00520 AGREEMENT FORM

This Section includes the Contract Form to be executed and submitted by the successful proposer and represents the legal instrument binding the two parties to the work once the document is signed by the Authority and the Design-Builder. PROPOSER'S INFORMATION NOTICE: The following form is included for the proposer's information and use in the event he is awarded the Contract. It is not required to be submitted with the proposal.

00521 DESIGN-BUILD CONTRACT FORM

DESIGN/BUILDER: Hensel-Phelps Construction Company, Inc. **CONTRACT NUMBER:** FN5008
4437 Brookfield Corporate Drive
Suite 207
Chantilly, VA 20151 **Date:** July 25, 2005

CONTRACT FOR: RAIL YARDS EXPANSION PROJECT AT GREENBELT & SHADY GROVE YARDS

CONTRACT TYPE: FIXED-PRICE CONSTRUCTION

CONTRACT PRICE: Ninety-Eight Million Three Hundred Thousand Twenty-One Dollars \$98,321,000.00

CONTRACT PERFORMANCE TIME: Shady Grove: NTP + 825 calendar days
Greenbelt: NTP + 660 calendar days

In consideration of the covenants contained herein, the Washington Metropolitan Area Transit Authority (hereinafter called the Authority), represented by the Contracting Officer executing this Contract, and the individual, partnership, joint venture or corporation named above (hereinafter, the Design-Builder), mutually agree to perform this Contract in strict accordance with its provisions. The Contract consists of: this RFP and its amendments, if any; all documents referenced or attached to the RFP including the following:

1. Project Manual as defined in the General Conditions including the Project Drawings and other attachments to the Project Manual.
2. Design-Builder's Proposals as finally accepted.
3. Other publications referenced in the Contract Documents.
4. Amendment Number(s): 001 thru 007

ALTERATIONS: The following alterations were made to this Contract before it was signed by the parties hereto:

In Witness Whereof, the parties hereto have executed this Contract as of the date entered above.

***NOTE:** Execution for the Design-Builder that is an individual, corporation or partnership shall be accompanied by the Power of Execution that follows. A Joint Venture Design-Builder must complete the Power of Attorney that follows. All persons executing this Contract must complete the appropriate Certification of the person's authority to act on behalf of the Design-Builder.

00434 PRICE SCHEDULE - Submit with Price Proposal

A. DESCRIPTION OF WORK:

The Design-Builder shall Design and Build the Facilities satisfactorily completed for its intended use in the manner and at the locations set forth in the Requirements of the Project Manual and the Project Drawings of this solicitation, and in accordance with the Technical and Price Proposals as finally accepted by the Authority. The Design-Builder shall design the facility pursuant to the Authority's Design Criteria, and in full compliance with the Terms and Conditions of the Contract and the Rules and Regulations of the jurisdictional authorities, and shall construct the facility in strict accordance with the Final Design Specifications and Final Design Drawings and in full compliance with the Terms and Conditions of the Contract and the Rules and Regulations of the jurisdictional authorities.

Schedule A: GREENBELT YARD EXPANSION

Item	Description	Qty	Unit	Amount
1	Sitework			
1-A	Demolition	1	LS	\$ <u>150,422</u>
1-B	Earthwork	1	LS	\$ <u>182,700</u>
1-C	Paving and Surfacing	1	LS	\$ <u>307,938</u>
1-D	Piped Utilities	1	LS	\$ <u>543,211</u>
1-E	Site Improvements	1	LS	\$ <u>181,700</u>
1-F	Yard Electrical Work	1	LS	\$ <u>358,903</u>
2	New Shop and Existing Shop Reconfiguration			
2-A	Demolition and Earthworks	1	LS	\$ <u>1,478,323</u>

00910	PRECONTRACT REVISIONS	00900 - 1
00920	CLAIMS	00900 - 3
00930	RECORD CLARIFICATIONS AND PROPOSALS	00900 - 5
00940	RECORD MODIFICATIONS	00900 - 7

Separate, individual tables of contents are provided for the following Divisions as applicable:

- Division 1, GENERAL REQUIREMENTS
- Division 2, SITE CONDITIONS
- Division 3, CONCRETE
- Division 4, MASONRY
- Division 5, METALS
- Division 6, WOOD AND PLASTICS

Division 7, THERMAL AND MOISTURE PROTECTION
Division 8, DOORS AND WINDOWS
Division 9, FINISHES
Division 10, SPECIALTIES
Division 11, EQUIPMENT
Division 12, FURNISHINGS
Division 13, SPECIAL CONSTRUCTION
Division 14, CONVEYING SYSTEMS
Division 15, MECHANICAL
Division 16, ELECTRICAL

PROCUREMENT REQUIREMENTS

00100 SOLICITATION - REQUEST FOR PROPOSALS

This Section includes project information for proposers.

NOTICE TO OFFERORS

RFP-FN5008/FMP includes Project Manuals and Project Drawing Sets for:

PROJECT DESCRIPTION: RAIL YARDS EXPANSION PROJECT
BRENTWOOD, GREENBELT, AND SHADY GROVE YARDS

PROPOSALS for the work described herein shall be submitted by the Proposers so as to be received at the Office of Procurement, Washington Metropolitan Area Transit Authority, Office of Procurement, **PRMT File Room 3C-02**, 600 Fifth Street, N.W., Washington, D.C. 20001 before the time and date listed in Section 00412 and 00413. Questions may be directed to the Contract Administrator.

DIRECTIONS FOR SUBMITTING OFFER: Read and comply with Section 00200, INSTRUCTIONS TO PROPOSERS. Proposal volumes shall be submitted in accordance with Section 00204. Proposal documents are contained in Section 00500, PROPOSAL FORMS AND SUPPLEMENTS.

The separate, sealed Proposal Volumes must be marked with offer under solicitation RFP NO. FN5008/FMP, Volume Number and Description. All amendments must be acknowledged on the Proposal Forms.

PROPOSALS MUST SET FORTH FULL, ACCURATE AND COMPLETE INFORMATION AS REQUIRED BY THIS REQUEST FOR PROPOSAL INCLUDING ANY AMENDMENTS.

THIS PAGE NOT USED

00101 GENERAL STATEMENT OF WORK:

- A. This solicitation is for a Design-Build Project that includes furnishing both design and construction services. The Design-Builder, through itself or others, shall provide professional design engineering and architectural services as well as technical, subprofessional, clerical and other services necessary for the complete design and preparation of the Final Design Drawings and Specifications, as well as the schedules, cost estimates, quality assurance/quality control and other Contract requirements. The Design-Builder shall also furnish all labor, equipment, materials, quality assurance/quality control and testing, construction and environmental/security/safety superintendence, and field engineering services required for the construction of the Project. The Design-Builder is responsible for program and project management; providing submittals, field engineering support, quality assurance and quality control during both design and construction; coordinating with jurisdictional agencies and utilities through the Authority Representative; obtaining all necessary permits, approvals and easements; fully constructing the Project ready for its intended use including as applicable, but not limited to: performing sitework; providing structural work and architectural finishes; electrical and mechanical items; installing and testing systems equipment, as well as integrating and testing these systems into existing systems; providing operation and maintenance training and manuals for the systems and equipment installed; commissioning the facilities and Project as applicable; furnishing all requisite deliverables including, but not limited to, spare equipment, record drawings and specifications, and warranties; all in accordance with the Contract requirements. No attempt has been made to separate the work by trades or types of construction, and the Design-Builder shall make its own decision as to who does what to accomplish the work.
- B. It is the responsibility of the Design-Builder to gather all data necessary for the performance of the Work under this Contract and to develop a complete and final design. The Authority will furnish the Design-Builder its Project Manual and Attachments to the Project Manual, which include Design Criteria (the WMATA-provided Program Criteria in Section 01112, applicable WMATA Standard and Technical Specifications Divisions 2 through 16; Project Drawings; the applicable WMATA Construction Safety and Environmental Manual or Coordinated Safety Program and Reporting Procedures Manual and associated Insurance Specifications for Construction Projects; the Safety and Security Certification Program Plan and the System Safety Program Plan; and other design related information) for the Design-Builder's use in developing the Final Design Specifications and Final Design Drawings.
1. The Authority will furnish to the Design-Builder without charge one (1) set of CD ROM disks in an AutoCAD (.DWG) file format of the original Proposal Set Project Drawings including any amendments, and including if applicable Standard Drawings and Information and Authority Record Drawings from prior

contracts, and one (1) set of CD ROM disks of the original Proposal Set specifications including any amendments in current WordPerfect version, except for the applicable publications referenced in the technical provisions. Additional documents will be furnished on request at the cost of reproduction.

2. The Design-Builder shall produce Final Design Specifications and Final Design Drawings, Shop and Working Drawings, Contract Record Drawings and Specifications and other Contract Documents in the appropriate medium.
 - a. The Final Design and As-Built Specifications shall be in Construction Specifications Institute (CSI) Format (latest edition) per the Authority's requirements.
 - b. The Final Design, Shop, Working and Contract Record Drawings shall be produced in an AutoCAD (.DWG) format and line work shall be shown on designated layers in accordance with the standard CAD guidelines as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Images shall be clear, sharp and readily legible. For updates to As-Built Drawings, drafting quality shall match the original documents in line weights, symbols and lettering style and size.
 3. By providing the Authority's Design Criteria the Authority does not relieve the Design-Builder of its complete responsibility for the adequacy of the design. Accordingly, the selected Design-Builder must verify that existing site conditions described in the Contract Documents are current and verify all design elements to ensure that the Final Design Specifications and the Final Design Drawings are consistent with the applicable codes and regulations adopted by the governing jurisdictional agencies. In the event that the Authority's Design Criteria exceeds applicable codes and regulations, the Design-Builder shall be responsible for providing a design that is consistent with the Authority's Design Criteria.
- C. Complete approved designs for the following elements will be provided by the Authority:
1. Track alignment and trackwork designs for all three sites.
 2. Conceptual Storm water management designs, for Greenbelt Site only. Design-Builder will be required to develop erosion and sediment plans and obtain final MDE approval.
- D. All work under this Contract shall be performed in accordance with the terms and conditions of the Contract and in a logical sequence as developed by the Design-Builder. The Authority reserves the right to review and approve the sequence of work.

00102 GENERAL SCOPE OF WORK:

Rail Yards Expansion Project at Brentwood, Greenbelt, and Shady Grove Yards

- A. Background: Projected increases in ridership require the Washington Metropolitan Area Transit Authority (WMATA) to exercise options within the next year to purchase 120 rail cars to increase current train consists from six to eight-car operations to relieve overcrowding in the 2007 - 2008 time frame. In order to service the enlarged fleet and ensure safe and reliable eight-car operations, additional rail car maintenance capacity is required.
- B. Purpose: The Shops Expansions Project will provide WMATA additional maintenance capacity at three existing rail Yards in the Metro System: Brentwood Yard on the Red Line in the District of Columbia, Greenbelt Yard on the Green Line in Prince George's County, Maryland, and Shady Grove Yard on the Red Line in Montgomery County, Maryland. All construction work is to be completed by September 2007.
- C. Scope: There are two completely separate projects which will be evaluated separately for award. One project involves the modifications at the Greenbelt and Shady Grove Yards and the other modifications at the Brentwood Yard. Award of the Brentwood Yard Project is predicated on funding availability. The scope of the first project is for the construction of a new, two-story 72,000 s.f. back shop building at the Greenbelt Yard facility. Wheel and axle repairs will be expanded in the existing Greenbelt S & I shop. Construction of a new 16 bay S & I double ended maintenance shop with necessary trackwork and systems will be constructed at the Shady Grove Yard immediately adjacent to the existing shop. Expanded back shop, parking and laydown areas will also be constructed at Shady Grove. The Brentwood Yard Project involves the construction of three new tracks and four S & I bays. The Target Price for the Greenbelt and Shady Grove Yard Project is \$79 million and for the Brentwood Yard Project is \$41 million. The Period of Performance is approximately 27 months, or 825 calendar days for Greenbelt/Shady Grove Project and 910 calendar days for the Brentwood Project. Specific Project Milestones are shown in Section 00825. In addition, similar expansion at Alexandria Yard may be considered for inclusion at a later date once scope and funding have been finalized.
- D. Intent of the Project: The intent of the project is to provide improvements at three Yards in a design consistent with the aesthetic quality and locations contained in the Project Drawings and as specified in the Project Manual.
- E. Basis of Design: The Project shall be designed in accordance with the established requirements described in the following:
1. Project Manual:

- a. Introductory Information (Project Title Page, Certifications Page, Table of Contents and List of Project Drawings).
 - b. Procurement Requirements (Proposal Solicitation including RFP, Project Solicitation Schedule, General Statement of Work and General Scope of Work; Instructions to Proposers including General Instructions, Technical and Price Proposal Instructions and Evaluation Factors, Supplementary Instructions to Proposers and Pre-Proposal Meetings; Information Available to Proposers including Informational Documents, Geotechnical Data, Existing Conditions and Environmental Assessment Information; and Proposal Forms and Supplements including Proposal Form, Proposal Guarantee, Compliance/Exception Information, Brand Name or Equal Form, Price Schedule, Reps & Certs, Proposal Data Form, DBE Data, Proposing Addenda including Technical Proposal As Finally Accepted), and Wage Determination Rates.
 - c. Contracting Requirements (Agreement, Bonds and Certificates, General Conditions, Supplementary Conditions, and Addenda and Modifications including Addenda Amendment Letters, Claims, Clarifications and Proposals, and Modifications).
 - d. General Requirements including Design Requirements and Program Criteria in Section 01112.
 - e. The pertinent requirements of the WMATA Standard Specifications and WMATA Technical Specifications.
2. Attachments to the Project Manual:
- a. Project Drawings.
 - b. Other Authority-issued documents or drawings.
 1. WMATA's Automatic Train Control System Integrity Maintenance Practices, Revision 1, dated March 25, 2003.
 - c. The appropriate WMATA Construction Safety and Environmental Manual as specified in Section 00371, the Safety and Security Certification Program Plan as specified in Section 00381, and the System Safety Program Plan as specified in Section 00391, and the Metrorail Safety Rules and Procedures Handbook (MSRPH), January 2004.
 - d. WMATA Manual of Design Criteria (CD with electronic file)
3. Applicable codes, regulations, reference standards and specifications.

- F. **Design Criteria:** The Design Criteria (Design Requirements and Program Criteria in Section 01112; pertinent requirements of the WMATA Standard Specifications and Technical Specifications; Project Drawings; other Authority-issued documents or drawings) and applicable codes, regulations, reference standards and specifications are not the final design; however, the Design Criteria shall be utilized as the basis for design and shall be used as shown and/or as specified, unless the latest Codes and Regulations of the governing jurisdictional agencies are more stringent, in which case the Codes/Regulations shall apply. The Design-Builder shall develop, coordinate and prepare the final design including but not limited to Final Design Drawings with design calculations and details for all elements to be used in carrying out the work and provide Final Design Specifications in CSI Format, latest edition. The design shall be submitted to the Authority in accordance with the requirements of this Section and other Sections of the Project Manual.
- G. **Materials:** The principal criteria that govern the selection of materials are consistency with the Authority-required materials, appropriateness of construction, maintainability, operational efficiency, safety, and economy. The materials to be specified for the Project shall be as set forth in the Design Criteria. The materials specified in the Standard Specifications and Technical Specifications represent the minimum standards to be used for construction. If the codes and regulations of the jurisdictional agencies exceed the Authority requirements, then the more stringent standard shall be utilized.
- H. **Safety/Security:** The Project shall be designed to provide an optimum level of safety and security for users and Authority employees at all times and shall conform to the applicable WMATA Construction Safety and Environmental Manual; Safety and Security Certification Program Plan and the System Safety Program Plan; the Safety Rules and Procedures Manual and the Metrorail Safety Rules and Procedures Handbook as applicable. Dark, confined and indefensible spaces shall be avoided. The lighting in all areas shall conform to the Design Criteria.
- I. **Project Phasing/Scheduling:** The Project is divided in two phases, the Design Phase and the Construction Phase, however, there is an overlap between the Phases. The Construction for any Design Element will not be approved until the balance of the Design is advanced to a stage where in the judgement of the Authority the Design Element can be adequately evaluated. The Design-Builder shall receive approval by the Authority of the Design by Element before proceeding to Construction for that Element.
- J. **Permits and Jurisdictional and Utility Approvals:** To facilitate meeting the timetables indicated in Section 00870, except to the extent those milestones are modified by the Authority, the Authority has been conducting discussions with the affected jurisdictional agencies concerning site environmental, storm water management, wetlands mitigation, and utility issues, and the proposed work as shown and specified in the plans has to date been favorably received by those agencies. It is

the Design-Builder's responsibility to obtain the necessary approvals and permits; however, the Authority will work with the Design-Builder to support this effort. The Design-Builder is also required to submit an application for Building Permits to the three jurisdictions affected, and the Designer shall advance the design so that securing of these jurisdictional permits by the Design-Builder will occur in a timely fashion. In addition, the Design-Builder is responsible for obtaining all the necessary utility approvals with the exception of the following:

1. WMATA will obtain conceptual storm water management approvals from MDE for the Greenbelt site only.
- K. Coordination with Others: The Design-Builder shall coordinate for this Project with the following as applicable:
1. The Authority Representative or his designee. The Design-Builder shall designate a single liaison to coordinate with operating personnel through the Authority Representative for any work that may have a potential impact on any operations at existing facilities.
 2. Utility companies and jurisdictional agencies affected by or having jurisdiction over the Project through the Authority Representative.
 3. Other Authority personnel, Authority consultants and contractors associated with adjacent projects through the Authority Representative for this Contract.
- L. Minimal Interference with Existing Operations: The Design-Builder shall perform the Work such that the operation of the existing facility is not adversely impacted. The Design-Builder shall submit plans including, but not limited to, a maintenance of traffic plan as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING at minimum for the following:
1. Non-restricted access by the Authority's forces to the existing facilities and temporary access for the Design-Builder to the facility.
 2. The maintenance of traffic plan shall ensure that the on-going operations of the facility are not adversely affected by the Project.
 - a. The Design-Builder shall minimize interference with the operations and maintenance functions of the Authority's RAIL or BUSV Transportation personnel. An Authority-approved routing, signage and striping plan will be required prior to the commencement of work.

- b. The Design-Builder shall propose a Work Plan that provides for minimal disruption to ongoing operations in the existing facilities which must be coordinated with Rail Car Maintenance (CMNT).

M. Design Phase

1. The Design-Builder shall schedule a Pre-Design Meeting with the Authority prior to beginning any design work in order to review Project requirements and discuss any issues for clarification.
2. The Designer of the Design/Build Team shall perform the Design services for the Project required by the Contract Documents and in accordance with the approved Quality Control/Quality Assurance Plan. The Authority will review and approve the design as being in general conformance with the functional requirements contained in the Contract Documents. The Design-Builder shall use the firms and personnel identified in the Technical Proposal as finally accepted. The Design-Builder shall not change the designated design firms(s) and personnel or shift design and engineering Work from one firm to another (including changes in Work performed by Subcontractors) without the prior written approval of the Authority Representative.
3. Designer: All design and field engineering Work required to be performed by the Design-Builder hereunder shall be performed by or under the supervision of licensed professionals under the laws of the State of Maryland and the District of Columbia or who have the ability to obtain such through reciprocity.
4. Code Requirements: The designs shall be carried out in accordance with the latest version of the applicable codes of the District of Columbia and Prince George's County, Montgomery County and the State of Maryland, as well as other codes and regulations that apply to the work being performed on the Project Site. In addition, the Design-Builder shall adhere to the Code Requirements as set out in the Design Criteria including using the above cited District, County and State where county and/or state codes are referred to, and also shall verify that the requirements of the Contract comply with the above-mentioned codes and regulations.
5. Conflicts in Requirements and /or Criteria: The Design-Builder shall identify and make known to the Authority as soon as practicable, but in no case less than five (5) days after the Designer knows of such, any potential conflicts among the requirements and criteria either indicated in the Project Manual and/or Project Drawings or required by local, state or federal jurisdictions that affect the scope, cost or quality of this work. The notification shall include a clear statement of the conflict, the source of the requirement and/or criteria and a recommended solution to the potential conflict. The Authority will determine solely the solution to the conflict based on either the Designer's recommendation or its own evaluation. The Designer shall incorporate that

decision into the design with a minimum of impact to the scope, cost and/or quality of the work.

6. Technical Specifications in CSI Format: The Designer shall develop and provide the Design Specifications for this project in the latest edition of CSI Format, and also cross reference these to the Section Numbers of the WMATA Standard and Technical Specifications of the Project Manual.
7. Design Submittal Review:
 - a. Design Review: The Designer of the Design-Build Team is responsible for preparing, reviewing and approving the Design Drawings and Design Specifications before submittal to Prince George's County, other jurisdictional authorities, and utility companies through the Authority Representative. The Designer shall be responsible for obtaining all the necessary utility and jurisdictional approvals for the design. Submittal review and approval and certification milestones shall be included in the Design-Builder's schedule in accordance with the Schedule requirements of this Project Manual.
 - b. Authority Review: The Authority explicitly reserves the right to also review and approve the Design items identified in subparagraph c. of this subparagraph. Such approval (or disapproval) shall be given to the Design-Builder within twenty-one (21) calendar days after receipt by the Authority. The Design-Builder shall incorporate any comments or corrections and deliver a revised submittal to the Authority within fourteen (14) calendar days following receipt of such by the Design-Builder. Review and approval by the Authority will not relieve the Design-Builder from its responsibility for accuracy of submittals, for conformity of submittals to and for prosecution and completion of the Contract in accordance with the Contract Documents, and for compatibility of described product with contiguous products and the rest of the systems that they impact. Authority review and approval of a separate item will not constitute review and approval of an assembly in which the item functions. Authority approval is general in nature and shall not be construed as relieving the Design-Builder of their responsibility for the adequacy and functionality of the Final Design within the given parameters.
 - c. Design Review:
 - 1.) S&I Yard Improvements: Includes all elements of the Base Items listed in Section 00100, Project Information.
 - 2.) S&I Shop Expansion Facility: Includes all elements of the Base and Option Items listed in Section 00100, Project Information.

- a) 60% level of design details for elements shown in project Documents (Intermediate Design Specifications in CSI format).
 - b) 90% level of design details for elements shown in project Documents (Pre-Final Designs Specifications in CSI format)
 - c) 100% level of design for what the Designer will submit to the jurisdictional authorities during the permitting/approval process (Final Design Drawings and Final Design Specifications in CSI format).
 - d) Other Design Reviews: The Authority retains the right to review and approve any other submittals that it deems necessary during the Design Phase of this Contract. In addition, the Design-Builder shall provide all other submittals to the Authority that are specified in the Project Manual beyond those referenced above and as listed on the approved Schedule of Submittals.
8. Design: In all aspects of the design, the proposed facilities shall operate as one entity upon completion of the Contract.
- N. Construction Phase
1. The Builder of the Design/Build Team shall perform all construction, provide all construction materials and equipment, install all equipment and Systems, and undertake all efforts necessary or appropriate to construct the Project in accordance with the approved Final Design Drawings and Final Design Specifications; the Project Schedule; all applicable jurisdictional codes and regulations; jurisdictional approvals and permits and utility approvals; the approved QC/QA Plan; the approved Safety Plan; and all safety, environmental and other applicable requirements so as to complete the Project and achieve Final Acceptance by the dates specified. All personnel involved in performance of construction work shall be experienced and qualified to perform their trade and all construction work shall be performed in a skilled and workmanlike manner. The work shall include field engineering, quality control, manufacturing, procuring, delivering, storing, setting up, constructing, installing, testing, documenting, and quality assurance by the Designer, and warranting and placing in service the complete project. The Design-Builder shall use the firms and personnel identified in the Technical Proposal as finally accepted. The Design-Builder shall not change the designated construction firms(s) and personnel or shift construction and field engineering Work from one firm to another (including changes in Work performed by Subcontractors) without the prior written approval of the Authority Representative.
 2. Construction Submittal Review:
 - a. Submittal, Review and Inspection: The Design-Builder shall provide field engineering and all professional services during construction for on-site

observation, attendance at project meetings, and general consultation as required to complete the Project. The Designer of the Design/Build Team shall have primary responsibility for these tasks. The Designer is also responsible for reviewing and approving all required construction submittals as specified in the Design Criteria, before submittal to the Authority and to Prince George's County and other jurisdictional agencies and utility companies. The Design-Builder shall be responsible for obtaining all necessary approvals and permits. The Design-Builder shall also provide all testing services required during construction. In addition, the Design-Builder is responsible for submitting to the Authority the Designer's certifications that the Builder's Quality Control Program is functioning and certifications for the final products, the overall construction and the functioning of systems and equipment installations. These certifications are to be turned over to the Authority for the project records. Submittal review and approval and certification milestones shall be included in the Design-Builder's schedule in accordance with the Schedule requirements of this Project Manual.

- b. **Authority Review:** The Authority explicitly reserves the right to also review and approve the Construction items identified in this subparagraph. Such approval (or disapproval) shall be given to the Design-Builder within no less than twenty-one (21) calendar days after receipt by the Authority. The Design-Builder shall incorporate any comments or corrections and deliver a revised submittal to the Authority within fourteen (14) calendar days following receipt of such by the Design-Builder. Review and approval by the Authority will not relieve the Design-Builder from its responsibility for accuracy of submittals, for conformity of submittals to and for prosecution and completion of the Contract in accordance with the Contract Documents, and for compatibility of described product with contiguous products and the rest of the systems that they impact. Authority review and approval of a separate item will not constitute review and approval of an assembly in which the item functions. Authority approval is general in nature and shall not be construed as relieving the Design-Builder of their responsibility for the adequacy and functionality of the constructed facilities.
3. **Construction Review:**
All elements of S&I Shop and Yard Improvements including the following:
 - a. Factory visit to pre-caster to approve fabrication of insulated architectural pre-cast concrete panels, if used.
 - b. Design-Builder's schedules and reports, submittal logs, and daily progress reports.
 - c. Working Drawings.

- d. Shop, Schematic and Installation Drawings, manufacturer's literature, product data and product substitution requests.
 - e. Samples.
 - f. Certifications.
 - g. Miscellaneous documentation.
 - h. Testing and Inspection Reports.
 - i. Calculations.
 - j. Licenses and Permits.
 - k. Applications for Payment.
 - l. Bound sets of Contract Record Drawings including As-built Contract Drawings, Shop Drawings, Working Drawings, Standard Drawings, Information Drawings, Authority Record Drawings, Manufacturers' Shop Drawings, Field Drawings, and installation details.
 - m. Bound sets of As-built Contract Specifications in CSI format.
 - n. Bound sets of Operation and Maintenance Manuals.
 - o. Bound sets of Instructor's Training Manual, Lesson Plans, and Student's Training Manual.
 - p. Electronic Media Drawing Files for Operation and Maintenance Manuals; Instructor's Training Manual, Lesson Plans, and Student's Training Manual; As-built Contract Specifications; Contract Record Drawings; and As-built CPM Schedule.
4. Other Construction Reviews: The Authority retains the right to review and approve any other submittals that it deems necessary during the Construction Phase of this Contract. In addition, the Design-Builder shall provide all other submittals to the Authority that are specified in the Project Manual beyond those referenced above and as listed on the approved Schedule of Submittals.
5. Start of Construction: The Design-Builder shall not start construction until the Authority has approved the Design for that Element as listed in Section 00103, Paragraph H., except by the express consent of the Authority. The Construction for any Design Element listed in Section 00103, Paragraph H., will not be approved until the balance of the Design is advanced to a stage where in the judgment of the Authority the Design Element can be adequately evaluated.
6. Performance of Inspections and Tests by the Design-Builder: The Design-Builder shall perform all inspection and testing in accordance with the Contract Documents and the procedures in the Design-Builder's approved Quality Control/Quality Assurance (QC/QA) Plan.
- O. S&I Yard Improvements and S&I Shop Expansion Facility:
- 1. Construction:
 - a. Design-Builder Responsibilities: The Builder of the Design/Build Team shall construct the S&I Yard Improvements in accordance with the

approved Final Design Drawings and Final Design Specifications, with the approved shop drawings, with the permits and approvals issued by the Authority, District of Columbia, Prince George's County, Montgomery County and other jurisdictional agencies, and in accordance with all codes and regulations of the jurisdictional authorities or the Design Criteria, whichever is more stringent. The Design-Builder shall submit to the Authority all items as set forth in subparagraph J.2.c.(1) of this Section and all submittals required per the Final Design Specifications as reviewed and approved, per the Design Criteria, and others that are specified in the Project Manual beyond those referenced above, and all items listed in the approved Schedule of Submittals. The Builder shall not install any materials until approvals of submittals are obtained. The Builder is responsible for performing Quality Control for construction, the Designer is responsible for performing Quality Assurance during construction, and the Authority shall perform an oversight function, all as specified in Section 01470 and in the approved QC/QA Plan.

b. Environmental Concerns:

- 1) Landscape Factors: The Builder shall install the landscape plantings required in the approved plans that have been tagged at the nursery by the Designer and that are listed on the approved plant schedule in conformance with the appropriate planting seasons. The Designer shall coordinate delivery of the plantings to the worksite for installation by the Builder. The Design-Builder shall coordinate the maintenance by the Builder of the landscape plantings during this entire period.
- 2) Air Pollution : The Design-Builder will minimize fugitive dust.
- 3) Earth, sediment control and storm drainage work shall be performed in accordance with the jurisdictional requirements and as shown in the Final Design Drawings, and as specified in the Final Design Specifications. The Builder shall also provide a Low-Impact Stormwater Management System (LID) for stormwater runoff.
- 4) Oil/grit separators for the S&I Shop Expansion Facility floor drains shall be installed that discharge into the existing sanitary sewer system.
- 5) Waste Disposal: The Design-Builder shall properly characterize, handle, and dispose of all waste. Known wastes include trash, asbestos cement waterlines, asbestos tiles and insulation, and lead based paint.

- c. The Builder shall provide access roads, sidewalks, curb and gutter, and parking area/lot in accordance with the jurisdictional requirements, as shown in the Final Design Drawings, and as specified in the Final Design Specifications. The Design-Builder shall coordinate with the affected public agencies for inspections and approvals of handicapped curb cuts through the Authority Representative.

- d. The Builder shall site the new Greenbelt Annex Building and Shady grove S&I Expansion as shown in the Final Design Drawings.
- e. The Design-Builder shall be responsible for providing all new site utility systems and connections and for demolition of portions of existing utility systems (including, but not limited to, sanitary sewer, storm drainage, water supply, electrical, and Systems) as needed for a complete and workable system. All utility services must remain operational until new utilities and utility connections are installed by the Builder and before any portion of existing systems can be demolished or abandoned, as applicable. Also, coordinate with the Authority and affected utility agencies through the Authority Representative for obtaining approvals, permits, easements, installation, tie-ins, inspections, and testing
 - 1) Availability of Utilities: The Builder shall provide all temporary utility systems that are required for his use during performance of the work.
- f. If the Design-Builder decides to procure insulated architectural precast concrete panels, he shall coordinate with the panel supplier for Designer and Authority approval at the plant for fabrication.
- g. Signage and Graphics: S&I Shop Expansion Facility's and S&I Yard Improvements' signage and graphics shall be fabricated and installed as approved by the Authority.
- h. Foundation and Superstructure Construction and Architectural Finishes: The Builder shall construct the S&I Shop Expansion Facility as shown on the Final Design Drawings and as specified in the Final Design Specifications. Foundation construction may commence only after the foundation design has been approved by the Authority and a permit for the construction is issued by the governing jurisdiction.
- i. Electrical Service and Supply: Sufficient capacity exists to supply the new facilities. The Design-Builder shall provide feeder, conduit, wiring, cabling, convenience outlets, lighting, and all other necessary electrical items for the Shop Improvements to meet codes and regulations of governing jurisdictions and other jurisdictional agencies and in accordance with the Final Design Drawings and the Final Design Specifications including providing power to all Shop equipment and COMM and other Systems equipment. All site and building lighting shall be shaded to eliminate glare.
- j. Mechanical Items: The Design-Builder shall procure and install materials and install fire protection, plumbing items, eyewash, heating, air conditioning and ventilation, and roof and floor drainage systems and oil/grit separators for the Shop and yad improvements as necessary to meet codes and regulations of the governing jurisdiction and in accordance with the Final Design Drawings and the Final Design Specifications.
- k. Fixed and Additional Shop Equipment: The Design-Builder shall procure the Shop equipment for as specified in the Final Design Specifications

and shall coordinate with the equipment manufacturers for the delivery of the equipment to meet the Builder's installation schedule. The Builder shall install the Fixed Shop Equipment in accordance with jurisdictional codes and the Final Design Documents.

- I. Systems Equipment and Cabling: The Design-Builder shall coordinate with equipment manufacturers for the delivery of the equipment to meet the Builder's installation schedule. The work shall include procuring, installing, integrating and testing of equipment, material, racks, cables, cable trays, conduit, outside plant cabling, ductbank, hardware and all appurtenances and final system and component configuration as required to ensure the new Systems or additional Systems are compatible with and will not degrade the existing Systems and to provide a complete and coordinated operating system, with functional subsystems and elements, all which meet the requirements described in the Final Design Drawings and Final Design Specifications and operate as an entity for: Voice and Data Communications, i.e., Administrative and Emergency Trip Telephones and Elevator Emergency Telephone, CTS, FIA, Yard Talkback, PAS, and CCTV; and Trackwork; Traction Power; and ATC Systems.

P. Operations and Maintenance Training

- 1. The Design-Builder shall provide operations and maintenance training classes as specified in Section 01820.

Q. Operations and Maintenance Manuals

- 1. The Design-Builder shall provide to the Authority all manuals as specified in Section 01780.

R. As-built Drawings and As-built Specifications

- 1. The Design-Builder shall provide to the Authority all as-built drawings and as-built specifications as specified in Section 01780.

00103 PROJECT SOLICITATION SCHEDULE

A. The solicitation schedule for this project is as follows:

Issue Phase Two - Request for Proposals:	12/03/04	Sections 00412 & 00413
Proposals due date:	01/21/05	Sections 00412 & 00413
Projected Award date:	03/21/05	
Final Completion	09/01/07	Section 00825.

- B. Contract milestones interim completion dates, if any, and final completion date of Contract work are specified in Section 00825, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE REQUIREMENTS of the Supplementary Conditions.

END OF SECTION

THIS PAGE NOT USED

PROCUREMENT REQUIREMENTS

00200 INSTRUCTIONS FOR PROCUREMENT

- A. This solicitation is a competitive, "best value" selection process as described herein for the award of a Design-Build contract.
- B. This Section includes procedures with which proposers must comply and conditions affecting award of the Contract.

00201 GENERAL INSTRUCTIONS

- A. Definitions as used herein:
 - 1. The term "solicitation" used in this document means this Request for Proposals ("RFP").
 - 2. The term "offer" and "proposal" are synonymous and mean a response to this solicitation.
 - 3. The terms "offeror" and "proposer" are synonymous and refer to the Design-Builder that submits a response to this solicitation.
 - 4. For further explanation of Contract terms, refer to Section 00701 DEFINITIONS of the General Conditions.

- B. Method of Procurement:

This is a competitive, negotiated acquisition with a "best value" (Fixed Price / Best Design) selection process. Proposers shall submit separate proposal volumes in accordance with this Section, which the Authority will evaluate in accordance with the Authority's evaluation criteria as specified in this Section.

- C. Basis for Award:

- 1. The Authority will make multiple awards from this solicitation, one for each Project as described. Award(s) will be made to that proposer or proposers:
 - (a) whose offer is judged by an integrated assessment of the evaluation criteria to be the most advantageous to the Authority based on technical merit and value provided within the established Target price for each Project; and

- (b) that the Authority deems responsible in accordance with the WMATA Procurement Procedures Manual.

 - 2. This a Two-Phase Design-Build selection to be awarded on a "Fixed-Price / Best-Design" basis. For Phase One, the proposers were asked to submit certain technical qualifications. The Authority evaluated the Phase One proposals to determine which proposers would be asked to participate under Phase Two of the project. Phase Two proposers are required to submit a Technical and Cost proposal which the Authority will evaluate using source selection procedures.

 - 3. The Authority reserves the right to (1) reject any or all offers at any time prior to acceptance of proposals or award of Contract if such action is in WMATA's or the public's interest, (2) negotiate with all proposers, (3) waive informalities and minor irregularities in offers received, and (4) evaluate Price Proposals from proposers whose Technical Proposals conform to this Request for Proposal.

 - 4. The Authority anticipates making multiple awards as the result of this solicitation. See Notes to Proposers on Section 00434 PRICE SCHEDULE for further Award information.

 - 5. A written award or acceptance of offer mailed or otherwise furnished by the Authority to the successful proposer within the specified Acceptance Period shall result in a binding contract. The Authority may accept an offer whether or not it conducts discussions, unless the Authority receives from the proposer a written notice of withdrawal before award.
- D. Type of Contract:
- The Authority contemplates award of a Firm Fixed Price, Design-Build contract(s) resulting from this solicitation consistent with the Price Schedule.
- E. Preparation of Offers:
- 1. The proposer shall complete the Proposal Forms furnished in Section 00400, or copies thereof, submit them according to the instructions given in this RFP. If erasures or other changes appear on the forms, such erasures and changes must be initialed by the person signing the proposal.

 - 2. Each proposer shall furnish the information required by the solicitation. Proposers are expected to examine the drawings, specifications, schedule, and all instructions and exhibits. Failure to do so will be at the proposer's risk.
- F. Explanation to Proposers:

1. Any explanation desired by a Proposer regarding the meaning or the interpretation of this RFP or any other solicitation document must be requested in writing and with sufficient time allowed for a reply to reach all proposers before the submittal of their proposals. Oral explanations or instructions given before the award of the Contract will not be binding. Any information given to a prospective proposer concerning the solicitation will be furnished promptly to all prospective proposers as an amendment to this RFP, if the information is necessary in submitting offers or if lack of such information would be prejudicial to other prospective proposers.
2. The Authority reserves the right to revise or amend the RFP prior to the date set for receipt of proposals or final offers. Such revisions and amendments, if any, will be announced by an amendment or amendments to this RFP. Copies of such amendments as may be issued will be furnished to all prospective proposers prior to receipt of proposals or to all proposers within the competitive range thereafter.
3. If amendments would require material changes in the proposals, the date set for the receipt of proposals may be postponed by such number of days as in the opinion of the Authority will enable proposers to revise their proposals. In such cases, the amendment will include an announcement of the new date for the receipt of proposals.

G. Acknowledgment of Amendments:

1. Proposers are required to acknowledge receipt of all amendments to this solicitation on copies of the Proposal Forms, Sections 00412 and 00413, in the space provided. Failure to acknowledge all amendments may cause the proposal to be considered not responsive to the solicitation and may be ineligible for award.
2. Modifications of proposals already submitted due to the revisions listed in an amendment will be considered if received at the office designated in this Request For Proposal by the time set for receipt of proposals. Modifications shall be enclosed and sealed in separate proposal volume packages.
3. If this solicitation is amended, all terms and conditions which are not modified remain unchanged.

H. Submission/Withdrawal of Proposals/Offer:

1. Proposals shall be sealed, marked, addressed and submitted in separate packages by volume number as directed in this Section H.

2. The proposer shall show on the face of each separately sealed proposal volume package the hour and date specified in the solicitation for receipt of proposals, the solicitation number, the name and address of the proposer and the volume content of the proposal. Failure to do so may result in a premature opening of or a failure to open such proposal.
 3. Proposals may be mailed or delivered in person to the Washington Metropolitan Area Transit Authority, Office of Procurement, Room **3C-02**, 600 Fifth St. N.W., Washington D.C., 20001 prior to the date for receipt of proposals unless otherwise specified. Receipt of hand-delivered proposals shall be prior to the date and hour specified in Sections 00412 and 00413 at the Office of Procurement, Room **3C-02**. Please be advised that the Authority has security screening facilities in place for personnel and packages at the lobby level entrance.
 4. Electronic and facsimile proposals will not be considered, unless authorized by the Authority.
 5. Proposals may be withdrawn by written or electronic notice before award. Proposals may be withdrawn in person by a proposer or an authorized representative, if the representative's identity is made known and the representative signs a receipt for return of the proposal before award.
- I. Late Proposals, Modifications or Withdrawals:
1. Any offer received at the office designated in the solicitation after the date specified for receipt will not be considered unless it is received before award is made and it:
 - a. Was sent by registered or certified U.S. mail not later than the fifth calendar day before the date specified for receipt of offers (e.g., an offer submitted in response to a solicitation requiring receipt of offers by the 20th of the month must have been sent by registered or certified mail by the 15th);
 - b. Was sent by U.S. mail or a recognized commercial carrier, and it is determined by the Authority that the late receipt was due solely to mishandling by the Authority after receipt;
 - c. Was sent by U.S. Postal Service Express Mail Next Day Service-Post Office or similar express service from a recognized commercial carrier to Addressee, not later than 5:00 p.m. at the place of mailing two working days prior to the date specified for receipt of offers. The term "working days" excludes weekends and U.S. Federal holidays; or

- d. Is the only offer received.
2. Any modification of an offer, except a modification resulting from the Contracting Officer's request for a final proposal revision (FPR), is subject to the conditions stated above.
3. A modification resulting from the Authority's request for a final proposal revision received after the time and date specified in the request will not be considered unless it is received before award, and the late receipt is due solely to mishandling by the Authority.
4. The Authority may in its sole discretion accept a late proposal in instances where it is clear that the proposal left the hands of the proposer before the time set for receipt of proposals and acceptance of the late proposal will not delay the procurement or prejudice the other proposers.
5. Notwithstanding these requirements, a late modification of any otherwise successful offer that makes its terms more favorable to the Authority will be considered at any time it is received prior to an award and may be accepted.

J. Proposal Guarantee:

1. A proposal guarantee in the penal amount of five (5) percent of the proposal price is required by the Request for Proposal. Failure to furnish a proposal guarantee in the proper form and amount with the Price Proposal, by the time set for the receipt of Proposals, may be cause for rejection of the proposal.
2. A proposal guarantee shall be in the form of a firm commitment, such as a proposal bond (form supplied in Section 00431), postal money order, certified check, cashier's check, irrevocable letter of credit from a State or Federally chartered bank or, in accordance with Treasury Department regulations, certain bonds or notes of the United States. Corporations executing the proposal bond as sureties must be among those appearing on the Treasury Department's list of approved sureties and must be acting within the limitations set forth therein. Proposal guarantees, other than proposal bonds, will be returned as follows:
 - a. To unsuccessful proposers: As soon as practicable after they are eliminated from further consideration.
 - b. To the successful proposer: Upon execution of such further contractual documents and bonds as may be required by the proposal as accepted.
3. If the successful proposer, upon acceptance of its Proposal by the Authority within the Acceptance Period, fails to execute such further contract documents

and give such bond(s) as may be required by the terms of the Contract, its Contract may be terminated for default. In such event, the successful proposer shall be liable for any cost of reprocurring the work which exceeds the amount of its proposal, and the proposal guarantee shall be applied toward offsetting such difference.

K. Minimum Proposal Acceptance Period:

1. "Acceptance Period", as used in this provision, means the number of calendar days available to the Authority for awarding a contract from the date of receipt of the most current proposal.
2. This provision supersedes any language pertaining to any period for acceptance that may appear elsewhere in this solicitation.
3. The Authority requires a minimum Acceptance Period of **60** calendar days from the date of receipt of the most current proposal.

L. Contract and Bonds:

The proposer whose Proposal is accepted shall, within the time established in the Contract Documents, enter into a written contract with the Authority and furnish performance and payment bonds on standard Authority forms in the amounts indicated in Section 00600, BONDS AND CERTIFICATES.

M. Solicitation Documents:

1. One set of project documents for will be furnished free of charge. Additional sets may be purchased at the following non-refundable price for each:
 - a. Project Manual \$50.00
 - b. Half-size Project Drawing \$50.00
 - c. The appropriate WMATA Safety Manual, and associated insurance document if applicable, as specified in Section 00371 \$10.00
 - d. The Safety and Security Certification Program Plan as specified in Section 00381 \$10.00
 - e. The System Safety Program Plan as Specified in Section 00391 \$10.00

2. Payment shall be made with the request and shall be by company check or money order (personal checks will not be accepted) made payable to the Washington Metropolitan Area Transit Authority.
4. Unless otherwise stated, plans and specifications may be obtained from:

WMATA
Jackson Graham Building
Office of Procurement and Materials
Attn: Fred M. Pohlmann, Rm. 3E-01
600 Fifth Street, N. W.
Washington, D.C. 20001
Phone: (202) 962-1529
Fax: (202) 962-6247

N. Conditions Affecting the Work:

1. Proposers are strongly urged to visit the site and take such other steps as may be reasonably necessary to ascertain the nature and location of the work and the general and local conditions which can affect the work or the cost thereof. Failure to do so will not relieve proposers from the responsibility for estimating properly the difficulty and cost of successfully performing the work. See Section 00252 for further details.
2. The Authority will assume no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of the Contract, unless included or referenced in this Request for Proposal.
3. As discussed in Section 00300, INFORMATION AVAILABLE TO PROPOSERS, proposers may examine records of all borings, test excavations, and other subsurface investigations and existing utilities and environmental investigations, if any, made for the Authority prior to the design and construction of the project and As-Built Information Drawings if initially provided in the Project Drawings. Said investigations and drawings are provided to assist the proposer in the preparation of its proposal. The proposer shall be responsible for interpretation of the data to determine actual conditions and for conducting further investigations prior to commencement of design work.

O. Opportunity for Disadvantaged Business Enterprises to Propose:

Proposer shall affirmatively ensure that in regard to any contract entered into pursuant to this solicitation, disadvantaged business enterprises will be afforded full opportunity to submit proposals in response to this solicitation and will not be

discriminated against on the grounds of race, color or national origin in consideration for award.

- P. Disadvantaged Business Enterprises: (See Section 00453 [aka Appendix B])*
1. It is the policy of the Authority that Disadvantaged Business Enterprises (DBEs) shall have an equal opportunity to receive and participate in performing WMATA contracts, including contracts and subcontracts at any tier, and also of the Federal Transit Administration (FTA) and the U. S. Department of Transportation (US DOT) in receiving and participating in federally assisted contracts. The DBE requirements, if any, are set forth in Section 00453, DBE DATA (aka Appendix B) and are applicable if the proposal is \$500,000 or more for construction (and construction-related) contracts; and for supply and service contracts having a total dollar value of \$100,000 or greater. The DBE goal percentages, if applicable, are listed in Section 00453, DBE Data.
 2. If the proposer is not a DBE, then the DBE goal set forth in Section 00453, if any, shall be met by subcontracts or joint ventures with DBEs.
 3. If a DBE goal is specified, the proposer shall submit with its initial Price Proposal a list of WMATA certified DBE firms with which it intends to enter into subcontract agreements for this contract. The documentation requirements of Section 00453 shall be completed and submitted to the Authority at the time set forth for the submittal of final proposal revisions for any contract in which a DBE goal is applicable. Also, if no goal is specified in Section 00453, but the proposer still intends to utilize DBEs in the performance of this contract, the proposer shall submit with its initial Price Proposal a list of those WMATA-certified DBE firms. Further, if the Authority elects to award a contract without discussions and/or final proposal revisions, that proposer with which the Authority intends to award a contract shall submit the requisite DBE data as may be required by the Contracting Officer before contract award. Any proposer which fails to complete and return this information, if applicable, may be deemed to be not responsible and may be ineligible for contract award. The documentation requirements , if applicable, are as follows:
 - a. SCHEDULE OF DBE PARTICIPATION and executed LETTER(S) OF INTENT TO PERFORM AS A SUBCONTRACTOR/JOINT VENTURE with agreed price sufficient to meet the DBE goal set forth in Section 00453; or
 - b. A request for waiver of the DBE goal or portion of the goal , if any, and reasons therefor as stipulate in Paragraph F.3. of Section 00453. Request must be made on company stationary and signed by the responsible official.

4. Proposers that fail to meet the DBE goal set forth in Section 00453, if any, and fail to demonstrate "good faith efforts" to justify waiver of the DBE goal, if any, may be deemed non-responsible and ineligible for contract award.
5. In connection with the performance of this Contract, the Design-Builder agrees to cooperate with the Authority in meeting its commitments and goals with regard to the maximum utilization of Disadvantaged Business Enterprises (DBE), and further agrees to exert good faith efforts to satisfy the requirements of Section 00453, if applicable, by subcontracting portions of the work to disadvantaged firms, by entering into joint ventures with disadvantaged firms, or both.
6. The DBE policy of the Authority underwent a complete revision October 1, 1999 to meet revised Federal requirements. The DBE provisions of this solicitation are subject to revision by amendment.
7. If there is no goal in this Contract, DBE participation is encouraged and pursuant to the Authority's race neutral program, is anticipated to be as specified in Section 00453.

***Applies only if Design Proposal price is \$100,000 or more and/or if Construction Proposal price is \$500,000 or more.**

Q. Civil Rights:

The Design-Builder will be required to comply with all applicable Equal Employment Opportunity laws and regulations of Section 00770, CIVIL RIGHTS, of this Contract.

R. Debarred or Ineligible Proposers:

Proposers will be required to certify that neither it nor its "principals" [as defined at 49 C.F.R. § 29.105(p)] is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency (see Section 00451, Representations and Certifications).

S. Notice of Protest Policy:

1. WMATA policy and procedure for the administrative resolution of protests is set forth in Chapter 20 of the Procurement Policy Manual (PPM). The PPM contains strict rules for filing a timely protest, for responding to a notice that a protest has been filed, and other procedural matters. The Contracting Officer can furnish a copy of Chapter 20 upon request.

2. FTA Circular 4220.IE, paragraph 7.I addresses Bid Protests. Review of protests by FTA is discretionary and will be limited to:
 - a. a grantee's failure to follow its protest procedures, or its failure to review a complaint or protest; or
 - b. violations of Federal law or regulation.

A protester must exhaust all administrative remedies with the Authority before filling an appeal to the FTA. An appeal to FTA must be received by the cognizant FTA regional or Headquarters Office within five (5) working days of the date the protester learned or should have learned of an adverse decision by the Authority of other basis of appeal to FTA.

3. Alleged violations on other grounds must be submitted to the Contracting Officer who will decide the protest.
4. The judicial authorities having jurisdiction over court actions concerning protest decisions are the United States District Courts for the Districts of Maryland, Virginia, and the District of Columbia, and the local courts in Maryland, Virginia, and the District of Columbia.

T. Requirement for Cost Data Prior to Contract Award (Not Used):

U. Davis-Bacon Wage Determination Decision:

The Authority's Compact requires that all mechanics and laborers employed by the Design-Builder or subcontractors on construction related activities on this contract be paid wages not less than those prevailing on similar contracts in this locality as determined by the Secretary of Labor in accordance with Section 00774, LABOR PROVISIONS. The Wage Determination Decision of the Secretary of Labor is referred to in Section 00776, WAGE RATES and attached as APPENDIX D in Section 00800.

V. WMATA's Tax Exempt Status:

1. Pursuant to Article XVI., Paragraph 78., of the Washington Area Metropolitan Transit Authority Compact, as adopted by the State of Maryland, the District of Columbia, and the Commonwealth of Virginia, with the authorization and consent of the Congress of the United States, the Authority has been accorded exemption from taxes as follows:

"the Authority and the Board shall not be required to pay taxes or assessments upon any of the property acquired by it or under its jurisdiction, control, possession or supervision, or upon its activities in the

operation and maintenance of any transit facility or upon any revenues therefrom, and the property and income derived therefrom shall be exempted from all Federal, State, District of Columbia, municipal, and local taxation. This exemption shall include without limitation, all motor vehicle license fees, sales taxes and motor fuel taxes."

2. It has been the practice of the District of Columbia to apply the Authority's tax exempt status to certain purchases of materials required under Authority construction contracts and acquired by Design-Builders for physical incorporation into the project work. This has not been the practice in either Maryland or Virginia. The Authority does not represent or warrant that the District of Columbia practice applies to this project or, if it does, that it will continue in effect during the term of this project. It is the responsibility of the Design-Builder to determine its liability for any and all taxes applicable to this project. Assessment or payment of taxes by the Design-Builder, including taxes resulting from changes in existing laws or the application thereof or of new or additional taxes, shall not constitute the basis for an increase in the Contract price, except as otherwise allowed under Section 00779, FEDERAL, STATE AND LOCAL TAXES.
3. By submission of its proposal, the proposer certifies that none of the taxes as to which the Authority is exempt are included in its proposal price(s) or the final Contract Price. In the event that the Authority learns that any taxes to which the Authority is exempt are included in the final Contract Price, the Authority shall be entitled to a reduction in the Contract Price reflecting such amount and a refund of monies paid related to such taxes, plus applicable interest.

W. Advance Cost Agreement:

Within 30 days after Notice of Award, the Design-Builder shall make available for audit review, information on its accounting system used to project fixed and variable overhead rates applicable to possible Contract changes. The Authority's Office of the Auditor General, to the extent possible, will review and approve said accounting system. When appropriate and if possible, as a result of the audit review, Advance Cost Agreements may be executed between the Contracting Officer and the Design-Builder. The Cost Agreements shall be a supplemental agreement to the Contract.

X. Proprietary Data in Proposals:

1. The Authority shall provide all reasonable precautions to insure that proprietary, technical and pricing information remains within the review process except where otherwise ordered by an administrative or judicial body, as necessary to use in a judicial or administrative proceeding. Proposers shall attach to each page of any proprietary data submitted with the solicitation the following legend:

"The data contained on this page shall not be disclosed outside the Authority, be duplicated, or used in whole or in part, for any purpose other than to evaluate the offer; provided that, if a contract is awarded on the basis of that offer, the Authority shall have the right to duplicate, use, and disclose this data, in any manner and for any purpose whatsoever."

2. This information does not limit the Authority's right to use information contained in this data if it is or has been obtained by the Authority from another independent legitimate source.
3. Except for the foregoing limitation, the Authority may duplicate, use, and disclose in any manner and for any purpose whatsoever and have others so do, all data furnished in response to this solicitation.

Y. Contract Performance Evaluation:

The Proposer is advised that a Performance Evaluation will be completed at the end of the Contract. Factors to be included in the Performance Evaluation are as follows: Quality of Work, Timely Performance, Effectiveness of Management, Compliance with Labor Standards, Compliance with Safety Standards and Overall Evaluation. The Performance Evaluation may be used in determinations of responsibility for future WMATA contracts.

00202 GENERAL PROPOSAL INSTRUCTIONS

- A. Proposal Page and Character Size: The page size shall not exceed 8-1/2 by 11 inches, except for foldouts which may not exceed 11 by 17 inches. The page margins shall not be smaller than one inch on all four sides. The type size for text shall not be smaller than 10 point, with at least a line spacing of 1. The type size for figures and tables shall be no smaller than 8 point.
- B. Identification: Identify each volume with the RFP number, the Contract Title and Contract Number, the Volume Number of the total number of volumes (i.e., Volume 1 of 3, etc.), the Volume Title, and the Proposer's identity, all printed on the Cover Page of the Volume. Dividers shall be placed between separate Parts and Parts shall be identified on the dividers by Part Letter Designation. Provide one unbound original, and the number of copies specified in this Section.
- C. Proposal Page Count Limits: Proposals are limited to the page limits listed in Subparagraph A. 1. b. of Section 00204, and will be evaluated up to these page limits. Page limits include all text, charts, figures, diagrams, and schematics. Cover pages, title pages, tables of contents, tabbed dividers and blank pages are not included in the page limitations. If both sides of the sheet are used, it will be counted as two pages. Foldouts shall be printed on one side only, but will count as two

pages. Foldouts shall not be used for text. Material exceeding the page limits may not be evaluated and may be returned to the proposer.

- D. Elaboration: Legibility, clarity, and completeness are essential. Unnecessarily elaborate brochures or other presentations beyond that sufficient to present a complete and effective proposal are not desired and may be construed as an indication of the proposer's lack of cost consciousness. Elaborate artwork, expensive paper and bindings, and expensive visual and other presentation aids are neither necessary nor wanted.
- E. Completeness: Include all forms and project specific information as required in this Section. Include pre-printed literature if directly relevant to this project. Failure to provide forms or any other information required in the response to this solicitation may cause the offer to be deemed unacceptable, and the offer may be subsequently rejected.

00203 PHASE ONE QUALIFICATIONS PROPOSAL FORMAT, EVALUATION PROCEDURES AND FACTORS, AND INSTRUCTIONS - NOT USED

00204 PROPOSAL FORMAT, PROCEDURES AND EVALUATION FACTORS, AND INSTRUCTIONS

A. General:

1. Proposal Format:

- a. Organization: The Proposal shall be submitted in separate volumes as required herein.
- b. The Proposal shall be divided into three volumes, with the following number of copies (not including originals and 1 electronic copy, as required) and with the following page limits:

Volume 1: Technical Proposal, Greenbelt & Shady Grove Project				
Volume	Part	Title	Copies	Page Limits
1	A	Value of Design Solutions	6	N/A
1	B	WorkApproach/ScheduleCompliance	6	N/A
1	C	Management Resources	6	N/A

Volume 2: Technical Proposal, Brentwood Project				
<u>Volume</u>	<u>Part</u>	<u>Title</u>	<u>Copies</u>	<u>Page Limits</u>
2	A	Value of Design Solutions	6	N/A
2	B	WorkApproach/ScheduleCompliance	6	N/A
2	C	Management Resources	6	N/A

Volume 3: Price / Contract Proposal				
<u>Volume</u>	<u>Part</u>	<u>Title</u>	<u>Copies</u>	<u>Page Limits</u>
3	A	Shady Grove & Greenbelt Project Price w/ Detailed Narrative	6	N/A
3	B	Brentwood Project Price w/ Detailed Narrative	6	N/A
3	C	Forms and Contractual Information	4	N/A

2. Proposer Information:

Proposers shall submit within the proposal volumes, as may be further required below, sufficient information for the following general evaluation factors for both the design and construction phases as applicable: Experience/Past Performance; Organization including Key Personnel; Safety and QA/QC Programs; Project Approach, Schedule and Work Element Description; Compliance / Exception; Pricing information; and Responsibility information.

3. Subcontractor Information:

- a. Within the proposal volumes, provide applicable information required in the paragraphs below for all major subcontractors (design or construction) including DBE's, that are proposed to participate in this project (unless otherwise specified, a major subcontractor at any tier is one performing 10 percent or more of the work [i.e., design or construction] involved based on proposed dollar value). If appropriate identify by name three subcontractors to whom you would consider awarding these subcontracts and include copies of all licenses/certifications required by the jurisdictional agencies for all firms. The Authority reserves the right to approve any change during the performance of the work (both design and construction) to the Design-

Build Team firms and/or sub-contractor firms identified in the Proposal as finally accepted.

- b. Before entering into any subcontracts, the Design-Builder shall submit a written statement to the Authority giving the name and address of the proposed subcontractor, the portion of the work and material which it is to perform and furnish, and any other information tending to prove that the proposed subcontractor has the necessary facilities, skill, integrity, past experience and financial resources to perform the work in accordance with the terms and conditions of this Project. Subcontract agreements at any tier shall be in accordance with Section 00704, paragraph F. No subcontractor shall be permitted to perform work on the site until it fully complies with the applicable requirements for Indemnification and Insurance, and abides by the approved project safety program.

B. Technical Proposal Evaluation Procedures:

1. Each Technical Proposal will be reviewed and evaluated individually by the Authority in accordance with procurement policy and procedures.
2. Proposals will be evaluated by their strengths, weaknesses and deficiencies against the evaluation factors and these attributes will be communicated to the proposers for follow-up action as appropriate.
3. Definitions:
 - a. Discussions: Oral or written communications including negotiations between the Authority and an offeror (other than clarifications) that involves information essential for determining the acceptability of the proposal or to cure identified defects in the proposal.
 - b. Clarifications: Communication with an offeror for the sole purpose of eliminating minor irregularities, informalities or apparent clerical mistakes in the proposal. Unlike discussions, clarification does not give the offeror an opportunity to revise or modify its proposal, except to the extent that correction of apparent clerical mistakes results in revision.
 - c. Deficiencies: Any defects in the proposal which preclude acceptance. Involves any part of the offeror's proposal which would not satisfy the Authority's minimum requirements established in the solicitation. Includes failures to meet specifications, submit information, or questionable technical or management approaches. Items disclosed during discussions will be evaluated in two categories: material-basis for rejection because further discussions would be meaningless; curable-

- may be corrected by clarifications or discussions and brought into the competitive range.
- d. **Weakness:** Aspect of or omission from a proposer's proposal that includes ambiguities and conflicts within the proposal, lack of complete descriptions, errors in interpretation, omissions of essential information, inadequate information that prevents the evaluators from knowing the intent of the proposal, all of which are considered curable in discussions. An excessive number of clarifications may in itself constitute a weakness.
 - e. **Strengths:** Elements of the proposal that exceed the minimum requirements of the solicitation and provide an identified benefit to the Authority.
4. **Ratings.** Based upon the evaluations, an adjectival rating will be given depicting how well the proposer's proposal meets the stated evaluation factors and solicitation requirements for the Technical Proposal. The adjectival criteria are as follows:
- a. **Exceptional:** Exceeds requirement in a beneficial way to the Authority, has no significant weaknesses or deficiencies and is innovative, comprehensive, and complete in all details.
 - b. **Acceptable:** Meets evaluation standards and any weaknesses are readily corrected.
 - c. **Marginal:** Fails to meet evaluation standards, however, any significant deficiencies are correctable. Lacks essential information to support the proposal.
 - d. **Unacceptable:** Fails to meet the evaluation standard and the deficiency is uncorrectable. Proposal would have to undergo major revision to become acceptable. Demonstrated lack of understanding of the Authority's requirements or omissions of major areas.
- C. **Price Proposal Evaluation Procedures:** Price offers will be evaluated only for those proposers whose technical offers have been determined to be acceptable. The Authority will evaluate the price proposal for its completeness, clarity, conciseness, realism and responsiveness to the RFP-requested information.
- 1. The Authority will evaluate the Price proposal for price design value, alternate value engineering options, and cost realism by facility within the provided project target price.
 - 2. Proposers in Phase Two will be required to demonstrate their ability to obtain

the required performance and payment bonds for the project as part of their Phase Two response. The Authority may consider alternate methods of obtaining adequate security for contract performance and payment at its discretion.

3. The Authority may give consideration to that offeror who indicates that they will be paying lower premium costs for Workmen's Compensation insurance as a result of their favorable Experience Modification Rating (EMR). The reason for this is that in a fixed price / best design procurement, lower insurance costs translate into greater value being incorporated into the design and construction of the project. Accordingly, offerors are required to provide the Worker's Compensation rates which are applicable for all design-build team members and major subcontractors including any deductible associated with those costs.
- D. Phase II - Technical Proposal Evaluation Factors: Factors under Phase Two will be ranked as follows: Factors 1. and 2. are considered to be most important followed by Factor 3. Since it is anticipated that multiple awards will result from this solicitation, Proposers must submit information requested under Phase Two separately as follows: Shady Grove and Greenbelt combined and Brentwood as a standalone project.

1. Value of Design Solutions

A. Stated below are several design and construction challenges or major activities that if not fully addressed would produce detrimental effects to the project. The proposers are required to address these and any other situations with detailed solutions that demonstrate that they understand the issues, have developed viable solutions and can implement these solutions in a timely manner to meet the schedule. These will include but are not limited to:

Shady Grove Site:

1. Relocation of Underground Utilities:
 - a. 24W ATC and Comm. ductbank running diagonally under the proposed Shop. Comm. includes some fiber optic cable.
 - b. 78" and 8" Storm sewer, 6" Water main
 - c. Water lines and electrical ductbanks of various sizes.
2. Relocation of a buried fuel tank.
3. Relocation of Salt Dome, Trailers, Storage containers, sundry materials.
4. Removal of excess material form the earth stockpile in the loop track area.
5. Construction of the Blow Down Pit extension during months of March through September only.
6. Replacement or modification of the Yard Control Panel to reflect all the added tracks and switches.
7. Completing the shop and blow down pit extension in the least time to allow beneficial occupancy and operations before project completion.

Brentwood Site (to be evaluated separately for award):

1. Working in an operating and electrified yard with minimal work and storage area while causing minimal disruption of the ongoing work process.
2. Maintaining the top of rail to ceiling height of 11'-2" minimum throughout the shop, particularly under the existing mezzanine area.
3. Environmental mitigation of the work area and adjacent areas for noise, dust and hazardous materials such as asbestos tile and lead paint.
4. Installation of tracks in the existing floor area to the same top of rail elevation as the existing tracks in the shop area while supporting the existing floors to accommodate the lifts and the loading of trains.
5. Sequencing of work, laydown areas and WMATA employee parking within the limited area of the site.
6. Replacement or modification of the Yard Control Panel to reflect all the added tracks and switches.

Greenbelt Site:

1. Construction of facilities within an electrified yard with consideration of the adjacent wetlands and stream.
2. Relocation of the facilities from the existing shop to the shop to be constructed in a manner that will cause the least disruption.
3. Completing the new shop within the least possible time to allow beneficial occupancy.
4. Room arrangement for Greenbelt Annex to meet space requirements provided for the various shop functions and to accommodate orderly and efficient work flow.

B. Major Shop Equipment: Provide a detailed life cycle analyses for the identified major shop equipment to be provided and installed in accordance with Appendix A of Section 11001. Such analyses are to take into consideration the following: Acquisition costs, including non-recurring costs such as purchase cost, spare parts, facility and construction modifications, O & M training, and technical data, as well as recurring costs such as Parts upgrades, support of equipment upgrades, and system integration; in addition it should include an analyses of Sustaining Costs, such as; scheduled and unscheduled maintenance, utility costs, operations costs, and disposal costs and salvage value, if any. A separate listing is provided of the existing major shop equipment in use in Authority facilities as Appendix A to Section 11001.

In addition to the life cycle analyses a "system effectiveness analyses" is to be provided. This involves the following criteria to determine overall quality and dependability of the proposed equipment:

- a. Availability –the duration of time the system is available for use
- b. Reliability – the reduction of the frequency of failures over a given time, usually

- expressed as mean time between failure (MTBF)
- c. Maintainability – the duration of outages for maintenance in accordance with manufacturer’s recommendations, usually expressed as mean time to repair (MTTR) and includes the time necessary for diagnostics, troubleshooting, tear-down, removal/replacement of parts, active repair time, system testing, and administrative actions.

The standard manufacturer’s recommended timeframe for a mid-life retrofit should also be provided as well as standard warranties or extended warranties offered.

2. Work Approach / Schedule Compliance

- A. A detailed description of the design approach that will be implemented to design the Project within the target price.
- B. A detailed description of the construction methodology, including equipment, materials and manpower to be employed to construct the project.
- C. A detailed description of the plans and procedures for Systems Integration testing.
- D. A detailed description of the plan for final acceptance, training of operating personnel, and warranty implementation.
- E. A detailed narrative which clearly indicates how the proposed design solutions will be implemented and the cost/schedule impact and/or quality betterments that will be provided.
- F. Adherence to schedule is of paramount importance. A detailed CPM schedule with narrative description of the construction methodology, including equipment, materials and manpower to be employed to construct the project. The schedule must identify the critical path and explain how the critical activities will be controlled to meet schedule dates. The schedule should include the staffing requirements for each activity.
- G. Early completion is very important to WMATA. The proposers are encouraged to explore a compressed schedule, however, it must be reasonable, realistic, and achievable. Those proposers that elect to pursue an early completion, should submit a separate schedule, of the same detail as that for the “base” period, to demonstrate the Proposer’s ability to achieve timely completion as well as detailed information as to how this affects the project in terms of providing additional value. WMATA will determine whether the stated benefits for early completion are in its best interest. Additional consideration will be given for a compressed schedule only if it meets the criteria stated and the offeror can provide evidence of a record of solid schedule compliance or accelerated performance on other projects.

3. Management Resources

A. The Authority will evaluate and rate the Key Personnel proposed for design and construction management in the proposal package. The resumes and levels of responsibility of the principal managers and technical personnel who will be directly responsible for the day-to-day design and construction activities will be evaluated. All designers must be registered and familiar with local codes and regulatory and permitting requirements. Data should indicate whether each individual has had a significant part in any of the project examples cited under Past Performance in Phase One. If reassignment of personnel is considered possible, the names and resumes of the alternative professionals for each assignment will be evaluated.

B. The following are the minimum qualifications for the key project personnel (all Key Personnel must be identified separately for each project and the same personnel cannot be utilized for more than one project. However, should it be determined that a single proposer represents the best value for both projects, the Authority reserves the right to maximize project efficiency by combining Key Personnel where possible)::

1. Design manager and other design staff for each major component of the design activity. They should each have a minimum of 8 years of experience, relevant experience designing facilities such as this and professional engineering certification in the jurisdiction where their installation will be constructed.
2. Project Manager should each have a minimum of 8 years of experience, relevant experience managing a design-build facility such as this and professional engineering certification.
3. Superintendents shall have a minimum of 8 years experience on projects of similar scope and have worked in an operating facility.
4. Quality Control Manager shall have worked for a minimum of 5 years as a QC manager and be certified as Lead Auditor.
5. Safety Superintendent shall have knowledge of industry safety practices and a minimum of 8 years experience as a safety officer and possess current Red Cross First Aid/Bloodborne Pathogen/CPR Certificate. Safety Superintendents are to be full-time dedicated with one per facility, not per Project.

C. The qualifications and experience of the proposed key personnel accepted by the Authority will be considered the minimum acceptable criteria for any proposed replacements during contract performance. Any substitutions must be approved by the Authority.

D. Provide a project organization chart and narrative to show the make-up and staffing capabilities of the Design-Build Team (ie. Show how this project management structure fits into the corporate management structure). Show the limits of authority and lines of authority of specific personnel to be assigned to the Contract(s). Identify the person responsible for all major decisions pertaining to the

overall project, to include person responsible for coordinating with local jurisdictions, procurement of materials, liaison, safety, quality/control, and design integration. Identify all major subcontractors who will be performing twenty (20) percent or more of the work based on the target price for the project and provide narrative of experience for these firms which shows their relevant experience over the past five (5) years. Identify proposed WMATA-Certified DBE subcontractors and provide information on relevant experience in the past five (5) years along with a copy of their current DBE Certification Letter from WMATA.

E. Demonstrate how the organization utilizes, implements, and administers their Disadvantaged Business Enterprise (DBE) participation program on current and past projects and how it intends to do so on this project. Identify the person(s) responsible for assuring that the DBE program and its goal are in compliance with the Authority, state/local, and organizational policies.

E. Price Proposal Evaluation Factors:

1. The Authority will evaluate price proposals for reasonableness, completeness, and realism as appropriate.
2. All offers with separately priced line items or subline items shall be analyzed to determine if the prices are unbalanced. Unbalanced pricing exists when, despite an acceptable total evaluated price, the price of one or more contract line items is significantly over or understated as indicated by the application of cost or price analysis techniques. An offer may be rejected if the Contracting Officer determines that the lack of balance poses an unacceptable risk to the Authority.
3. The Authority will award separate contracts for each Project based on that proposer(s) who offers the best value to the Authority within the stated target price for each Project. If there are Options, Price Proposals will be evaluated based on the Total Base Proposal Plus Option Price(s) in accordance with Notes to Proposers. The Authority reserves the right to award the initial Contract for only the Base Proposal Price or the Base Proposal Price and the most favorable Options to the Authority within budget as may be further described in Section 00434, PRICE SCHEDULE and the accompanying Notes to Proposers.

F. Technical Proposal Instructions: The information provided should be complete and clearly presented. If the information requested under a factor is presented elsewhere in the proposal, the proposer should cross reference this information rather than duplicate it.

1. Complete, sign and submit the TECHNICAL PROPOSAL FORM (Section 00412)

- G. Price Proposal Instructions: The information provided should be complete and clearly presented. If the information requested under a factor is presented elsewhere in the proposal, the proposer should cross reference this information that is provided elsewhere rather than duplicate it.
1. Complete, sign and submit the PRICE PROPOSAL FORM, Section 00413 and also submit the following:
 - a. Signed and completed REPRESENTATIONS AND CERTIFICATIONS (Section 00451).
 - b. Provide a completed PRICE SCHEDULE Form (Section 00434). Provide an amount on each line item where one is requested and a total amount representing the sum of individual amounts requested.
 - (1) Price Schedule prices shall include all services, labor, material, equipment, overhead, incidentals, and profit, unless otherwise specified.
 - (2) In case of a discrepancy between a unit price and an extended price, the unit price will be presumed to be correct, subject however, to correction to the same extent and in the same manner as any other clarification.
 - (3) Where the Price Schedule explicitly requires that the proposer propose on all items, failure to do so will disqualify the proposal. When submittal of a price on all items is not required, proposers shall insert the words NO PROPOSAL in the space provided for any item on which no price is submitted.
 - (4) Offers for design and/or construction services other than those specified will not be considered unless authorized by the solicitation. Unless specifically called for, alternate proposals will not be considered.
 - c. The Proposer shall submit with its initial Price Proposal a list of WMATA certified DBE firms that it intends to enter into subcontract agreements with for this contract. The completed Section 00453, DBE DATA (aka Appendix B) forms or waiver if applicable, are not required to be submitted with the initial Price Proposal, but shall be submitted with the final proposal revision or, if award is made without discussions, by the successful proposer before award per requirements of Appendix B, Section 00453.

Note: If a DBE goal is established in these documents and the offer is

\$500,000 or greater, or if there is no DBE goal established and the Proposer proposes to utilize DBE subcontractors on this project, the submittal of certain completed DBE documents is required with the Final Proposal Revision or if award is made without discussions, by the successful proposer before award. Failure to submit Section 00453 forms B-12 and B-13, or form B-14 waiver (if applicable), may cause the offer to be found non-responsive and may therefore be ineligible for award.

- d. An executed Proposal Guarantee with Surety Certificate (PROPOSAL BOND Form Section 00431). The Proposal Guarantee shall be based on the Total Base Proposal Plus Total Option Price, if any. (The Performance and Payment Bonds shall be based on the award amount.)
- e. A signed and completed PROPOSAL DATA FORM with attachments (Section 00452). Forms shall also be submitted for each proposed major subcontractor including DBEs.
- f. Other documents, forms and agreements as may be necessary to adequately evaluate the proposer. Should the proposer or joint venture entities have a parent company(ies), a letter(s) guaranteeing performance may be required.

2. Instructions for Supplementary Items to Price Proposal

- a. Provide an estimated cash flow curve for the planned duration of the project showing the dollar values.
- b. Price proposals shall be supported by a detailed narrative which clearly explains the quality of design, construction, major equipment, etc. that is being offered in sufficient detail to permit a value analysis as well as cost information.

H. Oral Presentations:

- 1. The Authority reserves the right to schedule oral presentations. If oral presentations are scheduled, the oral presentations shall be requested only from proposers which have not been eliminated from the competition. The oral presentation shall address items and issues identified by the Authority. The oral presentation shall be provided by the proposed key members of the proposer's project team. Proposers' proposed major subcontractors/DBE representatives are also urged to attend. Total presentation time, including clarifications, shall be no longer than **two** hours with additional time allotted for technical discussions.

2. At its sole discretion, the Authority will schedule oral presentations at the Headquarters of the Washington Metropolitan Area Transit Authority at 600 Fifth Street, N.W., Washington, D.C. 20001. Requests from proposers to reschedule their oral presentations are discouraged. No rescheduling will be done unless determined necessary by the Authority.
 3. If held at the Authority Headquarters, the presentations will be held in a conference room with conference room style seating. The Authority will provide only a projection screen.
 4. Oral presentations shall be treated as a discussion.
 5. Offerors will present their corporate background and qualifications and generally describe the following relevant to this requirement:
 - a. Executive Summary/Overview of Qualifications under Phase I
 - b. Design solutions for challenges provided for each site and project overall
 - c. Major Shop Equipment provided including life-cycle cost and system effectiveness analyses
 - d. Design approach, construction methodology, systems integration and testing procedures, training plan, cost/schedule and/or quality betterments
 - e. Schedule compliance with critical path and major activities shown
 - f. Key project personnel qualifications including, Design Manager, Project Manager, Superintendents, QC Manager, and Safety Superintendent
 - g. Project Specific Organization Chart and lines of authority/communication
 - h. DBE compliance procedures and proposed DBE subcontractors
 - i. Pricing assumptions and considerations
 6. The proposer shall provide seven printed copies of its presentation in 8.5" x 11" format to the Contract Administrator at the time of the presentation. No other documentation of the oral presentations will be accepted.
 7. The Authority reserves the right to video or audio tape each proposer's oral presentation for its exclusive use. All such information will remain confidential and will not be disclosed.
 8. Items that augment or revise the proposal must be submitted in subsequent proposal revisions.
- I. Discussions:

1. The Authority contemplates that discussions will be necessary to maximize the Authority's ability to obtain best value on a "Fixed Price / Best Design" basis. The Authority will maintain confidentiality of all proposals.
 2. Discussions will be held at the Headquarters of the Washington Metropolitan Area Transit Authority at 600 Fifth Street, N.W., Washington, D.C. 20001. Requests from proposers to reschedule their discussions are discouraged, and no rescheduling will be done unless determined necessary by the Authority.
 3. A description of proposal deficiencies will be provided in advance of discussions if possible to proposers for revision or modification of their proposal. Technical Proposal weaknesses and deficiencies will be discussed as well as adverse past performance information with each proposer.
 4. The Authority will conduct negotiations tailored to each proposal as required in order to determine that proposal which provides the best value in terms of quality for the established target price. To support these negotiations, the Authority may request the offerors to submit offers, quotes, price supports, identify major cost drivers, and provide pricing assumptions and any basis for any contingencies that have been incorporated into the price proposal. The Authority may negotiate with proposers to increase their performance for additional technical merit. Also, the Authority may suggest to proposers that they decrease their performance and reduce their costs to make their proposals more competitive. The proposers will also be given an opportunity to correct errors and omissions in their Price Proposals.
 5. After discussions have begun, the Authority may determine that a proposer is no longer considered within the competitive range and may eliminate that proposer from the competition whether or not all material aspects have been discussed or the proposer afforded the opportunity to submit a proposal revision.
 6. The Authority will request Final Proposal Revisions (FPRs, formerly BAFOs), as appropriate from all proposers remaining in the competitive range.
- J. Best Value Determination:
1. The technical merit of the proposal and the value engineering contained in the design within the specified target price will be the basis for selection. However, the price for each facility, not just the overall contract amount, must be fair and reasonable.
- K. Responsibility:
1. Material submitted under the proposal volumes shall be used to determine the

responsibility of the Design-Builder and proposed subcontractors as appropriate.

2. In accordance with the WMATA Procurement Procedures Manual, to be considered responsible, the proposer must meet the following general standards:
 - a. Have adequate financial resources to perform the contract, or the ability to obtain them;
 - b. Be able to comply with the required or proposed delivery or performance schedule, taking into consideration all existing commercial and governmental business commitments;
 - c. Have a satisfactory performance record;
 - d. Have a satisfactory record of integrity and business ethics;
 - e. Have the necessary organization, experience, accounting and operational controls, and technical skills, or the ability to obtain them (including, as appropriate, such elements as production control procedures, property control systems, quality assurance measures, and safety programs applicable to materials to be produced or services to be performed by the prospective contractor and subcontractors);
 - f. Have the necessary production, construction, and technical equipment and facilities, or the ability to obtain them; and
 - g. Be otherwise qualified and eligible to receive an award under applicable laws and regulations.

00210 SUPPLEMENTARY INSTRUCTIONS TO PROPOSERS

This Section includes procedures for product substitutions during the proposal period.

00211 BRAND NAME OR EQUAL

- A. Use of brand names within the technical requirements:

(As used in this clause, the term "brand name" includes identification of products by make and model in either the Technical Proposal or the design submittals approved by the Authority.)

1. If items called for by the Standard and Technical Specifications have been

identified by a "brand name or equal" description, such identification is intended to be descriptive, but not restrictive, and is to indicate the quality and characteristics of products that will be satisfactory. Proposers offering "equal" products including products of the brand name manufacturer other than the one described by brand name will be considered by the Authority if such products are clearly identified in the Technical Proposal and are determined by the Authority to meet fully the salient characteristics requirements in the Standard and Technical Specifications.

2. Unless the Proposer clearly indicates that it is offering an "equal" product by submitting Section 00433 BRAND NAME OR EQUAL FORM, the Proposer shall be considered as offering a brand name product referenced in the Standard and Technical Specifications.
3. If the Proposer proposes to furnish an "equal" product, the brand name, if any, of the product to be furnished shall be otherwise clearly identified and the determination as to equality of the product offered shall be the responsibility of the Authority and will be based on information reasonably available to the Authority.
4. If the Proposer proposes to modify a product so as to make it conform to the requirements of the Standard and Technical Specifications, he shall (i) include a clear description of such proposed modifications, and (ii) clearly mark any descriptive material to show the proposed modifications.
5. **CAUTION TO PROPOSERS:** The Authority is not responsible for locating or securing any information which is not identified and reasonably available to the Authority. Accordingly, to insure that sufficient information is available, the Proposer must furnish all descriptive material (such as cuts, illustrations, drawings, or other information) necessary for the Authority to (i) determine whether the product offered meets the salient characteristics requirements of the Standard and Technical Specifications and (ii) establish exactly what the Proposer proposes to furnish and what the Authority would be binding itself to purchase by approval by the Authority. The information furnished may include specific references to information previously furnished or to information otherwise available to the Authority.

00250 PRE-PROPOSAL MEETINGS SCHEDULE

This Section includes requirements and schedules for pre-proposal meetings.

00251 PRE-PROPOSAL CONFERENCE - NOT USED

00252 SITE INSPECTION

- A. Proposers are strongly urged to visit the site of the work and inform themselves of all local conditions that may affect the work or the cost thereof.
- B. A general industry conference and site visit will not be held, however, site visits will be scheduled individually upon proposer request. Proposers are permitted to take photographs/video tapes for use in preparing their proposals.
- C. Requests for site visits should be provided in writing to the Contract Administrator, Fred M. Pohlmann, and should include the number of attendees so arrangements can be made. Requests may be mailed to the Contract Administrators' attention at WMATA , Office of Procurement, Rm 3E-01, 600 Fifth Street N.W., Washington, D.C. 20001, or e-mailed to fpohlmann@wmata.com or faxed to (202) 962-6247. It is suggested that the proposer wear casual clothing, but safety footwear is mandatory. No transportation will be provided by the Authority.
- D. The proposer acknowledges and agrees that it shall be bound by all the terms of the Contract regardless the lack of a formal pre-proposal conference, official site visit, or the thoroughness of its site investigations prior to submitting its proposal.

00260 PRE-AWARD MEETING

This Section includes requirements and schedules for a pre-award meeting.

00261 PRE-AWARD CONFERENCE

A Pre-Award Conference with the successful proposer may be held by the Authority as specified in Section 01312, PROJECT MEETINGS.

00262 PROVISION FOR STIPEND

This procurement provides for the payment of a \$100,000 "stipend" to those unsuccessful Phase Two offerors, not selected for award of either Project. An otherwise eligible, unsuccessful Phase Two offeror may decline acceptance of a stipend. In that event, the offeror shall retain full rights to its Phase Two proposal. Upon acceptance of a stipend by the unsuccessful Phase Two offeror, the Authority may utilize all or any part of the offeror's technical design proposal in the resulting design for this project or in solicitations for other projects. To be eligible for the stipend, the unsuccessful offeror's technical design proposal must be rated as "acceptable". Payment of a stipend shall only be made if the technical design proposal provides "something of value" to the Authority such as the following which is typical in a project design: Presentation drawings, sketch details, Architects or artists rendering of project, renderings of interior design and layout, rendered site plan showing any grading or utility improvements, selected cross sections and details, exterior elevations, other information that clearly defines the scope and quality levels being offered including implementation plans for overcoming identified project and schedule challenges. Designs of unsuccessful proposers who choose to accept payment may

be used post-award if such is determined to be in the best interests of the Authority. They will not be used for technical leveling of the proposals prior to award.

END OF SECTION

THIS PAGE NOT USED

PROCUREMENT REQUIREMENTS

00300 AVAILABLE INFORMATION

This Section includes information made available to the proposer.

00301 INFORMATION DOCUMENTS

The preliminary documents referenced in this Section are Informational in nature. The information contained in the documents is provided as an aid for the proposer's preparation of their proposals. The Design-Builder shall be solely responsible for its design, whether or not it was based in part on information provided on Information Documents.

00302 DESIGN CRITERIA

A. Design Criteria (the WMATA-provided Program Criteria in Section 01112 of this Project Manual, WMATA Standard and Technical Specifications in Divisions 2 through 16 of this Project Manual, Drawings in the Project Drawings Attachment to this Project Manual), and other design-related information.

1. The Program Criteria in Section 01112 is provided as an aid for the proposer's preparation of their proposals and for preparation of the Final Design by the Design-Builder. The Program Criteria represent the minimum criteria to be used unless jurisdictional codes and regulations are more stringent, in which case the codes and regulations shall govern. The WMATA Program Criteria has been prepared to serve as standard requirements for the design of the Project.
2. The WMATA Standard and Technical Specifications in Divisions 2 through 16 are provided as an aid for the proposer's preparation of their proposals and for preparation of the Final Design Specifications by the Design-Builder. The Standard and Technical Specifications represent the minimum standards to be used unless jurisdictional codes and regulations are more stringent, in which case the codes and regulations shall govern. The WMATA Standard Specifications have been prepared to serve as standard requirements for materials and construction methods for all WMATA projects and are unedited. The Design-Builder shall use the Standard Specifications and edit accordingly in the preparation of the Contract-specific Final Design Specifications, and shall indicate these revisions made to the Standard Specifications utilizing strikeouts on deleted text, bolding on new text, sidebars in the page margin (redline method), and also by adding the date of revision to the footer. Some of the Technical Specifications Sections have already been edited by WMATA to specify Contract-specific project requirements for materials and construction methods. The Design-Builder shall use the WMATA Technical Specifications in the preparation of the Contract-specific Final Design Specifications. If further editing is required, the revisions shall be notated as specified above.

3. The Project Description Drawings and Design Directive Drawings as applicable in the Project Drawings Attachment to the Project Manual illustrate an approach to the Work based on a preliminary engineering level of effort and are provided as an aid for the proposer's preparation of their proposals and for preparation of the Final Design Drawings by the Design-Builder. Since the solutions developed are of a preliminary nature and have not had the benefit of detailed design development work, the final designs necessary to comply with the Requirements set out in the Contract Documents may, as approved, differ slightly from the preliminary designs shown. The Standard Drawings as applicable in the Project Drawings Attachment to the Project Manual illustrate WMATA standards for various items and are provided as an aid for the proposer's preparation of their proposals and for inclusion in the Final Design Drawings as applicable by the Design-Builder. The Project Drawings include the following:
 - a. Exhibit A, Project Description Drawings.
 - b. Exhibit B, Standard and Design Directive Drawings as applicable.
- B. Compact Disc containing electronic files in PDF format of the WMATA Manual of Design Criteria, Release 6, Books 1-3.

00303 INFORMATION DRAWINGS

- A. The Information Drawings in the Project Drawings Attachment to the Project Manual are Recommended Layout and Details Drawings as applicable and As-Built Drawings reproduced from similar or previous Authority projects as applicable and are provided only as an aid for the proposer's preparation of their proposals and for preparation of the Final Design Drawings at the option of the Design-Builder and include the following:
 1. Exhibit C, Information Drawings as applicable
- B. After award of the Contract, the Design-Builder shall conduct its own additional detailed investigation to verify that the As-Built Information Drawings initially provided by the Authority as applicable reflect the current conditions.
- C. Compact disc containing electronic files in TIF format of the following as-built contract drawings:
 1. Contract 1A0162, Shady Grove Service and Inspection Shop, Section A-16b.
 2. Contract 1Z4202, Major Repair Shop, Brentwood, Section B-5a
 3. Contract 1B4054, Brentwood Major Repair Shop, Office and Shop Renovation.
 4. Contract 1E0112, Greenbelt Service and Inspection Shop, Section E-11b.

00320 GEOTECHNICAL INFORMATION DATA

This Section includes Geotechnical Information made available to the proposer. This information is not guaranteed and is provided as information only as an aid for the proposers' preparation of their proposals.

00321 GEOTECHNICAL INFORMATION

- A. The Geotechnical Information provided by the Authority for this Project is comprised of the following Documents:
1. Greenbelt Yard Consolidated Heavy Repairs
 - a. Greenbelt Yard Geotechnical Engineering Report, Contract FN5008, by GeoConcepts Engineering, Inc.
 2. Brentwood Shop Expansion
 - a. Brentwood Yard Geotechnical Engineering Report, Contract FN5008, by GeoConcepts Engineering, Inc.
 3. Shady Grove Shop Expansion
 - a. Shady Grove Yard Geotechnical Engineering Report, Contract FN5008, by GeoConcepts Engineering, Inc.
- B. Post-Award Investigation/Coordination - Not Used.
- C. Previous Geotechnical Information available from the Authority regarding soils in the vicinity of the proposed work is as follows:
1. Greenbelt Yard Consolidated Heavy Repairs
 - a. MRCE Report No. 228 - Contract 3Z7256- Greenbelt S & I Yard-Section E011a/c, Greenbelt Route Supplementary Subsurface Investigation, March 25, 1991.
 - b. MRCE Report No. 229 - Contract 3Z7256- Greenbelt S & I Yard-Section E011a/c, Greenbelt Route Supplementary Subsurface Investigation, July 30, 1991.
 2. Brentwood Shop Expansion
 - a. MRCE Second Supplementary Report - Modification No. 5 - Contract No. TAC 20-68-E - East Coach Yard Buildings - Subsurface Investigation, April 9, 1969.
 - b. MRCE Supplementary Report - Modification No. 6 - Contract No. TAC 20-68-E - B & O Route, East Coach Yard Buildings - Subsurface Investigation, May 13, 1969.
 3. Shady Grove Shop Expansion

- a. MRCE Report No. 147 - Contract Mod. No. 3Z725M-012- Section A016a - Rockville Route - Subsurface Investigation, May 24, 1976.
- b. MRCE Report No. 120 - Contract Mod. No. 3Z725K-022- Section A016a & A017 - Rockville Route - Subsurface Investigation, December 23, 1974.
- c. MRCE Report No. 152 - Contract No. 3Z725N- Section A016b - Rockville Route - Subsurface Investigation, July 29, 1977.

00322 MISCELLANEOUS REPORTS AND DATA - (NOT USED)

00330 EXISTING CONDITIONS

This Section includes information about survey data, existing site and existing buildings and the Specifications and Drawings provided by the Authority.

00331 DESCRIPTION OF PROJECT CONDITIONS

- A. Existing site conditions are shown in the Project Drawings. The information is not guaranteed to be complete and is provided as information only as an aid for the proposers' preparation of their proposals.
- B. After award of the Contract, the Design-Builder should conduct its own additional detailed surveys and investigations to verify that the site conditions shown on the Project Drawings initially provided by the Authority reflect the current conditions.

00340 ENVIRONMENTAL ASSESSMENT INFORMATION

This Section includes information about the environmental data for the project. This information is not guaranteed and is provided as information only as an aid for the proposers' preparation of their proposals.

00341 ENVIRONMENTAL REPORT

- A. The Authority anticipates Categorical Exclusions (CE) as a result of its own environmental investigations. Copies of the CE's are available for the Authority upon request.
- B. After award of the Contract, the Design-Builder should conduct its own additional detailed environmental assessment and coordinate with the jurisdictional agencies as necessary as a basis for it's final design and for obtaining all necessary permits. All work performed under this Contract shall meet the requirements of the Authority's Design Criteria and/or the jurisdictional codes and regulations, whichever is more stringent.
- C. Copies of Environmental Reports provided by the Authority for this Project are as follows:

1. Greenbelt Yard Consolidated Heavy Repairs
 - a. Phase I ESA, Greenbelt Metro Rail Yard, by EEE Consulting, Inc., August 2004.
 - b. Consolidated Plan (Hazardous Waste Contingency Plan; Spill Prevention; Control and Countermeasures Plan; Stormwater Pollution Prevention Plan) Greenbelt Rail Yard, June 30, 2002.
2. Brentwood Shop Expansion
 - a. Asbestos-Containing Material Survey at Brentwood Major Repair Yard, by Connor Environmental Services and Engineering Assessments, May 18 and 19, 1998.
 - b. Results of Asbestos and Lead Paint Survey, WMATA Brentwood Maintenance Facility, by EEE Consulting, Inc., September 28, 2004.
 - c. Phase II ESA, Subsurface Soil Investigation, WMATA Brentwood Maintenance Facility, by EEE Consulting, Inc., September 29, 2004.
 - d. Consolidated Plan (Hazardous Waste Contingency Plan; Spill Prevention; Control and Countermeasures Plan; Stormwater Pollution Prevention Plan) Brentwood Major Repair and Overhaul Yard, June 30, 2002.
3. Shady Grove Shop Expansion
 - a. Results of Asbestos and Lead Paint Survey, WMATA Shady Grove Maintenance Facility, by EEE Consulting, Inc., September 28, 2004.
 - b. Phase II ESA, Subsurface Soil Investigation, WMATA Shady Grove Maintenance Facility, by EEE Consulting, Inc., September 29, 2004.
 - c. Consolidated Plan (Hazardous Waste Contingency Plan; Spill Prevention; Control and Countermeasures Plan; Stormwater Pollution Prevention Plan) Shady Grove Rail Yard, June 30, 2002.

00370 SAFETY MANUAL

This Section lists the Safety Manual for the Project and is provided as an aid for the proposer's preparation of their proposals.

00371 WMATA CONSTRUCTION SAFETY AND ENVIRONMENTAL MANUAL REQUIREMENTS

The WMATA Construction Safety and Environmental Manual is an attachment to the Project Manual and is a compilation of the Safety and Reporting Requirements for the project.

00381 SAFETY AND SECURITY CERTIFICATION PROGRAM PLAN REQUIREMENTS

The WMATA Safety and Security Certification Program Plan is an attachment to the Project Manual and is a compilation of the safety and security certification requirements for the project.

00390 SYSTEM SAFETY PROGRAM PLAN

This Section lists the WMATA System Safety Program Plan for the Project and is provided as an aid for the proposer's preparation of their proposals.

00391 SYSTEM SAFETY PROGRAM PLAN REQUIREMENTS

The WMATA System Safety Program Plan is an attachment to the Project Manual and is a compilation of the system safety requirements for the project. Also provided is the Metrorail Safety Rules and Procedures Handbook (MSRPH), January 2004, referred to in the SSPP.

00412 TECHNICAL PROPOSAL FORM

DATE OF REQUEST: PHASE 2 - December 3, 2004

PROJECT: FN5008 METRO MATTERS: RAIL YARDS EXPANSION PROJECT AT BRENTWOOD, GREENBELT, AND SHADY GROVE YARDS

REQUEST FOR TECHNICAL PROPOSAL containing information requested herein shall be submitted by the Proposer so as to be received before: **2:00 p.m.** on **January 21, 2005** at the Washington Metropolitan Area Transit Authority, Office of Procurement, PRMT FILE Room 3C-02, 600 Fifth Street, N.W., Washington, D.C. 20001. Questions may be directed to the Contract Administrator, Fred M. Pohlmann at (202) 962-1529, FAX to (202) 962-6247.

In response to your Request For Technical Proposal for the above referenced Contract, the undersigned hereby proposes to furnish all labor, equipment and materials and perform all work to design and construct the Project in strict accordance with the Contract requirements for the consideration of the amount proposed on the Price Schedule under the Price Proposal. If awarded the Contract within the Proposal Acceptance Period, the undersigned agrees to execute the Design-Build Contract within 10 calendar days and to furnish, if required, performance and payment bonds on standard Authority forms with good and sufficient surety or sureties.

If the Contract is executed, the undersigned further agrees to commence the work within 10 calendar days after the receipt of Notice to Proceed and to complete the work within the time specified in the Contract.

The undersigned acknowledges receipt of the following amendments to the Request for Technical Proposal under RFP - FN5008/FMP (give number and date of each):

Amendment Number ____, dated _____.

Amendment Number ____, dated _____.

Amendment Number ____, dated _____.

Amendment Number ____, dated _____.

Note: Failure to acknowledge receipt of all amendments may cause the Technical Proposal to be considered not responsive to the request, which would require rejection of the Technical Proposal as unacceptable.

00412 TECHNICAL PROPOSAL FORM (CONT.)

PROPOSER:

_____	By _____
Firm Name	
_____	_____
Address	Printed name
_____	_____
Zip Code	Title
_____	_____
Telephone	DUNS Number
_____	_____
Representative Authorized To Act on Proposer's Behalf	Alternate Authorized Representative

DIRECTIONS FOR SUBMITTING OFFER:

1. Read and comply with the Solicitation Instructions. This form is to be submitted with your Technical Proposal. The Price Proposal and Price Proposal Attachments shall be submitted separately from the Technical Proposal, and the Technical Proposal shall not contain any information relating to costs.
2. The Technical Proposal Form and related required documents must be sealed, marked, and addressed as follows:

WASHINGTON METROPOLITAN AREA
TRANSIT AUTHORITY
PRMT FILE ROOM 3C-02
600 FIFTH STREET, N.W.
WASHINGTON, D.C. 20001

TECHNICAL OFFER UNDER FN5008/FMP

**TECHNICAL PROPOSALS SHALL BE TIMELY MAILED OR HAND DELIVERED TO REACH
WMATA BEFORE 2:00 p.m. (LOCAL TIME) ON DAY OF PROPOSAL CLOSING.**

00413 PRICE PROPOSAL FORM

DATE OF REQUEST: PHASE 2 - December 3, 2004

PROJECT: FN5008 METRO MATTERS: RAIL YARDS EXPANSION PROJECT
AT BRENTWOOD, GREENBELT, AND SHADY GROVE YARDS

REQUEST FOR PRICE PROPOSAL containing information requested herein shall be submitted by the Proposer so as to be received before: **2:00 p.m.** on **January 21, 2005** at the Washington Metropolitan Area Transit Authority, Office of Procurement, PRMT FILE Room 3C-02, 600 Fifth Street, N.W., Washington, D.C. 20001. Questions may be directed to the Contract Administrator, Fred M. Pohlmann at (202) 962-1529, FAX to (202) 962-6247.

In response to your Request For Price Proposal for the above referenced Contract, the undersigned hereby proposes to furnish all labor, equipment and materials and perform all work to design and construct the Project in strict accordance with the Contract requirements for the consideration of the amount proposed on the Price Schedule. If awarded the Contract within the Proposal Acceptance Period, the undersigned agrees to execute the Design-Build Contract within 10 calendar days and to furnish, if required, performance and payment bonds on standard Authority forms with good and sufficient surety or sureties.

If the Contract is executed, the undersigned further agrees to commence the work within 10 calendar days after the receipt of Notice to Proceed and to complete the work within the time specified in the Contract.

The undersigned acknowledges receipt of the following amendments to the **Request for Price Proposal under FN5008/FMP** (give number and date of each):

- Amendment Number ____, dated _____.
- Amendment Number ____, dated _____.
- Amendment Number ____, dated _____.
- Amendment Number ____, dated _____.

Note: Failure to acknowledge receipt of all amendments may cause the Price Proposal to be considered not responsive to the request, which would require rejection of the Price Proposal as unacceptable.

00431 PROPOSAL SECURITY (PROPOSAL BOND FORM) - Submit with Price Proposal

PROPOSAL BOND

Request for Proposal No.: Proposal Closing Date:
Penal Sum of Bond: 5% of Offered Price or Amount, \$:
Date Bond Executed:

KNOW ALL MEN BY THESE PRESENTS, that we, the Principal and Surety(ies) hereto, are firmly bound to the Washington Metropolitan Area Transit Authority in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally: provided, that, where the Sureties are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sum "jointly and severally" as well as "severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sum only as set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

THE CONDITION OF THIS OBLIGATION IS SUCH, that whereas the Principal has submitted the proposal identified above:

NOW, THEREFORE, if the Principal, upon acceptance by the Authority of his proposal identified above, within the period specified therein for acceptance (sixty [60] days if no period is specified), shall execute such further contractual documents, if any, and give such bond(s) as may be required by the terms of the proposal as accepted within the time specified (ten [10] days if no period is specified) after receipt of the forms by him, or in the event of failure so to execute such further contractual documents and give such bonds, if the Principal shall pay the Authority for any cost of procuring the work which exceeds the amount of his proposal, then the above obligation shall be void and of no effect.

Each Surety executing this instrument hereby agrees that its obligation shall not be impaired by any extension(s) of the time for acceptance of the proposal that the Principal may grant to the Authority notice of which extension(s) to the Surety(ies) being hereby waived provided that such waiver shall apply only with respect to extensions aggregating not more than sixty (60) calendar days in addition to the period originally allowed for acceptance of the proposal.

Attach additional pages as needed.			
Instructions			
1. This form is authorized for use whenever a proposal guaranty is required in connection with design-build work.			
2. The full legal name and business address of the Principal shall be inserted in the space designated "Principal" on the face of this form. The bond shall be signed by an authorized person. Where such person is signing in a representative capacity (e.g., an attorney-in-fact), but is not a member of the firm, partnership or joint venture, or an officer of the corporation involved, evidence of his authority must be furnished.			
3. The penal sum of the bond may be expressed as a percentage of the proposal price (e.g., 5% of the proposal price) if desired or may be expressed in dollars and cents.			
4. Corporation executing the bond as sureties must be among those appearing on the Treasury Department's list of approved sureties and must be acting within the limitations set forth therein. Where more than a single corporate surety is involved, their names and addresses (city and State) shall be inserted in the spaces (Surety A, Surety B, etc.) headed "Corporate Surety(ies)".			
5. Corporations executing the bond shall affix their corporate seals.			
6. The name of each person signing this proposal bond should be typed in the space provided.			

00432 COMPLIANCE / EXCEPTION INFORMATION - **Submit with Technical Proposal**

Indicate whether the proposal submitted is intended to fully comply with the Requirements of this Request for Proposals, or if certain exceptions are taken. If exceptions are taken, the proposer shall clearly identify any exception to the requirements, terms, or conditions of any part of this RFP. Each exception must be specifically related to the particular part of the RFP to which the exception is taken. The proposer must support and explain the reason for any exceptions taken and explain the impact, if any, on the RFP requirements and state the necessity for or advantage of the exception.

Check one statement below. If exceptions are taken, explain the exceptions per the following instructions.

- The proposer certifies that its proposal is intended to comply fully with all Requirements.
- The proposer certifies that its proposal is intended to comply fully with all Requirements, except as noted (add additional sheets to explain).

00434 PRICE SCHEDULE - Submit with Price Proposal

A. DESCRIPTION OF WORK:

The Design-Builder shall Design and Build the Facilities satisfactorily completed for its intended use in the manner and at the locations set forth in the Requirements of the Project Manual and the Project Drawings of this solicitation, and in accordance with the Technical and Price Proposals as finally accepted by the Authority. The Design-Builder shall design the facility pursuant to the Authority's Design Criteria, and in full compliance with the Terms and Conditions of the Contract and the Rules and Regulations of the jurisdictional authorities, and shall construct the facility in strict accordance with the Final Design Specifications and Final Design Drawings and in full compliance with the Terms and Conditions of the Contract and the Rules and Regulations of the jurisdictional authorities.

TOTAL Schedules D + E \$ 41,000,000

TOTAL PROPOSAL PRICE (SCHEDULES A + B + C + D + E) \$120,000,000

NOTES TO PROPOSERS:

1. The Contract(s) will be awarded to responsible contractor(s) on the basis of the proposal that provides the overall best value to the Authority in terms of design solutions, innovativeness, and technical factors based on an integrated assessment within the stated target price as shown in the Price Schedule for each Project. Multiple contracts will be awarded, however, it is required that proposals be submitted for both Projects and all items, therefore failure to submit an offer on all items may result in rejection of the proposal.
2. Unless otherwise specified, each LUMP SUM priced line item includes all labor, material, equipment, and other incidentals, ready for its intended use including, but not limited to, furnishing, installation and testing. The successful Offeror will be required to provide a detailed breakdown to the Authority Representative of all LUMP SUM items for payment purposes.
3. Schedules C and E of the Price Schedule is for items where a specific allowance is set-aside by the Authority for payment. This is an estimated amount subject to negotiation and is not guaranteed. Schedule C, Item 3 is for Minor Greenbelt Shop Equipment only, all Major Shop Equipment for Greenbelt Yard is to be priced under Schedule A, Item 3 as shown.
4. As part of the determination of responsibility, the pre-award data submitted must indicate

compliance with the requirement that 15% of the work is to be performed by the Design/Build contractor.

5. The proposers are advised that this contract contains Davis-Bacon provisions. The Contractor will be required to submit certified payrolls on a weekly basis. Also, the Authority will monitor compliance by performing Labor Standards Interviews of the labor force. The Authority will hold retainage in a sufficient amount as may be considered necessary for any under payments of wages and/or fringes until they are fully resolved in accordance with the Labor Provisions of the contract.
6. The offerors are advised that the Authority will complete a "Performance Evaluation" at the end of the contract. The Performance Elements will include: Quality of Work, Timely Performance, Effectiveness of Management, Compliance with labor Standards, Compliance with Safety Standards and an Overall Evaluation. The Performance Evaluation may be used in determinations of responsibility for future WMATA contracts.
7. DBE data (See Appendix B) shall be submitted with the Final Proposal Revisions (FPR) if the Total Proposal Price is \$500,000 or more. It is required that in order to be counted towards meeting the DBE goal established for each Project, proposed DBE firms must be pre-certified by WMATA prior to submittal of FPRs. Although non-certified DBE firms can be utilized, they will not be counted towards meeting the goal.

END OF PRICE SCHEDULE

00450 REPRESENTATIONS AND CERTIFICATIONS - Submit with Price Proposal

- A. This Section includes the Representations and Certifications that are required to be submitted with the Price Proposal.

00451 REPRESENTATIONS AND CERTIFICATIONS

The Offeror represents as part of its offer that:

A. TYPE OF BUSINESS ORGANIZATION

It operates as an individual, a partnership, a joint venture, a nonprofit organization, or a corporation incorporated under the laws of the _____ State/Commonwealth/District

B. PARENT COMPANY AND EMPLOYER IDENTIFICATION NUMBER (AFFILIATION AND IDENTIFYING DATA):

1. The proposer represents that it is, is not owned or controlled by a parent company. For this purpose a parent company is defined as one which either owns or controls the activities and basic business policies of the proposer. To own another company means the parent company must own at least a majority, i.e., more than 50 percent, of the voting rights in that company. To control another company, such ownership is not required; if another company is able to formulate, determine or veto basic business policy decisions of the proposer, such other company is considered the parent of the proposer. This control may be exercised through the use of dominant minority voting rights, use of proxy voting, contractual arrangements or otherwise.
2. If the proposer is owned or controlled by a parent company, insert in the space below the name and address of the main office of the parent company:

Name

Address (Including Zip Code)

3. If the proposer has no parent company, he shall provide in the applicable space below his own Employer's Identification Number (E.I. No.), i.e., Federal Social Security Identification Number used on Federal Tax Returns or, if he has a parent company, the E.I. No. of his parent company:

Proposer's E.I. Number: _____

Parent Company's E.I. Number: _____

4. With respect to the Data Universal Numbering Systems (DUNS), the following applies:

The offeror shall insert the DUNS number applicable to the offeror's address entered on the Proposal Form: _____

00451 Reprs and Certs
Page 1 of 8

C. NONDISCRIMINATION CLAUSE:

1. The proposer represents that he [] has, [] has not participated in a previous contract or subcontract subject to either the Nondiscrimination in Employment clause herein, or the clause originally contained in Executive Order 10925, Section 301, or the clause contained in Section 201 of Executive Order Number 11114, or the CIVIL RIGHTS Section 00770 included in this Contract, that he [] has, [] has not filed all required compliance reports; and that representations indicating submittal of required compliance reports signed by proposed subcontractors will be obtained prior to subcontract awards.
2. The above representation need not be submitted in connection with contracts or subcontracts which are exempt from the clause.

D. DISADVANTAGED BUSINESS ENTERPRISE:

It is [], is not [], a disadvantaged business enterprise.

1. "Disadvantaged Business Enterprise" means a for-profit small business concern (as defined by 49 CFR Part 26) (1) which is at least 51% owned by one or more socially and economically disadvantaged individuals, or in the case of a corporation, at least 51% of the stock is owned by one or more socially and economically disadvantaged individuals; and (2) whose management and daily business operations are controlled by one or more socially and economically disadvantaged individuals who own it. "Socially and Economically Disadvantaged Individuals" means those individuals who are citizens of the United States (or lawfully admitted permanent residents) who are women, Black Americans, Hispanic Americans, Native Americans, Asian-Pacific Americans, or Subcontinent Asian Americans, and any additional groups whose members are designated as socially and economically disadvantaged by the Small Business Administration (SBA) at such time as the designation becomes effective.

E. CERTIFICATION OF NONCOLLUSION (INDEPENDENT PRICE DETERMINATION):

1. By the submittal of this proposal, the proposer certifies in connection with this procurement that he, and in the case of a joint offer, each party thereto, that:
 - a. The prices in this proposal or bid have been independently arrived at without collusion (without consultation, communication or agreement for the purpose of restricting competition as to any matter relating to such prices) with any other proposer, bidder or competitor;
 - b. Unless otherwise required by law, the prices in this proposal or bid have not been knowingly disclosed and will not be knowingly disclosed by the offeror prior to opening in the case of a bid, or prior to award, in the case of a proposal, directly or indirectly, to any other proposer, bidder or competitor; and
 - c. No attempt has been made or will be made to induce any other person or firm to submit or not to submit a proposal or bid .

2. Each person signing this proposal or bid certifies that he has fully informed himself regarding the accuracy of the statements contained in this certification:
 - a. He or she is the person in the offeror's organization responsible within that organization for the decision as to the prices being offered herein and that he/she has not participated, and will not participate, in any action contrary to 1.a. through 1.c. above; or
 - b. (1) He/she is not the person in the offeror's organization responsible within that organization for the decision as to the prices being offered herein, but that he/she has been authorized in writing to act as agent for the persons responsible for such decision in certifying that such persons have not participated and will not participate, in any action contrary to 1.a. through 1.c.) above, and as their agent does hereby so certify; and
(2) He/she has not participated, and will not participate, in any action contrary to 1.a. through 1.c. above.
3. A proposal or bid will not be considered for award where 1.a., 1.c. or 2. above has been deleted or modified. Where 1.b. above has been deleted or modified, the proposal or bid will not be considered for award unless the proposer or bidder furnishes with the proposal or bid a signed statement which sets forth in detail the circumstances of the disclosure and the head of the agency, or his designee, determines that the disclosure was not made with collusive intent.

F. REGULAR DEALER - MANUFACTURER NOT USED

G. CERTIFICATION OF NAMING CERTAIN SUBCONTRACTORS:

By submittal of this proposal, the proposer certifies that he will comply with the provisions concerning approval of certain subcontractors as set forth in Section 00200, INSTRUCTIONS TO PROPOSERS or 01300, ADMINISTRATIVE REQUIREMENTS, if any.

H. CERTIFICATION OF REVIEW OF DATA AVAILABLE:

By submittal of this proposal, the proposer certifies that he has examined, or caused to be examined, all of the information and data listed in Section 00100, PROJECT INFORMATION and Section 00300, INFORMATION AVAILABLE TO PROPOSERS of this Contract and has satisfied himself as to their contents for the work under this Contract.

I. GOVERNMENT-WIDE DEBARMENT AND SUSPENSION (NONPROCUREMENT):

49CFR Part 29
Executive Order 12549

Certification Regarding Debarment, Suspension, and Other Responsibility Matters -Lower Tier Covered Transactions (Third Party Contracts over \$100,000)

1. Instruction for Certification:

- a. By signing and submitting this proposal, the prospective proposer is providing the signed certification set out below.
- b. The certification in this Section is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, WMATA may pursue available remedies, including suspension and/or debarment.
- c. The prospective proposer shall provide immediate written notice to WMATA if at any time a prospective subcontractor (at any tier) learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
- d. The terms "covered transaction", "debarred", "suspended", "ineligible", "lower tier covered transaction", "participant", "person", "principal", "bid", "proposal", and "voluntarily excluded", as used in this clause, have the meanings set out in the Definitions and Coverage sections of rules implementing Executive Order 12549 [49 CFR Part 29]. You may contact the Contracting Officer for assistance in obtain a copy of those regulations.
- e. The proposer agrees by submitting this proposal that, should the contract be entered into, it shall not knowingly enter into any subcontract (at any tier) with a firm which is debarred, suspended, declared ineligible, or voluntarily excluded, unless authorized in writing by the Contracting Officer.
- f. The proposer further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction", without modification, in all subcontracts and solicitations for subcontracts anticipated to exceed \$100,000 in value.
- g. A Design-Builder may rely upon a certification of a subcontractor that it is not debarred, suspended, ineligible, or voluntarily excluded for the contracting, unless it knows that the certification is erroneous. A Design-Builder may decide the method and frequency by which it determines the eligibility of its principals. Each Design-Builder may, but is not required to, check the Nonprocurement List issued by the U.S. General Service Administration.

00451 Reps and Certs
Page 4 of 8

- h. Nothing contained in the foregoing shall be construed to require establishment of system of records in order to render in good faith the certification required by this Section. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.
 - i. Except for transactions authorized under Paragraph e. of these instructions, if a Design-Builder under a WMATA contract knowingly enters into a subcontract (at any tier) with a firm which is suspended, debarred, ineligible, or voluntarily excluded from contracting, in addition to all remedies available to the Federal Government, WMATA may pursue available remedies including suspension and/or debarment.
2. "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transaction":
- a. The prospective proposer certifies, by submission of this proposal that neither it nor its "principals" (as defined at 49 C.F.R.- ¶ 29.105) is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency.
 - b. When the prospective proposer is unable to certify to the statements in this certification, such prospective proposer shall attach an explanation to this proposal.

* As the proposer/bidder, the Certification is required ONLY for a contract over \$100,000.

J. CLEAN AIR AND WATER ACTS

[Applicable if the offer exceeds \$100,000, or the Contracting Officer believes that orders under an indefinite contract in any year will exceed \$100,000, or a facility to be used has been the subject of a conviction under the Clean Air Act (42 U.S.C. 7413(c)(1)) or the Water Act (33 U.S.C. 1319(c)) and is listed by the Environmental Protection Agency (EPA) as a violating facility, and the acquisition is not otherwise exempt.]: The Proposer certifies that-

- 1. Any facility to be used in the performance of this proposed Contract is [] is not [] listed on the Environmental Protection Agency List of Violating Facilities;
- 2. The Proposer will immediately notify the Contracting Officer, before award, of the receipt of any communication from the Administrator, or a designee, of the Environmental Protection Agency, indicating that any facility that the Proposer proposes to use for the performance of the Contract is under consideration to be listed on the EPA List of Violating Facilities; and

3. The Proposer will include a certification substantially the same as this certification, including this Paragraph 3. in every nonexempt subcontract.

K. BUY AMERICA CERTIFICATE:

The Design-Builder agrees to comply with 49 U.S.C. 5323(j) and 49 CFR Part 661, which provide that Federal funds may not be obligated unless steel, iron, and manufactured products used in FTA-funded projects are produced in the United States, unless a waiver has been granted by FTA or the product is subject to a general waiver. General waivers are listed in 49 CFR 661.7, and include final assembly in the United States for 15 passenger vans and 15 passenger wagons produced by Chrysler Corporation, microcomputer equipment, software, and small purchases (currently less than \$100,000) made with capital, operating, or planning funds. Separate requirements for rolling stock are set out at 5323(j)(2)(C) and 49 CFR 661.11. Rolling stock not subject to a general waiver must be manufactured in the United States and have a 60 percent domestic content.

A proposer must submit to the FTA recipient the appropriate Buy America certification (below) with all bids on FTA-funded contracts, except those subject to a general waiver. Proposals or bids that are not accompanied by a completed Buy America certification must be rejected as nonresponsive. This requirement does not apply to lower tier subcontractors.

Proposers shall note that certain electrical equipment must be considered in the "rolling stock" category for the purposes of Buy America.

Certification requirement for procurement of steel, iron, or manufactured products.
Certificate of Compliance with 49 U.S.C. 5323(j)(1)

The proposer hereby certifies that it will meet the requirements of 49 U.S.C. 5323(j)(1) and the applicable regulations in 49 CFR Part 661.

Whether or not the proposer certifies that it will comply with the applicable requirement, such proposer is bound by its original certification and is not permitted to change its certification after receipt of proposals. A proposer that certifies it will comply with the applicable Buy America requirements is not eligible for a waiver of those requirements.

L. CERTIFICATION AND DISCLOSURE REGARDING PAYMENTS TO INFLUENCE CERTAIN FEDERAL TRANSACTIONS (November 2000)

1. The definitions and prohibitions contained in the clause, at Federal Acquisition Regulation, 52.203-12, Limitation on Payments to Influence Certain Federal Transactions, are hereby incorporated by reference in Paragraph 2. of this certification.
2. The undersigned certifies, to the best of his or her knowledge and belief, that
 - a. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

- b. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form LLL, "Disclosure Form to Report Lobbying", in accordance with its instructions.
 - c. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers and require that all recipients of subcontract awards in excess of \$100,000 (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.
3. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000, and not more than \$100,000, for each such failure.

PROJECT: FN5008 - METRO MATTERS: RAIL YARDS EXPANSION PROJECT

1. Name of Firm: _____
2. Legal Address: _____

3. Individual Partnership Corporation Joint Venture
4. Date Organized _____.
State in which incorporated _____.
5. Names and Addresses of Officers or Partners:
 - a. _____
 - b. _____
 - c. _____
 - d. _____
 - e. _____
 - f. _____
6. How long has your firm been in business under its present name? _____
7. Attach as SCHEDULE 7 a list of current contracts, each with contract amount, owner, architect-engineer, character or type of work and percentage of completion. Also, include those projects on which you are apparent low bidder, but for which you have not received an award of contract.
8. Attach as SCHEDULE 8 a list of contracts, each with contract amount, owner, architect-engineer and character or type of work, for contracts completed in the last five years.
9. What is the estimated work placement value required per year to complete the work described in SCHEDULE 7.

2005: _____ 2006: _____ 2007: _____ 2008: _____

00452 PROPOSAL DATA FORM (CONT.)

10. Have you ever been denied an award on which you were low bidder? _____ If the answer is YES, attach as SCHEDULE 10 the full particulars regarding each occurrence.
11. Have you ever failed to complete any contract, other than current, on which you were the low bidder? _____ If the answer is YES, attach as SCHEDULE 11, the full particulars regarding each occurrence.
12. Have you ever been assessed liquidated damages or actual damages for late completion within the last five years? _____ If the answer is YES, attach as SCHEDULE 12 the full particulars regarding each occurrence.
13. Financial resources available as working capital for this Contract:
 - a. Cash on hand: \$ _____ Date: _____
 - b. Sources of credit: _____
14. Attach as SCHEDULE 14 certified financial statements and letters from banks regarding credit as required by Section 00200 of this Contract.
15. Attach as SCHEDULE 15 the design and construction experience of each officer and principal individual of your organization; include present position, years of design and construction experience, magnitude and type of work and in what capacity.
16. What percentage of the work (contract amount) do you intend performing with your own personnel? _____%
17. Attach as SCHEDULE 17 a list of all principal subcontractors and the percentage and character of work (contract amount) which each will perform.
18. Attach as exhibits completed Proposal Data Forms for each of the subcontractors listed in SCHEDULE 17. above.
19. If the Design-Builder or subcontractor is a joint venture, submit Proposal Data Forms for each member of the joint venture.

The above information is confidential and will not be divulged to any unauthorized person or persons.

The signatory of this questionnaire certifies to the truth and accuracy of all statements, answers and attachments.

00453 DBE DATA (aka APPENDIX B) (Submit with the Final Proposal Revision [FPR, formerly BAFO] Price Proposal or by the selected proposer before award if discussions are not held)

Pursuant to the policy of the Authority (WMATA) that businesses owned by socially and economically disadvantaged persons (Disadvantaged Business Enterprises [DBE's]) shall compete fairly to receive and participate in performing WMATA contracts, including contracts and subcontracts at any tier, and also of the Federal Transit Administration (FTA) and the United States Department of Transportation (U.S. DOT) to receive and participate in performing federally assisted contracts.

Under its DBE Program, WMATA applies a DBE participation goal on construction (and construction-related) contracts having a total dollar value of \$500,000 or greater and a DBE participation goal on supply and service contracts having a total dollar value of \$100,000 or greater.

THIS PAGE NOT USED

~APPENDIX B

DISADVANTAGED BUSINESS ENTERPRISE (DBE)
NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION PLAN (REVISED SEPTEMBER 2001)

A. Disadvantaged Business Enterprise (DBE) Requirement:

1. The DBE requirements of the Authority's DBE Program Plan apply to this Contract. Accordingly, the Design-Builder shall carry out the requirements of the Authority's DBE Program Plan and this Appendix in the award and administration of U.S. Department of Transportation (US DOT) assisted contracts.

B. Policy:

1. It is the policy of the Authority (WMATA) that Disadvantaged Business Enterprises (DBE's) shall compete fairly to receive and participate in performing WMATA contracts, and of the Federal Transit Administration (FTA) and the US DOT that Disadvantaged Business Enterprises (DBE's) shall compete fairly to receive and participate in performing federally assisted contracts, and also including contracts and subcontracts at any tier. It is further the policy of the Authority, the FTA and the U.S. DOT that its prime contractors establish procedures to ensure the timely payment of amounts due pursuant to the terms of their subcontracts. The Design-Builder hereby agrees to carry out this policy in the award and administration of subcontracts to the fullest extent possible consistent with efficient Contract performance.

C. Contract Goal:

1. If the proposer is not a DBE, then the proposer agrees that the DBE goal for this Contract will be met by subcontracts or by joint ventures with DBE's. The percentage goal of the final Contract price, including amendments and modifications, set forth for each of these Projects is established at **21%**. The amount of DBE participation will be determined by the dollar value of the work performed and/or supplies furnished by DBE firms as compared to the total value of all work performed and/or supplies furnished under this Contract. The Design-Builder shall have met this goal if the Design-Builder's DBE participation meets or exceeds this goal.
2. In cases where work is added to the Contract by modification such that additional DBE participation is necessary to meet this goal, the Design-Builder shall increase the participation of one or more firms listed on the "Schedule of DBE Participation" or submit additional DBE firms to meet the goal. In cases where work is deleted from the Contract, the goal shall be applicable to the new Contract amount. The Design-Builder shall be permitted to meet the goal by revising its DBE participation, provided, however, that the revision shall not result in DBE participation that is less than the original goal.

D. Definitions:

1. Design-Builder. Design-Builder means one who participates, through a contract or subcontract (at any tier), in a US DOT assisted highway, transit or airport program.
2. DBE. A DBE means a for-profit small business concern that is at least 51% owned by one or more individuals who are both socially and economically disadvantaged individuals or, in the case of a corporation, in which 51 percent of the stock is owned by one or more such individuals; and whose management and daily business operations are controlled by one or more of the socially and economically disadvantaged individuals who own it.
3. Good Faith Efforts. "Good faith efforts" means efforts to achieve a DBE goal or other requirements of the Authority's DBE Program Plan which by their scope, intensity, and appropriateness to the objective, can reasonably be expected to fulfill the goal program requirement.
4. Joint Venture. Joint Venture means an association of a DBE firm and one or more other firms to carry out a single, for-profit business enterprise, for which the parties combine their property, capital, efforts, skills and knowledge, and in which the DBE is responsible for a distinct, clearly defined portion of the work of the contract and whose share in the capital contribution, control, management, risks, and profits of the joint venture is commensurate with its ownership interest.
5. Personal Net Worth. Personal net worth means the net value of the assets of an individual remaining after total liabilities are deducted. An individual's personal net worth does not include the individual's ownership interest in an applicant or participant DBE firm; or the individual's equity in his or her primary place of residence. An individual's personal net worth includes only his or her own share of assets held jointly or as community property with the individual's spouse.
6. Race-conscious. Race-conscious means a measure or program that is focused specifically on assisting only DBE's, including women-owned DBE's.
7. Race-neutral. Race-neutral means a measure or program that is, or can be, used to assist all small businesses. For the purposes of the DBE program, race-neutral includes gender-neutrality.
8. Small Business Concern. Small business concern means, with respect to firms seeking to participate as DBE's in US DOT assisted contracts, a small business concern as defined pursuant to Section 3 of the Small Business Act and Small Business Administration regulations implementing it (13 CFR Part 121) that also does not exceed the cap on average annual gross receipts specified in 49 CFR Part 26.65(b).
9. Socially and Economically Disadvantaged Individual. The phrase "socially and economically disadvantaged individual" means any individual who is a citizen (or other lawfully admitted permanent resident) of the United States and who is any individual who the Authority finds to be a socially and economically disadvantaged individual on a case-by-case basis, and any individual in the following groups, members of which are rebuttably presumed to be socially and economically disadvantaged:

- a. Black Americans, which includes persons having origins in any of the Black racial groups of Africa;
 - b. Hispanic Americans, which includes persons of Mexican, Puerto Rican, Cuban, Dominican, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race;
 - c. Native Americans, which includes persons who are American Indians, Eskimos, Aleuts, or Native Hawaiians;
 - d. Asian-Pacific Americans, which includes persons whose origins are from Japan, China, Taiwan, Korea, Burma (Myanmar), Vietnam, Laos, Cambodia (Kampuchea), Thailand, Malaysia, Indonesia, the Philippines, Brunei, Samoa, Guam, the U.S. Trust Territories of the Pacific Islands (Republic of Palau), the Commonwealth of the North Marianas Islands, Macao, Fiji, Tonga, Kiribati, Juvalu, Nauru, Federated States of Micronesia, or Hong Kong;
 - e. Subcontinent Asian Americans, which includes persons whose origins are from India, Pakistan, Bangladesh, Bhutan, the Maldives Islands, Nepal or Sri Lanka;
 - f. Women; and
 - g. Any additional groups whose members are designated as socially and economically disadvantaged by the SBA, at such time as the SBA designation becomes effective.
10. US DOT Assisted Contract. US DOT assisted contract means any contract between the Authority and a contractor (at any tier) funded in whole or in part with US DOT financial assistance, including letters of credit or loan guarantees.

E. How DBE Participation Is Counted Towards the Contract Goal:

DBE participation shall be counted towards meeting the DBE goal in accordance with the following:

1. When a DBE participates in a contract, only the value of the work actually performed by the DBE is counted towards the DBE goal.
 - a. This amount includes the entire amount of that portion of a construction contract that is performed by the DBE's own forces. This amount includes the cost of supplies and materials obtained by the DBE for the work of the contract, including supplies purchased or equipment leased by the DBE (except supplies and equipment the DBE subcontractor purchases or leases from the Design-Builder or its affiliate).
 - b. This amount includes the entire amount of fees or commissions charged by a DBE firm for providing a bona fide service, such as professional, technical, consultant, or managerial services, or for providing bonds or insurance specifically required for the performance of the contract, towards the DBE goal, provided the fee is reasonable and not excessive as compared with fees customarily allowed for similar services.
 - c. When a DBE subcontracts part of its work under the contract to another firm, the value of the subcontract work may be counted towards the DBE goal only if the DBE's subcontractor is itself a DBE. Work that a DBE subcontracts to a non-DBE firm does not count towards the DBE goal.
2. When a DBE performs as a participant in a joint venture, the portion of the total dollar value of the contract equal to the distinct, clearly defined portion of the work of the contract that a DBE performs with its own forces towards the DBE goal may be counted.

3. Expenditures to a DBE contractor towards the DBE goal may be counted only if the DBE is performing a commercially useful function on that Contract.
 - a. A DBE performs a commercially useful function when it is responsible for execution of the work of the contract and is carrying out its responsibilities by actually performing, managing, and supervising the work involved. To perform a commercially useful function, the DBE must also be responsible, with respect to materials and supplies used on the contract, for negotiating price, determining quality and quantity, ordering the material, and installing (where applicable) and paying for the material itself. To determine whether a DBE is performing a commercially useful function, the Authority will consider the amount of work subcontracted, industry practices, whether the amount the firm is to be paid under the contract is commensurate with the work it is actually performing and the DBE credit claimed for its performance of the work, and other relevant factors.
 - b. A DBE does not perform a commercially useful function if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of DBE participation.
 - c. If a DBE does not perform or exercise responsibility for at least 30 percent of the total cost of its contract with its own work force, or if the DBE subcontracts a greater portion of the work of a contract than would be expected on the basis of normal industry practice for the type of work, the Authority will presume that the DBE is not performing a commercially useful function.
4. The following factors will be used by the Authority in determining whether a DBE trucking company is performing a commercial useful function:
 - a. The DBE must be responsible for the management and supervision of the entire trucking operation for which it is responsible for on a particular contract, and there cannot be a contrived arrangement for the purpose of meeting the DBE goal.
 - b. The DBE must itself own and operate at least one fully licensed, insured and operational truck used on the contract.
 - c. The DBE receives credit for the total value of the transportation services it provides on the contract using trucks it owns, insures, and operates using drivers, it employs.
 - d. The DBE may lease trucks from another DBE firm, including an owner-operator who is certified as a DBE. The DBE who leases trucks from another DBE receives credit for the total value of the transportation services the lessee DBE provides on the contract.
 - e. The DBE may also lease trucks from a non-DBE firm, including an owner-operator. The DBE who leases trucks from a non-DBE is entitled to credit only for the fee or commission it receives as a result of the lease arrangement. The DBE does not receive credit for the total value of the transportation services provided by the lessee, since these services are not provided by a DBE.
 - f. The lease must indicate that the DBE has exclusive use of and control over the truck. This does not preclude the leased truck from working for others during the terms of the lease with the consent of the DBE, so long as the lease gives the DBE absolute priority for use of the leased truck. Leased trucks must display the name and identification number of the DBE.

5. The following factors will be used to count expenditures with DBE's for materials or supplies towards the DBE goal:
 - a. If the materials or supplies are obtained from a DBE manufacturer, 100 percent of the cost of the materials or supplies will be counted towards the DBE goal. A manufacturer is a firm that operates or maintains a factory or establishment that produces, on the premises, the materials, supplies, articles, or equipment required under the Contract and of the general character described by the Contract.
 - b. If the materials or supplies are purchased from a DBE regular dealer, 60 percent of the cost of the materials or supplies will be counted towards the DBE goal. A regular dealer is a firm that owns, operates or maintains a store, warehouse, or other establishment in which the materials, supplies, articles or equipment of the general character described and required under the contract are bought, kept in stock, and regularly sold or leased to the public in the usual course of business. To be a regular dealer, the firm must be an established, regular business that engages, as its principal business and under its own name, in the purchase and sale or lease of the products in question. A person may be a regular dealer in such bulk items as petroleum products, steel, cement, gravel, stone or asphalt without owning, operating, or maintaining a place of business as provided in this paragraph if this person both owns and operates distribution equipment for the products. Any supplementing of regular dealers' own distribution equipment shall be by long-term lease agreement and not on an ad hoc or contract-by-contract basis. Packagers, brokers, manufacturers' representatives, or other persons who arrange or expedite transactions are not regular dealers within the meaning of this paragraph.
 - c. With respect to materials or supplies purchased from a DBE which is neither a manufacturer nor a regular dealer, the entire amount of fees or commissions charged for assistance in the procurement of the materials and supplies, or fees or transportation charges for the delivery of materials and supplies required on a job site, may be counted towards the DBE goal, provided the fees are reasonable and are not excessive as compared with fees customarily allowed for similar services. The cost of the materials and supplies themselves may not be counted towards the DBE goal.
6. Participation by a firm that is not currently certified as a DBE by the Authority at the time of Contract award, does not count towards the DBE goal. Effective March 4, 2002, all DBE firms must be pre-certified: certification of firms must be in place prior to the due date of proposals on which the firm wishes to participate as a DBE.
7. The dollar value of work performed under the Contract by a firm whose DBE certification has expired, does not count towards the DBE goal.
8. The participation of a DBE subcontractor does not count towards the Design-Builder's DBE goal until the amount being counted towards the goal has been paid to the DBE.

F. Proposal Requirements (With the Initial Price Proposal and with the Final Proposal Revision [FPR]):

If a DBE goal is specified, the proposer shall submit with its initial Price Proposal a list of DBE-certified firms that it intends to enter into subcontract agreements with for this Contract. If no goal is specified and the proposer still intends to utilize DBE's in the performance of this Contract, the proposer shall submit with its initial Price Proposal a list of those DBE-certified firms. The documentation requirements of this Section 00453 shall be completed and submitted at the time set forth for the submittal of the FPR or if based on the initial proposals without discussions by the selected proposer before award as requested by the Authority for any Contract in which a DBE goal is applicable or for any Contract in which there was no goal established, but the proposer identified DBE-certified firms that it intends to enter into subcontract agreements with in its initial Price Proposal. Any proposer who fails to complete and return the following information, if applicable, as required may be deemed to be not responsible and may be ineligible for contract award. Proposers that fail to meet the DBE goal, if any, and fail to demonstrate "good faith efforts" to justify waiver of the DBE goal (see paragraph F.3. below) may be deemed to be not responsible and may be ineligible for contract award.

1. Completed "Schedule of DBE Participation" (Page B-12) sufficient to meet the above goal. If the proposer is a DBE firm and intends to satisfy the appropriate DBE requirement with its own firm, he/she must indicate in the Schedule the area of work and percentage it will perform to satisfy the goal.
 - a. For Design-Build negotiated procurements where a DBE goal is applicable, "the "Schedule of DBE Participation" need not be completed with initial proposals that are subject to further negotiations. However, the proposer shall provide a list of DBE-certified firms that it intends to enter into a subcontract agreement with as an element of the initial Price Proposal. A completed "Schedule of DBE Participation" shall be submitted with the final proposal revision (FPR) or by the selected proposer before award if discussions are not held.
2. Executed "Letters of Intent to Perform as a Subcontractor/Joint Venture" (Page B-13). If the proposer is not a DBE then he/she must attach these letters from each DBE listed on the Schedule.
 - a. For Design-Build, negotiated procurements where a DBE goal is applicable, the "Letters of Intent to Perform as a Subcontractor/Joint Venture" need not be submitted with initial proposals that are subject to further negotiations. Executed "Letters of Intent to Perform as a Subcontractor/Joint Venture" shall be submitted with the final proposal revision (FPR) or by the selected proposer before award if discussions are not held.
3. Justification for grant of relief (waiver of DBE goal). If in the submittal of its DBE Data, the proposer fails to meet the DBE goal, above if applicable, the proposer has the burden of furnishing sufficient documentation with its FPR of its "good faith efforts" to justify a grant of relief (waiver) from the goal or portion of the goal. Such justification shall be in the form of a detailed report. The following is a list of actions which shall be considered as part of the proposer's good faith efforts to obtain DBE participation. This list is neither a mandatory checklist nor is it intended to be exclusive or exhaustive. Other factors or types of efforts may be relevant in appropriate cases:
 - a. Soliciting through all reasonable and available means (e.g. attendance at pre-proposal meetings, advertising and/or written notices) the interest of all certified DBE's who have the capability to perform the work of the Contract. The proposer must solicit this interest within sufficient time to allow the DBE's to respond to the solicitation. The proposer must determine with certainty if the DBE's are interested by taking appropriate steps to follow up initial solicitations.

- b. Selecting portions of the work to be performed by DBE's in order to increase the likelihood that the DBE goal will be achieved. This includes, where appropriate, breaking out contract work items into economically feasible units to facilitate DBE participation, even when the Design-Builder might otherwise prefer to perform these work items with its own forces.
- c. Providing interested DBE's with adequate information about the plans, specifications, and requirements of the contract in a timely manner to assist them in responding to a solicitation.
- d.
 - (1) Negotiating in good faith with interested DBE's. It is the proposer's responsibility to make a portion of the work available to DBE subcontractors and suppliers and to select those portions of the work or material needs consistent with the available DBE subcontractors and suppliers, so as to facilitate DBE participation. Evidence of such negotiation includes the names, addresses, and telephone numbers of DBE's that were considered; a description of the information provided regarding the plans and specifications for the work selected for subcontracting; and evidence as to why additional agreements could not be reached for DBE's to perform the work. "DBE Unavailability Certifications" (Page B-14) shall be completed as appropriate.
 - (2) A proposer using good business judgment would consider a number of factors in negotiating with subcontractors, including DBE subcontractors, and would take a firm's price and capabilities as well as the contract goal into consideration. However, the fact that there may be some additional costs involved in finding and using DBE's is not in itself sufficient reason for a proposer's failure to meet the contract DBE goal, as long as such costs are reasonable. Also, the ability or desire of a Design-Builder to perform the work of a contract with its own organization does not relieve the proposer of the responsibility to make good faith efforts. Design-Builders are not, however, required to accept higher quotes from DBE's if the price difference is excessive or unreasonable.
- e. Not rejecting DBE's as being unqualified without sound reasons based on a thorough investigation of their capabilities. The Design-Builder's standing within its industry, membership in specific groups, organizations, or associations and political or social affiliations (for example union vs. non-union employee status) are not legitimate causes for the rejection or non-solicitation of proposals in the Design-Builder's efforts to meet the project goal.
- f. Making efforts to assist interested DBE's in obtaining bonding, lines of credit, or insurance as required by the recipient or Design-Builder.
- g. Making efforts to assist interested DBE's in obtaining necessary equipment, supplies, materials, or related assistance or services.
- h. Effectively using the services of available minority/women community organizations; minority/women contractors' groups; local, state, and Federal minority/women business assistance offices; and other organizations as allowed on a case-by-case basis to provide assistance in the recruitment and placement of DBE's.

G. PROPOSING REQUIREMENTS (APPARENT SUCCESSFUL PROPOSER):

As applicable, the proposer shall submit the following items within ten (10) calendar days after notification that they are the apparent successful proposer:

1. The documents itemized on the DBE Certification Instructions (Page B-15) and the "DBE Disclosure Affidavit" (Pages B-16, B-17 & B-18) are for DBE firms not currently certified with WMATA. For those DBE's certified by WMATA within the past three years, a copy of the current WMATA certification letters may be attached in lieu of the Disclosure Affidavit and related documents.
2. DBE Manufacturer's Affidavit, if applicable, must be submitted in order to receive 100 percent of the allowable credit for expenditures to DBE manufacturers/suppliers (page B-19). By submission of this Affidavit, the proposer certifies this it is satisfied that the manufacturer meets the requirements of 49 CFR Part 26.
3. Schedule B Information for Determining Joint Venture Eligibility, if applicable (pages B-22, B-23, B-24 & B-25*). Submittal shall be signed by all parties, dated and notarized.
4. Copy of Joint Venture Agreement, if applicable. Submittal shall be signed by all parties, dated and notarized.
5. Certification letter of the DBE regular dealer/supplier, if applicable. If the proposer wants to receive the maximum allowable credit of its expenditures for material(s) or supplies required under this Contract, from DBE regular dealers/suppliers, the DBE must submit a signed and notarized statement on their letterhead, that they are a regular dealer of the material(s) or supplies. By submission of this statement, the proposer certifies that it is satisfied that the subcontractor is a regular dealer/supplier that meets the requirements of 49 CFR Part 26.

H. CONTRACT ADMINISTRATION REQUIREMENTS:

The following requirements apply after contract award:

1. The Design-Builder shall include the following provision in each subcontract it awards in support of the Appendix B DBE goal:

The Design-Builder shall not discriminate on the basis of race, color, national origin or sex in the performance of this Contract. The Design-Builder shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of US DOT assisted contracts and Authority Contracts. Failure by the Design-Builder to carry out these requirements is a material breach of this Contract, which may result in termination of this Contract or such other remedy as the Authority deems appropriate.
2. The Design-Builder shall monitor the performance of, collect and report data on DBE participation to the Authority's Office of Civil Rights, on the attached "Prompt Payment Report-Design-Builder's Report" (page B-20) and "Prompt Payment Report Prime Sub-Contractor's Report" (page B-21), which shall be submitted monthly with each payment request to the Authority Representative. Failure to submit these reports may result in suspension of Contract payments. The Design-Builder shall certify with each payment request that payment has been or will be made to all subcontractors due payment, within ten (10) days after receipt of payment from the Authority for work by that subcontractor. The Design-Builder shall inform the Authority Representative, with their payment request, of any situation in which scheduled subcontractor payments have not been made.

3. The Design-Builder shall have a continuing obligation to maintain a schedule for participation by DBE contractor(s) to meet its goal set forth above in this Appendix. The Design-Builder shall not have work performed nor the materials or supplies furnished by any individual or firm other than those named in the "Schedule of DBE Participation". If at any time, the Design-Builder believes or has reason to believe that it needs to obtain a substitute for a DBE contractor named in the "Schedule of DBE Participation", the Design-Builder shall, within ten (10) days, notify the Contracting Officer or other delegated Authority Representative of that fact in writing. Situations which may warrant substitution for a DBE firm include, but are not limited to the following:
 - a. Failure to qualify as a DBE.
 - b. Death or physical disability, if the named subcontractor or DBE partner of the joint venture is an individual.
 - c. Dissolution, if a corporation or partnership.
 - d. Bankruptcy of the subcontractor, subject to applicable bankruptcy law, and only instances where the bankruptcy affects the Design-Builder's ability to perform.
 - e. Inability to furnish a reasonable performance or payment bond, if required.
 - f. Inability to obtain, or loss of, a license necessary for the performance of the particular category of work.
 - g. Failure or inability to comply with a requirement of law applicable to contractors and subcontractors on a construction, alteration or repair project.
 - h. Failure or refusal to execute the subcontract in accordance with the terms of an offer submitted to the Design-Builder prior to the Design-Builder's submission of its proposal, but only where the Contracting Officer or other delegated Authority Representative can ascertain with reasonable certainty the terms of such offer. In the absence of any other factors, such a failure or refusal will be considered an unusual situation only if the bidder/proposer obtained, prior to bidding/proposing, an enforcement commitment from the subcontractor involved.
 - i. Failure to comply with the terms and conditions of this Contract or those of its subcontract or joint venture agreement.

Within 30 days thereafter, the Design-Builder shall, if necessary to achieve the Appendix B goal, make every reasonable effort to subcontract the same or other work to other DBE firms. The Design-Builder must have the prior written approval of the Contracting Officer or other delegated Authority Representative and the Authority's Office of Civil Rights before substitution for a DBE subcontractor, regardless of the reason for substitution. Failure to obtain Authority approval could result in the Design-Builder being found non-compliant with the requirements of Appendix B.

4. The Design-Builder shall forward copies of all subcontracts at the time of their execution to the Authority's Office of Civil Rights through the Authority Representative.

5. If the Contracting Officer or other delegated Authority Representative determines that the Design-Builder has failed to comply with this Appendix B, he will notify the Design-Builder of such non-compliance and the action to be taken. The Design-Builder shall, after receipt of such notice, take corrective action. If the Design-Builder fails or refuses to comply promptly, the Contracting Officer may issue a "stop work order" stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to any such stop work order shall be made the subject of claim for extension of time or for excess costs or damages by the Design-Builder. When the Authority proceeds with such formal actions, it has the burden of proving that the Design-Builder has not met the requirements of this Appendix, but the Design-Builder's failure to meet its Appendix B goal shall shift to it the requirement to come forward with evidence to show that it has met the good faith requirements of this Appendix. Where the Design-Builder, after exhausting all its administrative and legal remedies and procedures is found to have failed to exert a "good faith effort" to involve DBE's in the work as herein provided, the Authority may declare the Design-Builder ineligible to receive further Authority contracts for three years from the date of the finding.
6. The Design-Builder agrees to cooperate in any studies or surveys as may be conducted by the Authority which are necessary to determine the extent of the Design-Builder's compliance with this Appendix.
7. The Design-Builder shall keep records and documents for two years following performance of this Contract to indicate compliance with this Section 00453. These records and documents, or copies thereof, shall be made available at reasonable times and places for inspection by any Authorized Representative of the Authority and will be submitted upon request together with any other compliance information which such Representative may require.
8. If the Authority, the FTA or the US DOT has reason to believe that any person or firm has willfully and knowingly provided incorrect information or made false statements regarding the DBE Program, the matter shall be referred to the Authority's Office of Civil Rights.
9. Failure by the Design-Builder to carry out the requirements of this Appendix is a material breach of this Contract, which may result in the termination of this Contract under the Default provisions of this Contract or such other remedy as the Authority deems appropriate.

SUMMARY OF SUBMITTALS

With the Initial Price Proposal

1. List of DBE-certified firms that it intends to enter into subcontract agreements with (if a DBE goal is specified in Section 00453, DBE GOAL REQUIREMENTS, or if no goal is specified in Section 00453, but the proposer still intends to utilize DBE's in the performance of this Contract).

With the Price Proposal Final Proposal Revision (FPR) (if a DBE goal is specified in Section 00453, or if no goal is specified in Section 00453, but the proposer submitted with its Initial Price Proposal a list of DBE-certified firms that it intends to enter into subcontract agreements with)

1. Completed "Schedule of DBE Participation" (Page B-12).
2. Executed "Letters of Intent to Perform as a Subcontractor/Joint Venture" (Page B-13).
3. Justification for grant of relief (waiver of DBE goal), if applicable. Include completed "DBE Unavailability Certifications" (Page B-14) as appropriate.

Proposing Requirements (Apparent Successful Proposer) As Applicable

1. Documents itemized on the DBE Certification Instructions (Page B-15) and the "WMATA DBE Disclosure Affidavit" (Pages B-16, B-17 & B-18) for each DBE currently not certified with WMATA. For those DBE's certified by WMATA within the past three years, copy of the current WMATA certification letters.
2. DBE Manufacturer's Affidavit, if applicable, must be submitted in order to receive 100 percent of the allowable credit for expenditures to DBE manufacturers/suppliers (page B-19).
3. Schedule B Information for Determining Joint Venture Eligibility, if applicable (pages B-22, B-23, B-24 & B-25*).
4. Copy of Joint Venture Agreement, if applicable.
5. Certification letter of the DBE regular dealer/supplier, if applicable.

After Contract Award

1. "Prompt Payment Report-Design-Builder's Report" (page B-20) – submitted monthly.
2. "Prompt Payment Report-Sub-Contractor's Report" (page B-21) – submitted monthly.
3. Request to substitute DBE contractor (see paragraph 8.C.) – submitted as required.
4. Copies of subcontracts - submitted at the time of their execution.

SUBMIT WITH FPR
SCHEDULE OF DBE PARTICIPATION

Contract No. _____

Name of Proposer _____ Project Name _____

The proposer shall complete this Schedule by identifying only those DBE firms, with scope of work and price, who have agreed to perform work on this Contract. The prices for the work/supplies of these firms shall be at prices amounting to at least the DBE percentage goal of the total Contract price. The proposer agrees to enter into a formal agreement with the DBE firm(s) listed for the work and at, or greater than, the prices listed in this Schedule subject to award of a Contract with the Authority. If the total amount is less than the DBE percentage goal, a justification for waiver of DBE goal shall be attached to this Schedule.

DBE Certification Instructions

Important Notice

If you do not have a current official letter of certification from WMATA, you must comply with the procedures that follow in order to be eligible to participate in WMATA's Disadvantaged Business Enterprise (DBE) Program.

Instructions

If you currently hold a valid DBE Certification status with either the Maryland Department of Transportation (MDOT); or the U.S. Small Business Administration, 8a Program (SBA-8a), forward a copy of the official certification letter along with the WMATA Affidavit. In addition, submit the pertinent documents for your company listed below. The affidavit form should be completed in full and NOTARIZED.

General (All firms must submit documents under General)

- Current (unaudited) Financial Statements
- Prior three (3) years Federal Tax Returns
- Resume of Principal(s) and Key Personnel
- Third Party Agreements, such as Rental and Management Agreements
- Licenses to Do Business
- Personal Net Worth (PNW) Statement
- Statement of Disadvantage
- No Change Affidavit or Notice of Change (where applicable)

Corporations

- Articles of Incorporation
- By-Laws
- Stock Ownership Options
- Copy of Stock Certifications of Each Holder
- Copy of Voting Rights
- Record of First Organizational Meeting

Partnerships

- Partnership Agreement

Proprietorships

- IRS Employer ID Number
- WMATA Vendor ID#

Recertification Review

Once certified you will be required, every three years, to resubmit for our review an updated NOTARIZED WMATA DBE Affidavit form along with the latest income tax return and copies of any of the above cited documents that may have changed since your initial certification. This should include updated letters of certification from MDOT or SBA-8a if your initial WMATA Certification was based upon prior certification under either of these programs. (NOTICE: In-person interviews may be scheduled at WMATA facilities and scheduled or unscheduled visits to your place of business may be conducted at the direction of WMATA staff.)

CONTRACTING REQUIREMENTS

00600 PROJECT FORMS

This Section includes documents that are to be submitted relating to the Contracting Requirements.

00610 BOND FORMS

This Section includes bond forms required to be submitted by the Design-Builder.

00611 BOND REQUIREMENTS

- A. Requirements: If the Contract price is \$100,000 or more, the Design-Builder shall submitted to the Contracting Officer within 10 calendar days after the date of Contract Award performance and payment bonds each with good and sufficient surety or sureties acceptable to the Authority. Corporations executing the bonds as sureties must be among those appearing on the Treasury Department's list of approved sureties and must be acting within the limitations set forth therein. The bonds should be submitted with the other contractual forms required in Section 00500. The penal sums of such bonds shall be as follows for each Project:
1. Performance Bond:
 - a. The penal sum of the performance bond shall equal 100 percent of the Contract price.
 2. Payment Bond:
 - a. The penal sum of the payment bond shall be \$2,500,000.
- B. Failure to furnish: In the event the required bonds are not furnished as specified, the Contracting Officer may issue the Notice To Proceed, however, no work will be permitted on site and no payment will be made to the Design-Builder until the required bonds are furnished.
- C. The Authority may consider alternate methods of providing adequate security for contract performance and payment at its discretion.

00612 PERFORMANCE BOND

PROPOSER'S INFORMATION NOTICE: The following is included for the proposer's information and use in the event he is awarded the Contract. It is not required to be submitted with the proposal.

Contract No.:

Contract Date:

Penal Sum of Bond:

Date Bond Executed:

KNOW ALL MEN BY THESE PRESENTS, that we, the Principal and Surety(ies) hereto, are firmly bound to the Washington Metropolitan Area Transit Authority (hereinafter called the Authority) in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally: Provided, that, where the Sureties are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sum "jointly and severally" as well as "severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sum only as set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

THE CONDITION OF THIS OBLIGATION IS SUCH, that whereas the Principal entered into the contract identified above:

NOW, THEREFORE, if the Principal shall perform and fulfill all the undertakings, covenants, terms, conditions and agreements of said contract during the original term of said contract and any extensions thereof that may be granted by the Authority, with or without notice to the Surety(ies), and during the life of any guaranty required under the contract, and shall also perform and fulfill all the undertakings, covenants, terms, conditions and agreements of any and all duly authorized modifications of said contract that may hereafter be made, notice of which modifications to the Surety(ies) being hereby waived, then the above obligation shall be void and of no effect. Surety acknowledges Authority can advance the date of payments to Contractor, and by so doing the Surety remains liable under the terms of the bond.

IN WITNESS WHEREOF, the Principal and Surety(ies) have executed this performance bond and have affixed their seals on the date set forth above.

Bond Premium Schedule	Total Premium	\$
-----------------------------	---------------	----

Performance Bond Instructions:

1. This form is authorized for use in connection with contracts for design and construction work or the furnishing of labor, materials, equipment, supplies and services.
2. The full legal name and business address of the Principal shall be inserted in the space designated "Principal" on the face of this form. The bond shall be signed by an authorized person. Where such person is signing in a representative capacity (e.g., an attorney-in-fact), but is not a member of the firm, partnership or joint venture, or an officer of the corporation involved, evidence of his authority must be furnished.
3. Corporation executing the bond as sureties must be among those appearing on the Treasury Department's therein. Where more than a single corporate surety is involved, their names and addresses (city and State) shall be inserted in the spaces (Surety A, Surety B, etc.) headed "Corporate Surety(ies)".
4. Corporations executing the bond shall affix their corporate seals.
5. The name of each person signing this performance bond should be typed in the space provided.
6. The date this Bond is executed must be later than the contract execution date.

00613 PAYMENT BOND

Contract No.

Contract Date:

Penal Sum of Bond:

Date Bond Executed:

KNOW ALL MEN BY THESE PRESENTS, that we, the Principal and Surety(ies) hereto, are firmly bound to the Washington Metropolitan Area Transit Authority (hereinafter called the Authority) in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally: Provided, that, where the Sureties are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sum "jointly and severally" as well as "severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sum only as set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

THE CONDITION OF THIS OBLIGATION IS SUCH, that whereas the Principal entered into the contract identified above:

NOW, THEREFORE, if the Principal shall promptly make payment to all claimants as hereinafter defined supplying services, labor material and/or equipment in the prosecution of the Work provided for in said contract, and any and all duly authorized modifications of said Contract that may hereafter be made, notice of which modifications to the Surety(ies) being hereby waived, then the above obligation shall be void and of no effect, otherwise it shall remain in full force and effect, subject, however, to the following conditions:

1. A claimant is defined as one having a direct contract with the Principal or with a subcontractor of the Principal for labor, material, or both, used or reasonably required for use in the performance of the contract, labor and material being construed to include that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental of equipment directly applicable to the Contract.
2. The above-named Principal and Surety hereby jointly and severally agree with the Owner that every claimant as herein defined, who has not been paid in full before the expiration of a period of ninety (90) days after the date on which the last of such claimant's work or labor was done or performed, or materials were furnished by such claimant, may sue on this bond for the use of such claimant, prosecute the suit to final judgment for such sum or sums as may be justly due the claimant, and have execution thereon. The Owner shall not be liable for the payment of any costs or expenses of any such suit.
3. No suit or action shall be commenced hereunder by any claimant:
 - a. Unless claimant, other than one having a direct contract with the Principal, shall have given written notice to the Principal within ninety (90) days after such claimant did or performed the last of the work or labor, or furnished the last of the materials for which said claim is made, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were furnished, or for whom the work or labor was done or performed. Such notice shall be served by mailing the same by registered mail or certified mail, postage prepaid, in an envelope addressed to the Principal at any place where he maintains an office or conducts business, or his residence or such notice shall be served in any manner in which legal process may be served in the state or District of Columbia in which the aforesaid project is located, save that such service need not be made by a public officer.
 - b. After the expiration of one (1) year following the date of final settlement of said CONTRACT, it being understood, however, that if any limitation embodied in this bond is prohibited by any law controlling the construction hereof, such limitation shall be deemed to be amended so as to be equal to the minimum period of limitation permitted by such law.
 - c. Other than in a state court of competent jurisdiction in and for the county or other political subdivision of the state in which the project, or any part thereof, is situated or in the United States District Court for the district in which the project, or any part thereof, is situated, and not elsewhere.

Instructions

1. This form is authorized for use in connection with contracts for design work, construction work or the furnishing of labor, materials, equipment, supplies and services.
2. The full legal name and business address of the Principal shall be inserted in the space designated "Principal" on the face of this form. The bond shall be signed by an authorized person. Where such person is signing in a representative capacity (e.g., an attorney-in-fact), but is not a member of the firm, partnership or joint venture, or an officer of the corporation involved, evidence of his authority must be furnished.
3. Corporation executing the bond as sureties must be among those appearing on the Treasury Department's list of approved sureties and must be acting within the limitations set forth therein. Where more than a single corporate surety is involved, their names and addresses (city and State) shall be inserted in the spaces (Surety A, Surety B, etc.) headed "Corporate Surety(ies)".
4. Corporations executing the bond shall affix their corporate seals.
5. The name of each person signing this performance bond should be typed in the space provided.
6. The date this bond is executed must be later than the contract execution date.

00614 PERFORMANCE AND PAYMENT BONDS (Additional Bond Security)

- A. If any surety upon any performance bond furnished in connection with this Contract becomes unacceptable to the Contracting Officer, or if any such surety fails to furnish reports as to its financial condition from time to time as requested by the Contracting Officer, the Design-Builder shall promptly furnish such additional security as may be required from time to time to protect the interest of the Authority and of persons supplying labor or materials in the prosecution of the work contemplated by this Contract.
- B. If any surety upon any payment bond furnished in connection with this Contract becomes unacceptable to the Contracting Officer, or if any such surety fails to furnish reports as to its financial condition from time to time as requested by the Contracting Officer, the Design-Builder shall promptly furnish such additional security as may be required from time to time to protect the interest of the Authority and of persons supplying labor or materials in the prosecution of the work contemplated by this Contract.

00620 CERTIFICATES AND OTHER FORMS

This Section provides an area for conforming the Project Manual with required Affidavits and Certificates provided by the Design-Builder; i.e., Certificates of Acceptance, Application for Payment, Insurance, Compliance including ADAAG Design and Construction Compliance and Checklists, Substantial Completion, Final Performance and Completion, and Final Settlement.

END OF SECTION

THIS PAGE NOT USED

CONTRACTING REQUIREMENTS

00700 CONDITIONS OF THE CONTRACT

THIS PAGE NOT USED

CONTRACTING REQUIREMENTS

00700 GENERAL CONDITIONS (10/28/04)

PHASE II - NOTE: The asterisks (*) at the beginning of the clause number references represent clauses mandated by the Federal Transit Administration (FTA), WMATA's funding agency, and will be incorporated into this Design-Build contract. The provisions without asterisks are negotiable and may be negotiated by either party prior to contract award.

This Section includes a compilation of contractual and legal requirements that list the rights, responsibilities and relationships of the parties to a contract and defines duties and limits of authority for design professionals and construction management in performance of contract administration. This Section 00700 shall be read in conjunction with Section 00800, Supplementary Conditions, which specifies any modifications to these General Conditions, and which will be cited in the 00800 Section using the same last 2 digits of the Section number; i.e., a mod to Section 00724 will be indicated as Section 00824.

*00701 CONTRACTING DEFINITIONS (10/25/04)

- A. As used throughout the Contract Documents the following terms shall have the meanings set forth below:
1. Agreement: The term Agreement means the Authority form titled "Design-Build Contract Form" or "Solicitation, Offer and Award" or other suitable Authority form contained in this RFP, that, upon execution by the Design-Builder and the Authority, creates the Contract between the two parties for the services specified in this Project Manual, and as graphically described in the attachments to the Project Manual.
 2. Amendment and Modifications: Written or graphic instructions issued to clarify, revise, add, or delete Contract requirements that are issued either before or after the execution of the Agreement:
 - a. Amendment: A document which is added to the original Contract Documents during the proposing period.
 - b. Contract Modification: A document which is added to the Contract Documents after the execution of the Agreement.
 3. Approval: Approval of a submittal or any other item shall be solely for the purpose of establishing conformance to the Documents as described in Section 00719, AUTHORITY REVIEWS, Section 00720, SUBMITTALS Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES AND Section 01780, CLOSEOUT SUBMITTALS. Where the specifications require approval

by the Authority, the Design-Builder shall obtain such approval before proceeding with the affected work. Where specifications call for submittals to be made to the Authority but do not state a requirement for Authority approval, the Authority may disapprove such submittals, but it shall not be required to respond to or to approve such submittals.

4. Approved, acceptable, satisfactory or words of like import: Approved by, acceptable to or satisfactory to the Contracting Officer or the Authority Representative or his designated representative, unless otherwise expressly stated.
5. As-built Contract Drawings (Design-Builder Provided): The term As-built Contract Drawings prepared by or through the Design-Builder reflect all known changes from the approved Final Design Drawings, including as applicable As-built Standard Drawings and As-built Information Drawings; and also include As-Built Shop, Working, and Manufacturers' Shop Drawings and Field Installation Details as specified in Section 01780, CLOSEOUT SUBMITTALS.
6. As-Built Specifications (Design-Builder Provided): The term As-Built Specifications means those specifications prepared by or through the Design-Builder in CSI format consisting of written technical descriptions of materials, equipment, construction systems, standards, and workmanship that were actually applied in construction of the Project and annotated to show revisions from the Final Design Specifications as specified in Section 01780, CLOSEOUT SUBMITTALS.
7. As shown, as indicated, as detailed or words of similar import: It shall be understood that the reference is made to the Project Drawings accompanying this Project Manual unless stated otherwise. The word provided as used herein shall be understood to mean provided complete in place, that is furnished and installed.
8. As specified, as described, or words of similar import: It shall be understood that the reference is made to this Project Manual unless stated otherwise.
9. Authority: The term Authority means the Washington Metropolitan Area Transit Authority, created effective February 20, 1967, by Interstate Compact by and between Maryland, Virginia and the District of Columbia, pursuant to Public Law 89-774, approved November 6, 1966.
10. Authority Representative: The Authority Representative is the person responsible for post award execution of an Authority contract in the most effective, economical, and timely manner. The Authority Representative is the Authority's primary point of contact with its Design-Builder. In addition, the Authority Representative is delegated authority to modify this Contract under the Changes clause, within specified dollar limits. The Authority may delegate contracting

officer authority to other project personnel. The Authority Representative may, at his or her discretion, delegate project management responsibilities to a Project Representative. Unless the Design-Builder is directed to the contrary, all correspondence with respect to this Contract shall be sent to the Authority Representative.

11. **Basis of Design:** The Design-Builder shall utilize for the design of any project and for the preparation of the Final Design Specifications and Final Design Drawings, the WMATA Design Criteria consisting of the Program Criteria in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA; the Standard and Technical Specifications in Divisions 2 through 16; and the Project Description, Standard and Design Directive Drawings as applicable in the Project Drawings Attachment to the Project Manual as a minimum. (10/24/03)
12. **Board of Directors:** The term Board of Directors means the Board of Directors of the Washington Metropolitan Area Transit Authority.
13. **Builder:** The term Builder refers to all members in the Design-Build team that take part in the manufacture, fabrication, installation, and construction of the Project. For more detail on the Builder's role and responsibility, refer to Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
14. **Claim:** The term Claim means a written demand or assertion by one of the parties seeking, as a legal right, the payment of money, adjustment or interpretation of Contract terms, or other relief, arising under or relating to this Contract.
15. **Contract:** The term Contract means the written Agreement between the Authority and the Design-Builder covering the Work as set forth in all the Contract Documents.
16. **Contract Documents:** The term Contract Documents means all documents included in the Contract as defined above. The Contract Documents consist of: This Project Manual and the Project Drawings and all documents referenced herein or appended hereto; all addenda or modifications issued before, on, or after the effective date of the Contract; the Notice to Proceed; and the Design-Builder's Price and Technical Proposals, as finally accepted.
17. **Contract Record Drawings (Design-Builder Provided):** The term Contract Record Drawings means those final as-built drawings prepared by or through the Design-Builder consisting of all the tangible, graphic manifestations of the technical descriptions of materials, equipment, construction systems, standards, and workmanship that were actually applied in construction of the Project including the As-built Final Design Drawings, Shop Drawings, Working Drawings, Standard Drawings, Record Drawings for Authority-Provided Information Drawings, Manufacturers' Shop Drawings, Field Drawings, and installation details as

specified in Section 01780, CLOSEOUT SUBMITTALS.

18. **Contracting Officer:** A Contracting Officer is an employee within the Authority's Office of Procurement and Materiel with authority duly delegated from the powers of the General Manager and CEO to legally bind the Authority by signing a contractual instrument. The Office of Procurement and Materiel has been delegated broad authority regarding acquisition functions, independent from the project office. Contracting Officers have the authority to make related determinations and findings, and take other significant actions normally reserved for the Office of Procurement and Materiel including, but not limited to: awards, modifications above the Authority Representative's level of authority, final payments, suspensions, terminations, debarments, assessment of liquidated damages, and issuances of final decisions under Section 00732, DISPUTE RESOLUTION. The term includes certain other representatives of the Authority acting within delegated limits of authority. In general, the Authority's primary point of contact for pre-award administration and fiscal closeout resides with the Contracting Officer, and the primary point of contact for the post-award contract administration is the Authority Representative.
19. **Contracting Requirements:** Documents related to the Contracting Requirements including Contract Forms and Attachments to be submitted by the successful proposer which includes Agreement and Bonds and Certificates.
20. **Contractor:** The term Contractor means the Design-Builder that contracts with the Authority to furnish design and construction (design-build) services for the Project. The term Contractor is synonymous with Design-Builder.
21. **Day:** The term day shall mean calendar day except where the term working day or like term is used.
22. **Design-Builder:** The term Design-Builder means the individual, partnership, firm, corporation, or other business entity that is contractually obligated to the Authority to furnish, through itself or others, the design and construction (design-build) services described in the Contract, including all incidentals which are necessary to complete the Work in accordance with the Contract. The term Design-Builder is synonymous with Contractor. For more detail on the Design-Builder's role and responsibilities, refer to Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
23. **Design Professional:** The term Design Professional or Designer means the individual(s), partnership(s), firm(s), corporation(s) or other business entity(s) that is either the Design-Builder, or employed or retained by the Design-Builder, to manage and perform the design services for the Project. For more detail on the Design Professional's role and responsibility, refer to Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
24. **Directed, required, ordered, designated, prescribed or words of like import:** It

shall be understood that the direction, requirement, order, designation or prescription of the Contracting Officer or his designated representative is intended, unless otherwise expressly stated.

25. Engineer: The term Engineer is used in numerous locations in the specifications. The term Engineer is synonymous with the term Resident Engineer, Project Representative, or if no individual has been so designated, the Authority Representative.
26. Acceptance means that all Work has been substantially completed, has been inspected by the Authority for contract compliance, and is ready for beneficial use of the Authority with only punchlist and administrative items remaining for completion.
27. Final Completion means that all design and construction have been completed; all punch list items completed; all Contract Record Drawings, manuals and other close-out submittals including spare parts completed; all turned over to the Authority; and all parts of the Work are accepted by the Authority.
28. Final Design Drawings (Design-Builder Provided): The term Final Design Drawings means those drawings prepared by or through the Design-Builder and approved for construction by the Authority consisting of the tangible, graphic manifestations of the technical descriptions of materials, equipment, construction systems, standards, and workmanship as applied to the construction of the Project.
29. Final Design Specifications (Design-Builder Provided): The term Final Design Specifications means those specifications prepared by or through the Design-Builder and approved for construction by the Authority consisting of written technical descriptions of materials, equipment, construction systems, standards, and workmanship as applied to the construction of the Project as well as administrative details related thereto.
30. General Conditions are those contract conditions that are applicable to all Authority construction contracts and mandated by the Authority's funding agency, Federal Transit Administration (FTA) and are not specifically tailored to the requirement.
31. Geotechnical information, logs and borings, water-level readings of existing observation wells, data and drawings of the jurisdictional highway and traffic department, plats of sidewalk vaults, existing building and utility plans and cross sections, street widths and traffic counts, building codes and design standards, environmental information, survey data and existing site conditions as applicable are provided as a part of the Information Documents and have been included for information only as an aid for the proposers' preparation of their proposals. The Geotechnical Information document provided in Section 00321,

GEOTECHNICAL INFORMATION and the environmental information provided in Section 00341, ENVIRONMENTAL REPORT as applicable describes the geologic and environmental conditions anticipated during the work of this Contract and the influence such anticipated geologic and environmental conditions have had upon the preliminary design. The Design-Builder shall conduct its own additional detailed geotechnical and environmental investigations as necessary as a basis for its final design. The survey and site information as applicable is not guaranteed to be complete and the proposers are encouraged to attend the scheduled site visit as specified in Section 00252, SITE INSPECTION.

32. Including/Consisting of:
 - a. Including: Introduces a partial, representative listing of things or actions.
 - b. Consisting of: Introduces a complete listing of things or actions which constitute the whole.
33. Information Documents (Authority-Provided): The term Information Documents means those Contract Documents that are informational and recommended in nature, and which are provided to the Design-Builder for its information and use, but which the Design-Builder is not necessarily required to comply with. Information Documents are listed in Section 00300 of the Proposing Requirements.
34. Issued for Construction: The term Issued for Construction refers to drawings, specifications and other documents that are approved to be issued by the Design-Builder's for the construction, fabrication, or other implementation of its design.
35. Jurisdictional Authorities: The term Jurisdictional Authorities refers to Federal, State and local authorities or agencies having jurisdiction over work to which reference is made.
36. Legal Requirements: The term Legal Requirements means all federal, state and local laws, ordinances, rules, orders, decrees, and regulatory requirements such as building codes, mechanical codes, electrical codes, fire codes, Americans with Disabilities Act Accessibility Guidelines (ADAAG) regulations and other regulations of any government or quasi-government entity that are applicable to the Project as specified in Section 01410, REGULATORY REQUIREMENTS, Section 01420, REFERENCES, Section 00708, RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN-RELATED SERVICES, AND Section 00707, PERMITS AND RESPONSIBILITIES.
37. Authority-Provided Documents: The term Authority-Provided Documents means the Requirements of the Project Manual and Attachments to the Project Manual which the Design-Builder must comply with, and are further described in Section

00300 of the PROPOSING REQUIREMENTS. The following are such Documents:

- a. Project Manual Division 00, Introductory Information, Requirements of the Proposing Requirements, and Contracting Requirements.
 - b. Project Manual Division 01, General Requirements.
 - c. WMATA Design Criteria: Project Manual Program Criteria in Division 01 above, Project Manual WMATA Standard Specifications and WMATA Technical Specifications - Divisions 2 through 16, and Drawings in the Project Drawings Attachments to the Project Manual (See Section 00302).
 - d. The appropriate WMATA Safety Manual, and associated insurance document if applicable, as specified in Section 00371, the Safety and Security Certification Program Plan as specified in Section 00381 and the System Safety Program Plan as specified in Section 00391 Attachments to the Project Manual; and also, the Safety Rules and Procedures Manual and the Metrorail Safety Rules and Procedures Handbook as applicable 12/24/03
 - e. All other documents incorporated by reference in the above.
38. Operations Readiness Date (ORD): Operations Readiness Date is the date upon which WMATA certifies that the system and equipment are complete and capable of supporting revenue rail service.
39. Project: The term Project means the design and construction (Design-Build) of the facility described in the Contract Documents. The Project also involves the integration of new systems into existing Authority systems as applicable.
40. Project Drawings (Authority-Provided):
- a. Project Drawings: The term Project Drawings means the plans, profiles, cross sections, elevations, schedules and details listed or referenced in the Project Manual and which are an Attachment to the Project Manual, and that show the locations, character, dimensions and details of the work to be performed and include the Project Description, Standard and Design Directive Drawings and the Information Drawings.
 - (1) Design Directive Drawings: The term Design Directive Drawings means those drawings that have been prepared by the Authority, and that have been prepared to serve as standard designs for WMATA projects that the Design-Builder shall utilize as applicable in the preparation of the Final Design Drawings.
 - (2) Project Description Drawings: The term Project Description Drawings

means those drawings that have been prepared by the Authority and that have been prepared specifically for this project. The Design-Builder shall utilize these in the preparation of the Final Design Drawings.

