÷ Total number of failures occurring during revenue service</p>	<p>Mean Distance Between Failure and Mean Distance Between Delay communicate the effectiveness of Metro's railcar maintenance and engineering program. Factors that influence railcar reliability are the age and design of the railcars, the amount the railcars are used, the frequency and quality of preventive maintenance, and the interaction between railcars and the track.</p>
<b>Bus Fleet Reliability</b>	<p>Mean Distance Between Failures (MDBF)</p> <p>The number of total miles traveled before a mechanical breakdown requiring the bus to be removed from service or deviate from the schedule</p>	<p>Mean Distance Between Failures is used to monitor trends in vehicle breakdowns that cause buses to go out of service and to plan corrective actions. Factors that influence bus fleet reliability include vehicle age, quality of maintenance program, original vehicle quality, and road conditions affected by inclement weather and road construction.</p>
<b>MetroAccess Fleet Reliability</b>	<p>Mean Distance Between Failures (MDBF)</p> <p>The number of total miles traveled before a mechanical breakdown requiring the van to be removed from service or deviate from the schedule</p>	<p>Mean Distance Between Failures is used to monitor trends in vehicle breakdowns that cause vans to go out of service and to plan corrective actions. Factors that influence MetroAccess van fleet reliability include vehicle age, quality of maintenance program, original vehicle quality, and road conditions affected by inclement weather and road construction.</p>

# APPENDIX B | DEFINITIONS

## QUALITY SERVICE

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Elevator and Escalator Availability</b>	<p>In-service percentage</p> $\text{Hours in service} \div \text{Operating hours}$ $\text{Hours in service} = \text{Operating hours} - \text{Hours out of service}$ $\text{Operating hours} = \text{Operating hours per unit} \times \text{number of units}$	<p>Escalator/elevator availability is a key component of customer satisfaction with Metrorail service. This measure communicates system-wide escalator and elevator performance (at all stations over the course of the day) and will vary from an individual customer's experience.</p> <p>Availability is the percentage of time that Metrorail escalators or elevators in stations and parking garages are in service during operating hours.</p> <p>Customers access Metrorail stations via escalators to the train platform, while elevators provide an accessible path of travel for persons with disabilities, seniors, customers with strollers, and travelers carrying luggage.</p> <p>An out-of-service escalator requires walking up or down a stopped escalator, which can add to travel time and may make stations inaccessible to some customers. When an elevator is out of service, Metro is required to provide alternative services which may include shuttle bus service to another station.</p>
<b>Available Track</b> (Federal Transit Administration Transit Asset Management Performance Measure)	<p>Percentage of track segments with performance restrictions at 9:00 AM the first Wednesday of every month</p> $\frac{\text{Number of track miles with performance restrictions}}{234 \text{ total miles}}$	<p>In 2016, the Federal Transit Administration (FTA) issued its Final Rule on Transit Asset Management, which requires transit properties to set targets and report performance on a variety of measures, including guideway condition. Guideway includes track, signals and systems.</p> <p>A performance restriction occurs when there is a speed restriction: the maximum train speed is set below the guideway design speed. Performance restrictions may result from a variety of causes, including defects, signaling issues, construction zones, and maintenance causes. FTA considers performance restrictions to be a proxy for both track condition and the underlying guideway condition.</p>
<b>Train On-Time Performance: Headway Adherence</b>	<p>Number of station stops delivered within the scheduled headway plus 2 minutes during rush (AM/PM) service ÷ Total station stops delivered</p> <p>Number of station stops delivered up to 150% of the scheduled headway during non-rush (midday and evening) ÷ Total station stops delivered</p>	<p>Train on-time performance measures the adherence to weekday headways, or the time customers wait between trains. Factors that can effect on-time performance include: infrastructure conditions, missed dispatches, railcar delays (e.g., doors), or delays caused by sick passengers. Station stops are tracked system-wide, with the exception of terminal and turn-back stations.</p>