- (3) Standard Drawings: The term Standard Drawings means those drawings prepared by the Authority, and that have been prepared to serve as standard for all WMATA projects. The Design-Builder shall include the applicable Standard Drawings in the Final Design Drawings.
 - (4) Information Drawings: The term Information Drawings means those Recommended Layout and Detail Drawings and As-Built Drawings that have been reproduced from similar or previous Authority projects and that have been included for information only.
41. Project Manual (Authority-Provided): Compilation of the Contract Specifications including Introductory Information, Proposing Requirements, Contracting Requirements, General Requirements and the WMATA Standard Specifications and WMATA Technical Specifications as follows:
- a. Introductory Information: Documents related to the Introductory Information for proposers including Project Title Page, Certifications Page, Division 0 Table of Contents, and List of Project Drawings.
 - b. Proposing Requirements: Documents related to the Proposing Requirements including Project Information - Request for Proposal and Proposal Solicitation which includes a statement and scope of work and a solicitation schedule, Instructions to Proposers which includes the procedures with which proposers must comply and conditions affecting award of Contract, Information Available to Proposers which includes information made available to the proposer, and Proposal Forms and Supplements which includes forms and supplements for submitting proposals.
 - c. General Conditions: The term General Conditions means a compilation of contractual and legal requirements that list the rights, responsibilities and relationships of the parties to a contract and defines duties and limits of authority for design professionals and construction management in performance of contract administration.
 - d. Supplementary Conditions: The term Supplementary Conditions means modifications to the General Conditions for requirements unique to a specific project.
 - e. General Requirements: The term General Requirements means a

compilation of the conditions and requirements peculiar to the specific contract that governs the execution of the Design and Construction work including Summary of Work Requirements, Price and Payment Procedures, Administrative Requirements, Quality Requirements, Temporary Facilities and Controls, Product Requirements, Execution Requirements, and Facility Operation Requirements.

- f.. Program Criteria: The term Program Criteria means written design criteria prepared by the Authority that have been created to establish the minimum basis of design for any specific contract. The Design-Builder shall use the WMATA Program Criteria in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA in the preparation of the Contract-specific Design.
 - g. WMATA Standard and Technical Specifications: The term WMATA Standard Specifications means those specifications in Divisions 2 through 16 prepared by the Authority that have been created to serve as standard requirements for materials and construction methods for all WMATA projects and are unedited. The Design-Builder shall use the Standard Specifications and edit accordingly in the preparation of the Contract-specific Final Design Specifications. Some of the Technical Specifications Sections in Divisions 2 through 16 may have already been edited by WMATA to specify Contract-specific project requirements for materials and construction methods. The Design-Builder shall use the WMATA Technical Specifications in the preparation of the Contract-specific Final Design Specifications.
42. Project Representative: The term Project Representative means the individual(s), including but not limited to the Resident Engineer, to whom the Authority Representative has delegated Project responsibilities.
43. Proposer: The prospective Design-Builder who submits Proposals to perform the Work of the Contract. The term Bidder is synonymous with the term Proposer.
44. Related Documents: In specifications in Division 00 (General and Supplementary Conditions), in Division 01 (General Requirements) and in Divisions 02 to 16 (WMATA Standard Specifications and WMATA Technical Specifications), the term "Related Documents" is used to identify documents that directly relate to the Section in question. This is done in order to assist the reader in finding some of the other most relevant Sections of the Contract Documents and the Final Design Specifications and Final Design Drawings. However, this shall not be interpreted as diminishing any other requirement set out in the Contract Documents that are not referred to under "Related Documents". The Contract Documents shall be read and interpreted as a whole.
45. Request for Proposal (RFP): The term RFP means the written document

prepared in anticipation of the negotiation and award of the Design-Build Contract for the design and construction of the Project.

46. Revenue Operations Date (ROD): Revenue Operations Date is the date upon which the new system segment is opened for revenue (passenger) service.
47. Section: An element of the Project Manual bearing its own Alphanumeric designation.
48. Shall/Will/May:
 - a. Shall: Indicates action which is mandatory on the part of the Design-Builder.
 - b. Will: Indicates probable action by the Authority or its representatives.
 - c. May: Indicates permissible action.
49. Shop Drawings (Design-Builder Provided): Fabrication, erection, layout, setting, schematic and installation drawings prepared by the Design-Builder for permanent structures, equipment and systems designed by him to comply with the Requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings including manufacturer's drawings and literature, materials list, product data, product substitution requests, schedules, wiring and control diagrams, catalog cuts or entire catalogs, descriptive literature, performance and test data as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
50. Similar: Generally the same but not necessarily identical; details shall be worked out in relation to location and relation to other parts of the work.
51. Submit: Unless otherwise specified, transmit to the Authority Representative for approval or to the Contracting Officer through the Authority Representative for approval.
52. Submittal: The term Submittal means a written, or graphic or electronic document prepared by the Design-Builder, which the Contract Documents and the Final Design Specifications and Final Design Drawings require be submitted to the Authority. Submittals include, but are not limited to, drawings, specifications, progress schedules, shop drawings, product data, safety and quality control plans, samples, and schedules of value for the Work.
53. WMATA Safety Manual (Authority-Provided): The term WMATA Safety Manual means a compilation of the appropriate safety and reporting requirements for the project as specified in Section 00371.

54. WMATA Safety and Security Certification Program Plan (Authority-Provided): The term WMATA Safety and Security Certification Program Plan means a compilation of the appropriate safety and security certification requirements for the project as specified in Section 00381. 10/01/03
55. WMATA System Safety Program Plan (Authority-Provided): The term means a compilation of the appropriate system safety requirements for the project as specified in Section 00391. 10/24/03
56. Work: The term Work means all of the design and construction services, including supervision, quality control and quality assurance, labor, materials, machinery, equipment, tools, supplies and facilities required to complete the Project, or the various separately identifiable parts thereof, in accordance with the terms of the Contract.
57. Working Drawings (Design-Builder Provided): Plans prepared by the Design-Builder for temporary structures such as decking, temporary bulkheads, support of excavation, support of utilities, groundwater control systems, and forming and falsework; for underpinning; and for such other work as may be required for construction which but do not become an integral part of the completed project as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

00702 ORDER OF PRECEDENCE (10/25/04)

- A. Any inconsistency in this solicitation or Contract shall be resolved by giving precedence in the following order:
 1. Contract Modifications in Division 0, Section 00940, MODIFICATIONS.
 2. The Agreement Form and Attachments in Division 0, Section 00521, DESIGN-BUILD CONTRACT FORM; Section 00541, POWER OF ATTORNEY; and Section 00542, POWER OF EXECUTION, respectively.
 3. Bonds and Certificates in Division 0, Section 00612, PERFORMANCE BOND; Section 00613, PAYMENT BOND; and Section 00621 CERTS.
 4. Representations and Certifications in Division 0, Section 00451, REPS AND CERTS.
 5. Price Proposal and Technical Proposal as Negotiated and Accepted in Division 0, Section 00492, PRICE PROPOSAL AS NEGOTIATED AND ACCEPTED (including the Price Schedule in Division 0, Section 00434, PRICE SCHEDULE).
 6. Approved Final Design Specifications issued for Construction.

7. Approved Final Design Drawings issued for Construction.
 8. Program Criteria in Division 1, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and other Division 1 Requirements.
 9. WMATA Standard Specifications and WMATA Technical Specifications in Divisions 2 through 16.
 10. WMATA Project Description, Standard, and Design Directive Drawings Issued as an Attachment to the Project Manual.
 11. General Conditions and Supplementary Conditions in Division 0, Section 00700, GENERAL CONDITIONS and Section 00800, SUPPLEMENTARY CONDITIONS, respectively.
- B. In the event of a conflict within, between or among the above listed order of precedence, the more stringent requirement shall apply.

00703 GENERAL REQUIREMENTS, DRAWINGS AND SPECIFICATIONS (06/01/03)

- A. During the Design Phase of the project, the Design-Builder shall keep at the work site a copy of the Project Manual and Project Drawings and during the Construction Phase of the project shall keep at the jobsite a copy of the Final Design Specifications and Final Design Drawings, and shall at all times give the Authority Representative(s) access thereto.
- B. The Sections of Division 01, General Requirements, procedures shall govern the execution of the Work of the Contract.
- C. Anything mentioned in the Project Manual and not shown on the Project Drawings, or shown on the Project Drawings and not mentioned in the Project Manual, shall be of like effect as if shown or mentioned in both.
- D. In case of discrepancy between the Project Manual and Project Drawings, the Project Manual shall govern. In case of discrepancy in the figures between the Project Drawings, the matter shall be promptly submitted in writing to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS who shall promptly make a determination in writing. Notification of conflicts among the requirements and criteria either indicated in the Project Manual and/or Project Drawings or required by local, state or federal jurisdictions or utilities, as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, that affect the scope, cost or quality of this work shall be promptly submitted in writing to the Authority Representative for a written determination in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS. Any adjustment by the Design-Builder without such a determination shall be at the Design-Builder's own risk and expense.

- E. Wherever in the Project Manual and in the Final Design Specifications the imperative form is used such as the words "directed," "ordered," "designated," "prescribed," or words of like import are used, it shall be understood that the "direction," "requirement," "order," "designation," or "prescription" of the Authority Representative or Project Representative, as specified, is intended, and similarly the words "approved," "acceptable," "satisfactory," or words of like import, shall mean "approved by," "acceptable to," or "satisfactory to" the Authority Representative or Project Representative, as specified, unless otherwise expressly stated.
- F. Should it appear that the work to be performed is not sufficiently detailed or explained in the Contract Documents and the Final Design Specifications and Final Design Drawings, then the Design-Builder shall promptly apply to the Authority Representative in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS for such written explanations as may be necessary and shall conform to the explanation provided. The Design-Builder shall promptly notify the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS of all errors, omissions, inconsistencies, or other defects including inaccuracies which it may discover in the Contract Documents and the Final Design Specifications and Final Design Drawings, shall provide options to the Authority Representative to remedy such errors, omissions or other defects, and shall obtain in writing from the Authority Representative specific instruction regarding any such error, omission or defect before proceeding with the design work affected thereby. Omission of details of the work from the Contract Documents or the mis-description of details of work which are necessary to carry out the intent of the Contract Documents, or which are customarily preformed, shall not relieve the Design-Builder from performing such omitted work, no matter how extensive, or mis-described details of the work and they shall be performed as if fully and correctly set forth and described in the Contract Documents, without entitlement to a Change Order hereunder.

00704 INTENT OF CONTRACT

(06/01/03)

- A. The Design-Builder shall, upon execution of this Contract and receipt of Notice to Proceed (NTP), perform all work as defined herein to complete the Project as described in this Contract. The Authority has detailed its requirements in the Contract Documents. The Authority has not specified the precise details of performing the Work, except as the Authority considered such details to be essential for the successful completion of the Work. Therefore, the Design-Builder shall not deviate from the Contract Requirements without the written approval of the Authority.
- B. The Design-Builder shall conduct a pre-design meeting jointly with the Authority, and during the design of the Project, the Design-Builder and the Authority shall meet periodically and confer about the progress of the design as specified in Section 01312, PROJECT MEETINGS. At these design review meetings, the Design-Builder shall identify the evolution of the design and any changes or deviations from the requirements of the Contract Documents, as well any associated potential changes to the Contract Price or Performance Time. The Design-Builder in a timely manner shall

provide minutes of all such meetings for all attendees to review and approve or correct as specified in Section 01312, PROJECT MEETINGS and in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Authority will review and approve subsequent design submittals that are consistent with the Contract Documents and the Final Design Specifications and Final Design Drawings as modified by agreements reached at the design review meetings and documented in meeting minutes approved by the Authority. Any agreement that involves changes to the Contract Documents shall be documented in a fashion consistent with Section 00753, CHANGES. The Authority will perform its design reviews solely for the purposed stated in Section 00719, AUTHORITY REVIEWS.

- C. It is the intent of the Contract Documents to describe a functionally complete Project to be designed and constructed in accordance with the Contract Documents and the Final Design Specifications and Final Design Drawings. Any work, materials or equipment that may reasonably be inferred from the Contract Documents, from prevailing custom, or from trade usage as being required to produce the intended results will be furnished and performed whether or not specifically called for. Unless otherwise defined in the Contract, when words or phrases having a well-known technical, construction industry, or trade meaning are used to describe work, labor, services, materials, tools or equipment, such words or phrases shall be interpreted in accordance with that meaning.
- D. The Design-Builder accepts the relationship of trust and confidence established between it and the Authority by the Agreement. The Design-Builder agrees to furnish the architectural, engineering and construction services set forth herein, and agrees to furnish efficient business administration and superintendence, including quality control and quality assurance, and use its best efforts, to complete the Project in the best and soundest way and in the most expeditious and economical manner consistent with the Contract Documents and the Final Design Specifications and Final Design Drawings. The Design-Builder agrees to perform its design services in accordance with the responsibilities and requirements set forth in Section 00708, RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN RELATED SERVICES, in Section 00709, REQUIREMENTS FOR PROFESSIONAL REGISTRATION, Section 01111, KEY DESIGN-BUILDER FUNCTIONS and in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
- E. The Design-Builder shall be responsible for performing or furnishing construction services and related services in all phases of the Project and require its subcontractors to perform the services in accordance with the best general practice. Only new materials and workmanship of best standard quality shall be used. Unless otherwise specified, the Design-Builder shall furnish all work, services, labor, materials, tools, equipment and incidentals which are necessary to complete the Work in a proper, substantial and workmanlike manner in accordance with the Contract Documents and the Final Design Specifications and Final Design Drawings.
- F. Nothing contained in these Contract Documents shall create a contractual relationship between the Authority and any party other than the Design-Builder. However, it is

understood and agreed that the Authority is an intended third party beneficiary of all contracts for design, engineering or construction services and all such subcontracts, purchase orders, and other agreements between the Design-Builder and third parties related to those services. The Design-Builder shall incorporate the obligations of this Contract into its respective subcontracts, supply agreements, and purchase orders.

00705 LEGAL REQUIREMENTS (06/01/03)

- A. The Design-Builder shall perform the Work in accordance with all Legal Requirements as specified in Section 01410, REGULATORY REQUIREMENTS, in Section 01420, REFERENCES, in Section 00708, RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN RELATED SERVICES, and in Section 00707, PERMITS AND RESPONSIBILITIES. The Contract Price and/or Period of Performance shall be adjusted to compensate the Design-Builder for the effects of any changes in the Legal Requirements enacted after the date of the Agreement affecting the performance of the Work. Such effects may include, without limitation, revisions the Design-Builder is required to make to the Contract Documents and the Final Design Specifications and Final Design Drawings because of changes in Legal Requirements. Notwithstanding the foregoing, any change in Legal Requirements which affects the method and/or manner of performance of the work but not the Final Design of the work incorporated into the Project shall be at the Design-Builder's risk and at no additional cost to the Authority.
- B. The Design-Builder's failure to design or construct the Work in conformance to all applicable Legal Requirements in force as of the Notice to Proceed shall not be the basis for a change to either the Contract Price or Contract Performance Period. The Design-Builder shall remedy all such failures to design or construct the Work in conformance to all such Legal Requirements at its own expense.
- C. The Design-Builder shall be responsible for remaining informed of all changes in the Legal Requirements that may occur after the Notice to Proceed and shall perform the Work in accordance with such changed Legal Requirements.

00706 NOT USED

*00707 PERMITS AND RESPONSIBILITIES (06/01/03)

- A. The Design-Builder shall, without additional expense to the Authority, be responsible for obtaining any necessary licenses, permits, and/or easements and for complying with any applicable International, Federal, State, Local or Municipal laws, codes or regulations, in connection with the prosecution of the Work.
- B. The Design-Builder shall be responsible for all damages to persons or property that occur as a result of its fault or negligence or that of its subcontractors or anyone directly or indirectly employed by the Design-Builder, or anyone for whose acts the Design-Builder may be liable, subject to an allocation or proportion of any such liability, loss,

cost or expense if caused in part by a party indemnified hereunder. The Design-Builder shall take proper safety and health precautions to protect the Work, the workers, the public and the property of others. The Design-Builder shall also be responsible for all materials delivered and Work performed until completion and Acceptance of the entire Work, except for any completed unit of construction thereof which theretofore may have been accepted in writing by the Authority.

00708 RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN-RELATED SERVICES

- A. The Design-Builder shall be responsible for performing or furnishing design professional services and related services in all phases of the Project as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS and in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, and require its Design Professional to perform the services in accordance with the specifications and requirements of the Contract and in accordance with professional standards of skill, care, and diligence adhered to by firms recognized for their expertise, experience and knowledge in performing services of a similar nature. The Design-Builder shall be responsible for the professional quality, technical accuracy, completeness, and coordination of the services, it being understood that the Authority will be relying upon such professional quality, technical accuracy, completeness, and coordination in utilizing the services for construction and implementation of the Project.
- B. The Design-Builder shall, without additional compensation, correct or revise any errors or deficiencies in its designs, drawings, specifications, and other services. In addition, the Design-Builder in performing its design services herein shall be responsible for project management, quality control/quality assurance, and other elements of the Work required for the successful completion of the Project.
- C. The Design-Builder shall likewise be liable to the Authority for all costs to the Authority of any kind caused by or resulting from the Design-Builder's failure to perform design services consistent with the terms and conditions of this Contract. Failure to agree to the responsibility for costs, either those incurred by the Design-Builder or by the Authority, for corrective actions required by this Section, shall constitute a dispute concerning a question of fact within the meaning of Section 00732, DISPUTE RESOLUTION.
- D. Neither the Authority's review, approval or acceptance of, nor payment for, the services required under this Contract shall be construed to operate as a waiver of any rights under this Contract or of any cause of action arising out of the performance of this Contract, and the Design-Builder shall be and remain liable to the Authority in accordance with applicable law for all damages to the Authority caused by the Design-Builder's performance of any of the services furnished under this Contract.
- E. The Design-Builder shall be responsible to the Authority for acts, errors and omissions of its Design Professional, subcontractors, suppliers, agents, and employees of those in privity with the Design-Builder, whether employed directly or through subcontracts or

other means.

- F. The rights and remedies of the Authority provided for under this Contract are in addition to any other rights and remedies provided by law.

00709 REQUIREMENTS FOR PROFESSIONAL REGISTRATION (06/01/03)

All architecture, engineering and other design services rendered by or through the Design-Builder under this Contract shall be accomplished and/or reviewed and approved by design professionals licensed to practice in the particular professional field involved in the jurisdiction in which the project being designed will be constructed. The Design-Builder shall comply with local laws regarding the licensing of design firms and personnel providing services for the Project.

*00710 PROJECT MANAGEMENT AND SUPERINTENDENCE AND KEY PERSONNEL(06/01/03)

- A. The Design-Builder shall provide project management and direct superintendence of the Work.
- B. The Design-Builder shall provide personnel for the positions specifically identified by the Authority in this Contract as required key personnel (see Section 00203, TECHNICAL AND PRICE PROPOSAL INSTRUCTIONS AND EVALUATION FACTORS) and in addition, for those and other personnel essential for performance of the work as identified by the Design-Builder (see the Design-Builder's TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491), and for any other positions the Design-Builder deems necessary for the successful execution during performance of the Contract work. Also see Section 01111, KEY DESIGN-BUILDER FUNCTIONS and Section 01310, PROJECT MANAGEMENT AND COORDINATION for responsibilities of key personnel. All positions shall be filled by competent personnel satisfactory to the Authority. Each position shall be held by a separate full-time employee, unless otherwise specifically approved by the Authority. Individuals holding these, or any key position shall not be changed without permission of the Authority. The Design-Builder shall acquire written Authority approval for substitutions of any key personnel as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS. The Design-Builder shall provide the Authority, in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, with any information as may be reasonably requested regarding any substitution and any proposed substitute will share similar or better qualities than the person substituted for. The Design-Builder shall provide the original and six copies and one electronic copy of this qualifications information. The Authority shall be entitled to satisfactory performance of all services described in this Contract and the Design-Builder shall promptly remove from the Project any employee or other person performing services hereunder in an unsatisfactory manner.
- C. The Design-Builder shall present, as specified in Section 00726, COMMENCING THE WORK and Section 01111, KEY DESIGN-BUILDER FUNCTIONS, confirmation of the credentials of the individuals submitted in the TECHNICAL PROPOSAL AS FINALLY

ACCEPTED, Section 00491, to the Authority Representative for review and acceptance in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

00711 WORK BY DESIGN-BUILDER (10/29/04)

- A. The Design-Builder shall perform, with its own organization, work equivalent to at least the percentage specified in Section 00811 of the Supplementary Conditions for the construction work.
- B. The percentage shall be determined by the dollar value of the construction work done by his own organization in comparison to total value of construction work in the Contract. The cost of the work performed by skilled and unskilled labor carried on the Design-Builder's own payroll, together with the cost of materials installed, may be included in the above percentage. The Design-Builder's markup for overhead and profit on work performed by subcontractors shall not be included in determining the percentage.
- C. If, during the progress of the Work, the Design-Builder requests a reduction in such percentage and if the Contracting Officer determines that it would be to the Authority's advantage, the Contracting Officer may approve such a reduction at his/her sole discretion.

*00712 OTHER CONTRACTS (06/01/03)

- A. The Authority may undertake or award other contracts for additional work, and the Design-Builder shall fully cooperate with such other contractors and Authority employees and carefully fit its own work to such additional work as may be directed by the Authority Representative. The Design-Builder shall not commit or permit any act which will interfere with the performance of work by any other contractor or by Authority employees.
- B. The Design-Builder shall conduct all work in a manner that will minimize interference with the operations of other contractors and Authority employees, if any, involved in the performance of related work. All work shall be brought to a stage of completion that will conform to the requirements specified in the Contract Documents and the Final Design Specifications and Final Design Drawings.

00713 CONFIDENTIALITY (06/01/03)

The Design-Builder or its subcontractors shall not divulge any confidential information which is so designated by the Authority to Design-Builder or its subcontractors or acquired in the course of performance of the work under this Contract.

*00714 CONDITIONS AFFECTING THE WORK (06/01/03)

The Design-Builder shall be responsible for having taken steps reasonably necessary to ascertain the nature and location of the Work, and the general and local conditions which can affect the Work or the cost thereof as described in Section 01711, ACCEPTANCE OF CONDITIONS. Any failure by the Design-Builder to do so will not relieve the Design-Builder from responsibility for successfully performing work without additional expense to the Authority. The Authority assumes no responsibility for any understanding or representations concerning conditions made by any of its officers or agents prior to the execution of this Contract, unless such understanding or representations are expressly stated in the Contract.

*00715 SITE INVESTIGATION (06/01/03)

The Design-Builder acknowledges that it has investigated and satisfied itself as to the conditions affecting the work including, but not restricted to, those bearing upon transportation, disposal, handling and storage of materials; availability of labor, water, electric power and roads; and uncertainties of weather, river stages, tides or similar physical conditions at the site, the conformation and conditions of the ground, and the character of equipment and facilities needed preliminary to and during prosecution of the work as described in Section 01711, ACCEPTANCE OF CONDITIONS. The Design-Builder further acknowledges that it has satisfied itself as to the character, quality and quantity of surface and subsurface materials or obstacles to be encountered insofar as this information is reasonably ascertainable from an inspection of the site, including all exploratory work done by the Authority, as well as from information provided by the Authority and made a part of this Contract, the character and extent of existing work within or adjacent thereto, and any other work being performed thereon at the time of the submission of its proposal as described in Section 01711, ACCEPTANCE OF CONDITIONS. Nothing in this requirement shall be construed as being determinative of the character, scope or extent of the work required under this Contract. Any failure by the Design-Builder to acquaint itself with the available information will not relieve it from responsibility for estimating properly the difficulty or cost of successfully performing the work. The Authority assumes no responsibility for any conclusions or interpretations made by the Design-Builder on the basis of the information made available by the Authority.

00716 PRECONSTRUCTION INSPECTION (06/01/03)

- A. Conditional inspection of buildings or structures in the immediate vicinity of the project which may reasonably be expected to be affected by the Work will be performed by and be the responsibility of the Design-Builder.
- B. Prior to beginning excavation or any other work, the Design-Builder shall inform the Authority of buildings or structures on which it intends to perform work or which performance of the project work will affect.
- C. The Authority shall be provided sufficient notice of this inspection and afforded an opportunity to participate in the inspection. The Design-Builder shall submit for

approval, in accordance with Section 01330 DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the preconstruction inspection records as specified in Section 01711, ACCEPTANCE OF CONDITIONS, to the Authority prior to beginning work.

*00717 DIFFERING SITE CONDITIONS (10/28/04)

- A. The Design-Builder shall promptly, and before such conditions are disturbed, notify in writing as described in Section 01711, ACCEPTANCE OF CONDITIONS and in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the Contracting Officer, through the Authority Representative, of subsurface or latent physical conditions at the site differing materially from those indicated in this Contract or unknown physical conditions at the site, of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for this Contract .
- B. The Authority will promptly investigate the conditions, and if the Authority finds that such conditions do materially so differ and cause an increase or decrease, in the Design-Builder's cost of, or the time required for, performance of any part of the work under this Contract, whether or not changed as a result of such conditions, an equitable adjustment shall be made and the Contract modified in writing accordingly.
- C. No claim of the Design-Builder under this Section shall be allowed unless the Design-Builder has given the notice required in Paragraph A. above; provided, however, the time prescribed therefor may be extended by the Authority Representative.
- D. No claim by the Design-Builder for an equitable adjustment hereunder shall be allowed if asserted after final payment under this Contract.

00718 ROLE OF THE AUTHORITY (06/01/03)

- A. The character and extent of the Work to be performed by the Design-Builder shall be subject to the general oversight and general approval of the Authority.
- B. The Authority will not supervise, direct or have control over, nor be responsible for, the Design-Builder's means, methods, techniques, sequences, or procedures of design and construction or the safety precautions and programs incident to the Work, or for any failure of the Design-Builder to comply with Legal Requirements. The Authority will not be responsible for the Design-Builder's failure to perform or furnish the Work in accordance with the requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings.

00719 AUTHORITY REVIEWS

(06/01/03)

- A. The Authority shall review information submitted by the Design-Builder, furnish required information and required approvals, and render decisions pertaining thereto, all in a timely manner in order to facilitate the orderly progress of the Work in cooperation with the Design-Builder and in accordance with the planning, scheduling and budgetary requirements and restraints of the Project.
- B. The Authority will review and approve design submittals solely for the purpose of establishing their conformance to the Authority's requirements in the Contract Documents. Such review and approval shall not be deemed to transfer any liability from the Design-Builder to the Authority.
- C. The Authority will review and approve construction submittals solely to determine if the items covered by the submittal will, after installation or incorporation in the construction, conform to the requirements set forth in the Final Design Specifications and Final Design Drawings, be compatible with the design concept of the completed Project as a functioning whole, as indicated by the Contract Requirements. The Authority's review and approval of construction submittals will not extend to means, methods, techniques, sequences or procedures of construction (except where a particular means, method, technique sequence or procedure of construction is specifically and expressly called for by these Contract Requirements) or to safety precautions or programs incident thereto. The Authority's approval will be general and shall not be construed as: (1) permitting any departure from the Contract Requirements; (2) relieving the Design-Builder of the responsibility for any errors including details, dimensions and materials; or, (3) approving departures from details furnished by the Design-Builder and/or the Authority except as otherwise specified.
- D. The Authority reserves the right to review design and construction submittals and to disapprove any submittal when, in its sole judgment, the submittal deviates from the requirements of the Contract Documents or the Final Design Specifications and Final Design Drawings and compromises the integrity of the structure. The Authority's review, approval, or acceptance of any submittal required under this Contract shall not be construed to operate as a waiver of the Design-Builder's responsibility for the professional quality, technical accuracy, and the coordination of all designs, drawings, specifications, construction and other services provided by the Design-Builder under this Contract.
- E. For the Authority's procedures for reviewing and approving design and construction submittals, refer to Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS.

00720 SUBMITTALS

(06/01/03)

- A. The Design-Builder shall submit for review and approval a preliminary Schedule of Required Submittals, as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, that the Authority reserves the right to review and approve, and the times for submitting, reviewing and processing each Submittal.
- B. The Design-Builder shall maintain a Contract Documents submittal log as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, to show the status of all submittals. The submittal log and all approved submittals shall be kept at the Project site and shall at all times be made available for Authority inspection. Approved submittals and certificates are to be turned over to the Authority at the completion of the Project as part of the Project records.
- C. The Authority will timely review and approve those submittals that it deems necessary, and as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01780 CLOSEOUT SUBMITTALS, during the design and construction and closeout of the Project. The Authority's review of design or construction submittals shall be solely for the purposes stated in Section 00719, AUTHORITY REVIEWS. The Authority's review and approval of separate items as such will not indicate approval of the assembly in which the item functions. The Design-Builder shall make corrections to submittals as required and shall return the required number of corrected copies for additional review and approval.
- D. The Authority's review and approval of any submittal that it deems necessary to review and approve shall not relieve the Design-Builder from responsibility for any variations from the requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings unless the Design-Builder has in writing called the Authority's attention to each such variation at the time of submission in the submittal letter of transmittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and the Authority has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the submittal.
- E. Where a submittal is required by the Contract Documents or the Final Design Specifications and Final Design Drawings, any related work provided prior to the appropriate review and approval of a submittal shall be at the sole risk, expense, and responsibility of Design-Builder.

00721 VALUE ENGINEERING INCENTIVE

(06/01/03)

- A. This Section applies to those Value Engineering Change Proposals (VECP's) which are initiated and developed by the Design-Builder during the performance of the Contract to modify the Authority's Design Criteria, or other requirements of this Contract including commitments made in the Design-Builder's proposal as finally accepted. In order to be accepted under this Section each VECP shall:

1. Be identified by the Design-Builder at the time of submittal to the Contracting Officer or other delegated Authorized Representative as submitted pursuant to this Section using the prescribed The Authority VECP proposal form;
 2. Require a significant change to this Contract and Contract Requirements;
 3. Decrease the Contract price;
 4. Maintain the Contract requirements such as safety, service life, reliability, economy of operation, ease of maintenance and necessary standardized and architectural features of the facility or system;
 5. Not require an unacceptable extension of original Contract duration; and
 6. Be reviewed and evaluated by way of a two-phase process.
- B. Phase One - Conditional Approval: In addition to the use of the Authority VECP proposal form, any VECP the Design-Builder submits in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES shall be in sufficient detail to clearly define the proposed change including the following items:
1. A description of the difference between the existing and the proposed Contract requirements, and the comparative advantages and disadvantages of each;
 2. Contract requirements recommended by the Design-Builder to be changed;
 3. Separate detailed cost estimates for both the basic Contract requirement and the proposed change, and an estimate of the change in Contract price including an accounting of the costs of development and implementation and Authority review of the VECP and the sharing arrangement as set forth in the following Paragraph E.;
 4. A statement from the Design-Builder predicting any effects the proposed VECP will have on the life-cycle cost of the work to include and identify separately the cost for increased or decreased maintenance and operations;
 5. A statement of the time by which the proposal must be accepted so as to obtain the maximum price reduction effect and not delay the original Contract completion time. The time required for VECP review shall be considered and included in this statement and also in a separate bar chart;
 6. A list of codes and the Authority standards applicable to the work to be carried out by the VECP and a statement that the proposed VECP will be in compliance with the requirements set forth in listed codes and standards;
 7. The identification of a project where the materials, methods of construction and

- special equipment, where required, have been previously and successfully performed on construction similar to that which is being proposed for implementation on this Contract.
8. Preliminary architectural and engineering analysis, including calculations and 11 x 17 inch drawings in sufficient detail for each requirement of the Contract which must be changed if the VECP is accepted, with recommendations for accomplishing each change and its effect on unchanged work.
 9. The Design-Builder shall submit the original and six paper copies and one electronic copy to the Authority for approval.
- C. The Contracting Officer or other delegated Authorized Representative may at any time during the two-phase review and evaluation process reject part or all of the VECP by giving the Design-Builder written notice thereof. Until final approval is issued, the Design-Builder shall remain obligated to perform in accordance with the terms of the original Contract. VECP's will be processed expeditiously; however, the Authority shall not be liable for any delay in acting upon any proposal submitted pursuant to this Section. The decision of the Contracting Officer or other delegated Authorized about acceptance or rejection of any such proposal shall be final and shall not be subject to Section 00732, DISPUTE RESOLUTION.
1. The Design-Builder has the right to withdraw part or all of the VECP at any time prior to acceptance or rejection by the Authority. Such withdrawal shall be made in writing to the Contracting Officer or other delegated Authorized Representative. The Design-Builder shall submit the original and six paper copies and one electronic copy to the Authority for approval. If the Design-Builder desires to withdraw the proposal, it shall be liable for the cost incurred by the Authority in reviewing the proposal.
- D. Upon notice of conditional approval of the concept of the VECP, the Design-Builder shall proceed with final VECP design in accordance with the agreed schedule.
- E. Phase Two - Final Approval: Final approval of the VECP by the Authority will be contingent upon the following items:
1. The Design-Builder shall address, to the Authority's satisfaction, all design issues and review comments and submit the VECP to the Authority for approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
 2. An equitable adjustment in the Contract price and appropriate changes in any other affected provisions of the Contract shall be made and the Contract modified in accordance with Section 00753, CHANGES, or other applicable Sections of this Contract.

3. The net savings resulting from the change shall be shared between the Design-Builder and the Authority on the basis of 50 percent for the Design-Builder and 50 percent for the Authority. Net savings shall be determined by deducting from the estimated gross savings, the Design-Builder's costs of developing and implementing the proposal, including any amount attributable to a subcontractor, and the estimated amount of increased costs to the Authority resulting from the change, such as costs for review, implementation, inspection, related items and Authority-furnished property. Estimated gross savings shall include Design-Builder's labor, material, equipment, overhead, profit and bond. The Contract price shall be reduced by the sum of the Authority's costs and share of the net savings.
 4. The Design-Builder is entitled to share in instant Contract savings only, to the full extent provided for in this Section. For purposes of sharing, the term 'instant contract' shall not include any supplemental agreements to or other modifications of this Contract, executed subsequent to acceptance of the particular VECP, by which the Authority increases the quantity of any item or adds any item.
 5. Notwithstanding any review, approval or acceptance of any VECP by the Authority; the Design-Builder agrees to be liable to the Authority for all costs of any kind whatsoever caused by or resulting from any error, omission, deficiency or negligence, or combination thereof, of any kind in the design, drawings or specifications submitted to the Authority in connection with any VECP proposal under this Contract. The rights and remedies of the Authority provided in this Section are in addition to any other rights or remedies provided by law or under this Contract.
 6. The Design-Builder shall submit the original and six paper copies and one electronic copy to the Authority for approval.
- F. The Design-Builder will use its best efforts to include Value Engineering arrangements in any subcontract, which in its judgement, appears to offer sufficient value engineering potential.
- G. A VECP identical to one submitted under any other contract, by this or any other contractor, may also be submitted under this Contract.
- H. The Design-Builder may restrict the Authority's right to use any VECP data by marking it with the following statement:

"This data, furnished pursuant to the VALUE ENGINEERING INCENTIVE Section of this Contract, shall not be duplicated, used or disclosed, in whole or in part, for any purpose except to evaluate the VECP, unless the proposal is accepted by the Authority. This restriction does not limit the Authority's right to use information contained in this data if it is or has been obtained, or is otherwise available, from the Design-Builder or from other source, without limitations. When this proposal is accepted by the Authority,

the Authority shall have the right to duplicate, use and disclose any data in any manner and for any purpose whatsoever, and have others do so whether under this or any other Authority contract."

00722 QUALITY CONTROL / QUALITY ASSURANCE (10/01/03)

- A. The Design-Builder shall be responsible for conducting an ongoing Design/Build Quality System as described in Section 01470, QUALITY SYSTEM during the entire term of the Contract based on the approved detailed Design/Build Quality System. The purpose of the Design-Build Quality System is to effectively and economically assure technical quality in the Final Design, other Contract deliverables, and construction of the Work, thus reducing the potential for:
 - 1. adverse construction schedule and cost impacts;
 - 2. personal and public safety problems and incidents and their attendant costs;
 - 3. those operational and maintenance problems, disruptions, and costs that result from design errors and omissions; and,
 - 4. a poor quality design,
 - 5. poor construction quality,
- B. The Design-Builder shall submit for approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES all required quality submittals as specified in Section 01470, QUALITY SYSTEM.
- C. An effective Design-Build Quality Program is fundamental to all work performed by the Design-Builder and will be considered by the Authority in assessing the Design-Builder's progress, performance, and earnings entitlement.

00723 NOT USED

*00724 PROGRESS SCHEDULES AND REQUIREMENTS FOR MAINTAINING PROGRESS RECORDS (10/30/04)

- A. The Design-Builder shall submit a schedule to the Authority Representative for approval, within 15 days after the award of the Contract, showing the order in which the Design-Builder proposes to carry on the work, the dates on which he will start the several major features, including procurement of materials, plant and equipment, and the contemplated dates for completing the same. The schedule shall be in the form of a graphic network diagram or progress chart indicating appropriately the work scheduled for accomplishment at any time in accordance with Section 1330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Unless otherwise specified, the Design-Builder shall enter on the schedule the

actual progress at monthly intervals and shall immediately deliver to the Authority Representative four copies thereof.

- b. Failure to comply with the terms of this Article may affect the processing of progress payment requests submitted by the Design-Builder as provided in Section 00749, METHOD OF PAYMENT.
- c. If, in the opinion of the Authority Representative, the Design-Builder falls significantly behind the approved progress schedule, the Design-Builder shall take any and all steps necessary to improve his progress. The Authority Representative, in this instance, may require the Design-Builder to increase the number of shifts, initiate or increase overtime operations, increase days of work in the work week, or increase the amount of construction plant, or all of them. The Authority Representative may also require the Design-Builder to submit for approval supplemental progress schedules detailing the specific operational changes to be instituted to regain the approved schedule, all without additional cost to the Authority.
- d. Failure of the Design-Builder to comply with the requirements of the Authority Representative under this provision shall be grounds for determination that the Contractor is not prosecuting the work with such diligence as will ensure completion within the time specified. Upon such determination the Contracting Officer may terminate the Contractor's right to proceed with the work, or any separate part thereof, in accordance with the Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY AND TIME EXTENSIONS.

00725 PERIOD OF PERFORMANCE AND PROJECT SCHEDULE (06/01/03)

- A. The Design-Builder shall perform, complete and advance all Work under this Contract in accordance with the schedule set out in Section 00825, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE REQUIREMENTS.
- B. The Authority may modify the Contract, pursuant to Section 00753 CHANGES, to extend the period of performance as often and in time periods as deemed necessary until completion of the Work under this Contract.
- C. Early Completion: If the Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a schedule or express an intention to complete the Work earlier than any required milestone, interim or final completion date, the Authority shall not be liable for any costs incurred because of delay or hindrance should the Design-Builder be unable to complete the Work before such milestone, interim or final completion date. The Design-Builder shall submit the original schedule and six paper copies and one electronic copy. The duties, obligations and warranties of the Authority to the Design-Builder shall be consistent with and applicable only to the completion of the Work and completion dates set forth in this Contract.

00726 COMMENCING THE WORK (10/07/03)

- A. The Design-Builder shall commence the work within ten (10) calendar days after the date of receipt of Notice to Proceed (NTP) and shall prosecute the Work diligently to complete it within the time specified in the Contract to meet all specified interim milestone dates.
- B. A Pre-Design-Build Conference attended by the Authority and the Design-Builder and others as appropriate will be held to establish a working understanding among the parties as to the Work and to discuss the design concepts, schedules, procedures for handling Submittals, processing Applications for Payment, maintaining required records, quality control, and other matters. For a more complete agenda, refer to Section 01312, PROJECT MEETINGS.
- C. The following items require approval prior to commencement of any design activities, construction activities, and/or offsite fabrication associated with the Project. Submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS:
 - 1. Executed Contract as specified in Section 00521, DESIGN-BUILD CONTRACT FORM with Power of Attorney as specified in Section 00541, POWER OF ATTORNEY and Power of Execution as specified in Section 00542, POWER OF EXECUTION; Required Performance Bond as specified in Section 00612, PERFORMANCE BOND and Payment Bond, as specified in Section 00613, PAYMENT BOND; and Insurance Certificates as specified in Section 00787, INDEMNIFICATION AND INSURANCE REQUIREMENTS AND SPECIAL PROVISIONS OF INSURANCE FURNISHED BY DESIGN-BUILDER within ten (10) calendar days after the date of receipt of Notice to Proceed (NTP). Submit the original and six paper copies and one electronic copy.
 - 2. Designer, Builder, Major Subcontractors and Key Project Personnel Confirmation as specified in Section 00710, PROJECT MANAGEMENT AND SUPERINTENDENCE AND KEY PERSONNEL and Section 01111, KEY DESIGNER-BUILDER FUNCTIONS within ten (10) calendar days after Award of Contract. Submit the original and six paper copies and one electronic copy.

*00727 SUSPENSION OF WORK (06/01/03)

- A. The Authority may order the Design-Builder in writing to suspend, delay or interrupt all or any part of the work for such period of time as he or she may determine to be appropriate for the convenience of the Authority.
- B. If the performance of all or any part of the work is, for an unreasonable period of time, suspended, delayed or interrupted by an act of the Contracting Officer or other delegated Authority's Representative in the administration of this Contract, or by his or her failure to act within the time specified in this Contract, or if no time is specified, within a reasonable time, an adjustment shall be made for any increase in the cost of

performance of this Contract, excluding profit, necessarily caused by such unreasonable suspension, delay or interruption and the Contract modified in writing accordingly. However, no adjustment shall be made under this Section for any suspension, delay, or interruption to the extent.

1. That performance would have been so suspended, delayed or interrupted by any other cause including the fault or negligence of the Design-Builder or
2. For which an equitable adjustment is provided for or excluded under any other provision of this Contract.

C. No claim under this Section shall be allowed:

1. For any costs incurred more than 20 days before the Design-Builder shall have notified the Contracting Officer or other delegated Authority's Representative in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES of the act or failure to act involved, but this requirement shall not apply as to a claim resulting from a suspension order, and
2. Unless the claim, in an amount stated, is asserted in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES as soon as practicable after the termination of such suspension, delay or interruption, but no later than the date of final payment under this Contract.
3. The Design-Builder shall submit the original and six paper copies and one electronic copy.

D. Failure to agree to any adjustment shall be a dispute concerning a question of fact within the meaning of Section 00732, DISPUTE RESOLUTION.

***00728 TERMINATION FOR DEFAULT, DAMAGES FOR DELAY, AND TIME EXTENSIONS (06/01/03)**

- A. If the Design-Builder refuses or fails to prosecute the Work, or any separable part thereof, with such diligence as will ensure its completion within the time specified in this Contract, or any extension thereof, or fails to complete said Work within such time, the Contracting Officer may, by written notice to the Design-Builder, terminate its right to proceed with the Work or such part of the Work as to which there has been delay. In such event the Contracting Officer may take over the Work and prosecute the same to completion, by contract or otherwise, and may take possession of and utilize in completing the Work such design product, materials, appliances, plant, and other work product as may be on the site of the Work and necessary therefor, all of which shall become the property of the Authority. Whether or not the Design-Builder's right to proceed with the Work is terminated, the Design-Builder and its sureties shall be liable for any damage to the Authority resulting from its refusal or failure to complete the Work in the specified time.

- B. If fixed and agreed liquidated damages are provided in the Contract and if the Contracting Officer so terminates the Design-Builder's right to proceed, the resulting damage will consist of such liquidated damages until such reasonable time as may be required for final completion of the Work together with any increased costs occasioned the Authority in completing the Work.

- C. If fixed and agreed liquidated damages are provided in the Contract and if the Contracting Officer does not so terminate the Design-Builder's right to proceed, the resulting damage will consist of such liquidated damages until the Work is completed or accepted.

- D. The Design-Builder's right to proceed shall not be so terminated nor the Design-Builder charged with resulting damage under the following circumstances:
 - 1. If the delay in the completion of the Work arises from unforeseeable causes beyond the control and without the fault or negligence of the Design-Builder, including, but not restricted to, acts of God, acts of the public enemy, acts of the Authority in its contractual capacity, acts of another contractor in the performance of a contract with the Authority, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, unusually severe weather, or delays of subcontractors or suppliers at any tier arising from causes other than normal weather beyond the control and without the fault or negligence of both the Design-Builder and such subcontractors or suppliers.
 - (a) Unusually severe weather conditions:
 - [1] Pursuant to paragraph D.1. above, the Authority will use the following table as the basis for determining allowable time extensions to the Contract for unusually severe weather conditions and the impact of such weather at the construction site.

 - [2] The column below labeled WORK DAYS represents work-day delays which may be expected in each month named within the Washington Metropolitan Area, based on a five-day work week:

<u>MONTH</u>	<u>WORK DAYS</u>
January	4
February	4
March	4
April	5
May	5
June	2
July	2
August	3
September	2
October	3
November	4
December	4

[3] Time extensions for weather delays during a given month will be allowed only for actual work days in excess of the numbers listed above and only when those excess days of delay affect the current critical path(s) leading to specified Contract completion or milestone dates.

2. If the Design-Builder, within ten (10) calendar days from the beginning of any such delay, unless the Contracting Officer grants a further period of time before the date of final payment under the Contract, notifies the Contracting Officer in writing of the causes of delay in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Design-Builder shall submit the original and six paper copies and one electronic copy of the notification. The Contracting Officer shall ascertain the facts and the extent of the delay and extend the time for completing the Work when, in the Contracting Officer's judgment, the findings of fact justify such an extension. The Contracting Officer's findings of fact shall be final and conclusive on the parties, subject only to appeal as provided Section 00732, DISPUTE RESOLUTION.
3. If, after notice of termination of the Design-Builder's right to proceed under the provisions of this Section, it is determined for any reason that the Design-Builder was not in default under the provisions of this Section, or that the delay was excusable under the provisions of this Section, the rights and obligations of the parties shall be the same as if the notice of termination had been issued pursuant to the Section 00730, TERMINATION FOR CONVENIENCE OF THE AUTHORITY of these General Conditions.
4. The rights and remedies of the Authority provided in this Section are in addition to any other rights and remedies provided by law or under this Contract.

00729 NOT USED

*00730 TERMINATION FOR THE CONVENIENCE OF THE AUTHORITY (06/01/03)

- A. The Authority may terminate this Contract in whole or, from time to time, in part, for the convenience of the Authority, the performance of Work under this Contract may be terminated by the Authority in accordance with this subsection, in whole, or from time to time in part, whenever the Contracting Officer shall determine that such termination is in the best interest of the Authority. Any such termination shall be effected by delivery to the Design-Builder of a Notice of Termination specifying the nature, extent to which performance of work under the Contract is terminated, and the date upon which such termination becomes effective.
- B. After receipt of a Notice of Termination, and except as otherwise directed by the Contracting Officer, the Design-Builder shall:
1. Immediately discontinue all services and stop work under the Contract on the date and to the extent specified in the Notice of Termination;
 2. Place no further orders or subcontracts for materials, services or facilities, except as may be necessary for completion of such portion of the Work under the Contract as is not terminated;
 3. Terminate all orders and subcontracts to the extent that they relate to the performance of work terminated by the Notice of Termination;
 4. Assign to the Authority, in the manner, at the times, and to the extent directed by the Contracting Officer, all of the right, title, and interest of the Design-Builder under the orders and subcontracts so terminated, in which case the Contracting Officer shall have the right to settle or authorize payments on any or all claims arising out of the termination of such orders and subcontracts;
 5. Settle all outstanding liabilities and all claims arising out of such termination of orders and subcontracts, with the approval or ratification of the Contracting Officer, to the extent he or she may require, which approval or ratification shall be final for all the purposes of this Section;
 6. Transfer title and deliver the following to the Authority in the manner, at the times, and to the extent, if any, directed by the Contracting Officer:
 - a. The fabricated or unfabricated parts, work in process, completed work, supplies, and other material procured as a part of, or acquired in connection with the performance of, the work terminated by the Notice of Termination.
 - b. All data, Design Specifications and Design Drawings, reports, estimates, summaries, and other information and materials accumulated in performing this Contract, whether completed or in process, shall become the property

of the Authority.

- c. All data, drawings, specifications, reports, estimates, summaries, and other information and materials accumulated in performing this Contract, whether completed or in process.
 7. Use its best efforts to sell, in the manner, at the times, to the extent, and at the price or prices directed or authorized by the Contracting Officer, any property of the types referred to in (6) above, provided, however, that the Design-Builder:
 - a. Shall not be required to extend credit to any purchaser, and
 - b. May acquire any such property under the conditions prescribed by and at a price or prices approved by the Contracting Officer; and provided further that the proceeds of any such transfer or disposition shall be applied in reduction of any payments to be made by the Authority to the Design-Builder under this Contract or shall otherwise be credited to the price or cost of the Work covered by this Contract or paid in such other manner as the Contracting Officer may direct.
 8. Complete performance of such part of the Work as shall not have been terminated by the Notice of Termination; and
 9. Take such action as may be necessary, or as the Contracting Officer may direct, for the protection and preservation of the property related to this Contract which is in the possession of the Design-Builder and in which the Authority has or may acquire an interest.
- C. After receipt of a Notice of Termination, the Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES to the Contracting Officer the original and six paper copies and one electronic copy of its termination claim, in the form and with certification prescribed by the Contracting Officer. Such claim shall be submitted promptly but in no event later than one year from the effective date of termination, unless one or more extensions in writing are granted by the Contracting Officer, upon request of the Design-Builder made in writing within such one year period or authorized extension thereof. However, if the Contracting Officer determines that the facts justify such action, the Contracting Officer may receive and act upon any such termination claim at any time after such one year period or any extension thereof. Upon failure of the Design-Builder to submit its termination claim within the time allowed, the Contracting Officer may determine, on the basis of information available to the Contracting Officer, the amount, if any, due to the Design-Builder by reason of the termination and shall thereupon authorize payment to the Design-Builder the amount so determined.
- D. Subject to the provisions of Paragraph C. the Design-Builder and the Contracting Officer may agree upon the whole or any part of the amount or amounts to be paid to

the Design-Builder by reason of the total or partial termination of work pursuant to this Section, which amount or amounts may include a reasonable allowance for profit on work done; provided, that such agreed amount or amounts, exclusive of settlement costs, shall not exceed the total Contract price as reduced by the amount of payments otherwise made and as further reduced by the Contract price of work not terminated. The foregoing notwithstanding, the Contracting Officer shall allow no anticipated profit on services not performed by the Design-Builder.

- E. The Contract shall be amended accordingly, and the Design-Builder shall be paid the agreed amount. Nothing in Paragraph F. of this Section, prescribing the amount to be paid to the Design-Builder in the event of failure of the Design-Builder and the Contracting Officer to agree upon the whole amount to be paid to the Design-Builder by reason of the termination of work pursuant to this Section shall be deemed to limit, restrict, or otherwise determine or affect the amount or amounts which may be agreed upon to be paid to the Design-Builder pursuant to Paragraph D. above.
- F. In the event of the failure of the Design-Builder and the Contracting Officer to agree, as provided in Paragraph D. upon the whole amount to be paid to the Design-Builder by reason of the termination of work pursuant to this Section, the Contracting Officer shall authorize payment to the Design-Builder the amounts determined by the Contracting Officer as follows, but without duplication of any amounts agreed upon in accordance with Paragraph D.:
 - 1. With respect to all Contract Work performed prior to the effective date of the Notice of Termination, the total, without duplication of any items, of the following:
 - a. The cost of such work;
 - b. The cost of settling and paying claims arising out of the termination of work under subcontracts or orders as provided in Paragraph B.5. above, exclusive of the amount paid or payable on account of supplies or materials delivered or services furnished by the subcontractors or suppliers prior to the effective date of Notice of Termination of work under this Contract, which amounts shall be included in the cost on account of which payment is made under Paragraph D. above; and
 - c. A sum, as profit on Paragraph D. above, determined by the Contracting Officer to be fair and reasonable, provided, however, that the Contracting Officer shall allow no anticipated profit on design services not performed by the Design-Builder, and, further, if it appears that the Design-Builder would have sustained a loss on the entire Contract had it been completed, no profit shall be included or allowed and an appropriate adjustment shall be made reducing the amount of the settlements to reflect the indicated rate of loss; and
 - 2. The reasonable cost of the preservation and protection of property incurred

pursuant to Paragraph B.9.; and any other reasonable cost incidental to termination of work under this Contract, including expense incidental to the determination of the amount due to the Design-Builder as the result of the termination of work under this Contract.

- G. The total sum to be paid to the Design-Builder under Paragraph F. above shall not exceed the total Contract price as reduced by the amount of payments made and as further reduced by the Contract price of work not terminated. Except for normal spoilage, and except to the extent that the Contracting Officer shall have otherwise expressly assumed the risk of loss, there shall be excluded from the amounts payable to the Design-Builder under this Section 00793, the fair value, as determined by the Contracting Officer, of property which is destroyed, lost, stolen, or damaged so as to become undeliverable to the Authority, or to a buyer pursuant to subparagraph B.7.
- H. The Design-Builder shall have the right of appeal, under Section 00732, DISPUTE RESOLUTION, from any determination made by the Contracting Officer under Paragraphs C. or E. above, except that if the Design-Builder has failed to submit its claim within the time provided in Paragraph C. above and has failed to request extension of such time, he shall have no such right of appeal. In any case where the Contracting Officer has made a determination of the amount due under Paragraphs C. or E. above, the Authority shall pay to the Design-Builder the following:
1. If there is no right of appeal hereunder or if no timely appeal has been taken, the amount so determined by the Contracting Officer; or
 2. If an appeal has been taken, the amount finally determined on such appeal.
- I. In arriving at the amount due the Design-Builder under this Section, the following shall be deducted:
1. All unliquidated advance or other payments on account theretofore made to the Design-Builder, applicable to the terminated portion of this Contract.
 2. Any claim which the Authority may have against the Design-Builder in connection with this Contract.
 3. The agreed price for, or the proceeds of sale of any materials, supplies, or other things acquired by the Design-Builder or sold, pursuant to the provisions of this Section, and not otherwise recovered by or credited to the Authority.
- J. If the termination hereunder be partial, prior to the settlement of the terminated portion of this Contract, the Design-Builder may file with the Contracting Officer in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the original and six paper copies and one electronic copy of a request for an equitable adjustment of the price or prices specified in the Contract relating to the continued portion of the Contract, i.e., the portion not terminated by the Notice of Termination, and

such equitable adjustment as may be agreed upon shall be made in such price or prices.

- K. The Authority may from time to time, under such terms and conditions as it may prescribe, make partial payments and payments on account against costs incurred by the Design-Builder in connection with the terminated portion of this Contract whenever in the opinion of the Contracting Officer the aggregate of such payments shall be within the amount to which the Design-Builder will be entitled hereunder. If the total of such payments is in excess of the amount finally agreed or determined to be due under this Section, such excess shall be payable by the Design-Builder to the Authority upon demand for the period from the date such excess payment is received by the Design-Builder to the date on which such excess payment is repaid to the Authority upon demand, together with interest computed at the rate of six percent per annum, for the period from the date such excess payment is received by the Design-Builder to the date on which such excess payment is repaid to the Authority; provided, however, that no interest shall be charged with respect to any such excess, payment attributable to a reduction or other disposition of termination inventory until ten days after date of such retention or disposition, or such later date as determined by the Contracting Officer by reason of the circumstances.
- L. Unless otherwise provided for in this Contract, or by applicable statute, the Design-Builder, from the effective date of termination and for a period of three years after final settlement under this Contract, shall preserve and make available to the Authority at all reasonable times at the office of the Design-Builder but without direct charge to the Authority, all its books, records, documents and other evidence bearing on the costs and expenses of the Design-Builder under this Contract and relating to the work terminated hereunder, or to the extent determined by the Contracting Officer, photographs, microphotographs or other authentic reproduction thereof.

*00731 ASSIGNMENT

(06/01/03)

- A. The Design-Builder shall not transfer or assign this Agreement or any portion thereof or any of the rights and/or obligations of the Contract to any other party. The Contracting Officer may recognize a third party as successor in interest to the Contract where the third party's interest is incidental to the transfer of all the assets of the Design-Builder, i.e., sales of assets, transfer of assets pursuant to merger or consolidation, or incorporation of a proprietorship or partnership. Such recognition of the transfer shall be within the sole discretion of the Authority after review of the facts and circumstances surrounding each request submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, but the assignment shall not be approved unless the surety, in writing, agrees to that assignment and accepts the assignee as the Design-Builder and principal on the payment and/or performance bonds. The Design-Builder shall submit the original and six paper copies and an electronic copy of request.
- B. If this Contract provides for payments aggregating \$1,000 or more, claims for moneys

due or to become due the Design-Builder from the Authority under this Contract may be assigned to a bank, trust company or other financing institution, including any Federal lending agency, and may thereafter be further assigned and reassigned to any such institution. Notice of such assignment shall be made to the Contracting Officer and submitted through the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, but the assignment shall not be approved unless the surety, in writing, agrees to that assignment and accepts the assignee as the Design-Builder and principal on the payment and/or performance bonds. The Design-Builder shall submit the original and six paper copies and an electronic copy of notice. Any such assignment or reassignment shall cover all amounts payable under this Contract and not already paid, and shall not be made to more than one party, except that any such assignment or reassignment may be made one party as agent or trustee for two or more parties participating in such financing. It is the Authority's intent to recognize assignments only to bona fide lending institutions, therefore, assignment to any private corporation, business or individual which does not qualify as such is specifically prohibited.

- C. Any attempt to transfer by assignment not authorized by this Section shall constitute a breach of the Contract and the Contracting Officer may for such cause terminate the right of the Design-Builder to proceed as provided in Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY AND TIME EXTENSIONS, and the Design-Builder and its sureties shall be liable to the Authority for any excess costs incurred by the Authority.

*00732 DISPUTE RESOLUTION

(06/01/03)

- A. Except as otherwise provided in this Contract, any dispute arising under or related to this Contract including allegations of breach of contract or similar allegations which are not disposed of by agreement shall be decided by the Contracting Officer, who shall reduce a decision to writing and mail or otherwise furnish a copy thereof to the Design-Builder. The decision of the Contracting Officer is final and conclusive unless, within thirty (30) calendar days from the date of receipt of such copy, the Design-Builder mails or otherwise furnishes to the Contracting Officer a written notice of appeal accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES addressed to the Authority Board of Directors. The Design-Builder shall submit the original and six paper copies and an electronic copy of notice. Such notice should indicate that an appeal is intended and should reference the decision and Contract number. The decision of the Board of Directors or its duly authorized representative for the determination of such appeals shall be final and conclusive unless in proceedings initiated by either party for review of such decision in a court of competent jurisdiction, the court determines the decision to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or is not supported by substantial evidence. In connection with any appeal proceeding under this Section, the Design-Builder shall be afforded an opportunity to be heard and to offer evidence in support of its appeal. Pending final decision of a dispute hereunder, the Design-Builder shall proceed diligently with the performance of the Contract and in accordance with the

Contracting Officer's decision. The Armed Services Board of Contract Appeals is the authorized representative of the Board of Directors for finally deciding appeals to the same extent as could the Board of Directors.

- B. This Section does not preclude consideration of questions of law in connection with decisions provided for in Paragraph A above. Nothing in this Contract, however, shall be construed as making final the decisions of the Board of Directors or its representative on a question of law.

*00733 USE AND POSSESSION PRIOR TO COMPLETION (06/01/03)

The Authority shall have the right to take possession of or use any completed or partially completed part of the work. Such possession or use shall not be deemed an acceptance of any work not completed in accordance with the Contract. While the Authority is in such possession, the Design-Builder, notwithstanding the provisions of Section 00707, PERMITS AND RESPONSIBILITIES, shall be relieved of the responsibility for loss or damage to the work other than that resulting from the Design-Builder's fault or negligence or that of its subcontractors or agents. If such prior possession or use by the Authority delays the progress of the work or causes additional expense to the Design-Builder, an equitable adjustment in the Contract price or the time of completion will be made and the Contract shall be modified in writing accordingly.

00734 NOT USED

*00735 ACCEPTANCE AND INSPECTION OF WORK (10/24/03)

- A. "Acceptance," as used in this Section, means the act of the Authority Representative, or the Project Representative, by which the Authority approves specific services as partial or complete performance of the Contract. As used in this Section, "Correction" means the elimination of a defect.
- B. Unless otherwise provided in this Contract, acceptance by the Authority shall be made as promptly as practicable after completion and inspection of all Work required by this Contract. Acceptance shall be final and conclusive except as regards latent defects, fraud or such gross mistakes as may amount to fraud, or as regards to the Authority's right under any warranty or guarantee. All punch list items identified during final inspections and noted at the time of Acceptance shall be corrected by the Design-Builder as soon as is practically possible as specified in Section 01770, CLOSEOUT PROCEDURES.
- C. The Authority Representative shall give written notice of any defect or nonconformance to the Design-Builder if and when discovered, but no later than final acceptance of the construction work designed under this Contract as specified in Section 01770, CLOSEOUT PROCEDURES, except for latent defects which may be discovered following such acceptance. This notice shall state either:

1. that the Design-Builder shall correct or re-perform any defective or nonconforming services; or,
 2. that the Authority does not require correction or re-performance. The Design-Builder shall be liable to the Authority for all costs incurred of any kind caused by or resulting from the Design-Builder's defective workmanship or noncompliance with the requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings.
- D. Should it be considered necessary or advisable by the Design-Builder or Authority at any time before acceptance of the entire Work to make an examination of work already completed, by removing or tearing out same, the Design-Builder shall, on request, promptly furnish all necessary facilities, labor and material. If such work is found to be defective or nonconforming in any material respect, the Design-Builder shall defray all the expenses of such examination and of satisfactory reconstruction and pay all delay damages. If, however, such work is found to meet the requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings, an equitable adjustment shall be made in the Contract price to compensate the Design-Builder for the additional services involved in such examination and reconstruction and, if completion of the Work has been delayed thereby, the Design-Builder shall in addition be granted a suitable extension of time.
- E. All Work, which term includes but is not restricted to materials, workmanship, and manufacture and fabrication of components, shall be subject to inspection and test by the Authority, if it so deems, at all reasonable times prior to acceptance as specified in Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS, Section 01470, QUALITY SYSTEM, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING. Any such inspection and test is for the sole benefit of the Authority and shall not relieve the Design-Builder of the responsibility of providing quality control measures to assure that the Work strictly complies with the requirements of the Contract Documents and the Final Design Specifications and Final Design Drawings. No inspection or test by the Authority shall be construed as constituting or implying acceptance. Inspection or test shall not relieve the Design-Builder of responsibility for damage to or loss of the material prior to acceptance, nor in any way affect the continuing rights of the Authority after acceptance of the completed Work.
- F. The Design-Builder shall furnish promptly, without additional charge, all services, work, labor, materials, tools, equipment and facilities reasonably needed for performing such safe and convenient inspections and tests as may be required. All inspections and tests shall be performed in such manner as not to unnecessarily delay the Work. The Authority shall receive adequate advance notice submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES to witness all tests and inspections as part of its overall quality oversight of the Project as specified in Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS, Section 01470, QUALITY SYSTEM, Section

01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING. Tests performed that the Authority does not witness, due to the Design-Builder's failure to provide timely notice to the Authority of such tests, shall have no effect. Special, full size and performance tests shall be performed as described in the Contract Documents and the Final Design Specifications and Final Design Drawings.

- G. If the Design-Builder is required to correct or re-perform, it shall be without additional cost or fee to the Authority, and any services corrected or re-performed by the Design-Builder shall be subject to this Section to the same extent as work initially performed. If the Design-Builder fails or refuses to correct or revise any errors or deficiencies in its performance within 30 days of the Authority's request, the Authority may, by contract or otherwise, correct or replace with similar services and charge to the Design-Builder the cost incurred by the Authority thereby, or make an equitable adjustment to the Contract price.
- H. Failure to agree to responsibility for costs, either those incurred by the Design-Builder or by the Authority, for corrective actions required by this Section, shall constitute a dispute and shall be subject to the provisions of Section 00732, DISPUTE RESOLUTION.
- J. The rights and remedies of the Authority provided in this Section are in addition to any other Rights or remedies provided by law or under this Contract.
- K. The Design-Builder shall give the Authority Representative at least 14 calendar days advance notice of the date the Work, or separate portion thereof, will be fully completed and ready for final inspection, test and acceptance as specified in Section 01113, SYSTEMS INTEGRATION, Section 01470, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS, QUALITY SYSTEM, Section 01770, CLOSEOUT PROCEDURES, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING

*00736 AUTHORITY-FURNISHED PROPERTY (06/01/03)

- A. The Authority will make available to the Design-Builder, for use only in connection with this Contract, the property, if any, described in the Section 00836, hereinafter referred to as Authority-furnished property, at the times and locations stated therein. If the Authority-furnished property, suitable for its intended use, is not made available to the Design-Builder, the Contracting Officer shall, upon timely written request from the Design-Builder, if the facts warrant such action, equitably adjust any affected provision of this Contract pursuant to any procedures of Section 00753, CHANGES.
- B. Title to Authority-furnished property shall remain in the Authority. The Design-Builder shall maintain adequate property control records of Authority-furnished property in accordance with sound industrial practice.
- C. Unless otherwise provided in this Design-Build Contract, the Design-Builder, upon

acceptance of Authority-furnished property, assumes the risk of and shall be responsible for loss thereof or damage thereto except for reasonable wear and tear and except to the extent that such property is consumed in the performance of this Design-Build Contract.

- D. The Design-Builder shall, upon completion of this Design-Build Contract, prepare for shipment, deliver FOB origin or dispose of all Authority-furnished property not consumed in the performance of this Design-Build Contract or not theretofore delivered to the Authority as directed. The net proceeds of such disposal shall be credited to the Design-Builder price or paid in such other manner as may be directed.

*00737 MATERIAL, WORKMANSHIP AND EQUIPMENT

(06/01/03)

- A. Unless otherwise specifically provided in this Contract, all equipment, material and articles incorporated in the Project covered by this Contract are to be new and of the most suitable grade for the purpose intended. Notwithstanding the Authority's review and approval of any substitution, nothing herein relieves the Design-Builder of its obligations to satisfy its requirements under the Contract.
- B. Unless otherwise specifically provided in this Contract, reference to any equipment, material, or article to be incorporated in the Project and any patented process, by trade name, make or catalog number in the Contract Documents and Final Design Specifications and Final Design Drawings shall be regarded as establishing a standard of quality and shall not be construed as limiting competition, and the Design-Builder may, at its option, use any equipment, material, article, or process which, in the judgment of the Authority, is equal to that named. When required by this Contract or when called for by the Authority, the Design-Builder shall furnish to the Authority for approval the name of the manufacturer, the model number and other identifying data and information respecting the performance, capacity, nature and rating of the machinery and mechanical and other equipment which the Design-Builder contemplates incorporating in the Work. The Design-Builder shall furnish the Authority for approval full information concerning the material or articles which are contemplated to be incorporated into the Work. When required by the Contract or when so directed by the Authority, samples shall be submitted for approval at the Design-Builder's expense, with all shipping charges prepaid. Machinery, equipment, material and articles installed or used without required approval shall be at the risk of subsequent rejection.
- C. The Design-Builder shall provide construction equipment, in first class working order and safe condition, of sufficient quantities and sizes to complete the Work as specified and detailed in the Contract Documents and the Final Design Specifications and Final Design Drawings within the Contract Performance Time, and shall provide adequate maintenance of this equipment throughout the length of the Project.
- D. Any item of equipment that, at any time, proves ineffectual, or hazardous to personnel and/or property, shall be promptly brought to acceptable condition, or shall be removed

from the site as directed by the Authority or by any jurisdictional agencies.

*00738 HAZARDOUS MATERIALS (06/01/03)

The Authority shall be responsible for the presence of and any associated consequences of asbestos, PCB's, petroleum, or other hazardous waste or like materials and radioactive materials (Hazardous Materials) on the Project if such presence is unknown, unexpected, or not identified in information provided by the Authority, or not otherwise known to the Design-Builder prior to the preparation of his proposal. The Design-Builder shall, upon encountering or recognizing such Hazardous Materials, immediately stop work in the affected area and report the condition to the Authority Representative in writing. The Design-Builder shall submit the original and six copies and one electronic copy of the hazardous material report in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Authority shall have no responsibility or liability for any Hazardous Material that is brought to the Project or handled by the Design-Builder or any subcontractor.

*00739 PROTECTION OF EXISTING VEGETATION, STRUCTURES, UTILITIES AND IMPROVEMENTS (10/29/04)

- A. The Design-Builder shall preserve and protect all existing vegetation such as trees, shrubs, and grass on or adjacent to the site of work which is not to be removed and which does not unreasonably interfere with the work. Care shall be taken in removing trees authorized for removal to avoid damage to vegetation to remain in place. The Design-Builder shall be obligated to replace or restore all existing vegetation that is destroyed, removed or damaged in the performance of the Work to the condition that existed before work commenced.
- B. The Design-Builder shall protect from damage all adjacent property including, but not limited to, land, existing structures, improvements and/or utilities at or near the site of the Work and shall repair or restore any damage to such facilities resulting from failure to comply with the requirements of this Contract or the failure to exercise reasonable care in the performance of the Work. If the Design-Builder fails or refuses to repair any such damage promptly, the Authority may have the necessary work performed and charge the cost thereof to the Design-Builder.

00740 OPERATIONS AND STORAGE AREAS (10/29/04)

- A. All operations of the Design-Builder, including storage of materials, shall be confined to areas authorized or approved by the Authority Representative. Temporary buildings such as storage sheds, shops and offices, may be erected by the Design-Builder only with the approval of the Authority Representative, and shall be built with labor and materials furnished by the Design-Builder without expense to the Authority. Such temporary buildings and utilities shall remain the property of the Design-Builder and shall be removed by the Design-Builder at its expense upon the completion of the work. With the written consent of the Authority Representative, such buildings and utilities

may be abandoned and need not be removed.

- B. The Design-Builder shall, under regulations prescribed by the Authority, use only established roadways or construct and use such temporary roadways as may be authorized by the Authority Representative. Where materials are transported in the prosecution of the work, vehicles shall not be loaded beyond the loading capacity recommended by the manufacturer of the vehicle or prescribed by any Federal, State or Local law or regulation. When it is necessary to cross curbs or sidewalks, protection against damage shall be provided by the Design-Builder and any damaged roads, curbs, or sidewalks shall be repaired by or at the expense of the Design-Builder.

00741 CLEANING UP (06/01/03)

- A. The Design-Builder shall at all times keep the construction area, including storage areas used by the Design-Builder, free from accumulations of waste material or rubbish and prior to completion of the work remove any rubbish from the premises and all tools, scaffolding, equipment and materials not the property of the Authority.
- B. Upon completion of construction, the Design-Builder shall leave the work and premises in a clean, neat and workmanlike condition satisfactory to the Authority Representative.

*00742 ACCIDENT PREVENTION (10/29/04)

- A. In order to provide safety controls for protection to the life and health of employees and other persons, for prevention of damage to property, materials, supplies and equipment, and for avoidance of work interruptions in the performance of this Contract, the Design-Builder shall comply with all pertinent provisions of Authority safety requirements as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS and shall also take or cause to be taken such additional measures as the Authority Representative may determine to be reasonably necessary for that purpose.
- B. All construction work under this Contract shall be performed in a skillful and workmanlike manner. The Authority Representative may, in writing, require the Design-Builder to remove from the Project any employee the Authority Representative deems to be incompetent, careless or objectionable on other reasonable grounds related to the advancement of the project.
- C. The Design-Builder shall maintain an accurate record of, and shall report to the Authority Representative in the manner and on the forms prescribed by the Authority Representative exposure data and all accidents resulting in death, traumatic injury, occupational disease and damage to property, materials, supplies and equipment incidental to work performed under this Contract immediately after of such incident. Submittal shall include the original and six copies and an electronic copy of the form.
- D. The Authority Representative will notify the Design-Builder of any noncompliance with

the foregoing provisions and the action to be taken. The Design-Builder shall, after receipt of such notice, immediately take corrective action. Such notice, when delivered to the Design-Builder or its representative at the site of the work, shall be deemed sufficient for the purpose. If the Design-Builder fails or refuses to comply promptly, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to any such stop orders shall be made the subject of claim for extension of time or for excess costs or damages by the Design-Builder.

- E. Compliance with the provisions of this Section by subcontractors shall be the responsibility of the Design-Builder.
- F. Prior to commencement of the work, the Design-Builder shall:
 - 1. Submit in writing the original and six copies and an electronic copy of its proposals for effectuating this provision for accident prevention;
 - 2. Meet in conference with the Authority to discuss and develop mutual understanding relative to administration of the overall safety program.

00743 FIRE PROTECTION EQUIPMENT AND LIFE SAFETY AGREEMENT (06/01/03)

The Design-Builder shall submit a plan for a temporary fire protection system with provisions for fire protection systems and equipment as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS for use during the term of the Contract.

00744 PROTECTION OF PERSONS AND PROPERTY (06/01/03)

- A. The Design-Builder shall be responsible for ensuring compliance with the most stringent provisions of the applicable occupational safety and health statutes and regulations of the District of Columbia, State of Maryland, Commonwealth of Virginia or political subdivision in which the work is being performed and the Department of Labor OSHA standards. The Design-Builder shall comply with the Interim Organizational Health and Safety Program submitted with the Technical Proposal and the approved Organizational Health and Safety Program as specified in Section 01114 that is to be submitted by the Design-Builder prior to commencement of construction work. In addition, the Design-Builder must comply with the following documents: The appropriate WMATA Safety Manual, and associated insurance document if applicable, as specified in Section 00371; the WMATA System Safety Program Plan; the Metrorail Safety Rules and Procedures Handbook (for contracts in which work is performed on, or interfaces with the Metrorail System); the Department Bus Service Employee Handbook (for contracts in which work is performed on, or interfaces with the Metrobus System or facilities); Consolidated Plan prepared by WMATA for each Bus Division and Rail Yard in order to minimize the potential for pollutant discharge to the environment; the National Institute for Occupational Safety and Health (NIOSH) guidelines provisions pertaining to the safe performance of the Work; the American Conference of

Governmental Industrial Hygienists (ACGIH) guidelines; the American National Standards Institute (ANSI) guidelines; and the U.S. Army Corps of Engineers Safety and Health Requirements Manual. The Design-Builder shall also be responsible for compliance with applicable National Fire Protection Association (NFPA) Standards 13, 14, 24, 25 and 130. Further, the Design-Builder shall ensure that all methods of performing the work do not involve danger to the personnel employed thereon, the public, or private property, whether or not these methods are cited or indicated in the Contract Documents. Should charges of violation of any of the above be issued to the Design-Builder in the course of the work, a copy of each charge shall be immediately forwarded to the Authority Representative. The Design-Builder shall promptly notify the Authority of all damage to property of the Authority or others and of injuries sustained by any persons, of which the Design-Builder becomes aware, including but not limited to, employees of the Design-Builder, in any manner relating directly or indirectly to the Work or otherwise to this Contract.

- B. See Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS of the General Requirements for further safety, health and environmental safety requirements and procedures.
- C. See Section 00844 of the Supplementary Conditions for safety superintendence requirements.

00745 CONSIDERATION AND BASIS OF PAYMENT (06/01/03)

In consideration of its undertaking under this Contract, the Design-Builder shall be paid the sums set forth in this Contract, which shall constitute complete payment for all work and services required to be performed under this Contract and for all expenditures which may be made and expenses incurred. The basis of payment will be the Contract Price, as shown on the DESIGN-BUILD CONTRACT FORM, Section 00521, and which shall constitute complete compensation for performance of all work required by the Contract.

00746 CONTRACT PRICES AND PRICE SCHEDULE (06/01/03)

Payment for the various proposal items listed in the Price Schedule shall constitute full compensation for furnishing all plant, labor, equipment, appliances and material and for performing all operations required to complete the Work in conformity with the Authority's Contract requirements and the Final Design Specifications and Final Design Drawings developed by the Design-Builder. All costs for work not specifically mentioned in the Price Schedule shall be included in the Contract prices for the items listed.

00747 NOT USED

*00748 VARIATION IN ESTIMATED QUANTITIES

(06/01/03)

Where the quantity of a pay item in this Contract is an estimated quantity provided by the Authority and where the actual quantity of such pay item varies more than 15 percent above or below the estimated quantity stated in this Contract, an equitable adjustment in the Contract price shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above 115 percent or below 85 percent of the estimated quantity. If the quantity variation is such as to cause an increase in the time necessary for completion, the Authority Representative shall, upon receipt of a written request for an extension of time within ten (10) calendar days from the beginning of such delay, or within such further period of time which may be granted by the Authority Representative prior to the date of final settlement of the Contract, ascertain the facts and make such adjustment for extending the completion date as in the Authority Representative's judgment the findings justify.

00749 METHOD OF PAYMENT

(10/29/04)

- A. The Authority will make progress payments monthly as the Work proceeds on estimates approved by the Authority Representative for design related work and by estimates reviewed and approved by the Authority Representative for construction related work in accordance with Section 01290 PAYMENT PROCEDURES. At least ten (10) calendar days before submission of any Application for Payment, a Preliminary Progress and Quality Status Report Review meeting as specified in Section 01312, PROJECT MEETINGS, attended by Design-Builder, Authority Representative and others as appropriate will be held to review for acceptability of the schedules as specified in Section 01322, CONTRACT PROGRESS REPORTING and the Quality System as specified in Section 01470, QUALITY SYSTEM submitted in accordance with Section 01290, PAYMENT PROCEDURES. The Design-Builder shall have an additional ten (10) calendar days to make corrections and adjustments and to complete and resubmit the schedules a Formal Progress and Quality Status Report Review meeting as specified in Section 01312, PROJECT MEETINGS, attended by Design-Builder, Authority Representative and others as appropriate will be held to approve the schedules as specified in Section 01322, CONTRACT PROGRESS REPORTING and the QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification as specified in Section 01470, QUALITY SYSTEM and Section 01111, KEY DESIGN-BUILDER FUNCTIONS, and shall be submitted in accordance with Section 01290, PAYMENT PROCEDURES and Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. No progress payment shall be made to Design-Builder until the schedules are provided and accepted by the Authority Representative, whose acceptance shall not be unreasonably withheld. The progress schedule shall be acceptable to Authority as providing an orderly progression of the Work to completion within any specified Milestones and the Contract Performance Time, but acceptance of the progress schedule will neither impose on Authority responsibility for the sequencing, scheduling or work progress nor interfere with or relieve the Design-Builder from Design-Builder's full responsibility for the Work. The format and structure of the progress schedule will be as set forth in the Contract

Documents. The Authority's acceptance shall not be deemed to confirm that the schedule is a reasonable plan for performing the Work.

- B. The Design-Builder's progress payment requests shall be reviewed based on the scheduled and actual progress of the Work as reflected on the design schedule, cost loaded progress schedule, and monthly updates. The Design-Builder shall not be entitled to progress payments and the Authority shall have no obligation to review or approve progress payment requests if the Design-Builder has failed to submit or update the schedules, or if the applicable schedule or update submitted by the Design-Builder fails to accurately reflect the actual progress of the Work, or if the Authority Representative declines to approve the submitted schedules for any of the reasons stated in this Contract. A decision not to approve a request for progress payments based upon the Design-Builder's failure to comply with the schedule and update submission requirements is committed under this Contract shall be at the sole and absolute discretion of the Authority Representative.
- C. The Design-Builder shall furnish a breakdown of the total Contract price showing the amount included therein for each principal category of the Work, in such detail as requested, to provide a basis for determining progress payments. In the preparation of estimates the Authority Representative may authorize material delivered on the site and preparatory work done to be taken into consideration. Material delivered to the Design-Builder at locations other than the site may also be taken into consideration if the Design-Builder furnishes satisfactory evidence that the Design-Builder has acquired title to such material and that it will be utilized on the Work covered by this Contract.
- D. If the Contract price is more than \$50,000, material delivered that will be incorporated into the Project will be taken into consideration in computing progress payments, provided the materials is delivered on the site, or is delivered to the Design-Builder and properly stored in a warehouse, storage yard, or similar suitable place within 25 miles of the site or such reasonable distance in excess of 25 miles as may be approved by the Authority Representative, provided, however, that the Designer-Builder has the proper storage facilities, security, and insurance for the stored material as approved by the Authority Representative. Before each such payment is made for delivered material on the site, the Design-Builder shall furnish to the Authority Representative such evidence as may be required as proof of the ownership, quantity and value of such materials. Before each such payment is made for delivered materials off the site, the Design-Builder shall furnish the Authority Representative evidence of ownership, properly executed bills of sale to the Authority for the delivered material upon which payment is being made.
- E. In determining progress accomplished, the Authority will allow as an element of work accomplished, i.e., progress toward completion, only 50 percent of the invoiced cost of materials or equipment delivered to the site, or suitable location as described in paragraph D above, but not incorporated in the construction up to the time the materials or equipment are actually incorporated in the work.

- F. In making such progress payments, five percent of the estimated amount of work completed shall be retained until final completion and acceptance of the Contract Work. Also, whenever the Work is substantially complete, and the Design-Builder is in compliance with all provisions of the Contract, if the Authority Representative considers the amount retained to be in excess of the amount adequate for the protection of the Authority, the Authority Representative may request that the Contracting Officer reduce the level of retainage to an amount sufficient to protect the Authority's interests and release all or any portion of excess retainage to the Design-Builder.
- G. Where the time originally specified for completion of this Contract exceeds one year, the Authority Representative, at any time after 50 percent of the Work has been completed, if the Authority Representative finds that satisfactory progress (satisfactory progress includes prosecution of physical work, adherence to DBE if applicable, quality assurance and all other provisions of the Contract) is being made, may request that the Contracting Officer reduce the total amount retained from progress payments to the minimum level necessary to protect the interest of the Authority.
- H. All material and work covered by progress payments made shall thereupon become the sole property of the Authority but this provision shall not be construed as relieving the Design-Builder from the sole responsibility for all material and work upon which payments have been made or the restoration of any damaged work, or as waiving the right of the Authority to require the fulfillment of all of the terms of the Contract.
- I. Upon completion and acceptance of all work, the amount due the Design-Builder under this Contract shall be paid upon the presentation of a properly executed voucher as specified in Section 1290, PAYMENT PROCEDURES and Section 01770, CLOSEOUT PROCEDURES, and after the Design-Builder shall have furnished the Authority with a release of all claims against the Authority arising by virtue of this Contract as specified in Section 01780, CLOSEOUT SUBMITTALS, other than claims in stated amounts as may be specifically excepted by the Design-Builder from the operation of the release. If the Design-Builder's claim to amounts payable under the Contract has been assigned, a release may also be required of the assignee.
- J. The Authority may, at its sole discretion, withhold payment from the Design-Builder at the appropriate percentage for work, or portions thereof, that it deems to be defective or in nonconformance with the requirements of the Contract Documents.
- K. Satisfactory records for design, inspection, testing or other quality elements required under the approved Design-Build Quality System must be presented in order to receive payment for the completed work.
- L. See Section 01770, CLOSEOUT PROCEDURES for Final Inspection requirements.

*00750 PROGRESS PAYMENTS FOR LUMP SUM ITEMS (06/01/03)

If requested, the Design-Builder shall furnish to the Authority Representative a breakdown of the total Contract price for every lump sum item on the Price Schedule, showing the amount included therein for each principal category of the Work, in such detail as to provide a basis for determining progress payments. The breakdown shall be supported by such data to substantiate its correctness as the Authority Representative may require.

*00751 GARNISHMENT OF PAYMENTS (06/01/03)

Payment under this Contract shall be subject to any garnishment and attachment orders issued pursuant to the laws of Maryland, Virginia, and the District of Columbia, and to levies issued under the laws of the United States.

*00752 SUBCONTRACT PAYMENTS (06/01/03)

- A. The Design-Builder shall, under this Contract, establish procedures to ensure timely payment of amounts due pursuant to the terms of their subcontracts. The Design-Builder shall pay each subcontractor for satisfactory performance of its contract, no later than ten (10) days from the date of the Design-Builder's receipt of payment from the Authority for work by that subcontractor. The Design-Builder shall also release, within ten (10) days of satisfactory completion of all work required by the subcontractor, any retention withheld from the subcontractor.
- B. The Design-Builder shall certify on each payment request to the Authority that payment has been or will be made to all subcontractors in accordance with Paragraph A. above. The Design-Builder shall notify the Contracting Officer or other delegated Authority Representative with each payment request, of any situation in which scheduled subcontractor payments have not been made.
- C. If a subcontractor alleges that the Design-Builder has failed to comply with this Section, the Design-Builder agrees to support any Authority investigation, and, if deemed appropriate by the Authority, to consent to remedial measures to ensure subcontractor payment that is due.
- D. The Design-Builder agrees that the Authority may provide appropriate information to interested subcontractors who want to determine the status of Authority payments to the Design-Builder.
- E. Nothing in this Section is intended to create a contractual obligation between the Authority and any subcontractor or to alter or affect traditional concepts of privity of contract between all parties.

*00753 CHANGES

(06/01/03)

- A. The Authority Representative (or Contracting Officer, depending on the level of authority required) may, at any time, and without notice to the sureties, by written order designated or indicated to be a change order, make any change in the Work within the general scope of the Contract including, but not limited to, changes:
1. In the Scope of the Work or other Contract Requirements;
 2. In the Project Manual, the Project Drawing Attachments to the Project Manual, the Final Design Specifications and the Final Design Drawings;
 3. In the method or manner of performance of the work;
 4. In the Authority-furnished facilities, equipment, materials, services, or site; or
 5. Directing acceleration in the performance of work.
- B. Any other written order or an oral order, which terms as used in this Paragraph B. shall include direction, instruction, interpretation or determination from the Authority Representative or Contracting Officer, which causes any such change, shall be treated as a change order under this Section, provided that the Design-Builder gives the Authority Representative written notice stating the date, circumstances and source of the order and that the Design-Builder regards the order as a change order.
- C. Except as herein provided, no order, statement or conduct of the Authority Representative or Contracting Officer shall be treated as a change under this Section or entitle the Design-Builder to an equitable adjustment hereunder.
- D. If any change under this Section causes an increase or decrease in the Design-Builder's cost of, or the time required for, the performance of any part of the work under this Contract, whether or not changed by any order, an equitable adjustment shall be made and the Contract modified in writing accordingly: Provided, however, that no claim for any change under Paragraph B. above shall be allowed for any costs incurred more than 20 days before the Design-Builder gives written notice as therein required. This 20-day limitation shall be strictly applied regardless of whether the Authority is prejudiced by any lack of notice.
- E. If the Design-Builder intends to request an equitable adjustment under this Section, it must, within 30 days after receipt of a written change order under Paragraph A. above or furnishing of a written notice under Paragraph B. above, submit to the Authority Representative a written proposal in accordance with this CHANGES Section, unless this period is extended by the Authority Representative. The proposal hereunder may be included in the notice under Paragraph B. above.
- F. No claim by the Design-Builder for an equitable adjustment hereunder shall be allowed

if asserted after final payment under this Contract.

*00754 PRICING OF ADJUSTMENTS (06/01/03)

- A. When costs are a factor in any determination of a Contract price adjustment pursuant to Section 00753, CHANGES or any other Section of this Contract, such costs shall be in accordance with the contract cost principles and procedures in Subpart 31.1 of the Federal Acquisition Regulations (48 CFR 31.1). Where general and administrative expense is recoverable as part of any pricing adjustment under this Contract, the adjustment shall be based on the relationship between the entity's total general and administrative expenses allowable under FAR cost principles for all construction-type operations during the fiscal or calendar year covering the actual performance period of the work included in this pricing adjustment, and the entity's total cost input (excluding General and Administrative costs) for construction-type operations during the same period, expressed as a percentage, applied to the direct and overhead Contract costs included in the pricing adjustment; i.e., general and administration expenses will be paid on a percentage of cost basis, not on a daily rate type basis.
- B. Notwithstanding any interpretation of the aforementioned contract cost principles and procedures to the contrary, the Authority shall not be liable for interest, however represented, on or as a part of any claim, request, proposal or adjustment (including equitable adjustments) whether said claim, request, proposal or adjustment (including equitable adjustments) arises under the Contract or otherwise.

*00755 ACCOUNTING AND RECORD KEEPING (10/29/04)

- A. Applicability. This Section shall become effective for and shall apply to any adjustment in the price of this Contract initiated by the Design-Builder or the Authority. However, where the original amount of this Contract is less than \$1,000,000, Paragraph C. of this Section does not apply unless the adjustment is expected to exceed \$50,000.
- B. Forward Priced Adjustments. Unless expressly waived in writing in advance by the Authority Representative, the Design-Builder shall furnish to the Authority Representative a cost proposal in advance of performance of any work for which a price adjustment is requested under this Contract. The proposal format shall be as detailed in Section 01250, CONTRACT MODIFICATION PROCEDURES. The Design-Builder shall initiate such records as are necessary to substantiate all elements of the pricing proposal. Such records supporting the costs of each pricing adjustment request shall be specifically segregated and identified in the Design-Builder's accounting system as being applicable to the pricing adjustment request.
- C. Post Pricing Adjustments. In addition to the records required to be originated under Paragraph B. above, in the event pricing of an adjustment under this Contract is not agreed upon between the Design-Builder and the Authority Representative prior to the commencement of work for which the pricing adjustment is requested, the Design-Builder and any subcontractor engaged in work for which the pricing adjustment is

requested, shall maintain accounts and original cost records specifically segregated and identified by job order or other appropriate accounting procedures approved by the Authority of all incurred separated costs related to the work for which the pricing adjustment is requested. The Design-Builder shall maintain accounts and records which segregate and account for the costs of all work associated with that part of the project for which the pricing adjustment is requested and shall allocate between:

1. work required under the base Contract or under any Option if applicable;
2. work requested to be reimbursed under the pricing adjustment; and
3. other claim, including but not limited to, changes, differing site conditions, and the like.

In addition to the accounting system established to segregate and account for contract price adjustments, which shall accumulate such costs by work activity under logical cost groups, such as material, labor, equipment, subcontracts, field overhead and the like, the Design-Builder shall maintain field records associated with these costs on a form approved by the Authority Representative. Subject to agreement between the Design-Builder and the Authority Representative, or upon direction of the Authority Representative for work under Section 01250, CONTRACT MODIFICATION PROCEDURES, the Design-Builder shall use Authority Forms (Daily Report - Labor, Materials and Equipment), to be supplied by the Authority at the request of the Design-Builder. The terms of Section 01250, CONTRACT MODIFICATION PROCEDURES shall apply regardless of the form used. The use of Authority Forms to segregate change order costs does not, in and of itself, invoke the provisions of Section 01250, CONTRACT MODIFICATION PROCEDURES.

D. Availability. The accounts, records and costs information required to be originated under Paragraphs B. and C. above together with all other accounts, records and costs information related to this Contract shall be maintained and made available by the Design-Builder or subcontractor(s):

1. At the office of the Design-Builder or subcontractor(s) at all reasonable times for inspection, audit, reproduction or such other purposes as may be required by the Authority, or pursuant to any other Sections of this Contract;
2. Until the expiration of three years from the date of payment of the final \$100 (final payment) under this Contract or such lesser time as is specified in Contractor Records Retention, Subpart 4.7 of the Federal Acquisition Regulations (48 C.F.R. 4.7) and for such longer period, if any, as is required by applicable statute, or by any other Sections of this Contract, or by subparagraphs a. and b. below:
 - a. If the Contract is completely or partially terminated, for a period of three years from either the date of any resulting final settlement or the date of final payment, whichever is the greater period; and

- b. If a pricing adjustment is involved in any appeal under Section 00732, DISPUTE RESOLUTION, or in any litigation related to this Contract, for a period of one (1) year following the final disposition of the appeal or litigation.

- E. When asserting a claim under the various Sections of this Contract, the Design-Builder shall grant the Authority access to review and ascertain the validity of the accounting records being maintained for segregation of costs, including base cost records, and to audit such costs as are deemed appropriate by the Authority Representative. No payment shall be made to the Design-Builder on its claim until such records are made available and access is permitted.

- F. Limitation on Pricing Adjustment. In the event the Design-Builder or any subcontractor fails to originate or to maintain, or to make available any accounts or records as required under this or any other Section of the Contract, any pricing adjustment or portion thereof previously granted by the Authority Representative for which records are not available shall be rescinded and re-computed, or if a pricing adjustment has not yet been granted shall be computed, in an amount not to exceed the direct costs for which accounts or records are not available, plus a single markup for indirect expenses not to exceed 10 percent of the direct costs so determined by the Authority Representative. The adjustment will be established by the Authority Representative based upon, at his or her election, either:
 - 1. An audit of any existing books and records of the Design-Builder or subcontractor; or
 - 2. An Authority estimate adopted by the Authority Representative; or
 - 3. A combination of 1 and 2.

The Design-Builder and subcontractors shall not be allowed any profit for the work for which the Design-Builder or subcontractor fails to originate, or to maintain, or to make available any accounts or records as required under this Contract.

- G. The Design-Builder shall insert a clause containing all the provisions of this Section in all subcontracts issued under this Contract, modified as necessary, for proper identification of the contracting parties and the Authority Representative under this Contract.

***00756 AUDIT - PRICE ADJUSTMENTS (06/01/03)**

- A. General: The Authority shall have the audit and inspection rights described in the applicable Paragraphs B., C., and D. below.

- B. Examination of costs: If this is a cost-reimbursement type, incentive, time and materials, labor hour or price re-determinable contract, or any combination thereof, the

Design-Builder shall maintain, and the Authority shall have the right to examine books, records, documents and other evidence and accounting procedures and practices, sufficient to reflect properly all direct and indirect costs of whatever nature claimed to have been incurred for the performance of this Contract. Such right of examination shall include inspection at all reasonable times of the Design-Builder's plant, or such parts thereof, as may be engaged in the performance of this Contract.

- C. Cost or pricing data: If the Design-Builder submitted cost or pricing data in connection with the pricing of this Contract or any change or modification thereto, unless such pricing was based on adequate price competition, established catalog or market prices of commercial items sold in substantial quantities to the general public, or prices of commercial items sold in substantial quantities to the general public, or prices set by law or regulation, the Authority shall have the right to examine all books, records, documents and other data of the Design-Builder related to the negotiation, pricing or performance or such Contract, change or modification, for the purpose of evaluating the accuracy, completeness and currency of the cost or pricing data submitted. The right of examination shall extend to all documents necessary to permit adequate evaluation of the cost or pricing data submitted along with the computations and projections used therein.
- D. The Design-Builder shall insert a clause containing all the provisions of this Section, including this Paragraph D. in all subcontracts hereunder except altered as necessary for proper identification of the contracting parties and the Authority Representative under this Contract.

*00757 CERTIFICATE OF CURRENT COST OR PRICING DATA (06/01/03)

The Design-Builder shall provide a Certificate of Current Cost or Pricing Data to the Authority on a form suitable to the Contracting Officer as required in Subpart 15.403 of the Federal Acquisition Regulations (48 CFR 15.403) in support of any negotiated contract expected to exceed \$100,000 or any modification to a formally advertised or negotiated contract on which the aggregate of the increases and decreases in cost are expected to exceed \$100,000. The Authority Representative at his/her discretion may request cost or pricing data for modifications on which costs are less than \$100,000 and an attendant certificate of current cost or pricing data. Cost or Pricing data submittal procedures are specified in Section 00201, GENERAL INSTRUCTIONS and Section 01250, CONTRACT MODIFICATION PROCEDURES.

*00758 PRICE REDUCTION FOR DEFECTIVE COST OR PRICING DATA - PRICE ADJUSTMENTS (06/01/03)

- A. This Section shall become operative only with respect to any modification of this Contract which involves aggregate increases and/or decreases in cost plus applicable profits in excess of \$100,000 unless the modification is priced on the basis of adequate competition, established catalog or market prices of commercial items sold in substantial quantities to the general public, or prices set by law or regulation. The right

to price reduction under this Section is limited to defects in data relating to such modification.

- B. If any price, including profit or fee, negotiated in connection with any price adjustment under this Contract was increased by any significant sums because:
1. The Design-Builder furnished cost or pricing data which was not complete, accurate and current as certified in the Design-Builder's Certificate of Current Cost or Pricing Data;
 2. A subcontractor, pursuant to the Section 00760, SUBCONTRACTOR COST OR PRICING DATA, or any subcontract provision therein required, furnished cost or pricing data which was not complete, accurate and current as certified in the subcontractor's Certificate of Current Cost or Pricing Data;
 3. A subcontractor or prospective subcontractor furnished cost or pricing data which was required to be complete, accurate and current and to be submitted to support a subcontract cost estimate furnished by the Design-Builder but which was not complete, accurate and current as of the date certified in the Design-Builder's Certificate of Current Cost or Pricing Data; or
 4. The Design-Builder or a subcontractor or prospective subcontractor furnished any data, not within Paragraphs (1), (2) or (3) above, which was not accurate, as submitted; then the price shall be reduced accordingly and the Contract shall be modified in writing as may be necessary to reflect such reduction. However, any reduction in the Contract price due to defective subcontract data of a prospective subcontractor, when the subcontract was not subsequently awarded to such subcontractor, will be limited to the amount, plus applicable overhead and profit markup, by which the actual subcontract, or actual cost to the Design-Builder if there was not a subcontract, was less than the prospective subcontract cost estimate submitted by the Design-Builder, provided the actual subcontract price was not affected by defective cost or pricing data. (Note: Since the Contract is subject to reduction under this Section by reason of defective cost or pricing data submitted in connection with certain subcontracts, it is expected that the Design-Builder may wish to include an article in each such subcontract requiring the subcontractor to appropriately indemnify the Design-Builder. However, the inclusion of such an article and the terms thereof are matters of negotiation and agreement between the Design-Builder and the subcontractor, provided that they are consistent with disputes provisions in subcontracts. It is also expected that any subcontractor subject to such indemnification will generally require substantially similar indemnification for defective cost or pricing data required to be submitted by its lower tier subcontractors.)

00759 CONTRACT MODIFICATIONS: REQUIREMENTS FOR PROPOSALS, PRICE BREAKDOWN AND NEGOTIATION OF PROFIT (10/30/04)

- A. The Design-Builder, in connection with any proposal he makes for a Contract modification, shall furnish a price breakdown, itemized as required by the Authority Representative. Unless otherwise directed, the breakdown shall be in sufficient detail to permit an analysis of all material, labor, equipment, subcontract and overhead costs, as well as profit, and shall cover all work involved in the modification, whether such work was deleted, added or changed. Any amount claimed for subcontracts shall be supported by a similar price breakdown. In addition, if the proposal includes a time extension, a justification therefor shall also be furnished. The proposal, together with the price breakdown and time extension justification shall be furnished by the date specified by the Authority Representative.
- B. Where profit is negotiated as an element of price, with either the Design-Builder or subcontractor, a reasonable profit will be negotiated for each modification by using the following procedure as a guide:

(1) Breakdown:

FACTOR	RATE	WEIGHT	VALUE
Degree of Risk	20		
Relative difficulty of Work	15		
Size of Job	15		
Period of Performance	15		
Design-Builder's Investment	5		
Assistance by Authority	5		
Subcontracting	25		
	100		%

(2) Based on the circumstances of each modification, each of the above factors shall be weighted from .03 to .12 as indicated below. The value shall be obtained by multiplying the rate by the weight. From the value column when totaled the fair and reasonable profit can be determined under the circumstances of the particular modification.

[a] **Degree of risk:** Where the modified work involves no risk or the degree of risk is very small the weighting should be .03; as the degree of risk

increases the weighting should be increased up to a maximum of .12. Lump sum items will generally have a higher weighted value than unit price items for which quantities are provided. Things to consider: The portion of the work to be done by subcontractors, nature of work, where work is to be performed, reasonableness of negotiated costs, amount of labor included in cost and whether the negotiation is before or after performance of work.

- [b] **Relative difficulty of work:** If the modified work is most difficult and complex the weighting should be .12 and should be proportionately reduced to .03 on the simplest of jobs. This factor is tied in, to some extent, with the degree of risk. Things to consider: The nature of the work, by whom it is to be done, the location and the time schedule.
 - [c] **Size of job:** All modified work not in excess of \$100,000 shall be weighted at .12. Work estimated between \$100,000 and \$5,000,000 shall be proportionately weighted from .12 to .05. Work from \$5,000,000 to \$10,000,000 shall be weighted at .04 and work in excess of \$10,000,000 at .03.
 - [d] **Period of performance:** Modifications providing for an extension of time in excess of 30 days are to be weighted at .12. Jobs of lesser duration are to be proportionately weighted to a minimum of .03 for jobs not to exceed one day. No weight is to be granted for this factor where there is no extension of the Contract performance period of interim dates due to work under this modification.
 - [e] **Design-Builder's investment:** To be weighted from .03 to .12 on the basis of below average, average and above average. Things to consider: Amount of subcontracting, mobilization payment item, Authority-furnished property and method of making progress payments.
 - [f] **Assistance by Authority:** To be weighted from .12 to .03 on the basis of average to above average. Things to consider: Use of Authority-owned property, equipment and facilities, and expediting assistance.
 - [g] **Subcontracting:** To be weighted inversely proportional to the amount of subcontracting. Where 80 percent or more of the work is to be subcontracted the weighting is to be .03 and such weighting proportionately increased to .12 where all the work is performed by the Design-Builder's own forces.
- (3) When considered necessary because of very unusual circumstances or local conditions, the range of weight may be increased to an upper limit of .15 if supported by adequate justification and if approved by the Contracting

Officer.

- (4) When negotiations between the Authority and the Design-Builder are joined to determine an equitable adjustment for a modification of this Contract, the Design-Builder shall encourage involved subcontractor(s) to be present to present their cost data and to participate in the resolution of a fair and equitable adjustment. In any event, if after reasonable effort a negotiated settlement cannot be reached between the Authority and the Design-Builder and subcontractor(s) involved, then at the request of the subcontractor(s) concerned, the Contracting Officer may process Part 1 of a two-part modification to cover the direct costs only, as agreed upon or, if not agreed upon, as determined unilaterally by the Contracting Officer. Subcontractor(s) requests for a Part 1 modification shall be submitted to the Design-Builder and the Design-Builder shall forward such requests promptly to the Contracting Officer. Any payments received by the Design-Builder under this procedure shall be passed along within 10 days thereafter to the subcontractor(s) concerned.
- C. Change orders: When the Authority Representative directs a change in accordance with Section 00724, PROGRESS SCHEDULES AND REQUIREMENTS FOR MAINTAINING PROGRESS RECORDS and Section 01322, CONTRACT PROGRESS REPORTING, the Design-Builder shall identify in his proposal for equitable adjustment the network activities that precede and follow the change order work activities. If the change order work activities are performed concurrently with existing network activities, those concurrent network activities shall be identified. If the change order work activities restrain network activities, those restraints shall be identified.

*00760 SUBCONTRACTOR COST OR PRICING DATA

(06/01/03)

- A. The Design-Builder shall require subcontractors hereunder to submit cost or pricing data prior to award of any negotiated lump sum or cost-reimbursement type, incentive, or price re-determinable subcontract over \$100,000. The Design-Builder shall require subcontractors to certify that to the best of their knowledge and belief, the cost and pricing data submitted under this Paragraph is accurate, complete, and current as of the date of execution, which date shall be as close as possible to the date of agreement on the negotiated price of the subcontract. The Design-Builder shall insert the substance of this Section in each of its negotiated lump sum or cost reimbursement type, price re-determinable, or incentive subcontracts over \$100,000 hereunder. The Design-Builder also shall insert the substance of this Section in each subcontract with respect to any change or other modification made pursuant to one or more Sections of this Contract which involves a price adjustment greater than \$100,000. The Design-Builder shall conduct a cost analysis of all negotiated subcontracts.
- B. The requirements that follow shall become operative only with respect to any change or other modification made pursuant to one or more Sections of this Contract which

involves a price adjustment in excess of \$100,000. The requirements of this Section shall be limited to such price adjustments:

1. The Design-Builder shall require subcontractors hereunder to submit cost or pricing data:
 - a. prior to award of any cost-reimbursement type, incentive, or price re-determinable subcontract;
 - b. prior to the award of any subcontract the price of which is expected to exceed \$100,000; or,
 - c. prior to the pricing of any subcontract change or other modification for which the price adjustment is expected to exceed \$100,000; except where the price is based on adequate price competition, established catalog or market prices of commercial items sold in substantial quantities to the general public or prices set by law or regulation.
2. The Design-Builder shall require subcontractors to certify that to the best of their knowledge and belief the cost and pricing data submitted under this Paragraph B. is accurate, complete and current as of the date of execution, which date shall be as close as possible to the date of agreement on the negotiated price of the Contract modification.
- C. The Design-Builder shall insert the substance of this Section in each subcontract hereunder which exceeds \$100,000.

*00761 EXAMINATION OF RECORDS (06/01/03)

- A. The Design-Builder agrees that the Contracting Officer, and the Comptroller General of the United States and the United States Secretary of Transportation if applicable, or their duly authorized representatives, shall, until the expiration of three years after final payment under this Contract, have access to and the right to examine any directly pertinent books, documents, papers, and records of the Design-Builder involving transactions related to this Contract, for the purpose of making audit, examination, excerpts and transcription.
- B. The Design-Builder further agrees to include in all its subcontracts hereunder, a provision to the effect that the subcontractor agrees that the Contracting Officer, and the Comptroller General of the United States and the United States Secretary of Transportation if applicable, or their duly authorized representatives, shall until the expiration of three years after final payment under this Contract, have access to and the right to examine any directly pertinent books, documents, papers, and records of the subcontractor involving transactions related to the subcontract, for the purpose of making audit, examination, excerpts and transcription. The term "subcontract," as used in this Section, excludes:

1. purchase orders not exceeding \$2,500 and,
2. subcontracts or purchase orders for public utility services at rates established from standard costs applicable to the general public.

***00762 WARRANTY/GUARANTEE OF CONSTRUCTION (07/15/03)**

- A. Unless otherwise specifically provided for in the Contract, the Design-Builder, notwithstanding any final inspection, acceptance or payment, guarantees that all work performed and materials and equipment furnished under this Contract are in accordance with the Contract requirements. The Design-Builder also guarantees that when installed all materials and equipment were free from defects and will remain so for a period of at least two years from the date of acceptance by the Authority.
- B. If defects of any kind should develop during the period such guarantees are in force, the Contracting Officer shall immediately notify the Design-Builder in writing of such defects. The Authority thereupon shall have the right, by a written notice to that effect, to require the Design-Builder to repair or replace all inferior or defective work, material, or equipment or permit it to remain in place and assess the Design-Builder the costs it (the Design-Builder) would have incurred had the Design-Builder been required to effect repair or replacement.
- C. Any correction or replacement of parts, materials, equipment, supplies or construction made pursuant to the provisions of this Section shall also be subject to the provisions of the Contract including this clause to the same extent as parts, material, equipment, supplies or construction originally installed. The warranty with respect to such new or corrected parts, materials, equipment, supplies or construction shall be equal in duration as that set forth in A. above and shall run from the date that such parts, materials, equipment, supplies or construction are replaced or corrected and accepted by the Authority.
- D. The Design-Builder guarantees to reimburse the Authority for, or to repair or replace, any damages to the site, buildings, or contents thereof that is caused by inferior or defective workmanship, or the use of inferior or defective materials or equipment in the performance of this Contract. The Contracting Officer shall immediately notify the Design-Builder in writing when such damage occurs. The Authority shall have the right to require the Design-Builder to repair or replace such damaged areas or equipment, or elect to permit such damage to remain as is and assess the Design-Builder the costs it would have incurred had it been required to effect repair or replacement.
- E. Should the Design-Builder fail to proceed promptly, after notification by the Contracting Officer, to repair or replace any inferior or defective work, material, or equipment, or damage to the site, buildings, or contents, thereof, caused by inferior or defective work, or the use of inferior or defective materials, or equipment, the Authority may have such work, material, equipment, or damage repaired or replaced and charge all costs incident thereto to the Design-Builder.

- F. Any special guarantees that may be required under the Contract, shall be subject to the elections set forth above unless otherwise provided in such special guarantees.
- G. Should the Design-Builder fail to prosecute the work or fail to proceed promptly to provide guarantee period services after notification by the Contracting Officer, the Authority may, subject to Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY AND TIME EXTENSIONS contained in this Contract, and after allowing the Design-Builder 10 calendar days to correct and comply with the Contract, terminate the right to proceed with the work (or the separable part of the work) that has been delayed or unsatisfactorily performed. In this event, the Authority may take over the work and complete it by contract or otherwise, and may take possession of and use any materials, appliance, and plant on the work site necessary for completing the work. The Design-Builder and its sureties shall be liable for any damages to the Authority resulting from the Design-Builder's refusal or failure to complete the work within this specified time, whether or not the Design-Builder's right to proceed with the work is terminated. This liability includes any increased costs incurred by the Authority in completing the work.
- H. The decision of the Contracting Officer as to liability of the Design-Builder under this Section is subject to the appeal procedure provided for in Section 00732, DISPUTE RESOLUTION of this Contract.
- I. All subcontractor's, manufacturers' and suppliers' warranties and guarantees, expressed or implied, respecting any part of the Work and any material used therein shall be deemed obtained in accordance with Section 01780, CLOSEOUT SUBMITTALS, and shall be enforced, by the Design-Builder for the benefit of the Authority without the necessity of separate transfer or assignment thereof, provided that, if directed by the Authority, the Design-Builder shall require such subcontractor's, manufacturers and suppliers to execute such warranties and guarantees in writing to the Authority in accordance with Section 01780, CLOSEOUT SUBMITTALS. In connection therewith, the Design-Builder further agrees to perform the Work in such a manner or consistent with and so as to preserve all such warranties and guarantees.
- J. Certain Standard and Technical Specifications Sections provide for a warranty longer than the general warranty provided in this Contract, or commence from dates other than Final Completion and Acceptance of the Work. Where such warranties are specified as both in addition to the general warranty and in total years, the total years shall govern, and the warranty period shall commence from Final Completion and Acceptance of the Work.

00763 CORRECTION OF DEFICIENCIES

(07/07/03)

- A. This Section shall apply only to those deficiencies discovered by either the Authority or the Design-Builder within two years after acceptance. Materials or equipment will be regarded as having a deficiency if a type of material or equipment in like service accumulates a failure rate greater than five percent within a period of two years

following final acceptance by the Authority. Systems or subsystems will be regarded as having a deficiency if they exhibit any condition or characteristics which are not in compliance with the Contract Documents and the Design-Builder's Final Design Specifications and Final Design Drawings, and intent of this Contract anytime during a period extending for two years following their final acceptance by the Authority.

- B. Notice of deficiency to Design-Builder: If the Authority determines that a deficiency exists in any of the materials, equipment, systems or subsystems provided the Authority under this Contract, it shall promptly notify the Design-Builder of the deficiency, in writing, within 30 days.
- C. Recommendation for correction: Upon timely notification of the existence of such a deficiency, or if the Design-Builder independently discovers a deficiency in accepted materials, equipment, systems or subsystems, the Design-Builder shall promptly submit to the Authority its recommendation for corrective actions, together with supporting information in sufficient detail for the Authority to determine what corrective action, if any, shall be undertaken in accordance with Section 01780, CLOSEOUT SUBMITTALS. The recommendation shall be submitted to the Authority within 15 working days of discovery or receipt of notice of the deficiency.
- D. Direction to Design-Builder concerning correction of deficiencies: Within 30 days after receipt of the Design-Builder's recommendations for corrective action and adequate supporting information, the Contracting Officer, at his sole discretion, shall give the Design-Builder written notice not to correct any deficiency, or to correct or partially correct any deficiency within a reasonable time and at a specified location.
- E. Schedule of deficiency corrections: The Design-Builder shall prepare Schedule of Deficiency Corrections and deliver it to the Authority for approval in accordance with Section 01780, CLOSEOUT SUBMITTALS within 15 working days of discovery of deficiency by the Design-Builder or receipt of notice of discovery of a deficiency by the Authority.
- F. Correction of deficiencies by Design-Builder: The Design-Builder shall promptly comply with any timely written direction by the Contracting Officer to correct or partially correct a deficiency, at no increase in the Contract price. The Design-Builder shall also prepare and furnish to the Authority in accordance with Section 01780, CLOSEOUT SUBMITTALS data and reports applicable to any correction required under this Section (including revision and updating of all other affected data called for under this Contract) at no increase in the Contract price.
- G. Modification of Contract with respect to uncorrected deficiencies: In the event of timely notice of a decision not to correct or only to partially correct a deficiency, the Design-Builder shall submit to the Authority within 15 working days, a technical and cost proposal to amend the Contract in accordance with Section 01780, CLOSEOUT SUBMITTALS to permit acceptance of the affected materials, equipment, systems or subsystems in accordance with the revised requirements, and an equitable reduction

in Contract price shall promptly be negotiated by the parties and stated in a modification to this Contract.

- H. Failure to correct: If the Design-Builder fails or refuses to present a detailed recommendation for corrective action and to prepare and furnish data and reports as required in Paragraph G., then the Contracting Officer shall give the Design-Builder written notice specifying the failure or refusal and setting a period after receipt of the notice within which it must be corrected. If the failure or refusal is not corrected within the specified period, the Contracting Officer may, by contract or otherwise, as required:
1. Obtain detailed recommendations for corrective action;
 2.
 - a. Correct the materials, equipment, systems or subsystems, or
 - b. Replace the materials, equipment, systems or subsystems; and if the Design-Builder fails to furnish timely disposition instructions, the Contracting Officer may dispose of non-conforming materials, equipment, systems or subsystems for the Design-Builder's account in a reasonable manner, in which case the Authority is entitled to reimbursement from the Design-Builder or from the proceeds for the reasonable expense of care and disposition, as well as for excess costs incurred or to be incurred; and
 - c. Obtain applicable data and reports.
 3. Charge to the Design-Builder the cost occasioned to the Authority thereby.
- I. Correction of deficient replacements and re-performances: Any materials or equipment corrected or furnished in replacement and any systems or subsystems revised pursuant to this Section shall also be subject to all the provisions of the Contract to the same extent as materials, equipment, systems or subsystems initially accepted.
- J. The correction of materials or equipment exhibiting a failure rate greater than five percent means taking of any and all actions necessary to correct the deficiencies, including removal and replacement of all pieces of material or equipment in like service in a manner satisfactory to the Authority Representative. The correction of systems or subsystems exhibiting one or more deficiencies means taking any and all actions necessary to eliminate any and all deficiencies in a manner satisfactory to the Authority.
1. Disassembly/reassembly expense: The Design-Builder shall be liable for reasonable cost of disassembly/reassembly of larger items necessary to remove the materials or equipment to be inspected and/or returned for correction or replacement.
 2. Transportation charges:
 - a. When the Authority returns supplies to the Design-Builder for correction or

replacement pursuant to this Section, the Design-Builder shall be liable for transportation charges up to an amount equal to the cost of transportation by the usual commercial method of shipment from the designated destination point under this Contract to the Design-Builder's plant, in addition to any charges provided for in subparagraph 2.b. below. The Design-Builder shall also bear the responsibility for the supplies while in transit.

- b. When compliance with the terms of this Section by the Design-Builder involves shipment of corrected or replacement supplies from the Design-Builder to the Authority, the Design-Builder shall be liable for transportation charges up to an amount equal to the cost of transportation by the usual commercial method of shipment from the Design-Builder's plant to the designated destination point under this Contract, in addition to any charges provided for subparagraph 2.a. above. The Design-Builder shall also bear the responsibility for the supplies while in transit.
- K. No extension in time for performance; no increase in Contract price: In no event shall the Authority be responsible for extension or delays in the scheduled deliveries or periods of performance under this Contract as a result of the Design-Builder's obligations to correct deficiencies, nor shall there be any adjustment of the delivery schedule or period of performance as a result of such correction of deficiencies, except as may be agreed to by the Authority in a supplemental agreement with adequate consideration.
- L. The Design-Builder shall not be responsible under this Section for the correction of deficiencies in Authority-furnished property, except for deficiencies in installation, unless the Design-Builder performs or is obligated to perform any modifications or other work on such property. In that event, the Design-Builder shall be responsible for correction of deficiencies to the extent of such modifications or other work.
- M. The Design-Builder shall not be responsible under this Section for the correction of deficiencies caused by the Authority.

00764 COVENANT AGAINST CONTINGENT FEES

(06/01/03)

The Design-Builder warrants that no person or selling agency has been employed or retained to solicit or secure this Contract upon an agreement or understanding for a commission, percentage, brokerage or contingent fee, excepting bona fide employees or bona fide established commercial or selling agencies utilized by the Design-Builder for the purpose of securing business. For breach or violation of this warranty the Contracting Officer shall have the right to annul this Contract without liability or in his or her discretion to deduct from the Contract price or consideration, or otherwise recover, the full amount of such commission, percentage, brokerage or contingent fee.

***00765 OFFICIALS NOT TO BENEFIT (06/01/03)**

- A. No member of Congress or resident commissioner shall be admitted to any share or part of this Contract, or to any benefit that may arise therefrom; but this Paragraph shall not be construed to extend to this Contract if made with a corporation for its general benefit.
- B. No member, officer or employee of the Authority or of a local public body during tenure with the Authority or with another local public body and one year thereafter shall have any interest, direct or indirect, in this Contract or the proceeds thereof.

***00766 GRATUITIES (06/01/03)**

In connection with performance of work required under this Contract, or any changes or modifications relative thereto, the giving of or offering to give gratuities (in the form of entertainment, gifts or otherwise) by the Design-Builder, or any agent, representative or other person deemed to be acting on behalf of the Design-Builder, or any supplier or subcontractor furnishing material to or performing work under this Contract, or any agent, representative or other person deemed to be acting on behalf of such supplier or subcontractor, to any Director, Officer or employee of the Authority; or to any Director, Officer, employee or agent of any of the Authority's agents, consultants, representatives or other persons deemed to be acting for or on behalf of the Authority, with a view toward securing a contract or securing favorable treatment with respect to the awarding or amending, or the making of any determinations with respect to the performing of such contract is expressly forbidden. The terms of this GRATUITIES Section shall be strictly construed and enforced in the event of violations hereto.

***00767 CONFLICT OF INTEREST (06/01/03)**

- A. Neither the Design-Builder nor any person affiliated with it shall have, during the term of this Contract and any extension thereof, any contractual or other financial relationship with the Authority, with any Authority prime contractor, or with any subcontractor or supplier to any Authority prime contractor other than the contractual relationship established under this Contract, unless an exception is granted as described below. Such exceptions will not unreasonably be withheld.
- B. Upon request of the Design-Builder and upon full disclosure and for good cause the Contracting Officer may, at his/her sole discretion, grant an exception to the requirement of this Section 00767, when in his/her judgment the exception will not create a conflict between the Design-Builder's duties and obligations under this Contract and the duties and obligations imposed on the Design-Builder under the contractual or other relationship for which an exception is requested.
- C. If, during the performance of this Contract and any extension thereof, the Design-Builder becomes aware of any relationship, financial interest, or other activity in which it or an affiliated person or company is involved which is not in compliance with the

provisions of this Section 00767, it shall promptly notify the Contracting Officer in writing and fully disclose all circumstances thereof. Should the Contracting Officer not grant an exception to the requirements of this Section 00767, the Design-Builder shall, within ten days of written notice from the Contracting Officer to do so, take all action necessary to comply with the terms of this Section.

- D. If the Design-Builder fails to comply with the terms of this Section 00767, the Contracting Officer may withhold payments due under the Contract until such time as the Design-Builder is in compliance or, should the non-compliance remain uncorrected at the expiration of ten days from written notice from the Contracting Officer as provided in this Section, terminate the Contract for default pursuant to Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY, AND TIME EXTENSIONS of this Contract.
- E. The Design-Builder in performing this Contract shall avoid any conduct which might result in or give the appearance of creating for Directors, Officers or employees of the Authority in their relationship with the Design-Builder any conflicts of interest or favoritism and/or the appearance thereof and shall avoid any conduct which might result in a Director, Officer or employee failing to adhere to the Standards of Conduct adopted by the Authority's Board of Directors.
- F. The Design-Builder shall not, during the period of performance of the Contract, engage in any other contracts where its customary role would or might:
 - 1. Impair the actual or potential ability of the Design-Builder to render impartial assistance or advice to the Authority;
 - 2. Impair the Design-Builder's objectivity in performing this Contract or any other Authority contract,
 - 3. Give the Design-Builder an unfair competitive advantage with respect to the work under another proposed Authority contract.
- G. Any determination by the Contracting Officer under this Section shall be final and shall be subject to Section 00732, DISPUTE RESOLUTION.

00768 EMPLOYMENT RESTRICTION WARRANTY

(06/01/03)

- A. The Design-Builder warrants that it will not offer employment to any officer or employee of the Washington Metropolitan Area Transit Authority (WMATA) who has been involved, directly or indirectly, in any matter of financial interest to the Design-Builder until at least one year after the officer or employee has ceased involvement in or responsibility for the matter.
- B. The Design-Builder further warrants that it will not employ any WMATA officer or employee who has had direct responsibility for any matter of financial interest to the

Design-Builder within the year prior to the retirement or termination of the officer or employee until at least one full year after such officer or employee has left the employment of the Authority.

- C. The one-year restriction described in Paragraphs A. and B. above may be waived at the discretion of the Authority if the WMATA employee or former employee has been subject to a Reduction in Force; in such case, the Authority will provide the Design-Builder with a letter to that effect.
- D. If a waiver is granted, or if a former employee of WMATA is eventually hired, the Design-Builder shall be responsible for ensuring that the former employee is not directly involved in negotiating or otherwise dealing with WMATA on any particular matter over which such employee had responsibility during his or her period of employment at WMATA.
- E. Should the Design-Builder fail to comply with Paragraphs A., B. or D. above, the Authority shall have the right to withhold payment under this Contract in an amount not to exceed two percent of the total Contract amount as liquidated damages to the Authority, such withholding to be in addition to any other withholding or damages available for other matters under this Contract. Further, the Authority shall consider such violation in evaluating the Design-Builder's responsibility in connection with award of any other Authority contract.

00769 NOT USED

00770 CIVIL RIGHTS (06/01/03)

- A. Nondiscrimination: In accordance with Title VI of the Civil Rights Act, as amended, 42 U.S.C. §2000d, section 303 of the Age Discrimination Act of 1975, as amended, 42 U.S.C. §6102, section 202 of the American with Disabilities Act of 1990, 42 U.S.C. §12132, and Federal transit law at 49 U.S.C. §5332, the Design-Builder agrees that it will not discriminate against any employee or applicant for employment because of race, color, creed, national origin, sex, age, or disability. In addition, the Design-Builder agrees to comply with applicable Federal implementing regulations and other implementing regulations that the Authority, and the FTA if applicable, may issue.
- B. Equal Employment Opportunity: The following equal employment opportunity requirements apply to this Contract.
 - 1. Race, Color, Creed, National Origin, Sex: In accordance with Title VII of the Civil Rights Act, as amended, 42 U.S.C. §2000e, and Federal transit laws at 49 U.S.C. §5332, the Design-Builder agrees to comply with all applicable equal opportunity requirements of the U. S. Department of Labor (U.S. DOL) regulations, "Office of Federal Contract Compliance Programs, Equal Employment Opportunity, Department of Labor, " 41 C.F.R. Parts 60 *et seq.*, (which implement Executive Order No. 11246, "Equal Employment Opportunity,"

as amended by Executive Order No. 11375, "Amending Executive Order 11246 Relating to Equal Employment Opportunity," 42 U.S.C. 2000e note), and with any applicable Federal statutes, executive orders, regulations, and Federal policies that may in the future affect construction activities undertaken in the course of the Contract. The Design-Builder agrees to take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, creed, national origin, sex or age. Such action shall include, but not be limited to, the following: employment, upgrading, demotion or transfer, recruitment or recruitment advertising, layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. In addition, the Design-Builder agrees to comply with any implementing requirements the Authority, and the FTA if applicable, may issue.

2. Age: In accordance with Section 4 of the Age Discrimination in Employment Act of 1967, as amended, 29 U.S.C. §§ 623 and Federal transit law at 49 U.S.C. §5332, the Design-Builder agrees to refrain from discrimination against present and prospective employees for reason of age. In addition, the Design-Builder agrees to comply with any implementing requirements the Authority, and the FTA if applicable, may issue.
3. Disabilities: In accordance with Section 102 of the Americans with Disabilities Act, as amended, 42 U.S.C. §12112, the Design-Builder agrees that it will comply with the requirements of U. S. Equal Employment Opportunity Commission, "Regulations to Implement the Equal Employment Provisions of the Americans with Disabilities Act," 29 C.F.R. Part 1630, pertaining to employment of persons with disabilities. In addition, the Design-Builder agrees to comply with any implementing requirements the Authority, and the FTA if applicable may issue.

C. The Design-Builder also agrees to include these requirements in each subcontract, modified only if necessary to identify the affected parties.

00771 NOT USED

00772 DISADVANTAGED BUSINESS ENTERPRISE (Not Used) (10/25/04)

*00773 UTILIZATION OF SMALL BUSINESS CONCERNS (06/01/03)

- A. It is the policy of the Authority that a fair proportion of the purchases and contracts for supplies and services for the Authority be placed with small business concerns.
- B. The Design-Builder agrees to accomplish the maximum amount of subcontracting to small business concerns that the Design-Builder finds to be consistent with the efficient performance of this Contract.

*00774 LABOR PROVISIONS

(10/01/03)

The following Paragraphs B. TO M. apply only to the Construction portion of the Design-Build Contract.

A. Minimum Wages:

1. All laborers and mechanics employed or working upon the site of the work (or under the United States Housing Act of 1937 or under the Housing-Act of 1949 in the construction or development of the project), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act, 29 C.F.R. Part 3), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at the time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof as specified in APPENDIX D to Section 00800, regardless of any contractual relationship which may be alleged-to exist between the Design-Builder and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under Section 1(b) (2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of 29 C.F.R. §5.5(a)(1)(iv); also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs that cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided at 29 C.F.R. §5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein, provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under 29 C.F.R. §5.5(a)(1)(ii) And the Davis-Bacon poster (WH-1321) shall be posted at all times by the Design-Builder and its subcontractor at the site of the work in a prominent and accessible place where it can be easily seen by the workers.
 - a. The Authority shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The Authority shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:
 - (1) The work to be performed by the classification requested is not

- performed by a classification in the wage determination; and
- (2) The classification is utilized in the area by the construction industry; and
 - (3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.
- b. If the Design-Builder and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the Authority agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the Authority Representative to the Administrator of the Wage and Hour Division, Employment Standards Administration, Washington, D.C. 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the Authority or will notify the Authority within the 30-day period that additional time is necessary.
 - c. In the event the Design-Builder, the laborers or mechanics to be employed in the classification or their representatives, and the Authority do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the Authority shall refer the questions, including the views of all interested parties and the recommendation of the Authority to the administrator for determination. The Administrator, or an authorized representative, will issue a determination with 30 days of receipt and so advise the Authority or will notify the Authority within the 30-day period that additional time is necessary.
 - d. The wage rate (including fringe benefits where appropriate) determined pursuant to A.1.b. and c. above, shall be paid to all workers including helpers performing work in the classification under this contract from the first day on which work is performed in the classification.
2. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the Design-Builder shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.
 3. If the Design-Builder does not make payments to a trustee or other third person, the Design-Builder may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, provided, that the secretary of labor has found,

upon the written request of the Design-Builder, that the applicable standards of the Davis-Bacon act have been met. The Secretary of Labor may require the Design-Builder to set aside in a separate account assets for the meeting of obligations under the plan or program.

B. Withholding

1. The Authority shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the Design-Builder, under this agreement or any other Authority contract with the same recipient, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the Design-Builder or any subcontractor the full amount of wages required by the Contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), all or part of the wages required by the Contract, the Authority may, after written notice to the Design-Builder, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee or funds until such violations have ceased.

C. Payrolls and Basic Records

1. Payrolls and basic records relating thereto shall be maintained by the Design-Builder during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work (or under the United States Housing Act of 1937, or under the Housing Act of 1949, in the construction or development of the project). Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1(b)(2)(b) of the Davis-Bacon act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 C.F.R. § 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in Section 1(b)(2)(b) of the Davis-Bacon Act, the Design-Builder shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual costs incurred in providing such benefits. Design-Builders employing apprenticeship or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the

applicable programs.

2. The Design-Builder shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the Authority. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 C.F.R. §5.5(a)(3)(i). This information may be submitted in any form desired. Optional form WH-347 is available for this purpose and may be purchased from the Superintendent of Documents (Federal Stock no. 029-005-00014-1), U.S. Government Printing Office, Washington, D.C. 20402. The Design-Builder is responsible for the submission of copies of payrolls by all subcontractors.
 - a. Each payroll submitted shall be accompanied by a "Statement of Compliance" signed by the Design-Builder or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the Contract and shall certify the following:
 - (1) That the payroll for the payroll period contains the information required to be maintained under 29 C.F.R. §5.5(a)(3)(i) And that such information is correct and complete;
 - (2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth at 29 C.F.R. Part 3;
 - (3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.
 - b. The weekly submission of a properly executed certification set forth on the reverse side of optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by 29 C.F.R. §5.5(a)(3)(ii)(B).
 - c. The falsification of any of the above certifications may subject the Design-Builder or subcontractor to civil or criminal prosecution under 18 U.S.C. §1001 and 31 U.S.C. §3729.

D. Apprentices and Trainees

1. The Design-Builder or subcontractor shall make the records required under 29 C.F.R. §5.5(a)(3)(i) available for inspection, copying, or transcription by authorized

representatives of the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the Design-Builder or subcontractor fails to submit the required records or make them available, the Authority may, after written notice to the Design-Builder, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or make such records available may be grounds for debarment action pursuant to 29 C.F.R. §5.12.

- a. Apprentices: Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship, Training and Employer Labor Services, or with a State apprenticeship agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship, Training and Employer Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the Design-Builder as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage on the wage, determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a Design-Builder is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the Design-Builder's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringe benefits shall be paid in accordance with that determination. In the event the Office of Apprenticeship, Training and Employer Labor Services, or a

state apprenticeship agency recognized by the Office, withdraws approval of an apprenticeship program, the Design-Builder will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

2. Trainees: Except as provided in 29 C.F.R. §5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination that provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the employment and training administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the employment and training administration withdraws approval of a training program, the Design-Builder will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.
3. Equal employment opportunity. The utilization of apprentices, trainees, and journeymen under 29 C.F.R. Part 5 shall be in conformity with the equal employment opportunity requirements of Executive Order No. 11246, as amended 29 C.F.R. Part 30.
4. Helpers: Helpers will be permitted to work on a project if the helper classification is specified on an applicable wage determination or is approved pursuant to the conformance procedure set forth in 29 C.F.R. §5.5(a)(1)(ii). The allowable ratio of helpers to journeyman employed by the Design-Builder or subcontractor on the job site shall not be greater than two helpers for every three journeymen (in other words, not more than 40 percent of the total number of journeymen and helpers in each Design-Builder's or in each subcontractor's own work force employed on the job site.) Any worker listed on a payroll at a helper wage rate, who is not a

helper as defined in 29 C.F.R. §5.2(n)(4), shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any helper performing work on the job site in excess of the ratio permitted shall be paid not less than the applicable journeyman's (or laborer's, where appropriate) wage rate on the wage determination for the work actually performed.

- E. Compliance with Copeland Act Requirements. The Design-Builder shall comply with the requirements of 29 C.F.R. Part 3, which are incorporated herein by reference.
- F. Contract Termination: Debarment. A breach of the contract clauses in 29 C.F.R. §5.5 may be grounds for termination of the Contract, and for debarment as a Design-Builder and/or a subcontractor as provided in 29 C.F.R. §5.12.
- G. Compliance with Davis-Bacon and Related Act Requirements. All rulings and interpretations of the Davis-Bacon and related Acts contained in 29 C.F.R. Parts 1, 3 and 5 are incorporated herein by reference.
- H. Disputes Concerning Labor Standards: Disputes arising out of the Labor Standards provisions of this Contract shall not be subject to Section 00732, DISPUTE RESOLUTION of this Contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 C.F.R. Parts 5, 6, and 7. Disputes within the meaning of this Section include disputes between the Design-Builder (or any of its subcontractors) and the Contracting Agency, the U.S. Department of Labor, or the employees or their representatives.
- I. Certification of Eligibility:
 - 1. By entering into this agreement or a third party contract financed under this agreement the Design-Builder certifies that neither it (nor he nor she) nor any person or firm that has an interest in the Design-Builder's firm is a person or firm ineligible to be awarded government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 C.F.R. §5.12(a)(1).
 - 2. No part of this Contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act or 29 C.F.R. §5.12(a)(1).
 - 3. The penalty for making false statement is prescribed in the U.S. Criminal code, 18 U.S.C.1001.
- J. Overtime Requirements: Neither the Design-Builder nor any subcontractor contracting for any part of the Contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanics in any work week in which he or she is employed on such work to work in excess of forty hours in such work week unless such laborer or mechanics receives compensation at

a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such work week.

- K. Violation: Liability for Unpaid Wages: Liquidated Damages: In the event of any violation of the requirements of 29 C.F.R. §5.5(b)(1), the Design-Builder and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such Design-Builder and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such district or to such territory) if the Contract is funded by the FTA, and if not, to the Authority for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of 29 C.F.R. §5.5(b)(1) in the sum of \$10 for each calendar day on which such individual was required or permitted to work in excess of the standard work week of forty hours without payment of the overtime wages required by 29 C.F.R. §5.5(b)(1).
- L. Withholding for Unpaid Wages and Liquidated Damages: The FTA or the recipient shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the Design-Builder or subcontractor under any such contract, or any other Authority contract with the same Design-Builder or any federally-assisted contract subject to the Contract Work Hours and Safety Standards Act if FTA funding is provided for the Contract, which is held by the same Design-Builder, such sums as may be determined to be necessary to satisfy any liabilities of such Design-Builder or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth at 29 C.F.R. §5.5(b)(2).
- M. Subcontracts: The Design-Builder or subcontractor shall insert in any subcontracts, the clauses set forth in Paragraphs A. through L. of this LABOR PROVISIONS Section, and also a clause requiring the subcontractor to include these clauses in any lower tier subcontracts. The Design-Builder shall be responsible for compliance by any subcontractor with Paragraphs A. through M. of this LABOR PROVISIONS Section.

*00775 WALSH-HEALEY PUBLIC CONTRACTS ACT

(06/01/03)

If this Contract is for the manufacture or furnishing of materials, supplies, articles, or equipment in an amount which exceeds or may exceed \$10,000 and is subject to the Walsh-Healey Public Contracts Act, as amended (41 U.S.C. 35-45), the following terms and conditions apply:

- A. All stipulations required by the Act and regulations issued by the Secretary of Labor (41 CFR Chapter 50) are incorporated by reference. These stipulations are subject to all applicable rulings and interpretations of the Secretary of Labor that are now, or may be hereafter, be in effect.
- B. All employees whose work relates to this Contract shall be paid not less than the minimum wage prescribed by regulations issued by the Secretary of Labor (41 CFR 50-

202.2). Learners, student learners, apprentices, and handicapped worker may be employed at less than the prescribed minimum wage (see 41 CFR 50-202.3) to the same extent that such employment is permitted under Section 14 of the Fair Labor Standards Act (41 U.S.C. 40).

***00776 WAGE RATES (06/01/03)**

- A. The minimum wages, which in addition to basic hourly rate of pay include fringe benefit payments to be paid laborers and mechanics on this project pursuant to Section 00774, LABOR PROVISIONS of this Contract, as determined by, the Secretary of Labor to prevail for corresponding classes of laborers and mechanics employed on projects similar in character to the Contract work in the pertinent locality, are set forth as an attachment to this Contract.
- B. Any class of laborers and mechanics not listed but employed on this Contract shall be classified or reclassified conformably to the schedule set out therein by mutual agreement between the Design-Builder and class of labor concerned, subject to prior approval of the Authority Representative. In the event the interested parties cannot agree on the proper classification or reclassification of a particular class of laborer and mechanics to be used, the question, accompanied by the recommendation of the Authority Representative, shall be referred to the Secretary of Labor for final determination.
- C. For Current Wage Mods, Refer to Appendix D - WAGE DETERMINATION RATES, included as an Appendix to the Proposal Forms and Supplements in Section 00400.

00777 NOTICE TO THE AUTHORITY OF LABOR DISPUTES (06/01/03)

- A. Whenever the Design-Builder has knowledge that any actual or potential labor dispute is delaying or threatens to delay the timely performance of this Contract, the Design-Builder shall immediately give notice thereof, including all relevant information with respect thereto, to the Authority Representative.
- B. The Design-Builder agrees to insert the substance of this Section 00777 in any subcontract hereunder as to which a labor dispute may delay the timely performance of this Contract; except that each such subcontract shall provide that in the event its timely performance is delayed or threatened by delay by any actual or potential labor dispute, the subcontractor shall immediately notify its next higher tier subcontractor, or the Design-Builder, as the case may be, of all relevant information with respect to such dispute.

***00778 CONVICT LABOR (06/01/03)**

In connection with the performance of work under this Contract, the Design-Builder agrees not to employ any person undergoing sentence of imprisonment at hard labor.

*00779 FEDERAL, STATE AND LOCAL TAXES

(06/01/03)

- A. The Contract price includes all applicable Federal, State and local taxes and duties.
- B. Nevertheless, with respect to any Federal excise tax or duty on the transactions or property covered by this Contract, if a statute, court decision, written ruling, or regulation takes effect after the Contract date and results in the following:
 - 1. The Designer-Builder being required to pay or bear the burden of any such Federal excise tax or duty or increase in the rate thereof which would not otherwise have been payable on such transactions or property, the Contract price shall be increased by the amount of such tax or duty or rate increase, provided the Designer-Builder warrants in writing that no amount for such newly imposed Federal excise tax or duty or rate increase was included in the Contract price as a contingency reserve or otherwise; or
 - 2. The Designer-Builder not being required to pay or bear the burden of, or in its obtaining a refund or drawback of, any such Federal excise tax or duty which would otherwise have been payable on such transactions or property or which was the basis of an increase in the Contract price, the Contract price shall be decreased by the amount of the relief, refund, or drawback, or that amount of the relief, refund, or drawback, or that amount that shall be paid to the Authority, as directed by the Authority Representative. The Contract price shall be similarly decreased if the Designer-Builder, through its fault or negligence or its failure to follow instructions of the Authority Representative, is required to pay or bear the burden of, or does not obtain a refund or drawback or, any such Federal excise tax or duty.
- C. Paragraph B. above shall not be applicable to Social Security taxes or to any other employment tax.
- D. No adjustment of less than \$100 shall be made in the Contract price pursuant to Paragraph B. above.
- E. As used in Paragraph B. above, the term Contract date means the dates set for proposal opening, except if this is a negotiated Contract, the date that the Designer-Builder submits its Best and Final Offer. As to additional supplies or services procured by modification to this Contract, the term Contract date means the date of such modification.
- F. Unless there does not exist any reasonable basis to sustain an exemption, the Authority Representative upon the request of the Designer-Builder shall, without further liability, furnish evidence appropriate to establish exemption from any Federal, State, or Local tax; provided that, evidence appropriate to establish exemption from any Federal excise tax or duty which may give rise to either increase or decrease in the Contract price will be furnished only at the discretion of the Authority Representative.

- G. The Designer-Builder shall promptly notify the Authority Representative of matters which will result in either an increase or decrease in the Contract price, and shall take action with respect thereto as directed by the Authority Representative.

*00780 ADDITIONAL BOND SECURITY (06/01/03)

For information on Additional Bond Security, see Section 00614.

00781 NOT USED

00782 NOT USED

*00783 PATENT AND COPYRIGHT INDEMNITY (06/01/03)

In addition to any other indemnification provided in this Contract, the Design-Builder agrees to defend, hold harmless and indemnify the Authority, and its officers, representatives, agents and employees acting within the scope of their official duties, from and against any and all claims, demands, liabilities, damages, losses, costs and expenses (including, but not limited to, court costs, reasonable attorney's fees and expenses) of any nature whatsoever in any way arising out of infringement upon any Letters of Patent of the United States arising out of the performance of this Contract or out of the use or disposal by or for the account of the Authority of supplies furnished or work performed hereunder. Similarly, the Design-Builder indemnifies the Authority from any claim of copyright infringement resultant from actions of the Design-Builder or any of its subcontractors or suppliers. Nothing in this Section shall be construed to require any indemnification which would make said this Section void or unenforceable or to eliminate or reduce any indemnification or rights which the Authority or Design-Builder has by law.

*00784 NOTICE AND ASSISTANCE REGARDING PATENT AND COPYRIGHT INFRINGEMENT (06/01/03)

- A. The Design-Builder shall report to the Authority Representative, promptly and in reasonable written detail, each notice or claim of patent or copyright infringement based on the performance of this Contract of which the Design-Builder has knowledge.
- B. In the event of any action, claim or suit against the Authority on account of any alleged patent or copyright infringement arising out of or related to the performance of this Contract or out of the use of any supplies furnished or work or services performed hereunder, the Design-Builder shall furnish to the Authority, when requested by the Authority Representative, all evidence and information in possession of the Design-Builder pertaining to such action, suit or claim. Such evidence and information shall be furnished at the expense of the Authority except where the Design-Builder has agreed to defend, indemnify, or hold harmless the Authority. This Section shall be included in all subcontracts.

*00785 TECHNICAL DATA - WITHHOLDING OF PAYMENT

(06/01/03)

- A. If technical data, as defined in this Contract, specified to be delivered under this Contract is not delivered within the time specified by this Contract or is deficient upon delivery (including having restrictive markings not specifically authorized by this Contract), the Authority may until such data is accepted by the Authority, withhold payment to the Design-Builder of ten percent of the total Contract price or amount unless a lesser withholding is specified in the Contract. Payments shall not be withheld nor any other action taken pursuant to this Paragraph when the Design-Builder's failure to make timely delivery or to deliver such data without deficiencies arises out of or is beyond the control and without the fault or negligence of the Design-Builder.
- B. After payments total 90 percent of the total Contract price or amount and if all technical data specified to be delivered under this Contract has not been accepted, the Authority may withhold from further payment, in addition to other withholdings specified elsewhere, such sum as he considers appropriate, not exceeding ten percent of the total Contract price or amount unless a lesser withholding limit is specified in the Contract.
- C. The withholding of any amount or subsequent payment to the Design-Builder shall not be construed as a waiver of any rights accruing to the Authority under this Contract.

*00786 AUTHORITY RIGHTS IN TECHNICAL DATA

(06/01/03)

- A. All drawings, designs, specifications, architectural design of structures and buildings, samples, processes (including computer software), laboratory testing analyses and reports, notes, as-built drawings produced after completion of design tasks and other work produced in the performance of this Contract, or in the contemplation or implementation thereof shall be and remain the sole property of the Authority and may be used on any other work without additional cost to the Authority. Any re-use of design services shall be at the Authority's sole risk and with respect thereto the Design-Builder agrees not to assert any rights or to establish any claim under the design patent or copyright laws and not to publish or reproduce such matter in whole or in part or in any manner or form, or authorize others so to do, without the written consent of the Authority until such time as the Authority may have released such matter to the public. Further, with respect to any design or process which the Authority desires to protect by applying for and prosecuting a design patent application, or otherwise, the Design-Builder agrees to furnish the Authority such duly executed instruments and other papers (prepared by the Authority) as are deemed necessary to vest in the Authority the rights granted it pursuant to this Section. The Design-Builder for a period of three (3) years after completion of the project or task agrees to furnish and to provide access to the originals or copies of all such materials on the request of the Authority.
- B. Rights in Technical Data
 - 1. The Authority shall have the right to use, duplicate or disclose technical data,

which includes, without limitation, computer software and other items listed below, in whole or in part, in any manner and for any purpose whatsoever, and to have or permit others to do so:

- a. Any manuals, instructional materials prepared for installation, operation, maintenance or training purposes;
 - b. Technical data pertaining to end items, components or processes which were prepared for the purpose of identifying sources, size, configuration, mating and attachment characteristics, functional characteristics and performance requirements ("form, fit and function" data; e.g., specification control drawings, catalog sheets, outline drawing; except that for computer software it means data identifying source, functional characteristics, and performance requirements but specifically excludes the source code, algorithm, process, formulae, and flow charts of the software);
 - c. Other technical data which has been, or is normally furnished without restriction by the Design-Builder or subcontractor;
 - d. Other specifically described technical data which the parties have agreed will be furnished without restriction.
- C. The Authority shall have the right to use, duplicate, or disclose technical data other than that defined in Paragraph B.1.a. in whole or in part, with the express limitation that such technical data shall not, without the written permission of the party furnishing such technical data, be:
1. Released or disclosed in whole or in part outside the Authority;
 2. Used in whole or in part by the Authority for manufacture; or
 3. Used by a party other than the Authority except for emergency repair or overhaul work only, by or for the Authority where the item or process concerned is not otherwise reasonably available to enable timely performance of the work; provided, that the release or disclosure thereof outside the Authority shall be made subject to a prohibition against further use, release or disclosure.
 4. Technical data provided in accordance with the provisions of Paragraph B.1.b. shall be identified by a legend which suitably recites the aforesaid limitation. Nothing herein shall impair the right of the Authority to use similar or identical data acquired from other sources.
 5. The term technical data as used in this Section means technical writing, computer software, sound recordings, pictorial reproductions, drawings, or other graphic representations and works of a technical nature, whether or not copyrighted, which are specified to be delivered pursuant to this Contract. The term does not

include financial reports, cost analyses, and other information incidental to Contract administration. Computer software as used in this Section means computer programs, computer data bases, and documentation thereof.

6. Material covered by copyright:
 - a. The Design-Builder agrees to and does hereby grant to the Authority, and to its officers, agents and employees acting within the scope of their official duties, a royalty-free, nonexclusive and irrevocable license throughout the world for Authority purposes to publish, translate, reproduce, deliver, perform, dispose of, and to authorize others so to do, all technical data now or hereafter covered by copyright.
 - b. No such copyrighted matter shall be included in technical data furnished hereunder without the written permission of the copyright owner for the Authority to use such copyrighted matter in the manner above described.
 - c. The Design-Builder shall report to the Authority promptly and in reasonable written detail each notice or claim of copyright infringement received by the Design-Builder with respect to any technical data delivered hereunder.
 - d. Relation to patents: Nothing contained in this Section shall imply a license to the Authority under any patent, or be construed as affecting the scope of any license or other right otherwise granted to the Authority under any patent.
 - e. Any dispute under this Section shall be subject to Section 00732, DISPUTE RESOLUTION.
 - f. Notwithstanding any other payment provision in this Contract, the Authority may retain from payment up to 10 percent of the Contract price until final delivery and acceptance of the Technical Data defined in this Section and as required to be furnished by the Project Manual.

00787 INDEMNIFICATION AND INSURANCE REQUIREMENTS AND SPECIAL PROVISIONS OF INSURANCE FURNISHED BY DESIGN-BUILDER (10/01/03)

A. Indemnification:

1. The Design-Builder shall indemnify, hold harmless and defend the Authority and its officers, representatives, agents, consultants and employees as well as the Government, its officers, representatives and agents acting within the scope of their official duties (hereinafter, the "Indemnitees") from and against any and all claims, demands, liabilities, damages, losses, costs and expenses (including, but not limited to, court costs, reasonable attorney's fees and expenses) and for injuries, including personal injury to or death of person or persons, and for any

acts in connection with activities to be performed under this Contract of any nature whatsoever in any way arising out of or relating to the performance by the Design-Builder of the Work required under this Contract, in all its phases, which are caused in whole or in part by any negligent or willful act, error or omission, or breach of Contract by the Design-Builder, the Design-Builder's subcontractors or anyone directly or indirectly employed by the Design-Builder, or anyone for whose acts the Design-Builder may be liable, subject to an allocation or proportion of any such liability, loss, cost or expense to the extent caused by a party indemnified hereunder. Nothing in this Section shall be construed to require any indemnification which would make said Section void or unenforceable or to eliminate or reduce any indemnification or rights which the Authority or Design-Builder has by law.

2. The Design-Builder further expressly undertakes to, upon request of the Authority, indemnify, hold harmless and defend the Indemnitees, at the Design-Builder's sole expense, against any actions, lawsuits or proceedings brought against Indemnitees as a result of claims filed against the Authority, the Work, the Project site, the site of any of the Work, payments due the Design-Builder or any portion of the property of any of the Indemnitees (referred to collectively as "claims" in this Section) by any subcontractor, provided such claims arise out of, are related to, or are connected with the Work or any activities of the Design-Builder in connection with the Project or the Contract and are not due solely to a failure by the Authority to pay the Design-Builder amounts properly due and owing. The Design-Builder hereby agrees to defend, indemnify and hold the Indemnitees harmless against any damages, costs, expenses (including, without limitation, reasonable attorneys' fees, consultant fees, court costs and related expenses), losses, claims and liabilities arising out of, relating to, or in connection with the claims, unless such claim is due solely to a failure by the Authority to pay the Design-Builder amounts properly due and owing under the Contract. The Design-Builder hereby agrees that amounts which are subject to a good faith dispute shall not be deemed due and owing under the Contract.
 3. The Design-Builder shall, during the entire period of performance under this Contract, be responsible for and make good at no additional cost to the Authority, all damage to the Authority property caused by its acts and those of its employees, subcontractors, and subcontractors' employees in carrying out the work required by this Contract.
- B. The Design-Builder will provide WMATA with evidence of its Design-Builder's insurance coverages for the exposures listed in Section 00887 of the Supplementary Conditions.
1. The Design-Builder shall forward to the Washington Metropolitan Area Transit Authority's Office of Insurance, Room 8D-01, through the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a certificate or certificates,

issued by the insurer(s) of the insurance indicating the insurance and any special provisions required under the foregoing provisions. Such certificate(s) shall be in a form satisfactory to WMATA and shall list the various coverages and limits. Insurance companies providing the coverage must be acceptable to WMATA, rated by A.M. Best and carry at least an "A" Rating. In addition to the aforementioned provisions; such insurance policies shall not be changed or canceled and they will be automatically renewed upon expiration and continued in full force and effect until completion and acceptance of all work covered by the Contract between WMATA and the Design-Builder, unless WMATA's Office of Insurance is given thirty (30) days written notice before any change or cancellation is made effective. The Design-Builder shall furnish WMATA's Office of Insurance with a certified copy of each insurance policy upon request.

2. The initial and subsequent certificates of insurance shall include a description of the Contract work and the assigned Contract number. Prior to beginning any project work, the insurance requirements as outlined by WMATA's Office of Insurance must be approved in writing.
3. All insurance shall be procured from insurance or indemnity companies acceptable to WMATA and licensed and authorized to conduct business in the District of Columbia, State of Maryland and Commonwealth of Virginia. WMATA approval or failure to disapprove insurance furnished by the Design-Builder shall not release the Design-Builder of full responsibility for liability for damage and accidents.
4. If at any time the above required insurance policies should be canceled, terminated or modified so that the insurance is not in full-force and effect as required herein, WMATA reserves the right to terminate this Contract between WMATA and the Design-Builder.
5. The Design-Builder shall require each subcontractor, at all tiers, to provide evidence of insurance coverage specified herein and such evidence of coverage shall be provided to WMATA's Office of Insurance through the Authority Representative prior to commencement of work in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Such coverage shall remain in full force and effect during the performance of activities under this Contract between WMATA and the Design-Builder.
6. Any contract of insurance or indemnification naming WMATA, the United States of America, its officers, representatives and agents as an additional insured shall be endorsed to provide that the insurer will not contend in the event of any occurrence, accident, or claim that WMATA or the United States of America, et al, are not liable in tort by virtue of being governmental instrumentalities or public or quasi-public bodies.
7. In the event the required certificates of insurance as specified herein are not

furnished within ten calendar days after the date of receipt of Notice to Proceed (NTP), the Design-Builder shall not be permitted to enter upon the property to perform the duties outlined in the Contract until all required insurance certificates or evidence of self-insurance has been received.

8. The Design-Builder will not be paid for providing insurance for this Project Work as prescribed in this Contract, but the insurance cost thereof shall be included in the prices for the various items as set forth in the Price Proposal.

*00788 LIQUIDATED DAMAGES (06/01/03)

- A. The Design-Builder understands that if it fails to complete portions of and/or all of the Work as described in Section 00725, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE of these General Conditions, the Authority will suffer damages which have been estimated and are specified in Section 00888, LIQUIDATED DAMAGES REQUIREMENTS of the Supplementary Conditions.
- B. The Design-Builder agrees that if it does not complete the Work within the specified Period of Performance, then the Design-Builder shall pay to the Authority as liquidated damages, pursuant to Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY, AND TIME EXTENSIONS of these General Conditions, the sums per calendar day as separate damages for each specified completion requirement. Milestones are as defined in Section 00725, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE of these General Conditions.

*00789 COMPLIANCE WITH COPELAND ACT REQUIREMENTS (08/20/03)

The Design-Builder shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this Contract.

*00790 CONTRACT WORK HOURS AND SAFETY STANDARDS ACT (08/20/03)

- A. Overtime requirements: Neither the Design-Builder nor any subcontractor contracting for any part of the Contract work which may require or involve the employment of laborers, mechanics, apprentices, trainees, watchmen, and guards shall require or permit any laborer, mechanic apprentice, trainee, watchman or guard in any workweek in which he is employed on such work to work in excess of 40 hours in such work week on work subject to the provisions of the Contract Work Hours and Safety Standards Act, unless such laborer, mechanic, apprentice, trainee, watchman, or guard receives compensation at a rate not less than one and one-half times his or her basic rate of pay for all such hours worked in excess of 40 hours in such work week.
- B. Violation, liability for unpaid wages, and liquidated damages. In the event of any violation of the provisions of Paragraph A. above, the Design-Builder and any subcontractor responsible therefor shall be liable to any affected employee for unpaid wages. In addition, such Design-Builder and subcontractor shall be liable to the

Authority for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer, mechanic, apprentice, trainee, watchman, or guard employed in violation of the provisions of Paragraph A. in the sum of ten dollars for each calendar day on which such employee was required or permitted to be employed on such work in excess of his or her standard work week of 40 hours without payment of the overtime wages required by Paragraph A.

- C. Withholding for unpaid wages and liquidated damages: The Authority Representative may withhold from the Design-Builder, from any monies payable on account of work performed by the Design-Builder or subcontractor, such sums as may be administratively determined to be necessary to satisfy any liabilities of such Design-Builder or subcontractor for unpaid wages and liquidated damages as provided in the provisions of Paragraph B.
- D. Subcontracts: The Design-Builder shall insert Paragraphs A. through E. of this Section in all subcontracts and shall require their inclusion in all subcontracts of any tier.
- E. Records: The Design-Builder shall maintain payroll records containing the information specified in 29 CFR 516.2(a). Such records shall be preserved for three years from completion of this Contract.

00791 EQUITABLE ADJUSTMENT FOR MINOR CONTRACT MODIFICATIONS: (11/22/04)

- A. When the Contracting Officer and Contractor agree to an additive or deductive amount for a modification to this Contract made pursuant to Section 00753, CHANGES, Section 00707, DIFFERING SITE CONDITIONS, or Section 00721, VALUE ENGINEERING INCENTIVE, when the fair and reasonable price in aggregate amount does not exceed \$50,000 and further agree to an adjustment in the time for Contract performance resulting from said modification which increases or decreases the completion date 10 or less calendar days, the equitable adjustment in Contract amount shall consist of the sum of the following:
 - (1) Direct costs as agreed to by the Contracting Officer and Contractor.
 - (2) Job Office Overhead costs, the sum of which shall be limited to a maximum of 10 percent of direct labor costs, including fringe benefits, but excluding FICA, FUTA, and State Unemployment Insurance (SUI); a maximum of 10 percent of direct material costs; a maximum of five percent of direct equipment costs (small tools, defined as equipment less than \$2,000 in acquisition costs, are included and computed at a maximum of five percent of direct base labor wages); and a maximum of five percent of subcontract costs.
 - (3) Home Office General and Administrative (G&A) costs, the sum of which shall be limited to a maximum of three percent or the audited rate of the direct costs plus job office overhead costs computed as above.

- (4) Profit will be determined in accordance with the guidelines specified in Section 00759 CONTRACT MODIFICATIONS-REQUIREMENTS FOR PROPOSALS, PRICE BREAKDOWN AND NEGOTIATION OF PROFIT.
- B. In using the above rates, the following shall apply:
- (1) Payroll Tax (FICA, FUTA & SUI) amounts are added immediately after direct and indirect costs are totaled.
 - (2) Subcontractors' indirect costs and profit shall be computed in the same manner as above.
 - (3) Indirect costs shall not be duplicated in direct costs.
 - (4) When the Contract time is increased, the change in Contract amount for direct and indirect costs computed by application of the above rates includes costs of impact and extended performance due to the time extension and no further consideration of costs arising from the specific modification and cited pending change orders (PCO's) will be given. The Contractor shall not receive both a percentage and a daily rate markup for job office overhead costs when a time extension to the Contract Performance Period is recognized.
 - (5) Bond will be allowed at actual cost without markup.
- C. Equipment Rates shall be determined from prior Authority audits. In the absence of audited rates for equipment owned or controlled by the Contractor, hourly rates shall be computed from the current Contractor's Equipment Cost Guide (monthly rate divided by 176).

END OF SECTION

CONTRACTING REQUIREMENTS

00800 SUPPLEMENTARY CONDITIONS

This Section includes Modifications to the Section 00700 General Conditions for requirements unique to a specific project and are hereby incorporated into the General Conditions by reference to. This Section 00800, which specifies any modifications to the General Conditions, shall be read in conjunction with Section 00700 and which will be cited in the 00700 Section using the same last 2 digits of the Section number; i.e., a mod to Section 00724 is indicated as Section 00824.

00811 WORK BY DESIGN-BUILDER PERCENTAGE REQUIREMENTS

Modify General Conditions Section 00711, WORK BY DESIGN-BUILDER to delete Paragraph A. and substitute the following Paragraph:

- A. The Design-Builder shall perform, with its own organization, work equivalent to at least **15%** for the construction work.

00825 PERIOD OF PERFORMANCE AND PROJECT SCHEDULE REQUIREMENTS

Modify General Conditions Section 00725, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE to delete Paragraph A. and substitute the following Paragraph and subparagraphs:

- A. The Design-Builder shall perform, complete and advance all Work under this Contract in accordance with the following:
1. Interim Completion(s)
 - a. Greenbelt Yard NTP+ **765** calendar days
 2. Final Completion
 - a. Greenbelt/Shady Grove Yards Project NTP+ **825** calendar days
 - b. Brentwood Yard Project NTP+ **910** calendar days
 3. See Section 00888 LIQUIDATED DAMAGES for Liquidated Damages associated with the Milestone(s) listed above.

00832 DISPUTES REVIEW BOARD REQUIREMENTS

Modify General Conditions Section 00732, DISPUTE RESOLUTION to add the following Paragraph and subparagraphs:

- C. Disputes Review Board: WMATA is interested in undertaking any type of alternative disputes resolution procedure which is thought by the parties to have a likelihood of

successfully resolving disputes. Either party may propose and the parties may agree to any type of dispute resolution procedure including but not limited to mediation, arbitration, mini trial, etc. WMATA has available a list of retired federal judges who have indicated a willingness to mediate WMATA contract disputes and, upon agreement of the parties that such mediation is appropriate for a specific dispute, WMATA is willing to bear one half of the cost of such mediation.

1. A written demand by any party requesting an equitable adjustment under this Contract, that is not disposed of by agreement within a reasonable time, is a dispute governed by this Section and shall be submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES to the Contracting Officer for a written final decision. The Contracting Officer shall either call for a hearing before the Disputes Review Board or issue a Contracting Officer's Final Decision if the dispute is of a policy nature already decided under other contracts or there are no facts in dispute. However, all parties to the Contract agree that the dispute will not be heard by the Disputes Review Board until such time as the Authority's Project Manager, or if the Authority Representative is the Project Manager, a level of supervision within the Authority higher than the Authority Representative and the Design-Builder's Representative (Officer, Area Manager or Vice President) have met and attempted to resolve the dispute or 60 calendar days have passed, whichever occurs first. If the Contracting Officer convenes the Disputes Review Board, completion of this dispute resolution process is a condition precedent to commencement of any other administrative proceeding or commencement of a court action. Either party may request in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES that a specific dispute not be subject to the Disputes Review Board proceeding and be immediately addressed by the Contracting Officer's final decision. The Authority may do so in cases involving Authority policy or contract interpretation issues which have broad application to other Authority contracts. The Design-Builder may do so for any good reason. If the Contracting Officer denies the Design-Builder's request to forego the DRB procedure or decides on the Authority's behalf to forego the DRB procedure at the Authority's request, he shall so advise the Design-Builder who shall have five days to request a review of this decision by the Assistant General Manager for Capital Projects Management in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Assistant General Manager for Capital Projects Management shall make his/her decision in coordination with WMATA's Offices of Procurement and Materials, Auditor General, and General Counsel. This decision regarding whether to proceed with DRB proceedings or directly to a Contracting Officer's final decision shall be final and not subject to further review.
2. At all times during this disputes resolution process or any subsequent administrative or court proceeding, the Design-Builder shall proceed with the work diligently, without delay, in accordance with the Contract, and as directed by the Contracting Officer or his/her Authorized Representative. The Design-Builder

shall continue to comply with all provisions of the Contract and shall be entitled to timely payment of all proper payment requests to the extent that payments are not affected by the dispute. The following notice requirements and procedures set forth elsewhere in the Contract shall all take precedence over any provision of this article including Sections: 00717, DIFFERING SITE CONDITIONS; 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY, AND TIME EXTENSIONS; 00732, DISPUTE RESOLUTION; and 00753, CHANGES for submitting and processing claims.

3. Within 60 calendar days following receipt of the final DRB recommendations, the Contracting Officer shall indicate acceptance or rejection of the DRB findings and recommendations. The acceptance, rejection or modification of the Final Recommendation is the Contracting Officer's final decision. The Contracting Officer's final decision shall cite the DRB findings and recommendations and, in the case of rejection in whole or in part, or modifications thereto, stipulate specific reasons for rejection of the DRB recommendation(s).
4. If the Design-Builder disagrees with the decision of the Contracting Officer, written appeal may be filed as specified in this Section in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Admission of all or part of the data presented to the DRB shall be left to the rules of evidence used by the appeals process.
5. Processes to be used for the Disputes Review Board are set out in Section 01260, DISPUTES REVIEW BOARD PROCEDURES.
6. An allowance is listed in Section 00434, PRICE SCHEDULE Notes to Proposers to provide funds for the Authority's share of all Disputes Review Board costs. The Design-Builder will be reimbursed for the Authority's share on an invoice basis from the established allowance in accordance with the Contract payment provisions.

00836 AUTHORITY-FURNISHED PROPERTY REQUIREMENTS

- A. The Authority intends to provide a fully functional Underfloor Wheel-Truing Machine as manufactured by Hegenscheidt-MFD, Model U2000 modified to WMATA's requirements and as described in the Architectural Program Criteria, Section 1.04.B.46. The Design-Builder is required to provide equipment and manpower as required to assist the equipment manufacturer with the installation of the Wheel-Truing Machine at Brentwood Shop. It shall be the responsibility of the Design-Builder to: construct the equipment pit and foundation; provide the main power input supply, grounding rods, hand rails, and pit stairs. Alignment, calibration, testing, and training will be the responsibility of the equipment manufacturer.

00844 SAFETY SUPERINTENDENCE REQUIREMENTS

Modify General Conditions Section 00744, PROTECTION OF PERSONS AND PROPERTY Paragraph C. as follows:

- C. The Design-Builder shall assign to the work Safety Superintendent(s) who has (have) specialized training and experience in construction safety supervision and has (have) a thorough knowledge of all OSHA regulations. He (They) shall have the ability to develop and conduct safety training courses. He (They) shall be familiar with industrial hygiene equipment and testing as required for the protection of all employees. The contractor shall employ and assign full-time dedicated Safety Superintendent(s) and First Aid Attendant for on-site work activities at all times. The Safety Superintendent shall have no duty other than safety supervision of persons, equipment, and property affected by contract work. Due to the distance between the project sites, separate full-time dedicated Safety Superintendents are to be employed and assigned for each project site. He (They) shall also be responsible for providing first aid at the site and must have current First Aid and CPR certifications. Employees expected to render First Aid or CPR must be trained in Bloodborne Pathogens in accordance with 29 CFR §1910.1030. Copies of required certifications and evidence of required training shall be provided to WMATA prior to the start of work, along with a resume in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Safety Superintendent(s) must be acceptable to the Contracting Officer and no work at the site shall be performed until this approval has been received. Once employed, the Safety Superintendent(s) shall not be changed without permission of the Contracting Officer and he (they) must be onsite anytime work is being performed by the Contractor or any subcontractors.

00887 INSURANCE REQUIREMENTS

Modify General Conditions Section 00787, INDEMNIFICATION AND INSURANCE REQUIREMENTS AND SPECIAL PROVISIONS OF INSURANCE FURNISHED BY DESIGN-BUILDER to add Paragraph C. as follows:

- C. Insurance Requirements:
1. The Design-Builder will provide WMATA with evidence of it's Design-Builder's commercial insurance coverages in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for the following exposures:
 - a. Workers Compensation: An insurance policy complying with the requirements of the statutes of the jurisdiction(s) in which the work will be performed, and if there is any exposure to any of the Design-Builder or Design-Builder's personnel due to the U. S. Longshoremen's and Harbor Workers' Act, Jones Act, Admiralty Laws or the Federal Employers' Liability Act, the Design-Builder shall provide coverage for these exposures on an

"if any" basis. The coverage under such an insurance policy or policies shall have limits not less than:

Worker's Compensation:	STATUTORY LIMIT
Employer's Liability: Each Accident	<u>\$1,000,000</u>
Disease Policy Limits	<u>\$1,000,000</u>
Disease - Each Employee	<u>\$1,000,000</u>

- b. Commercial General Liability Insurance (CGL): An insurance policy covering the liability of the Design-Builder for all work or operations under or in connection with this Project; and all obligations assumed by the Design-Builder under this Contract. Products, Completed Operations and Contractual Liability insurance must be included in addition to coverage for explosion, underground hazards and collapse, wherever required. Liability for Project work within 50 feet of owned / operating railroad property is excluded and Railroad Protective Liability Insurance must be provided.

The coverage under such an insurance policy or policies shall have limits not less than:

BODILY INJURY AND PROPERTY DAMAGE LIABILITY
\$1,000,000 per occurrence/\$2,000,000 aggregate
or Combined Single Limit not less than \$2,000,000

PREMISES MEDICAL PAYMENTS
\$5,000

FIRE LEGAL LIABILITY
\$1,000,000

PERSONAL INJURY / ADVERTISING
\$1,000,000

WMATA must be included as an additional insured under the general liability insurance coverage with respect to activities related to this Contract.

- c. Automobile Liability Insurance: A commercial auto insurance policy covering the use of all owned, non-owned, hired, rented or leased vehicles bearing license plates appropriate for the circumstances for which they are being used. These vehicles should bear license plates applicable to the state laws for which the vehicle(s) are registered. Liability for Design-Builder's mobile equipment is not subject to this coverage and therefore the aforementioned general liability insurance is required. Contract employees are not permitted to operate any vehicle owned by WMATA whether in

commission of the contract or outside the same.

The coverage under such an insurance policy or policies shall include Uninsured Motorist Coverage and include Form MCS-90 as required by the Motor Carrier Act of 1980.

The coverage under such an insurance policy or policies shall have limits not less than:

BODILY INJURY AND PROPERTY DAMAGE LIABILITY
\$2,000,000 Combined Single Limit

WMATA must be included as an additional insured under the automobile liability insurance coverage with respect to activities related to this Contract.