# APPENDIX B | DEFINITIONS

## QUALITY SERVICE

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Trains in Service</b>	<p>Percentage of required trains that are in service at 8:15 AM and 5:00PM</p> <p>Number of Trains in service ÷ Total required trains</p>	<p>Trains in Service is a key driver of customer on-time performance and supports the ability to meet the Board standard for crowding. WMATA’s base rail schedule requires 140 trains during rush periods. Fewer trains than required results in missed dispatches, which leads to longer wait times for customers and more crowded conditions. Key drivers of train availability include the size of the total fleet and the number of “spares”, railcar reliability and average time to repair, operator availability, and balancing cars across rail yards to ensure that the right cars are in the right place at the right time.</p>
<b>Offloads</b>	<p>Number of railcar offloads</p>	<p>An offload is any time all passengers traveling on a train must get off the train for any un-scheduled reason (e.g., not a turnback or planned removal from service). Offloads are a key driver of customer on-time performance and communicates the impact of Metro's maintenance and engineering programs on customer service. Factors that influence railcar offloads are railcar performance, rail infrastructure performance, rail operations policies, and customer behavior.</p>
<b>Rail Crowding</b>	<p>Percentage of passenger time spent on vehicles exceeding crowding guidelines</p> <p>Number of crowded passenger minutes ÷ Total number of passenger minutes</p>	<p>Crowding is a key driver of customer satisfaction with Metrorail service. Crowding measures the percentage of passenger time spent on vehicles that exceed crowding guidelines per WMATA service standards:</p> <ul style="list-style-type: none"> <li>▶ Before Pandemic: 100 passengers per car</li> <li>▶ Pandemic: 23 passengers per car</li> </ul> <p>Crowding informs decision making regarding asset investments, service plans and scheduling. Factors that can effect crowding include: service reliability, missed trips insufficient schedule, or unusual demand.</p>

# APPENDIX B | DEFINITIONS

## QUALITY SERVICE

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Bus Crowding</b>	<p>Percentage of bus stops encountered by a bus that exceeds crowding guidelines</p> <p>Number of bus stops encountered by a crowded bus ÷ Total number of bus stops encountered</p>	<p>Crowding is a key driver of customer satisfaction with Metrobus service. Crowding measures the percentage of bus stops encountered by a bus that exceeds crowding guidelines per WMATA service standards:</p> <ul style="list-style-type: none"> <li>▶ Before Pandemic: 120% of seated capacity during peak for BRT, framework, and coverage routes, 100% off peak and at all times on commuter routes</li> <li>▶ Pandemic: 50% of seated capacity</li> </ul> <p>Crowding informs decision making regarding asset investments, service plans and scheduling. Factors that can affect crowding include: service reliability, missed trips insufficient schedule, or unusual demand.</p> <p>Note: Prior to the adoption of the Metrobus Service Guidelines in December 2020, crowding guidelines were 120% of seated load for all services except express bus during peak.</p>
<b>Customer Satisfaction</b>	<p>Survey respondent rating</p> <p>Number of survey respondents with high satisfaction ÷ Total number of survey respondents</p>	<p>Surveying customers about the quality of Metro’s service delivery provides a mechanism to continually identify those areas of the operation where actions to improve the service can maximize rider satisfaction.</p> <p>Customer satisfaction is defined as the percent of survey respondents who rated their last trip on Metrobus or Metrorail as “very satisfactory” or “satisfactory.” The survey is conducted via phone with approximately 400 bus and 400 rail customers who have ridden Metro in the past 30 days. Results are summarized by quarter (e.g., January–March).</p>