- d. Professional Errors and Omissions Liability Insurance: A separate insurance policy to pay on behalf of the Design-Builder all costs the Design-Builder shall become legally obligated to pay as damages due to any claim caused by any negligent act, error or omission of the Design-Builder or any other person for whose acts the Design-Builder is legally liable arising out of the performance under this Project work.

Such insurance shall be maintained for five (5) years after the final acceptance of the work by either continuation of the policy every year or if coverage is moved to another carrier, the same prior acts retro date should be continued. If coverage is not renewed, an extended reporting period of five (5) years should be purchased and such coverage should be evidenced on the certificate of insurance.

The coverage under such an insurance policy shall have a limit of liability not less than:

BODILY INJURY AND PROPERTY DAMAGE LIABILITY
\$3,000,000 per occurrence / \$3,000,000 aggregate

- e. Railroad Protective Liability Insurance: An insurance policy issued to WMATA for bodily injury and property damage liability of the Design-Builder resulting from the Design-Builder's performance of project work within 50 feet of WMATA's railroad property. Project work within 50 feet is defined as: work performed on, adjacent to (North, South, East, West), above, or beneath WMATA's owned /operating railroad property.

Such insurance shall be written on the ISO form. The coverage under such an insurance policy shall have a limit of liability not less than:

BODILY INJURY AND PROTECTIVE DAMAGE LIABILITY
\$5,000,000 per occurrence / \$10,000,000 Aggregate

No waivers will be issued for the Railroad Protective Liability Insurance requirement under this Contract.

- f. Builder's Risk Insurance: An insurance policy covering all risk of physical damage to property under construction. Damage to building materials being installed may be written separately or by endorsement to this policy. Insurance shall be on an all-risks policy form including the perils of fire, extended coverage, theft, vandalism, certified acts of terrorism, malicious mischief, collapse, and earthquake. Coverage limits shall be equal to the initial Contract construction amount and any amendments to the Contract which affect the project cost on a replacement cost basis.

Such insurance shall be written on the ISO Form. The coverage under such an insurance policy shall have a limit of liability not less than:

The estimated completed value of building under construction.

If additional options are exercised after award of Contract, the coverage shall be increased to include the estimated cost of materials for the options awarded.

00888 LIQUIDATED DAMAGES REQUIREMENTS

Modify General Conditions Section 00788, LIQUIDATED DAMAGES Paragraph A. as follows:

- A. The Design-Builder understands that if it fails to complete portions of and/or all of the Work as described in Section 00825, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE of these General Conditions, the Authority will suffer damages which have been estimated and are as specified below:
1. The following are the Contract Milestone(s) and the associated Interim and Final Liquidated Damages amounts:
 - a. Interim Completion(s)
 1. Greenbelt Yard \$2,940 per calendar day
 - b. Final Completion - \$5,650 per calendar day
 2. Total Liquidated Damages shall not exceed \$5,650 per calendar day combined.
 3. See Section 00825, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE

for Project Milestone(s).

00891 PARTNERING REQUIREMENTS

Modify Section 00700 General Conditions to add the following Section:

00791 PARTNERING

A. Authority Partnering Policy: The Authority intends to encourage development of a cohesive partnership with the Design-Builder, the Design Professional, principal subcontractors and suppliers for effective and efficient completion of this Contract. This partnership will strive to draw on the strengths of each organization in an effort to achieve a quality project done right the first time, and completed on-schedule, within the budget. This partnership will be bilateral in make-up and participation of the parties is required. The partnering workshop(s) will be conducted by a professional facilitator at an off-site location convenient to the project within 45 days of Contract award. Follow-up workshops will be conducted on a quarterly basis during the course of the Contract as agreed to between the Design-Builder and the Authority.

1. The establishment of a partnership charter on this project will not change the legal relationship of the parties to the Contract nor relieve either party from any terms of the Contract.
2. All costs associated with initiating and maintaining this partnership, outside of participant's salaries and travel and travel-related costs, will be agreed to by both parties and will be shared. The Authority will reimburse the Design Builder 50% of the incurred cost up to the allowance specified on the Notes to Proposers in Section 00434, PRICE SCHEDULE. If the agreed cost exceeds the allowance specified on the Notes to Proposers in Section 00434, PRICE SCHEDULE, the Authority will reimburse the Design Builder 100% of the cost over that amount.
3. Partnership Goals:
 - a. For the Design-Builder and the Authority to work together probatively through a cohesive partnership with the objective to build a quality product on time, at a satisfactory cost to the Authority, with a satisfactory profit to the Design-Builder (fostering a win-win relationship);
 - b. To establish and maintain an atmosphere of trust with timely, positive and ongoing communications;
 - c. To reach a mutual understanding on how the construction project will be managed;
 - d. To resolve disputes at the lowest working level possible; and,

e. To avoid confrontation and disputes among the parties.

B. Measurement and Payment:

1. Allowance for Partnering Costs:

- a. An allowance is identified in Section 00434, PRICE SCHEDULE to provide funds for the Design Builder's share of services for a Professional Facilitator and for the expenses of the partnering workshop(s).
- b. The Design-Builder will be reimbursed for the Design Builder's share of hiring a Professional Facilitator (and for conducting the workshops) on an invoice basis from the allowance in accordance with the Contract payment provisions.

00892 FTA REQUIREMENTS:

Modify Section 00700 General Conditions to add the following Section:

00792 FTA CLAUSES:

A. Buy America Requirements

The Design-Builder agrees to comply with 49 U.S.C. §5323(j), and its implementing regulations at 49 C.F.R. Part 661, any amendments thereto, and any implementing guidance issued by FTA.

B. Rights in Data and Copyrights - FTA

1. The term "subject data" used in this Paragraph and subparagraphs means recorded information, whether or not copyrighted, that is delivered or specified to be delivered under this Contract in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The term includes graphic or pictorial delineation in media such as drawings or photographs; text in specifications or related performance or design-type documents; machine forms such as punched cards, magnetic tape, or computer memory printouts; and information retained in computer memory. Examples include, but are not limited to: computer software, engineering drawings and associated lists; specifications, standards, process sheets, manuals, technical reports, catalog item identifications, and related information. The term "subject data" does not include financial reports, cost analyses, and similar information incidental to project administration.
2. The following restrictions apply to all "subject data" first produced in the performance of this Contract:

- a. Except for its or the Authority's own internal use, the Design-Builder may not publish or reproduce "subject data" in whole or in part, or in any other manner or form, nor may the Design-Builder authorize others to do so, without the written consent of the U.S. Government, until such time as the Government may have either released or approved the release of such data to the public; this restriction on publication, however does not apply to Agreements with academic institutions.
- b. In accordance with 49 C.F.R. §18.34 and 49 C.F.R. §19.36, the Government reserves a royalty-free, non-exclusive and irrevocable license to reproduce, publish, or otherwise use, and to authorize others to use, the following "subject Data" for Federal Government purposes:
 - (1) Any "subject data" developed under this Contract whether or not a copyright has been obtained; and
 - (2) Any rights of copyright to which the Design-Builder purchases ownership with Federal assistance.
3. When the Federal Transit Administration (FTA) provides financial assistance for a planning, research, development, or a demonstration project, it is FTA's general intention to increase mass transportation knowledge, rather than limit the benefits of the Project to participants in the Project. Therefore, unless FTA determines otherwise, the Design-Builder agrees that, in addition to the rights set forth in subparagraph 2.b. above, FTA may make available to any FTA recipient, subrecipient, third party contractor, or third party subcontractor, either FTA's license in the copyright to the "subject data" derived under this Contract or a copy of the "subject data" first produced under this Contract. If this Contract is not completed for any reason whatsoever, all data developed under this Contract shall become "subject data" as defined in subparagraph 1. and shall be delivered as the Government may direct.
4. Unless prohibited by state law, the Design-Builder agrees to indemnify, save, and hold harmless the Authority and the Government, their Officers, agents, and employees acting within the scope of their official duties against any liability, including costs and expenses, resulting from any willful or intentional violation by the Design-Builder of proprietary rights, copyrights, or right of privacy, arising out of the publication, translation, reproduction, delivery, use or disposition of any data furnished under this Contract. The Design-Builder shall not be required to indemnify the Authority and the Government for any such liability arising out of the wrongful acts of employees or agents of the Authority and the Government.
5. Nothing contained in this Section on rights in data shall imply a license to the Authority or the Government under any patent or be construed as affecting the scope of any license or other right otherwise granted to the Authority or the Government under any patent.

6. The requirements of subparagraphs 2. and 3. do not apply to material furnished by the Authority to the Design-Builder and incorporated into the work carried out under the Contract provided that the Design-Builder identifies the incorporated material at the time of delivery of the work.
7. Any dispute under this Section shall be subject to the Section 00732, DISPUTE RESOLUTION.
8. Notwithstanding any other payment provision in this Contract, the Authority may retain from payment up to 10 percent of the Contract price until final delivery and acceptance of the technical data defined in this Section and as required to be furnished by the Price Schedule or the Project Manual.

C. Cargo Preference - Use of United States Flag Vessels

Pursuant to Pub. L 664 (46 U.S.C. 1241 (b)):
"Cargo Preference — Use of United States-Flag Vessels

The Design-Builder agrees:

1. To utilize privately owned United States-flag commercial vessels to ship at least 50 percent of the gross tonnage (computed separately for dry bulk carriers, dry cargo liners, and tankers) involved, whenever shipping any equipment, materials, or commodities pursuant to this Contract, to the extent such vessels are available at fair and reasonable rates for United States-flag commercial vessels.
2. To furnish in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES within 20 days following the date of loading for shipments originating within the United States, or within 30 working days following the date of loading for shipments originating outside the United States, a legible copy of a rated, "on-board" commercial ocean bill-of-lading in English for each shipment of cargo described in subparagraph 1. above to the Grantee (through the prime Design-Builder in the case of subcontractor bills-of-lading) and to the Division of National Cargo, Office of Market Development, Maritime Administration, Washington, D.C. 20230, marked with appropriate identification of the Project.
3. To insert the substance of the provisions of this Paragraph and subparagraphs in all subcontracts issued pursuant to this Contract.

D. Incorporation of Federal Transit Administration (FTA) Terms

1. The contract provisions include, in part, certain Standard Terms and Conditions required by DOT, whether or not expressly set forth in the Contract provisions. All Contractual provisions required by DOT, as set forth in FTA Circular 4220.1E, dated June 19, 2003, as amended or revised by FTA, are hereby incorporated by

reference. Anything to the contrary herein notwithstanding, all FTA mandated terms shall be deemed to control in the event of a conflict with other provisions contained in this Agreement. The Design-Builder shall not perform any act, fail to perform any act, or refuse to comply with any WMATA requests which would cause WMATA to be in violation of the FTA terms and conditions.

2. The Design-Builder agrees to include this Section in each subcontract financed in whole or in part with Federal assistance provided by FTA. It is further agreed that the following subparagraphs shall not be modified, except to identify the subcontractor who will be subject to the provisions.

E. Federal Changes

1. The Design-Builder shall at all times comply with all applicable FTA regulations, policies, procedures and directives, including without limitation those listed directly or by reference in the Agreement (Form FTA MA (9) dated October, 2002) between the Authority and FTA, as they may be amended or promulgated from time to time during the term of this Contract. Design-Builder's failure to so comply shall constitute a material breach of this Contract.
2. The Design-Builder agrees to include this clause in each subcontract financed in whole or in part with Federal assistance provided by FTA. It is further agreed that the clause shall not be modified, except to identify the subcontractor who will be subject to its provisions.

F. No Obligation by the Federal Government

1. The Authority and the Design-Builder acknowledge and agree that, notwithstanding any concurrence by the Federal Government in or approval of the solicitation or award of this contract, absent the express written consent by the Federal Government, the Federal Government is not a party to this contract and shall not be subject to any obligations or liabilities to the Authority, Design-Builder, or any other party (whether or not a party to that contract) pertaining to any matter resulting from the underlying contract.
2. The Design-Builder agrees to include the above clause in each subcontract financed in whole or in part with Federal assistance provided by FTA. It is further agreed that the clause shall not be modified, except to identify the subcontractor who will be subject to its provisions.

G. Program Fraud and False or Fraudulent Statements and Related Acts

1. The Design-Builder acknowledges that the provisions of the Program Fraud Civil Remedies Act of 1986, as amended, 31 U.S.C. § § 3801 et seq . and U.S. DOT regulations, "Program Fraud Civil Remedies," 49 C.F.R. Part 31, apply to its actions pertaining to this Project. Upon execution of the underlying Contract, the

Design-Builder certifies or affirms the truthfulness and accuracy of any statement it has made, it makes, it may make, or causes to be made, pertaining to the underlying Contract or the FTA assisted project for which this Contract work is being performed. In addition to other penalties that may be applicable, the Design-Builder further acknowledges that if it makes, or causes to be made, a false, fictitious, or fraudulent claim, statement, submission, or certification, the Federal Government reserves the right to impose the penalties of the Program Fraud Civil Remedies Act of 1986 on the Design-Builder to the extent the Federal Government deems appropriate.

2. The Design-Builder also acknowledges that if it makes, or causes to be made, a false, fictitious, or fraudulent claim, statement, submission, or certification to the Federal Government under a contract connected with a project that is financed in whole or in part with Federal assistance originally awarded by FTA under the authority of 49 U.S.C. § 5307, the Government reserves the right to impose the penalties of 18 U.S.C. § 1001 and 49 U.S.C. § 5307(n)(1) on the Design-Builder, to the extent the Federal Government deems appropriate.
3. The Design-Builder agrees to include the above two clauses in each subcontract financed in whole or in part with Federal assistance provided by FTA. It is further agreed that the clauses shall not be modified, except to identify the subcontractor who will be subject to the provisions.

H. Seat Belt Use Policy:

The Design-Builder agrees to comply with terms of Executive Order No. 13043 "Increasing Seat Belt Use in the United States" and is encouraged to include those requirements in each subcontract awarded for work relating to this Contract.

I. Access to Records:

1. The Design-Builder shall maintain records and the Authority Representative, the FTA Administrator or his authorized representatives, including any Project Management Oversight (PMO) Design-Builder, the U.S. Department of Transportation, and the Comptroller General of the United States or any of their duly authorized representatives shall have access to and the right to examine any books, documents, papers and records of the Design-Builder, involving transactions related to this Contract.
2. The Design-Builder agrees to permit any of the foregoing parties to reproduce by any means whatsoever or to copy excerpts and transcriptions as reasonably needed.
3. The Design-Builder agrees to maintain all books, records, accounts and reports required under this Contract for a period of not less than three years after the date of termination or expiration of this Contract, except in the event of litigation

or settlement of claims arising from the performance of this contract, in which case Design-Builder agrees to maintain same until the Authority, the FTA Administrator, the Comptroller General, or any of their duly authorized representatives, have disposed of all such litigation, appeals, claims or exceptions related thereto. Reference 49 CFR 18.39(i)(11).

4. The Design-Builder agrees to include this Paragraph and subparagraphs in each subcontract awarded for work performed under this Contract. It is further agreed that the Section shall not be modified, except to identify the subcontractor who will be subject to its provisions.

J. Contracts Involving Federal Privacy Act Requirements:

The following requirements apply to the Design-Builder and its employees that administer any system of records on behalf of the Federal Government under any contract:

1. The Design-Builder agrees to comply with, and assures the compliance of its employees with, the information restrictions and other applicable requirements of the Privacy Act of 1974, 5 U.S.C. §§ 552a. Among other things, the Design-Builder agrees to obtain the express consent of the Federal Government before the Design-Builder or its employees operate a system of records on behalf of the Federal Government. The Design-Builder understands that the requirements of the Privacy Act, including the civil and criminal penalties for violation of that Act, apply to those individuals involved, and that failure to comply with the terms of the Privacy Act may result in termination of the underlying contract.
2. The Design-Builder also agrees to include these requirements in each subcontract to administer any system of records on behalf of the Federal Government financed in whole or in part with Federal assistance provided by FTA.

K. Fly America Requirements:

The Design-Builder agrees to comply with 49 U.S.C. 40118 (the "Fly America" Act) in accordance with the General Services Administration's regulations at 41 CFR Part 301-10, which provide that recipients and subrecipients of Federal funds and their contractors are required to use U.S. Flag air carriers for U.S Government-financed international air travel and transportation of their personal effects or property, to the extent such service is available, unless travel by foreign air carrier is a matter of necessity, as defined by the Fly America Act. The Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, if a foreign air carrier was used, an appropriate certification or memorandum adequately explaining why service by a U.S. flag air carrier was not available or why it was necessary to use a foreign air carrier and shall, in any event, provide in accordance with Section 01330, DESIGN AND CONSTRUCTION

SUBMITTAL PROCEDURES a certificate of compliance with the Fly America requirements. The Design-Builder agrees to include the requirements of this Paragraph in all subcontracts that may involve international air transportation.

L. Seismic Safety:

The Design-Builder agrees that any new building or addition to an existing building will be designed and constructed in accordance with the standards for Seismic Safety required in Department of Transportation Seismic Safety Regulations 49 CFR Part 41 and will certify to compliance to the extent required by the regulation. The Design-Builder also agrees to ensure that all work performed under this Contract including work performed by a subcontractor is in compliance with the standards required by the Seismic Safety Regulations and the certification of compliance issued on the project.

M. Energy Conservation:

The Design-Builder agrees to comply with standards and policies relating to energy efficiency which are contained in the state energy conservation plan issued in compliance with the Energy Policy and Conservation Act.

N. Recovered Materials:

The Design-Builder agrees to comply with all the requirements of Section 6002 of the Resource Conservation and Recovery Act (RCRA), as amended (42 U.S.C. 6962), including but not limited to the regulatory provisions of 40 CFR Part 247, and Executive Order 12873, as they apply to the procurement of the items designated in Subpart B of 40 CFR Part 247.

=====

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after

award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations

Wage and Hour Division

U.S. Department of Labor

200 Constitution Avenue, N.W.

Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

LABORERS CLASSIFICATIONS

GROUP 1: Carloaders, choker setter, concrete crewman,

crushed feeder, demolition laborers, including salvaging all material, loading, cleaning up, wrecking, dumpmen, flagmen, fence erector and installer, including installation and erection of fence, guard rails, median rails, reference posts, guide posts and right-of-way markers, form strippers, general laborers, railroad track laborers, riprap man, scale man, stake jumper, structure mover, includes foundation, separation, preparation, cribbing, shoring, jacking and unloading of structures, water nozzleman, timber buckler and faller, truck loader, water boys, tool room men.

GROUP 2: Combined air and water nozzleman, cement handler, dope pot fireman (nonmechanical), form cleaning machine, mechanical railroad equipment (includes spiker, puller, tie cleaner, tamper, pipe wrapper, power driven wheelbarrows, operators of hand derricks, towmasters, scootcretes, buggymobiles and similar equipment), tamper or rammer operator, trestle scaffold builders over one tier high, power tool operator (gas, electric or pneumatic), andblast or gunnite tailhose man, scaffold erector,(steel or wood), vibrator operator up to 4 feet) asphalt cutter, mortar men, shorer and lagger, creosote material handler, corrosive enamel or equal, paver breaker and jackhammer operators.

GROUP 3: Multi-section pipe layer, non-metallic clay and concrete pipe layer (including caulker, collarman, jointer, rigger and jacker, thermit welder and corrugated metal culvert pipe layer.

GROUP 4: Asphalt block pneumatic cutter, asphalt roller, walker chainsaw operator with attachment, concrete saw (walking), high scalers, jackhammer operator (using over 6 feet of steel), vibrator operator (6 feet and over), well point installer, air trac operator.

GROUP 5: Asphalt screeder, big drills, cut of the hole drills, (1 1/2" piston or larger), down the hole drills (3 1/2" piston or larger), gunnite or sandblaster nozzleman, asphalt raker, asphalt tamper, form setter, demolition torch operator, shotcrete nozzlelemen and potman.

GROUP 6: Powderman, master form setters.

GROUP 7: Brick paver (asphalt block paver, asphalt block sawman, asphalt block grinder; hastings block or similar type)

GROUP 8: Licensed powdermen.

=====

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

In the listing above, the "SU" designation means that rates listed under the identifier do not reflect collectively bargained wage and fringe benefit rates. Other designations indicate unions whose rates have been determined to be prevailing.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted

because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.

Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

SECTION 01110

SUMMARY OF WORK

PART 1 GENERAL

1.01 SUMMARY

This Section describes, in general terms, the work to be performed by the Design-Builder and specifies the project milestones.

1.02 RELATED DOCUMENTS

All of the Contract Documents.

1.03 PROJECT WORK

- A. The Design-Builder shall design the project, and build it as designed, in accordance with the Mandatory Requirements in order to provide WMATA with a complete and finished project. The project shall function as an integral part of, and be fully compatible with, the existing WMATA system.
- B. The Design-Builder shall not solely rely on the description provided in this Section 01110 and Section 00100, SOLICITATION - REQUEST FOR PROPOSALS, to identify all project components. The Design-Builder shall determine the full scope of the work from a thorough examination of the Mandatory Documents and the project site, and as may be reasonably inferred from such examination.
- C. The Design-Builder shall obtain necessary permits, conduct survey and additional geotechnical and environmental investigations and work as necessary, perform designs and systems integration work, manage quality through the use of an effective and well-planned quality system, perform inspection and testing as necessary, and manage the safe construction and commissioning of the project. The Design-Builder's Designer of Record shall provide a design and produce "stand-alone" issued for construction drawings and "stand-alone" issued for construction specifications which incorporate and comply with WMATA's Design Criteria, and as-built record drawings, records and spare parts as required by the Project Documents.
- D. Except as specifically provided for in the Project Documents as listed in Section 00300, all materials, services and efforts necessary to achieve project completion and final acceptance, on or before project milestones, shall be the Design-Builder's sole responsibility.
- E. Permits and Plans
 - 1. Design-Builder shall prepare all necessary Designs applicable to obtain all necessary permits.
 - 2. The Design-Builder shall submit on site Water and Sewer plans for approval to Prince George's County, Montgomery County, the District of Columbia and WSSC as applicable. It is the Design-Builder's responsibility for obtaining final approval for all work.
 - 3. It is the Design-Builder's responsibility for obtaining all applicable jurisdiction's approval for Landscaping design plans and plant schedule and final approval for all Landscaping work.
 - a. It is the Design-Builder's responsibility for obtaining MDNR and MDE/ACOE final approval for all work.

4. Maintenance of traffic plans including temporary bridging, decking and support systems and calculations shall be designed and submitted to MDOT and/or Prince George's County and/or Montgomery County, and/or the District of Columbia as applicable for approval.
5. Sediment and Erosion control and Stormwater Management shall be accomplished for each phase of work to be performed and shall be approved by the applicable jurisdictional agencies. Sediment and Erosion controls and Storm Water Management facilities installed and/or constructed by Design-Builder shall be assumed to be in place and they shall be maintained until no longer needed or transferred to WMATA.
6. The Design-Builder is responsible for obtaining any and all necessary permits required to construct the projects.
7. All other necessary plans and permits shall be submitted and obtained by the Design-Builder as required by the Mandatory Documents.

F. Survey Work

The Design-Builder shall perform survey work. Related documents include: Section 01722, MOBILIZATION and Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING,.

G. Design

The Design-Builder shall perform Design work. Related documents include: Section 01111, KEY DESIGN-BUILDER FUNCTIONS and 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.

H. ADAAG Design and Construction Compliance

ADAAG Regulations apply to all occupied space by both the public and by WMATA employees. In projects that address only a portion of an existing facility, ADAAG requirements state that the connection to public use space has to be accessible to the public at finish of construction. Alterations cannot decrease public accessibility. Accessible paths must be provided both within scope of the facility being constructed or renovated and to adjacent properties. The Design-Builder shall design and build the work in accordance with ADAAG requirements and this applies to facilities open to the public as well as facilities for WMATA employees per ADAAG reference 4.1.1.5.

I. Systems Integration

The Design-Builder shall perform and manage systems integration of work. Related documents include: Section 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM and Section 01810, COMMISSIONING.

J. Quality

The Design-Builder shall establish and follow a Quality System. Related documents include: Section 00722, QUALITY CONTROL/QUALITY ASSURANCE, Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.

K. Inspection and Testing

The Design-Builder shall establish, perform and monitor inspection and testing. Related documents include: Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.

L. Safety

The Design-Builder shall establish and effective safety program, and manage project safety. Related documents include: Section 00744, PROTECTION OF PERSONS AND PROPERTY, Section 00844, SAFETY SUPERINTENDENCE REQUIREMENTS and Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

M. System Testing and Commissioning

The Design-Builder shall manage and perform testing of the system as a whole, and the commissioning of the system. Related documents include: Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM and Section 01810, COMMISSIONING.

N. Project Record Documents and Training

The Design-Builder shall submit project record documents and perform training. Related documents include: Section 01780 CLOSEOUT SUBMITTALS and Section 01820, DEMONSTRATION AND TRAINING.

O. Site Specific Work Plan (SSWP)

The Design-Builder shall submit a SSWP in accordance with Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS.

1.04 PHYSICAL DESCRIPTION OF THE WORK

A. Description of Work:

1. Shop and Yard improvements with related site, utility, and systems work at three existing WMATA Service & Inspection (S & I) Yards: Brentwood Yard on the Red Line in the District of Columbia, Greenbelt Yard on the Green Line in Prince George's County, MD, and Shady Grove Yard on the Red Line in Montgomery County, MD

2. Work includes, but is not limited to, the following:

a. Brentwood Yard:

(1) Brentwood Yard covers an area of 30 acres and stores 86 cars. It includes a Repair Shop, which will undergo major renovations. The Shop, located in a congested area between mainline Metro tracks, is a brick and block building with a footprint of approximately 108,000 square feet and basement, ground floor and partial mezzanine levels. The main ground level is comprised primarily of open shop repair areas with a secondary administrative support office area at the south end of the building. The main level floor slab is reinforced concrete supported by concrete and steel columns. Six service tracks pass through the main level, three on the east side and three on the west side. There is an approximate 120-foot wide area between east and west tracks, which is used for heavy truck and wheel repair, light maintenance functions and the support offices. This 120-foot wide strip is where the renovations will occur. The administrative office area at the south end of the Shop occupies all three levels one on top of each other. The basement level occupies the full area beneath the ground floor level and is used for storage, light maintenance and to house the car hoist equipment.

(2) The 120-foot wide area referred to above will be vacated and retrofitted with three additional service and inspection (S&I) tracks, each with four S&I bays, adding to the existing six tracks and 28 bays. Installation of the new S&I tracks will require partial demolition of the first floor cast-in-place concrete slab for installation of track and rail car hoists. The new hoists will be founded on the existing basement floor slab, which may require supplemental

support. Major mechanical and electrical systems will have to be relocated and possibly supplemented.

- (3) Construction affecting the Brentwood Shop main floor, except for the relocated loading dock, shall be coordinated with WMATA to ensure that any disrupted maintenance functions at Brentwood due to construction activities can be accommodated at other WMATA facilities to allow car and parts maintenance to continue with minimal disruption. This may result in delayed access to the main floor until other facilities, e.g. Greenbelt, are available.
- (4) Construction in the Brentwood shop basement, however, can proceed at the Design Builder's discretion, except for the lunch room and office area at the south end of the basement, the hoist equipment room in the north end of the basement, the two hoist equipment enclosures and the wheel truing pit. WMATA will rearrange the storage area to vacate the area between column lines D and F. Design Builder will be responsible for relocating the Component Repair Shop from the basement to a Design Builder provided double wide trailer to be located in the Yard. The existing loading ramp which provides access to the basement will be available to the Design Builder, but on a shared basis so WMATA deliveries and access to the basement can continue.

b. Greenbelt Yard:

- (1) The existing Greenbelt Yard covers 45.5 acres and stores 284 cars. It includes an S&I Shop, Paint Shop, Operations Building and Traction Power Substation. The S&I Shop is a one story brick and block building with a footprint of 129,000 square feet. It has a main ground level comprised primarily of open track bays with a secondary two-level administrative support office area. The office area occupies two levels from main ground level through to a partial mezzanine level.
- (2) The maintenance functions displaced by the new S&I tracks at Brentwood will be relocated to Greenbelt Yard. The relocated Brentwood heavy truck and wheel repair functions will be consolidated and expanded in the existing Greenbelt Shop. This will require renovation to the existing Greenbelt Shop's reinforced concrete slab-on-grade to install the required truck lifts, turntables and rail. Lighter maintenance functions such as axle and air brakes, HVAC shop, electronics shop, etc. will be relocated from Brentwood to a new 72,000 square foot two-story building to be constructed at Greenbelt Yard in an existing parking lot between the S&I and Paint Shops. New shop equipment will be furnished and installed in the new Greenbelt Shop by the Design Builder as directed by the Authority's Representative. Greenbelt service functions and shop equipment displaced by consolidation of the heavy repair in the existing Shop will either be rearranged and kept in the existing shop or be relocated to the new building.

c. Shady Grove Yard:

- (1) Shady Grove Yard covers 43.2 acres and has a storage capacity of 168 cars. It includes an S&I Shop, Operations Building and Traction Power Substation. The S&I Shop is a one story brick and block building with a footprint of 73,000 square feet. It has a main ground level comprised primarily of open track bays with a secondary two-level administrative support office area. The office area occupies two levels, one on top of the other, from main ground level through to a partial mezzanine level.
- (2) At Shady Grove Yard a new one story, four-track 16 bay S&I shop will be constructed immediately adjacent to and attached to the west side of existing shop. A covered extension approximately 43 feet wide and 85 feet

long will be added to the south end of the existing shop to extend the blow-down pit tracks to accommodate a married pair of cars.

3. General Requirements: Improvements at the three yards are all within WMATA property limits. The contract includes all trackwork, utilities, and systems work. Work activities in the existing shops and yards must be phased in a manner so as to minimize disruption to on-going rail car maintenance operations. Replacement parking for WMATA employees, must be provided prior to removal of existing parking. Track cut-ins for new or relocated track shall be permitted only on weekends or between 11:00 p.m. and 4:00 a.m. on weekdays. (Sunday night through Friday morning). The Contractor will be responsible for final design, construction and integration into the existing yards of all new components and systems, inclusive of testing and training, except designs for alignment, trackwork, and conceptual stormwater management at Greenbelt Yard which will be provided by the Authority.
4. Specific features include but are not limited to:
 - a. Brentwood Yard Specific Features:
 - (1) Convert the existing heavy maintenance shop area to a 12-car Service & Inspection (S&I) area with vertical hoists, turntables and cranes; three tracks for two married pairs per track. Install track access for the new shop area from both ends of the Shop. Modify structure as necessary to accommodate new S&I tracks and hoists.
 - (2) Relocate heavy truck and wheel maintenance to Greenbelt as directed by the Authority.
 - (3) Provide in-line wheel truing capabilities on existing Shop Track #11.
 - (4) Construct replacement parking within the limits of the Yard for the existing parking to be removed for the new access tracks.
 - (5) Relocate basement level loading dock, which will be made obsolete with the installation of the rail car hoists, to first floor loading dock.
 - (6) Modify existing floor framing of Mezzanine offices over the new tracks to provide 11'-2" clearance for rail cars to pass below.
 - (7) Modify electrical, mechanical, traction power, yard interlocking control and communications rooms and systems as required to accommodate the new shop area and tracks. Modify the Yard Control Panel as required to include the new tracks.
 - (8) Relocate utilities, conduit, cable, piping and ductwork as necessary to accommodate new installation.
 - (9) Modify existing freight elevator to mezzanine level to be ADA/ANSI compliant.
 - (10) Reference environmental reports listed in Section 00341 for extent of asbestos containing material and lead based paint and potential for contaminated soils and water.
 - b. Greenbelt Yard Specific Features:
 - (1) Heavy truck and wheel maintenance functions from Brentwood to be relocated to Greenbelt as described above. Increase the current four truck repair lifts to 12. Provide additional turntables and cranes.

- (2) Construct a two-story approximate 72,000 SF new building in parking lot adjacent to Paint Shop to house relocated shop functions from Brentwood, (other than heavy truck and wheel repair), and service areas and equipment displaced from the existing Greenbelt Shop (motor repair, electro-mechanical shop, pneudraulic shop, HVAC shop and storage) as a result of consolidating all heavy truck and wheel maintenance in the existing shop building.
 - (3) Replace parking that is displaced by the new building.
 - (4) Relocate maintenance-of-way (MOW) tracks to accommodate new parking.
 - (5) Relocate storage containers and materials now located with construction limits.
 - (6) Modify electrical, mechanical, traction power and communications rooms and systems as required to accommodate the new shop and track.
 - (7) Relocate utilities, conduit, cable, piping and existing track as necessary to accommodate new installation.
 - (8) Reference environmental reports listed in Section 00341. Groundwater will require treatment before discharging.
- c. Shady Grove Specific Features:
- (1) Construct a new four track 16-car S&I building with mezzanine level and track access from both ends of the building. New building to be adjacent and directly accessible to existing shop.
 - (2) Construct a covered extension on the south end of the existing shop and extend the blow-down pit to accommodate a married pair of cars. The current blow-down pit can only accommodate one car of a married pair.
 - (3) Modify mezzanine in existing shop by expanding Men's Locker Room into existing Lunch and Vending Room.
 - (4) Modify electrical, mechanical, traction power, yard interlocking control and communications rooms and systems as required to accommodate the new shop and track. Modify the Yard Control Panel as required to include the new tracks.
 - (5) Replace parking and outside storage that is displaced by the new building and tracks. This will require excavation and removal from the site of cut from an existing spoil hill within the loop track.
 - (6) Relocate utilities, conduit, cable, piping and existing track as necessary to accommodate new installation.
 - (7) Relocate bypass track and maintenance of way (MOW) tracks 7, 8, 10C and 10D to accommodate new shop. Contractor must provide for continued access and storage for equipment stored on the existing MOW tracks. This can be handled by phasing of work or possible installation of new tracks along west side of existing storage tracks.
 - (8) Relocate salt dome, storage containers and materials now located with construction limits.
 - (9) Relocate glycol tanks and fuel dispenser to accommodate realigned access road.

- (10) Relocate utilities in proposed building footprint: fuel oil tank, 78" RCP Storm Sewer, 24W ATC/Comm Ductbank, waterlines of varied sizes, various electrical and traction power ductbank.
- (11) Relocate S&I track No. 6.
- (12) Reference Environmental Reports listed in Section 00341 for extent of asbestos-containing materials and lead based paint and for potential of encountering contaminated soils and water.

B. Limits of Work

Limits of work are as shown on the Drawings.

C. Temporary Facilities

Temporary facilities include temporary construction for use by the Design-Builder. Related Documents include: Section 01510, TEMPORARY UTILITIES; Section 01520, TEMPORARY CONSTRUCTION FACILITIES; 01530, TEMPORARY CONSTRUCTION; and 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.

D. Site Preparation

1. Site preparation will include excavation and rough grading of the site at certain locations to provide adequate room to perform construction, and to provide staging and laydown areas, then backfill adjacent to completed structures. Related documents include: Project Drawings; Division 02 specifications.
2. After construction, the sites are to be landscaped as required by local governing jurisdictions and as approved by the jurisdictional authorities.

E. Civil

Civil works will include sediment and erosion control, stormwater management, and storm collection and de-watering, support of the excavation, excavation, grading, then backfill over and adjacent to completed structures. Related documents include: Project Drawings; Division 02 specifications.

1. Design-Builder will coordinate with other contractors and Authority employees through the Authority Representative on the establishment and operation of work areas and rough grading of sites.
2. Design-Builder shall develop grading plans and cross sections that provide for rough grading of sites before other operations.
3. Design-Builder shall adhere to current existing Yard elements and field conditions when constructing parking lots, access roads, sidewalks, and Yard facilities in order that they match. Pavement shall be in accordance with the Design Criteria. Design mixes for bituminous concrete and concrete shall be per WMATA Standard and Technical Specifications and/or jurisdictional requirements.
4. Restore pavements as soon as possible. Design of pavement and marking must be approved by agencies having jurisdiction.
5. Design-Builder shall provide temporary fencing around the construction area.
6. Discharge from erosion to storm water management ponds shall be monitored for acidity.

F. Site Work

1. Excavation and grading and sediment and erosion control
2. Utilities and stormwater management
3. Paving and striping
4. Landscaping and site furniture for parking structures and landscaping, wetlands mitigation and forest conservation for the Shop and Yard work
5. Lighting
6. Signage
7. Walkways
8. Fencing
9. Systems work including COMM, Trackwork, Traction Power, ATC and Outside Plant Cabling

G. Roadworks

Roadworks will include the installation of parking lots and entrances, temporary Design-Builder's and permanent access roads, grade crossings, and striping. Detours and staging will be required for an uninterrupted circulation and use of the existing Access Roads.

H. Utilities and Stormwater Management

1. Utilities will need to be protected and supported over excavation, relocated, and installed as shown in the Mandatory Documents.
2. Design-Builder will coordinate with PEPCO on the design and construction of electric service power feeder.
3. Stormwater management shall be performed as required by local jurisdictions.
4. Related documents include: Project Drawings; Division 02 specifications.

I. Structures

Facility Structures include:

1. S&I Shops
2. Related documents include: All drawings and specifications and provided documents of the existing S&I Shops and provided documents of the Yard for Shop work.

J. Mechanical, Plumbing, Electrical and Systems Work

1. Heaters and fans in utility rooms.
2. Dry standpipe and fire suppression and alarm systems as required by jurisdictional Code and Design Criteria.
3. Restrooms as required per ADAAG regulations.

4. Communications Systems as specified.
5. Air Conditioning Split System Units in Equipment and Communications rooms.
6. Positive water drainage systems (drains, risers, and sewers).
10. Oil/Grit Separators for Shop and Yard Improvements as necessary.
11. COMM equipment and cabling as shown and specified.
12. ATC equipment and cabling as shown and specified.
13. Trackwork as shown and specified.
14. Traction power equipment and cabling as shown and specified.
15. Related documents include: All drawings and specifications, and provided documents of the Yard for Shop and Yard work.

K. Graphics and Signage

1. Pedestrian, Vehicular, Way Finding as required.
2. Slab and Pavement Markings.
3. Related documents include: All drawings and specifications and provided documents of the Yard for Shop and Yard work.

1.05 PROJECT MILESTONES

Project Milestones are as set out in Section 00888, LIQUIDATED DAMAGES.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

SECTION 01111

KEY DESIGN-BUILDER FUNCTIONS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies several key functions that are to form part of the Design-Builder's role, and the responsibilities relating to those functions.

A. The key Design-Builder functions include those of the:

1. Design Professional
2. Construction Firm
3. Key Personnel

1.02 RELATED DOCUMENTS

Section 00400, Procurement Forms and Supplements

Section 00700, General Conditions

Section 00800, Supplementary Conditions

Section 01112, General Requirements - Summary of Work Requirements: Design Requirements and Program Criteria

Section 01113, General Requirements - Summary of Work Requirements: Systems Integration

Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination

Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

Section 01470, General Requirements - Quality Requirements: Quality System

Section 01780, General Requirements - Execution Requirements: Closeout Submittals

1.03 DESIGN PROFESSIONAL

A. The Design-Builder shall include, as a part of its team, a Design Professional (Designer) as defined in Section 00701 of the General Conditions. The Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, verification of the firm name and credentials of the Designer, Major Subcontractors and Key Personnel submitted in the TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491, to the Authority Representative within ten (10) calendar days after award of the Contract for the Authority Representative's review and acceptance as specified in Section 00726, COMMENCING THE

WORK,. Before substituting any Design Firm or Key Personnel or entering into any subcontracts with substitute subcontractors, the Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a written statement to the Authority giving the name and address of the proposed replacement, the portion of the work it is to perform, and any other information tending to prove that it has the necessary facilities, skill, past experience and financial resources to perform the work in accordance with the terms and conditions of this project, as specified in Section 00710, PROJECT MANAGEMENT AND SUPERINTENDENCE AND KEY PERSONNEL.

- B. Firms and individuals that comprise Design Professional must be approved to practice by the applicable jurisdiction's professional board of architects and engineers to practice in the field of architecture and / or engineering.
- C. The Design Professional's responsibilities shall include but not be limited to the following:
 - 1. Perform and/or manage the performance of all design for the entire project in accordance with the Project Requirements of this Contract, recognized standards, and all jurisdictional and permit requirements including building codes.
 - 2. Be the architect / engineer of record for the design of all work including but not limited to architectural, structural, mechanical, electrical, civil, systems and other engineering features of the work, all as evidenced by the Design Professional's professional seal on the Final Design documents.
 - 3. Design Submittal Reviews and Certifications: The Designer shall prepare the design and submit the specified completion level designs as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Designer shall complete an ADA Facilities Accessible Checklist and certify that the design complies with ADAAG regulations as described in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01470, QUALITY SYSTEM and submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
 - 4. Field Engineering: Manage and/or review and approve all shop and fabrication drawings for conformance to final and / or issued for construction drawings and specifications as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and all Contract Record Drawings and other Closeout Submittals as specified in Section 01780, CLOSEOUT SUBMITTALS.
 - 5. Construction Submittal Reviews and Certifications: The Design-Builder shall provide field engineering as specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING and all professional services during construction for on-site observation, attendance at project meetings as specified in Section 01312, PROJECT MEETINGS, and general consultation as required to complete the Project. The Designer of the Designer-Builder Team shall have primary responsibility for these tasks. The Designer is also responsible for reviewing and approving all required construction submittals as specified in this Section and in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, and also for submittals as specified in the Final Design Specifications developed from the pertinent requirements of the WMATA Standard and Technical Specifications, Divisions 2 through 16 of this Project Manual, and others that are specified in the Project Manual beyond those referenced above and all items listed in the approved Schedule of Submittals as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, before submittal to the Authority and jurisdictional agencies and utility companies through the Authority

Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Design-Builder shall be responsible for obtaining all necessary approvals and permits. In addition, the Design-Builder is responsible for submitting to the Authority in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, QA/QC Manager's Statement of Compliance for Payment Verification that the Design-Builder's Quality System is effectively controlling the quality of the work, certifications for the final products, and certifications for the overall construction and the functioning of systems and equipment installations as specified in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION. These certifications are to be turned over to the Authority for the project records in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS. Submittal review and approval and certification milestones shall be included in the Design-Builder's schedule in accordance with the Schedule requirements of this Project Manual in Section 01322, CONTRACT PROGRESS REPORTING.

6. For further information, refer to Section 00708, RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN-RELATED SERVICES, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, Section 01470, QUALITY SYSTEM, and Section 01780, CLOSEOUT SUBMITTALS.

1.04 CONSTRUCTION FIRM

- A. The term Construction Firm (Builder) in this Section shall refer to all members in the Design-Build Team that take part in the manufacture, fabrication, installation, and construction of the work as defined in Section 00701 of the General Conditions. The Design-Builder shall submit verification of the firm name and credentials of the Builder, Major Subcontractors and Key Personnel submitted in the TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491, to the Authority Representative within ten (10) calendar days after award of the Contract for the Authority Representative's review and acceptance as specified in Section 00726, COMMENCING THE WORK,. Before substituting any Construction Firm or Key Personnel or entering into any subcontracts with substitute subcontractors, the Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a written statement to the Authority giving the name and address of the proposed replacement, the portion of the work and material it is to perform and furnish, and any other information tending to prove that it has the necessary facilities, skill, past experience and financial resources to perform the work in accordance with the terms and conditions of this project, and acquire written Authority approval for substitutions before they may be utilized on the Project as specified in Section 00710, PROJECT MANAGEMENT AND SUPERINTENDENCE AND KEY PERSONNEL.
- B. The Builder of the Designer-Builder Team shall perform all construction, provide all construction materials and equipment, install all equipment and Systems, and undertake all efforts necessary or appropriate to construct the Project in accordance with the approved Final Design Drawings and Final Design Specifications; the Project Schedule; all applicable jurisdictional codes and regulations; jurisdictional approvals and permits and utility approvals; the approved QC/QA Plan; the approved Safety Plan; and all safety, environmental and other applicable requirements so as to complete the Project and achieve Final Acceptance by the dates specified. QA/QC Plan shall include Testing and Inspections in accordance with jurisdictional codes. All personnel involved in performance of construction work shall be experienced and qualified to perform their trade and all construction work shall be performed in a skilled and workmanlike manner. The work shall include field engineering, quality control, manufacturing, procuring, delivering, storing, setting up, constructing, installing, all testing services required during construction, documenting, and quality

assurance by the Designer, and warranting and placing in service the complete project. The Design-Builder shall use the firms and personnel identified in the Technical Proposal as finally accepted. The Design-Builder shall not change the designated construction firms(s) and personnel or shift construction and field engineering Work from one firm to another (including changes in Work performed by Subcontractors) without the prior written approval of the Authority Representative.

- C. Prior to the manufacture, installation, or construction of any part of the work, the Construction Firm shall receive "issued for construction" drawings and/or specifications, issued by the Design Professional that govern that part of the work.
- D. The Construction Firm shall comply with the "Issued for Construction" design requirements established by the Design Professional.
- E. The Construction Firm will obtain Design Professional approval of all shop, fabrication or working drawings, if any, prior to submittal to the Authority for approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and prior to the manufacture, installation, or construction of that part of the work and of all Contract Record Drawings and other closeout submittals as specified in Section 01780, CLOSEOUT SUBMITTALS.
- F. For further information, refer to Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, Section 01470, QUALITY SYSTEM, and Section 01780, CLOSEOUT SUBMITTALS.

1.05 KEY PERSONNEL

- A. Overall Program Manager: Oversees complex multi-discipline design engineering work efforts and construction work efforts and all associated programs and supervises key management personnel.
- B. Design Engineering Manager: Manages complex multi-discipline design engineering work efforts including the preparation of Final Design Drawings and Final Design Specifications and approval of all design and construction submittals.
- C. Field Engineering Manager: Manages complex multi-discipline field engineering work efforts including the preparation of shop, working, and as-built drawings and other required technical documentation during construction and of contract record drawings and other closeout submittals upon completion of the project that are to be approved by the Design Engineering Manager. Please note that the Design Engineering Manager may be appointed as Field Engineering Manager during the construction phase.
- D. Construction Project Manager: Manages complex multi-discipline construction work efforts and coordinates with subcontractors' Construction Project Managers.
- E. Construction General Superintendent: Supervises complex multi-discipline construction work efforts and coordinates with subcontractors' Construction General Superintendents.
- F. Quality System Manager for QA/QC: Manages complex multi-discipline design and construction QA/QC work efforts and is responsible to ensure that:
 - 1. An appropriate quality program is established that addresses quality assurance and quality control as described in Section 01470, QUALITY SYSTEM.

2. Appropriate input is received from the Design Professional, manufacturers, suppliers, and others to establish appropriate test parameters and test programs.
- G. Systems Integration Manager: Leads and coordinates systems integration efforts as specified in Section 01113, SYSTEMS INTEGRATION. Please note that the Systems Integrator may be appointed as Design Engineering Manager during both the design and construction phases provided the Systems Integrator meets the minimum qualifications for that position.
- H. Key staff/field personnel: Technical, supervisory, and other personnel responsible as applicable for design, shop and as-built drawings and specifications preparation and in reviewing and certifying plans prior to submission, contract planning and scheduling, overseeing construction safety programs and ensuring safety is maintained, supervising construction crews and coordinating the work of subcontractors including the installation of equipment and Systems; in providing quality control/quality assurance services; in providing systems integration services; and in coordinating any operational issues.
- I. See Section 00204, PROPOSAL FORMAT, PROCEDURES AND EVALUATION FACTORS, AND INSTRUCTIONS for qualifications of required key personnel identified by the Authority and in addition, see the Design-Builder's TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491, for those and any other personnel essential for performance of the work as identified by the Design-Builder and for their qualifications. Also see Section 00710, PROJECT MANAGEMENT, SUPERINTENDENCE AND KEY PERSONNEL and Section 01310, PROJECT MANAGEMENT AND COORDINATION for responsibilities of key personnel. All positions shall be filled by competent personnel satisfactory to the Authority Representative. Each position shall be held by a separate full-time employee, unless otherwise specifically approved by the Authority. Individuals holding these key positions shall not be changed without permission of the Authority Representative. The Design-Builder shall submit verification of the names and credentials of the individuals submitted in the TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491, to the Authority Representative within ten (10) calendar days after award of the Contract for the Authority Representative's review and acceptance as specified in Section 00726, COMMENCING THE WORK, and acquire written Authority approval for substitutions of any key personnel before they may be utilized on the Project.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

THIS PAGE NOT USED

SECTION 01112

DESIGN REQUIREMENTS AND PROGRAM CRITERIA

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies design requirements and Program Criteria for the Project.
- B. The purpose of this Contract is for WMATA to receive a complete system that functions efficiently as a part of the overall WMATA system and within the local community. The Project Drawings and Project Manual set out the Project Requirements that define the WMATA's intent. It is the Design-Builder's responsibility, through design, and systems integration as applicable, to refine the drawings and specifications provided by WMATA into a complete, unified whole which is compatible with the existing setup.

1.02 RELATED DOCUMENTS

- Section 00700, General Conditions
- Section 00800, Supplementary Conditions
- Division 01, General Requirements

1.03 GENERAL

- A. The Design-Builder is advised that the some of the Project Drawings may use terms such as "by others" to indicate other crafts, trades or disciplines outside the specific scope of the individual drawing or specification section. The Design-Builder is required to provide all work required for a turnkey installation regardless of the use of the foregoing, or similar, phrases.
- B. The design scope of work specified in this Section is only a summary, and in no way limits the responsibility of the Design-Builder for performing all the work in strict accordance with the Project Drawings and Project Manual and the Final Design Specifications and Final Design Drawings Issued for Construction.
- C. The Design-Builder is responsible to make allowances to accommodate variations in material, size and quantities between the preliminary design provided by WMATA and the approved Design-Builder final design to be implemented.

1.04 GENERAL DESIGN REQUIREMENTS

- A. The Design-Builder shall schedule a Pre-Design-Build Meeting with the Authority prior to beginning any design work in order to review Project requirements and discuss any issues for clarification as specified in Section 01312, PROJECT MEETINGS. The sequence of Design Submittals shall be consistent with the Milestone Summary Schedule, the Detailed Project Schedule and Cash Flow Payment as specified in Section 01322, CONTRACT PROGRESS REPORTING. The Design-Builder's Overall Program Manager and Design Manager shall meet with the Authority to establish a schedule for the submittals as specified in Section 01312, PROJECT MEETINGS.

- B. The Designer of the Design-Builder Team shall perform the Design services as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS for the Project required by the Contract Documents and in accordance with the approved Quality System as specified in Section 01470, QUALITY SYSTEM. The Authority will review and approve the design as being in general conformance with the functional requirements contained in the Contract Documents in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Design-Builder shall use the firms and personnel identified in Section 00204, PROPOSAL FORMAT, PROCEDURES AND EVALUATION FACTORS, AND INSTRUCTIONS, Section 00491, TECHNICAL PROPOSAL AS FINALLY ACCEPTED and Section 01111, KEY DESIGN-BUILDER FUNCTIONS. The Design-Builder shall not change the designated design firms(s) and personnel or shift design and engineering Work from one firm to another (including changes in Work performed by Subcontractors) without the prior written approval of the Authority Representative.
- C. Designer: All design and field engineering Work required to be performed by the Design-Builder hereunder shall be performed by or under the supervision of licensed professionals under the laws of the jurisdiction in which the Project is located or who have the ability to obtain such through reciprocity.
- D. Code Requirements: The design shall be carried out in accordance with the latest version of the applicable codes of jurisdiction in which the Project is located, as well as other codes and regulations that apply to the work being performed on the Project Site. In addition, the Design-Builder shall adhere to the Code Requirements as set out in the Design Criteria including using the above cited jurisdiction where county and/or state codes are referred to, and also shall verify that the project requirements of the Contract comply with the above-mentioned codes and regulations. In addition to applicable codes and regulations of the jurisdictional authorities, the Design-Builder shall also incorporate into the Design all WMATA requirements; however, the more stringent of these requirements govern. Also the Design-Builder shall incorporate any required environmental mitigation, and the preservation, restoration and reconstruction of indicated features.
- E. ADAAG: All design and construction for new facilities and for renovations, alterations, and relocations of existing facilities and all acquisition and installation of equipment having ADA content shall be in compliance with ADAAG requirements. Any part of the construction/installation/renovation work not meeting these requirements of these regulations shall be removed and replaced by the Design-Builder, all at no additional cost to the Authority. All WMATA facilities must meet Federal Transit Authority (FTA) ADA requirements, and the Design-Builder's attention is directed to the fact that without exception all WMATA construction projects are subject to FTA audits review assessment of the facilities as actually built with regard to ADAAG regulations. The Design-Builder shall secure the latest version of these regulations from the FTA. Also, the Design-Builder is urged to acquire the FTA's Accessibility Handbook for Transit Facilities publication for the Design-Builder's use as an information guide. The ADAAG Design Compliance Certification Form attached at the end of this Section which addresses design conformance with ADAAG regulations for relevant items reflected in each required level of design completion shall be certified by the Design-Builder and shall accompany each design review submittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The ADA Facilities Accessibility Checklist Form also attached at the end of this Section shall be completed concurrent with the design of relevant items and shall be submitted along with each required level of design completion review submittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- F. Conflicts in Requirements and /or Criteria: The Design-Builder shall identify and make known to the Authority as soon as practicable but in no case less than five (5) days after the Designer knows of any potential conflicts among the requirements and criteria either indicated in the Project Manual and/or Project Drawings as specified in Section 00703, GENERAL REQUIREMENTS, DRAWINGS AND SPECIFICATIONS or required by local, state or federal jurisdictions that affect the scope, cost or quality of this work. The notification shall include a clear statement of the

conflict, the source of the requirement and/or criteria and a recommended solution to the potential conflict. The Design-Builder shall submit the original and six copies and one electronic copy of the notification in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Authority will determine solely the solution to the conflict based on either the Designer's recommendation or its own evaluation. The Designer shall incorporate that decision into the design with a minimum of impact to the scope, cost and/or quality of the work.

- G. Utilize Project Drawings, Project Manual and other Contract Documents as the basis for design. The Contract Documents establish requirements for the preparation of design and are not to be used for construction, instead the approved Final Design Drawings and Final Design Specifications prepared by the Design-Builder as part of the design process shall be utilized.
- H. Indicate in the Design Drawings where utilities, agencies, and other contractors will perform design, construction and maintenance of their facilities in relation to this Contract. The Design-Builder shall coordinate its design work with the work of others to ensure compatibility of design and construction. All such work shall be shown on the Final Design Drawings as "work by others", if applicable.
- I. Technical Specifications in CSI Format: The Designer shall develop and provide the stand-alone Design Specifications for this project in the latest edition of CSI Format, and also cross reference these to the Section Numbers of the WMATA Standard and Technical Specifications of the Project Manual.
- J. The Designer's final designs shall provide for layouts, installations and typical circuits and the incorporation of components, equipment, and systems as applicable.
- K. The Designer shall be responsible for obtaining all the necessary utility and jurisdictional approvals for the design. Submittal review and approval and certification milestones shall be included in the Design-Builder's schedule in accordance with the Schedule requirements in Sections 00725, 00825 and 01322 of this Project Manual.
- L. Design Submittal Review:

Authority Review: The Authority explicitly reserves the right to also review and approve the Design items at the specified design progress levels identified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- M. Prepare and submit reports substantiating design analyses and calculations as required in accordance with accepted industry practice to support the basis of design and development of Final Design Drawings and submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- N. Design: In all aspects of the design, the proposed facilities shall operate as one entity upon completion of the Contract.

1.05 DESIGN CONTROL

- A. The Design-Builder shall establish and maintain documented procedures to verify and control designs in order to ensure that the Project Requirements are met as described in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION.
- B. The Design-Builder shall prepare plans for each design and development activity and define responsibility for their implementation as described in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION.

- C. The Design-Builder shall assign design and verification activities to qualified personnel equipped with adequate resources as described in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION.
- D. The Design-Builder shall verify its understanding of the design by making submittals to communicate its intended course of complying with the Project Requirements in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- E. The Design-Builder shall design and submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, test, acceptance and verification criteria and/or procedures for the product being specified as described in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION. Test and acceptance criteria and/or procedures may be used by the Authority to verify designs and products. The design verification process shall test the design to assure that it meets Contract requirements.
- F. The Design-Builder shall conduct formal design reviews before submitting a design to the Authority for all required design progress submittals in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Designer of the Design-Builder Team is responsible for preparing, reviewing and approving the Design Drawings and Design Specifications before submittal to jurisdictional authorities and utility companies through the Authority Representative. The Design-Builder shall form a Design Review Team of no less than two qualified individuals, not including the Design Manager or individuals who prepared the design, with relevant experience and expertise who shall review the design internally. The Design-Builder shall submit resumes for reviewers in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. In addition, this Design Review Team shall conform to any jurisdictional requirements for the Team. Designs submitted shall be accompanied by a signed certificate indicating that each member of the Design Review Team has reviewed the document and found it proper in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Design-Builder shall maintain records of all Design Reviews and submit them to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Authority Representative has the authority to remove any and all individuals from a Design Review Team if, in his the Authority Representative's opinion, insufficient review has been performed. In such a case, the Design-Builder shall immediately submit resumes for replacement reviewers for approval by the Authority.

1.06 CONFIGURATION MANAGEMENT

- A. The Design-Builder shall be responsible for configuration management and document change control for the duration of this Project as more fully described in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION. Configuration management of drawings, specifications, documents, systems, operating and maintenance documentation, and the physical materials is the responsibility of the Design-Builder. The Design-Builder shall maintain document change control, including drawings, manuals and specifications, and shall update all documents as the design and installation progresses. Configuration management system shall provide an accurate historical record that can trace decisions made through the life of the Contract. At the end of the Contract, the Design-Builder shall submit to WMATA in accordance with Section 01780, CLOSEOUT SUBMITTALS a complete configuration management system fully documented with all required information including the version status of all system components and all documents and all approved submittals and certificates as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS for part of the Project records.
- B. The Authority Representative has the right to accept or deny a requested design change. If it will require a change to one or more of the Project Requirements, the Authority will only consider a requested design change with the following support documentation:

1. A valid reason for a change.
 2. Evidence that the desired change is feasible.
 3. An explanation of why the change is desirable.
 4. Estimates of effects on performance, costs and schedule.
 5. Submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
 6. Only upon approval by the Authority Representative may a change or revision may be implemented.
- C. The Design-Builder shall submit a Contract Documents Submittals Log consisting of all Design Drawings, Design Specifications, design calculations, analyses and reports to be prepared by the Design-Builder as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 00720, SUBMITTALS.

1.07 PROGRAM CRITERIA

The Authority has furnished, as part of this procurement, Program Criteria that is to be the basis of the Technical Proposal. All design elements, as proposed, shall follow the Criteria as specified.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 DESIGN MANAGEMENT

The Design-Builder shall appoint a Design Engineering Manager to lead and coordinate the Design-Builder's design effort as a part of the Design Professional. For further information, see Section 00204 PROPOSAL FORMAT, PROCEDURES AND EVALUATION FACTORS, AND INSTRUCTIONS, Section 00491 TECHNICAL PROPOSAL AS FINALLY ACCEPTED and Section 01111, KEY DESIGN-BUILDER FUNCTIONS.

3.02 IMPLEMENTATION

- A. Prepare the design by developing detailed Final Design Drawings, Final Design Specifications, design calculations, analyses and reports, with all engineering required in accordance with accepted industry practice for completion of the Construction in accordance with the approved Final Design Drawings and Final Design Specifications "Issued for Construction".
- B. Provide the engineering design as specified for facilities owned by states, cities, agencies, districts, and utilities including service connections, facility modifications and relocations as applicable.
- C. Coordinate and resolve any conflicts for locations and sizes of openings, conduits, equipment placement, power and HVAC requirements as applicable, clearances and weights of all elements among all the disciplines.
- D. The Authority Representative shall be notified immediately in writing as specified in Section 00703, GENERAL REQUIREMENTS, DRAWINGS AND SPECIFICATIONS, upon identification of design

issues or problems which may affect schedule, or the work of utilities or other contracts. The Design-Builder shall submit the notification in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

- E. Final Design Drawings and Final Design Specifications, design calculations, analyses and reports and certifications shall be stamped and signed by the Design Professional in accordance with the State or Local Jurisdiction Professional Engineers Act and equivalent requirements for architects and landscape architects. A statement by the Design Professional who signed the drawings that the drawings and specifications conform to applicable architectural, engineering, Systems and Authority requirements and to the appropriate jurisdictional regulations shall accompany Design Reviews as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01470, QUALITY SYSTEM.
- F. The Design-Builder shall coordinate its design, through the Authority Representative, with governmental, public and private agencies and others. Such coordination shall include attending conferences as may be authorized and required by the Authority. The Design-Builder shall prepare and submit to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES within ten working days, a memorandum of record of all such conferences attended. The Design-Builder shall promptly bring to the attention of the Authority Representative, by written notice submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, any betterments or other work requested by private and public agencies and property owners that have not already been authorized by the Authority.

3.03 INTERFACE REQUIREMENTS

- A. The Design-Builder shall be responsible to design, furnish and install systems and materials which interface with and are fully compatible with other systems and design the system interfaces to function in a fully compatible similar manner as existing with regard to safety, security, reliability and maintainability as specified in Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
- B. The Design-Builder shall be responsible to investigate, design, and coordinate the respective systems designs and their interfaces with other systems and facilities provided under this Contract and with existing systems and structures as necessary. This coordination shall include the scheduling of interface design, installation and testing efforts to avoid delays in their completion as specified in Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING.
- C. Systems which require functional and physical interface coordination may include as applicable, but are not limited to:
 - 1. Power and Energy Management System.
 - 2. Drainage Systems.
 - 3. Communications Systems including Voice and Data.
 - 4. Closed Circuit Television (CCTV).
 - 5. Structural Connections.
 - 6. Roadway and Civil Works.
 - 7. Existing Underground Utilities.
 - 8. Traffic Maintenance during Construction.
 - 9. Continuous uninterrupted operations of the Existing Facilities and Roadways.

10. Traction Power Systems.
 11. Trackwork Systems.
 12. Automatic Train Control (ATC) Systems.
 13. Fire Intrusion Alarm (FIA).
 14. Private Automatic Branch Exchange (PABX).
 15. Public Address System (PAS)
 16. Carrier Transmission System (CTS).
 17. Automated Energy Management System (AEMS).
 18. Mechanical Systems.
 19. Plumbing Systems.
 22. Electrical Systems.
- D. Interface and Compatibility requirements within various other interfaces for the Communications Systems include:
1. Coordinate locations for Fire and Intrusion Alarm System and other security systems by Others with new security fencing for Yard. Coordinate provisions for Fire and Intrusion Alarm System for Shop. Local Fire Jurisdictional Authorities: Coordinate provisions for fire detection and alarm to ensure compliance.
 2. Coordinate provisions for Yard Talkback system coverage at new track switchpoint locations in Yard.
 3. Coordinate elevator emergency telephone additions. Coordinate Shop Administrative and Emergency Trip telephones.
 4. Coordinate Shop PAS expansion with existing Yard PAS system.
 5. Coordinate Shop CTS equipment and connectivity with existing Yard CTS system.
 6. Coordinate Shop CCTV expansion with existing Yard CCTV system.
- E. Interface and Compatibility requirements for Trackwork:
1. Coordinate embedded trackwork in Shop with new Yard trackwork and new Yard trackwork and appurtenances with existing Yard trackwork.
 2. Coordinate provisions for rail heaters in Yard.
- F. Interface and Compatibility requirements for ATC:
1. Coordinate new Yard ATC equipment with existing Yard ATC.
 2. Coordinate modification of Yard Control Machine.
- G. Interface and Compatibility requirements for Traction Power:

1. Coordinate new Shop Traction Power DC stinger rail, rectifier and DC and AC switchgear and Yard Traction Power with existing Yard Traction Power.
- H. Interface and Compatibility requirements for the Utility Systems:
1. Coordinate equipment location and drain inlets and pipes. Coordinate new drain inlets and pipes with existing manholes, drain inlets and pipes. Coordinate new sanitary sewer pipes with existing manholes and pipes.
 2. Coordinate electrical power requirements and location of equipment, feeders and ductbanks.
- I. NOT USED
- J. Interface and Compatibility requirements for the Automated Energy Management System:
1. Coordinate AEMS requirements for Shop.
- L. Develop a Systems Interface Report as specified in Section 01470, QUALITY SYSTEM and in Section 01113, SYSTEMS INTEGRATION which shall identify all system interfaces and describe in detail the functional and physical interfaces between new and existing systems. The descriptions shall include interface locations, operating parameters and applicable test points.
1. The Systems Interface Report shall assign primary and secondary responsibilities to the providers of the interfaced systems and provide assurances that the systems provided under this Contract are fully compatible and that interface connections will not degrade, compromise or otherwise interfere with the normal operations of either of the interfaced systems.
 2. The Systems Interface Report shall provide assurances that the systems provided under this Contract are interfaced in a manner similar to existing WMATA systems performing the same functions. Differences in the manner in which the systems are interfaced shall be clearly described and subject to the approval of the Authority's Representative.
 3. The Systems Interface Report shall provide a direct reference to one or more test procedures contained in the Design-Builder's approved Systems Integration Testing and Cut-In Program as specified in Section 01470, QUALITY SYSTEM and in Section 01113, SYSTEMS INTEGRATION which will verify that each system interface fully satisfies the requirements described herein.
 4. The Systems Interface Report shall be developed before or concurrent with the systems designs and shall be submitted for review along with each relevant design submittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The submitted report shall address System Interfaces reflected in the design submittal.
- M. The Design-Builder controls the installation, its current configuration, and the appropriate documents to support it. The Design-Builder shall issue engineering recalls, update installed material, and update support material such as test equipment and documentation as specified in Section 01470 QUALITY SYSTEM and in Section 01113, SYSTEMS INTEGRATION.

ATTACHMENTS TO SECTION 01112:

1. The Design-Builder shall complete and submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the following ADAAG Design Certification in conjunction with the completed Checklist Sections in the Preliminary, Intermediate, Pre-Final and Final Level of Design submissions specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

CERTIFICATE OF DESIGN COMPLIANCE WITH ADAAG REGULATIONS

The Design-Builder hereby certifies that it's Design complies with all applicable Regulations of ADAAG.

CONTRACT NO.: _____

DATE: _____

DESIGNER'S NAME: _____

DESIGN-BUILDER NAME: _____

DESIGN MANAGER'S SIGNATURE: _____

OFFICER'S SIGNATURE: _____

TITLE: _____

2. **WMATA ADA Accessibility Checklist Forms (See Appendix A):** The Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the WMATA ADA Accessibility Checklist Forms in the appropriate level of completeness, respective to the Intermediate, Pre-Final and Final Level of Design submissions specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

- a. As the design is developed, the Designer shall complete each checklist item as described herewith. The Designer shall enter the sheet number into the column 'REFERENCE DWG. NO.' where the checklist item is referenced in the Design Drawings. The column 'REFERENCES' contain the paragraph or section numbers, in the sub-columns 'FTA' and 'ADAAG', where the checklist item is referenced in the FTA Accessibility Handbook for Transit Facilities and the ADAAG Regulations, respectively. The Designer shall indicate if the particular area of the Design indicated in the checklist item complies with the requirements by entering an 'X' into the appropriate sub-column, 'YES' or 'NO', found below the column 'COMPLIANCE'. If compliance with the requirements indicated in the checklist item does not apply to the project, then indicate as not applicable with an 'X' in the sub-column 'N/A'. In any given submission before the Final Level of Design submission, checklist items that cannot be referenced to any drawing or compliance with ADAAG regulations cannot be verified due to the preliminary level for completion of the Design, the Designer shall enter "To Be Determined" into the column 'COMMENTS'. The 'COMMENTS' column shall also be used by the Designer to clarify compliance issues if necessary. The Designer shall enter a sequential line item number into the column 'ITEM NO.' before the Final Level of Design submission. All line items under each column, in every Checklist Section, shall be fully completed before the Final Level of Design submission.

END OF SECTION

SECTION 01113

SUMMARY OF WORK REQUIREMENTS: SYSTEMS INTEGRATION

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies systems integration requirements for the Project.
- B. The purpose of this Contract is for WMATA to receive a complete system that functions efficiently as a part of the overall WMATA system and within the local community. The Project Drawings and Project Manual Specifications set out the Project Requirements that define WMATA's intent. The designs of Communications, Train Control, Trackwork, (Final Trackwork Design provided by the Authority) Mechanical, Electrical and Traction Power systems as applicable are conceptual, with standard system drawings and some typical drawings provided. It is the Design-Builder's responsibility to complete these designs and integrate these systems into the overall WMATA system. The Design-Builder is expected to advance the designs into a single unified whole.
- C. Systems Integration shall ensure that individual elements fit into components, that components fit into subsystems, subsystems fit into systems, and that systems fit into the existing facilities and/or WMATA operating system as applicable. The WMATA operating system includes train operations and the operations of existing facilities such as the Operations Control Center (OCC), Maintenance Operations Center (MOC) and Yards.
- D. As part of the Systems Integration process, the Design-Builder shall implement a systems engineering program designed to assure attainment of the reliability, availability and safety goals of WMATA.
 - 1. In addition to the Initial Systems Integration Plan submitted with the Technical Proposal, provide a Systems Integration Design document that defines the process for accomplishing these goals.
 - 2. Develop the Systems Integration Design to provide the Work in a finished turnkey state that reflects these goals.
 - 3. Develop special drawings for the sole purpose of demonstrating coordination between crafts, disciplines and systems.
 - 4. Provide a Work Breakdown Structure addressing form, fit and function of all systems and subsystems.

1.02 RELATED DOCUMENTS

Section 00371, WMATA Construction Safety and Environmental Manual Requirements
Section 00381, Safety and Security Certification Program Plan Requirements
Section 00391, System Safety Program Plan Requirements
Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements
Divisions 2 through 16, Standard and Technical Specifications Requirements

Safety Rules and Procedures Manual
Metrorail Safety Rules and Procedures Handbook

1.03 GENERAL

- A. The Design-Builder is advised that the some of the Project Drawings may use terms such as “by others” to indicate other crafts, trades or disciplines outside the specific scope of the individual drawing or specification section. The Design-Builder is required to provide all work required for a turnkey installation regardless of the use of the forgoing, or similar, phrases.
- B. The design scope of work specified in this Section is only a summary, and in no way limits the responsibility of the Design-Builder for performing all the work in strict accordance with the Contract Documents.

1.04 SYSTEMS INTEGRATION PROCESS REQUIREMENTS

The Design-Builder shall establish and maintain a systematic, documented, comprehensive, verifiable and continuous Systems Integration process applied throughout the duration of the Contract to implement the intent of the Contract Documents and the Final Design Drawings and Final Design Specifications Issued for Construction. At a minimum, the Design-Builder’s systems integration effort shall:

- A. Provide a Systems Integration design document that systematically identifies and formally documents all interfaces and identifies a process for handling each interface.
- B. Provide a mechanism, and assign project responsibility for interface management and control, such that every interface has a single entity within the Design-Builder’s organization accountable for engineering and verifying the interface.
- C. Define methods to confirm interface compatibility and demonstrate said compatibility through tests or other approved verification methods.
- D. Assure that reliability, availability, maintainability, and safety requirements are propagated through all systems and system elements so as to meet the overall availability, dependability and safety criteria set out in this Contract.
- E. Allow WMATA to independently assess the effectiveness of, and audit, the Design-Builder’s Systems Integration process.
- F. Coordinate all disciplines, civil/structural/architectural, utilities, landscaping, trackwork, mechanical, electrical, train control, communications, traction power, etc., as applicable, to ensure that all systems fit together and there are no conflicts.

1.05 TRAINING

When required, the Design-Builder shall provide WMATA with training in the operation of specific interfaces. This training shall be generally consistent with current WMATA practice as described in this Contract in Section 01820, DEMONSTRATION AND TRAINING and typically shall be made a part of the system training program. Each system training program shall explicitly devote training to identifying and explaining interfaces. When no system training is otherwise specified, the Design-Builder shall provide additional training on the specific interface.

1.06 SYSTEMS DESIGN INTEGRATION

- A. The Design-Builder shall provide systems design integration. The Design-Builder shall systematically identify and document all technical interfaces, by means of an Interface Matrix which shall list all systems and major system elements, define which elements have a direct or indirect interaction and describe each interface by means of an Interface Control Document.
- B. Design-Builder's systems design integration shall:
1. Provide the Systems Integration Procedure which shall:
 - a. Define a method for tracking physical, electrical, electronic and software interfaces.
 - b. Define a method for tracking contacts and human interfaces.
 - c. List all major system components as applicable (e.g., track, train control, traction power, communications, electrical, mechanical, etc.) and their interfaces.
 - d. List all suppliers and subcontractors and their interfaces.
 - e. Identify WMATA interface points for existing systems.
 - f. Identify major coordination milestones.
 - g. Identify major system integration demonstrations.
 - h. Identify conflict resolution procedures.
 2. Provide the Systems Operations Description. In this document the Design-Builder shall, in text, flow charts and simple graphics, describe what the system is supposed to do and how the system is supposed to do it. The purpose of this document is to ensure that the Design-Builder and WMATA have a common understanding of the system's use and operation so that WMATA receives a truly turnkey product that will function as desired. This document will be in sufficient detail to assure a complete understanding of WMATA's intent and the Design-Builder's approach to meeting that intent.
- C. The Systems Integration Design shall be provided in stages:
1. The Preliminary 30% Systems Integration Design shall be delivered 90 Calendar Days after NTP. The 30% design will:
 - a. Provide draft Description of Facility Operations and/or WMATA operating system as applicable.
 - b. Provide draft Systems Integration Procedure.
 - c. Provide a working model of the Systems Integration Database.
 - d. Identify the Design-Builder's Systems Integrator.
 - e. Identify all major systems.
 - f. Identify all major coordination efforts.
 - g. Identify any interfaces that are on the critical path.

- h. Identify WMATA reliability, availability and safety goals.
 - i. Address generally as applicable:
 - (1) Consolidation of duct banks and conduit runs.
 - (2) Switch machine layouts.
 - (3) Electrical distribution.
 - (4) Community interfaces:
 - (a) Fire procedures.
 - (b) Medical/police procedures.
 - (c) Fuel spill procedures.
 - (d) etc.
2. The Intermediate 60% Systems Integration Design shall be delivered 150 Calendar Days after NTP. The 60% design will build on comments of the Preliminary 30% design review and will:
- a. Provide a final draft Description of Facility Operations and/or WMATA operating system as applicable.
 - b. Provide a final draft Systems Integration Procedure.
 - c. Deliver a populated Systems Integration Database.
 - d. Identify all systems, their interfaces and schedule impact.
 - e. Identify all coordination efforts.
 - f. Identify any interfaces that are on the critical path.
 - g. Identify compliance with WMATA reliability, availability and safety goals.
 - h. Address in detail as applicable:
 - (1) Consolidation of duct banks and conduit runs.
 - (2) Switch machine layouts.
 - (3) Electrical distribution.
 - (4) Emergency procedures and/or WMATA operating system/community interfaces.
 - (5) Medical/police procedures.
 - (6) Fuel spill procedures.
 - (7) All high priority interfaces.

3. The Final 100% Systems Integration Design shall be delivered with the 100% Final Level of Review for Design Documents specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, will build on the comments of the 60% design review, and will as applicable:
 - a. Provide a complete set of Final Design Specifications and Final Design Drawings including cut sheets, progressed to the 100% level.
 - b. Provided written disposition of the 90% design review comments.
 - c. Provide the Facility Operations Description and/or WMATA operating system as applicable.
 - d. Provide Systems Integration Procedure.
 - e. Deliver a fully populated Systems Integration Database.
 - f. Update all impacts.
 - g. Identify all coordination efforts.
 - h. Identify any interfaces that are on the critical path.
 - k. Identify compliance with WMATA reliability, availability and safety goals.

D. Integration Design and Documentation:

1. The Design-Builder shall provide full technical documentation of each interface and when required provide detailed descriptive and operations procedures for operation of any particular interface. Systems Integration services shall extend high level interfaces such as interactions with WMATA operations and maintenance, local fire fighters, and others as applicable. When required, the Design-Builder shall provide operations and/or procedures manuals to define exactly how each interface is designed and operates.
2. The Design-Builder shall design and document all systems interfaces. When the systems integration process results in a complete integrated product with no special parts or features, the normal Final Design Drawings and Specifications and approved Shop Drawings as applicable will suffice for complete documentation. For example, switch layouts detailing the rail, switch machine, timber, snow-melters, junction boxes, etc. as applicable would not require additional interface drawings or documentation. When the systems integration process requires a separate element, physical or otherwise, to assure proper operation, separate and full documentation will be required. For example, if a fuel spill or fire requires WMATA personnel to perform certain functions such as opening the emergency entrance for emergency vehicles, the Design-Builder shall be required to document this interface in a procedure. Required documentation may take the form of additional drawings, procedures, manuals, flow charts, or other material. The Authority Representative shall be the sole arbiter of what documentation is required.
3. Documentation includes test, verification, certification documents, and other records that relate to the performance of any particular interface. When required by the Authority Representative, the Design-Builder shall design procedures and methods to assure the interface works as desired. The Design-Builder shall provide Certificates of Compliance when required by the Authority Representative.

4. All documentation provided under this Contract shall be in standard (U.S.) English. Document format and layout shall be consistent with current WMATA practice.

1.07 SYSTEMS INTEGRATION PROGRESS MEETINGS

Systems Integration Progress Meetings shall be held as specified in Section 01312, PROJECT MEETINGS.

1.08 INTERFACE DATABASE

- A. The Design-Builder shall develop and maintain an interface database that lists all physical, mechanical, electrical, electronic, software, operational and other interfaces. The database will be developed in the software of the Design-Builder's choice provided the software is ODBC (Open Data Base Connectivity) compliant and the data tables can be imported directly into Microsoft Access. The Design-Builder shall provide the Authority Representative two licensed copies of the database software used and upgrades, if any are required, so that WMATA may also run the database. The Design-Builder shall submit the database structure to the Authority Representative for approval. Further enhancements can be added to the database provided the initial approved data fields are maintained unchanged upon approval of the Authority Representative. The Design-Builder shall submit updated copies of the interface database at each progress meeting and when requested by the Authority Representative. Databases are further described in Section 01470, QUALITY SYSTEM.
- B. The Design-Builder shall develop a relational database to document all Interfaces and related information. The database will have a full set of reporting tools and the Design-Builder shall retain the services of a data base developer who is familiar with these reporting tools and who can create custom reports. The Design-Builder shall demonstrate the developer's adequacy by providing a sample data base with sample reports showing how this tool can be used to manage the physical system interfaces. The Authority Representative shall be the sole judge of the adequacy of the data base, its structure, or the developer.
- C. Data fields/tables to be included in the database would include such items as:
 1. Interface ID number.
 2. Work Breakdown Structure reference.
 3. Type of interface as applicable:
 - a. Mechanical.
 - b. Electrical.
 - c. Physical.
 - d. Data/protocol.
 - e. Operational.
 4. Interface Level as applicable:
 - a. Between subsystems.
 - b. Between subsystems and major systems.

- c. Between major systems.
 - d. Between the Facility and/or WMATA operating system and the community.
5. Purpose of interface.
6. Side one identification:
 - a. Side one standard.
 - b. Side one contact (person).
7. Side two identification:
 - a. Side two standard.
 - b. Side two contact (person).
8. Status.
9. Safety standard.
10. Open Issues/Conflicts.
11. Person taking action.
12. Projected resolution date.
13. Scheduled test date:
 - a. Test results (pass/fail).
14. Scheduled demonstration date:
 - a. Demonstration results (pass/fail).
15. Schedule conflict (yes/no).
16. Results/Impacts.
17. List of all standard interfaces:
 - a. Characteristics of all standard interfaces.
 - b. Referenced specifications of all standard interfaces.
18. List of all nonstandard interfaces:
 - a. Characteristics of all nonstandard interfaces.
 - b. Referenced specifications for all nonstandard interfaces.
19. Training requirements.
20. Contacts:

- a. Name.
- b. Organization.
- c. Address.
- d. Phone.
- e. Fax.
- f. E-mail.

1.09 INTERFACE STANDARDS

- A. The use of English (US customary units) standard measures shall be consistent with the current use of those standards at WMATA. No new or different measures, or items that adhere to different measures, shall be introduced into the WMATA system without the express written approval of the Authority Representative. Where explicit standards exist, the Design-Builder shall not deviate from those standards without the express written approval of the Authority Representative.
- B. The current use of maintenance, operational, safety or other practices will, at the Authority Representative's discretion, define these practices as defacto standards. A standard shall be deemed to exist when a previously existing interface, similar to that required by this Contract, is already in use on WMATA property. Standard, in this context, means that this is the "standard" way to make this interface at this location. The Design-Builder is to provide a system that is consistent with current practices and the defacto standards so as to minimize effects on the balance of the system. The Design-Builder shall adhere to defacto standards unless an explicit written waiver is granted. The Design-Builder is obligated to notify the Authority Representative in writing of any deviations from a defacto standard.
- C. When no existing standard for an interface exists, the Design-Builder shall submit a proposed standard interface to the Authority Representative. The Design-Builder is to minimize the number of interface types.
- D. The Design-Builder shall maintain, in the interface database, a complete listing of all interfaces, both standard and nonstandard, and their relevant characteristics. The Design-Builder shall also maintain a library of standards and specifications relevant to the system interfaces. The Design-Builder shall be required to provide WMATA with copies of such standards and specifications at no additional cost, when requested by the Authority Representative. The Design-Builder shall be required to provide samples of interface materials (e.g., connectors, protocol conversion software, black boxes), at no additional cost, when requested by the Authority Representative.

1.10 SUBMITTALS

- A. Submit for Authority Representative's approval:
 - 1. Systems Interface Design.
 - 2. Systems Interface Database.
 - 3. Drawings.
 - 4. Manuals.
 - 5. Operations procedures.

6. Flow charts.
7. Verification procedures - 90 days before use.
8. Test procedures - 90 days before use.
9. Inspection records - within 10 calendar days of inspection.
10. Test results - within 10 calendar days of test.
11. Certificates of compliance - before acceptance.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 SYSTEMS INTEGRATION MANAGER

- A. The Design-Builder shall appoint a Systems Integration Manager as specified in Section 00204, PROPOSAL FORMAT, PROCEDURES AND EVALUATION FACTORS, AND INSTRUCTIONS, Section 00491, TECHNICAL PROPOSAL AS FINALLY ACCEPTED and SECTION 01111, KEY DESIGN-BUILDER FUNCTIONS to lead and coordinate the Design-Builder's systems integration efforts. The Design-Builder shall not change the designated person without the prior written approval of the Authority.

3.02 IMPLEMENTATION

- A. It is the Design-Builder's responsibility to implement System Integration as specified in Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING. System integration will have been achieved once the Design-Builder demonstrates that all subsystems operate as a unit with each other and within the overall WMATA system as applicable.
- B. Composite Clearance Verification Drawings:
 1. The Design-Builder shall provide composite clearance verification drawings that demonstrate the spatial location of all utilities and their relation to other utilities, facilities, and items such as foundations. The Composite Clearance Verification drawings shall also demonstrate horizontal clearances for train movement such as signals, platform edges, railings, emergency trip stations, fence posts, and other similar items as applicable.
- C. Train Control as applicable:
 1. It is the Design-Builder's responsibility to complete the train control system design and to integrate this system into the Facility and/or the existing WMATA system. The train control system shall be tied into the existing train control system. The Design-Builder shall communicate and coordinate with authority personnel to assure there is seamless operation from the new extension onto the mainline and in the reverse direction. The materials and methods shall be materially identical and shall not require special tools or special training.
 2. The existing system shall provide interface points from TC/COMM facilities and track circuits at stations or existing right of way near the project limits, and in some instances with facilities in the Jackson Graham Building. The Design-Builder shall interface with these facilities and

circuits, and complete the installation. The Design-Builder shall be ultimately responsible to make this interface work as intended and must integrate with the existing system to assure this happens.

D. Track Switches and Associated Apparatus as applicable:

1. It is the Design-Builder's responsibility to complete the design and to integrate this system into the new Facility and/or the existing WMATA system. The Design-Builder shall coordinate and integrate the work of all subcontractors to provide satisfactory switch layouts. The switch machine installation work shall be integrated with duct and cable installation, switch installation, signal installation, snow-melters for surface locations, and rail and traction power apparatus. The Design-Builder shall submit a single layout drawing for the purpose of demonstrating that the individual components work together and do not interfere with any other installation, function or maintenance operation to be performed on the switch or any associated apparatus.

E. Traction Power as applicable:

1. It is the Design-Builder's responsibility to complete the provided traction power system design and to integrate this system into the new Facility and/or the existing WMATA system. Coordinate all traction power design and work with the construction project as necessary to assure a complete and integrated finished project. The traction power equipment and installation design shall be coordinated with the substation or tiebreaker building design and with the associated train control room, communications room and station as required.

F. Communications as applicable:

1. It is the Design-Builder's responsibility to complete the communications system design and to integrate this system into the new Facility and/or the existing WMATA system. The Design-Builder is required to work closely with the Authority Representative, to assure a seamless fit between the devices installed in the existing system and new work. The Design-Builder shall also work with WMATA personnel at the Jackson Graham Building to assure the proper and smooth installation of new communications equipment in that location. The Design-Builder is directed to pay special attention to the electrical and data interfaces that are required between new and existing systems. There are systems, specified in the Contract, that are required to work as extensions of existing systems and therefore must be of particular and specific design and manufacture with no allowed substitutes.
2. The Design-Builder is directed to review the Facilities communications systems physical, electrical, electro-magnetic and software characteristics and complete the initial design presented in these Project Drawings. The provided system must be sized to meet the minimum requirements set forth in these specifications with a reasonable amount of spare capacity left over. The Design-Builder shall make a complete accounting of all communications circuits, including type of circuit and use, to be provided in the Facility area and submit that listing to the Authority Representative. The Design-Builder is required to size the communications system sufficiently to meet all the current needs with a minimum of 20% spare pairs, or circuits. This listing shall incorporate all systems using communications circuits including the AEMS, fire alarm, data systems, etc.

G. Mechanical, Electrical and Plumbing as applicable:

1. It is the Design-Builder's responsibility to complete the provided mechanical electrical and plumbing systems design and to integrate these systems into the new Facility and/or the existing WMATA system. This work specifically includes elevators, escalators, ventilation, drainage, fire protection, and heating, ventilation and air conditioning, as well as all other

mechanical, electrical and plumbing equipment or systems required for the Project. Coordinate all design and work with the construction project as necessary to assure a complete and integrated finished project. The equipment and installation design shall be coordinated with the facility design and with the associated external systems as required.

H. Conflicts and Omissions in the Plans and Specifications:

1. The Design-Builder is required to bring conflicts and omissions in the Plans and Specifications to the attention of the Authority Representative, in writing, within three working days of discovery. When reporting to the Authority Representative on a conflict, the Design-Builder shall make a written report that: states the nature of the conflict, the conflicting specification sections or drawings, and its suggested resolution for the conflict. See Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01470, QUALITY SYSTEM for further instructions on configuration control.

3.03 SYSTEM PERFORMANCE DEMONSTRATION AND TESTING

- A. The Design-Builder shall provide a system of progressive testing to assure that system components interface properly. It is the Design-Builder's responsibility to appropriately test all interfaces and certify that the interfaces work properly and meet all Contract requirements. The Design-Builder shall create test procedures and test data sheets that fully exercise the interface and prove that the interface performs its intended function. The Design-Builder shall submit each interface test procedure to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for approval prior to performing the test.
- B. Each test procedure will describe:
1. What parameters are to be tested.
 2. What the minimum pass/fail criteria is.
 3. What qualifications are required to perform the test.
 4. What test equipment is required.
 5. Step by step procedures for the test.
 6. Test data sheets or test report forms.
 7. Test certification process.
- C. The Authority Representative has the right to reject any test procedure or require additional tests if, in the Authority Representative's sole opinion, the proposed test does not adequately exercise or demonstrate the performance of the interface.
- D. The Design-Builder shall notify the Authority Representative a minimum of 15 working days in advance of each test. All test results shall be submitted to the Authority Representative within 10 working days of the test.
- E. The integrated test program shall culminate in a Project Performance Demonstration that shall simulate all operations and shall exercise all systems and system elements. The Performance Demonstration Plan and Procedures shall be submitted for approval as part of the final design review package. The Performance Demonstration shall include testing of anticipated normal and

abnormal operations, in addition to simulations of emergency operations. The Design-Builder shall provide a Performance Demonstration Plan that delineates the following:

1. Tests to be performed.
 2. Date and time when each test is to be performed.
 3. An outline of the test parameters.
 4. Pass/fail criteria which must be quantified and measurable.
- F. The Performance Demonstration shall be in accordance with Section 01820, DEMONSTRATION AND TRAINING and shall include those static and dynamic tests used to demonstrate that the Design-Builder designed the systems and subsystems according to the specification and that performance specified. This Performance Demonstration shall include:
1. All necessary functional and performance testing conducted during construction and manufacture of the system elements to ensure compliance with the specification; and
 2. Operational tests which include integrated testing of system interfaces to assure that the project as a whole is capable of operating as specified.
- G. The Design-Builder shall, in addition to interface testing, demonstrate to the Authority Representative's satisfaction, that all critical system components work together properly as a whole system and with the existing systems as a macro-system under operating conditions. These demonstrations will also confirm operation of the systems safety features. Inter-operability demonstrations will be conducted at the earliest possible opportunity.
- H. Acceptance testing will include a demonstration that the Design-Builder has fulfilled all contractual obligations for systems integration. The Design-Builder is required to submit for approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a test plan 90 days prior to the acceptance test, to confirm all systems interface properly with themselves and with existing systems. Acceptance testing for systems integration may be part of a project's comprehensive acceptance test/inspection plan or it may be separate. In either case, it must be clearly identified as acceptance testing for systems integration.
1. The Design-Builder shall furnish upon installation and testing of any system's operation or upon completion of a project but before re-starting the operation of the renovated system or facility as applicable, a systems and safety certification for each of the systems as well as a Safety and Security Certification for the entire project and/or WMATA operating system as applicable before the start of the revenue service as specified in Section 00381, the Safety and Security Certification Program Plan Attachment to the Project Manual; as specified in Section 00391, the System Safety Program Plan Attachment to the Project Manual; and as further specified in the Safety Rules and Procedures Manual; Section 01810, COMMISSIONING; and Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

3.04 SYSTEM INTEGRATION MONITORING AND AUDIT

- A. WMATA will have the right to monitor and audit the systems integration process. The Design-Builder shall facilitate these audits by providing information and arranging for WMATA's auditors to have access to all relevant records. The Design-Builder shall provide timely information to WMATA about any interface problem that is identified, and the steps being taken to resolve it. The Design-Builder shall also invite WMATA to attend meetings held within the Design-Builder's organization or with subcontractors to resolve interface definitions or systems integration issues.

The Design-Builder shall furnish WMATA with minutes of such meetings within 10 calendar days after such meeting, regardless of whether WMATA attends.

- B. In addition, WMATA reserves the right to witness all interface and systems integration tests. The Design-Builder shall inform the Authority Representative of each upcoming test at least 14 calendar days before it is scheduled to be performed. WMATA reserves the right to direct supplemental testing of a component, element, subsystem or system in the interest of verifying achievement of specified performance levels, at no cost to the Authority.

SECTION 01114

SAFETY / ENVIRONMENTAL REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies construction safety and environmental safety and security requirements for the Project.

1.02 RELATED DOCUMENTS

Section 00371, WMATA Construction Safety and Environmental Manual Requirements
Section 00381, Safety and Security Certification Program Plan Requirements
Section 00391, System Safety Program Plan Requirements
Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements
Divisions 2 through 16, Standard and Technical Specifications Requirements
Safety Rules and Procedures Manual
Metrorail Safety Rules and Procedures Handbook

1.03 SAFETY REQUIREMENTS

- A. The Design-Builder shall be responsible for ensuring compliance with the protection of persons and property requirements of Section 00743 and Section 00744 of the General Conditions.
- B. The Design-Builder shall employ and assign to the work, safety superintendence as specified in Section 00844 of the Supplementary Conditions.
- C. The Department of System Safety and Risk Protection (SARP), in coordination with the Authority Representative and the Design-Builder, will conduct the Safety and Security Certification Program to certify that all reasonable and practical measures have been taken to optimize the operational safety and security of WMATA during planning, design and construction/installation and prior to the start of the revenue service, system operation or before re-starting the operation of the renovated system or facility as applicable. The Safety Certification Program will be conducted in accordance with Section 3.3.5, System Safety Certification of the Authority's System Safety Program Plan Attachment to the Project Manual as specified in Section 00391, SYSTEM SAFETY PROGRAM PLAN REQUIREMENTS; Section 2.2/0, Safety Certification Program of the Safety Rules and Procedures Manual; and the Safety and Security Certification Program Plan Attachment to the Project Manual as specified in Section 00381, SAFETY AND SECURITY CERTIFICATION PROGRAM PLAN REQUIREMENTS; and as further specified in Section 01113, SYSTEMS INTEGRATION; Section 01470, QUALITY SYSTEM; Section 01810, COMMISSIONING; and Section 01820, DEMONSTRATION AND TRAINING.
- D. The jurisdictional Fire Marshals prohibit the use of oxygen-acetylene welding/cutting equipment or flammable materials anywhere in the Metrorail system during revenue hours. After each work shift, all flammable materials must be removed from the Metrorail system. The storage of hazardous and flammable materials (including such items as rags, mops, paper towels, or other combustible materials contaminated with hazardous or flammable products) on WMATA property, is restricted. Design-Builders, seeking to store hazardous or flammable materials on WMATA property, must request permission from the Authority Representative. It may not always be possible to grant permission to store hazardous or flammable materials on WMATA

property. If permission is granted, the Design-Builder must store the materials in compliance with the jurisdictional codes and regulations. In addition, six copies of the material safety data sheet (MSDS) for each specific chemical and the quantity of each chemical to be stored on the site shall be provided to the Authority Representative. The Design-Builder shall acquire permits for use of hazardous materials as required by the jurisdictional Fire Marshal.

- E. The use of explosives for the performance of Contract work will not be permitted without written authorization from the Authority Representative.
- F. Prior to performing any work on or above or under the right-of-way, arrangements shall be made through the Authority Representative for access rights and power outage in accordance with WMATA SOP's No. 19, 28, and No. 33 contained in the Metrorail Safety Rules and Procedures Handbook (MSRPH) and Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS; with OAP No. 100-9 contained in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS; and with OAP No. 200-10. All special requests for access, single tracking, power outages, escorts, and other Authority support shall be submitted in writing through the Authority Representative to the appropriate OPER officials within the time frame as set forth in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS
- G. For any work within Confined Spaces, the Design-Builder and all subcontractors shall comply with all OSHA, state and local jurisdictional rules and regulations for confined spaces. As a minimum, the Design-Builder shall follow 29 CFR §1910.146 for all permit confined space work on Authority property, including construction. A detailed site specific Confined Space Program shall be submitted to WMATA for review for all work requiring entry into permit confined spaces as defined by 29 CFR §1910.146. No work shall be performed in any area considered to be a permit confined space until the Design-Builder's Confined Space Program is reviewed by WMATA. Prior to the initial entry into any confined space (permit or non-permit), the Design-Builder shall coordinate entry with the Authority Representative and take air quality readings to establish base readings and conditions. At a minimum, oxygen, lower explosive limit, carbon monoxide, and hydrogen sulfide, shall be measured. Measurement of additional parameters may be required depending on the location of the space and potential for atmospheric hazards related to contamination or work activities. These results shall be provided to the Authority Representative for recording purposes and will determine if atmospheric hazards exist which would classify the space as a permit-required confined space. Continuous and follow-up monitoring of air quality shall meet OSHA requirements, and all subsequent results shall be provided to the Authority Representative.
 - 1. Prior to the start of any work involving non-permit or permit-required confined spaces, the Design-Builder shall submit to the Authority Representative the original and six paper copies and an electronic copy of the following:
 - a. Written Job Hazard Analysis for any work to be performed in the confined space, including MSDS's for chemicals to be used in the space. Design-Builders must submit MSDS's for ALL chemicals to be used on Authority property to the Authority Representative, along with a brief description of how and where they will be used, and if wastes will be generated. The MSDS's will be reviewed by WMATA's Department of System Safety and Risk Protection(SARP) and if approved, the materials can be used in the system. If they are rejected, the Design-Builder must identify a substitute that will meet SARP's criteria for approval in addition to the Authority Representative's criteria for performance. The MSDS's must be recent (preferably less than 3 years old) and comply with the OSHA Hazard Communication Standard 29 CFR §1910.1200. The Design-Builder is responsible for complying with the requirements of the MSDS's.
 - b. Written Emergency Response Plan which identifies emergency responders for rescue operations.

- c. Written plan for a temporary Fire Protection System as specified in Section 00744, PROTECTION OF PERSONS AND PROPERTY for use during the term of the Contract, which shall be subject to approval by the Authority Representative. Design-Builder shall ensure that work activities do not adversely impact existing fire protection system(s) i.e., sprinklers, stand pipes, portable extinguisher, etc.
 - d. Identification of air monitoring devices that will be used to monitor air quality at the work site. Provide copies of most recent manufacturer calibration and all Design-Builder field calibration checks. As a minimum, WMATA requires field calibration checks on air monitoring instruments, each day (or shift) before use. As a minimum, the field calibration check information must include the date, time, calibration check data, and the printed name and signature of the person performing the calibration check.
 - e. Documentation to show that all personnel working in or near non-permit confined spaces are trained in Confined Space Awareness.
2. In addition, the following is required for work in involving permit-required confined spaces, the Design-Builder shall submit to the Authority Representative the original and six paper copies and an electronic copy of the following:
- a. Written site specific Confined Space Program.
 - b. Confined space permit for applicable space. Each permit is valid for a maximum of 24 hours. (Submit to the Authority Representative at least 48 hours before entry.)
 - c. Written Respiratory Protection Program.
 - d. Documentation to show that all personnel required to wear respiratory protection have received respiratory protection training, have been fit tested for the respirators they are required to wear (applies to tight fitting respirators) and have been medically evaluated, to verify that they have no health problem that would interfere with their safe use of a respirator.
 - e. A warning sign to identify the work site as a permit-required confined space requiring authorization to enter.
 - f. As applicable, the Design-Builder is required to notify the State of Maryland at least 24 hours prior to entering permit-required confined spaces.
- H. Design-Builder must provide a Job Hazard Analysis prior to the start of each phase of work.
- I. Work clothing consists of long pants, shirts with long or short sleeves, sturdy work boots, and appropriate personal protective equipment. Jewelry that hangs, loose clothing or clothing with non-detachable hoods, drawstrings, or anything that can become entangled in machinery, shall not be worn on the work site, if machinery is in use on the work site. Personal protective equipment such as hard hats and footwear shall meet the requirements of 29 CFR §1910.135 and §1910.136. Athletic-type footwear shall not be worn on WMATA work sites.
 - J. Smoking is prohibited in the Metrorail system, at WMATA facilities, and in WMATA vehicles. The Authority Representative, will select a designated smoking area outside the system and/or facilities and Design-Builder employees will be informed of its location. Design-Builder personnel found smoking in non-designated areas on WMATA property or in the Metrorail system will be subject to removal from WMATA property. The Design-Builder's Safety Superintendent shall be responsible for ensuring compliance.

- K. The OSHA standard for sanitation, 29CFR & 1910.141, shall be followed. Prior to starting work, the Design-Builder shall furnish for the Design-Builder's staff, necessary toilet convenience secluded from public view. They should be kept in a clean and sanitary condition and should comply with the requirements and regulations of the area in which the work is being performed. Potable drinking water shall be provided with individual cups and sanitary conditions for the water dispenser shall be maintained. A common drinking cup and other common utensils are prohibited.
- L. Design-Builder and subcontractor employees shall cooperate with representatives of the Authority and federal, state, and local regulatory agencies during site inspections or investigations. Inspection and investigation activities do not involve directing of Design-Builder's work, but may involve interviews with Design-Builder and subcontractor personnel. The Department of Capital Projects Management (CAPM), Office of Environmental Services (ENSV) and Department of System Safety and Risk Protection (SARP) will notify the Authority Representative of any operation that is not in compliance with federal, state, or local health and safety or environmental regulations or WMATA policy and procedures, and that may require the Design-Builder or subcontractor to stop work on a specific task or operation.
- M. For any work at heights above 6 feet, the Design-Builder must submit a detailed, site-specific Fall Protection Plan. The Design-Builder must comply with the most stringent OSHA requirements for Walking-Working Surfaces (29 CFR Part 1910 Subpart D), Scaffolds (29 CFR Part 1926, Subpart L), and Fall Protection 29 CFR Part 1926, Subpart M.
- N. The Design-Builder and all subcontractors shall comply with 29 CFR §1910.95, Occupational Noise Exposure for all work on Authority property, including construction. This standard requires that employees exposed to continuous noise in excess of the OSHA Action Level, participate in a Hearing Conservation Program. Instruments used for noise measurements must be appropriate for the type of noise being measured (impact/impulse or continuous).
- O. If the work involves removal of paints or coatings, the Design-Builder must test the paint or coatings to determine if they contain heavy metals such as lead that require special handling and disposal considerations. As a minimum, testing should be conducted for the eight Resource Conservation and Recovery Act (RCRA) of 1976 and amendments metals (arsenic, barium, cadmium, chromium, lead, mercury, silver, and selenium). If any of these are present, the components will require special handling and disposal to prevent exposure to workers, patrons, the community, and the environment. The Design-Builder and/or subcontractor performing lead-based paint abatement, removal, or control, must have all licenses and accreditation required by the jurisdiction in which the work is performed. Jurisdictions that do not have their own state lead plans fall under the auspices of the Environmental Protection Agency (EPA). The Design-Builder's and subcontractor's employees are required to have medical monitoring to meet the requirements of 29 CFR 1910.1025 and 1926.62. As a minimum, medical monitoring shall consist of biological monitoring for lead and zinc protoporphyrin and shall include a physician's medical determination. As a minimum, biological monitoring shall be conducted immediately prior to working on a WMATA property where the employee may be exposed to lead, and immediately upon completion of this work. The Design-Builder and subcontractor employees shall receive training for lead workers and supervisors as required by the jurisdictional regulations. Documentation shall be provided to the Authority Representative prior to commencement of work. All documentation shall be authentic and verifiable. All materials must be handled and disposed of in compliance with the jurisdictional regulations. MSDS's for replacement paints/coatings must be reviewed by WMATA prior to use on WMATA property.
- P. If the work involves removal of insulation, flooring, cove base, mastic, ceiling tile, roofing materials, or any other material that is suspected of containing asbestos, the Design-Builder must have the materials sampled and analyzed to determine if they contain asbestos. If the

Design-Builder and/or subcontractor will be handling or removing asbestos-containing materials, the Design-Builder and/or subcontractor must have all licenses and accreditations required by the jurisdiction in which the work is performed. The Design-Builder's and subcontractor's employees are required to have medical monitoring to meet the requirements of 29 CFR 1910.1001 and 1926.1101. The Design-Builder and subcontractor employees shall receive training for asbestos workers and supervisors, as required by the jurisdictional regulations. Documentation shall be provided to the Authority Representative prior to commencement of work. All documentation shall be authentic and verifiable. All materials must be handled and disposed of in compliance with the jurisdictional regulations. All replacement materials shall be free of asbestos. Design-Builders shall follow the WMATA Technical Specifications for Asbestos Removal.

- Q. Design-Builder and subcontractor employees shall not be exposed to asphalt fumes in excess of the National Institute for Occupational Safety and Health (NIOSH) recommended ceiling limit of 5 milligrams of asphalt fumes per cubic meter of air (5 mg/m³), in any 15 minute period. NIOSH provides recommendations for control of asphalt fumes.
- R. Work that generates visible dust requires submission of a Dust and Debris Control Plan to prevent exposure of employees, patrons, and the community to dust including crystalline silica dust. Submit air monitoring data to demonstrate effectiveness of dust control measures. If dust cannot be controlled, submit Respiratory Protection Program in compliance with 29 CFR §1926.103 or 29 CFR §1910.134, and be prepared to submit evidence of air monitoring, training documentation, medical clearance for respirator use, and respirator fit tests for tight-fitting respirators.
- S. The Design-Builder shall ensure that the level of exhaust emissions from equipment such as air compressors and generators, are within acceptable limits to comply with clean air regulations and that workers are not exposed to exhaust fumes or gases (carbon monoxide, sulfur dioxide, nitrogen oxides, hydrogen sulfide, aldehydes) in excess of the most stringent of occupational exposure limits.
- T. For all work generating Waste Water, the Design-Builder shall submit a Waste Water Discharge Plan that describes how the Design-Builder will treat and release wastewater generated by activities at the work site, for all work that generates wastewater. Design-Builder shall also comply with Consolidated Plan prepared by WMATA for Bus Divisions and Rail Yards as applicable.
- U. For Abrasive Blasting activities all MSDS's for abrasives shall be submitted through Authority Representative to Department of System Safety and Risk Protection (SARP) prior to abrasive blasting activities. Only abrasives containing less than 1 percent crystalline silica shall be used for abrasive blasting.
- V. For Hot Work activities, the Design-Builder and subcontractors shall provide documentation on certification for personnel who perform welding on WMATA property. Ventilation in accordance with OSHA regulations, shall be provided for hot work such as welding, cutting, or brazing.
- W. At the work site, a First Aid Kit shall be provided and fully equipped to meet the needs of the anticipated work force. Employees expected to render First Aid or CPR must have the proper current certifications and be trained in Bloodborne Pathogens in accordance with 29 CFR §1910.1030.
- X. The Design-Builder shall be responsible for all subcontractors, suppliers and other persons working under its direction, to comply with all requirements as noted above and herein, and shall disseminate these requirements to those personnel. Design-Builders and subcontractors shall ensure that their personnel complete safety training by WMATA on the rules and

procedures for working on the Right-Of-Way before starting such work.

- Y. The Design-Builder shall immediately report all accidents and incidents (including near misses) that occur during the performance of the work to the Authority Representative.
- Z. Work shall not be performed in any area in use by the public, unless specifically required by the Contract or directed in writing by the Authority Representative. The Design-Builder shall give at least 48 hours notice to the Authority Representative before beginning such work.
- AA. In cases where the movement of motorized equipment is necessary, flag persons shall be provided to warn and direct personnel and patrons away from the area of travel. Flag persons must be certified as trained in proper flagging techniques and Design-Builder employees involved in traffic control and devices must be certified as trained in traffic management as required by the State or local jurisdiction. Certification must be documented. The Authority Representative shall be notified before using heavy equipment in or near stations and their entrances, building entrances, bus bays, sidewalks, etc. Under no circumstances shall motorized equipment be left unattended with the motor idling. Always remove keys from motorized equipment not in use. Provide proper blocks as necessary to prevent running away of any equipment.
- BB. When it is necessary to maintain use of work areas involving stations, sidewalks, elevators, platforms, bus shelters, vehicular roadways, building entrances, corridors, etc., the Design-Builder shall protect the area with guardrails, substantial barricades, temporary fences, overhead protection, and temporary partitions as deemed necessary by the Authority Representative. Under no circumstances will yellow or orange tape strung between barricades, or the like, be acceptable as a substantial barricade. Open manholes, access openings or other breaks in the normal walking surface shall be isolated, from personnel and the public, using barricades.
- CC. Sidewalks, entrances, platforms, mezzanines or any other location where personnel or the public traverses, shall always be kept clear of obstruction, tools, ladders, work debris, excavation materials, etc. When necessary, temporary sidewalks or pathways shall be provided for pedestrian traffic. Temporary sidewalks or pathways shall be free of tripping hazards and protected by proper guardrails and barricades. Temporary means of egress and access shall be marked for easy recognition. If work is required above sidewalks or pathways, substantial overhead protection shall be provided. Protected walkways shall be approved by the Authority Representative.
- DD. Appropriate warning signs and instructional safety signs shall be conspicuously posted in all areas involving construction activities. Work involving electrical systems or equipment in or near the area to which personnel or the public have access shall be isolated using barricades, partitions, etc. Exposed, live circuits shall not be left accessible to personnel or the public or left dangling overhead. Before completion of the work, the Design-Builder shall:
 - 1. Ensure that all wiring is insulated and properly positioned.
 - 2. Verify grounding, bonding, or both, of all metallic conduit, wiring or electrical equipment that is in the areas of contractual effort, and to which the public can make contact.
 - 3. Notify the Authority Representative immediately in those instances where verification cannot be made.
 - 4. Ensure that personnel working near the platform edge, or in the Right-of-Way, wear reflective safety vests with the tear-away feature, to identify them to passing trains, as directed by Operations Planning and Administrative Support (OPAS) at the right-of-way

safety training required in this Section. The safety vests shall comply with the ANSI/ISEA 107-1999 guideline entitled American National Standard for High-Visibility Safety Apparel. All of the Design-Builder's personnel are required to attend safety training provided by WMATA before starting work near the platform edge or in the Right-of-Way.

EE. Use of Cranes and Derricks:

1. General Safety Requirements. Comply with the following:
 - a. 29 CFR §1910.180 through §1910.189.
 - b. 29 CFR §1926.550 through §1926.556
 - c. U.S. Army Corps of Engineers, Safety Manual EM-385-1-1.
2. No part of any Crane or Derrick Boom shall swing over WMATA patrons, tracks or stations without an Authority Representative-approved shield, or an Authority Representative-approved procedure.
3. Placement of Crane or Derrick shall be coordinated with the Authority Representative.
4. Rights for use of the Crane or Derrick affecting Metrorail Operations are granted through SOP's No. 19 and 33 of the Metrorail Safety Rules and Procedures Handbook and in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS.
5. A supervisory or a red tag power outage is required. Exceptions may be granted on an individual basis after a review and approval by the Authority.
6. Hardhat requirements are enforced.
7. "Swing Stop" requirements may be instituted based on the hazards involved.
8. Use of Cranes and Derricks over common corridor railroads and highways is under the rules of the affected common corridor railroad or highway owner.

FF. All jobsite visits for visitors and tours shall be coordinated through the Authority Representative in accordance with the appropriate WMATA Safety Manual, and associated insurance document if applicable, as specified in Section 00371.

GG. Due to concerns with long-boom cranes threatening employee walking paths during pick and placement of construction materials, all cranes used for erecting components structure on the project shall be equipped with Load Moment Indicating devices (LMI) or Rated Capacity Indicators (RCI), an anti-two-block device. All crane operators shall be certified to operate the type of crane used by the National Commission for the Certification of Crane Operators (2750 Prosperity Ave., Suite 120, Fairfax, VA 22031-4312. Telephone 703 560-2391). Six copies of the CCO Certificate shall be submitted to the Authority Representative before the operator works on the site. To increase the factor of safety when picking structural elements of the building, all cranes shall have load capacity charts reduced (de-rated) by a factor of 30%. For example, if the load chart at a given radius and boom angle indicates a total load capacity of 10,000 lbs., the crane will be limited to 7,000 lbs. (10,000 lbs. - 30%[3,000 lbs.] = 7,000 lbs.). A lift plan, showing all pertinent information demonstrating that the total load does not exceed 70% of the maximum, shall be submitted to the Authority Representative, before crane delivery to the project site.

1.04 ENVIRONMENTAL SAFETY REQUIREMENTS

- A. The Design-Builder and subcontractors shall be responsible for complying with the most stringent of federal, state, or local environmental regulations for air, water, land, and waste in order to maintain the safety and health of employees, WMATA patrons, and the community.
- B. If the work task requires specialized licenses for example "lead or asbestos abatement contractor's license", Design-Builder and subcontractors shall be required to show evidence of such registration, prior to commencement of work. If the work requires specialized training, for example lead or asbestos training, Design-Builder and subcontractors shall be required to show evidence that their employees have received such training, prior to commencement of work.
- C. If the work requires transportation of hazardous materials or hazardous substances, Design-Builder and subcontractors are required to provide evidence of Department of Transportation General Awareness Driver's Training in compliance with 49 CFR §172 and Commercial Driver's License in compliance with 49 CFR §390-397, prior to commencement of work.
- D. All hazardous materials and hazardous substances, must be stored in "Performance Oriented Packaging" in compliance with 49 CFR §178, Subpart L.
- E. If the work requires disposal of hazardous wastes, disposal must be to a Treatment/Storage/Disposal facility with a Part B Permit and the waste hauler must have a state or local license and U.S. EPA identification number. The Design-Builder and subcontractors shall be required to provide evidence of all applicable licenses and permits along with the name and address of the waste disposal facility where hazardous waste materials are to be disposed, prior to commencement of work.
- F. If the work involves response to spills of hazardous materials, hazardous substances or hazardous wastes, the Design-Builder or subcontractor personnel shall have appropriate training that complies with 29 CFR §1910.120.

1.05 SUBMITTALS

- A. The Design-Builder and subcontractors performing the work shall submit the original and six copies of the appropriate documentation in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, 60 calendar days prior to commencing the construction work:
 - 1. Record of federal, state, or local violations of environmental and occupational safety and health regulations for the last 3 years.
 - 2. Organizational Health and Safety Program including OSHA required programs applicable to the work and site. For work and sites not addressed in the original Organizational Health and Safety Program submitted with the Technical Proposal as specified in Section 00204 and the Proposal as Finally Accepted in Section 00491, and with the updated Project Management Plan as specified in Section 01310, PROJECT MANAGEMENT AND COORDINATION, addenda may be added when the work and sites are identified, however, the addenda must be submitted to the Authority Representative for review and approval by WMATA prior to the commencement of specified work.
 - 3. Job Hazard Analysis (prior to each phase of work).
 - 4. Site-specific Emergency Response Plan.
 - 5. Site-specific Temporary Fire Protection System Plans.

6. Site-specific Waste Water Discharge Plan (if wastewater is generated).
7. Site-specific Pollution Control Program.
8. Site-specific Dust and Debris Control Plan.
9. Bloodborne Pathogens Exposure Control Plan.
10. Hearing Conservation Program if employees are exposed to continuous noise in excess of the OSHA Action Level.
11. Respiratory Protection Program if employees are exposed to dust (including crystalline silica) or other toxic atmospheres in excess of the OSHA permissible exposure limits. If a respiratory program is required, the Design-Builder also must provide documentation of training, medical clearance for respirator use and respirator fit testing.
12. Hot Work Program.
13. Lockout Tagout Program.
14. Site-specific Confined Space Program.
15. Documentation to show that all Confined Space entrants and attendants are trained in Confined Space Entry, including hands-on-training or Confined Space Awareness as applicable and possess applicable licenses and certifications.
16. Results of noise monitoring, air monitoring, and soil, water or waste sampling. These to be submitted at least weekly during work activities.
17. Documentation of medical surveillance.
18. Documentation and Certifications of Assistant Safety Superintendent's and First Aid Attendant's, as applicable, experience in construction safety.
19. Identity of all materials or chemicals the Design-Builder will use on Authority property (including welding rods), material safety data sheets (MSDS's) for these products, and a brief explanation of how they will be used and if any wastes will be generated.
20. Identity of equipment that may generate toxic atmospheres such as gasoline or diesel-powered generators, welding and cutting equipment.
21. Documentation of licenses and certificates required for lead or asbestos abatement or other work requiring licensing or certification such as welding.
22. Documentation of licenses, certificates, and U.S. EPA identification numbers required for transportation of hazardous materials, hazardous substances, or hazardous wastes.
23. Documentation of licenses, permits, and certificates required for disposal of hazardous wastes including the name and address of the waste disposal facility where hazardous waste materials are to be disposed.
24. Certificates of Insurance, including pollution liability coverage, endorsed to WMATA is required for Design-Builder or subcontractors performing work involving hazardous materials, hazardous substances, hazardous wastes, or contaminated soil or water.

25. CCO Certificate before the crane operator works on the site.
26. Site-specific Fall Protection Plan.
27. Identification of air monitoring devices that will be used to monitor air quality at the work site. Provide copies of most recent manufacturer calibration and all Design-Builder field calibration checks.

1.06 SAFETY AWARENESS PROGRAM - [Not Applicable]

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

SECTION 01115

SAFETY AND SECURITY CERTIFICATION PROCESS

PART 1 GENERAL

1.01 Summary

- A. This section specifies the process used to certify the WMATA system's safety and security.

1.02 Related Documents

- A. WMATA Safety & Security Certification Program Plan
B. Project Specific Safety and Security Program Plan (To be provided prior to award.)
C. Preliminary Certifiable Elements List (CEL) (To be provided prior to award.)
D. WMATA Daily ATC Certification Procedures
E. WMATA ATC System Integrity Maintenance Practices
F. FTA Handbook for Transit Safety & Security Certification
G. Section 01113, System Integration
H. Section 01114, Safety & Environmental Requirements
I. Section 01142, Site Specific Work Plan

1.03 General

- A. The purpose of the Safety and Security Certification Program is to ensure that:
1. The design, construction, fabrication, installation, testing and commissioning of all critical elements (civil, structural and systems) have been evaluated for conformance with the safety and security requirements and to verify their readiness for operational use.
 2. WMATA's bus and rail systems are operationally safe and secure for customers, employees and the general public.
- B. The objective is to achieve acceptable risk through a systematic approach to hazard management, criteria adherence, design and construction certification and review, and formal contract acceptance. This is accomplished through documentation and verification that:
1. System Safety hazards are identified and assessed and undesired risk levels are corrected to acceptable or manageable risk levels.
 2. Security vulnerabilities are identified and assessed and documented action is taken to resolve identified unwarranted risk.
 3. Appropriate codes, guidelines and standards have been reviewed to provide a basis for safety and security considerations in the final design documents.
 4. Facilities and/or systems and/or equipment have been designed, constructed, inspected and tested in accordance with applicable codes and standards.

1.04 Safety and Security Certification Process Requirements

The Design Builder shall establish and maintain a systematic, documented, comprehensive, verifiable, and continuous system Safety and Security Certification process applied throughout the duration of the contract to implement the intent of the WMATA Safety & Security Certification Program Plan. At a minimum, the Design Builder's Safety & Security Certification efforts shall:

- A. Comply with the Project Specific Safety & Security Certification Program Plan.
- B. Perform a Safety Hazard and Security Threat Analysis.

- C. Participate in working groups whose purpose will be to review the status of the items on the Certifiable Elements List (CEL). (The preliminary CEL furnished the Design Builder will be general in nature and shall be broken down into more detail as the design evolves.)
- D. Maintain an electronic CEL and update it based on input from the working group.
- E. Demonstrate and Certify that Final Design has been performed in compliance with and satisfies all applicable codes and standards.
- F. Conduct test and inspections as necessary to document compliance on all safety critical work.
- G. Maintain a database that documents design approvals, approvals of design changes, variance approvals, inspections, tests, and certification of items on the CEL.
- H. Maintain a document management system that enables retrieval of documentation that demonstrates approvals, inspections, tests and certifications have been achieved for each certifiable element.
 - I. Assign a Certification Manager that oversees the Safety & Security Certification process.
 - J. Generate a System Safety and Security Certificate at the completion of the project.

1.05 Additional Information - [Not Applicable]

Part 2 Products - [Not Applicable]

Part 3 Execution

3.01 Certification Manager

- A. The Design Builder shall appoint a Certification Manager to lead and coordinate the Design Builder's Safety & Security Certification Program Plan. The Certification Manager shall have more than 10 years of safety and security related experience working with large multiple disciplinary rail transit projects in a management role and specific design experience with transit facilities and systems (train control, communications, fire protection, and traction power).

Part 4 Measurement and Payment

4.01 Payment

- A. Compensation in the amount of one percent of the base bid of the contract shall be retained until the Safety and Security Certification Program Plan documentation, defined in 1.04 above, has been received and approved.

1.03 ACCESS TO SITE - IDENTIFICATION CARDS AND TRAINING

- A. The Design-Builder and its subcontractors working at the project site shall provide their personnel with distinctive badges showing the employer's name and the employee's name, number, and photo I.D. These badges shall be displayed in a prominent manner on each person while engaged on the work. Access to the sites shall be granted only to properly accredited representatives of the Design-Builder and its subcontractors.
- B. As applicable, the Design-Builder and subcontractors requiring entry into the rail revenue operating system, including rail maintenance yards, for performance of Contract work shall provide such employees requiring entry with photo identification cards issued by the Authority. The Design-Builder shall obtain and be responsible for administering the use of the identification cards in accordance with Authority POLICY/INSTRUCTION No. 6.10/1, July 29, 1993. The ID cards are not valid for transportation on Metrobus or Metrorail and will be valid for the duration of the Contract up to a maximum of one year.
- C. Right-of-Way (ROW) Safety Training, as administered by the Authority, will be required Design Builder and Sub Contractor employees prior to working in the Yards. Design Builder's Safety Superintendent shall schedule the ROW Safety Training through the AR.
- D. A comprehensive Shop tour/indoctrination is required for all Design Builder and Sub Contractor employees prior to initiation of the work. The Design Builder's Safety Superintendent shall schedule the tour/indoctrination through the AR.

1.04 ACCESS TO SITE - HOURS OF WORK

- A. The Design-Builder shall work such hours per shift, with or without overtime, as many shifts per day and as many days per week as necessary to complete the various parts of the work and the entire work within the dates specified and within the restrictions listed below and in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS, if any.
- B. The Design Builder and Sub Contractors shall not begin work on any day until authorized to do so by the AR or the AR's appointed designee.

- C. The Design-Builder shall coordinate and schedule all work with the Authority to ensure that the Design-Builder's activities do not interfere with the operation of or access to the Authority's facilities.
- D. Restrictions if any on the hours for removal of existing work to be demolished and any other work which will affect train or employee operations and/or vehicular or pedestrian traffic; delivery of supplies, equipment and components to the site; and any other specific restrictions relating to coordination are listed in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS.

1.05 HOURS OF OPERATION

- A. Yard Operations are continuous 24 hours a day, 7 days a week.
- B. Non-revenue hours are defined as the hours during which train service is closed to passenger traffic:
 - 1. Monday through Friday 0000h to 0500h
 - 2. Saturday and Sunday 0300h to 0700h
- C. Revenue hours are the hours during which train service is open to passenger traffic. Except when these hours are extended for special events or disrupted due to emergencies, they are:
 - 1. Monday through Thursday: 5:00 AM to 12:00 Midnight.
 - 2. Friday: 5:00 AM to 3:00 AM Saturday.
 - 3. Saturday: 7:00 AM to 3:00 AM Sunday.
 - 4. Sunday: 7:00 AM to 12:00 Midnight.
- D. Rush hours are Monday through Friday 0500h to 0930h and 1500h to 1900h.
- E. Non-rush hours are the revenue hours during which train service is not designated as rush hour traffic:
 - 1. Monday through Thursday: 0930h to 1500h and 1900h to 2400h.
 - 2. Friday: 0930h to 1500h and 1900h to 0300h Saturday.
 - 3. Saturday and Sunday: All revenue hours.
- F. Metrorail Safety Rules
 - 1. The Design-Builder's work shall be performed and conducted in accordance with the Washington Metropolitan Area Transit Authority (WMATA) "Metrorail Safety Rules and Procedures Handbook". Attention should be focused on the following sections:
 - Section 1 – General Rules
 - Section 2 – Rules of Conduct

Section 3 – Operating Rules – Flagging
Section 4 – Safety Rules

2. Standard Operating Procedures (SOP)

SOP 2 – Emergency Removal and Restoration of Third Rail Power
SOP 28 – Removal & Restoration of Third Rail Power for Work by WMATA
SOP 33 – Removal & Restoration of Third Rail Power for Work by Design-Builder Forces

3. The following WMATA communication numbers should be noted:

Metro Police	(202) 962-2121
Safety	(202) 962-2687
Track & Structures	(202) 962-5136
OCC	(202) 962-1787
Rail Systems	(202) 962-5201
Local Police, Fire, Emergency	911

4. WMATA Access Control Plan will be determined after preliminary meetings with the WMATA AR and shall be part of the Site Specific Work Plan specified in Section 01142, Coordination with Occupants and Operations. This plan will address ingress and egress to the Yards, emergency contacts sources and specific limits of Design Builder work activity.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

THIS PAGE NOT USED

SECTION 01142

COORDINATION WITH OCCUPANTS AND OPERATIONS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies restrictions that may affect construction operations including coordination with occupants and operations and preparation of Site Specific Work Plans (SSWP).

1.02 RELATED DOCUMENTS

Section 00742, General Conditions - Accident Prevention
Section 00744, General Conditions - Protection of Persons and Property
Section 00787, General Conditions - Indemnification and Insurance Requirements and Special Provisions of Insurance Furnished by Design-Builder
Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements
Section 01141, General Requirements - Summary of Work Requirements: Access to Site
Section 01143, General Requirements - Summary of Work Requirements: Use of Site
Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination
Section 01322, General Requirements - Administrative Requirements: Contract Progress Reporting
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures
Section 01470, General Requirements - Quality Requirements: Quality System

Section 01550, General Requirements - Temporary Facilities and Controls: Maintenance of Traffic, Construction Sequence and Staging, Access and Parking
WMATA's Construction Safety and Environmental Manual Or Coordinated Safety Program and Reporting Procedures Manual, the Safety and Security Certification Program Plan as specified in Section 00381 and the System Safety Program Plan as specified in Section 00391.

1.03 HOURS OF OPERATION

Hours of operation are specified in Section 01141, ACCESS TO SITE.

1.04 DELIVERY OF SUPPLIES, EQUIPMENT AND COMPONENTS AND REMOVAL OF EXISTING WORK

A. Removal of existing work to be demolished and any other work which will affect train or employee operations at the Yard location shall be coordinated with the Authority's Yard Master as well as the Shop Superintendent through the Authority's Representative (AR). No work will commence without prior notification and approval from the Authority.

1.05 SPECIFIC RESTRICTIONS RELATING TO COORDINATION

A. Site Specific Work Plan (SSWP): The Site Specific Work Plan shall be prepared by the Design-Builder and shall expand upon the narrative explanation of the Design-Builder's approach to the work that is included in this Contract as a part of Section 00491 TECHNICAL PROPOSAL AS FINALLY ACCEPTED. It shall address all major areas of concern, including construction techniques, staging, sequencing, scheduling, and methods for minimizing disruptions to Yard

Operations as applicable. The plan shall encompass elements, which apply to the whole project (staging areas, work windows, safety measures), as well as elements specific to a particular construction area (contract limits, schedule, phasing). The plan does not need to include or duplicate elements addressed elsewhere, but shall reference these other documents and plans as appropriate. The SSWP is subject to approval by the Authority Representative (AR).

1. As a reference, the general requirements for the sequencing and staging of the Design-Builder's work are specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING, and the general requirements for the submittal of detailed construction schedules are specified in Section 01322, CONTRACT PROGRESS REPORTING.
2. The Design-Builder shall outline and establish his access to the work area as specified in Section 01141, ACCESS TO THE SITE.
3. The following are the procedural requirements to enable the Design-Builder to plan the work, develop an SSWP, and be granted concurrence for track outages, power outages, and track occupancy. This section also specifies the general requirements for the staging of the Design Builder's work and for the submittal of detailed construction schedules. As a general reference, the Design Builder should outline and establish its access to the work areas including gates in the WMATA protective fence and gaps in the contact rail for personnel movement. In addition, the Design Builder should outline its methods and procedures for measuring stray current during single track.
 - a. Request for service outages, service disruptions, shutdowns, diversions, or work that will occupy or foul the track shall require the development of a Site Specific Work Plan (SSWP) by the Design Builder and approval of the plan by the Authority Representative. No work shall be performed without an approved SSWP.
 - b. The SSWP shall provide a description of work, time-scaled logic network, breakdown of labor force by company and crew including shift changes, type of equipment that will be utilized, equipment access to the site, Design-Builder's watchmen, WMATA flagging, protection personnel, construction methods, traffic detours, arrangements for emergency clearing and restoration of services, and sketches defining the configuration of facilities at the end of the Design-Builder's activities as applicable. The SSWP shall also include a listing of all submittals, testing, and cut-over procedures associated with the work as applicable as specified in Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM, and Section 01810, COMMISSIONING. In addition, the Design-Builder's SSWP shall provide for the safe operation of vehicular and pedestrian traffic as applicable and the safety of all personnel including the public at all times.
 - c. In addition to the requirements for a Site Specific Work Plan (SSWP), all construction operations that interfere with the normal operations or that require outages, track occupancy, or protection shall be detailed in a time-scaled logic network. This network is to fully detail the extent of work proposed and the Design-Builder's plan and means for its accomplishment. Specific separate operations shall be highlighted in these submittals. All work by others that has the potential of delaying the work by the Design-Builder, shall be identified clearly in terms of scope and scheduled so that it can be coordinated. Also, the submittal and re-submittal of the SSWP shall be identified as a scheduled milestone activity in the project schedule.
 - d. The SSWP shall be submitted by the Design-Builder to the AR for concurrence 28 calendar days prior to start of construction work. The AR will respond within 14 calendar days of receipt of the SSWP submittal. Any changes to the submittal once reviewed and approved by WMATA are subject to a subsequent review by WMATA.

- e. The SSWP shall be updated if necessary and reissued weekly to reflect any changes that may have occurred during the 28 calendar day period between the original issue and the date of work execution.
- f. Not later than 14 calendar days before the planned work, the revised submittal incorporating all changes and reflecting the final work plan shall be submitted to the AR. The final revisions of the schedule that incorporates all changes and reflects the final work plan shall be distributed by the Design-Builder to all parties involved.
- g. The Design-Builder shall not perform any of the work required until written approval has been received from WMATA.
- h. WMATA will not grant track outages, powers outages, or track occupancy until the Design Builder's SSWP has been reviewed by the Authority Representative and approved in writing. The Design Builder is advised the WMATA reserves the right to cancel or re-schedule an approved outage in the event of an operating emergency (derailment, system failure, power failure, etc.) in which support/protection personnel may not be available.

B. Outages

- 1. Work shall be scheduled and sequenced in conformance with approved Construction Schedules as described in the Contract.
- 2. Clarification of Starting and Ending time for outages.
 - a. WMATA will define the work window in accordance with the SSWP.
 - b. WMATA will clear all rail traffic from the section affected by the outage and perform operational functions to prepare the track and/or power for removal from service.
- 3. The design Builder must be mobilized with sufficient manpower including qualified supervisory personnel, equipment and materials to make substantial progress during each outage or occupancy. All necessary material required for a particular task to be completed during the outage must be inspected and approved by the Authority Representative and on the site a minimum of ten (10) days in advance of the scheduled outage. All equipment assigned for each task shall be inspected, maintained in accordance with manufacturer's recommendations, with sufficient spare fuel, oil, and repair parts to ensure operable condition for the duration of each task. If mobilization of sufficient manpower, equipment, or material do not comply with the SSWP, the Authority Representative will deny outage with no allowance for compensation.
- 4. The Design Builder is advised that there may be other Capital or Maintenance Construction projects occurring in the vicinity of this contract. The Design Builder will be expected to cooperate in coordinating its outages with other outages. WMATA shall be solely responsible for determining which contract outage request has priority when there is more than one request for any given day.

C. Weather

- 1. Inclement weather shall not be used as a basis for any claims for a delay or completion of the work within the outage, occupancy, and the restoration of rail service. The Design Builder shall provide the means for protection from adverse elements. Additional time but not additional cost will be allowed due to adverse weather conditions.

- D. Interruptions to Operations
1. The Design Builder's attention is called to the fact that other construction or maintenance may be in progress concurrent with this contract. In order to minimize interruptions required for the progression of this work, the Design Builder shall schedule work in coordination with track power usage required for the progress of other work where possible.
 2. The Design Builder shall attend update meetings chaired by the Authority Representative and all other parties performing work or scheduled to perform work on the interfacing activities. The Design Builder shall make it mandatory that all subcontractors attend this scheduling meeting.
- E. Safety Plan: The Design-Builder shall produce a Safety Plan and other submittals as described in Section 01114, SAFETY AND ENVIRONMENTAL REQUIREMENTS, and as described elsewhere in the Contract. Items described below shall be taken into account in developing safety submittals.
1. Safety is a primary concern that affects all levels of WMATA activities, including planning, design, construction, testing and operations and maintenance of all WMATA transportation systems. Therefore, all WMATA personnel and appropriate Design-Builders are responsible for ensuring the safety of passengers, employees, and the general public who come in contact with the WMATA system as applicable, as well as property adjacent to the system or site as applicable. Construction methods and practices shall be safe and efficient, while maintaining the maximum operation of the system or site as applicable.
 2. The Design-Builder has direct responsibility for conducting the construction operation in a manner that will provide a safe working environment for all employees as well as protect the general public and all those parties who may come in contact with, or be exposed to this project as applicable. The Design-Builder shall prepare and implement a written General Safety Program as outlined in WMATA's Project Safety Guidelines specified in Section 01114, SAFETY AND ENVIRONMENTAL REQUIREMENTS and the Safety Document Attachments to this Project Manual and the other Safety Documents referenced in this Contract. The program should cover, at a minimum:
 - a. Work site hazard identification and mitigation
 - b. Fall protection plans and procedures
 - c. Injury reporting, handling and accident investigations
 - d. Crane/hoisting equipment certifications and work procedures as applicable
 - e. Daily employee safety briefings
 - f. Weekly safety meetings
 - g. First aid - Location of supplies, employees qualified to administer CPR and first aid
 - h. Safety inspections
 - i. Fire prevention/protection
 - j. Protection of environment
 - k. Utility protection as applicable - Use of Miss Utility
 - l. Public and property - Railroad and private as applicable

- m. Emergency procedures
 - n. Identify on-site emergency coordinator
 - o. Method of protection to be used on track where work is to be performed as applicable - Type of barriers used to keep Design-Builder personnel and equipment away from operating track and method of installation and removal of barriers
 - p. Barricades or stop signs as applicable to protect work limits
 - q. Procedures for working on or around the tracks or right of way and for working on or around the contract rail system as applicable (Work Blocks/Red Tag)
 - r. List of emergency telephone numbers for the appropriate Design-Builder personnel for WMATA's use
 - s. Training
 - t. Communication
3. Prior to construction, the Design-Builder shall also be responsible for the preparation of a site specific safety work plan and time line for each site or combination of sites as applicable. This plan shall be submitted to WMATA for approval, and shall include, but not be limited to, the following information:
- a. Emergency action plan
 - b. Identification of all work site hazards/problems
 - c. On-Track worker protection plan as applicable
 - d. Step-by-Step outline of construction process for each site and equipment to be used
 - e. WMATA Manpower and Equipment Request Form and/or a test procedure if applicable
 - f. Timetable for completion, with WMATA approval prior to NTP
4. In addition, the Design-Builder shall have all work personnel complete and pass the WMATA Track Access Safety Course/Roadway Worker Protection Training as applicable.

1.06 SPECIFIC CONDITIONS

- A. The Design Builder should note that Rail Car Maintenance Operations at all three project locations (Yards) will be on-going, 24 hours a day, 7 days a week, during the construction period of this contract. The Design Builder shall not adversely impact Yard Operations, rail car or employee traffic, while performing any aspect of this contract.
- B. Generally, work can be performed both during revenue and non-revenue hours if sufficient protection is provided for yard operations; and protection systems and hours of work will be agreed upon between the Authority Representative and the Design-Builder. All work is subject to adequate prior scheduling of work that complies with the time frames for approval of work schedules as detailed below, and in those cases, compliance with the SOP No. 19, 28, and 33 requirements for working within WMATA Metro Stations or on the Rail Right of Way specified in Section 1.06 and 1.07 of this Section, will be strictly enforced. All work shall be in accordance with all noise control procedures, dust control procedures and all other procedures, as stipulated herein and as approved. Also, the Design-Builder may be subject to restrictions on hours of work for material

and equipment deliveries as coordinated with Yard Operations.

- C. The Design-Builder is warned of the presence of electric contact rail, 750 volts DC, on the WMATA tracks and moving trains on the WMATA tracks and shall take necessary precautions to prevent damage to life and property through contact with the electrical or operating systems. The Design-Builder's attention is directed to the fact that any contact with live electrical contact rail may result in severe burn or death. Prior to performing any work on a segment of track, arrangements shall be made through the Authority Representative for access rights and power outage in accordance with WMATA Metrorail Safety Rules and Procedures, Standard Operating Procedures No. 19, 28, and No. 33 and Operations Administrative Procedures No. 100-9 and No. 200-10. All special requests for access, single tracking, power outages, escorts, and other Authority support shall be submitted in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES through the Authority Representative to appropriate WMATA OPER officials. See Section 01114 SAFETY/ENVIRONMENTAL REQUIREMENTS of these General Requirements.
 - D. Greenbelt Yard Tracks and Shady Grove Yard tracks are electrically isolated from the mainline tracks. Therefore, any outage request for a section of track in those Yards must be approved by the Assistant Superintendent of Operations in charge of that particular Yard. Brentwood Yard tracks are not isolated from the mainline tracks. Therefore, outage request for a section of track in the Brentwood Yard could effect mainline tracks and must be approved by both, the Yard Superintendent and the Superintendent of OCC and appear on the General Order.
 - E. Personal Protective Equipment (PPE): Necessary PPE for Design-Builder employees and training for correct usage shall be provided by the Design-Builder, and such safety equipment must be employed by Design-Builder personnel while on Authority property. The Design-Builder's work force shall wear safety and protective clothing as required by OSHA and WMATA to include wearing orange safety vests. See Section 01114 SAFETY/ENVIRONMENTAL REQUIREMENTS of these General Requirements.
 - F. The Design-Builder is responsible for training its employees in the proper utilization of materials in order to make them aware of any hazards associated with use of these products, and shall provide WMATA with evidence that such training was conducted as specified in Section 01114 SAFETY/ENVIRONMENTAL REQUIREMENTS of these General Requirements.
 - G. No hazardous or flammable materials shall be stored on WMATA property at any time. The Design-Builder shall acquire permits for use of hazardous or flammable materials as required by the jurisdictional Fire Marshals. See Section 01114 SAFETY/ENVIRONMENTAL REQUIREMENTS of these General Requirements.
 - H. Lighting: Whenever by reasons of conditions created by the Design-Builder in constructing fences, barricades, or otherwise, illumination by artificial means becomes necessary in order to protect persons and property, the Design-Builder shall furnish and maintain adequate illumination at the site. See Section 01114 SAFETY/ENVIRONMENTAL REQUIREMENTS of these General Requirements.
- 1.07 APPLICABLE WMATA 'S STANDARD OPERATING PROCEDURES SOP 19: MAINTENANCE AND TESTING ON REVENUE FACILITIES, SOP 28: REMOVAL AND RESTORATION OF THIRD RAIL POWER FOR WORK BY WMATA MAINTENANCE FORCES - MAINLINE REVENUE SOURCES, AND SOP 33: REMOVAL AND RESTORATION OF THIRD RAIL POWER FOR WORK BY DESIGN-BUILDER'S/CONTRACTOR'S FORCES - MAINLINE, REVENUE SYSTEM
- A. Metrorail Standard Operating Procedure No. 19 Maintenance and Testing on Revenue Facilities
 - 1. Purpose and Applicability

- 19.1 The purpose of this Standard Operating Procedure (SOP) is to ensure consistency and provide guidance for all personnel desiring the use of the revenue railroad for maintenance or testing of vehicles or facilities. This SOP is applicable to Design-Builders, Contractors, subcontractors, consultants and all other personnel (including WMATA employees) desiring access to the revenue railroad or Rail Transportation (RTRA) facilities for maintenance or testing.
2. Responsibilities
- 19.2 The General Superintendent of RTRA is responsible for approval of the operational plan for all tests to be performed on the revenue railroad or on RTRA facilities.
- 19.3 The General Superintendent of the Operations Control Center (OCC) is responsible for approval, issuance, and implementation of the General Orders. They are used to define track sections for maintenance and testing, and will remain in effect until fulfilled, superseded, or cancelled by the Superintendent of OCC.
- 19.4 Authority offices, Design-Builders, contractors and consultants are responsible for scheduling all activities in accordance with this SOP.
- 19.5 Superintendents assigned to RTRA are responsible for providing support services when requested, and subsequently approved in accordance with this SOP.
- 19.6 Test Directors are responsible for test approval by the appropriate office to assure safe operation during tests.
- 19.7 Personnel requiring access rights are responsible for: advising OCC of their work areas, and after approval by OCC, monitoring the appropriate radio frequencies during access.
3. Exclusive Rights
- 19.8 All requests to obtain exclusive use of a section of yard track must be submitted to and approved by the Assistant Superintendent of Operations in charge of the specified yard.
- 19.9 All requests to obtain exclusive use of a section of mainline track must be submitted to and approved by the Superintendent of OCC and appear on the General Order.
4. Access Rights
- 19.10 All requests to obtain access rights for authorized WMATA personnel must be coordinated with and be approved by OCC before entering the right-of-way. OCC must also be notified when personnel have completed their tasks and are clear of the right-of-way. All other access rights must appear on the General Order.
5. General Order Procedures
- 19.11 All requests for rights must be submitted in writing to the Superintendent of OCC by 1700 on the Wednesday preceding the scheduled week. When a holiday falls on a Thursday, all requests must be submitted by 1000 Wednesday.
- 19.12 Only the Superintendent of OCC may approve the issuance of General Orders for requests after track allocations have been scheduled.
- 19.13 The time limits for the General Orders are defined as:

- a. Schedule Week - 0001 Saturday through 2359 the following Friday.
- b. Schedule Monday through Friday - 0030 to 0330.
- c. Schedule Saturday and Sunday - 0230 to 0630.

NOTE: When red tags are issued, an earlier clearing time may be required, and any deviation from these scheduled times must be approved by the Superintendent of the OCC.

19.14 All requests must include the following information:

- a. Department requesting rights.
- b. Date and hours of the request.
- c. Line, Track and Chaining.
- d. Contact rail status.
- e. Equipment to be utilized.
- f. Individual making the request.
- g. Purpose of the request.

6. General Order Format and Content

19.15 General Orders will be identified by bold type reading:

GENERAL ORDER

19.16 The heading will include the date of the order, the number of the General Order and to whom the Order is addressed. Numbers will be continuous on a yearly basis.

19.17 The General Order will identify for each approved area:

- a. The work to be performed and type of rights requested.
- b. The Design-Builder, contractor or Authority Department involved.
- c. The date and hours affected.
- d. The identification and location of the work area involved.
- e. The contact rail status when necessary.
- f. Instructions for flagging when necessary.

7. Suspension of a General Order

19.18 OCC has the authority to suspend or cancel a portion of, or all of, a General Order when conditions require it.

19.19 When a General Order is cancelled, OCC will immediately notify all concerned parties and document all actions taken.

8. Modification of a General Order
 - 19.20 After publication of a General Order, modifications will not be allowed except for emergencies or for cancellation of rights. All cancellations will be documented by OCC identifying the rationale for the cancellation.
 - 19.21 Emergency modifications of General Orders will be allowed only when conditions exist which will cause a portion of the mainline to be taken out of service during revenue hours.
9. Conducting Tests (Other than Routine Maintenance Tests)
 - 19.22 Personnel requiring the revenue railroad or RTRA facilities for tests shall:
 - a. When requiring exclusive rights for the mainline tracks, request those rights in accordance with Section E of this SOP and attach a copy of the request to the test procedure.
 - b. Submit to RTRA, no later than ten (10) working days prior to the test, a test request identifying:
 1. The purpose.
 2. The expected results.
 3. The Test Director (by name).
 4. All personnel participating and/or observing (by name).
 5. A detailed operational plan including:
 - (a) Operating scenario.
 - (b) RTRA personnel required.
 - (c) Equipment and facilities to be used.
 - 19.23 The Test Director shall be responsible for obtaining a "Covenant not to Sue" from all non-WMATA personnel involved in a test.
 - 19.24 After approval of the operational plan by the General Superintendent of RTRA, the appropriate RTRA Superintendent shall provide the necessary support as identified in the test procedure. Also, a single point of contact shall be provided for the Test Director. This individual will be responsible for the safety of the RTRA personnel and equipment while the test is being performed. Any modification to the operational scenario will be coordinated through the individual designated as the single point of contact.
- B. Metro Rail Standard Operating Procedure #28 REMOVAL AND RESTORATION OF THIRD RAIL POWER FOR WORK BY WMATA MAINTENANCE FORCES - MAINLINE REVENUE SYSTEM

Purpose;

The purpose of this Standard Operating Procedure is to delineate responsibilities and procedures for removal and restoration of third rail power for work by WMATA maintenance forces on the mainline.

Scope;

This SOP is applicable to all WMATA personnel working on the rail system.

1. Guidelines for Removing Power

- 28.1
 - a. Power will be removed to perform maintenance on the third rail or items connected to the third rail by red tag outage.
 - b. Power will be removed for maintenance of equipment and structures in the track bed, other than the third rail and its connected equipment, by supervisory outage.

- c. When requesting a mainline Red Tag power outage, request the outage by providing the Chain Markers of the third rail gaps which bracket the work area.
- d. Power outage need only cover the actual work area. Protected work areas outside of the actual work area do not require a power outage.
- e. Depending on the amount and type of materials/tools being transported to or from the work site, either carried or by rail cart, a supervisory power outage may be required from the point of entry. At the direction of the supervisor/escort at the time of, or prior to entry to the track, OCC shall provide a supervisory power outage.

NOTE 1: Certain inspection and maintenance of equipment and structures in the track bed may not require power removal.

2. Procedures for Removal and Restoration of Power for Red Tag Outages

28.2 Removal;

- a. The WMATA maintenance personnel that requires the outage shall submit the request via GOTRS (General Orders - Track Rights System). Each request must; identify the department supplying a qualified escort, specify the track number(s), chaining of the outage area, start and stop time of the outage, and identify any support required from other departments. CENG Planning will notify the requestor of the approval or disapproval of the request via GOTRS.
- b. The Maintenance Operation Center (MOC) will, in coordination with the Operations Control Center (OCC), initiate the power outage.
- c. Power crews will rack out and block tag the appropriate yard disconnect switches and/or circuit breakers at the involved substations, as directed by MOC, and confirm the third rail is de-energized with an approved voltage tester.
- d. When the outage area has been secured (racked out, tagged and tested), MOC will activate and hold the red tag for the outage area and record the date/time and numbers of the breakers involved.
- e. The maintenance supervisor, crew leader, escort or member of the WMATA maintenance activity who is to be the Red Tag Holder shall, prior to the start of work, contact the MOC to verify that the red tag has been activated and obtain the red tag number.
- f. The Red Tag Holder shall, after receiving the red tag number, contact OCC advising them of the red tag number and request permission to enter the track bed to test the third rail and protect the work area as follows:
 - 1. Place a reflective rubber mat in the track bed, at each end of the actual work area, to identify the actual work area for the crew (Figure 2).
 - 2. Connect a third rail warning device(s) on each section of third rail in the actual work area. Each third rail warning device shall be tested before being connected to the third rail.
 - 3. Install shunt straps and place red limit lights at each end of the protected work area (Figure 2).
 - 4.
 - a. If an interlocking is contained within the protected work area, request OCC to place normal calls on the switches in the interlocking, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signal on the work track. Example: if working on track one at a diamond interlocking, place the shunt strap between 02 and 04 signal. (Figure 3)
 - b. If an interlocking of any other configuration (diverging turnout, universal or pocket) is contained within the work area, request OCC to place the appropriate call on the switch to protect the work area, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signals

on the work track.

5. The maintenance supervisor, crew leader, or escort shall notify OCC before work begins to confirm that shunt straps, limit lights and third rail warning devices (safety equipment) are in place. If an interlocking is within the protected work area, ensure that switches are in the desired positions and the procedures outlined in 28.2 (section f., number 4.a. and b.) have been followed and the protected work area has been established.
6. OCC shall then verify track occupancy at the locations of the shunt straps, as specified in the General Order.
- g. The maintenance supervisor, crew leader, or escort in charge of the WMATA maintenance activity will, prior to starting work, brief the personnel of the work crew on applicable WMATA safety rules/procedures, track(s) involved, work area limits, red tag number and any restrictions on the work as specified by the Power Outage or General Order.
- h. In the event the work continues through an MOC or OCC shift change, it will be the responsibility of the initial MOC or OCC Supervisor to advise the relief person of the details of involving the work taking place, including the name of the Red Tag Holder and/or the person in charge of the work crew.
- i. If the Red Tag Holder is to be relieved, both the original Red Tag Holder and the new Red Tag Holder must contact MOC and OCC advising them of the change prior to making the change.

28.3 Restoration;

- a. The maintenance supervisor, crew leader or escort will, prior to or at the schedule stop time of the outage, contact MOC and OCC advising them that the work is completed and that the work area will be cleared and inspected.
 - b. The maintenance supervisor, crew leader or escort will, upon completion of the inspection, contact MOC advising them that the work area has been inspected for re-energization, all personnel/equipment are clear and the red tag can be cleared identifying it by number.
 - c. The maintenance supervisor, crew leader or escort will, after contacting MOC, contact OCC advising them that all personnel/equipment are clear of the work area and that the red tag has been cleared through MOC.
 - d. OCC will, prior to allowing personnel to leave the area, verify removal of the shunt straps when the work has been completed, time period has ended or when requiring the personnel to clear.
 - e. OCC will ensure that the times the shunt straps are applied and removed are recorded on the OCC radio tape and/or in writing.
 - f. OCC will remove prohibit exit commands only after the person holding the red tag has reported personnel and equipment clear of the track.
 - g. When the red tag is cleared, MOC will in coordination with OCC, direct power crews to remove block tags, rack in and place in remote the appropriate circuit breakers at the involved substations.
 - h. MOC will advise OCC that the breakers for each outage area are positioned to be re-energized.
 - i. MOC and OCC will cause announcements to be made on MOC and OCC radio nets that power is being restored.
 - j. OCC will restore power by supervisory control as described in SOP 2.17 and notify MOC of any circuit breakers that do not close.
3. PROCEDURES FOR REMOVAL AND RESTORATION OF POWER FOR SUPERVISORY OUTAGES

- 28.4 Removal
- a. The WMATA maintenance personnel requiring the outage will, submit the request -via GOTRS (General Orders Track Rights System). Each request must: identify the department supplying the qualified escort, specify the track number(s), chaining of the outage area, and start and stop time of outage. CENG Planning will notify the requester of the approval or disapproval of the request via GOTRS. OCC will record approved requests in the power outage or restoration request log.
 - b. The maintenance supervisor, crew leader or escort will, prior to allowing the crew to begin work, request from OCC permission to enter the track bed before the outage is initiated and then:
 1. Verify that the approved voltage tester is working properly.
 2. Make a radio check with OCC to confirm that radios are working properly.
 3. Request the supervisory outage be initiated.
 - c. OCC will initiate the outage recording the date/time that power removal was completed, the breaker number(s) involved, and the name of the person in charge of the work crew in the request log.
 - d. OCC will then contact the maintenance supervisor, crew leader or escort and advise him/her to test the third rail with an approved voltage tester and confirm that it is de-energized.
 - e. When the maintenance supervisor, crew leader or escort confirms to OCC that the third rail is de-energized, he/she will protect the work area as follows:
 1. Place a reflective rubber mat in the track bed, at each end of the actual work area, to identify the actual work area for the crew (Figure 2).
 2. Connect third rail warning device(s) on each section of third rail in the actual work area. Each third rail warning device shall be tested before being connected to the third rail.
 3. Install shunt straps and place red limit lights at each end of the protected work area (Figure 2).
 4.
 - a. If an interlocking is contained within the protected work area, request OCC to place normal calls on the switches in the interlocking, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signal on the work track. Example: if working on track one at a diamond interlocking, place the shunt strap between 02 and 04 signal. (Figure 3)
 - b. If an interlocking of any other configuration (diverging turnout, universal or pocket) is contained within the work area, request OCC to place the appropriate call on the switch to protect the work area, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signals on the work track.
 5. The maintenance supervisor, crew leader, or escort in charge of the work crew shall notify OCC before work begins to confirm that shunt straps, limit lights and third rail warning devices (safety equipment) are in place. If an interlocking is within the protected work area ensure that switches are in the desired position(s) and the procedures outlined in 28.4 (section e., number 4.a. and b.) have been followed and the protected work area has been established.
 - f. The maintenance supervisor, crew leader or escort will, prior to allowing the crew to begin work, brief personnel of the work crew that the third rail is to be considered energized at all times and not to make contact with it or its connected equipment. In addition, personnel will be advised of any applicable rules, procedures or restrictions.

- g. The maintenance supervisor, crew leader or escort must maintain contact with OCC during the work in the event OCC would have to clear the work area and restore power in response to an emergency. In addition, the maintenance supervisor, crew leader or escort will periodically check the third rail to confirm it is still de-energized.
- h. In the event that the work continues through an OCC shift change, it will be the responsibility of the initial OCC Supervisor to advise the relief person of the outage and the name of the person in charge of the work crew.
- i. In the event that the work continues through the work crew's shift change, it will be the responsibility of the initial maintenance supervisor, crew leader or escort to advise OCC of the name of the person in charge of the relief crew. At all times, OCC must be kept informed as to who is in charge and responsible for clearing the work area.

28.5 Restoration

- a. The maintenance supervisor, crew leader or escort will, prior to the schedule stop time of the outage, advise MOC and OCC that the work is completed and that the work area will be cleared and inspected.
- b. The maintenance supervisor, or crew leader or escort will, upon completion of the inspection, contact MOC and OCC advising them that the work area has been inspected for re-energization, all personnel/equipment are clear of the track(s) and give OCC clearance to re-energize the third rail in the area.
- c. When OCC receives the clearance from the maintenance supervisor, crew leader or escort and no other crews are holding the same third rail area out of service, OCC will ensure that announcements are made on their radio net and the MOC net that third rail power is being restored in the work area.
- d. After announcements have been made, OCC will re-energize the third rail in the cleared work area. OCC will record the request to re-energize in the power outage or restoration request log and also the time the restoration was completed.

C. Metrorail Standard Operating Procedure No. 33 Removal and Restoration of Third Rail Power for Work by Design-Builders'/Contractors' Forces - Mainline, Revenue System

1. Guidelines for Removing Power

33.1

- a. Power will be removed to perform work on the third rail, or items connected to the third rail, by red tag outage, and with WMATA escort by the appropriate WMATA activity (Section B).
- b. Power will be removed for work on equipment and structures in or over the trackbed, other than the third rail and its connected equipment, or work that intrudes into the dynamic outline of the train, by supervisory outage, and with WMATA escort by the appropriate WMATA activity.
- c. When requesting a mainline Red Tag power outage, request the outage by providing the Chain Markers of the third rail gaps which bracket the work area.
- d. Power outage need only cover the actual work area. **Protected work areas outside of the actual work area do not require a power outage.**
- e. Depending on the amount and type of materials/tools being transported to or from the work site, either carried or by rail cart, a supervisory power outage may be required from the

point of entry. At the direction of the supervisor/escort at the time of, or prior to entry to the track, OCC shall provide a supervisory power outage.

NOTE 1: Design-Builder/Contractor work that is not in or over the trackbed, does not intrude into the dynamic outline of the train, and is not affected by train movements or third rail status will not, require power removal. Such Design-Builder/Contractor work, shall require a WMATA escort.

NOTE 2: A management representation of each Design-Builder/Contractor who will be performing work on the rail system will, prior to the scheduling of the work, receive an Authority orientation to the rail system rules, procedures, restrictions, and other pertinent information as applicable. The Design-Builder/Contractor will be required to acknowledge receiving the orientation by authorized signature.

NOTE 3: Each Design-Builder/Contractor employee who will be performing work on the rail system, prior to performing that work will receive and pass an approved Authority course on the rail system rules, procedures, restrictions and any other pertinent information as applicable. Upon successful conclusion of the course a Design-Builder/Contractor ID will be issued identifying the individual as have been authorized to work on the right of way. This badge shall be displayed at all times while on Rail facilities.

2. Procedures for Removal and Restoration of Power for Red Tag Outage

33.2 Removal:

- a. The Design-Builder/Contractor who requires the outage shall, in coordination with the appropriate WMATA activity, submit the request via GOTRS (General Orders - Track Rights System). Each request must: identify the Department supplying a qualified escort, specify the track number(s), chaining of the outage area, and start and stop time of the outage. CENG Planning will notify the requestor of the approval or disapproval of the request via GOTRS.
- b. The Maintenance Operation Center (MOC) will, in coordination with the Operations Control Center (OCC), initiate the power outage.
- c. Power crews will rack out and block tag the appropriate yard disconnect switches and/or circuit breakers at the involved substations, as directed by MOC, and confirm that the third rail is de-energized with an approved voltage tester.
- d. When the outage area has been secured (racked out, tagged and tested) MOC will activate and hold the red tag for the outage area and record the date/time and numbers of breakers involved.
- e. The WMATA escort shall, prior to starting the work, contact the MOC to verify that the red tag has been activated and obtain the red tag number.
- f. The WMATA escort shall, after receiving the red tag number, contact OCC advising them of the red tag number and request permission to enter the trackbed to test the third rail.
 1. Place a reflective rubber mat in the track bed, at each end of the actual work area to identify the actual work area for the crew (Figure 2).
 2. Connect a third rail warning device(s) on each section of third rail in the actual work area. Each third rail warning device shall be tested before being connected to the third rail.

3. Install shunt straps and place red limit lights at each end of the protected work area (Figure 2).
 4. a. If an interlocking is contained within the protected work area, request OCC to place normal calls on the switches in the interlocking, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signal on the work track. Example: if working on track one at a diamond interlocking, place the shunt strap between 02 and 04 signal. (Figure 3).
 - b. If an interlocking of any other configuration (diverging turnout, universal or pocket) is contained within the work area, request OCC to place the appropriate call on the switch to protect the work area, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signals on the work track.
 5. The escort in charge of the work crew shall notify OCC before work begins to confirm that shunt straps, limit lights and third Rail warning devices (safety equipment) are in place. If an interlocking is within the protected work area, ensure that switches are in the desired positions and the procedures outlined in 33.2 (section f., number 4.a. and b.) have been followed and the protected work area has been established.
 6. OCC shall then verify track occupancy at the locations of the shunt straps, as specified in the General Order.
 - g. The WMATA escort shall, prior to allowing the Design-Builder/Contractor to start work, brief the personnel of the work crew on applicable safety rules/procedures, track(s) involved, work area limits, red tag number, and any restrictions on the work as specified by the Power Outage or the General Order. The Design-Builder/Contractor must comply with the rules, procedures, and any restrictions set forth by the escort.
 - h. In the event the work continues through an MOC or OCC shift change, it will be the responsibility of the initial MOC or OCC supervisor to advise the relief person of the outage and the name of the person in charge of the work crew.
 - i. In the event the work continues through the escort's shift change, it will be the responsibility of the initial escort to advise the MOC and the OCC of the new escort's name. At all times, OCC must be kept informed as to who is in charge and is responsible for clearing the work area.
- 33.3 Restoration:
- a. The WMATA escort shall, prior to or at the scheduled stop time of the outage, contact MOC and OCC advising them that the work is completed, and that the work area will be cleared.
 - b. The WMATA escort shall, upon completion of the inspection, contact MOC advising them that the work area has been inspected for re-energization, all personnel/equipment are clear, and the red tag can be cleared identifying it by number.
 - c. The WMATA escort shall, after contacting MOC, contact OCC advising them that all personnel/equipment are clear of the work area and that the red tag has been cleared through MOC.
 - d. OCC will, prior to allowing personnel to leave the area, verify removal of the shunt straps when the work has been completed, time period has ended or when requiring the activity to clear.
 - e. OCC will ensure that the times the shunt straps are applied and removed are

recorded on the OCC radio tape and/or in writing.

- f. OCC will remove prohibit exit commands only after the person holding the red tag has reported personnel and equipment clear of the track.
- g. When the red tag is cleared, MOC will, in coordination with OCC, direct power crews to remove tags, rack in and place in remote the appropriate circuit breakers at the involved substations.
- h. MOC will advise OCC that the breakers for each outage area are positioned to be re-energized.
- i. MOC and OCC will cause announcements to be made on the MOC and OCC radio nets that power is being restored.
- j. OCC will restore power by supervisory control, as described in Safety Rule 42.17 and notify MOC of any circuit breakers that do not close.

3. Procedures for Removal and Restoration of Power for Supervisory Outage

33.4 Removal:

- a. The Design-Builder/Contractor who requires the outage shall, in coordination with the appropriate WMATA activity, submit the request via GOTRS (General Orders Track Rights System). Each request must: identify the Department supplying the qualified escort, specify the track number(s), chaining of the outage area, and start and stop time of outage. CENG Planning will notify the requestor of the approval or disapproval of the request via GOTRS. OCC will record approved requests in the power outage or restoration request log.
- b. The WMATA escort shall, prior to allowing the Design-Builder/Contractor to begin work, request from OCC permission to enter the trackbed before the outage is initiated and then:
 1. Verify that the approved voltage tester is working properly.
 2. Make a radio check with OCC to confirm that radios are working properly.
 3. Request the supervisory outage be initiated.
- c. OCC will initiate the outage, recording the date/time that power removal was completed, the breaker number(s) involved, and the name of the escort in charge of the work crew, in the request log.
- d. OCC will then contact the WMATA escort and advise the escort to test the third rail with an approved voltage tester and confirm that it is de-energized.
- e. When the WMATA escort confirms to OCC that the third rail is de-energized, the WMATA escort will protect the work area as follows:
 1. Place a reflective rubber mat in the track bed, at each end of the actual work area, to identify the actual work area for the crew (Figure 2).
 2. Connect third rail warning device(s) on each section of third rail in the actual work area. Each third rail warning device shall be tested before being connected to the third rail.
 3. Install shunt straps and place red limit lights at each end of the protected work area (Figure 2).
 4.
 - a. If an interlocking is contained within the protected work area, request OCC to place normal calls on the switches in the interlocking, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signal on the work track. Example: if working on track one at a diamond interlocking, place the shunt strap between 02 and 04 signal. (Figure 3)
 - b. If an interlocking of any other configuration (diverging turnout, universal or pocket) is contained within the work area, request OCC to place the appropriate call on the switch to protect the work area, establish a route on the work track and place prohibit exits on the signals on the work track. Then place a shunt strap between the entrance and exit signals on the work track.

- 
5. The person in charge of the work crew shall notify OCC before work begins to confirm that shunt straps, limit lights and third rail warning devices (safety equipment) are in place. If an interlocking is within the protected work area, ensure that switches are in the desired position(s) and the procedures outlined in 33.4 (section e., number 4. a. and b.) have been followed and the protected work area has been established.
 - f. The WMATA escort will, prior to allowing the Design-Builder/Contractor to begin work, brief personnel of the work crew that the third rail is to be considered energized at all times and not to make contact with it or its connected equipment. In addition, personnel will be advised of any applicable safety rules and procedures, track(s) involved, work area limits, and any restrictions on the work as specified by the General Order. The Design-Builder/Contractor must comply with the rules, procedures, and any restrictions set forth by the escort.
 - g. The WMATA escort must maintain contact with OCC during the work in the event OCC would have to clear the work area and restore power to respond to an emergency. In addition, the WMATA escort will periodically check the third rail to confirm it is still de-energized.
 - h. In the event that the work continues through an OCC shift change, it will be the responsibility of the initial OCC supervisor to advise the relief person of the outage and the name of the escort in charge of the work crew.
 - i. In the event that the work continues through the escort's shift change, it will be the responsibility of the initial escort to advise the OCC of the new escort's name. At all times, OCC must be kept informed as to who is in charge and responsible for clearing the work area.

33.5 Restoration:

- a. The WMATA escort will, prior to the scheduled stop time of the outage, advise MOC and OCC that the work is completed and that the work area will be cleared and inspected.
- b. The WMATA escort will, upon completion of the inspection, contact MOC and OCC advising them that the work area has been inspected for re-energization, all personnel and equipment are clear of the track(s) and give OCC clearance to re-energize the third rail in the area.
- c. When OCC receives the clearance from the WMATA escort, and no other work crews are holding the same third rail area out of service, OCC will ensure that announcements are made on their radio net and the MOC net that third rail power is being restored in the work area.
- d. After announcements have been made, OCC will re-energize the third rail in the cleared work area. OCC will record the request to re-energize in the power outage or restoration request log and also the time the restoration was completed.

Organization and Administration

1.07 ACCESS TO REVENUE OR START-UP RAILROAD FACILITIES

1. PURPOSE AND SCOPE

The purpose of this Operations Administrative Procedure (OAP) is to provide consistency and guidance to all personnel desiring access to facilities maintained or controlled by organizations associated with the Revenue (Active) or Start-Up (Future Phase) Railroad Systems. It is applicable to all Department of Rail Service (RAIL) personnel, in addition to Design-Builders/Contractors, Consultants and other WMATA employees having a need for such access.

2. RESPONSIBILITY

- A. The Assistant General Manager RAIL (Implementing Authority) is responsible for implementing, and for approving revisions to this OAP.
- B. The Senior Manager, Operations Support Branch, is designated the Reviewing Authority, and as such, is responsible for periodic review of this OAP and for reporting accomplishment of the review by January 31 of each year.

3. POLICIES

- A. The Maintenance Planning and Scheduling Section of the Operations Support Branch shall coordinate all Rail Support Requests received in accordance with paragraph 4.A. below. This coordination activity shall have input from those personnel designated below, or their representatives:
 - 1) RTRA - Operations Control Center (OCC) Superintendent.
 - 2) SMNT - Maintenance Operations Center (MOC) Manager(s).
 - 3) SMNT - Automatic Train Control Branch Superintendent.
 - 4) SMNT - Power Branch Superintendent.
 - 5) SMNT - Communications Branch Superintendent.
 - 6) ENSP - Start-Up Manager.
 - 7) PLNT - Plant Maintenance, General Superintendent.
 - 8) TRST - Track and Structures, General Superintendent.
 - 9) Other WMATA Offices/Branches/Sections, as required.
- B. All coordination activity shall be conducted prior to the General Orders meeting (Wednesday of each week), after which requestors will be advised of approval, disapproval or changes to their request. The Operations Support Branch, Maintenance Planning and Scheduling Section shall maintain records of all submitted Rail Support Requests in the mainframe-based GOTRS (General Orders Track Rights System).

- C. When required, ENOS/ENSP/Start-Up and RAIL (SMNT, RTRA, CMNT, PLNT or TRST) will provide, at the work location, escort(s) and/or support personnel who are completely aware of the nature and extent of the work and shall ensure that it is performed in compliance with the details of the approved request.
- D. The OCC Superintendent and the MOC Superintendent shall, on a daily basis, monitor approved requests as to be able to assist in the resolution of difficulties involving scheduled activities. In addition, they shall be available to review emergency requests for access as they arise.
- E. Requests entered in the "General Orders and Track Rights System" (GOTRS) in accordance with paragraph 4.A. below, provides the routine means for personnel to request:
 - 1) Access to revenue railroad facilities;
 - 2) Access to start-up railroad facilities;
 - 3) Escort or support service;
 - 4) Supervisory or red tag power outages;
 - 5) Certification of hi-rail equipment.
- F. All requests involving facility additions or modifications must be approved by the appropriate General Superintendent in accordance with paragraph 4.E. below.
- G. Emergency requests may be made in accordance with paragraph 4.G. below.
- H. All requests for vehicle access to the revenue or start-up railroad must be made in accordance with paragraph 4.I. below.
- I. Requests for access to the revenue railroad must be made in accordance with Metrorail SOP 19, in addition to the requirements of this OAP.
- J. Requests for access to the start-up railroad must be made in accordance with Rules and Instructions for Conducting Start-Up Activities, in addition to the requirements of this OAP.

4. PROCEDURES

- A. Requests for access to either the revenue railroad facilities or the start-up railroad facilities, electrical power outages, and/or escort/support service by personnel of any Office, must be entered in the "General Orders/Track Rights System" (GOTRS), by the Requestor, not later than Tuesday at 1200 hours of the week preceding the WMATA operating week, which begins Saturday morning at 0001 hours and ends Friday at 2359 hours. A copy (computer screen print) of the Rail Support Request screen is attached for reference (Attachment A).
- B. A General Orders meeting will be conducted each Wednesday at a time and place designated by the RTRA-OCC Superintendent. Only those requests that are properly prepared, coordinated and submitted to the Operations Support Section - Maintenance Planning and Scheduling in accordance with paragraph 4.A. above by the preceding Tuesday at 1200 hours will be considered at the General Orders meeting for implementation for the following week (Saturday through Friday).

- C. Requests for access, once approved, may not be adjusted. Changes may only be accomplished by canceling the old request and entering a new request in GOTRS reflecting the desired version, in accordance with paragraph 4.A. above.
- D. Requests (such as engineering tests) involving special testing or work on the revenue railroad that may affect passengers or revenue service must be supported by prints or drawings and accompanied by a statement of work. They shall be forwarded to the RTRA General Superintendent so as to be received at least ten (10) days prior to the desired start date. These requests must be approved by the RTRA General Superintendent before they will be considered for scheduling.
- E. Access will not be permitted to perform work which has not been coordinated and approved in accordance with Authority policy. Refer to Policy/Instruction (P/I) 2.2/0 and 4.10.0 and OAP 200.4.
- F. Requests involving adjustments to the start-up wayside, the removal of gates or bumping-posts, or those which may infringe on the dynamic clearance envelope shall be accompanied by a thoroughly detailed justification to include prints or drawings and accompanied by a statement of work. All requests involving the start-up railroad must be approved by the Start-Up Manager before they will be considered for scheduling.
- G. Emergency or urgent requests for access or escort/support not addressed by the General Orders planning and scheduling process, should be directed to:

OCC (revenue railroad access)	(202) 962-1970
Start-Up (start-up railroad access)	(202) 962-1080
	(202) 962-2758
MOC (revenue and start-up railroad access):	
Automatic Train Control	(202) 962-1797
Communications	(202) 962-1700
Computer	(202) 962-1790
Automatic Fare Collection	(202) 962-2907
Power	(202) 962-1058

Note: Examples of urgent requests include the repair of the operations, police or fire radio equipment; water main breaks and floods; or the train control room air conditioners. In such cases, the MOC, or appropriate Section Assistant Superintendent shall prepare the necessary forms, to include power switching orders.

- H. Any requestor or WMATA support organization desiring to delay or cancel previously approved and scheduled access/support and/or power outage, MUST call the appropriate MOC section as listed in paragraph 4.G. above. Start-Up Control shall also be notified, as required. All cancellations should be reported in a timely manner.

OAP 100-9

Page 4 of 4

- I. Design-Builder/Contractors who wish to use equipment on Metrorail tracks must complete the "Hi-Rail Vehicle Certification" form (Attachment B). All Rail Support Requests involving any vehicle or rail equipment access to the revenue or start-up railroad must be accompanied by an approved "Hi-Rail Vehicle Certification" form, which must be submitted to Start-Up Manager a minimum of ten (10) working days in advance of the week in which access is required.

WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY
DEPARTMENT OF RAIL SERVICE
HI-RAIL VEHICLE CERTIFICATION

- 10. For multiple-unit equipment, indicate type of connection between prime mover and other units.
- 11. Propulsion Capability - Equipment must possess tractive effort sufficient to move the gross maximum load from a stopped position on a 5% grade in a 750 ft. radius curve.
- 12. Equipment should be equipped with fail-safe brakes (spring-applied power release). If this is not the case, brake system details must be provided. The equipment braking effort should be capable of locking all wheels on dry rail (25% coefficient of adhesion) when fully applied.
- 13. Equipment should have parking brake system capable of holding equipment on a 5% grade.
- 14. Other Information:

USE OF SITE

PART 1 GENERAL

1.01 SUMMARY

This Section specifies restrictions that may affect construction operations including, use of the site, noise and vibration control, historical and scientific specimens, use of explosives, and work on property other than the Authority's.

1.02 RELATED DOCUMENTS

Section 00742, General Conditions - Accident Prevention
Section 00744, General Conditions - Protection of Persons and Property
Section 00787, General Conditions - Indemnification and Insurance Requirements and Special Provisions of Insurance Furnished by Design-Builder
Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements
Section 01141, General Requirements - Summary of Work Requirements: Access to Site
Section 01142, General Requirements - Summary of Work Requirements: Coordination with Occupants and Operations
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

1.03 CONSTRUCTION NOISE CONTROL

A. Noise control: The Design-Builder shall take every action possible to minimize the noise caused by its operation. When required by agencies having jurisdiction, noise producing work shall be performed in less sensitive hours of the day or week as directed. Noise produced by the work shall be maintained at or below the decibel levels specified and within the time periods specified.

1. Protection of public and employees: Noise abatement measures and precautions shall be taken in order to reduce exposure to noise. Permissible noise exposure shall be calculated in accordance with the procedures established under the Walsh-Healy Public Contracts Act. Sound levels for public noise exposure due to construction will be measured at the property line of adjacent residential, commercial or industrial property or at the property line of the public right-of-way or 50 feet from the noise source, whichever is greater, when work is in progress in the public right-of-way, while construction work is in progress. Employee noise exposure levels will be measured at the employees' normal work station. In either case sound levels shall not exceed the following:

<u>EXPOSURE PER DAY IN HOURS</u>	<u>SOUND LEVEL IN</u>
<u>dBA</u>	
8	60
6	92
4	95
3	97
2	100
1-1/2	102
1	105
1/2	110
1/4 or less	115

Above ground repetitive, high level impact noise will be permitted only between 8:00 A.M. and 9:00 P.M. Repetitive impact noises in the receiving property will not exceed the following dB limitations:

<u>TIME DURATION OF IMPACT NOISE</u>	<u>RESIDENTIALLY ZONED</u>	<u>COMMERCIALLY OR INDUSTRIALLY ZONED</u>
More than 12 minutes in any hour	70	77
Less than 30 seconds of any hour	85	92
Less than three minutes of any hour	80	87
Less than 12 minutes of any hour	75	82

In underground or tunnel construction work, where the above requirements may not be obtained, individual auditory protection shall be provided.

2. Noise restrictions at affected property: In addition to the provisions of Paragraph 1., sound level for noise due to construction activities will be monitored at the property line of property affected acoustically by the Design-Builder's operations and plant. Sound levels for noise from equipment shall be measured at the property line on the A weighting network of a General Purpose sound level meter at slow response. To minimize the effect of reflective sound waves at buildings, measurements may be taken three to six feet in front of any building face.
 - a. Construction equipment: Sound levels for unscheduled, intermittent, short-term noise from equipment shall not exceed the following dBA levels:

RESIDENTIAL PROPERTY

Daily, 7:00 AM to 9:00 PM	75
Daily, 9:00 PM to 10:00 PM	55
Daily, 10:00 PM to 7:00 AM	50

BUSINESS, COMMERCIAL
AND INDUSTRIAL PROPERTY:

Daily, including Sundays and Legal Holidays, 7:00 AM to 9:00 PM	82
Daily, including Sundays and Legal Holidays, 9:00 PM to 7:00 AM	62

- b. Mobile equipment in the public right-of-way: Truck or other powered equipment which moves off the construction site in the public right-of-way and that produces a maximum sound level exceeding the following limits when moving in the public right-of-way shall not be used on this Contract. The sound level limits specified are referenced to a distance of 50 feet from the equipment. Sound levels shall be measured in substantial conformity with the Standards and Recommended Practices established by the Society of Automotive Engineers, Inc., including the latest revisions to SAE J366b and SAE J952b.

- (1) Mobile construction and industrial machinery as defined in Paragraph (c)[1] below:

SOUND LEVEL
LIMITS

Manufactured before July 1, 1975	90 dBA
Manufactured after July 1, 1975	80 dBA
Manufactured after July 1, 1982	77 dBA

- (2) Trucks:

SOUND LEVEL
LIMITS

Manufactured before July 1, 1975	88 dBA
Manufactured after July 1, 1975	83 dBA
Manufactured after July 1, 1982	80 dBA

- c. Noise abatement measures: The Design-Builder shall provide such equipment and sound-deadening devices and take such noise abatement measures that are necessary to comply with the requirements of this Contract, consisting of, but not limited to the following:
- (1) Shields or other physical barriers to restrict the transmission of noise.
 - (2) Soundproof housings or enclosures for noise-producing machinery.
 - (3) Efficient silencers on air intakes for equipment.
 - (4) Efficient intake and exhaust mufflers on internal combustion engines.
 - (5) Lining of hoppers and storage bins with sound-deadening material.
 - (6) Conducting truck loading, unloading and hauling operations so that noise is kept to a minimum.
 - (7) Routing of construction equipment and vehicles carrying spoil, concrete or other materials over streets that will cause the least disturbance to residents in the vicinity of the work. The Authority Representative shall be informed in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES of the proposed haul routes prior to the Design-Builder's securing a permit from the local government.
 - (8) Siting of stationary equipment shall be subject to approval in accordance with SECTION 01520 CONSTRUCTION FACILITIES.
3. Definitions: The following definitions will be used in differentiating mobile equipment from stationary equipment:
- a. Mobile construction equipment: Any automotive vehicle powered by an internal combustion engine or electric drive which is capable of being operated as a vehicle either on the construction site or in the public right-of-way. Under the Maryland Transportation Act, a vehicle means any device, in, on, or by which any individual or property is or might be transported or towed on a highway.
 - (1) Construction equipment is mobile equipment any time it is operated in an automotive mode when performing construction tasks. Such equipment includes compactors, paving machines, front-end loaders, back hoes, scrapers, pavers, ditchers, and trucks.

(2) Some construction equipment while in transit may have the characteristic of mobile equipment, but for the purposes of this definition are not to be so considered. Such equipment includes generators, power shovels, cranes, pile drivers, drilling rigs, concrete mixers, pumps, trash compactors, bar benders, and other similar truck-mounted devices.

b. Stationary construction equipment: Any device tool, or other mechanical system powered by an internal combustion engine, pneumatic engine, or electric motor which does not employ any of the above power sources for automotive propulsion for more than ten minutes out of every working hour while engaged in construction tasks. Examples of such equipment include truck-mounted compressors, generators, power shovels, pile drivers, cranes, drilling rigs, concrete mixers, pumps, trash compactors, bar benders, augers, and other similar truck-mounted devices.

1.04 CONSTRUCTION VIBRATION CONTROL

The Design-Builder shall not cause or permit, beyond the property line of a source, vibration of sufficient intensity to cause another person to be aware of the vibration by such direct means as sensation of touch or visual observation of moving objects. The observer shall be located at or within the property line of the receiving property when vibration determinations are made. Prepare and submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, a plan indicating monitoring locations, including the timing of monitoring measurements to be taken at the construction site boundaries and at nearby residential, commercial and industrial property lines.

1.05 HISTORICAL AND SCIENTIFIC SPECIMENS

Articles of historical or scientific value, including, but not limited to, coins, fossils and articles of antiquity which may be uncovered by the Design-Builder during the progress of the work shall become the property of the Authority. Work in the area where discovered shall cease and such findings shall be reported immediately to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES who will determine the method of removal, where necessary, and the final disposition thereof.

1.06 EXPLOSIVES

A. The use of explosives for the performance of Contract work will not be permitted.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

SECTION 01180

PROJECT UTILITY SOURCES

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the Design-Builder's responsibilities regarding site utilities including its interface with utility companies and agencies.

1.02 RELATED DOCUMENTS

Section 00739, General Conditions - Protection of Existing Vegetation, Structures, Utilities and Improvements

Section 01111, General Requirements - Summary of Work Requirements: Key Design-Builder Functions

Section 01112, General Requirements - Summary of Work Requirements: Design Requirements and Program Criteria

Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

1.03 UTILITIES AND AGENCIES

The Design-Builder is responsible for coordination, treatment and design of all utilities or properties owned or controlled by utilities or agencies. An active effort must be made by the Design-Builder as early in the design as possible to coordinate with all affected utilities and agencies to determine their current standards. The Design-Builder shall generate a new drawing(s) reflecting the latest standards and code requirements.

1.04 SUBMITTALS

A. The Design-Builder shall submit sets of Drawings and Specifications to those Utilities and Agencies affected by the design as required by the following paragraphs:

1. Drawings, standards and specifications, which have been previously coordinated with the Authority and with private and public utility companies and Agencies, shall be submitted for utility and Agency formal approval subsequent to the incorporation by the Design-Builder of the Utility and Agency review comments and of the Authority's review comments as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Six paper copies and one electronic copy of the Drawing set and/or Specifications resubmission required to obtain this formal approval shall be provided to the Authority when request is made for final approval by the Utility and Agency.
2. All transmittals and requests to Agencies and Utilities for approvals, reimbursable estimates and other data shall indicate the submittal stage. The Design-Builder shall provide the Authority with six paper copies and one electronic copy of all transmittal letters and other communications and replies thereto as each is sent to or received from a Utility or Agency as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
3. The Utilities and Agencies noted below shall be provided with the following number of copies of review submittals:

- a. (6) copies of each of the composite utility plans,
 - b. (6) copies of each of the appropriate individual utility plans and profiles (including interior potable water, sanitary sewer and mechanical plumbing plans for WSSC),
 - c. (6) copies of all pertinent sections of the specifications,
 - d. (6) copies of index sheets, key plans and general information drawings as appropriate. Key (location) plans for each discipline will not be developed, three or four key plans covering several disciplines each shall be prepared.
4. The Utilities and Agencies listed hereinafter may not be inclusive, and the Design-Builder shall recommend any additional agencies/utility companies as appropriate. The Design-Builder shall determine all affected utilities including but not limited to the following agencies or their successor agencies as general guidelines:
- a. Verizon (D.C., Md.)
 - b. Western Union Telegraph Company (D.C. Relocation of Telegraph Lines).
 - c. Washington Gas (D.C. Relocation of Gas Lines; Md.).
 - d. Baltimore Gas and Electric (Md. ROW).
 - e. PEPCO (D.C. Relocation of Electric Lines, ROW, Permanent Connections to System; Md. Permanent Connections to System;).
 - f. NOT USED
 - g. WSSC (Montgomery Co. & Prince George's Co.).
 - h. District of Columbia Water and Sewer Authority (D.C.).
 - i. Comcast (Prince George's Co.).
 - j. NOT USED
 - k. District Cablevision (D.C.).
 - l. Montgomery Cable TV (Montgomery Co. Relocation of Cable Lines).
 - m. Metrovision of Prince George's County (Prince George's Co.).
 - n. Plantation Pipeline Company (D.C., Md. ROW).
 - o. Transcontinental Gas Pipeline Corp. (Montgomery Co. Relocation of Lines around WMATA ROW)
 - p. NOT USED
 - q. Williams Telecommunications Group.
 - r. U.S. Sprint Communications Company.
 - s. American Telephone & Telegraph Co. (D.C.; Md.; Va. Relocation of Phone Lines).

- t. MCI Communications.
 - u. Columbia Gas Transmission Corp.
 - v. Lightnet (Prince George's Co. Relocation of Cable Lines).
 - w. U.S. Army Engineer District (D.C.).
 - x. NOT USED
 - y. Police Alarm and Call Boxes.
 - z. Any other identified utility owner (cable, fuel lines, etc.) whose facility will be affected by the construction.
5. Confirmation of approval by the affected Utility or Agency of the treatment, design and standards must accompany the submittal to the Authority of the Final Design Drawings and Final Design Specifications as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

PART 2 PRODUCTS

2.01 APPROVED PRODUCTS

All products to be utilized on any utility shall be as approved by that utility.

PART 3 EXECUTION

3.01 DESIGN, CONSTRUCTION AND MAINTENANCE OF UTILITY FACILITIES

- A. All work performed by the Design-Builder on any utility, if any, shall be performed in accordance with the requirements of that utility and the full knowledge of the Authority Representative.
- B. Indicate in the Design Drawings where utilities will perform design, construction and maintenance of their facilities in relation to this Contract. Provide the engineering design as specified for facilities owned by utilities including service connections, facility modifications and relocations as applicable.
- C. Provide the Utilities with detailed Shop Drawings for utility connections and special facilities during construction.

END OF SECTION

THIS PAGE NOT USED

SECTION 01250

CONTRACT MODIFICATION PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

This Section specifies procedures for making clarifications and proposals for change, and changes to the contract.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements

1.03 GENERAL

- A. Specific approval must be received from the Authority prior to doing any work which may be considered to be a change to the Contract and for which an equitable adjustment may be requested under Section 00753, CHANGES provisions of this Contract.
- B. Authority Request for Additional Work - NOT USED
- C. Should the Authority determine it to be in their best interest to delete portions of the work from the Contractor's scope, the Design-Builder will be requested to give a credit to the Authority, stating the amount of the equitable adjustment. The offer for the credit shall be documented and directed to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, who, upon approval at the appropriate level, will issue a contract modification.

1.04 TIME AND MATERIALS WORK FOR THE CONSTRUCTION EFFORT

- A. In the event equitable adjustment pursuant to Section 00753, CHANGES provisions of the Contract cannot be agreed to in a timely manner, the Authority reserves the right to order work on a time and materials basis as specified in Section 00755, ACCOUNTING AND RECORD KEEPING. When work is ordered under this Section and notwithstanding the provisions of other Sections, compensation for the work shall be determined as hereinafter provided and shall constitute the total compensation to be paid for the changes to the work. The methods, labor, materials and equipment used in the performance of such work shall be subject to the approval of the Authority.
- B. Work performed by or for the Design-Builder: labor, materials, services and equipment shall be furnished by the Design-Builder or by a subcontractor or by others on behalf of the Design-Builder. The Design-Builder will be paid therefor as hereinafter provided, except where agreement has been reached to pay in accordance with Section 1.04 C. below.
 - 1. Labor: The cost of labor used in performing the work, whether the employer is the Design-Builder, subcontractor, or other forces, will be the sum of the following:
 - a. The gross actual wages paid including income tax withholding but not including any employer payments to or on behalf of workmen for health and welfare, pension, vacation,

insurance, and similar purposes.

- b. To the actual gross wages, as defined in Section B.1.a above, will be applied a percentage based upon current applicable labor rates concerning payments made to or on behalf of workmen other than actual wages, which percentage shall constitute full compensation for all payments other than actual gross wages as defined in Section B.1.a above and subsistence and travel allowance as specified in Section B.1.c below. The Design-Builder shall compute a separate percentage for each craft or a composite percentage for all crafts, if so approved by the Authority. All computed percentages shall be submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES to the Authority Representative for approval within 30 days after start of construction work or as directed by the Authority Representative prior to any time and materials work being performed.
 - c. Subsistence and travel allowance paid to such workmen if required by collective bargaining agreements. The charges for labor shall include all classifications through foremen when engaged in the actual and direct performance of the work. They shall not include charges for such overhead personnel as assistant superintendents, superintendents, office personnel, timekeepers and maintenance mechanics.
2. Materials: The cost for materials required for the accomplishment of the work will be delivered cost to the purchaser without mark-up, whether Design-Builder, subcontractor or other forces, from the supplier thereof, except as the following are applicable:
- a. If a cash or trade discount by the actual supplier is offered or available to the purchaser, it shall be credited to the Authority notwithstanding the fact that such discount may not have been taken.
 - b. If materials are procured by the purchaser by any method which is not a direct purchase from and a direct billing by the actual supplier to such purchaser, the cost of such materials, including handling, shall be deemed to be the price to the actual supplier as determined by the Authority Representative.
 - c. If the materials are obtained from a supply or source owned wholly or in part by the purchaser, payment therefor will not exceed the price paid by the purchaser for similar materials furnished from said source on Contract items or the current wholesale price for such materials delivered to the job site, whichever price is lower.
 - d. The cost of such materials shall not exceed the lowest current wholesale price at which such materials are available in the quantities concerned, delivered to the job site, less any discount as provided in Section 1.04 B.2.a. above.
 - e. If the Design-Builder does not furnish in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES satisfactory evidence of the cost of such materials from the actual supplier thereof, the cost shall then be determined in accordance with Section 1.04 B.2.d. above.
 - f. The Design-Builder shall not be compensated for indirect costs and profit on Authority-furnished materials.
3. Equipment: The Design-Builder shall be paid for the use of equipment in accordance with the Contract. The Design-Builder shall furnish in accordance with Section 01330, DESIGN AND

CONSTRUCTION SUBMITTAL PROCEDURES all data which might assist the Authority in the establishment of such rates.

- a. Operators of equipment will be paid under Section 1.04 B.1. above.
 - b. Small tools (defined as equipment less than \$2,000 in acquisition costs) are computed at a maximum of five percent of direct base labor wages.
4. Subcontracts: The cost for subcontract work at any tier will be the actual cost to the Design-Builder/subcontractor for work performed by a subcontractor as computed in accordance with Sections 1.04 B.1. through 3. above. For the purposes of this article, subcontractor is defined as an individual, partnership, corporation, association, joint venture or any combination thereof, who contracts with the Design-Builder to perform work or labor or render service on or about the work. The term subcontractor shall not include those who supply materials only. When work paid for on a time and materials basis is performed by forces other than the Design-Builder's organization, the Design-Builder shall reach agreement with such other forces as to the distribution of the payment made by the Authority for such work and no additional payment therefor will be made by the Authority by reason of performance of the work by a subcontractor or by others.
5. To the totals, completed as indicated in Sections 1.04 B.1. through 4., shall be added field office overhead as follows:
- a. If the costs determined above do not exceed \$50,000 and the adjustment in time for Contract performance is ten days or less, the markup shall be computed in accordance with Section 1.05 below.
 - b. In all other cases, the most recent audited daily field office overhead rate will be used.
6. Home Office General and Administrative (G&A) costs will be determined using the most recent audited rate at the time the work was accomplished. A fixed rate of 3 percent will be used in the absence of an audited rate.
7. Profit will be negotiated as provided in Section 1.08 below.
8. A percentage for Design-Builder's bond, not to exceed one percent, may be added.
- C. Special items of work: If the Authority Representative and the Design-Builder, by agreement, determine that either: an item of time and materials work does not represent a significant portion of the total Contract price, or such item of work cannot be performed by the forces of the Design-Builder or the forces of any of its subcontractors, or it is not in accordance with the established practice of the industry involved to keep the records which the procedure outlined in Section 1.04 B. above would require, charges for such special time and materials work item may be made on the basis of invoices for such work without complete itemization of labor, materials and equipment rental costs. To such invoiced price, less a credit to the Authority for any cash or trade discount offered or available, whether or not such discount may have been taken, will be added a negotiated amount not to exceed five percent of the discounted price, in lieu of the negotiated lump sum not to exceed the percentages provided for in Section 1.04 B. above.
- D. Records: The Design-Builder shall maintain its separate records in such a manner as to provide a clear distinction between the direct costs of work paid for on a time and materials basis and the cost of other operations.

1. The Design-Builder shall prepare, and furnish to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the original and six copies and one electronic copy of report sheets of each day's work paid for on a time and materials basis the day after such work was performed. The daily report sheet shall itemize the materials used, and shall cover the direct cost of labor and the charges for equipment rental, whether furnished by the Design-Builder, subcontractor or other forces, except for charges described in Section 1.04 C. above. The daily report sheet shall provide names or identifications and classifications of workmen, the hours worked, and also the size, type and identification number of equipment, and hours operated.
 2. Material charges shall be substantiated by valid copies of vendor's invoices. Such invoices shall be submitted with the daily report sheets, or if not available, they shall be submitted with subsequent daily report sheets in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Should said vendor's invoices not be submitted within 60 days after the date of delivery of the material or 15 days after acceptance of the work, whichever comes first, the Authority reserves the right to establish the cost of such materials at the lowest current wholesale prices at which such materials are available in the quantities concerned delivered to the location of the work less any discounts provided in Section 1.04 B.2.a. above.
 3. Said daily report sheets shall be signed by the Design-Builder or its authorized agent.
 4. The Authority Representative will compare the Authority's records with the Design-Builder's daily report sheets, make any necessary adjustment, and compile the costs of work paid for on a time and materials basis on daily time and materials work report forms furnished by the Authority. When these daily reports are agreed upon and signed by both parties, they shall become the basis of payment for the work performed, but shall not preclude subsequent adjustment based on a later audit. The use of any specific Authority form, such as Form C-113, to segregate change order costs does not, in and of itself, invoke the provisions of this Section 1.04 or other provision of this Contract.
- E. Payment: Payment as provided in Section 1.04 B. and C. above shall constitute full compensation to the Design-Builder for performance of work paid for on a time and materials basis and no additional compensation will be allowed therefore.
- 1.05 EQUITABLE ADJUSTMENT FOR MINOR CONTRACT MODIFICATIONS FOR THE CONSTRUCTION EFFORT
- A. When the Authority and Design-Builder agree to an additive or deductive amount for a modification to this Contract made pursuant to this Contract when the fair and reasonable price in aggregate amount does not exceed \$50,000, and further agree to an adjustment in the time for Contract performance resulting from said modification which increases or decreases the completion date 10 or less calendar days, the equitable adjustment in Contract amount shall consist of the sum of the following:
1. Direct labor, material and equipment costs as agreed to by the Authority and Design-Builder (small tools, defined as equipment less than \$2,000 in acquisition costs, are included in equipment costs and computed at a maximum of five percent of direct base labor wages.)
 2. Job Office Overhead costs, the sum of which shall be limited to a maximum of 10 percent of direct labor costs, including fringe benefits, but excluding FICA, FUTA, and State

Unemployment Insurance (SUI); a maximum of 10 percent of direct material costs; a maximum of five percent of direct equipment costs (including small tools); and a maximum of five percent of subcontract costs.

3. Home Office General and Administrative (G&A) costs are computed using the most recent audited rate, or a fixed rate of three percent in the absence of an audited rate.
 4. Profit will be determined in accordance with the guidelines specified in Section 1.07 below.
- B. In using the above rates, the following shall apply:
1. Payroll Tax (FICA, FUTA & SUI) amounts are added immediately after direct and indirect costs are totaled.
 2. Subcontractors' indirect costs and profit shall be computed in the same manner as above.
 3. Indirect costs shall not be duplicated in direct costs.
 4. When the Contract time is increased, the change in Contract amount for direct and indirect costs computed by application of the above rates includes costs of impact and extended performance due to the time extension and no further consideration of costs arising from the specific modification and cited pending change orders (PCO's) will be given. The Design-Builder shall not receive both a percentage and a daily rate markup for job office overhead costs when a time extension to the Contract Performance Period is recognized.
 5. Bond costs will be allowed at actual cost without markup.
- C. Equipment Rates shall be determined from prior Authority audits. In the absence of audited rates for equipment owned or controlled by the Design-Builder, hourly rates shall be computed in the same fashion as described in 1.08 D.

1.06 COST OR PRICING DATA

- A. The Design-Builder shall submit to the Authority Representative, either actually or by specific identification in writing in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the original and six copies and an electronic copy of cost or pricing data under the conditions described in this Paragraph and certify that, to the best of the Design-Builder's knowledge and belief, the cost or pricing data submitted is accurate, complete and current as of the date of execution, which date shall be as close as possible to the date of agreement on the negotiated price of the Contract modification. The cost or pricing data shall be submitted at the time the Design-Builder submits its proposal for the pricing of any modification to this Contract, whether or not cost or pricing data was required in connection with the initial pricing of the Contract, when the modification involves aggregate increases and/or decreases in costs plus applicable profits expected to exceed \$100,000, or less at the discretion of the Authority.
- B. The submittal of certified cost or pricing data shall not be required if the price is based on adequate price competition, established catalog or market prices of commercial items sold in substantial quantities to the general public, or prices set by law or regulation. The Design-Builder agrees that the terms "adequate price competition" and "established catalog or market prices of commercial items sold in substantial quantities to the general public" shall be determined by the Authority in accordance with the guidelines as set forth in Subpart 15.8 of the Federal Acquisition Regulations

(48 CFR 15.8).

- C. Cost or pricing data consists of all facts existing up to the time of agreement on price which prudent buyers and sellers would reasonably expect to have a significant effect on the price negotiations for the modification. The definition of cost or pricing data embraces more than historical accounting data; it also includes, where applicable, such factors as subcontractor, supplier and vendor quotations, nonrecurring costs, changes in construction methods, unit cost trends such as those associated with labor efficiency and any management decisions which could reasonably be expected to have a significant bearing on costs under the proposed modification and the Contract work. Cost or pricing data consists of all facts which can reasonably be expected to contribute to sound estimates of future costs as well as to the validity of costs already incurred. Cost or pricing data, being factual, is that type of information which can be verified. Because the certificate pertains to cost or pricing data, it does not make representations as to the accuracy of the Design-Builder's judgment on the estimated portion of future costs or projections. The certificate does however, apply to the data upon which the Design-Builder's judgment is based.

1.07 PAYMENT FOR USE OF EQUIPMENT

- A. The following methods of determination of equipment costs shall apply to all adjustments to Contract prices arising under the provisions of the Contract except for Section 00730, TERMINATION FOR CONVENIENCE OF THE AUTHORITY provisions thereunder.
- B. Allowable ownership and operating expense for construction plant and equipment in sound workable condition, owned by the Design-Builder, Joint Venture, Partnership, organizations under common control, and any equipment under lease purchase or sale-lease back agreements, will be paid for at hourly rates applicable to the performance period, published in the Rental Rate Blue Book for Construction Equipment (Blue Book) by PRIMEDIA Information, Inc., by applying the following formula: the Regular Hourly Rate shall be 75 percent of the sum of the monthly rate (area adjustment map not used) divided by 176 and the estimated operating cost per hour. Regular Hourly Rate shall be full compensation for equipment ownership and operating expenses and shall include the cost of fuel, oil, lubricants, supplies, spare parts, repairs and maintenance, major overhauls, mechanics and servicing labor, depreciation, storage, insurance, interest, taxes, record keeping and all incidentals. The cost of equipment operators is not included. For forward pricing, the Blue Book rates in effect at the time of negotiations shall apply. For retrospective pricing, the Blue Book rates in effect at the time the work was performed shall apply. Manufacturers ratings and manufacturer approved modifications shall be used to classify equipment for the determination of the Regular Hourly Rate.

The hourly rates are calculated as shown in the following example:

	Regular Hourly Rate	Multi-Shift Hourly Rate	Standby Hourly Rate
Monthly \$	\$6,070.00	\$6,070.00	\$6,070.00
Divided by	176	176	176
Monthly \$	\$34.49	\$34.49	\$34.49
Estimated	18.20	18.20	18.20
Subtotal	52.69	52.69	52.69
Rate	75%	75%	75%
Subtotal	39.52	39.52	39.52
Status	100%	60%	40%
Total Rate	\$39.52	\$23.71	\$15.81

1. For Design-Builder owned equipment as identified in Paragraph B., the first eight (8) hours, or fraction thereof, usage in any one day shall be paid for at the Regular Hourly Rate and any additional time in excess of eight (8) hours, shall be considered to be an additional shift, or fraction thereof, and shall be paid for at 60 percent of the Regular Hourly Rate. Standby time, if authorized by the Authority Representative, will be paid for at 40 percent of the Regular Hourly Rate. Standby time shall be limited to the regular eight hour shift and shall not exceed 40 hours in a week. Any usage time less than 30 minutes shall be considered to be one half hour.
2. For third party rented equipment the Authority will accept rental rates actually paid and substantiated by certified reproduced copies of invoices or bills. Such invoices or bills shall indicate the amount of operating expenses and/or operator wages and fringes, if any, included in the rental rate. In no case shall the bare rental rate per hour (operating expense, and/or operator wages and fringes not included) exceed the appropriate Regular Hourly Rate. Where required, the operating costs per hour will be agreed upon between the Design-Builder and the Authority using operating costs per hour from the Blue Book for the same or similar equipment.
3. When approved by the Authority Representative, use of equipment not listed in the Blue Book shall be permitted. An equitable hourly rate for such equipment shall be established by the Authority Representative based on Design-Builder furnished cost data and basic information concerning the equipment submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Information required to determine rates includes, but is not limited to, manufacturer, year, size, model, serial number, capacity, and weight. This information shall be furnished to the Authority Representative prior to the use of the equipment. Authority shall be granted audit access to verify information related to or pursuant to this Section.
4. The Regular Hourly Rate does not include "move-in" and "move-out" costs.
5. These equipment rates shall apply to equipment in sound workable condition. The equipment shall be of approved size and capacity to provide normal output or production required for the work to be done. Equipment not meeting these requirements may be used only with the Authority Representative's approval and at agreed, reduced rates. Usage time or standby time will not be allowed while equipment is inoperative due to breakdown and such equipment shall be removed from the jobsite at the direction of the Authority Representative.

C. Items of equipment with an acquisition cost of \$2,000 or less shall be considered as small tools.

D. Equipment costs that are paid under the equipment use rate shall not be duplicated in the Design-Builder's other direct or indirect costs.

DISPUTES REVIEW BOARD PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

This Section is inserted into the Contract by mutual agreement of the parties, and specifies the processes relating to the use of a Disputes Review Board.

1.02 RELATED DOCUMENTS

Section 00732, General Conditions, Dispute Resolution
Section 00832, Supplementary Conditions, Disputes Review Board Requirements
Three-Party Agreement

1.03 FORMATION OF A BOARD

A Disputes Review Board (DRB) shall be established when the parties to this contract can not resolve disputes or issues by negotiations or mutual agreement. The DRB shall consist of one member selected by the Authority, one member selected by the Contractor, and a third member, who shall be the chairperson, selected by the first two members. The selection of qualified DRB members shall be made in accordance with the Authority's Disputes Review Board Rules and Procedures, as amended.

1.04 RULES AND PROCEDURES

- A. All DRB members shall have substantial experience with the type of work involved in this Contract and in the interpretation of construction contract documents. The goal in selecting the chairperson is to complement the experience of the first two members, thus furnishing technical as well as administrative expertise that will facilitate the DRB's operations.
- B. The specific qualifications and requirements for membership on the DRB shall be as follows:
1. The candidate member shall have commensurate formal/technical education and experience in one or more of the fields of construction, engineering, or architecture.
 2. Except for payment of services as a DRB member, excluding fee-based consulting services on other projects, or for roles identical or similar to DRB membership, [1] no voting DRB member shall have a) employment with, an ownership interest in, or existing business or financial relationship with, any party to the Contract including designers and other consultants; or b) a financial interest in the Contract; and [2] no voting member shall have been employed by any party to the contract within one year prior to award of the contract.
 3. No voting DRB member shall have been or be involved directly or indirectly, in the management or administration of the Contract, or have had any prior involvement with the

Contractor (or a company with a substantial role with the Contractor) or in the Washington Metropolitan Area Transit Authority's Rail Capital Construction Program of a nature that could compromise her/his ability to impartially review disputes.

4. During the term of membership on the DRB, no discussion of or agreement for employment after the Contract is completed shall occur or be made between any DRB member and any party to the Contract.
- C. Before their appointments are made, the first two DRB candidate members shall submit complete disclosure statements for review and acceptance by the Contracting Officer and the Contractor. Each statement shall include [a] resume of experience and education; [b] a detailed description of all past, present, and planned future relationship(s) to the Authority's Rail Capital Construction Program or with any party involved in the Contract, including any fee-based consulting services on any other projects; and [c] certification that the prospective member meets the qualifications set forth above. The chairperson shall supply such a disclosure statement to the first two DRB members and to the Contracting Officer and the Contractor before his/her appointment as chairperson is approved and finalized.

1.05 SELECTION OF MEMBERS

- A. WHEREAS, the BOARD is composed of three members. Each party selects one member, and these two members select the third member who is designated as the "Chairman" of the DRB.
- B. The third member of the DRB shall be an impartial and qualified chairperson who shall be selected and mutually agreed upon by the first two members within 15 calendar days after the first two members' appointments are finalized. If the two designated DRB members cannot agree on a chairperson within the 15-day period, the chairperson shall be selected within 10 calendar days thereafter by mutual agreement of the Contracting Officer and the Contractor.
- C. The Contracting Officer and the Contractor shall negotiate with each of the three members of the DRB on the terms and conditions of salary and reimbursable costs for travel, conference facilities, clerical services, mailings, and copying. All costs are to be initially borne by the Design-Builder for payment purposes. The Authority will pay the Contractor for 50 percent of the incurred cost of the DRB up to the allowance specified in the Contract Modification (to be issued). If the agreed cost exceeds the allowance specified on the Contract Modification, the Authority will reimburse the Contractor 50% of the cost over the Contract Modification amount.

Fees for each member of the DRB shall be commercially reasonable and shall be no greater than the fees charged to the DRB member's most favored customer for similar work. Billing procedures and the fees for travel, per diem and reimbursable items shall be prudent and consistent with practices given most favored customers.

- D. Each voting DRB member shall be appointed for the life of the Contract. Forty-five calendar days prior to the yearly anniversary of the appointment of the chairperson, the Contracting Officer and the Contractor shall review the performance of the DRB, individually and as a group. Either the Contracting Officer or the Contractor may elect to replace any voting member of the DRB, except that in the case of the chairperson, both the Contracting Officer and the Contractor must agree

on replacement. Action to appoint a replacement must start immediately and follow the same procedure as for initial appointment, except that the appointment must be made prior to the yearly anniversary date of the appointment of the chairperson.

- E. If an election by either party to replace a member is not made in a timely manner, the DRB shall continue for another 12-month period before any replacement is made. If a member of the DRB cannot continue or voluntarily seeks to leave the DRB, the new member shall be appointed in the same manner in which the original appointment had been made.
- F. Any DRB member to be replaced shall, in conjunction with the remaining DRB members, complete consideration of any dispute pending before the DRB at the time the decision to replace is made. The DRB shall make appropriate rules to handle such disputes during the transition period. In the case of an incapacitated member, or of a member who voluntarily leaves the DRB, all disputes will be put in abeyance until the replacement DRB member has been appointed.

1.06 OPERATION OF THE BOARD

- A. The DRB shall formulate its own rules of operation which shall be provided in writing to the Authority Representative and the Contractor. The entire process may be kept flexible and any portion of the process may be changed to adapt to individual circumstances presented by a particular dispute. The DRB may initiate on its own or in consultation with the Authority Representative and the Contractor new rules or modifications to existing rules, whenever the DRB deems it appropriate.
- B. The DRB members shall keep abreast of industry developments and the progress of the work. The Authority Representative and the Contractor shall copy the DRB on periodic progress reports that have been jointly signed by the Authority Representative and the Contractor or special written progress reports no less often than once a month.
- C. The DRB members may, at their discretion, visit the job site as often as it deems necessary.

1.07 HEARING PROCEDURES

- A. DRB hearings shall be conducted at the jobsite, the Authority offices, or in the Washington Metropolitan Area.
- B. The DRB may request the Authority Representative and the Contractor to produce documents and/or exchange documents prior to any hearing. The DRB may also request the Authority Representative and the Contractor to produce documents and/ or witnesses at a hearing. Either party's failure to comply with the DRB's request may be taken into consideration by the DRB in reaching a decision.
- C. The DRB has the authority to conduct hearings and reach decisions in the manner the DRB deems most appropriate. The DRB has the authority to impose appropriate rules and procedures for the conduct of its hearings. However, such rules and procedures should be informal and, except for the conduct of an orderly hearing, should not exclude any member from the Authority's or Contractor teams.

- D. The DRB chairperson shall be responsible for directing the course of the hearings. The DRB shall follow its own rules of presentation and shall not be bound by the judicial rules of evidence. Documents and testimony concerning the dispute shall be presented in the order, manner, and degree of detail the DRB deems most efficient and probative. Each party shall be allowed to make a brief initial presentation and to rebut any factual assertion by another party until the DRB determines that all aspects of the dispute have been covered adequately. The DRB may limit the presentation of any documents or testimony the DRB deems not relevant or redundant. In rare circumstances the DRB chairperson may require that the testimony of certain or all individuals be given under oath. The DRB chairperson shall administer the oath.

1.08 FINDINGS AND RECOMMENDATIONS

- A. The DRB shall meet in private at the conclusion of the dispute hearing. All deliberations by the DRB shall be kept confidential except for the findings and recommendations. The DRB shall make a concerted effort to reach a unanimous decision. The DRB shall base its findings and recommendations on the Contract provisions and documents, law, statutes and regulations deemed by the DRB to be applicable, considering all facts and circumstances of the dispute. The DRB's findings and recommendations are to be set forth in the following format:

DISPUTES REVIEW BOARD FINDINGS AND RECOMMENDATIONS

I. INTRODUCTION

This Article shall contain the following information:

- Name, Number, and Notice-to-Proceed Date of Contract
- Dispute Title and Specific Number
- Dispute Hearing Conclusion Date and Location
- Attachment Number(s) or Exhibits, if any
- General Scope of the Contract
- General Contract Background information, as appropriate to facilitate the parties' understanding

II. STATEMENT OF DISPUTE

This Article shall include a description of the dispute(s) presented by claimant and/or counter-claimant. It should set forth each element of the relief requested (e.g., adjustment to Contract time and/or price) and the basis of each claim and difference advanced by the parties. In general this Article should be a brief summation of the dispute, and the basis for bringing forward the dispute and the basis on which the initial claim was denied.

III. FINDINGS AND ANALYSIS

This Article shall include the DRB's findings on (a) each element of the entitlement constituting an adjustment in Contract price, (b) each element of time constituting an adjustment in Contract time, and (c) each element of any other relief requested by the parties. This Article shall provide the analysis of and justification for the following Article IV,

RECOMMENDATIONS, and shall include references to all contractual, statutory or other applicable authority supporting the DRB's findings. This Article shall also address the DRB's conclusion as to the relative merits of each parties' position. Nothing in the foregoing shall be construed as the DRB being expected to produce a legal brief or detailed estimate of cost and time. However, this Article shall be detailed enough to provide both parties with sufficient information to act on the DRB's recommendation(s) contained in the following Article IV.

IV. RECOMMENDATION(S)

This Article shall contain the DRB's specific recommendation(s) for resolution of the dispute. The recommendation(s) shall be consistent with the findings and analysis in Article III, FINDINGS AND ANALYSIS.

V. DISSENTING OPINION

This Article shall contain any dissent to the findings and recommendations, in whole or in part. The dissenter shall be identified. Any dissent shall explain the dissenting member's reasons for disagreeing with the findings and recommendations, in whole or in part, made by the majority of the DRB.

- B. Within 60 calendar days after the close of the hearing, the DRB shall issue draft findings and recommendations, to the Authority and the Contractor. Within 14 calendar days after receipt of the draft findings and recommendations each party shall independently notify the DRB in writing of any calculation or other errors or omissions in the draft. Within 14 calendar days after receipt of the parties' responses to the draft, the DRB shall forward its final findings and recommendations to the Authority and the Contractor simultaneously.

1.09 ADMINISTRATIVE CLOSING

Either party may reject the recommendation(s) of the DRB issued pursuant to Article 1.08 of this Section all or in part in the resolution of a dispute or disputes. If the Contractor rejects the DRB recommendation, the Contractor shall request a final decision of the Contracting Officer pursuant to General Provisions Article 11, DISPUTES. The request for a final decision shall be accompanied by a full explanation as to basis for the rejection of the DRB recommendation(s). In the event of a rejection by the Authority, the Contracting Officer shall support the basis of the rejection by findings of fact which shall provide a full explanation for the basis of rejection, subject only to appeal as provided by General Provisions Article 11, Disputes.

SECTION 01290

PAYMENT PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

This Section specifies procedures for submitting applications for payment.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements

1.03 DETERMINATION OF PROGRESS

- A. Independent of progress payments pursuant to payment provisions of the Contract in Section 00749, METHOD OF PAYMENT, progress schedules prepared under the requirements of the Contract in Section 01322, CONTRACT PROGRESS REPORTING, shall provide as schedules progress for only 50 percent of the estimated invoiced cost of materials or equipment delivered to the site but not incorporated in the work as of the time of the scheduled delivery thereof.
- B. In determining progress accomplished, the Authority will allow as an element of work accomplished, i.e., progress toward completion, only 50 percent of the invoiced cost of materials or equipment delivered to the site but not incorporated in the construction up to the time the materials or equipment are actually incorporated in the work.

1.04 BASIS OF PAYMENT

The basis of payment will be the Total Base Proposal Price, and including, if applicable, any Options exercised, which shall constitute complete compensation for performance of all work required by the Contract.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 PROGRESS PAYMENT PROCEDURES

- A. The mutually agreed to Progress Report as specified in Section 01322, CONTRACT PROGRESS REPORTING shall be the basis for progress payments to the Design-Builder.
- B. The Design-Builder shall submit the original and necessary paper copies as directed and an electronic copy of the approved final monthly update of the Initial 90-Day Schedule or the Monthly Progress Report as specified in Section 01322, CONTRACT PROGRESS REPORTING and of the approved QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification stating that the Quality System has effectively ensured that the items requested for payment have been designed or constructed to meet the design requirements, or have been inspected and tested as required to comply with Contract requirements including those of the Quality Management System as specified in Section 01470, QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION, reflecting the outcome of the Preliminary and Formal Progress Status Report Review Meetings as specified in Section 01312, PROGRESS MEETINGS, along with the Monthly Progress Payment Schedule within seven calendar days after the last day of the Design-Builder's last pay period of the month. Upon receipt of the Monthly Progress Status Report, the Authority will approve the processing of the Monthly Progress Payment.

- C. The approved final monthly update of the Initial 90-Day Schedule or the Monthly Progress Report and Quality Certification shall include the following:
1. The Monthly Design Progress Report or CPM Status Progress Report specified in Section 01322, CONTRACT PROGRESS REPORTING as applicable.
 2. QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification as specified in Section 01470, QUALITY SYSTEM.
- D. The supporting narrative shall include the following:
1. A description of activities in progress as of the data date with originally scheduled start dates, actual start dates, percent complete, and projected completion dates noted for each activity.
 2. A description of activities completed during the report period with the originally scheduled and actual start dates and the scheduled and actual completion dates noted for each activity.
 3. A description of activities planned to start during the next report period with the originally scheduled and planned start dates for each activity noted.
 4. A discussion of activities which are behind schedule including the reasons for the delay and the corrective actions planned or implemented to get back on schedule.
 5. A list of approved revisions to the approved Schedules with the reason for each revision/change noted.
 6. The status of the Contract Milestone Dates.
 7. A listing of Actual or Potential Problems, their causes, and impact on any critical path/activity, and proposed solutions.
- E. When so directed, the Design-Builder shall revise/change the approved Monthly Progress Report(s) to reflect changes in the Design-Builder's planned sequence of work or to reflect scope of work, and or time changes included in any Contract modification(s). All such revisions/changes will be shown only after approval by the Contracting Officer.
1. If it becomes apparent that minor logic changes and or activity additions to the approved Monthly Progress Reports could be advantageous to one or both parties, the Design-Builder may propose such changes and/or additions. If the Authority approves, the Design-Builder shall submit a revision/change to the Monthly Progress Reports in the same form and format as the originally approved Monthly Progress Reports, including a narrative explanation of the changes/revisions, and a tabulation of estimated monthly and cumulative earnings to completion of the Contract.
 2. If the Design-Builder's Monthly Progress Report does not, based on the Authority's decision, accurately reflect the value and status of the work completed to date and is not in accordance with the Contract requirements, progress payment will not be made until a correct report has been submitted and approved.
- F. Final Payment Request shall be submitted in accordance with Section 00749, METHOD OF PAYMENT, Section 01770, CLOSEOUT PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS.

Safety Rules and Procedures Manual

Metro rail Safety Rules and Procedures Handbook

1.03 PROJECT MANAGEMENT PLAN

The Design-Builder shall prepare a Comprehensive Updated Project Management Plan (PMP) that describes its approach to the Design, Construction and Systems Installation and Integration work. The updated PMP shall follow the outline submitted with its Technical Proposal as specified in Section 00204 and as finally accepted in Section 00491, which corresponds to revision 0 of the PMP, and expand the information contained in that Initial PMP. The updated PMP shall include the addition of appropriate charts, narratives, Plans and other requested information to describe the organization, relationships and responsibilities of project management. The original, six paper copies and one electronic copy of the Updated PMP shall be submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, 10 calendar days after Award. Some of the components of the comprehensive PMP are more fully described in Section 00321, GEOTECHNICAL INFORMATION, Section 00701, DEFINITIONS, Section 00707, PERMITS AND RESPONSIBILITIES, Section 00708, RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN-RELATED SERVICES, Section 00722, QUALITY CONTROL/QUALITY ASSURANCE, Section 00744, PROTECTION OF PERSONS AND PROPERTY, Section 00753, CHANGES, Section 00844, SAFETY SUPERINTENDENCE REQUIREMENTS, Section 01110, SUMMARY OF WORK, SECTION 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS, Section 01250, CONTRACT MODIFICATION PROCEDURES, Section 01260, DISPUTES REVIEW BOARD if applicable, Section 01290, PAYMENT PROCEDURES, Section 01410, REGULATORY REQUIREMENTS, Section 01420 REFERENCES, Section 01470, QUALITY SYSTEM,

and Section 01520, TEMPORARY CONSTRUCTION FACILITIES. The PMP shall be revised for major changes in organization or approach to the work as necessary during the progress of the work and specifically for safety program plans as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS and for quality management plans as specified in Section 01470, QUALITY SYSTEM.

- A. Updated Overview/Executive Summary: Provide a narrative detailed Overview of the Project Control and Management System to be utilized for this Project. Identify critical areas, method of problem resolution, lines of communications and responsibility. Detail the overall management strategy for accomplishing all aspects of the required work. The Design-Builder shall demonstrate understanding of the management techniques required for proper implementation and control of the work.
- B. Updated Organization: Provide a project organizational chart including a definition of the responsibilities shown therein. Show how this project management structure fits into the corporate management structure. Show the limits of authority and lines of authority of personnel to be assigned to the Contract. Include information regarding the positions they will fill and the percentage of time they are expected to devote to the work. In addition, identify who is responsible for project staffing, coordination with the Authority, jurisdictional inspectors/authorities and others, integrating design and construction aspects of the work, etc. Define who makes all major decisions pertaining to the overall project, including project staffing for design and construction management and who makes all day-to-day decisions. Identify who is the: Architect of Record, Structural Engineer of Record, Civil Engineer of Record, Electrical Engineer of Record, Mechanical Engineer of Record, and Systems Engineer of Record.
- C. Updated Project and Program Management and Control:
1. Subcontractor Management: Provide a narrative of procedures for coordinating, managing and controlling the work and the work of subcontractors: Identify who is responsible. Identify who reviews and approves subcontractor designs. Identify who reviews and approves subcontractor submittals. Identify who inspects and accepts subcontractor construction/installation work. Identify who reviews, verifies and approves subcontractor requests for equitable adjustment in subcontract price and period of performance. Identify who coordinates with the Authority, jurisdictional inspectors/authorities and others. Identify persons responsible for the procurement of construction materials and Systems equipment to be installed and for securing construction equipment to be utilized for the construction/installation, and include plans and procedures to ensure timely delivery of materials to achieve project schedule.
 2. Quality Management: Quality Control/Quality Assurance - provide a narrative description of the quality control/assurance organization for this Contract including numbers, qualifications, duties, responsibilities and authority of personnel, as well as, a description of the methods by which the applicable quality requirements of the Contract will be regulated, maintained and monitored. In addition, describe your proposed Quality Control/Quality Assurance (QC/QA) Plans and Quality Program, and the responsible component of each organization involved in this work. Indicate how interfaces between various quality control organizations will be accomplished to ensure compliance with the overall quality control requirements. Identify who monitors all design and construction work for compliance with QC/QA Plans and supervises the design and construction QC/QA Staff. Identify who approves submittals. Identify who performs inspections and documents material/equipment testing. Identify who is responsible for managing and implementing the QC/QA Plans and maintaining contact with the Authority's Representative for the purpose of providing up-to-date, accurate design and construction status with emphasis given to deviations from the Contract Documents. Refer to Section 00722, QUALITY CONTROL / QUALITY ASSURANCE and Section 01470, QUALITY SYSTEM for a

detailed description of required quality management plans including Quality Plan and Proposed Interim Inspection and Test Plans and other quality requirements.

3. **Systems Integration Management:** Identify who is responsible for preparing the Systems Integration Plans. Identify who oversees Systems integration and who is responsible for coordinating the work of the Systems trades. Refer to Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM for a detailed description of system integration management plans including Systems Inspection and Test Plans, Integrated System Test Plan and other Systems Integration requirements.
 4. **Safety Program Management:** Provide the following information regarding your proposed safety program management for this Contract: Narrative of the proposed project safety program that complies with the attachments to the Project Manual; i.e., the WMATA Construction Safety and Environmental Manual as specified in Section 00371, and the Safety and Security Certification Program Plan as specified in Section 00381 and the System Safety Program Plan as specified in Section 00391; and also with the System Safety Certification Program of the Safety Rules and Procedures Manual. Describe who is responsible for enforcement of the safety program. Refer to Section 01114, SAFETY AND ENVIRONMENTAL REQUIREMENTS and Section 00744, PROTECTION OF PERSONS AND PROPERTY for a detailed description of safety plans and requirements and Section 00844, SAFETY SUPERINTENDENCE REQUIREMENTS for a description of Safety Superintendence.
 5. **DBE Program Management if applicable:** Identify who is responsible for assuring that the DBE Program if applicable is in accordance with Authority policy as specified in Section 00453 and 49 CFR Part 23 and that the goals are being met. Refer to SECTION 00453, DBE DATA for a detailed description of DBE requirements and Section 00872 for percentage of DBE participation required, if applicable.
 6. **Design and Construction Management:** Provide description of the design and construction support and project engineering services for furnishing required drawings and other submittals. Identify persons responsible for preparing and approving design drawings, specifications, calculations, working drawings, shop drawings, operation and maintenance manuals, as-built drawings, as-built specifications, etc. Refer to SECTION 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, and Section 01113, SYSTEMS INTEGRATION for a detailed description of Design and Construction Management requirements.
- D. **Temporary Facilities:** Identify who is responsible for janitorial services, trash and snow removal, recycling and equipment repair/maintenance for the Authority Representative's Site Facility and for maintenance of parking areas associated with the AR's Site Facility, temporary access roads and storage/laydown areas as specified in Section 01520, TEMPORARY CONSTRUCTION FACILITIES.
- E. **Contract Administration:** Identify who is responsible for the management of pending change and change orders and payment requests as specified in Section 00753, CHANGES, Section 01250, CONTRACT MODIFICATION PROCEDURES, Section 01260, DISPUTES REVIEW BOARD if applicable and Section 01290, PAYMENT PROCEDURES and of VECP's as specified in Section 00721, VALUE ENGINEERING INCENTIVE.
- F. **Permit and Regulatory Compliance:** Identify who coordinates with the Authority, jurisdictional authorities and others for obtaining permits, approvals, etc. from the entities specified in Section 01410, REGULATORY REQUIREMENTS and Section 01420 REFERENCES and the permits and approvals described in Sections 00321, 00701, 00707, 00708, 01110, 01111, and 01114.

1.04 COORDINATION

- A. Coordinate Design-Build activities included in various Sections of the Specifications to ensure efficient and orderly design and installation of each part of the Work. Coordinate planning, design and construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation. Coordination extends to and includes the interfaces between this and other contracts and existing facilities within the system.
- B. The Design-Builder shall coordinate its construction operations with those of other contractors and entities to ensure efficient and orderly installation of each part of the Work. Each subcontractor shall coordinate its operations with other operations included in different Sections that depend on each other for proper installation, connection, and operation.
1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 2. Coordinate installation of different components with other subcontractors to ensure maximum accessibility for required maintenance, service, and repair.
 3. Make adequate provisions to accommodate items scheduled for later installation.
 4. All work under this Contract shall be performed generally in accordance with the construction sequence and staging and maintenance of traffic requirements shown on the approved detailed plans of the work following a logical sequence developed by the Design-Builder as specified in Section 01530, TEMPORARY CONSTRUCTION and in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
 5. The Design-Builder shall conduct its work in a manner that will minimize interference with the operations of other contractors involved in the performance of related work.
 6. The Design-Builder's particular attention is directed to the fact that both vehicular traffic and pedestrian traffic must be continuously maintained and remain unimpeded at all times throughout the duration of the work at the site(s) as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
 7. A method of staging shall be developed that specifically complies with all requirements pertaining to the maintenance of both vehicular and pedestrian traffic onsite and the use of all approved working and storage/laydown areas. The staging plan shall incorporate and comply with all limitations imposed elsewhere in this Project Manual, and six paper copies and one electronic copy of the staging plan shall be submitted to the Authority Representative for approval, working drawings including comprehensive sequence and staging plans in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. No work shall be started prior to approval by the Authority as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
 8. The Design-Builder's particular attention is directed to the fact that both vehicular and pedestrian traffic must be maintained on the various existing streets within and adjacent to the project site at all times during the duration of the Contract. The Design-Builder is responsible for coordinating access to the site from the public roadways, including, but not limited to, the delivery of all materials by the Design-Builder to the site from public roads. All such use of

public roadways shall be coordinated with the jurisdictional authority(ies). The staging plan shall incorporate and comply with all limitations imposed elsewhere in this Project Manual, and shall be submitted to the Authority Representative for review, and shall also be submitted to the jurisdictional agency(ies) of the area(s) where the work is to be performed, for their (its) approval, working drawings including comprehensive sequence and staging plans in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. No work shall be started prior to approval by the jurisdictional agency(ies) as specified in Section 01530, TEMPORARY CONSTRUCTION and in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.

- C. As necessary, prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings. Prepare similar memoranda for Authority Representative and separate subcontractors if coordination of their Work is required.
- D. The Design-Builder shall coordinate its design and construction activities, through the Authority Representative, with governmental, public and private agencies and others. Such coordination shall include acquiring permits and approvals and attending conferences as may be authorized and required by the Authority. The Design-Builder shall prepare and submit to the Authority Representative within five working days, six paper copies and one electronic copy of a memorandum of record of all such conferences attended. The Design-Builder shall promptly bring to the attention of the Authority Representative, by written notice, any betterments or other work considered to be a change requested by private and public agencies and property owners that have not already been authorized by the Authority.
- E. Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other subcontractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
 - 1. Preparation of Design-Builder's cost-loaded schedules and updates as described in Section 01322, CONTRACT PROGRESS REPORTING.
 - 2. Installation and removal of temporary facilities and controls as described in Section 01500.
 - 3. Delivery and processing of submittals as described in Sections 01330, 01780 and 01820 and elsewhere in this Project Manual.
 - 4. Meetings, as described in Section 01312, PROJECT MEETINGS.
 - 5. Safety, as described in Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS and Safety Management as described in Section 00844.
 - 6. Quality Management as described in Section 01470, QUALITY SYSTEM.
 - 7. Systems Integration as described in Section 01113.
 - 8. Project closeout activities as described in Section 01770, CLOSEOUT PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS .

1.05 CORRESPONDENCE

- A. All correspondence shall be referenced to the Authority Contract number.

- B. Three copies of matters relating to the Contract, change proposals, billings and other matters shall be addressed and sent to the Authority Representative.
- C. Three copies of matters relating to the technical performance of the work and the schedule thereof shall be sent to the Design-Professional and the Authority Representative.
- D. Three copies of correspondence between the Design-Builder and third parties shall be sent to the Authority Representative.
- E. Copies of all correspondence are to be retained by the Design-Builder and forwarded to the Authority Representative as a complete correspondence file at the completion of the Contract as specified in Section 01780, CLOSEOUT SUBMITTALS.

1.06 SUBMITTALS

- A. Project Management Plan: As outlined elsewhere in this Section.
- B. Coordination Drawings / Composite Drawings: Prepare and submit the original and six copies and one electronic copy of Coordination Drawings if limited space availability necessitates maximum utilization of space for efficient installation of different components or if coordination is required for installation of products and materials fabricated by separate entities. Prepare and submit the original and six copies and one electronic copy of Composite Drawings, showing the work of all disciplines, where clearance, coordination, and conflicts among different disciplines may occur. The Coordination Drawings and/or Composite Drawings shall be submitted, in conjunction with the relevant submission to the Authority for use during its review and approval of submittals as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
 - 1. Indicate relationship of components shown on separate Shop Drawings.
 - 2. Indicate required installation sequences.
 - 3. Refer to Division 15 and Division 16 for specific coordination drawing requirements for mechanical, electrical and systems installations.
- C. Staff Names: Submit the original, six paper copies and one electronic copy of a list of principal staff assignments, including Superintendent and other personnel in attendance at Project site at least 30 calendar days prior to the start of any construction work. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home and office telephone numbers. Provide names, addresses, and telephone numbers of individuals assigned as standbys in the absence of individuals assigned to Project. Post copies of list in Project meeting room, in temporary field office, and by each temporary telephone.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

3.01 PERSONNEL

- A. Provide administrative and supervisory personnel as required for proper performance of the Work and additional special personnel required for coordination of operations with subcontractors as

needed. The Design-Builder shall provide personnel for the positions specifically identified by the Authority in this Contract as required Key Personnel (see Section 00204, PROPOSAL INSTRUCTIONS AND EVALUATION FACTORS) and in addition, any other personnel essential for performance of the work as identified by the Design-Builder (see the Design-Builder's TECHNICAL PROPOSAL AS FINALLY ACCEPTED, Section 00491), and for any other positions the Design-Builder deems necessary for the successful execution during performance of the Contract work. The Design-Builder shall confirm the Key Personnel in the verification submittal as specified in 01111, KEY DESIGN-BUILDER FUNCTIONS. Also see Section 00710, PROJECT MANAGEMENT, SUPERINTENDENCE AND KEY PERSONNEL and Section 01111, KEY DESIGN-BUILDER FUNCTIONS for responsibilities of Key Personnel.

- B. If any subcontractor or person employed by the Design-Builder appears to the Authority to be incompetent or careless or to act in a disorderly or improper manner, that person's services in connection with the work shall be immediately terminated upon request by the Authority Representative and that person shall not again be employed on the Work.

END OF SECTION

SECTION 01312
PROJECT MEETINGS

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies administrative and procedural requirements for project meetings, including, but not limited to:
1. Pre-Award Conference
 2. Pre-Design-Build Conference
 3. Design Review Meetings
 4. Pre-Activity Meetings
 5. Progress Meetings
 6. Progress Status Report Reviews
 7. Systems Integration Progress Meetings
 8. Change Meetings
- B. During the term of this Contract, the Design-Builder shall attend meetings and conferences with officials of the Authority, governmental agencies or others interested in the work as may be directed by the Authority Representative. A record of all such meetings or conferences shall be made by the Design-Builder who is responsible for preparing a memorandum stating the place and time of the meeting, the names and identification of those present, and a brief description of the matters discussed and the agreements reached. Comprehensive meeting minutes memoranda shall be prepared immediately after the meeting and original and six copies and one electronic copy shall be submitted within ten (10) calendar days to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

Section 00200, Instructions for Procurement

Section 00700, General Conditions

Section 00800, Supplementary Conditions

Section 01111, General Requirements - Summary of Work Requirements: Key Design-Builder Functions

Section 01112, General Requirements - Summary of Work Requirements: Design Requirements and Program Criteria

Section 01113, General Requirements - Summary of Work Requirements: Systems Integration

Section 01290, General Requirements - Price and Payment Procedures: Payment Procedures

Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination

Section 01322, General Requirements - Administrative Requirements: Contract Progress Reporting

Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

Section 01470, General Requirements - Quality Requirements: Quality System

1.03 PRE-AWARD CONFERENCE

- A. The Authority requires that a pre-award conference with the successful proposer be held prior to the actual award of the Contract. The purpose of the meeting would be to review the successful proposer's understanding of the Contract Documents, contractual requirements prior to award, and the successful proposer's capabilities, financial standing, and past experience.
- B. The pre-award conference will be held in the Washington Metropolitan Area and shall be chaired by the Authority and attended by representatives of the Authority, the successful proposer, and its key personnel nominated for assignment to the Contract, the Design Professional, the Construction Firm, and including major subcontractors if so requested by the Authority. Concerned parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the work described in the Contract Documents.
- C. Agenda discussion items for the meeting may include, but are not limited to, the following:
 - 1. Requirements for acceptability of payment and performance bonds.
 - 2. Requirements for DBE participation.
 - 3. Verification of qualifications of key individuals and subcontractors. The Design-Builder shall not substitute any key personnel and subcontractors identified in its Technical Proposal As Finally Accepted without the written approval of the Authority. The Design-Builder shall provide the Authority with any information as may be reasonably requested regarding any substitution and any proposed substitute will share similar or better qualities than the person or firm substituted for.
 - 4. Requirements for quality assurance/control.
 - 5. Percentage of construction work to be performed by Design-Builder's forces.
 - 6. Verification of successful proposer's experience with similar work, including previous Authority contracts, scheduling capabilities and financial standing.
 - 7. Understanding of work described in the Contract Documents and the physical constraints associated with the work.
- D. Representations and commitments made by the successful proposer or its subcontractors shall be construed as binding to the Contract.

1.04 PRE-DESIGN-BUILD CONFERENCE

- A. The Authority will schedule a pre-design-build conference and organizational meeting in the Washington Metropolitan Area with the Design-Builder ten calendar days after the issuance of the Notice of Award. The purpose of the meeting will be to review the parties' responsibilities and personnel assignments and to submit the required submittals to the Authority. The Authority will publish an agenda at least one week prior to the meeting.
- B. The pre-design-build conference shall be chaired by the Authority and attended by representatives of the Authority, the Design-Builder and its Key Personnel nominated for assignment to the Contract, including the Design Professional, the Construction Firm, and major subcontractors, manufacturers, suppliers and other concerned parties. Concerned parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the Work described in the Contract Documents if so requested by the Authority.

- C. Agenda discussion items for the meeting may include, but are not limited to, the following:
1. DBE participation and certifications.
 2. Site security.
 3. Required Pre-Design-Build Conference Meeting Submittals: Updated Key Personnel, firms and subcontractors identifications and qualifications; Initial Project Management Plan; Overview/Executive Summary; Organizational Chart; Program Management and Control Plan including Interim Quality Management Plan, Interim Systems Integration Plan, Interim Health and Safety Plan, Interim Design and Construction Management Plan, Temporary Facilities Plan, Contract Administration Plan, and Permit and Regulatory Requirements Plan; Project Approach; Description of Compliance with Project Requirements; Executed Contract Agreement; Power of Attorney Form; Power of Execution Form; Performance Bond Form; Payment Bond Form; Insurance Certificates; and Preliminary Required Submittals List.
 - a. Designation of responsible personnel verification: The Design-Builder shall provide confirmation that the Key Personnel identified by the Authority in Section 00203 as applicable or Section 00204 and these and any other personnel and subcontractors essential for performance of the work as identified by the Design-Builder in its Final Proposal Revision (FPR) are assigned to the Work. The Design-Builder shall not substitute any key personnel and subcontractors identified without the written approval of the Authority. The Design-Builder shall provide the Authority with any information as may be reasonably requested regarding any substitution and any proposed substitute will share similar or better qualities than the person or firm substituted for.
 4. Work sequencing.
 5. Procedures for processing design decisions and approvals.
 6. Procedures for processing Applications for Payment.
 7. Authority Design Criteria and other Project Requirements including requirements for ADA Facilities Accessibility Checklist submittals and certification of ADAAG regulations compliance submittals during design process by the Design-Builder.
 8. Authority Construction Guidelines including requirements for certification of ADAAG regulations compliance submittal at completion of construction by the Design-Builder, and emphasizing the fact that project is subject to FTA audit for ADAAG compliance.
 9. Submittal of Shop Drawings, Working Drawings, Product Data, Samples, Certification, and Documentation.
 10. Preparation and submittal of Record Documents and Operations & Maintenance Manuals.
 11. Use of the premises.
 12. Office, Work and Storage areas.
 13. Equipment deliveries and priorities.
 14. Safety procedures and administration of the overall safety program.
 15. Quality Assurance and Quality Control Requirements.
 16. First aid.
 17. Housekeeping.
 18. Working hours.

19. Codes and permits.
 20. Other Required Submittals.
 21. Approvals required before construction proceeds.
 22. Mobilization plan.
 23. Equipment and manpower availability.
 24. Systems Integration plans.
- D. The Design-Builder shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from the meeting.

1.05 DESIGN REVIEW COMMENT MEETINGS

- A. The Authority will schedule a design review comment meeting in the Washington Metropolitan Area with the Design-Builder after receipt of preliminary, intermediate, pre-final and final levels of design as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Authority review and comment on these Design Specifications and Design Drawings. The purpose of these meetings will be to discuss and clarify the Authority's design review comments and the Design-Builder's written responses to the review comments.
- B. The design review comment meeting shall be chaired by the Authority and attended by representatives of the Authority, the Design-Builder and its Key Personnel assigned to the Contract, including the Design Professional and other concerned parties. Concerned parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the Work described in the Design Specifications and Design Drawings if so requested by the Authority.
- C. The Design-Builder shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting. The Design-Builder shall initiate whatever actions are necessary to incorporate the agreed to required changes and additions into the Design Drawings and Design Specifications.

1.06 PRE-ACTIVITY MEETINGS

- A. The Design-Builder will conduct pre-activity meetings at the site prior to the start of construction activities that require special coordination or for those activities that are deemed to require a separate meeting because of the technical nature of the installation. The Key Personnel, subcontractors, representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with their materials and installations that have preceded or will follow and the Authority shall attend the meeting. The parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the Work described in the approved Final Design Drawings and Final Design Specifications Issued for Construction.
- B. The Design-Builder shall inform the Authority in advance of the date, time, location and topics for review and discussion at each pre-activity meeting. The Design-Builder shall ensure that other attendees are properly notified. Topics that may require pre-activity meetings include, but are not limited to the following:
 1. Precast Concrete Installation as applicable,
 2. Systems Equipment Installation as applicable,
 3. Items that require connection to existing Authority equipment or systems as applicable,
 4. Other pre-installation meetings as may be called by the Design-Builder, or the Authority.

- C. Agenda discussion items for the meeting may include, but are not limited to, the following:
1. Approved Final Design Drawings and Final Design Specifications Issued for Construction.
 2. Options, if any.
 3. Purchases.
 4. Deliveries.
 5. Shop Drawings, Working Drawings, Product Data, Quality Control Samples, Certifications and Documentation.
 6. Possible conflicts.
 7. Compatibility problems.
 8. Time schedules.
 9. Weather limitations.
 10. Manufacturers' recommendations.
 11. Compatibility of materials.
 12. Temporary facilities.
 13. Space and access limitations.
 14. Governing regulations.
 15. Safety.
 16. Inspection and testing requirements.
 17. Required performance results.
 18. Recording requirements.
 19. Protection.
 20. QA/QC.
 21. ADAAG compliance.
- D. Work shall not proceed if the meeting cannot be successfully concluded. The Design-Builder shall initiate whatever actions are necessary to resolve impediments to performance of Work and schedule a follow-up meeting with the Authority at the earliest date.
- E. The Design-Builder shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.07 PROGRESS MEETINGS

- A. The Design-Builder shall conduct Progress meetings in the Washington Metropolitan Area weekly at regularly scheduled times convenient for all parties involved. Progress meetings are in addition to specific meetings held for other purposes, such as coordination and special pre-installation meetings. A two week work plan shall be developed by the Design-Builder prior to the start of the meeting as specified in Section 01322, CONTRACT PROGRESS REPORTING and will be discussed during the planning portion of the agenda. Additionally, discussions will address administrative and technical issues of concern, determining resolutions, and development of

deadlines for resolution within allowable time frames. The Authority Representative or designee shall attend all progress meetings.

- B. The Design-Builder shall determine, together with the Authority Representative, who should attend the meeting in addition to representatives of the Authority, the Design-Builder, and those subcontractors, suppliers, or other entities critical to the current progress or involved in planning, coordination or performance of future activities that are part of the Work. The parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the work described in the approved Final Design Drawings and Final Design Specifications Issued for Construction.
- C. Agenda discussion items shall include, but are not limited to, review of minutes of the previous progress meeting prepared by the Design-Builder. The Design-Builder shall publish an agenda at least 10 calendar days prior to the meetings and submit to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL and will document issues of significance including submittals, schedules, quality control/assurance, safety, problems encountered, and the assignment of responsibilities for future action. Agenda items may include other items of significance that could affect progress such as:
1. Design-Builder's design and/or construction schedule.
 2. Interface requirements.
 3. Time.
 4. Sequences.
 5. Deliveries.
 6. Off-site fabrication problems.
 7. Access.
 8. Site utilization.
 9. Updated Submittals List and Submittals.
 10. Requests for Information.
 11. Non-Compliance Notices.
 12. Temporary facilities and services.
 13. Hours of Work.
 14. Resource allocation.
 15. Hazards and risks.
 16. Housekeeping.
 17. Quality and Work standards.
 18. Safety issues.
 19. Change Orders.
 20. Documentation of information for payment requests.
 21. ADAAG compliance.

- D. The Design-Builder shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.08 PROGRESS AND QUALITY STATUS REPORT REVIEWS

- A. The Initial 90-Day Schedule or the Monthly Progress Report, including Design Progress and Bar Graph or CPM Schedules and Cash Flow Curves as applicable, based on the phase of the work in progress, as specified in Section 01322, CONTRACT PROGRESS REPORTING, are to be updated on at least a monthly basis after the last day of the Design-Builder's last pay period for the month to ensure the incorporation of all approved changes made to the sequence of work and any change notices issued by the Authority. Job progress shall specifically include actual start and completion dates for all activities completed during the report period, actual start dates and percent complete for activities started but not completed during the report period, estimated start dates for activities scheduled to start during the next period, approved changes in durations of any activity, and separate tabulation of monthly earnings, including a cumulative tabulation of monthly earnings to date shall be provided. In computing the monthly earnings, no value will be allowed for partially completed activities. The Schedule may need to be supplemented with a narrative to explain unusual circumstances. Preliminary status report meetings will be held in the Washington Metropolitan Area prior to the submittal of the Design-Builder's final monthly update of the Initial 90-Day Schedule or the Monthly Progress Report. The purpose of the meetings is a review to determine the status of each activity in relation to the Design-Builder's draft monthly update of the Initial 90-Day Schedule or the Monthly Progress Report and any deficiencies based on the Quality System as specified in Section 01470, QUALITY SYSTEM, in order to develop an informal agreement on pay items. This meeting shall be attended by the Design-Builder's Design Professional and Construction Firm and the Authority Representative.
- B. The draft monthly update of the Initial 90-Day Schedule or the Monthly Progress Report shall again be updated to incorporate all changes agreed to during the Preliminary Status Report Meetings. A certification stating that the Quality System has effectively ensured that the items of work completed have been designed or constructed to meet the design requirements, and have been inspected and tested as required to comply with Contract requirements including those of the Quality Management System as specified in Section 01470, QUALITY SYSTEM shall be provided. Formal Status Report Meetings will be held in the Washington Metropolitan Area prior to the submittal of the Design-Builder's Application for Payment. The purpose of the meetings is to review and develop a formal joint agreement on the final monthly update of the Initial 90-Day Schedule or the Monthly Progress Report, job progress, pay items and quality certification. This meeting shall be attended by the Design-Builder's Design Professional and Construction Firm and the Authority Representative and shall be held five (5) working days after the Preliminary status report meeting.
- C. The Design-Builder shall submit the approved final monthly update of the Initial 90-Day Schedule or the Monthly Progress Report and the approved certificate stating that the Quality System has effectively ensured that the items requested for payment have been designed or constructed to meet the design requirements, or have been inspected and tested as required to comply with Contract requirements including those of the Quality Management System, reflecting the outcome of the Preliminary and Formal Progress Status Report Review Meetings, along with the Monthly Progress Payment Schedule as specified in Section 01290, PAYMENT PROCEDURES.

1.09 SYSTEMS INTEGRATION PROGRESS MEETINGS

- A. Systems Integration Progress Meetings shall be held by the Design-Builder monthly in the Washington Metropolitan Area starting 10 calendar days after receipt of the Design-Builder written responses to the Authority's design review comments on the 30% Systems Integration Design. The purpose of these meetings will be to clarify the comments, update WMATA personnel on the systems integration issues, resolve interface definitions or systems integration issues and exchange ideas and information. Meeting intervals can be revised by the Authority Representative, if he deems it appropriate.

- B. The agenda for the progress meetings shall be similar to the progress review meeting agenda and shall be built based upon the previous meetings issues. The Design-Builder shall publish an agenda at least one week prior to the meetings and shall provide comprehensive minutes of the meetings within 10 calendar days after such meeting.
- C. It is important that any and all interface problems are identified at the earliest possible opportunity. The Design-Builder shall provide a list of problem interfaces along with an assessment of the project impact and potential resolutions at each progress meeting.

1.10 CHANGE MEETINGS

- A. Separate meetings will be held in the Washington Metropolitan Area by either the Authority or the Design-Builder, on an ad hoc basis, to discuss and resolve change order issues as they arise during the course of design and construction.
- B. This meeting shall be attended by the Design-Builder, Authority Representative or designee, and those subcontractors, suppliers, or other entities critical to the resolution of any open issues. The parties shall each be represented by persons thoroughly familiar with and authorized to conclude matters relating to the work described in the initial Contract Documents and in the Final Design Specifications and Final Design Drawings Issued for Construction.
- C. The Design-Builder shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

SECTION 01321
CONSTRUCTION PHOTOGRAPHS

PART 1 GENERAL

1.01 SUMMARY

This section describes the requirements for taking and submitting construction photographs.

1.02 RELATED DOCUMENTS

Section 01322, General Requirements - Administrative Requirements: Contract Progress Reporting
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures
Divisions 2 through 16, Standard and Technical Specifications Requirements

1.03 PHOTOGRAPHS

After construction operations have started at the site, the Design-Builder shall have an average of ten color photographs taken each month until completion of the work. The actual number and location of views to be taken each month shall be as directed by the Authority Representative or designee.

PART 2 PRODUCTS

2.01 DELIVERABLES

- A. Digital Photographs shall be submitted to the Authority in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, in an electronic format on CD's. Digital photographic files shall be capable of producing standard commercial quality photographs, eight inches by ten inches in size. Each file shall consist of one page containing one photograph. Each page shall contain the following information arranged as shown:

WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY

Project: _____ Contract No.: _____
Design-Builder: _____
Photograph No. _____ Date: _____
Description: _____

- B. Submit photographs with the Monthly Report as described in Section 01322, CONTRACT PROGRESS REPORTING.

SECTION 01322

CONTRACT PROGRESS REPORTING

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies the requirements for Monthly Progress Reports, and the development and maintaining of progress schedules and work plans for both the design and construction of the Project.
- B. The Design-Builder shall carefully monitor the progress of the Work during design and construction and provide the Authority with Monthly Progress Reports detailing the progress of that work.
- C. The approved schedules shall be used by the Design-Builder to ensure adequate planning, scheduling, management and execution of the work, and to enable the Authority to evaluate work progress and progress payments. These approved schedules shall not be revised without the prior approval or direction of the Authority Representative. Schedules shall include the following, as applicable: Initial 90-Day Schedule; Design Progress, or Cost-Loaded CPM Schedule as applicable; Monthly Updates of the Schedules; 90-Day Rolling Schedule; and Two-Week Work Plan.

1.02 RELATED DOCUMENTS

Section 00753, General Conditions: Changes

Section 01321, General Requirements - Administrative Requirements: Construction Photographs
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures
Section 01470, General Requirements - Quality Requirements: Quality System

1.03 GENERAL: MONTHLY PROGRESS REPORTS

- A. The Monthly Progress Reports shall include a narrative report, schedules information, and construction photographs as follows:
 - 1. A narrative description of work accomplished, work activities planned for the upcoming reporting period, problem areas and actions intended by the Design-Builder to mitigate the problem areas, work that is being performed out of sequence with accepted schedules, status of change orders, notices of potential claims, status of submittals, and status of Design-Builder procurement items.
 - 2. Schedules, including: the Initial 90-Day Schedule; the Design Progress; the Cost-Loaded CPM Schedule; the Monthly Update of the Schedules as appropriate; and a 90-day Rolling Schedule; and a Two-Week Work Plan as applicable. Schedules shall clearly identify the critical path(s).
 - 3. Cash flow curves indicating graphically the total percentage of Contract value and the total dollar value scheduled to be in place on early finish, late finish, and actual finish on a monthly and cumulative basis.

4. A complete list of scheduled submittal dates for each review submittal and design completion. Submittal dates for each phase of the design as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and for each phase of Systems integration as specified in Section 01113 SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM shall be listed.
 5. A summary of meetings or conferences held or attended during the report period as specified in Section 01312, PROJECT MEETINGS and elsewhere in the Contract Documents.
 6. A listing of actions or decisions required of the Authority or its Consultants with an indication of the date by which such action or decision is required to avoid any adverse impact on the design schedule.
 7. Utility/Agency coordination and approvals report. Include telephone conversation and dates of contact made with each agency/utility.
 8. Construction Photographs, as described in Section 01321, CONSTRUCTION PHOTOGRAPHS.
- B. The supporting narrative shall include the following:
1. A realistic approach to meeting the Contract completion date required by the Contract.
 2. A discussion of the critical path and the most critical activities in meeting the required completion dates.
 3. A listing of holidays and special non-working days planned during the Contract duration.
 4. A separate tabulation of estimated monthly and cumulative planned earnings. The monetary values shall be generally consistent with the proposal item breakdown.
- C. The Monthly Progress Report Request for Payment submittal is described in Section 01290, PAYMENT PROCEDURES.

1.04 UPDATED INITIAL NINETY-DAY SCHEDULE

- A. Revision 0 of the Initial 90-Day Schedule shall be submitted with the Technical and Cost Proposals. Any changes and additions shall be incorporated into the Initial 90-Day Schedule and submitted within 10 calendar days after Award. The 90-day schedule is the Design-Builder's plan for planning, managing, executing and for recording completed work during the first 90 days of the Project. All approved activities in the 90-day schedule shall be incorporated into the Schedule.
- B. The schedule shall be time-scaled and may be submitted in either bar chart or Critical Path Method (CPM) format. The schedule shall include the requirements listed in Part 1.05 F. below.
- C. Work items defined in the schedule shall not exceed 20 work days in duration.
- D. The submittal shall be accompanied by a written narrative that describes the schedule and the approach to the work that the Design-Builder intends to employ during the initial ninety-day period of the Contract.
- E. The 90-day schedule will be cost-loaded and will be used to process the progress payments for

the first three months following NTP until the Cost-Loaded CPM Schedule is approved.

1.05 UPDATED COST-LOADED CPM SCHEDULE

- A. Revision 0 of a calendar time scaled CPM network diagram schedule covering the complete project shall be submitted with the Technical and Cost Proposals. Any changes and additions shall be incorporated into the CPM Schedule and submitted within 60 calendar days after NTP. A Cost-Loaded CPM Schedule, acceptable to the Authority Representative, shall be in place prior to the third Partial Payment Invoice being submitted. The original logic of the initial 90-day schedule shall be incorporated into the Cost-Loaded CPM Schedule, unless identified changes are submitted and approved by the Authority Representative. The final Construction Planning Schedule plus related documents showing the order in which the Design-Builder proposes to carry on the construction work, the dates on which it will start the several major features, including procurement of materials, plant and equipment, and the contemplated dates for completing same shall be submitted with the Final Design Drawings and Final Design Specifications level of submittal specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTALS.
- B. The schedule must meet all of the Project Milestones listed under Section 00725, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE and Section 00825, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE REQUIREMENTS.
- C. A schedule showing the work completed in less than the Contract time, which is found practical and approved by the Authority Representative, shall be considered to have float. The float shall be the time between the scheduled completion of the work and the Contract completion date. Float shall not be for the exclusive benefit of either the Authority or the Design-Builder. Float shall be a resource available to both parties.
- D. A schedule found to be impractical by the Authority Representative for any reason shall be revised by the Design-Builder and resubmitted.
- E. The schedule shall be prepared utilizing the Precedence Diagram Method (PDM) of CPM scheduling technique. The 90-Day schedule shall be cost-loaded and will be used to process the progress payments for the first three months following NTP until the complete Cost-Loaded CPM Schedule is approved.
- F. The schedule shall show clearly the sequence and interdependence of activities and shall list specifically:
 - 1. Interim milestone completion dates. Phasing and staging of the work as specified shall be prominently identified.
 - 2. Procurement, fabrication, delivery, installation, and testing of major materials and equipment.
 - 3. Submittals and Authority Representative review of shop drawings, working drawings and material samples.
 - 4. Interfacing, coordination, and dependencies with preceding, concurrent, and follow-on contractors.
 - 5. Manpower, material, and equipment restrictions, if any.
 - 6. Delivery of the Authority-furnished equipment, if any.

7. Inspection of the work including punch list and acceptance.
8. Work to be performed by other agencies which affect the schedule.
9. Acquisition of permits.
10. Resources necessary to accomplish the work for that activity including, but not limited to, specific equipment, manpower and material requirements.
11. The costs of the work for each activity.
12. The graphic network diagram shall be composed of two parts: a table of activity data; and a time-scaled graphic network diagram and shall include the following:
 - a. A Table of Activity Data in columnar format with the pertinent data for each activity in the row corresponding to that activity's placement in the schedule. The minimum required data is: Activity ID, Activity Description, Early Start date, Early Finish date, Late Start date, Late Finish date, Total Float, Planned Duration, the monetary value in whole dollars for that activity, man-days applicable to each activity and any lag/lead time. The Authority Representative may require additional data such as total shifts or other resource data. An activity numbering system will be utilized which assigns a unique activity identification number to each activity. No two activities shall bear the same activity number or description. Activity descriptions shall be brief but shall convey the scope of the work described. Unusual abbreviations shall be explained in a legend. If an activity includes work to be done by a Disadvantaged Business Enterprise (DBE), that fact shall be identified in the activity description by inclusion of an appropriate parenthetical entry, e.g., Install West Footing Reinforcing Steel (DBE1) with DBE properly identified in the legend. Percentages shall generally not be used in activity descriptions, e.g., Pour West Footing (0 – 50 percent) is not acceptable.
 - b. A time-scaled graphic network diagram showing logical relationships and constraints formatted in accordance with the following requirements: a bar (node) representing the duration of each work activity scaled to the planned duration with arrows (relationship lines) defining predecessor and successor relationships. Each bar shall contain the following information positioned above, below or adjacent to it in a consistent and legible manner: activity description; abbreviated start and finish dates (the day of the month in which the event occurs) and the activity duration. Lag time in whole project units (e.g. work days) shall be displayed on each relationship line where it occurs. The use of lag must be minimized and restricted to only those situations where it is not possible to properly define the start or finish of an activity by the use of a normal Finish-to-Start, Start-to-Finish, Start-to-Start or Finish-to-Finish relationship. Negative Lag shall not be used.
13. Monetary value of each activity indicated in the Schedule shall be identified in a Table of Activity Data following the description. The allocation of monetary values assigned to activities shall be subject to approval and will contain, as close as can reasonably be determined, all labor, equipment, material and subcontractor cost plus its proportional share of all indirect costs. The total of all values allocated to the individual work activities shall equal the total contract value. Should the Design-Builder intend to deliver materials and receive payment under the Materials-on-Site provision of the contract, with the approval of the Authority Representative, the following will be incorporated into the schedule:
 - a. A materials-on-site (MOS) delivery activity will be incorporated into the schedule in logical sequence with the associated installation activity. The cost allocated to the installation

activity will be reduced by the approved MOS activity amount. The activity description will contain the MOS designation and an MOS activity code will be assigned.

- b. The monetary value assigned to that MOS activity will be arrived at by considering only those materials the monetary values of which are to be excluded from the monetary values of the installation activities to which they relate. The monetary value of the delivery activity will equal the projected invoiced values of materials, as restricted above and in other relevant provisions of the Contract, to be delivered to the site. The Design-Builder shall submit a separate, detailed breakdown of the projected total of all MOS activities.
- G. Individual schedule activities shall not exceed 20 work days in duration, except certain procurement, delivery and/or material-on-site activities, which may exceed 20 work days with the approval of the Authority Representative. Activities exceeding 20 work days in duration shall be subdivided.
- H. Schedule activities shall be sufficiently described to include what is to be accomplished and identified by the applicable work areas. Activities shall be grouped to assist in the understanding of the activity sequence. Group activities by category of work, work area and/or responsibility. Activity durations shall be expressed in whole days. Work that is to be performed by subcontract shall be clearly defined.
- I. The schedule diagram shall indicate a clearly defined critical path which shall be prominently distinguished.
- J. A written narrative shall accompany the schedule submittal describing the Design-Builder's approach and methods for completion of the work. The narrative shall be adequate for the Authority Representative to understand the schedule and specifically identify the use of lag time.
- K. Submit the calendar(s) used to calculate the CPM schedule, including: (i) the proposed number of work days per week; (ii) the planned number of shifts per day; (iii) the number of hours per shift; and (iv) all non-work days.
- L. In addition to the initial Cost-Loaded CPM Schedule, the Design-Builder shall submit for approval a summarized schedule depicting the entire Cost-Loaded CPM Schedule in graphical, time-scaled format that clearly identifies the Design-Builder's work areas, activities and planned logic for completion of the work. The summarized schedule shall be hammocked activities or otherwise summary bars of logically-grouped activities, of approximately 300-500 activities total.

1.06 MONTHLY UPDATES OF THE COST-LOADED CPM SCHEDULE

- A. At least once each month, the Design-Builder shall submit an updated schedule showing the progress of the work to date and anticipated activities to be worked on.
- B. The Cost-Loaded CPM Schedule shall not be revised to include additional activities, deleted activities, revised activity durations, revised network logic, or any other changes to the schedule, without approval of the Authority Representative. Only actual progress, completion dates, and anticipated future progress shall be incorporated in a schedule update.
- C. If according to the current updated Cost-Loaded CPM Schedule, the Design-Builder is sixty or more days behind the Contract completion date of any milestone, or the schedule contains sixty or more work days of negative float, considering all granted time extensions, the Design-Builder shall submit a Recovery Schedule, showing a practical plan to complete the work within the

contract time. The Design-Builder shall execute some or all of the following remedial actions: (i) increase construction labor in such quantities and crafts as necessary to eliminate the backlog of work; (ii) increase the number of working hours per shifts, shifts per working day, working days per week, the amount of construction equipment or any combination to eliminate the backlog of work. The Authority may withhold progress payments until a revised schedule, acceptable to the Authority Representative, is submitted by the Design-Builder.

- D. Any revisions to the planned sequence, activity durations, interdependency of activities and any other change to the schedule shall be submitted separately for review. Written notification and explanation for the proposed changes and separately revised CPM network schedule and reports shall accompany the submittal. Changes shall not be incorporated into the current schedule until the submittal has been accepted by the Authority Representative. A Baseline Schedule, i.e., the current schedule excluding any schedule changes, shall be submitted along with the proposed schedule changes for the Authority Representative's review and approval.
- E. After all Contract work items are complete, and as a condition of final payment, the Design-Builder shall submit an "as-built" Contract Schedule showing actual start and finish dates for all work activities and milestones, based on the accepted monthly updates. These schedule submittals shall be in tabular and in time-scaled PDM plot formats. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT, the amount specified in Section 01780, CLOSEOUT SUBMITTALS will be withheld until approved as-built computer printouts and network diagrams are delivered to the Authority Representative.
- F. The Design-Builder is responsible for maintaining the as-built schedule data according to the field records and submit to the Authority Representative on the monthly basis.

1.07 NINETY-DAY ROLLING SCHEDULE

- A. A schedule depicting activities occurring in the upcoming ninety day period in greater detail than specified in the Initial Ninety-Day and subsequent Schedules. The logic shall generally follow the logic of the approved Schedule.
- B. The schedule shall be time scaled and may be submitted in either bar chart or Critical Path Method (CPM) format.
- C. Activities shall be ten work days or less in duration with particular focus on design, procurement and associated activities to be performed in this time frame.
- D. The Ninety-Day Rolling Schedule shall be updated and submitted monthly for review and approval by the Authority Representative.

1.08 TWO-WEEK WORK PLAN

- A. A schedule in a calendar time-scaled bar chart format depicting the Design-Builder's intended work activities for the upcoming two-week period shall be submitted on a weekly basis and due on the first working day of each week. Each activity lasting one day in duration shall be prominently noted.
- B. Any deviations, including but not limited to sequences of work, timing, and durations of activities, from the Initial Ninety-Day or subsequent Schedule shall be noted and explained in writing.
- C. The form of submittal may be a medium smaller than specified in 1.10 of this Section; however, the format shall not be less than 8-1/2 x 11 inches in size.

1.09 MONTHLY DESIGN PROGRESS REPORT

- A. A description of design progress in the previous month, and a look ahead to the completion of design work.
- B. Identify all design submittals issued to the Authority and the status of the submittals.
- C. Identify all design submittals to be issued to the Authority for review and/or approval within the next 60 days.

1.10 SUBMITTALS

- A. Refer to the Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for submittal procedures and quantities and also for the additional Scheduling Information submittals required along with the various levels of design review submissions.
- B. The Monthly Progress Status Report shall be submitted in a medium no larger than 11 inches by 17 inches nor any smaller than 8-1/2 x 11 inches in size.
- C. The Cost-Loaded CPM Schedule, as specified under section 1.05, shall be submitted on sheets no smaller than 22 inches wide by 34 inches long nor larger than 34 inches wide by 44 inches long.
 - 1. CPM terminology, definitions and conventions as required herein shall be consistent with the technical portions of the Associated General Contractor's Manual titled Construction Planning & Scheduling.
 - 2. The schedule must be generated in Primavera Project Planner (P3) for Windows version 3.0 or the latest version available. As an exception and with approval of the Authority Representative, the Design-Builder may be permitted to submit data that has been generated utilizing other scheduling software. These schedules must be submitted in an electronic form that can be directly read by P3 and results in no loss of data or restrictions of scheduling or analysis capabilities. If an alternative software is approved, the Design-Builder may be required to provide, at no additional cost to the Authority, up to three current, licensed copies of that software for the Authority's use and provide the necessary manuals and training for Authority staff to achieve proficiency with the software. Design-Builder provided scheduling software must operate on an IBM-compatible personal computer, Windows95 operating system or later.
 - 3. All schedules and reports are to be prepared and submitted in electronic format on CD-ROM labeled with the Contract number, Contract name, Design-Builder's name, data date, run date and any access codes or file designators listed.
- D. Schedule submittals shall include the following and shall be submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES:
 - 1. Rev 0 Preliminary Initial 90-Day Schedule Draft submitted with Technical Proposal as specified in Section 00204 as applicable - one reproducible and six copies and one set of electronic media.
 - 2. Rev 0 Cost-Loaded CPM Schedule Draft submitted with Technical Proposal as specified in Section 00204 as applicable - one reproducible and six copies and one set of electronic

media.

3. Updated Initial 90-Day Schedule - one original reproducible and six full size copies of the network diagram together with six copies of Narrative and one set of electronic media for both.
 4. Monthly Updates of Design Schedule if applicable - original and six copies of the reports specified under Section E. (below) and one set of electronic media.
 5. Monthly Narrative Report - original and six copies and one set of electronic media.
 6. Updated Cost-Loaded CPM Schedule - one reproducible and six full size copies of the network diagram together with six copies of Narrative and one set of electronic media for both.
 7. Monthly Updates of Cost-Loaded CPM Schedule - original and six copies of the reports specified under Section E. (below) and one set of electronic media.
 8. 90-Day Rolling Schedule - original and six copies and one set of electronic media.
 9. Two-Week Work Plan - original and six copies and one set of electronic media.
 10. Construction Photographs - as specified in Section 01321, CONSTRUCTION PHOTOGRAPHS
 11. "As-Built" Contract Schedule as specified in Section 01780 CLOSEOUT SUBMITTALS - original and six (6) copies and one set of electronic media.
- E. At a minimum number of work days, the Authority Representative will review and return the Design-Builder's schedule submittal with comments according to the following schedule from the date of receipt:

Initial Ninety-Day Schedule	-	Seven Days
Cost-Loaded CPM Schedule	-	Fifteen Days
Ninety-Day Rolling Schedule	-	Seven Days
Two-Week Work Plan	-	One Day

The Design-Builder shall make all corrections to the schedule requested by the Authority Representative and resubmit the schedule for approval. If the Design-Builder does not agree with the Authority Representative's comments, the Design-Builder shall provide written notice of disagreement within five work days from the receipt of the Authority Representative's comments for the Cost-Loaded CPM Schedule. Authority Representative's comments to the Initial Ninety-Day Schedule, Ninety-Day Rolling Schedule and Two-Week Work Plans for which the Design-Builder disagrees shall be resolved in a meeting held for that purpose, if necessary. Resubmittals shall conform to the same requirements as original submittals.

- F. The Cost-Loaded CPM Schedule submittal, all subsequent schedule updates, and time extension requests shall also include the following computer generated reports:
1. Successor Report: This report shall contain all activities shown on the graphic network diagram listed in ascending order of activity ID based on successor relationships.

2. Predecessor Report: This report shall contain all activities shown on the graphic network diagram listed in descending order of activity ID based on their predecessor relationships.
3. Float Report: This report shall contain all activities shown on the graphic network diagram listed in order of ascending total float values and, where float values are equal, in chronological order of the early start date.
4. Late Finish Report: This report shall contain all activities as shown on the graphic network diagram listed in chronological order of the late finish date.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 GENERAL

- A. Schedules shall represent a practical plan to complete the work within the Contract time, and shall convey the Design-Builder's intent in the manner of prosecution and progress of the work.
- B. The scheduling and execution of the project work in accordance with the Project Requirements of the Project Manual and Attachments to the Project Manual are the responsibility of the Design-Builder.
- C. The submittal of schedules shall be understood to be the Design-Builder's representation that the schedule meets the requirements of the Contract Documents and that the work will be executed in the sequence and duration indicated in the schedule.
- D. All schedule submittals are subject to review and acceptance by the Authority Representative. The Authority retains the right to withhold progress payments until the Design-Builder submits a schedule, payment schedule and updates acceptable to the Authority Representative.
- E. The approved Cost-Loaded CPM Schedule shall be used as the basis for periodic progress payments to the Design-Builder.

3.02 PAYMENT

The Design-Builder shall submit the original reproducible and six paper copies and an electronic copy of the approved final updated Cost-Loaded CPM Schedule and Monthly Progress Report reflecting the outcome of the Formal Progress Status Report Review specified in Section 01312, PROJECT MEETINGS along with its Application for Payment as specified in Section 01290, PAYMENT PROCEDURES. No invoice will be processed if there is not an agreed update in place.

3.03 PROJECT SCHEDULER

- A. To prepare the project schedules, the Design-Builder shall engage the services of a scheduler who is skilled in the time and cost application of scheduling using PDM network techniques for heavy-construction projects, the cost of which is included in the Design-Builder's bid or price proposal and whose qualifications are listed in Section 00491, TECHNICAL PROPOSAL AS FINALLY ACCEPTED and as confirmed in the Key Personnel verification submittal as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
- B. The Design-Builder's scheduler may or may not be an independent consultant; however, the scheduler shall be available to the Design-Builder and Authority Representative to address

schedule questions and shall attend all Periodic Progress Review and Schedule meetings convened by the Authority Representative.

- C. In the event that the project scheduler is not found to be competent or to have sufficient relevant experience, WMATA will request that the project scheduler be removed from the project pursuant to Section 00710, PROJECT MANAGEMENT, SUPERINTENDENCE AND KEY PERSONNEL. In that event, the Design-Builder shall submit a resume of the new candidate for consideration within 10 calendar days.

3.04 REQUESTS FOR TIME EXTENSIONS

- A. The Design-Builder is responsible for submitting a written request for any extensions of Contract time within the time specified by the Contract. Requests not submitted in writing, without the required documentation, and not submitted in 30 calendar days will not be considered.
- B. The request shall include documentation with written justification for the extension of time, supporting evidence, and specific references to the Contract for which the basis of the request is being made.
- C. The request shall also include a calendar time-scaled CPM network schedule analysis and reports specified in Section 1.05, Cost-Loaded CPM Schedule, depicting the time impact basis of the request with the affected areas prominently highlighted. The Cost-Loaded CPM Schedule to be used in determining the time extension request shall be the current and accepted schedule at the time of the event.
- D. If the Authority Representative finds that the Design-Builder is entitled to an extension of time of any completion date under the provisions of the Contract, the Authority Representative's determination of the total number of days extension will be based upon the current analysis of the currently approved Cost-Loaded CPM Schedule and upon data relevant to the extension. Extensions of time for performance under any and all of the provisions of the Contract will be granted only to the extent that equitable time adjustments for the activity or activities affected exceed the total float along the paths involved of the most critical path to project completion.
- E. The Design-Builder shall submit a CPM fragnet with enough details to depict the causes, duration, and logic relationship and impact of the current schedule activities. The quantum of delay impact on contract completion or interim milestone(s) must be determined for time extension.
- F. Critical delays, i.e., delay which may affect the activities on the current critical path, will be contemporaneously discussed and mutually agreed by all the parties involved. In case the quantum of delays or impact cannot be resolved, the background, issues, work performed, as well as start and finish dates of delays shall be well-documented in chronological order. The Authority Representative's determination of merit for time extension(s) will be awarded after the Authority Representative finds entitlement to the Design-Builder's request and only after the alleged delays are demonstrated to impact the most critical path(s). Data furnished by the Design-Builder shall be used as a basis in the findings of the Authority Representative.
- G. A complete As-Built Schedule which has enough details to depict delay and demonstrate cause-effect delay impact shall be submitted at the end of the project as specified in Section 01780, CLOSEOUT SUBMITTALS, and will be utilized in the event of unresolved time-related issues.

END OF SECTION

SECTION 01330

DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies administrative and procedural requirements for Design and Construction submittals required for performance of the Work. Refer to the WMATA Standard and Technical Sections for specific construction submittal requirements. This Section excludes various administrative submittals and closeout and training submittals specified elsewhere, but includes the following:
1. Required Submittals List and Submittal Log.
 2. Design Specifications - 60%, 90% and 100%.
 3. Design Drawings - 60%, 90% and 100%.
 4. Design Computations.
 5. Building and Utility Plans and Topographic Data.
 6. Estimated Material Quantities.
 7. Design Certifications.
 8. Product Data.
 9. Shop Drawings.
 10. Working Drawings.
 11. Samples.
 12. Construction Certifications.
 13. Documentation.
 14. Design-Builder's Reports.
 15. Licenses, Permits, and Approval Letters from Government and Utility Agencies.
 16. Overviews, Procedures, Plans and Reports.
 17. Site Specific Work Plan (SSWP) - See Section 01142.
- B. Refer to other Sections of the Contract for administrative submittal and closeout and training submittal requirements.

- C. Generally, the Design-Builder shall submit the original and six paper copies and one electronic copy for all required submittals, unless otherwise specified.

1.02 RELATED DOCUMENTS

All Divisions of the Project Manual and the Project Drawings.

1.03 GENERAL SUBMITTAL PROCEDURES

- A. The Design-Builder shall provide a Preliminary Required Schedule of Submittals List as described in Section 00720, SUBMITTALS and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA for all sections of the Project Manual and for all Project Drawings developed from the requirements identified in the Contract Documents. The Preliminary Submittal List shall be submitted for Authority approval at the Pre Design-Build Conference as specified in Section 01312, PROJECT MEETINGS to be held ten (10) calendar days after Award of Contract, and after approved, shall subsequently be updated through discussions with the Authority during weekly progress meetings or through special meetings as may be required. . As the design progresses, the Design-Builder shall separate items of the work that require Authority approval as directed by the Authority Representative into a separate Submittal List.

1. Within 60 days of NTP, the Design-Builder shall submit for approval the original and six paper copies and one electronic copy of a Contract Documents Submittals Log as described in Section 00720, SUBMITTALS, created in a Corel Office 2000 data base, consisting of all Design Drawings, Design Specifications, design calculations, analyses and reports to be prepared by the Design-Builder. The log shall also list all versions of a document, only one version of a document may be effective at any one time. The Log shall function to keep a history of each document and its evolutionary status. The Contract Documents Submittals Log shall provide the following information:
 - a. Contract Document Title /Number.
 - b. Document Serial Number.
 - c. Nature/Reason for Change.
 - d. Version Number/Change Commentary.
 - e. Reference specification(s).
 - f. Effective Date.
 - g. Anticipated Submittal Date.
 - h. Responsible Party.
 - i. Tested/Inspected By: Quality Control/Quality Assurance; third party agency; subcontractor or supplier QC representative.
 - j. Status (as a minium):
 - (1) Effective.

(2) Draft.

(3) Archived.

k. Approved By: Authority Representative or Project Representative.

l. Remarks.

B. PROFESSIONAL REGISTRATION - NOT USED - Specified elsewhere.

C. The Designer of the Design-Builder Team shall be responsible for the review and approval of all Contract-related submittals prior to forwarding to the Authority those submittals the Authority has reserved the right to review and comment or review and approve and for maintenance of records of submittals.

D. All Authority reviews, whether for design or construction submittals, shall be solely for the purposes stated in Section 00719, AUTHORITY REVIEWS and Section 00720, SUBMITTALS. The Design-Builder shall make submittals sufficiently in advance of schedule requirements to permit for checking and appropriate action. Time critical submittals (those whose lack of acceptance would cause delay to the project) shall be scheduled on the CPM schedule, showing appropriate durations and review sequences.

E. Submittals that the Authority reserves the right to review and approve will be returned to the Design-Builder with one of the following approval codes:

1. Code 1: Approved Without Condition or Comment.

2. Code 2: Approved As Corrected, Resubmittal Not Required. The Design-Builder shall comply with any changes, conditions or comments on the submittal.

3. Code 3: Disapproved. The entire submittal is disapproved and shall be resubmitted.

F. The Design-Builder shall be responsible for and bear all cost of damages which may result from the ordering of material from or proceeding with any part of the work prior to the approval of specified or directed submittals. The Authority's approval will be general and shall not be construed as relieving the Design-Builder of the responsibility for any errors including details, dimensions and materials as specified in Section 00719.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 DESIGN SUBMITTALS

A. Design Submittal Reviews: The Authority will complete its review of submittals within twenty-one (21) calendar days unless otherwise specified, and provide written review comments and marked-up drawings and specifications to the Design-Builder. Within ten (10) calendar days after receipt of the Authority review comments, the Design-Builder shall deliver to the Authority Representative the original and six paper copies and one electronic copy of written responses to all comments detailing the proposed technical modifications required to comply with the comments or reasons

why the Design-Builder recommends that they not comply. The Design-Builder shall meet with the Authority to discuss the review comments as specified in Section 01312, PROJECT MEETINGS. A resubmittal by the Design-Builder will be required when the design has not been developed to the level specified. Within ten (10) calendar days after the Design Review Comment Meeting, the Design-Builder shall deliver to the Authority Representative the original and six paper copies and one electronic copy of the meeting minutes documenting decisions on comments made in the meeting. The Design-Builder shall incorporate all revisions and additions agreed to at the Design Review Comment Meeting and shall deliver the original and six paper copies and one electronic copy of the appropriate design documents to the Authority Representative for approval for adherence to the Project Requirements within fourteen (14) calendar days after the review meeting.

- B. Specifications, Drawings, and other submittals shall be submitted for review in accordance with the requirements stated in this PART 3 EXECUTION and the approved Design-Builder's Design Progress Schedule. A submittal is not complete until all of the elements have been received by the Authority and the level of completion of the several disciplines is substantially as presented in the approved design activity schedule. Review and approval by the Authority will not relieve the Design-Builder from its responsibility for accuracy of submittals, for conformity of submittals to the Project Requirements, for prosecution and completion of the Contract in accordance with the Contract Documents and Final Design Specifications and Final Design Drawings, and for compatibility of described product with contiguous products and the rest of the systems that they impact. Authority review and approval of a separate item will not constitute review and approval of an assembly in which the item functions.
1. The Design-Builder shall prepare electronic copies of the Design Specifications text files in current WordPerfect file format version.
 2. If available, the Authority will furnish to the Design-Builder without charge one (1) set of CD ROM disks in an AutoCAD (.DWG) file format of the original Project Drawings including any amendments, and including if applicable Standard Drawings and Informational Layout and Detail Drawings and Authority As-Built Record Drawings from prior contracts, and if available, one (1) set of CD ROM disks of the Project Manual including any amendments and the WMATA CAD Manual in current WordPerfect version, except for the applicable publications referenced in the technical provisions. If the Drawings are not available in electronic format, then full-sized or half-sized Mylars or other reproducible medium will be provided. Additional documents will be furnished on request at the cost of reproduction.
 3. If drawing reproducibles were initially provided by the Authority, the Design-Builder, if it desires to, may use the reproducible medium to prepare AutoCAD (.DWG) file format Design Drawings, in addition to the other requirements of this Section. The original reproducibles of Project Drawings, including if applicable Standard Drawings and Information and Authority Record Drawings from prior contracts, shall be returned to the Authority not later than 10 calendar days after their receipt from the Authority.
 4. The Design-Builder shall prepare Design Drawings, including if applicable Standard Drawings and Informational Layout and Detail Drawings and Authority Record Drawings from prior contracts, on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified herein shall be the standard formats for all Design, Shop, Working and As-Built Drawings that are to be forwarded to the Authority for approval.

5. Please note that all Design Drawing (and also including all Shop, Working and As-Built Drawings prepared during construction) line work shall be shown in AutoCAD drawings on designated layers in accordance with the information listed below. Images shall be clear, sharp and readily legible. The Authority reserves the right to have drawing(s) resubmitted until the Authority Representative approves the legibility of the drawing contained in the file. For updates to Design, Shop, Working and As-Built Drawings, drafting quality shall match the original documents in line weights, symbols and lettering style and size.
6. The Design-Builder shall utilize the latest version of WMATA's CAD Manual, which is based on the NIBS's National CAD Standard publication, consisting of the AIA's CAD Layer Guidelines, the CSI's Uniform Drawing System Modules 1 - 8 and the U.S. DOD CADD/GIS Technology Center's Plotting Guidelines of the U.S.C.S., and includes unique Authority symbols, conventions and layering standards for the preparation of required Drawing submittals during both the design phase and the construction phase of the Project. WMATA's CAD Manual is an Attachment to this Project Manual.

C. Design Reviews:

1. Submit the following for approval for conformance with the Requirements as specified below. Where design submittal level and contents are defined in individual Specification Sections, those percentages for level of completion shall be used. However, submittal contents shall include both the requirements specified in individual Specification Sections and in this Section. If a conflict occurs, the individual Specification Sections requirements shall take precedence, except that "issued for construction" submittals shall always be required. Includes all elements listed in Section 00100.
 - a. 60% Intermediate level of design review: The Design-Builder shall submit the Design Drawings of all disciplines that are required for the completion of the Project including layouts, installations, typical circuits, schedules of equipment and complete flow diagrams developed sufficiently to indicate the intended level of completion, and shall also submit the Intermediate Design Specifications in CSI format. The Specifications in may be in draft form, but otherwise complete, including Standard and Technical Specifications Sections edited for the Contract, and developed text for specifications generated by the Design-Builder. The Design Drawings shall be in sufficient detail to define the design of all major elements, substantially complete and checked. In addition, the 60% design package shall contain the original and six paper copies and one electronic copy of the following also for the Authority Representative/Project Representative's review:
 - (1) Notification of Variations in Project Requirements if applicable in Intermediate submittal letter of transmittal as described in Section 00720, SUBMITTALS.
 - (2) Complete list of all Intermediate Design Drawings, Intermediate Design Specifications and other material being submitted.
 - (3) Disposition of 30% Comments - Not Used
 - (4) Test, acceptance and verification criteria and/or procedures for the product being supplied as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
 - (5) Updated Overview of the Quality Management System: Include any adjustments made

to Finalized Design Control Plan; Inspection and Testing Plans and Reports including Quality Manual, Plans, Reports and Procedures; Document Control Procedures; Subcontracting and Purchasing Procedures; Process Control Procedures; Inspection, Measuring and Test Equipment Procedures; Reporting, Review and Disposition of Non-Conforming Product Procedures; Control of Quality Records Procedures; and Internal Quality Audit Procedures. Also include QA/QC Records; Summary of Management Review Findings and Corrective Actions; Audit Results; Status Reports; QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification Certificate; and Certifications. The above shall be as specified in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION; Section 01310, PROJECT MANAGEMENT AND COORDINATION; and Section 01470, QUALITY SYSTEM.

- (6) Systems Integration - Not Used. See Section 01113 for requirements.
- (7) Resumes for Design Review Team reviewers and a signed certificate indicating that each member of the Design Review Team has reviewed the Intermediate documents and found them proper; Reports substantiating design analyses and calculations as required in accordance with accepted industry practice to support the basis of Intermediate design and development of Intermediate Design Drawings; All checked Intermediate design computations, indexed and bound (Coordinate and elevation listings shall be provided in AutoCAD compatible format); Reports substantiating Intermediate design analyses and calculations as required in accordance with accepted industry practice to support the basis of design and development of Intermediate Design Drawings; Intermediate design documentation including any jurisdictional approval letters received from governmental agencies (approvals applied for, but not received, should be indicated and the reasons for not receiving such approvals given) and any permits for maintenance of traffic, environmental, geotechnical, stormwater management, sediment and erosion control, grading, pavement and markings, forest conservation, wetlands mitigation, right-of-entry, forest stand delineation, reforestation, afforestation, landscaping, and buildings and other structures as applicable; Intermediate ADAAG Design Compliance Certification; Intermediate ADA Facilities Accessibility Checklist; and Records of Intermediate design reviews and design change requests as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
- (8) Statement by the Design Professional who signed the drawings that the Intermediate drawings and specifications conform to applicable architectural, engineering, Systems and Authority requirements and to the appropriate jurisdictional regulations as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01470, QUALITY REQUIREMENTS.
- (9) Drawing set and/or Specifications transmittals and other communications and replies thereto as each is sent to or received from a Utility or Agency since the Preliminary level review submittal including transmittal letters and requests for approvals, reimbursable estimates and other data; confirmation of approval by the affected Utility or Agency of the treatment, design and standards; written statement indicating those items of utility work which must be completed prior to construction, and those which must be completed within six months after start of construction as applicable; and of all utility plans and all materials collected by or issued to the Design-Builder, as specified in Section 01180, PROJECT UTILITY SOURCES.

- (10) Latest approved version of Construction Planning Schedule plus related documents as specified in Section 01322, CONTRACT PROGRESS REPORTING.
- (11) Design survey field notes as applicable as specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING.
- (12) Building plans and topographic data and all materials collected by or issued to the Design-Builder.
- (13) Intermediate report listing specific actions which are required by others to enable construction to proceed on schedule. Give particular attention to those items of construction indicated in the Contract Documents and Intermediate Design Drawings and Intermediate Design Specifications to be performed by others.
- (14) Product data including cut sheets to demonstrate compliance with the Contract Documents and Intermediate estimated quantities for all types of materials to be incorporated into the project. This shall include civil, structural, architectural, electrical, mechanical, Systems and all other items to be permanently installed in the project.
- (15) Completed stormwater management, paving and restoration plans as applicable.
- (16) Electrical plans and calculations as applicable and as follows:
- (a) Electrical plans showing: lighting and equipment layout; layout of raceways, manholes, trenches and conduits for alternating current (A.C.) power; conduit and wire schedule showing number, type, size, routing and voltage; panelboard, transformer and circuit breaker schedules; stray current bonding and cathodic protection; cable support and equipment mounting details; provisions for circuit breakers to permit selective tripping; automatic lighting control.
 - (b) Complete design computations, including assumptions and back-up data, for the following: illumination levels; voltage drop on feeders; summary of connected and demand load on each panelboard and feeder; sizing of all equipment short circuit calculations; breaker coordination study of selective tripping; and resistance of grounding mat.
 - (c) Power feeder and ductbank if required: After coordination with local electrical utility company on design of power feeder for installation by local electrical utility company, a statement of final approval of electric power service ductbank entrance to rapid transit facilities by the supplying utility company.
- (17) System plans and schedules showing all conduit ductbank and cable trench routing as applicable.
- (18) Mechanical plans and calculations as follows:
- (a) Mechanical plans showing heating and ventilation, air-conditioning systems including control and air flow diagrams; complete equipment schedules; fire suppression, drainage and plumbing systems.
 - (b) Complete design computations, including any assumptions and back-up data,

covering heating and ventilation, air-conditioning systems, fire suppression system, exiting calculations and any other special systems. Computations are to include equipment selection with a minimum of three manufacturers listed, complete with model numbers along with appropriate performance data, curves, dimensions, etc. Equipment selection is to include verification that equipment will fit in space available and retain adequate accessibility for maintenance.

- (19) Civil, Architectural and Structural plans and calculations as applicable including list of control monuments that could be destroyed or disturbed during construction, complete design computations, including any summary and back-up data, covering sitework, foundation and superstructure.
- (20) A letter from electrical, mechanical and Systems subcontractors as applicable stating that their design represents the intermediate level submission and that, at a very minimum, items identified in Design-Builder's Quality Control/Quality Assurance Plan have been complied with.
- (21) Product data including cut sheets to demonstrate compliance with the Contract Documents and Preliminary estimated quantities for all types of materials to be incorporated into the project. This shall include civil, structural, architectural, electrical, mechanical, Systems and all other items to be permanently installed in the project.
- b. 90% pre-final level of design review for details of what was included in the previous submittals (Pre-Final Design Drawings and Pre-Final Design Specifications in CSI format Review and Approval): The Design-Builder shall submit the Design Drawings of all disciplines that are required for the completion of the Project with cut sheets and shall also submit the Pre-Final Design Specifications in CSI format. The 90% submittal shall include basically complete and checked revised drawings and specifications of all disciplines. In addition, the 90% design package shall contain the original and six paper copies and one electronic copy of the following also for the Authority Representative/Project Representative's review:
- (1) Notification of Variations in Project Requirements if applicable in Pre-Final submittal letter of transmittal as described in Section 00720, SUBMITTALS.
 - (2) Complete list of all Pre-Final Design Drawings, Pre-Final Design Specifications and other material being submitted.
 - (3) Written disposition of the 60% comments by the Design-Builder certifying that all previous comments from the Authority and its Design Professional have been resolved and/or incorporated in the design.
 - (4) Pre-Final Test, acceptance and verification criteria and/or procedures for the product being supplied as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
 - (5) Pre-Final Updated Overview of the Quality Management System: Include any adjustments made to Finalized Design Control Plan; Inspection and Testing Plans and Reports including Quality Manual, Plans, Reports and Procedures; Document Control Procedures; Subcontracting and Purchasing Procedures; Process Control

Procedures; Inspection, Measuring and Test Equipment Procedures; Reporting, Review and Disposition of Non-Conforming Product Procedures; Control of Quality Records Procedures; and Internal Quality Audit Procedures. Also include QA/QC Records; Summary of Management Review Findings and Corrective Actions; Audit Results; Status Reports; QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification Certificate; and Certifications. The above shall be as specified in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION; Section 01310, PROJECT MANAGEMENT AND COORDINATION; and Section 01470, QUALITY SYSTEM.

- (6) Systems Integration - Not Used. See Section 01113 for requirements.
- (7) Resumes for Design Review Team reviewers and a signed certificate indicating that each member of the Design Review Team has reviewed the Pre-Final documents and found them proper; Reports substantiating design analyses and calculations as required in accordance with accepted industry practice to support the basis of Pre-Final design and development of Pre-Final Design Drawings; All checked Pre-Final design computations, indexed and bound (Coordinate and elevation listings shall be provided in AutoCAD compatible format); Reports substantiating Pre-Final design analyses and calculations as required in accordance with accepted industry practice to support the basis of design and development of Pre-Final Design Drawings; Pre-Final design documentation including any jurisdictional approval letters received from governmental agencies (approvals applied for, but not received, should be indicated and the reasons for not receiving such approvals given) and any permits for maintenance of traffic, environmental, geotechnical, stormwater management, sediment and erosion control, grading, pavement and markings, forest conservation, wetlands mitigation, right-of-entry, forest stand delineation, reforestation, afforestation, landscaping, and buildings and other structures as applicable; Pre-Final ADAAG Design Compliance Certification; Pre-Final ADA Facilities Accessibility Checklist; and Records of Pre-Final design reviews and design change requests as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
- (8) Statement by the Design Professional who signed the drawings that the Pre-Final drawings and specifications conform to applicable architectural, engineering, Systems and Authority requirements and to the appropriate jurisdictional regulations as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01470, QUALITY REQUIREMENTS.
- (9) Drawing set and/or Specifications transmittals and other communications and replies thereto as each is sent to or received from a Utility or Agency since the Intermediate level review submittal including transmittal letters and requests for approvals, reimbursable estimates and other data; confirmation of any approvals by the affected Utility or Agency of the treatment, design and standards (approvals from all utilities and agencies must be acquired by the Design-Builder prior to the Final Design Level submittal); and of all utility plans and all materials collected by or issued to the Design-Builder, as specified in Section 01180, PROJECT UTILITY SOURCES.
- (10) Latest approved version of Construction Planning Schedule plus related documents as specified in Section 01322, CONTRACT PROGRESS REPORTING.
- (11) Pre-Final design survey field notes as applicable as specified in Section 01721,

LAYOUT OF WORK AND FIELD ENGINEERING.

- (12) Building plans and topographic data and all materials collected by or issued to the Design-Builder.
- (13) Pre-Final report listing specific actions which are required by others to enable construction to proceed on schedule. Give particular attention to those items of construction indicated in the Contract Documents and Pre-Final Design Drawings and Pre-Final Design Specifications to be performed by others.
- (14) Pre-Final product data including cut sheets to demonstrate compliance with the Contract Documents and Pre-Final estimated quantities for all types of materials to be incorporated into the project. This shall include civil, structural, architectural, electrical, mechanical, Systems and all other items to be permanently installed in the project.
- (15) Completed stormwater management, paving and restoration plans as applicable.
- (16) Electrical plans and calculations as applicable and as follows:
- (a) Electrical plans showing: lighting and equipment layout; layout of raceways, manholes, trenches and conduits for alternating current (A.C.) power; conduit and wire schedule showing number, type, size, routing and voltage; panelboard, transformer and circuit breaker schedules; stray current bonding and cathodic protection; cable support and equipment mounting details; provisions for circuit breakers to permit selective tripping; automatic lighting control.
 - (b) Complete design computations, including assumptions and back-up data, for the following: illumination levels; voltage drop on feeders; summary of connected and demand load on each panelboard and feeder; sizing of all equipment short circuit calculations; breaker coordination study of selective tripping; and resistance of grounding mat.
 - (c) Power feeder and ductbank: After coordination with local electrical utility company on design of power feeder for installation by local electrical utility company, a statement of final approval of electric power service ductbank entrance to rapid transit facilities by the supplying utility company.
- (17) System plans and schedules showing all conduit ductbank and cable trench routing as applicable.
- (18) Mechanical plans and calculations as follows:
- (a) Mechanical plans showing heating and ventilation, air-conditioning systems including control and air flow diagrams; complete equipment schedules; fire suppression, drainage and plumbing systems.
 - (b) Complete design computations, including any assumptions and back-up data, covering heating and ventilation, air-conditioning systems, fire suppression system, exiting calculations and any other special systems. Computations are to include equipment selection with a minimum of three manufacturers listed,

complete with model numbers along with appropriate performance data, curves, dimensions, etc. Equipment selection is to include verification that equipment will fit in space available and retain adequate accessibility for maintenance.

- (19) Civil, Architectural and Structural plans and calculations as applicable including list of control monuments that could be destroyed or disturbed during construction, complete design computations, including any summary and back-up data, covering sitework, foundation and superstructure.
- (20) A letter from electrical, mechanical and Systems subcontractors as applicable stating that their design represents the pre-final level submission and that, at a very minimum, items identified in Design-Builder's Quality Control/Quality Assurance Plan have been complied with.
- c. 100% final level of design review for what the Designer will submit to the jurisdictional authorities during the permitting/approval process (Final Design Drawings and Final Design Specifications in CSI format Review and Approval): The 100% design package shall be a complete set of checked revised Construction Documents for all disciplines including Final Design Drawings with cut sheets and Final Design Specifications in CSI format, progressed to the 100% level and incorporating all of the WMATA's comments from the earlier submittals. In addition, the 100% design package shall contain the original and six paper copies and one electronic copy of the following also for the Authority Representative/Project Representative's review:
- (1) Notification of Variations in Project Requirements if applicable in Final submittal letter of transmittal as described in Section 00720, SUBMITTALS.
 - (2) Complete list of all Final Design Drawings, Final Design Specifications and other material being submitted.
 - (3) Written disposition of the 90% comments by the Design-Builder certifying that all previous comments from the Authority and its Design Professional have been resolved and/or incorporated in the design.
 - (4) Final Test, acceptance and verification criteria and/or procedures for the product being supplied as specified in Section 01111, KEY DESIGN-BUILDER FUNCTIONS and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
 - (5) Final Updated Overview of the Quality Management System: Include any adjustments made to Finalized Design Control Plan; Inspection and Testing Plans and Reports including Quality Manual, Plans, Reports and Procedures; Document Control Procedures; Subcontracting and Purchasing Procedures; Process Control Procedures; Inspection, Measuring and Test Equipment Procedures; Reporting, Review and Disposition of Non-Conforming Product Procedures; Control of Quality Records Procedures; and Internal Quality Audit Procedures. Also include QA/QC Records; Summary of Management Review Findings and Corrective Actions; Audit Results; Status Reports; QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification Certificate; and Certifications. The above shall be as specified in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION; Section 01310, PROJECT MANAGEMENT AND COORDINATION; and Section 01470, QUALITY SYSTEM.

- (6) Final Updated Systems Integration and Testing Plans, Procedures and Records as applicable: Include any adjustments made to Systems Integration Procedure and Systems Operations Description including Interface Control Document; Interface Matrix; Systems Interface Report; Description of Route Operations or WMATA operating system as applicable; Integration Procedure; Fully Populated Systems Integration Database; All Systems, Interfaces and Schedule Impact Identification Update; All Coordination Effort Identification; Interfaces on Critical Path Identification; WMATA Reliability, Availability and Safety Goals Identification and Compliance; Detailed Layout and Interface Identification and Consolidated Drawings; and Emergency Procedures, Integration Design Technical Documentation; Operations Procedures for All Interfaces; Proposed Standards; Manuals; Flow Charts; Operation Procedures; Verification Procedures; Test Procedures; Performance Demonstration Plan and Procedures; and Acceptance Testing Plan as specified in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS; Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS, Section 01310, PROJECT MANAGEMENT AND COORDINATION, Section 01470, QUALITY SYSTEM, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING.
- (7) Resumes for Design Review Team reviewers and a signed certificate indicating that each member of the Design Review Team has reviewed the Final documents and found them proper; Reports substantiating design analyses and calculations as required in accordance with accepted industry practice to support the basis of Final design and development of Final Design Drawings; All checked Final design computations, indexed and bound (Coordinate and elevation listings shall be provided in AutoCAD compatible format); Reports substantiating Final design analyses and calculations as required in accordance with accepted industry practice to support the basis of design and development of Final Design Drawings; Final design documentation including all jurisdictional approval letters received from governmental agencies and all permits for maintenance of traffic, environmental, geotechnical, stormwater management, sediment and erosion control, grading, pavement and markings, forest conservation, wetlands mitigation, right-of-entry, forest stand delineation, reforestation, afforestation, landscaping, and buildings and other structures as applicable; Final ADAAG Design Compliance Certification; Final ADA Facilities Accessibility Checklist; and Records of Final design reviews and design change requests as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
- (8) Statement by the Design Professional who signed the drawings that the Final drawings and specifications conform to applicable architectural, engineering, Systems and Authority requirements and to the appropriate jurisdictional regulations as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01470, QUALITY REQUIREMENTS.
- (9) Drawing set and/or Specifications transmittals and other communications and replies thereto as each is sent to or received from a Utility or Agency since the Pre-Final level review submittal including transmittal letters and requests for approvals, reimbursable estimates and other data; confirmation of all approvals by the affected Utility or Agency of the treatment, design and standards; written statement indicating those items of utility work which must be completed prior to construction, and those which

must be completed within six months after start of construction as applicable; and of all utility plans and all materials collected by or issued to the Design-Builder, as specified in Section 01180, PROJECT UTILITY SOURCES.

- (10) Latest approved version of Construction Planning Schedule plus related documents as specified in Section 01322, CONTRACT PROGRESS REPORTING.
 - (11) Final design survey field notes as specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING.
 - (12) Building plans and topographic data and all materials collected by or issued to the Design-Builder.
 - (13) Final report listing specific actions which are required by others to enable construction to proceed on schedule. Give particular attention to those items of construction indicated in the Contract Documents and Final Design Drawings and Final Design Specifications to be performed by others.
 - (14) Final product data including cut sheets to demonstrate compliance with the Contract Documents and Final estimated quantities for all types of materials to be incorporated into the project. This shall include civil, structural, architectural, electrical, mechanical, Systems and all other items to be permanently installed in the project.
- d. Issued For Construction (Review and Approval): In some cases, construction may commence before the complete 100% Final Design Drawings and Specifications are produced and issued to the Authority for consideration. In such cases, an additional submittal shall be required of the Design-Builder consisting of all Design Drawings, Design Specifications, and other materials needed to review and approve the work that the Design-Builder intends to construct. Such submittals shall include composite drawings, showing the various disciplines of work involved, where appropriate. Secure WMATA approval for conformance to the Project Requirements before construction for fabrication of any work indicated by a required design submittal.
- e. Other Design Reviews: The Authority retains the right to review and approve for conformance to the Project Requirements any other submittals that it deems necessary during the Design Phase of this Contract. In addition, the Design-Builder shall provide all other submittals to the Authority that are specified in the Project Manual beyond those referenced above and as listed on the approved Schedule of Submittals.
2. The number of sets of Design Drawings and Design Specifications to be submitted by the Design-Builder for approval shall be as indicated below:
- a. Intermediate and Pre-Final Reviews:
 - (1) The Design-Builder shall prepare electronic copies of the Design Specifications text files in current WordPerfect file format version. The Design-Builder shall, unless otherwise directed, submit the original, one electronic copy and six sets of paper copies of Design Specifications to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.

- (2) The Design-Builder shall prepare separate sets of electronic Design Drawings on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The Design-Builder shall prepare separate sets of electronic Design Drawings on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified shall be the standard formats for all Design Drawings submitted for approval. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines specified in the WMATA CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. When forwarding to the Authority those Design Drawing submittals, the Authority reserves the right to have drawing(s) resubmitted until the Authority Representative approves the legibility of the drawing contained in the file. The Design-Builder shall, unless otherwise directed, submit the original half-size reproducible, electronic copies as specified above and six half-size sets of black ink on white paper copies of all Design Drawing submittals to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.
3. For delivery of the Final Design Documents, the original full-size and half-size reproducible of Final Design Drawings and original Final Design Specifications shall be checked in accordance with the approved Design-Builder's Quality Plan, bear the professional registration seal, and be signed and camera ready for reproduction.
- a. The number of sets of Final Design Drawings and Final Design Specifications to be submitted by the Design-Builder for approval will be as indicated below:
- (1) Final delivery of documents:
- (a) The original Final Design Specifications along with the Specifications cover shall be printed on bond and ready for reproduction: One set unbound.
- (b) Copies of the Final Design Specifications: Six bound copy sets.
- (c) The original full-size reproducible Final Design Drawings (22 inches by 34 inches): One set.
- (d) The original half-size reproducible Final Design Drawings (11 inches by 17 inches): One set.
- (e) Copies of the full-size Final Design Drawings: One bound blackline print set.
- (f) Copies of the half-size Final Design Drawings: Six bound blackline print sets.
- b. The Final Design Specifications and the Final Design Drawings will be reviewed by the Authority Representative as specified below and, if necessary, comments will be given to the Design-Builder for resolution. Any original Drawings or Specifications that require revision will be returned to the Design-Builder. The Design-Builder shall re-submit the revised Drawings and Specifications for approval for conformance to the Project Requirements in the quantities as listed above.
- c. Electronic Media Drawing Files: Following acceptance of the Final Design Drawings and

Final Design Specifications, the Design-Builder shall prepare the final Electronic Media Drawing Files as previously specified for all approved Final Design Drawings and Final Design Specifications, and submit to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative, six (6) sets each of Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media and one (1) separate set of Specifications in WordPerfect current file format version on CD-ROM electronic media. All CD-ROM disks shall be labeled with file name, operating system, file format, and contract number.

3.02 CONSTRUCTION SUBMITTALS

- A. Authority Review: The Design-Builder shall be responsible for the review and approval of all Contract-related submittals prior to forwarding to the Authority those submittals the Authority has reserved the right to review and comment or review and approve. The Authority explicitly reserves the right to review and approve for conformance to the Project Requirements the Construction items identified below. Such approval (or disapproval) shall be given to the Design-Builder within no less than twenty-one (21) calendar days after receipt by the Authority unless otherwise specified. The Design-Builder shall incorporate any comments or corrections and deliver a revised submittal to the Authority within fourteen (14) calendar days following receipt of such by the Design-Builder unless otherwise specified. Review and approval by the Authority will not relieve the Design-Builder from its responsibility for accuracy of submittals, for conformity of submittals to and for prosecution and completion of the Contract in accordance with the Contract Documents and Final Design Specifications and Final Design Drawings, and for compatibility of described product with contiguous products and the rest of the systems that they impact. Authority review and approval of a separate item will not constitute review and approval of an assembly in which the item functions.
1. Construction Review:
- a. S&I Yard Improvements and S&I Shop Expansion Facility:
- (1) Factory visit to pre-caster to approve fabrication of insulated architectural pre-cast concrete panels, if proposed.
 - (2) Working Drawings.
 - (3) Shop, Schematic and Installation Drawings, manufacturer's literature, product data and product substitution requests.
 - (4) Samples.
 - (5) Certifications.
 - (6) Documentation including calculations and miscellaneous documentation.
 - (7) Licenses, Permits, and Approval Letters from Government and Utility Agencies.
- b. Other Construction Reviews: The Authority retains the right to review and approve for conformance to the Requirements any other submittals that it deems necessary during the Construction Phase of this Contract. In addition, the Design-Builder shall provide all other submittals to the Authority that are specified in the Project Manual beyond those

referenced above and as listed on the approved Schedule of Submittals.

- c. **Start of Construction:** The Design-Builder shall not start construction until the Authority has approved the Design for that Element for conformance to the Requirements, except by the express consent of the Authority. The Construction for any Design Element will not be approved until the balance of the Design is advanced to a stage where in the judgment of the Authority the Design Element can be adequately evaluated.
- d. **Performance of Inspections and Tests by the Design-Builder:** The Design-Builder shall perform all inspection and testing as specified in Section 01470 QUALITY SYSTEM, Section 01113, SYSTEMS INTEGRATION, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING and with the procedures in the Design-Builder's approved Quality Control/Quality Assurance (QC/QA) Plan and in the approved Systems Integration Plan as specified in Section 01470 QUALITY SYSTEM and Section 01113, SYSTEMS INTEGRATION . QA/QC Plan and Systems Integration Plan shall include Testing and Inspections in accordance with jurisdictional agencies and utility companies.

3.03 CONSTRUCTION SHOP DRAWINGS

- A. Initially and as work progresses, Shop Drawings shall be submitted to the Designer for approval prior to forwarding to the Authority for approval.
- B. The Design-Builder shall prepare separate sets of electronic Shop Drawings on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified in this Project Manual shall be the standard formats for all Shop Drawings submitted for approval for conformance to the Requirements. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines specified in the WMATA CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. When forwarding to the Authority those Shop Drawing submittals the Authority has reserved the right to review and comment or review and approve, the Authority reserves the right to have drawing(s) resubmitted until the Authority Representative approves the legibility of the drawing contained in the file. Also, the Design-Builder shall, unless otherwise directed, submit one set of full-size and six sets of half-size black ink on white paper copies of all Shop Drawing submittals the Authority has reserved the right to review and approve to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.
- C. Shop Drawings shall be complete, detailed and dimensioned and shall include the following:
 - 1. Fabrication, erection, layout and setting drawings.
 - 2. Complete list of materials.
 - 3. Schedules.
 - 4. Manufacturer's drawings.
 - 5. Wiring and control diagrams and utility connections and special facilities as specified in Section 01180, PROJECT UTILITY SOURCES, as applicable.

6. Catalog cuts or entire catalogs: Six originals.
 7. Descriptive literature.
 8. Performance and test data.
 9. Drawings prepared by the Design-Builder for permanent structures, equipment and systems designed by it to comply with the Specifications.
 10. Additional requirements specified in the technical specifications.
- D. Drawings and schedules shall be checked and coordinated with the work of all trades involved before they are submitted for approval by the Designer and shall bear the Designer's stamp of approval as evidence of such checking and coordination. Drawings or schedules submitted to the Authority without this stamp of approval may be returned to the Design-Builder for resubmittal. Where specified to be certified by a professional engineer, certification of shop drawings shall comply with such requirements of the WORKING DRAWINGS article.
- E. Maximum size of each full-size sheet shall be 22 inches by 34 inches and maximum size of each half-size sheet shall be 11 inches by 17 inches. Each full-size shop drawing shall have a blank area 3-1/2 inches by 3-1/2 inches, located adjacent to the title block. The title block in the lower right hand corner shall display the following:
1. Number and title of the drawing.
 2. Date of drawing or revision.
 3. Name of project.
 4. Name of Design-Builder and subcontractor submitting the drawing.
 5. Clear identification of contents and location of the work.
 6. Title and number of Specifications section.
- F. Drawings for work on utility facilities, streets and other facilities which are constructed for owners other than the Authority shall be coordinated so that the information required by these owners is included on the Shop Drawings for their facilities.
- G. If drawings show variations from the Contract requirements because of standard shop practice or for other reasons, the Design-Builder shall describe such variations in its letter of transmittal as specified in Section 00720, SUBMITTALS. The Design-Builder shall submit the original and six paper copies and one electronic copy of the submittal transmittal letter. If acceptable, the Authority Representative may approve such variations, subject to a proper adjustment in the Contract. If the Design-Builder fails to describe such variations it shall not be relieved of the responsibility for executing the work in accordance with the Contract, even though such drawings have been approved for conformance to the Requirements.
- H. If the drawings or schedules as submitted include such variations and show a departure from the Contract requirements, which the Authority Representative finds to be in the interest of the Authority and to be so minor as not to involve a change in the Contract price or time for performance, the Authority Representative may approve the drawings.

- I. One set of full-size black ink on white paper copies of all Shop Drawings will be returned to the Design-Builder. Each of the approved Shop Drawings will be identified as having received such approval by being so stamped and dated. Shop Drawings not approved will be stamped NOT APPROVED and will have required corrections shown. If disapproved, resubmittals shall be in the formats and quantities as specified in B. above. Additions and corrections resulting from Authority review comments shall be incorporated by the Design-Builder. On resubmittals the Design-Builder shall direct specific attention, in writing or on resubmitted Shop Drawings, to revisions other than the corrections requested by the Authority Representative on previous submittals. If the Design-Builder considers corrections indicated on the Drawings to constitute a change to the Contract Documents, notice as required under the CHANGES Section 00753 of the General Conditions shall be given to the Contracting Officer through the Authority Representative.
- J. When the Shop Drawings have been completed to the satisfaction of the Authority Representative, the Design-Builder shall carry out the construction in accordance therewith and shall make no further changes therein except upon written instructions from the Authority Representative.
- K. After written approval of the Shop Drawings by the Designer, or after written approval of the Shop Drawings by the Authority Representative for submittals the Authority has reserved the right to review and approve, the Design-Builder shall supply the Authority Representative with one set each of Shop Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media, one set of full-size paper prints and six sets of half-size paper prints of the approved Shop Drawings if the Drawings have been approved subject to certain revisions prior to commencing such work.
- L. Before the date of final substantial completion, the Builder shall furnish to the Designer for approval prior to forwarding to the Authority Representative for approval, Record Shop Drawings, all clearly revised, completed and brought up to date, showing permanent construction as actually made. Record Shop Drawings shall be provided in both an AutoCAD (.DWG) file format and a .pdf file format on CD-ROM electronic media as specified in Section 01780 CLOSEOUT SUBMITTALS of these General Requirements. Also, the Design-Builder shall, submit one set of full-size and six sets of half-size black ink on white paper copies of all Shop Drawings to the Designer for approval prior to forwarding to the Authority Representative for approval.
- M. Once the Record Shop Drawings are approved, the Builder shall submit six separate sets each of Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media and one set of full-size and one set of half-size reproduces of all approved Record Shop Drawings to the Designer for approval prior to forwarding to the Authority Representative for approval as specified in Section 01780 CLOSEOUT SUBMITTALS of these General Requirements using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.

3.04 CONSTRUCTION WORKING DRAWINGS

- A. When used in the Specifications, the term Working Drawings shall be considered to mean: the Design-Builder's plan for temporary structures such as decking, temporary bulkheads, support of excavation, support of utilities, groundwater control systems, and forming and falsework; for underpinning; and for such other work as may be required for construction which but do not become an integral part of the completed project.
- B. Working Drawings and calculations as submitted shall be certified by a professional engineer registered in the area where the work will be performed and shall convey, or be accompanied by,

information sufficient to completely explain the structure, machine or system described and its intended manner of use.

- C. Initially and as work progresses, Working Drawings shall be submitted to the Designer for approval prior to forwarding to the Authority for approval for conformance to the Requirements. The Design-Builder shall prepare separate sets of electronic Working Drawings on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality shall be the standard formats for all Working Drawings submitted for approval. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines specified in the WMATA CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. When forwarding to the Authority those Working Drawing submittals the Authority has reserved the right to review and approve, the Authority reserves the right to have drawing(s) resubmitted until the Authority Representative approves the legibility of the drawing contained in the file. Also, the Design-Builder shall, unless otherwise directed, submit one set of full-size and six sets of half-size black ink on white paper copies of all Working Drawing submittals the Authority has reserved the right review and approve to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.
- D. Drawings shall be checked and coordinated with the work of all trades involved before they are submitted for approval by the Designer and shall bear the Designer's stamp of approval as evidence of such checking and coordination. Drawings or schedules submitted to the Authority for approval without this stamp of approval may be returned to the Design-Builder for resubmittal.
- E. One set of full-size black ink on white paper copies of all Working Drawings will be returned to the Design-Builder. Each of the approved Working Drawings will be identified as having received such approval by being so stamped and dated. Working Drawings not approved will be stamped NOT APPROVED and will have required corrections shown. If disapproved, resubmittals shall be in the formats and quantities as specified in C. above. Additions and corrections resulting from Authority review comments shall be incorporated by the Design-Builder. On resubmittals the Design-Builder shall direct specific attention, in writing or on resubmitted Working Drawings, to revisions other than the corrections requested by the Authority Representative on previous submittals. If the Design-Builder considers corrections indicated on the Drawings to constitute a change to the Contract Documents, notice as required under the CHANGES article of the General Conditions shall be given to the Contracting Officer through the Authority Representative.
- F. When the Working Drawings have been completed to the satisfaction of the Authority Representative, the Design-Builder shall carry out the temporary construction in accordance therewith and shall make no further changes therein except upon written instructions from the Authority Representative.
- G. After written approval of the Working Drawings by the Designer, or after written approval of the Working Drawings by the Authority Representative for submittals the Authority has reserved the right to review and approve, the Design-Builder shall supply the Authority Representative with one set each of Working Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media, one set of full-size paper prints and six sets of half-size paper prints of the approved Working Drawings if the Drawings have been approved subject to certain revisions prior to commencing such work.
- H. Before the date of final substantial completion, the Builder shall furnish to the Designer for approval prior to forwarding to the Authority Representative for approval, Record Working Drawings, all

clearly revised, completed and brought up to date, showing temporary construction as actually performed as specified in Section 01780 CLOSEOUT SUBMITTALS of these General Requirements . Record Working Drawings shall be provided in both an AutoCAD (.DWG) file format and a .pdf file format on CD-ROM electronic media. Also, the Builder shall, submit one set of full-size and six sets of half-size black ink on white paper copies of all Working Drawings to the Designer for approval prior to forwarding to the Authority Representative for approval.

- I. Once the Record Working Drawings are approved, the Builder shall submit six (6) separate sets each of Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media and one set of full-size and one set of half-size reproducibles of all approved Record Working Drawings to the Designer for approval prior to forwarding to the Authority Representative for approval as specified in Section 01780 CLOSEOUT SUBMITTALS of these General Requirements using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.
- J. Temporary Construction and Construction Sequence and Staging Working Drawings including Temporary Decking are more fully described in Section 01530, TEMPORARY CONSTRUCTION and in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
- K. Temporary utility connections and special facilities Working Drawings are more fully described in Section 01510, TEMPORARY UTILITIES.

3.05 CONSTRUCTION SAMPLES

- A. The Design-Builder shall submit samples for approval for conformance to the Requirements as specified or as directed and shall be delivered to the Design Professional as specified in the Final Design Specifications or Final Design Drawings or as directed by the Authority. The Design-Builder shall prepay shipping charges on samples. Materials or equipment for which samples are required shall not be used in the work until approved.
- B. Each sample shall be labeled as follows:
 - 1. Name of project.
 - 2. Name of Design-Builder and subcontractor.
 - 3. Material or equipment represented.
 - 4. Place of origin.
 - 5. Name of producer and brand, if any.
 - 6. Location in project. Samples of finish materials shall have additional markings identifying them under the schedules.
- C. The Design-Builder shall mail, under separate cover, a letter to the Authority Representative submitting each shipment of samples as specified in Section 00737, MATERIALS, WORKMANSHIP AND EQUIPMENT, and containing the information required in Paragraph B. above. Design-Builder shall also enclose a copy of this letter with the shipment. Approval of a sample shall be only for the characteristics or use named in such approval and shall not be construed to change or modify Contract requirements. Substitutions will not be permitted unless

they are considered to be in the best interests of the Authority and are requested in accordance with the Contract Documents.

- D. Approved samples not destroyed in testing shall be sent to the Design Professional. Approved samples in good condition will be marked for identification and may be used in the work. Materials and equipment incorporated in the work shall match the approved samples. Samples which fail testing or are not approved will be disposed of, unless the Design-Builder requests, at the time of submittal, that they be returned to the Design-Builder at its expense.
- E. Failure of any material to pass the specified tests will be sufficient cause for refusal to consider, under this Contract, further samples of the same brand or make of that material. The Authority Representative reserves the right to disapprove any material or equipment which previously has proved unsatisfactory in service.
- F. Samples of various materials on site, stored or in place, may be taken by the Authority for testing. Samples failing to meet Contract requirements will automatically void approvals of items tested. The Design-Builder shall replace such materials or equipment to meet Contract requirements, or there shall be a proper adjustment of the Contract price as determined by the Contracting Officer.
- G. Samples which do not meet specified requirements will be rejected. Retesting of additional samples will be made at the expense of the Design-Builder.

3.06 CONSTRUCTION CERTIFICATIONS

- A. The Design-Builder shall submit the original and six paper copies of certification and an electronic copy for approval, unless otherwise specified.
- B. The Design-Builder shall submit the following certificates:
 - 1. Certification that construction complies with ADAAG regulations as specified in Section 01780, CLOSEOUT SUBMITTALS.
 - 2. Certificates to demonstrate proof of compliance with requirements specified in the technical specifications for each of the following:
 - a. Products and materials.
 - b. Functioning and testing of equipment and systems.
 - c. Qualifications of personnel, manufacturers, fabricators and installers.
 - d. Each certificate shall be signed by an official authorized to certify on behalf of the issuing organization and shall bear the name and address of the Design-Builder, the project name and location; if for a material, quantity and date(s) of shipment or delivery to which the certificates apply shall be indicated.
- C. Certification shall not be construed as relieving the Design-Builder from furnishing satisfactory material, if, after tests are performed on selected samples, the material is found not to meet the specified requirements.
- D. Certified test reports:

1. Submit original and number and type of copies as specified above.
2. Unless otherwise specified, testing shall be conducted by an independent testing agency that certifies that it complies with the recommended requirements of ASTM E329.

3.07 CONSTRUCTION DOCUMENTATION

- A. The Design-Builder shall provide the original and six paper copies and an electronic copy for approval of each of the following when so specified in the technical specifications and as follows:
1. Test reports of previous testing. Where specified in the technical specifications, the Design-Builder may in lieu of testing submit certified test reports of previous testing of such items under similar Authority contracts. The inclusion of a previously approved product only signifies that at one time the manufacturer made a product which met specification requirements. It does not relieve the Design-Builder of its responsibility for furnishing supplies that meet all specification requirements or for performing specified inspections and tests for such material.
 - a. Include the following:
 - (1) Certification that materials meet or exceed specified test requirements.
 - (2) Name and address of testing laboratory.
 - (3) Dates of tests to which reports apply.
 - (4) Certification that materials provided are the same as those tested.
 2. Calculations: Certified by a professional engineer registered in the area where the work will be installed.
 3. Miscellaneous documentation: Specified items such as delivery tickets, batch tickets and bills of materials.

3.08 AS-BUILT CONTRACT DRAWINGS PROVIDED DURING CONSTRUCTION

- A. As-built Contract Drawings provided during construction: The term As-built Contract Drawings prepared by or through the Design-Builder reflect all known changes from the approved Design-Builder provided Final Design Drawings Issued for Construction, including as applicable revisions and additions to Standard Drawings and As-built Information and Record Drawings from previous Authority projects initially provided by the Authority. During construction, the Design-Builder shall maintain a record set of all Drawings annotated to show any changes incorporated as work progresses. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines specified in the WMATA CAD Manual Attachment to this Project Manual. Information shall include, but not be limited to, the following:
1. Depths of various elements of foundations in relation to survey data.
 2. Horizontal and vertical locations of underground electrical and utility facilities referenced to survey data. Unless otherwise specified, verify measurements within a 12-inch tolerance. Verify storm and sanitary sewer pipe inverts within 0.01 foot.
 3. Location of interior utilities and appurtenances concealed in construction, referenced to visible and accessible features of the structure.

4. Field changes of dimensions and detail.
 5. Changes accomplished by change orders.
- B. Construction left in place, such as temporary support systems and concrete outside neat lines of permanent structures, including notes defining types and locations of items.
- C. Before the scheduled date of final substantial completion, the Design-Builder shall submit approved as-built drawings for the completed work as specified in Section 01780 CLOSEOUT SUBMITTALS.

3.09 ADMINISTRATIVE SUBMITTALS AND CONSTRUCTION CLOSEOUT AND TRAINING SUBMITTALS

- A. Authority Review: The Design-Builder shall be responsible for the review and approval of all Contract-related submittals prior to forwarding to the Authority those submittals the Authority has reserved the right to review and comment or review and approve. The Authority explicitly reserves the right to review and approve the Administrative items identified below. Such approval (or disapproval) shall be given to the Design-Builder within no less than twenty-one (21) calendar days after receipt by the Authority unless otherwise specified. The Design-Builder shall incorporate any comments or corrections and deliver a revised submittal to the Authority within fourteen (14) calendar days following receipt of such by the Design-Builder unless otherwise specified. Review and approval by the Authority will not relieve the Design-Builder from its responsibility for accuracy of submittals, for conformity of submittals to and for prosecution and completion of the Contract in accordance with the Contract Documents and Final Design Specifications and Final Design Drawings.
- B. Administrative Submittals Review: Submit the original and six paper copies and one electronic copy of:
1. Cost or Pricing Data as specified in Section 00201, GENERAL INSTRUCTIONS Section 00756, AUDIT - PRICE ADJUSTMENTS, Section 00757, CERTIFICATE OF CURRENT COST OR PRICING DATA, Section 00758, PRICE REDUCTION FOR DEFECTIVE COST OR PRICING DATA - PRICE ADJUSTMENTS, Section 00760, SUBCONTRACTOR COST OR PRICING DATA; and Section 01250, CONTRACT MODIFICATION PROCEDURES.
 2. Signed Contract as specified in Section 00521, DESIGN-BUILD CONTRACT FORM, Section 00611, BOND REQUIREMENTS and Section 00726, COMMENCING THE WORK.
 3. Power of Attorney as specified in Section 00541, POWER OF ATTORNEY, Section 00611, BOND REQUIREMENTS and Section 00726, COMMENCING THE WORK.
 4. Power of Execution as specified in Section 00542, POWER OF EXECUTION, Section 00611, BOND REQUIREMENTS and Section 00726, COMMENCING THE WORK.
 5. Performance Bond as specified in Section 00611, BOND REQUIREMENTS, Section 00612, PERFORMANCE BOND and Section 00726, COMMENCING THE WORK.
 6. Payment Bond as specified in Section 00611, BOND REQUIREMENTS, Section 00613, PAYMENT BOND and Section 00726, COMMENCING THE WORK.
 7. Contract Closeout Certificates including ADAAG Construction Compliance, Affidavits, Written Descriptions, Releases, and Warranties and Guarantees as specified in Section 00620,

CERTIFICATES and Section 01780, CLOSEOUT SUBMITTALS.

8. Notification of discrepancy in the figures in the Project Drawings if applicable; RFI's if work to be performed is not sufficiently detailed or explained in the Project Requirements if applicable; notification of all errors, omissions, inconsistencies if applicable; notification of conflicts among the requirements and criteria either indicated in the Project Manual and/or Project Drawings or required by local, state or federal jurisdictions or utilities that affect the scope, cost or quality of this work or other defects including inaccuracies in the Project Requirements with options to resolve if applicable as specified in Section 00703, GENERAL REQUIREMENTS, DRAWINGS AND SPECIFICATIONS and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
9. Pre-Design and Design Review Meetings Minutes as specified in Section 00704, INTENT OF CONTRACT and Section 01312, PROJECT MEETINGS.
10. Resumes of Design-Builder Substitutions of Key Personnel if applicable as specified in Section 00710, PROJECT MANAGEMENT AND SUPERINTENDENCE AND KEY PERSONNEL and Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
11. Preconstruction Inspection Records as specified in Section 00716, PRECONSTRUCTION INSPECTION and Section 01711, ACCEPTANCE OF CONDITIONS.
12. Differing Site Conditions Report if applicable as specified in Section 00717, DIFFERING SITE CONDITIONS and Section 01711, ACCEPTANCE OF CONDITIONS.
13. VECP's if applicable as specified in Section 00721, VALUE ENGINEERING INCENTIVE.
14. Schedules and Progress Reporting as specified in Section 00724, PROGRESS SCHEDULES AND REQUIREMENTS FOR MAINTAINING PROGRESS RECORDS and Section 01322, CONTRACT PROGRESS REPORTING.
15. Schedule to complete the Work earlier than any required milestone, interim or final completion date, if applicable as specified in Section 00725, PERIOD OF PERFORMANCE AND PROJECT SCHEDULE.
16. Insurance Certificates as specified in Section 00726, COMMENCING THE WORK and Section 00787, INDEMNIFICATION AND INSURANCE REQUIREMENTS AND SPECIAL PROVISIONS OF INSURANCE FURNISHED BY DESIGN-BUILDER.
17. Designer, Builder, Major Subcontractors and Key Personnel Identification Confirmation as specified in Section 00726, COMMENCING THE WORK and Section 01111, KEY DESIGN-BUILDER FUNCTIONS.
18. Notification of the Causes of Delay if applicable as specified in Section 00728, TERMINATION FOR DEFAULT, DAMAGES FOR DELAY AND TIME EXTENSIONS.
19. Termination Claims if applicable as specified in Section 00730, TERMINATION FOR THE CONVENIENCE OF THE AUTHORITY.
20. Request for an Equitable Adjustment of the price for the portion not terminated by the Notice of Termination if applicable as specified in Section 00730, TERMINATION FOR THE CONVENIENCE OF THE AUTHORITY.

21. Requests for and Notice of Assignment if applicable in Section 00731, ASSIGNMENT.
22. Notice of Appeal if applicable as specified in Section 00732, DISPUTE RESOLUTION.
23. Advance notice to witness all tests and inspections as specified in Section 00735, ACCEPTANCE AND INSPECTION OF WORK , Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING.
24. Equitable Adjustment Request for Authority-furnished property not made available as applicable as specified in Section 00736, AUTHORITY-FURNISHED PROPERTY.
25. Name of the manufacturer, the model number and other identifying data and information concerning the performance, capacity, nature and rating of the machinery and mechanical and other equipment and full information about the material or articles which are to be incorporated into the Work as specified in Section 00737, MATERIALS, WORKMANSHIP AND EQUIPMENT.
26. Hazardous Materials Report as applicable as specified in Section 00738, HAZARDOUS MATERIALS.
27. Accident Prevention Proposals, Exposure and Accident Data as specified in Section 00742, ACCIDENT PREVENTION.
28. Temporary Fire Protection Plan as specified in Section 00743, FIRE PROTECTION EQUIPMENT AND LIFE SAFETY AGREEMENT and Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.
29. Updated Organizational Health and Safety Program (as part of the Updated PMP) and Construction and Environmental Safety Plans and other required submittals that comply with the attachments to the Project Manual; i.e., the WMATA Construction Safety and Environmental Manual as specified in Section 00371, and the Safety and Security Certification Program Plan as specified in Section 00381, the System Safety Program Plan as specified in Section 00391, and as further specified in the Safety Rules and Procedures Manual, Section 00744, PROTECTION OF PERSONS AND PROPERTY, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS and Section 01310, PROJECT MANAGEMENT AND COORDINATION.
30. Request for an Extension of Time due to delay from quantity variation if applicable as specified in Section 00748, VARIATIONS IN ESTIMATED QUANTITIES.
31. Applications for Payment including breakdown of price for major work categories, updated schedules, evidence of proof of the ownership, quantity and value of such delivered materials, properly executed bills of sale for materials and QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification as specified in Section 00749, METHOD OF PAYMENT, Section 01111, KEY DESIGN-BUILDER FUNCTIONS, Section 01290, PAYMENT PROCEDURES and Section 01470, QUALITY SYSTEM.
32. Request for Final Payment as specified in Section 00749, METHOD OF PAYMENT, Section 01290, PAYMENT PROCEDURES, Section 01770, CLOSEOUT PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS.

33. Properly executed voucher; Release of all claims against the Authority; and satisfactory records for design, inspection, testing or other quality elements upon completion and acceptance of all work as specified in Section 00749, METHOD OF PAYMENT, Section 01770, CLOSEOUT PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS.
34. Breakdown of the Total Contract Price for every lump sum item on the Price Schedule with supporting data as applicable as specified in Section 00750, PROGRESS PAYMENTS FOR LUMP SUM ITEMS.
35. Subcontractor Applications for Payment, Subcontractor Payment Certification and Subcontractor non-payment notice with Payment Request as applicable as specified Section 00752, SUBCONTRACT PAYMENTS.
36. Equitable Adjustment Proposals and Written Notice of Change as applicable as specified in Section 00753, CHANGES and Section 01250, CONTRACT MODIFICATION PROCEDURES.
37. Cost proposal in advance of performance of any work for which a price adjustment is requested under this Contract as applicable, proposed cost records and accounting system and daily report form as specified in Section 00755, ACCOUNTING AND RECORD KEEPING and Section 01250, CONTRACT MODIFICATION PROCEDURES.
38. Warranties and Guarantees as specified in Section 00762, WARRANTY OF CONSTRUCTION and Section 01780, CLOSEOUT SUBMITTALS.
39. If applicable, recommendation for Corrective Actions, together with supporting information; Schedule of Deficiency Corrections; Data and Reports applicable to any correction; and a Technical and Cost Proposal to amend the Contract to permit acceptance of the affected materials, equipment, systems or subsystems as specified in Section 00763, CORRECTION OF DEFICIENCIES and Section 01780, CLOSEOUT SUBMITTALS.
40. Request for Exception to conflict of interest clause with full disclosure and for good cause as applicable and notification of non-compliance the provisions of conflict of interest clause with full disclosure as applicable as specified in Section 00767, CONFLICT OF INTEREST.
41. Request to consider the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program and Weekly Payrolls and Employee Records accompanied by a "Statement of Compliance" as specified in Section 00774, LABOR PROVISIONS.
42. Notification of actual or potential labor dispute delaying or threatens to delay the timely performance including all relevant information with respect thereto as applicable as specified in Section 00777, NOTICE TO THE AUTHORITY OF LABOR DISPUTES.
43. Warrant that no amount for newly imposed Federal excise tax or duty or rate increase was included in the Contract price as a contingency reserve or otherwise as applicable; request to furnish evidence appropriate to establish exemption from any Federal, State, or Local tax as applicable; and notification of matters which will result in either an increase or decrease in the Contract price as applicable as specified in Section 00779, FEDERAL, STATE AND LOCAL TAXES.
44. Report of each notice or claim of patent or copyright infringement based on the performance

of this Contract of which the Design-Builder has knowledge as applicable and all evidence and information in possession of the Design-Builder pertaining to any action, suit or claim against the Authority on account of any alleged patent or copyright infringement arising out of or related to the performance of this Contract or out of the use of any supplies furnished or work or services performed hereunder as applicable as specified in Section 00784, NOTICE AND ASSISTANCE REGARDING PATENT AND COPYRIGHT INFRINGEMENT.

45. Technical data including technical writing, computer software, sound recordings, pictorial reproductions, drawings, or other graphic representations and works of a technical nature, whether or not copyrighted, which are specified to be delivered pursuant to this Contract. The term does not include financial reports, cost analyses, and other information incidental to Contract administration. Computer software means computer programs, computer data bases, and documentation; and Notice or claim of copyright infringement with respect to any technical data delivered hereunder as specified in Section 00785, TECHNICAL DATA - WITHHOLDING OF PAYMENT and Section 01780, CLOSEOUT SUBMITTALS.
46. Equitable Adjustment Request for Authority-furnished property not made available as applicable as specified in Section 00836, AUTHORITY-FURNISHED PROPERTY REQUIREMENTS if applicable.
47. Assistant Safety Superintendent if applicable and First Aid Attendant if applicable resumes and certifications as specified in Section 00844, SAFETY SUPERINTENDENCE REQUIREMENTS.
48. Certified Safety Statement for Insurance Coverages with Weekly Certified Payroll Records for Authority-Furnished Insurance as applicable as specified in Section 00887, INSURANCE REQUIREMENTS.
49. Written demand requesting an equitable adjustment as applicable, review request of decision on whether to proceed with DRB proceedings as applicable, request that a specific dispute not be subject to the Disputes Review Board as applicable and written appeal as applicable as specified in Section 00832, DISPUTES REVIEW BOARD REQUIREMENTS if applicable.
50. FTA Clauses, if applicable, as specified in Section 00892, FTA REQUIREMENTS:
 - a. Rights in Data and Copyrights - FTA Subject Data whether or not copyrighted.
 - b. Cargo Preference - Use of United States Flag Vessels: Certification that no U.S. Flagships Available.
 - c. Fly America Requirements: Certificate of Compliance with the Fly America requirements and if a foreign air carrier was used, an appropriate certification or memorandum if a foreign air carrier was used adequately explaining why service by a U.S. flag air carrier was not available.
51. Updated Overview of the Quality Management System and Updated Finalized Design Control Plan, Finalized Quality Plan, Updated Quality Management System (as part of the Updated PMP) and Inspection and Testing Plans and Reports including Quality Manual, Plans, Reports and Procedures; Document Control Procedures; Subcontracting and Purchasing Procedures; Process Control Procedures; Inspection, Measuring and Test Equipment Procedures; Reporting, Review and Disposition of Non-Conforming Product Procedures; Control of Quality Records Procedures; Internal Quality Audit Procedures and QA/QC Records; Summary of

Management Review Findings and Corrective Actions; Audit Results; Status Reports; QA/QC Manager's Statement of Compliance Quality Certification for Payment Verification; and Certifications in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS; Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA; Section 01113, SYSTEMS INTEGRATION; Section 01310, PROJECT MANAGEMENT AND COORDINATION; and Section 01470, QUALITY SYSTEM.

52. Systems Integration and Testing Plans, Procedures and Records as applicable: Systems Integration Procedure and Systems Operations Description including Interface Control Document; Interface Matrix; Systems Interface Report; Description of Route Operations; Integration Procedure; Working Model of Systems Integration Database; Systems Integrator Identification; Major Systems Identification; Major Coordination Effort Identification; Interfaces on Critical Path Identification; WMATA Reliability, Availability and Safety Goals Identification and Compliance; Layout and Interface Identification; Emergency Procedures; All Systems, Interfaces and Schedule Impact Identification; All Coordination Efforts; High Priority Interface Identification; Consolidated Drawings; Integration Design Technical Documentation; Operations Procedures for All Interfaces; Proposed Standards; Manuals; Flow Charts; Operation Procedures; Verification Procedures; Test Procedures; Inspection Records; Test Results; Certificates of Compliance; Audit Information; and Acceptance Testing Plan in General Requirements Section 01111, KEY DESIGN-BUILDER FUNCTIONS; Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS, Section 01310, PROJECT MANAGEMENT AND COORDINATION, Section 01470, QUALITY SYSTEM, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING.
53. Memorandum of record of conferences with governmental, public and private agencies and others and notification of any betterments or other work beyond the Contract scope requested by private and public agencies and property owners as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
54. ADAAG Design Compliance Certification and the ADA Facilities Accessibility Checklist; Design Review Team documentation of jurisdictional compliance; Design Control Procedures; Configuration Management Plans and Procedures; Design Change Requests; Design Documentation; Records of Design Reviews; and Design Analysis and Calculations Substantiation Reports, Product Test, Acceptance and Verification Criteria/Procedures as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
55. Satisfactory records for design, inspection, testing or other quality elements required under the approved Design-Build Quality System as specified in Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM and Section 01780, CLOSEOUT SUBMITTALS.
56. Record of federal, state, or local violations of environmental and occupational safety and health regulations for the last 3 years; Updated Organizational Health and Safety Program including OSHA required programs applicable to the work and site (for work and sites not addressed in the original Updated Organizational Health and Safety Program, addenda may be added when the work and sites are identified and resubmitted to the Authority Representative); Job Hazard Analysis (prior to each phase of work); Site-specific Emergency Response Plan; Site-specific Temporary Fire Protection System Plans; Site-specific Waste Water Discharge Plan (if wastewater is generated); Site-specific Pollution Control Program; Site-specific Dust and Debris Control Plan; Bloodborne Pathogens Exposure Control Plan; Hearing Conservation

Program (if employees are exposed to continuous noise in excess of the OSHA Action Level); Respiratory Protection Program (if employees are exposed to dust [including crystalline silica] or other toxic atmospheres in excess of the OSHA permissible exposure limits. If a respiratory program is required, the Design-Builder also must provide documentation of training, medical clearance for respirator use and respirator fit testing documentation); Hot Work Program; Lockout-Tagout Program; Site-specific Confined Space Program; Documentation of applicable training, licenses, certifications; Results of noise monitoring, air monitoring, and soil, water or waste sampling (these to be submitted at least weekly during work activities); Documentation of medical surveillance; Documentation and Certifications of Assistant Safety Superintendent's and First Aid Attendant's, as applicable, experience in construction safety; Identity of all materials or chemicals the Design-Builder will use on Authority property (including welding rods, material safety data sheets (MSDS's) for these products, and a brief explanation of how they will be used and if any wastes will be generated); Identity of equipment that may generate toxic atmospheres such as gasoline or diesel-powered generators, welding and cutting equipment; Documentation of licenses and certificates required for lead or asbestos abatement or other work requiring licensing or certification such as welding; Documentation of licenses, certificates, and U.S. EPA identification numbers required for transportation of hazardous materials, hazardous substances, or hazardous wastes; Documentation of licenses, permits, and certificates required for disposal of hazardous wastes including the name and address of the waste disposal facility where hazardous waste materials are to be disposed; Certificates of Insurance (including pollution liability coverage endorsed to WMATA for Design-Builder or subcontractors performing work involving hazardous materials, hazardous substances, hazardous wastes, or contaminated soil or water); CCO Certificate before the crane operator works on the site; Site-specific Fall Protection Plan; and Documentation to show that all Confined Space entrants and attendants are trained in Confined Space Entry, including hands-on-training or Confined Space Awareness as applicable and possesses applicable licenses and certifications as specified in Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS.

57. Site Specific Work Plan, detailed weekly work schedule; special requests for access, single tracking, power outages, escorts and other authority support services; request for use of work train; request for track rights; and advance notice of abatement work as applicable as specified in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS.
58. Noise monitoring data and compliance information, noise measurement report, proposed noise monitoring locations, proposed haul routes, notification of commencement and completion of work and ready for inspection on parkland property, notification of temporary work stoppage and resumption of work, layout drawings of Design-Builder's facilities, proposed vibration monitoring locations, conditions requiring blasting during restricted hours report, historical and scientific specimens located notification, explosives magazines and truck parking locations and advance notice of work on railroad property as applicable as specified in Section 01143, USE OF SITE.
59. Documented offer for credit; All computed percentages prior to any time and materials work being performed; Material charges substantiated by valid copies of vendor's invoices with the daily report sheets, or if not available, they shall be submitted with subsequent daily report sheets; Report sheets of each day's work paid for on a time and materials basis itemizing the materials used, covering the direct cost of labor and the charges for equipment rental, with names or identifications and classifications of workmen, the hours worked, and also the size, type and identification number of equipment, and hours operated; Satisfactory evidence of the cost of such materials from the actual supplier thereof; and Cost Data and Basic Equipment Information including manufacturer, year, size, model, serial number, capacity, and weight and all other data which might assist the Authority in the establishment of equipment costs;

Subcontractor(s) requests for a Part 1 modification; as applicable as specified in Section 01250, CONTRACT MODIFICATION PROCEDURES.

60. DRB candidate members' and chairperson's complete disclosure statements including resume of experience and education; detailed description of all past, present, and planned future relationship(s) to the Authority's Rail Capital Construction Program or with any party involved in the Contract, including any fee-based consulting services on any other projects, and certification that the prospective member meets the qualifications set forth; rules of operation; draft and final findings and recommendations; and request a final decision of the Contracting Officer accompanied by a full explanation as to basis for the rejection of the DRB recommendation(s) as applicable as specified in Section 01260, DISPUTES REVIEW BOARD PROCEDURES.
61. Updated Comprehensive Project Management Plan (PMP), Coordination Drawings/Composite Drawings, and Staff Names: List of principal staff assignments in attendance at Project site as specified in Section 01310, PROJECT MANAGEMENT AND COORDINATION.
62. Complete correspondence file as specified in Section 01310, PROJECT MANAGEMENT AND COORDINATION and Section 01780, CLOSEOUT SUBMITTALS.
63. Construction Sequence and Staging Plans as specified in Section 01310, PROJECT MANAGEMENT AND COORDINATION and Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
64. Meeting Agendas and Minutes as specified in Section 01312, PROJECT MEETINGS.
65. Construction Photographs as specified in Section 01321, CONSTRUCTION PHOTOGRAPHS.
66. Schedules and Progress Reporting including Submittal Logs, Daily Progress Reports, Updated Initial 90-Day Schedule, Updated Initial Bar Graph/Cost-Loaded CPM Schedule, Monthly Updates of Design Schedule, Monthly Progress Status Report, Monthly Narrative Report, Monthly Updates of Bar Graph/Cost-Loaded CPM Schedule, 90-Day Rolling Schedule, Two-Week Work Plan, and Daily Progress Reports as applicable; Request for any Extension of Contract time as applicable including documentation with written justification and CPM schedule; Notice of Disagreement to Authority's requested corrections to the schedule as applicable; and Resume of Replacement Scheduler Candidate as applicable as specified in Section 01322, CONTRACT PROGRESS REPORTING.
67. Site plans indicating all temporary utility connections; detailed working drawings of utility connections and special facilities; necessary revisions to working drawings after existing utility facilities have been located by field investigations to reflect actual site conditions; reports for tests, inspections, meter readings and similar procedures performed for temporary utilities; and on its first schedule submission as described in Section 01322, CONTRACT PROGRESS REPORTING, the implementation and termination of each temporary utility as applicable as specified in Section 01510, TEMPORARY UTILITIES.
68. Working Drawings for Temporary Facilities, Layout of Plant and Materials Storage Plan as specified in Section 01520, TEMPORARY CONSTRUCTION FACILITIES.
69. Working Drawings and design calculations showing proposed procedures and methods of constructing temporary structures including support system and necessary construction details and certified information concerning each previous use of materials to include purpose, duration and type of loading as specified in Section 01530, TEMPORARY CONSTRUCTION.