# APPENDIX B | DEFINITIONS

## SAFETY & SECURITY

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Crime</b>	Reported Part I Crimes	<p>Part I crimes reported to the Metro Transit Police Department for Metrobus (on buses), Metrorail (on trains and in rail stations), or at Metro-owned parking lots in relation to Metro's monthly passenger trips. Uniform Crime Reporting, managed by the Federal Bureau of Investigation, include Part I offense classifications of Criminal Homicide, Forcible Rape, Robbery, Aggravated Assault, Burglary, Larceny, Motor Vehicle Theft, and Arson.</p> <p>This measure provides an indicator of the perception of safety and security customers experience when traveling the Metro system. Increases or decreases in crime can have a direct effect on whether customers feel safe in the system.</p>
<b>Customer Injury Rate</b>	<p>Customer injury rate:</p> $\frac{\text{Number of injuries} +}{\text{(Number of passengers} + 1,000,000)}$	<p>The customer injury rate is based on National Transit Database (NTD) Reporting criteria. This measure includes customers injured during Metro operations when the injury is considered serious or requires immediate medical attention away from the scene.</p> <p>Customer safety is the highest priority for Metro and a key measure of quality service. Customers expect a safe and reliable ride each day. The customer injury rate is an indicator of how well the service is meeting this safety objective.</p>
<b>Employee Injury Rate</b>	<p>Employee injury rate:</p> $\frac{\text{Number of injuries} +}{\text{(Total work hours} + 200,000)}$	<p>An employee injury is recorded based on OSHA 1904 Recordkeeping Criteria, when the injury is (a) work related; and, (b) one or more of the following happens to the employee: 1) fatality, 2) injury or illness that results in loss of consciousness, days away from work, restricted work, or job transfer 3) receives medical treatment above first aid, 4) diagnosed case of cancer, chronic irreversible diseases, fractured or cracked bones or teeth, and punctured eardrums, 5) special cases involving needlesticks and sharps injuries, medical removal, hearing loss, and tuberculosis.</p> <p>Per the Occupational Safety and Health Act, employers are obligated to provide a workplace free of recognized hazards which may cause employee death or serious injury. OSHA recordable injuries are a key indicator of how safe employees are in the workplace.</p>
<b>NTD Bus Collision Rate</b>	<p>NTD bus collision rate:</p> $\frac{\text{Number of NTD reportable collisions} +}{\text{(Total number of bus miles operated} + 1,000,000)}$	<p>The NTD collision rate is a subset of the Bus Collision Rate and is based on National Transit Database (NTD) Reporting criteria. It reflects bus collisions that result in injuries requiring transport for any involved vehicle or pedestrian; towaway of any involved vehicle; or total damages that cost \$25,000 or more.</p> <p>NTD-reportable collisions reflect a measure of serious bus collisions and represent an opportunity to fully investigate the incident; determining causal factors and root causes. The NTD bus collision rate is an indicator of how well service is meeting this safety objective.</p>

# APPENDIX B | DEFINITIONS

## SAFETY & SECURITY

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Rail Collisions</b>	Number of rail collisions	<p>Rail collision incidents reflect any incident on the mainline or yard where a train, with or without customers, or a Roadway Maintenance Machine (RMM) makes contact with another vehicle, equipment, or object, and meet the NTD threshold of substantial damage.</p> <p>The number of rail collision incidents is an indicator of how well Train and Equipment Operators and Rail Controllers are paying full time and attention to their operating environment and how efficient communications are from controllers to operators.</p>
<b>Derailments</b>	Number of derailments	<p>A derailment is a non-collision event that occurs when a train or other rail vehicle unintentionally comes off its rail, causing it to no longer be properly guided onto the railway.</p> <p>The number of derailment incidents is an indicator of how well Train Operators and Rail Controllers are paying full time and attention to their operating environment and how efficient communications are from controllers to operators. Derailments are also an indicator of the state of good repair of both the right-of-way and rail vehicles (trains, RMMs, Flat Cars, Hi-Rail trucks).</p>
<b>Fire Incidents</b>	Number of fire incidents	<p>Fire incidents consist of any fire that occurs within the Metrorail system regardless if active suppression was required. There are three main types of fires that occur within the Metrorail system: non-electrical (e.g., debris, rubbish such as leaves, newspapers), cable, arcing events (track components, train components) and station equipment.</p> <p>The number of fire incidents is an indicator of how well Metro is keeping its right of way clean and dry, and its equipment in state of good repair.</p>
<b>Red Signal OVERRUNS</b>	Number of red signal overruns	<p>Red signal overrun incidents reflect any time a train or equipment operator passes a red signal on the right-of-way (including in rail yards), or when the operator passes an employee on the roadway who's telling the train or Roadway Maintenance Machine (RMM) to not move any further.</p> <p>The number of red signal overruns is an indicator of how well Train Operators and Rail Controllers are paying full time and attention to their operating environment and how efficient communications are from controllers to operators.</p>

# APPENDIX B | DEFINITIONS

## FINANCIAL RESPONSIBILITY

KPI	How is it measured?	What does this mean and why is it key to our strategy?
<b>Operating Financial Performance</b>	Percentage favorable or unfavorable comparing actual revenues and subsidy to actual expenses  $\frac{(\text{actual revenues} + \text{subsidy} - \text{actual expenses})}{\text{actual expenses}}$	This indicator tracks Metro's progress managing its operating revenue and expenses