70. Maintenance of Traffic Plan as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
71. Working Drawings and design calculations for barriers, fences and pedestrian bridges as specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES.
72. Products List as specified in Section 01610, BASIC PRODUCT REQUIREMENTS.
73. As applicable, all survey field notes and all results of Control Surveys, Project Structural As-Built Surveys, Movement Detection Surveys, Early Alignment As-Built Surveys, Hi-Lo Surveys, Post Construction Alignment As-Built Surveys and Final Trackway Monumentation Surveys, survey procedures, and surveyor resumes, as applicable, as specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING.
74. Contract Record Drawings including As-Built Contract Drawings, Standard Drawings, Informational Layout and Detail Drawings, Authority Record Drawings, Shop Drawings, Working Drawings, Manufacturers' Shop Drawings, Field Drawings, and Installation Drawings as applicable; As-Built Record Specifications in CSI format; As-Built CPM Schedule as applicable; Operation and Maintenance Manuals as applicable; Electronic Media Drawing Files for Operation and Maintenance Manuals as applicable; Fully documented complete Configuration Management System; List of required Spare Parts as applicable; Survey Record Log as applicable; and Releases & Vouchers as specified in Section 01780, CLOSEOUT SUBMITTALS.
75. Instructor's Training Manual, Lesson Plans, Student's Training Manual and Electronic Media as applicable as specified in Section 01780, CLOSEOUT SUBMITTALS and Section 01820, DEMONSTRATION AND TRAINING.

3.10 ORGANIZATION AND SUBMISSION OF SUBMITTALS

- A. The Design-Builder shall organize its submittal packages to the Authority so that each submittal package contains all relevant material necessary to allow WMATA to conduct a thorough review. For example, if approval of a structural design element also requires consideration of electrical conduit placement and mechanical pipe elements, then all relevant structural, electrical and mechanical drawings should be provided within the same submittal package to allow consideration of relevant elements in the approval of structural element. As well, composite drawing may be required as described elsewhere in this document.
- B. The Design-Builder shall organize its submittal packages so that each submittal package corresponds to a submittal or submittal and approval requirement. For example, if an electrical drawing that illustrates conduit layout is to be submitted as part of a structural submittal, and it also forms part of an electrical submittal, then the drawing should be submitted as a part of each submittal packages.

Section 00705, General Conditions: Legal Requirements

Section 00707, General Conditions: Permits and Responsibilities

Section 00708, General Conditions: Responsibility of the Design-Builder for Design-Related Services

Division 01, General Requirements

Divisions 2 through 16, Standard and Technical Specifications Requirements

1.03 GENERAL

The Design-Builder shall meet or exceed the Authority's Design Criteria relevant for each element of the work as these represent the minimum standards to be used for design and construction. If the International, Federal, State, or local jurisdictional laws, codes and regulations that also control the design and construction of the Project exceed the Authority requirements, then the more stringent standard shall govern.

1.04 THE JURISDICTIONAL AGENCIES, RAILROADS, UTILITIES AND MISCELLANEOUS AGENCIES

A. Federal agencies:

1. Environmental Protection Agency (EPA).
2. Federal Aviation Administration (FAA).
3. Federal Highway Administration (FHWA).
4. Federal Transit Administration (FTA).
5. General Services Administration (GSA).
6. Department of the Interior:
 - a. National Park Service (NPS), National Capital Region.
7. Occupational Safety and Health Administration (OSHA).

8. U.S. Army, Corps of Engineers (COE):
 - a. Washington Aqueduct Division.
 - b. Baltimore District.
 - c. Norfolk.
 9. U.S. Coast Guard (USCG).
 10. U.S. Navy, Naval Facilities Engineering Command (NAVFAC).
 11. Architectural and Transportation Barriers Compliance Board (ATBCB):
 - a. American with Disabilities Act Accessibility Guidelines (ADAAG).
 12. Federal Emergency Management Agency (FEMA).
 13. U.S. Army Engineer District.
 14. Department of Defense (DOD).
- B. District of Columbia:
1. Department of Consumer and Regulatory Affairs:
 - a. Building and Land Regulation Administration.
 2. Department of Environmental Services.
 3. Department of Health (Environmental Health Administration).
 4. Bureau of Hazardous Materials and Toxic Substances - NOT USED
 5. Bureau of Environmental Quality - NOT USED.
 6. Department of Housing and Community Development:
 - a. Redevelopment Land Agency.
 7. Department of Human Services.
 8. Department of Public Works:
 - a. Bureau of Traffic Services.
 - b. Design and Engineering Construction Administration.
 - c. Bureau of Design, Engineering and Research.
 - (1) Traffic and Electrical Services Division.
 - d. Bureau of Engineering and Construction.

(1) Project Development Division.

9. Department of Recreation and Parks.
10. Department of Transportation:
 - a. Office of Mass Transit.
11. Fire Department.
12. Metropolitan Police Department.
13. Bureau of Air & Water Quality Control - NOT USED.
14. Department of Sanitary Engineering.
15. Department of Highway Facilities.
16. Department of Planning.

C. State of Maryland:

1. Department of Transportation.
 - a. State Highway Administration.
 - b. State Railroad Division.
 - c. Office of Traffic.
 - d. Office of the District Engineer (District #3).
2. Department of Natural Resources:
 - a. Water Resources.
3. Department of Health and Mental Hygiene.
4. Department of the Environment:
 - a. Industrial Waste Division.
5. Department of Transportation.

D. Montgomery County:

1. Department of Transportation.
2. Storm Water Control.
3. Department of Fire and Rescue Services.
4. Department of Public Works.

5. Soil Conservation District.
6. Department of Environmental Protection:
 - a. Division of Pollution Control.
 - b. Sediment Control Permit.
7. Office of Architectural Service.
8. Police Department.
- E. Prince George's County:
 1. Department of Public Works and Transportation.
 2. Soil Conservation District.
 3. Health Department.
 4. Fire Department.
 5. Department of Environmental Resources.
- F. City of Greenbelt.
- G. Railroads:
 1. Consolidated Rail System Corporation.
 2. CSX Transportation:
 - a. Baltimore and Ohio Railroad.
 - b. Chesapeake and Ohio Railroad.
 - c. Richmond, Fredericksburg and Potomac Railroad Company.
 3. National Railroad Passenger Corporation (AMTRAK):
 - a. Washington Terminal Company.
 4. Southern Railway System.
 5. Norfolk Southern Corporation.
 6. Penn Central Transportation Company.
 7. Philadelphia, Baltimore & Washington Railroad Co.
- H. Utilities: See Section 01180.

- I. Miscellaneous agencies:
1. Maryland-National Capital Park and Planning Commission.
 2. Metropolitan Washington Airports Authority.
 3. National Capitol Planning Commission.
 4. Washington Suburban Transit Commission.
 5. Metropolitan Washington Council of Governments.

PART 3 EXECUTION [Not Applicable]

END OF SECTION

SECTION 01470

QUALITY SYSTEM

PART 1 GENERAL

1.01 DESCRIPTION

- A. This Section specifies the Quality System that is to be established, documented, maintained, and executed by the Design-Builder to ensure that the performed Work conforms to the specified requirements. The Quality System shall be consistent with the ISO 9001:1994 standard. Certification of the Design-Builder to ISO 9001 is not required. However, certain suppliers and manufacturers shall be certified as required in the specifications.
- B. Quality System elements include the following documentation:
1. An Interim Quality Management System to document the Design-Builder's plan for a complete and executable Quality Management System.
 2. A Quality Management System (including a Quality Manual and Quality Procedures) to consist of:
 - a. Design Control Plan
 - b. Document Control Procedures.
 - c. Subcontracting and Purchasing Procedures
 - d. Process Control Procedures
 - e. Inspection and Test Plans
 - f. Integrated System Test Plan
 - g. Procedures for Control of Inspection, Measuring and Test Equipment
 - h. Procedures for Reporting, Review and Disposition of Nonconforming Product
 - i. Procedures for Control of Quality Records
 - j. Procedures for Performing Internal Quality Audits
- C. Quality Assurance Standards applicable to the work include the following:
1. ISO 9001:1994: Quality systems - Model for quality assurance in design, development, production, installation and servicing.
 2. ISO 10013:1995 - Guidelines for Developing Quality Manuals.
- D. For definitions regarding quality used in this Section, refer to ISO 8402:1994, Quality management and quality assurance - Vocabulary.

1.02 RELATED DOCUMENTS

Section 00381, Safety and Security Certification Program Plan Requirements
Section 00391, System Safety Program Plan Requirements
Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements
Divisions 2 through 16, Standard and Technical Specifications Requirements
Safety Rules and Procedures Manual
Metrorail Safety Rules and Procedures Handbook

1.03 PROGRAM REQUIREMENTS

- A. The Design-Builder shall maintain a documented, operational, and approved Quality Management System throughout the term of the Contract. This system shall generally be as prescribed in ISO 9001:1994 and as supplemented in the Contract Documents.
- B. Certification of the Design-Builder under ISO 9001 is not required. The purpose of this program is for the Design-Builder to document how it will execute the work to assure that:
1. The Design-Builder's design process translates the Authority's needs and requirements into an acceptable design, including the requirements for Design-Builder certification of ADAAG regulations compliance and completion of an ADA Facilities Accessibility Checklist as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA to accompany each specified level of completion design review submittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL REQUIREMENTS.
 2. Material, equipment, construction, and workmanship are furnished in conformance with the original Contract Documents and the Design-Builder's Final Design Drawings and Final Design specifications Issued for Construction and with all jurisdictional codes and regulations, including the requirement for certification of ADAAG regulations compliance submittal at completion of construction by the Design-Builder as specified in Section 01780, CLOSEOUT SUBMITTALS. The Design-Builder's attention is directed to the fact that all projects are subject to FTA assessment for ADAAG compliance.
 3. The work is properly completed, tested, and furnished to the Authority on time as specified in this Section; and in Section 01113, SYSTEMS INTEGRATION; Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS; and Section 01810, COMMISSIONING; in the WMATA Safety and Security Certification Program Plan and the System Safety Program Plan Attachments to the Project Manual; and in the Safety Certification Program of the Safety Rules and Procedures Manual.
- C. During the Term of the Contract, the Design-Builder shall exercise positive control over all of the Work, including that of subconsultants, subcontractors, fabricators, manufacturers, installers, and suppliers (suppliers and subcontractors) in accordance with the Quality Manual and Quality Procedures described in an approved Design-Builder Quality Management System.
- D. In addition to the basic Quality Management System, the Design-Builder shall develop, implement, and update specified Plans that are fundamentally required to assure satisfactory execution of the Work. These Design-Builder Plans shall supplement and shall be integral components of the Quality Management System.

- E. The Quality Management System shall be revised, updated, and approved as necessary throughout the term of the Contract to reflect changes determined by management review, internal audit and/or WMATA audit to be necessary to improve the system.

1.04 OVERVIEW OF PROPOSED QUALITY MANAGEMENT SYSTEM

- A. Revision 0 of the Quality Management System describing the proposed Quality Management System including Quality Plan from a past similar project that was modeled on ISO 9000 or similar quality control system was submitted with the Phase One Qualifications.
- B. The Interim Plan shall provide:
 - 1. A description of the approach, plan and schedule for providing a documented Quality Management System as required in this Section and elsewhere in the Contract Documents.
 - 2. Interim steps to be taken by Design-Builder to assure quality while the Finalized Quality Management System is being developed, approved, and implemented.
 - 3. Identification of staffing (e.g. positions) for personnel who will fulfill key functions affecting quality, including key managers of design, construction, and the quality staff.
 - 4. A contract-specific Finalized Design Control Plan for this project.
 - 5. The planned approach for construction and systems inspection and testing including that of suppliers and subcontractors.
 - 6. The planned approach for systems testing, including that of Design-Builder suppliers and subcontractors.
 - 7. Planned means for communication of quality requirements of this section to subconsultants, subcontractors and manufacturers including requirements for Quality Plans to management, plant/site visits and discussions with subcontractor executive management.
 - 8. Development and implementation of subcontractor quality oversight by the Design-Builder including inspection, and testing required by the Contract Documents.
 - 9. Development of Quality Management System requirements for critical subcontract elements.
 - 10. The planned approach for employee training.
 - 11. The planned approach for performing internal audits and audits of subconsultants and subcontractors.

1.05 FINALIZED QUALITY MANAGEMENT SYSTEM

- A. The Design-Builder shall develop a Quality Management System for the project using article 4.0 of the ISO 9001:1994 Standard and ISO 10013 as guides. The QMS shall be an executable system of Quality Assurance and Quality Control that addresses all twenty elements of the Standard and the System. As a minimum, it shall include a Quality Manual, Procedures, and the

Plans specified in this Section. Further, the Quality Manual shall show the connection and relationship of all Procedures and Quality Plans to the Quality Manual.

- B. The Quality Manual, Procedures, and Plans shall be approved by the Executive(s) responsible for the Design-Build entity.
- C. Initial submission and subsequent revisions of the Quality Manual and Quality Procedures shall require Authority approval. In addition, the execution of the Quality Management System shall be subject to Authority audit throughout the term of the Contract.
- D. Work Instructions shall be approved at the appropriate level within the Design-Builder organization and are subject to audit by the Authority.

1.06 CLARIFICATIONS AND ADDITIONAL REQUIREMENTS

The following clarifications and additional requirements, as they relate to article 4.0 of the ISO 9001:1994 Standard and ISO 10013, shall be incorporated in the Quality Management System:

A. Organization

- 1. Responsibility and Authority (ISO 9001, article 4.1.2.1) - Design-Builder personnel responsible for implementing the quality system shall have the authority to stop the work.
- 2. There shall be a clearly articulated Quality Policy (ISO 9001, article 4.1.1) approved by the Executive(s) of the Design-Builder entity and which shall be widely publicized and known throughout the project team.
- 3. Management Representative (ISO 9001, article 4.1.2.3) - The Quality Manager shall perform as the Management Representative.
- 4. Management Review (ISO 9001, article 4.1.3) - shall occur monthly during the first six months of the Contract and no less than quarterly thereafter. Written summaries of findings and major corrective actions shall be provided to the Authority Representative within five business days following completion of each Review.
- 5. Organizational and Technical Interfaces (ISO 9001, article 4.4.3) shall be defined in a manner that assures inter-discipline coordination and communication among and between designers, builders, major subcontractors, manufacturers, systems and facilities personnel, and the Authority.

B. Design Control Procedures (ISO 9001, article 4.4)

- 1. Design Control procedures shall be integrated and consistent with the Design Control Plan for the project. Design control plan and procedures are further described in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01113, SYSTEMS INTEGRATION.
- 2. Control of design inputs and changes shall be managed by the Design-Builder in a manner that assures Contract and Design-Builder requirements are correctly translated into the drawings and specifications used for procurement, manufacturing, construction, and testing.
- 3. Completion of design, and the subsequent review, approval and distribution of submittals shall

be completed prior to the start of a related Construction activity.

4. Design Verification Activities (ISO 9001, article 4.4.7) - shall include checking and back-checking calculations, drawings, and other design elements without reliance on review and comments from the Authority shall be conducted before providing each design submittal to the Authority and before the start of construction or fabrication. In addition, verification and validation of software products designed for the Project shall be planned and provided for within the Design Control Procedures.
5. Design Review - The Design-Builder shall include in Design Control procedures, methods for completing internal verification activity prior to the submission of documents to the Authority for Design Review per Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA. The Design-Builder shall submit as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL REQUIREMENTS, certification that the design complies with ADAAG regulations along with submission of ADA Facilities Accessibility Checklist as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA with every required level of completion design review submittal specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. The Design-Builder shall also submit as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL REQUIREMENTS, a statement by the Design Professional who signed the drawings that the Final Design Drawings and Final Design Specifications conform to applicable architectural, engineering, Systems and Authority requirements and to the appropriate jurisdictional regulations as specified in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.
6. The Design-Builder's approach to meeting the requirement for Configuration Management shall be defined in the Design Control Plan and shall comply with the requirements included in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01113, SYSTEMS INTEGRATION. In addition, a Configuration Management System shall be developed and managed by the Design-Builder and shall include the means for contemporaneously:
 - a. Relating the modification status of equipment and construction to the corresponding drawing or specification.
 - b. Ensuring that versions of software are controlled at all levels of design, development and production.

C. Document Control (ISO 9001, article 4.5)

The Design-Builder shall use a computerized database to identify and manage the current revision of instructions, procedures, drawings, software revision numbers and specifications. The database shall be kept current throughout the term of the Contract. The Design-Builder shall provide the Authority real-time access to the information in this database through a direct connection, dial up modem connection, or web-page access. Systems interface database is further described in Section 01113, SYSTEMS INTEGRATION.

D. Subcontracting & Purchasing (ISO 9001, article 4.6)

1. Purchased material, equipment, and services shall be controlled to ensure that they are properly integrated into the Work.
2. Procedural means shall be included to assure that Design-Builder subconsultants, suppliers

and subcontractors satisfactorily demonstrate and document an adequate system for managing quality to the Design-Builder.

3. The Design-Builder shall have procedures for providing adequate surveillance of subconsultants, subcontractors and suppliers to assure conformance with the Quality Management System and Specification requirements. This surveillance shall include inspection and audit of off-site activities of Design-Builder subconsultants, subcontractors and suppliers.

E. Product Identification and Traceability (ISO 9001, article 4.8)

The Design-Builder's quality system shall include provisions to identify and trace products and materials where appropriate and as required in the WMATA Standard and Technical Specifications.

F. Process Control (ISO 9001, article 4.9)

The Design-Builder shall include procedures for control of, including but not limited to, the following processes:

1. Completion of quality procedures, work instructions, preactivity and coordination meetings, and training prior to the start of a related activity.
2. A formal system of continuous feedback of problems and their resolution shall be developed between the Design-Builder's Design Professional and construction staff.
3. Documented Procedures for checking of survey computations.
4. Documented Procedures for verifying the accuracy of and the maintenance of secondary survey controls.

G. Inspection and Testing/General (ISO 9001, article 4.10.1)

1. The Design-Builder shall establish an integrated Inspection and Test Plan that conforms to the Quality Management System and the individual technical specifications and that allows for tracking of actual performance of inspections and tests. Systems inspection/testing is further described in Section 01113, SYSTEMS INTEGRATION.
2. Inspection procedures shall include instructions necessary to implement: source inspections; receiving inspections; inspection of work in progress; hold point inspections and completion inspections.
3. Test procedures shall utilize forms for recording test results and authorized approval signatures. Each test procedure shall identify the applicable specification section, article, and paragraph.
4. Daily Quality Reports shall be provided to the Authority that summarize the construction activities, record the inspections and tests completed and the results, and record deficiencies identified, during the previous 24 hours.

H. Control of Inspection, Measuring and Test Equipment (ISO 9001, article 4.11)

Processes will be included to assure that test equipment used by the Design-Builder and subcontractors meets the requirements of the standards, and that the equipment and instruments are controlled, maintained and calibrated by a nationally recognized certification entity/agency. Devices used to calibrate measuring and test equipment or other measurement standards shall be traceable to one or more of the following:

1. U.S. national standards maintained by the U.S. National Institute of Standards and Technology (NIST) and the U.S. Naval Observatory.
2. Fundamental or natural physical constants with values assigned or accepted by the U.S. NIST.
3. National standards of other countries, which are correlated, with U.S. national standards.
4. Comparison to consensus standards.

I. Review and Disposition of Nonconforming Product (ISO 9001 article 4.13.2)

The authority within the Design-Builder organization to review and provide disposition of nonconforming products shall be identified. The disposition of product that does not conform to Contract Requirements shall be subject to approval by the Authority Representative.

J. Control of Quality Records (ISO 9001, article 4.16)

1. The Design-Builder shall establish and implement measures to identify, collect, index, file, and store. These procedures shall include a database to track and maintain control over all Quality Records generated by the Contract Work.
2. Quality control records shall be available at designated, controlled, but accessible areas at work locations. Procedures shall identify the responsible custodians for these records.
3. Quality control records shall be stored and maintained in such a way that they are readily retrievable and provided with a suitable environment that minimize deterioration or damage, and prevent unauthorized alteration or loss.
4. Quality control records shall be legible, reproducible, identifiable with the item involved, and contain the date of origination and identity of the originator, verifier, and/or responsible supervisor.
5. Applies as well to quality records, as appropriate, from subcontractors, suppliers, fabricators, and test laboratories.
6. Retention period for quality control records shall be defined as seven years unless otherwise specified in the Contract. Quality control records shall be made available to the Authority throughout the retention period.

K. Internal Quality Audits (ISO 9001, article 4.17)

1. Perform internal audits at least quarterly.
2. Record in the audit results any deficiencies in the quality system, the causes of deficiencies in the Quality System, and the status of corrective action or preventive action, when

appropriate.

3. Provide the audit results to the Authority Representative and complete required corrective actions within 30 days of the audit.

1.07 DESIGN CONTROL PLAN

- A. Within 15 days after NTP, the Design Builder shall submit the contract specific Design Control Plan.
- B. In addition to that described in Article 1.06 B., the Design Control Plan shall include a Design Status Report that visibly tracks and reports the status of design products to be submitted by the Design-Builder for Authority review. The Design-Builder shall revise, update, and submit the Design Status Report for approval at least monthly.
- C. The Design Status Report shall:
 1. Be consistent with and follow from the Finalized Design Control Plan and shall specifically track all design and design verification activities included in the approved Finalized Design Control Plan.
 2. Be in a format that allows the Design-Builder and the Authority to reasonably understand the means by which each design element of the project is being completed. It will provide planned versus actual schedule performance and shall be accurate and useful as a means for project personnel to understand how the Design is proceeding throughout the Term.
 3. Include subcontracted design work, if appropriate.
 4. Include a Configuration Control system for drawings that allows for all concerned Design-Builder and Authority personnel associated with the Contract to know the development and approval status of the various design documents. Systems configuration control is further described in Section 01113, SYSTEMS INTEGRATION.

1.08 INSPECTION AND TEST PLANS

- A. The Design-Builder shall submit Inspection and Test Plans that delineate the specific inspections and tests required to assure that characteristic design and Contract requirements of structures, components and systems are fully complied with. These Plans shall be an extension of the Quality Management System required and established in accordance with this Section. The Design-Builder shall submit for approval the Inspection and Test Plans for the Civil and Structural areas of construction and Inspection and Test Plans for the other areas of work. Systems Inspection/Test Plans are further described in Section 01113, SYSTEMS INTEGRATION.
- B. The Inspection and Test Plans shall include the following:
 1. A matrix of all tests required by the Contract Documents and the Design Specifications and Design Drawings to be performed by Design-Builder, suppliers, or subcontractors.
 2. Samples of test reports - the test reports are to meet the minimum requirements called for in the applicable test standards or specifications.
 3. Provisions for coordinating onsite and offsite testing.

4. Provisions for meeting the Authority notification criteria for planned tests and inspections specified to be witnessed by the Authority. Provide the Authority a minimum of 14 calendar days advance notice.
- C. Where required by the Contract Documents, the Design-Builder shall separate inspection and testing requirements into sub-plans. This shall be done to facilitate coordination, and tracking of results through the "Final Completion" date.
- D. As a minimum, the Test Plans shall include the following information:
1. Specification section, article, paragraph
 2. Description of test
 3. Type of test (e.g. total System, sub-system, factory)
 4. Applicable standard
 5. Test frequency
 6. Responsibility for test performance
 7. Completion status
 8. Means of tracking and recording corrective actions being taken to assure compliance with the Contract Documents.
 9. Means for recording test results.
- E. As a minimum, the Inspection Plans shall include the following information:
1. A matrix of all inspections required by the Contract Documents and the Design Specifications and Design Drawings to be performed by Design-Builder, suppliers, or subcontractors and their frequency.
 2. Established hold points.
 3. Checklists to be utilized.

1.09 INTEGRATED SYSTEM TEST PLAN

- A. The Design-Builder shall submit an Integrated System Test Plan that delineates the specific tests required. These tests will directly involve Authority personnel. The Design-Builder shall revise, update, and submit for approval the System Integration Test Plan at least monthly. Systems Test Plans are further described in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA and Section 01113, SYSTEMS INTEGRATION.
- B. The Integrated System Test Plan shall include the following:
1. A matrix of all Systems testing required by the Contract Documents and the Design Specifications and Design Drawings to be performed by Design-Builder, suppliers, or

subcontractors. This shall encompass all systems tests through to and including final testing.

2. Samples of test reports - the test reports are to meet the minimum requirements called for in the applicable test standards or specifications.
 3. Provisions for coordinating onsite and offsite testing.
 4. Provisions for meeting the Authority notification criteria for planned tests and inspections.
 5. Provisions for Integrated Systems Testing Status Report that visibly tracks and reports the status of systems testing. The Design-Builder shall revise, update, and submit the Integrated Systems Testing Status Report at least monthly.
- C. As a minimum, the Plan shall include the following information:
1. Specification section, article, paragraph
 2. Description of test
 3. Type of test (e.g. total System, sub-system, factory)
 4. Applicable standard
 5. Test frequency
 6. Responsibility for test performance
 7. Completion status
 8. Means of tracking and recording corrective actions being taken to assure compliance with the Contract Documents.
 9. Means for recording test results.
- D. The Design-Builder shall provide the Authority 5 working days notice of any test except when greater notice is required in the specifications.

1.10 SUMMARY OF SUBMITTALS

A. Quality Management System

1. Interim Quality Management System: Any changes and additions shall be incorporated into the Updated Interim Quality Management System and Updated Finalized Design Control Plan, and the original and six paper copies and one electronic copy shall be submitted within 10 calendar days after Award, and shall also accompany each required level of completion design review submittal as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
2. Finalized Quality Management System (Quality Manual and Quality Procedures)

Original and six paper copies and one electronic copy (NTP plus 30 calendar days and when revised).

3. Daily Quality Reports

Original and six paper copies and one electronic copy (Daily).

4. Summary of Management Review

Original and six paper copies and one electronic copy (monthly during the first six months after NTP; no less than quarterly thereafter).

5. Review and Disposition of Nonconforming Product

Original and six paper copies and one electronic copy (as occurring).

6. Report of Audit Results

Original and six paper copies and one electronic copy (within five days of the completion of an audit).

7. Report of Completion of Corrective Actions

Original and six paper copies and one electronic copy (within 30 days of an audit).

8. Design Status Reports

Original and six paper copies and one electronic copy (monthly). Status Reports are further described in Section 01322, CONTRACT PROGRESS REPORTING.

9. Integrated Systems Testing Status Report.

Original and six paper copies and one electronic copy (monthly). Systems Test Plans are further described in Section 01113, SYSTEMS INTEGRATION and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.

10. Statement of Compliance Quality Certification for Payment Verification

Original and six paper copies and one electronic copy (included with each payment request). QA/QC Manager's Statement of Compliance Quality Certification accompanying Payment Request is further described in SECTION 01290, PAYMENT PROCEDURES and Section 01111, KEY DESIGN-BUILDER FUNCTIONS.

B. Quality Plans

1. Design Control Plan (NTP + 15 calendar days and updated monthly).

2. Inspection and Test Plans

Original and six paper copies and one electronic copy (NTP plus 60 calendar days for Civil and Structural work, others minimum 30 calendar days in advance of the covered work scheduled to start). Systems Inspection/Test Plans are further described in Section 01113, SYSTEMS INTEGRATION and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA

3. Payment Verification Certificate - NOT USED.

4. Integrated System Test Plan

Original and six paper copies and one electronic copy (NTP plus 180 calendar days). Systems Test Plans are further described in Section 01113, SYSTEMS INTEGRATION and Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA.

5. Integrated Systems Testing Status Report

Original and six paper copies and one electronic copy (monthly). Systems Testing Status Reports are further described in Section 01113, SYSTEMS INTEGRATION.

C. All submittals shall be submitted for approval and submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION

3.01 QUALITY SYSTEM

The Design-Builder will submit and execute a Quality Management System and the executable Plans as prescribed in this Section.

3.02 QUALITY SYSTEM MANAGER AND OTHER RESOURCES

A. The Design-Builder shall appoint a full-time Quality System Manager. The Quality System Manager shall be a degreed engineer, trained as a Lead Auditor in a RAB approved course to the requirements of ISO 9000:2000; and shall have 10 years of related experience including 5 years of management positions in a production, manufacturing, or construction environment and experience in QA/QC auditing.

B. The Quality System Manager shall:

1. Have no other assigned duties except to establish, implement and maintain the Quality Management System
2. Report directly to and be supervised by an Officer of the Design-Builder at a level above that of the Project Manager responsible for the project
3. Serve as a liaison officer with WMATA and the jurisdictional agencies on matters relating to the Design-Builder's quality system
4. Be responsible for ensuring that the Quality System is effective in ensuring that the Contract requirements are satisfied.
5. Be responsible for the oversight of onsite and offsite testing by the Design-Builder.

C. In the event that the Quality System Manager is not found to be competent or to have sufficient

relevant experience, the Authority will request that the Quality System Manager be removed from the project pursuant to Section 00710, PROJECT MANAGEMENT, SUPERINTENDENCE AND KEY PERSONNEL. In that event, the Design-Builder shall submit a new candidate for consideration within 10 calendar days by submitting a resume.

- D. In addition to the Quality System Manager, the Design-Builder shall assign additional trained and experienced staff to fulfill Contract and Design-Builder requirements for meeting quality. The Design-Builder shall provide sufficient resources to effectively manage quality related functions including the following:
1. Quality Management System Administration
 2. Design Quality
 3. Construction Quality
 4. Subcontractor Quality
 5. Oversight of Quality Control
 6. Configuration Management
 7. System Testing

3.03 AUTHORITY QUALITY OVERSIGHT

- A. The principal role of the Authority in the implementation of the Design-Build Quality Program will be oversight of the effectiveness of the Design-Builder's Quality Management System including quality control and quality assurance activities. However, the Authority reserves the right to conduct inspection of all phases of design of the Designer of the Design-Builder and onsite construction work activities of the Builder of the Design-Builder and subcontractors by Authority field staff. Any deficiencies discovered shall be brought to the immediate attention of the Design-Builder including written follow-up notification to the Design-Builder.
- B. At its sole discretion, the Authority may conduct audits, tests, and inspections in addition to those performed by the Design-Builder.
- C. When the Authority determines that the approved Quality Management System or Plans, or any portion or feature thereof, is not controlling work sufficiently for the work to conform to Contract standards, the Design-Builder shall take appropriate action to correct such deficiencies. The Authority Representative may stop the work activities if the Quality Management System is not working due to lack of Design-Builder's staff or for any other Contract non-compliance.
- D. Notwithstanding the above, Authority inspection, testing, or other actions shall not constitute acceptance of work, nor shall it relieve the Design-Builder of its contractual responsibilities.
- E. When Authority inspection is required, the Design-Builder shall add to the purchasing document the following statement:

"Authority inspection is required prior to shipment from your plant. Upon receipt of this order, promptly notify the Authority's Representative at the Authority, in writing, so that appropriate planning for Authority inspection can be accomplished."

3.04 AUDITS OF THE DESIGN-BUILDER'S DESIGN-BUILD QUALITY PROGRAM

- A. There will be an ongoing review and evaluation of implementation of the Design-Builder's Quality Management System to verify that the Design-Builder is effectively controlling the quality of design and construction. If the implementation of the Design-Builder's Quality Management System is determined to be ineffective by the Authority, the Authority, at its sole discretion, may withhold payment at the appropriate percentage for any and all work it deems to be deficient or non-conforming to the Contract Documents, approved Final Design Specifications, approved Final Design Drawings, and/or appropriate standards. The Design-Builder will be expected to make whatever changes are necessary in the organization or in the Design-Builder Quality Management System to provide effective control of the quality of the work.
- B. The Authority will perform audits to verify that the Design-Builder is effectively controlling the quality of the work. The basis for the audits will be the Design-Builder Quality Management System and the Contract Documents and Final Design Drawings and Final Design Specifications Issued for Construction.

3.05 INSPECTION AND TESTING PROGRAM

- A. The Inspection and Test programs shall be designed by the Design-Builder to assure that testing is performed to demonstrate that systems or components perform satisfactorily in service. Testing shall be performed by qualified and experienced personnel in accordance with approved test procedures. These procedures shall incorporate acceptance limits defined by industry codes and standards or by the Specifications; the more restrictive standard shall take precedence. All test results shall be documented, and submitted to the Authority for review in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES. Systems Inspection and Test Programs are further described in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION, Section 01810, COMMISSIONING and Section 01820, DEMONSTRATION AND TRAINING.
- B. Inspection and test equipment shall be controlled and maintained in serviceable condition and within correct calibration with primary standards traceable to the NIST, or an approved alternative, shall be maintained. The system shall assure the accuracy of equipment and tools used to support this procurement.
- C. Subcontractors testing their own work shall be supervised and managed by the Design-Builder. Overall, responsibility for testing and subcontractor performance remains with the Design-Builder.
- D. If tests or certifications conducted by the Authority disclose that work is not in conformance with the Contract Documents and Final Design Drawings and Final Design Specifications Issued for Construction, then the Authority will advise the Design-Builder as to the particular defects to be remedied. Upon correction of the defects, Design-Builder shall provide written notification to the Authority Representative and additional testing or certification shall be conducted as necessary to result in a proven and certified system(s). Further, in the case of such non-conformance with the Contract Documents and Final Design Drawings and Final Design Specifications Issued for Construction, the Design-Builder shall provide details on the preventive action taken to consistent with the requirements of ISO 9001, Article 4.14 and the Design-Builder's approved Quality Management System.

3.06 STATEMENT OF COMPLIANCE QUALITY CERTIFICATION FOR PAYMENT VERIFICATION

The Design-Builder shall provide the original and six paper copies and an electronic copy of an approved QA/QC Manager's Statement of Compliance Quality Certification with each pay request as specified in Section 01290, PAYMENT PROCEDURES stating that the Quality System has effectively ensured that the items requested for payment have been designed or constructed to meet the design requirements, or have been inspected and tested as required to comply with Contract requirements including those of the Quality Management System reflecting the outcome of the Formal Progress

Status Report Review as specified in Section 01312, PROJECT MEETINGS. Work for which satisfactory records for design, testing, inspection, or other quality elements are not available shall not qualify for payment.

THIS PAGE NOT USED

SECTION 01510

TEMPORARY UTILITIES

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies requirements for temporary utility services for use during construction.
- B. As applicable, temporary utilities required include but are not limited to:
 - 1. Water service and distribution.
 - 2. Temporary electric power and light.
 - 3. Telephone service.
 - 4. Storm and sanitary sewer.

1.02 RELATED DOCUMENTS

Section 00701, General Conditions: Definitions
Section 00707, General Conditions: Permits and Responsibilities
Section 00708, General Conditions: Responsibility of the Design-Builder for Design-Related Services
Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination;
Section 01322, General Requirements - Administrative Requirements: Contract Progress Reporting
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures
Section 01410, General Requirements - Quality Requirements: Regulatory Requirements
Section 01420, General Requirements - Quality Requirements: References
Section 01520, General Requirements - Temporary Facilities and Controls: Temporary Construction Facilities
Section 01530, General Requirements - Temporary Facilities and Controls: Temporary Construction

1.03 SUBMITTALS

- A. The Design-Builder shall provide review and approval site plans indicating all temporary utility connections. Provide detailed working drawings of utility connections and special facilities and after existing utility facilities have been located by field investigations make necessary revisions to working drawings to reflect actual site conditions and resubmit drawings. Submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- B. The Design-Builder shall provide reports for tests, inspections, meter readings and similar procedures performed for temporary utilities. Submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- C. The Designer shall indicate on its first schedule submission to the Authority as described in Section 01322, CONTRACT PROGRESS REPORTING and submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, the implementation and termination of each temporary utility as appropriate.

1.04 QUALITY ASSURANCE

- A. The Design-Builder shall comply with industry standards and applicable laws and regulations of authorities having jurisdiction as specified in Section 01420, REFERENCES, Section 01410, REGULATORY REQUIREMENTS, Section 00701, DEFINITIONS, Section 00708

RESPONSIBILITY OF THE DESIGN-BUILDER FOR DESIGN-RELATED SERVICES, and Section 00707 PERMITS AND RESPONSIBILITIES, including but not limited to:

1. Building Code requirements.
 2. Health and safety regulations.
 3. Utility company regulations.
 4. Police, Fire Department and Rescue Squad rules.
 5. Environmental protection regulations.
- B. The Design-Builder shall: comply with NFPA Code 241, "Construction Alteration and Demolition Operations", ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition", and NECA Electrical Design Library, "Temporary Electrical Facilities". For Electrical Service, the Design-Builder shall comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70).
- C. Inspections: The Design-Builder shall arrange for the inspection and testing of each temporary utility before use, and shall coordinate all requirements for certifications and permits. The Authority Representative shall be notified sufficiently in advance so as to be present at all planned inspections and onsite activities.

1.05 PROJECT CONDITIONS

- A. The Design-Builder shall incorporate into the construction schedule dates for implementation and termination of each temporary utility. At the earliest practical time and when acceptable to the Authority, change over from use of temporary service to use of the permanent service.
- B. The Design-Builder shall keep temporary services and facilities clean and neat in appearance. Temporary services and facilities shall operate in a safe and efficient manner. The Design-Builder shall take all necessary fire prevention measures and shall ensure that facilities shall not be overloaded or permitted to interfere with progress. The Design-Builder shall not allow hazardous, dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.
- C. The Design-Builder shall determine temporary utility services requirements and shall make arrangements with utility companies and governmental agencies to obtain such services. The Design-Builder shall be responsible for the cost of all utility use until the Authority takes beneficial occupancy of the facility unless specified otherwise.
- D. The Design-Builder shall provide temporary electrical service of sufficient capacity to serve the temporary requirements during the life of the Contract. The source of temporary power for testing may be the temporary service, portable generator or other approved system which will deliver power at the voltage and other characteristics required to accomplish testing as specified. Circuits and construction for temporary systems shall suit the needs of the work and comply with NEC and the codes and regulations of the jurisdictional authorities.
- E. Temporary services shall be furnished, installed, connected and maintained by the Design-Builder in an approved manner. Prior to completion of the work, the Design-Builder shall remove all temporary services and restore affected areas as approved.
- F. Shop drawings for all temporary utility and electrical services shall be submitted for approval. Power supply shall be of such quantity and type required to perform the work of the Contract. Maximum primary voltage shall be 600 volts, unless otherwise approved. Lighting equipment shall be of the type and quantity needed to provide illumination of all project areas. Materials for and installation of temporary services shall comply with OSHA requirements and with the minimum requirements of the technical specifications.

1.06 ACCESS TO FIRE HYDRANTS AND FIRE ALARM BOXES

- A. Whenever the work is being carried on, free access must be given to each fire hydrant, fire alarm box and standpipe; when required, hydrants shall be extended by suitable tubes or piping to an accessible point as approved and to the satisfaction of the jurisdictional fire department. Obstructions shall not be piled at any time or placed within 10 feet of any fire hydrant or fire alarm box and, where materials are placed in the vicinity of a fire hydrant or fire alarm box and to such height as to prevent the same from being readily seen, the position of such hydrants or fire alarm boxes shall be indicated by suitable signs and lights, both day and night.
- B. The Design-Builder shall safeguard, maintain and protect the wires, cables, ducts, manholes, posts and poles, signals, and alarm boxes of fire departments. The Design-Builder shall not cause interruption to the fire department fire alarm telegraph service, and in case of accident, shall promptly notify the fire department. No fire department wire, cable, duct, manhole, post or pole, signal or fire alarm box shall be disturbed, except in the presence of a representative of the Bureau of Fire Alarm Telegraph. In case such wire, cable, duct, manhole, post or pole, signal or fire alarm box is disturbed, the Design-Builder shall immediately notify the Authority Representative, and it shall be restored immediately to its original condition.

SECTION 01520

TEMPORARY CONSTRUCTION FACILITIES

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies requirements for temporary facilities for use during construction.
- B. Temporary facilities required include but are not limited to:
 - 1. Temporary heat.
 - 2. Field offices and storage sheds.
 - 3. Sanitary facilities, including drinking water.
 - 4. Waste disposal services.
 - 5. Rodent and pest control.
 - 6. Miscellaneous services and facilities.
 - 7. Authority Representative's Site Facility (co-located with Design-Builder's Field Office) and Parking Area.
 - 8. First Aid Station.
 - 9. Storage/Laydown Areas.

1.02 RELATED DOCUMENTS

Section 00844, Supplementary Conditions: Safety Superintendence Requirements;
Section 01114, Safety/Environmental Requirements
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures;
Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination;
Section 01510, General Requirements - Temporary Facilities and Controls: Temporary Utilities;
Section 01530, General Requirements - Temporary Facilities and Controls: Temporary Construction;
Section 01550, General Requirements - Temporary Facilities and Controls: Maintenance of Traffic, Construction Sequence and Staging, Access and Parking;
Section 01560, General Requirements - Temporary Facilities and Controls: Temporary Barriers and Enclosures;
Section 01770, General Requirements - Execution Requirements: Contract Closeout

1.03 SUBMITTALS

- A. The Design-Builder shall submit for review and approval site plans indicating all temporary facilities, utility connections and traffic flows and working drawings of temporary facilities as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

- B. The Design-Builder shall submit reports to the Authority Representative the results of tests, inspections, meter readings and similar procedures performed for temporary facilities for the Authority's information and records as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- C. The Design-Builder shall submit a schedule to the Authority indicating implementation and termination of each temporary facility within 60 calendar days prior to the start of construction or other period as may be approved by the Authority as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

1.04 QUALITY ASSURANCE

- A. The Design-Builder shall comply with industry standards and applicable laws and regulations of authorities having jurisdiction, including but not limited to:
 - 1. Building Code requirements - local and international as applicable.
 - 2. Health and safety regulations.
 - 3. Utility company regulations.
 - 4. Police, Fire Department and Rescue Squad rules.
 - 5. Environmental protection regulations.
 - 6. Governmental Agencies
- B. The Design-Builder shall: comply with NFPA Code 241, "Construction Alteration and Demolition Operations", ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition", and NECA Electrical Design Library, "Temporary Electrical Facilities". For Electrical Service, the Design-Builder shall comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70). Also comply with the IBC as applicable.
- C. Inspections: The Design-Builder shall arrange for the inspection and testing of each temporary facility before use and shall coordinate all regarding requirements for certifications and permits. The Authority shall be kept informed of all planned inspections and onsite activities.

1.05 PROJECT CONDITIONS

- A. The Design-Builder shall incorporate into the construction schedule dates for implementation and termination of each temporary facility. At the earliest practical time and when acceptable to the Authority, the Design-Builder shall change over from use of temporary facilities to use of the permanent facilities if applicable.
- B. The Design-Builder shall keep temporary facilities clean and neat in appearance. Temporary facilities are to be operated in a safe and efficient manner. The Design-Builder shall take the necessary fire prevention measures and shall not overload facilities, or permit them to interfere with progress of the Work. Hazardous, dangerous, unsanitary conditions, or public nuisances shall not be allowed to develop or persist on the site.
- C. Due to limited space available at each site, the Design Builder will be allowed one single wide trailer at Greenbelt Yard and one single wide trailer at Shady Grove Yard. At Brentwood Yard, space within the basement work area of the S&I Shop can be utilized. The Design Builder's

office facility shall be co-located with WMATA off-site. See Article 1.07, this specification.

- D. A small single wide trailer for WMATA field staff will be necessary at Greenbelt Yard only. WMATA field personnel at Brentwood and Shady Grove will make use of office space available in the existing S&I Shop buildings.
1. The Greenbelt facility shall be compliant with all codes, air conditioned, be provided with all utilities, and meet the requirements of Article 1.07.C of this specification, except for furnishings and restrooms.
 2. The Design Builder shall pay all cost for hauling and connection purposes.
 3. The Greenbelt facility shall be ready for occupancy within seven (7) calendar days after the start of the construction phase of the work and shall be maintained and serviced by the Design Builder until completion of the work.
 4. The Greenbelt facility shall be large enough to house four desks and chairs, and filing cabinets.
 5. Upon completion of this contract, the complete facility will become the property of the Design Builder who shall remove it from Authority property and restore the site to its original condition.

1.06 DESIGN-BUILDER'S ON-SITE PLANT

- A. The Design-Builder shall submit a plan of its plant layout as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for approval 60 calendar days prior to the start of construction. All necessary construction in connection therewith shall be done in a neat workmanlike manner to the Authority's satisfaction.
- B. Sufficient construction plant shall be provided and maintained at points where work is in progress to adequately meet demands of the work and with ample margin for emergencies or overload. The plant shall be of sufficient capacity, in the opinion of the Authority, to permit a rate of progress which will ensure completion of the work within the time specified in the Contract. The Authority shall have the right to reject or condemn any plant, apparatus or staging which in its opinion is unsafe, improper or inadequate. Whether the Authority exercises this authority or not, the Design-Builder is not relieved of its responsibility for the safe, proper and lawful construction, maintenance and use of such plant, apparatus or staging. Condemned plants or equipment shall be brought to acceptable condition or shall be removed from the site.
- C. The location of stationary equipment and the location of miscellaneous mobile equipment shall be subject to approval.

1.07 AUTHORITY REPRESENTATIVE'S FACILITY

- A. The Design-Builder shall locate, and acquire or construct and fit out facilities a mobile unit or a building and co-locate its key personnel and management activities with WMATA, off-site at one mutually agreed upon location. The facility shall remain operational until the Authority has assumed full maintenance and operation of all project elements and the facility will be maintained by the Design-Builder at their own expense.

- B. The facility shall be compliant with the ADAAG regulations and provide ADAAG accessibility, complete with parking facilities, hereinafter called field office. The field office shall be situated in the work area at an approved location. The field office shall be complete as specified and ready for occupancy by the Authority Representative within seven (7) calendar days after the start of the construction phase of work. It shall be maintained and serviced by the Design-Builder as hereinafter specified until completion of the work. A mobile unit shall have the features specified. If the Design-Builder elects to provide a building in lieu of a mobile unit, the building shall conform to local building codes, and international building codes as applicable, and shall have the basic features specified herein, with substitute materials allowable, subject to approval. The facility shall be fully winterized.
- C. The Design-Builder shall obtain and pay all costs for hauling, building and connection permits. The field office shall be substantially constructed satisfactory to the Authority Representative. All materials shall be good commercial quality. The field office shall provide a minimum of 1,200 square feet of usable area, with furniture, parking, and the following additional requirements:
1. Painting:
 - a. Exterior surfaces of buildings and all interior surfaces, other than factory-finished surfaces, shall be painted with two coats of an approved paint of approved color(s).
 - b. No painting will be required on aluminum or stainless steel surfaces.
 2. Exterior walls, ceilings and floors, shall be insulated; interior walls shall be paneled with finished plywood or gypsum wallboard of not less than one-half inch thickness on steel stud support, or other suitable materials as approved. Ceiling surfaces shall be either gypsum wallboard of not less than one-half inch thickness or suspended grid with lay-in acoustical tiles. Floors shall be covered with flooring material such as resilient tile or sheet linoleum. Floors shall be constructed to withstand a live load of 125 psf. Interior layout and materials to be approved by the Authority Representative.
 3. Construction is to be gypsum board on steel studding with lay in acoustical tile and tile or carpeted flooring or equal. Floors shall be constructed to withstand a live load of 125 psf. The field office shall also have a 60' X 6' covered porch or deck secured by a lockable gate.
 4. Two rest rooms shall be provided, each with lavatory, toilet, mirror, soap holder, toilet paper holder, paper towel dispenser, and sanitary napkin dispenser and hot and cold water supply.
 5. Lighting shall be provided to furnish a minimum of 100 foot-candles at desk height uniformly in all areas except rest rooms. Rest rooms shall be provided with adequate lighting.
 6. Duplex electrical receptacles shall be provided around interior walls at approximately ten-foot spacing.
 7. An electric water cooler shall be installed to supply cool water.
 8. Heating and air conditioning systems shall have thermostatic control. Systems shall be capable of maintaining office at ambient temperature of 72F.
 9. Water, sewer and electrical utility connections shall be provided as necessary.
 10. Adequate access from public streets shall be provided to the field office together with adjacent space for 10 parking spaces. The access roadway and parking area shall be graded for

drainage and surfaced with gravel, concrete or bituminous pavement in an approved manner.

11. The interior of the field office shall provide two completely partitioned office rooms approximately 200 square feet, two interior and two exterior doors, two coat closets, 30 feet of counter space and 50 feet of shelving arranged as directed. Each exterior door shall be equipped with a cylinder lock and two keys. This area shall also have a 60' x 6' covered porch or deck secured by a lockable gate.
12. The field office shall be furnished with the following new furniture as approved:
 - a. Desk, 60 inches by 30 inches; with 3 drawers and one file drawer, all with locks; with armchair: Seven
 - b. Secretary desk, 54 inches by 30 inches, with typewriter shelf, file drawer and paper rack with secretarial chair: One
 - c. Drafting table, 60 inches by 36 inches, with drawer and stool: One
 - d. Side chair: Twenty
 - e. Bookcase, 36 inches by 42 inches, with four shelves: Three
 - f. File cabinet, letter size, four drawers, with lock: Six
 - g. File cabinet, legal size, four drawers, with lock: Two
 - h. Reference table, 54 inches by 30 inches: Twelve
 - i. Storage cabinet, 36 inches by 18 inches by six feet, with lock: Two
 - j. Rolling Plan storage rack, six stick: Two
 - k. Utility cabinet, 18 inches by 46 inches by 30 inches, with lock: Six
 - l. Coat rack: One
 - m. Chalk board and stand, 60 inches by 36 inches: One
 - n. Eighteen cubic foot, frost free, refrigerator: One
 - o. 800 watt microwave: One
 - p. First aid kit containing eye and skin protection for emergencies
 - q. Fire Extinguishers: As required by code, not less than three
 - r. 20 drawer flat file: One
13. All windows shall be provided with shades, blinds or curtains and security grills.
14. The field office shall be furnished with the following new equipment as approved by the Authority Representative:
 - a. Facsimile machine: One.

- b. Copier with the following functions: One.
- (1) High capacity, 115-volt operation.
 - (2) Twenty bin sorter, 50 sheets per bin, at least 11" x 17" sheet size, with stapler function.
- c. Computers and Printers: The following Authority-provided items is are specified to establish system capabilities and quantities; however, an equal system may be substituted as approved:
- (1) Computers: Four (4) Dell Minitower (OptiPlex GX260) with Pentium 4 Processor, 2.40 GHz, 533FSB, 512K Cache, Intel Gigabit NIC, 512 MB DDR Non-ECC SDRAM (2DIMMS), Dell 19-inch M992 color monitor (18.0 viewable), Integrated DVMT video, 40GB EIDE 7200RPM, 1.44 MB 3.5-inch floppy drive, Windows 2000 Professional SP2 with CD using NTFS, Dell PS/2 keyboard, Dell PS/2 2-button mouse, 3COM 10/100 (3C905C) PCI Adapter, 48X Max CDRW, 48X CD-ROM, Integrated Sound Blaster Compatible harman/kardon 206 speakers, Resources CD contains Diagnostics and Driver for Dell OptiPlex Systems, Energy Star Label, 3-year Same Day 4Hr Response Parts + Onsite Labor (M-F 8am-6pm), Mouse Pad.
 - (2) Printers: One (1) Color Printer capable of handling 11" X 17" sheets, compatible with the scheduling software, network ready, and of HP quality or better. Four (4) HP LaserJet 1200 w/cable (C2950A).
 - (3) The Design-Builder shall provide point-to-point computer cabling to the Authority a dedicated, hardwired communication connection to from the PC's from the tie-in location of XXXXX temporary facility to JGB and the network wiring within the temporary facility to connect Authority's PC's to the Authority's WAN/LAN including an adequately sized, secure and ventilated server closet, and the Design-Builder shall coordinate the design and installation with the Authority's Office of Information Technology and Services (ITSV) through the Authority Representative.
- d. The Design-Builder shall maintain the equipment for the duration of this Contract. Upon completion of the work, the equipment shall become the property of the Design-Builder.
- e. Maintenance and services shall be provides by the Design-Builder as follows:
- (1) Repair and cleaning, twice weekly, of the field office, parking area and access road, including complete janitorial services and supplies, and snow removal.
 - (2) The furnishing of all utilities except telephones.
 - (3) During other than normal working hours, provide security measures and area protection equivalent to that normally used by the Design-Builder for its job site shop and office facilities.
- f. Upon completion of this Contract, the complete facility, other than the computer equipment and telephone handsets, will become the property of the Design-Builder who shall remove it and restore the site.

1.08 SANITARY PROVISIONS

- A. The OSHA standard for sanitation, 29 CFR § 1910.141 et. seq. shall be used. Prior to starting work, the Design-Builder shall furnish for use of its force on the work necessary toilet conveniences

secluded from public view. They shall be kept in a clean and sanitary condition and comply with the requirements and regulations of the area in which the work is performed. Potable drinking water shall be provided with individual cups and sanitary conditions for the water dispenser shall be maintained. A common drinking cup or other common utensils shall not be used.

1.09 WORK AND STORAGE/LAYDOWN AREA

- A. The areas designated as the Design-Builder's Work and Storage Area will be provided to the Design-Builder without charge. Additional work and storage space, if required, shall be obtained by the Design-Builder. Laydown areas may have been identified by the Authority. The Design-Builder's use of laydown areas other than those identified by the Authority shall be approved by the Authority Representative prior to their use. The Design-Builder shall submit a materials storage plan as described in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for approval 60 calendar days prior to the start of construction.
- B. As applicable, no protrusions of materials/tools/equipment/etc. into the dynamic outline of the track or of railcars will be permitted.

1.10 FIRST AID STATION

First Aid Station requirements, if applicable, are specified in Section 00844, SAFETY SUPERINTENDENCE REQUIREMENTS and Section 01114, SAFETY / ENVIRONMENTAL REQUIREMENTS.

PART 2 PRODUCTS	[Not Applicable]
PART 3 EXECUTION	[Not Applicable]

SECTION 01530

TEMPORARY CONSTRUCTION

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies requirements for temporary construction that may be required during the course of the Project. Temporary construction items include temporary decking, and its respective support system over excavated areas for the purpose of maintaining the flow of pedestrian and vehicular traffic during the construction period.
- B. Decking, bridges for pedestrians and temporary grade crossing for vehicular traffic as applicable shall be constructed of suitable materials in accordance with jurisdictional requirements. Pedestrian bridges shall be as specified in Section 01560 TEMPORARY BARRIERS AND ENCLOSURES.
- C. The Design-Builder shall submit the original, six paper copies and one electronic copy no less than 60 calendar days prior to the start of construction for approval, working drawings as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES for all proposed temporary construction to the Authority and also the Design-Builder shall prepare and submit to the Jurisdictional Agency of the area where the work is to be performed, for its approval, working drawings including maintenance of traffic comprehensive staging and decking plans prior to the time public traffic pattern closures and changes are proposed as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING. Jurisdictional Agency approval must be obtained at least 30 calendar days prior to installation of temporary decking.

1.02 RELATED DOCUMENTS

- Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements;
- Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination;
- Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures;
- Section 01510, General Requirements - Temporary Facilities and Controls: Temporary Utilities;
- Section 01550, General Requirements - Temporary Facilities and Controls: Vehicular Maintenance of Traffic, Construction Sequence and Staging, Access and Parking;
- Section 01560, General Requirements - Temporary Facilities and Controls: Temporary Barriers and Enclosures;
- Section 01580, General Requirements - Temporary Facilities and Controls: Project Signs;
- Section 02205, Technical Requirements Division 2 - Site Construction: Restoration of Miscellaneous Surface Facilities;
- Section 02260, Technical Requirements Division 2 - Site Construction: Support of Excavation;
- Section 02270, Technical Requirements Division 2 - Site Construction: Maintenance, Support and Restoration of Utility Facilities;
- Section 02320, Technical Requirements Division 2 - Site Construction: Grading, Excavating and Backfilling
- Section 02727, Technical Requirements Division 2 - Site Construction: Ballast, as applicable.

Section 02920, Technical Requirements Division 2 - Site Construction: Topsoil, Seeding and Sodding
Section 02930, Technical Requirements Division 2 - Site Construction: Landscaping

1.03 QUALITY ASSURANCE

A. Codes, Regulations, Reference Standards and Specifications:

1. Codes and regulations of the jurisdictional authorities.
2. AASHTO: Standard Specification for Highway Bridges.
3. AWS: D1.1.
4. ASTM: D2555, E274.
5. AREA.

B. Design Criteria:

1. Base design on Authority's Design Criteria as a minimum.
2. Design temporary decking and support system for AASHTO HS27 loading and impact, earth pressures, utility loads and other applicable live impact and dead loads including the Design-Builder's equipment.
3. When excavation or construction equipment is to be operated from decking, design decking using actual maximum loads in accordance with design criteria of referenced AASHTO specification, unless otherwise shown.
4. Design supporting members to allow clearance for existing and relocated utilities.
5. Provide suitable openings for access for servicing utilities and fire fighting. Provide flush covers for openings.
6. When the deck beams or other members supporting such deck are required to carry the support of excavation loads, these members to also be in compliance with the requirements of Section 02260, SUPPORT OF EXCAVATION.
7. Design temporary grade crossing, as applicable, in accordance with AREA criteria.
8. All accessible path designs shall comply with ADAAG regulations.

1.04 SUBMITTALS

A. Submit the following for approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, and with the additional requirements as specified for each:

1. Working Drawings:
 - a. Prior to installation of elements for support of excavation, submit working drawings and

design calculations.

- b. Show proposed procedures and methods of constructing temporary structures including support system and necessary construction details.
- c. Working Drawings for temporary utilities are specified in Section 01510, TEMPORARY UTILITIES, working drawings for temporary construction facilities are specified in Section 01520, TEMPORARY CONSTRUCTION FACILITIES and working drawings for temporary enclosures are specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES.

2. Certification:

If previously used material are utilized, submit certified information concerning each previous use, such information to include, but not be limited to, the following:

- a. Purpose.
- b. Duration.
- c. Type of loading.

1.05 JOB CONDITIONS:

A. Responsibilities:

1. Design, construction, maintenance and removal of temporary construction including decking and support systems are the responsibility of the Design-Builder.
2. Perform work in accordance with construction sequence and maintenance of traffic schedules acceptable to the Authority and requirements of the jurisdictional agencies as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
3. Maintain vehicular and pedestrian access to buildings at levels existing prior to start of Contract work. Maintain persons with disabilities access in accordance with ADAAG.
4. Perform work in accordance with specified safety requirements as described in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

PART 2 PRODUCTS

2.01 MATERIALS

A. Timber, Steel, Concrete and Other Materials:

1. Used materials are permitted in lieu of new materials provided they are sound and free from defects which might impair their strength.
2. Timber: Structural lumber, visually graded in accordance ASTM D2555, minimum working

stress 1,100 psi.

- B. Welding: Have welding performed by certified welders and in accordance with the requirements of the AWS D1.1.
- C. Ballast, as applicable: Section 02727.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Comply with the requirements of Section 02260, SUPPORT OF EXCAVATION. Install and maintain decking at design elevations. Accessibility and decking surfaces and slopes shall be in accordance with ADAAG regulations.
- B. Mechanically laminate decking elements in panels not less than five feet wide.
- C. Provide and maintain skid-resistant surface.
- D. If asphalt or asphaltic concrete is used on decking, mechanically bond asphalt or asphaltic concrete to decking.
- E. Maintain free of snow, ice, water, mud and debris.
- F. Place premixed asphaltic patching material to provide smooth transitions between existing pavement surfaces and decking and between existing pavement surfaces and pedestrian bridges as specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES and elsewhere as required to provide proper drainage and prevent ponding of water.
- G. As removal of pavement and sidewalk progress, furnish and install barricades in accordance with Section 01560, TEMPORARY BARRIERS AND ENCLOSURES and requirements of the jurisdictional agencies.
- H. Along sides of decked areas for pedestrian walkways where such walkways are adjacent to vehicular traffic, install concrete barriers as specified in SECTION 02845, TRAFFIC CONTROL DEVICES and Section 01560, TEMPORARY BARRIERS AND ENCLOSURES and as shown on approved maintenance of traffic plan as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING.
- I. Install wooden fence as specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES along sides of decked areas for pedestrian walkways where such walkways are adjacent to open areas, staging/storage areas and other areas used by the Design-Builder. Paint barricades and fences and maintain in good repair as specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES.
- J. Provide walkways or galleries for full length of excavation when excavation reaches depth of approximately 15 feet. Pedestrian Bridges are specified in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES.
- K. Erect and maintain load limit and other signs as specified in Section 01580, PROJECT SIGNS to restrict loading on decking so that it does not exceed maximum design loading.

- L. Remove temporary decking along with any support systems when no longer required. Comply with the requirements of Section 02260, SUPPORT OF EXCAVATION, when removing support system.

3.02 FIELD QUALITY CONTROL

A. Allowable Tolerances:

1. Maintain surface elevations at abutting elements within plus-or-minus 1/4 inch.
2. Do not allow horizontal gaps to exceed 3/8 inch.
3. All profile grades and cross-slopes, curb ramps, ramps or other features required in an accessible path shall be provided and maintained to ADAAG requirements.

- B. Skid-Resistant Surface. Provide skid-resistant surface having a Skid Number at 30 mph (SN 30) of no less than 35 when measured in accordance with ASTM E274, and also, skid resistance shall be in accordance with ADAAG regulations.

- C. Protect Existing Vegetation, Structures, Utilities and Improvements in accordance with Section 02205, REMOVAL AND RESTORATION OF EXISTING LANDSCAPING, Section 02270, MAINTENANCE, SUPPORT AND RESTORATION OF UTILITY FACILITIES, Section 02320, GRADING, EXCAVATING AND BACKFILLING, Section 02920, TOPSOIL, SEEDING AND SODDING, and Section 02930, LANDSCAPING.

3.03 VENTILATION

When excavations are decked, provide ventilation as required by the applicable code requirements and jurisdictional agencies. Provide ventilation which meets specified safety requirements as described in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

3.04 ILLUMINATION

- A. In areas covered by decking, supply and maintain illumination of sufficient intensity to permit safe and expeditious conduct of all phases of construction and inspection of support system, lagging, bracing and utilities maintained in place.
- B. Provide illumination which meets specified safety requirements as described in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

END OF SECTION

THIS PAGE NOT USED

SECTION 01550

MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING

PART 1 GENERAL

1.01 SUMMARY

This Section specifies requirements for maintenance of existing pedestrian and vehicular traffic onsite and offsite; construction sequence and staging; maintaining access to and from the site including construction areas, haul routes, and temporary roads with traffic control; and for Design-Builder parking.

1.02 RELATED DOCUMENTS

Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements
Section 01310, General Requirements - Administrative Requirements: Project Management and Coordination;
Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures;
Section 01510, General Requirements - Temporary Facilities and Controls: Temporary Utilities;
Section 01520, General Requirements - Temporary Facilities and Controls: Temporary Construction Facilities;
Section 01530, General Requirements - Temporary Facilities and Controls: Temporary Construction;
Section 01560, General Requirements - Temporary Facilities and Controls: Temporary Barriers and Enclosures.

1.03 MAINTENANCE OF TRAFFIC

- A. The Design-Builder shall be responsible for maintaining traffic and for erecting and maintaining traffic control devices, as required by the Jurisdictional Agency of the area where the work is to be performed, including, but not limited to, the following:
1. Temporary directional and electrical warning and detour signs.
 2. Temporary barricades.
 3. Temporary lighting, overhead warning lights, flashing lights and lanterns.
 4. Temporary paving and striping.
- B. Traffic control signs: Traffic control signs shall be standard signs of the Jurisdictional Agency. Each change in location of traffic shall be adequately posted with a minimum of two signs mounted on barricades or standard posts. All signing shall be done in accordance with the requirements of the latest published standard of the jurisdictional agency.

- C. Striping: The Design-Builder shall provide all necessary temporary striping required in connection with all temporary street work. The Design-Builder shall remove or obliterate existing or temporary pavement markings whenever vehicular traffic is moved to newly available pavement areas or to different traffic patterns.
- D. Redirecting traffic: Channeling and shifting of traffic lanes as well as barricading of traffic in connection with this work will be subject to approval of the jurisdictional agency.
 - 1. Activity of the Design-Builder which will interfere with the orderly movement of pedestrians and vehicular traffic will not be permitted from 10:00 AM to 9:00 PM Monday through Saturday in the period from Thanksgiving to Christmas, except in an emergency or when authorized by a special permit issued by the District of Columbia.
- E. Temporary closing: Prior to the temporary closing to traffic of part of any public street, sidewalk or other access or prior to changing traffic patterns from those shown, approval shall be obtained from the appropriate jurisdictional agency by the Design-Builder prior to the time such closures and changes are to be made. Deviations from this will be for a bonafide emergency only and as approved by the Jurisdictional Agency.
- F. Design-Builder's surface operations: The Design-Builder shall schedule its surface operations so as not to be working intermittently throughout the area. Excavation or construction activities shall be carefully scheduled and vigorously pursued to completion as required to permit opening of street areas to traffic as soon as possible without unnecessary delays.
- G. Temporary walkways: In areas where the removal of existing sidewalks is necessary, access to adjacent businesses, entrances and properties shall be maintained by temporary walkways having a width of not less than six feet.
- H. Intersections: Intersections shall be excavated and decked in stages as shown. Construction shall be so phased that the required number of traffic lanes on each street will be provided at all times during these operations. Upon completion of decking, traffic in all intersections shall be fully maintained.
- I. Temporary pavement and patching: The Design-Builder shall construct, maintain and remove temporary pavement and patching required to safely and expeditiously handle vehicular and pedestrian traffic within or adjacent to the Contract site. The temporary pavement composition and patch shall conform to the requirements of the jurisdictional agency. Construction, maintenance or removal required by the Design-Builder's operations off the site shall be included under this Section.
- J. The use of staging, working, storage and laydown areas shall be as approved by the Authority Representative.
- K. Jurisdictional Agency MOT approval must be obtained at least 30 calendar days prior to the time public traffic pattern closures and changes are to be made and Authority MOT approval must be

obtained 60 calendar days prior to start of construction on Authority property. The original, six paper copies and one electronic copy of the Maintenance of Traffic Plan shall be submitted to the Authority in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

- L. Haul Routes: Haul routes shall be subject to approval of the local jurisdictional agency.
 - 1. Greenbelt Yard: Sunnyside Avenue provides the only access to the site. Construction vehicles are prohibited from approaching Greenbelt Yard on Sunnyside Avenue from the East via Edmonston Road (Route 201). All construction vehicles shall approach Greenbelt Yard on Sunnyside Avenue from the West

1.04 CONSTRUCTION SEQUENCE AND STAGING

- A. All work under this Contract shall be performed generally in accordance with the approved detailed plan of the work following a logical sequence developed by the Design-Builder.
- B. The Design-Builder's particular attention is directed to the fact that both vehicular and pedestrian traffic must be maintained on the existing roads adjacent to the project site at all times for the duration of the Contract.
- C. Structures constructed underground by cut-and-cover methods, will require the Design-Builder to provide temporary decking as specified in Section 01530, TEMPORARY CONSTRUCTION over open excavations for the maintenance of vehicular and pedestrian traffic. In order that disruptions to traffic may be kept to a minimum, the Design-Builder shall perform the decking operations, the utility work and the subsequent paving and restoration operations in stages.
- D. A method of staging and requirements pertaining to the number of traffic lanes to be provided during rush hours and non-rush hours, shifting of traffic lanes, the use of working, storage and laydown areas and other requirements pertaining to the maintenance of traffic as previously specified shall be developed by the Design-Builder as part of this Contract.
- E. The particular order in which the various stages are to be performed will be optional with the Design-Builder, provided that stage work within the limits of one stage is completed before work in another stage is commenced; and provided that all other requirements pertaining to maintenance of traffic are complied with. The Design-Builder shall prepare and submit the original, six paper copies and one electronic copy to the Authority and shall submit to the Jurisdictional Agency of the area where the work is to be performed, for its approval, working drawings including comprehensive staging and decking plans including support of excavation and calculations as described in Section 01530, TEMPORARY CONSTRUCTION. No work shall be started prior to approval.
- F. The construction staging part of the SSWP as specified in Section 01142, COORDINATION WITH OCCUPANTS AND OPERATIONS shall be based on the sequencing of construction activities. The plan shall develop a project schedule and a sequence of procedures for the Design-Builder and

subcontractors who will be working on the project. The following types of information shall be incorporated into the plan.

1. Type of work required
 2. Level of coordination/cooperation expected between WMATA and the Design-Builder
 3. Operational details/requirements for the project
 - a. Physical characteristics of project
 - b. Dictated work windows
 - c. Established work procedures, including safety policies/practices
 - d. Manpower and equipment requirements
 - e. Material approvals
 - f. Contingent allowances
 4. Design-Builder and personnel qualification requirements
 5. Planning requirements
 - a. Preliminary
 - b. Implementation
 - c. Post
 6. Quality assurance/quality control plan (QA/QC)
 7. Testing
 8. Safety Certification
- B. In some cases, the above elements may not explicitly defined in the staging plan; however, each element must be considered in the development process, and will ultimately influence the final staging plan.
- C. The general issues that shall influence the development of the staging plan for the project are the overall construction priorities, the work requirements, and the desire to maintain maintenance operations as much as possible. The sequencing of particular sections and contracts was influenced by the civil and structural requirements. Installation and implementation of the new rail, signal, and power systems is also as major factor.
- D. A primary influence on construction staging is available work windows. These windows will depend on maintenance of service. WMATA's primarily concern is the continued safe and efficient operation of maintenance operations.

1.05 ACCESS TO ADJACENT PROPERTY

- A. The Design-Builder shall conduct construction operations in such a manner as to cause as little inconvenience as possible to owners of property affected by such operations. Convenient access to all property from roads and highways along line of work shall be maintained. When access to adjacent properties is temporarily cut off due to the Design-Builder's operations, the Design-Builder shall render every assistance to provide access to the property and the transfer of commodities, including refuse, to and from the property.

1.06 ACCESS TO FIRE HYDRANTS AND FIRE ALARM BOXES

- A. Whenever the work is being carried on, free access must be given to each fire hydrant, fire alarm box and standpipe; when required, hydrants shall be extended by suitable tubes or piping to an accessible point as approved and to the satisfaction of the jurisdictional fire department. Obstructions shall not be piled at any time or placed within 10 feet of any fire hydrant or fire alarm

box and, where materials are placed in the vicinity of a fire hydrant or fire alarm box and to such height as to prevent the same from being readily seen, the position of such hydrants or fire alarm boxes shall be indicated by suitable signs and lights, both day and night.

- B. The Design-Builder shall safeguard, maintain and protect the wires, cables, ducts, manholes, posts and poles, signals, and alarm boxes of fire departments. The Design-Builder shall not cause interruption to the fire department fire alarm telegraph service, and in case of accident, shall promptly notify the fire department. No fire department wire, cable, duct, manhole, post or pole, signal or fire alarm box shall be disturbed, except in the presence of a representative of the Bureau of Fire Alarm Telegraph. In case such wire, cable, duct, manhole, post or pole, signal or fire alarm box is disturbed, the Design-Builder shall immediately notify the Authority Representative, and it shall be restored immediately to its original condition.

1.07 DESIGN-BUILDER'S PERSONNEL AND DESIGN-BUILDER'S SUBCONTRACTORS PARKING

Parking facilities for the Design-Builder's personnel and that of subcontractors shall be the Design-Builder's responsibility. The storage/laydown and work facilities provided for the Authority, if any, shall not be used for parking by the Design-Builder or Design-Builder personnel.

PART 2 PRODUCTS [Not Applicable]

Section 01580, General Requirements - Temporary Facilities and Controls: Project Signs

Section 02205, Technical Requirements - Division 2 Site Construction: Removal and Restoration of Existing Landscaping

Section 02270, Technical Requirements - Division 2 Site Construction: Maintenance, Support and Restoration of Utility Facilities

Section 02320, Technical Requirements - Division 2 Site Construction: Grading, Excavating and Backfilling

Section 02820, Technical Requirements - Division 2 Site Construction: Fencing

Section 02920, Technical Requirements - Division 2 Site Construction: Topsoil, Seeding and Sodding

Section 02930, Technical Requirements - Division 2 Site Construction: Landscaping

1.03 GENERAL

A. Wherever necessary, shown or specified, the Design-Builder shall erect and maintain signs, fences, barricades and pedestrian bridges for the protection of public travel, the work site, adjoining property and adjoining public places.

B. The Design-Builder shall take positive measures to prevent entry into the site of the work and storage areas by children, animals and unauthorized adults and vehicles.

C. Appropriate warning signs and instructional safety signs as specified in Section 01580, PROJECT

SIGNS shall be conspicuously posted in all areas involving construction activities. The Design-Builder shall also furnish signs and attach to, as applicable, the protective devices enclosing the Contractor's work, access, operating, and platform storage and site storage/laydown areas as applicable; pedestrian sidewalks, streets, and parking lots adjacent to the work area; and excavations and openings as specified in Section 01580, PROJECT SIGNS. The storage/laydown areas as designated by the Authority, if any, and as specified in Section 01520, TEMPORARY CONSTRUCTION FACILITIES, shall be fenced and signage shall be provided to prevent unauthorized entry, and stored materials shall be bundled and/or tied down by the Design-Builder.

- D. Protective devices shall be in accordance with codes and regulations of jurisdictional agencies.

1.04 BARRICADES

- A. Barricades shall be substantial in character, neat in appearance, and of approved size and arrangement.
- B. Flashing yellow lights shall be mounted and maintained on barricades at maximum intervals of 25 feet.

1.05 TEMPORARY WOODEN PEDESTRIAN BARRIERS

- A. Wooden barriers for protection of non-construction personnel from the Design-Builder's work and operating areas and to enclose storage areas, as applicable: The location of barriers shall be as shown on the approved Design-Builder's working drawings submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES or as directed.
- B. Temporary wooden barriers shall be substantial in character, neat in appearance, and of approved size and arrangement.
 - 1. Unless otherwise shown, barriers shall be a minimum of six feet high.
 - 2. The type of barrier, whether fixed or movable, shall be as directed or as shown.

1.06 TEMPORARY FENCES

- A. The Design-Builder shall furnish temporary fencing within the construction area to fence off pedestrian sidewalks, streets and parking areas from operating, access and work areas and site storage/laydown areas. The location of fencing for pedestrian sidewalks shall be as shown on the approved Design-Builder's working drawings submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES or as directed.
- B. Temporary fences shall be substantially constructed in a neat appearance.
- C. Working Area Wooden Fencing
 - 1. The Design-Builder shall furnish a minimum six-foot high temporary working area wooden

fencing as shown or as directed and as specified. Working area wooden fencing shall serve two purposes: to fence off pedestrian sidewalks, and to enclose the Design-Builder's work, access, storage and operating areas.

2. The location of fence for pedestrian sidewalks adjacent to the work area and for enclosing Design-Builder's work areas shall be as specified and as shown on the Design-Builder's approved working drawings.

D. Working Area Chain-link Fencing

1. The Design-Builder shall furnish a minimum of six-foot high temporary working area chain-link fencing as specified in Section 02820, FENCING to fence off storage area from operating areas, and if necessary, to fence off pedestrian sidewalks.
2. The location of fence for pedestrian sidewalks adjacent to the work area and to the storage areas shall be as specified and shall be as shown on the Design-Builder's approved working drawings.

1.07 PEDESTRIAN BRIDGES, AS APPLICABLE:

Bridges for pedestrians shall be constructed of approved suitable materials in accordance with local requirements, be provided with handrails or with sides tightly boarded in accordance with such requirements and shall have a minimum width of six feet or such greater minimum width as will accommodate the normal traffic flow at the particular location. Also, accessibility shall be in accordance with ADAAG regulations. Maintain vehicular and pedestrian access to buildings at levels existing prior to start of Contract work. The Design-Builder shall submit for review and approval in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES, working drawings for required bridges. Decking is specified in Section 01530, TEMPORARY CONSTRUCTION.

1.08 TREE AND PLANT PROTECTION

Protect trees and plants not slated to be removed or replaced from construction activities in accordance with Section 00739, PROTECTION OF EXISTING VEGETATION, STRUCTURES, UTILITIES AND IMPROVEMENTS, Section 02205, REMOVAL AND RESTORATION OF EXISTING LANDSCAPING, Section 02920, TOPSOIL, SEEDING AND SODDING and Section 02930, LANDSCAPING.

1.09 PROTECTION OF UTILITIES

Protect existing utilities in accordance with Section 00739, PROTECTION OF EXISTING VEGETATION, STRUCTURES, UTILITIES AND IMPROVEMENTS and SECTION 02270, MAINTENANCE, SUPPORT AND RESTORATION OF UTILITY FACILITIES.

1.10 PROTECTION OF EXISTING STRUCTURES AND IMPROVEMENTS

Protect Existing Structures ,and Improvements in accordance with Section 00739, PROTECTION OF

EXISTING VEGETATION, STRUCTURES, UTILITIES AND IMPROVEMENTS, Section 01723, PROTECTION OF ADJACENT CONSTRUCTION, and Section 02320, GRADING, EXCAVATING AND BACKFILLING.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Barricade and pedestrian bridge materials shall be as approved. Lumber for barriers as applicable and working area wooden fencing shall be exterior grade, treated to be fire-retardant, pressure impregnated with resin salt as approved. Exterior latex paint for barriers and working area wooden fencing shall be as specified in Section 09920, FIELD PAINTING. Color shall be as approved. Provide necessary fencing hardware, locks, gates and all other incidentals as approved.
- B. All chain-link fencing shall be anti-climbing type with barbed wire as specified in Section 02820, FENCING and shall have plastic inserts.
- C. Tree and Plant Protection is specified in Section 02205, REMOVAL AND RESTORATION OF EXISTING LANDSCAPING, Section 02920, TOPSOIL, SEEDING AND SODDING and Section 02930, LANDSCAPING.
- D. Protection of existing utilities is specified in SECTION 02270, MAINTENANCE, SUPPORT AND RESTORATION OF UTILITY FACILITIES.
- E. Existing Structures and Improvements Protection is specified in Section 02320, GRADING, EXCAVATING AND BACKFILLING.
- F. Warning signage is specified in Section 01580, PROJECT SIGNS.
- G. Structural lumber for decking is specified in Section 01530, TEMPORARY CONSTRUCTION.

PART 3 EXECUTION

3.01 INSTALLATION

- A. As removal of pavement and sidewalk progress as applicable and as specified in Section 01530, TEMPORARY CONSTRUCTION, furnish and install barricades in accordance with requirements of the jurisdictional agencies. The Design-Builder shall also, during the prosecution of the work, barricade or close excavations and openings in floors, walls and other parts of the structures and excavations while such openings are not in regular use as applicable. The Design-Builder shall barricade or close such openings before final acceptance of the work. Barricades shall be anchored to the ground on all sides of excavations. Work involving electrical systems or equipment in or near the area to which personnel or the public have access shall be isolated using barricades.
- B. Fabricate and erect in accordance with local requirements pedestrian barriers as applicable and working area wooden fencing with a stud framework and a covering of tightly fitted plywood sheets.

Paint with two coats of exterior latex paint. Install hardware, locks, gates and all other incidentals. Install wooden fence along sides of decked areas for pedestrian walkways as applicable and as specified in Section 01530, TEMPORARY CONSTRUCTION, where such walkways are adjacent to open areas, staging/storage areas and other areas used by the Design-Builder.

- C. Erect chain-link fencing as applicable and as specified in Section 02820, FENCING consisting of a post and rail framework with chain-link fabric; install hardware, locks, gates and all other incidentals; and insert plastic inserts into the chain link fence.
- D. Along sides of decked areas for pedestrian walkways as applicable and as specified in Section 01530, TEMPORARY CONSTRUCTION, where such walkways are adjacent to vehicular traffic, install concrete barriers as specified in Section 02845, TRAFFIC CONTROL DEVICES and as shown on approved maintenance of traffic plan as specified in Section 01550, MAINTENANCE OF TRAFFIC, CONSTRUCTION SEQUENCE AND STAGING, ACCESS AND PARKING and submitted in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
- E. Fabricate, install and maintain pedestrian bridges at design elevations and as shown on the approved shop drawings submitted as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and in accordance with local requirements. All profile grades and cross-slopes or other features required in an accessible path shall be provided and maintained to ADAAG requirements. Place premixed asphaltic patching material as specified in Section 01530, TEMPORARY CONSTRUCTION to provide smooth transitions between existing pavement surfaces and pedestrian bridge decks to provide proper drainage and prevent ponding of water. Maintain free of snow, ice, water, mud and debris. Provide and maintain skid-resistant surface. Decking is specified in Section 01530, TEMPORARY CONSTRUCTION.
- F. Erect Fabricate, attach and maintain safety warning and other signs as specified in Section 01580, PROJECT SIGNS.
- G. Protect Existing Vegetation, Structures, Utilities and Improvements in accordance with Section 02205, REMOVAL AND RESTORATION OF EXISTING LANDSCAPING, Section 02270, MAINTENANCE, SUPPORT AND RESTORATION OF UTILITY FACILITIES, Section 02320, GRADING, EXCAVATING AND BACKFILLING, Section 02920, TOPSOIL, SEEDING AND SODDING, and Section 02930, LANDSCAPING.
- H. The Design-Builder shall provide maintenance for all barricades, barriers, temporary fences, pedestrian bridges, signage and existing vegetation, structures, utilities and improvements protection as applicable during the entire duration of the Contract. Immediately prior to completion of the Contract, the Design-Builder shall completely remove the items and restore the area unless otherwise directed.

SECTION 01570

TEMPORARY CONTROLS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies security, site, environmental and pollution abatement controls required to allow construction to proceed.

1.02 RELATED DOCUMENTS

Section 00701, General Conditions: Definitions

Section 00707, General Conditions: Permits and Responsibilities

Section 00708, General Conditions: Responsibility of the Design-Builder for Design-Related Services

Section 00739, General Conditions: Protection of Existing Vegetation, Structures, Utilities and Improvements

Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements

Section 01141, General Requirements - Summary of Work Requirements: Access to Site

Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

Section 01410, General Requirements - Quality Requirements: Regulatory Requirements

1.03 SITE SECURITY - [Not Applicable]

1.04 EROSION AND SEDIMENT CONTROL

- A. Erosion and Sediment materials: No erosion or sediment materials shall be allowed to enter natural or man-made water or sewage removal systems. Erosion materials from excavations, borrow areas or stockpiled fill shall be contained within the work area. The Design-Builder shall develop methods to control waste and erosion including such means as filtration, settlement and manual removal.
- B. The Design-Builder shall be responsible for complying with and providing all necessary drawings, specifications, and certifications necessary to comply with local jurisdiction erosion and sediment control statues, ordinances, and requirements in Maryland, Montgomery County, Prince George's County and the Distic of Columbia.
 - 1. Maryland as applicable:
 - a. Chapter 245 of the Acts of the 1970 General Assembly of the State of Maryland which provides for a statewide erosion and sediment control program in Maryland under the guidance of the Department of Natural Resources.
 - b. Prior to the start of the applicable earthwork construction the Contractor Design-Builder shall submit schedules for accomplishment of erosion control work in the State of Maryland as are applicable for earthwork under this Contract. No earthwork operations in the State of Maryland shall be started until the Contractor Design-Builder's erosion control schedules and methods of operation have been approved.

2. Submit to the affected jurisdiction for approval through the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.

1.05 ENVIRONMENTAL CONTROL

- A. The Design-Builder shall maintain temperature and humidity to protect work, in progress and in place, as well as permanent equipment and materials, stored and installed, against damage from heat, cold and dampness and take such steps as necessary to protect such work from other adverse conditions.

1.06 POLLUTION ABATEMENT

- A. The Design-Builder shall by every means possible conduct its operations in a manner to minimize pollution of the environment surrounding the area of work. Specific controls shall be applied as follows:

1. Material transport: Trucks leaving the site and entering paved public streets shall be cleaned of mud and dirt clinging to the body and wheels of the vehicle. Trucks arriving and leaving the site with materials shall be loaded so as to prevent dropping materials and debris on the streets. Trucks carrying dirt from the site shall have their loads covered to minimize fugitive dust. The Design-Builder shall maintain a suitable vehicle cleaning installation and inspection installation with permanent crew for this purpose. Spills of materials in public areas shall be removed immediately.
2. Waste materials: No waste materials shall be allowed to enter natural or man-made water or sewage removal systems. The Design-Builder shall develop methods to control waste including such means as filtration, settlement and manual removal.

- a. District of Columbia

[1] DCDPW Standard Specifications for Highways and Structures (1996), 107.16 (A) "WATER QUALITY" 107.16 (B) "Storm Water Management".

[2] DCDPW Standard Specification for Highways and Structures (1996), 628 "Erosion and Sediment Control".

3. Burning: No burning of waste shall be allowed without written permission. When permission is granted, burning shall be conducted in accordance with the regulations of the Jurisdictional Agency. Submit request to the affected jurisdiction for approval through the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
4. Dust control: The Design-Builder shall, by water sprinkling or by other approved methods, continuously control dust generated by its operations.
5. Noise control: The Design-Builder shall take every action possible to minimize the noise

caused by its operation. When required by agencies having jurisdiction, noise producing work shall be performed in less sensitive hours of the day or week as directed. Noise produced by the work shall be maintained at or below the decibel levels specified and within the time periods specified in Section 01141, ACCESS TO SITE.

6. The Design-Builder, subcontractors and suppliers must submit evidence to the Authority that the governing air pollution criteria will be met. These criteria and related documents will be retained by the Authority for on-site examination by FTA as applicable. Submit to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
7. Design-Builder shall submit a program for pollution control prior to beginning operations. Submit to the Authority Representative in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES.
8. Clean air and water:
 - a. The Design-Builder agrees as follows:
 - (1) To comply with all the requirements of Section 114 of the Clean Air Act, as amended (42 U.S.C. 1857, et seq., as amended by Pub. L. 91-604) and Section 308 of the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq., as amended by Pub. L. 92-500), respectively, relating to inspection, monitoring, entry, reports and information, as well as other requirements specified in Section 114 and Section 308 of the Air Act and the Water Act, respectively, and all regulations and guidelines issued thereunder before the award of this Contract.
 - (2) That no portion of the work required by this prime Contract will be performed in a facility listed on the Environmental Protection Agency List of Violating Facilities on the date when this Contract was awarded unless and until the EPA eliminates the name of such facility or facilities from such listing.
 - (3) To use its best efforts to comply with clean air standards and clean water standards at the facility in which the Contract is being performed.
 - (4) To insert the substance of the provisions of this article into any nonexempt subcontract, including this paragraph.
 - b. The terms used in this article have the following meanings:
 - (1) The term Air Act means the Clean Air Act, as amended (42 U.S.C. 1857 et seq., as amended by Pub. L. 91-604).
 - (2) The term Water Act means Federal Water Pollution Control Act, as amended (33 U.S.C. 1251 et seq., as amended by Pub. L. 92-500).
 - (3) The term clean air standards means any enforceable rules, regulations, guidelines,

standards, limitations, orders, controls, prohibitions or other requirements which are contained in, issued under or otherwise adopted pursuant to the Air Act or Executive Order 11738, an applicable implementation plan as described in Section 110(d) of the Clean Air Act (42 U.S.C. 1857c-5(d)), an approved implementation procedure or plan under Section 111(c) or Section 111(d), respectively, of the Air Act (42 U.S.C. 1857c-6(c) or (d)), or an approved implementation procedure under Section 112(d) of the Air Act (42 U.S.C. 1857c-7(d)).

- (4) The term clean water standards means any enforceable limitation, control, condition, prohibition, standard or other requirement which is promulgated pursuant to the Water Act or contained in a permit issued to a discharger by the EPA or by a State under an approved program, as authorized by Section 402 of the Water Act (33 U.S.C. 1342), or by local government to ensure compliance with pretreatment regulations as required by Section 307 of the Water Act (33 U.S.C. 1317).
- (5) The term compliance means compliance with clean air or water standards. Compliance shall also mean compliance with a schedule or plan ordered or approved by a court of competent jurisdiction, the EPA or an air or water pollution control agency in accordance with the requirements of the Air Act or Water Act and regulations issued pursuant thereto.
- (6) The term facility means any building, plant, installation, structure, mine, vessel or other floating craft, location or site of operations, owned, leased or supervised by Design-Builder or subcontractor, to be utilized in the performance of a contract or subcontract. Where a location or site of operations contains or includes more than one building, plant installation or structure, the entire location or site shall be deemed to be a facility except where the Director, Office of Federal Activities, Environmental Protection Agency, determines that independent facilities are co-located in one geographical area.

1.07 PERMIT AND MITIGATION REQUIREMENTS

The Design-Builder shall obtain all permits and comply with all mitigation requirements of the local jurisdiction's Environmental requirement for all work included in this contract.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

SECTION 01580

PROJECT SIGNS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the requirements for signage that will be required at the site during the construction of the Project.

1.02 RELATED DOCUMENTS

WMATA Standard Drawings (ST), available from the Authority.
Section 01560, General Requirements - Temporary Facilities and Controls: TEMPORARY BARRIERS AND ENCLOSURES

1.03 PROJECT IDENTIFICATION SIGNS

- A. The Design-Builder shall furnish three (one sign per site) Authority, and as applicable FTA, project identification signs in the locations at the site(s) selected by the Authority Representative.
- B. Sign size, content, lettering and format for the large permanent-mount WMATA sign, and as applicable FTA signs, shall be as shown on the Standard Drawings (or for WMATA sign, shall be as shown on the Design-Builder's Working Drawings).
- C. Signs shall be installed as soon as possible after construction work has commenced, shall be maintained during the work, and shall be removed upon the completion of the Project.

1.04 WARNING SIGNS AND INSTRUCTIONAL SAFETY SIGNS

- A. The Design-Builder shall provide "No Trespassing" signs as described in Section 01560, TEMPORARY BARRIERS AND ENCLOSURES, load limit on decking as described in Section 01530, TEMPORARY CONSTRUCTION, and other warning and instructional safety aluminum signs with minimum two-inch high Helvetica Medium style lettering and mount at locations on fencing/barriers/barricades/pedestrian bridges and on other areas as directed. Sign panel size and thickness shall be as directed. The Design-Builder shall mount the signs with stainless-steel cap screws with hex nuts and lockwashers.

1.05 ALLOWANCE FOR PROJECT SIGNS

- A. Design Builder's Lump Sum Price(s) shall include an allowance for project signs.

PART 2 PRODUCTS

PART 3 EXECUTION

[Not Applicable]

END OF SECTION

SECTION 01610

BASIC PRODUCT REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies administrative and procedural requirements governing the Design-Builder's selection of products for use in construction of the Project.
- B. Refer to Section 01420, REFERENCES for applicability of industry standards to products specified.
- C. Administrative procedures for handling requests for substitutions made after award of the Contract are included under Section 01630, PRODUCT SUBSTITUTION PROCEDURES.

1.02 RELATED DOCUMENTS

Section 01732, General Requirements - Execution Requirements: Application, Installation and Erection.

Section 01740, General Requirements - Execution Requirements: Cleaning

Divisions 2 through 16, Standard and Technical Specifications Requirements

1.03 DEFINITIONS

- A. Definitions used in the Section are not intended to change the meaning of other terms used in the Design Builder's Final Design Drawings and Final Design Specifications, such as "specialties," "systems," "structure," "finishes," "accessories," and similar terms. Such terms are self-explanatory and have well recognized meanings in the construction industry.
 - 1. The term Product, includes the terms "material", "equipment", "system", and other terms of similar intent. Products are items purchased for incorporation in the Work, whether purchased explicitly for the Contract or obtained from previously purchased stock.
 - 2. The term Named Products, includes items identified by manufacturer's product name, make, or model designation as published in the manufacturer's most current product literature.
 - 3. The term Materials, includes products that are substantially shaped, cut, worked, mixed, finished, refined or otherwise fabricated, processed, or installed to form a part of the Work.

4. The term Equipment, includes a product that is motorized, with operating parts, and either automatically or manually operated.
- B. As used herein, the term "brand name" includes identification of products by make and model. If items called for in the Final Design Drawings and Final Design Specifications have been identified by a "brand name or equal" description, such identification is intended to be descriptive, but not restrictive, and is to indicate the quality and characteristics of products that will be satisfactory. Proposals offering "equal" products including products of the brand name manufacturer other than the one described by brand name as specified in Section 01630, PRODUCT SUBSTITUTION PROCEDURES will be considered if such products are clearly identified and are determined by the Designer and the Authority to meet fully the salient characteristic requirements of the Final Design Drawings and Final Design Specifications.

1.04 SUBMITTALS

- A. The Builder shall prepare a schedule in tabular form acceptable to the Designer and the Authority showing products specified in the Final Design Drawings and Final Design Specifications. The generic name, manufacturer's name, and proprietary product name for each item in the schedule shall be listed.
- B. The Builder shall coordinate the product list schedule with the Design-Builder's Construction Schedule as specified in Section 01322, CONTRACT PROGRESS REPORTING and Submittal Log as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL REQUIREMENTS. At a minimum, the following information shall be provided:
 1. Related Specification Section number.
 2. Generic name used in the Final Design Drawings and Final Design Specifications.
 3. Proprietary name, model number and similar designation.
 4. Manufacturer's name and address.
 5. Supplier's name and address.
 6. Installer's name and address.
 7. Projected delivery date, or time span of delivery period.
- C. The Builder shall submit to the Designer for review the original and 6 paper copies and an electronic copy of an initial product list schedule within 7 calendar days after date of commencement of the construction work. A written explanation for omissions of data and for known variations from Contract requirements shall be included. Comments will be provided in writing by the Designer to the Builder within 7 calendar days from the receipt of the initial product list schedule. The Builder shall submit the original and 6 paper copies and an electronic copy of the completed product list schedule including a written explanation for omissions of data and for variations from Contract requirements to the Designer for approval within 21 calendar days after date of commencement of the construction work. The Design-Builder shall submit to the Authority Representative for approval the original and 6 paper copies and an electronic copy of the Designer-approved completed product list schedule including a written explanation for omissions of data and for variations from Contract requirements within 30 calendar days after date of commencement of

the construction work. Within 15 calendar days of receipt of the documentation, the Design-Builder will be notified of Authority acceptance or rejection of the documentation.

- D. Acceptance of the product list does not constitute a waiver of the requirement that products comply with the Final Design Drawings and Final Design Specifications.

1.05 QUALITY ASSURANCE

- A. The Design-Builder shall provide products of the same kind from a single source.
- B. When the Design-Builder is given the option of selecting between two or more products for use on the Contract, the product selected shall be compatible with existing or previously selected products, even if previously selected products were also options.
- C. Except for required labels and operating data, the manufacturer's or producer's nameplates or trademarks shall not be attached or imprinted on an exposed surfaces.
 - 1. Labels: Locate required product labels and stamps on a concealed surface or, where required for observation after installation, on an accessible surface that is not conspicuous.
 - 2. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. The nameplate shall contain the following information and other essential operating data:
 - a. Name of product and manufacturer.
 - b. Model and serial number.
 - c. Capacity.
 - d. Speed.
 - e. Ratings.

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. All products shall be delivered, stored and handled in accordance with the manufacturer's recommendations so as to prevent damage, deterioration, loss or invalidation of the manufacturer's warranty.
- B. The Design-Builder shall schedule delivery to minimize long-term storage at the site and to prevent overcrowding of construction storage and staging areas.
- C. The Design-Builder shall coordinate the time of delivery with the installation schedule to ensure that hazardous, easily damaged, or those items sensitive to deterioration, theft and other losses are stored for a minimum holding period.
- D. Products shall be delivered to the site in the manufacturer's original sealed container or other appropriate packaging, complete with labels and instructions for handling, storing, unpacking, protecting and installing.

- E. Products shall be inspected upon delivery by the Design-Builder to ensure compliance with the Final Design Drawings and Final Design Specifications , and to ensure that products are undamaged and properly protected. Documentation noting the time, date, and manner of delivery shall be maintained by the Design-Builder. A statement attesting to the inspection of the products at time of delivery shall be include in the documentation signed by the Design-Builder's authorized representative.
- F. Products shall be stored at the site in a manner that will facilitate inspection and measurement of quantity or counting of units. Heavy materials are to be stored in a manner that will not endanger supporting construction. Products subject to damage by the elements shall be stored under cover in weather-tight enclosures with adequate ventilation adequate to prevent condensation. Temperature and humidity are to be maintained within range required by manufacturer's instructions.

PART 2 PRODUCTS

2.01 PRODUCT SELECTION

- A. Products shall be provided by the Design-Builder that comply with the Final Design Drawings and Final Design Specifications. All products to be installed in the Work shall be undamaged and, unless otherwise permitted, unused at the time of installation. Products shall include all accessories, trim, finish, safety guards and other devices and details needed for a complete installation and suitable for the intended use.
- B. Unless otherwise specified, the Design-Builder shall provide standard products of the type that have been produced and used successfully in similar situations on other Authority projects of a similar nature.
- C. The product selection shall be governed by the Final Design Drawings and Final Design Specifications and governing regulations. Procedures governing product selection include:
 - 1. Where only a single product or manufacturer is named and the notation, "no substitution is permitted" is included in the specification, the Design-Builder shall provide the product indicated. No substitutions shall be permitted.
 - 2. Where two or more products or manufacturers are named followed by the notation "no substitutions are permitted," the Design-Builder shall provide one of the products indicated. No substitutions will be permitted.
 - 3. Where the Final Design Drawings and Final Design Specifications list products or manufacturers that are available and acceptable for incorporation into the Work, accompanied by the term "...or equal" or "...or approved equal," the Design-Builder may propose any available product that complies with Contract requirements. The Design-Builder shall comply with the requirement of Specifications Section 01630, PRODUCT SUBSTITUTION PROCEDURES, to obtain approval for use of an unnamed product.
 - 4. Where the Specifications Final Design Drawings and Final Design Specifications list the salient features that explicitly describe a product or assembly and a brand name is not included, the Design-Builder shall provide a product or assembly that provides the listed features and otherwise complies with the Contract requirements.

5. Where the Specifications Final Design Drawings and Final Design Specifications explicitly require compliance with performance requirements and the product complies with those requirements based on the manufacturer's recommended use of the product for the application indicated in the Final Design Drawings and Final Design Specifications (as evidenced in published product literature, or by the manufacturer's certification of performance), the Design-Builder may submit the product for incorporation into the Work.
6. Where the Final Design Drawings and Final Design Specifications require only compliance with an imposed code, standard or regulation, the Design-Builder may select a product that complies with the standards, codes or regulations specified.
7. Visual Matching: Where Specifications require matching an established item, the Authority's decision will be final on whether a proposed product matches satisfactorily. Where no product is available that adequately matches complies with the other specified requirements, the Design-Builder shall comply with provisions of Specification Section 01630, PRODUCT SUBSTITUTION PROCEDURES, for selection of an alternate product.
8. Where specified product requirements include the phrase "...as selected from manufacturer's standard colors, patterns, textures..." the Design-Builder shall select a manufacturer that provides a range of colors in a product that meets all other Final Design Drawings and Final Design Specifications requirements. In this situation, "standard" shall imply regularly or routinely produced.

PART 3 EXECUTION

3.01 INSTALLATION OF PRODUCTS

- A. The Design-Builder shall comply with the manufacturer's instructions and recommendations for installation of all products installed under this Contract unless otherwise specified. Products shall be accurately located, aligned with other elements of the Work, and securely installed in place as specified in Section 01732, APPLICATION, INSTALLATION AND ERECTION. All exposed surfaces are to be clean as specified in Section 01740, CLEANING and protected as necessary to prevent damage and deterioration as specified in Section 01723, PROTECTION OF ADJACENT CONSTRUCTION.

END OF SECTION

THIS PAGE NOT USED

SECTION 01630

PRODUCT SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

- A. This Section specifies administrative and procedural requirements for handling requests for substitutions made after award of the Contract.
- B. Refer to Section 01420, REFERENCES for applicability of industry standards to products specified.
- C. Other requirements governing the Design-Builder's selection of products and product options are included under Section 01610, BASIC PRODUCT REQUIREMENTS.

1.02 RELATED DOCUMENTS

Section 00211, Proposing Requirements - Brand Name or Equal
Section 00433, Proposing Requirements - Brand Name or Equal Form
Section 00700, General Conditions
Section 00800, Supplementary Conditions
01420, General Requirements - Quality Requirements: References
01610, General Requirements - Product Requirements: Basic Product Requirements
Divisions 2 through 16, Standard and Technical Specifications Requirements

1.03 DEFINITIONS

- A. Definitions used in the Section are not intended to change the meaning of other terms used in the Contract Documents or approved Final Design Drawings and Final Design Specifications Issued for Construction .
- B. Design-Builder requests for changes in products, materials, equipment, and methods of construction as required or specified by Contract Documents after award of the Contract or in approved Final Design Drawings and Final Design Specifications Issued for Construction are considered requests for substitutions. The following are not considered substitutions:
 - 1. Revisions to Contract Documents or approved Final Design Drawings and Final Design Specifications Issued for Construction requested by the Authority.
 - 2. Specified options of products and construction methods included in Contract Documents or in approved Final Design Drawings and Final Design Specifications Issued for Construction. Note that products submitted under an "or equal" or "not limited to" provision are considered to be substitutions as specified in Section 00211, BRAND NAME OR EQUAL.
 - 3. The Design-Builder's determination of and compliance with governing regulations and orders issued by governing authorities.

1.04 SUBMITTALS

- A. Requests for substitution from the Designer during design work will be considered by the Authority if received prior to the intermediate level of review or with the intermediate level review submittal.

Requests received after the intermediate level review submittal may be considered or rejected at the sole discretion of the Authority. Requests for substitution from the Builder during construction will be considered by the Designer if received within 7 calendar days after the commencement of construction work. Requests received more than 7 calendar days after commencement of construction work may be considered or rejected at the sole discretion of the Designer. The Designer shall evaluate the requested substitution and if approved, the Design-Builder shall submit to the Authority Representative for approval within 30 calendar days after commencement of construction.

1. The Design-Builder shall submit six copies of the Brand Name or Equal Form, Section 00433 for each request for substitution to the Authority Representative or the Authority Representative's designee for consideration of the form and in accordance with procedures required for Change Order proposals as specified in Section 00753, CHANGES.
2. In each substitution request, the Design-Builder shall identify the product and fabrication or installation method to be replaced. The related Standard and Technical Specification Sections and Project Drawing numbers or approved Final Design Drawing Issued for Construction Drawing numbers shall be referenced in the submittal. Complete documentation showing compliance with the requirements for substitutions shall also be submitted including the following information as appropriate:
 - a. Product Data, including drawings, fabrication, and installation procedures.
 - b. Samples, where samples of the specified product are requested.
 - c. A detailed comparison of significant qualities/salient features of the proposed substitution with those of the material or work specified. Significant qualities may include elements such as size, weight, durability, performance, visual effect, code compliance, maintenance requirements, energy usage, and environmental considerations.
 - d. Coordination information, including a list of changes or modifications made necessary to other parts of the Work and to construction performed by the Authority or separate contractors.
 - e. A statement indicating the substitution's effect on the Design-Builder's Construction Schedule. Indicate the effect of the proposed substitution on overall Contract Time.
 - f. Cost comparison between the product specified and the requested substitution, including a proposal of the net change, if any in the Contract Sum.
 - g. Certification by the Design-Builder that the substitution proposed is equal-to or better in every respect to that required under the Contract, and that the product will perform as intended. The Design-Builder shall include a waiver of rights to additional payment or time that may subsequently become necessary should the product fail to perform adequately, or because of changes to other work were required as a consequence of the substitution.
 - h. Failure by the Design-Builder to include the above requirements in the submittal may be cause for rejection of the submittal in its entirety.
- B. If deemed necessary and within ten (10) calendar days of receipt of the submittal, the Authority Representative or the Authority Representative's designee may request additional information or documentation that, in their sole judgment is required for the evaluation of the substitution request. Within 15 calendar days of receipt of the original substitution request or of requested additional

information or documentation, the Design-Builder will be notified of acceptance or rejection of the proposed substitution. If a decision on the use of a proposed substitute cannot be made or obtained within the time allocated, the product specified by name in the Contract Specifications or approved Final Design Drawings and Final Design Specifications Issued for Construction shall be used. Acceptance of substitutions will be confirmed in writing by the Authority.

PART 2 PRODUCTS

2.01 SUBSTITUTIONS

- A. The Design-Builder's request for substitution may be rejected by the Authority Representative or the Authority Representative's designee if the substitution would involve:
1. Extensive revisions to Contract Documents.
 2. A proposed change not in keeping with the general intent of Contract Documents.
 3. An untimely request, not fully documented when submitted.
 4. A request that is directly related to an "or equal" clause or similar language in the Contract Documents.
 5. A product or method of construction that could not be provided within the Contract Time. (A request will not be considered if the product or method specified is being requested as a result of failure to pursue the Work promptly or coordinate activities properly.)
 6. A product or method of construction that could not be approved by a governing authority.
 7. Additional responsibilities or expense to the Authority (including additional expenses for redesign and evaluation services, increased cost of related construction, and other similar considerations) that outweighs any advantage that is being offered to the Authority as a result of the substitution.
 8. A method of construction that cannot be provided in a manner that is compatible with other materials, the product cannot be coordinated with other materials, and a warranty cannot be provided for the product in accordance with the requirements of the Contract even though the Design-Builder expresses a willingness to certify that the apparent deficiencies can be corrected.
- B. Neither the Builder's submittal nor the Designer's review or approval of shop drawings, product data or samples that relate to a substitution constitutes a final approval of the requested substitution. The submittal of a substitution does not relieve the Builder from fulfilling existing Contract requirements.

PART 3 EXECUTION

[Not Applicable]

END OF SECTION

SECTION 01711

ACCEPTANCE OF CONDITIONS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies basic requirements for determining acceptable conditions for installation.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements

1.03 PRECONSTRUCTION INSPECTION REQUIREMENTS

- A. Prior to beginning any construction work, the Design-Builder shall inform the Authority of buildings or structures on which it intends to perform work or which performance of the project work will affect.
- B. Conditional inspection of buildings or structures in the immediate vicinity of the project which may reasonably be expected to be affected by the work will be performed jointly by the Authority and the Design-Builder. This inspection will be conducted prior to the commencement of any construction work to determine pre-existing conditions. After this inspection, the Authority will not assume any responsibility for damages arising from the work performed and it shall be the responsibility of the Design-Builder to correct all damages caused by performance of the Contract work.
- C. Examine substrates, areas, and conditions, with Authority personnel present where indicated, for compliance with requirements for installed tolerance and other conditions affecting performance. Record observations from the preconstruction inspection as specified in Section 00716, PRECONSTRUCTION INSPECTION, and submit the original and six copies and one electronic copy of the preconstruction inspection records in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES no later than 10 calendar days after completion of this inspection.
- D. Where an inspection written report requires listing conditions detrimental to performance of the Work, include the following:
 - 1. Description of the Work.
 - 2. List of detrimental conditions, including substrates.
 - 3. List of unacceptable installation tolerances.
 - 4. Recommended corrections.

1.04 EXAMINATION

- A. General: Dimensions shown on existing work and dimensions required for work that is to connect with work not in place shall be verified by the Design-Builder by actual measurement of the existing work. Discrepancies between the Final Design Drawings and Final Design Specifications and the existing conditions shall be referred to the Authority Representative before work affected thereby has been performed.
1. The Design-Builder shall compare drawings and verify the dimensions before laying out the work and shall be responsible for errors which might have been avoided thereby.
 2. The dimensions and descriptions given on As-Built Information Drawings in the Contract Documents is not guaranteed. It shall be the responsibility of the Design-Builder to verify all as-built conditions and interface information by actual field measurement.
- B. Existing Conditions
- The existence and location of site improvements, utilities, and other construction indicated as existing are not guaranteed. Before beginning work, investigate and verify the existence and location of mechanical and electrical systems and other construction affecting the work. Verify the location and point of connection of utility services.
- C. Existing Utilities
- The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning site work, investigate and verify the existence and location of underground utilities and other construction affecting the Work. Design-Builder shall call Miss Utility before beginning any excavation or demolition project.
1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, water service pipes, and electrical services.
 2. Furnish location data for work related to the Project that must be performed by public utilities serving the Project site.
- D. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- E. Examine rough-in for mechanical and electrical systems to verify actual location of connections before equipment and fixture installation.
- F. Examine new and existing facilities for suitable conditions where products and systems are to be installed.

1.05 ACCEPTANCE OF CONDITIONS

- A. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Proceeding with work will indicate acceptance of surfaces and conditions.

THIS PAGE NOT USED

SECTION 01721

LAYOUT OF WORK AND FIELD ENGINEERING

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General Conditions and Special Provisions and other Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:

1. General Requirements.
2. Examination.
3. Preparation.
4. Construction layout.
5. Field engineering.
6. Installation.
7. Survey personnel.
8. Equipment and calibration requirements.
9. Survey Standards.
10. Surveys and Procedures.
11. Figures and Report Formats.

- B. Related Sections include the following:

1. Division 1 Section "Submittal Procedures" for submitting surveys.
2. Division 1 Section "Closeout Procedures" for submitting final survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and grades.

1.03 SUBMITTALS

- A. Survey personnel qualification data: Submit resume and proof of certification or registration for all project surveyors. Resumes should include information to demonstrate their capabilities and experience. Include lists of completed projects with owner, project names, project duration, project description, project addresses and phone numbers.
- B. Survey equipment: Submit a list of equipment and instruments to be used on the contract and notify the Authority Representative when changes are made. Include manufacturer specifications, date of purchase and last date of service for all instruments.
- C. Electronic distance measuring instruments: Submit all measurements, computations and results from the required calibration exercise.
- D. All methods, equipment, and procedures for Control Surveys, Structural As-built Surveys, Movement Detection Surveys, Early Alignment As-built Surveys, Hi-Lo Surveys, Post Construction Alignment As-built Surveys and Final Trackway Monumentation Surveys.

- E. All horizontal and vertical alignment revisions with supporting calculations and data.
- F. All supporting documents, calculations and data for required remedial actions.
- G. Numbering sequence for trackway vertical control monumentation.

1.04 QUALITY ASSURANCE

- A. The Design Builder shall verify and maintain records to document personnel certification; equipment maintenance, calibration and adjustment; and use of required procedures for field work and office computations. These records shall be maintained by the surveyor in responsible charge of the work. Verification of compliance shall be included in the Design Builder's overall Quality Assurance program and provided to the Authority Representative quarterly or upon request.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS

- A. The Authority has established, or will establish, such general reference points including horizontal control points and vertical bench marks as will enable the Design Builder to proceed with the work. If the Design Builder finds that any previously established reference points have been destroyed or displaced, or that none have been established, he shall promptly notify the Authority Representative.
- B. The Design Builder shall lay out his work from reference points established by previous construction or from established reference points shown in the contract and shall be responsible for all measurements in connection therewith. The Design Builder shall furnish, at his own expense, stakes, templates, platforms, equipment, tools, materials and labor as may be required in laying out any part of the work from the reference points established by previous construction or by the Authority. The Design Builder will be held responsible for the execution of the work to such lines and grades as may be directed.
- C. The Design Builder shall protect and preserve the established reference points and shall make no changes in locations without approval. Reference points lost, disturbed by construction, destroyed or which require shifting because of necessary changes in grades or locations shall, subject to prior approval, be replaced and accurately located at the Design Builder's expense by a registered surveyor in the area where the work is to be performed or a qualified certified survey technician (CST Level IV). Reference points replaced by the Design Builder's surveyor shall be done in accordance with the FGCC "Standards and Specifications for Geodetic Control Networks" using First Order, Class 1 specifications for horizontal control work and Second Order, Class 1 specifications for vertical control work.
- D. For the purpose of this article, the Design Builder shall provide competent engineering services as necessary to execute the work in accordance with the Contract requirements. He shall verify the dimensions shown before undertaking any construction work and shall be responsible for the accuracy of the finished work.

3.02 EXAMINATION

- A. General: Dimensions shown on existing work and dimensions required for work that is to connect with work not in place shall be verified by the Design Builder by actual measurement of the existing work. Discrepancies between the Contract Drawings and Specifications and the existing conditions shall be referred to the Authority Representative before work affected thereby has been performed.
1. The Design Builder shall compare drawings and verify the dimensions before laying out the work and shall be responsible for errors which might have been avoided thereby.
 2. The dimensions and descriptions given on the Contract Drawings for adjacent work are based on the design drawings. It shall be the responsibility of the Design Builder to verify all as-built conditions and interface information by actual field measurements.
- B. Existing Conditions: See Section 01711, ACCEPTANCE OF CONDITIONS, Paragraph 1.04 B.
- C. Existing Utilities: See Section 01711, ACCEPTANCE OF CONDITIONS, Paragraph 1.04 C.
- D. Acceptance of Conditions: Examine substrates, areas, and conditions, with contract personnel present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
1. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:
 - a. Description of the Work.
 - b. List of detrimental conditions, including substrates.
 - c. List of unacceptable installation tolerances.
 - d. Recommended corrections.
 2. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
 3. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
 4. Examine new and existing facilities for suitable conditions where products and systems are to be installed.
 5. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.03 PREPARATION

- A. Existing Utility Information: Furnish information to local utility and the Authority Representative that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate and obtain approval from authorities having jurisdiction.
- B. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
1. Notify the Authority Representative and utility representative not less than five business days in advance of proposed utility interruptions.
 2. Do not proceed with utility interruptions without written permission from the utility and the Authority.

- C. Field Measurements: Take field measurements as required to fit the work properly. Recheck measurements before installing each product. Where portions of the work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the work.
1. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings
 2. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to the Authority Representative. Include a detailed description of the problem encountered, together with recommendations for changing the Contract Documents. Submit requests on WMATA Form 13.2A, "Request for Interpretation."

3.04 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on the Drawings. If discrepancies are discovered, notify Authority Representative promptly.
- B. General: Engage qualified Certified Survey Technician(s) to lay out the Work using accepted surveying practices.
1. Establish benchmarks and control points to set lines and levels at each stage of construction and elsewhere as needed to locate each element of the Project.
 2. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 3. Inform installers of lines and levels to which they must comply.
 4. Check the location, level and plumb, of every major element as the Work progresses.
 5. Notify the Authority Representative when deviations from required lines and levels exceed allowable tolerances.
 6. Close site surveys with an error of closure equal to or less than the standard established or referenced herein.
- C. The tolerances generally applicable in setting survey stakes or marks shall be as set forth below. Such tolerances shall not supersede stricter tolerances required by the Contract Drawings or Specifications, and shall not otherwise relieve the Design Builder of responsibility for measurements in compliance therewith. The tolerances listed below are **not** to be used for setting or re-establishing primary and secondary control markers and/or final alignment monumentation.
- D. Tolerances: Tolerances in setting survey stakes or markers shall not exceed the following:

Horizontal survey stakes or markers:	Distance	Tangent
Horizontal marks on hubs on centerline and offset centerlines.	1:35,000	0.02 ft.
Intermediate stakes or hubs on centerlines and offset centerlines.	1:35,000	0.02 ft.
Rough excavation and embankment for roads and other work not otherwise provided.	1:10,000	0.50 ft.
Trimming of excavation and embankment unless otherwise provided.	1:10,000	0.50 ft.
Structures - Building construction.	1:35,000	0.02 ft.
Trimming or preparation of earth sub-grade for trackbeds, roadways, and concrete pipes.	1:20,000	0.04 ft.
Trackbed and roadway sub-base and base, steel pipe and other work not otherwise provided for.	1:20,000	0.04 ft.
Track invert and roadway surfacing, steel reinforcement, concrete pipe and other formed concrete.	1:35,000	0.02 ft.

Vertical grade stakes or markers:	Elevation (Plus/Minus)
Rough excavation and embankment for roads and other work not otherwise provided.	0.20 ft.
Trimming of excavation and embankment unless otherwise provided.	0.20 ft.
Structures - Building construction.	0.01 ft.
Trimming or preparation of earth sub-grade for trackbeds, roadways, concrete pipe and other concrete structures.	0.05 ft.
Trackbed and roadway sub-base and base, steel pipe and other work not otherwise provided for.	0.05 ft.
Track invert and roadway surfacing, steel reinforcement, concrete pipe and other formed concrete.	0.02 ft. (Track invert only - 0.00 ft. high/ 0.04 ft. low)
Equipment Installation.	As required by manufacturer.

- E. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and invert elevations.

- F. Building Lines and Levels: Locate and lay out control lines and grades for structures, building foundations, column grids, and floor grades, including those required for mechanical and electrical work. Transfer survey reference line markings and elevations for use with control lines and grades. Level foundations and piers from two or more locations.
- G. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available to the Authority Representative upon request.

3.05 FIELD ENGINEERING

- A. Identification: WMATA shall provide and identify existing benchmarks and control points to be used for the duration of the contract.
- B. Reference Points: Locate existing and verify by field traverse permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent primary benchmarks, deep benchmarks and control points during construction operations.
 - 1. Do not change or relocate existing benchmarks or control points without prior written approval by the Authority Representative. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to the Authority Representative before proceeding.
 - 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- C. Benchmarks: Establish and maintain permanent secondary control points on Project site, referenced to data established by survey control points. Comply with WMATA Standard Drawing for Survey Monuments, drawing numbers ST-C-3 and ST-C-19 for type and size of monument marker.
 - 1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 - 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
 - 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- D. When the Specifications requires Bid Schedule items of work to be measured by surveying methods, the Design Builder shall perform the surveys. Perform all such surveys, including control surveys run for establishing the measurement reference lines. The Design Builder shall perform all survey data reduction and calculations and supply the reduced survey data in an understandable and readable format at the Authority's request or when required to do so in accordance with the contract.

3.06 INSTALLATION

- A. General: Locate the work and components of the work accurately, in correct alignment and elevation, as indicated.
 - 1. Make vertical work plumb and make horizontal work level unless otherwise specified.

- B. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect.
- C. The Design Builder's surveys are a part of the work and may be checked by the Authority or representatives of the Authority at any time. The Design Builder shall be responsible for any lines, grades, or measurements which do not comply with specified or proper tolerances, or which are otherwise defective, and for any resultant defects in the work. The Design Builder shall be required to conduct re-surveys or check surveys to correct errors indicated by review of the work.

3.07 SURVEY PERSONNEL

- A. The Design Builder shall ensure that all personnel are minimally qualified to perform the work.
- B. The Design Builder shall provide a full time Survey Manager for the duration of the contract to plan execute and verify all survey work.
- C. The Authority may choose to withhold payment for all construction work if the Design Builder fails to provide qualified survey personnel.
- D. All personnel performing and/or assisting in survey activities, including construction layout, shall be Certified Survey Technicians (CST) by and through the National Society of Professional Surveyors (NSPS) - American Congress on Surveying and Mapping (ACSM).
 - 1. Each member of the Design Builder's survey staff shall be certified in one, or more, of the Certified Survey Technician levels when assigned to a WMATA project. There are four (4) levels of certification in the CST program. Certification is by experience and examination. Refer to **Figure 3.7-1** for the levels of the CST Program.
 - 2. The Authority will accept registration as a Land Surveyor or Property Line Surveyor, in Virginia, Maryland or the District of Columbia in lieu of CST certification.
 - 3. Survey consultants hired by the Design Builder to provide survey services are bound by the same CST requirements contained in the contract.
 - 4. Surveyors working under the direction of a Licensed Surveyor or Property Line Surveyor are not exempt from the CST requirement.
 - 5. Use of craft personnel as substitute for temporary survey staff is not acceptable unless they are a Certified Survey Technician.
 - 6. With concurrence by the Authority Representative and WMATA Quality Assurance Manager, a Design Builder's surveyor without CST certification may temporarily work on a WMATA contract prior to taking the CST exam, if the surveyor:
 - a. Fulfills the minimum education and or experience requirements for the position held as described in the CST Program Book.
 - b. Submits a copy of the CST application to the Authority Representative along with other documentation of education and or work experience.
 - c. Is scheduled to take the next available CST exam.
 - d. Requests in writing, a temporary waiver of the CST requirement pending the outcome of the results of the CST exam with the understanding that failure to pass the CST exam will result in said surveyor's removal from the WMATA contract.

3.08 SURVEY EQUIPMENT AND CALIBRATION REQUIREMENTS

- A. Survey Equipment - All electronic distance measuring instruments (or total station theodolites) shall be checked by the Design Builder against a National Geodetic Survey (NGS) range of known distances at least once every six (6) months.
1. All distance measurements shall be computed using the procedures in NOS NGS-10 "Use of Calibration Base Lines". The actual measurements shall be recorded, atmospheric corrections applied, and then adjusted by least squares to compute a constant, as well as, a relative correction factor (scale correction).
 2. National Geodetic Survey has established specific calibration baselines for the purpose of comparing survey equipment to known monumentation to verify the instruments vertical angles, horizontal angles and difference in elevation for compliance with the manufacturer's specifications. Verification of angle measurement and difference in elevation will only be done by the Design Builder if all other methods of verification acceptable to the Authority have been exhausted.
 3. The Design Builder shall bring each electronic distance meter (EDM) or total station theodolite to the Corbin, VA Geo-magnetic observatory (phone 703-373-7605) or similar NGS facility and compare their instrument(s) to known NGS values whenever there is any question as to the correct operation, accuracy and functionality of the Design Builder's survey equipment. Minimally, this will be done every six (6) months or after a damaged instrument has been repaired and before it is put back in service. The Design Builder shall supply the Authority Representative with all appropriate documentation from this exercise.
 4. All total station distance measuring devices and prisms shall be serviced every six months and checked frequently over lines of known distances. Generally, this exercise will be conducted in the spring and fall.
 5. Results of this calibration exercise shall be forwarded to the Authority. Correction factor's shall be posted in the Design Builder's office computing area and applied as required to maintain the desired accuracy.
 6. Adjustment and certification documents from a supplier or manufacture are not allowed as a substitution for the distance calibration exercise at a NGS or similar facility.
 7. Records of instrument calibration and adjustment shall be maintained as a part of the Design Builder's quality control program.
 8. Use of the NGS baseline for checking distances is not intended to take the place of normal maintenance, cleaning and adjustment of the Design Builder's instruments.
 9. Every six months or whenever the difference between direct and reverse readings of the theodolite depart from 180 degrees by more than 30 seconds, the instrument shall be adjusted for collimation error. Readjustment of the cross hairs and level bubble shall be done whenever their mis-adjustments affect the instrument reading by the amount of the least count.
 10. Instruments found to be in disrepair or out of adjustment shall be removed and repaired or replaced.
 11. All steel tapes shall be compared with the Design Builder's EDM at least every six months. The Design Builder shall number all tapes and measuring chains, record comparisons, compute correction factors and forward to the Authority upon request or whenever equipment is changed. In addition, tape correction information shall be posted in the Design Builder's office computing area and applied as required to maintain the desired accuracy.
 12. The Design Builder shall provide and maintain the ability in-house to check and adjust all tribrachs for eccentricity. Adjustment checks shall be made weekly or as necessary. A record of adjustments to all tribrachs shall be kept current and made available to the Authority monthly or upon request. Each tribrach shall be numbered and tagged with the date of the last adjustment.

3.09 SURVEY STANDARDS

A. The Design Builder shall maintain accuracy standards for all control surveys performed under the terms of this Contract in accordance with the following table:

B.

Primary horizontal control surveys	First order
Primary vertical control surveys	Second order, Class I
Secondary horizontal control surveys	Second order, Class I
Secondary vertical control	Second order, Class II

1. Primary control is defined as the original control provided to the Design Builder at the start of the Contract. Secondary control is defined as the control established and used by the Design Builder during construction. All secondary control traverse stations shall be set with permanent markers.
2. Control surveys and computations including surveys of main control lines to determine alignment of major structure components shall be performed in accordance with Second Order Class I requirements.
3. Unless specified, the Design Builder will not be required to perform First-Order survey work unless they destroy primary control points included in the contract documents or set by WMATA after contract NTP. GPS will not be used by the Design Builder to reestablish destroyed primary control unless approved by the Authority Representative.
4. The Design Builder should expect all primary or secondary horizontal control traverses they perform to meet a 1:50,000 distance accuracy closure. All vertical control traverses shall have a closure accuracy that does not fall below that specified for Second Order, Class II surveys.
5. Survey procedures and accuracy are a function of the types of survey that is being performed. The Design Builder is responsible for ensuring the use of proper procedures to maintain accuracy requirements contained in the contract.
6. The Design Builder shall use the closed traverse method in setting controls by starting at and ending at known or previously established traverse stations and benchmarks.
7. All distances over 100 feet shall be measured by the use of electronic distance measuring instrument (EDMI). Critical distances under 100 feet shall be checked with a distance meter.

C. Horizontal Traverse

1. Conventional traverse work shall be performed in accordance with the requirements defined in the **Standards and Specifications for Geodetic Control Networks, Federal Geodetic Control Committee (FGCC), September 1984** or latest version.
2. All survey field data shall be provided to the Authority upon request in a Star*Net digital input file format.
 - a. All reduced horizontal traverse measurements shall be provided in a set reduction report in an ASCII text file format which clearly lists the following data:
 - 1) Individual observations in an orderly format along with the mean angle from each direct and reverse observation.
 - 2) Horizontal angle mean, vertical angle mean and slope distance mean for each set of observations.

- 3) Standard deviation of the observations, and maximum, minimum, range and collimation error for each set of observations. Refer to **Figure 3.9-1** for a sample set reduction report.
3. Accuracy requirements:
 - a. First Order control surveys:
 - 1) Horizontal and vertical angle circle reading observation accuracy (standard deviation) of .5 seconds (DIN 18723) and read to 0.1 of a second.
 - 2) Occupied station centering (eccentricity) accuracy of 1 mm.
 - 3) Electronic distances measuring accuracy (standard deviation) of 1 mm +/- 1 ppm and read to 0.001 feet.
 - b. Second Order control surveys:
 - 1) Horizontal and vertical angle circle reading observation accuracy (standard deviation) of 1.0 seconds (DIN 18723) and read to 1.0 second or less if possible.
 - 2) Occupied station centering (eccentricity) accuracy of 1 mm.
 - 3) Electronic distances measuring accuracy (standard deviation) of 2 mm +/- 2 ppm and read to 0.001 feet.
 4. All horizontal traverse adjustments shall be performed using a minimally constrained Least Squares adjustment method which will produce the following output:
 - a. Summary of unadjusted input observations
 - b. Statistical summary
 - c. Chi Square test
 - d. Adjusted observations and residuals
 - e. Residual summary
 - f. Adjusted bearings and horizontal distances (grid and ground)
 - g. Horizontal unadjusted traverse closures
 - h. Adjusted coordinates
 - i. Convergence angles and grid factors at stations
 - j. Standard deviations, error propagation and error ellipses
 5. All horizontal traverse adjustment results shall be provided to the Authority upon request.
- D. Vertical Traverse
1. Differential leveling shall be performed in accordance with the requirements for Second-Order, Class I geodetic leveling surveys as defined in the Standards and Specifications for Geodetic Control Networks, Federal Geodetic Control Committee (FGCC), September 1984 or latest version and NOAA Manual NOS NGS 3 Geodetic Leveling, National Geodetic Survey (NGS), August 1981 or latest version.
 - a. The survey contractor shall provide documentation of staff calibration which includes certificates for expansion coefficient and length calibration.
 2. All reduced vertical traverse data shall be provided to the Authority upon request in a Star*Lev digital input file format.

- a. All vertical traverse data shall be provided as a data reduction report in an ASCII text file format which clearly lists the following data:
 - 1) Individual observations with the point identifier,
 - 2) Distance from instrument to staff (rod) for each observation,
 - 3) Backsight staff (rod) reading and foresight staff (rod) reading,
 - 4) Number of measurements taken and standard deviation per staff (rod) reading.
 - 5) Cumulative station differences.
3. Accuracy Requirements:
 - a. Differential leveling observation accuracy (standard deviation) of .4 mm and read to 0.0001 feet.
4. The Design Builder may use electronic digital levels and bar coded leveling staffs. The use of leveling staffs with ground plate (turning turtle) is required.
5. The Design Builder shall use calibrated invar staffs (level rods) for all control work including final vertical monumentation installation.
6. The Design Builder shall use semi-precise level rods or equal equipment for level work.
7. All vertical traverse adjustments shall be performed using a minimally constrained Least Squares adjustment method after a vertical traverse meets the minimum closure requirements referenced herein.
8. All vertical traverse adjustment results shall be provided to the Authority upon request.

3.10 SURVEYS AND PROCEDURES

A. Control Surveys

1. Verify Project primary control monumentation and provide adjustment computations to the Authority Representative.
2. Replace primary control monuments that have been destroyed or damaged and provide adjustment computations to the Authority Representative.
 - a. Provide Monument Record Sheets to the Authority Representative.
3. Establish secondary control monumentation along the Authority's construction project and provide adjustment computations to the Authority Representative.
 - a. Horizontal and vertical control discs shall be installed in accordance with the details and requirements shown on Standard Drawings ST-C-3 and ST-C-19.
 - b. Horizontal and vertical control discs set on direct fixation trackways shall be recessed to protect them from disturbance.
 - c. Provide Monument Record Sheets to the Authority Representative.

B. Structural As-builts

1. General Requirements: Structural as-builts are required to check for out-of-tolerance construction which may impact other structures or compromise train clearances along the trackway.

- a. All methods, equipment and procedures used by the Design Builder to perform structural checks shall be approved by the Authority Representative prior to commencement of the work.
 - b. This survey data must be analyzed by the Design Builder and the Authority for compliance with construction and rail tolerances.
 - c. This survey data must be analyzed by the Design Builder and the Authority to determine what remedial action, if any, may be required to address out-of-tolerance construction and the impact of structural mis-alignment on the final placement of other structures and rail.
 - 1) If the survey data reveals out-of-tolerance construction which will impact the placement of other structures along the trackway, the Design Builder shall take appropriate remedial action to comply with the plans and specifications.
 - a) If minimally out-of-tolerance, perform horizontal and vertical alignment revisions to minimize the impact of the misalignment on the future placement of adjoining structures and rail along the trackway.
 - b) If significantly out-of-tolerance and an acceptable alignment revision cannot be used to compensate for out-of-tolerance construction, then demolish and remove the structure and re-install.
 - 2) All alignment revisions and remedial actions shall be approved by the Authority Representative prior to commencement of the work.
2. Verify existing primary horizontal and vertical controls and re-establish, if destroyed or disturbed, and provide adjustment computations to the Authority Representative.
- a. Provide Monument Record Sheets to the Authority Representative.
3. Establish a secondary horizontal and vertical control system on the Authority's structures and reference to the approved project primary horizontal and vertical control system. The secondary control system established on or within trackway structures shall be used for detailed cross sections, Hi-Lo surveys and placement of final trackway monumentation. The secondary control system shall be adequately referenced so it can be readily recovered.
- a. Horizontal and vertical control discs shall be installed in accordance with the details and requirements shown on Standard Drawings ST-C-3 and ST-C-19.
 - b. Horizontal and vertical control discs set on direct fixation trackways shall be recessed to protect them from disturbance.
 - c. Provide Monument Record Sheets to the Authority Representative
4. Verify structural concrete pours for compliance with plans and specifications and provide the final results to the Authority Representative when requested.
5. Routinely verify the horizontal and vertical alignments of the trackbeds, tunnels, shafts, aerial structures and other adjoining or adjacent structures during construction and provide the results to the Authority Representative when requested.
- C. Post Construction Alignment As-built Surveys

1. General Requirements: Post construction alignment as-built surveys are required to check trackway structures for compliance with plans and specifications and to check for out-of-tolerance construction which may impact train clearance tolerances. All methods, equipment and procedures used by the Design Builder to perform post construction alignment as-built surveys shall be approved by the Authority Representative prior to commencement of the work.
 - a. This survey data must be analyzed by the Design Builder and the Authority for compliance with construction and rail tolerances.
 - b. This survey data must be analyzed by the Design Builder and the Authority to determine what remedial action, if any, may be required to address out-of-tolerance construction and the impact of structural mis-alignment on the final placement of the rail.
 - 1) If the survey data reveals out-of-tolerance construction which will impact the placement of other structures along the trackway, the Design Builder shall take appropriate remedial action to comply with the plans and specifications.
 - a) If minimally out-of-tolerance, perform horizontal and vertical alignment revisions to minimize the impact of the misalignment on the future placement of adjoining structures and rail along the trackway.
 - b) If significantly out-of-tolerance and an acceptable alignment revision cannot be used to compensate for out-of-tolerance construction, then demolish and remove the structure and re-install.
 - 2) All alignment revisions and remedial actions shall be approved by the Authority Representative prior to commencement of the work.
2. Verify existing primary horizontal and vertical controls and re-establish, if destroyed or disturbed, and provide adjustment computations to the Authority Representative for approval.
 - a. Provide Monument Record Sheets to the Authority Representative.
3. Establish a secondary horizontal and vertical control system on the Authority's structures and reference to the approved project primary horizontal and vertical control system. The secondary control system established on or within trackway structures shall be used for detailed as-built cross sections, hi-lo surveys and placement of final trackway monumentation. The secondary control system shall be adequately referenced so it can be readily recovered.
 - a. Horizontal and vertical control discs shall be installed in accordance with the details and requirements shown on Standard Drawings ST-C-3 and ST-C-19.
 - b. Horizontal and vertical control discs set on direct fixation trackways shall be recessed to protect them from disturbance.
 - c. Provide Monument Record Sheets to the Authority Representative.
4. As-built of the edge of the platform to address potential out-of-tolerance construction and the impact of structural mis-alignment on the final placement of the tracks.

- a. Horizontal measurements must be taken from the established C/L of track to the existing edge of the platform and compared to plan dimensions as well as the existing rail if installed.
 - b. Vertical measurements must be taken to the top of the edge of the platform and compared to the plan dimension above the top of rail as well as the existing top of rail if installed.
 - c. Sections must be taken on 10 ft. centers through the platform area.
 - 1) Stationing and horizontal offset accuracies must be to 0.01 ft.
 - 2) Vertical accuracy must be to 0.01 ft.
 - d. Provide a platform as-built report to the Authority Representative.
 - 1) This report must compare the horizontal and vertical location of the existing top of the edge of the platform to the plan location from the C/L of Track and the Top of Low Rail as well as the existing rail if installed.
 - a) This data must be analyzed by the Design Builder and the Authority for compliance with construction, rail and train clearance tolerances.
 - b) This data must be analyzed by the Design Builder and the Authority to determine what remedial action, if any, may be required to address out-of-tolerance construction and the impact of structural mis-alignment on the final placement of the tracks.
5. Detailed cross sections of the Authority's structures along the trackbed shall be taken to check for structural misalignment and compliance with plans and specifications.
- a. The methods, equipment and procedures used shall produce detailed cross sections within ½ inch accuracy.
 - 1) Stationing accuracies must be to 0.04 ft.
 - 2) horizontal offset accuracies must be to 0.02 ft.
 - 3) Vertical accuracy must be to 0.02 ft.
 - b. Detailed cross sections of the structures shall be taken at, but shall not be limited to, the following locations.
 - 1) At 50-foot maximum intervals on tangent sections and 25-foot maximum intervals on curved sections.
 - 2) At the following locations on curves with spirals: tangent to spiral (TS), spiral to curve (SC), curve to spiral (CS), spiral to tangent (ST), circular to circular (PCC), spiral to spiral (SCS);
 - 3) At the following locations on curves without spirals: tangent to circular (PC), circular to circular (PCC), and curve to tangent (PT);
 - 4) At vertical curve points: point of vertical curvature (PVC) and point of vertical tangent (PVT).
 - 5) At points of intersection of turnout (PITO).
 - 6) At any changes, breaks, or areas of transitions of the structures adjacent to the trackway.
 - 7) At all construction joints and section midpoints.
 - 8) At drainage slot horizontal transitions.
 - 9) Stake equation stations to ensure proper stationing in the field and take sections 1 ft. down station and 1 ft. upstation from the equation station.

- 10) Additional detailed sections shall be required to determine the magnitude and exact limits of out-of-tolerance construction.
 - c. If automated methods are used to obtain the sections, then conventional field verification of the sections shall be performed on maximum 200 ft. centers and compared to the automated sections and provided to the Authority Representative.
6. Provide a report to the Authority Representative comparing the as-built location of the structure to the plan location as well as the theoretical dynamic outline of the train along the tunnels, retained areas and aerial structures.
 - a. These cross sections must show computed clearances between the as-built location of the structure as well as the theoretical dynamic outline of the train.
 - b. This data must be analyzed by the Design Builder and the Authority for compliance with construction and train clearance tolerances.
 - c. This data must be analyzed by the Design Builder and the Authority to determine what remedial action, if any, may be required to address out-of-tolerance construction and the impact of structural mis-alignment on the final placement of the tracks.
7. The Design Builder shall install and reference all permanent, secondary and final monumentation required for construction, trackwork and other systemwide facilities.
 - a. Provide Monument Record Sheets to the Authority Representative.
8. The Design Builder shall coordinate the post construction alignment as-built survey work with the Authority Representative.

SECTION 01722

MOBILIZATION

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the basic requirements for preparing to install, erect, or apply products.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions

Section 00800, Supplementary Conditions

Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements

Section 01330, General Requirements - Administrative Requirements: Design and Construction Submittal Procedures

Section 01711, General Requirements - Execution Requirements: Acceptance of Conditions

Section 01721, General Requirements - Execution Requirements: Layout of Work and Field Engineering

Section 01723, General Requirements - Execution Requirements: Protection of Adjacent Construction

1.03 ACCEPTANCE OF CONDITIONS

Examination is specified in Section 01711, EXAMINATION: ACCEPTANCE OF CONDITIONS

1.04 SURVEYING

A. Construction layout is specified in Section 01721, PREPARATION: LAYOUT OF WORK AND FIELD ENGINEERING.

B. Detection of Movement

1. In order to detect any movement of buildings or structures that may be affected by its work, the Design-Builder shall, prior to excavation, establish a system of vertical and horizontal control points on or about such buildings or structures, tied to bench marks and indices sufficiently remote so as not to be moved by its operations as specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING.

1.05 MOBILIZATION AND PREPARATORY WORK

A. Mobilization and preparatory work shall include mobilization of construction equipment, materials, supplies, appurtenances and the like, manned and ready for commencing and continuing the work as well as the subsequent demobilization and removal from the site of such equipment, appurtenances and the like upon completion of the work.

B. Mobilization and preparatory work shall also include assembly and delivery to the site of the plant, equipment, materials and supplies necessary for the prosecution of the work; the clearing of and preparation of the Design-Builder's work area; the complete assembly, in working order, of equipment necessary to perform the required work; personnel services and hire of plant on work preparatory to commencing actual work; plus other preparatory work required to permit

commencement of the actual work on construction items for which payment is provided under the terms of the Contract.

- C. The Design-Builder shall conduct its work in accordance with the safety requirements of Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS. In case of a conflict between the various jurisdictional and WMATA or Design-Builder's organizational safety requirements, the more stringent requirements shall apply.
- D. When separate payment for mobilization and preparatory work is provided in the Contract, such payment will be made progressively, up to 100 percent of the fixed lump sum Contract price for mobilization as shown on the UPS, as mobilization occurs. Payment will be made in the form of twelve equal monthly payments, with the first payment beginning 30 calendar days after the start of construction portion of work.

1.06 PREPARATION

A. Existing Utility Information

As applicable, furnish information to local utility and the Authority Representative that it is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, service, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction and affected utilities and secure any required permits and approvals.

B. Existing Utility Interruptions

Do not interrupt utilities serving facilities occupied by the Authority or others, unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated in Section 01510, TEMPORARY UTILITIES:

1. Notify Authority Representative not less than two days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without the Authority Representative's and as applicable, the affected utility's written approval.

C. Field Measurements

Take field measurement as required to fit the Work properly. Check measurements before installing each product. Where portion of the Work are indicated to fit to other construction, verify dimension of other construction by field measurement before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the work.

D. Space Requirements

Verify space requirements and dimensions of items shown diagrammatically on Final Design Drawings.

E. Review of Final Design Drawings and Final Design Specifications and Field Conditions:.

1. Immediately on discovery of the need for clarification of the Final Design Drawings and Final Design Specifications, submit a request for information to the Authority Representative. Include a detailed description of the problem encountered, together with recommendations for interpretation of the Final Design Drawings and Final Design Specifications, or suggested changes to the documents if appropriate. Submit requests on WMATA Form 13.2A, Request for Interpretation which is available from the Authority Representative.

SECTION 01723

PROTECTION OF ADJACENT CONSTRUCTION

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the appropriate methods for protection of adjacent construction when performing installations and improvements in and around existing facilities.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Divisions 02 to 16, Technical and Standard Specifications Requirements

1.03 PROTECTION OF EXISTING SURFACES

A. Existing surfaces shall be carefully protected during placing of concrete and other operations under this Contract to avoid damaging existing surfaces.

1. Existing surfaces shall be protected by the Design-Builder in accordance with Section 00739, PROTECTION OF EXISTING VEGETATION, STRUCTURES, UTILITIES AND IMPROVEMENTS, from all possible damages including chipping, staining and corrosion during performance of the work. If the project includes work at a Metrorail Station, elevators, access routes, storage areas, service rooms and other objects and surfaces within and adjacent to the Metrorail Station subject to Design-Builder contact shall also be protected from any possible damages. Adjacent properties shall be protected from all damages, particularly structural issues and excavation failures.
2. If damage occurs, the Design-Builder shall repair or replace to match original undisturbed conditions as approved by the Authority Representative at no additional cost to the Authority as specified in Section 01731, CUTTING AND PATCHING.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

THIS PAGE NOT USED

SECTION 01731

CUTTING AND PATCHING

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the appropriate methods for performing remedial work when installations occur in existing facilities or improvements including selective demolition, salvage of materials and equipment and pavement and other surfaces and improved areas restoration from damage caused by the Design-Builder's operations.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Divisions 02 through 16, Standard and Technical Specifications Requirements

1.03 SELECTIVE DEMOLITION

As applicable, the Design-Builder shall perform selective demolition in existing facility or improved area to accommodate required new work as shown.

1.04 EMBEDDED ITEMS

A. In a drilling or coring operation, if applicable, when reinforcing steel or other items embedded in the concrete are encountered, the operation shall be stopped and the Authority's Representative immediately notified. The Design-Builder shall also be immediately notified and determination made by the Design-Builder whether the embedded item may be cut through. If it is not permissible to cut through the embedded item, the holes shall be drilled in another location and the original holes patched to the Authority Representative's satisfaction.

1.05 SALVAGE OR MATERIALS AND EQUIPMENT

A. As applicable, the Design-Builder shall maintain adequate property control records for materials or equipment specified to be salvaged. The Design-Builder shall be responsible for the adequate storage and protection of salvaged materials and equipment and shall replace salvage materials and equipment which are broken or damaged during salvage operations as the result of negligence or while in the Builder's care.

B. Salvaged material not specified for reuse shall become the property of the Design-Builder and shall be removed from the site.

1.06 PAVEMENT AND IMPROVED AREAS RESTORATION

A. As applicable, the Design-Builder shall secure permits from the jurisdictional agency for all pavement restoration within the limits of said agency's jurisdiction. The Design-Builder shall submit working drawings of such pavement restoration prepared in accordance with the requirements of the Final Design Drawings and Final Design Specifications and the jurisdictional

agency to the Designer agency through the Authority Representative for approval by the agency.

- B. During construction operations on this Contract, certain areas currently grassed, landscaped or otherwise improved may be disturbed or damaged. The Design-Builder shall restore such areas disturbed or damaged by its operations to the condition prior to being damaged at no additional cost to the Authority and as approved by the Authority Representative and/or the jurisdictional agencies as applicable.
- C. Existing surfaces marred or damaged by operations under this Contract shall be repaired or replaced by the Design-Builder to the condition prior to being damaged and at no additional cost to the Authority and as approved by the Authority Representative and/or the jurisdictional agencies as applicable.
- D. The Design-Builder shall maintain precast concrete protective coverings, as applicable, to the completion of this Contract, at which time it shall remove and dispose of the precast concrete protective covering.

SECTION 01732

APPLICATION, INSTALLATION AND ERECTION

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the appropriate methods for applying, installing and erecting products and equipment that are new, salvaged for re-use and Authority-furnished as applicable.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Divisions 02 through 16, Standard and Technical Specifications Requirements

PART 2 PRODUCTS

2.01 MATERIALS AND EQUIPMENT

- A. New and salvaged materials and equipment shall be as specified in Divisions 02 through 16 of the Final Design Specifications and as shown on the Final Design Drawings, the Design-Builder's approved Shop and Working Drawings, and the approved manufacturer's fabrication, assembly, erection and field drawings.
- B. If applicable, the item(s), quantity and when and where available for Authority-furnished property are listed in Section 00836, AUTHORITY-FURNISHED PROPERTY REQUIREMENTS.

PART 3 EXECUTION

3.01 APPLICATION, INSTALLATION AND ERECTION OF NEW, SALVAGED AND AUTHORITY-FURNISHED PRODUCTS AND EQUIPMENT

Materials and equipment shall be applied, installed or erected as specified in Divisions 02 through 16 of the Final Design Specifications; as shown on the Final Design Drawings, the Design-Builder's approved Shop and Working Drawings, and the approved manufacturer's fabrication, assembly, erection and field drawings; and in accordance with the jurisdictional agencies' codes and regulations, manufacturer's instructions, and ADAAG regulations. Design-Builder shall submit certification that all facilities were built in accordance with ADAAG regulations as specified in Section 01780, CLOSEOUT SUBMITTALS.

Section 00800, Supplementary Conditions

Section 01114, General Requirements - Summary of Work Requirements: Safety/Environmental Requirements

Divisions 02 through 16, Standard and Technical Specifications Requirements

1.03 CLEANING UP

- A. The Design-Builder shall at all times keep the construction area, including storage areas used by it, free from accumulations of waste material or rubbish and prior to completion of the work remove any rubbish from the premises and all tools, scaffolding, equipment and materials not the property of the Authority. The Design-Builder shall observe all safety requirements as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.
- B. Upon completion of each shift and of construction, the Design-Builder shall leave the work and premises in a clean, neat and workmanlike condition satisfactory to the Authority Representative.

SECTION 01770

CLOSEOUT PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

- A. This Section includes specifications for performing all operations necessary for and incidental to closing out a Contract and assisting in the Authority Representative's final inspection.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements
Divisions 02 to 16, Technical and Standard Specifications Requirements

1.03 CLOSEOUT SCHEDULE AND PROCEDURE

A. Changes from Original Conditions:

1. Upon completion of the work and prior to final substantial completion, the Design-Builder shall examine each property to determine changes from the original conditions established by the preconstruction inspection as specified in Section 00716, PRECONSTRUCTION INSPECTION and Section 01711, ACCEPTANCE OF CONDITIONS and shall furnish a written description to the Authority Representative of any measures taken to correct damage that may have resulted from performance of this Contract, and shall obtain a written release from each owner accepting condition of the building or structure, corrections, or both, thereby relinquishing any claim against the Design-Builder. In the event any owner refuses to furnish a release of claims, the Contractor shall notify the Authority Representative in writing.
2. The Authority will not assume responsibility for alleged damages arising from the work performed under this portion of this Contract.

B. Requirements Preparatory to Final Inspection by the Authority:

1. Notify the Authority Representative to perform a preliminary final inspection for the purpose of determining the state of completion of the Contract work. Notify the Authority Representative at least 14 calendar days in advance of requested inspection. The Authority Representative will perform the inspection within three days of the requested date. From the information gathered from this inspection, the Authority Representative will prepare a "punch list" of work to be performed, corrected, or completed before the Contract work will be accepted. All work on the punch list shall be completed by the Design-Builder prior to final inspection.
2. Temporary facilities excepted as may be required for "punch list work" shall be removed from the site.
3. Clean the site and all applicable appurtenances and improvements as specified in Section 01740, CLEANING.
4. Properly mount operating instructions for equipment and post as specified or required.

C. Final Inspection by the Authority:

1. After all requirements preparatory to the final inspection have been completed as hereinbefore specified, notify the Authority Representative to perform the final inspection as specified in Section 00735, ACCEPTANCE AND INSPECTION OF WORK. Notice shall be given at least 14 calendar days in advance of the time the work will be available for final inspection. The Authority Representative will perform the inspection within three days of the requested date. If the work is accepted at the final inspection, the requested date will be the acceptance date.
2. Design-Builder or its principal superintendent, authorized to act in behalf of the Design-Builder, shall accompany the Authority Representative on the final inspection tour, as well as any principal subcontractors that the Authority Representative may request to be present.
3. If the work has been completed in accordance with the Contract or "Issued for Construction" Documents, and no further corrective measures are required, the Authority Representative will accept the work and will issue a Certificate of Completion as evidence of acceptance.
4. If the work has been substantially completed in accordance with the Contract or "Issued for Construction" Documents, and the work can be used for its intended purpose with only minor corrective measures required, the Authority Representative will conditionally accept the work and will issue a Certificate of Substantial Completion based upon the Design-Builder's assurance that corrective measures will be completed within the shortest practicable time period. A fixed schedule for such corrective measures shall be submitted to the Authority Representative for approval.
5. If the work has not been substantially completed in accordance with the Contract or "Issued for Construction" Documents, and several or many corrective measures are still required, the Authority Representative will not issue a Certificate of Substantial Completion. Instead, a new punch list will be prepared based on the information gathered from the final inspection, and the Design-Builder will be required to complete this work and then call for another final inspection, following the procedure outlined above.

1.04 MEASUREMENT AND PAYMENT

Separate measurement or payment will not be made for work required under this Section. All costs in connection with the work specified herein will be considered to be incidental to the work.

1.05 SUBMITTALS

- A. Submit maintenance manuals; Contract record drawings and As-built specifications; electronic media; as-built CPM schedule; spare parts list, delivery information and distribution of spare parts; certifications, affidavits and warranties and guarantees; releases; vouchers; records for design, inspection, testing or other quality elements; configuration management system; and training manual, lesson plans, student's training manual and electronic media of such, as applicable, as specified in Section 01780, CLOSEOUT SUBMITTALS.
- B. Upon final acceptance of the work by the Authority Representative, the Design-Builder shall submit a request for final payment. Final payment will be made in accordance with Section 00749, METHOD OF PAYMENT and Section 01290, PAYMENT PROCEDURES.

PART 2 PRODUCTS [Not Applicable]

PART 3 EXECUTION [Not Applicable]

END OF SECTION

SECTION 01780

CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.01 SUMMARY

This Section specifies procedures for closeout submittals including operation and maintenance manuals; contract record drawings and contract record specifications; electronic media; as-built CPM schedule; spare parts list, delivery information and distribution of spare parts; configuration management system; training manual, lesson plans, and student's training manual and electronic media of such, as applicable; survey record log; correspondence file; releases; vouchers; records for design, inspection, testing or other quality elements; request for final payment; certifications, affidavits and warranties and guarantees; and correction of deficiencies submittals as applicable. Final payment will be made in accordance with Section 00749, METHOD OF PAYMENT and Section 01290, PAYMENT PROCEDURES.

1.02 RELATED DOCUMENTS

Division 00
Division 01, General Requirements
Divisions 02 to 16, Technical and Standard Specifications Requirements

1.03 OPERATION AND MAINTENANCE MANUALS

- A. The Design-Builder shall furnish manuals for equipment and systems as required by the Specifications.
- B. Data copy included from standard catalogs shall be edited to reflect only conditions pertinent to this Contract.
- C. Data copy shall be suitable for dry-copy reproduction on standard office copy machines.
- D. Manuals shall be prepared using the following materials:
 1. Binder:
 - a. One of following:
 - (1) Loose-leaf; three-ring with elliptical rings; stiff cover with covering resistant to oil, water and wear; reinforced hinges; label holder on spine; mechanical device to open, close and lock rings; and sheet lifters. Size for 8-1/2-inch by 11-inch paper, three-inch maximum capacity.
 - (2) Loose-leaf three-post binder conforming to FS UU-B-320, Type II, Class 2, with covering resistant to oil, water and wear; label holder on spine; size for 8-1/2 inch by 11-inch paper; capacity as required, four-inch maximum thickness.
 - b. When the assembled data exceeds the capacity of one binder, provide additional binders as necessary.
 2. Pages:

- a. Originals: White, 60-pound bond with plastic-reinforced binding edge.
- b. Catalog data: Offset-printed copy on white paper, with plastic-reinforced edge.
- c. Standard: 8-1/2 inches by 11 inches.
- d. Fold-out: 11 inches by 8-1/2 inches for binding portion of page plus 7-1/2 inches for each additional portion of folded page; title and page number visible without unfolding. Provide a filler at the binding edge of fold-out pages, equal in thickness to the folded portion.
- e. Holes punched for standard three-ring binder.
- f. Consecutively numbered.

E. Manuals shall include the following data:

1. Table of contents.
2. Design-Builder's name, address and telephone number, with similar data for its 24-hour service organization.
3. Manufacturer's name, address and telephone number, with similar data for its local representative, distributor and service agency.
4. Catalog, model and serial number of equipment installed. Include WMATA unit numbers where applicable.
5. Description of equipment.
6. Statement of warranty as specified.
7. Description of modification, servicing and repairs performed prior to start of warranty.
8. Dates warranty begins and expires.
9. Standard starting, stopping and operating procedures.
10. Emergency and special operating procedures.
11. Routine maintenance procedures.
12. Servicing and lubrication schedule.
13. Manufacturer's printed operating and maintenance instructions, manufacturer's parts list, illustrations and diagrams.
14. One copy of each wiring diagram.
15. List of spare parts, prices and recommended stock quantities for routine maintenance of the equipment for one year and list of spare parts that are considered critical and for which extended time frames for acquisition would create undesirable down-time for equipment.
16. List of special tools required to perform inspection, adjustment, maintenance and repair.

Special tools are those developed to perform a unique function related to the particular equipment and not available from commercial sources.

17. Copy of each approved shop drawing of equipment and system. Include drawings which show outline dimensions, weights and assembly data. Do not include drawings which show manufacturing details.

F. Submittals: Manuals shall be submitted as follows:

1. Six copies of sample formats and outlines of contents in draft form 120 calendar days prior to the time scheduled for operation inspection, testing, or acceptance of the equipment.
2. Six copies of complete manual in final form 45 calendar days prior to the time scheduled for operation inspection, testing, or acceptance of the equipment.
3. Six bound sets and electronic media of approved manual before the time scheduled for operation inspection, testing, or acceptance of the equipment.
 - a. For the separate set of electronic copy text, files shall be in current WordPerfect electronic file format version. Files shall be submitted on CD-ROM.
 - b. The Design-Builder shall prepare a separate set each of electronic illustrations, diagrams and drawings, as applicable, on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified herein shall be the standard formats for all electronic Operation and Maintenance Manual illustrations, diagrams and drawings that are to be forwarded to the Authority for approval. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES of these General Requirements and in WMATA's CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. The Authority reserves the right to have any illustrations, diagrams and drawings resubmitted until the Authority Representative approves the legibility of the illustration, diagram or drawing contained in the file.
6. In addition to the other requirements of this Section, if manufacturer's hardcopy illustrations, diagrams and drawings are also used in the preparation of Operation and Maintenance manual illustrations, diagrams and drawings, they shall also be furnished in AutoCAD (.DWG) and .pdf file formats.
7. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT of the General Conditions, \$100,000 will be withheld until all approved manuals have been delivered to the Authority Representative.
8. If operation and maintenance training is included in the Contract, the Design-Builder shall provide to each trainee, a copy of approved operation and maintenance manuals for this purpose as specified in Section 01820, DEMONSTRATION AND TRAINING.

1.04 CONTRACT RECORD DRAWINGS AND SPECIFICATIONS:

A. General:

1. Contract Record Drawings and Specifications provided at Contract closeout (Design-Builder Provided): The term Contract Record Drawings means the record set of all final Drawings incorporating as-built drawings prepared by or through the Design-Builder consisting of all the tangible, graphic manifestations of the technical descriptions of materials, equipment, construction systems, standards, and workmanship that were actually applied in construction of the Project including as applicable any revisions to the Design-Builder's approved Final Design Drawings Issued for Construction and to the Authority-provided Standard Drawings and Authority-Provided As-built Informational Detail and Layout Drawings and Record Drawings from previous Authority projects, and also to the Design-Builder provided Shop Drawings, Working Drawings, Manufacturers' Shop Drawings, Field Drawings, and Installation Details. The term Contract Record Specifications means the Design-Builder's approved Final Design Specifications Issued for Construction in CSI format that are annotated by or through the Design-Builder to show any revisions and additions that were actually applied in construction of the Project to materials, equipment, construction systems, standards, and workmanship.

2. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT of the General Conditions, the amount specified will be withheld until all final approved As-Built Contract Record Drawings, As-Built Contract Specifications and As-Built Electronic Media Drawing Files are delivered to the Authority Representative.
 - a. Amount to be withheld: \$200,000.

B. As-built Contract Record Drawings:

1. The Design-Builder shall submit separate sets of electronic Contract Record Drawings on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified herein shall be the standard formats for all Contract Record Drawings that are to be forwarded to the Authority for approval. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES of these General Requirements and in WMATA's CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. The Authority reserves the right to have drawing(s) resubmitted until the Authority Representative approves the legibility of the drawing contained in the file. Also, the Design-Builder shall, unless otherwise directed, submit one set of full-size and six sets of half-size black ink on white paper copies of all Contract Record Drawings to the Authority Representative for approval using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.

2. One set of full-size black ink on white paper copies of all Contract Record Drawings will be returned to the Design-Builder. Each of the approved Contract Record Drawings will be identified as having received such approval by being so stamped and dated. Contract Record Drawings not approved will be stamped NOT APPROVED and will have required corrections shown. If disapproved, resubmittals shall be in the formats and quantities as specified in a. above. Additions and corrections resulting from Authority review comments shall be incorporated by the Design-Builder. On resubmittals the Design-Builder shall direct specific attention, in writing or on resubmitted Contract Record Drawings, to revisions other than the corrections requested by the Authority Representative on previous submittals.

3. By the date scheduled for receipt of final approved drawing deliverables in the Contract Schedule, the Design-Builder shall submit one separate set each of electronic Contract

Record Drawings reflecting all known changes on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. Also, the Design-Builder shall, unless otherwise directed, submit one set of full-size and six sets of half-size black ink on white paper copies and one set of full-size reproducible and one set of half-size reproducible of all Contract Record Drawings to the Authority Representative for approval using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative.

4. Completed Contract Record Drawings shall bear the signature of an officer of the Design-Builder organization, certifying compliance with as-built conditions, using a stamp as follows:

AS - BUILT

I CERTIFY THAT THIS DRAWING
ACCURATELY DEPICTS THE WORK
CONSTRUCTED AS OF

(DATE)

(AN OFFICER OF THE Design-Builder)

Design-Builder's Name

- C. Six bound sets and one set of unbound originals of As-Built Contract Specifications in CSI format with all revisions to Final Design Specifications annotated.

1.05 ELECTRONIC MEDIA FILES:

- A. Electronic Media Drawing and Specification Files: Following acceptance of the Contract Record Drawings, the Design-Builder shall prepare the Electronic Media Drawing Files as previously specified for all approved As-built Contract Drawings, including as applicable As-built Standard Drawings and As-built Informational Layout and Detail Drawings and Authority Record Drawings from previous projects; Shop, Working, and Manufacturers' Shop As-built Drawings; and As-built Field Installation Details as applicable, and submit six separate sets each of Drawings in both an AutoCAD (.DWG) file format and in a .pdf file format on CD-ROM electronic media of all approved Contract Record Drawings to the Authority Representative using standard submittal forms in accordance with detailed instructions furnished by the Authority Representative. For the six electronic copies of the As-built Specifications, text files shall be in current WordPerfect electronic file format version. Specifications files shall be submitted on CD-ROM.

1. All CD-ROM disks shall be labeled with file name, operating system, file format, contract number and drawing types (i.e. Contract Drawings, Shop Drawings, etc.) or Specifications.

1.06 AS-BUILT CPM SCHEDULE

- A. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT of this Contract, \$50,000 will be withheld until one original and six (6) copies and one electronic copy of the

approved as-built computer printouts and arrow diagrams required by the scheduling requirements as specified in Section 01322, CONTRACT PROGRESS REPORTING are delivered to the Authority Representative.

1.07 SPARE PARTS

- A. This Contract includes the requirement for spare parts, either specifically identified in the price schedule or to be identified later during the term of the Contract. The Design-Builder shall assure that all spare parts required by this Contract are provided and delivered in accordance with the following paragraphs.
- B. The Design-Builder shall submit to the Authority the original and six paper copies plus one electronic copy of the list of required spare parts either specifically identified in the unit price schedule or later identified by the Authority in accordance with a separate provision of this Contract. The list provided by the Design-Builder shall include model numbers, part numbers, component name, manufacturer's name, price, quantities, available packaging, special storage and handling requirements, and anticipated annual usage. In addition, the spare parts listing will include the following additional information as appropriate:
 - 1. Group the list by system and subsystem for stocking identification. Include order and procurement information for subassemblies and components.
 - 2. Correlate the required quantities with the reliability requirements and lead time considering the following classifications:
 - a. Wear: Components which may be expected to require regular replacement under normal maintenance schedule and operations, such as mechanical parts subject to continuous operation within projected mean time between failure levels.
 - b. Consumables or expendables: Components which are consumed, used up, destroyed, or upon failure, are otherwise made unusable for their intended purpose and are economically unrecoverable except for inherent scrap value.
 - c. Recoverable or repairable: Components which, upon failure, are capable of being repaired or remanufactured to a serviceable, operational condition and maintained available for use within their initial intended purpose. Such items should be accounted for via appropriate asset records.
 - d. Long lead: Components which are not available at short notice from commercial distributors or within 48 hours from the manufacturer, such as specially made or selected components.
 - e. Cross referencing: Where replacement components are common to more than one system or subsystem, include a cross reference and indexing system in the replacement components list.
 - f. Non-unique parts: In all components lists, items which are not unique to the system and have been manufactured by others shall be identified by the manufacturer's name and part number, as well as by the proposer's component number, if any.
- C. Within 30 calendar days after the Design-Builder submits the required spare parts listing, the Authority will provide the Design-Builder with shipping instructions and with WMATA stock numbers for each item the Design-Builder is required to furnish. The Design-Builder agrees to ship

the required parts to the destination points specified by the Authority and to include the Contract number, manufacturer part number, quantity, unit price, and WMATA part number on the shipping document.

- D. The identification of the individual manufacturer's part numbers will be cross referenced to the assigned WMATA stock numbers by including a column with appropriate heading adjacent to the manufacturer's part numbers in any parts manual or listing provided in accordance with Paragraph B. above.
- E. Parts furnished in accordance with this provision shall not be used to satisfy replacement needs under any warranty provision of this Contract.
- F. Spare parts will be the same in all respects as their counterparts furnished as part of the assembled equipment to be delivered under the terms of this Contract.
- G. Unless otherwise specified in this Contract, the spare parts are to be delivered at the same time as the counterpart equipment delivery. The spare parts are to be properly packaged or crated so as to prevent damage during shipment and long term storage. The spare parts will be labeled in accordance with the instructions contained in Paragraph C. above.

1.08 CONFIGURATION MANAGEMENT SYSTEM

As applicable, the Design-Builder shall submit to WMATA the original and six (6) paper copies plus one electronic copy of a complete configuration management system fully documented with all required information including the version status of all system components and all documents and all approved submittals and certifications for part of the Project records as described in Section 01112, DESIGN REQUIREMENTS AND PROGRAM CRITERIA, Section 01113, SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.

1.09 TRAINING MANUAL, LESSON PLANS, AND STUDENT'S TRAINING MANUAL

- A. Original and bound sets and electronic media of approved Training Manual, Lesson Plans, and Student's Training Manual before the scheduled date of substantial completion prior to the time scheduled for operation inspection, testing, or acceptance of the equipment.
 - 1. Original and six bound sets of Instructor's Training Manual, Lesson Plans, and Student's Training Manual.
 - 2. For electronic copy of text, files shall be in current WordPerfect electronic file format version. Files shall be submitted on CD-ROM.
 - 3. The Design-Builder shall prepare a separate set each of electronic illustrations, diagrams and drawings, as applicable, on CD-ROM electronic media in both an AutoCAD (.DWG) file format and a .pdf file format, in print quality black and white, with all fonts embedded. The latest version of both the AutoCAD (.DWG) and .pdf file formats of the type and quality specified herein shall be the standard formats for all electronic Manual illustrations, diagrams and drawings. All line work shall be shown in AutoCAD drawings on designated layers in accordance with CAD layering guidelines as specified in Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES of these General Requirements and in WMATA's CAD Manual Attachment to this Project Manual. Images shall be clear, sharp and readily legible. The Authority reserves the right to have any illustrations, diagrams and drawings resubmitted until the Authority Representative approves the legibility of the

illustration, diagram or drawing contained in the file.

- B. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT of the General Conditions, \$100,000 will be withheld until approved Training Manual, Lesson Plans, and Student's Training Manual and electronic media of such have been delivered to the Authority Representative.

1.10 SURVEY FIELD NOTES

- A. As applicable, submit original and six paper copies and electronic media of the following as more fully specified in Section 01721, LAYOUT OF WORK AND FIELD ENGINEERING:

1. Survey Record Log.

1.11 CORRESPONDENCE FILE

Submit complete correspondence file as more fully specified in Section 01310, PROJECT MANAGEMENT AND COORDINATION.

1.12 RELEASES & VOUCHERS

As applicable, submit original and six paper copies and electronic media of releases & vouchers.

1.13 RECORDS FOR DESIGN, INSPECTION, TESTING AND OTHER QUALITY ELEMENTS

Submit original and six paper copies and electronic media of records for design, inspection, testing or other quality elements as more fully specified in Section 01470, QUALITY SYSTEM.

1.14 REQUEST FOR FINAL PAYMENT

Submit original and six paper copies and electronic media of final payment request. Final payment will be made in accordance with Section 00749, METHOD OF PAYMENT and Section 01290, PAYMENT PROCEDURES.

1.15 CORRECTION OF DEFICIENCIES SUBMITTALS

As applicable, submit original and six paper copies and electronic media Schedule of Deficiency Corrections, Recommendation for Corrective Actions, together with supporting information, Data and Reports applicable to any correction, and a Technical and Cost Proposal to amend the Contract to permit acceptance of the affected materials, equipment, systems or subsystems as specified in Section 00763, CORRECTION OF DEFICIENCIES.

1.16 CERTIFICATIONS, AFFIDAVITS AND WARRANTIES AND GUARANTEES

Required Affidavits, Certificates, Written Descriptions and Releases and Warranties and Guarantees provided by the Design-Builder; i.e., Certificates of Acceptance and Compliance, Certification that all facilities were constructed in conformance with ADAAG regulations (Form attached at end of Section), of System Safety and Security, of Substantial Completion, of Final Performance and Completion, and of Final Settlement; Written Description of any measures taken to correct damage that may have resulted from performance of this Contract; Written Releases; Design-Builder's executed Affidavit of Payment of All Applicable Taxes and License Fees in connection with the Contract and Affidavit of Payment of Debts and Claims; Consent of Surety Company to Final Payment; Warranties and

Guarantees as specified in Section 00762, WARRANTY/GUARANTEE OF CONSTRUCTION and Section 00763, CORRECTION OF DEFICIENCIES and various sections of the Specifications as applicable: Submit the original and six (6) copies plus one electronic copy.

ATTACHMENT TO SECTION 01780

The Design-Builders's attention is directed to the fact that the project is subject to FTA **assessment** for ADAAG compliance. The Design-Builder shall complete and submit the following ADAAG Construction Certification with the Closeout Submittals to be provided to the Authority as specified in this Section 01780, CLOSEOUT SUBMITTALS and in accordance with Section 01470, QUALITY SYSTEM:

CERTIFICATE OF CONSTRUCTION COMPLIANCE WITH ADAAG REGULATIONS

The Design-Builder hereby certifies that it's Construction complies with all applicable Regulations of ADAAG.

SECTION 01810

COMMISSIONING

PART 1 GENERAL

1.01 SUMMARY

This Section specifies procedures and processes required for commissioning facilities and facility systems and the integration and commissioning of various components of the Project into the operating WMATA system.

1.02 RELATED DOCUMENTS

All Contract Documents.

1.03 GENERAL

Work on a contract will generally fall into one of three contract periods as described below. The focus of this specification is the third period, system start-up and testing.

- A. Civil Construction: Site preparation, followed by construction of roadworks, structures and facilities as applicable.
- B. Systems Installation: Installation of power, mechanical equipment, automatic train control, traction power, trackwork, fire and intrusion alarm and communications as applicable.
- C. Individual elements and complete systems are tested as appropriate as specified in Section 01113, SYSTEMS INTEGRATION, Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS, Section 01470, QUALITY SYSTEM and SECTION 01820, DEMONSTRATION AND TRAINING.

1.04 SUBMITTALS

Submit the following for approval in accordance with the Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and with the additional requirements as specified for each in this Contract:

- A. Test Schedules as specified in Section 01113 SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
- B. Test Plans as specified in Section 01113 SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
- C. Test Procedures as specified in Section 01113 SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
- D. Test Data Sheets as specified in Section 01113 SYSTEMS INTEGRATION and Section 01470, QUALITY SYSTEM.
- E. System Safety Test Plan (per FTA requirements as applicable): The Safety and Security Certification Program Plan Attachment to the Project Manual as specified in Section 00381 and

the System Safety Program Plan Attachment to the Project Manual as specified in Section 00391, and as further specified in the Safety Rules and Procedures Manual, Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS, Section 01113, SYSTEMS INTEGRATION.

F. Personal Protection/Safety Procedures as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS.

G. ORD Checklist as applicable.

H. Authority Support Requirements.

1.05 QUALITY ASSURANCE

All work in support of the commissioning shall comply with the Design-Builder quality assurance plans required by the Contract in Section 01470, QUALITY SYSTEM.

PART 2 PRODUCTS [Not Applicable]

PART 3 PROCEDURES

3.01 SAFETY AND SECURITY

Safety and security is the top priority during the construction of the Project. The Design-Builder's safety and security program as specified in Section 01114, SAFETY/ENVIRONMENTAL REQUIREMENTS shall contain specific provisions related to hazards of working in and around the operating rail system as applicable, and will include specific provisions for the mitigation of these hazards.

3.02 OPERATION READINESS DATE

A. In preparation for ORD, as applicable, the Design-Builder shall prepare a comprehensive ORD Checklist listing all items necessary for completion and testing prior to achievement of the ORD. The purpose of the checklist is to prevent the missing of any critical items that might unexpectedly prevent achievement of the ORD. The Checklist shall be submitted to the Authority Representative for review and approval. It shall include, as applicable, but not be limited to all relevant elements of the following:

1. Structures and facilities
2. Communications
3. All MEP Systems and Fire Alarm Systems
4. Trackwork, Traction Power, and ATC
5. Mechanical Equipment
6. Electrical Equipment

B. The Design-Builder shall provide a safety and security certification to the Authority Representative. The Design-Builder's Safety and Security Certification is a written certification stating, as applicable, that the segment of the Line is ready for passenger operations or the constructed or renovated system or facility is ready for operation and that it complies with all Contract safety and security requirements as specified in Section 01114, SAFETY/ENVIRONMENTAL

REQUIREMENTS, in the Safety and Security Certification Program Plan and the System Safety Program Plan Attachments to the Project Manual and in the Safety Rules and Procedures Manual . The certificate shall be signed by an officer of the Design-Build firm. The safety and security certifications shall confirm that all testing, including dynamic and systems level train control testing as applicable, as specified in Section 01113, SYSTEMS INTEGRATION, Section 01470, QUALITY SYSTEM and Section 01820, DEMONSTRATION AND TRAINING, and in the Safety and Security Certification Program Plan and the System Safety Program Plan Attachments to the Project Manual, and in the Safety Rules and Procedures Manual, is complete, documented, and approved and that certificates for operation of escalators and elevators, and certificates of occupancy, as applicable, have been obtained from the local jurisdiction, and that training of Authority personnel as applicable as specified in Section 01820, DEMONSTRATION AND TRAINING is complete.

- C. The Operations Readiness Date (ORD), as applicable, is achieved when all of the work is:
1. essentially complete.
 2. fully tested as applicable.
 3. The Design-Builder's safety and security certification has been received.
 4. The structure or system, as applicable, is verified safe for and secure by WMATA's Department of System Safety and Risk Protection (SARP), Office of Operations Liaison (OLIA), Office of Systems Maintenance (SMNT), Office of Chief Engineer (CENG), Office of Plant Maintenance (PLNT), and Metro Transit Police Department (MTPD), in accordance with the Safety and Security Certification Program Plan and the System Safety Program Plan Attachments to the Project Manual, and the Safety Rules and Procedures Manual.
- D. Once a facility, as applicable, has achieved Operations Readiness, the control of the segment shall be transferred to WMATA's Department of Operations (OPER).

END OF SECTION

THIS PAGE NOT USED

SECTION 01820

DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.01 SUMMARY

This Section specifies the general requirements for Operation and Maintenance Training for facility systems and a Project Performance Demonstration.

1.02 RELATED DOCUMENTS

Section 00700, General Conditions
Section 00800, Supplementary Conditions
Division 01, General Requirements
Section 11001, Equipment General Requirements
Division 15, Technical Requirements - Mechanical
Division 16, Technical Requirements - Electrical and Systems

1.03 OPERATION AND MAINTENANCE TRAINING

A. General:

1. The Design-Builder shall develop and conduct a program to train WMATA selected Authority personnel in the operation and maintenance of each equipment and systems furnished.
2. The Design-Builder shall furnish instructors, instructional materials and audio-visual aids and equipment.
3. The Authority will furnish physical facilities and equipment.

B. Qualification of instructors:

1. Instructors shall have full, precise and detailed knowledge of the design and functional characteristics of all aspects of the equipment and systems furnished with particular emphasis on operational and maintenance considerations and requirements.
2. Instructors shall present the instructional program in an effective manner.
3. Instructors will be subject to approval by the Authority.

C. Program content: As a minimum, instruction will include material covered in the operation and maintenance manual as well as the following:

1. Theory of operation.
2. Practical aspects of operation.
3. Description of system, equipment and components.

4. Functional characteristics of system, equipment and components.
 5. Emergency operating procedures.
 6. Location, removal and reinstallation of components.
 7. Maintenance procedures.
 8. Servicing intervals and schedules.
 9. Diagnosis and problem solving (troubleshooting).
 10. Repair.
 11. Overhaul.
- D. The Design-Builder shall provide WMATA with training in the operation of specific interfaces as a part of the system training program as specified in Section 01113, SYSTEMS INTEGRATION.
- E. Class Duration shall be a nominal 7-½ hour shift, with advantageous combinations of theoretical/classroom and hands-on practice, utilizing operational equipment and test equipment as applicable; and, for On-the-Job Training (OJT) at work locations as applicable, shall include participating in installation activities.
- F. Operating and maintenance training shall be completed prior to the time scheduled for operation inspection, testing, or acceptance of the equipment. In addition to the retainage specified in Section 00749, METHOD OF PAYMENT of the General Conditions, payment may be withheld until training is completed and accepted.
1. Amount to be withheld: \$100,000.
- G. The Design-Builder shall furnish for training, a minimum of (4) O&M Manuals as described in Section 01780, CLOSEOUT SUBMITTALS for each piece of equipment & System, unless otherwise specified.

1.04 PERFORMANCE DEMONSTRATION

The System Performance Demonstration that shall simulate all operations and shall exercise all systems and system elements is specified in Section 01113, SYSTEMS INTEGRATION.

1.05 SUBMITTALS

- A. The Design-Builder shall submit in accordance with Section 01330, DESIGN AND CONSTRUCTION SUBMITTAL PROCEDURES and Section 01780, CLOSEOUT SUBMITTALS as applicable the following at the times stated:
1. Training Preliminary submittal: Six sets not later than 60 calendar days after commencement of construction work.
 - a. Instructional outline: A complete, accurate and detailed listing of topics to be addressed in the instructional program using the specified content list.

- b. Specimens of instructional material to be used.
 - c. Descriptions of audio-visual material and equipment to be used.
2. Training Intermediate submittal: Six sets not later than 60 calendar days after approval of preliminary submittal.
 - a. All material submitted for preliminary submittal incorporating or resolving comments.
 - b. Complete instructional plans including audio-visual aids and descriptions of instructional techniques and procedures.
 3. Training Final submittal: Six sets not later than 30 calendar days prior to scheduled date for operation inspection, testing, or acceptance of the equipment.
 - a. All material submitted for intermediate submittal incorporating or resolving comments.
 4. Training Contract closeout submittal: As specified in Section 01780, CLOSEOUT SUBMITTALS.
 5. System Performance Demonstration submittals: As specified in Section 01113, SYSTEMS INTEGRATION.

PROGRAM CRITERIA

ARCHITECTURAL

1.01 SUMMARY:

A. General:

1. The Design-Builder will provide architectural and engineering design services for Service and Inspection (S&I) Shops. The shop facilities shall be designed to support maintenance operations on revenue vehicles. The facilities will be designed to facilitate scheduled inspections, minor repairs, car cleaning, truck repair and replacement, and minor painting. The shop systems will provide for segregation of work functions into designated areas to minimize interference between functions and time lost in material or equipment handling evolutions. The shop may also include spaces and equipment for expansion of the Systems.
2. Design and layout of all rooms and functional spaces to conform to the reference standards, drawings, and criteria. Room locations as shown and room areas as listed are approximate. Coordinate actual room dimensions and locations by functional relationships, local code and ADA requirements, equipment requirements including vertical and horizontal clearance requirements, with user requirements and with maintenance requirements.
3. Provide doors and partitions with consideration to use and space utilization. Materials, room finishes and doors shall be provided as indicated. Provide doors and partitions in UL rating required by local code. Provide door numbering system in a door schedule to coordinate with the room numbering system.
4. Provide signage for each room at each door as shown on the signage drawings. Provide building identification sign (type 5) and additional signage as required, with location and lettering coordinated with the Authority Representative. Coordinate exterior signage, traffic control signs, and directional signage with track work, existing exterior signs, the Information Drawings and the Authority Representatives requirements.
5. To conform to area constraints at the site, the car maintenance shops must maintain both the clear interior and exterior building shell limits illustrated in the drawings for the placement and movement of equipment, vehicles and personnel. The interior clearances illustrate the limits of clear floor area devoid of exterior walls, partitions and structural elements and vertical clearance to bottom of roof structure or heights to match on the existing buildings.

B. Greenbelt:

1. The existing Greenbelt S & I Shop First Floor is comprised primarily of open shop rail car repair and inspection areas as well as various rail car component repair shops. The Second Level of the facility is a mezzanine comprised of administrative/employee spaces, Employee Lunch Room, Yard Control Room, Train Control Room, and Mechanical Room. This Mezzanine area is located in the northeast corner of the existing building.
2. The existing exterior construction is a double-wythe cavity wall construction of 4 inch face brick, air space, and rigid insulation with 8 inch concrete masonry unit backup. The top of the masonry wall is capped with a pre-cast concrete coping and parapet running continuously at the top of the wall. The roofing system is a ballasted built up membrane over rigid insulation board,

- over metal deck. The roof system is penetrated by skylights, smoke relief vents, and roof drains spaced throughout the roof area.
3. The existing structural system is wide-flanged steel beams and columns, and corrugated metal deck supported on steel bar-joists.
 4. The interior of the existing repair shop and inspection areas are comprised of concrete unit masonry construction and concrete floor slabs with epoxy paint finish. The interior partitioning of the existing office area is gypsum board on metal stud framing.
 5. The new work within the existing building includes but is not limited to track work, systems and equipment relocation.
 6. The existing Machine and Sheet Metal Shops, Gear Case Rebuild, Truck Shop and Wheel Shop will be relocated and expanded within the existing main facility.
 7. Areas to be relocated, (and possibly expanded in size), from the existing building to the new Annex include: Component Parts Storage, Motor Repair, Mechanical Component, Parts Office, Electrical Component, Pneudraulics Shop, and HVAC Shop. The existing Lube Oil Room shall be relocated to the exterior of the existing building and is identified in the new work as the Oil Storage Room.
 8. The new work is comprised of a new Annex building which will house functions including but not limited to: Wheel and Axle Shop, Gear Box Rebuild, Machine Shops, a Lathe Room, Motor Repair Shop, Mechanical Component Repair Shop, Pneudraulics, Component Parts Storage, Steam and Degreasing Room, Air Compressor Repair Shop, HVAC Unit Repair Shop, Component Paint Room, Office suite, Employee Locker and Toilet rooms, High Voltage Electronic Repair Shop, Electronic Repair Shop, Electrical Component Repair Shop, and Mechanical and Electrical rooms.
 9. The new Annex building envelope shall match the existing building in appearance.

C. Brentwood:

1. The existing Brentwood Major Repair Shop has a Main Ground Level comprised primarily of open shop repair areas with a secondary Administrative/employee welfare area. The administrative office area occupies two levels one on top of each other extending from the Ground Level to the Mezzanine Level. The basement level contains employee welfare functions which consists of Locker / Shower Rooms, Lunch Room, and additional office areas. The entire three floors in this area is completely fire protected and separated along the walls and roof with a 2-1/2 hour fire rated gypsum board construction and spray-on fire proofing at all exposed structural steel elements. The Design/Build contractor shall preserve the integrity of this fire separation when performing the new work in this area.
2. The existing Basement Level occupies approximately two-third the area beneath the Main Ground Level with a finish floor elevation of 14'-0" below the Main Ground Level. The partial Mezzanine Level has a finish floor elevation of 13'-4" above the Main Ground Level. The roof is composed of varying finish elevations with the highest elevation point at 31'-0" above the Main Ground Level.
3. The existing exterior shop envelope is a double-wythe wall construction, comprised of 4 inch face brick with 8 inch concrete masonry unit backup with an approximate 4'-2" insulated metal panel band running continuously at the top of the wall. The exterior envelope at the office area is the same with the inclusion of fire rated gypsum board furring on the interior finish.

- The Basement Level foundation walls are comprised of reinforced concrete construction.
4. The existing shop floor construction is comprised of reinforced concrete and epoxy paint finish.
 5. The existing structural system is comprised of wide-flanged steel beam, girders and posts.
 6. The existing interior partitioning of the repair shop areas are composed of 8 inch concrete masonry unit construction with epoxy paint finish. The interior partitioning of the office area is of gypsum board and metal stud construction.
 7. The existing roof construction has no parapet projection. The top of roof elevation varies around the facility. The roofing system is comprised of a rubber membrane roofing system on 1-1/2" rigid insulation on 1-1/2" corrugated metal deck, supported on steel bar-joist construction. . The roof system is penetrated by fire relief skylights and interior roof drains spaced throughout the roof area.
 8. The existing roof construction above the office area is comprised of a rubber membrane roofing system on 1-1/2" rigid insulation on composite 2-1/2" concrete on corrugated metal deck, supported on steel bar-joist construction.
 9. The proposed new shop work will extend three tracks identified on the drawings as 9A, 9B, 9C through the building interior. The new work shall consist of but not limited to; track work, systems and required structural improvements to accommodate new track work, mezzanine structural design to accommodate minimum train clearance, partial existing façade reconstruction and building addition, new vehicle lifts and lift pits, receiving area and new freight elevator, installation of a new wheel truing machine, reprogramming of administrative office and employee welfare areas, upgrade of existing passenger elevator, modification of egress requirements, relocation and reconnection of existing utilities, installation of new utilities to support the new shop equipment, functions and operations, continuous roof skylights and roofing.
 10. The demolition as a result of the new work shall result in but not limited to the following; partial demolition of ground level office space, slab, and associated systems, the partial demolition of the basement level employee welfare and associated systems, the demolition and infill of the existing ramp down receiving area and ramp, exterior façade alterations, wheel truing machine, freight elevator, and site parking.
 11. The existing interior equipment located within the shop expansion area, (generally between column lines D through H on the ground floor and throughout the basement), shall be relocated to the Greenbelt Shop and the remaining equipment and space shall be reconfigured to be coordinated with the three track extension through the building. The existing floor slab shall be saw-cut and trenched for installation of the new tracks. New foundations shall be required at the Basement level for track and lift supports. The roof shall be modified as required for installation of new skylights.
 12. The Mezzanine level structure shall be modified to increase the structural clearance required for the passenger trains to pass under, maintaining a minimum of 11'-2" clearance. This minimum clearance is a variance from WMATA's standard. New structural columns will be added as required and existing columns shall be demolished as required to accommodate the new track work. The office space and functions that are displaced due

to the track extension shall be relocated into the adjacent space vacated by the existing Electronics Lab. The Electronics Lab shall be relocated to the Greenbelt Shop. The Basement level space shall be reconfigured to coordinate with the new structural elements.

D. Shady Grove:

1. The existing Shady Grove S & I Shop has a Ground Floor comprised primarily of open shop repair and inspection areas with administrative/employee spaces. The office area is in the center of the building on both the Ground Floor and Mezzanine. On the Second Floor is the Yard Control Room including access to the roof. The Basement Floor is primarily storage, mechanical rooms, electrical rooms and hoist enclosure space. The Mezzanine at the Ground Floor also has spaces for administrative, employee support and mechanical.
2. The existing exterior construction is a double-wythe wall construction of 4 inch face brick with 8 inch concrete masonry unit backup with a pre-cast concrete fascia and parapet running continuously at the top of the wall. The roofing system is rigid insulation board, lightweight concrete fill, and built up roofing sloped to drains. The roof system is penetrated by fire relief skylights and interior roof drains spaced throughout the roof area. The Basement Floor foundation walls are reinforced concrete with waterproofing and protection boards.
3. The remaining structural system is wide-flanged steel beams and columns, tube steel columns, and corrugated metal deck supported on steel bar-joists.
4. The interior of the repair shop and inspection areas are composed of 8 inch concrete masonry unit construction and concrete slab with epoxy paint finish. The interior partitioning of the office area is of gypsum board and metal stud construction.
5. The new work includes but is not limited to; track work, systems and equipment, installation of two (2) sets of married pair vehicle lifts with car body hoists and motorized turntables positioned for ease of access to adjacent truck repair area, installation of two (2) sets of married pair vehicle lifts with spinning posts, two tracks holding two married pairs each track with posted rail and pitted to a depth of 5' 0" from the top of the posted rail & platforms installed at vehicle floor height to access the interior of the vehicles, Blow Pit remodeling and expansion, relocation of existing Small Parts Storage, rooms and chases for existing mechanical and electrical modifications, employee restrooms, building shell to match the existing building appearance and function, continuous roof skylights, roofing, and miscellaneous existing structural improvements.

1.02 CODES, REGULATIONS, REFERENCE STANDARDS AND SPECIFICATIONS:

- A. WMATA Design Criteria
- B. WMATA Standard Drawings
- C. WMATA Standard Specifications
- D. Metro Matters Shops Program Drawings
- E. Local Code Amendments

- F. IBC 2000
- G. Americans With Disabilities Act 2002
- H. American National Standards Institute (ANSI)
- I. Building Reference Drawings
- J. Existing Building As-Built Drawings
- K. NFPA 101 Life Safety Code 2003
- L. Fire/Life Safety
 - 1. Greenbelt:
 - a. The use group classification for both the existing building and new addition is F-1, Factory Industrial moderate hazard. Both the existing building and the new addition shall be considered collectively as an unlimited area building. The Construction Type is IIB, noncombustible, with automatic sprinkler system throughout.
 - b. The existing building height of 34 feet, one-story, (with a mezzanine), is within the allowable building height of 55 feet and 2 stories. The new annex shall be a two story building constructed within the height limitations established by applicable codes.
 - c. The existing building square footage and the added square footage of the new annex shall be within the allowable square footage for an unlimited area building. An unlimited area building must be surrounded and adjoined by at least 60 feet of public ways or yards. In this regard the existing paint shop represents the the tightest site constraint. The new annex shall be located a minimum of 60 feet from the existing paint shop.
 - d. Replace missing fire extinguishers in the existing building as required to meet code requirements.
 - e. All new work in the existing building shall incorporate all current applicable code requirements.
 - f. It is anticipated that the fire command center required for the new addition will be provided in the fire command center lobby of the existing building, verify with fire marshal and all applicable codes and standards.
 - g. The Design Build Contractor shall coordinate with local building officials and the fire marshal to implement any and all additional requirements requested by the fire marshal and code review agencies prior to submitting the Design Build Proposal.
 - 2. Brentwood:
 - a. The design/build contractor shall perform an independent code analysis and implement any additional restriction that may be required by the local building officials. The information contained in this code analysis is for informational use only.
 - b. The primary use group classification is an F-1, moderate hazard factory & industrial. The incidental non-separated uses are B, Business, and A-2, Lunch Room / Vending. Reference Section 306.2, of the IBC 2000.
 - c. The Construction Type is IIB, noncombustible, unprotected with automatic sprinkler system throughout. Reference Table 601.1, of the

IBC 2000.

- d. The existing building height of 31 feet, one-story is with-in the allowable building height of 55 feet and 4 stories. An additional 20 feet and one-story increase is permitted for a building which is provided with an automatic sprinkler fire system throughout. Reference Table 503.0, Section 504.2, of the IBC 2000.
- e. The new building footprint of 115,000 square feet is with-in the allowable unlimited building area. A one-story, storage building which is provided with an automatic sprinkler system throughout and is surrounded and adjoined by at least 60 feet of public ways or yards, the maximum building area shall not be limited. Reference Sections 507.2, and 507.3, of the IBC 2000.
- f. With a 60 foot building and fire separation distance and type IIB construction; there are no fire-resistance-rated construction requirements for building elements. Reference Table 601.0, of the IBC 2000.
- g. Minimum dead-end corridor distance of 50 feet. Reference Section 1004.3.2.3, of the IBC 2000.
- h. Exit access travel distance of 250 feet. Reference Table 1004.2.4, of the IBC 2000.
- i. Exit access travel distance may be increased to 400 feet. Reference Section 1004.2.4.1

3. Shady Grove:

- a. The existing building and addition use group classification is F-1. The construction classification is Type IIB, noncombustible, unprotected with automatic sprinkler system throughout.
- b. The existing building height of 33 feet is with-in the allowable building height of 55 feet and 4 stories. An additional 20 feet and one-story increase is permitted for a building which is provided with an automatic sprinkler system throughout.
- c. The existing building footprint of 74,736 square feet is with-in the allowable unlimited building area for a two-story storage building which is provided with an automatic sprinkler system throughout and is surrounded and adjoined by at least 60 feet of public ways or yards.
- d. With a 60 foot building and fire separation distance and Type IIB construction there are no fire-resistance-rated construction requirements for building elements.
- e. A further review of the preliminary code analysis with the local building officials and fire marshal may be required.

M. ADA Accessibility Compliance:

- 1. Greenbelt:
 - a. All new construction shall be compliant with IBC 2000 and standards referenced by that code, along with the District of Columbia Construction Code Supplement of 2003 to IBC 2000.
 - b. Where alterations affect the accessibility to an area of primary function, the route to the primary function area shall be accessible and in accordance with Section 3408.6 of the IBC, 2000.
- 2. Brentwood:
 - a. All new construction shall be compliant with IBC 2000 and standards referenced by that code.
 - b. Where alterations affect the accessibility to an area of primary function, the route to the primary function area shall be accessible and

- in accordance with Section 3408.6 of the IBC, 2000.
3. Shady Grove:
- a. All new construction shall be compliant with IBC 2000 and standards referenced by that code.
 - b. Where alterations affect the accessibility to an area of primary function, the route to the primary function area shall be accessible and in accordance with Section 3408.6 of the IBC, 2000.

1.03 GREENBELT PROGRAM:

- A. General Building Requirements:
- a. Coordinate location of equipment, room layouts, system connections and space functional requirements with WMATA Standards and RAIL Operations through the Authority Representative. The Design Build Contractor shall include a complete installation of the items identified in this document with the notation of "provide".
 - b. All doors and frames shall be primed and epoxy painted hollow metal, unless noted otherwise.
 - c. All doors in the office suite shall be stained wood doors with primed and painted hollow metal frames.
 - d. The entire second floor office suite shall receive acoustical ceiling tiles at 10'-0" above finish floor; all other areas are to be painted exposed structure, unless noted otherwise.
 - e. The entire second floor office suite shall have partitions constructed of metal studs and gypsum board with a 4" resilient base; all other interior partitions are to be constructed of concrete masonry units.
 - f. The entire second floor office suite shall be carpeted unless noted otherwise.
 - g. All interior walls are to be concrete masonry units, unless noted otherwise.
 - h. All interior concrete and concrete masonry units exposed to view shall receive epoxy paint, unless noted otherwise.
 - i. All interior gypsum board surfaces exposed to view shall receive latex paint and a 4" vinyl base.
 - j. All interior concrete floor surfaces shall receive epoxy paint.
 - k. All exposed interior structural columns, beams, steel joists and metal deck shall receive epoxy paint.
 - l. Provide signage near the doorway of all enclosed rooms. Signage shall be placed on the latch side of the door. Signage shall meet the accessibility requirements set forth in the above referenced codes and standards.
 - m. Provide (1) electric water cooler at the first floor central to the shop work areas. Provide (2) electric water coolers at the second floor; (1) central to the shop work areas and (1) near the open office area.
 - n. Provide (1) eyewash station at each of the first and second floors central to the shop work areas, in addition to eyewash stations identified elsewhere in the drawings or criteria.
 - o. A minimum of 8% of the exterior building envelope shall receive glazing.
 - p. A minimum of 5% of the second floor shop areas shall receive skylights at the roof.
 - q. All forklift aisles located outside the building envelope shall be designed for the weight of the forklift in addition to the forklift's maximum load capabilities.

- r. Provide exterior trench drains at the exterior side of all new construction overhead service doors, and at the base of the dock.
 - s. All new roofs shall be a single ply membrane roof system.
- B. Basement floor: Not applicable.
- C. First Floor:
- 1. Existing Building Space Requirements:
 - a. Truck Repair & Rebuild Shop – G101 & G102: The Truck Repair and Rebuild Shop (Truck Shop) shall be expanded in size from its current configuration. The Truck Shop shall include the existing complement of four truck hoists and also include eight (8) new Truck Hoist systems. One new 2-ton jib crane shall be provided for each pair of new truck hoists to lift and maneuver truck rebuild components. Motorized turntables and associated connecting trackwork shall be provided to allow for movement of trucks throughout the Truck Shop and onto each Truck Hoist station. New trackwork shall be provided to connect the Truck Shop directly to three (3) tracks within the Truck Storage area located south of column line 8. Tracks within the Truck Storage area shall be reconfigured as required to align with the Truck Shop tracks. Three (3) new 15-ton (unless otherwise noted) capacity bridge cranes shall be provided for the Truck Shop and Truck Storage areas, all operating on the same crane rails. The bridge crane systems shall have appropriate safety features to prevent collision of bridge cranes. Truck Shop benches and equipment shall be relocated from Brentwood and the existing Greenbelt Shops and installed as required. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Electrical receptacles for portable welding equipment shall be provided throughout the area.
 - b. Tool Room (Existing) – G102A: Install a new pass through window to allow for the distribution of tools and materials from the Tool Room. The window shall be located above a sturdy stainless steel shelf to support tools on either side of the window. The window shall have locking capabilities to secure the room.
 - c. Oil Storage Room – 400 s.f.; G103: The existing interior Oil Storage Room located along column line 10 between column lines B-C shall be demolished. A new Oil Storage Room shall be constructed outside but attached to the existing facility. The Oil Storage room shall be accessible via forklift through double-doors to the interior of the shop. Provide galvanized steel floor grates. The Oil Storage Room shall comply with all applicable codes and regulations.
 - d. Welding Room – 200 s.f.; G104: A new Welding Room shall be constructed outside the existing facility, adjacent to the new Oil Storage Room (G103). The room shall be forklift accessible. The room shall be equipped with adequate electrical capacity and receptacles to operate WMATA's welding equipment. Compressed air supply shall be provided. The room shall be appropriately ventilated to the outside to eliminate welding fumes from entering the general shop area.
 - e. Wheel & Axle Shop – 8700 s.f.; G105: The existing Brentwood and Greenbelt Wheel and Axle Shops shall be relocated and combined into one shop area. This shall include the relocation and of existing equipment and the purchase of new equipment. This includes but is not limited to the relocation of the existing Greenbelt wheel press and wheel boring mill and the relocation of the existing Brentwood wheel boring mill.

In addition, a new wheel press shall be procured for the area. Foundations required for wheel presses and wheel boring machines shall be provided as required. New trackwork and motorized turntables shall be provided to enable movement of wheel sets throughout the area. A minimum of four (4) wheel set storage tracks shall be provided. Track access to the Steam and Degreasing Room (G108) shall be provided to enable the cleaning of trucks or wheel sets. Two (2) new 5-ton bridge cranes shall be installed within the Wheel & Axle Shop spanning column lines A-C and operating between column lines 10 and 16, with both cranes on the same tracks. The bridge crane systems shall have appropriate safety features to prevent collision of bridge cranes. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.

- f. Supervisor (Existing room) – 180 s.f.; G106: Refurbish the Wheel Shop Supervisor Office. Epoxy paint the walls and floors. Remove the existing ceiling and provide a new acoustical tile ceiling system.
- g. Gear Box Rebuild – 1700 s.f.; G107: Relocate the existing Gear Box Rebuilding Shops currently located at the Brentwood and Greenbelt Shops into one consolidated Gear Box Rebuild area at the Greenbelt Main Shop. Construct new floor to ceiling concrete masonry unit walls to completely enclose the new Gear Box Rebuild Area. This room shall be enclosed to permit HVAC of the space. Provide two sets of (2) new 4 ft. wide doors to provide access to the area. The doors shall have a clear opening height of 12 ft. Two (2) new man doors shall be provided for the area. Provide appropriate HVAC for the area. Remove existing equipment located within the space. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Gear Box Rebuild area. The existing bridge crane system in the area shall be retained and refurbished. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Electrical receptacles for portable welding equipment shall be provided throughout the area.
- h. Steam and Degreasing Room – 1400 s.f.; G108: The existing Steam and Degreasing Room shall remain in its current location. Replace the existing vertical parts washer with a new washer. Install tracks into the steam cleaning pit area to allow for the washing of trucks and wheel sets. Replace the grating as required to accommodate the tracks.
- i. Grit Blast & Parts Washroom (Existing room) – 180 s.f.; G109: Relocate and install existing Brentwood and Greenbelt equipment into the room. Provide appropriate equipment venting and HVAC for the area. Provide sink and floor drains with oil water separation. Provide an eyewash station.
- j. Machine Shop #2 – 2300 s.f.; G110: The existing Brentwood and Greenbelt Machine Shops shall be consolidated into various spaces within the Greenbelt Main Shop area. Within space G110, remove the existing wall separating the existing Pneudraulics and Electromechnical Shops located 8 ft. south of column line 21 to create one open room between column lines B-C. Remove a portion of the existing wall along column line B, between column lines 21-22 to provide an opening between spaces G110 and G111. Install a coiling overhead door into the room at column line 18. Remove existing equipment located with the

- space. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Machine Shop area. Provide equipment pads or foundations, as required. Provide appropriate HVAC for the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
- k. Storage Cage – 220 s.f.; G110A: Construct a galvanized steel wire mesh secured storage cage within room G110 for the storage of sheet and bar stock metal and other materials for the Machine Shop. Provide a wire mesh wall and double 3'-0" wide x 10'-0" high wire mesh doors. Extend the wire mesh walls to the existing structure above.
 - l. Machine Shop #1 – 1900 s.f.; G111: The existing Brentwood and Greenbelt Machine Shops shall be consolidated into various spaces within the Greenbelt Main Shop area. Within space G111, construct a new wall to completely enclose the room along column line 18 and provide new double doors for access to the room. Remove existing equipment, as required from the space. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Machine Shop area. Provide equipment pads or foundations, as required. Provide appropriate HVAC for the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
 - m. Portable Weld Room (Existing space) – 120 s.f.; G112: This space remains in service. Provide venting to the outside for welding equipment and processes.
 - n. Lathe Room – 800 s.f.; G113: The existing Brentwood and Greenbelt Machine Shops shall be consolidated into various spaces within the Greenbelt Main Shop area. Within space G113, remove existing equipment located in the space. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Machine Shop Lathe Room. Provide equipment pads or foundations, as required. Provide appropriate HVAC for the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
2. New Annex Space Requirements:
- a. Vestibule - 470 s.f.; G114: Entry Vestibule into the New Annex.
 - b. Passenger Elevator - Provide a hydraulic 2500 pound ADA compliant passenger elevator with two stops that vertically connect the first and second floors. Adjacencies with first floor building entries and the second floor office areas are essential.
 - c. Elevator Equipment Room – G115: The elevator equipment room shall be sized, and conditioned or ventilated, as required by the elevator manufacturer. The ceiling is to be exposed structure.
 - d. Electrical Panel Room - 350 s.f.; G116: Electrical service shall enter the building at this room. Electrical panels shall be located in this room. The ceiling is to be exposed structure.
 - e. Stair #1 - 200 s.f.; GS-1: Quadruple run concrete filled metal pan stairs. Epoxy paint handrails, stairs, and all associated ferrous metal components.
 - f. Motor Repair Shop – 7000 s.f.; G117: Relocate the existing Motor Repair Shops currently located at the Brentwood and Greenbelt Shops

- into one consolidated shop area within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Motor Repair Shop. Provide suitable equipment and/or jib crane foundations. Install three (3) new 3-ton, 30 ft. span, 75 ft. cranes within the area spanning column lines 29-30, 30-31 and 31-32, providing crane access from the center aisle to the west wall of the facility. The bridge crane must clear all shop equipment within the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
- g. (M.R.S.) Secure Tool Storage – 120 s.f.; G118: This room shall be located in the Motor Repair Shop next to the (M.R.S.) Office and is to be constructed of concrete masonry unit walls and cast in place concrete ceiling at 10'-0" above finished floor. Provide a galvanized steel wire mesh wall and locking door facing the shop functions.
 - h. (M.R.S.) Office – 120 s.f.; G119: This room shall be located in the Motor Repair Shop and shall be constructed of concrete masonry unit walls and cast in place concrete ceiling at 10'-0" above finished floor. Provide a window on the exterior wall. Provide two borrow lites, (12) square feet each, adjacent to the entry door. Provide voice, power, and data.
 - i. Mechanical Component Repair Shop – 4300 s.f.; G120: Relocate the existing Mechanical Component Repair Shops currently located at the Brentwood and Greenbelt Shops into one consolidated shop area within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Mechanical Component Repair Shop. Provide suitable equipment and/or jib crane foundations. Install one (1) new 3-ton, 30 ft. span, 75 ft. crane within the area spanning column lines 33-34, providing crane access from the center aisle to the west wall of the facility. The bridge crane must clear all shop equipment within the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
 - j. (M.C.R.S.) Secure Tool Storage – 120 s.f.; G121: This room shall be located in the Mechanical Component Repair Shop next to the M.C.R.S. Office and shall be constructed of concrete masonry unit walls and a cast in place concrete ceiling at 10'-0" above finished floor. Provide a galvanized steel wire mesh wall and locking door facing the shop functions.
 - k. (M.C.R.S.) Office – 120 s.f.; G122: This room shall be located in the Mechanical Component Repair Shop and is to be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor. Provide a window on the exterior wall. Provide two borrow lites, (12) square feet each, adjacent to the entry door. Provide voice, power, and data.
 - l. (Pneudraulics) Office – 120 s.f.; G123: This room shall be located in the Pneudraulics Repair Shop and is to be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor. Provide a window on the exterior wall. Provide two borrow lites, (12) square feet each, adjacent to the entry door. Provide voice, power, and data.
 - m. (Pneudraulics) Secure Tool Storage – 120 s.f.; G124: This room shall

be located in the Pneudraulics Repair Shop next to the (Pneudraulics) Office and is to be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor. Provide a galvanized steel wire mesh wall and locking door facing the shop function.

- n. Pneudraulics Repair Shop – 3000 s.f.; G125: Relocate the existing Mechanical Component Repair Shops currently located at the Brentwood and Greenbelt Shops into one consolidated shop area within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Mechanical Component Repair Shop. Provide suitable equipment and/or jib crane foundations. Install one (1) new 3-ton, 30 ft. span, 75 ft. crane within the area spanning column lines 33-34, providing crane access from the center aisle to the west wall of the facility. The bridge crane must clear all shop equipment within the area. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
- o. Brake Valve Clean Room – 900 s.f.; G126: This room shall be located in the Pneudraulics space and is to be constructed of double wythe concrete masonry unit walls with an stc rating of 50. Provide sound attenuation insulation between the two wyths of concrete masonry units. The roof/ceiling shall be a cast in place concrete ceiling at 10'-0" above finished floor. Relocate existing Pneudraulics Repair Shops currently located at the Brentwood and Greenbelt Shops into consolidated shop areas within the Greenbelt Annex facility, which includes the Pneudraulics Repair Shop (G125), the Brake Valve Clean Room (G126) and the Air Compressor Repair Shop (G137). Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Pneudraulics Repair Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. High pressure compressed air (180 psi, minimum), shall be available within this room (in addition to normal shop compressed air supply) from the High Pressure Air Compressor Room (G127). Provide a wash-up sink and counter and an emergency eye wash station.
- p. High Pressure Air Compressor Room – 120 s.f.; G127: This room shall be located in the Pneudraulics space and is to be constructed of double wythe concrete masonry unit walls with an stc rating of 50. Provide sound attenuation insulation between the two wyths of concrete masonry units. Install a high pressure (180 psi minimum) air compressor to be relocated from the Greenbelt Main Shop to this room. Provide an eyewash station. The roof/ceiling shall be a cast in place concrete ceiling at 10'-0" above finished floor.
- q. Stair #2 - 200 s.f.; GS-2: Quadruple run concrete filled metal pan stairs. Epoxy paint handrails, stairs, and all associated ferrous metal components.
- r. Component Parts Storage – 7200 s.f.; G128: Procure and install a component parts storage system comprising a combination of pallet rack shelving, cantilever rack systems, bin type shelving, secure shelving systems and vertical carrousel shelving systems, as defined by WMATA. Secure the room with concrete masonry unit walls and (2)

interior sliding gates 8ft. wide x 12 ft. high constructed of galvanized steel wire mesh. Provide (2) galvanized steel wire mesh locking man doors next to each sliding gate. Provide a 12 foot wide x 12 foot high overhead coiling door and adjacent man door at the eastern wall of the storage room; these doors will serve the dock area. Provide a dock leveler and dock bumpers. Provide a 12 foot wide x 12 foot high overhead coiling door and adjacent man door at the southern wall of the storage room; the coiling door will serve as entry for fork lift traffic. The ceiling will be exposed structure.

- s. Communications Room – 100 s.f.; G129: Provide concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor. Provide protected cable trays between the first and second floor Communications Rooms.
- t. Elevator Equipment Room – G130: The elevator equipment room shall be sized, and conditioned or ventilated, as required by the elevator manufacturer. Provide concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor.
- u. Freight Elevator - Provide a hydraulic 12,000 pound ADA compliant freight elevator with two stops that vertically connect the first and second floor component part storage rooms. Provide front and rear loading on the elevator at both floor levels. The freight elevator shall be sized to safely accommodate at least one forklift with a 4 ft. by 4 ft. loaded pallet and an operator.
- v. Janitor Closet – 60 s.f.; G131: Provide mop sink, mop holder and shelving. Provide concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor.
- w. Men's Toilet – 200 s.f.; G132: Provide regular and ADA compliant fixtures and toilet accessories as follows: (1) toilet and toilet compartment with toilet paper dispenser, (1) ADA compliant toilet and toilet compartment with side and back grab bars for the toilet, and ADA compliant toilet paper dispenser, (1) ADA compliant urinal, (1) ADA compliant lavatory and trap protection, (1) ADA compliant mirror, (above ADA compliant lavatory), (1) ADA compliant soap dispenser, (above ADA compliant lavatory), (1) ADA compliant paper towel dispenser, Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system. The wall finish shall be glazed concrete masonry units. The floor finish shall be epoxy paint on concrete.
- x. Women's Toilet – 200 s.f.; G133: Provide regular and ADA compliant fixtures and toilet accessories as follows: (2) toilets and toilet compartments with toilet paper dispensers, (1) ADA compliant toilet and toilet compartment with side and back grab bars for the toilet, and ADA compliant toilet paper dispenser, (1) ADA compliant lavatory and trap protection, (1) ADA compliant mirror, (above ADA compliant lavatory), (1) ADA compliant soap dispenser, (above ADA compliant lavatory), (1) ADA compliant paper towel dispenser, Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system. The wall finish shall be glazed concrete masonry units. The floor finish shall be epoxy paint on concrete.
- y. Clerk – 150 s.f.; G134: This room shall be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 14'-0" above finished floor. Provide an acoustical tile ceiling at 10'-0" above finished floor.

- z. Supervisor – 150 s.f.; G135: This room shall be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 14'-0" above finished floor. Provide an acoustical tile ceiling at 10'-0" above finished floor.
- aa. Steam and Degreasing Room – 1400 s.f.; G136: Relocate the existing Steam and Degreasing Room currently located at the Brentwood Shop into a new Steam and Degreasing Room within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Steam and Degreasing Room. Provide suitable equipment foundations. Provide galvanized steel floor grates as required for cleaning operations. Provide stainless steel sheets at the walls above the floor grating for wall protection. Provide floor drains and trench drains with oil water separation. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Provide a wash-up sink and counter and an emergency eye wash station.
- bb. Air Compressor Repair Shop – 1400 s.f.; G137: Relocate existing Pneudraulics Repair Shops currently located at the Brentwood and Greenbelt Shops into consolidated shop areas within the Greenbelt Annex facility, which includes the Pneudraulics Repair Shop (G125), the Brake Valve Clean Room (G126) and the Air Compressor Repair Shop (G137). Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Pneudraulics Repair Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. High pressure compressed air (180 psi, minimum), shall be available within this room (in addition to normal shop compressed air supply) from the High Pressure Air Compressor Room (G127). Provide an emergency eye wash station.
- cc. HVAC Unit Repair Shop - 1400 s.f.; G138: Relocate the existing HVAC Unit Repair Shop currently located at the Greenbelt Main Shop into a new shop within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new HVAC Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
- dd. Component Paint Room – 1150 s.f.; G139: Relocate the existing Component Paint equipment currently located at either Brentwood or Greenbelt Main Shops into a new shop within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new HVAC Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Explosion proof fixtures shall be used. Provide an emergency eyewash station.
- ee. Storage – 250 s.f.; G140: General storage room. The ceiling shall be exposed structure.

D. Second Floor:

- 1. Existing Building Space Requirements:

- a. Selectively demolish the existing exterior wall to allow second floor circulation between the new and existing buildings.
2. New Annex Space Requirements:
- a. Elevated Walkway connecting the New Annex and the Existing Building – 600 s.f.; G201: Glass walled elevated walkway. Provide a floor, wall, ceiling, and roof expansion joint system and cover at the location where the new Annex meets the existing building. Finishes are as follows: The ceiling finish shall be a painted gypsum board system suspended 10'-0" above finished floor. The wall finish shall be a glass and aluminum frame window system. The floor finish shall be vinyl composition tile.
 - b. Elevator Lobby - Finishes are as follows: The ceiling finish shall be acoustical ceiling tile. The wall finish shall be painted gypsum board and vinyl base. The floor finish shall be vinyl composition tile.
 - c. Corridor adjacent to offices - Finishes are as follows: The ceiling finish shall be acoustical ceiling tile suspended 10'-0" above finish floor. The wall finish shall be painted gypsum board and vinyl base. The floor finish shall be vinyl composition tile.
 - d. Stair #1 - 200 s.f.; GS-2: Quadruple run concrete filled metal pan stairs. Epoxy paint handrails, stairs, and all associated ferrous metal components.
- e. Office Suite - 3,600 s.f.: Walls surrounding the office suite shall have an STC rating of 50. Spaces required are:
- (1) Reception – 400 s.f.; G202: Provide power, voice and data connections. Walls enclosing this room shall have an STC rating of not less than 45, unless noted otherwise.
 - (2) Storage – 170 s.f.; G203: General storage/Future office. Provide power, voice and data connections.
 - (3) Office – 150 s.f.; G204: Provide power, voice and data connections. Walls enclosing this room shall have an STC rating of not less than 45, unless noted otherwise.
 - (4) Office – 150 s.f.; G205: Provide power, voice and data connections. Walls enclosing this room shall have an STC rating of not less than 45, unless noted otherwise.
 - (5) Office – 230 s.f.; G206: Provide power, voice and data connections. Walls enclosing this room shall have an STC rating of not less than 45, unless noted otherwise.
 - (6) Office – 230 s.f.; G207: Provide power, voice and data connections. Walls enclosing this room shall have an STC rating of not less than 45, unless noted otherwise.
 - (7) Copy Room – 150 s.f.; G208: Provide a minimum of 20 feet of upper and lower cabinets with a plastic laminate counter top. Provide power, voice and data connections.
 - (8) Open office – 300 s.f.; G209: Provide space for four work stations. Work stations shall be integrally wired for power, voice and data connections.
 - (9) Conference Room – 500 s.f.; G210: Provide a minimum of 15 feet of upper and lower cabinets with a plastic laminate counter top, back and side splash. Provide a refrigerator with ice maker. Provide a 9" deep double bowl stainless steel sink. Provide (1) paper towel dispenser. Provide (1) upper cabinet microwave. Provide power, voice and data connections. Walls enclosing the Conference Room shall have an STC rating of not less than 50. Provide a sound attenuated operable partition with an STC rating

of not less than 50. The operable partition shall divide the Conference Room and Multipurpose Room.

- (10) Multipurpose Room – 750 s.f.; G211: Provide a minimum of 15 feet of upper and lower cabinets with a plastic laminate counter top, back and side splash. Provide a refrigerator with an ice maker/dispenser at the door. Provide a double bowl stainless steel sink. Provide (5) power, voice and data connections to serve temporary workstations. Walls enclosing the Multipurpose Room shall have an STC rating of not less than 50.
 - (11) Telephone Closet – 60 s.f.; G212: Provide ¾" fire treated plywood telephone boards. Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system at 9'-0" above finished floor.
 - (12) Men's Toilet – 70 s.f.; G213: Provide ADA compliant fixtures and toilet accessories as follows: (1) toilet, (1) lavatory with trap protection, side and back grab bars for the toilet, (1) mirror, (1) soap dispenser, (1) paper towel dispenser, (1) toilet paper dispenser. Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system at 9'-0" above finished floor. The wall finish shall be ceramic tile at 6'-8" above finished floor and latex painted gypsum board above the tile. The floor finish shall be ceramic tile with metal trim at the threshold.
 - (13) Women's Toilet – 70 s.f.; G214: Provide ADA compliant fixtures and toilet accessories as follows: (1) toilet, (1) lavatory with trap protection, side and back grab bars for the toilet, (1) mirror, (1) soap dispenser, (1) paper towel dispenser, (1) toilet paper dispenser. Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system at 9'-0" above finished floor. The wall finish shall be ceramic tile at 6'-8" above finished floor and latex painted gypsum board above the tile. The floor finish shall be ceramic tile with metal trim at the threshold.
- f. Employee welfare Women's Locker and Shower Room Facilities – 500 s.f.; G215: Provide (18) 72" high x 18" wide x 21" deep metal lockers; (4) of the (18) lockers shall be ADA compliant. Provide ADA compliant benches with ADA compliant clearances to serve all lockers. Provide regular and ADA compliant fixtures and toilet accessories as follows: (1) toilet and toilet compartment, (1) ADA compliant toilet and toilet compartment with side and back grab bars for the toilet, and ADA compliant toilet paper dispenser, (1) lavatory, (1) ADA compliant lavatory and trap protection, (1) mirrors, (1) ADA compliant mirror, (above ADA compliant lavatory), (1) soap dispensers, (1) ADA compliant soap dispenser, (above ADA compliant lavatory), (1) ADA compliant paper towel dispensers, (1) toilet paper dispenser. Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system at 12'-0" above finished floor. The wall finish shall be glazed concrete masonry units. The floor finish shall be ceramic tile on the concrete substrate.
- g. Employee welfare Men's Locker and Shower Room Facilities – 1300 s.f.; G216: Provide (102) 72" high x 18" wide x 21" deep metal lockers; (21) of the (102) lockers need to be ADA compliant. Provide ADA compliant benches with ADA compliant clearances to serve all lockers. Provide

regular and ADA compliant fixtures and toilet accessories as follows: (2) toilets and toilet compartments, (2) toilet paper dispensers, (1) ADA compliant toilet and toilet compartment with side and back grab bars for the toilet, and ADA compliant toilet paper dispenser, (1) urinal, (1) ADA compliant urinals, (2) lavatories, (1) ADA compliant lavatory and trap protection, (2) mirrors, (1) ADA compliant mirror, (above ADA compliant lavatory), (2) soap dispensers, (1) ADA compliant soap dispenser, (above ADA compliant lavatory), (2) ADA compliant paper towel dispensers. Finishes are as follows: The ceiling finish shall be a latex painted suspended gypsum board ceiling system at 12'-0" above finished floor. The wall finish shall be glazed concrete masonry units. The floor finish shall be ceramic tile on the concrete substrate.

- h. High Voltage Electronic Repair Shop – 2800 s.f.; G217: Relocate the existing Brentwood Electronics Shop into new spaces within the Greenbelt Annex facility, including the High Voltage Electronics Repair Shop (G217) and the Electronic Repair Shop (G219). Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new High Voltage Electronic Repair Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Provide an anti-static floor within the space suitable for protecting electronic circuitry during handling and repair.
- i. (E.R.S.) Supervisor Office – 200 s.f.; G218: This room is to be located in the Electronic Repair Shop and is to be constructed of concrete masonry unit walls and cast in place concrete ceiling. Provide (1) door with access to the High Voltage Electronic Repair Shop and Provide (1) door with access to the Electronic Repair Shop. Provide a window on the exterior wall. Provide two borrow lites, (12) square feet each, adjacent to each entry door. Provide voice, power, and data.
- j. Electronic Repair Shop – 7200 s.f.; G219: Relocate the existing Brentwood Electronics Shop into new spaces within the Greenbelt Annex facility, including the High Voltage Electronics Repair Shop (G217) and the Electronic Repair Shop (G219). Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Electronic Repair Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Provide an anti-static floor within the space suitable for protecting electronic circuitry during handling and repair. Provide a wash-up sink area.
- k. Component Part Washing – 320 s.f.; G220: Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the Component Part Washing Room. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Provide an anti-static floor within the space suitable for protecting electronic circuitry during handling and repair. Provide drains and floor drains with oil water separation. Provide an eyewash station.
- l. Stair #2 - 200 s.f.; GS-2: Quadruple run concrete filled metal pan stairs. Epoxy paint handrails, stairs, and all associated ferrous metal

- components.
- m. Mechanical Room – 4500 s.f.; G221: Mechanical Equipment will be located in this room. The size of this space can vary as required to sufficiently house the H.V.A.C. equipment necessary to support the New Annex.
 - n. Component Part Storage – 2500 s.f.; G222: Procure and install a component parts storage system comprising a combination of pallet rack shelving, cantilever rack systems, bin type shelving, secure shelving systems and vertical carrousel shelving systems, as defined by WMATA.
 - o. Communications Room – 110 s.f.; G223: This room houses communication and telephone equipment boards. The ceiling shall be exposed structure.
 - p. Janitor Closet – 50 s.f.; G224: Provide mop sink, mop holder and shelving. The ceiling shall be exposed structure.
 - q. (E.C.R.S.) Secure Storage – 120 s.f.; G225: This room is to be located in the Electrical Component Repair Shop next to the E.C.R.S. Office and is to be constructed of concrete masonry unit walls and a cast in place concrete ceiling at 10'-0" above finished floor. Provide a galvanized steel wire mesh wall and locking door facing the shop functions.
 - r. (E.C.R.S.) Office – 120 s.f.; G226: This room is to be located in the Electrical Component Repair Shop and is to be constructed of concrete masonry unit walls and a cast in place concrete roof/ceiling at 10'-0" above finished floor. Provide a window on the exterior wall. Provide two borrow lites, (12) square feet each, adjacent to the entry door. Provide voice, power, and data.
 - s. Electrical Component Repair Shop – 6200 s.f.; G227: Relocate the existing Electrical Component (Electromechanical) Repair Shops currently located at the Brentwood and Greenbelt Shops into one consolidated shop area within the Greenbelt Annex facility. Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the new Electrical Component Repair Shop. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
 - t. Grit Blast Room – 360 s.f.; G228: Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the Grit Blast Room. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Soundproofing shall be provided within the interior walls of this room. Provide drains and floor drains with oil water separation. Provide an eyewash station.
 - u. Parts Washing Room – 320 s.f.; G229: Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the Parts Washing Room. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. The room shall be well ventilated to prevent the accumulation or dispersion of solvent fumes. Provide drains and floor drains with oil water separation. Provide an eyewash station.

- v. Component Paint Room – 320 s.f.; G230: Install existing Brentwood and/or Greenbelt equipment and/or procure and install new equipment within the Parts Washing Room. Provide suitable equipment and/or jib crane foundations. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. The room shall be well ventilated to prevent the accumulation or dispersion of solvent fumes. Provide drains and floor drains with oil water separation. Provide an eyewash station.

1.04 BRENTWOOD PROGRAM:

A. Basement Floor:

1. Coordinate location of equipment, room layouts, system connections and space functional requirements with WMATA Standards and RAIL Operations through the Authority Representative.
2. Provide floor drainage in areas of new work required to capture water that may enter through new vehicle lift pits and shower facilities.
3. The basement level is to be connected to the upper floors with existing and new egress stairs, a new passenger elevator, and a new freight elevator.
4. Provide means of egress access aisles and corridors from all areas of the basement to rated exits, providing a continuous protected and unobstructed common path of travel from the basement to exit discharge and public way.
5. All existing floors, ceilings and partitions to receive new finishes shall be leveled, filled and patched by the Design/Build Contractor with appropriate compound required to provide a sound, clean substrate suitable for installation of new work.
6. Receive prior approval from the Authority Representative before cutting and patching. Use materials identical to existing materials. If identical materials are not available, or cannot be used, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials for cutting and patching that will result in equal or better performance characteristics.
7. Men's Shower & Locker Room - 1,660 s.f.; B001, B002, B003: Provide fixture count for (1) ADA compliant toilet compartment, (4) standard toilet compartments, (1) ADA compliant urinal, (2) standard urinals, (8) ADA compliant lavatories, (2) 36" x 36" ADA compliant shower stalls, (6) 36" x 36" standard shower stalls, (129) 15"w x 18"d x 72"h single tier louver lockers, with sloped tops. Mount lockers to 4 in. high concrete curb. Provide adequate linear bench space to accommodate the maximum number of men working in one shift with number to be verified by the Design/Builder through the Authority Representative. Finishes are as follows; Ceramic tile floor finish, sloped to drain. Wall finish to be full height glazed CMU construction. Ceiling finish to be painted water resistant gypsum board construction. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
8. Stair #2 - 175 s.f.; B004: Provide fire rated exit enclosure with an area of refuge. Stair system to be a prefabricated and pre-finished metal stair system with equally spaced risers and treads with two 180 degree intermediate landings per floor. Finishes are as follows: Floor finish to be epoxy paint on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be painted gypsum board

- construction. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
9. Offices - 144 s.f. each; B005, B006: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be carpet on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 10. Open Office #1 - 675 s.f.; B007: Finishes are as follows: Floor finish to be epoxy paint on concrete substrate. Wall finish to be paint on gypsum board & metal stud or furring construction. Ceiling finish to be painted gypsum board construction. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 11. Corridor; B008: Finishes are as follows: Floor finish to be vinyl composite tile on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be suspended acoustical tile system. All doors in this space to be of painted hollow metal door and frame construction. Provide ADA compliant high/low electric water cooler. Provide fire rated assemblies where required. Provide ADA compliant signage at each door leading into adjacent spaces. Provide HVAC.
 12. Lunch Room & Vending - 1,415 s.f.; B009, B010: Provide a designated vending area within this space. Finishes are as follows: Floor finish to be vinyl composite tile on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be suspended acoustical tile system. All doors in this space to be of painted hollow metal double door and frame construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 13. Custodial Room #1 - minimum 25 s.f.; B011: Floor finish to be epoxy paint on concrete substrate. Wall finish to be epoxy paint on CMU construction. Ceiling finish to be open to above. Provide mop sink and shelving. All doors in this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
 14. Women's Shower & Locker Room - 540 s.f.; B012: Provide fixture count for (1) ADA compliant toilet compartment, (2) standard toilet compartments, (3) ADA compliant lavatories, (1) 36" x 36" ADA compliant shower stalls, (2) 36" x 36" standard shower stalls, (38) 15"w x 18"d x 72"h single tier louver lockers, with sloped tops. Mount lockers to 4 in. high concrete curb. Provide adequate linear bench space to accommodate the maximum number of women working in one shift with number to be verified by the Design/Builder through the Authority Representative. Finishes are as follows; Ceramic tile floor finish, sloped to drain. Wall finish to be full height glazed CMU construction. Ceiling finish to be painted water resistant gypsum board construction. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 15. Car Wash Room - 350 s.f.; B014: Provide space for car wash equipment. Finishes are as follows; Wall finish to be epoxy paint on full height CMU construction. Ceiling finish is open to above. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide

ADA compliant signage at each door leading into this space. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.

16. General Storage Area: B015: Open storage space separated by mesh partition enclosure and gates. In addition, secure areas around all vehicle lifts within the general storage areas with mesh partition enclosures and gates. Maintain an unobstructed path of travel for egress purposes and designated forklift aisle. Provided painted yellow floor striping to identify designated egress paths.
17. Existing Unisex Restroom #1; B016: This space to receive new finishes as follows; Vinyl composite tile floor finish. Painted wall finish. Painted ceiling finish. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
18. Existing Storage - B017: This space to receive new finishes as follows; Vinyl composite tile floor finish. Painted wall finish. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Painted ceiling finish. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and door construction. Provide ADA compliant signage at each door leading into this space.
19. Existing Drug Testing; B018: This space to receive new finishes as follows; Vinyl composite tile floor finish. Painted wall finish. Painted ceiling finish. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
20. Existing Elevator Lobby; B019: This space to receive new finishes as follows; Vinyl composite tile floor finish. Painted wall finish. Painted ceiling finish. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and door construction. Remove existing passenger elevator and provide a new front loading with three stops, ADA compliant, 2500 lb. passenger elevator. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
21. Existing Elevator Equipment Room; B020: All entry doors to this space are to be of painted hollow metal frame and door construction. Provide ADA compliant signage at each door leading into this space.
22. Existing Office, Graphics; B021, B024, B025: This space to receive new finishes as follows: Ceiling finish to be suspended acoustical tile system. Painted wall finish. Floor finish to be carpet on concrete substrate. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.

23. Existing Custodial Room; B022: All entry doors to this space are to be of painted hollow metal frame and door construction. Provide ADA compliant signage at each door leading into this space.
24. Existing Stair #2; B023: Floor finish to be epoxy paint on concrete substrate. Wall finish to be epoxy paint on full height CMU construction, patch as required to like new condition. Ceiling finish to be painted gypsum board construction, patch as required to like new construction. Patch wall, ceiling and floor as required providing a sound, clean substrate suitable for installation of new work. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
25. Existing Communication, Tele & Server Rooms; B026, B027, B028: All entry doors to this space are to be of painted hollow metal frame and door construction. Provide restricted access to this space. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
26. Electrical Room - 100 s.f.; B031: Provide restricted access to this space. Finishes are as follows: Floor finish to be sealed concrete substrate. Wall finish to be epoxy paint on full height CMU & concrete construction. Ceiling finish to be open to above. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
27. Stair #3; B032: Provide fire rated exit enclosure with an area of refuge. Stair system to be reinforced poured concrete with equally spaced risers and treads with two intermediate landings. Finishes are as follows: Floor finish to be sealed concrete substrate. Wall finish to be epoxy paint on full height CMU & concrete construction. Ceiling finish to be painted gypsum board construction. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
28. Freight Elevator; B033: Provide ADA compliant 12,000 lb, hydraulic, front and rear opening freight elevator with center doors, three stops, freight elevator that vertically connects the receiving area with the ground floor shop area and basement general storage area. Adjacencies with receiving, ground floor open shop area, and basement general storage. The freight elevator shall be sized to safely accommodate at least one forklift with a 4 ft. by 4 ft. loaded pallet and an operator.
29. Freight Elevator Equipment Room; B034: Size per manufacturer's recommendations and per ASME. Finishes are as follows: Floor finish to be sealed concrete substrate. Wall finish to be epoxy paint on full height CMU & concrete construction. Ceiling finish to be open to above. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
30. Existing Hoist Equipment / MCCT Room – 675 s.f.; B035: As a result of extensive structural demolition required in this area to accommodate the new rail extension, all existing utilities in this space shall be rerouted with as minimum interruption as possible to existing active services. This work shall be coordinated and performed with prior written approval from the Authority Representative. Floor finish to be sealed concrete. Wall finish to be epoxy paint on concrete. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
31. Electrical Equipment Room: - 760 s.f.; B036: Provide space for a new electrical motor-control center and equipment. Floor finish to be sealed

- concrete. Wall finish to be full height CMU. Entry door to this space to be of painted hollow metal double door and frame construction. Provide restricted access to this space. Provide ADA compliant signage at each door leading into this space.
32. DC Switchgear Room - 200 s.f.; B037: Floor finish to be sealed concrete. Wall finish to be full height CMU. Entry door to this space to be of painted hollow metal door and frame construction. Provide restricted access to this space. Provide ADA compliant signage at each door leading into this space.
33. Storage Room – 510 s.f.; B038: Floor finish to be sealed concrete. Wall finish to be epoxy paint on concrete. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.

B. Ground Floor:

1. Coordinate location of equipment, room layouts, system connections and space functional requirements with WMATA Standards and RAIL Operations through the Authority Representative.
2. Reprogram space functions for open shop, and administrative support as a result of new lifts and track work.
3. Provide a rated means of egress from the basement and mezzanine levels to an exit discharge and public way.
4. ADA Passenger Elevator: Remove existing elevator and associated systems and replace with new ADA compliant passenger elevator.
5. All existing floors, ceilings and partitions to receive new finishes shall be leveled, filled and patched by the Design/Build Contractor with appropriate compound required to provide a sound, clean substrate suitable for installation of new work.
6. Receive prior approval from the Authority Representative before cutting and patching. Use materials identical to existing materials. If identical materials are not available, or cannot be used, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials for cutting and patching that will result in equal or better performance characteristics.
7. All partitions that separate the office space functions from the shop space functions shall be of cmu construction. Where gypsum board is identified in office spaces that are adjacent to shop areas, the intent is for interior walls to be gypsum board and metal stud construction and the perimeter walls that are adjacent to shops are of cmu construction with gypsum board furring occurring at the office side only.
8. Stair #2 - 205 s.f.; B101: Provide fire rated exit enclosure. Stair system to be a prefabricated and pre-finished metal stair system with equally spaced risers and treads with two 180 degree intermediate landings per floor. Finishes are as follows: Floor finish to be vinyl composite tile on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be painted gypsum board construction. Entry door to this space to be of painted hollow metal door and frame
9. Vestibule - 110 s.f.; B102: Provide fire rated exit enclosure. Finishes are as follows: Floor finish to be vinyl composite tile on concrete substrate with recessed entry floor matting system. Wall finish to be epoxy paint on full height CMU and gypsum board furring construction. Ceiling finish to be painted gypsum board construction. Base board finish to be 4 rubber base. Exterior entry door to this space to be of a pre-finished metal store front system to match existing exterior windows with perimeter weather seal and

- threshold. Provide HVAC.
10. Lan Server Room - 95 s.f.; B103: Finishes are as follows: Floor finish to be anti-static vinyl composite tile on concrete substrate. Wall finish to be paint on full height CMU and gypsum board furring construction. Base board finish to be 4 rubber base. Ceiling finish to be suspended acoustical tile system. Entry door to this space to be of painted hollow metal door and frame. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 11. Chief Operation Room - 165 s.f.; B104: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide mini-blinds at exterior window. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 12. Supervisor of Rail Transportation - 192 s.f.; B105: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide mini-blinds at exterior window. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 13. Rail Supervisor - 173 s.f.; B106: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide mini-blinds at exterior window. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 14. Corridor #2; B107: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Door to this space to be of painted hollow metal door and frame construction with sidelight. Provide weather seal and threshold at doors leading into the open shop area. Provide ADA compliant signage at each door leading into adjacent spaces. Provide HVAC.
 15. Copy Clerk - 125 s.f.; B108: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 16. Office #3 - 145 s.f.; B109: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide ADA compliant signage at each

- door leading into this space. Provide HVAC.
17. Elec/Tele Room - 32 s.f.; B110: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
 18. Office #4 - 145 s.f.; B111: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 19. Elevator Lobby - 325 s.f.; B112: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted full height gypsum board construction. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide perimeter weather seal and threshold at doors leading into the open shop area. Remove existing passenger elevator and provide a new ADA compliant, 2500 lb. passenger elevator. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 20. Men's Room – 215 s.f.; B113: Provide fixture count for (1) ADA compliant toilet compartment, (1) ADA compliant urinals, (1) standard urinal, (2) ADA compliant lavatories, Finishes are as follows; Ceramic tile floor finish, sloped to drain. Wall finish to be full height glazed CMU construction. Ceiling finish to be painted water resistant gypsum board construction. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 21. Women's Room - 215 s.f.; B114: Provide fixture count for (1) ADA compliant toilet compartment, (2) standard toilet compartments, (2) ADA compliant lavatories, Finishes are as follows; Ceramic tile floor finish, sloped to drain. Wall finish to be full height glazed CMU construction. Ceiling finish to be painted water resistant gypsum board construction. Base board finish to be 4 inch rubber base. All entry doors to this space are to be of painted hollow metal frame and louver door construction. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 22. Assistant Supervisor Car Inspector 1 & 2; - 125 s.f. each; B115, B117. Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide ADA compliant signage at each door leading into this space. Provide HVAC. Adjacencies with Inspection Office.
 23. Custodial Room #2 - 35 s.f.; B116: Floor finish to be vinyl composite tile on epoxy paint on concrete substrate. Wall finish to be epoxy paint on gypsum board construction. Where partition separates space interior from adjacent shop interior, wall finish to be painted gypsum board furring on full height CMU. Ceiling finish to be open to above. Provide mop sink and shelving. All

- doors in this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
24. Inspection Office - 282 s.f.; B118: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Where partition separates office space interior from adjacent shop interior, wall finish to be painted gypsum board furring on full height CMU. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Provide built-in counter with sliding glass opening into shop area. Provide ADA compliant signage at each door leading into this space. Provide HVAC. Adjacencies with Assistant Supervisor Car Inspector 1 & 2.
 25. Coat Closet #1 - 12 s.f.; B119: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Floor finish to be padded carpeting on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted bi-folding wood door and frame construction with built-in shelving. Provide ADA compliant signage at door leading into this space.
 26. Corridor #3; B120: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted full-height gypsum board construction. Where partition separates office space interior from adjacent shop interior, wall finish to be painted gypsum board furring on full height CMU. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry doors to this space to be of painted hollow metal door and frame construction. Provide ADA compliant high/low electric water cooler. Provide perimeter weather seal and threshold at doors leading into the open shop area. Provide ADA compliant signage at each door leading into adjacent spaces. Provide HVAC.
 27. Operator's Lounge - 662 s.f.; B121: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Where partition separates office space interior from adjacent shop interior, wall finish to be painted gypsum board furring on full height CMU. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction. Adjacencies with Depo-Clerk and interior corridor with visual (borrow-life) connection between both. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 28. Depo Clerk Office - 270 s.f.; B122: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted gypsum board construction to underside of suspended grid system. Where partition separates office space interior from adjacent shop interior, wall finish to be painted gypsum board furring on full height CMU. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame construction with sidelight. Adjacencies with Operator's Lounge. Provide built-in counter with sliding glass opening into Operators Lounge. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
 29. Storage #1 - 80 s.f.; B123: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be painted full-height

- gypsum board construction. Floor finish to be vinyl composite tile on concrete substrate. Base board finish to be 4 inch rubber base. Entry door to this space to be of painted hollow metal door and frame. Provide ADA compliant signage at each door leading into this space.
30. S & I Bench Work; B124: Remove all work benches and equipment from existing shop areas B128 and B126 and relocate to new S & I Bench Work area B124. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate.
31. S & I Shop; B125: Remove all existing equipment from the area and relocate to Greenbelt, other locations within Brentwood, other locations as defined by WMATA, or scrap as programmed. Install three (3) new Service and Inspection (S & I) tracks (designated as track 9A, 9B and 9C) within column lines D-F. All new tracks shall align and connect with existing track within the Brentwood Yard as required. Provide the installation of six (6) sets of married pair vehicle lifts with spinning posts on the three (3) new tracks, with each track holding two married pairs. Provide two (2) new east-west tracks connecting the existing truck release tracks from Track 9 near column lines D11 and D15 to the Truck Dismantling area (B129). Install two (2) new overhead rail car stinger systems between the new tracks with one system centered between Tracks 9A and 9B and the other centered between Tracks 9B and 9C. The stinger systems shall extend from column lines 1 to 18. The new Service and Inspection track area is to be provided with sufficient lighting, compressed air outlets, electrical and welding receptacles to support the equipment and shop functions within the S & I Area. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate. Provide a minimum clearance of 11'-1" from finish ground floor elevation to the lowest obstacle beneath the mezzanine level between column grid lines D & F. Provide (3) overhead coiling doors, center on track work & mounted on the exterior face of the South Elevation. Provide (3) overhead sectional doors, center on track work at the North Elevation. All overhead doors to match existing overhead door requirements. Provide 6 in. diameter concrete filled steel bollards at both sides of overhead doors on interior and exterior side of door. Provide vehicle lifts as shown on the drawings.
32. Open Shop Area; B126: Remove existing equipment from this area and relocate according to the Program. Repair flooring as required and install equipment within this area as directed by WMATA. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate.
33. Open Shop Area; B127: Remove existing equipment from this area and relocate according to the Program. Repair flooring as required and install equipment within this area as directed by WMATA. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor

- finish to be epoxy paint on concrete substrate.
34. Machine Shop; B128: Remove existing equipment from this area and relocate according to the Program. Repair flooring as required and install equipment within this area as directed by WMATA. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate.
35. Truck Dismantling; B129: Remove existing equipment and trackwork from the area as required. Install two (2) new motorized turntables within this area connecting to the new east-west truck release tracks installed in area B125, and the two existing truck release tracks from Track 11, as shown on the Plan views. Install a new north-south track adjacent to column line G to provide a direct connection between the two new turntables. Install equipment within the area as directed by WMATA. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate.
36. Receiving – 2,100 s.f.; B131: Finishes are as follows: Ceiling finish to be open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete substrate. Provide (2) 8 foot wide by 10 foot high overhead section doors at dock receiving. Provide (1) 10 foot wide by 10 foot high overhead coiling door at ramp entrance. Provide 6 in. diameter concrete filled steel bollards at both sides of overhead coiling doors on interior and exterior side of door. All overhead doors to match existing overhead door requirements. Provide (2) in pit dock levelers, center levelers with overhead section doors. Provide ADA compliant high/low electric water cooler. Provide exterior dock bumpers. Provide a prefabricated exterior stair system of equal risers and treads that leads from the receiving area to grade for easy parcel driver access. Provide interior stairs that connects the ground floor receiving area with the basement general storage area. Exterior entry door to this space to be of painted hollow metal door and frame construction with a 24"w. x 36"h. glass light vision panel.
37. Unisex Restroom #2 – 68 s.f.; B132: Provide fixture count for (1) ADA compliant toilet compartment, (1) ADA compliant urinal, (1) ADA compliant lavatory. Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be full height glazed CMU construction. Floor finish to be epoxy paint on concrete substrate. Entry door to this space to be of painted hollow metal door and frame construction. Adjacencies with receiving. Provide ADA compliant signage at each door leading into this space.
38. Stair #3; B133: Provide fire rated exit enclosure. Stair system to be reinforced poured concrete with equally spaced risers and treads with two intermediate landings. Finishes are as follows: Floor finish to be sealed concrete substrate. Wall finish to be epoxy paint on full height CMU & concrete construction. Ceiling finish to be painted gypsum board construction. Entry door to this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.

39. Waste Oil Storage; B134: Finishes are as follows: Ceiling finish open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete. Provide area of full containment with a 2 inch curb or recessed slab according to applicable environmental regulations. Provide proper venting and explosion proof electrical fixtures, as required by applicable building codes and regulations. Finishes are as follows: Entry door to this space to be of painted hollow metal door and frame. Provide ADA compliant signage at each door leading into this space.
40. Custodial #3 – min. 45 s.f.; B135: Floor finish to be epoxy paint on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be open to above. Provide mop sink and shelving. All doors in this space to be of painted hollow metal door and frame construction. Provide ADA compliant signage at each door leading into this space.
41. Receiving Office – 160 s.f.; B136: Finishes are as follows: Ceiling finish to be suspended acoustical tile system. Wall finish to be epoxy paint on full height CMU construction. Floor finish to be epoxy paint on concrete substrate. Entry door to this space to be of painted hollow metal door and frame construction. Adjacencies with receiving with visual (borrow-lite) connection between. Provide ADA compliant signage at each door leading into this space.
42. Ramp; B137: Floor finish to be epoxy paint on concrete substrate. Wall finish to be epoxy paint on CMU construction. Ceiling finish to be open to above. Provide 42 inch minimum wall height when there is no adjacent room.
43. Battery Room; B138: Finishes are as follows: Ceiling finish open to structure above. Wall finish to be epoxy painted full-height CMU construction. Floor finish to be epoxy paint on concrete. Entry door to this space to be of painted hollow metal door and frame. Provide restricted access to this space. Provide ADA compliant signage at each door leading into this space. Provide area of full containment with a 2 inch curb or recessed slab. Provide proper venting and explosion proof fixtures, as required by applicable regulations. Provide floor drain and eye wash station. Floor drain to connect to a separate collection system required by code.
44. Open Shop Area; B139: Remove existing equipment and refinish the floor as required. Floor finish to be epoxy paint on concrete.
45. Freight Elevator; B140: Provide ADA compliant freight elevator 12,000 lb, hydraulic, front and rear opening with center doors, three stops, freight elevator that vertically connects the receiving area with the ground floor shop area and basement general storage area. Adjacencies with receiving, ground floor open shop area, and basement general storage. The freight elevator shall be sized to safely accommodate at least one forklift with a 4 ft. by 4 ft. loaded pallet and an operator.
46. Wheel Truing Machine (WTM): Provide equipment and man-power to assist the manufacturer with the installation of a new lathe-type, single axle, underfloor wheel truing machine system on Track 9A at approximately column line 11. The wheel truing machine shall be a new Hegenscheidt Model U-2000. The Contractor shall develop machine location and pit configuration designs to maximize machine and machine pit clearance from Track 9B and rail cars located on Track 9B. Provide the electrical, grounding rods, handrails and pit stairs to support the equipment and the operation. Wheel truing chips shall be directed to and accumulated in easily accessible hoppers located in the basement of the facility. The Wheel Trueing Machine will require 480V- 3 Phase power. The WTM weighs approximately 37,500

#

#

lbs. and will require a machine pit depth of 7.9'. Space allocation required for the WTM is 20' x 21.5' minimum.

C. Mezzanine Floor:

1. Coordinate location of equipment, room layouts, system connections and space functional requirements with WMATA Standards and RAIL Operations through the Authority Representative.
2. The mezzanine level is to be connected to the ground level with existing and new egress stairs, and a new ADA compliant passenger elevator.
3. The entire mezzanine level is to have the following work provided: Existing ceiling grid system to remain, replace all existing ceiling tile with new. Patch and repair all gypsum board finishes to like new construction, prime and paint. Replace all existing base with new 4 inch rubber base. Replace existing carpeting and pad system with new. In offices with exterior windows, replace all window treatment with new. Prime and paint all metal doors and frames. Provide new light fixtures and mechanical diffusers. Provide ADA compliant signage at each door. HVAC.
4. All existing floors, ceilings and partitions to receive new finishes shall be leveled, filled and patched by the Design/Build Contractor with appropriate compound required to provide a sound, clean substrate suitable for installation of new work.
5. Receive prior approval from the Authority Representative before cutting and patching. Use materials identical to existing materials. If identical materials are not available, or cannot be used, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials for cutting and patching that will result in equal or better performance characteristics.
6. Train Control Equipment Room Annex - 610 s.f.; B204A: Expand existing Train Control Equipment room towards the East as shown on the drawings. Entry door to this space to be of painted hollow metal double door and frame. Provide restricted access to this space. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
7. Stair #2 - 205 s.f.; B212: Provide fire rated exit enclosure. Stair system to be a prefabricated and pre-finished metal stair system with equally spaced risers and treads with two 180 degree intermediate landings per floor. Finishes are as follows: Floor finish to be vinyl composite tile on concrete substrate. Wall finish to be epoxy paint on full height CMU construction. Ceiling finish to be painted gypsum board construction. Entry door to this space to be of painted hollow metal door and frame. Provide ADA compliant signage at each door leading into this space. Provide HVAC.
8. Open Office Space; B213: Recover square footage of open office space as result of Train Control Equipment Room Annex by demolishing existing partition and associated systems along column line 2 at the existing area originally identified as Supervisor of Material Control on the existing conditions - reference set of drawings.

1.05 SHADY GROVE PROGRAM:

A. Basement Floor: not applicable

B. Ground Floor:

1. Coordinate location of equipment, room layouts; system connections and

- through the Authority Representative.
2. Inspection/Repair Area - 41,333 s.f.: Provide fire equipment cabinets as required by code. Provide the installation of two (2) sets of married pair vehicle lifts with car body hoists and motorized turntables positioned for ease of access to adjacent truck repair area, installation of two (2) sets of married pair vehicle lifts with spinning posts, two tracks holding two married pairs each track with posted rail and pitted to a depth of 4' 6" from the top of the posted rail & platforms installed at vehicle floor height to access the interior of the vehicles. The inspection track pits shall be provided with sufficient ventilation, lighting, compressed air outlets, electrical and welding receptacles, to support the equipment and shop functions throughout the Inspection /Repair Area. Truck Repair hoists shall be installed as shown and new trackwork and motorized turntables shall be provided to enable truck movement throughout the area and into the storage area and the loading dock. Additionally, track shall be installed from the truck repair area to a new motorized turntable between column lines 8 and 9. Track shall extend from this new turntable into the existing building to existing Track 6 such that trucks or wheel sets can be moved between the existing and new shop areas. All new track shall align with existing track as required. A 15 ton overhead crane shall be installed to service the truck repair hoist area. A new jib crane shall be provided at the existing truck hoist located at Shop Area 121. Install two (2) new rail car stinger systems, one located between and servicing cars on the two new hoist tracks, and one system located between and servicing cars on the two new posted rail tracks. Provide appropriate equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions. Provide trench drains at exterior in front of all overhead service doors. Provide floor drains throughout Inspection/Repair Areas, hoist pits and access chases. Provide bridge crane over truck repair area. Provide six (6) LAN connections for workstations distributed in separate locations where directed by the Authority Representative.
 3. Office – 900 s.f.: General offices enclosed with concrete masonry unit walls and borrow lites to observe the Inspection/Repair space. Provide lighting, power, phone and data connections to serve cubicle style layouts.
 4. Small Parts Storage - 4,290 s.f.: Secure with wire mesh partition and 6 ft. wide gates. Procure and install a component parts storage system comprising a combination of pallet rack shelving, cantilever rack systems, bin type shelving, secure shelving systems and vertical carousel shelving systems, as defined by WMATA.
 5. Men's Toilet - 210 s.f.: Provide ADA compliant layout, fixtures and toilet accessories in quantity to accommodate the maximum number of men working day shift. Slope tile floors to drain to floor drain(s) in toilet area. Use glazed CMU units at interior side of room.
 6. Women's Toilet - 225 s.f.: Provide ADA compliant layout, fixtures and toilet accessories in quantity to accommodate the maximum number of women working day shift. Slope tile floors to drain to floor drain(s) in toilet area. Use glazed CMU units at interior side of room.
 7. Elevator Equipment Room – 50 s.f.: Room for enclosure of elevator controls and hydraulic pump. Provide vent to exterior.
 8. Boiler Room - 400 s.f.: New room for location of additional boiler equipment and controls. Provide 42" entry door for access and removal of equipment.
 9. Relocated Fan Room - 480 s.f.: New room similar to existing and utilizing existing equipment if possible with new intake chase routed to exterior.

10. Blow Pit (Expansion) - 3,140 s.f.: Extend the existing blow pit facility to the south-east such that the new combined blow pit facility can accommodate two (2) married pairs of cars, one married pair on each track. The expanded blow pit facility shall be designed to be similar in configuration to the existing blow pit area. Provide restricted access to this space. Extend the existing rail car stinger system from the existing blow pit into the new blow pit facility. Provide continuous removable railings along perimeter of pit areas and stairs to pits. Remodel existing space as indicated with lower pit slab, elevated working platforms, access doors and overhead doors to the exterior and replacing existing units at the interior. Provide continuous pit slab and trench drains below tracks from existing to addition. Provide appropriate lighting, equipment venting, electrical service, water supply/drainage, natural gas supply and compressed air supply to support the equipment and shop functions.
11. Storage - 275 s.f.: Space for general storage and Blow Pit equipment.
12. Loading Dock: replace existing Loading Dock with new layout including dock leveler as indicated.
13. Passenger Elevator: Hydraulic 2500 pound minimum, two-stop unit to be ADA compliant.

C. Mezzanine Floor:

1. Women's Lockers: Remodel Women's Lounge within the locker space to expand layout for new locker and bench units. Provide one locker for each employee. Mount lockers to 4 in. high concrete curb. Provide adequate linear bench space to accommodate the maximum number of women working in one shift with number to be verified by the Design/Builder through the Authority Representative.
2. Men's Lockers: Remodel the locker space to expand layout for new locker and bench units. Provide one locker for each employee. Mount lockers to 4 in. high concrete curb. Provide adequate linear bench space to accommodate the maximum number of men working in one shift with number to be verified by the Design-Builder through the Authority Representative.
3. Lunch/Meeting Room – 1300 s.f.: Provide an open room for arrangement of tables and chairs. Walls shall be painted gypsum board assemblies, ceiling to 9'-0" high minimum lay-in acoustical tile type. Provide lighting, power, phone and data connections to serve layout.

1.06 CAR MAINTENANCE EQUIPMENT SYSTEMS:

- A. The DB shall coordinate the procurement of equipment for the shops with WMATA that is responsible for the purchasing of such equipment. The following equipment for each location shall be purchased using the specifications that follow, and as included within the Contract Documents.
- B. Greenbelt:
 1. 8 – Truck Repair Hoist System – single truck with spinning posts. Systems to be installed per preferred vendor installation specifications.
 2. 15 – Turntables – motorized. Turntables to be installed per preferred vendor installation specifications.
 3. 2 – Vertical Parts Washer – Better Engineering - #F-6000LX-P. Equipment to be installed per preferred vendor installation specifications.
 4. 4 – Bridge Cranes – 3 ton. Cranes to be installed per preferred vendor installation specifications.

5. 2 – Bridge Cranes – 5 ton. Cranes to be installed per preferred vendor installation specifications.
6. 3 – Bridge Cranes – 15 ton. Cranes to be installed per preferred vendor installation specifications.
7. 6 – Jib Cranes – 2 ton. Jib Cranes to be installed per preferred vendor installation specifications.
8. 4 – Jib Cranes – 5 ton. Jib Cranes to be installed per preferred vendor installation specifications.
9. 1 – Wheel Press – 600 ton double ended – Simmons # SF-620. Wheel Press to be installed per preferred vendor installation specifications.
10. 1 – Tool Room Mill – Haas 30" - # VMC 30. Equipment to be installed per preferred vendor installation specifications.
11. 2 – Tool Room Lathe – Haas 10" - # TL-2. Equipment to be installed per preferred vendor installation specifications.
12. 1 – Vertical Milling Center – Haas - # VF-4. Equipment to be installed per preferred vendor installation specifications.
13. 1 – Grinder 24" – Cone-Blanchard. Equipment to be installed per preferred vendor installation specifications.
14. 1 – Lathe – CNC – American Turnmaster - # CNL-1740-A. Equipment to be installed per preferred vendor installation specifications.
15. 1 – Pressure Washer – Better Engineering - # T-700P. Equipment to be installed per preferred vendor installation specifications.
16. 1 – Storage Equipment System - Systems to be installed per preferred vendor installation specifications.
17. 1 – Dock Lift System - System to be installed per preferred vendor installation specifications.
18. 1 - Fork Lift – Electric with Battery Charger - Systems to be installed per preferred vendor installation specifications.
19. 1 – Shop Work Station - Systems to be installed per preferred vendor installation specifications.
20. 1 – Car Component Repair and Test Equipment System - Systems to be installed per preferred vendor installation specifications.

C. Brentwood:

1. 6 – Car Hoist Systems - Married Pairs with Spinning Posts Systems to be installed per preferred vendor installation specifications.
2. 2 – Turntables – motorized turntables to be installed per preferred vendor installation specifications.
3. 1 – Wheel Truing Machine (WTM) – Underfloor – Hegenscheidt # U-2000 machine will be provided by the Owner and installed by the manufacturer. The Design-BUILDER is required to provide equipment and manpower as required to assist the manufacturer with the installation of the Wheel-Truing Machine at Brentwood Shop. The Owner will provide a design of the foundation plan to the Design Builder showing the arrangement of the machine and the equipment, all interfaces, i.e. dimensions and position of the lathe pit, main supplies, and rail track connection. The structural drawings for the construction of the foundation are the responsibility of the Design Builder.
Considerations need to be established for clearances with existing track, vehicles and walkways.
4. 1 – Fork Lift – Electric with Battery Charger - Systems to be installed per preferred vendor installation specifications.
5. 2 – Dock Lift System - Systems to be installed per preferred vendor

installation specifications.

6. 1 – Storage Equipment System - Systems to be installed per preferred vendor installation specifications.
7. 1 – Cleaning Equipment System – For additional bays - Systems to be installed per preferred vendor installation specifications.
8. 1 – Steam Pressure Washer System – For additional bays - Systems to be installed per preferred vendor installation specifications.
9. 4 – Prefabricated Storage Building Systems - Systems to be installed per preferred vendor installation specifications.
10. 2 – Material Lift Systems - Systems to be installed per preferred vendor installation specifications.
11. 1 – Shop Work Station - Systems to be installed per preferred vendor installation specifications.
12. 1 – Car Component Repair and Test Equipment System - Systems to be installed per preferred vendor installation specifications.
13. 1 – Jacking Carriage System - Systems to be installed per preferred vendor installation specifications.

D. Shady Grove:

1. 2 – Car Hoist Systems - Married Pairs with car body posts. Systems to be installed per preferred vendor installation specifications
2. 2 – Car Hoist Systems - Married Pairs with spinning posts. Systems to be installed per preferred vendor installation specifications.
3. 9 – Turntables – motorized. Turntables to be installed per preferred vendor installation specifications.
4. 1 – Jib crane – 5 ton. Jib Crane to be installed per preferred vendor installation specifications.
5. 2 – Truck Repair Hoist Systems – Single truck with spinning posts. Systems to be installed per preferred vendor installation specifications.
6. 1 – Steam Cleaner Pressure Washer System – For expanded Blow Pit. Systems to be installed per preferred vendor installation specifications.
7. 1 – Storage Equipment System - Systems to be installed per preferred vendor installation specifications.
8. 1 – Bridge Crane – 3 ton - Systems to be installed per preferred vendor installation specifications.
9. 1 – Fork Lift – Electric with Battery Charger - Systems to be installed per preferred vendor installation specifications.
10. 1 – Dock Lift System - Systems to be installed per preferred vendor installation specifications.
11. 1 – Shop Work Station - Systems to be installed per preferred vendor installation specifications.
12. 1 – Car Component Repair and Test Equipment System - Systems to be installed per preferred vendor installation specifications.
13. 1 – Jacking Carriage System - Systems to be installed per preferred vendor installation specifications.

1.07 ARCHITECTURAL SYSTEMS:

- A. Design-Builder to coordinate specifications for architectural systems with the WMATA Standard Specifications, the Authority Representative, codes and regulations of the jurisdictional authorities, and with the following criteria:

1. 03450 - Architectural Precast Concrete: Precast concrete panels shall match appearance of the existing building. The details for matching the existing

- appearance will be developed during the design phase of the Design-Build contract.
2. 04215 - Brick Masonry: Face brick system to match appearance of the existing building. The details for matching the existing appearance will be developed during the design phase of the Design-Build contract.
 3. 04222 - Concrete Unit Masonry: Provide CMU partitions typically at interior walls, exterior cavity walls, and column surrounds where indicated. Provide units in size and rating as required.
 4. 05500 - Miscellaneous Metal: Provide 6 in. dia. steel bollards both sides of overhead coiling doors on interior and exterior side of door. Provide bollards at gas meters and one bollard on each side of shop floor control stations parallel to track. Provide 48 in high, steel corner guards on all corners of CMU partitions and column covers.. Provide stair nosings at all concrete stair threads. Provide ladder to roof hatch.
 5. 05521 - Handrails and Railings: Provide painted steel handrails and railings with at stairs. Provide painted steel removable safety railings without insert panels along edge of platforms, Inspection Pits and Equipment Lifts; refer to WMATA Design Directive Drawings for details.
 6. 05531 - Gratings and Floor Plates: Provide galvanized steel grating at air wells and non-skid, non corrosive steel plates at shop floor. Provide access floor hatches were required for shop equipment.
 7. 05810 - Expansion Joint Cover Assemblies: At exposed concrete floors, provide flat recessed abrasive cover plate. At finished floors, provide recessed plate to receive full thickness of flooring material.
 8. 05811 - Expansion Joint Systems: At precast concrete and CMU walls, provide extruded preformed seals in color selected by the Authority Representative.
 9. 06100 - Rough Carpentry: Provide wood framing, furring, nailers, and blocking as required.
 10. 06402 - Interior Architectural Woodwork: Interior Architectural Woodwork: High-pressure decorative laminate counter tops and cabinets, coordinate pattern and color with the Authority representative. Provide satin finish, stainless steel hardware.
 11. 07125 - Waterproof Membrane: At basement foundation walls, equipment pits, and pit access chases install membrane waterproofing system with insulating protection board. Also provide inspection report as well as patching of existing waterproofing system in the existing building Basement. Membrane waterproofing system shall come with the manufacturer's standard warranty to keep basement dry and free from water infiltration for a twenty (20) year period.
 12. 07210 - Building Insulation: Provide tapered insulation board if roof decking is flat; slope 1/4" per foot. Provide rigid insulation in total thickness to provide R-30 rating. Install loose-fill insulation or block fitted rigid insulation into CMU walls between conditioned spaces and unconditioned spaces. Provide 1" rigid board insulation with proper air space at masonry cavity walls.
 13. 07415 - Metal Wall Panels: Metal wall panels finished to match existing building panels requirements. The details for matching existing panels will be developed during the design phase of the Design-Build contract.
 14. 07535 - EPDM Roofing: Provide watershed and overflow designs and drains to eliminate ponding and standing water on roof surfaces. Provide specifications and installation of EPDM roofing system which shall come with the manufacturer's standard fifteen (15) year warranty.
 15. 07730 - Roof Accessories: Provide roof access hatch and smoke/heat vents

- as shown or as required; high-performance organic coated aluminum finish.
16. 07900 - Seals and Sealants: Color of sealant to match color of the adjacent curtain wall, window or doorframe.
 17. 08110 - Hollow Metal Doors and Frames: Provide galvanized steel doors and frames on exterior and interior as indicated. Provide insulated exterior doors. Provide vision lites as directed by Authority's Representative.
 18. 08305 - Access Doors and Frames: Wall, ceiling, and floor units as required.
 19. 08331 - Overhead Coiling Doors: Insulated service doors, galvanized steel panels with baked-on enamel finish. Coordinate color with the Authority's Representative. Provide automatic door operation.
 20. 08360 - Upward-Acting Sectional Doors: Provide specifications and installation of insulated service doors, manufacturer's standard glass lites, galvanized steel panels with baked-on enamel finish. Coordinate color with the Authority's Representative. Provide automatic door operation.
 21. 08710 - Finish Hardware: Coordinate door hardware and finish requirements with the Standard Specifications and the Authority Representative.
 22. 08630 - Metal Framed Skylights: Provide aluminum-framed insulated skylights with extruded cellular UV polycarbonate panels where indicated on the drawings.
 23. 08800 - Glass and Glazing: Insulated glass at exterior vision lites and safety glass at interior vision lites; non-tinted. Insulated glass at exterior curtain wall and storefront systems; blue-green tint. Provide opaque glass at spandrel with blue-green tint.
 24. 09255 - Drywall Systems: Interior gypsum board partition, ceiling and framing systems as required.
 25. 09265 - Gypsum Board Shaft wall Assemblies: Vertical shaft and horizontal duct enclosures including metal framing.
 26. 09320 - Tile: Provide specification section and installation of ceramic mosaic wall and floor tile, marble thresholds and miscellaneous trim. Apply tile system at the following areas; Men's Toilet and Shower Rooms, Women's Toilet and Shower Rooms, Men's Locker Room, and Women's Locker Room.
 27. 09511 - Acoustical Panel Ceilings: Mineral base and glass fiber base tile with exposed suspension system as required.
 28. 09650 - Resilient Flooring: Vinyl composition floor tile and base system.
 29. 09680 - Carpet: Tufted and woven commercial carpet and carpet cushion.
 30. 09920 - Field Painting: Paint all CMU surfaces exposed to view, paint interior face of precast concrete panels exposed to view, paint all structural steel and miscellaneous steel exposed to view. Do not paint galvanized steel surfaces, exposed or unexposed unless noted otherwise. Prepare existing surfaces to receive paint finish in remodeled areas as required.
 31. 09971 - Epoxy Mastic Flooring: Provide specification section and installation of epoxy mastic flooring. Floor finish shall be two (2) coats of Gulf Coast Paint PC-636 Low Temperature Curing Epoxy Mastic or approved equal applied to shot blasted concrete slab. Install mastic flooring per the manufacturer's written instruction. Coordinate color selection for the manufacturer's standard colors with the Authority Representative. Apply flooring at the following areas; Inspection/Repair Area, Blow Pits, and hoist pits.
 32. 10155 - Toilet Partitions, Compartments and Screens: Floor-and-ceiling-anchored compartments in stainless steel sheets. Stainless steel anchors, brackets, and hardware. Tile shower compartments with vinyl curtains, stainless steel rods, hooks, grab bars. Provide fold-up shower seat at ADA compliant stalls.

33. 10200 - Metal Louvers: Fixed and adjustable louvers and wall vents as required.
34. 10265 - Impact Resistant Wall Protection: Protection for walls, corners, and door edges.
35. 10505 - Metal Lockers: 12 in. wide x 18 in. deep metal lockers. Provide benches in front of all rows of lockers.
36. 10520 - Fire Protection Specialties: Portable fire extinguishers and fire protection cabinets as required.
37. 10605 - Wire Mesh Partitions: - Manufacturer's standard shop-applied enamel finish with swing and sliding gates/man doors as indicated.
38. 10810 - Toilet Accessories: Provide toilet accessories as scheduled in the standard specifications. Coordinate location and quantity of toilet accessories with the required quantity and type of plumbing fixtures. Coordinate with the example drawings and with the Authority Representative.
39. 11160 - Loading Dock Equipment: Dock bumpers at all elevated docks and dock levelers as indicated.
40. 14200 - Passenger Elevators: Provide ADA compliant hydraulic passenger elevator as described in the preceding Program descriptions.
41. 14215 - Freight Elevators: Provide ADA compliant hydraulic freight elevator as described in the preceding Program descriptions.

END OF SECTION

THIS PAGE NOT USED

PROGRAM CRITERIA

CIVIL

1.01 GENERAL

This section establishes:

- A. The basic design criteria for trackwork and clearances for the Washington Metropolitan Area Transit Authority Metro Rail System.
- B. The basic design criteria for water, sewer, storm drainage, stormwater management, site roadways, and sediment control.

2.01 SURVEY CONTROL

A. HORIZONTAL CONTROL

- 1. It shall be the responsibility of WMATA ENGA to direct the appropriate base control for use in establishing all future WMATA control points to be used for design or construction purposes.
- 2. In general, all new horizontal control points established will be related to the new North American Datum of 1983, as defined by the National Geodetic Survey. Where applicable and or required, local jurisdiction coordinate systems shall prevail. Global Positioning System, GPS, based control may be implemented where applicable. All finalized control must be approved and sealed by a registered land surveyor registered in the appropriate jurisdiction.
- 3. Project survey control points were established from USC&GS. Triangulation Stations. In April, 1974, the National Geodetic Survey (formerly USC&GS.) announced that all triangulation stations in the United States, except Washington, D.C., were readjusted. Since there are significant changes in the final values, a note shall be affixed to the final design plans stating, "The Grid Coordinates and Horizontal Control Values are based on USC&GS. 1971 Field Geographic Positions and Coordinate Values." This provision applies to design plans not using GPS based coordinates.
- 4. The horizontal control for all alignments shall be based on survey control points established under the direction of the WMATA as follows:
- 5. District of Columbia and Maryland Coordinates for control points in the District of Columbia and Maryland that are generally based on the Maryland State Plane Coordinate System, adjusted for scale and elevation to project grid, herein referred to as Project Coordinates.
- 6. To convert project coordinates to Maryland state plane coordinates, multiply the project coordinates by 0.9999430.
- 7. For map showing designation of various coordinate systems by Metro Route see Figure III.1.

B. VERTICAL CONTROL

- 1. All bench marks established shall contain a minimum of one deep bench per half mile of vertical control to be used for construction. The relationship between USC&GS datum and the various datum planes common to the Washington Metropolitan area are as shown on Figure III.4.
- 2. District of Columbia - The vertical control for the District of Columbia is related to the U.S. Coast and Geodetic Survey Mean Sea Level Datum, 1929 General Adjustment. Refer to Figure III.4 for the relationship between District of Columbia and WMATA vertical datums. Coordination shall be made with the D.C. Surveyor's Office.
- 3. Maryland - Bench marks for the lines in Maryland will be based upon the U.S. Coast and Geodetic Survey Mean Sea Level Datum, 1929 General Adjustment.

C. HORIZONTAL AND VERTICAL CONTROL ADJUSTMENTS

1. All new control shall conform to the most current version of Standards and Specifications for Geodetic Control Networks published by the Federal Geodetic Control Committee.
2. Horizontal closures for control traverses shall have a relative accuracy ratio of not less than 1:100,000 (distance accuracy standard) if using GPS.
3. Secondary control traverses used to establish centerline geometry shall have a relative accuracy ratio of not less than 1:50,000.
4. When connecting new GPS based control to the existing control, some modifications may be made to the requirements with consent of WMATA and other governing authorities involved with the project.
5. Computations for all control (horizontal and vertical) shall be prepared under the direction of a professional land surveyor registered in the appropriate jurisdiction and sealed prior to submission to WMATA. Computations will show results in both the U.S. survey foot and in the metric system, for incorporation into the existing WMATA system, and to meet the new requirements of WMATA and other agencies.

3.01 CURVATURE

Circular curves shall be defined by the arc definition of curvature and specified by the radii. Refer to Figure III.5 for circular curve functions and abbreviations.

4.01 TRACKWORK

Metro track materials and special trackwork shall comply with the Design Drawings, Design Criteria and Standard Drawings of WMATA which are based on the current American Railway Engineering and Maintenance-of-Way Association (AREMA) "Manual for Railway Engineering" and "Portfolio of Trackwork Plans".

Railroad trackwork shall comply with current plans and specifications.

A. GAUGE

Metro track gauge shall comply with the criteria in Table 3.1:

TABLE 3.1

HORIZONTAL TRACK ALIGNMENT	Track Gauge
Tangent Track & Curve of Radius $\geq 350'$	4'-8 1/2"
Curve of Radius $<350'$ with restraining rail	4'-9 1/4"

These gauges apply only with standard AAR wheel Gages of 4'-7 11/16" and vehicle axle spacing of 7'-0" and 8'-6" inclusive.

For every 1/4" change in track gauge, the transition in gauge shall be made in a length of track not less than 31" nor more than 62".

B. CONSTRUCTIBILITY AND MAINTAINABILITY OF TRACKWORK

All trackwork design shall be performed with the objective of obtaining an optimum degree of constructibility and maintainability. Alternative analyses of major cost items of trackwork shall be made using life cycle and other analytic procedures which address the following principles

1. Selection of materials, configurations, and tolerances (manufacturing and construction) shall be based on lowest life cycle cost which meets the level of quality established by Metro standards, good engineering practice, and the level of service intended, with consideration of constructibility and maintainability. Key components

shall be standardized to provide interchangeability and reduce maintenance stockpiles.

2. Constructibility shall be considered from initial design development to final detailing. Packaging and scheduling of trackwork procurement and installation contracts shall seek to minimize brokering, periods of inactivity, excessive storage time, re-handling of materials, and interference with other disciplines. Installation contracts shall be staged to maximize trackbed availability, access, and continuity of work. Special consideration should be given to handling of continuous welded rail. Other disciplines should be provided with convenient, adequate staging and storage sites. Selection of materials and configuration of materials should give consideration to the site conditions, and other discipline's skill levels and plant capacity for their affect on the ease of handling and installing materials and the tolerances to be met.
3. Maintainability encompasses the selection of materials and configurations that result in highly durable, easily accessible and easily repaired or replaced components and systems. Durability is achieved by materials which resist wear, fatigue and deterioration due to environmental conditions. Accessibility is achieved by configuring materials, particularly fasteners, and clearances to permit inspection, adjustment, repair and replacement with minimum disturbance to other components. Maximum accessibility should be provided to these components requiring most frequent maintenance. Repairability is achieved by providing materials and configurations which require minimum quality control effort in the field to inspect, adjust, repair or replace, by avoiding complex sequences of steps to mix, place, cure, tighten, finish, or adjust and which require minimum tolerance to be acceptable.
4. Where a conflict between constructibility and maintainability occurs, preference shall be given to maintainability. Within maintainability, preference shall be given to durability over accessibility and repair ability.

C. TURNOUTS

Refer to Figures III-18 and III-19 for the clearance point and signal location beyond the heel of the frog.

D. CLEARANCES

Clearances between obstructions and the rail car are determined from the dynamic outline. See Figure III-29 for the design vehicle dynamic outline.

The clearance envelope is shown on Design Drawing DD-C-1 "WMATA Rapid Transit Car Clearance Envelope." The clearance envelope is developed from the rail car dynamic outline, and is a composite of the WMATA Design Vehicle, the Rohr Car and the Breda Car. Each of the extreme dimensions of each car have been taken into account in the development of the Clearance Envelope.

The Clearance Envelope is equal to the Dynamic Outline plus 2" (inches). The design of structures and surface sections must accommodate the dynamic outline of the rail car for safe operations.

1. Clearance Definitions:

DW Dynamic Width - Maximum horizontal width of dynamic outline, exclusive of M.O. and E.O. and equal to $DW_A + DW_T$

DW_A Dynamic Width Away - Maximum horizontal distance from the centerline of track to the dynamic outline, exclusive of M.O., on the side of the rail car away from the curve center.

DW_T Dynamic Width Toward - Maximum horizontal distance from the centerline

of track to the dynamic outline, exclusive of M.O., on the side of the rail car toward the curve center.

- M.O.** Mid Ordinate - Distance from the centerline of a curved track to the centerline of the rail car at a point midway between the trucks.
- E.O.** End Overhang - Distance from the centerline of a curved track to centerline of car at each end of the car measured normal to the centerline of the track.
- A_C** Allowance Corded Construction - Measured horizontally.
- C.T.** Construction Tolerance Allowance.
- SW** Safety Walk
- X_A** Structure Centerline Offset - Away from Curve Center
- X_T** Structure Centerline Offset - Toward the Curve Center

Offset is measured from centerline of track.

P.G. Profile Grade Elevation at top of low rail.

Structure Size Factors used in sizing the structure, but not included in the clearance envelope are allowances for chorded construction, construction tolerances and clearances to walls specified by type of cross-section.

2. **Construction Tolerance**
All walls and roof slabs shall have a horizontal and vertical construction tolerance allowance of 1". Fences, piers, columns, light standards and miscellaneous structures shall have a horizontal construction tolerance of $\pm 1"$.
3. **Middle Ordinate Displacement**
Is the horizontal displacement of the center of the side of the design vehicle toward the center of the curve, as it transits a curve of a specific radius. The Middle Ordinate can be calculated for any radius from the formula $M.O. = R - (R^2 - 676)^n$ where R = radius in feet and $n = \frac{1}{2}$. For design purposes, the end overhang and middle ordinate of the vehicle are considered equal. The formula is based on a 75'-0" long vehicle with 52'-0" truck centers. Rounding at car corners has not been considered. The centerline radius of the curve should be reduced by half of the width of the car plus the dynamic outline.
4. **Clearance Envelope below Top of Rail**
Refer to Figure III-28 to determine the clearance envelope for structures below the top of rail in ballasted track.
5. **Minimum Clearances from the Dynamic Outline**
Fixed surfaces and installations shall be located so as to provide the following minimum clearances:

Table 3.4
Minimum Clearances from the Dynamic Outline

Description of Location	Clearance Distance
Between the face of wall and the dynamic outline	6"
Between the roof surface and the dynamic outline	4"
Between any fixed installation (e.g., pipes, pipe hangers, pipe supports, signals, lighting fixtures, air conditioning units, etc.) and the design vehicle dynamic outline.	2"

Minimum Clearances from the Dynamic Outline

Description of Location	Clearance Distance
Between light standards and the design vehicle dynamic outline.	4"
Between existing adjacent intermittent columns and existing point restrictions, and the dynamic outline	6"
Between new adjacent intermittent columns and new point restrictions, and the dynamic outline	2'-0"
Between top of low rail to the under-clearance point of overhead structure.	13'-0"
Between track centers.	14'-0"
Between top of rail and bottom of new bridges spanning the right-of-way	15'-0"

Note: Wherever possible, installations shall be dimensioned and located so that maximum distances are obtained between these and the dynamic outline along tangent and curved alignments.

6. Turnout Clearances

The horizontal offsets from centerline of track to the design vehicle dynamic outline as shown on Figures III.63 and III.64 have been determined graphically from a plan drawn at a scale of 1" = 1'-0". In developing these offsets it has been assumed that the design vehicle is on a tangent track as it approaches the turnout and as it leaves the turnout. It is also assumed that the vehicle is operating on track that is not superelevated. If the turnout is from a curved track, the values shown on Figures III.63 and III.64 must be adjusted to compensate for additional clearance required for curvature.

7. Clearances Diagrams

The clearance requirements for surface track sections are indicated in Figure III.54.

8. Design Tables

The tabulated values for the horizontal dimensions A, T, A_s, and T_s, measured from centerline of track to inside face of wall, are shown in Figures III-56 and III-61. Linear interpolation is to be used for values of radii and superelevation intermediate to those shown in the tables.

The increase of A, T, A_s, and T_s, from a tangent condition to a curved condition shall be applied and removed linearly over 100 feet, beginning at a point on the tangent 125 feet prior to the P.C. Full width required on the circular curve shall be reached at a point on the tangent 25 feet before the S.C. and maintained 25 feet after the C.S.

5.01 ADDITIONAL TRACKWORK - Ties, Derails, Bumping Posts

A. TIE SPACING

Wood ties will be used in ballasted track. Wood ties shall be spaced 30 inches center-to-center in yard track. Yard tracks with radii less than 350 feet shall use 24 inch tie spacing. Only wood ties shall be used in ballasted special trackwork units and they shall be spaced in accordance with the trackwork Standard Drawings. Except in special trackwork units, every fourth tie shall be a contact rail tie.

B. DIRECT FIXATION RAIL FASTENER SPACING

Concrete trackbed reinforcing steel shall be designed to provide the anchorage clearance envelopes shown on the Design Drawings and in such manner as to permit the following direct fixation rail fastener spacing of 33 inches in yard track

C. BUMPING POSTS

A bumping post shall be installed at the end of each stub end track. The minimum distance between the face of bumping post when uncompressed and the end of track shall be 14'-6".

D. APPROACH SLABS

An approach slab shall be provided at all transitions between direct fixation and ballasted track construction.

6.01 BASIC DESIGN CRITERIA

A. GREENBELT AND SHADY GROVE YARD

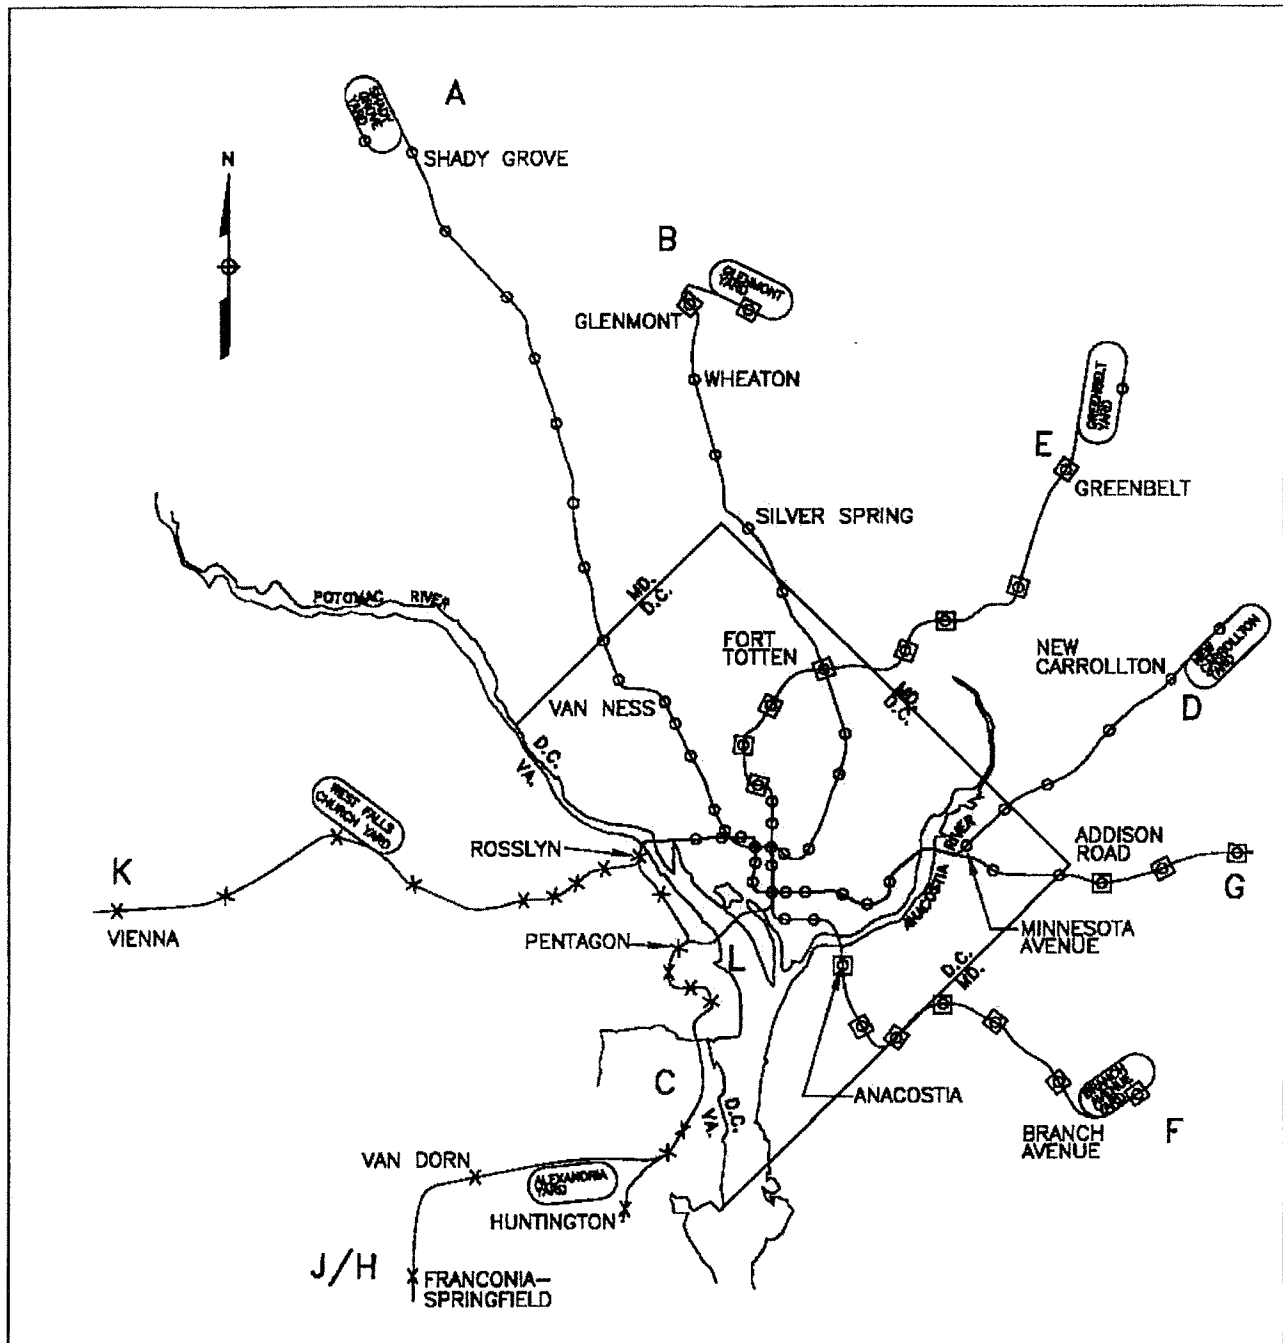

1. Water and Sanitary Sewer Systems - All water and sanitary sewer systems, including both WSSC and WMATA on-site systems, shall be designed, approved and constructed in accordance with all requirements of the Washington Suburban Sanitary Commission (WSSC).
2. Stormwater Management, Storm Drainage, and Sediment and Erosion Control - All stormwater management, storm drainage, and sediment and erosion control shall be designed, approved and constructed in accordance with the requirements of the Maryland Department of the Environment (MDE), using jurisdictional Low Impact Development requirements.

B. BRENTWOOD YARD

1. Water, Storm Drainage and Sanitary Sewer Systems - All water, storm drainage and sanitary sewer systems, including both DC WASA and WMATA on-site systems, shall be designed, approved and constructed in accordance with all requirements of the *District of Columbia Water And Sewer Authority (DC WASA)*.
2. Stormwater Management and Sediment and Erosion Control - All stormwater management and sediment and erosion control shall be designed, approved and constructed in accordance with the requirements of the *District of Columbia, Department of Health, Environmental Health Administration, Bureau of Environmental Quality, Watershed Protection Division*.

C. ON-SITE ROADS PARKING LOTS AND OTHER AREAS FOR ALL YARDS

1. All on-site roadways and parking lots and other related items shall be designed, approved and constructed to allow accesses to building facilities, designated loading docks and parking lots as shown on plans and in accordance with the requirements of the jurisdictional agencies, except bituminous paving and materials which shall be in accordance with the standards of the Maryland State Highway Administration.
2. Proposed parking lots at Shady Grove Yard and Greenbelt Yard shall be designed, approved and constructed with new curb and gutter, sidewalk and sidewalk ramps and landscaped island as shown on plans and as specified. Proposed parking spaces at Brentwood Yard shall be created by removing debris and cleaning the designated areas completely, and by striping parking spaces as shown on plans. Adequate accessible parking spaces shall be provided at all yard facilities as per the ADA requirements. All sidewalk ramps shall be designed, approved and constructed per ADA requirements.
3. Proposed Storage and Laydown Area and access road connection near the loop track at Shady Grove Yard shall be constructed with gravel on a well compacted subballast roadbed material.
4. All truck routes or designated areas near loading facilities shall be designed, approved, and constructed with concrete pavement.
5. Timber shall be used for all grade crossings.

- NOTES:
1. THIS DIAGRAM GIVES THE MAXIMUM HORIZONTAL LIMITS OF THE DYNAMIC OUTLINE OF THE STANDARD DESIGN VEHICLE AS IT MOVES THROUGH A NO. 6 TURNOUT FROM A TANGENT RUNNING TRACK.
 2. FOR CLEARANCES BETWEEN THE DYNAMIC OUTLINE AND STRUCTURES OR INTERMITTENT INSTALLATIONS, REFER TO THE CLEARANCE DIAGRAMS IN THE MANUAL OF DESIGN CRITERIA FOR THE PARTICULAR TYPE OF CONSTRUCTION INVOLVED.
 3. IF THE TURNOUT IS MADE FROM A CURVED OR SUPERELEVATED TRACK, THE VALUES SHOWN ON THIS STANDARD MUST BE CORRECTED FOR SUPERELEVATION AND CURVATURE.

PROGRAM CRITERIA

STRUCTURAL

1.01 CODES AND HANDBOOKS

- A. The structural design shall satisfy the requirements of the following:
1. The "Manual of Design Criteria" by the Washington Metropolitan Area Transit Authority (WMATA).
 2. The current edition of the "Manual for Railway and Maintenance-of-Way Engineering", hereinafter referred to as the AREMA Manual.
 3. The current edition of the "Building Code Requirements for Structural Concrete (ACI-318) and Commentary (ACI 318R)" adopted by the American Concrete Institute, hereinafter referred to as the ACI 318 Code.
 4. The current edition of the "Manual of Steel Construction - Allowable Stress Design" by American Institute of Steel Construction, Inc., hereinafter referred to as the AISC Code.
 5. The current edition of the "American Society of Civil Engineers Minimum Design Loads for Building and Other Structures", hereinafter referred to as the ASCE 7. This shall apply where referenced in this 'Design Criteria'.
 6. The current edition of the International Building Code (IBC).
 7. In addition to the above, the latest Building Codes of the local jurisdiction, supplemented by any WMATA requirements, shall apply.
 8. Any special applicable requirements or codes, not listed and in WMATA Criteria or above, should be considered only with the approval of the Authority.
 9. American Society of Testing Materials (ASTM) Standards.
 10. American Welding Society (AWS) Welding Code D 1.1 and D 1.4.
 11. Precast and Prestressed Concrete Institute (PCI) Design Handbook.
- B. In case of conflict among the Codes, the most stringent shall govern.
- C. The Designer shall list the latest edition and/or year of the Standards, Codes and Criteria used in the design.

1.02 LOADS

- A. The following loads shall be the basis for structural design:
1. Dead Load:
 - a. Dead Loads shall comply with IBC.
 2. Capacity of Cranes and Hoists:
 - a. Overhead Traveling Crane 15 Tons
 - b. Body Hoists, Truck Hoists, Turntables, etc.
 - 1) Operating weight with a minimum safety factor of 2.0
 3. Uniform Live Load:
 - a. Roof (Minimum) 30 PSF
 - b. Ground Snow Load (Snow drift per IBC) 25 PSF
 - c. First Floor 250 PSF minimum, or as shown on Figures V.1 and V.2 for train and crane cars design loading, whichever produces worst effect
 - d. Ground Floor/Basement level 250 PSF
 - e. Mezzanine Level (Brentwood) 150 PSF
 - f. Platforms and Pits 250 PSF

- g. Yard & Train Control Rooms 275 PSF or actual weight of equipment whichever is larger.
- h. Mechanical & Electrical Rooms, Service Rooms, Storage Spaces, Machinery Rooms, Parts Storage and other elevation floor areas unless specifically stated otherwise 250 PSF or actual weight of equipment whichever is larger.
- i. Stairs & Landings, Assembly 150 PSF
- j. Railing 200 lbs (applied at any direction, at any point) or 50 PLF (applied vertically and horizontally), whichever produces the worst case.
- k. Floors Accessible to Vehicles, Grating Walkways over Repair Pits, Driveway over Grease Trap AASHTO HS20-44
- l. Highway Traffic Surcharge for Retained Fill AASHTO
- m. Guard Railing / Parapet Traffic Load AASHTO
- n. Wind:
 - 1) Basic Wind Speed² (3 second gusts) 110 MPH
 - 2) Wind Exposure "C"
 - 3) Seismic As per IBC
- 4. Concentrated Live Load (LL)
 - a. Live load shall consist of any non-permanent gravity load placed on the structure:
 - 1) Rapid Transit Loading
 - (a.) See Figure V.1 for car dimensions and weights. Any combination of train lengths and loadings which produces the critical design loading shall be used for structural design.
 - 2) Crane Car Loading
 - (a.) See Figure V.2 for car dimensions and weights.
 - 3) Force (RF)
 - (a) A force equal to 10% of the rapid transit loading per track shall be applied downwards on one rail and upwards on the other, on all tracks.
 - 4) Longitudinal Braking and Traction Force (LF)
 - (a) A force equal to 15% of the rapid transit loading per track shall be applied 5 feet above the top of rail on all tracks. Consideration is to be given to combinations acceleration and deceleration forces where more than one track occurs.
 - 5) Impact
 - (a) 30 percent of the total rapid transit vehicle or crane car loading
- 5. Lateral Earth Pressure: Refer to the Geotechnical Design Summary Report by GeoConcepts.

B. Loading combinations shall be in accordance with ACI-318, and IBC Code.

1.03 MATERIALS:

- A. Concrete:
1. Concrete to be made with normal weight aggregates. Admixtures containing chloride salts shall not be used.
 2. Concrete shall conform to type of class designated below:
 - a. Class 4000 for cast-in-place concrete
 - 1) with a water cement ratio of 0.45 or less
 - b. Class 6000 min. for precast concrete
 - 1) Precast concrete with a maximum water-cement ratio of 0.38
- B. Reinforcing Steel:
1. Reinforcing steel:
 - a. ASTM A615, Grade 60 ($F_y = 60000$ psi). Use ASTM A 706 where required for welding.
 2. Welded Wire Fabric:
 - a. ASTM A185 ($F_y = 65000$ psi). Lap edges of wire fabric at least 6" in each direction.
 - b. All concrete slabs on grade shall have a minimum of one layer of 6x6 - W2.9xW2.9 WWF at 2 inches from top of slab.
 3. Mechanical splices of reinforcing bars made by the use of Cadweld or NMB splices are acceptable. No other type of mechanical splice is acceptable.
 4. Reinforcing details shall be in accordance with the current "ACI Manual of Standard Practices for Detailing Reinforced Concrete Structures". Reinforcing bar lap splices shall be Class B tension lap splices.
- C. Structural Steel:
1. All structural steel shall conform to one of the following; ASTM A36 ($F_y = 36$ ksi), ASTM A572, ($F_y = 50$ ksi), ASTM A992. Structural tubing shall be cold formed welded structural tubing conforming to ASTM 500, grade ($F_y = 46$ ksi).
 2. Welding Electrode: E70XX.
 3. Bolts: 3/4" Dia., minimum, ASTM A325, Connection Type X (thread excluded from shear plane).
 4. Anchor Bolts: ASTM A307.
 5. Shear Studs: ASTM A108 3/4" Dia.
 6. All beam connections shall be shop welded or shop bolted, and field bolted. All shop welded connections shall be prequalified welded connections. Field connections shall be AISC standard bolted connections using 3/4" Dia. high strength bolts conforming to ASTM A325.
 7. All exposed structural steel shall be hot-dip galvanized after fabrication.
- D. Open Web Steel Joist:
1. Open web steel joist shall be K -Series or LH-Series and shall conform to the latest specifications of the Steel Joist Institute (SJI).
 2. The ends of the bridging lines shall be anchored in accordance with SJI requirements.
 3. All bridging shall be placed and anchored before installation of deck.
 4. The bottom chord of the steel joist shall be welded/anchored to steel column/beam/wall.
- E. Roof Deck
1. Steel Deck: Steel deck shall have a minimum yield strength of 33 ksi and shall be galvanized.
 2. Roof decking shall be minimum 20 gage x 1½" deep with a min. section modulus of 0.20 in³/ft. Floor deck shall be minimum of 24 gage x 1½" deep metal slab form with a minimum section modulus of 0.120 in³/ft.
 3. Galvanizing shall conform to ASTM A525, coating class G60.

- F. Limits of Stresses:
1. Prestressed Concrete:
 - a. Extreme fiber stress in tension in concrete immediately after prestress transfer (before time-dependent prestress losses) shall be as noted in section F.1.c.1) below. Increase in the depth of the members, and/or the use of draped tendons or a judicious use of additional tendons can be used to maintain stresses within the recommended limits. Bonded auxiliary reinforcement, if used, shall consist of many small bars distributed uniformly over the face rather than a few small large bars (like 3-#10, 2-#11, etc).
 - b. Extreme fiber stress in tension, in precompressed tensile zone at service loads (after prestress losses) shall be as given in section F.1.c.2) below.
 - c. Concrete Stresses in Structural Members
 - 1) Extreme fiber stress in tension immediately after prestress transfer (before time-dependent prestress losses) shall not exceed 6 times the square root of f'_c even if bonded reinforcement is provided.
 - 2) Extreme fiber stress in tension, in pre-compressed tensile zone at service loads (after prestress losses) shall not exceed 6 times the square root of f'_c .
 2. Additional Requirements for Non-prestressed Concrete Members for One-way Construction:
 - a. For non-prestressed reinforced concrete members for one-way construction which are exposed to weather or earth, for the serviceability, the minimum thickness of the member (beams, slabs etc.) shall be as specified in the 'Table 9.5(a)' of the ACI 318 Code. The reduction in the thicknesses based on the computation of deflections as given in ACI 318 Section 9.5.2.1, shall not be used to reduce the thicknesses specified in the 'Table 9.5(a)' of the ACI 318 Code, for this project.
 - b. In addition to the criteria given in 'a' above, it is intended that the section should not be cracked under dead load with a load factor of one. Therefore, the maximum flexural tensile stress in the concrete section under dead load should not exceed 7.5 times the square root of f'_c , for both precast and cast in place members. This can be achieved by selection of appropriate thickness, width and the concrete strength. In case it is not possible to limit the stress to 7.5 times the square root of f'_c , for cast in place concrete only, the crack widths based on cracked section at the extreme fiber in tension under dead load should be limited to 0.003 inches.
- G. Connections: The precast manufacturer shall design and provide all embedded items necessary to adequately anchor the precast member to the foundation including anchor bolts. Any additional foundation details required for proper transfer of forces between the precast members and the foundation not already shown in the design shall be submitted with the shop drawings by the precast manufacturer. All exposed connection hardware and assemblies shall be hot-dipped galvanized after fabrication. Galvanized connections which are subsequently field-welded shall be touched up with zinc-rich paint after welding as per Standard Specifications.
- H. The fabricator (precast contractor) shall participate in the Precast/Prestressed Concrete Institute (PCI) Certification Program and be designated as a PCI certified plant for product categories A1 and C3. The fabricator shall have continuous experience and is to be regularly engaged in the fabrication of precast/prestressed concrete products as per the requirements of the RFP and as stated in the Technical Proposal as finally accepted.

1.04 SOILS AND GEOLOGIC CRITERIA

- A. The Authority has provided and approved a final geotechnical report with recommendations pertaining to the Brentwood, Greenbelt and Shady Grove Shop and Yard Expansion. This information is contained in the GeoConcepts, Inc. Soils and Foundation Report dated September 2004.

- B. The Design-Builder shall use the information provided in the GeoConcepts, Inc. report. The Design-Builder may perform additional geotechnical investigations, after Contract Award, at no additional cost to the Authority. Any field work performed on WMATA property shall require a written request that includes a field investigation plan and proposed schedule for review and acceptance by the owner. The Design-Builder shall submit any additional geotechnical data and/or recommendations to the Authority for review and comment prior to final design.
- C. The Design-Builder will be responsible for design and sealing of design drawings.

1.05 GEOTECHNICAL DESIGN:

- A. The design criteria for the geotechnical portion of the work shall be in accordance with the GeoConcepts, Inc. geotechnical reports dated September 2004 contained in this contract document, and with any additional geotechnical recommendations submitted and accepted by the Authority.
- B. Temporary Retaining Walls - Temporary Retaining Walls shall be designed on the basis of specific soils information and in accordance with the procedures outlined on Figures V.15a, V.15b and V.16.

1.06 FOUNDATIONS:

- A. Foundation design shall be based on the subsoil exploration and the recommendations of the Authority-approved geotechnical report(s) and recommendations submitted by an engineer registered as a professional engineer in the jurisdiction, where the structure is proposed.
- B. Spread footings, piles or caissons may be used as foundations for this structure, such that the maximum settlement of any column shall not be greater than 1/2 inch nor the differential settlement between any two adjacent columns greater than 1/4 inch.
- C. If piles foundations are used, pile driving records and results of pile driving load tests shall be developed and submitted as required in standard specification.
- D. Caissons must be designed by and fully justified by an Authority-approved Geotechnical Engineer registered as a professional engineer in the Jurisdiction where the structure is proposed, and retained by the Designer/Builder.
- E. Any variations shall be reported to the Authority Representative in writing before the construction of the foundations.

1.07 COMPACTED STRUCTURAL BACKFILL:

- A. Compacted structural backfill against interior ramp walls and retaining walls shall be in accordance with the requirements of 1.07B
- B. Compact each layer of embankment, fill or backfill to 95 percent of maximum dry density as determined in accordance with ASTM D698, at moisture content within tolerance specified, except the following:
 - 1. From upper surface of fill or backfill to a plane 12 inches below subbase level of vehicular pavement, sidewalks, trackbeds and structural foundations to 100 percent of maximum dry density, as determined in accordance with ASTM D698, at moisture content within tolerance specified.
 - 2. In areas of 95-percent compaction where utility facilities are located in fill and are not

supported on concrete cradles, compact material for a depth of one foot directly below bottom of facility to 100 percent of maximum, as determined in accordance with ASTM D698, dry density at moisture content within tolerance specified.

- C. Light hand-operated compaction equipment (2,000 pounds) shall be used within ten feet of any structure.
- D. All subgrade shall be proof-rolled with at least two passes of a fully loaded 10 wheel dump truck prior to placing the stone layer or placing fill in the building area and at least five feet beyond the outer edge of the footings.

1.08 PERMANENT RETAINING WALLS

- A. Reinforced Concrete Retaining Walls - Retaining walls shall be designed on the basis of specific soils information relating to the backfill material and in accordance with the procedures outlined in the AREMA Manual, Chapter 8, Part 5.
- B. External Stability of Wall System
 - 1. Stability of the retention system as a whole must satisfy three conditions: The factors of safety against sliding and overturning must be adequate; the soil pressure beneath the toe of the foundation must not exceed the allowable soil pressure; and differential settlements of the foundation must not be excessive.
 - 2. Safety Against Sliding
 - a. Sliding of a retaining wall is resisted by the friction between the soil and base and by the passive earth pressure of the soil in contact with the outer face of the foundation.
 - b. The factor of safety against sliding is equal to horizontal resisting forces divided by the horizontal component of the backfill pressures, which should be at least 1.5. The friction between the base and clean sand or silty sand is equal to the effective normal pressure on the base times the tangent of the friction angle, ϕ , between soil and base. The value of f may be taken as 30° for a coarse-grained soil containing no slit or clay, and as 24° for a coarse-grained soil containing silt. The value of ϕ between sand and the underlying clay can be assumed as 20° . The passive resistance in front of the wall shall be disregarded unless approved otherwise by the authority.
 - 3. Safety Against Overturning - The factor of safety against overturning is determined by dividing the sum of moments of forces tending to resist rotation of the wall about its toe by the sum of moments of forces tending to produce the overturning. A factor of safety of at least 1.5 is conventional.
 - 4. Allowable Soil Pressure and Settlement - The maximum base pressure at the toe of the wall will be limited by the allowable bearing capacity of the soil. If the wall rests on a very compressible soil, the foundation should be designed in such a way that the point of application of the resultant pressure is located close to the midpoint of the base. A minimum factor of safety of 2 shall be provided.
 - 5. Overall Stability - In addition, where retaining walls are underlain by weak soils ($\phi < 25^\circ$), the overall stability of the mass containing the retaining wall should be checked with respect to the most critical surface of sliding. A minimum factor of safety of 2 is required.

C. Reinforced Earth/Mechanically Stabilized Earth:

1. This system may be used with the following criteria:
 - a. Reinforced Earth (RE) and Mechanically Stabilized Earth (MSE) walls shall be designed in accordance with the current requirements of the AASHTO Standard Specifications for Highway Bridges, Section 5, as supplemented by the below criteria and requirements.
 - b. Service Life of walls shall be minimum 100 years; with minimum 5-year warranty period on wall system, during which annual inspections shall be performed by the engineer of record or authorized agent.
 - c. RE/MSE wall supplier shall be the engineer of record for the RE/MSE wall design, and shall be responsible for internal, external and global stability design including allowable bearing capacity. Supplier shall certify that wall installation conforms to approved design.
 - d. RE/MSE wall supplier shall provide the following for WMATA approval: With Proposal package:
 - 1) Complete specifications identifying
 - (a) Design parameters (including minimum required soil bearing capacity)
 - (b) Materials and design properties
 - (c) Installation methods
 - (d) Catalog cuts
 - (e) Equipment list
 - (f) Sample calculations for tallest wall section (including internal, external and global stability calculations, and settlement calculations for which design/builder will be fully responsible)
 - (g) QC Plan and QC Staff
 - (h) Cost Loaded Bar Chart Schedule showing planned start and finish dates of activities and associated dollars
 - (i) Identification of limit of work and access through site.
 - (j) Method of controlling differential settlement along the wall based on the available soil boring information. (To include at least the minimum requirements in Requirement of "Subgrade Preparation" below.)
 - (k) Monitoring program to monitor potential settlements and other wall movements.
 - (l) Schematic design of drainage system to control, collect and discharge water from behind the wall.
 - (m) Design for corrosion protection of steel elements.
 2. Prior to NTP:
 - (a) Final calculations with P.E. stamp (including internal, external and global stability calculations, and settlement calculations).
 - (b) Shop Drawings
 - (c) Details of drainage system to control, collect and discharge water from behind the wall.
 3. RE/MSE wall design/construction must demonstrate that highly acidic soils ($\text{pH} < 3$) if found on-site do not affect the performance and service life of the wall.
 4. Backfill:
 - (a) Backfill for undercut shall be similar to Virginia DOT Stone No. 57 requirements as specified in the latest edition of Virginia Department of Transportation Specifications, Road and Bridge Specifications.

- (b) Backfill for reinforced earth volume: VDOT Stone No. 57 or Select Granular Backfill Material as specified below shall be used.
- (c) Select Granular Backfill Material shall be free from organic and other deleterious material and conform to the following gradation limits:

U.S. Sieve Size	% by Weight of Material Passing Sieve
1½ in	100
½ in	25-60
No. 40	15 - 30
No. 200	0 - 5

- 5. Plasticity Index (PI) for Select Granular Backfill Material shall not exceed 6.
- 6. Random backfill beyond the limits of the reinforced earth volume shall meet the requirements for backfill in Standard Specification Section 204, Article 2.1.A. The pH for Random Backfill shall be between 5.0 and 8.0 measured in a peroxide medium.
- e. Subgrade Preparation: To control differential settlement along the length of wall, undercut within limits described below, place Tensar Geogrid BX1100 or equal on excavated surface, overlay geogrid with layer of geotextile fabric and fill with VDOT Stone No. 57.

f. Limits of undercut:

- 1) Length: The entire length of the wall.
- 2) Width: Equal to or greater than the length of the reinforcing elements behind the wall, and in front of the wall to a distance from the edge of the leveling pad equal to or greater than the depth of undercut.
- 3) Depth: Minimum 3 feet, but depth shall be increased as required, so that differential settlement is eliminated or reduced to a negligible amount. If unexpected unstable or bad ground conditions are encountered during excavation, engineer of record to provide proposed solution; resulting additional undercut, rip rap, fabric, fill will be paid as a unit price item.

g. RE/MSE wall supplier shall provide the following minimum factors of safety (FOS):

External Stability	Minimum FOS
Sliding	2.0
Overturning	2.5
Global Stability	1.7
(Overall depth/Deep seated slope stability)	
Bearing Capacity	2.5
Internal Stability	
Pullout Resistance	2.0

h. Wall face:

- 1) Reinforced Concrete Panels are preferred.
- 2) Minimum concrete strength at installation shall be 4000 psi.
- 3) Alignment of panels and construction of wall face shall provide a true vertical plane with uniform surface after deflection. Precast tolerances and erection tolerances shall be coordinated.
- 4) A minimum of 2 layers of steel reinforcing per panel with maximum vertical spacing of 30" on centers shall be provided. Panels shall be adequately reinforced for flexure.
- 5) All panels shall be keyed to each other (shear connection).

- i. Concrete Block Wall may be used as an alternate.
- 1) Minimum strength of concrete block at installation shall be 4000 psi.
 - 2) Alignment of blocks and construction of wall face shall provide a true vertical plane with uniform surface after deflection. Precast tolerances and erection tolerances shall be coordinated.
 - 3) Place steel reinforcement on 16" centers vertically (every other course) for 8" block. Place steel reinforcing in the course of every other block in the horizontal direction. On the course of blocks in between, place an intermediate reinforcing layer of continuous geotextile or geogrid extending a minimum 8 feet length into backfill behind wall. All blocks shall be doweled to each other.
 - 4) The steel reinforcing shall be designed to provide the full structural support, neglecting any contribution from the geotextile or geogrid, which shall be assumed to provide the facial stability only.
 - 5) Inextensible Reinforcements:
 - a) Steel, hot-dipped Galvanized after fabrication.
 - b) Minimum layers and spacing in accordance with requirement number h above.
 - c) Minimum length $> 1.0 \times H$ (wall height)
 - 6) Settlement:
 - a) No settlement 3 months after completion of the yard. Surcharge wall as needed.
 - b) Allowable during construction, as long as an approved monitoring and remediation program can be implemented without compromising the project schedule.
 - c) Design/Construction shall include provisions such as subgrade preparation to limit settlement. See "Subgrade Preparation" above.
 - 7) RE/MSE wall shall be designed to support the traffic barrier and moment slab withstanding AASHTO loading and deflection due to fire truck (WB-50). Traffic barrier shall be capable of accommodating future site lighting pole.
 - 8) Provide effective permanent drainage including necessary drainage blankets in back of and behind the reinforced zone, and other internal drainage elements, to eliminate seepage from behind the wall. Drainage from behind the wall shall be controlled, collected and discharged from common point(s).
 - 9) Detailed design for corrosion protection (100 year minimum) of any steel elements in the system including consideration of stray current, aggressive elements infiltrating from surface flows and groundwater flows. All steel elements in the system must be hot-dipped galvanized.
 - 10) Design/Construction shall accommodate subsurface utilities, such as ballast drains, cable trenches, ductbanks, light pole foundations and storm drain pipes; without decreasing wall performance/service
 - 11) RE/MSE wall supplier shall provide full time inspector during wall construction. Inspector shall provide daily reports thru Contractor. Reports shall include, but not be limited to, pre-placement, placement, and post-placement inspection records of precast panels.

The requirements set forth herein shall be treated as a minimum. The responsibility of production and erection of structurally adequate, stable structures, free from structural flaws, cracks or damage lies with the Designer/Builder.

APPARENT PRESSURE DIAGRAM FOR STRATIFIED SANDS WITH STIFF TO HARD CLAY AND SILT LAYERS
WATERTIGHT RIGID WALLS

NOTES:

1. Effective earth pressure is equal to the average of active and at-rest pressures distributed as a rectangle with P_0 ordinate.
2. Total thickness of clay and silt layers as much as 50% of the depth of the cut.
3. Use effective soil friction shown on Table V.2 in estimating the active and at-rest earth pressures.

WATERTIGHT RIGID WALLS

(b) STIFF TO HARD CLAYS $N_b > 5$
WATERTIGHT RIGID WALLS

APPARENT PRESSURE DIAGRAMS FOR STRATIFIED CLAYS WITH SAND LAYERS AND LENSES

NOTES:

1. Diagrams (a) and (b) can be used in stratified clays, where the total thickness of sand layers or lenses does not exceed 25% of the depth of the cut.
2. Soil Pressure for soft to medium clays is equal to the average of active and at-rest pressures distributed as a trapezoid with P_D ordinate. P_D shall be not less than $0.3yH$.
3. Use effective soil friction shown on Table V.2 in estimating the active and at-rest earth pressures.
4. Presence of groundwater level does not have any effect on magnitude of lateral pressure.

LEGEND

- $N = \frac{yH}{S_u} =$ Base stability factor
- Sub = Average undrained shear strength below base of cut.
- $\gamma =$ Total soil unit weight.
- $P_D^* = 0.2 yH$ for very stiff intact nonfissured clays.
- $P_D^* = 0.3 yH$ for fissured or slickensided clays.

END OF SECTION

PROGRAM CRITERIA

MECHANICAL

1.01 GENERAL

- A. These criteria cover the work required to retrofit, design, furnish, install and test mechanical systems for the Washington Metropolitan Area Transit Authority (WMATA) modified maintenance facilities at Brentwood, Greenbelt, and Shady Grove including:
1. Ventilation
 2. Heating
 3. Air Conditioning
 4. Air Filtration
 5. Vibration Isolation
 6. Fire Protection
 7. Plumbing
 8. Process Piping
 9. Automated Energy Management System
 10. Elevator Machine Room
 11. Clearance to Installations
 12. Maintainability and Constructability
 13. Submittals
- B. The design shall be complete with automatic temperature controls and automatic energy management controls. The design shall be based on applicable codes, regulations and the following standards.

1.02 CODES AND STANDARDS

- A. Unless otherwise required herein, mechanical designs and installations shall be governed by all applicable local codes in addition to the codes, guidelines and standards listed below. In cases where national codes, local codes, and WMATA standards conflict, the most stringent code or standard shall take precedence. The following publications, in their entirety and of the latest approved edition, form a part of this System Description:
1. WMATA Design Criteria
 2. WMATA Standard Mechanical Specifications
 3. WMATA Standard Drawings

4. WMATA Reference Drawings
 5. WMATA Design Drawings
 6. National Fire Protection Association (NFPA) - 13, 25, 30, 54, 70, 90A, 130, and 2001
 7. ASME- A.17.1
 8. International Mechanical Code (IMC)
 9. International Plumbing Code (IPC)
- B. Heating, Ventilating and Air Conditioning
1. All heating, ventilating and air conditioning system designs shall be based on the version of International Mechanical Code (IMC), as amended by the local jurisdiction, in effect at the time of design.
 2. Air conditioning and refrigerating equipment shall bear the ARI stamp.
- C. Sheet Metal Ductwork
1. All sheet metal ductwork shall be constructed in accordance with Sheet Metal and Air Conditioning Contractors National Association Inc. (SMACNA) standards.
- D. Fans
1. All fans shall be rated in accordance with the "Standard Test Code for Air Moving Devices" and the "Test Code for Sound Rating Air moving Devices" of the Air Movement and Control Association, Inc.(AMCA).
- E. Acoustical Materials
1. Acoustical materials shall be rated in accordance with the standards of the Acoustical Society of America, UL, ASTM and NFPA.
- F. Noise Criteria
1. Noise criteria shall be as described herein and in the current handbook series published by the American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE).
- G. Fire Protection
1. Fire protection system designs shall be based on NFPA.
- H. Plumbing
1. Plumbing shall meet the standards of the appropriate local authority. The District of Columbia is covered by the International Plumbing Code (IPC), as amended by the District of Columbia. Montgomery and Prince George Counties in Maryland are covered by the Plumbing and Gas Fitting Code for the Washington Suburban Sanitary Commission (WSSC).
 2. All plumbing installations and fixtures shall comply with the applicable requirements of the Americans with Disabilities Act Guidelines (ADA).

I. Piping

1. Friction losses in piping shall be as described in the current edition of the Cameron Hydraulic Handbook.

1.03 CODE COMPLIANCE

A. The following issues shall be addressed to meet current codes:

1. Air intakes and contaminated air sources separated to comply with IMC.
2. Overflow roof drains or scuppers necessary to comply with the IPC.
3. Guardrails for equipment located within 10 feet of the roof edge to comply with the IMC.
4. Fire protection systems shall be modified to comply with NFPA and/or the International Fire Code.

1.04 SCOPE

A. Site Specific Scope

1. Greenbelt

a. Existing Shop Building

(1) Ventilation

- (a) Summer ventilation in the existing building is provided with roof mounted supply fans with air relieved through dampers and louvers.
- (b) The main AC/DC Switchgear Room is ventilated with a filtered and ducted outside air system using two (2) high velocity inline fans. Air is relieved through wall louvers and dampers, which are interlocked with the supply fans. Contractor shall modify system as required to maintain the Program Criteria with the addition of new electrical equipment serving the new addition and the remodeled areas of the existing shop areas.
- (c) Contractor shall verify all supply fans and motor-operated dampers operate properly and as noted in existing sequence of controls.
- (d) The new Oil Storage Room and Welding Room added to the existing building shall be ventilated per IMC.
- (e) The ventilation system (HVU-6) serving the remodeled Steam and Degreasing Room shall be modified and rebalanced as required to coordinate with revised layout. Existing piping and ductwork shall be modified and supported to coordinate with new walls.

- (f) The new Gear Box Rebuild room created within the shop area and the newly enclosed Machine Shop # 1 shall be ventilated per Program Criteria for.
 - (g) The Lathe Room (located where the HVAC Room was previously) shall be ventilated per IMC.
- (2) Heating and Air Conditioning
- (a) The first floor shops, offices, elevated walkway, and locker rooms are conditioned by a central single-zone, constant volume air handling unit (AHU-1) with direct expansion cooling and gas-fired duct furnace heating located in the east mechanical room and a remote air-cooled condensing unit on the roof. Return air is ducted to the unit with an inline return fan. Electric duct heaters provide heat for the locker rooms and two entries.
 - (b) The main AC/DC Switchgear Room temperature and humidity control is maintained with a DX-cooling rooftop unit.
 - (c) AHU-1 system shall be modified and rebalanced as required to serve remodeled Storage Cage, Machine Shop #2, Grit Blast & Parts Washroom, and Lathe Room on the first floor. Contractor shall verify capacity of AHU-1 and provide additional HVAC units as required to meet the additional requirements.
 - (d) The new Gear Box Rebuild room and Machine Shop # 1 shall be heated per Program Criteria for shop areas, and cooled to 84 degrees F.
 - (e) New and remodeled offices within the shop area shall be heated and cooled per Program Criteria with outside air provided to comply with the International Mechanical Code.
 - (f) The new Oil Storage Room and Welding Room shall be heated per Program Criteria for shop areas.
- (3) Fire Protection
- (a) The existing sprinkler systems shall be modified as necessary to accommodate remodeled areas.
- (4) Plumbing
- (a) Domestic water, storm, sanitary, waste, venting and utilities (above and below ground) in conflict with the new structure and modifications in the basement, at the first floor and second floor (mezzanine) shall be modified to accommodate new equipment and space arrangement.
- (5) Process Piping

- (a) Process piping systems and equipment including but not limited to piping, gauges, natural gas, connections, compressed air, filters, grease, lube fluids, and waste oil in conflict with the new structure and modifications in the basement, at the first floor and second floor (mezzanine) shall be modified to accommodate new equipment and space arrangement.

b. New Shop Building

(1) Ventilation, Heating and Air Conditioning

- (a) The new addition shall be heated, ventilated and cooled for office areas unless noted otherwise, with the exception of the Component Parts Storage Rooms and the Mechanical Room.
- (b) The Component Parts Storage Rooms shall be heated and ventilated per Program Criteria for Shop areas.
- (c) The Motor Repair Shops, Mechanical Component Repair Shop, Open Corridor, Pneudraulics Repair Shop, Steam and Degreasing, Parts Washing Rooms, Grit Blast Rooms, and Component Paint Rooms shall be cooled to 84F.

(2) Fire Protection

- (a) The fire protection sprinkler systems shall be modified as necessary to the new addition.

(3) Plumbing

- (a) Domestic water, storm, sanitary, waste, venting, and utilities (above and below ground) shall be expanded with new plumbing fixtures, domestic water, sanitary, waste, venting, and utility services to accommodate new equipment and space arrangement.

(4) Process Piping

- (a) Process piping systems and equipment including but not limited to piping, gauges, connections, compressed air, filters, natural gas, grease, lube fluids, and waste oil shall be increased and modified as required to accommodate new construction.

(5) Elevator

- (a) One (1) new freight elevator and one (1) new passenger elevator shall be provided.

2. Brentwood

a. Existing Shop Building

(1) Ventilation

- (a) Outside air intake hoods are located on the roof and serve the heating and ventilating units throughout the shop area. An outside air intake hood also serves the dual duct air handling unit. These shall be modified and balanced as required for the new arrangement and occupancy.
- (b) The office area additions are ventilated with outdoor air hoods on the rooftop units. These shall be balanced as required for the new arrangement and occupancy.
- (c) The basement General Storage, Wheel and Truck Storage and Dock areas are served by a hot water heating and ventilating unit (HVVU-09). The ductwork, grilles, and system balancing shall be modified for the new arrangements and space occupancies.
- (d) The Ground Floor Shop area is served by hot water heating and ventilating units (HVVU-01 thru HVVU-06 and HVVU-08) located near the roof. Outside air requirements for these units shall be evaluated and adjusted to meet the International Mechanical Code.
- (e) The pit area is served by a heating only unit (HVVU-07) located in the basement. No outside air is provided to the unit (HVVU-07). Outside air requirements for this unit shall be provided per IMC.
- (f) The Shop areas, Toilet and Locker Rooms, Dock, Flammable Liquids Room, and Degreasing Room are served by roof mounted exhaust fans. The Battery Room is ventilated with an inline exhaust fan. The Substations are ventilated with cabinet fans. Each system may be modified or relocated as required for the new building arrangement.

2. Heating

- (a) A central hot water system consisting of two natural gas-fired boilers is located in the basement boiler room. Hot water pumps circulate water to the hot water unit heaters, heating and ventilating units and the office area dual deck air handling unit. The hot water piping and system shall be modified to meet the new building needs.
- (b) Refer to the Brentwood Air Conditioning section for additional existing heating systems.

3. Air Conditioning

- (a) The air handling unit (AHU-01) currently serving the south end of Brentwood is a dual duct unit with a chilled water cold deck and a hot water hot deck. The hot deck is served by a central, gas fired boiler hot water system. The cold deck is served by an air-cooled chiller located on the roof of

the office area. The air handling unit serves the locker/shower and lunch room on the basement level as well as the office areas on the first floor and mezzanine level using dual-duct mixing box air terminals. Modify the mixing boxes, ductwork, diffusers, controls and system balancing as necessary to accommodate the new office space arrangement.

- (b) The interior mezzanine office area addition between columns 4 and 6 is currently served by rooftop unit (RTU-01) with direct expansion (DX) cooling and electric heat. Modify the ductwork, diffusers and system balancing as necessary for the new office space arrangement.
- (c) The first floor electronics shop is currently served by rooftop unit (RTU-02) with DX cooling and electric heat. Modify the ductwork, diffusers and system balancing as necessary for the new office space arrangement.
- (d) The calibration lab is currently served by a split computer room unit (CRU-01) with the condensing unit located on the roof. This unit has electric reheat and a humidifier for control of both temperature and relative humidity. If this system is still in good working order, it may be used in a new lab that requires both temperature and humidity control.
- (e) The basement server and telephone rooms are served by an air handling unit (AHU-02) with DX cooling with the condensing unit located on the roof and the air handling unit located in the server room. The unit has electric heat. Modify the ductwork, diffusers and system balancing as necessary for the new office space arrangement.
- (f) The basement Pneudraulics and Electronics Components Rooms are served by air handling units (AHU-03 and AHU-04) with DX cooling with the condensing units located on the Dock roof. The units have electric heat. Modify the ductwork, diffusers and system balancing as necessary for the new office space arrangement.
- (g) The Automatic Train Control (ATC) room is served by rooftop unit (RTU-03) with DX cooling and electric heat. This is a retrofit system. Provide new system with reconfigured ductwork to condition the new ATC room.
- (h) Various local office spaces within the basement and ground floor shops are served by small thru-wall packaged terminal air conditioners. Modify or replace units as necessary for reconfiguration of spaces.

4. Fire Protection

- (a) The existing fire protection sprinkler systems shall be modified as necessary to accommodate the modifications to the structure and building systems. This modification includes the basement, first floor, and mezzanine areas being modified to incorporate three new tracks in two existing bays. New sprinkler systems and the required water supply modifications shall be provided in the new addition for the at-grade dock. The existing system shall be

temporarily supplied to maintain sprinkler protection throughout construction.

5. Plumbing
 - (a) Domestic water, storm, waste, and vent piping shall be expanded with new plumbing fixtures, domestic water, sanitary, waste, venting, and utility services to accommodate new equipment and space arrangement.
 - (b) Roof drain piping shall be relocated to accommodate new location of skylights.
 6. Process Piping
 - (a) Process piping systems and equipment including but not limited to piping, gauges, connections compressed air, filters, natural gas, grease, lube fluids, and waste oil in conflict with the new structure and modifications in the basement, first floor, and mezzanine shall be modified to accommodate new equipment and space arrangement.
 - (b) Vacuum pump at the mezzanine level in conflict with modifications shall be adapted to accommodate equipment and space arrangements.
 7. Elevator
 - (a) Provide new freight elevator and modify existing passenger elevators to be ADA compliant.
3. Shady Grove
- a. Existing Blow Pit
 - (1) Ventilation
 - (a) Replace the existing Blow Pit dust collector and ventilation system and the new system shall cover the modified Blow Pit and expansion.
 - (b) Blow Pits shall be ventilated to effectively remove the dust produced by the blow cleaning.
 - i. The air from the Blow Pit cleaning area shall be ducted through a dust collector system before being recirculated in the blow pit area, or before being discharged to the atmosphere.
 - (2) Heating
 - (a) Hot water heating piping shall be expanded to include addition to blow pit area.
 - (b) Replace heating systems in the Blow Pit area.
 - (3) Fire Protection

- (a) The existing sprinkler systems shall be modified as necessary to accommodate the new addition for the Shop Building to house Service & Inspection operations, the new Support Area, and Blow-down Pit Addition areas. The existing sprinkler riser on the southwest side of the building shall be moved for the new addition. The systems shall be temporarily supplied to maintain sprinkler protection throughout construction.
- (4) Plumbing
 - (a) Domestic water, sanitary, waste, venting, and utilities (above and below ground) in conflict with the new structure and modifications in the basement, at the ground floor and mezzanine shall be modified to accommodate new equipment and space arrangement.
 - (b) Trench drain sludge collection shall be modified to eliminate standing water in the blow pit area.
- (5) Process Piping
 - (a) Process piping systems (compressed air, filters, natural gas, fuel oils, grease, lube fluids, and waste oil) in conflict with the new structure and modifications in the basement, at the ground floor and mezzanine shall be modified to accommodate new equipment and space arrangement.
 - (b) Modify existing instantaneous pressure washer system to accommodate modified Blow Pit.
- b. New Shop Expansion
 - (1) Ventilation
 - (a) The relief louver for the AC Switchgear Room and the intake louver for the DC Breaker Room are located in the existing exterior wall. The new addition requires the relief louver and the intake louver to be relocated.
 - (b) The existing basement Battery Room relief louver, ductwork and associated accessories shall be relocated to accommodate new addition.
 - (c) The elevator equipment room shall be ventilated per Program Criteria.
 - (d) Ventilate new addition per Program Criteria for shop areas.
 - (2) Heating
 - (a) New hot water heating coils and hot water unit heaters shall be used for heating. Existing fuel oil-fired boilers located in the basement mechanical

equipment room shall supply hot water through a closed loop system.

- (b) The existing fuel oil storage tank is located below the existing parking lot. Due to the new addition, the fuel oil storage tank, piping and associated appurtenances shall be relocated.
- (c) Heat new addition per Program Criteria for shop areas.

(3) Air Conditioning

- (a) The AC Switchgear Room and DC Breaker Room shall be air conditioned to maintain 84 degree F summer and 50 degree F winter using the glycol heat recovery loop system. For conditions where the glycol heat recovery loop system is not accessible or economical, a DX-cooling system shall be used. Modify cooling system as required to condition new equipment.
- (b) Office, meeting and toilet rooms within the shop expansion shall be heated and cooled per Program Criteria with outside air provided to comply with the International Mechanical Code.
- (c) Modify air conditioning for control room per Program Criteria as necessary to accommodate new equipment.

(4) Fire Protection

- (a) The fire protection sprinkler systems shall be modified as necessary to accommodate the new addition and new functions. The new addition shall require new sprinklers, and the areas being modified shall accommodate the new functions.

(5) Plumbing

- (a) Domestic water, storm, sanitary, waste, venting and utilities (above and below ground) shall be expanded with new plumbing fixtures, domestic water, sanitary, waste, venting, and utility services to accommodate new equipment and space arrangement
- (b) Trench drains sludge collection shall be designed to eliminate standing water in the blow pit area.
- (c) Roof drain piping shall be expanded to accommodate the new addition.
- (d) Domestic water, fuel oil, and fire supply lines shall be modified.

(6) Process Piping

- (a) Process piping systems and equipment including but not limited to piping, gauges, connections, fuel oil, compressed air, filters, grease, fuel oils, lube fluids, and waste oil capacity shall be increased as required to accommodate new construction.
 - (b) Provide new Blow Pit wash equipment to match existing.
- (7) Elevator
- (a) Provide (1) new passenger elevator.

1.05 VENTILATION

A. General

1. All existing, retrofitted, and new office and shop areas shall be evaluated for use and shall be modified or designed to meet all current codes, standards, and/or this Program Criteria for ventilation rates.
2. Spaces not described in this Program Criteria shall be ventilated as per the IMC.
3. All outside air shall be filtered before building distribution.

B. Characteristics

1. The characteristics of the individual ventilation systems for all areas and rooms in the shop renovations and additions are described below. The following are minimum requirements:
 - a. AC Switchboard Rooms
 - (1) Provide two fans of equal capacity. A room thermostat shall cycle the lead fan when the room temperature reaches 90°F. The two fans shall not operate simultaneously except when under manual control. During each cycle, one fan shall serve as a stand-by which will operate only upon failure of the lead fan. Lead fan and stand-by fan shall alternate automatically after each operating cycle. Provide a H-O-A switch for each fan. Provide controls such that the air intake dampers remain open when neither fan is operating. During operation of any one fan, the intake damper with other fan shall be closed. The fans shall be located on the supply side of the system. The ductwork, air distribution system, intake and relief louvers and dampers shall be sized for one fan operation. Relief air shall be discharged to a point outside of the building unless otherwise approved by the Authority. Supply air shall be from a point outside of building filtered through a bag filter sized for one fan operation and discharged into the AC Switchboard Room to maintain a positive pressure of 0.1 inch of water gauge within the room with respect to adjacent space. Air quantities for each fan shall be based on the following:
 - (2) Single AC Switchboard Rooms - 8 cfm per kVA for the total output rating of the main and auxiliary transformers and 51

cfm per kVA for the total output rating of the uninterrupted power system.

- (3) Combined AC Switchboard Rooms - 8 cfm per kVA for 65% of the combined total output rating of the two main transformers, 8 cfm per kVA of the total output rating of the auxiliary transformers, and 51 cfm per kVA of the total output rating of the uninterrupted power system. When it is determined that a combined switchboard room has only essential loads, reference Electrical Program Criteria, provide 8 cfm per kVA for only 50% of the combined total output rating of the two main transformers. If the switchgear and transformers are located in separate rooms, the air shall be distributed in proportion to the load in each room. Transfer of air from one room to the other is not allowed. Provide tight fitting, weather-stripped doors with no undercuts on underground AC Switchboard Rooms.
- (4) A special consideration shall be given for control of humidity in the room.

b. DC Breaker Rooms

- (1) Below Grade:
 - (a) Supply: Provide eight air changes per hour. Provide a H-O-A switch. Air shall be drawn from and discharged to a point outside of the building unless otherwise approved by the Authority, filtered, and discharged into the breaker room so as to maintain a positive pressure not exceeding 0.1" WG within the room. Provide tight fitting, weather-stripped doors with no undercuts. Fan will be operated by thermostat to maintain room temperature of 90°F.
- (2) Surface:
 - (a) Supply: Provide eight air changes per hour. Maintain positive pressure not exceeding 0.1" WG within the room. Filtering of air not required unless special conditions exist.

c. Battery Rooms

- (1) Exhaust: 18 Air Changes per Hour. Exhaust system shall be operated continuously. Air shall be drawn from adjacent AC Switchboard Rooms and discharged to a point outside of the building unless otherwise approved by the Authority. Additional filtering is not required. Provide tight fitting, weather-stripped doors with no undercuts on underground Battery Rooms.
- (2) Suspended ceilings are not allowed. Battery Rooms shall be under negative pressure not to exceed 0.1" WG.

d. Train Control, Dispatch, and Communications Rooms

- (1) Provide air conditioning with 0.3 CFM of filtered, outside air per square foot of floor area.

- (2) Train control room has 8,000 watts of internal electrical heat load, plus a lighting load of 4 watts per square foot. Communication Room has 6,000 watts of internal electrical heat load plus a lighting load of 4 watts per square foot. Train Control and Communications Rooms doors shall be tight fitting with no undercutting for relief air. Relief venting of these rooms shall be accomplished by means of adjustable, motorized dampers. Dampers shall be sized at 1100 feet per minute to maintain slight positive pressure in the rooms.
- e. Maintenance Rooms
 - (1) Exhaust: 10 Air Changes Per Hour
- f. Restrooms, Locker Rooms, Cleaners' Rooms, and Sewage Ejector Rooms
 - (1) Exhaust: 2-1/2 CFM per square foot of floor area, exhausted to outside where possible.
- g. Shop areas, basements, and inspection pits shall be ventilated during the summer to remove heat gain from all sources with temperature rise of 10°F. The winter ventilation rate shall be based on the IMC.
- h. Elevator Machine Rooms - See Elevator Machine Room Section.
- i. Electric and telephone equipment rooms - no mechanical ventilation unless heat producing equipment, i.e. transformers, are to be installed in the room(s).

1.06 HEATING

A. General

- 1. All-heating equipment shall be natural gas heating or hot water heating. Where natural gas heating or hot water heating are not accessible or not economical, electric resistance heat shall be used. Wall heaters, unit heaters, duct heaters or combination heating/cooling units may be employed as required by the application. Convective type wall heaters are preferred to force-flow types provided units are available in the required capacity.
- 2. Design Temperature
 - a. Design dry-bulb temperatures for each room are as follows:
 - (1) AC Switchboard Rooms (Below Ground): No heat required.
 - (2) AC Switchboard Rooms (Above Ground): Provide heat to maintain 50°F. Calculations of heating load shall include a deduction of 10,000 BTU per hour for each 100 KVA of transformer capacity.
 - (3) DC Breaker Rooms - Below and above ground, provide heat to maintain 77°F.

- (4) Battery Rooms - Provide heating for underground battery rooms to maintain 77°F. Assume heat gain from the adjoining AC switchgear room equal to one percent of the rated capacity of the transformers in the switchboard room. Above ground, provide heat to maintain 77°F.
- (5) Train Control and Communications Rooms-60°F.
- (6) Dispatch, Operations, and Trainmen's Rooms-70°F. Deductions shall not be made for internal loads in the computation of heating load.
- (7) Above Ground Maintenance Rooms-60°F, no heating is required in below ground maintenance rooms.
- (8) Washrooms, 70°F.
- (9) Cleaner's Rooms and water service rooms, 50°F.
- (10) Elevator Machine Rooms, 50°F.
- (11) Above Ground Electric rooms and mechanical rooms-60°F, except no heating is required in below-ground rooms.
- (12) Shop area, inspection and cleaning pits, blow pits, stair wells, basement, offices, lunch room, rest rooms and locker rooms shall be heated to maintain a temperature of 70°F.

3. Heat Loss Parameters

a. Underground:

- (1) One BTU per square foot per hour loss to ground.
- (2) Ambient temperature assumptions: 14°F outdoor.

4. Heating Equipment - Electrical Characteristics

- a. See Electrical Program Criteria for electrical characteristics. Verify that scheduled equipment is commercially available. All heating equipment shall be thermostatically controlled. Control transformers shall be provided where required.

5. Special Systems

- a. Air curtains: Air curtain supply to be tempered to a minimum of 50°F DB.

1.07 AIR CONDITIONING

A. General

- 1. In general, air conditioning shall be provided in rooms where personnel are stationed for extended periods of time or where equipment operation requires lower temperatures than can be provided by mechanical ventilation. Variation from these criteria must be approved by the Authority.

2. All offices, lunch rooms, locker rooms, office areas, control rooms and restrooms shall be air conditioned to maintain a temperature of 72°F.
 3. Operations Rooms and Dispatcher's Rooms
 - a. Provide air conditioning designed for two occupants and a lighting load of 4 watts per square foot. Provide manual on/off control. In the case of underground rooms, use split system air conditioning units. Locate condensers in areas where exposure to dust is minimized. Small capacity self contained air conditioning units are acceptable for use in isolated rooms above ground.
- B. Design Conditions
1. The following conditions shall be used in the selection of equipment and design of air conditioning systems.
 - a. Ambient summer design conditions: 91°F Dry Bulb and 77°F Wet Bulb
 - b. Design room conditions at peak load: 72°F Dry Bulb
- C. Air Conditioning Equipment
1. Air conditioning equipment may be self-contained or split system type. Thermostatic control shall be provided. Control voltage shall not exceed 120 volts.

1.08 AIR FILTRATION

- A. Air filters shall be of the following types:
1. Under 5,000 cfm: Replaceable media
 2. 5,000 cfm and over: Primary - bag type, 80-85% efficiency; Prefilter - replaceable media

1.09 VIBRATION ISOLATION

- A. Vibration Isolation
1. Equipment producing vibrations shall be isolated from the structure by spring or rubber-in-shear vibration isolators. All pipe and ducts connected to equipment mounted on vibration isolators shall contain flexible connections or provisions made for vibration isolating type supports. Identify on drawings where vibration isolators are to be provided.
- B. Equipment Mountings
1. Equipment to be mounted on the floor shall be placed on reinforced concrete housekeeping pads. Minimum pad height shall be six inches; all equipment to be suspended from ceiling shall be provided with suspension type hangers consisting of combination of spring and neoprene in series.

1.10 FIRE PROTECTION

A. Fire Suppression Systems

1. Fire Suppression Systems shall be designed to comply with requirements of NFPA 13 for a completely sprinklered building.

B. Fire Alarm System

1. Fire Alarm Systems shall be designed per this section and the communications section.

C. Smoke and Fire Detection System

1. Detectors will be of the ionization type, combined rate of rise/fixed temperature type or fixed temperature type. Detectors will be designed to detect abnormal smoke densities, products of combustion or heat in electrical rooms, ducts of air conditioning systems, and elevator machine rooms. The detection system will be equipped with contacts which can perform the following functions:
 - a. Stop all air conditioning fan units and ventilation fans having a capacity in excess of 2000 cfm and battery room fans that serve or are located in the zone protected by activated detector.
 - b. Terminal boxes shall be located in mechanical equipment rooms and control wiring shall be run to nearest terminal box. Equipment schedules shall identify the units served by each terminal box.

D. Fire Extinguishers

1. Portable fire extinguishers, where required by fire code standards, shall be of the dry powder, stored pressure type, Type 4A: 40B: C, suitable for use on Class A, B, and C fires; or alternate type consistent with the degree of hazard, except as follows:
2. Train Control, Communications Rooms, Electrical Rooms -- Carbon dioxide or Clean Agent (CF₃CH₂CF₃), 10B: C.
3. Fire extinguishers in traction power substations and A.C. switchboard rooms are to be located such that the maximum travel distance to any extinguisher will not exceed 50 feet. Extinguisher locations are to be identified on the plans with extinguishers furnished and installed by the Authority.

F. Fire Hydrants

1. Assure or provide fire hydrant within 100 feet of fire department Siamese connection, within public right-of-way if possible, and in a location that will not necessitate running fire hoses across a major or heavily-trafficked thoroughfare. Advise the Authority if no hydrant exists within the 500 feet limit or if a hydrant is required to comply with access criteria. Coordinate specific location with local jurisdiction. Fire hydrants located in public right-of-way will be provided by the local jurisdiction. Water line of adequate size will be extended to the WMATA property line by the responsible jurisdiction.

G. Fire Walls

1. The integrity of all fire walls shall be maintained at all penetrations of whatever sort, as for piping, conduits, ductwork, air intake, air exhaust or air relief

openings, etc. Walls or floors shall be protected when designated fire rated in order to comply with applicable codes.

2. Fire dampers complying with the SMACNA Fire Damper Guide and all other applicable codes and standards shall be installed at all duct penetrations and at all other openings provided for the passage of air in fire rated floors or walls. The location of fire dampers shall be indicated on the contract drawings. Where fire dampers are installed in ducts, access panels will be provided to permit inspection and resetting of the fire dampers.
3. Where pipes or conduits penetrate a fire wall, the space between the sleeve and pipe or conduit shall be tightly packed with an approved noncombustible material of a rating equivalent to the wall or better. In all cases, there shall be full closure of the penetration in a manner as to preserve the fire rating of the fire wall.

H. Fire Protection for all Areas

1. All rooms shall be provided with a sprinkler system for NFPA ordinary hazard, Group 1 minimum water density and spacing, except where NFPA 13 requires higher hazard use.
2. Sprinkler heads shall be uniformly located within the space, midway of the width of the room in cases where a single sprinkler head is required, and equally spaced where two or more sprinkler heads are required.
3. Sprinkler heads are to be of the fusible link type with temperature rating of 165 degrees F in conditioned spaces and in accordance with NFPA 13 for ambient temperatures above 100 degrees F. An unmonitored OS&Y shut-off valve, a swing check valve and a flow detector switch are to be provided in the branch line to the sprinkler heads. OS&Y valve shall be easily accessible, be readily viewed from the room door, and sealed in the open position. A flow detector shall be located between the OS&Y valve and check valve. A 1/2" bronze angle hose valve is to be installed at the end of the sprinkler pipe. The flow switch is to be connected into the fire alarm circuit for the fire zone in which the sprinklers protect.

I. Clean Agent Suppression Systems

1. Where fire suppression systems in electrical rooms are required by the local jurisdiction, Clean Agent (CF3CHFCF3) systems shall be provided in accordance with NFPA 2001 Standards and as follows:
 - a. Each protected room shall be served by an independent system.
 - b. Systems shall be sized on a 7% total flooding basis.
 - c. Reserve supplies shall not be provided unless required by local jurisdiction.
 - d. Clean Agent (CF3CHFCF3) storage shall be located near the protected room (storage may be in protected room if conditions make it necessary).
 - e. Each system shall have a dual zone panel.
 - f. Ionization detectors will be provided and transmit a zone 1/zone 2 signal to panel.

- g. Clean Agent System panel shall activate audible alarm, close dampers and shut off fan if either zone signal is received.
- h. When the second zone signal is received, Clean Agent System panel shall:
 - (1) Activate second (different) audible alarm.
 - (2) Start timer (0 to 60 sec.).
 - (3) Discharge Clean Agent when timer times out.
 - (4) Activate "Clean Agent" visual alarm outside of each entrance to the room when Clean Agent is discharged.
- i. Clean Agent shall discharge in 10 sec. maximum.
- j. A manual by-pass fan switch shall be provided outside the protected room (for Fire Department use).
- k. A manual Clean Agent release shall be provided to function as if a zone 1/zone 2 signal had been received.
- l. Battery power shall be provided for Clean Agent panel. Batteries shall be equipped with a trickle charger.
- m. A remote reset switch shall be provided at a station supervising the system.
- n. Protected room doors shall swing out.
- o. Panic hardware shall be provided for protected room door latches.

1.11 PLUMBING

- A. Pipe and Fittings
 - 1. Soil pipe within the structure shall be pitched at 1/4" per foot, except soil pipe in invert running the length of the station shall be pitched at 1/8" per foot with one pipe size larger pipe.
 - 2. Domestic hot and cold water piping in the structure shall be copper tubing.
 - 3. Drainage pipe (for track drains and seepage drains) shall be perforated or unperforated as required.
 - 4. Force mains shall be mechanical joint, ductile iron pipe.
 - 5. Pipe for water service entrance shall be ductile iron, mechanical joint.
 - 6. Floor drains in Mechanical Equipment rooms may be connected to the track drains without venting.
 - 7. Minimum waste pipe size underground or in structural slab shall be 2".
 - 8. Electrolytic separation shall be provided for dissimilar metals.
 - 9. Cathodic protection for buried pipe shall be provided as required.

10. Unless otherwise approved by the Authority, water, sewer and drainage pipes shall not be run through electrical equipment spaces.

B. Roughing-in

1. Sleeves shall be provided in the structure to accommodate plumbing installations. Sleeves shall be provided in structural walls for the extension of the force main from the sewage ejector. Piping shall be run as directly as possible. All piping shall be run parallel to and at right angles to walls and partitions. Multiple pipes shall be grouped in parallel lines.

C. Water Service

1. At least four (4) inch diameter water service connection shall be provided to each facility. Each domestic service shall have a main shut-off valve immediately inside the structure wall.
2. Required load, in GPM, shall be estimated from fixture unit values as follows:

Flush valve water closet	10
Flush valve urinal	5
Lavatory	2
Mop Service Basin	3
3. Fixture demand in GPM can be estimated from data in The Model Plumbing Code, Washington Suburban Sanitary Commission Plumbing Code, or International Plumbing Code, whichever is applicable.
4. The demand for outlets, (hose connections, cooling tower, make-up, etc.) which are likely to impose continuous demand, shall be estimated separately and added to the fixture demand GPM to determine the total demand.

D. Hot Water Service

1. Hot water shall be supplied to all toilet and cleaner's rooms. Hot water shall be supplied by electric heaters. Heaters shall be installed at least six inches above floor. Heater capacity shall be based on 100°F recovery and shall be sized in conformance with the fixtures installed which are to be served by the heater.
2. Provide relief valves in accordance with code requirements. Relief valve shall be piped to indirect waste.
3. Provide a recirculation system if supply piping is more than 100 feet long.

E. Insulation and Freeze Protection

1. The following shall be insulated:
 - a. Water piping.
 - b. Traps at roof drains.
 - c. Exposed floor drain traps.

- d. Portions of all water piping subject to freezing. Condenser water piping exposed to freezing temperatures shall be drained after the cooling season. Any remaining exposed sections which are not drained shall be heat traced to prevent freezing.
 - e. Portions of drainage and cold water piping subject to sweating.
 - f. Hot water heater, if not factory insulated.
2. Where freeze protection is required, use electric heating cable.

F. Plumbing Fixtures

1. Provide number and types of fixtures as required by the applicable local plumbing code. One set of fixtures and accessories in each men's and women's washrooms shall be suitable for use by the physically handicapped and in compliance with local codes and ADA.
2. Mop service basins shall be of the floor-mounted type.
3. Provide one electric water cooler per local building code. Electric water coolers shall be wall-mounted and hand-operated and ADA compliant.
4. Water supplied to lavatories and flush valve fixtures shall have water shock absorbing provisions.
5. Vacuum breakers shall be installed on all outlets with hose bibb connections and submerged inlets.
6. In addition to the features listed above, plumbing fixtures shall also meet the following requirements:
 - a. Lavatories: Self closing outlet devices 0.5 GPM
 - b. Outlet temperature, 110°F maximum
 - c. Maximum hot water, 0.25 gallon/actuation
 - d. Showers: 3 GPM per shower head
7. All water supplies to fixtures shall have key operated service valves. Each connection shall carry the pressure recommended by the fixture manufacturer but not less than 15 psi for flush valves and 8 psi for other fixtures.

Plumbing Fixture Schedule

<u>Symbol</u>	<u>Fixture</u>	<u>Waste</u>	<u>Trap</u>	<u>Vent</u>	<u>HW</u>	<u>CW</u>	<u>Remarks</u>
WC	Water Closet	4"	Integral	2"	No	Yes	Wall Hung
UR	Urinal	2"	Integral	1-1/2"	No	Yes	Wall Hung
LAV	Lavatory	1-1/2"	1-1/4" x 1-1/2"	1-1/2"	Yes	Yes	Wall Hung
MSB	Mop Service Basin	3"	3"	1-1/2"	Yes	Yes	Set on Floor Slab
EW/BS	Eye Wash Fountain and Body Spray	1-1/2"	*	*	No	Yes	Wall Hung
EWC	Electric Water Cooler	1-1/2"	1-1/2"	1-1/2"	No	Yes	Wall Hung
SH	Shower	3"	3"	1-1/2"	Yes	Yes	Set in Wall

* Required only where connected to sanitary sewer.

Minimum Fixture Supply Pipe Sizes

Flush Valve Water Closet	1"
Flush Valve Urinal	3/4"
Lavatory	3/8"
Mop Service Basin	1/2"
Hose Bibb	3/4"
Eye Wash Fountain and Body Spray	1/2"
Electric Water Cooler	1/2"
Shower	1/2"

8. Where city water pressure is above 60 psi at water service room, provide reducing valve assemblies consisting of reducing valve, three-valve bypass, and strainer.
9. Emergency eye wash and body spray facilities shall be provided in chilled water plants, battery rooms, traction power substations, tie breaker stations, car wash buildings, and in any other areas where corrosive materials are handled or stored. Portable eye wash and body spray facilities will be furnished and installed by the Authority; however, their locations are to be designated and a clear wall space of not less than 30" wide and 6'-0" high provided. Shields will be provided at both permanent and portable facility locations as required to

protect electrical equipment from water spray. A minimum of 20 psi water flow pressure is to be provided to the permanent eye wash fountain and body wash facilities.

G. Sewage Ejector Station

1. Sewage ejector stations shall be of the triplex type and utilize vertical dry pit sewage pumps. Dry pits shall be provided with ladder access and covered with grating. A sump pit and pump shall be provided in the dry pit and shall discharge to the wet well. Wet wells shall be sealed and vented per local codes. Wet well access shall be through a gas tight manhole. Each pump shall have a capacity of 100 percent of design load and as follows:

Pump Rating	Based on fixture unit as previously stated for water service, minimum capacity of 50 gpm.
Pump Head installation.	To suit static and friction heads of each installation.
Electrical Characteristics	See Electrical Program Criteria.
Ejector Discharge	Ejector discharge to the nearest sanitary or combined sewer shall be minimum four-(4) inch cast iron pressure pipe - mechanical joint. Discharge velocity shall be 2.5 feet per second minimum, 7 feet per second maximum.

2. Sewage ejector station controls shall utilize float switches such that the lead pump is energized after the lead pump float switch rises to the pump start position and de-energized after the pump off float switch falls to the off position. If the sewage level continues to rise after the lead pump is energized, additional float switches shall energize the first lag pump and a high level alarm. If sewage level still continues to rise, additional float switches shall energize the second lag pump and a second high level alarm. An alternator shall be provided to alternate lead and lag pumps after every cycle.

H. Elevator Sump Pump

1. Elevator sump pump that does not pump oil into storm or sanitary system and complies with local codes and regulations.

1.12 PROCESS PIPING

A. Compressed Air Systems:

1. Compressed air shall be provided for equipment scheduled in shop equipment listing. In addition, provide miscellaneous cool air drops with valving, filters and connections to match existing shop air drops. Space air drop stations to match existing shop distribution.
2. New compressors shall be rotary screw type UL approved air compressors, dual receiver/compressor with each speed for 60% of required capacity.

1.13 AUTOMATED ENERGY MANAGEMENT SYSTEM

A. General

1. The Automated Energy Management System (AEMS) shall be modified to incorporate the building system modifications to the HVAC, plumbing and fire protections systems.
2. New buildings shall implement an AEMS system to control and monitor the HVAC, plumbing, and fire protection systems.

1.14 ELEVATOR MACHINE ROOM

A. Machine Room

1. The purpose of temperature control in the Machine Room is to prevent equipment shutdown due to over-cooling or over-heating. Machine Room temperature shall be maintained between 50 °F minimum and 100 °F maximum, unless elevator manufacturer's recommendations differ. Temperature controls shall be automatic.
2. Maximum temperature control shall be maintained with one of the following systems:
 - a. Exhaust the airflow required to maintain Machine Room temperature at or below maximum design requirement. Make-up air shall be transferred from inside the building. Calculate airflow as follows, using motor heat output to space as provided by equipment manufacturer:

$$\text{CFM} = \frac{\text{Motor heat output to Machine Room in BTUHs}}{1.08 \times (100 \text{ }^\circ\text{F} - \text{make-up air temperature})}$$
 - b. Where adequate make-up air is unavailable, utilize an air terminal unit, fan coil unit, or split system to provide temperature control for Machine Room. All air shall be recirculated within Machine Room.
3. For planning purposes, design for 15 horsepower motors for electric elevators, 30 horsepower for hydraulic elevators up to 20 feet of rise, and 35 horsepower for hydraulic elevators of more than 20 feet of rise.
4. Machine room walls shall be constructed with 2-hour fire rating. Ducts penetrating rated walls shall have 2-hr fire dampers protecting penetrations.
5. Minimum head room clearance of 7'-0" shall be provided under HVAC equipment and ductwork.
6. No water piping shall be designed or installed to cross through any elevator machine room.

1.15 CLEARANCE TO INSTALLATIONS

- A. A minimum of two inches is required between any fixed installations (e.g. pipes, pipe hangers, pipe supports, signals, lighting fixtures, etc.) and the design vehicle dynamic outline. Installations shall be so dimensioned and located that maximal distances are obtained between these and clearance envelope along tangent and curved alignments.

1.16 MAINTAINABILITY AND CONSTRUCTABILITY

- A. The design of mechanical systems and equipment installations shall be coordinated with structural, electrical, architectural and other disciplines for the purpose of insuring adequate space, clearances, structural support, and non-interference with other trades during construction. Designs shall take ease of mechanical equipment maintenance into account. Maintenance operations will include inspection, adjustments, cleaning,

trouble shooting, servicing, repairs and replacement of mechanical equipment. The selected equipment shall be subject to minimal system component failure.

1. Space and Accessibility
 - a. Sufficient working space and adequate access shall be provided for the maintenance and replacement of all mechanical equipment. This requirement shall include adequate space for movement of equipment during initial installation, and during subsequent unscheduled maintenance involving removal and replacement of failed equipment.
2. Specific Requirements
 - a. Mechanical system designs shall be in accordance with the following requirements:
 - (1) Mechanical equipment mounted 8 feet or more above the finish floor shall be provided with work platforms. The mechanical equipment in this category shall include any items which require frequent servicing or contain large components or require large replacement parts.
 - (2) Access to work platforms less than 10 feet shall be by portable ladder. Fixed ladders shall be provided to work platforms 10 feet or more in height.
 - (3) Chain operators shall be provided for chilled and condenser water valves mounted 8 feet or more above the finish floor.
 - (4) Chiller and boiler tube pull spaces shall be indicated on the contract drawings.
 - (5) Filter pull spaces shall be indicated on the contract drawings.
 - (6) Coil pull spaces shall be indicated on the contract drawings.
 - (7) Special requirements (e.g. cooling tower drive shaft pull space) shall be considered and called out on the contract drawings as required.
 - B. Equipment shall not be suspended over floor mounted equipment or pits in a manner which prevents access to the suspended unit.

1.17 SUBMITTALS

A. GENERAL:

1. The contractor shall submit to the Authority for approval.
2. Products to be used prior to the design phase.
3. 60 and 90 percent complete design drawings for review.
4. O& M manuals and training manuals
5. As built mechanical drawings.

END OF SECTION

PROGRAM CRITERIA

ELECTRICAL

1.01 GENERAL

- A. These program criteria include functional and design requirements for the supply and supervision of electrical power to the Washington Metropolitan Area Rapid Rail Transit System shop renovations at three sites: Brentwood, Greenbelt, and Shady Grove.
- B. The Electrical Systems will supply power to all building systems to provide safe, efficient and continuous operation. Design the Electrical Systems in coordination with the requirements of the individual power companies in D.C. and Maryland providing primary power to the system.

1.02 GLOSSARY

- A. Standard Terminology
 - 1. In general, definitions applied to AC power conform to definitions listed in ANSI/IEEE C37.100 of the American National Standards Institute and the Institute of Electrical and Electronics Engineers.
 - 2. Basic electrical terminologies used in these criteria, which are not defined in the ANSI/IEEE reference are to be interpreted in their normal usage.

1.03 STANDARDS AND CODES

- A. Where applicable, conform to the current adopted version of the following standards and codes:
 - 1. National Electrical Code (NEC)
 - 2. National Electrical Safety Code (NESC)
 - 3. Electrical Codes of the District of Columbia and Counties of Maryland and Virginia through which the Transit System may operate.
 - 4. American National Standards Institute (ANSI)
 - 5. National Electrical Manufacturers Associations (NEMA)
 - 6. Institute of Electrical and Electronic Engineers (IEEE)
 - 7. Illuminating Engineering Society of North America (IESNA)
 - 8. Insulated Cable Engineers Association (ICEA)
 - 9. Underwriters Laboratories, Inc. (UL)
 - 10. Intertek Testing Services (ITS)
 - 11. ASHRAE 90.1
 - 12. International Energy Conservation Code (IECC)
 - 13. Building As-Built Drawings
 - 14. WMATA Design Criteria

1.04 SCOPE

- A. General Scope
 - 1. The scope includes all work required to design, furnish, install, connect, test, and energize the power, lighting, and grounding required for the redeveloped and new

- buildings and buildings' systems equipment. Systems include, but are not limited to, DC power, HVAC, special purpose receptacles, elevators, turntables, car hoist/crane systems, service shop equipment, communications, control systems, and equipment required by other disciplines.
2. Coordinate with WMATA to determine locations, loads, voltages, connection requirements and other electrical characteristics of WMATA's new and relocated equipment.
 3. The work may modify existing exits and means of egress. Re-evaluate exit signs and emergency lighting and modify where necessary.
 4. Provide temporary power to keep work disruptions to a minimum. Coordinate and stage all electrical work to maintain maximum operational ability of the facility during construction.
 5. Carefully phase work at all three sites to keep maintenance services as functional as possible during construction. Provide a complete schedule of the phased construction plan to owner for approval.
 6. Work in existing facilities includes removing and/or relocating power, lighting, and grounding systems and coordinating work to minimize downtime and interference with building functionality.
 - a. Remove abandoned conduit above accessible ceilings. Cut conduit behind walls and below floors. Patch surfaces and finishes to match existing fire ratings and finishes.
 - b. Without additional cost to owner, replace equipment, facilities, and materials damaged as a result of demolition work.
 7. Work in the new facilities includes primary and secondary power distribution.
 8. Work includes site visit and field verification of existing conditions.
 9. Where existing overcurrent protective devices are intended for re-use, test and certify for re-use.

B. Site Specific Scope

1. Greenbelt
 - a. Existing Shop Building
 - (1) Relocate or remove electrical equipment, panels, area lighting, and associated wire and conduit in designated areas to facilitate the project upgrades to the building.
 - (2) New and relocated equipment may be installed in the existing building shop areas. Provide working clearance and track clearance around new electrical equipment.
 - (3) Provide all new and replacement electrical equipment needed to facilitate new shop layouts. Equipment may include, but not be limited to, feeders, Motor Control Centers, distribution panels, combination motor starters, fused and non-fused disconnect switches, welding receptacles and circuit breakers. Coordinate individual space requirements with owner.
 - (4) In spaces where existing lighting may remain, measure and record existing lighting levels. If lighting levels are deficient for the new use of space, modify lighting to meet the illumination levels referenced in the lighting systems section of this document.
 - (5) Provide new light fixtures for new rooms.
 - (6) Work includes bringing area of work up to current code.
 - b. New Shop Building

- (1) New and relocated equipment may be installed in the new building shop areas. Provide working clearance and track clearance around new electrical equipment.
- (2) Provide a new electrical distribution system to provide power for the new and relocated shop equipment, receptacles, HVAC equipment, elevator equipment, special systems and lighting. Equipment may include, but not be limited to, feeders, Motor Control Centers, main and secondary distribution panels, transformers, combination motor starters, fused and non-fused disconnect switches, welding receptacles and circuit breakers. Coordinate individual space requirements with owner.
- (3) The new shop building shall be provided with a complete grounding system.

2. Brentwood

- a. Analyze existing electrical distribution system to determine equipment that must be removed or relocated due to new construction, including, but not limited to panelboards, transformers, disconnect switches, conduit, and wire.
- b. Provide new electrical distribution system including, but not limited to, panelboards, transformers, disconnect switches, conduit, and wire to connect remaining, relocated, and new equipment, including HVAC and shop equipment.
- c. Provide new motor control centers for new train hoist system.
- d. Install new equipment to match the existing track area layout. Provide working clearances and track clearances around new electrical equipment.
- e. Coordinate with architect to determine required clearances and locations of new motor control centers.
- f. New track work area conflicts with numerous conduit banks. Verify which conduits may be relocated and provide rerouting solutions and scheduling to owner before construction begins.
- g. Modify lighting to meet the illumination levels referenced in the lighting systems section of this document.
- h. Provide new light fixtures in office areas and new rooms.
- i. Work includes bringing area of work up to current code.
 - (1) Provide convenience outlets on roof as required by code.
 - (2) Remove lights and equipment supported by conduit and re-support from building structure.

3. Shady Grove

- a. Blow Pit
 - (1) Remove power and lighting systems from the existing blow pit as necessary to accommodate demolition and new work.
 - (2) Provide power and lighting systems for the new blow pit. Provide 120V convenience receptacles on Blow Pit platforms. Provide only materials and equipment suitable for the dirty and wet environment present in the pit.
 - (3) Investigate current load on motor control center MCC-1A and replace if necessary to accommodate additional loads; allow for 100% future growth.
- b. New Shop Expansion

- (1) The primary electrical service ductbank and manhole may need to be relocated to accommodate the new shop.
- (2) Remove or relocate existing electrical equipment where new construction interfaces with the existing building.
- (3) Provide power and lighting systems for the new shop expansion.
- (4) Investigate the accumulation of water in the facility entering from nearby manholes into the basement AC switchgear room. Devise and implement an acceptable solution to (1) provide proper drainage for storm and ground water, and (2) effectively waterproof the AC switchgear room.

1.05 AUXILIARY ELECTRICAL SYSTEMS

A. General

1. This section identifies the requirements for installation of lighting circuits and auxiliary electrical equipment.
 - a. Demolition work includes removal of feeders and/or branch circuits to all equipment determined to be demolished in final project documents. Feeders to equipment determined to be relocated or feeders and circuits run in areas that are otherwise considered for demolition may be evaluated on a case by case basis whether to extend, re-route or demolish and re-feed.
 - b. New work includes routing and coordination of new or relocated feeders to new and relocated equipment from power service points to final served loads.
 - c. Match existing 480Y/277V and 208Y/120V, 3-phase, 60Hz systems for distribution and service.
 - d. Provide load calculations based on equipment data, power density data, PEPCO historical data, WMATA design standards, and expected future loads to determine new equipment sizes and modifications to the existing distribution systems.
 - e. Provide available short circuit current calculations and perform a coordination study to determine equipment withstand and interrupting ratings. Replacement of ANSI C37 power breakers with molded case breakers is not permitted without clear justification by analysis.
 - f. Provide new electrical service and/or upgrade existing electrical service as required to accommodate new work. Perform a continuous two-week survey to monitor power factor or reactive power (kVARs) demand. Use either the 15-minute peak kVAR demand or the 15-minute minimum power factor and combine with the most recent 12-month peak power (kW) demand as reported by PEPCO as a basis for facility current load calculation.

B. AC Power Descriptions

1. Greenbelt Shop
 - a. New Shop Building
 - (1) The existing AC substation that serves the existing Greenbelt Shop is located in the first floor substation room. The substation has capacity to serve the expected load of the new shop building.

- (2) The AC power distribution system for the new building may be served from new sections and breakers added to the existing AC substation or new service from PEPCO.
- (3) The new electrical distribution system will include a 480Y/277V, 3-phase, 4-wire service entrance switchboard sized to provide all expected power needed for the new building plus 20% reserve for future growth. Provide new Switchboard equipment with transient voltage surge suppression.
- (4) The main Switchboard will radially feed local and remote distribution panels, lighting panels and motor control centers located in the main electrical room or shop areas. Locate primary and secondary distribution panels to minimize the branch circuit voltage drop, provide maintenance and operational convenience to the users, and to serve each concentration of loads.
- (5) Step down, dry-type, 480V-208Y/120V transformers will be utilized to feed the buildings receptacle panels.
- (6) Emergency loads are currently served by a 50kVA uninterruptible power supply (UPS), located in the main Switchgear room. New emergency loads may be connected to the existing system or a new UPS, subject to load analysis. Provide load analysis, and additional UPS capacity as needed. Provide 2 hours of emergency power for life safety equipment and as required by code.
- (7) Shop electrical requirements are to be coordinated with end users on an individual shop by shop basis when laying out receptacle concentrations and welding receptacles.

b. Existing Shop Building

- (1) The existing AC substation has capacity to serve the addition of distribution panels or motor control centers needed for the building upgrades.

2. Brentwood Shop

- a. The existing AC substations are located on the basement level. The substations have sufficient capacity to serve the expected load of the new shop expansion.
- b. Reconfigure substations' feeds as needed to avoid tapping the bus.
- c. Emergency loads are currently served by a 50kVA uninterruptible power supply (UPS), located in the main switch room. New emergency loads may be connected to the existing system or a new UPS, subject to load analysis. Provide load analysis, and additional UPS capacity as needed. Provide 2 hours of emergency power for life safety equipment and as required by code.

3. Shady Grove Shop

- a. The existing AC substation that serves the Shady Grove Shop is located on the basement level. The substation has capacity and breaker space to serve the expected load of the new shop expansion.
- b. The AC power distribution system for the new expansion may be served from new breakers or spares in the existing AC substation.
- c. The new electrical distribution system will include MCCs and panelboards

to provide power to the new process equipment, receptacles, HVAC equipment and lighting. Do not connect or re-connect to panelboards no longer available from their manufacturers, but replace with new equipment. Install panelboards and MCCs on the shop floor of common manufacturer and similar to the existing facility. Provide working clearance and track clearance around the new electrical equipment.

- d. Emergency loads are currently served by a 75kVA uninterruptible power supply (UPS). New emergency loads may be connected to the existing system or a new UPS, subject to load analysis. Provide load analysis, and additional UPS capacity as needed. Provide 2 hours of emergency power for life safety equipment and as required by code.

C. General Electrical Characteristics

1. Clearance to Installations

- a. A minimum of 2" is required between any fixed installation (e.g., pipes, pipe hangers, pipe supports, signals, lighting fixtures, etc.) and the design vehicle dynamic outline. This is defined by the clearance envelope. However, installations will be so dimensioned and located that maximal distances are obtained between these and the clearance envelope along tangent and curved alignments.

2. Utilization Voltages

- a. Utilization voltages for devices and equipment requiring AC power will conform to the following characteristics:
 - (1) Fluorescent Lights: 277 volts (preferred) or 120 volts single phase
 - (2) Tungsten-Halogen
 - (a) 120 volts single phase or 277 volts single phase.
 - (3) General Incandescent Lights
 - (a) Maintenance lights: 120 volts, single phase controlled manually
 - (4) High Intensity Discharge Lights
 - (a) General: 277 volts, single phase
 - (b) Lights equipped with medium base lampholder: 120 volts, single phase or 277 volts, single phase.
 - (5) Convenience Outlets: 120 volts, single phase, 20 ampere.
 - (6) Motors
 - (a) 3/4 to 200 HP: 460 Volts, three phase
 - (b) 1/2 HP and below: 115 volts, single phase
 - (c) Motor Control Power: 120 volts, single phase
 - (7) Duct heaters and unit heaters
 - (a) Below 4 KW: 277 volt, single phase
 - (b) 4 KW and above: 480 volts, three phase
 - (8) Wall convectors
 - (a) Below 4 KW: 277 volts, single phase
 - (b) 4 KW and above: 480 volts, three phase
 - (9) Water heaters
 - (a) 6 GPH recovery: 120 volts, single phase and below
 - (b) Above 6 GPH: 480 volts, three phase recovery
 - (10) Chillers: 460 volts, three phase
 - (11) Air conditioning
 - (a) 10,000 BTUH and below: 115 volts, single phase
 - (b) Over 10,000 BTUH up to 36000 BTUH: 208 volts, single phase

- (c) Over 36000 BTUH: 460 volts, three phase
3. Large Motor Starters
 - a. For 460 volt motors, starter will include a control transformer. Across-the-line motor starters will be used for motors up to and including 50 HP at 460 volts, three phase.
 - b. All motors over 50 hp will be equipped with reduced voltage starters of the auto-transformer, 2-step, closed transition type, unless otherwise approved by the Authority. Remotely located motor control centers (such as fan shafts, pumping stations or chiller plants) will be provided with main incoming breakers.
 4. Load Classification
 - a. Load requirements are classified into two categories: essential loads and emergency loads (from the Uninterruptible Power Supply (UPS) System).
 - b. Emergency power loads are listed in the Emergency Power System paragraph. In maintenance facilities treat all loads as essential loads except those requiring connection to emergency power.
- D. 480 Volt Switchgear and Switchboard
1. Secondary main and tie breakers will be 480 volts, 3 phase, 60 hertz, drawout type, low voltage power circuit breakers with stored energy closing mechanisms. These circuit breakers will be manually actuated close with manual and electrically operated trip; except that the tie breakers will include electrically actuated close.
 2. Each secondary main and tie breaker will be equipped with a solid-state tripping system consisting of three current sensors, microprocessor-based controlled phase overcurrent trip device and flux-transfer shunt trip, ground-fault protection, position indicating lights, spare auxiliary contacts for DTS, accessories and interlocks. The trip device will have long-time and short-time elements, communication interface, power metering and non-volatile memory for protective settings. The trip unit will be equipped with an energy monitoring function processor to provide at a minimum; phase current (amps), peak demand (kilowatts), present demand (kilowatts) and energy completion (kilowatts-hours).
 3. For each secondary main and tie breaker, provide digital power metering to measure the real-time rms values of phase currents, ampere demand, and phase and line voltages plus power measurements including kW, kW demand, kW-hours, kVA, kVAR-hours, power factor and frequency. Resettable minimum and maximum values for each measured value will be recorded in a nonvolatile memory. The digital power meter will derive power from a separate 125V AC or DC source, and include the following:
 - a. Internal illuminated display for reading all real-time and min/max measured values as well as programming initial configuration and any relay setpoints.
 - b. Three programmable relay outputs to activate and release based on threshold and time-delay values associated with any of the measured parameters.
 - c. Communications module to remotely read real-time and min/max measured values, interrogate the event log, reset min/max and kW/kVAR-hours, program configuration and any relay setpoints.
 - d. Extended memory
 - e. Portable Interface Device
 - f. Software
 4. All breakers will have short circuit interruption and withstand ratings as determined by short circuit and coordination calculations and approved by the Authority. Feeder breakers in switchboard will be ambient compensated and may be molded

case bolt-on type. C37 Power circuit breakers may be used where necessary to obtain suitable protection of down-stream equipment and wiring.

5. Provide time coordinated and interlocked ground fault protection on secondary main, tie breakers and feeder breakers. Provide single point grounding.
6. Size 480 volt switchgear buses and secondary main circuit breaker frames based on transformer forced air-cooled capacity. Set breaker trip ratings based on calculated initial connected loads plus allowance for future 20% growth.
7. Breaker Operation
 - a. Provide control power at 125 volts DC and feed with a minimum of two No. 6 AWG wires. Unit substations for 34.5 kV or 13.8 kV service through metal-clad switchgear will have the following control operation:
 - (1) Primary breaker is tripped by primary undervoltage condition (detected by 27/59 relay for 13.8 kV service and 27 relay for 34.5 kV service), residual ground, or phase overcurrent relays. Primary breaker is closed via manually operated switch.
 - (2) Secondary main breaker is tripped automatically by tripping of primary breaker. Secondary main breaker is closed via manually operated switch.
 - (3) When the secondary main breaker is tripped by the primary breaker due to an undervoltage at the primary service, and if the other secondary main breaker is closed, the tie breaker(s) will automatically close. Closing of the tie breaker(s) is blocked if the primary breaker or secondary main breaker has tripped because of overcurrent or ground fault condition; closing of the breaker(s) is also blocked if both secondary main breakers are closed.
 - (4) Second stage transformer overtemperature device will trip the primary breaker.
 - (5) Where two tie breakers are required due to unit substation being located in separate switchboard rooms, both tie breakers will close simultaneously, and the tripping of either tie breaker will instantaneously trip the other tie breaker.
8. Provision for System Growth
 - a. Design the AC power service facilities with a 20% allowance for future growth. This includes all switchboards, distribution transformers, feeders, panelboards, and motor control centers. Provide space at each unit substation for the installation of at least one additional switchboard cubicle.

E. Panelboards

1. Designations
 - a. The designation of each panelboard will indicate the following information about the panelboard:
 - (1) Service voltage -- 480Y/277 volt AC or 208Y/120 volt AC.
 - (2) Identify circuits with the panel identity and the branch circuit number. Example: circuit fed by breaker #3 in panelboard NE is identified NE-3.
 - b. Install panelboards with top 6'-6" maximum above finished floor.
 - c. Do not locate panelboards in cleaner's rooms, sewage ejector rooms, wash rooms, or locker rooms.
2. Panelboard Sizes
 - a. The following will serve as a guide in selecting panelboard sizes:

Minimum Breaker Poles <u>Connected</u>	No. of Spare 20A <u>Breakers</u>
Up to 8	2
9 to 12	4
13 to 22	4
22 to 28	4
29 to 36	4

- b. Unused spaces will be equipped with buswork and terminations for ready connection of ready connection of breakers.

3. Demand Factors Service

Service	Demand Factor
Lighting and Signs	100% of Connected Load
Emergency Lighting	100% of Connected Load
Elevators	50% of Connected Load
Ventilation Equipment	70% of Connected Load
Air Conditioning Equipment	70% of Connected Load
Heating	100% of Connected Load
Drainage Pumps & Ejectors	70% of Connected Load
Communications Equipment	100% of Connected Load
Convenience Outlets	1.5 amperes per receptacle

- a. Indicate the calculated demand load total at each panelboard schedule for summer and winter.

F. Emergency Power System

1. The UPS system will provide emergency power for loads listed below. The UPS output will be backed up by an alternate essential feeder and automatic transfer switch. The rectifier/charger, inverter, and transfer switch will be located in the AC Switchboard room adjacent to the battery room. The battery disconnect device (enclosed circuit breaker) will be wall mounted inside and next to battery room entry door, if possible. The UPS will be capable of operation from the power source of a mobile generator.
 - a. Rectifier/Charger
 - (1) A silicon rectifier/charger will be of adequate capacity to provide DC input to inverter to give rated output while simultaneously providing charge to battery at rate to give full charge in 12 hours after battery has been fully discharged, and to provide control power for high voltage and 480 volt switchgear.
 - b. Battery
 - (1) Storage batteries will be UPS cycle duty, industrial flooded lead acid cell.
 - (a) The discharge capacity capable of providing DC inverter input to give rated inverter output at 0.8 lagging power factor for three hours at 77°F while simultaneously

providing DC continuous and final minute load for switchgear. Minimum battery terminal voltage of 105 volts under full load at end of three hour discharge period.

- (b) The two tier battery rack will be 1'-3" wide by 2'-6" long by 6'-4" high. Each rack has two cells per tier.
- (2) Each battery room will be ventilated as stated in the Mechanical Design Criteria and the ventilation fan shall run continuously from an essential power source. Where required by local jurisdiction, interlock to charger shall be provided to prevent operation if fan is not operating.
- c. Inverter
 - (1) Inverter will be of solid state design with 480/277V, 3 Phase, 4 wire, 60 Hertz output and capable of delivering rated KVA into load which has power factor of 0.8 lagging, minimum.
- d. Automatic Transfer Switch
 - (1) The switch will be static type and capable of transferring automatically the emergency power load to AC by-pass line under the following conditions:
 - (a) Inverter failure
 - (b) Inverter output voltage dropping to 80% of rated voltage.
 - (2) The switch will automatically retransfer emergency load from by-pass line to inverter when inverter output voltage returns to 90% of rated voltage.
- e. Load Requirements
 - (1) Connect the following loads to the UPS:
 - (a) Communications.
 - (b) Exit signs, egress lighting, and 20% of indoor lighting.
 - (c) Elevator car light, fan, and controls.
 - (d) Fire suppression systems.
 - (e) Public Service Radio System.
 - (f) Chemical detector.
- f. Wiring
 - (1) Do not install emergency system wiring in raceway common to other system wiring.

G. Conduit

- 1. Conduit applications include but are not limited to the following:
 - a. Where access to wire or cable may not be available or required.
 - b. Where concealed wiring is required, such as in public areas.
 - c. Where mechanical protection is required beyond that provided by armored cable.
 - d. Buried conduit where clearances are limited.
- 2. Types and Materials
 - a. Liquid-tight Flexible Metal Conduit
 - (1) Use flexible conduit where vibration isolation is required (e.g., motors, transformers) and for short connections between items of equipment whose alignment precludes the use of rigid conduit.
 - b. Rigid Galvanized Steel Conduit
 - (1) Generally, galvanized rigid steel conduit may not be embedded. Use only for surface runs in normally dry underground areas including fan and vent shafts, on interior ceilings and walls, or concealed where conditions are normally dry, such as above drop

ceilings, and in CMU walls.

- c. Fiberglass Reinforced Epoxy (FRE) Conduit
 - (1) Embedded conduit for incoming service, communications, and auxiliary AC power requirements will be FRE. Conduit embedded in concrete structure is encased, while conduit embedded in earth shall have concrete encasement added.

3. General Requirements

- a. Conduit size for train control and communications will be as shown on electrical and train control Design or Standard Drawings.
- b. Minimum size conduit will be 3/4". Size conduits in accordance with NEC Annex 'C'.
- c. Where non-metallic conduits are used for AC power cables, provide proper equipment grounding conductors. Do not install conduits in floating slabs unless absolutely necessary and then only at right angles to the slab. Provide suitable isolation of conduit stub-ups; coordinate with structural design. Provide twenty percent spare conduits in embedded runs, ductbanks and sleeves in floors and walls for future needs.

4. Terminate empty conduits as follows:

- a. For conduits under 1.5 inch diameter, install heavy wall shrink tube as a seal.

H. Electrical Boxes

- 1. Provide boxes where surface mounted multi-conductor cables interface with single conductor cable in embedded conduits for proper termination of cable and cable fittings. Boxes located in underground locations (except electrical equipment rooms) will be fiberglass or stainless steel, watertight construction with threaded conduit hubs.
- 2. Boxes located in outdoor above ground locations will be of fiberglass, watertight construction with threaded conduit hubs. All other boxes will be provided with knockouts.

I. Conductors

1. Material and Insulation

- a. AC power, lighting and grounding conductors will be copper with flame retardant insulation and jacket. Minimum conductor size shall be No. 12 AWG, except for control and signal wiring.
- b. Power and lighting cables:
 - (1) Specific low-smoke and zero halogen generation characteristics.
 - (2) Fixture wire: stranded copper conductor of No. 16 AWG minimum size with Type SF-2 silicone rubber insulated or as necessary to suit temperature ratings of lighting fixture, minimum of 90° C.

2. Voltage Drop

- a. Calculate voltage drop for all long and heavily loaded circuits and feeders.
- b. Maximum total voltage drop for feeders plus branch circuits not to exceed five percent.

3. Feeders

- a. When the nearest WMATA-dedicated power source is at an excessive distance from the facility to be served, consideration may be given to use a separate utility service. Perform an economic evaluation to develop a recommended service scheme for these facilities. Final determination as to preferred service scheme will be made by the Authority, based on reliability and economics.

- b. Install neutral conductor with three phase feeders only when required. Provide each feeder and cable assembly with an equipment ground conductor, sized in accordance with NEC.
 - 4. Cable
 - a. All cables will be readily accessible for future maintenance and protected from mechanical damage.
 - b. Size feeder cables to accommodate 20% future growth in loads. Conceal cables and conduit in public areas.
 - c. Only one length of cable will be used in any feeder as far as it is practicable. Splice cables in junction boxes. Use splice boxes at any transition between MC cables and single conductor cable in conduit.
 - 5. Wiring methods
 - a. Wiring of emergency and essential AC systems and DC systems will each be independent of each other and will not occupy common raceways or enclosures.
- J. Wiring Devices
- 1. Switches
 - a. Provide snap switches to control lighting in all service rooms. Locate inside the individual rooms, on the knob side of the door.
 - b. Switches: specification grade, 20A, 120 277V rated.
 - 2. Receptacle (Convenience Outlets)
 - a. Receptacles: duplex, heavy-duty, 20A, 125V. Provide weather-proof-while-in-use enclosures and ground-fault circuit-interrupters for protection of personnel for receptacles in outdoor areas and in damp or wet locations. Provide ground-fault circuit-interrupter (GFCI) receptacles in wash rooms. Receptacles may be supplied from multi-wire branch circuits. No more than 6 receptacles on each circuit. In ancillary areas and maintenance facilities space receptacles on 20-foot centers unless indicated below.
 - (1) Ancillary and Service Rooms
 - (a) Offices, open office areas, lunch room: 10-foot centers on each wall. Provide (1) dedicated receptacle per microwave, coffee maker, and refrigerator.
 - (b) Office workstations: minimum of (3) per workstation.
 - (c) Shop workstations: 2-foot centers minimum.
 - (d) Vending: (1) dedicated receptacle per vending machine.
 - (e) Storage and custodial rooms: (1) minimum.
 - (f) Corridors: 25-foot centers.
 - (g) Train control rooms: 5-foot centers.
 - (h) Communication room: 12-foot centers with minimum of (1) per wall.
 - (i) Dispatcher's room: (6) total. Locate (3) of these above the desk level on the wall with the window facing the track.
 - (j) AC switchboard room, electrical rooms, mechanical rooms, chiller plants: 12-foot centers with a minimum of one per wall.
 - (k) Elevator machine rooms and hoistways: minimum of (2) GFCI receptacles in each elevator machine and hoistway.
 - (l) Battery room, maintenance room, trainmen's room, operation's room and bus driver's room: (2) Minimum with

- one on each opposite wall.
- (m) Wash rooms, cleaner's room, water service room and locker room: (2) minimum GFCI receptacles.
- (n) Bell system room, cart storage room: (1). Receptacles in these areas need not be GFCI.

K. Service Requirements for Ancillary Space

1. Train Control Room
 - a. Provide two 208Y/120V, 3-phase, 4-wire circuits, rated KVA as below, and terminated in disconnect switch.
 - b. Train Control Room in the S&I Shop or Yard (15 kVA):
 - (1) Train Control Room in Yard Operation Building:
 - (a) Transformers supplying the branch circuits will be located in the Yard Operation Building, AC switchboard room.
 - (2) Shop
 - (a) Normal supply will be from the emergency power panel. The reserve will be from the essential switchboard not used to feed the rectifier/charger in the UPS. Transformers supplying the branch circuits will be located in the Shop AC Switchboard Room.
2. Communications Rooms
 - a. Provide emergency 208Y/120V, 3-phase, 4-wire circuit, rated KVA as below, and terminated in a disconnect switch.
 - (1) For communications room in S&I shop or yard: 15 KVA. Transformer supplying the circuit will be located in the AC Switchboard room nearest to the Communication Room. Provide one point grounding.

L. Electrical Service Requirements for Elevators

1. Three feeders are required for the elevator machine room as follows: 1) 480V, 3-phase, 3-wire essential power feeder; 2) 208/120V, 3-phase, 4-wire auxiliary essential feeder; 3) 120V, 1-phase emergency feeder. Size the 480V feeder for the total load of all elevator motor drive systems in accordance with the Mechanical design criteria and terminate near the doorway inside the machine room. Provide a separate disconnecting means, in accordance with local codes, for each elevator drive unit.
2. The 208/120 volt auxiliary feeder will be provided to the elevator machine room and terminated in a multi-circuit panelboard or other disconnecting means where required by local codes. The number of circuits in the panelboard will be based on the following 120 volt circuits, as required for each elevator: a) lighted signal system (100 watts); b) hoistway lights; c) hoistway receptacles; d) canopy light cathodic protection rectifier (30 amp circuit). Install conduit and cables for hoistway lighting and receptacles and canopy light elevator machine room to and in the hoistway. Install the 120VAC emergency feeder to the elevator machine room and terminated in a separate disconnecting means for each elevator in accordance with local codes. For each elevator the load will include 500W for elevator car lighting and exhaust fan, 125W for intercom, and 300W future provision for elevator relay controls. Install conduit and cables for elevator car lighting and exhaust fan from the machine room to the hoistway pit and terminated in a junction box.
3. For hydraulic elevator with a steel casing, install conduits and cables for cathodic protection. Install conduits for all other functions from the elevator machine room

to the hoistway and to other areas.

M. Service Requirement for Fire Suppression Systems

1. Provide (1) 120V, 250W emergency power circuit and terminate in a junction box adjacent to each Fire Suppression system control panel.

N. AC System and Equipment Grounding

1. Provide a complete AC power grounding system for the protection of property and human life. Comply with the National Electrical Code and with requirements in these criteria, specifications and standard drawings. Ground all enclosures and raceways of the AC power and distribution system. Provide a low impedance path to ground for all exposed metallic structures, railings, stairways, etc., in the vicinity of the AC power systems.
2. Physically isolate the grounding system from structural rebars, stray current systems, and cathodic protection systems. Intentional metallic contact or electrical bonding between the two systems is not permitted. Where soldier piles are used for AC power system grounding purposes, any number of soldier piles may be bonded together provided they are in the same row and are adjacent to each other. Isolate soldier piles used for grounding from other soldier piles which are bonded and connected to drainage circuits and from reinforcing bars in the structure.
3. Provide a ground grid for each new or modified AC service at shop buildings. Ground grid/bus resistance will not exceed two ohms for AC switchboard rooms, traction power substations and chiller plants, and five ohms for tie breaker stations, electrical rooms, fan shafts, and pumping stations. Grid will consist of bare or insulated copper conductors and ground rods buried in earth and in a pattern to suit the structure; a rectangular pattern is preferred. In at-grade locations grid will be 24 inches minimum below grade. Where grid is below the bottom of the slab or near metallic objects, maintain minimum 24" separation. In underground locations, grids may be installed under the structure. A minimum of 24 inches separation must be provided between grid and soldier piles used for stray current control between grid and cathodic protection systems. In soils of high resistivity and in rock construction where normal grounding grid design does not provide required low resistance, alternate methods of ground grid design, or location, or soil treatment, etc., are to be submitted to the Authority for approval. Provide grounding of outdoor service transformers by means of a grounding electrode conductor from the transformer pad to the nearest ground grid, as well as to the substation ground bus.
4. After locations for ground grid(s) are determined and staked by survey personnel, provide engineering consultant to conduct a soil resistivity survey and report the data for use in design.
5. Main ground bus on walls of substation rooms will be used to ground the neutral of the secondary AC power distribution systems and to connect grounding sub-buses in train control and communication rooms, dispatcher and Bell system rooms, elevator machine rooms and other grounding as required. Ground bus will be copper, approximately 24 inches above floor and mounted on insulators 1-1/2 inches from wall. Where there is insufficient clearance behind the electrical AC or DC switchgear, install ground bus bar above the switchgear.
6. Requirements for installing grounding connections in train control and communication rooms:
 - a. The only connection on the bus bar provided for train control/communication equipment grounding is the cable leading to the

- AC switchboard room.
- b. No equipment or metallic structure shall be bonded to the ground bus provided for train control and communications equipment.
 - c. For items requiring bonding, the grounding conductors must go to the nearest ground bus beyond the ground bus provided for the train control and communications equipment.
 - d. Grounding transformers to the dedicated train control and communication room ground bus bars is not permitted.
 - e. Install ground bus as follows:
 - (1) AC switchboard room: 1/4" x 2" main bus installed around the inside periphery of the room.
 - (2) Train control room: 1/4" x 2" x 24" sub-bus near power supply switch and connected to AC switchboard room bus with No. 2/0 AWG insulated grounding conductor. Connect the sub-bus insulated grounding conductor to the AC switchboard room ground bus within 2" of the grounding conductor connection for the transformers supplying power to the train control room.
 - (3) Communications room: 1/4" x 2" x 24" sub-bus near power supply switch and connected to AC switchboard room bus with No. 2/0 AWG insulated grounding conductor. Connect the sub-bus insulated grounding conductor to the AC switchboard room ground bus within 2" of the grounding conductor connection for the transformer supplying power to the train control room.
 - (4) Others: Sub-bus in electrical and mechanical rooms, dispatcher and bell system rooms, as required for convenient grounding of separately derived AC power systems.
 - (5) Drainage pumping stations: 1/4" x 2" x 24" main bus installed on the wall adjacent to the AC power equipment.
 - (6) Battery Rooms: 1/4" x 2" x 24" grounding sub-bus bar located below battery disconnected device.
 - f. The complete AC power grounding system will include ground bus in each distribution equipment enclosure such as switchgear, panelboards, motor control centers, and load centers, and will be interconnected by insulated equipment grounding conductors that run with the feeders from the source panelboard or switchboard. Such conductors will be identified by a continuous green color and be sized in accordance with the NEC and will run in a common conduit with the associated phase and neutral conductors. Multiple-conductor cables with metallic sheaths will be provided with insulated or bare equipment grounding conductors; use of the metallic covering for grounding is not considered adequate.
 - g. Provide insulated copper equipment grounding conductors for the following services:
 - (1) All feeders.
 - (2) All branch circuits.
 - h. Provide grounding for personnel to minimize shock hazards as follows:
 - (1) In substations and electrical and mechanical rooms bond all exposed metallic structures, motor frames, AC equipment enclosures, ductwork and metallic piping to the local main ground bus with an exterior No. 6 AWG minimum insulated grounding conductor.
 - (2) Bond the elevator's metallic structure to equipment grounding conductor in the AC feeder and to local ground bus bar. Provide a

- minimum of two ground paths for electrical equipment (including but not limited to motor frames, AC equipment and lighting fixture enclosure) as follows:
- (a) Bonding to green insulated equipment grounding conductor in the AC feeder/branch circuit.
 - (b) Connection to grounded metallic structure using metallic fasteners, metallic conduit and/or bonding jumper.
 - (c) For elevators provide a second ground path connecting trusses and guide rails using a No. 1/0 AWG insulated ground conductor connected to ground bus bar in AC switchboard room. Leave 20-foot length of conductor coiled up in pits or wellways.
 - (d) Metallic structure grounding may be supplemented by a connection to the ground grid where conveniently available.
- (3) Where a dielectric water fitting is installed for cathodic protection of underground piping, only the exposed piping may be grounded. Do not install jumper around the fitting. The use of municipal water system as a grounding electrode is not permitted. Exposed structural metalwork such as stairways, handrails and safety walk gratings within reach of AC power equipment (5'-0"+) will be bonded to the nearest AC equipment ground bus or sub-bus.
 - (4) Exposed metallic structures in open areas such as light standards, handrails, cable trough and fence on at-grade construction, will be bonded and grounded to separate ground rods.
 - (5) Fencing will be grounded at approximately 50-foot intervals to ground rods, and jumpers provided where required for grounding continuity. Fencing around transformer pads shall be suitably grounded. Flexible jumpers shall be provided at gates to ensure continuity.
 - (6) Manholes, handholes, junction and pull boxes metallic body, cover frame and cover will be grounded as follows:
 - (a) Metallic cover will be bonded to metallic frame using a minimum No. 6 AWG insulated grounding conductor and a bronze or brass chain inside rubber hose.
 - (b) Metallic body and frame will be grounded to 5/8inch diameter by 10-foot long ground rod using a minimum No. 6 AWG insulated grounding conductor.
 - (c) When a cable is spliced or tapped in a handhole, manhole, junction or pull box the metallic body and frame will be bonded to equipment grounding conductor.
 - (7) Connections to metallic structure, safety walk grating, cable trough, stairway, hand railing, telephone and map case enclosures, fence, frame columns of shelters, pylon frame, diorama metallic cover and metallic body and metallic cover frame of handhole, manhole and junction box will be made by exothermic welding or gas torch brazing.
 - (8) When necessary, only handholes with nonmetallic cover and non-metallic junction and pull boxes will be installed in landscape and grassy areas.
 - (9) Cable splices and taps in outdoor handhole, manhole, junction

and pull boxes will be covered by watertight heat-shrinkable tubing or wraparound sleeve.

1.06 LIGHTING SYSTEMS

A. General

1. This criterion establishes desirable standards for illumination and design requirements for light fixtures and control.

B. Scope

1. Provide new light fixtures in areas where ceiling, grid, or light support surface is being modified.
2. Do not use or re-use T-12 fluorescent fixtures.
3. Provide illumination levels in new facilities per tables VII.3 and VII.4.
4. Upgrade illumination levels in existing facilities in the area of work per tables VII.3 and VII.4.
5. Provide temporary lighting as necessary during construction.
6. Clean and relamp fixtures which are relocated or removed and re-installed during construction. Verify proper operation of each fixture and replace non-functioning units.
7. The criteria covers lighting requirements for the following:
 - a. Ancillary Spaces
 - b. Car Storage Yards and Maintenance Facilities

C. Illumination Levels

1. Minimum maintained lighting levels for various areas shall be indicated in Tables VII.3 and VII.4.
2. The method for calculating these levels is per the Illuminating Engineering Society (IES) Lighting Handbook. For indoor lighting use the zonal cavity method. Lamp mean lumens or lamp depreciation as listed in the IES Lighting Handbook and the luminaire dirt depreciation factor classified as "Dirty" will be assumed.
3. Provide light levels with a uniformity ratio of 3:1 average to minimum at the workplane.

D. Lighting Fixtures and Control

1. Lighting Fixtures
 - a. Select luminaires as follows:
 - (1) Service and Inspection Areas
 - (a) Industrial Type fixtures as appropriate to give levels of illumination indicated in Tables VII.3 and VII.4.
 - (b) Fluorescent fixture Types 1, 2, 3, 4 and 5 equipped with energy saving ballasts and T8 lamps. Type 6 fixtures equipped with compact fluorescent lamps.
 - (c) Exit light Type X with backlit light emitting diode (LED) as its lighting source.
 - (2) Coordinate locations of luminaires with other equipment.

TABLE VII.3 - NORMAL ILLUMINATION LEVELS

AREA	FOOTCANDLES
1. Stairs	30.0
2. Storage Rooms	30.0
3. Electrical Rooms	30.0
4. Mechanical Rooms	30.0
5. Corridors	30.0
6. Elevator Equipment Room	30.0
7. Misc. Rooms	30.0
8. Offices and Open Office Areas	30.0
9. Shop and Work Areas	50.0
10. Track Floor	50.0
11. Open Areas on Shop Floor	50.0
12. Lunch Rooms	50.0
13. Conference Rooms	50.0
14. Small Parts Storage	50.0
15. Locker Rooms and Bathrooms	50.0
16. Train Control and Comm Rooms	50.0
17. Blow Pit	100.0

2. Control of Lighting

a. Indoor General Lighting

- (1) Lighting in service areas, including maintenance and service & inspection shops, will be manually controlled by switches.
- (2) Lighting in offices, restrooms, breakrooms, conference rooms, and storage rooms will be controlled automatically to comply with energy code. Conference room sensors will have manual override.

b. Lighting Circuits

- (1) Where multiphase branch circuits are used for feeding power to light fixtures, connect adjacent fixtures to alternating phases. Protective devices will be single-pole type to maintain a more uniform illumination with de-energization of one or two phases.

E. Emergency Lighting

1. Emergency lighting will be provided by a percentage of the normal continuous burning lighting fixtures to obtain the desired illumination levels. Submit lighting calculations verifying the level of illumination for each area listed below. Provide minimum maintained illumination for emergency purposes as follows:

TABLE VII.4 - EMERGENCY ILLUMINATION LEVELS

AREA	FOOTCANDLES
1. Washrooms	2.0
2. Communications Rooms	2.0
3. Train Control Rooms	2.0
4. AC Switchboard Rooms	5.0
5. Stairs, Mezzanines	3.0
6. Egress Corridor	5.0
7. Elevator Car	5.0

2. Approximately 50 percent of the lighting fixtures in emergency exit stairways, and 20 percent of the indoor lighting fixtures, will be connected on emergency circuits. Outdoor lighting fixtures will not be connected on emergency circuits unless approved by the Authority.
3. In all cases the emergency lighting will conform to the codes and regulations of all jurisdictional Authorities. Exit lights and signs will be fed from the emergency power system.
4. Emergency lighting for the stairs will be designed to emphasize illumination on the top and bottom steps or landings.

1.07 MAINTAINABILITY AND CONSTRUCTIBILITY

- A. Design the electrical system comprising equipment, raceways, fixtures, devices, wires and cables in coordination with structural, mechanical, architectural and other disciplines providing adequate space, clearances, and structural support, and to ensure non-interference with other trades during construction. Take into account the ease of maintainability of the electrical equipment installed. Maintenance operations include inspection, adjustments, cleaning, trouble shooting, servicing, repairs, and replacement of electrical equipment. The equipment selected should be subject to minimal system component failure.
- B. Space
 1. Provide sufficient working space and adequate access for the maintenance and replacement of electrical equipment. Provide adequate space around electrical

equipment to allow for heat dissipation and cooling. This requirement includes adequate space for movement of equipment during initial installation, and during subsequent unscheduled maintenance involving removal and replacement of failed equipment.

C. Accessibility

1. All electrical system switching and overcurrent protection devices will be accessible to authorized persons only. Access to cables or conduits installed in return air plenums will be provided at appropriate locations.
2. Provide adequate means, such as lifting eyes and/or I-beams with a running hoist for raising, lowering, shifting, removing or replacing heavy electrical equipment. Provide pulling eyes for the pulling of cables at the following locations:
 - a. AC Switchboard Rooms
 - b. Train Control Rooms
 - c. Communications Rooms
 - d. Electrical Rooms
 - e. Cable shafts
 - f. Manholes
 - g. Other locations where considered necessary.
 - h. Equipment Protection Against Water and Moisture:
3. Design each substation building and electrical room to preclude any entry of water. Provide seals on raceway and cable penetrating a building wall, floor or ceiling. Do not install water or sewage piping inside substation and electrical equipment rooms. Pipes or mechanical ducts that could cause moisture or condensation will not be located above any major electrical equipment.
4. Embedded Conduits, Conduit Sleeves and Channel Inserts:
 - a. Embedded conduits may be installed in the space available between rebars. Where a slab has to carry a large number of conduits, ensure that conduits are installed without compromising the structural integrity of the concrete structure. Show adequate cross sections on the drawings to indicate where raceways and other embedded items cross each other. With the exception of traction power conduit, where embedded FRE conduit emerges from a concrete slab or a wall provide an FRE to galvanized rigid steel conduit adapter.
 - b. Where conduits are not provided as raceways, install channel inserts for supporting multiple conductor cables located under platforms, and in manholes. Provide spare conduit and sleeves in concrete walls, floors, and ceiling slabs of the AC switchboard rooms, electrical rooms, mechanical rooms, ductbanks, and other areas as required for possible future requirements.

D. Electrical Plans, Details and Schedules:

1. Provide plans and details on the drawings showing physical arrangements and elevations with dimensions for all major electrical and mechanical equipment, raceways, junction boxes, fixtures and other items so that the design and construction can be coordinated with mechanical, structural, and other disciplines.
2. Provide schedules on the drawings of all major electrical equipment including switchgear, switchboards, panelboards, transformers, disconnect switches, conduits, and cables. Schedules will be complete and consistent with plans on associated electrical and mechanical drawings.

E. Lighting System

1. Avoid the use of incandescent lamps, whenever practical. Where incandescent lamps are used, provide the long life type.
 2. Select locations of lighting fixtures to permit easy cleaning, replacement and maintenance. Provide adequate illumination on all working areas around the electrical equipment.
- F. Operation and Maintenance Manual:
1. Provide Operation and Maintenance Manuals for major electrical equipment. Manuals to include manufacturer's operation and maintenance instructions, wiring diagram, control and power elementary diagrams, list of spare parts and recommended stock quantities for one year routine maintenance and repair. Include a copy of approved shop drawing of equipment and other items where considered necessary.
 2. Engage factory-authorized service representatives to train Authority maintenance personnel to adjust, operate, and maintain all components and devices. Video record all training sessions and provide DVD copies to the Authority.

END OF SECTION

THIS PAGE NOT USED

PROGRAM CRITERIA

TRACTION POWER AND YARD LIGHTING

PART 1. GENERAL

1.01 SUMMARY

- A. The scope includes all work required to design, furnish, install, connect, test and energize yards and shop traction power equipment and appurtenances, and yard lighting, to ensure safe, complete, workable, secure, and operational traction power systems and yard lighting at the referenced yards and shops of the WMATA Metro Rail System, including furnishing and installation of ancillary material as required.
- B. As referenced within this program criteria, "traction power" is intended to include all work associated with vehicle stinger systems (to facilitate energization of vehicles at the vehicle pickup shoes at 750 VDC, enabling movement of vehicles within the shops), car receptacle power (to provide 750 VDC power to vehicle auxiliary power systems during shop maintenance, testing, and repair), yard traction power (to facilitate movement of vehicles and trainsets within the yard area by means of the on-board vehicle propulsion systems, energized through contact rail), and yard lighting. Traction power systems include not only the "positive" DC connection (nominal 700 volts DC) at the stingers, car receptacles, and contact rails, but also the return (negative) connections and paths via the tracks/running rails.
- C. Work includes installation of all electrical power, wiring, and equipment from identified existing or new power sources to final served loads. This includes conduits and raceways (both exposed and embedded) for trackwork and traction power systems. Service to lighting systems includes feeders and branch circuits associated with exterior (yard) lighting. Areas covered by this contract include interior portions of the shop buildings and the yard areas. Applicable technical provisions include but are not necessarily limited to:
- 16060 Grounding and Bonding
 - 16118 Fiberglass Conduit
 - 16119 Medium Voltage Cable
 - 16120 Wire, Cable, and Busways
 - 16121 DC Stinger System and Control
 - 16122 Contact Rail Cable Connector Assemblies For Traction Power
 - 16123 Contact Rail Insulator Assembly for Traction Power
 - 16124 Contact Rail Protection Cover Assemblies
 - 16125 Wire Connection Accessories
 - 16126 Contact Rail Anchor Assembly for Traction Power
 - 16127 Contact Rail System Installation for Traction Power
 - 16128 Wire and Cable For Traction Power
 - 16129 2000 Volt Shielded Cable
 - 16130 Raceways, Boxes, and Cabinets
 - 16131 DC Pedestal and Wall Mounted Contactor System
 - 16294 Contact Rail Heating System for Traction Power
 - 16341 DC Switchgear, Switchboard, and Related Equipment
 - 16526 Lighting Fixtures and Mounting Poles
- D. The work shall include furnishing, installing, connecting, energizing and testing of all materials, equipment, labor, transportation and handling, construction equipment, tools and all other incidental necessary for the execution, testing, connection, interconnection and

energizing of equipment and systems as indicated.

1.02 REFERENCES

- A. Codes, regulation, reference standards and specifications.
 - 1. Codes and regulation jurisdictional authorities.
 - 2. National Electrical Code (NFPA 70)
 - 3. IEEE: 141,242
 - 4. IES Lighting Standards

1.03 SYSTEM DESCRIPTION

- A. General: The Contractor shall install all required equipment. The work shall be in accordance with the drawings and specifications included in this contract and comply with the "Information Drawings" and equipment vendor drawings. The following systems and components are included:

- 1. Provide wire and cable. Included are cable connections using unshielded and shielded 1000 kcmil and 500 kcmil cable as follows for DC negative track jumpers and for DC positive jumpers between contact rail sections:

Unshielded 1000 kcmil cable (127 strand, per specification section 16128) shall be utilized for jumper connections (nominal 750 VDC negative) between tracks (running rails) at the Shady Grove Yard and Shop.

Unshielded 500 kcmil cable (127 strand, per specification section 16128) shall be utilized for jumper connections (nominal 750 VDC negative) between tracks (running rails) and for negative return connections from tracks to traction power rectifier at the Brentwood Yard and Shop.

Shielded 1000 kcmil cable (127 strand, per specification section 16129) shall be utilized for positive DC jumper cables between yard contact rails, except that the final connection (short lengths) at the contact rails shall be made with unshielded 1000 kcmil cable (427 strand, per specification 16128.)

- 2. Conduit for conductor containment. All below grade conduits shall be fiberglass reinforced epoxy (FRE) and shall be concrete encased. Conduits containing positive or negative traction power cables (including yard area cables, stinger circuit power cables, and car receptacle circuit power cables) shall be fiberglass reinforced epoxy if below grade. Conduits containing positive or negative traction power cables (including yard area cables, stinger circuit power cables, and car receptacle circuit power cables) shall be aluminum or fiberglass reinforced epoxy if above grade. All fiberglass reinforced conduit shall be UL listed as type "AG".

Conduit for positive feeders and jumpers to contact rail, and for negative returns or rail bonding of yard tracks, shall be 4" trade size FRE unless otherwise indicated. Total of all bends between any two pulling points shall not exceed 225 degrees.

3. Provide "stinger" systems to provide power to vehicles for movement within the shop buildings. Each stinger shall provide 750 volts (nominal) DC to vehicle shoes, and shall be controlled via a dedicated 1250 amp 1000 volt rated contactor (fused at 500 amps). Each stinger shall include all remote controls to allow for remote operation of the respective contactor by the stinger operator. Each stinger system's design shall be similar to that of the stinger systems described on applicable as-built drawings for other WMATA shop facilities. Refer to specification section 16121.
4. Provide "car receptacle" systems to provide power to vehicles within the shop buildings for operation of the vehicle auxiliary systems during maintenance, testing, and repair. Each car receptacle system provides 750 volts (nominal) DC to vehicle shore power receptacles, and shall be controlled via a dedicated 150 amp contactor (fused at 150 amps). Each car receptacle system shall include all remote controls (shop floor control station) to allow for remote operation of the respective contactor. Each car receptacle system's design shall be similar to that of the car receptacle systems described on applicable as-build drawings for other WMATA shop facilities. Refer to specification section 16122.
5. Contactors for stingers and car receptacle circuits shall be rated at 750 volts DC, continuous current rated, and load break rated, and shall be normally open, electrically held, single pole.
6. Make modifications to existing contact-rail heating system. Remove and reinstall existing contact rail heating controllers and devices as required for contact rail affected by this work (Shady Grove Yard bypass track relocation); install WMATA-furnished replacement contact rail heater cables. Refer to specification section 16294.
7. Provide grounding and bonding as required and specified. Refer to specification section 16060.
8. Provide cutting, patching and core drilling: The Contractor shall provide wall and floor openings or enlarge openings as required to accommodate bus duct, cable tray or conduit furnished. All unused conduit, sleeves, openings around bus ducts, cable trays etc. shall be sealed using fireproof material to meet occupancy jurisdictional codes for the room.
9. Fabricate plastic sheets to close sections around bus duct passing through floor openings (if applicable).
10. Assemble equipment: switchgear shipping sections shall be assembled for proper alignment, leveling, and bonding of adjacent sections. Electrical connections between shipping breaks shall be made according to manufacturer's shop drawings.
11. At the Brentwood shop, an existing DC traction power substation within the shop building provides power to 11 existing stingers and 21 existing car receptacle circuits. Stingers and car receptacles are fed from circuits which are fused at an existing DC switchboard; local enclosed contactors in the vicinity of the stinger trolleys and at the car receptacles provide for control of stinger and car receptacle power. The capacity of the existing rectifier-transformer (2 MW) has been determined to be adequate to serve the existing stingers and car receptacles along with the new stingers and car receptacles. The existing DC switchboard is considered to be in poor condition, and is inadequate to serve both the new and existing stinger/car receptacle requirements. Therefore, the existing DC switchboard

and the existing positive DC buswork from the rectifier to the DC switchboard are to be replaced by the Design-Builder as part of this work. Replacement DC switchboard and replacement DC positive buswork are each to be rated at 6000 amps. The replacement DC switchboard is to include fused overcurrent devices (fused switches) to serve not only the 11 existing stingers and 21 existing car receptacle circuits, but also 4 new stingers and 12 new car receptacle circuits. The four new stinger systems are to each include a single trolley assembly of approximately 150 foot length. Between tracks 9A and 9B, one stinger/trolley assembly is to be provided located adjacent to the south shop doors, and one stinger/trolley assembly is to be provided located adjacent to the north shop doors. Both stinger/trolley assemblies shall be capable of serving either track (9A or 9B). Between tracks 9B and 9C, one stinger/trolley assembly is to be provided located adjacent to the south shop doors, and one stinger/trolley assembly is to be provided located adjacent to the north shop doors. Both stinger/trolley assemblies shall be capable of serving either track (9B or 9C). Electrical interlocks are to be provided to prevent simultaneous operation of the four new trolley/stinger systems. Car receptacles are to be located so as to serve tracks 9A, 9B, and 9C; final locations for the car receptacles at the tracks will be determined by WMATA. Each stinger requires a dedicated 600 amp fused switch power source and each car receptacle circuit requires a dedicated 150 fused switch power source; the fused switches are to be located within a DC switchboard. Contactors for the new stingers and new car receptacles are to be located in the shop areas, in non-metallic enclosures. It is anticipated that the replacement DC switchboard will be considerably larger than the existing DC switchboard (to be removed as part of this work); contract drawings indicate proposed expanded limits for the substation room to accommodate the larger switchboard. The Design-Builder is to expand the room limits of the existing substation room as required to perform this work. All work is to conform to NEC requirements with respect to presence of overhead mechanical equipment and piping, clearances, working space, emergency egress, and equipment access. The Design-Builder is to remove and replace with new control and power circuits: all control and power circuits from the existing DC switchboard to existing stinger contactors/controls, and all control and power circuits from existing DC switchboard to existing car receptacle contactors/controls; the existing control/power circuits are not to be reused or extended. Provide bus bracing and equipment interrupting/withstand capability at the DC equipment of 50000 amps (output from the existing rectifier.) Refer to specification section 16341.

12. To minimize service disruptions at the Brentwood shop associated with changeover of DC power systems from the existing to the new DC switchboard, develop a phasing plan for transitioning and work in conjunction with Authority Representative.
13. At the Shady Grove shop, an existing DC traction power substation within the shop building provides power to 5 existing stingers and 26 existing car receptacle circuits. The capacity of the existing rectifier-transformer (2 MW) has been determined to be adequate to serve the existing stingers and car receptacles along with the new stingers and car receptacles. The existing DC switchboard is considered to be in good condition, and is to remain in service to serve the existing stingers and car receptacle circuits. Power for 5 new stingers and 18 new car receptacle circuits in the new shop area are to be provided from a new 4000 ampere DC switchboard to be installed in the new shop area (Design-Builder shall provide a dedicated electrical equipment room and space for this equipment.) Each new stinger systems shall include a single trolley assembly of approximately 150 foot nominal length. Between tracks 7 and 8, one stinger/trolley assembly is to be provided located adjacent to the south shop doors, and one stinger/trolley assembly is to be provided located adjacent to the north shop doors. Both stinger/trolley assemblies shall be capable

of serving either track (7 or 8). Between tracks 9 and 10, one stinger/trolley assembly is to be provided located adjacent to the south shop doors, and one stinger/trolley assembly is to be provided located adjacent to the north shop doors. Both stinger/trolley assemblies shall be capable of serving either track (9 or 10). Electrical interlocks are to be provided to prevent simultaneous operation of any of the four new trolley/stinger systems at tracks 7, 8, 9, and 10. A fifth new stinger/trolley assembly is to be provided to serve the new construction (blow pit) area for tracks 2 and 3; this stinger/trolley assembly shall be located between tracks 2 and 3, to serve either track, and shall provide power not only to the new blow pit construction area (approximately 85 feet in length) but also the existing blow pit area at tracks 2 and 3. For car receptacle power, (16) new car receptacles are to be located so as to serve tracks 7, 8, 9, and 10, and (2) new car receptacles are to be located to serve the new and existing blow pit area (at tracks 2 and 3); final locations for all car receptacles at the tracks will be determined by WMATA. Control of car receptacle circuits shall be via local enclosed contactors in the vicinity of the car receptacles. Control of stinger assemblies shall be via contactors which shall be installed within dedicated enclosures in the shop area. Enclosures for stinger contactors and car receptacle contactors shall be non-metallic. Within the existing shop, the existing DC switchboard is fed from a 4000 amp DC breaker within an existing DC metal clad switchgear lineup (Impulse equipment, rated 800 VDC with 10000 amp rated horizontal copper bus); the Design-Builder is to add a new feeder cubicle and new DC feeder breaker (rated 4000 amps) to serve the new DC switchboard. The new feeder breaker cubicle and feeder breaker shall be enclosed, drawout, single pole, semi-high speed or high-speed, rated 750 VDC nominal, 800 VDC maximum, of metal clad switchgear construction. The Design-Builder is to extend the existing 10000 amp buswork at the existing DC switchgear into the new feeder breaker cubicle. The Design-Builder is to provide 4000 amp rated buswork (or equivalent cable-in-conduit) from the new 4000 amp feeder breaker to a new DC switchboard. The new DC switchboard is to include all necessary control devices (overcurrent devices, relays, etc.) to serve the 5 new stingers and 18 new car receptacle circuits. At the new DC switchboard, each stinger will require a 600 amp fused switch and each car receptacle circuit will require a 150 amp fused switch. Provide bus bracing and equipment interrupting/withstand capability at the DC equipment of 50000 amps (output from the existing rectifier.) Refer to specification section 16341.

14. Design-Builder shall be particularly diligent in design of shop stinger systems and overhead bridge crane systems to minimize conflicts between these systems and to facilitate safe operation of both the stinger systems and the bridge crane systems. Provide interlocks and warning signals to minimize possibility of damage resulting from conflicts between these two systems. Provide audible and visual indications (warning signals) of system operation similar to existing stinger systems.
15. Provide yard lighting at Greenbelt, Brentwood, and Shady Grove yards; refer to specification section 16526. Lighting systems shall be designed in accordance with IES recommendations and procedures. Design shall be based on light loss factor of 64%. Provide design which minimizes glare which would tend to interfere with observation of track by train attendants. Select, locate, and aim luminaires to accomplish primary purpose of illumination while producing a minimum of objectionable glare and interference with vehicular traffic and neighboring surroundings. Where yard tracks are located adjacent to railroad operating tracks, pay particular attention to placement and direction of lighting fixtures to avoid interference with railroad signals or operations. Light sources for yard lighting shall be high pressure sodium. Special trackwork areas within the yards shall be lit to 3.0

footcandles maintained; other areas of yards shall be lit to 1.0 footcandles maintained. Yard lighting shall be controlled by control systems similar to that of the existing yard lighting systems. Do not re-use any lighting fixtures, poles, or hardware affected by the Design-Builder's work; provide new lighting fixtures, poles, and hardware. New poles and fixtures shall be similar in materials, construction, photometrics, and finish to existing poles and fixtures. Height of new poles shall not exceed height of existing poles within the yards. Provide branch circuit wiring from shop building to lighting poles/standards which limit branch circuit voltage drop to not more than 2.5 percent.

16. At Brentwood and Shady Grove yards, provide contact rail jumpers and track (running rail) jumpers as indicated. Provide insulating joints in tracks to ensure electrical isolation between yard and shop tracks.

At the Shady Grove Shop, provide jumpers from the new tracks to the existing tracks for negative return current. The jumpers are to be 1000 KCMIL in size and are to be arranged as shown on train control drawings.

At the Brentwood Shop, provide jumpers between the new tracks, and from new track(s) to the existing negative switchboard, for negative return current. The jumpers are to be 500 KCMIL in size and are to be arranged as shown on electrical (traction power) drawings. Connections to shop rails shall be via exothermic welds. The location and design of the shop rail connections shall facilitate inspection, maintenance, and repair. Provide any necessary modifications at the existing negative switchboard to facilitate connection of the new negative return cables.

At all shops, maintain electrical integrity and continuity, and isolation (from ground) of all tracks within the shop areas to facilitate negative return current flows associated with stinger and car receptacle power circuits. Provide bonding jumpers as required from rail to rail to maintain continuity around any physical discontinuities in the rails.

17. Provide labor and miscellaneous hardware/materials to disconnect, relocate, and reconnect existing contact rail disconnect switches (rated 1200 amps) in yards. Provide new 1200 amp rated disconnect switches at the Shady Grove Yard as indicated.
18. New DC positive switchboards at Brentwood and Shady Grove shop buildings shall each be designed, constructed, and tested in accordance with ANSI C37.20. Respective fused switches, fuses, and contactors shall not be rated at less than 750 VDC. Refer to specification section 16341.
19. Conduct system-wide integrated testing to demonstrate continued proper functioning of all ETS trip functions upon completion of work associated with yard tracks. All remote control and indication functions shall be verified.
20. Within shop areas, provide insulation of tracks (running rails) from building structure. Negative return currents for the 750 VDC stinger and car receptacle power circuits shall flow entirely through dedicated negative return feeders or jumpers; the building structure shall not be utilized as a path for negative return currents.
21. For each new section of contact rail associated with new tracks, provide a contact rail anchor assembly at approximately midway between the two end approaches.

22. At the Shady Grove shop traction power substation, repair the existing ventilation damper assemblies to make operational.
23. Existing manholes containing ETS circuits (contact rail Emergency Trip Systems) may be affected by this work. Provide relocation, and extension/reconnection/testing of ETS circuits, as necessary.
24. DC positive switchboards and switchgear shall be provided with enclosures which are ungrounded. Provide hot-structure and ground detection relays for structures in accordance with WMATA standards. Provide insulated floor topping, and secure enclosures to floor with insulated attachments, to maintain isolation/insulation.
25. Provide power to yard rail lubricators.

1.04 SUBMITTALS

Submit the following for approval in accordance with Special Conditions and with the additional requirements as specified for each:

- A. Shop drawings:
 1. For equipment furnished in this contract, provide complete shop drawings and documentation as specified elsewhere in this specification.

1.05 QUALITY ASSURANCE

- A. For codes, regulations, reference, standards and specifications, refer to article 1.02 above.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store all equipment in secure and dry storage facility before installation at no additional cost to the Authority.

PART 2 PRODUCTS

2.01 EQUIPMENT

- A. As specified in other sections of these specifications.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Provide oversight and supervision to ensure that all equipment are installed in accordance with manufacturers' recommendation and approved shop drawings.
- B. Install equipment as shown and specified in other sections of this specification.

3.02 FIELD QUALITY CONTROL

A. Field Testing and Inspection:

1. General requirements:

- a. Correct any deficiencies found during field testing and retest at no additional cost to the Authority.

2. Field Inspection

- a. Prior to field testing, check DC drawout breaker equipment installation in accordance with manufacturer's recommendations and IEEE 141 as applicable including, but not limited to, verification of the following:

- 1) Integrity of bus insulation.
- 2) Tightness of connections.
- 3) Adequate support of bus bars.
- 4) Correct grounding, anchoring and alignment of switchgear in accordance with manufacturer's drawings. Correct insulation of rectifier and dc switchgear from ground.
- 5) Ease of racking draw out breakers in and out of cubicle.
- 6) Physical interchangeability of similar circuit breakers.
- 7) Adjustment of circuit breaker main and secondary contacts.
- 8) Functioning of interlock and closing of safety shutter with breaker in disconnect or withdrawn position.
- 9) Verify mechanical clearances and proper operation of disconnecting and grounding devices associated with potential transformers.
- 10) Tightness of bolted bus joints by calibrated-torque-wrench method, based on manufacturer's recommended values.

3. Field Testing:

- a. The Contractor shall coordinate with the Authority Representative to establish the specific testing schedule for each facility. Notify the Authority Representative one week in advance of each test. Conduct test in presence of Authority Representative.
- b. Furnish test equipment, labor and services of manufacturers' engineering representative to perform specified tests.
- c. Submit certified test reports within ten days of substantial completion inspection. For each item, submit for approval and perform approved tests but not limited to those specified.

d. Perform insulation resistance test of 60-second duration on all equipment in accordance with the following requirements:

1) Test voltage:

<u>Voltage Rating</u>	<u>Test Voltage</u>
(a) 150-600V	1,000V, dc
(b) 601-5,000V	2,500V, dc
(c) Above 5,000V	5,000V, dc

2) Insulation resistance: kV rating plus one megohm but not less than minimum value recommended by manufacturer.

3) Ensure insulation resistance is equal to or greater than minimum value specified before performing dielectric withstand test.

e. Perform functional and set-up tests on metering, control, interlocking, blocking and supervisory circuits, including verification of interconnections between equipment and interface points. Verification of these tests to be substantiated by lined-in schematics, signed by the Contractor and the Engineer.

f. Positive dc busducts:

1) Test resistance of all busway connections. Resistance not to exceed value recommended by manufacturer.

2) Test insulation resistance from bus bars to ground and between insulated busbar.

3) Perform dielectric withstand test of one minute duration at 75 percent of specified factory test value.

g. Metal-enclosed dc switchgear:

1) Test protective devices/relays in accordance with IEEE 141 procedures, modified as necessary, for compliance with approved coordination study.

2) Test operation of each circuit and control in accordance with approved sequence.

3) Test interlock system as follows:

(a) Make closure attempt on locked-open devices.

(b) make opening attempt on locked-closed devices.

4) Perform dielectric withstand test of one minute duration on entire assembled and erected switchgear. Test at a voltage of 2775 volts, rms, 60 Hertz or 3900 volts dc on live parts and 1500 volts, rms, 60

Hertz on control wiring. Isolate all electronic timers and devices during the test.

- h. Test ETS system for proper operation.
 - i. DC cable tests, and tests on cable shield monitoring system.
- B. Field Testing Personnel:
- 1. Provide services of qualified engineering representatives of the equipment manufacturers to conduct specified field testing program.
 - 2. When more than one representative is involved, the Contractor is responsible for coordination of testing effort.
- C. Submit five (5) copies of certified test reports within 10 days of Substantial Completion (SCI) for each station.

END OF SECTION

PROGRAM CRITERIA
YARDS AND SHOPS

1.01 GENERAL

- A. This program criteria includes design requirements for yards and shops for the Washington Metropolitan Area Transit Authority Metro Rail System. The yards will store the rapid transit trains, provide a storage area for the system maintenance and support the shops. The shop will perform service and inspection for the individual transit cars.

- B. Transit Car Maintenance Philosophy
 - 1. Efficient operation of the Metro Rail System requires the availability of a completely reliable service fleet of revenue cars sufficient to maintain scheduled service, while minimizing the total number of cars required.
 - 2. Routine maintenance, sometimes referred to as preventative maintenance involves the detection and resolution of minor maintenance problems before the malfunction either necessitates major overhaul of the transit car or causes a breakdown in service. Running repairs also are to be included in routine maintenance.
 - 3. Routine maintenance work will be performed at the Service and Inspection Shop, referred to hereafter as S&I Shop.

- C. The following characterize the maintenance activities of the S & I Shop:
 - 1. Cars are handled as married pairs.
 - 2. Unit parts and components are replaced.
 - 3. Major disassembly is not involved, except for truck.
 - 4. Portable hand tools are the worker's primary aid. Machine tools are seldom utilized.
 - 5. Majority of work is on-car, requiring relatively small work support areas.
 - 6. Complete pairs of cars are rapidly cycled.
 - 7. Lubricants are replenished.

1.02 SERVICE AND INSPECTION SHOP

- A. The shop shall be designed to facilitate the performance of scheduled inspection, minor repair, interior/exterior car cleaning, major truck repair, body repair and painting.

- B. The shop layout shall provide for segregation of work functions into designated areas to minimize interference with other functions and time lost in material handling.

- C. Aisles shall be kept clear of fixed equipment to allow free flow of materials.

- D. The layout shall be based on servicing 75 foot transit cars coupled into 150 ft. married pairs.

1.03 SHOP TRACKS AND TRUCK TRACKS TRACKWORK

- A. All trackwork design shall be performed with the objective of obtaining an optimum degree of constructibility and maintainability. Alternative analyses of major cost items of trackwork shall be made using life cycle and other analytic procedures which address the following principles:
 - 1. Selection of materials, configurations, and tolerances (manufacturing and construction) shall be based on lowest life cycle cost which meets the level of quality established by Metro standards, good engineering practice, and the level of service intended, with consideration of constructibility and maintainability. WMATA standard shall be utilized to provide interchangeability and reduce maintenance stockpiles.
 - 2. Constructibility shall be considered from initial design development to final detailing.

3. Maintainability encompasses the selection of materials and configurations that result in highly durable, easily accessible and easily repaired or replaced components and systems. Durability is achieved by materials which resist wear, fatigue and deterioration due to environmental conditions. Accessibility is achieved by configuring materials, particularly fasteners, and clearances to permit inspection, adjustment, repair and replacement with minimum disturbance to other components. Maximum accessibility should be provided to these components requiring most frequent maintenance. Repair ability is achieved by providing materials and configurations which require minimum quality control effort in the field to inspect, adjust, repair or replace by avoiding complex sequences of steps to mix, place, cure, tighten, finish, or adjust and which require minimum tolerancing to be acceptable.
 4. Where a conflict between constructibility and maintainability occurs, preference shall be given to maintainability. Within maintainability, preference shall be given to durability over accessibility and repair ability.
- B. Shop trackwork is track constructed in shop buildings for inspection, maintenance, repair, testing, servicing, cleaning, painting, washing, etc. of WMATA revenue and non-revenue rail vehicles as described in Section 1.01 and 1.02 above.
 - C. Truck trackwork includes the truck repair track and the truck transfer tracks used to transfer trucks between the shop tracks and the truck repair track.
 - D. The layout of the shop tracks and truck tracks are determined during the shop layout design as guided by the shop program criteria.
 - E. The shop tracks' limits are the insulated joints where the shop tracks and yard tracks join.
 1. The insulated joint locations are determined by the Train Control designer as guided by the Program Criteria.
 2. The desirable track design location for insulated joints and track bonding cable connections is in the ballasted track beyond the track approach slab at the end of the shop building apron and not within the limits of roadway crossing panels.
 - a. Where the application of other program criteria will not permit the insulated joints or track bonding cables to be located in the desired ballasted track location, then the embedded track or roadway grade crossing shall be designed to provide easy maintenance access and electrical isolation of the insulated joint and track bonding cables and connections as guided by the train control and electrical Program Criteria and approved by the Authority.
 - F. Road surfaces adjacent to the shop building and crossing the shop tracks shall be included in the shop building apron. The shop tracks shall be embedded into the concrete apron.
 - G. The concrete apron shall include a concrete reinforced ballasted track approach slab for each shop track.
 1. The ballast approach slab shall be designed and poured monolithically with the apron and extending a minimum of 3 feet beyond the end of the top of the apron (which is also the end of the embedded track construction).
 2. The ballast approach slab shall be 12 feet wide; 6 feet either side of the shop track centerline.
 3. At the end of the apron, the top of the ballast approach slab shall be 1' – 11" below top of rail/apron. At the end of the ballast approach slab, the top of the ballast approach slab shall be 2' – 3" below top of rail.
 4. The structural design of the ballast approach slab shall be guided by the structural Program Criteria.

- H. At the stub ends of the truck tracks, wheel stops shall be placed on both rails. The wheel stops shall be made of steel, shall fill the flangeways, and shall be flush with the top of rail and shop floor. The wheel stop shall be 2 ½" x 2 ½" x 1'. The wheel stop shall be welded to the truck track rail for the full length of the wheel stop.
- I. Shop and truck trackwork shall structurally support live loads and be designed in accordance with the structural Program Criteria.
- J. The design speed for shop and truck tracks is 2 MPH.
- K. Shop trackwork shall be electrically isolated from the shop and shall be connected to the negative switchboard as guided in the traction power Program Criteria.
- L. The ballasted shop tracks shall be designed and constructed the same as yard tracks.
- M. Between the ballasted track approach slabs, shop tracks have three construction types; open track, pedestal track and embedded track.
 - 1. Open track with 115 RE rail, WMATA standard F-17 DF or Transit Products F20R0 DF rail fastener with Pandrol left hand spring rail clips, grout pads, and female inserts coated with electrical insulating material. DF rail fasteners are spaced on 30 inch centers. Example use is wash track.
 - a. The DF rail fastener electrically isolates the rail from ground.
 - b. Nominal grout pad thickness is 7/8 inch thick with a minimum thickness of ¾ inch. Invert shall be chipped as necessary to achieve minimum grout pad thickness. Grout pads over 2 inches thick shall be reinforced.
 - c. Female inserts shall be of sufficient length to be embedded a minimum of 4 inches into the concrete invert, that is, the grout pad is not included as part of the insert embedment depth.
 - 2. Pedestal track with 115 RE rail and industry standard DF rail fastener with rigid bolted rail clips (satisfying the performance criteria herein). DF rail fasteners are bolted to a cap plate on top of rail posts that are spaced a maximum of 60 inch on centers. Example use is inspection pit track.
 - a. The DF rail fastener electrically isolates the rail from ground.
 - 3. Embedded track with 115 RE rail, industry standard DF rail fastener with rigid bolted rail clips, grout pads (satisfying the performance criteria herein), female inserts coated with electrical insulating material, and track embedment material. DF rail fasteners are spaced on 30 inch centers. The plane across the top of the rails shall be set at the top of the shop floor. The embedment material shall be placed to the top of the rail and shop floor with a 2 ¾ inch by 2 ¾ inch flangeway on the gauge side of the rails. Example use is repair track.
 - a. The DF rail fastener provides electrical insulation between the rail and ground. The track embedment material shall provide electrical insulation between the rails and ground. The DF rail fastener and embedment material system shall electrically isolate the rails from ground.
 - b. Concrete and cement grouts shall not be used for the embedment material. The embedment material shall be sufficiently flexible and elastic so that it will be compliant with the rail deflections with out cracking, tearing or separating. The rail deflections shall consider the rail support provided by the DF rail fastener, the embedment material, thermal conditions and loads, and, in the areas adjacent to ballast track, a 1/4 inch subsidence of the ballast support beneath the ties.
 - c. Nominal grout pad thickness is 7/8 inch thick with a minimum thickness of ¾ inch. Invert shall be chipped as necessary to achieve minimum grout pad thickness. Grout pads over 2 inches thick shall be reinforced.

- d. Female inserts shall be of sufficient length to be embedded a minimum of 4 inches into the concrete invert, that is, the grout pad is not included as part of the insert embedment depth.
4. An alternative embedded track design that uses a rail section different from 115RE rail or an alternative metal section for the rail or uses an alternative anchoring and embedment system that meets the following requirements may not be installed before approved by the Authority.
- a. The alternative embedded track system (including the transition rail and additional 115RE rail section that may be used) shall be electrically isolated from the shop building, floor and apron and shall be connected to the negative switchboard as guided in the traction power Program Criteria.
 - b. The top and gauge face of the alternative rail or metal section shall have the same cross section shape as 115RE.
 - c. The alternative rail or metal section shall meet AREMA rail straightness requirements.
 - d. The chemical and mechanical properties of the alternative rail or metal section shall be consistent with the structural analysis prepared in accordance with the structural Program Criteria.
 - e. The surface hardness of the alternative rail or metal section head and gauge face shall be sufficient to resist permanent deformation and damage from wheel contact stress from a WMATA revenue car with the WMATA wheel profile but, in order to minimize brittleness, shall not be harder than needed.
 - f. A single alternative rail or metal section shall not have an electrical resistance in excess of 0.025 ohms per 1000 feet at 20°C.
 - g. The alternative rail or metal section shall be welded into CWR strings as required for 115 RE rail. Welds shall be full section welds with structural strength meeting or exceeding the strength determined to be necessary in the structural analysis and with electrical resistance not exceeding the maximum resistance given herein.
 - h. A transition rail shall be used to transition between the alternative rail or metal section and 115 RE rail.
 - (1) The transition rail section shall be cast steel or milled from a steel bar. The chemical, mechanical, surface hardness, and electrical properties shall be the same as indicated herein for the alternative rail or metal section.
 - (2) The alternative rail or metal section portion of the transition rail shall have the same cross section as the alternative rail or metal section and shall be welded to the alternative CWR rail or metal section.
 - (3) The 115 RE portion of the transition rail shall have the 115 RE rail cross section and shall be a minimum of 60 inches long.
 - (4) A minimum of 60 inches of rail with 115 RE rail section rail shall be in embedded track.
 - (5) The 115RE rail end of the transition rail shall either join to the the yard track with an IJ joint or shall be welded to a piece of 115RE rail that is 19 feet or longer in length.
 - i. The alternative rail or metal section shall be supported in the vertical, lateral and longitudinal directions.
 - (1) At a maximum of every 4 track feet, the base of the alternative rail or metal section shall attach to a gauge bar that holds the alternative rail or metal sections at 4' – 8 ½" gauge. The gauge bar shall be a minimum of 6 feet long and extend a minimum of 7 ¾ inches from both gauge lines.
 - (2) Between the gauge bars, equally spaced ½" minimum diameter anchor bars of sufficient length and depth to anchor the alternative

- rail section shall attach to the alternative rail or metal section.
- (3) When a turntable or elevator is included in the shop track, the design and spacing of the gauge bars and anchors shall consider longitudinal rail loads and deflections due to thermal rail loads per the criteria herein.
 - (4) The gauge bars and anchor bars shall be embedded into the concrete invert to anchor the alternative rail or metal section at the design horizontal and vertical alignment, cross-slope, rail cant, and gauge.
 - (5) If the alternative rail or metal section is detachable from the gauge bar or the anchors, then the gauge bars and anchors shall have shoulders with rigid bolted rail clips that holds the alternative rail or metal section to the design horizontal and vertical alignment, cross slope, rail cant and gauge before the alternative rail or metal section is embedded and when the embedment material is subsequently removed.
- j. The portion of the transition rail with the 115RE rail section that is embedded shall be supported with DF rail fastener spaced at a maximum of 30 inches, grout pads, female inserts coated with electrical insulating material, etc. as described herein for embedded track with 115 RE rail.
 - k. The embedment material shall be designed or configured to provide a 2 3/4 inch by 2 3/4 inch flangeway on the gauge side of the rails.
 - l. Structural analysis shall be made and submitted to the Authority
 - to determine the shape and material properties of the alternative rail or metal section and of the transition rail,
 - to determine the spacing and pull out strength needed for the alternative rail or metal section gauge bars and anchors,
 - to determine the strength, flexibility and elasticity the electrical insulating and embedment materials need so that it will be compliant with differential movements in the embedded track without tearing, cracking, or separating.
 - (1) The analysis shall consider the strains resulting from the geometric and mechanical properties of the concrete invert and its support, and of the alternative rail or metal section, 115 RE rail and the transition rail and their supports.
 - (2) In the areas adjacent to ballast track, the analysis shall consider a 1/4 inch subsidence of the ballast support beneath the ties.
 - (3) The structural analysis shall include the loads due to thermal rail loads from a temperature rise of 50°F and a temperature fall of 100°F in the rails outside of the shop. The thermal rail loads to use in the structural analysis for the rails inside the shop shall be determined from a thermal mechanical analysis of the shop.
- N. Restraining rail shall be provided on the gauge side of the inside running rail for curves in the shop tracks where the curve radius is less than 450 feet.
1. The applicable curves and the restraining rail limits are shown on the track construction plan drawings in the contract documents. The limits include a minimum of 15 feet of restraining rail on tangent.
 2. The restraining rail shall be stand up 132 RE rail and bolted to the running rail with separator blocks and three 1/8 inch adjustment shims as shown in the contract documents.
 3. The top of the restraining rail shall be 3/4 inch above the top of the running rail.
 4. The flangeway shall be 1 7/8 inches.
 5. Restraining rail shall be made from stick rail with minimum and maximum stick

- lengths of 20 and 40 feet, respectively.
6. Restraining rail sticks shall be joined with restraining rail joints as shown in the contract drawings.
 7. The end sections of restraining rail shall have an end flare and bevel per AREMA.
 8. Track gauge of 4' - 8 1/2" shall be used except, when the curve radius is less than 350 feet.
 9. When the curve radius is less than 350 feet.
 - a. Both running rails and the restraining rail shall be shop precurved to the prescribed radius.
 - b. The track gauge is 4' - 9 1/4".
 - (1) Gauge widening shall occur linearly over a gauge transition section on tangent track with a transition length of not less than 15 feet.
 - (2) Over the transition length, the inside rail and the restraining rail shall shift 3/4 inch towards the curve center to accomplish the gauge widening. The outside rail does not shift from its standard gauge line offset of 2' - 4 1/4" from track centerline.
 - (a) The restraining rail and inside running rail shall be shop bent at the beginning and end of the gauge transition section as necessary for the gauge transition.
 10. The inside running rail and the restraining rail shall be supported by an industry standard DF rail fastener with rigid rail clips and shall be spaced at 30 inches. The industry standard DF shall meet the requirements in paragraph 1.04 of this Program Criteria except as follows.
 - a. The maximum length requirement of 17 inches is waived.
 - b. The anchor bolt hole location in the DF body and the anchor insert location requirements are waived.
 - c. The requirement for a full bottom plate is waived.
 11. As applicable for open, pedestal and embedded track, paragraphs 1.03 M.1. in this Program Criteria applies to restraining rail.
 12. If an alternative embedded track design that uses a different rail section from 132 RE or an alternative metal section for the restraining is proposed, then paragraph 1.03 M.4. shall be applied.
- O. The 115 RE rail shall meet AREMA chemical, mechanical, section, manufacturing, hydrogen elimination, interior condition, surface condition, workmanship, etc. requirements for rail and as approved by the Authority.
1. The 115 RE running rails not used with restraining rail shall meet AREMA requirements for standard rail and AREMA tolerances for rail.
 2. The 115 RE running rails used with restraining rail and the 132 RE restraining rail shall meet AREMA requirements for high-strength rail (fully heat treated or head hardened) and AREMA tolerances for trackwork rail.
- P. The 115 RE rail shall be welded into CWR strings with a moveable permanent electric flash butt welding plant. Exothermic thermite welds are only to be used when construction sequencing requires field welding. Electric flash butt and thermite welds shall meet AREMA welding standards except as approved by the Authority.
1. No bolted rail joints shall be used in the shop and truck tracks.
 2. Insulated rail joints shall be bonded.
- Q. Truck tracks have one construction type; embedded track. Alternative truck track designs shall be approved by the Authority.
1. Truck tracks are not electrically isolated from ground and they shall be grounded in accordance with electrical Program Criteria.
 2. The rail for truck track is a continuous steel bar 2 1/2 inch square in section.

- a. The top gauge corner of the square rail section shall be chamfered ¼ inch.
 - b. The surface hardness of the square rail section shall be sufficient to resist permanent deformation and damage from wheel contact stress from a WMATA truck with the WMATA wheel profile but, in order to minimize brittleness, shall not be harder than needed.
 - c. The steel bar shall meet AREMA rail straightness requirements.
 - d. The chemical and mechanical properties of the alternative rail shall be consistent with the structural analysis prepared in accordance with the structural Program Criteria. The live load is the weight of a WMATA revenue truck.
 - e. The square rail section shall be welded into CWR strings as required for 115 RE rail. Welds shall be full section welds.
3. The square steel bar shall be supported in the vertical, lateral and longitudinal directions.
- a. Every 4 track feet, the square rail sections shall be welded to a gauge bar that holds the square rail sections at 4' – 8 ½" gauge. The gauge bar shall be a minimum of 6 feet long and extend a minimum of 7 ¾ inches from both gauge lines. The gauge bar shall be a 2" x 9/16" x 3/16" at 1.76 lbs./ft channel.
 - b. Two ½" diameter anchor bars shall be spaced 1' – 4" between the gauge bars and welded to the square rail sections. The anchor bar shall be 16 inches long and configured to provide equal length legs that are angled down and transverse to the square rail section at a rise to run slope of 1 to 2.
 - c. The gauge bars and anchor bars shall be embedded into the concrete invert to anchor the square rail section at the design horizontal and vertical alignment, cross-slope, and gauge.
4. The plane across the top of the square steel bar sections shall be set at the top of the concrete floor. The concrete floor shall be formed to provide a 2.5 inch by 2.5 inch flangeway on the gauge side of the rails. A continuous 1 ½" x 1 ½" angle bar shall be embedded in the concrete floor to make the top flangeway corner that is opposite the square rail. 3/8" x 4" studs shall be welded to the angle bar at 18" centers. The studs are embedded into the concrete floor and they anchor the angle bar.

1.04 INDUSTRY STANDARD DF RAIL FASTENER WITH RIGID, BOLTED RAIL CLIPS AND DF TRACK FOR SHOP TRACKS

- A. The Design Builder shall supply and install direct fixation (DF) rail fasteners for the shop tracks that perform the following primary functions:
- 1. The DF rail fastener shall be comprised of as few components as is economically and technically feasible for ease of assembly, disassembly and maintenance, and shall be designed to permit installation and replacement of the entire assembly or any of its components by one man using standard, conventional hand stools.
 - 2. Provide vertical, lateral and longitudinal stability, and provide for vertical and lateral adjustments.
 - 3. Provide rigid bolted rail clamps to control the rail in the longitudinal direction.
 - 4. Provide electric insulation for the rail.
- B. The Design Builder shall require a DF rail fastener be supplied that provides the following minimum performance requirements. The Design Builder shall certify that the DF fastener supplied comply with the following requirements, certify that the tests listed below and the tests the Design Builder designer specifies were performed as required, and certify that the test results for the tests listed below and the tests the Design Builder designer specifies meet the specified requirements.
- 1. The fastener shall be designed for 115 RE Rail section.

2. The DF fastener includes a molded fastener body; rigid bolted rail clamps; the rail clamp's bolt, washer and nut; anchor bolts; lateral adjustment components; shims; and female inserts.
3. The DF fastener shall have a maximum length of 17 inches measured normal to the rail and a maximum thickness at the rail seat of 1 3/4 inches. The nominal rail centerline at the rail base is at the DF fastener centerline located midway between the DF fastener's two ends.
4. The holes in the body of the DF fastener for the anchor bolts and the female inserts shall be located 5-1/4 inches from the nominal centerline of rail at the rail base measured normal to the rail and 1-3/4 inches from the centerline of fastener measured parallel to the rail. The anchor bolt holes and female inserts shall be symmetrically located in the upper right quadrant and lower left quadrant of the DF fastener when standing on the rail centerline and looking along the centerline of rail.
5. The lateral mechanical properties of the DF fastener shall be the same in both lateral directions. The longitudinal mechanical properties of the DF fastener shall be the same in both longitudinal directions.
6. Adjustment Requirement.
 - a. Lateral Adjustment:
 - 1) The rail fastener shall provide a minimum of plus or minus 1/2 inch rail lateral adjustment in 1/8 inch increments.
 - 2) Friction shall not be used as a means for adjustment or for preventing lateral movement.
 - 3) If lateral adjustment employs serrations on any component, each serrated interface shall have at least three engaged serrations. There shall be a minimum of three linear inches of serration engagement per fastener. Serrations shall be machined or cast to a minimum depth of 1/16 inch. Cap plates, if used, shall cover the opening to any electrical ground potential in every position of adjustment and form a reasonable seal to prevent the intrusion of dirt, metallic particles, and other material.
 - 4) Components of the rail fastener shall not be replaced or added to the basic configuration in order to laterally adjust the rail.
 - b. Vertical Adjustment:
 - 1) Vertical rail adjustment capability shall be a minimum of 1/2 inch in 1/16 inch increments, provided by shims. The one-sixteenth-inch shims shall be made of steel and shall provide full bearing support to the bottom of the fastener.
 - c. All requirements of these Specifications shall be satisfied for all increments of fastener adjustment.
7. The body of the fastener is a metal base element and a metal top element with an elastomeric pad bonded between them. Bonding shall occur during the vulcanization process.
8. Elastomer shall be a blend of natural rubber and chloroprene. The proposed elastomer shall meet following requirements. The following requirements are not the QC requirements. The QC requirements shall be set from these test results or from a history of test data the manufacturer can provide for the proposed compound.
 - a. Each test listed below shall be performed on two specimens.
 - b. The specimens used for the test shall have been taken from the production size batch used for making the fastener and to have cured in a manner equivalent to the cure used for the fastener.
 - c. Prior to the testing, all elastomer specimens shall be conditioned for not less than two days at 23 deg, C plus or minus 2 deg. C and 50% plus or minus 5% relative humidity
 - d. Tests performed on specimens are:

- 1) The elastomer shall be tested for 22 hours in accordance with ASTM D395, Method B. The test shall be conducted at 70 deg. C. And the set shall not exceed 25 percent.
 - 2) When tested at minus 10 deg. C for 70 hours in accordance with ASTM D1229, the compression set at 30 minutes after release (t@30 reading) shall not exceed 37 percent
 - 3) Oil Absorption Test
 - a) One test shall be conducted with ASTM No. 3 oil at 23 deg. C for 70 hours in accordance with ASTM D471. The volume change for the No. 3 oil shall not exceed 60 percent.
 - b) A second test using a different sample shall be conducted with ASTM No. 1 oil at 23 deg. C for 70 hours in accordance with ASTM D471. The volume change for the No. 1 oil shall not exceed 10 percent.
9. Molding
- a. Contractor's name or trademark shall be molded into the elastomer.
 - b. The base of the fastener is parallel to the rail seat so as to provide no cant to the rail. The slope tolerance is plus and minus 0.37%. The rail seat area is flat having maximum convexity and concavity of less than 0.001 inch per inch when measured from a straight edge.
 - c. The bottom of the base element shall be free of elastomer except that minimal flashing will be acceptable providing it does not interfere with retention of proper anchor bolt tension.
10. Rigid rail clips shall be configured to bear against the side and top of the toe of the rail. The rail clip configuration and the material shall be chosen by the Design Builder to perform to the vertical and lateral loads given here-in and to allow the rail to slip in the longitudinal direction in the load range given here-in.
11. All threaded elements shall be high strength type conforming to the chemical composition and mechanical requirements of ASTM A 325, Type 3, including nuts and plain hardened washer, with chromium, nickel and copper in such combination to achieve maximum corrosion resistance consistent with strength and hardness requirements. Thread fit shall be 2A and 2B. Thread length may vary from that specified for structural bolts.
12. The rail clip bolt length, diameter, and head design shall be as needed to provide vertical and lateral rail stability and rail slippage in the longitudinal direction in the load range given here-in. The installed bolt tension shall be 75% of the proof load for the rail clip bolt size.
13. Anchor bolts
- a. The anchor bolts shall be 7/8 inch in diameter with a heavy hex head.
 - b. The anchor bolts shall secure the fastener to the concrete trackbed with a tension of 30,000 pounds per anchor bolt.
 - c. The anchor bolts shall be threaded into female threaded inserts set in the concrete trackbed.
 - d. The anchor bolts engage not less than one inch and not more than one and one -half inches of the threaded insert in the installed position.
 - e. Other than the standard protective coating applied by the bolt and insert manufacturers, no oil, sealant or other compound shall be applied to the threads.
14. For material requirements for grout pads, female inserts and insert anchoring material for DF track construction, the Design Builder shall use Specification SECTION 05653, Direct Fixation Track Construction.
15. Mechanical and Electrical Requirements. Two fasteners shall be tested, either individually or as a pair in a two fastener test rig. The vertical, lateral and longitudinal tests shall all be done individually or as a pair and all subsequent tests for production

lots shall be done in the same manner.

- a. Vertical Load: No components of a DF fastener (including the grout pad and female insert anchoring material) shall fail, yield or slip when a downward 12 kip vertical load is applied to a single fully assembled and anchored DF fastener for all positions of lateral adjustment. A 12 inch minimum length 115 RE rail section shall be attached per the designers specifications. The 12 kip vertical load shall be applied to the rail head and shall pass through the intersection of the rail's longitudinal centerline and the DF fastener's transverse centerline for each position of lateral adjustment. The vertical deflection of the rail head at the DF centerline shall be measured to the nearest 0.0001 of an inch and recorded.
 - 1) A two fastener test rig may be used with a longer rail section and 24 kips of vertical load. The center lines of the two fasteners may be spaced 10 to 30 inches apart. The vertical load shall be applied midway between the two fasteners. The vertical deflection of the rail head at both DF center lines shall be measured to the nearest 0.0001 of an inch and recorded.
- b. Lateral Load: No components of a DF fastener (including the grout pad and female insert anchoring material) shall fail, yield or slip when a 6 kip lateral load is applied to a single fully assembled and anchored DF fastener for all positions of lateral adjustment and with 1/2 inch of vertical adjusting shims. A 12 inch minimum length 115 RE rail section shall be attached per the designers specifications. The 6 kip lateral load shall be applied to the rail base and shall align with DF fastener's transverse centerline. The lateral deflection of the rail base and at 5/8 inch below the top of rail at the DF centerline shall be measured to the nearest 0.0001 of an inch and recorded.
 - 1) A two fastener test rig may be used with a longer rail section and 12 kips of vertical load. The center lines of the two fasteners may be spaced 10 to 30 inches apart. The lateral load shall be applied midway between the two fasteners. The lateral deflection of the rail base and at 5/8 inch below the top of rail at both DF center lines shall be measured to the nearest 0.0001 of an inch and recorded.
- c. Longitudinal Restraint: No components of a DF fastener (including the grout pad and female insert anchoring material) shall fail, yield or slip when a 7.5 kip longitudinal load is applied to a single fully assembled and anchored DF fastener for all positions of lateral adjustment. A 12 inch minimum length 115 RE rail section shall be attached per the designers specifications. The 7.5 kip longitudinal load shall be applied to the rail base and shall align with the rail's longitudinal centerline. The longitudinal load shall then be increased above 7.5 kips and the rail shall slip through the rail clamps and DF rail seat before a 10 kip longitudinal load is reached. No other components of a DF fastener (including the grout pad and female insert anchoring material) shall fail, yield or slip for longitudinal loads up to and including the rail slip load. The longitudinal deflection of the rail base and of the DF rail seat plate shall be measured to the nearest 0.0001 of an inch and recorded.
 - 1) A two fastener test rig may be used with a longer rail section and the rail shall not slip with a 15 kips of longitudinal load but shall slip through the rail clamps and DF rail seat before a 20 kips longitudinal load is reached. The center lines of the two fasteners may be spaced 10 to 30 inches apart. The longitudinal load shall be applied at the rail base in line with the rail's longitudinal centerline. The longitudinal deflection of the rail base and of both DF rail seat plates shall be measured to the nearest 0.0001 of an inch and recorded.
- d. Electrical Resistance: A complete fastener body shall be fully immersed for

70 hours in distilled boiling water. After 70 hours, the fastener body shall remain in the water until the water and fastener body cools to an ambient temperature of 70 F plus or minus 5 F. Once reaching 70 F, the fastener body shall be quickly removed without drying from the water and fully assembled with a section of rail and anchored. With both anchor bolts and the DF fasteners bottom plate electrically grounded, 100 volts DC shall be applied to the rail head for 3 minutes. The actual current flow shall be measured to the nearest 0.1 microampere and recorded. The maximum current for 100 volts DC shall be 1.0 microampere. If the maximum current of 1.0 microampere is exceeded, then current readings shall be taken every 15 minutes until 1.0 microampere or less is reached. The DF rail fastener shall not be dried with fans, lamps, etc. At each current reading the fastener's surface body temperature and the humidity in the air shall be measured and recorded. The DF fastener's body temperature shall be kept at 70 F plus or minus 5 F and the air's relative humidity at 50% plus or minus 5%.

- 1) The electrical test shall not be done in a two fastener rig. The two fasteners may be tested during the same time period but while one DF is tested, the other DF shall not be electrically connected to the DF being tested in any manner.

16. Qualification Tests

- a. For an industry standard DF fastener, previously performed certified test reports inclusive of the herein specified elastomer, mechanical and electrical tests shall be submitted as qualification tests for approval and for establishing QC/production test result criteria prior to beginning production.
 - 1) When previously performed test reports are not available for all or some tests, then qualification tests shall be performed for those tests for which data is not available.
 - 2) When the elastomer compound or the DF design of an industry standard DF fastener is modified, then all elastomer, mechanical and electrical tests shall be performed.
- b. When the proposed DF fastener is not an industry standard design, then all elastomer, mechanical and electrical tests shall be performed and approved prior to production.
- c. Qualification tests shall be performed on samples manufactured with the same materials, components, processes, procedures, molds, etc. as will be used for full production. Elastomer test samples shall be taken from a full production size batch. DF fastener test samples shall be chosen from a production type run of at least 20 fasteners.

C. The Design Builder shall require a packaging, shipping and storage plan to be developed and implemented.

1. Fasteners shall be packed and shipped in a manner that shall prevent a load on any fastener from exceeding 1,000 pounds.
2. Fasteners shall not be stored in a wet location or where the ambient temperature will exceed 120 deg. F.
3. Fasteners shall be packaged on wood pallets and wrapped in minimum 6 MIL plastic to permit outdoor storage in a secured area. Rail hold-down assemblies, shoulders, bolts, nuts and other loose items shall be packaged by component type in secure shipping kegs or boxes and clearly identified.
4. Fasteners used in the production quality control testing shall be packed and labeled separately from the rest of their lot.

D. For installation procedures for grout pads, female inserts, DF fasteners, and rail laying and

adjustment, the Design Builder shall use Specification SECTION 05653, Direct Fixation Track Construction.

- E. The Design Builder shall develop and maintain a quality control program.
1. The quality control program shall require regulated methods, procedures, processes and tests to ensure compliance with standards of quality required by the Contract Documents. The program shall include:
 - a. Establishing the material and configuration requirements for each component and product.
 - b. Establishing procedures and frequencies for sampling, testing and measurement for each component and product.
 - c. Performance of sampling, testing and measurements.
 - d. Verification that the dimensions and test results conform to the configuration and material requirements.
 - e. Develop corrective action when non-conforming materials and products are found.
 - f. Disposition of non-conforming materials and products.
 2. When testing or measurement cannot be done in a timely manner, for example, because of lengthy cure time, or when the volume of a material is large or difficult to isolate and replace, or when QC testing is destructive or difficult and time consuming to do, such as, QC testing to determine proper thermal rail adjustment, then the Design Builders quality control program shall place additional emphasis on monitoring that the correct raw materials, handling, production procedures and processes, and workmanship are being used.
 3. Elastomer, mechanical and electrical QC test result requirements shall be developed from the qualification test result values or from historical data the manufacturer provides for the elastomer and DF fastener proposed for this project.
- F. The Design Builder shall require as a minimum the following submittals to the Authority for approval.
1. The quality control program and quality control reports.
 2. Shop drawings and other data, including design calculations. Shop Drawings are to be complete and detailed.
 3. The method and materials for packaging the shipment and for storage.
 4. DF track construction work plan.
 5. Test reports
 - a. DF rail fastener elastomer, mechanical and electrical qualification tests, or, when permitted by this program criteria, previously prepared test reports inclusive of tests specified herein for the same elastomer and DF design proposed for this project.
 - b. Elastomer tests for each elastomer batch used to make DF fastener bodies.
 - c. Mechanical and electrical tests on 2 samples from each production lot of 2000 or less DF rail fasteners.
 - d. Others.
 6. Certifications
 - a. DF fasteners, grout pads, and female insert anchoring material comply with the specified requirements,
 - b. The specified tests were performed as required,
 - c. The test results meet the specified requirements.

END OF SECTION

PROGRAM CRITERIA

YARD SIGNAL CONTROL AND INTERLOCKING SYSTEMS

1. GENERAL

1.01 Criteria Coverage

A. Scope

These Criteria include design and functional requirements for the Washington Metropolitan Area Transit Authority (WMATA) METRORAIL Yard Signal Control and Interlocking Systems changes and additions being implemented under the Metro Matters Project.

B. Intent

The intent of these Criteria is to establish acceptable standards for Yard Signaling and Interlocking Control Systems and equipment which must be specified, designed, properly implemented, tested, and documented, to result in systems which shall control the movement and operations of trains in a safe and expeditious manner, and in complete compatibility with the current Train Control Systems in use on the WMATA METRORAIL System.

1.02 Standards

The design of the Yard Signal Control and Interlocking Systems must be coordinated with the design standards of current and new transit car equipment, propulsion power equipment, and communications equipment, and with the current WMATA Train Control Systems.

A. Organizational Standards:

The design and implementation of Yard Signal Control and Interlocking Systems shall be guided by the requirements of:

1. Title 49, Part 236 of the Code of Federal Regulations (49 CFR 223) - Rules, Standards, and Instructions Governing The Installation, Inspection, Maintenance, and Repair of Signal and Control Systems, Devices and Appliances, the: rules and regulations prescribed by the Department of Transportation - Federal Railroad Administration - Office of Safety;
2. The National Electrical Code and all applicable local codes.
3. The recommendations of applicable Parts of the Signal Section Manual of the Association of American Railroads/American Railway Engineering and Maintenance-of-Way Association (AAR/AREMA Signal Manual of Recommended Practice), unless otherwise specified.

B. WMATA Standards and Practices:

The design and implementation of Yard Signal Control and Interlocking System changes and additions shall comply with the requirements of:

1. Current WMATA METRORAIL clearance standards;
2. Current WMATA METRORAIL Standard Operating Procedures;
3. Current WMATA METRORAIL wayside signal aspects, names, and indications;
4. Current WMATA METRORAIL nomenclature, terminology and definitions of terms.
5. Current WMATA METRORAIL "Automatic Train Control System Integrity Maintenance Practices".
6. Program Criteria as described herein.

1.03 Environmental Requirements:

A. Physical:

1. All Yard Signal Control and Interlocking System equipment housed in Train Control Rooms shall function in accordance with specified requirements over a room temperature range of -22 degrees F to +158 degrees F at relative humidities of 5 percent non-condensing to 95 percent, inclusive.
2. All wayside Yard Signal equipment not housed in Train Control Rooms shall function in accordance with the specified requirements over a temperature range of -40 degrees F to +158 degrees F at relative humidities of 5 percent non-condensing to 95 percent, inclusive.
3. All Yard Signal equipment housed in Train Control Rooms shall be constructed and installed so that it will remain fully operational while subjected to acceleration and frequency as listed below:

<u>Sweep Frequencies</u>	<u>Peak to Peak Displacement</u>	<u>Acceleration</u>
5-12 Hz	0.02 Inches	---
12-1000 Hz	—	0.14g peak or 0.10g rms

4. All Yard Signal equipment not housed in Train Control Rooms shall be constructed and installed so that it will remain fully operational while subjected to acceleration and frequency as listed below:

<u>Sweep Frequencies</u>	<u>Peak to Peak Displacement</u>	<u>Acceleration</u>
5-20 Hz	0.2 Inches	---
20-1000 Hz	—	4.2g peak or 3.0g rms

5. All electrical contacts on Yard Signal equipment (including relay contacts, jack

contacts and switch contacts) shall be protected from dust and moisture.

B. Electrical:

All Yard Signal Control and Interlocking System equipment and systems provided shall be constructed so that they function properly in the unfavorable electrical environment of the WMATA METRORAIL Rapid Transit System, which will tend to cause electro-static, electromagnetic, inductive, conductive and radiated interference.

1.04 Current Yard Signal Control and Interlocking System Configurations:

A. Yard Signal Control and Interlocking Systems shall conform to current WMATA Yard Train Control System practices as follows:

1. Yard Signal Control and Interlocking Systems are controlled by vital and non-vital Train Control (TC) equipment installed in Train Control Rooms (TCR)s located at strategic points in the Yard.
2. The Yard Signal Control and Interlocking System equipment in the TCRs is hard-wired to the various switch machines, signals, snowmelters, dragging equipment detectors and other trackside equipment in accordance with WMATA standard practices.
3. The Train Control Room shall conform to the following configuration:
 - a. Racks and Cable Trays:

Cable trays and 19-inch equipment racks for Train Control equipment, power supplies, and cable entrance terminations, shall be installed in rows in the TCRs, in compliance with WMATA standard spacing requirements and in coordination with lighting, power source, grounding and HVAC equipment installed by others.
 - b. Train Control Power:

Automatic power transfer and bypass-isolation equipment shall be wall-mounted in the TCRs with regard for accessibility and equipment clearances.
 - c. Maintenance Furniture and Equipment:

Maintenance furniture and equipment shall be provided at appropriate locations in each yard.

 - (1) Appropriate tables, storage cabinets, lockers, ladders, and other maintenance furniture and equipment shall be provided in each TCR.
 - (2) Appropriately sized and constructed Gang Boxes (for storage of tools and equipment) shall be provided in the field, at interlocking locations.
4. A Yard (Interlocking) Control Machine shall be provided in the Yard Control Room to

enable WMATA Interlocking Operators to supervise the movement and routing of transit cars and railborne maintenance/ service equipment, within the limits of the yards. The Yard Control Machine shall consist of one or more consoles which will support control and indication panels (face plates), which will display a diagram of all tracks and interlockings within the yard limits and the associated mainline station platform. These panel face plates shall be large sectional engraved phenolic plates.

- a. Right-hand track switches (in the field) shall be engraved as right-hand switches on the control panel, and left hand switches (in the field) shall be engraved as left-hand switches on the control panel. A small "dot" shall be engraved on the panel next to the applicable diverging track indicator LED for each power switch layout to indicate the arbitrarily designated "NORMAL" alignment for that switch.
- b. The base(s) of these control machine consoles shall be used to house Train Control system equipment such as Computerized Yard Control System modules, on roll-out or swing-out racks.
- c. Pushbuttons, toggle switches and LED indicators are mounted on the control panel faceplates to initiate safe routes for trains, manually control track switches for test and maintenance purposes, interface with Central Control, and monitor train movements, dragging equipment detectors, snowmelters, and various alarm conditions. Audible alarm devices shall be mounted within the control machine console.
- d. Control Machine Controls
 - (1) A Key Switch shall be provided to control energization of the Yard Control Machine.
 - (2) Train routing shall be initiated by a non-vital Entrance/ Exit system.
 - (3) Appropriate pushbuttons shall be provided to request routes for train movement and signal fleeting.
 - (4) Individual Test Keys (toggle switches) shall be provided for the independent operation of track switches and crossovers.
 - (5) Appropriate pushbuttons shall be provided to check (momentarily energize) all indicator lights on the Yard Control Machine.
 - (6) Pushbuttons shall be provided to cause the display of the current alignment of all electrically powered switches in the yard.
 - (7) Appropriate pushbuttons shall be provided for Transfer of Control of the mainline interface portion of the yard to and from Central Control.
 - (8) A pushbutton shall be provided to acknowledge alarm conditions and silence audible alarms.
 - (9) A toggle switch shall be provided for the control of yard snowmelter

layouts.

- (10) A device shall be provided on the outside of the Control Machine Console which uniformly controls the light intensity of the variously colored indication LEDs.

e. Control Machine Indications

- (1) Light Emitting Diodes (LEDs) and appropriate circuitry shall be provided for all visual indications, to include:

- (a) Track Occupancy
- (b) Traffic Direction
- (c) Route Locked
- (d) Switch Locked
- (e) Switch Position
- (f) Available Exit Points
- (g) Wayside Signal Status and Fleeting
- (h) Snowmelter Status
- (i) Blown Fuse
- (j) Power Status
- (k) Grounding Status
- (l) Microprocessor Status
- (m) Dragging Equipment Status
- (n) Individual Snowmelter Failure
- (o) Next Train Needed
- (p) Central/Local Control
- (q) Dispatch Warning

- (2) Audible indications are provided as follows:

- (a) A single-stroke bell to indicate a change in status of certain normal operational features.
- (b) An acknowledgeable (cancelable) bell or buzzer to indicate alarm conditions.

f. Control Machine Furniture

An appropriate armchair and a file cabinet, both on casters, shall be provided for the Yard Interlocking Operator in the Yard Control Room.

1.05 Yard Signal Control and Interlocking System Functions, Principles and Operational Requirements

A. Component or System Failures:

1. Component or system failures which are not self-detecting shall not cause unsafe conditions, even if added to other failures.
2. Any number of simultaneous components or system failures attributable to the same causes or related causes shall not cause unsafe conditions.
3. Any component or wire becoming grounded or any combination of such grounds shall not cause unsafe conditions.

B. Circuit Requirements:

1. Vital Circuits:

- a. Regardless of how they are implemented, vital circuits shall be fail-safe design.
- b. Electronic fail-safe circuit design shall provide protection against the following types of component failures:
 - (1) Two terminal devices: open, short, partial open or partial short.
 - (2) Multi-terminal devices: any combination of opens, shorts, partial opens or partial shorts.
- c. Vital circuits shall be based on closed-loop principles: i.e. broken wires, damaged or dirty contacts, a relay failing to respond when energized, or a loss of power supply energy shall not result in unsafe conditions.
- d. When the number of contacts required in vital circuits demand the use of repeater relays, minor circuits shall be operated by contacts of the repeater relays. Minor circuits are defined as those involved in panel illuminations and similar applications.
- e. The circuits controlled by the prime relay and its repeaters shall be coordinated so that unsafe or undesirable conditions cannot occur if a repeater relay fails to pick up.
- f. Except when specified otherwise, all circuits which energize a vital relay located outside of a Train Control Room and all circuits which energize a vital relay located inside of a Train Control Room but which contains contacts located outside of the Train Control Room in which the relay is located, shall

be two-wire, double break circuits and shall be energized from an ungrounded power supply.

- g. If non-vital relays are used in vital circuits, it shall be assumed that these relays can fail so that front contacts weld, back contacts weld, or any combination of these events may occur. It shall be assumed that the welding of a front contact will not prevent back contacts from conducting when the relay is deenergized, and that the welding of a back contact will not prevent front contacts of the relay from conduction when the relay is energized. It shall also be assumed that an armature may stick in any position. None of the above events when they occur, shall cause unsafe conditions.
- h. Switch Operation circuits shall be two-wire, polar, double break circuits. Overload Stick Relays shall be circuited to meet operating requirements. The remaining vital circuits shall be positive energy, single break circuits. All of the relays used in these circuits shall have one side of each relay, or each individually controlled relay coil, connected directly to negative energy (common).
- i. The following types of circuits shall be considered vital to the safety of the Yard Signal Control and Interlocking System:
 - (1) Interlocking Track Circuits
 - (2) Switch Operating Circuits
 - (3) Switch Locking Circuits

2. Non-Vital Circuits:

- a. Non-vital logic relays shall be plug-in, dc, neutral relays with a nominal operating voltage of 28 volts.
- b. Non-vital logic relays shall be manufactured specifically for railroad and transit applications and shall conform to the recommendations established by the AREMA Signal Manual, Part 6.3.5 (Detachable DC Non-vital Relay).
- c. Arc suppression for non-vital logic and heavy duty interfacing relay coils shall be built into the relays or into their plugboards.
- d. Non-Vital circuits shall utilize non-vital relay or solid state technology. Failures of non-vital equipment shall not affect the safety of the system.
- e. Non-Vital circuits shall employ closed-loop circuit design principles and be based on fail-safe concepts.
- f. The following types of circuits shall be considered non-vital in the Yard Signal Control and Interlocking System.
 - (1) Shop Lead Track Circuits

- (2) All circuits except those specifically identified as Vital Circuits.

C. Computerized Yard Control System

1. Non-vital functions

Non-vital functions of the Yard Signal Control and Interlocking System shall be performed by solid-state, electronic processors (computers) unless otherwise specified. These "computers" shall be configured in a manner approved by the Authority and shall meet the Mean Time Between Failures (MTBF) and Mean Time To Repair (MTTR) requirements shown in the graph on Criteria Diagram TC-7.

2. Quality

The logic and operation of the computerized system shall be at least equivalent in safety and speed of operation as the best operation achievable by a system implemented with non-vital relays and discrete component circuitry.

3. Documentation

Complete documentation shall be furnished for all software and hardware to be included in the Computerized Yard Control System. This shall include both conventional relay logic drawings and computer-equivalent circuit drawings (or equivalent software logic statements) for all of the non-vital functions which are to be performed by the "computers" in the Computerized Yard Control System, and a complete test and inspection program for all hardware and software included in the system.

4. Compliance

The Computerized Yard Control System shall comply with all basic environmental, mechanical, electrical, programming diagnostic, and spare requirements and current practices for WMATA Yard Train Control Systems.

D. Train Detection:

Determination of train location on the tracks within the yard shall be accomplished by means of shunts applied to track circuits by the wheel-and-axle sets of the transit cars. The running rail portion of every track circuit (or contiguous portion thereof) shall be at least 50 feet in length (to avoid the possibility of being straddled by the transit car wheelbase).

1. Vital, single-rail, AC power frequency (60 Hz) track circuits using vane-type vital track relays shall be used for train detection purposes on yard interlocking, yard lead, and yard running tracks, and as otherwise specified. These track circuits shall provide train detection for up to 0.6 ohms shunting resistance.
2. Non-vital, series-type, alternating current (60 Hz) track circuits shall be used for train detection purposes on yard storage, wash track, and shop lead tracks. These track circuits shall provide train detection for up to 0.6 ohms shunting resistance.
3. The Track Circuit Design shall perform these basic functions:

- a. Provide track circuit blocks for safe train operation, i.e. train separation for both "ideal" and "worst case" trains, at all times.
- b. Provide such track circuit boundaries for crossbonding and negative propulsion return requirements;
- c. Provide such track circuit boundaries for safe definition of interlocking boundaries.

E. Traffic Control:

Yard running tracks shall be equipped with non-vital traffic and traffic initiation circuits configured to prevent clearing of opposing signals into a section of track between two interlockings or intermediate signals.

F. Train Routing:

1. Route request and initiation shall be accomplished by identifying the desired route in terms of the entering signal and exiting signal on the Yard Control Machine.
2. The desired entrance point (home signal) control device shall first be activated. Once this has been done, the Entrance-Exit system circuits (logic) shall determine the "status" of all possible routes emanating from the chosen entrance point, based upon conditions in the field, and shall indicate which of these possible route exit points are "available," i.e., can safely accept a train exit movement from the interlocking without conflicting with any other route previously granted or requested. (A route request originating at an intermediate or hold-out signal has only one possible route "exit." The "availability" of this route will depend upon the current availability of the desired "traffic" direction on the applicable exit track.)
3. The desired route through the interlocking shall be "selected" by activating the control device at the "available exit" point desired.

G. Route Completion

After the route initiation is completed, by identifying both the entering signal and the exiting signal, the route completion circuits (logic) shall complete the route by requesting the proper switch positions, de-energizing the unselected "available exit" relays, making a preliminary check of the route integrity, initiating the locking, and initiating the request for signal clearing.

H. Time Released Approach Locking:

1. Approach locking with timed release shall be provided for all controlled signals. One such locking circuit shall be provided for each signal or group of converging-route signals. This form of locking shall remain in effect until released by one of the following:
 - a. The signal is accepted by the train (two track release).
 - b. The signal is set to stop and no train is within the approach limits.

- c. The signal is set to stop and a predetermined "approach" time has expired.
 - 2. The approach locking relay circuits shall be arranged such that a momentary interruption of track circuit energy will not release the locking. This shall be accomplished by using a "two track release" (the last track circuit within the interlocking, and the first, "exit" track circuit beyond the interlocking). The two track circuits shall be driven from different branch fuses, and the approach locking relays shall be cross checked so that, if opposing relays are both de-energized, as would be the case with a dc bus failure, time must be run to release the locking.
- I. Route Locking
- 1. Route locking shall be provided to maintain security of the route ahead of the train as it progresses through the interlocking. Route locking shall be initiated by the initiation of approach locking and shall be released when approach locking is released and there are no occupancies in the route. In some cases the route shall be divided into contiguous sections for route locking purposes and locking of the section(s) of the route behind the train shall be released (sectional route release) as the train progresses through the route.
 - 2. Sectional Route Release shall be provided in the control of long or complex interlockings in order to reduce delays to trains and improve yard throughput.
- J. Detector Locking:
- Detector locking shall be established by the track relay(s) for the track circuit(s) in which each switch (or crossover) in the route is located and shall prevent switches from being thrown under a train. Detector locking shall also lock any switch(es) which could be fouled by train occupancy of an adjacent track when the track relay of that adjacent track circuit is down..
- K. Switch Locking:
- 1. Switches shall be locked by Time Locking, Route Locking and Detector Locking. Switch Locking shall only be released when applicable Time Locking, Route Locking and Detector Locking are all released for the switch(es) involved, i.e. when all Lock Relays governing the switch(es) involved are picked up.
- L. Traffic Locking:
- 1. Traffic Locking shall prevent clearing opposing signals into a section of track between consecutive interlockings or between an interlocking and an intermediate opposing signal. Individual Traffic Locking circuits shall be provided for each direction on each such section of track.
 - 2. The direction of Traffic Locking shall be locked for a section of yard running track over which Traffic Locking is provided whenever any of the following conditions exist:
 - a. Any track circuit within that track section is occupied.
 - b. Traffic direction is requested into that track section.

- c. Time Locking is effective for a signal which had been cleared into that track section.
3. A signal governing movement into a section of track for which Traffic Locking is effective shall not clear until traffic direction has been established and locked in the direction of movement for which the signal governs.

M. Switch Control and Indication:

1. The switch control relays shall be driven from the switch call relays in the route completion network. The switch control relays shall be circuited to provide storage of the switch call, provide premature indication prevention, and prevent preconditioning.
2. Switch correspondence relays shall be provided to verify that the switch repeater relays are indicating that the switch is in the position required by the switch control and switch operating relays.

N. Signal Control:

Signals shall be controlled by home signal relays which are energized by route check network relays. The following checks shall be included in these networks:

1. Approach locking is in effect.
2. Route locking is in effect.
3. Traffic locking beyond the exit signal is in effect.
4. Lock relays are deenergized.
5. Switches are in proper correspondence.
6. Route is not occupied.
7. Timers associated with release of locking are at zero time.
8. There has not been an overrun of a red signal at the interlocking.

O. Signal Clearing:

Once the desired route has been aligned and checked, locking activated, and, where applicable, suitable traffic direction established, the Yard Signal Control and Interlocking System shall:

1. Cause the applicable wayside signal to display the appropriate "clear" aspect. Signal lighting energy shall be controlled through front and back contacts of the home signal relays. (The two red lenses of the STOP aspect shall be independently lighted from separate energy buses.)
2. The System shall then indicate , to the Yard Control Panel, the route aligned and locked, and the cleared signal.

P. Yard Controlled Signal Aspects:

<u>ASPECT</u>	<u>NAME</u>	<u>INDICATION</u>
Red Over Red	STOP	Stop
Lunar White	CLEAR	Proceed

Yard signals shall display stop indications at all times except when cleared for train movements.

Q. Clearance Requirements:

All wayside Yard Signal Control and Interlocking System equipment shall be designed and installed to provide 4-inch clearance between wayside equipment and the dynamic outline of the METRO transit cars. This shall include allowances for the end and center overhang of transit cars on curved track and when passing through crossovers and diverging turnouts. In all cases where a 4-inch transit car clearance envelope cannot be maintained, an absolute minimum 2-inch clearance envelope shall be maintained. See Criteria Diagrams TC-1, TC-2, TC-3, TC-4 and TC-5.

R. Maintainability:

1. All Yard Signal Control and Interlocking equipment shall be designed and installed in such a manner to be consistent with existing WMATA procedures for maintenance and replacement of similar equipment.
2. All adjustable equipment and components shall be designed to operate within their 25-percent-to-75-percent adjustment range under all normal conditions.
3. All test points, indications and components requiring adjustment or replacement shall be visible and accessible while mounted in their normal position, without disassembly of other components.
4. Test points for checking essential voltages and wave forms shall be clearly labeled and shall be provided whenever required for trouble shooting and routine maintenance, and shall be capable of accepting probes and connectors used with standard equipment such as voltmeters and oscilloscopes. Accessible points shall also be provided where signals need to be injected for testing.
5. Built in indicators or meters shall be provided as necessary when frequent observations or adjustments are necessary. All electronic modules shall be equipped with LED or other approved indicators. They shall at a minimum demonstrate that each function of the module is performing correctly. All indications shall be labeled.

1.06 Basic Criteria for Yard Signal Control and Interlocking System Wayside Equipment

A. Yard Track Switch Layouts

Trailable switch machine layouts, complete with switch point detection, and all necessary rods and connecting hardware, shall be provided for all power track switch layouts in the yard. The switch machines shall exert at least 1000 lbs. closing force on the switch points. The switch

layouts shall be trailable at low speeds without damage to the switch machines, rods, or special trackwork.

B. Wayside Signal Layouts:

Controlled and marker signal layouts provided shall be complete, with the following features, as appropriate:

1. signal heads having three lamp compartments;
2. appropriate signal-head lamp adjusting transformers;
3. appropriate lamps, adjustable lamp holders, lenses, blanking plates, terminal blocks and lens hoods.
4. appropriate masts and bases;
5. appropriate signal number plates;
6. appropriate foundations for all ballast-mounted signals;
7. appropriate ladders or climbing steps;

all fabricated, assembled and mounted in the WMATA prescribed manner.

C. Cases and Junction Boxes

Appropriately sized and equipped cases and junction boxes, complete with applicable foundations or pedestals, shall be provided for all yard wayside Yard Signal Control and Interlocking System cabling. These housings shall be so located and constructed that they meet all transit vehicle clearance criteria. All metallic cases shall be made of stainless steel, and shall be equipped for proper grounding. All cases and junction boxes shall be suitably equipped for waterproof closure and, where applicable, locking.

D. Snowmelter Layouts

All power operated track switches shall be provided with special snowmelter layouts to prevent buildup of snow and/or ice in the area of the switch points and rods. These snowmelter layouts shall consist of two types of heaters (one type for the switch points and a second type for the switch rods); a non-metallic wayside control case to control the operation of these heaters, and; all necessary associated control and indication circuitry and installation hardware, all in conformance with current WMATA practices.

E. Cable and Wiring

1. All Yard Signal Control and Interlocking System cable and wiring provided shall meet all the requirements specified for such cable and wiring in the Yard Signal Control and Interlocking System Specification Section 16949.
2. All TC cable and wiring conductors shall be sized to provide equipment-rated current and voltage, within specified tolerances, at each piece of signal equipment supplied under full load conditions.

3. The types of cable, insulation, and number of conductors provided for each type of application shall be in accordance with the requirements of the Yard Signal Control and Interlocking Specification Section 16949.
4. Yard Signal cable shall be terminated on binding post terminal blocks meeting applicable AREMA requirements. Splicing of yard signal cables is not permitted as a normal installation practice and shall be allowed only with prior written approval by the Authority's Representative.

F. Crossbonding:

Negative propulsion return cross-bonding of yard tracks shall be provided to incorporate all tracks equipped with traction power third rail.

G. Track Circuit and Negative Return Rail Connections:

1. Track Circuit Rail Connections:

All power-frequency track circuit leads and bonding shall be provided.

- a. Power frequency track circuit leads shall be connected to the running rails by means of rail-web, pin-type connectors of the specified type and size.
- b. Signal rails shall be bonded by means of exothermically connected rail-head bonds of the specified type wherever possible, and by rail-web, pin-type bonds where necessary.

2. Negative Propulsion Return Current Connections:

The Yard Signal Control and Interlocking Systems shall include all running rail connections of the types and sizes required for negative-return rail transposition purposes, for current equalizing purposes, and for the return of propulsion current from the trains, through the running rail(s), to the substation return conductors. This shall include compression-cone type, compression-eyelet type, compression-bolted type, and base-of-rail-clamped type bonds.

3. Snowmelter Related Rail Connections:

All rail connections necessary for the safe operation of switch point snowmelters and switch rod heater units shall be provided. This shall include:

- a. Exothermic connection of snowmelter and rod heater unit negative return leads to the center of the web of the proper negative return rail(s).
- b. Exothermic connection of snowmelter case-heater negative return leads to the proper negative-return rail.
- c. Base-of-rail exothermic connection of the snowmelter fuse box positive energy lead to the appropriate traction power third rail.

H. Cable Surface Trench, Ductbank and Conduits:

1. Cabling between Train Control Rooms within a yard and between a Train Control Room and wayside equipment shall be installed in a network of surface trenches, duckbanks and conduits.
 - a. Surface trench shall be constructed of high density polymer concrete. Surface trench channel sections and covers shall meet AASHTO Heavy Traffic requirements of 32,000 LBS axle loading.
 - b. Manholes, concrete encased ductbanks and conduits in trackbed areas shall meet the requirements described in WMATA Standard Specification Section 02585, "Underground Electrical and Communications Distribution Systems."
 - c. Cabling routed under paved roadway areas shall be installed in rigid galvanized steel conduits.
 - d. Track circuit connection cables shall be protected by heavy duty, two-ply, fiber reinforced rubber hose or Schedule 80 PVC conduit. The top end of each hose or conduit shall be filled with sealing compound where the cable emerges.

1.07 Support Systems

A. TC Power Distribution Systems

1. Description

A Train Control Power Distribution System shall be provided inside each Train Control Room. Each of these Power Distribution Systems shall include all transfer and bypass equipment, power supplies, transformers, buses, feeders and mains necessary to accept electrical energy from the power sources furnished by others, modify it as necessary, and distribute it at proper voltages to the various pieces of Yard Signal Control and Interlocking System equipment mounted in the TCR in compliance with Authority standards.

2. Load Balance and Power Factor

Each TC Power Distribution System shall be designed to achieve the best load balance and power factor practicable.

3. Power Failure Alarm

Each TC Power Distribution System shall include a power failure and over current alarm system circuited in compliance with Authority standards.

4. Protective Devices

Each TC Power Distribution System shall include an array of monitoring, isolation and protective facilities in compliance with Authority standards.

5. Voltage and Capacity

All TC Power Distribution Systems, regardless of rated system voltage, current or frequency, shall deliver the system voltage to the modules, devices, or appliances connected to that system at not less than 95 percent, or more than 105 percent of the nominal voltage rating of the modules, devices, or appliances, and with sufficient capacity for continuous operation of the applicable equipment.

6. Configuration

Each TC Power Distribution System shall be configured in compliance with all applicable Authority standards and practices, and shall be compatible with the commercial power sources furnished by others.

7. Supplementary Power Sources

For any TCR not furnished with commercial power sources by others, the TC Power Distribution System shall also include provision of necessary power sources from the nearest TCR having one or more commercial power sources.

8. Lightning/Surge Protection and Grounding Systems

a. Lightning/Surge Protection

A complete, coordinated system to protect the Train Control circuits and equipment from lightning and other electrical surges shall be included in the Train Control system. This lightning/surge protection system shall include:

Segregation of high voltage wiring from low voltage wiring;

Segregation of Train control wiring from power/operating wiring and communications wiring;

Provision of short, direct, low resistance conductor paths for the grounding of equipment and protective devices;

Provision of initial lightning protection and surge protection by means of low resistance (15 ohms) earth grounds for outside Train Control equipment, and at the point where TC cables and wiring first enter the buildings housing the Train Control Rooms;

Provision of primary, high-current-capacity, properly grounded arresters of characteristics and type(s) appropriate to the application(s);

Provision of three-stage secondary surge protection, which shall consist of:

- Stage 1 - Dual overvoltage devices, each containing a gas-filled surge arrester, a varistor-type overvoltage protection module, and zener-type suppression diodes;

- Stage 2 - Fast-blow fuses rated at the maximum current capable of being delivered by the device(s) being protected,

and;

- Stage 3 - a duplication of Stage 1, circuited as shown on Criteria Diagram TC-23.

b. Grounding

- (1) Low resistance grounding shall be provided for all TC circuits and metallic equipment and racks in Train Control Rooms, and for all metallic outdoor TC equipment.
- (2) Ground connection to the track rails or use of the neutral conductors of the power company or any signal power supply system will not be permitted.
- (3) All ground connections in each TCR shall be made to a room prime ground bus bar in the manner prescribed by the latest applicable WMATA METRORAIL Train Control Specifications.
- (4) The grounding of each piece of metallic outdoor TC equipment shall be provided by means of an individual connection to a driven copper ground rod, or rods driven in series, one on top of the other. The resistance of the connection from each piece of equipment to earth ground shall not exceed 15 ohms.

B. TC Maintenance Telephone System

1. Hardware

All telephone jacks and plugs, terminals, jack boxes, rotary selector switches, interconnecting twisted pair wiring and speaker phones of the types prescribed in the latest applicable WMATA METRORAIL Train Control Specifications shall be provided to extend the existing METRORAIL Train Control (TC) Maintenance Telephone System throughout each new METRORAIL TC Contract area in the WMATA prescribed manner.

2. Location of Jacks

TC Maintenance Telephone jacks shall be provided in each of the following pieces of equipment, as applicable to the given contract work:

- a. Power, Entrance, and Equipment Racks (2 per rack)
- b. Large Junction Boxes and Wayside Interface Junction Boxes furnished by the Contractor.
- c. Signal Junction Boxes
- d. Trailable Switch Mechanisms
- e. Yard Control Machine

1.08 Yard Monitoring Facilities

A. Event Recording System

1. Description:

Each Yard Train Control System shall be equipped with a complete, properly operating, microprocessor controlled Event Recording System which shall monitor, record, store, and print or display, in various prescribed formats, the status of various prescribed Yard Train Control functions over a period of time. The Event Recording System shall be accurate, user friendly, versatile in output formats, easily expandable, easy to troubleshoot and maintain, and shall meet all of the following basic minimum requirements:

- a. The system shall be equipped to monitor 250 points. Modular construction shall be utilized such that the initial system can be easily expandable in the field to monitor up to 500 points.
- b. All data points shall be monitored continually including during viewing and/or printing.
- c. All detected changes of state shall be recorded with the device identification, new status, and the time and date of occurrence.
- d. Event printouts and/or displays shall be accurate to one second.
- e. Displays and printouts shall be menu driven and manually initiated from a local or remote keyboard or other interrogating device.
- f. Displayed and/or printed data shall include the following information in a format easily readable and understandable by Train Control maintenance personnel:
 - type of event,
 - julian date,
 - time of occurrence,
 - point identification, and
 - new state.
- g. Standby battery shall be provided as an integral part of the Event Recording System to prevent loss of the time base during external power failures or shut-down periods up to seven days in duration.
- h. Controls shall be provided for setting the date and the time; for initiating the viewing and/or printing of stored data in the desired format, and for adding new devices to be monitored.
- i. The printer shall be capable of printing one event per line, two lines per

second.

- j. The system shall include a standard RS232C interface wired to one or more plug couplers.
- k. Input wiring to the system shall be easily removable to facilitate testing.
- l. Detection of an error in the Event Recording System (by the internal diagnostic subsystem) shall cause a change in status of the externally wired error detection contact closure.
- m. The system shall include automatic and manually-initiated screen saving.

2. Input Storage

- a. The minimum storage capability of the hard disk drive provided shall be 100 megabytes or greater. Sufficient storage media for 32 days of events shall be furnished initially.
- b. The program which controls the hard disk drive storage shall store the yard events in a file format labeled on a daily basis (0000-2400 hours) by date and year, with one separate file for each day. These files shall be further subdivided by the type of event, i.e., switch machines, controlled signals, track occupancy, auxiliary devices, alarms, etc.
- c. The event storage program shall automatically rotate through the storage area, erasing the oldest of the 32 daily files at the start of each new day's recording.

3. Outputs

The processor shall have the capability of outputting information to a local or remote monitor, printing device or floppy disc in various menu-driven, operator-selectable formats.

4. Equipment and Installation

- a. The major computer components of the Event Recording System shall be installed on a rack in the Yard (main) Train Control Room in a manner previously approved by the Engineer.
- b. Indication contacts shall be provided on appropriate equipment for use by the Event Recording System.
- c. Plug connector receptacles shall be provided for the Event Recording System wiring on the racks containing equipment to be monitored in the various Yard TCRs.
- d. Interconnecting cables shall be provided between the event recording equipment and test contact receptacles on the various racks, and between the rack test contact receptacles and the appropriate test contacts on the equipment mounted on the racks.

PROGRAM CRITERIA

YARD COMMUNICATIONS

1 GENERAL

1.01 Criteria Coverage

A. Scope

These Criteria include design and functional criteria for the Washington Metropolitan Area Transit Authority (WMATA) METRORAIL Yard Communications Systems changes and additions being implemented under the Metro Matters Project.

B. Intent

The intent of these Criteria is to establish acceptable standards for Yard Communications Systems and equipment which must be specified, designed, properly implemented, tested, and documented, to result in systems which shall serve the voice and data communications requirements within the project yards and comply with compatibility requirements for the Communications Systems in use on the WMATA METRORAIL System.

1.02 GENERAL DESCRIPTIONS

- A. The Yard Communications System provide state-of-the-art, efficient, reliable communications between all yard facilities and include an interconnection to the systemwide communications network.
- B. The Yard Communications System is more localized than the Mainline System. Yards consist of somewhat independent functioning elements such as rail vehicle maintenance, the vehicle cleaning and wash operations, vehicle storage, make-up and dispatch of trains, wayside maintenance, security and administration functions. Selected functions are centralized at the Gatehouse and at the Yard Control Room. The communications systems are designed to serve the specific functions.
- C. The Yard Communications Network consists of communications systems with common equipment located in the yard main Communications Equipment Room. These systems are extended to the various yard facilities through a cable system that radiates from the Communications Equipment Room. The cable is installed in cable duct except for a small amount buried at trackside.
- D. A yard radio system provides service to trains and to maintenance and security personnel within the yard area.
- E. Control of various yard communications systems is centralized at the Yard Control Room and at the Gatehouse.
- F. The Yard Communications System includes the following elements:

1. Public Address System
2. Talkback System
3. Telephone System
4. Data Communications System
5. Radio System
6. Closed Circuit Television System
7. Fire and Intrusion Alarm System
8. Communications Consoles
9. Communications Power Distribution System

1.03 System Criteria

A. Public Address System:

1. Basic System Configurations:

- (a) The Yard Public Address System enables announcements to be made throughout the yard buildings (typically including: Yard Operations Building; Traction Power Building(s); Car Wash Building; Communications and Train Control Rooms; and, where applicable, the Shop building(s)). The announcements originate from telephones within the yard buildings, gatehouse and Yard Control Room..
- (b) The Public Address System consists of loudspeakers, including enclosures and baffles, and paging horns installed in selected rooms and locations within each yard building. A Telephone Access Paging System, power amplifiers, distribution panels and jackfield panels is provided in the main Communications Equipment Room.
- (c) The loudspeakers of the Public Address System are grouped into individual zones throughout the yard buildings. The Public Address System is configured to permit announcements to be made to the speakers in an individual zone, or simultaneously to a combination of any and all zones (ALL PAGE) by dialing the appropriate zone code(s).
- (d) The Telephone Access Paging System accepts an audio input from the Telephone System via the appropriate Channel Bank Terminal, provides the appropriate dialed zone decoding and audio routing of the announcements to the desired zone amplifiers, which provide audio amplification for announcements to each zone circuit. The audio inputs and outputs of the Telephone Access Paging System are connected to a

distribution panel.

- (e) Jackfield panels provide audio test points for the Public Address System. Each Public Address Loudspeaker circuit is wired through a jackfield panel to a loudspeaker distribution panel. In addition, the loudspeaker distribution panels provide single point ground connections for the Public Address System cabling.

2. Operations and Administration Building Requirements:

- (a) The Yard Public Address System includes loudspeakers grouped into zones. The zones are addressable from telephones in the Operations and Administration Buildings through the Telephone Access Paging System. The zones are designed with consideration given to the functional requirements of the space within the buildings. As a minimum, each building and functional area is considered a separate zone. Loudspeakers are recessed in areas with suspended ceiling and surface mounted in other areas.

3. Shop Traction Power, and Car Wash Building Requirements:

- (a) The Yard Public Address System includes Paging Horns (loudspeakers) in Traction Power Buildings, Car Wash Buildings, and, where applicable, in Shop Buildings. The Telephone Access Paging System and loudspeakers grouped into zones are designed with consideration given to the functional requirements of the space within the buildings. As a minimum, each building and functional area is considered a separate zone.

4. Yard Control Room and Gatehouse Requirements:

- (a) The Yard Public Address System for the Yard Control Room and the Gatehouse is addressed under separate headings.

5. Telephone Access Paging System

- (a) The system provides a Telephone Access Paging function which includes decoding circuitry to provide selection of any zone or combination of zones including all zones during an "ALL PAGE."
- (b) The Telephone Access Paging System is a part of the Yard Telephone System. A dedicated telephone extension number from the Rolm PABX via a dedicated channel card in the Channel Bank Terminal provides access to the paging system.

6. Power Amplifier

- (a) The system includes a power amplifier for each loudspeaker zone. As a minimum the power amplifiers have the following characteristics:
 - (1) Power Output: At least 375 watts continuous rms (50-10,000 Hz)

@ 70.7 volts.

- (2) Total Harmonic Distortion: Less than 1% (50-10,000 Hz) @ 70.7 volts.
- (3) Frequency Response: ± 1 dB (30-15,000 Hz)
- (4) Input Impedance: 600 ohms and 10K ohms balanced.

7. Loudspeakers

- (a) The system includes loudspeakers with the following characteristics (as a minimum):
 - (1) 8-inch diameter, 8 ohm with a frequency response of ± 2 dB (30-19,000 Hz).
 - (2) Power Rating: 7 watts.
 - (3) High efficiency, low distortion, permanent magnet type with moisture resistant seamless cone.
 - (4) Each loudspeaker has a 70.7 volt matching transformer providing selectable power levels of $\frac{1}{2}$, 1, 2, and 5 watts to the loudspeaker.

8. Paging Horns

- (a) Horns (loudspeakers) have the following characteristics as a minimum:
 - (1) Weatherproof design consisting of a water-sealed all-metal construction with baked epoxy finish suitable for both indoor and outdoor installation.
 - (2) Contain built-in 70.7 volt line transformer with selectable audio power levels of 3.7, 7.5, 15, and 30 watts.

9. System Performance:

- (a) The following performance requirements are met or exceeded:
 - (1) Frequency Response: ± 5 dB (@ 200 Hz - 8 kHz).
 - (2) Noise Level: 60 dB less than 5% (@ 250 Hz - 6.6 KHz).
 - (3) Loudspeaker Sound Pressure:
 - (i) At least 100 dB measured 1 meter in front of loudspeaker for areas with ceiling heights 25 feet or greater.
 - (ii) At least 70 dB measured 1 meter in front of loudspeaker for

areas with ceiling heights less than 25 feet.

B. Yard Talkback System

1. Basic Talkback System Configurations:

- (a) Provides voice paging from a master control panel located on the Yard Communications Console in the Yard Control Room, to personnel located trackside (via nearby loudspeaker/ talkback stations) and/or to the Gatehouse Building console as set by selector switch position;
- (b) Provides the ability for trackside personnel, in the vicinity of track switching points and other locations within the yard, or Gatehouse personnel to verbally answer a page or signal the Yard Communications console that they want to talk to the Yard dispatcher;
- (c) The system broadcasts an emergency tone, originating from the Communications Console, to the loudspeaker/talkback stations located trackside;
- (d) Broadcasts an "All Call" verbal message, originating from the Communications Console, to all of the loudspeaker/talkback stations located trackside.
- (e) The Yard Talkback System includes:
 - (1) Talkback Stations
 - (2) Master Talkback Control Panel
 - (3) Gatehouse Talkback Control Panel
 - (4) Talkback Control Unit
- (f) Talkback Stations
 - (1) The Talkback Stations are located along the trackside in the vicinity of track switching points and at other locations considered appropriate. The final locations of the talkback speakers must take into consideration train clearances and clearances of people when using the talkback system. Safety of personnel is of primary importance in determining the final locations.
 - (2) The Talkback Stations include:
 - A metal stanchion mounted on a concrete base.
 - An amplifier and "CALL" button mounted in a waterproof enclosure mounted on the stanchion.
 - A control relay or equivalent circuitry for talk/listen function

mounted in the weatherproof enclosure.

- Two weatherproof speaker horns mounted on the stanchion.

(g) Talkback Amplifier

(1) The amplifier has the following characteristics, as a minimum:

- Input Power - 24Vdc, 1.0 Amp
- Output - Push-pull, Class B, 12 watts min,@24Vdc
- Sensitivity - 0.5 Volts at rated output
- Frequency Response - 250-4000 Hz \pm 1.5 dB
- Distortion - 1% max. total harmonic distortion @1,000 Hz, 12 watts
- Input Impedance - 50,000 ohms
- Temperature Range - -30°C to +70°C

(h) Call Buttons

(1) The "CALL" button is a weather-proof, momentary, normally-open contact pushbutton switch sealed against oil and water.

(i) Talkback Speaker Horns

(1) Weatherproof speaker horns have the following characteristics:

- Corrosion resistant finish
- Integral 8 ohm, 30 watt driver
- Low frequency cutoff - 250 Hz
- Dispersion angle -90°
- Sound pressure level – 116 dB @ 12 watts, 119 dB @ 30 watts
- Frequency range 450-6000 Hz

(j) Master Talkback Control Panel

(1) The Master Talkback Control Panel located in the Yard Communications Console provides the capability to call, receive calls, and talk with yard personnel in the vicinity of the trackside Talkback Stations. From this panel a specific Talkback Station can be called or all Talkback Stations can be called.

(2) The Master Talkback Control Panel includes the following features:

- Illuminated pushbutton switches associated with each Talkback Station and the Gatehouse.
- A spring loaded "Talk/Listen" switch normally in the "Listen" position.
- A loudspeaker, with volume control to serve as speaker and microphone.
- An illuminated "All Call" switch to provide for simultaneous paging to all Talkback Stations and the Gatehouse.
- An illuminated "Emergency Call" switch to provide for an emergency tone to be transmitted to all Talkback Stations and the Gatehouse.

(k) Gatehouse Talkback Panel

(1) A Gatehouse Talkback Panel is located in the Gatehouse Console which provides the Gatehouse with the equivalent capability of a Talkback Station. The panel includes, the following features:

- A Talkback loudspeaker with volume control.
- An illuminated pushbutton switch to provide an indication for an incoming call and to initiate an outgoing call.
- A spring-loaded "Talk/Listen" switch, normally in the "Listen" position.
- The console includes a station amplifier, located outside the panel with a control relay or circuitry to provide for the talk/listen function.

(l) Talkback Control Unit:

(1) The Talkback Control Unit is located in the Yard Communications Equipment Room.

(2) The Talkback Control Unit includes the following:

- Circuitry for the control functions of the Talkback System.
- Circuitry to distribute primary power to the Talkback Stations.
- An Amplifier
- DC Power Supply with 120 Vac, 60 Hz input.

- Multitone generator.

2. Talkback System Performance Criteria

(a) At Talkback Stations with speakers configured as loudspeakers:

- Speaker power: >103 dB at 4 feet
- Distortion: <1.5% total harmonic distortion 300-3000 Hz
- Audio dispersion: -90 degrees each speaker
- Frequency Response: ± 1.5 dB between 300-3000 Hz

(b) At Talkback Stations with speakers configured as microphones (measured at console panel):

- Frequency Response: ± 1.5 dB @ 300-3000 Hz
- Harmonic distortion: <1.5% 300-3000 Hz

3. Environmental Criteria

(a) All equipment fully operational without damage or functional degradation under any combination of the following:

- Ambient temperature: -30°C to +60°C
- Relative humidity: 0% to 95%
- Effects of rain, salt, dust, oil and other pollutants.
- Effects of wind up to 90 mph
- Effects of train related vibrations

C. Yard Telephone System

1. General

(a) The Yard Telephone System is part of the WMATA Systemwide Telephone Network. Its purpose is to provide telephone service to WMATA personnel working within the Yard limits. Telephone instruments associated with the Yard Telephone System are used to access the Yard Public Address System.

(b) The Yard Telephone System provides automatic Dual Tone Multiple Frequency (DTMF) tone telephone service in Yard buildings at selected locations. All telephone instruments are wired to the Yard Communications Equipment Room using dedicated cable pairs.

(c) All telephone instruments are cross connected to the appropriate telephone sub-system which provides the functionality required for each individual instrument. The configuration of the Yard Telephone System may include one or more of the following subsystems.

- The Carrier Transmission System provides the transmission facility to connect the telephone circuits to the existing ROLM 9000 PABX in the WMATA Jackson Graham Building.
- A ROLM 8000 Satellite PABX provides local yard telephone service and connectivity to the ROLM 9000 in Jackson Graham Building.
- A digital key system provides local telephone service and includes an interface to the ROLM 9000 PABX in the Jackson Graham Building.

(2) Telephone Instrument Locations:

(a) The Yard Telephone System includes, as a minimum, telephone instruments installed in offices, administrative spaces, and service areas as follows:

- Yard Operations Room(s)
- Gatehouse
- Train Control Building
- Traction Power Substation
- Car Wash Building
- Shop Building
- Elevators
- Emergency Trip Stations
- Tiebreaker Station(s)

telephone jacks are provided at appropriate locations.

(3) Types of Telephones

(a) The Yard Telephone System includes, as a minimum, the following types of telephone instruments:

- Analog telephone instruments - multi-line and single line.
- Emergency Trip Station telephone instruments.
- Automatic dialing intercom telephone instruments.

- Elevator telephone instruments.
 - Digital PABX or Key System telephone instruments.
- (4) Yard Operations Building Telephones:
- (a) The system includes telephone jacks installed in locations convenient to proposed work stations and yard consoles. In offices and administrative spaces locations are selected with consideration given to the function to be performed in that space. Analog or digital telephone instruments both multi-line and single line are provided. In general, desk type instruments are provided in office areas and wall type instruments are provided in the Communications Equipment Room and service areas.
- (5) Gatehouse Telephones:
- (a) The system includes a desk type multi-line analog or digital telephone instrument in the Gatehouse located adjacent to the Gatehouse console.
- (6) Yard Control Room and Train Control Room(s)
- (a) The system includes a single line, wall mounted, analog telephone instrument for the Yard Control Room and for each Train Control Room and other service room in the Yard.
- (7) Traction Power Building(s)
- (a) The system includes a single line, wall mounted, analog telephone instrument for the Yard Traction Power Substation and/or Tiebreaker Station.
- (8) Car Wash Building Telephones:
- (a) Ruggedized single line, analog telephone instrument mounted in weatherproof enclosure are provided in the exposed areas of the Car Wash Building.
- (9) Shop Building(s)
- (a) The system includes analog or digital telephone instruments in Shop Buildings. In general maintenance and service areas are provided with ruggedized single line analog telephone instrument mounted in weatherproof enclosures. In protected areas with desks or similar work areas (parts storage, electronic supply, etc.) desk type single line analog or digital telephone instruments are provided. Multi-line instruments are provided in work spaces assigned to supervising personnel.
- (10) Elevators and Elevator Machine Room:
- (a) The system includes single line analog telephone instruments in elevators and elevator machine rooms.
- Telephone instruments in elevator cars are equipped with auto-

dialing feature to provide automatic dialing to the Gatehouse, yard control console, and/or other selected locations. The telephone instrument is installed in the telephone cabinet integral to the elevator car.

- A single line, wall mounted, analog telephone instrument is provided in the Elevator Machine Room.

(11) Emergency Trip Stations

- (a) The system includes Emergency Trip Station telephone instruments installed in Emergency Trip Station enclosures located in the Shop Area, Car Wash Area and throughout the yard.

(12) Digital Telephone Instrument (Single and Multi-line) Criteria.

- (a) The digital telephone instruments are compatible with the central distribution system provided (i.e. PABX or Key System) and are programmed for features appropriate to the specific station applications.

(13) Analog Telephone Instrument (Multi-line) Criteria:

- (a) Multi-line with hold and conference features.
- (b) Hands free operation with LED indication.
- (c) DTMF Keypad.
- (d) 18 single-touch memory capability.
- (e) Battery back-up for memory.
- (f) Desk and Wall Mountable.

(14) Analog Telephone Instrument (Single Line) Criteria:

- (a) Single Line.
- (b) Desk and Wall Mountable.
- (c) DTMF Keypad.

(15) Ruggedized Analog Telephone Instrument Criteria:

- (a) Single line, analog.
- (b) High-impact, anti-corrosive enclosure, resistant to chemicals and solvents.
- (c) Sealed DTMF keypads.
- (d) Sealed electronic ringer with loud ringer broadcast.

- (e) 15 foot extra strength cord.
 - (f) Noise canceling microphone.
 - (g) Connects to standard RJ11C jack.
 - (h) Mountable in weatherproof enclosure.
- (16) Weatherproof Enclosure Criteria:
- (a) For outdoor applications.
 - (b) High-impact, anti-corrosive enclosure, resistant to chemicals and solvents.
 - (c) Spring Door Return.
 - (d) Compatible with Ruggedized Telephone Instrument.
- (17) Emergency Trip Station Telephone Instrument Criteria:
- (a) Single Line, Analog Telephone Instrument with electronic ringer, DTMF keypad covered with protective seal.
 - (b) Face plate of heavy gauge steel, corrosion resistant, dustproof.
 - (c) Handset: Cradle of cast aluminum with nylon coating with heavy duty handset cord of appropriate length to fit into enclosure.
- (18) Elevator Telephone Instrument Criteria
- (a) Single Line Analog Telephone Instrument.
 - (b) Equipped with automatic dial feature.
 - (c) Equipped with ringer option.
 - (d) Compatible with the fully enclosed elevator car telephone cabinet provided by others.
 - (e) Equipped with Braille instruction plate.
- (19) System Performance Criteria:
- (a) Frequency response from end-to-end: 300 Hz to 3000 Hz, maximum 6 dB loss.
 - (b) Maximum Actual Measured Loss (AML) shall not exceed 8.5 dB at 1000 Hz when measured from the Communications Equipment Room to telephone instrument location - terminated into 900 ohms impedance.
 - (c) Noise objective of 20 dBrnC with 30 dBrnC maximum measured noise terminated into 900 ohm impedance.

- (d) The DC loop resistance shall not exceed 1300 ohms being terminated into a short circuit.
 - (e) Loop DC current not less than 23 mA.
 - (f) Balance ratio not less than -50 dB.
- (20) Telephone Equipment installed in Communications Equipment Room
- (a) Centralized and ancillary equipment required for the proper functioning of the Yard Telephone System is installed in the Yard Communications Equipment Room. Equipment includes ringing generator, power supplies, cable terminals, protection blocks and all items required to properly interface the yard Telephone System with other systems and Networks.

D. Data Communications

1. General

- (a) The Yard Data Communications System is part of the WMATA computer network. Its purpose is to accommodate present and long term requirements of WMATA Information Technology and Services (ITSV) for the transmission of digital data between WMATA facilities. Initially ITSV requires the transmission of data through an interface to the existing LAN/WAN and computer systems from Terminals and Personal Computers to be installed by others in the various Yard Facilities and Buildings.

2. Data Equipment Room

- (a) The Data Equipment Room contains all the equipment necessary to support the Yard interface with the WMATA LAN/WAN system. This includes at a minimum 19-inch equipment racks, switchers, routers, servers, data patch/distribution panels, and fiber optic interfaces as required. Data Equipment Rooms are generally located in the Yard Shop and Operations Buildings.

3. Data Distribution

- (a) Data distribution throughout the Yard facilities is accomplished by fiber optic interface between major buildings and the use of dedicated Category 5 Cable (CAT-5) for local distribution. In general CAT-5 cable should be run to all locations that require an administrative telephone and other locations as designated by the Authority Representative. All CAT-5 cable must be terminated in a data jack at the user end and the distribution patch panel in the Data Equipment Room.

E. Yard Radio System

1. General

- (a) The Yard Radio System consists of two subsystems; the Yard Dispatcher's Radio Subsystem and the Yard Gatehouse Radio Subsystem.
- (b) The Yard Dispatcher's Radio Subsystem provides two-way voice communications between a base station and Yard personnel (with portables), and between the base station and transit trains within the confines of the yard and lead track areas.
- (c) The Yard Gatehouse Radio Subsystem provides communications with the Transit Police and Security network (TPAS) within the yard area on the primary TPAS frequency.

2. Yard Dispatcher Radio Subsystem:

- (a) The Yard Dispatcher's Radio Subsystem includes voice frequency modulated, high band (150-174 MHz), two-way simplex radio communications. It provides RF coverage within the WMATA rail yards, lead tracks and associated areas.
- (b) The Yard Dispatcher's radio base station equipment is located in the Yard Control Building. An outside omnidirectional rooftop antenna coupled with a Radio Antenna System provides RF coverage to the desired areas.
 - The control of the base station is by dispatcher interface through a remote control unit which is capable of making the base station perform all of the functions required in these Criteria. The remote control unit is located adjacent to the Yard Communications Console.

3. Gatehouse Radio Subsystem

- (a) The Yard Gatehouse Radio Subsystem includes a voice frequency modulated, high band (150-174 MHz), two-way radio subsystem, operating on the Transit Police and Security (TPAS) Network radio frequency. It provides RF coverage of the WMATA rail yard and associated areas patrolled by Transit Police personnel using the TPAS Network.
- (b) The Yard Gatehouse Radio Subsystem portable radio equipment is located in the Gatehouse. An outside omnidirectional unity gain antenna provides coverage of the desired areas.

4. Yard Dispatcher Radio Equipment Criteria:

- (a) Radio Base Station
 - 40 Watt output - 16 Channels.
 - Field programmable without opening the Radio.
 - Frequency Range 150-174 MHz; RF input impedance 50 ohms.

- Equipped with Desk Mounting Microphone.
- Equipped with Remote Controller; Tone Frequency Control.
- AC Power Supply (120 Vac, 60 Hz).

(b) Unity Gain Antenna Criteria:

- Omnidirectional, roof mount, VHF Antenna.
- Impedance: 50 ohms.
- Power capability: 40 watts, minimum.
- Frequency Range: 150-170 MHz.

5. Yard Gatehouse Radio Equipment Criteria:

(a) Portable Radio

- Single frequency simplex operation.
- Frequency range: 150-170 MHz.
- Equipped with microphone, speaker and battery.
- Battery Charging Rack manufactured by the same manufacturer as the Gatehouse Portable Radio and capable of charging a single nickel cadmium battery and portable radio.

(b) Unity Gain Antenna Criteria

- Omnidirectional Pole mount VHF Antenna.
- Impedance: 50 ohms.
- Complete with mounting hardware.
- Power capability: at least 5 watts.
- Frequency Range: 150-170 MHz.

6. Yard Radio System Coverage Criteria

(a) The Yard Radio Systems signal strength and antenna radiation patterns provide the following coverage as a minimum:

(1) The Yard Dispatcher's Radio Subsystem Coverage:

- Lead Tracks - 100%

- Exposed Yard Area - 100%
- Rail Vehicles in Yard Area - 100%
- Yard Boundary Areas - 100%

(2) The Yard Gatehouse Radio Subsystem Coverage:

- Lead Tracks - 100%
- Exposed Yard Area - 100%
- Rail Vehicles in Yard Area - 98%
- Yard Boundary Areas - 100%

7. Frequency Assignments

- (a) Frequency assignments within the allocated frequency bands will be furnished by the Authority.

8. System Performance Requirements

- (a) The Yard Radio System criteria ensures that the following performance requirements are met or exceeded:

<u>CHARACTERISTIC</u>	<u>REQUIREMENTS</u>
Frequency Stability	±.0005% of the assigned carrier frequency
Receiver Sensitivity	.35 microvolt (12 dB SINAD)
Audio Distortion 1 kHz	Equal to or less than 3%
Audio Response	+1, -3 dB, from 6 dB per octave pre-emphasis 300 Hz to 3 kHz referenced to 1000 Hz
Modulation	16F3, ±5 Khz for 100% Deviation at 1 kHz
FM Hum & Noise	-45 dB, 300-3 kHz, BW, 1 kHz TONE @ 3 kHz Deviation
Spurious & Harmonic	70 dB

RF Impedance	50 ohms
Temperature Range	-30 to 60 degrees C
Humidity	90% @ 50 degrees C
Spurious & Image	-80 dB
Selectivity	-80 dB
Intermodulation	-78 dB

F. Closed Circuit Television System

1. General

- (a) The Yard Closed Circuit Television (CCTV) System consists of two independent CCTV Systems: the Gatehouse CCTV System and the Yard Control CCTV System. The Yard CCTV System provides security, general surveillance, and surveillance of yard operations.

2. Gatehouse CCTV System

- (a) The Gatehouse CCTV System provides the Gatehouse attendants with surveillance of major parking bays and the yard perimeter.

- (1) The Gatehouse CCTV System includes but is not limited to the following equipment:

- CCTV Cameras.
- Pan and Tilt Units.
- 9-inch CCTV Monitors.
- PT&Z Control Panel.

- (2) Each CCTV camera is be equipped with a pan and tilt unit and with a zoom lens.

- (3) CCTV Monitors are located in the Gatehouse to monitor the video output from each CCTV camera in the Gatehouse CCTV System. Two 9-inch CCTV monitors are mounted in the Gatehouse Console. Each of the 9-inch CCTV monitors are used to view a sequence from all Gatehouse CCTV System cameras. The two cameras provide continuous surveillance and adjust to Pan, Tilt and Zoom (PT&Z) settings. One camera is dedicated for each 9-inch monitor.

3. Yard Control CCTV System

- (a) The Yard Control CCTV System provides the Yard Control Room attendants

with surveillance of interlocking switching track areas

- (1) The Yard Control CCTV System includes the following components:
 - CCTV Cameras.
 - Pan and Tilt Units.
 - PT&Z Control Panels.
 - 9-inch CCTV Monitors.
 - PT&Z Terminal Panel.
- (2) CCTV Monitors are located in the Yard Control Room to monitor the video output from each CCTV camera in the Yard Control CCTV System. Two 9-inch CCTV monitors are located in the Yard Communications Console located in the Yard Control Room. Each 9-inch CCTV monitor is assigned to a unique Yard-Control camera.
- (3) Fiber Optic Video Links provide the means of transmitting CCTV Camera Video signals over a multimode fiber optic facility.
 - Fiber Optic Video Links are used when the inter-building conduit path between a camera and its control point exceeds 800 feet.

4. CCTV Cameras and Associated Equipment

- (a) The cameras are provided in two configurations - with fixed lens and with zoom lens.
 - (1) The cameras with fixed lens meet or exceed the following requirements:
 - High performance monochrome camera.
 - 2/3-inch f/1.4 Auto-Iris Lens with IR filter.
 - EIA RS-170 Compatible, Automatic Gain Control, and Automatic Black Clamping.
 - Low Temperature Operation.
 - Environmental Resistant Sealed Housing.
 - Television camera housing and all mounting hardware are finished in Metro Bronze, Federal Standard 595A, Color No. 20040.
 - (2) The cameras equipped with zoom lens meet or exceed the following requirements:

- High performance monochrome camera.
 - 2/3-inch Format CCD Image Sensor.
 - Zoom Range: 11.5-69mm (6x), f/1.4, Auto Iris lens with IR filter.
 - EIA RS-170 Compatible, Automatic Gain Control, and Automatic Black Clamping.
 - Low Temperature Operation.
 - Environmental Resistant Sealed Housing.
 - CCTV camera housing and all mounting hardware is finished in Metro Bronze, Federal Standard 595A, Color No. 20040.
- (3) The zoom lens controller meets or exceeds the following requirements:
- Provides zoom, focus, and iris controls.
 - Output voltage: ± 2 to ± 9.5 Vdc (adjustable).
 - 110 Vac operation.
 - With 19-inch Rack Mounting Kit.
- (4) Cameras equipped with zoom lens are also equipped with Pan and Tilt Units. The Pan Tilt Units and Pan Tilt Controllers meet or exceed the following requirements:
- (i) Pan Tilt Unit
- Spot heater in base; blanket heater in cover.
 - 110 Vac operation.
 - Weatherproof.
 - The exterior of the Pan & Tilt Unit and all mounting hardware are finished in Metro Bronze, Federal Standard 595A, Color No. 20040.
- (ii) Pan Tilt Controller
- Operates 110 Vac Pan & Tilt Units.
 - Joystick control.
 - 19-inch rack mount/adapter.

(b) CCTV Monitors

(1) The 9-inch TV monitors meet or exceed the following requirements:

- 9-inch Monochrome CCTV Monitor.
- Resolution: 700 TV lines minimum.
- Sweep linearity: 2% or better.
- Video input: EIA RS-170 compatible composite video, 75 Ohms (BNC).

(c) Fiber Optic Link

(1) A Fiber Optic Link between a camera and its control point is provided when distances exceed 800 feet or to eliminate EMI. The Fiber Optic Video Link consists of a Fiber Optic Video Transmitter, a Fiber Optic Facility, and a Fiber Optic Video Receiver.

(2) The Fiber Optic Link meets or exceeds the following requirements:

- Accommodates standard NTSC video signal.
- Video Input/Output signal 1V p-p.
- ASMA Optical Connectors.
- 15 MHz Video Bandwidth.
- Video Input/Output impedance 75 Ohms unbalanced.
- Differential phase <5 deg type Differential gain <8%.
- Optical Wavelength 850nm.
- Compatible with 62.5/125 um multi-mode fiber.
- Operating environment -20 deg C to +65 deg C, 0 to 95% relative humidity (non condensing).

(d) CCTV Control Consoles

(1) A CCTV Control Panel and 9-inch Monitors are installed in the Gatehouse Console.

(2) A CCTV Control Panel is installed in the Yard Control Console and 9-inch Monitors are installed on a table adjacent to the Yard Control Console.

5. CCTV System Coverage Criteria

- (a) The Yard CCTV System ensures that the following viewing coverage requirements are met or exceeded:
 - (1) The Gatehouse CCTV System provides coverage of at least 90 percent of the parking areas and the Yard perimeter.
 - (2) The Yard Control CCTV System provides coverage of at least 90 percent of the interlocking switching track area.

6. System Performance Criteria

- (a) The Yard CCTV System meets or exceeds the following performance requirements:
 - (1) Gray Scale Reproduction
 - Ten shades of gray are distinguishable when viewing a standard EIA Resolution Chart on each CCTV camera.
 - A faceplate illumination of 0.2 foot-candles (or less) with IR filter and AGC off causes a full video output from the CCTV camera.
 - (2) Minimum Scene Illumination
 - Each CCTV camera provides a usable video output with IR filter and AGC on with a faceplate illumination of 0.04 foot-candles (or less).
 - (3) Resolution
 - The center limiting vertical resolution as determined by viewing on any CCTV monitor, as produced by a signal originating from each associated CCTV camera and passing through the installed cable and distribution equipment for each CCTV system, is not less than 350 lines in the center when all system equipment is operated to any combination of values within those specified. The horizontal resolution measured under these conditions is not less than 550 TV lines in the center of the picture when viewing on any CCTV monitor.
 - (4) Video Signal Level
 - Video signal levels conform to level requirements of EIA Standard RS-170 when measured at the input of the installed CCTV monitors.
 - (5) Scanning Lines

- 525 lines per frame, interlaced 2:1 Standard RS-170 with no discernible interlace jitter or pairing on the monitor.

(6) Frame Frequency

- 30 frames per second

(7) Aspect Ratio

- Height to width ratio of 3 to 4.

(8) Noise

- Operating of any aspect of the system, including the pan & tilt unit or zoom lens function controls, does not produce any discernible noise on the CCTV monitor. The signal-to-noise ratio under all transit system operating conditions is degraded by no more than 3 dB.

7. Environmental Requirements

- (a) All equipment mounted outdoors remains fully operational without damage or functional degradation under any combination of the following environmental/ working conditions:

- (1) Ambient temperature -40 degrees C to +55 degrees C.
- (2) Relative humidity 0 percent to 100 percent.
- (3) Operation to +60 degrees C shall be fully satisfactory with less than 100 lines reduction in camera horizontal resolution.
- (4) Rain, salt, dust, oil, and other pollutants.
- (5) Winds up to and including 90 MPH with rime icing.
- (6) Vigorous and normal use.
- (7) Train related vibrations.

8. Equipment, Material and Installation

- (a) The Yard CCTV System employs the latest, state-of-the-art equipment and material. Installation and workmanship complies with the latest codes and standards.

- (1) The system meets or exceeds the the following "grounding" requirements:
 - All CCTV Equipment installed in Communications Equipment Rooms is connected to Communications ground.

- Shields of all copper coaxial cables are grounded only to the Communications ground in a Communications Equipment Room.
- The grounds of CCTV equipment installed in CCTV equipment cabinets are electrically isolated from power building ground.
- All CCTV cameras are isolated from ground through structures and wiring, except for a single ground path via the shield of the video coaxial cable to the communications ground from a Communication Equipment Room and except for a single ground path via the shield of the video coaxial to the Fiber Optic video transmitter or to the ground from an insulated CCTV equipment cabinet.
- All installed video connectors and adapters are covered with shrink sleeving to electrically isolate the connectors from power and building ground.

G. Fire and Intrusion Alarm System:

1. General:

- (a) The Yard Fire and Intrusion Alarm (FIA) System is to provide alarm warnings to assist Washington Metropolitan Area Transit Authority (WMATA) employees in protecting the public, employees, and property.

2. Fire Detection System Description:

- (a) The Yard Fire and Intrusion Alarm System provides an electrically supervised, closed circuit fire detection system for the Rapid Transit System. Automatic devices, such as fixed temperature fire detectors, combination rate of rise and fixed temperature fire detectors, combination smoke and fixed temperature detectors, products of combustion detectors, and water flow switches, shall be included. Manual pull stations are provided as required. Audible and visual alarms and indications shall be provided in the Yard Gatehouse and an alarm, via DTS, at the Control Center.
- (b) Provisions are made for automatic shut down of air handling systems, closing of fire doors and the performance of other functions as required in the area of an alarm.
- (c) The system is installed in accordance with the NFPA and all local fire codes. In cases of conflict local codes will prevail.
- (d) The system includes the automatic permanent recording of a fire alarm, including date, time, and location at the JGB Control Center.

3. Intrusion Detection System Description:

- (a) The system provides an electrically supervised, closed circuit intrusion detection system for the designated Yard Shop Building Rooms and Facilities. Automatic devices, tape, and switches shall be provided on doors, windows, louvers, and other points as required in the shop building, gatehouse, substations, tie-breaker stations, train control and communications rooms requiring protection against unauthorized entry. Audible and visual alarms and indications are provided in the Yard Gatehouse and an alarm, via DTS, at the JGB Control Center. Automatic recording of an intrusion indication, including a permanent record of date, time, and location, is provided at the Control Center.

4. FIA System Configuration:

- (a) Fire Detectors and Intrusion Detectors are grouped into zones. Fire Zones and Intrusion Zones shall be independent of each other. Fire Zones and Intrusion Zones shall each be connected to a Common Control Unit.
- (b) The FIA System includes the following major components:
 - (1) Common Control Unit
 - (2) Gatehouse FIA Annunciator
 - (3) Graphic Annunciator Panels
 - (4) Fire Detection system
 - (5) Intrusion Detection System

5. Fire Detection System Criteria:

- (a) A Fire Detection System consisting of fire detectors and manual pull stations and audiovisual alarm devices is provided in the Yard Shop Building and in ancillary buildings located within the yard.
- (b) All fire detector Zone Alarms and Trouble Indications shall be reported directly to the Common Control Unit, which shall display the alarms on building Graphic Annunciator Panels and the Gatehouse FIA Annunciator Panel.
- (c) Detectors:
 - (1) The system incorporates state-of-the-art fire detectors. The latest improvements to the following types of detectors are used:
 - Combination Detectors (Rate-of-Rise and Fixed Temperature) to monitor room and area ambient temperature and temperature change.
 - Fixed Temperature Detectors to monitor room and area temperature.

- Combustion Product (Ionization) Detectors to detect the presence of smoke.
 - Duct Detectors to detect the presence of smoke in ventilation duct work.
- (d) Manual Pull Stations with local audible/ visual alarms (typically a horn/strobe-light) are located in hallways and work areas. Activation of a Manual Pull Station initiates a Fire Alarm in the Fire Zone associated with the area.
- (e) Audio/Visual Alarm Devices are located throughout the shop building and ancillary buildings. These audio/visual devices shall be activated by any fire alarm within the respective building. When the triggering alarm is acknowledged, the horn is silenced but the light remains flashing until the associated control unit is reset.
- (d) Fire Zone Layout
- (1) The following criteria is used in the layout of fire zones:
- No Fire Zone shall contain more than 10,000 square feet. The 10,000 square feet zone shall be contiguous.
 - No Fire Zone shall contain more than four rooms plus a connecting passageway.
 - No Fire Zone shall contain more than ten Ionization Detectors.
 - The maximum distance between any two points of a Fire Zone shall not exceed 300 feet.
 - A separate Fire Zone shall be assigned to each remote ancillary building within the yard. Some yard buildings may have multiple zones and/or an independent Control Panel. In this instance, these alarms are summarized and reported to the Master Control Panel as a single zone.
 - Each Tie Breaker Station shall be assigned a separate Fire Zone.
 - Each Traction Power Substation shall be assigned a separate Fire Zone.
 - A separate fire zone shall be assigned to each elevator.
- (e) Fire Detection System Interfaces:
- (1) The Fire Detection System provides controls to and/or interfaces with the following systems and equipment:

- Selected ventilation fans within the yard facilities are remotely controlled by the Common Control Unit. Upon receipt of a Fire Alarm associated with an area being serviced by a ventilation fan, the Common Control Unit cause the fan to shut down.
- Selected ventilation fans within the yard facilities are locally controlled by detectors serving the area. The local control is provided by ancillary contacts on the fire and smoke detectors.
- All Chemical and Wet Fire Suppression (Sprinkler) Systems are monitored by the Common Control Unit. Tamper switches detect any movement of the Fire Main manual shut-off valves and provide a "Trouble" condition in the Fire Zone associated with that Sprinkler System.
- The Fire Detection System provides an interface so that upon detection of smoke within an Elevator Machine Room, all elevators associated with the Elevator Machine Room that travel more than 25 feet, immediately return to a designated level. The elevator(s) remain at this designated level and elevator cab controls (except for emergency controls) are rendered inoperative as long as smoke is detected within the associated Elevator Machine Room.
- The Yard Fire Detection System provides an interface with the DTS System to indicate a summary Fire Alarm condition at the yard which is transmitted to the JGB Rail Operations Control Center. Some yards include an interface with a digital communicator unit for transmission of alarms to the WMATA Rail Maintenance Operations Center.

- (2) Interface of the FIA System and other systems is accomplished in interface boxes located near the fan controller or other system. The interface boxes are painted red and appropriately labeled.

6. Intrusion Detection System Criteria:

- (a) An Intrusion Detection System consisting of intrusion detectors is provided in the yard buildings.
- (1) Intrusion Detectors provide alarms indicating unauthorized entry for each of the following conditions:
- A broken or opened window connected to a public or outside area.

- A broken or opened air duct cover, louver or grating connected to a public or outside area, if the shortest side is greater than six inches.
 - A protected door when opened.
- (2) All intrusion detector zone alarms and trouble indicators are reported directly to the Common Control Unit which shall display the alarms on the Gatehouse FIA Annunciator Panel.

(b) Intrusion Detectors

- (1) The design incorporates state-of-the-art intrusion detectors. The latest improvements to the following types of detectors are used:
- Trip wire and window tape are provided across louver openings and windows. When the wire is broken or disturbed, a relay associated with the wire shall place +24 Vdc on the "Alarm" lead.
 - Magnetic Switches are used on grates and doors to detect when they are opened. Each magnetic switch is weathertight or installed in a weathertight enclosure.
 - Tamperproof detectors especially designed to provide alarm for unauthorized access to devices such as flow valves and TV cameras.

(c) Intrusion Zone Criteria

- (1) The following criteria is used in the layout of Intrusion Zones:
- A separate zone is assigned for protected doors within the Shop Building. Protected doors include doors for Train Control, Communications and Electrical equipment and the Yard Control Room.
 - No zone shall contain more than three rooms with protected doors.
 - No zone shall contain more than 10,000 square feet. Zone areas shall be contiguous.
 - A separate zone is assigned to each remote Train Control Room.
 - A separate zone is assigned for each Tie Breaker Station.
 - A separate zone is assigned for each Traction Power Substation.

- A separate zone is assigned for each Chemical Suppression System.

(2) Special Protection Areas

The Intrusion Detection system design shall include provisions for the following special protection areas and interfaces:

- Doors leading from an outside or public area into a protected zone, including roll-up doors, shall be furnished with additional features. At these locations, a key-operated access control switch, a non-locking pushbutton switch, and a magnetic switch shall be provided. Roll-up doors shall be equipped with only a key-operated access control switch and a magnetic switch.
- The system includes, in the Common Control Unit, a single alarm output (contact closure) to the DTS for a summary yard intrusion alarm.

H. Yard Consoles

1. General

- (a) The Yard Consoles include a Yard Communications Console located in the Yard Control Room and a Gatehouse Console located in the Gatehouse.

2. Yard Communications Console

- (a) The Yard Communications Console includes a self-contained, table top console housing, a Talkback Control panel, a CCTV Pan, Tilt and Zoom panel, a cable terminating facility and ac power receptacles.

- The console is of steel construction equipped for mounting standard 19-inch console panels. The console is equipped for attachment to a conference table top.
- The two 9 inch CCTV Monitors are mounted on the conference table top.

3. Yard Gatehouse Console

- (a) The Yard Gatehouse Console includes a self-contained console housing; a Talkback Station Panel (with remote amplifier); a Fire Alarm Subsystem Annunciator Panel; a dual 9-inch Television Monitor Assembly; a CCTV Control Panel; a coax Video Receiver Panel; a PT&Z Star-Distribution Panel; a Gate Intercom Panel when required; wire and cable termination facilities, and; ac power receptacles.

4. Yard Console Configuration

- (a) The console configuration includes a self-contained, single bay table top cabinet. The cabinet is constructed of 19 gauge steel and provides for the mounting of 19-inch wide equipment panels in the front section of the cabinet. The cabinet is constructed so that equipment panels can be installed or removed without disassembly.
- (b) The cabinet frame is reinforced to provide rigidity required to maintain alignment. Accurately machined surfaces are provided to assure proper positioning. Steel is accurately rolled and has a smooth finish. Joints are formed to a tight fit with abutting edges flush and securely welded. Joints are welded their full length and dressed flush on exposed surfaces. Spot welding is used when practicable in preference to screws or rivet fasteners.
- (c) The cabinet has appropriately sized and shaped top panel, side panels and back panel to fully enclose the cabinet. The back panel is perforated to provide ventilation for the equipment mounted in the console.
- (d) Appropriate protected passageways are provided at the rear portion of the bottom panel for the installation of cables to the various equipment within the console and for the installation of the power conductors to the ac duplex receptacles. In addition, an appropriate protected passageway is provided at the bottom rear portion of the right side panel for the installation of the cables to the MRS radio base station microphone and telephones that are installed on the conference table adjacent to the Yard Communications Console.

5. Gatehouse Console Configuration

- (a) The Gatehouse Console includes a self-contained, double bay floor mounted cabinet. The cabinet is constructed of 16 gauge steel and provides for the mounting of 19-inch wide equipment panels in the front section of the cabinet (both bays).
- (b) Each cabinet bay is comprised of a Turret Frame and a vertical Instrument Frame. The Turret Frame consists of 20-degree sloped front that provides 21-inches of sloped panel space. The vertical Instrument Frame provides 12 1/4-inches of vertical panel space in the front section. The cabinet bays are constructed so that equipment panels can be installed or removed without disassembly.
- (c) The cabinet frames are reinforced to provide rigidity required to maintain alignment. Accurately machined surfaces are provided to assure proper positioning. Steel is accurately rolled and has a smooth finish. Joints are welded their full length and dressed flush on exposed surfaces. Spot welding is used when practicable in preference to screws or rivet fasteners.
- (d) The cabinet bays have the appropriately sized and shaped top panels, side panels, and back panels to fully enclose the assembled cabinet (two bays). The cabinet has appropriately sized and shaped louvered panels in the side section of the Instrument Frame of each cabinet bay.

6. Yard Communications Console Panels and Equipment

- (a) The following panels and equipment are located in or adjacent to the Yard Communications Console:
 - (1) Talkback Control Panel.
 - (2) CCTV Control Panel with PT&Z Panel.
 - (3) 9-inch CCTV Monitors mounted on conference table adjacent to console.
 - (4) Telephone Instruments mounted on conference table adjacent to console.
 - (5) Radio base station microphone mounted on conference table adjacent to console.

7. Yard Gatehouse Console Panels and Equipment

- (a) The Gatehouse console provides for the following panels and equipment:
 - (1) Talkback Station panel with associated amplifier.
 - (2) Fire and Intrusion Alarm Annunciator panel.
 - (3) CCTV Control Panel.
 - (4) PT&Z Control Panel.
 - (5) 9-inch CCTV Monitors.

8. Equipment, Material and Installation

- (a) The Yard Consoles incorporate the latest state-of-the-art equipment and material. Installation and workmanship complies with the latest codes and standards.

I. Yard Electrical Power Distribution System Criteria

1. General

- (a) The Electrical Power Distribution System provides power distribution from the 3-phase, 4-wire, 120/208 Vac, primary power feed, to the communication systems.
- (b) The Electrical Power Distribution System includes the following facilities:
 - (1) 120 Vac Emergency Power (from existing UPS) for communications equipment in the Yard Communications Equipment Room.
 - (2) -48 Vdc power for communications equipment in the Yard Communications Equipment Room.

2. The 120 VAC Emergency Power Distribution System includes, but not limited to, the following components in the Yard Communications Equipment Room:
 - (a) Power Distribution Panelboard
 - (1) 3-phase, 4 wire, 120/208 Vac, main lugs only with isolated solid neutral bus and a ground bus.
 - (2) Capacity: 20 single-pole branch circuit breakers.
 - (3) Panel Amperage: Main Lugs, 100 Amps.
 - (4) Enclosure: NEMA Type 12 surface mounting and surface screw front cover with hinged door and flush lock.
 - (5) Circuit Breakers-16 single-pole NEMA Standard AB-1.
 - (b) AC Power Receptacles:
 - (1) Required conduits and fittings, junction boxes, feeder wires, and branch circuit wiring and cabling to apportion the 120 Vac power to the communications systems and facilities equipment.
3. The -48 Vdc Power Distribution System includes, but not limited to, the following components in the Yard Communications Equipment Room:
 - (a) -48 Vdc Power Supply
 - (b) -48 Vdc Power Distribution System Status Panel.
4. The -48 Vdc Power Distribution System provides fail safe service by load-sharing several power supplies. It is possible to remove power supplies from the active -48 VDC Power Distribution System to repair, or add power supplies for increased capacity without disrupting communications services. The power distribution system has the following additional features:
 - (a) Input: 95-130 Vac, 60 Hz (nominal), Power Factor: PF>90%.
 - (b) -48Vdc, 24 AMP Load sharing output.
 - (c) Rectifier Output Failure indicator with Form "C" alarm contacts.
 - (d) High DC Voltage shutdown.
 - (e) 19-inch Rack mount complete with 23-inch rack mount adapters and hardware.
 - (f) Fuse, alarm and distribution panels are provided on equipment racks to provide distribution to specific equipment.
5. Status Panel

- (a) The Status Panel provides voltage and current metering for the -48 Vdc Power Distribution System. The Status Panel also distributes -48 Vdc power to the Telephone (TEL), Carrier Transmission (CTS), Fiber Optic (FOS) Systems equipment racks and, as needed, to any other communications equipment racks requiring a source of -48 Vdc power. The Status Panel has the following additional features:
 - (1) Voltage and current metering (2% accuracy).
 - (2) High/Low DC Voltage Alarm Form-C Contacts.
 - (3) 6-position alarm breaker power distribution panel.
 - (4) 19-inch Rack Mount complete with 23-inch rack mount adapters and hardware.

6. Grounding

- (a) All conduit is electrically insulated from equipment racks and equipment cabinets; power ground is separated and isolated from the communications ground. Conduit containing branch circuit conductors are insulated from the equipment racks and cabinets by means of short lengths of non-conducting conduits.
- (b) Short lengths of flexible metallic conduit are provided in the equipment cabinets and on the equipment racks between the non-conducting conduit and the AC power receptacle strips. Each branch circuit contains a separate neutral conductor to the Communications Equipment Room Power Distribution Panelboard.

END OF SECTION

PROGRAM CRITERIA

STRAY CURRENT AND CATHODIC PROTECTION DESIGN

1.01 GENERAL

1.02 PURPOSE

This criteria describes design requirements necessary to accomplish stray current and corrosion control measures for WMATA owned and maintained structures. Stray current and corrosion control requirements shall be coordinated with all other engineering disciplines to minimize stray current and galvanic corrosion effects on WMATA and other underground structures, prevent premature failures and be installed, operated and maintained in a cost effective manner.

1.03 SCOPE

- A. Soil and Water Corrosion Control: Soil and ground water corrosive characteristics shall be determined, documented and analyzed from supplemental on-site measurements. The results of these measurements shall be the basis for corrosion control designs. Structures shall be protected against the environmental conditions by use of coatings, insulation, cathodic protection and electrical isolation and/or electrical continuity as appropriate.
- B. Grounding: Due to the natural difference between personnel safety grounding and stray current and corrosion control requirements, the guidelines provided in this criteria shall be followed. Designs shall be reviewed by WMATA corrosion control personnel to assure stray current and corrosion control designs are not compromised while still providing a safe system.

1.04 APPLICABILITY OF CRITERIA

The stray current and corrosion control criteria shall be applicable throughout the design, installation, and start-up process of the upgrade.

1.05 EXPANSION CAPABILITY

Stray current and corrosion control systems shall be easily expandable to the entire system without major reconfiguration, reconstruction, redundancy and duplication of equipment. Experimental designs, equipment and prototypes of a research nature are discouraged and must be reviewed and approved by WMATA prior to their implementation and prior to incurring any costs.

1.06 STANDARDS AND CODES

- A. Standards, codes, and recommended practices for stray current and corrosion control and grounding systems include the following publications and/or codes by:
 - 1. NACE International,
 - 2. SSPC, The Society for Protective Coatings,
 - 3. National Fire Protection Association,
 - 4. American National Standards Institute,
 - 5. National Electrical Manufacturers Association,
 - 6. American Standards for Testing Materials,

7. International Electrical and Electronic Engineers,
8. The Occupational Safety and Health Act,
9. National Electrical Code,
10. National Electrical Safety Code,
11. Life Safety Code,
12. Grounding Bonding & Shielding MIL-STD-188-124, and
13. Codes and regulations of the jurisdictional authorities.

1.07 SOIL AND WATER CORROSION PREVENTION

A. Purpose

The designs shall conform to structure life objectives for buried structures. Stray current and corrosion control provisions shall be required for all facilities, regardless of location or material of construction when corrosion failure of such facilities will affect safety or interrupt continuity of operations.

B. Scope

The structures which may be affected by soil and water corrosion shall be identified. Typically, these include, but are not limited to:

1. Ferrous pressurized piping (water, fire water, sewage ejectors, etc.),
2. Hydraulic elevator cylinders,
3. Underground storage tanks, and
4. Other underground structures.

C. Stray current and corrosion control measures provided by others for structures owned by others shall be coordinated with the design/builder and WMATA. This coordination shall be required to resolve design conflicts and to minimize impact of other designs, such as interference of cathodic protection. All contacts with owners of other structures shall be coordinated through the WMATA.

1.08 DESIGN OF SOIL AND WATER CORROSION PREVENTION SYSTEMS

A. General

Protection of metal structures, shall include, but shall not be limited to, corrosion control techniques, such as coating, electrical isolation, electrical continuity, and cathodic protection.

B. Materials and Structures

1. Ferrous Pressure Piping: All designs using buried cast iron, ductile iron and steel pressure piping shall be cathodically protected. Designs shall be provided to WMATA and will include the following:
 - a. Application of a protective coating to the external surfaces of the pipe (see Section 1.08 D.),
 - b. Electrical insulation from interconnecting piping, other structures, and segregation into discrete electrically insulated sections depending upon the total length of the piping (see Section 1.08 E.),
 - c. Electrical continuity through installation of insulated copper wires, across all mechanical joints other than intended insulators (see Section 1.08 F.),

- d. The number of sacrificial anodes shall be determined on an individual structure basis (see Section 1.08 G.), and
 - e. Permanent test/access facilities, to allow for verification of continuity, effectiveness of insulators and coating, and evaluation of protection levels; shall be installed at all insulated connections and at intervals convenient to local conditions and to the engineer's guidance (see Section 1.08 H.).
2. Reinforced/Prestressed Concrete Pressure Pipe: Design and fabrication of reinforced concrete pipe and steel cylinder prestressed concrete pipe shall include the following:
- a. Establish a low permeability concrete by controlling the water/cement ratio, ratios of 0.3 for core concrete and 0.25 for mortar are preferred, industry practices may result in significant increases and wide variations to these levels,
 - b. Maximum of 200 ppm chloride concentration in mixing water for concrete, and
 - c. Use of Type V cement.
3. Concrete/Reinforced Concrete: Design shall be based on the following for concrete in contact with soils:
- a. Use of Type V cement,
 - b. Maximum 200 ppm chloride concentration in mixing water and admixtures combined, and
 - c. Minimum 2-inches concrete cover on the soil side of all steel reinforcement when the concrete is poured within a form or a minimum 3-inches cover when the concrete is poured directly against soils.
4. Non-Metallic Materials: Plastics, fiberglass, and other non-metallic materials for pressurized piping may be appropriate to aid in corrosion control. The corrosion control design shall consider the following characteristics of proposed materials:
- a. Manufacturer's recommendations,
 - b. Mechanical strength and internal pressure limitations,
 - c. Elasticity/expansion characteristics,
 - d. Comparative costs,
 - e. Expected life,
 - f. Failure modes,
 - g. Local codes, and
 - h. Prior experiences with the proposed non-metallic material in similar applications.

C. Hydraulic Elevators

- 1. Hydraulic elevator steel cylinder plunger casings shall be coated on the exterior surface with a coal tar epoxy or coal tar tape. The plunger casing shall be electrically insulated from support brackets, hydraulic feed lines, and any other metallic connections. The plunger shall be electrically isolated from the elevator car body and any other metallic connections.
- 2. An outer construction casing of fiberglass-reinforced plastic (FRP) will require the space between the casings be filled with high resistivity sand, with a sacrificial anode system installed in the sand fill for cathodic protection of the hydraulic elevator plunger casing.
- 3. Test facilities shall be installed to activate and monitor the cathodic protection installation. The end cap at the bottom of the construction casing (FRP) and joints

in the length(s) of casing pipe used shall be installed and sealed in such a manner that there is no water infiltration into the casing.

4. A removable water tight lid shall be installed on the outer construction casing until installation of the cylinder. The construction casing shall be free of water prior to installation of the cylinder. The top of the casing shall have a permanent moisture seal after the cylinder is installed.

D. Coatings

Buried metal structures requiring coating shall be provided with coal tar, coal tar tape or coal tar epoxy coating systems having high electrical resistance. Mill applied coatings shall be specified whenever possible with use of compatible tape coatings for joints and field touch-up. The corrosion control design shall specify surface preparation, application procedure, primer, number of coats, minimum dry film thickness and inspection methods for each coating system.

E. Electrical Insulation

The corrosion control design shall establish the need for and location of insulated flanges, spacers, couplings, and unions. Insulated fittings shall have a minimum resistance of ten (10) megohms prior to installation and be designed for compatibility with material carried, including pressure and temperature restrictions. No more than 2% of the test current applied across the insulating device shall flow through the insulator. All insulated fittings, buried or exposed, shall be provided with monitoring cables. Wherever possible, a minimum clearance of twelve inches shall be provided between new and existing structures. When field conditions prohibit a six inch clearance, the design shall include special provisions, such as insulating spacers, to prevent electrical contact with the existing structure(s).

F. Electrical Continuity

1. Electrical continuity bonds of insulated copper wires shall be used to provide a low resistance path for cathodic protection current on systems with mechanical joints. Any threaded or slip-on connections will be exothermically welded at the connection point to provide low resistance paths. Welded and soldered joints do not require bonding. Continuity testing requirements shall not exceed 10% of the theoretical resistance.
2. Continuity bonds shall be made with high molecular weight polyethylene insulated copper cables and thermite welds. All thermite welds shall be coated.

G. Cathodic Protection

1. Cathodic protection installations shall be designed consistent with structure life objectives. Sacrificial galvanic anodes shall be used wherever possible to avoid corrosive interference efforts with underground utilities.
2. All new, replaced, or relocated pressurized utility piping associated with construction shall be afforded corrosion protection in accordance with requirements of each utility. At a minimum, test wires shall be installed for future testing.
3. The cathodic protection design shall consider the following:
 - a. Soil Environment,
 - b. Mutual protection or interference configurations,

- c. Limitations of protection potentials, and
 - d. Test monitoring facilities.
4. Cathodic protection designs shall be based on theoretical calculations using site environmental soil data collected during design surveys and boring operations for each system. Designs shall include the following minimal factors:
- a. Minimum assumed bare surface area shall be 1%,
 - b. Minimum protection current density for bare surface area shall be 2.0 ma/sq. ft.,
 - c. Calculated anode bed resistance,
 - d. Anode size, spacing and quantity, and
 - e. Calculated anode life.
5. The anticipated anode life shall not be less than life objectives.

H. Test Facilities

Types and locations of test facilities shall be specified in the corrosion control designs. Test facilities shall be designated according to type of installation, and shall include structure cable(s) reference electrode(s), anode lead cable(s), and continuity bonds. Conduit shall be as specified.

I. Casings

Casings, if required, shall be installed bare, unless coating and a sacrificial anode system is required by the owner. Casing insulators must be installed on the carrier pipe to avoid electrical contact between the casing and carrier pipe. Test leads are required on the casing and the carrier pipe.

J. Electrical Bonding

1. Concrete Structures: Structural reinforcing steel for at-grade and underground concrete structures shall be electrically bonded or welded to provide electrical continuity as shown on the design and standard drawings. Reinforcing steel in concrete walls, abutments and other similar structures shall be made electrically continuous. To allow for stray current tests, one No. 2 AWG insulated wire shall be exothermic welded to the reinforcing steel and terminated in a flush mounted junction box at the beginning and the end of each structure run for periodic monitoring and/or testing.
2. Traction Power Substations: At each traction power substation associated with WMATA structures, provisions shall be made to connect the electrically continuous reinforcing via cable to the traction power substation negative bus through diodes. These diodes and associated drainage equipment will be furnished as part of the traction power equipment. Termination connections will be incorporated to the reinforcing steel, as well as all embedded conduits and cables in the substation as required on the standard drawings.
3. Utility Structures: WMATA owned utility structures such as buried metallic pipe shall be, at a minimum, provided with electrical continuity. Pressure piping that penetrates structural walls shall be electrically insulated from the outside service piping and from watertight wall sleeves. Dielectric insulation shall be made on the interior of the structural wall and at all dissimilar metal connections. If an electrical

ground connection is made to the utility, the connection must be made on the building side of the insulator.

4. Replaced, relocated, and maintained in place utility structures owned by others shall be provided with corrosion control measures required by individual master agreements. These structures in the vicinity of traction power substations may require provisions for future connection to substation negative buses. These connections will be based upon results and agreements after cooperative testing performed by the utility and WMATA. To permit future connections, at least four 3-inch conduits shall be stubbed-out and capped, approximately 30 inches below grade, and at a distance of 3 feet outside of each traction power substation. The conduits shall be brought into the substation and turned up at a wall adjacent to the negative switchboard.

K. Storage tanks

Buried storage tanks shall be cathodically protected to prevent corrosion and avoid environmental impacts.

L. Piling

Permanent ferrous metal foundation piling shall be bonded and provided with stray current drain cables to a traction power substation, when adjacent to a substation. Metal piling remote from a traction power substation shall be provided with stray current drain cables for test purposes and future connection to substation negative switchboard. To assist in shielding stray currents, soldier piles to be left in place shall be bonded for continuity and provided with drainage connections. Bonding of soldier piles shall be accomplished by using No. 4/0 AWG insulated cable, thermite welded between piles. Soldier piles so bonded and drained to traction power substations shall not be used for alternating current grounding purposes.

M. Test Facilities

Test facilities shall be required on all WMATA owned electrically bonded structures to measure and monitor protection/stray current. The corrosion control design shall provide test facilities for individual protected structures. Junction box spacing shall not exceed 100 feet in continuous structures.

N. Quality Control

Stray current and corrosion control designs shall be coordinated with all other engineering disciplines to insure they do not conflict with other installations. Shop drawings, material catalog cuts, and additional information related to the stray current and corrosion control designs will be submitted for review and approval. Testing of materials prior to their delivery from a manufacturer, or during construction, shall be conducted, as required, to ensure compliance to corrosion control designs.

O. Testing

Testing shall be conducted in the presence of the Engineer to insure that installations are functioning in the proper manner and that they comply with engineering designs. Testing

will include, but not be limited to:

1. Electrical continuity bonding
2. Electrical insulation
3. Coating effectiveness
4. Test station installations
5. Cathodic protection installations

Test results indicating deficiencies in the corrosion control measures will be examined to determine the cause and what type of corrective action is required.

P. Test Results

Baseline values shall be established at the time of completion of the installation. The results shall include the following:

1. Galvanic anode system tests
2. Resistance tests
3. Test locations
4. Test criteria
5. System troubleshooting, if performed.

1.09 SPECIAL DESIGN PROVISIONS

A. Facility Identification

During the pre-design and design phases of the project, the design/builder shall identify unique and special design cases such as paralleling lines, and unusual soil conditions. In these cases, the design/builder shall evaluate and recommend special design measures as appropriate.

END OF SECTION

THIS PAGE NOT USED

PROGRAM CRITERIA

SIGNAL CONTROL AND INTERLOCKING SYSTEM

PART 1: GENERAL

1.01 DESCRIPTION: The Washington Metropolitan Area Transit Authority (WMATA) plans to expand and improve current operations at Alexandria Yard as part of the Metro Matters Program. Work to be accomplished under this project is diverse and includes various tasks such as the installation of new turnouts and shop lead tracks, track realignment, installation of new wayside signaling equipment and train control room signaling equipment, yard control machine revisions and building of civil infrastructure to support signaling. This Section describes the general scope, functional design and other requirements for the Yard Signal Control and Interlocking (YSCI) system work to be accomplished in Alexandria Yard.

1.02 PROGRAM CRITERIA

- A. Program Criteria applicable to the work described in this Scope of Work shall be the same as that provided in Project Manual, Book 2.

1.03 GENERAL FEATURES ALEXANDRIA YARD

- A. The changes and additions to the yard signaling system control and indication logic shall either be relay or microprocessor based and meet the design requirements provided under this Contract. The Design-Builder shall use Entrance-Exit type philosophy for routing train movements throughout the turnouts. The yard signaling system logic shall be designed using traditional vital and non-vital signaling philosophy consistent with the existing in-service signaling system at Alexandria Yard.
- B. A Yard Control Machine located in the Yard Tower shall be used to control routing throughout the yard by utilization of pushbuttons and switches located on the Yard Control Machine.
- C. Single rail power frequency track circuits shall be provided to ensure train detection throughout the yard turnouts and shop lead tracks.
- D. Trailable switch machine layouts with external switch circuit controllers shall be installed on all new and relocated turnouts.
- E. Switch rail heaters and crib heaters shall be installed on all new and relocated power operated yard switch machine turnouts. Control of the heaters shall be from the Yard Control Machine.
- F. Transit style wayside signals shall be installed at the limits of all interlockings to provide the train operator with a proceed or stop aspect.

- G. Interconnecting signal cables between the wayside equipment and Yard train control room shall be routed through new ductbanks, surface trench and conduit systems designed, furnished and installed by the Design-Builder under this contract. Where existing ductbank and conduit systems can accommodate the additional cabling without exceeding fill limitations, they may be used subject to Authority approval.

1.04 SCOPE OF WORK

- A. The work to be performed for the YSCI system under this Contract shall comply with the requirements of the Program Criteria and the Specifications. The Design-Builder may propose alternatives to the existing facilities, the criteria and the specifications within the parameters established for the project. It shall be the Design-Builder's responsibility to provide conclusive evidence that acceptance of an alternative is in the best interests of the Authority. WMATA Typical Layout Drawings and selected Yard As-Built Drawings to demonstrate the existing circuit and equipment configurations are provided as Information or Reference Drawings to enable the Design-Builder to better understand existing conditions and the expected installation methods and functional requirements. The Design-Builder's design shall be based on the existing conditions within the yard. Complete sets of Yard As-Built Drawings will be furnished by the Authority upon request by the Design-Builder. The Design-Builder shall be responsible to incorporate any changes marked on the TCR Room Book of Plans that have not been incorporated in the permanent drawings.

- B. The Design-Builder shall furnish the design, manufacture, documentation, delivery, storage, installation, demonstration, testing, interface requirements, placing into service and preparation of as-built drawings for the new YSCI system in the Alexandria Yard. This work shall include, but not limited the following components:

- 1. Train Control Room Equipment Space:

- a. The Design-Builder shall provide adequate space in the Alexandria Yard Train Control Rooms for the installation of new signaling equipment. This work shall include the removal of obsolete, "out of service", or disconnected equipment to create vacant space and the rearrangement of existing equipment, if necessary, to maintain the grouping of similar devices.

- 2. Trailable Switch Machine Layouts:

- a. Provide new switch layout on Bypass Track for new turnout for new Shop Track 3AW at the West end of the Shop Building. #
- b. Provide new switch layout on Bypass Track for new turnout for realigned existing Shop Track 6 at the West end of the Shop Building. #

- 3. Snowmelter Cases:

- a. Provide two new Snowmelter Control Cases at new turnouts on the West end of the Shop Building. #

- 4. Snowmelter Rods and Crib Heaters:

- a. Provide new Snowmelter rods and crib heaters for two new turnouts. #
- 5. Single Rail Power Frequency Track Circuits
 - a. Provide new and reconfigured track circuits for the new interlockings and shop lead tracks on both the East and West ends of the Shop Building.
- 6. Wayside Signals:
 - a. Provide new signal layouts to replace existing Signals 214, 216 and 218 and provide a new signal layout at the clearance point for new Track 3AW at the West end of the Shop Building. #
- 7. Yard Signal Control Logic:
 - a. Provide vital and non-vital equipment and circuits to implement changes and additions to accommodate the program track changes. Non-vital circuit requirements may be satisfied with the use of microprocessors or non-vital relay logic.
- 8. Yard Control Panel:
 - a. Replace existing panels of the yard control machine with new panels equipped with new switches, pushbuttons, indicator lamps and other panel control and indication components for the existing and new tracks. Replacement panels may be engraved phenolic panels or mosaic tile compositions and shall be wired to plug connectors to expedite panel replacement. Replacement panels shall match any panels not replaced in regard to materials, color, engraving, lettering size and weight, and overall appearance.
- 9. Signal Bonding:
 - a. Provide signal bonding as required for new and modified turnouts.
 - b. Provide signal bonding around any existing insulated joints which are not required in the new track circuit configurations.
- 10. Power Bonding:
 - a. Provide power bonding as required for new and modified turnouts.
 - b. Provide power cross bonding on shop and yard tracks to connect new tracks to existing negative return system and replace existing cross bonding displaced by new shop construction on both the East and West end of the Shop Building.
 - c. Provide power bonding around any existing insulated joints which are not required in the new track circuit and negative return rail configurations.

11. Cabling:

- a. Provide replacement cables for cables which are included in the existing ductbank TC/C-4 between Manhole TC/C-B and the mainline ductbank that interferes with construction of the inspection pits at the East end of the Shop Building.
- b. Provide new replacement cables for any existing cabling which is damaged during the course of the work.
- c. Provide new cabling between the Train Control Room and the new and relocated wayside equipment.
- c. Provide all necessary temporary and permanent wiring within the Train Control Room.
- d. Provide all necessary cabling between the Train Control Room and the Yard Control Room.

12. Ductbank, Conduit and Surface Trench:

- a. Provide replacement facilities for existing Ductbank TC/C-4 between Manhole TC/C-B and the mainline Ductbank that interferes with construction of the new Shop Extension at the East end of the existing Shop Building.
- b. Provide replacement facilities for any other existing underground conduit, ductbank or surface trench that is impacted by track and shop construction as determined in the final design.
- c. Provide new ductbank, conduit and surface trench to expand or supplement the existing facilities to accommodate the new cabling requirements.

13. Revisions and additions to the existing power distribution system:

- a. Provide new power distribution equipment as necessary to accommodate the additional electrical loads for the new signal equipment.

14. Event recording:

- a. Replace the existing Event Recording System with a new system incorporating all existing and new functions.

15. Power supplies, associated subsystems, equipment, materials, cables, hardware, and appurtenances, to provide a complete operating signal system as described

- C. The Design-Builder shall furnish the management, labor, data, design, relay logic, testing services, training, manuals, parts, materials, tools, equipment, appurtenance, and incidentals necessary to complete the work in accordance with the Contract requirements.

SECTION 02205

REMOVAL AND RESTORATION OF EXISTING FACILITIES

PART 1 - GENERAL

1.01 DESCRIPTION

- A. This section specifies removing, restoring and reinstalling miscellaneous facilities on WMATA property which are removed during construction.
- B. Related Work Specified Elsewhere
- | | |
|---------------|-------------------------------------|
| Section 02220 | Demolition |
| Section 02320 | Grading, excavating and backfilling |
| Section 02515 | Water Distribution System |
| Section 02554 | Storage Tank Systems |
| Section 02725 | Base for pavements |
| Section 02740 | Bituminous pavement |
| Section 02750 | Concrete pavement |
| Section 02772 | Curbs, gutters and walks |
| Section 02820 | Fencing |
| Section 02920 | Topsoil, seeding and sodding |
| Section 02930 | Landscaping |
| Section 02935 | Salt Dome |
| Section 03100 | Concrete formwork |
| Section 03200 | Concrete reinforcement |
| Section 03300 | Cast-in-place structural concrete |
- C. Definitions
1. Miscellaneous facilities include, but are not limited to, the following: Alarm and sprinkler systems, signs, awnings, security grilles, heating, cooling and electrical facilities, vaults, entrance walkways, steps, sidewalks, curbs, walls, railings, fences, shrubs, lawns, trees, and salt dome.
 2. Definitions pertaining to trees, shrubs and other plants - ANSI Z60.1.
 3. .Salvage - To remove and store material and equipment for reuse in this or other Authority contracts.
- D. Salvage:
1. Clean salvaged items of foreign material and store in accordance with the General Requirements at accessible points within right-of-way unless otherwise shown, approved or directed.
 2. Repair or replace salvaged items which are damaged or destroyed.
 3. Unless otherwise specified items removed but not to be salvaged will become the property of the Contractor.

1.02 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

- A. Working Drawings: Complete details of temporary signs including method of reinstalling existing permanent signs. Submit prior to removing signs.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
 - 1. Comply with codes and regulations of the jurisdictional authorities.
 - 2. ANSI: Z60.1.
 - 3. ASTM: C4.
 - 4. ICNCP (International Commission for the Nomenclature of Cultivated Plants): International Code of Nomenclature for Cultivated Plants.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Materials for Restoration: New materials, unless otherwise approved, conforming to existing undisturbed materials in quality, color and finish.
- B. Topsoil: Section 02920.
- C. Seeding and Sodding: Section 02920.
- D. Trees, Shrubs and Other Plants: Same species as that removed, unless otherwise specified, and identified in accordance with the International Code of Nomenclature for Cultivated Plants.
- E. Clay Drain Tile: ASTM C4.

PART 3 - EXECUTION

3.01 REMOVALS: Remove work to extent shown minimizing damage to work which is to remain in place.

3.02 TRACKWORK AND SPECIAL TRACKWORK: All reuseable trackwork and special trackwork material shall be salvaged and delivered to a facility located within a 50 mile radius as directed by the WMATA Project Manager.

3.03 ALARM AND SPRINKLER SYSTEMS:

- A. Alarm Systems:
 - 1. Maintain existing alarm systems in operating condition. On completion of construction, reinstall components to provide same degree of protection as original system.
- B. Sprinkler Systems:
 - 1. Maintain existing sprinkler systems fully operative in areas temporarily occupied for construction purposes.
 - 2. Protect system from freezing where exposed to open-air conditions.
 - 3. Restore sprinkler system to provide same degree of protection as original system.
- C. Fire Hydrants: Install new fire hydrants and water valves prior to removal of existing fire hydrants and valves due to shop expansion construction.

3.04 GRILLES: Remove and reinstall security grilles concurrently with building modifications.

3.05 VAULTS: Perform work on vaults as specified in Section 02320.

3.06 HEATING, COOLING AND ELECTRICAL FACILITIES

- A. Heating and Cooling Facilities - Shady Grove Shop Building underground heating oil fuel tank: Remove fuel tank under existing parking area. Restore with adequately sized fuel tank including access manholes and service lines - locate under future parking area.
- B. Electrical Facilities - Remove and reconstruct electrical facilities to extent necessary to provide electrical service inside building line.
- C. Gasoline and Diesel Fueling Facilities - Remove and restore Shady Grove fueling facility to new location adjacent to M/W Storage Track 7 and to relocated Access Road

3.07 SIGNS, FLAGPOLES, RAILINGS AND FENCES:

- A. Salvage usable signs, flagpoles, railings and fences where removal is required by shop expansion construction.
- B. Provide temporary sign for each permanent sign removed in accordance with approved working drawings. Remove on completion of construction.
- C. Reinstall items in their original locations or in alternate locations required by shop expansion construction. Reinstall or replace chain-link fences in accordance with Section 02820.
- D. Repair existing surfaces, damaged during the work, by cleaning and restoration to match existing.

3.08 STEPS, WALLS AND COPINGS:

- A. Salvage steps and copings of wall components where shown and rebuild them to match existing.
- B. Where new reinforcing steel and concrete construction is necessary, provide such items in accordance with Sections 03100, 03200 and 03300 so as to maintain continuity of quality and appearance between existing and new construction.

3.09 SIDEWALKS AND CURBS:

- A. Restore sidewalks and curbs to line and grades which existed originally or new lines and grades required by shop expansion construction using new asphalt and concrete of equal quality to existing.
- B. Restore asphalt and concrete sidewalks and curbs using new asphalt and concrete of equal quality to existing and to match lines, grades, thicknesses and construction, or new lines and grades as required by shop expansion. Perform work in accordance with Sections 02725, 02740, 02750 and 02772.

3.10 PARKING AREAS AND ACCESS ROADWAY PAVEMENTS: Restore parking area and access roadway pavements to lines, grades, thickness and construction as existed prior to removal at locations required by shop expansion. Perform work in accordance with Section 02725, 02740 and 02750.

3.11 LANDSCAPING:

- A. Tree Preservation:
 - 1. Repair injuries, abrasions or other damage to planting by cleanly removing broken members, loose or torn bark and shape edges in order to permit drainage of rain water from wounds. Perform pruning in accordance with Section 02930.
 - a. Where depth of soil over root system of existing plantings is to be modified by final grading, provide the following:

- (1) Where increase of one foot or more in elevation is shown, spread continuous layer of rock aggregate, graded 1/4 inch to two inches, six inches deep from trunk to drip line of branches prior to installation of fill.
- (2) Provide proper aeration by installing, within perimeter of spread, system of four-inch clay drain tile, vertically from soil surface into aggregate fill.
- (3) Construct stone wells around trunks as approved. Extend stone work from rock fill layer to final grade, allowing sufficient space for trunk growth.
- (4) Protect trees, shrubs, groundcovers and features such as landforms, walls, wells, coping and similar items that are to remain. Exercise special precautions and provide treatment for retention and protection of such landscape items in preference to removal.

B. Tree Removal and Replacement:

1. Where existing trees are to be removed and replaced by others at present locations, use replacement trees of comparable species and size up to four inches maximum caliper, except that the jurisdictional authorities have the right to specify alternate tree species or varieties of comparable size and cost, if such are readily available. Do not replant or relocate trees over 12 inches in caliper, except in cases of historical significance, rarity of type, excellence of form or other special considerations.
2. Replace trees of minimum three-inch caliper, removed by construction, on the basis of diameter inch for diameter inch, up to four-inch maximum caliper, and on total diameter inches removed, so that planting can be complete and uniform throughout.
3. Use replacement trees of prime specimen quality, field selected and seal-tagged. Measure, grade, install and maintain plants in accordance with ANSI Z60.1, except for National Park Service lands where trees are to be measured for diameter by taking the average of two trunk caliper measurements at right angles, six inches above the root crown.
4. Replace shrubs removed with same species and varieties and of same size in height or width or substitute at locations designated by the Engineer a number of plants of same species and variety whose total measurements equal measurement of plant or plants to be replaced

C. Plant maintenance and replacements:

1. For 18 months after completion of plant installation, maintain planting and incidental work by replacing plants, watering, weeding, cultivating, fertilizing, remulching, pruning, controlling insects and diseases, reguying, rewrapping and by performing other maintenance operations for promotion of root growth and plant life so that work is in satisfactory condition at completion of Contract and throughout maintenance period.
2. Water and weed root system of plants at regular intervals and keep surrounding soil in condition for promotion of root growth and plant life.
3. Provide planting and planting materials that will be in a condition acceptable to the Engineer at end of maintenance period.
4. During next planting season, replace trees, ground cover, vines and shrubs which are discovered during and at end of maintenance period to be dead or in unhealthy, unsightly or badly impaired condition. Replace with healthy plants of same kinds and sizes as originally specified.
5. The Contractor will not be held responsible or liable for damages to plants and planting materials by animals, malicious or careless damage by human agencies over which he has no control, or by fire and storm damage following completion and acceptance of original planting.

- D. Topsoil:
 - 1. Provide and place topsoil in tree spaces and areas to be seeded in accordance with Section 02920.
- E. Grassed Areas:
 - 1. Unless otherwise shown, provide seed in accordance with Section 02920. If sodding is required, provide in accordance with Section 02920.
- F. Replace landscaping, trees and grassed areas, inside and outside limits of work, if removed or damaged.

3.12 JOINTS BETWEEN EXISTING AND RESTORED WORK:

- A. Make joints between existing and restored work as inconspicuous as practicable.
- B. Use saw to cut straight line at joint between existing and new concrete surfaces.
- C. Make joints between existing and restored work at least equal structurally to original undisturbed items.

END OF SECTION

THIS PAGE NOT USED

SECTION 02220

DEMOLITION

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies demolition work.
- B. Related Work Specified Elsewhere:
 - Section 02230 Clearing, grubbing, removal and protection of trees and shrubs
 - Section 02320 Removal of concrete and masonry walls and foundations 12 inches below existing grade
 - Section 02205 Removal and restoration of miscellaneous facilities and salvage
- C. Definitions:
 - 1. Demolition: Complete removal and disposal of existing facilities from areas to be cleared and grubbed and from other areas shown.
 - 2. Existing facilities include, but are not restricted to, buildings, sheds, streetcar tracks, pavements, sidewalks, curbs and gutters, signs, posts, fences, drainage, sewage and other utility facilities located in the area to be cleared and grubbed.

1.02 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

- A. Certification:
 - 1. Submit copy of request to utility companies owning or agency controlling services and appurtenances affected by demolition work for discontinuance of services along with certificates of severance.
 - 2. Documentation:
 - a. Demolition permit from the jurisdictional agency or owner.
 - b. Permits and releases from each owner of property where demolition debris will be deposited absolving the Authority of responsibility in connection with such disposal.
 - c. District of Columbia: Disposal of soils from Brentwood Yard can require special handling and disposal. Meet the requirements of the Department of Health, Environmental Health Administration, including required soils testing, prior to demolition and disposal of soils.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
 - 1. Comply with codes and regulations of the jurisdictional authorities.

1.04 JOB CONDITIONS:

- A. Buildings:
 - 1. Demolish buildings in place.
- B. Maintenance of Traffic:
 - 1. Furnish and maintain temporary signs, barricades, flashing lights and flag persons necessitated by the work and remove same upon completion of work.
 - 2. Bridge cuts in traffic areas with steel plates or by other approved means.
 - 3. Keep traffic areas free from debris and spillage of materials.
- C. Protection and Restoration:
 - 1. Prevent damage to pipes, conduits, wires, cables and structures above and below ground which are not designated for removal. Repair or replace damaged items.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.01 PRESERVATION OF REFERENCES:

- A. Prior to removal, record location and designation of survey markers and monuments located within demolition area. Store markers and monuments during period of work. Restore survey markers and monuments upon completion of work.

3.02 BUILDING DEMOLITION:

- A. Undertake rodent control and extermination program in demolition areas.
 - 1. District of Columbia: Rodent control shall be initiated with the Department of Health, Environmental Health Administration two weeks before start of construction. The Contractor shall take the necessary steps to insure that the project site, including all project related facilities within the site, is free of rodent infestation at all times. Work includes, but is not limited to the following:
 - a. Daily removal of and proper disposal of all refuse. In the event that refuse cannot be removed from the project site the same day, the refuse shall be stored in containers designed to prevent infiltration by rodents.
 - b. Inspections at least once a week throughout the project site for possible rodent infestations. If such infestations are found, the Contractor shall engage the services of a certified pest control contractor and retain such service until infestation is no longer apparent.
- B. Take possession of building materials, fixtures and equipment in, attached to or belonging to, buildings and structures.
- C. Proceed with demolition of building or structure and appurtenances.
- D. Party Walls:

1. Where building wall being demolished is a party wall with another building not to be demolished, prevent damage to other building and avoid interference with its occupants.
 2. Restore and waterproof exposed party walls in accordance with applicable building code for exterior walls of particular type of construction involved.
 3. Should party wall become unsafe or dangerous because of demolition, effect remedial measures for anchoring, bracing or buttressing. If such work does not correct unsafe or dangerous conditions, remove and replace wall and perform necessary work to properly enclose structure that is to remain standing, at no cost to the owner of such property.
- E. Cellars, Foundation Walls, Truck Ramps, and Retaining Walls:
1. Break concrete and masonry cellar and truck ramp floors into pieces not exceeding four cubic feet in volume or, where approved, punch holes of not less than one-square-foot area through full thickness of floor approximately at 10-foot centers.
 2. Remove foundation and cellar 12 inches minimum below final grade, and remove retaining walls 12 inches below subgrade or subballast.
 3. After breaking or removing cellar floors and truck ramps, fill spaces with durable free-draining fill material, consisting of particles no one of which exceeds eight inches in its greatest dimension. Use masonry rubble obtained from demolition work if it meets this requirement. Place fill material in layers each of 12-inch maximum thickness, compact each layer and fill voids in each lift with approved coarse sand.
 4. Correct subsidence in filled areas by placing and compacting additional fill.

3.03 REMOVAL OF PAVEMENTS, SIDEWALK, CURBS AND GUTTERS:

- A. Demolish pavement, sidewalks, curbs and gutters within demolition area shown to underside of pavement and dispose of resulting debris.
- B. Fill resulting excavations, holes and depressions to existing grade or alternative grade as shown, using fill material conforming to requirements of Section 02320.
- C. Adequately drain resulting surfaces.

3.04 DISPOSAL:

- A. Remove debris resulting from demolition work to locations outside Authority's right-of-way.
- B. Dispose of debris off site only with permission of property owner where such debris is to be deposited and in accordance with codes and regulations of the jurisdictional authorities.
 1. District of Columbia: Meet the requirements of the Department of Health, Environmental Health Administration, for disposal of debris off the Brentwood Yard site
- C. Do not burn debris at demolition site.

END OF SECTION

THIS PAGE NOT USED

SECTION 02230

SITE CLEARING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This Section includes the following:
1. Protecting existing trees and vegetation to remain.
 2. Removing trees and other vegetation.
 3. Clearing and grubbing.
 4. Topsoil stripping.
 5. Removing above-grade site improvements.
 6. Disconnecting, capping or sealing, and abandoning site facilities in place.
 7. Disconnecting, capping or sealing, and removing site facilities.
- B. Related Sections include the following:
- | | |
|---------------|--|
| Section 02220 | Demolition |
| Section 02920 | Topsoil, seeding and sodding |
| Section 02930 | Landscaping |
| Division 1 | Construction Facilities and Temporary Controls |
- C. Definitions
1. Topsoil: Natural or cultivated surface-soil layer containing organic matter and sand, silt, and clay particles; friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects more than 2 inches in diameter; and free of weeds, roots, and other deleterious materials.
 2. Facility: Utility structures and system components belonging to utility company including service lines which are used to provide service to utility's customers and product which these facilities convey.
 3. Utility: Company, agency, owner or operator of facility concerned.

1.02 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

- A. Documentation:
1. Permits and releases from each owner of property where debris will be deposited absolving the Authority of responsibility in connection with such disposal.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
1. Comply with codes and regulations of the jurisdictional authorities.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Requirements for satisfactory soil materials are specified in Division 2 Section "Earthwork."
 - 1. Obtain approved borrow soil materials off-site when satisfactory soil materials are not available on-site.
- B. Standard Wood Tree Guards: As shown on W.M.A.T.A. Standard Drawing ST-C-16, consisting of the following:
 - 1. Wood posts: Two inches square.
 - 2. Wood stringers: Two inches by four inches.
- C. Standard Chain-Link Tree Guards: As shown on W.M.A.T.A. Standard Drawing ST-C-16, consisting of the following:
 - 1. Chain-link fencing: Nine gauge, two-inch mesh.
 - 2. Posts: 2.7 lbs. per foot "H" or 1-1/2 inches inside diameter.
 - 3. Brace rails: 1-5/8 inches outside diameter.
 - 4. Stretcher bars: 1/4-inch by 3/4-inch.
- D. Temporary Enclosures and Wrapping: Design-Builder's option.
- E. Tree Wound Paint: Standard bituminous product.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Protect and maintain benchmarks and survey control points from disturbance during construction.
- B. Provide erosion-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways
- C. Locate and clearly flag trees and vegetation to remain or to be relocated.
- D. Protect existing site improvements to remain from damage during construction.
 - 1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.02 TREE PROTECTION

- A. Erect and maintain temporary enclosures or wrappings around drip line of individual trees or around perimeter drip line of groups of trees to remain. Remove enclosures or wrapping when construction is complete.
 - 1. Do not store construction materials, debris, or excavated material within drip line of remaining trees.
 - 2. Do not permit vehicles, equipment, or foot traffic within drip line of remaining trees.
- B. Protect trees shown on the drawing with standard wood or chain link tree guards.
- C. Nurture protected and replaced trees, shrubs and plants during the period of this Contract.

- D. Do not excavate within drip line of trees, unless otherwise indicated.
- E. Where excavation for new construction is required within drip line of trees, hand clear and excavate to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.
 - 1. Cover exposed roots with burlap and water regularly.
 - 2. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.
 - 3. Coat cut faces of roots more than 1-1/2 inches in diameter with an emulsified asphalt or other approved coating formulated for use on damaged plant tissues.
 - 4. Cover exposed roots with wet burlap to prevent roots from drying out. Backfill with soil as soon as possible.
- F. Repair or replace trees and vegetation indicated to remain that are damaged by construction operations, in a manner approved by Architect.
 - 1. Employ a qualified arborist, licensed in jurisdiction where Project is located, to submit details of proposed repairs and to repair damage to trees and shrubs.
 - 2. Replace trees that cannot be repaired and restored to full-growth status, as determined by the qualified arborist.

3.03 UTILITY FACILITIES

- A. Locate, identify, disconnect, and seal or cap off facilities indicated to be removed.
 - 1. Owner will arrange to shut off indicated facilities when requested by Design-Builder.
- B. Existing Facilities: Do not interrupt facility service to building connections occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
 - 1. Notify Authority Representative not less than two days in advance of proposed facility interruptions.
 - 2. Do not proceed with facilities interruptions without Authority Representative's written permission.
- C. Excavate for and remove underground facilities indicated to be removed.

3.04 CLEARING AND GRUBBING

- A. Remove obstructions, trees, shrubs, grass, and other vegetation to permit installation of new construction. Removal includes digging out stumps and obstructions and grubbing roots.
 - 1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
 - 2. Cut minor roots and branches of trees indicated to remain in a clean and careful manner where such roots and branches obstruct installation of new construction.
 - 3. Completely remove stumps, roots, obstructions, and debris extending to a depth of 18 inches below exposed subgrade.
 - 4. Use only hand methods for grubbing within drip line of remaining trees.
- B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material, unless further excavation or earthwork is indicated

1. Place fill material in horizontal layers not exceeding 8-inch loose depth, and compact each layer to a density equal to adjacent original ground.

3.05 TOPSOIL STRIPPING

- A. Remove sod and grass before stripping topsoil.
- B. Strip topsoil to whatever depths are encountered in a manner to prevent intermingling with underlying subsoil or other waste materials.
 1. Strip surface soil of unsuitable topsoil, including trash, debris, weeds, roots, and other waste materials.
- C. Stockpile topsoil materials away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 1. Limit height of topsoil stockpiles to 72 inches.
 2. Do not stockpile topsoil within drip line of remaining trees.
 3. Stockpile surplus topsoil and allow for respreading deeper topsoil.

3.06 REMOVAL OF TREE BRANCHES:

- A. Remove tree branches which extend over structure neat lines and are less than 20 feet above top of rail or existing surface whichever is higher.
- B. Remove tree branches which create a hazardous condition.
- C. Remove branches so as to present balanced appearance of tree.
- D. Treat scars resulting from removal of tree branches with heavy coat of tree wound paint

3.07 SITE IMPROVEMENTS

- A. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.
- B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
 1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut length of existing pavement to remain before removing existing pavement. Saw-cut faces vertically.

3.08 DISPOSAL

- A. Disposal: Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials, including trash and debris, and legally dispose of them off Owner's property.
- B. Dispose of debris off site only with permission of property owner where such debris is to be deposited and in accordance with codes and regulations of the jurisdictional authorities.
- C. Burning and burying debris on site is prohibited.

END OF SECTION

SECTION 02240

DEWATERING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies general dewatering systems for control of groundwater and removal of surface water during construction.

1.02 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
 - 1. Comply with codes and regulations of the jurisdictional authorities.
 - 2. ASTM:
 - a. D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40
 - b. D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120
 - c. D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems
- B. Design Criteria:
 - 1. Provide dewatering system which will reduce hydrostatic pressure and lower groundwater levels below excavation levels as necessary for safe and proper prosecution of the work and which will result in obtaining stable, substantially dry subgrade for prosecution of subsequent operations.

1.03 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

- A. Working Drawings:
 - 1. Type of dewatering system proposed, showing arrangement, location and depths of proposed system, complete description of equipment and materials to be used, installation procedure, well and piezometer development procedures, maintenance plan for dewatering system and piezometers, standby equipment and standby power supply (if required), and proposed location of points of discharge of water and settlement measuring procedure.
 - 2. Obtain approval of jurisdictional agencies prior to installation of system.
 - a. District of Columbia: The Contractor shall obtain a temporary discharge permit from the Department of Health, Environmental Health Administration, prior to any dewatering at the construction site.
- B. Documentation:
 - 1. Observe and record average flow rate and time of operation of each pump used in dewatering system. Provide appropriate devices, such as totalizing flow meters for observing flow rates. Provide interior dewatering well drop tube and exterior filter

- piezometer to observe and record operating levels and filter levels. Submit data on approved form and in approved format during period dewatering system is in operation.
2. Observe and record elevation of groundwater in the piezometers, including those previously installed, on approved form and in approved format, during the period that dewatering system is in operation. Sound depth to bottom of each piezometer monthly to ensure that soil particles are not building up in standpipe. Submit observation records promptly, regularly and as directed.
 3. During dewatering, make observations daily. After dewatering levels have stabilized, observations frequency may be reduced as approved.
 4. Submit maintenance schedule for piezometers and dewatering system. Record and submit maintenance records for each piezometer and dewatering well or dewatering system component weekly or as approved
 5. Provide drill logs and installation details of all dewatering system components, and piezometers, 24-hours after installation.

1.04 JOB CONDITIONS:

- A. Subsurface Conditions:
 1. Reports of subsurface investigations are available as listed in the General Requirements.
- B. Permits:
 1. Prior to discharging water, obtain permit from jurisdictional agency.
 - a. District of Columbia: The Contractor shall obtain a temporary discharge permit from the Department of Health, Environmental Health Administration, prior to any dewatering at the construction site.
 2. Control discharge of water in accordance with the General Requirements, if specified.
- C. Responsibilities:
 1. Design and install dewatering system to accomplish groundwater control as specified.
 2. Monitor, and report as required, discharge from dewatering system to determine if water quality meets the requirements of jurisdictional agency. Modify dewatering system as necessary to meet the requirements of jurisdictional agency.
 3. Measure to determine if movement occurs in adjacent areas by dewatering operations; take approved measures to minimize movement and prevent damage to affected properties, buildings, structures, utilities or facilities. Establish criteria for acceptable tolerances.
 4. Take measures to prevent damage to properties, buildings, structures, utilities and facilities resulting from groundwater pumping.
 5. Modify system if it causes, or threatens to cause, damage to properties, buildings, structures, utilities or facilities.
 6. Repair as approved, damage, disruption or interference to properties, buildings, structures, utilities or facilities resulting from dewatering operations.
 7. Information Drawings may designate locations where lowering of groundwater will not be permitted.
 8. Locations of dewatering system elements and piezometers may be adjusted in field to suit job conditions, as approved.
 9. Operate dewatering system without interruption until directed otherwise.

PART 2- PRODUCTS

2.01 PIEZOMETERS:

- A. See Soil & Geological Standard Drawing Piezometer Details as shown.
- B. Piezometer construction shall use ASTM-specified materials and procedures (D2466, D1785, and D2564) .

PART 3 - EXECUTION

3.01 SURFACE DRAINAGE:

- A. Intercept and divert surface drainage away from excavations, piezometers and dewatering wells by use of dikes, curb walls, ditches, pipes, sumps or other means.
- B. Design surface drainage systems to prevent erosion.
- C. Remove surface drainage system when no longer required.
- D. Remove debris and restore site to original conditions.

3.02 DRAINAGE OF EXCAVATED AREAS:

- A. Provide and maintain ditches of adequate size to collect surface and subsurface water and divert it into sump for draining or pumping into channels or storm sewers, as approved.
- B. Install settling basins, tanks or other approved apparatus as necessary to bring the discharge into compliance with permit requirements.
- C. When no longer necessary, backfill and seal drainage ditches, sumps and settling basins with approved material.

3.03 DEWATERING:

- A. Coordinate dewatering installation to prevent conflict with other construction activities.
- B. Install dewatering system in accordance with approved drawings and procedures. If site conditions require modification of the dewatering system, implement modifications to achieve specified design criteria prior to excavation.
- C. Demonstrate by approved methods that discharged sand content from each well meets the design criteria specified above under Quality Assurance.
- D. Discharge subsurface water clear of the work area.
- E. Maintain continuous and complete effectiveness of the installation through regularly scheduled maintenance of well screens, pumps, piezometers, electrical and piping systems.
- F. Maintain water level so that no damage to structure can occur.

- G. During backfill operations, the extent of dewatering may be reduced when approved, provided water level does not result in uplift pressure in excess of 80 percent of downward pressure produced by weight of structure and backfill in place.

3.04 PIEZOMETERS:

- A. Prior to dewatering operations, install piezometers at locations shown or as approved and to the depths shown or approved.
- B. Verify installed piezometer tip elevation. Reinstall piezometers which do not comply with requirements at no additional cost to the Authority.
- C. 48 hours after completion of each piezometer installation, prove proper functioning of piezometer by performing Falling Head Tests. Submit test records within 24 hours of test completion.
- D. While dewatering system is in operation, prove continued proper functioning of each piezometer by performing rising head tests. Submit test records within 24 hours of test completion.
- E. Take static water level readings prior to energizing dewatering system. Submit water level readings within 24 hours of observation.
- F. Operate dewatering system so that groundwater level in piezometers is maintained continuously within prescribed limits.
- G. Protect and maintain piezometers in good operating condition until completion of Contract.
- H. Replace promptly any piezometer or dewatering well that is damaged or destroyed.
- I. Terminate piezometer readings when approved.

3.05 Not Used

3.06 SYSTEM TO BE REMOVED:

- A. Upon completion of Contract, remove piezometers and well casings, unless otherwise specified, to a depth of two feet minimum below ground surface.
- B. Backfill voids, well and piezometer casings with bentonite-cement grout.
- C. Backfill remaining space with compacted earth and restore ground surface to its original condition.

END OF SECTION

SECTION 02260

SUPPORT OF EXCAVATION

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies support for cut-and-cover, open-cut excavation, trench excavation and shafts.
- B. Related Work Specified Elsewhere:
 - 1. Grading, excavating and backfilling: Section 02320.
 - 2. Maintenance, support and restoration of utility facilities: Section 02270.
 - 3. Concrete reinforcement: Section 03200.
 - 4. Cast-in-place structural concrete: Section 03300.
 - 5. Steel bars, steel strand, anchorages, couplings for ground anchors, grout: Section 03415.
 - 6. Structural steel: Section 05120.
 - 7. Grounding and bonding of soldier piles: Section 16060.
- C. Contractor's Options:
 - 1. System of support to consist of soldier piles and lagging, sheet-piling or slurry-trench concrete walls, secured in place by means of bracing members such as wales, struts, shores and ground anchors. Other methods of support permitted only when approved.

1.02 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standard and Specifications:
 - 1. Comply with codes and regulations of the jurisdictional authorities.
 - 2. API: 13A, 13B-1.
 - 3. ASTM: A36, A709, A722.
 - 4. EPA.
- B. Design Criteria:
 - 1. Design support of excavation in accordance with design criteria shown and specified. Criteria are the minimum acceptable.
 - 2. Design component members of system to support temporary decking system, earth and rock pressures, unrelieved hydrostatic pressures, utility loads, applicable traffic and construction loads and other surcharge loads. Use loading combinations shown. Prepare design for staged removal of bracing to suit sequence of concrete placement.
 - 3. Design support system for nonpenetration of station and entrance surfaces visible to public. Temporary penetration permitted only where location of penetration is eventually to be hidden by elements such as acoustical panels or similar items.
 - 4. Design sheeting and bracing for sides of excavations for underground structures in a manner permitting safe and expeditious construction of permanent structures, minimizing movement or settlement of the ground and preventing damage to adjacent buildings, structures and utility facilities. Locate and design the bracing system such that it will not interfere with the reinforcement and construction of the permanent structure.
 - 5. For support systems in which struts are installed between opposite sides of the excavation, design and construct support of both sides to obtain comparable rigidity.

6. Choose location of soldier piles to allow for expected deviations from true line during driving procedure without encroaching on future permanent structures.
7. Approval of Contractor's plans and methods of construction does not relieve the Contractor of the responsibility for adequacy of support.

1.03 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

A. Working Drawings:

1. Details, arrangement and method of assembly of proposed system, including construction sequence.
2. Method of preloading and bracing.
3. Elevations and sections showing full excavation depth from top grade to bottom of soldier piles or subgrade, whichever is deeper.
4. Loads for various stages of bracing removal and concrete placement.
5. Anticipated equipment load.
6. Maximum design load to be carried by various members of support system and preloads.
7. Depths below main excavation to which support system will be installed.
8. Methods of resolving difficulties arising from misalignment of soldier piles exposed during excavation and criteria for implementation of those procedures.
9. Methods of controlling and monitoring vibrations caused by driving of soldier piles to prevent damage to structures and utility facilities.
10. If proposed support system includes tieback anchors, show geologic profile or section for which each anchor is intended, design load for full depth of the excavation, maximum design and proof load and criteria proposed for deformations under proof loads.
11. Ground anchors and rock bolts:
 - a. Prior to starting work, submit support system tieback and rock bolt details including design calculations, installation and load test procedures, grouting materials, grouting methods and detailed working drawings of the proposed rock bolt system.
 - b. Show geologic profile or section for which each ground anchor or rock bolt is intended and design load of ground anchor and rock bolt for full excavation condition.
12. Include design calculations and maximum theoretical deflections of support members.
 - a. The maximum allowable deflections of support members are as follows:

Soldier beams	1/2-inch
Walers	1/4-inch

This does not include the movement of support due to creep in tieback.
13. Include existing utility facilities. After checking their locations by field investigations, revise drawings to show actual locations of facilities, location of excavation supports, interference with proposed work and measures proposed to overcome such interferences.

B. Documentation:

1. Where proposed system of tieback anchors or rock bolts projects beyond vertical projection of property lines shown onto adjoining property, obtain permission of owner in writing.
2. Submit copies of permits with drawings.
3. Calculations:
 - a. Design calculations as applicable.

- b. Do not proceed with work prior to approval.

1.04 JOB CONDITIONS:

- A. Provision for Contingencies:
 - 1. Monitor performance of components of support system, both vertical and horizontal movement in accordance with Section 02291, at regular intervals not to exceed three days.
 - 2. Provide contingency plan or alternative procedures to be implemented if unfavorable performance is evidenced.
 - 3. Keep on hand materials and equipment necessary to implement contingency plan.
- B. Proceed with caution in areas of utility facilities; expose them by hand excavation or other methods acceptable to utility owner.
- C. If existing utility facilities interfere with proposed method of support, modify or relocate such facilities with the approval of the appropriate utility owner. If relocation of the utility is not possible, obtain Engineer's approval for field changes to the approved support scheme of the excavation.
- D. Do not splice elements of support system unless approved.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Steel Sheet Piles: Continuous interlocking type with cross section selected for intended use.
- B. Cast-In-Place Structural Concrete: Section 03300, Class 3500 unless otherwise shown.
- C. Timber Lagging: Structural grade, minimum allowable flexural stress of 1,100 psi.
- D. Concrete Reinforcement: Section 03200.
- E. Structural Steel: Section 05120; ASTM A36 or ASTM A709, Grade 36, minimum.
- F. Rock Bolts: Section 02420.
- G. Ground Anchors:
 - 1. Steel bars: ASTM A722 and Section 03415.
 - 2. Steel strand: Section 03415.
- H. Anchorages and Couplings for Ground Anchors: Section 03415.
- I. Grout: Section 03415.
- J. Bentonite Powder: API 13A.
- K. Other Materials: Those best suited for intended use, and as approved.

2.02 MIXES:

- A. Lean Concrete: Portland cement and mineral or soil aggregate proportioned so that concrete retains its shape during excavation operations.

- B. Concrete for Slurry Trench Walls:
 - 1. Tremie concrete of 3500 psi strength or higher if necessitated by design, with the following additional requirements:
 - a. Minimum cement factor: Seven bags per cubic yard.
 - b. Water-cement ratio: As necessary for strength and durability.
 - c. Sand proportion: As necessary to produce optimum results.
 - d. Rounded gravel aggregate: 1-1/2 inch maximum.
 - e. Slump: Six inches plus-or-minus one inch.
 - f. With water-reducing or fluidizing agents as necessary.
 - 2. Submit mix design for approval.
- C. Bentonite Slurry:
 - 1. Stable suspension of powdered bentonite, or equal, and natural silts and clays in water.
 - 2. Density: 64 pcf minimum, 85 pcf maximum.
 - 3. Marsh funnel flow rate: 40 seconds minimum, 80 seconds maximum viscosity.
 - 4. Fluid loss: 25-cc maximum in 30 minutes.
 - 5. pH: 7.0 to 11.0
 - 6. Shear strength:
 - a. By shearometer: 1.4 to 10 N/M.
 - b. By fan viscometer: 4.0 to 400 N/M.

PART 3 - EXECUTION

3.01 SHEETING, SHORING AND PILING:

- A. Install soldier piles by driving, preboring or other pre-excitation methods. Drive soldier piles only in those areas where shown or approved. Install piles vertically within tolerance of one foot per each 100 feet for full depth of each pile.
- B. Where piles are installed by preboring or other pre-excitation methods, take appropriate measures to stabilize excavation to preclude loss of ground.
- C. Provide prebored holes for soldier piles adequate to accommodate pile section shown on approved working drawings. Extend hole to necessary depth below top of subgrade.
- D. Carry bottom of support system to depth below main excavation, adequate to prevent lateral movement. In areas where additional excavation is required below main excavation subgrade, make provisions to prevent movement of main excavation supports.
- E. Multiple-Layered Horizontal Bracing:
 - 1. At locations where top of weathered bedrock is above the subgrade of main excavation, install soldier piles so that tips are at least two feet below top of subgrade.
 - 2. At locations where top of weathered bedrock is five feet or more below subgrade of main excavation, install soldier piles so that lower tip is at least five feet below bottom of excavation.
 - 3. If weathered bedrock is encountered at elevation between subgrade elevation and five feet below subgrade, install soldier piles so that lower tip is five feet below subgrade or two feet into rock, whichever is higher.
- F. After seating soldier piles in pre-excavated holes, encase piles with Class 3500 concrete up to lowest point of excavation adjacent to pile location. Fill remainder of hole with lean concrete, completely encasing pile.

- G. Use timber lagging, steel sheeting or precast reinforced concrete members secured in place for sheeting of excavations.
- H. Follow excavation closely with placement of sheeting and lagging. Do not allow maximum height of unsheeted or unlagged face of excavation to exceed five feet in rock or predominantly clayey soils and three feet in sandy soils.
- I. Do not permit height of unlagged face to exceed 15 inches if water flows from face of excavation or if soil in face moves toward excavation area.
- J. Carefully perform excavation for installation of sheeting to minimize formation of voids. Separate sheeting members only to extent necessary to permit packing behind them.
- K. Pack behind sheeting as installation progresses to establish tight contact between excavation face and sheeting. Pack openings between sheeting members with straw or other suitable material to allow free drainage of water without loss of soil or sand packing.
- L. If unstable material is encountered during excavation, take suitable measures to contain it in place and prevent ground displacement which may cause damage.
- M. Maintain sufficient quantity of material on hand for sheeting, shoring, bracing and other operations for protection of work and for use in case of accident or emergency.
- N. Support System For Vertical Shafts Which Penetrate Soil/Rock Interface:
 - 1. Soldier piles:
 - a. If shaft excavation is supported by soldier piles, locate piling at least five feet in a horizontal direction from outer face of shaft wall. Install lower tip of piling at least ten feet below top of unweathered bedrock.
 - b. Procedure for establishing tip elevations:
 - 1) Make three pilot core borings at equal spacing along soldier pile line. Borings may be washed through overburden, but must be cored through bedrock to a depth of 20 feet into unweathered rock as determined by the Engineer. Advance holes in rock by rotary drilling methods and recover 2-1/8 inch diameter (NX) size rock cores using Series M double-tube core barrel. Drill in conformance to applicable portions of Section 02431. Place cores in wooden boxes as specified in Section 02431 and deliver to storage site as directed.
 - 2) Install soldier piles to obtain tip elevations established by the Engineer's examination of coring results.
 - 3) For shafts where pilot core borings indicate top of unweathered bedrock varies by more than three feet in elevation, set tips of soldier piles at least ten feet below lowest point of top of unweathered bedrock.
 - 4) In drilling soldier pile holes; use equipment capable of penetrating hard igneous and metamorphic rock that has an average unconfined compressive strength of six to eight kips per square inch and that may reach even greater values in some locations.
 - 2. Ring beams and lagging or liner plate:
 - a. If shaft excavation is supported by ring beams or liner plates, install rings or liner plate to at least ten feet below average elevation of top of unweathered bedrock, which will be determined by the Engineer from examination of the rock in the advancing excavation.

3.02 SLURRY WALLS:

- A. Slurry Trench Equipment:
1. Use equipment capable of removing from trench foreign materials embedded in soil as well as natural materials, including boulders, where necessary. Arrange equipment to permit free vertical passage of slurry within trench and to prevent development of suction or pressure.
 2. Furnish trench inspection tools adequate to ensure that trench has been excavated to dimensions shown on approved working drawings and that cuttings and foreign material have been removed.
 3. Use slurry mixing equipment capable of producing, with mechanical agitation, a stable suspension of bentonite and water. Transport slurry to panels by temporary pipe line or other approved methods.
 4. Furnish slurry circulation equipment to provide circulation and agitation of the slurry throughout full depth of excavated panels. Do not agitate slurry by air
 5. Use slurry reclaiming equipment which will remove detrimental quantities of excavated material from slurry to ensure use of clean slurry in trenches. Recirculate reclaimed slurry to trenches in a continuous operation regardless of slurry density. Monitor slurry and control its capability of retaining solid particles in suspension.
- B. Field Quality Control:
1. Make tests on samples of in-place slurry to determine density, viscosity, filtration and sand content in accordance with API 13B-1.
 2. Maintain quality of bentonite slurry compatible with soil characteristics of trench walls.
- C. Construction:
1. Perform preparatory work to discover, protect, maintain, relocate and restore utility facilities and other obstructions in vicinity of slurry walls.
 2. Construct slurry trench walls by displacement of bentonite slurry with tremie concrete.
 3. Construct walls of reinforced concrete or plain concrete embedded with structural steel. Where soldier piles are used in construction of walls, it is permissible to consider piles as reinforcement.
 4. Provide sufficient embedment of walls below subgrade of excavation to prevent loss of ground due to piping under wall or lateral movement of wall.
 5. Use construction methods ensuring that slurry materials employed during trench excavation and placing of tremie concrete are contained and controlled to prevent leakage and spillage of slurry and excavated materials into basements, vaults, utilities and other facilities.
 6. Excavate slurry wall trenches in panels of width and depth shown on approved working drawings with maximum panel length of 18 feet. Reduce panel length when excavating adjacent to facilities sensitive to settlement.
 7. Maintain level of slurry in panels no more than five feet below top of trench during excavation operations and until tremie placement is essentially completed.
 8. Progress construction with no less than one unexcavated panel and one tremie-filled panel with concrete cured at least 72 hours, between two slurry panels under active excavation.
 9. Keep slurry circulated or agitated during drilling and excavating and immediately prior to concreting. Continuously maintain slurry requirements even during nonworking periods and stoppages. If stoppage occurs in the operation causing slurry in panel to remain uncirculated and unagitated for more than 24 hours, backfill panel until operation can be resumed.
 10. Place concrete by tremie methods either by gravity flow or by pumping. As soon as possible after placement of concrete is commenced, position bottom of pipe not less than five feet below upper surface of concrete being placed and maintain it in this position throughout operation. Equip tremie pipe with bottom valve or other device

to prevent mixing of slurry with concrete inside tremie pipe. Aluminum pipe is prohibited.

11. Inspect trenching in the presence of the Engineer prior to concreting. Ensure that settled cuttings and excavated material have been removed.
12. Start placement of concrete in panels within 12 hours after completion of panel excavation and proceed continuously until concreting is completed.
13. When wales are used, obtain tight bearing between wales and wall and ample bearing area with wedges and dry pack for load transfer.
14. Preload braces at each level to computed maximum compressive force to be encountered at that level. Base calculations of this computed force upon pressure diagrams shown. Take into consideration increased strut loads that may develop because of removal of bracing as structure is built.
15. Accomplish preloading by approved procedures. Transfer load by jacking applied symmetrically to braces without introducing eccentricity.
16. Introduce jacking load into braces immediately after each tier of braces has been installed and before excavation has progressed more than two feet below bottom of bracing tier. Make provision to fix preload into each brace by shim plates, wedges, blocking or other approved device.
17. After concrete invert slab has been placed and attains sufficient strength to receive loads from slurry walls, remove tiers of bracing above invert level, provided the following conditions exist:
 - a. Remaining tiers are capable of resisting total load calculated from trapezoidal pressure diagrams shown.
 - b. Calculated deflection of the walls between tiers of bracing, assuming forces indicated by the trapezoidal pressure diagrams, does not exceed 1/2 inch.
18. Construct tight joints between adjacent pours of concrete in slurry wall to minimize loss of fines from retained earth. Take necessary care to accomplish this in terms of properly excavating trench and cleaning abutting face of hardened concrete or surfaces of structural members if used. Provide approved method of water stopping.
19. Seal leaks encountered in walls as excavation progresses, if leaks are of sufficient size to permit penetration of fines and loss of ground. Procedures may include grouting outside or through wall.
20. Dispose of unsuitable excavated material and debris in accordance with Section 02320.
21. Dispose of slurry waste offsite by means of sealed tanks and in accordance with EPA regulations.

3.03 PRIMARY SUPPORT:

- A. Use wales, struts, tieback anchors and rock anchors as necessary to provide primary support of excavation faces retained by soldier piles, sheeting, sheet piles or concrete slurry walls. For excavation depths greater than eight feet, primary support or supports are required.
- B. Provide struts with intermediate bracing as needed to enable them to carry maximum design load without distortion or buckling.
- C. Provide diagonal bracing as needed to maintain stability of system.
- D. Include web stiffeners, plates or angles as needed to prevent rotation, crippling or buckling of connections and points of bearing between structural steel members. Allow for eccentricities caused by field fabrication and assembly.
- E. Install and maintain primary support members in tight contact with each other and with surface being supported.

- F. Design primary support members to support maximum loads occurring during excavation or removal stages.
- G. Preloading:
 - 1. Except for ground anchors and slurry wall bracing, preload primary bracing members including struts, shores, wales carrying axial load, and similar members at installation to 50 percent of design load, which for this purpose is maximum load that bracing member will have to carry. Preload tiebacks and slurry walls as specified for those installations.
 - 2. Use procedures that produce uniform loading of bracing member without appreciable eccentricities or overstressing and distortion of members of wall system.
 - 3. Make provisions for permanently fixing load in each member using steel shims or wedges welded into place.
 - 4. Accomplish preloading by jacking support in place against soldier piles or wales.
 - 5. Do not use wooden wedges to preload bracing member.
 - 6. Include in preloading system means to determine within five percent amount of preload induced into bracing members.
- H. If decking beams are not required or if decking beams are not designed for support of excavation loads, install uppermost tier of bracing at vertical distance of not more than six feet below top of excavation.
- I. Install tiers of primary support with no greater vertical distance between them than 16 feet
- J. Reduce maximum vertical distance to 12 feet at locations where ground movement and settlement must be minimized to prevent damage, where shown and as directed.
- K. Excavate to no more than two feet below point of support about to be placed. Install support and preload immediately after installation and prior to continuing excavation.

3.04 SUPPORT SYSTEM WITH TIEBACKS:

- A. Install tieback system in accordance with approved working drawings. Install anchorage in soil no closer than a plane extending upward at an angle of 45 degrees to the horizontal from outer limit of lowest depth of excavation.
- B. Stress tiebacks to proof loads equal to 140 percent of maximum design load and maintain proof load for 30 minutes prior to reducing to design load. Reject tiebacks which lose more than five percent of proof load during 30-minute period.
- C. Apply proof loads in increments of five tons at one-minute intervals and provide means to measure load application within accuracy of plus-or-minus five percent.
- D. After reducing tieback load to design load, encase anchors in grout maintaining design load until anchors are fixed in place.
- E. In transfer of loads from jacks to support system, use fixation method which will limit load loss to no more than five percent of design load.
- F. Provide and maintain convenient access and appropriate means to accomplish these observations.
- G. Preliminary And Creep Tests On Tiebacks:
 - 1. Reapply proof loads equal to 140 percent of design load at each level of support in excavation on first installation on each side of excavation at horizontal intervals not

- exceeding 500 feet and wherever there is significant difference in soil in which tiebacks are installed.
2. As specified for proof loading, apply proof loads in increments of five tons at one-minute intervals. Provide means to measure load applications with an accuracy of plus-or-minus five percent of design load. Maintain proof load for 24 hours prior to reducing it to design load.
 3. Make records of axial movement with incremental applications of load as well as amount and time of load fall-off with no pumping of jack or axial movement during 24-hour period that proof load on tieback is maintained. If during 24-hour period axial deformation of tieback system exceeds 0.02 inch or decrease in jack pressure without pumping is more than five percent after correcting for temperature changes during the test period, redesign tieback system to satisfy requirements.
- H. Rock Bolts:
1. Tension rock bolts to their design load as approved to permit checking of each loading by the Engineer.
 2. If grouted rock bolts are used, after loading has been approved, pressure-grout each permanent rock bolt in place using methods and equipment which will ensure elimination of air from bolt hole.
 3. If fully resin-encapsulated bolts are used, use slow-setting resin to allow Engineer sufficient time to approve loading prior to gelation.
- I. Vertical Support System With Tiebacks:
1. Install piles or other vertical support system members incorporated in a system utilizing tiebacks so that they are capable of resisting vertical components of tieback loads without significant settlement during excavation and construction.
 2. Install vertical support members so that settlements will not be caused by construction. In general, install members to be end bearing in stratum below maximum depth of excavation and capable of carrying total vertical loads without assistance of skin friction at depth of excavation.

3.05 LAGGING:

- A. Unless otherwise shown or specified, provide timber lagging of three inches minimum thickness where it spans soldier piles placed at distances five to seven feet on centers and for excavation depths up to 25 feet. Increase minimum lagging thickness to four inches for excavation below 25 feet in depth.
- B. For other conditions and types of lagging, submit design details for approval.

3.06 TRENCH EXCAVATION:

- A. Perform sheeting, shoring and bracing for trench excavation for utility facilities and other purposes in accordance with specified safety requirements.
- B. Provide sheeting, shoring and bracing for trench excavation in subgrade of subway excavation to prevent movement of main excavation support system.

3.07 SUPPORT OF EXCAVATION AT INTERFACES:

- A. Design, construct, maintain and remove all or parts of support system at limits of the Contract at interface with the Authority's adjacent contracts, as may be necessitated by construction schedules and sequence of operations of respective contracts.

- B. In the event excavation is commenced at an interface prior to the commencement of excavation on adjacent contract, design, construct and maintain end support system making provisions as follows:
 - 1. Install near face of cofferdam on line separating contracts. Allow no part of support system to project into the next contract except thickness of supporting wall, e.g. soldier piles and lagging, and tiebacks if approved.
 - 2. Provide support system adequate to support backfill and restoration loads with installation of a reasonable bracing system by adjacent contractor during excavation for his contract.
 - 3. Design and construct support system so that it will be supported against vertical settlement when adjacent contractor removes lower portion of the cofferdam to effect connection of structures at juncture of two contracts.

- C. If excavation has commenced on adjacent contract at interface prior to excavation on this Contract, make provisions as follows:
 - 1. Coordinate removal of such portions of cofferdam which have been installed in adjacent contract and support and maintain remainder as necessary to effect juncture of contracts.

3.08 FIELD QUALITY CONTROL:

- A. Tests:
 - 1. Where system of tiebacks or rock bolts is proposed in conjunction with or in lieu of struts, bracing and shores, undertake approved number of on-site tests to demonstrate adequacy of tiebacks or rock bolts for typical subsurface conditions.
 - 2. Conduct tests and obtain approval prior to use of tieback system for excavation support.
 - 3. The Engineer may furnish and install certain instruments to monitor performance of tieback or rock-bolt system.

- B. Remove components of support system which inadvertently penetrate or encroach on permanent structure without endangering stability of support.

- C. Welding: In accordance with Section 05120.

3.09 REMOVAL OF SUPPORTING SYSTEM:

- A. When removing support of excavation system, wholly or in part, do not disturb or damage adjacent buildings, structures, construction or utility facilities. Fill voids immediately with lean concrete or with approved backfill compacted to density specified in Section 02320.

- B. During strut removal stages, design soldier piles or slurry walls for increased vertical spacing of supports. For the removal of the first level support immediately above the invert slab, the slab can be considered a support for the soldier piles or slurry walls if it is poured directly against the sheeting and shoring and the invert slab is in place for at least 48 hours and is adequate to safely support the support of excavation, adjacent structures and the works. Leave support immediately above top of intermediate structure element, such as walls, slabs, or other horizontal members, until they are placed and are in place for at least seven days and are adequate to carry the loads from the support of excavation and other loads imposed on them. Leave support immediately above top of roof slabs of structure in place for at least seven days after placement of roof slab concrete.

- C. Remove other supports above roof structure only after backfill has been placed and compacted to required density to within three feet of bottom of support.

- D. Except as specified below, remove supporting system to a depth of six feet below surface. Remove supporting systems of intersections of streets and at temporary access ramps to a depth of eight feet.
- E. Where top of Authority structure extends into six-foot or eight-foot limit, remove adjacent supporting systems to a depth flush with top of the Authority structure or one-foot below surface, whichever is greater. Increase removal depths where necessary to accomplish work in this Contract.
- F. Remove material of supporting system from site immediately.

SECTION 02270

MAINTENANCE, SUPPORT AND RESTORATION OF UTILITY FACILITIES

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies protecting, supporting, maintaining and reconstructing existing utility facilities affected by construction, including but not limited to the following:
1. Storm, sanitary and combined sewer facilities.
 2. Water distribution and service
 3. Gas distribution and services.
 4. Electric light and power facilities and services.
 5. Telephone, telegraph and GSA communication facilities and services.
 6. Police and fire alarm systems.
- B. Related Work Specified Elsewhere:
- | | |
|---------------|--|
| Section 02220 | Demolition |
| Section 02320 | Grading, excavating and backfilling |
| Section 02240 | Dewatering |
| Section 02535 | Sanitary Sewer |
| Section 02635 | Storm Sewer |
| Section 02515 | Water distribution system |
| Section 02205 | Removal and restoration of existing facilities |
| Section 03100 | Concrete |
| Section 03200 | Concrete reinforcement |
| Section 03300 | Concrete: |
- C. Work by Others:
1. Gas distribution and services: Gas company will do its own work.
- D. Definitions:
1. Facility: Utility structures and system components belonging to utility company including service lines which are used to provide service to utility's customers and product which these facilities convey.
 2. Utility: Company, agency, owner or operator of facility concerned.
 3. Abandoned: Use of facilities shown as existing has been discontinued by the owners and operators. Demolish or remove such facilities to the extent they conflict with proposed work.
 4. To be abandoned: Particular facilities will be removed from operation and/or replaced by other facilities after written notice has been received that service is no longer required. Maintain service for as long as required, including temporary support, rerouting, substitution of temporary facilities or other measures, as directed by the Authority Representative. Demolish or remove such facilities to extent they conflict with proposed work.
 5. Maintenance: Ensuring continuous and satisfactory service during construction.
 6. Proposed facility:
 - a. New facility constructed and, if necessary, temporarily supported in place, by the Design-Builder.
 - b. Temporary facility constructed, supported in place and ultimately removed and new facility constructed, by the Design-Builder.
 - c. New facility constructed as part of rapid transit construction.

7. Temporary facility: Facility provided by the Design-Builder in lieu of existing or proposed facility, to ensure continuity of service.
8. Maintain complete-in-place: Support and maintenance in serviceable condition, of existing facilities during construction, which may include constructing permanent support, temporary support or other measures necessary to maintain continuous service of existing facility.
9. Expose and maintain existing cables and replace ducts and manholes: Remove existing duct and manhole structures, construct temporary manholes, place existing cables in split conduits and replace spare ducts with whole conduit. Maintain this system during construction. Reconstruct permanent concrete manholes and encase conduits in concrete as specified. Cables for electric power and telephone facilities shall be exposed, separated and supported under supervision of electric power and telephone companies.
10. Maintain service and replace:
 - a. Construct new facility in same location and support it in place.
 - b. Provide temporary facility and ultimately remove it, and construct permanent replacement facility in its original location.
 - c. Temporarily support original facility and ultimately replace it with new facility.
11. Remove and replace: Remove existing facility without providing temporary replacement and reconstruct new facility in same location during execution of contract.
12. Local Jurisdictional Authority: Agency responsible for acceptance and approval of work on storm, sanitary and water distribution facilities.
13. Salvage: Remove and store material and equipment for reuse in this or other Authority contracts.

1.02 SUBMITTALS

- A. Schedule of Work on Utility Facilities:
 1. Submit to the Utilities and the Authority Representative a detailed sequence of work, with starting and ending dates for each interruption of utility services, and method of coordination for shutoff, capping and continuation of utility services.
 2. Give notice at least two weeks prior to date of intended commencement of operations to parties having surface, subsurface or overhead structures in the construction area. Provide copies of notices to the Authority Representative.
 3. Do not commence work until written approval has been received from the Utility and the Authority Representative.
- B. Record Documents:
 1. Show actual location of existing facilities, interference which these facilities present to new work, proposed method of proceeding with actual construction and details of proposed support systems.
 2. Show actual location of settlement measurement points for facilities as indicated on the drawings. Submit copies of readings and measurements within 24 hours after such readings are taken.
 3. Prior to construction, submit two copies of records of inspection of sewers, one copy to local jurisdictional authority and one copy to the Authority Representative. On completion of tunneling and cut-and-cover and prior to paving or other construction over sewers, submit to local jurisdictional authority and the Authority Representative one copy each of the inspection records of sewers, including video-tape records of television inspections and coordinated logs, photographs and other records as specified by local jurisdictional authority for visual walk-through inspections. Obtain and submit a written approval and acceptance from local jurisdictional authority of the inspection records of preconstruction and post-construction conditions of affected storm and sanitary sewers.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, and Standards: Comply with codes and regulations of the jurisdictional authorities, published standards of owning utility agency, and ASTM: C136.
- B. Inspection Of Sewers:
 - 1. Employ a sewer inspection company which has been regularly engaged in television sewer inspections and which is acceptable to local jurisdictional authority to perform preconstruction and post-construction inspections of sewers 36 inches and smaller in diameter. Submit to Local jurisdictional authority for prior approval one sample of the cassettes to be used.
 - 2. Conduct preconstruction and post-construction inspections under conditions as nearly identical as practical and using the same company.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Coordinate with utilities who are furnishing materials for the work to determine availability, locations and required methods of storage and care of materials prior to incorporation into the work.
- B. Transport store and handle materials in accordance with the requirements of the utilities.

1.05 PROJECT CONDITIONS:

- A. Existing Facilities:
 - 1. Locations of existing facilities shown are plotted from available records; however, these locations are not guaranteed.
 - 2. Verify by field investigation and "Miss Utility" utility locating service, locations of facilities within and adjacent to limits of project which may be affected by construction operations. Avoid damage or disruption of facilities during operation.
 - 3. Upon encountering existing facility which is not shown or upon ascertaining that facility differs from that shown, determine ownership, use and disposition of such facility and proceed as follows:
 - a. If facility is abandoned or is to be abandoned, perform necessary work for either condition as specified.
 - b. If facility is to remain in service, perform support and restoration work in accordance with these Specifications and the CHANGES article of the General Provisions.
- B. Temporary Service:
 - 1. Do not interrupt facility service to building connections unless permitted in writing by Authority Representative, and then only after arranging to provide temporary service as required..
 - 2. Notify the Authority Representative and the Utility of damage to facilities caused by construction operations. Repair such damage, except that damaged cables will be repaired or replaced only by the Utility.
 - 3. Provide access for inspection of facilities and for emergencies involving utility services as specified in Section 01530.
 - 4. Permit free and clear access to utility personnel for purposes of inspection, maintenance, providing additional service and construction of new facilities.
 - 5. When approved working or shop drawings show temporary facility provided for the Design-Builder's benefit, supply necessary materials and perform necessary work.
 - 6. Pay utility directly if, as an aid to the Design-Builder's construction, the utility performs work not shown.
 - 7. Items supplied by the utility companies are as listed and as shown.

1.06 Coordination:

- A. Establish through the Authority Representative direct and continuous contact with respective utilities and cooperate with them in all phases of the work.
- B. Contact utility early enough to allow them sufficient time to accomplish the work. Give special consideration to lead times required for cable work. Provide schedule of utility relocation to the utility to permit coordination with Authority's construction sequence.
- C. To locate buried telephone cables, call the local telephone company's Buried Cable Location Service at least 48 hours prior to starting excavation.
- D. Comply with printed standards and practices of utilities available from the Authority Representative.
- E. Aerial facilities shown to be relocated by others will be relocated by facility owner. The Design-Builder is responsible for coordinating relocation work with utility owner as far as possible in advance of required time of relocation. A minimum three-month lead time is required by utility owner when facility serves only one utility. When facility to be relocated is shared by more than one utility agency or when a street light is included in the relocation, a minimum four-month lead time is required

PART - PRODUCTS

2.01 MATERIALS:

- A. Refer to individual Division 2 Storm, Combined And Sanitary Sewer, Water Distribution and Services, Ducts and Manholes Sections for pipe, tubing, fittings and appurtenances, and for joining and installation methods.
- B. Refer to individual Division 3 Concrete and Reinforcement Sections for materials and installation methods.
- C. Sand Backfill Around High Voltage Conduits And Pipes:
 - 1. Thermal Resistivity Value (RHO) of not more than 70 and the following sieve analysis when tested in accordance with ASTM C136:

Sieve Size	Percent Passing
4	94 - 100
8	80 - 90
16	60 - 80
30	35 - 60
50	31 - 35
100	3 - 13
200	1 - 5

- 2. The power company, through the Authority Representative, will inform the Design-Builder of approved sources for this material.

PART 3 - EXECUTION

3.01 Salvage:

- A. Salvage and clean material shown to be salvaged.
- B. Maintain adequate records and storage facilities for salvaged items as specified in the General Requirements. Make available for inspection a detailed record including signed vouchers and receipts.
- C. Reuse salvaged items after inspection and approval for reuse has been given by the Utility
- D. Return salvaged materials which are not reused to the Utility.

3.02 SETTLEMENT OR MOVEMENT:

- A. Where settlement or movement monitoring system is shown, comply with the following:
 - 1. Provide series of settlement measurement points along each facility and make regular readings to detect movements.
 - 2. Use approved painted marks, metal marker plugs or pins as settlement measurement points.
 - 3. Prior to subsurface work, make initial survey to establish elevations of installed settlement measurement points utilizing permanent, established bench marks outside 100-foot line.
 - 4. Take readings weekly on settlement points until completion of this Contract. Take readings daily during work which may affect facilities.
 - 5. Make readings to an accuracy of 0.01 foot.
 - 6. Take immediate remedial measures to correct conditions causing settlement or other movement and to repair damages thus caused.

3.03 EXCAVATION AND BACKFILLING OF UTILITY TRENCHES:

- A. Excavate and backfill utility facility trenches in accordance with Sections 02320 and 02240.
- B. Proceed with caution in areas of utility facilities; expose them by hand excavation or other methods acceptable to facility owner.

3.04 SURFACE RESTORATION:

- A. Remove pavements, sidewalks, lawns, landscaping, curbs and gutters where necessitated by utility trenches in accordance with Section 02220.
- B. Replace pavements, sidewalks, curbs and gutters in accordance with Section 02205.
- C. Place temporary pavements where necessitated by sequence of operations.
- D. Replace lawns and landscaping in accordance with Sections 02920 and 02930.
- E. Provide erosion control measures to prevent erosion or displacement of soils and discharge of sediment bearing water or airborne dust from the site.

3.05 UNSAFE AND UNSUITABLE UTILITY STRUCTURES:

- A. General Requirements:

1. If upon exposure, condition or location of facility to be supported in place is found to be unsafe for maintenance or support, replace or reconstruct facility as required after receiving prior approval of the Authority Representative and Utility Owner.
 2. Maintain continuity of existing utility facilities. Protect, support, relocate and reconstruct such facilities, regardless of jurisdictional control.
- B. Electric, Communication and Similar Type Facilities:
1. If structures containing electrical, communication and similar types of cables shown to be maintained complete in place are found upon exposure to be incapable of being maintained in place because of condition, location or both, replace such structures with timber enclosures or split ducts after prior approval of the Authority Representative and the utility owner.
 2. When service box, manhole or conduit structure containing electrical or communication cables is broken away, replace it immediately with temporary structure having facilities for racking and supporting cables equivalent to existing facilities.
 3. Exercise care when working in vicinity of telephone structures containing coaxial cable which cannot withstand movement.
 4. Give timber enclosures one interior and one exterior coat of fire-retardant paint of type specified by owners and operators.
 5. Replace temporary timber enclosures with permanent structures in accordance with details shown and restore facilities to the satisfaction of the Authority Representative and utilities prior to completion of work. Remove materials of temporary nature after completion of permanent installation.
- C. Procedures for payment of costs of work on unsafe and unsuitable utility structures are governed by the CHANGES article of the General Provisions.

END OF SECTION

SECTION 02320

GRADING, EXCAVATING AND BACKFILLING

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies grading, excavating and backfilling for structures and utility facilities.
- B. Related Work Specified Elsewhere:
- | | |
|---------------|--|
| Section 02220 | Removal of existing construction and facilities |
| Section 02230 | Clearing and grubbing |
| Section 02240 | Dewatering |
| Section 02270 | Maintenance, support and restoration of utility facilities |
- C. Definitions:
1. Grading: Shaping earth and rock through the removal or filling of earth and rock materials.
 2. Earth Excavation: Excavation of materials of whatever nature, except rock as defined below.
 3. Rock Excavation: Excavation of material in place which cannot be loosened or broken down by ripping using earth excavating equipment and which requires blasting or rock excavating equipment for its removal.
 4. Approved Material: Earth which meets specified measurable requirements for use as embankment, fill or backfill.
 5. Surplus Excavated Material: Approved excavated material which is not used in embankments or as fill on site.
 6. Unsuitable Material: Material which does not meet specified requirements for use in situ or as embankment, fill or backfill and is prohibited for use in the work.
 7. Authorized Excavation: Excavating to neat lines and limits shown and specified; excavating unsuitable material.
 8. Unauthorized Excavation: Excavating materials which would otherwise be left in place; excavation which is not specified as authorized excavation, such as excavation beyond neat lines and bottoms of footings as shown.
 9. Excess Excavation: Excavating materials beyond or below cross section shown, as well as unavoidable over breakage in rock.
 10. Controlled Low Strength Materials (CLSM): Fill.
- B. Salvage:
1. Materials shown to be salvaged in accordance with Section 02205 and the General Requirements.

1.01 1.02 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and the additional requirements as specified for each:

- A. Samples:
1. Submit sample 21 days in advance of desired date of approval. Two one-cubic-foot samples are required of each material proposed for fill, backfill and embankments.

2. Obtain, identify and ship soil and aggregate samples in accordance with ASTM D75.
- B. Documentation:
1. Permits for disposal of excavated material:
 - a. Obtain written permits and releases from owners of property where material will be deposited.
 - b. Each permit and release from each property owner will absolve the Authority from responsibility in connection with such disposal of the material.
 2. Not Used
 3. Plan for tunneling or jacking of utility facilities:
 - a. Location: Under active yard tracks.
 - b. Prior to tunneling or jacking, submit a tunneling plan.
 - 1) Include in the plan the location of the facility, the method of construction, the types of equipment and the procedures proposed.
 - 2) Procedure for field determination of soil bearing capacity, including description of the equipment to be used, and any calibration curves for the various soil types to be encountered, details of field test procedures, forms for reporting of test data/results and details of minimum number of tests required for each footing/base area
- C. Certification:
1. With samples of materials proposed for fill, backfill and embankment, submit certified test reports of tests performed by an approved Independent Testing Agency for all tests required to demonstrate compliance with specified requirements.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
1. Comply with codes and regulations of the jurisdictional authorities.
 2. AASHTO: M147.
 3. ASTM: C33, D75 , D698, D2487, D2922, D3017, D4318.

1.04 JOB CONDITIONS:

- A. Existing Drainage:
1. Preserve, protect and maintain existing operable drains and sewers during grading operations.
 2. Keep excavations dry.
- B. Not Used
- C. Accident Prevention and Safety:
1. Perform work in accordance with specified safety requirements and PROTECTIVE DEVICES article of the General Requirements.
- D. Location of Underground Facilities and Structures:
1. Locations shown for utility facilities are approximate.
 2. Utility facility locations and site investigations are listed in the General Requirements.
 3. Contact Miss Utility to have utilities located before beginning excavation.
- E. Toxic and Combustible Substances:
1. During excavation, provide detection and testing equipment and carry out necessary tests to detect the presence of toxic and combustible substances.

2. Take action to safeguard persons and property in accordance with the rules and regulations of the jurisdictional agencies and utility owners.
3. Promptly notify utility owners when problems concerning their facilities become apparent.

F. Ramps:

1. Construct temporary ramps as necessary to provide access to work area.
2. Locate such access ramps in Design-Builder's storage, operations and access areas or within excavation for subway structure and maintain traffic as specified.
3. Support ramp excavation in accordance with Section 02260.
4. When ramps are in use, station flag persons equipped with red flags at ramp entrances to keep unauthorized vehicles or persons from entering work area.
5. When work necessitating entrance or exit of vehicles via ramps is not being performed, protect entrances and exits of ramps by warning signs, barricades and fences in accordance with the General Requirements.
6. Upon completion of the work needing ramps, remove the ramps and backfill excavated ramp areas, if necessary.

G. Excavation Near Buildings:

1. Control excavation in areas near buildings or structures to maintain stability of buildings or structures. If underpinning is necessary, perform excavation work so that condition of surrounding area remains unimpaired.

PART 2 - PRODUCTS:

2.01 MATERIALS:

A. Embankment, Fill or Backfill Materials:

1. Composition:
 - a. Well-graded soil-aggregate mixture, as defined by ASTM D2487, comprised of stone, gravel, sand, silt, clay or combinations of such materials.
 - b. Prohibited material: Organic matter, debris, cinders and frozen material.
2. Additional requirements:
 - a. Particle size: Four inches maximum, but not exceeding one inch within one foot of finished grade.
 - b. Liquid limit: Forty maximum, determined in accordance with ASTM D4318.
 - c. Plasticity index: Ten maximum, determined in accordance with ASTM D4318.
 - d. Maximum dry density: Not less than 100 pounds per cubic foot.

B. Select Material: AASHTO M147, with the following gradation requirements:

Sieve Designation	Percentage Passing By Weight
Two inch	100
One inch	70 - 95
3/8 inch	35 - 75
Size 4	25 - 60
Size 10	15 - 45
Size 40	10 - 30
Size 200	0 - 15

C. Pervious Material:

1. Natural, clean, free draining sand conforming to the requirements of ASTM C33 except the following:
 - a. Material passing Size 100 sieve not to exceed eight percent.
 - b. Material passing Size 200 sieve not to exceed five percent.
2. Drainage Material: Clean, crushed, rock, gravel, with 1-1/2 inch maximum particle size and maximum two percent by weight passing Size 4 sieve.
3. Below concrete walks and slabs: ASTM C33, Size No. 67, except maximum two percent by weight passing Size 4 sieve.

D. Impervious Material:

1. Silt-clay material minimum 35 percent by weight passing Size 200 sieve.
2. Plasticity index: 11 minimum, determined in accordance with ASTM D4318

2.02 SOURCE OF MATERIALS:

- A. Use materials for embankment, fill or backfill from this Contract if they meet specified requirements. If sufficient material meeting these requirements is not available from this Contract, obtain material meeting specified requirements.
- B. Use only material whose quality, source and zone of placement in the fill have been approved.
- C. Dress and shape borrow areas provided by the Authority to ensure positive drainage when borrow operations are completed.

PART 3 - EXECUTION

3.01 EQUIPMENT:

- A. Use appropriate equipment in sufficient quantity and sizes to perform the work as specified and shown.

3.02 EARTH EXCAVATION:

- A. Excavate in sequences and stages as specified, and in a manner which will not impair permanent or temporary structures, installations or surfaces.
- B. Excavate to neat lines or set back lines for mixed face conditions and grades shown. If approved, slopes may be flattened as a matter of expediency.
- C. Support sides of excavation.
- D. Protect, support and maintain utility facilities as specified in Section 02270.
- E. Proceed with caution in areas of utility facilities; expose them by hand excavation or other methods acceptable to the facility owner.
- F. Control runoff so that water does not run through excavation area. Keep excavation free of water.
- G. Remove excavated materials to fill, embankment, stockpile or disposal locations. Keep haul routes clean in accordance with the General Requirements.
- H. Fill excess excavations with approved materials and compact as specified.
- I. Unauthorized excavation for the purpose of obtaining materials for resale or for use at another job site is prohibited unless otherwise approved by the Authority Representative.

3.03 ROCK EXCAVATION:

- A. Perform rock excavation to neat lines shown and so as to produce surfaces free of loose rock.
- B. Not Used
- C. Not Used
- D. Not Used
- E. Not Used
- F. Remove excavated rock to approved fill locations or disposal locations.
- G. Fill excess excavation with concrete or other approved material.
- H. Not Used

3.04 REMOVAL OF SUBSURFACE OBSTRUCTIONS:

- A. Permanent Closure walls:

- B. Prior to removal of parts of vaults or areaways which extend into Contract limits, build permanent closure walls where shown in such vaults or areaways to separate areas to be left intact from areas to be removed.
 - 1. Obtain the Authority Representative's approval of permanent closure wall design prior to its installation.
- C. Remove vaults, areaways and foundation walls as shown.

3.05 EMBANKMENT, FILL AND BACKFILL:

- A. Place embankment, fill and backfill in eight-inch loose layers, unless otherwise shown, for entire width so that each layer can be uniformly and properly compacted.
- B. Avoid accumulation of large pieces of material at one location. Fill voids and interstices with finer materials.
- C. In confined areas, use approved power-actuated compactors to achieve required density.
- D. Prior to compaction, adjust moisture content of material within required limits by drying or watering either at material source or on fill.
- E. Leave struts, braces, lagging and timber sheathing in place as long as needed to support excavation and adjacent facilities and structures.
- F. Where utility facilities and structures are supported in place, use special equipment and techniques as required to achieve specified compaction under and around them.
- G. Not Used
- H. When backfilling against structures, place material approximately simultaneously on both sides of structures to equalize opposing horizontal pressures.
- I. When backfilling on tops of structures, place material in six-inch lifts over full area.
- J. Under concrete floor and other slabs on grade, place drainage material directly on prepared subgrade which meets density and elevation requirements. Compact with hand-operated plate-type vibratory compactor.
- K. Prior to placing embankment against slope greater than one vertical to four horizontal, cut benches into existing slope. Height of bench not to exceed two feet unless otherwise approved.
- L. Maintain embankment, fill and backfill in stable, well-drained condition.
- M. Where approved, dispose of surplus excavated material by widening embankments and flattening slopes.
- N. Where pervious material will be exposed to erosion, cover it with 12-inch layer of approved impervious material compacted in place.

3.06 COMPACTION ADJACENT TO STRUCTURES:

- A. Compact embankment, fill or backfill materials within five feet of retaining walls, abutments or other structures using lightweight compactors.
- B. Do not overstress structures.
- C. Backfilling against new structures without approval is prohibited.

3.07 EXCAVATION OF UNSUITABLE MATERIALS:

- A. Remove unsuitable materials from the site.
- B. Replace unsuitable material with approved material and compact as specified.

3.08 PREPARATION OF GROUND AS SUBGRADE:

- A. Where the subgrade is on original ground or in cut or where embankment or fill is less than one foot, fulfill compaction requirement for 12 inches minimum below final subgrade.
- B. If necessary, scarify original ground and adjust moisture content prior to compacting.

3.09 FIELD QUALITY CONTROL:

- A. Allowable Tolerances:
 - 1. Construct finished subgrade to vary not more than 0.05-foot above or 0.10-foot below elevation shown.
 - 2. Complete embankment slopes to plus-or-minus 0.5 foot of slope line shown.
 - 3. Maintain moisture content of embankment, fill or backfill material within plus-or-minus three percent of optimum moisture content of material.
 - 4. Compact each layer of embankment, fill or backfill to 95 percent of maximum dry density as determined in accordance with ASTM D698, at moisture content within tolerance specified, except the following:
 - a. From upper surface of fill or backfill to a plane 12 inches below subbase level of vehicular pavement, sidewalks, trackbeds and structural foundations to 100 percent of maximum dry density at moisture content within tolerance specified.
 - b. In areas of 95-percent compaction where utility facilities are located in fill and are not supported on concrete cradles, compact material for a depth of one foot directly below bottom of facility to 100 percent of maximum dry density at moisture content within tolerance specified.
- B. Test Method:
 - 1. Determine the maximum dry density and the optimum moisture content in accordance with ASTM D698.
 - 2. Determine in-place density and moisture content in accordance with ASTM D2922 and ASTM D3017 respectively, or other test methods acceptable to the Authority Representative.

3.10 TUNNELING FOR OR JACKING OF UTILITY FACILITIES:

- A. Location of facility, method of construction, type of equipment and procedures: As approved.

3.11 FINISHING:

- A. On completion of work, clean ditches and channels.
- B. Slope and shape borrow areas to provide positive drainage.
- C. Remove unsuitable and surplus excavated materials to locations outside the Authority's right-of-way.
- D. Leave site in neat, presentable condition.

END OF SECTION

SECTION 02460

PILES (NON-DRIVEN)

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies furnishing and installing bearing piles and performance of Static Pile Load Tests.
1. Sequence of Work:
 - a. Piles shall not be installed until embankments or excavations shown have been completed to the specified grade.
 - b. Perform Static Pile Load Tests per Article 3.2.B.2 on indicator piles designated by the Engineer after all indicator piles have been installed.
 - c. Order and procure production piles based on the approved "Order List".
- B. Definitions:
1. Pile Group: All piles to support a foundation element or column within a specified area, or all piles to support a linear unit of retaining wall. Pile groups are shown on the Contract Drawings.
 2. Production Piles: All piles that are installed after the installation of required test piles in accordance with the contract documents and which upon approval by the Engineer, become part of the permanent structure.
 3. Indicator Pile: Indicator piles are shown on the Contract Drawings. Static load tests shall be conducted on the indicator piles shown on the Contract Drawings or as directed by the Engineer. The Engineer may direct that additional indicator piles be installed and that static testing be conducted on them to verify the load capacity.
 4. Reaction Piles: Piles installed by the Contractor to provide reaction for Static Pile Load Tests.
 5. Predicted Maximum Tip Elevation: The elevation below which indicator pile tips must penetrate by at least one foot.
 6. Production Maximum Tip Elevation: The elevation below which production pile tips must penetrate by at least one foot, based on the indicator pile test program.
 7. Pile Design Load: The load each pile is designed to carry.
 8. Ultimate Bearing Capacity: The maximum bearing capacity that the pile can sustain without rapid progressive settlement of the pile under constant load.
- C. Pile Type:
1. Prestressed precast concrete piles, pre-bored.
- D. Related Information:
1. Grading, Excavating, and Backfilling: Section 02320.
 2. Support of Excavation: Section 02260.
 3. Concrete Formwork: Section 03100.
 4. Concrete Reinforcement: Section 03200.
 5. Cast-in-Place Structural Concrete: Section 03300.
 6. Structural Precast Concrete: Section 03400.
 7. Prestressed Concrete: Section 03415.

1.02 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
 - 1. Codes and regulations of the jurisdictional authorities.
 - 2. ASTM Standards:
 - a. D1143 - Test Method for Piles Under Static Axial Compressive Load.

1.03 SUBMITTALS:

- A. Submit the following for the Engineer's approval in accordance with the General Requirements and with the additional requirements as specified for each:
 - 1. Shop Drawings:
 - a. For Static Pile Load Tests, provide drawings that show load test apparatus setup including the method of applying the load. Drawings must show devices to be used to measure pile top movement.
 - b. For a Static Pile Load Test program, provide detailed sequence of testing, evaluation of results and planned reports.
 - c. Pile splicing is not desired and shall be avoided. In the event that concrete piles are installed below the elevation of bottom of cap, build-ups, precast or cast-in-place splicing may be used when approved by the Engineer. The pile submittal shall include splice details, build-up details and any other details necessary to satisfy the requirements of these specifications.
 - d. The pile submittal shall show prestressing methods, tendon arrangement, working stresses, and methods for pick-up and handling of piles.
 - e. Submit certification of accuracy for all gauges and test equipment.
 - 2. Documentation:
 - a. Submit procedures and details for installation of reinforcement and prestressing, if applicable.
 - b. Submit materials certifications and concrete mix designs for all concrete products to be used during the pile installation.
 - c. Indicator Pile Order List:
 - 1) Submit a list of piles to be installed as part of the indicator pile test program. List shall show type, size, number, location, indicator pile order length, predicted maximum tip elevation, allowable driving stress related to hammer blows, and blow count needed to attain twice the pile design load. If locations for indicator piles differ from those shown on the drawings, provide reasons for change. The proposed revised location will be reviewed and, if appropriate, approved by the Engineer.
 - 2) Submit list prior to ordering indicator piles.
 - d. Test Documentation and Reports:
 - 1) The Contractor shall retain an experienced Testing Engineer competent with pile load testing methods, procedures and reporting. The Testing Engineer shall be an integral part of the Contractor's Quality Control Program. Submit the qualifications of the Registered Maryland Professional Engineer responsible for monitoring Static Pile Testing. The Testing Engineer shall have a minimum of five (5) years experience in similar work.
 - 2) Sample pile installation record/report and sample sketch proposed to show any necessary deviations from planned locations.
 - 3) After completion of each Static Pile Test, submit a test report for review and approval by the Engineer. The test report shall include

reporting information specified in ASTM D1143 and recommendations for the Production Pile Order List.

e. Production Pile Order List:

- 1) After review and approval of the results of the Static Pile Load Test, submit an "Order List" of production piles proposed to be installed in each pile group. The list shall show type, size, number, location, sequence of installation, length, production maximum tip elevation, allowable driving stress related to hammer blows and blow count needed based on end of initial driving results to attain twice the pile design load for all piles in each pile group.

1.04 PRODUCT DELIVERY AND HANDLING:

- A. Lifting loops shall be used as provided by the precaster. Lifting loops shall not be tied in any way to the pile reinforcement. Loops may remain in place during driving. When handling and delivering precast piles, avoid bending and breaking or chipping of piles.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Precast concrete piles:
1. Prestressed precast concrete piles in accordance with Sections 03100, 03200, 03300, 03400, and 03415 of these specifications as applicable, shaped as shown.
- B. Lean concrete: Section 02260.

PART 3 - EXECUTION

3.01 DRIVING EQUIPMENT:

- A. Driven piles not allowed.

3.02 INDICATOR PILE TEST PROGRAM:

- A. Installation:
1. Provide and install indicator piles where shown, to determine lengths of production piles to be furnished to achieve twice the pile design load in the scheduled pile groups.
 2. Locate piles at contract pile locations so they can become part of the completed structure provided they are approved as conforming to requirements specified for production piles. Install indicator piles to achieve pile tips below the predicted maximum tip elevation, in the presence of the Engineer. Assist the Engineer in verifying measurements and installation characteristics as necessary to evaluate the adequacy of the foundation system.
 3. The indicator piles scheduled for Static Pile Load Tests are shown on the Contract Drawings. The Engineer may designate alternate or additional indicator piles that exhibit the weakest bearing capacity for Static Pile Load Tests.
 4. Piles which are subjected to Static Pile Load Tests which do not pass the acceptance requirements shall not be used for structural support.
 5. Additional piles may be installed, at the Contractor's option, in the area of the Static Load Test Piles to be used as reaction piles. All piles installed as indicator piles or reaction piles for load tests in accordance with the plans and specifications and

meeting specified requirements for production piles can, upon approval, be cut off and become a part of the permanent structure.

6. Install all indicator piles that are intended to become part of the permanent structure with the same type and model of equipment and methods to be used to install production piles. Perform work in the presence of the Engineer.
7. Remove piles which are not incorporated into the completed structure or which do not satisfy test requirements. Alternatively, if rejected piles are not removed then cut off at least three (3) feet below finished grade and backfill resulting hole with lean concrete.

B. Pile Testing:

1. Static Pile Load Tests:

- a. Static Pile Load Test equipment and testing procedures shall be in accordance with ASTM D1143, Quick Load Test Method, except as modified herein.
- b. Provide test equipment with capacity greater than three times the pile design load and having means of determining applied load to within five (5) percent of test load. Provide test equipment capable of measuring total settlement at the top of the pile to nearest 0.001 inch.
- c. Perform Static Pile Load Tests. Commence loading the pile no sooner than 72 hours after installation of the pile. The maximum test load shall be equal to three times the pile design load or the ultimate bearing capacity, whichever occurs first.
- d. The ultimate bearing capacity under axial compressive load is that load which produces a settlement of the pile head equal to:
$$S_u = S + (0.15 + 0.008D)$$
Where:
 S_u = Settlement at ultimate bearing capacity in inches
S = Elastic deformation of total unsupported pile length in inches
D = Pile diameter or width in inches
- e. The safe bearing capacity is defined as 50 percent of the maximum test load. Static load test results will be acceptable when the safe bearing capacity equals or exceeds the design bearing capacity.

3.03 PRODUCTION PILE INSTALLATION:

A. Bearing Value, Length and Penetration:

1. Provide production piles of length necessary to attain production maximum tip elevation, twice the pile design load, and to extend into cap or footing block as required.
2. Determine lengths of production piles by analysis of data obtained from Static Pile Load Tests.
3. The Contractor may install additional test piles, make borings or make such other investigations as he may desire at no additional time to the Contract and no cost to the Authority.

B. General Requirements:

1. Install piles only after completion of required excavation or construction of indicated embankments.
2. For production piles pre-drill through fill or embankment to planned tip elevation submitted by Contractor and approved by Engineer.
3. In Terrace deposits and directly above the Monmouth Formation, cobbles, boulders and cemented sand/silt deposits were found. Penetrate into and through these

deposits as necessary to attain twice the pile design load and required maximum tip elevation.

4. Achieve pile penetration through miscellaneous fill, rubble concrete, tires, hardpan, cemented sands/silts, and any other obstruction, natural or man-made, by means of pre-drilling or other approved excavation methods.
5. Pull and replace piles which are not within specified tolerances or, if approved, redesign pile cap as specified. Costs associated with the redesign and construction of modified pile caps will be borne by the Contractor and no additional time to the Contract will be allowed.

C. Pre-drilled Holes:

1. Where shown on the Contract Drawings, drill holes to diameter of greatest cross section dimension of the pile to be installed in accordance with the notes and schedules on the drawings and with Section 204.
2. Set pile in pre-drilled hole to predicted or production maximum tip elevation and twice the pile design load, but in all cases to a minimum depth of five (5) feet below bottom of pre-drilled hole.
3. Fill voids between pre-drilled hole and pile with lean concrete immediately upon completion of the installation sequence, as approved.
4. Dispose of material resulting from drilling holes in accordance with the requirements of Section 204.
5. Fill rejected pre-drilled holes with lean concrete and redrill at approved location.

D. Concrete Piles:

1. Cut off piles at such elevation that they will extend into cap or footing as shown. Saw cut piles with equipment capable of providing a flat smooth surface without spalling or damaging pile below cutoff. Replace or repair piles that are damaged when cut off.
2. Where reinforcing steel dowels are shown, dowels may be anchored in cast or drilled holes in concrete pile. If holes are drilled, drill by methods that will not damage concrete, reinforcing steel or prestressing steel. Drill minimum diameter consistent with placing approved epoxy adhesive and dowel. Leave holes free of dust, moisture or other deleterious material. Place sufficient epoxy in holes before inserting dowels leaving no voids afterwards. Leave dowels undisturbed until epoxy has developed 100 percent of its strength capacity.

3.04 FIELD QUALITY CONTROL:

A. Concrete Pile Allowable Tolerances:

1. Ensure straightness and cross-sectional dimensions of precast piles so that a line stretched from butt to tip on any face is not more than one inch from face of pile at any point.
2. Install piles within the following tolerances:
 - a. Axis of pile within six inches of design location at cutoff elevation.
 - b. Axis of pile not out of plumb or batter by more than one percent of its driven length.
 - c. No encroachment of piles upon neat lines of Authority structures.

PART 4 - MEASUREMENT AND PAYMENT

4.01 BASIS:

- A. Compensation for work specified in this section will be made in the following manner:

1. Furnishing and installing piles: Linear foot in place in the completed work measured from the tip of the pile to the plane of the cut off (top of pile). This price shall include furnishing piles; installing piles; splices; concreting; achieving specified load and tip elevations.
2. Static Pile Load Test: This work will be measured and paid for at the Contract unit price per each static pile load test performed. The payment will be full compensation for furnishing and setup of test equipment, providing reaction piles, conducting test, reporting and incidentals necessary to complete the work. If load test is terminated by the Engineer because of insufficient bearing capacity, test will be measured for payment. If the test is terminated because of malfunction of Contractor's equipment or other reasons that are the fault of the Contractor, the test will not be measured for payment.
3. Pre-drilled holes shown and specified in Article 3.3 will be paid for at the Contract unit price per linear foot measured from the plane of the cut off (top of pile) to the level of the pre-drilled elevation specified. This price shall include providing the equipment, material and labor necessary to drill holes to the scheduled elevation, disposal of materials, placing lean concrete and incidentals necessary to complete the work.

END OF SECTION

SECTION 02468

DRILLED CONCRETE PIERS (CAISSONS)

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. Machine drilled shaft, belled base, rock sockets, shear rings, and penetration tests at bottom of caisson shafts.
 - 1. Contaminated ground water removal: If contaminated ground water is encountered during caisson work, Contractor shall conform to the requirements of removal of same contained in the Environmental Reports included as part of the Document 00300 - Information Available to bidders.
- B. Concrete and reinforcement.
- C. Shaft liner, if required.
- D. Unit Prices: Unit Prices for prices to be used in either cost over runs due to extra depths required to be drilled, additional soil excavations, additional penetration tests at bottom of caissons and additional concrete required for caissons. Same cost figures shall be used to credit work which does not require to go as far down.

1.02 RELATED SECTIONS:

- A. Section 03200 - Concrete Reinforcement: Requirements for concrete reinforcement.
- B. Section 03300 - Cast-In-Place Concrete: Requirements for concrete.

1.03 REFERENCES:

- A. ACI 336.1 - Standard Specification for the Construction of Drilled Piers; American Concrete Institute International; 1998.
- B. ASTM A 252 - Standard Specification for Welded and Seamless Steel Pipe Piles; 1998.
- C. ASTM D 2487 - Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System).

1.04 SUBMITTALS:

- A. Contractor shall submit foundation design with calculations, QA/QC plan, and acceptance criteria to AR for approval prior to start of caisson installation work.
- B. Shop Drawings:
 - 1. Provide for reinforcing caissons.
 - 2. Provide concrete mix designs for caissons.
 - 3. Provide signed and sealed caisson design calculations, prepared by a Professional Engineer registered in the State in which the project is located.

- C. Project Record Documents: Record actual locations of piers, pier diameter, and pier length. Accurately record the following:
 1. Sizes, lengths, and locations of piers and footing groups.
 2. Sequence of placement.
 3. Final base and top elevations.
 4. Deviation from indicated locations.

1.05 QUALITY ASSURANCE:

- A. Design piers under direct supervision of a Professional Engineer experienced in design of this Work and licensed in the State in which the project is located.
- B. Installer Qualifications: Company specializing in performing the work of this section with minimum 10 years of documented experience.

1.06 PRE-INSTALLATION MEETING:

- A. Convene two weeks prior to commencing work of this section.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Concrete Materials and Mix: Specified in Section 03300.
- B. Reinforcement: Section 03200; spiral wound and as indicated on contract drawings.
- C. Equipment: Appropriate to dewater excavated shaft.

PART 3 - EXECUTION

3.01 PREPARATION:

- A. Use placement method which will not cause damage to nearby structures.
- B. Notify adjacent and affected land owners and building occupants with 30 days notice before proceeding with the work.
- C. Protect structures near the work from damage.
- D. Prepare to place piles from excavated working elevations.

3.02 INSTALLATION:

- A. Construct piers in accordance with ACI 336.1.
- B. Drill vertical pier shafts, belled bases, shear rings, and rock sockets to diameter and depths approved by AR.
- C. Place steel liners during drilling operations. Set firmly in place. Use shaft liner if free water is encountered.

- D. Clean shaft and bottom of loose material. Maintain shafts free of water.
- E. Allow inspection of shaft and liner prior to placement of reinforcement and concrete.
- F. Place reinforcing steel in accordance with Section 03200.
- G. Place concrete in single pour, in accordance with Section 03300 with equipment designed for vertical placement of concrete.
- H. Progressively raise shaft liner during concrete placement. Do not permit top of pier to deform to a mushroom shape due to premature removal of liner.
- I. Extend reinforcement or provide dowels for connection of caps and columns in accordance with contract drawing requirements.
- J. Set tops of piles to elevations approved by AR.

3.03 TOLERANCES:

- A. Install piers with maximum variation from location, plumbness, bottom area, diameter and anchorage locations as specified in ACI 336.1.
- B. Maximum Variation From Vertical: 1 in 48.
- C. Maximum Variation From Design Top Elevation: Plus 3 inches, minus 1 inch.
- D. Maximum Out-of-Position: 2 inches.

3.04 FIELD QUALITY CONTROL:

- A. Field inspection and testing will be performed under provisions of Section 01400.
 - 1. Perform penetration tests at bottom of Caisson shafts as approved by AR.
- B. Test Piers: Same diameter and type as specified for other piling, placed in same manner.
- C. Accepted test piers may be used in the Work, unless indicated otherwise by Engineer.

3.05 UNACCEPTABLE PIERS:

- A. Unacceptable Piers: Piers that fail, are placed out of position, are below elevations, or are damaged.
- B. Provide additional piers or replace piers failing to conform to specified requirements.

END OF SECTION

THIS PAGE NOT USED

SECTION 02515

WATER DISTRIBUTION SYSTEM

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies requirements for providing water mains, appurtenances, fire hydrants, and water meter.
- B. All work in Greenbelt Yard and Shady Grove Yard, including both WSSC and WMATA systems, shall be designed and constructed in accordance with all requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- C. All work in Brentwood Yard, including both WASA and WMATA systems, shall be designed and constructed in accordance with all requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

PART 2- PRODUCTS

2.01 MATERIALS:

All materials for Greenbelt Yard and Shady Grove Yard shall conform to the applicable requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

All materials for Brentwood Yard shall conform to the applicable requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. All work in Greenbelt Yard and Shady Grove Yard shall be performed in conformance with the requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- B. All work in Brentwood Yard shall be performed in conformance with the requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- C. All inspections and testing in Greenbelt Yard and Shady Grove Yard shall be accomplished in conformance with the requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- D. All inspections and testing in Brentwood Yard shall be accomplished in conformance with the requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

END OF SECTION

SECTION 02535

SANITARY SEWER

PART 1 - GENERAL

1.01 DESCRIPTION:

- A. This section specifies providing sanitary sewers, both WSSC and WASA..
- B. All work in Greenbelt Yard and Shady Grove Yard, including both WSSC and WMATA systems, shall be designed and constructed in accordance with all requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- C. All work in Brentwood Yard, including both WASA and WMATA systems, shall be designed and constructed in accordance with all requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

PART 2-PRODUCTS

2.01 MATERIALS:

All materials for Greenbelt Yard and Shady Grove Yard shall conform to the applicable requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

All materials for Brentwood Yard shall conform to the applicable requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

PART 3 - EXECUTION

3.01 INSTALLATION:

- A. All work in Greenbelt Yard and Shady Grove Yard shall be performed in conformance with the requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- B. All work in Brentwood Yard shall be performed in conformance with the requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- C. All inspections and testing in Greenbelt Yard and Shady Grove Yard shall be accomplished in conformance with the requirements of the Washington Suburban Sanitary Commission and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.
- D. All inspections and testing in Brentwood Yard shall be accomplished in conformance with the requirements of the District of Columbia, Water and Sewer Authority and in accordance with the WMATA Stray Current and Cathodic Protection Criteria. The most stringent requirements shall apply.

END OF SECTION

THIS PAGE NOT USED

**SECTION 02554
STORAGE TANK SYSTEMS**

PART1-GENERAL

1.01 DESCRIPTION

This section specifies furnishing and installing double wall underground fiberglass-reinforced polyester fuel storage tanks for gasoline, diesel fuel, heating oil and above ground glycol tanks including pipes, fittings, pumps and appurtenances, and dispensing units.

1.02 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and 1 Specification Sections, apply to this Section.
- B. Related Work Specified Elsewhere
 - Section 02320 Grading, Excavating and Backfilling
 - Section 02240 Dewatering
 - Section 02750 Concrete Pavement
 - Section 16120 Wire, Cable and Busways
 - Section 16125 Wire Connection Accessories
 - Section 16145 Wiring and Control Devices
 - Section 16060 Grounding and Bonding
 - Section 16225 Motors
 - Section 16425 Motor Starters and Control Centers

1.03 SUMMARY

- A. This section includes storage tanks, tank accessories, piping, valves, and specialties for fuel-oil and glycol distribution outside the building.
- B. A related section is Division 2 Section "Utility Materials" for basic piping joining materials, and joining and installation methods.

1.04 DEFINITIONS

- A. The following are industry abbreviations for storage tanks:
 - 1. AST: Aboveground storage tank(s)
 - 2. UST: Underground storage tank(s)
- B. The industry abbreviation for piping materials is FRP (fiberglass reinforced plastic).

1.05 SYSTEM PERFORMANCE REQUIREMENTS

- A. Aboveground, Fuel-Oil Distribution Piping Minimum Working-Pressure Rating: 150 psig.
- B. Double-Walled-Piping, Carrier-Pipe Minimum Working-Pressure Rating: 150 psig.

- C. Vent, Gage, and Fill Piping Minimum Working-Pressure Rating: 100 psig.
- D. Minimum Test-Pressure Rating for Inner Tank, Smaller Than 12-Foot Diameter: 5 psig.
- E. Minimum Test-Pressure Rating for Containment Shell, Smaller Than 12-Foot Diameter: 5 psig.

1.06 SUBMITTALS

- A. Product Data: Include identification materials and devices; and sizes, dimensions, capacities, pressure ratings, and operating characteristics for the following
 1. Each type and size of storage tank
 2. Submersible, fuel-oil pumps and glycol pumps
 3. Tank accessories and specialty fittings
 4. General- and special-duty valves
 5. Piping systems
 6. Liquid-level gage systems
- B. Shop Drawings
 1. Include storage tanks, accessories, pipe sizes, valves, and specialties. Include details of underground piping. Indicate interface and spatial relationship between piping, adjacent utilities, and proximate structures.
 2. Wiring Diagrams: For each item of equipment with electric power supply. Include ladder-type wiring diagrams for interlock and control wiring required for final installation. Differentiate between factory-installed and field-installed wiring.
- C. Test Reports - As specified in "Field Quality Control" Article
- D. Maintenance Data - For accessories and specialties to include in maintenance manuals specified in Division 1.
- E. Completed Notification for Underground Storage Tank (MDE Form 231).
- F. For each tank:
 1. Calibration chart.
 2. Manufacturer's installation checklist.
 3. Manufacturer's warranty.

1.07 QUALITY ASSURANCE

- A. Product Options - Drawings indicate size, profiles, and dimensional requirements of fuel-oil distribution components and are based on specific types and models indicated. Other manufacturers' products with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."
- B. Reference Codes and Specifications
 1. Codes and regulations of jurisdictional authorities
 2. API Bulletin No. 1615, Installation of Underground Gasoline Tanks and Piping at Service Stations
 3. ASTM: A48, A53, C33, D4021
 4. NEMA: 250

- D. Electrical Devices, Components, and Equipment - Listed and labeled according to NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction
- E. Compliance with ASME B31.1, "Power Piping", for fuel oil piping materials and joining requirements.
- F. Compliance with
 - 1. NFPA 30 Flammable and Combustible Liquids
 - 2. NFPA 30A Automotive and Marine Service Station
 - 3. NFPA 31 Installation of Oil Burning Equipment
 for design and construction, installation, inspection, and testing of fuel-oil distribution system tanks, piping, and other components.
- G. Compliance with NFPA 70, "National Electrical Code," for electrical connections between wiring and electrically operated devices.
- H. Compliance with requirements of the EPA (40 CFR 280) and state and local environmental-protection authorities having jurisdiction. Include recording of fuel-oil storage tanks and monitoring of tanks and piping
- I. Compliance with requirements of the Petroleum Equipment Institute (PEI) Standards RP-100, RP-200 and RP-300
- J. Compliance with Underwriters Laboratories Standards UL 1316 and UL 567

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.
- B. Preparation for Transport: Prepare storage tanks, accessories, valves, and specialties for shipping as follows
 - 1. Ensure that units are dry and internally protected against rust and corrosion.
 - 2. Protect against damage to threaded ends, flange faces, and weld ends.
 - 3. Set valves and specialties in position for handling that avoids damage to seats and operating parts.
- C. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent damage and entrance of dirt, debris, and moisture.
- D. Store valves and specialties with end protectors in place, unless necessary for inspection; then reinstall for storage.
- E. Store valves and specialties indoors and maintain temperature higher than ambient dew-point temperature. Support off ground or pavement in watertight enclosures if outdoor storage is necessary.
- F. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor if stored inside.
- G. Protect flanges, fittings, and piping specialties from moisture and dirt.
- H. Store pipes protected from direct sunlight. Support pipes to prevent sagging and bending.

1.09 PROJECT CONDITIONS

Notify Architect not less than two days in advance of proposed utility interruptions.

1.10 COORDINATION

- A. Coordinate installation and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- B. Coordinate sizes and locations of concrete-ballast and -surface bases for UST. Include manholes, fill and sounding boxes, and vent piping terminals.

1.11 WARRANTY

- A. General Warranty - Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Special Warranty - Written warranty, executed by fuel-oil storage tank manufacturer agreeing to repair or replace tanks that fail in materials or workmanship within specified warranty period, provided tanks are installed according to manufacturer's written instructions. Failures include structural failures of tanks, including cracking, breakup, and collapse; and failure due to external and internal corrosion if used for storage of fuel oils at temperatures not exceeding 150 deg F.
- C. Warranty Period - 30 years from date of Substantial Completion for underground double-wall polyester tanks and one year for above ground steel tanks.

PART 2 - PRODUCTS

2.01 PIPING MATERIALS

Refer to Subpart 3.02, of this section, "Piping Applications", for applications of pipe, tube, fitting, double-contained piping, and joining materials.

2.02 PIPES AND TUBES

- A. Steel Pipe - ASTM A 53, Schedule 40, Type S or E, Grade A or B, black
- B. Copper Tube - ASTM B 88, Type L (ASTM B 88M, Type B); water tube; drawn temper
- C. FRP: ASTM D 2310 and complying with UL 971
Note: 2- and 3-Inch NPS - 150-psig minimum working-pressure rating

2.03 PIPE AND TUBE FITTINGS

- A. Steel, Threaded Fittings - ASME B16.11, with threads according to ASME B1.20.1
- B. Steel Flanges and Flanged Fittings - ASME B16.5
- C. Malleable-Iron Threaded Fittings - ASME B16.3, Class 150, standard pattern, with threads

according to ASME B1.20.1

- D. Malleable-Iron Unions - ASME B16.39, Class 150. Include brass-to-iron seat, ground joint, and threads according to ASME B1.20.1
- E. Copper Fittings - ASME B16.22, wrought copper
- F. FRP Fittings - ASTM D 2310 complying with UL 971, and made by FRP manufacturer or approved equal

2.04 DOUBLE-WALLED FIBERGLASS PIPING SYSTEM

- A. Description - Piping includes carrier pipe and fittings, secondary-containment conduit and fittings, centering spacers in annular space between carrier pipe and inside of conduit, and liquid-tight joints. Arrange conduits and spacers so piping can be vented and drained and space is available for installing leak-detection cable.
- B. FRP Double-Walled Piping: UL 971, FRP carrier pipe, FRP secondary-containment conduit, FRP double-walled fittings, and bonded joints.
- C. Steel Pipe/FRP Double-Walled Piping, according to the following
 1. Carrier Piping - Steel pipe; steel, welding fittings; and welded joints
 2. Secondary-Containment Conduit - UL 971, FRP and fittings and bonded joints
- D. Copper-Tube/FRP Double-Contained Piping, according to the following
 1. Carrier Piping - Copper tube, copper fittings, and brazed joints
 2. Secondary-Containment Conduit - UL 971, FRP and fittings and bonded joints

2.05 JOINING MATERIALS

- A. Brazing Filler Metals - AWS A5.8, BAg-1 (silver classification)
- B. Bonding Adhesive - FRP manufacturer's standard, suitable for fuel oil piping application

2.06 PIPING SPECIALTIES

- A. Tank, Pipe Connectors - Comply with UL 567.
- B. Piping, Flexible Connectors
 1. Fabricated from materials suitable for fuel-oil service, including 150-psig minimum working-pressure rating, and having threaded ends for 2-inch NPS and smaller and flanged ends for 2-1/2-inch NPS and larger.
 2. Stainless-Steel-Hose, Flexible Connectors - Corrugated, stainless-steel, inner tubing covered with stainless-steel wire braid. Include steel nipples or flanges, welded to hose.

2.07 VALVES

- A. Bronze, Gate Valves - MSS SP-80, Type 2, Class 200. Include ends threaded according to ASME B1.20.1. Solder ends may be furnished for use with copper tube.
- B. Bronze, Ball Valves - MSS SP-110; three-piece bolted-body; 400-psig minimum, WOG, nonshock, working-pressure rating. Include full-port, cast-bronze, chrome-plated bronze ball; PTFE seats; lever handle; and threaded ends according to ASME B1.20.1. Solder ends may

be furnished for use with copper tube.

- C. Bronze, Check Valves - MSS SP-80, Type 3, Class 200. Include ends threaded according to ASME B1.20.1. Solder ends may be furnished for use with copper tube.
- D. Bronze, Vertical Ball Check Valves - ASTM B 61 or ASTM B 62, two-piece construction; and 400-psig WOG, nonshock, working-pressure rating. Include integral bronze seats, replaceable stainless-steel ball, and threaded ends according to ASME B1.20.1.
- E. Cast-Iron, Gate Valves - MSS SP-70, Type I, Class 250. Include OT construction, all-bronze trim, and flanged ends.
- F. Steel, Ball Valves - MSS SP-72; full-port, chrome-plated steel ball; TFE seats; and flanged ends
- G. Cast-Iron, Check Valves - MSS SP-71, Type I, Class 250, include flanged ends
- H. UL Valves - UL 842, listed for fuel-oil service

2.08 DISPENSER NOZZLE

- A. Gasoline vapor recovery nozzle - UL-listed, with 90 percent capability for retrofit to comply with future no-seal, no-flow requirements. Spout - corrugated rubber with 3/4-inch fuel inlet and 3/4 inch vapor outlet; Emco-Wheaton, Model No. 8300, or approved equal.
- B. Diesel fuel and glycol dispenser nozzle - Manufacturer's standard with 3/4-inch nozzle inlet
- C. Safety shut-off valve - UL-listed, size as shown, Universal, Model No. 520 RU or approved equal

2.09 GLYCOL STORAGE TANKS

- A. Description - Single-wall, horizontal, steel, AST; with enclosed, secondary-containment dike, with capacity a minimum of 110% of tank capacity; suitable for storage of Glycol solution of varying concentrations. Hoover containment or approved equal
- B. Construction - Fabricated with welded carbon steel, suitable for operation at atmospheric pressure and for storing 100% Glycol Solution with maintained temperature up to 150 deg F.

2.10 UNDERGROUND STORAGE TANKS

- A. Description - UL 1316 and ASTM D 4021, double-wall, horizontal, polyester, UST; with interstitial space. Fluid containment, Xerxes, or approved equal.
- B. Construction - Fabricated with fiberglass-reinforced polyester resins suitable for operation at atmospheric pressure. Fabricate tanks for the following internal and external loads
 1. External Hydrostatic Pressure - 3-foot depth of bury from top of tank and hole fully flooded, to withstand general buckling with safety factor of 2:1.
 2. Surface Loads - AASHTO's "Specifications for Highway Bridges," H-20 axle loads of 32,000 lb.

2.11 GLYCOL STORAGE TANK FITTINGS AND ACCESSORIES

- A. Tank Manholes - 24-inch diameter; bolted, flanged, and gasketed; centered on top of tank

- B. Threaded pipe connection fittings on top of tanks, for fill, supply, return, vent, sounding, and gaging. Include cast-iron plugs for shipping.
- C. Striker Plates - Inside tank, on bottom below fill, sounding vent, gage, and other tube openings.
- D. Lifting Lugs - For handling and installation.
- E. Supply Tube - Extension of supply piping fitting into tank, terminating 6 inches above tank bottom and cut at a 45-degree angle (1:1 slope).
- F. Sounding and Gage Tubes - Extension of fitting into tank, terminating 6 inches above tank bottom and cut at a 45-degree angle (1:1 slope).

2.12 FUEL-OIL STORAGE TANK FITTINGS AND ACCESSORIES

- A. Tank Manholes - 36- to 48-inch diameter; bolted, flanged, and gasketed, with extension collar; for access to inside of tank
- B. Threaded pipe connection fittings on top of tanks, for fill, supply, return, vent, sounding, and gaging, in locations and of sizes indicated. Provide with cast-iron plugs for shipping
- C. Striker Plates - Inside tank, on bottom below fill, sounding vent, gage, and other tube openings
- D. Lifting Lugs - For handling and installation
- E. Supply Tube - Extension of supply piping fitting into tank, terminating 6 inches above tank bottom and cut at a 45-degree angle (1:1 slope)
- F. Sounding and Gage Tubes - Extension of fitting into tank, terminating 6 inches above tank bottom and cut at a 45-degree angle (1:1 slope)
- G. Containment Sumps - PE, (Environ DBS4245 or approved equal) sump base, add-on extension pieces as required, sump top, lid, and gasket-seal joints. Include bulkhead fittings for pipe penetrations through sidewalls. Minimum depth 38-inch and a 42 inch manhole.
- H. Bulkhead Fittings - Two-part pipe fitting for field assembly and of size required to fit over pipe. Include gaskets shaped to fit sump sidewall, sleeves, seals, and clamps as required for liquidtight pipe penetrations
- I. Anchor Straps - Storage tank manufacturer's standard anchoring system, with straps, strap-insulating material, cables and turnbuckles, of strength at least one and one-half times maximum uplift force of empty tank without backfill in place.
- J. Filter Mat - Geotextile woven or spun filter fabric, in one or more layers, for minimum total weight of 3.0 oz/sq. yd.
- K. Submersible, Fuel-Oil Pumps - UL 79, turbine type.
- L. Observation Well - PVC pipe with manhole, per the drawings

2.13 FUEL-OIL TANK SPECIALTY FITTINGS

- A. Fitting Materials
 1. Cast-iron, malleable-iron, brass, or corrosion-resistant metal; suitable for fuel-oil service
 2. Surface, Flush-Mounted Fittings - Waterproof and suitable for fuel-oil truck traffic
- B. Spill-Containment Fill Boxes - Flush mounting, with drainage feature to drain oil into tank, threaded fill-pipe connection, and wrench operation. EBW Flex Catch BG Series, 715-474-01 or approved equal
- C. Supply and Sounding Drop Tubes - Fuel-oil supply piping or fitting, inside tank, terminating 6 inches above bottom of tank, and with end cut at a 45-degree angle (1:1 slope).
- D. Pipe Adapters and Extensions - Compatible with piping and fittings
- E. Suction Strainers, Check Valves, and Overfill Check Valves - Bronze or corrosion-resistant metal components
- F. Weatherproof Up Flow Vent Cap - Increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection
- G. Observation Well Caps - Locking manholes
- H. Overfill Prevention Valve - Automatic operation to prevent product flow prior to tank filling and to permit operator to drain hose into tank following activation.

2.14 GRADE MANHOLES

Cast-Iron Frame and Cover - Heavy-duty (H-20 rated), water-resistant, cast-iron manhole frame, gasket, and bolted cover

2.15 LEAK-DETECTION AND MONITORING SYSTEMS

Calibrated, leak-detection and leak-monitoring system, and liquid-level gage system with probes and other sensors and remote alarm panel, for fuel-oil storage tanks and fuel oil piping.

2.16 SUBMERSIBLE PUMPS

- A. Permanent split-compactor motor, horsepower as indicated, 200-volts ac, single-phase, 60 Hertz, 3450 rpm, UL-listed for Class 1, Group D, Division 1, Hazardous location, product cooled and lubricated, flow capacity as indicated at 200 psig to conform to NFPA 30. Appropriate device to detect and automatically de-energize the motor, if there is an increase in temperature of the motor beyond designed limit.
- B. Aluminum impellers and diffusers, labyrinth liquid flow path seals between stages. Pump completely waterproof, designed for use with automotive fuel having specific gravity of approximately 0.8. Submersible pump for glycol system shall have impeller trimmed to provide specified flow.
- C. Discharge head of cast iron construction, extractable design, and with integral electrical junction box.

- D. Spring-loaded check valve with built-in pressure relief remains in system with head removed.
- E. Across-the-line magnetic starter: Section 1614, with the following additional requirements
 - 1. Enclosures - NEMA 250 type 7, Suitable for Class 1, Division 1, Group D location
 - 2. NEMA size - As required

2.17 PRODUCT DISPENSERS

- A. One hose and nozzle assembly per dispenser. Casting incorporating 120-mesh non-corrosive Monel metal strainer and on-off switch, 240-volts, 10 amperes, 5,000 AIC, UL-Listed for Class 1, Group D, Division 1 locations.
- B. Internally mounted noncomputing four-sheet register with semiautomatic reset. Zero start ticket printer built into non-computing register to provide record of individual type, with antidrain valve.
- C. Gasoline-resistant 3/4-inch hose, 13 feet long, shockproof nozzle, variable flow, nonchattering type, with antidrain valve
- D. Panels
 - 1. removable and replaceable
 - 2. housing joints weather lapped to eliminate need for gaskets
 - 3. modern exterior cabinet of heavy gauge steel, bonderized and finished in red baked-on synthetic enamel
 - 4. rigidized stainless steel scuff panel and stainless steel snap-on trim guards.

2.18 REMOTE CONTROL

- A. Disconnect switch - Mounted on channel support for disconnecting AC power to fuel dispensing booth
- B. Keyed Switch - Wall mounted with the following requirements
 - 1. For remote control of gasoline, diesel fuel and glycol dispensing units to prevent unauthorized use and to shut off both dispensing units in emergencies
 - 2. Nameplates - Black-and-white laminated plastic, one inch high minimum height with adhesive backing, and with in 1/2-inch high with block letters on black background
 - a. One of the following legends, as appropriate
 - i. GASOLINE FUEL DISPENSING UNIT CONTROL
 - ii. DIESEL FUEL DISPENSING UNIT CONTROL
 - iii. GLYCOL DISPENSING UNIT CONTROL
 - b. Switch positions - ON and OFF

2.19 PEA GRAVEL

ASTM C33 - naturally rounded aggregate with particles ranging from 1/8-inch diameter to maximum of 3/8-inch diameter, clean and free-flowing.

2.20 SOURCE QUALITY CONTROL

- A. Perform factory tests on fuel tanks, according to UL 142 and STI F911, after fabrication and before shipment.

- B. Perform factory tests on glycol tanks, according to UL 1316 and ASTM D 4021, after fabrication and before shipment.

PART 3 - EXECUTION

3.02 EARTHWORK

Excavation, trenching, and backfilling are specified in Division 2 Section 204, "Grading, Excavating and Backfilling."

3.03 PIPING APPLICATIONS

- A. Use flanges, unions, transition and special fittings, and valves with pressure ratings same or higher than system's pressure rating in aboveground and containment sump applications, unless otherwise indicated.
- B. Aboveground, Glycol Piping and Fuel Oil Piping - Use 2-Inch NPS and Smaller with steel pipe, steel or malleable-iron threaded fittings, and threaded joints.
- C. Aboveground Vent Piping - Use Schedule 40 galvanized steel, ASTM A53.
- D. Underground Fuel Oil Piping - use the following.
 - 1. 2-Inch NPS - FRP double-walled piping
 - 2. 3- and 4-Inch NPS - FRP double-walled piping
- E. Underground Fuel Oil Riser Piping - Use black steel schedule 40 pipe except for interstitial monitoring riser, which shall be schedule 40 PVC.
- F. Underground, Gage and Vent Piping - Use FRP pipe.

3.04 VALVE APPLICATIONS

Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply.

- A. Shutoff Duty - Use ball valves
- B. Throttling Duty - Use ball valves

3.05 JOINT CONSTRUCTION

- A. Refer to Division 2 Section "Utility Materials" for basic piping joint construction.
- B. Make bonded joints for FRP piping with adhesives according to manufacturer's written instructions.

3.06 GLYCOL STORAGE TANK INSTALLATION

- A. Install glycol storage tanks according to manufacturer's written instructions and standards specified.
- B. Install tank bases and supports.

- C. Set tanks on bases and supports.
- D. Install piping connections and vent fittings.
- E. Install ground connections.

3.07 FUEL-OIL STORAGE TANK INSTALLATION

- A. Install fuel-oil storage tanks according to manufacturer's written instructions and standards specified.
- B. Excavate to sufficient depth for a minimum of 51 inches of earth cover from top of tank to finished grade. Allow for cast-in-place, reinforced concrete anchor pad plus 18 inches of pea gravel between ballast base and tank. Extend excavation at least 24 inches around perimeter of tank.
- C. Set tiedown eyelets for hold-down straps in reinforced concrete anchor pad and tie to reinforcing steel.
- D. Place 18 inches of pea gravel on top of reinforced concrete anchor pad.
- E. Set tank on fill materials and install FRP hold-down straps.
- F. Install piping connections.
- G. Install tank leak-detection and -monitoring devices.
- H. Install containment sumps.
- I. Install observation wells.
- J. Backfill excavation with pea gravel.
- K. Install fuel-oil storage tanks, manhole extensions, and manhole risers.
- L. Install reinforced concrete tank pad over tank excavation.

3.08 CONCRETE BASES

- A. Construct concrete tank and equipment bases according to supported tank and equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000 psi, 28-day compressive-strength concrete.
- B. Refer to Division 3 Section 03300; Cast-in-place Structural Concrete for concrete.
- C. Refer to Division 4 Section 04050; Mortar, Grout and Masonary Accessories for grout.

3.09 PIPING INSTALLATION

- A. Install piping free of sags and bends.
- B. Locate groups of pipes parallel to each other, spaced to permit valve servicing.

- C. Install fittings for changes in direction and branch connections.
- D. Install rigid, underground, single wall fiberglass vent piping at a minimum uniform slope of 2 percent downward toward fuel-oil storage tank sump.
- E. Install flexible, double wall FRP, fuel-oil pipe at a minimum slope of 1 percent downward toward fuel-oil storage tank sump. Primary pipe shall be 2 inches within a 3 inch containment pipe. Pipe well shall be install in diesel piping per the drawings.
- F. Assemble and install bulkhead fittings for pipe penetrations through storage tank sump sidewalls. Follow fitting manufacturer's written instructions and use components required for liquidtight joints.
- G. Install reductions in pipe sizes using concentric reducer fittings.
- H. Install tank, pipe connectors at piping connections to UST.
- I. Install, flexible connectors at piping connections to vibration-producing equipment. Use according to the following applications.
 - 1. Steel Piping - Stainless-steel-hose, flexible connectors
 - 2. FRP - Stainless-steel-hose or bronze-hose, flexible connectors
- J. Install double walled piping according to manufacturer's written instructions for assembly, joining, trench preparation, and installation.
- K. All underground metallic piping shall be wrapped and coated.

3.010 VALVE INSTALLATIONS

Install valves in accessible locations. Protect valves from physical damage and install metal tag attached with metal chain indicating fuel oil piping systems.

3.10 CONNECTIONS

- A. Connect vent, fill, sounding, gage, and other piping to fittings and specialty devices.
- B. Piping Connections - Make piping connections as follows, unless otherwise indicated.
 - 1. Install unions, in piping 2-inch NPS and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.
 - 2. Install flanges, in piping 2-1/2-inch NPS and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
 - 3. Install dielectric unions to connect piping of dissimilar metals.
- C. Make connections to liquid-level gage system.
- D. Make connections to tank leak-detection system.
- E. Make electrical connections to pumps, control panels, liquid-level probes, and leak-detection and -monitoring devices.
- F. Electrical wiring, disconnect switches, and motor controls are specified in Division 16.
- G. Ground equipment and AST and tighten electrical connectors and terminals according to

manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.11 LIQUID-LEVEL GAGE SYSTEM INSTALLATION

- A. Install liquid-level gage systems according to manufacturer's written instructions.
- B. Locate panel inside building where indicated.

3.12 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

- A. Install leak-detection and monitoring systems according to manufacturer's written instructions.
- B. Install alarm panel inside fuel boot as indicated on the drawings.
 - 1. Fuel-Oil Storage Tanks - Install probes in interstitial space of double-wall tanks.
 - 2. Fuel-Oil Double-Walled Piping - Install sump sensors.
 - 3. Install liquid-level gage systems according to manufacturer's written instructions.

3.13 LABELING AND IDENTIFYING

- A. Equipment - Install engraved, plastic-laminate equipment nameplates and signs on AST and equipment. Text of signs:
 - 1. Name of identified unit
 - 2. In addition to name of identified unit, distinguish between multiple units.
 - 3. Inform operator of operational requirements
 - 4. Indicate safety and emergency precautions, and warn of hazards and improper operations. T
 - 5. Tanks shall be identified for type of product and capacity
- B. Piping - Install pipe markers on aboveground piping.
- C. Warning Tapes - Arrange for installation of continuous, underground, detectable warning tapes during backfilling of trenches for piping. Locate tapes 6 to 8 inches below finished grade and directly over piping and edges of each fuel-oil storage tank.

3.14 PAINTING

- A. Refer to Division 9 Section 09920; Field Painting for field-painting requirements.
- B. Use materials and procedures in "Exterior Paint Schedule" Article's "Ferrous Metal" Paragraph and "Full-Gloss, Alkyd-Enamel Finish" Subparagraph in Division 9 Section "Painting," using color selected by Architect.
- C. Prime and paint AST and metal supports, except units with factory-applied paint or protective coating. Restore damaged finish to original condition. Painting shall be in accordance with WMATA color codes for storage tanks.
- D. Prime and paint aboveground pipe, fittings, valves, and supports.

3.15 FIELD QUALITY CONTROL

- A. Perform pressure test for tightness, with air, inert gas, or water according to NFPA 30 and NFPA 31 on tanks before installation.

1. Apply soap solution to joints and check for leaks.
 2. Do not exceed 5-psig test pressure with tanks smaller than 12-foot diameter
- B. Repair or replace defective tanks and retest until there are no leaks.
- C. Test fuel-oil distribution piping according to NFPA 30 and NFPA 31. Remake leaks and defects with new materials and retest until there are no leaks.
- D. Test and adjust leak-detection and -monitoring system controls and devices. Replace damaged and malfunctioning controls and devices.
- E. Report test results promptly in writing to Architect and authorities having jurisdiction.

3.16 ADJUSTING

Adjust controls and safety devices. Replace damaged and malfunctioning controls and safety devices.

3.17 DEMONSTRATION

Engage a factory-authorized service representative for leak-detection system to train Owner's maintenance personnel to adjust, operate, and maintain systems.

- A. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining leak-detection equipment and pumps.
- B. Review data in maintenance manuals.
- C. Schedule training with Owner with at least seven days' advance notice.

END OF SECTION

SECTION 02585

UNDERGROUND ELECTRICAL AND COMMUNICATIONS DISTRIBUTION SYSTEMS

PART 1 - GENERAL

1.01 DESCRIPTION:

This section specifies providing new ducts, manholes and handholes for electrical and communications facilities.

- A. Related Work Specified Elsewhere:
 - 1. Grading, excavating and backfilling: Section 02320.
 - 2. Support of excavation: Section 02260.
 - 3. Maintenance, support and restoration of utility facilities: Section 02270.
 - 4. Grounding and bonding: Section 16060.
 - 5. Concrete formwork: Section 03100.
 - 6. Concrete reinforcement: Section 03200.
 - 7. Cast-in-place structural concrete: Section 03300.
 - 8. Structural precast concrete: Section 03400.

- B. Definitions:
 - 1. Conduit: Individual raceway.
 - 2. Ductbank: Assembly of conduits in configurations shown, with concrete encasement, with or without reinforcement.

1.02 SUBMITTALS:

Submit the following for approval in accordance with the General Requirements and with the additional requirements as specified for each:

- A. Shop Drawings:
 - 1. Drawings for each cast-in-place manhole and handhole.
 - 2. Drawings for each size and configuration of precast manhole and handhole with details of accessories and joints.
 - 3. Diagrams showing dimensioned locations for openings and knockout panels for ductbank penetrations of manhole and handhole walls.

- B. Documentation:
 - 1. Submit calculations to demonstrate compliance with required load-bearing capacity, certified by a professional engineer registered in the jurisdiction where the work is to be installed.

1.03 QUALITY ASSURANCE:

- A. Codes, Regulations, Reference Standards and Specifications:
 - 1. Comply with codes and regulations of the jurisdictional authorities.
 - 2. AASHTO: H15-44, H20-44.
 - 3. ANSI: C80.1.
 - 4. ASTM: A36, A48, A123, A185, A615, C33, C109, C173, C231, D570, D638, D790, F512.

5. NEMA: TC-14.
6. UL: 6.

1.04 PRODUCT DELIVERY, STORAGE AND HANDLING:

- A. Transport those materials supplied by utility companies from companies' storage facilities to construction site.
- B. Protect materials stored on site from damage prior to incorporation into work and during handling.

1.05 JOB CONDITIONS:

- A. Coordination with Utility Companies:
